MUNICIPALITIES.

(RETURN SHOWING AMOUNT OF SPECIAL GRANTS TO, FROM 1st JANUARY, 1895, TO 30th JUNE, 1896.)

Printed under No. 13 Report from Printing Committee, 18 August, 1896.

[Laid upon the Table of the House in answer to Question No. 19 of the 3rd June, 1896.]

Question.

19. SPECIAL GRANTS TO MUNICIPALITIES:—MR. CHAPMAN asked THE SECRETARY FOR PUBLIC WORKS,—

- (1.) The total amount of money granted as special grants to municipalities since 1st January, 1895?
- (2.) The name of each municipality that has received a special grant or subsidy, and amount of same?
- (3.) For what purpose granted, and whether expended in daywork or by contract labour?

Answer.

RETURN of money granted as special grants to municipalities from the 1st January, 1895, to 30th June 1896:—

	£	s.	d.
1st January to 30th June, 1895	7,095	12	9
1st July, 1895, to 30th June, 1896	3,927	11	11
Amount issued	11,023	4	8
Not issued	9,724	7	2
	£1,298	17	6

The Councils were not restricted as to the method of expenditure either on day or contract work.

STATEMENT of Special Amounts granted to Municipalities from 1st January, 1895, to 30th June, 1896.

Municipality.	Grant from 1 January, 1895, to 30 June, 1895.	1 July, 1895, to 30 June, 1896.	Total Grant.	Amount Issued.
Armidale	Main Northern Road	£ s. d.	£ s. d.	£ s. d.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

DEPARTMENT OF LANDS.

(SIXTEENTH ANNUAL REPORT.)

*Printed under No. 27 Report from Printing Committee, 13 November, 1896, A.M.*

To The Hon. J. H. Carruthers, Esq., M.P., Secretary for Lands.

Sir, Department of Lands, Sydney, 12th October, 1896.

I have the honor to submit, for your information, the Annual Report of the Department, relating to the business transacted during the year 1895.

The chief event of the year was the addition to the Statute Book of the Crown Lands Act of 1895, which came into operation on the 1st June. This is not a mere Amending Act, but a comprehensive measure, which, in addition to providing remedies for anomalies in the existing law, has introduced new systems of tenure, accommodated to the necessities of the times, and aiming more particularly at providing land for the *bonâ fide* settler on terms and conditions of the most liberal character.

A reference in detail to its many provisions is not perhaps necessary here, but a brief mention of some of its salient features should not be omitted. Prominent among these is the provision for the classification, survey, and valuation of land before selection, which is designed to afford protection to the public estate, and at the same time promote the interests of the settlers themselves, and of the Colony at large, by the concentration of settlement upon specially chosen areas.

In connection with these classified areas, two forms of tenure have been created, viz., Homestead Selection and Settlement Lease. The first may be briefly described as a freehold tenure, with condition of perpetual residence and perpetual rent. The second is a leasehold, with a term of 28 years, and a condition of residence during the whole period. Both of these systems offer special advantages to the small capitalist, inasmuch as the rate of rental is low, being limited, in the case of homestead selection, to  $1\frac{1}{4}$  per cent. of the capital value of the land for the first five years, with a subsequent increase to  $2\frac{1}{2}$  per cent., while in the case of settlement lease a uniform charge of  $1\frac{1}{4}$  per cent. is maintained during the whole period of lease. The right of transfer exists in connection with both these tenures, and the conditions are few in number and capable of easy fulfilment. Homestead selection is confined to lands that are classified as suitable for agriculture, whilst a settlement lease may not only be granted over lands of that description, but also over farms, the greater proportion of which could only be classed as suitable for grazing purposes. Grazing farms may contain an area of 10,240 acres; but where agricultural lands are concerned the maximum limit of area in both classes is 1,280 acres.

Notwithstanding that it was only during the last quarter of the year that land was made available for application, the transactions during that period soon rendered it evident that all the resources of the Department would be severely taxed to keep pace with the demand.

Another

Another class of holding created by the Act of 1895 is that of Improvement Lease, which, although somewhat similar to the already existing tenures known as scrub leases and leases of inferior lands, is at the same time free from several restrictions which prevented those holdings from being applied for to any extent. The provisions attached to improvement leases offer encouragement to persons possessed of sufficient enterprise to bring under control lands overgrown with scrub; and it is confidently expected that under this tenure much of what are now "waste lands" will be brought under profitable occupation, and ultimately rendered suitable for closer settlement.

Amongst other features of the Act which deserve mention is the power of withdrawing land in the Central and Western Divisions from pastoral lease where the demand is such as to render it necessary that some provision should be made for satisfying the requirements of persons wishing to establish homes for themselves. The Act extends the term of residence attached to conditional purchases from five to ten years. It also confers upon the Minister power to refuse applications for annual leases where public interests render it advisable to do so. The extension to twenty-eight years of the terms of pastoral leases in the Western Division, and conditional, special, and homestead leases, and the provision for the sale of town, suburban, or population-area lands at the original upset price, when such lands have been passed at auction, are other matters of considerable importance.

In connection with many of the lease tenures tenant right in improvements is conferred; as, for instance, in the case of pastoral leases in the Western Division, and conditional, settlement, residential, improvement, and homestead leases. In the case of scrub leases and leases of inferior lands it is optional with the Minister to grant tenant right. The holders of homestead selections are allowed tenant right in improvements, and are permitted in addition to protect themselves by a simple process of registration against the loss of their holdings through bankruptcy or other process of law. The definition of trespass and of the circumstances under which the impounding of stock can be enforced is another useful provision of the Act of 1895; and, further, the concessions in the shape of reappraisal of capital values which have been made to holders of conditional purchases within special areas, and of rental values to pastoral and homestead lessees in the Western Division, will serve to show that the interests of all classes have been considered.

The extension of the provisions relating to the surrender and exchange of lands has also rendered it possible to entertain proposals that would previously have had to be declined—apart from any question as to their merits, simply on account of their being outside the somewhat limited scope of the then existing laws.

It is fitting that mention should be made of the initiation during the year of an Information Bureau for the purpose of distributing information respecting the Crown lands of the Colony available for settlement and assisting people to obtain lands suitable for their requirements. Its establishment proved most opportune in view of the passing of the Act of 1895, and the lines laid down for its working by the Board appointed for that purpose have been found to answer satisfactorily. The volume of business transacted during the comparatively short period it has been in existence affords strong evidence of the usefulness of this new branch of the Department.

Another matter to which some reference should perhaps be made is the abolition during 1895 of what had been for so many years known as the Temporary Staff. The anomaly of having a staff of so-called temporary officers, many of whom could point to lengthy periods of continuous service, had long been recognised. The Board appointed to consider and report upon the matter, consisting of the Secretary to the Civil Service Board and two senior officers of the Department, after a very careful consideration of the claims of each officer, found themselves in a position to make recommendations which led eventually to the transfer of 158 officers to the permanent staff.

*Judicial Decisions.*

Following hereunder is a brief epitome of cases decided by the Supreme Court and Privy Council during the year 1895, affecting the administration of Land Acts :—

Improvements upon forfeited Conditional Purchase and Conditional Lease become vested in Crown.

*Re T. H. Mate & Co., Limited* (Bank of New South Wales, respondents)—This case was one in which the ownership of certain improvements upon forfeited conditional purchases and a conditional lease was the point at issue. The facts are as follow :—One T. H. Mate (now represented by the appellants) was the lessee from the Crown of a pastoral property upon which he had made certain improvements. Part of the land so improved was taken up by one Louisa Dennis by way of conditional purchase, additional conditional purchase, and conditional lease, and subsequently T. H. Mate erected a dividing fence between his land and that selected by Dennis. The improvements on the additional conditional purchase only were duly appraised by the Local Land Board, and Dennis was directed to pay Mate their value. These selections and the conditional lease afterwards became forfeited to the Crown before Dennis had completed her payments to Mate with respect to the improvements on the additional conditional purchase, and the lands so forfeited were taken up by the respondents under conditional purchase. All the improvements on the land were then appraised by the Local Land Board, and the respondents were directed to pay their value to the Crown. Against this direction by the Local Land Board an appeal to the Land Appeal Court was lodged which, however, was dismissed, the Court holding that under the 44th section of the Crown Lands Act of 1889 all improvements which were on the lands at the time that Louisa Dennis' interest became forfeited passed to the Crown. The Supreme Court held that the Land Appeal Court was correct in its decision, and the appeal was therefore dismissed. The Court, however, regarded it as unfortunate that Mr. Mate did not obtain either an appraisement or an agreement with respect to the improvements, and on the whole considered the case to be hard, and one which had not been contemplated by the Legislature. (It may be here mentioned that section 52 of the Crown Lands Act of 1895 in a measure provides a remedy for any similar cases which may arise in future.)

Claim for contribution towards cost of Rabbit-proof Fence on a common boundary sustained.

*Re C. P. Davis* (London Bank of Australia, respondent)—The question in this case turned upon the interpretation of the 20th section of the Rabbit Act of 1890, under which a claim for contribution towards the cost of making the common boundary of their pastoral holdings rabbit-proof had been made upon C. P. Davis by the respondent Bank. The amount of such contribution was duly assessed by the Land Board which, however, rejected certain evidence as to the depreciation of the wire netting between 1889, when it was first erected, and 1893, when the claim was made; and also as to the fence not being perfectly rabbit-proof in consequence of the existence of certain holes left as traps. The Land Appeal Court refused to remit the case back to the Land Board, and dismissed the appeal lodged by Davis, who thereupon brought the matter before the Supreme Court. The decision of the Land Court was, however, upheld by the Supreme Court, and the appeal against that decision was consequently dismissed.

Waiver of objection to Appeal.

*Re Fanny Barbour and the Crown Lands Act* (Henry Ricketson, respondent)—This was an appeal against a decision of the Land Appeal Court on a point of practice. The Local Land Board had duly assessed the value of some improvements placed by Ricketson on certain land within the Aratula Pastoral Holding, taken up by Fanny Barbour by way of conditional purchase and conditional lease. Miss Barbour appealed against the sum assessed, and the Land Court dismissed the appeal on the ground that notice of the appeal against the Land Board's decision was not received by Ricketson within twenty-eight days of the date of that decision. The Land Court stated a special case setting out the facts, and the questions submitted for the decision of the Supreme Court were whether the notice required by section 17 of the Act of 1884 was properly given if it was posted within twenty-eight days, although it had not reached

reached the respondent until the twenty-eight days had expired, and whether, even if there had not been sufficient notice, it had been waived by Ricketson appearing and pleading.

The matter was decided on the question of waiver, the Supreme Court holding that it was shown that the respondent, Ricketson, had waived his objection to the appeal being heard, not under the case as stated, but by the fact of his having had the hearing of the appeal transferred from Sydney to Hay, and that it was, therefore, competent for the Land Court to hear the appeal.

An Additional Conditional Purchase cannot be made in virtue of an Original Conditional Purchase converted into fee-simple.

*Re Mary Ann and Samuel Clift and the Land Acts of 1884 and 1889*—This was an appeal from the decision of the Land Appeal Court dismissing an appeal against the disallowance by the Local Land Board of an application for a conditional purchase made by Mary Ann and Samuel Clift, as the executrix and executor of one William Clift. The facts necessary for statement are simple:—A conditional purchase, made by one Peter Duff, in 1871, was duly transferred in 1874 to William Clift, who thereupon paid to the Government the balance of purchase money due upon the land, and obtained a deed of grant. William Clift having died in 1889, Mary Ann and Samuel Clift, as executrix and executor, applied, in 1893, for 137 acres of land as an additional conditional purchase to the original conditional purchase made by Peter Duff.

This application was disallowed by the Land Board on the ground that the original conditional purchase of Peter Duff had been converted into a freehold prior to the date of the application. An appeal against this decision was subsequently dismissed by the Land Appeal Court, and the case was then taken to the Supreme Court, the principal question stated for determination being,—whether, under the circumstances hereinbefore set forth, Mary Ann Clift and Samuel Clift, on the 12th day of January, 1893, were the holders of a conditional purchase within the meaning of section 42 of the Crown Lands Act of 1884, so as to be enabled by virtue thereof to make the additional conditional purchase applied for on the said date.

The Supreme Court, in delivering judgment, traversed all the sections of the various Crown Lands Acts which bore upon the point at issue, which might tend to elucidate the construction that it was intended by the Legislature the particular section under review should bear; and the Court finally held that the words “any holder of a conditional purchase” in section 42 of the Act of 1884 meant anyone still fulfilling the conditions attaching to a conditional purchase as such, and did not apply to a person who had obtained his grant on their fulfilment. The decision of the Land Appeal Court being therefore held to be correct the appeal was dismissed.

The above decision covered the case of *re T. H. Mate & Co. (Limited)* and the Crown Lands Acts, and also that of *William Kiddle and the Crown Lands Acts (Pierce Murphy, respondent)*.

This decision led to the introduction of section 31 into the Crown Lands Act of 1895, which has the effect of validating all confirmed conditional purchases and conditional leases made in virtue of freeholds, and also permits applications for additional conditional purchases to be made in virtue of conditional purchases which have been converted into holdings in fee-simple.

A person having no interest in the land has no right to lodge a complaint questioning validity of Conditional Purchase.

*Re William Mitcham and the Crown Lands Acts (Ida Flora Flood, respondent)*—One William Mitcham had lodged a complaint against an application for a conditional purchase by Ida Flora Flood, on the ground that at the date of the application the lands in question were not Crown lands available for conditional purchase. The complaint was duly investigated by the Local Land Board and dismissed, and the same result was arrived at on Mitcham's appeal to the Land Appeal Court. The matter was then brought before the Supreme Court, the question for determination being whether the Land Appeal Court was right in holding that William Mitcham could not raise the question as to whether the lands were available for conditional purchase by means of a complaint purporting to be made under the Crown Lands Act of 1884. The

The Court held that the Act never contemplated that a person—a mere stranger—having no interest in the matter of any sort or description could come in and put a person who had been holding a conditional purchase, presumably taken up on Crown lands, to the proof of his title, and that therefore the Local Land Board and the Land Appeal Court had come to a proper determination in the case.

The question submitted to the Court was therefore answered in the affirmative, and the appeal dismissed.

An Additional Conditional Purchase cannot be taken up in virtue of an Additional Conditional Purchase made in virtue of a freehold—and no accrued rights to make Additional Conditional Purchases are contained in section 2, Act of 1884.

*In re W. E. Abbott.*—This was an appeal to the Privy Council from a decision of the Supreme Court. The main facts were these: Abbott was the holder in fee-simple of 40 acres in the Eastern Division acquired under section 25 of the Crown Lands Alienation Act of 1861, after having been offered for sale by auction and not sold.

Prior to the commencement of the Act of 1884 he had also acquired, under the provisions of section 22 of the Crown Lands Alienation Act of 1861, by virtue of the freehold above mentioned, certain conditional purchases, the aggregate area of which, together with the freehold, amounted to 240 acres. In March, 1892, Abbott applied for an additional conditional purchase of 150 acres, and also for a conditional lease of 440 acres.

His applications were refused by the Land Board on the ground that he was not the holder of a conditional purchase within the meaning of the section 42 of the Act of 1884, and a subsequent appeal to the Land Court was dismissed.

The Supreme Court held that the question in the case was whether the right of selection which existed prior to the commencement of the Act of 1884, in the then holders of land in fee-simple, was preserved to them by any provision of the Act of 1884, and on a consideration of section 2 (sub-section *b*) of that Act the Court by majority held that such right of selection was not a "right accrued" within the meaning of that sub-section. Their Honors were further of opinion that whatever might be the true construction of the words "right accrued" section 3 of the Act of 1884 was a complete answer to the appellants' contention.

Upon the case coming before the Privy Council their Lordships concurred with the Supreme Court in thinking that the appellant was not the holder of a conditional purchase within the meaning of section 42 and could not claim the benefit of that section.

With regard to the alleged accrued right under section 2, Act of 1884, their Lordships thought it fallacious to say that the section in question conferred on the fee-simple holder the right to make conditional purchases, and were of opinion that even if the language of section 2 was sufficient to reserve to appellant the right for which he contended the express provision in section 3 of that Act would be fatal to his claim.

Their Lordships accordingly advised that the judgment of the Supreme Court should be affirmed.

#### *Information Bureau.*

In accordance with the Minister's directions as to the necessity of some systematic method being adopted for affording prompt and reliable information to intending settlers respecting the vacant Crown lands of the Colony, an Information Bureau was established during the year with the object of circulating as widely as possible full particulars respecting Crown lands about to be made available for settlement or occupation.

Owing to survey and classification preceding selection under the Crown Lands Act of 1895, plans and printed details respecting the areas about to be made available can now be provided some time before the land is actually open to application, thus avoiding the uncertainty which existed under the policy of selection before survey.

By the end of June, 1895, details had been collated and maps prepared indicating the character and position of the vacant Crown lands of the Colony; and the value of this information being considerable, separate pamphlets were published of each of the fourteen Land Board Districts into which the Colony is divided

divided for the purposes of land administration. In these pamphlets the Department is enabled to furnish full particulars respecting the character of the land, distance from railways, ports of shipment, &c., capital value, rentals, &c.

Pamphlets are also issued every month containing particulars of the areas to become available in the immediate future, and these are exhibited at eighty of the principal railway stations, at a large number of the Post Offices, at the District Survey Offices, and at the office of every Crown Land Agent in the Colony. The demand for pamphlets and lithographic plans is such as to show that they are much appreciated by those in search of land. It may be mentioned that the Railway Commissioners and the Post Office authorities have rendered material assistance to this Department by exhibiting in public places pamphlets, advertisement sheets, and maps relating to available land. To still further meet the demand for information respecting lands to be made available, a weekly issue of the *Government Gazette*, containing full particulars of the week's notifications relating to Crown land matters, is published under the designation of the Lands Department *Weekly Gazette*, and sold for a nominal price. To the same end preliminary notices of areas about to be set apart for settlement are published every week in two of the daily and one of the weekly newspapers.

All written communications meet with prompt attention, and all information possible is furnished to persons inquiring.

That the public have taken every advantage of the Information Bureau is evidenced by the fact that from 1st April to the end of the year, no less than 2,428 personal inquiries were made, and 1,388 letters despatched in reply to written communications. 16,500 pamphlets and lithographs were circulated in connection with the areas notified for settlement since the 13th July, 1895.

#### *Rabbit Branch.*

During the past year the spread of the rabbit pest was checked in various parts of the Colony by the extreme heat and the severity of the drought.

The area of infested country, however, continues to increase, and rabbits are known to exist in localities so far east as to render it easy of belief that the pest can exist, and indeed thrive, in any part of this Colony, irrespective of the climatic conditions or the character of the soil. However, there is the pleasing fact to note, that the owners or occupiers of infested lands, after continuous efforts, have at length been rewarded by the discovery of a cheap and efficacious remedy, which has been instrumental in the destruction of a countless number of rabbits.

Reference is of course made to the phosphorized pollard, which apparently can be used at all periods of the year, and is readily consumed by rabbits, irrespective of the condition of the country in which it is laid. This poison, used in conjunction with wire-netting fences, is now regarded as the best means of coping with the pest. Nevertheless, when everything is admitted, the fact remains that the presence of the rabbit is the cause of an annual recurring expenditure of a more or less serious character in the management of the pastoral and agricultural estates of which this Colony is so largely composed.

During the year the work of erecting additional rabbit-proof fencing by private owners has been proceeded with to a considerable extent, and the number of miles previously known to have been erected has been increased by 390 miles, making the total quantity erected about 16,300 miles.

The prevalence of the pest in Queensland is of course well known, and the fear of its spreading has led landowners in that Colony to erect numerous lines of barrier fences. It also led to negotiations being entered into, which are now practically completed, for the erection in this Colony of an additional barrier fence, extending from a point on the Namoi River, below Narrabri, to Mungindi, on the Queensland Border, a distance of over 100 miles, the cost of which will probably be in excess of £6,000.

The area of country "declared" rabbit-infested has been but little increased during this year, although applications for action of this kind have been numerous. Local objections, however, have invariably been found to exist, and following the policy of the past such objections have generally been respected.

Complaints

Complaints and agitations of various kinds, regarding the best means of keeping the rabbit within bounds, induced the Minister to summon a conference for the purpose of securing an expression of opinion as to the best methods by which the eradication of the rabbit pest might be brought about. Upwards of fifty delegates attended, and a series of resolutions was adopted, upon which a Bill to make better provisions for the checking and suppression of the rabbit pest has been drafted, which it is anticipated will receive Parliamentary sanction at an early date.

Further schemes having for their object the extermination of the rabbit pest have been received in the department, but after examination it was found that in no case were they of such a nature as to warrant expenditure, in submitting any of them to a practical test.

In this year, and for the first time, were the provisions relating to the compulsory destruction of rabbits brought into operation, a number of the owners of small holdings in the Land District of Urana being at their own request called upon to adopt this course.

Several persons applied for licenses to keep live rabbits in their possession, and particulars of those granted are given below.

LICENSES TO KEEP LIVE RABBITS.

Name.	Place.	Period.
Baker and Cobb ... ..	Agricultural Society's Grounds, Moore Park ... ..	6 weeks.
J. M'Garvie Smith ... ..	Denison-street, Woollahra ... ..	12 months.
Charles Martin ... ..	Sydney University ... ..	12 months.
Robert Hudson ... ..	Winchcombe, Carson, and Co's. Wool Store, Pyrmont ... ..	1 week.
J. L. Thompson ... ..	Agricultural College, Richmond ... ..	6 months.

*Animals Infectious Diseases Act.*

This Act (assented to on the 16th March, 1888) was designed to prevent the indiscriminate introduction of noxious and infectious microbes, wherewith to cause the spread of disease with the object of exterminating the rabbit pest, but has not been resorted to much of late.

Various applications under the 6th and 7th sections of the Act in question, were made, in order that certain persons might obtain permits to introduce and keep microbes, as also permits to inoculate animals therewith.

Seven such licenses were issued during the year, and it may be as well to state that in each case the advice of the Board of Health has been obtained as to the desirableness of issuing the licenses.

*Labour Settlements.*

The Labour Settlements referred to in my report for last year still continue to exist, but the results attending each of them have been of a somewhat varied character.

*Pitt Town.*—The settlement at Pitt Town, which at the start was regarded as the most important, has practically been in a state of collapse for some months past, and although at the present time about 120 men, women, and children are located upon the place, dependent for their existence entirely upon the sale of firewood, it is beyond question that the so-called settlement must be closed.

Area of settlement ... ..	2,140 acres.
Cost of settlement to the State ... ..	£7,705
Value of improvements at date of last appraisalment ... ..	5,254
Population at initiation ... ..	480
Present population ... ..	129

*Wilberforce Settlement.*—This settlement which originally consisted of 37 enrolled members, with an area of 1,630 acres, has recently been reduced to 20 members, with an area of 882 acres. Matters here have progressed more favorably than at Pitt Town, and the settlers resident are confident of their ability to make permanent homes upon the place. Fruit trees have been planted, and the place presents a favorable aspect.

The

The total sum advanced to the Board of Control amounts to £1,940, whilst the improvements, including live stock and plant, were recently valued at £2,532.

*Bega Labour Settlement.*—The area set apart for a settlement at this place is 1,360 acres, and as the rental has been appraised at 3s. per acre per annum, the land may be regarded as good, and it is thought that in this instance the experiment may develop into a permanent home for a limited number of settlers.

The settlement now consists of 20 enrolled members (103 souls), but arrangements are being made to subdivide a further portion of the area, when it is anticipated that the population will be increased by the addition of 7 families.

The Board of Control of the Settlement has been aided by the Government to the extent of £1,300, of which over £300 remains unexpended. Agistment fees have also been received for depasturing stock upon the unallotted portion of the settlement area. The improvements upon the place were at the last appraisal valued at £1,253, but the value has been considerably increased of late by the erection of post and wire fencing.

The settlers are well housed, and work under the individualistic system. A considerable area is under cultivation, and quite recently much attention has been devoted to the growth of fruit trees.

#### *Expenditure, 1895.*

The total expenditure for all Services, in 1895 amounts to £320,308 7s. 9d., being £16,527 11s. 5d. less than that for 1894. Comparing it with 1886 expenses—the year just prior to the reorganisation of the Head Office—which then amounted to £555,873 5s. 10d., a saving is shown to the extent of £235,564 18s. 1d.

The salaries paid in the year, exclusive of the Land Appeal Court (£5,058 3s. 4d.), amounted to £175,759 7s. 4d., being £196 11s. 8d. more than in 1894, but £85,441 12s. 8d. less than those paid in 1886, the decrease being mainly due to the Departmental inquiries in 1887 and 1889.

A comparison of the figures under each head of Service is shown on Schedule III, from which it will be observed that a reduction in expenditure has been general. Of the few items showing an increase the only one calling for explanation is that for survey fees, viz., £1,840 7s. 11d.; but this is owing to the surveys necessitated by the provisions of the Land Act of 1895 in anticipation of homestead selection, settlement lease, &c.

The expenditure in 1895, for the Services of the year only, and from all sources, was £305,529 5s. 6d. Included in these figures, however, are expenses amounting to £8,897 10s. 9d., which were not met from the appropriations of the Department, and being deducted shows that the 1895 expenditure above referred to from such appropriations to be £296,631 14s. 9d. It is estimated that the unpaid claims on the 31st December, 1895, for the Services of the year alone, amounted to £14,400, and therefore the estimated expenditure for the Services of 1895 from the Votes of the Department is, in round numbers, £311,000.

Referring to the salaries of Crown Lands Agents and assistants, 27 were paid wholly by this Department; 49 were paid jointly by this Department and the Departments of Justice and Mines and Agriculture; while 21 received no remuneration whatever from the Department.

The number of accounts registered during the year was 10,276; and the separate payments made on account of them by cheques drawn in the Account Branch numbered 18,333.

Schedules I to VII show respectively Revenue and Receipts for 1895; Expenditure for all Services during 1895; Comparative Statement of the Expenditure in 1894 and 1895 respectively; Salaries paid in the year 1895; Statement showing the strength of the Staff, and the annual rate of Salaries as on the 31st December, 1894 and 1895, respectively; Statement of Travelling Expenses and Fees paid

paid in connection with Local Land Board Meetings during the year 1895; Statement of Revenue and Expenditure for the years 1886 to 1895 inclusive, showing the percentage of the latter to Revenue.

### The Land Appeal Court.

During the year 1895 the Court heard and disposed of 266 cases, comprising 179 appeals, 80 references, and 7 motions. Of these cases, 184 were heard and disposed of in Sydney, and 82 at the various sittings in the country. The Court held sittings in Sydney on 11 different occasions, and in the country as follows:— Bourke, 1; Dubbo, 2; Hay, 2; Tamworth, 2; Wagga Wagga, 1. In 7 instances the Court was asked to state a special case for the decision of the Supreme Court, and all were proceeded with. Of these, the Supreme Court confirmed the Land Appeal Court's ruling in 3 cases; the remaining 4 are still pending.

### Auction Sales.

*Town Lands.*—During the year an area of 1,017 acres 21½ perches was offered for sale, comprised in 2,564 lots. The area sold amounted to 289 acres 36¼ perches, the number of lots represented in that area being 745, and the amount realised reached a total of £9,926 17s., or an average price per acre of £34 6s. 5d.

*Suburban Lands.*—The area offered during 1895 amounted to 5,114 acres 3 roods 26¾ perches, embraced in 1,149 lots. The area sold was 868 acres 2 roods 25¾ perches, comprising 261 lots, and the amount realised £4,863 9s. The average price per acre obtained was therefore £5 12s.

*Country Lands.*—The lots offered in the case of these lands amounted to 1,403, representing an area of 57,342 acres 2 roods 1 perch. The lots and area sold during the year were respectively 485 and 19,989 acres 3 roods 25¾ perches, while the amount realised therefrom was £42,217 9s. 4d., being an average price per acre of £2 2s. 3d.

It will thus be seen from the figures given above that the total area of all classes offered for sale during 1895 amounted to 63,474 acres 2 roods 9¼ perches, comprised in 5,116 lots, and that the total area sold was 21,147 acres 3 roods 7¾ perches, embracing 1,491 lots, the amount realised reaching a total of £57,007 15s. 4d.

The following Schedule admits of a ready comparison between the transactions under this class of sales for the years 1894 and 1895:—

	Year.	No. of lots offered.	Area offered.			No. of lots sold.	Area sold.			Amount realised.			Average price per acre.		
			a.	r.	p.		a.	r.	p.	£	s.	d.	£	s.	d.
Town	1894	2,805	1,192	2	25½	806	335	2	22½	10,599	17	9	31	11	7½
	1895	2,564	1,017	0	21½	745	289	0	36¼	9,926	17	0	34	6	5
Suburban	1894	1,209	5,659	2	11¾	404	1,485	0	30¾	8,519	16	2	5	14	8¾
	1895	1,149	5,114	3	26¾	261	868	2	25¾	4,863	9	0	5	12	0
Country	1894	1,885	102,563	3	4¾	699	42,973	1	5½	86,042	7	0	2	0	0½
	1895	1,403	57,342	2	1	485	19,989	3	25¾	42,217	9	4	2	2	3

It will be noticed from the particulars supplied above that both in the area offered and sold during 1895 there has been a decrease, but the average price per acre obtained from the lands sold has been well maintained when compared with the results of similar sales in the previous year. It will also be seen that about 28 per cent. of town lands, 17 per cent. of suburban lands, and 35 per cent. of country lands offered were sold, as compared with 28 per cent., 26 per cent., and 42 per cent. respectively in 1894. Further details will be found in Schedule XXX.

The provisions relating to the sale of land by auction have been extended during the year by the passing of the Land Act of 1895. Section 56 of that Act provides that any town or suburban Crown lands, or lands within population areas, which might have been offered and not sold, may be granted at the original upset price to any person applying for them.

Since the Act came into force, on 1st June, 1895, 399 applications have been received, 68 of which it was thought advisable to refuse, while 210 applications, comprising 251 lots, were granted. The

The area and the amount realised in connection with the lands thus sold were respectively 738 acres 1 rood  $36\frac{1}{2}$  perches, and £4,170 2s. 6d., the average price per acre obtained being—for town land, £20 16s. 7d.; for suburban land, £7 0s. 11d.; and for country land within population areas £2 8s. Further details will be found in Schedule XXXI.

Consequent upon the non-payment of the balance of the purchase money within the required time, 492 lots were forfeited during the year, representing an area of 682 acres 2 roods  $9\frac{1}{4}$  perches, and the sum of £5,009 13s. 10d., which had been paid as deposits in connection therewith, was accordingly forfeited to the Crown. Further particulars will be found in Schedule XXII.

The value of improvements (£553 14s. 3d.), which had been added to the upset price of certain portions, was refunded to persons whose claims to consideration had been admitted as justifiable; and certain other payments which had been made in excess, to the amount of £64 16s. 6d., were also authorised for refund during the year.

#### *Homestead Selections.*

This is a new class of holding brought into existence by the Land Act of 1895, and as the leading characteristics and conditions of the tenure under which Crown lands are made available for this particular form of selection have already been explained, it will only be necessary here to give in brief the results obtained during the latter part of 1895, when the alienation of lands under this system first became possible. Further details can be obtained from Schedule XXII.

The blocks made available for homestead selection were 964 in number, representing an area of 164,520 acres 1 rood 30 perches, and the annual rent, which the Act provides shall be for the first five years at the rate of  $1\frac{1}{4}$  per cent. of the capital value of the land, amounted in the aggregate to £2,795 11s. 1d. Applications were received for 202 of these blocks, and the area and rental of the land thus selected were respectively 62,576 acres 1 rood 21 perches and £1,331 2s. 9d.

The Local Land Boards confirmed 63 of these applications, for an area of 24,624 acres 3 roods 5 perches, to which an annual rent of £572 8s. is attached. Thirteen applications were disallowed or withdrawn, thus leaving applications for 131 blocks which had not been finally dealt with prior to the close of the year.

Under section 20 of the Act of 1895 it was made possible for any holder of land under conditional purchase, with its attached conditional leases, who had obtained his certificate of conformity, to convert his holding into a homestead selection. In only three instances, however, up to the close of the year, was advantage taken of these provisions, the area held by the applicants being 1,327 acres. Schedule XXIII gives further details as to locality, &c.

From Schedule LXXV it will be seen that the blocks notified in the *Gazette* during 1895 as being set apart for homestead selection were 1,357 in number, and comprised an area of 267,159 acres 12 perches. Many of these blocks, however, did not become available for selection during 1895, as it is the practice of the Department to allow sufficient time to elapse between the date of notification and the date of the land becoming available, to enable intending settlers to satisfy themselves as to the blocks being suited to their requirements.

#### *Conditional Purchases.*

There were 1,751 applications lodged during 1895, covering an area of 253,431 acres 12 perches, and these results, when compared with those of the preceding year, will show a decrease both in the number received and in the area selected, the applications lodged in 1894 being 2,617, and the area embraced therein, 414,355 acres  $10\frac{3}{4}$  perches. Now that new legislation has increased the term of residence from five to ten years, and has also opened up other channels by means of which people can obtain the land they require, it cannot be expected that this particular form of purchase will be as largely availed of as in the past. It will be seen, from Schedules VIII and IX and from the summary appended below, that 959 of the applications received during 1895 were for original conditional purchases—773 for additional and 19 for non-residential conditional purchases—or taking these applications according to the Division of the Colony in which they are situated, the results will be as follows:—Eastern Division, 1,165 applications for 109,976 acres

1 rood 20 perches; Central Division, 585 applications for 143,414 acres 2 roods 32 perches; and Western Division, 1 application for 40 acres. In Schedule XI will be found particulars as to the number of applications received during the year for land within special areas and for ordinary lands, and also as to the number and area of conditional purchases applied for from 1862 up to the present time.

1874	830	132,233	8	80	13,223	18	4	358	170,302	0	24	17,080	4	4	49	3,424	0	0	634	16	0	850	107,889	3	30	21,450	3	44	2617	414,355	0	10	62,489	2	04
1875	631	102,305	0	0	10,236	10	0	643	94,218	3	0	9,421	13	0	19	1,253	2	0	250	14	0	455	55,593	3	12	10,322	19	9	1761	253,431	0	12	80,231	19	6

From Schedule XI it will be seen that, of the applications made during the year under review, 819 were confirmed for 107,290 acres 1 rood 24 perches, and 295 were disallowed, but taking into account those applications outstanding from previous years the total number confirmed during 1895 was 1,627, representing an area of 268,761 acres 3 roods 17 perches, and 446 were disallowed.

At the close of the year there were 147,883 incomplete conditional purchases current, embracing an area of 20,266,046 acres 3 roods 13 perches, and the number of conditional purchases, for which deeds of grant had been issued, was 22,610, the area thereby alienated being 2,648,329 acres 2 roods 23 perches. Further details will be found in Schedule XXI.

The forfeitures of conditional purchases during the year were 513, as compared with 659 during the preceding year. The following details are taken from Schedules XVII and XVIII:—

No.	Area.	Reasons of Forfeiture.
181	a. r. p. 16,665 2 19	Non-payment of balance, interest, or instalment of purchase money. Non-fulfilment of conditions.
332	46,867 1 16	
513	63,532 3 35	

It may here be mentioned in connection with the forfeitures of conditional purchases that in accordance with the provisions of the Crown Lands Act Amendment Act of 1891, forfeiture, incurred principally for technical *laches*, was conditionally waived in 479 instances, and in 647 was absolutely waived. In addition to the foregoing the holders of 5,338 conditional purchases, representing an area of 770,632 acres, were granted extensions of time for the payment of their instalments.

Under the provisions of the 28th section of the Land Act of 1895, applications affecting 1,250 conditional purchases, which contained 282,863 acres, were granted, and 462 were refused. By virtue of that section resident selectors, who may be unable to pay their instalments, are enabled to obtain a suspension of payment for twelve months, and it therefore follows that applications, such as are mentioned in the latter part of the preceding paragraph, can now be made and dealt with on fixed lines, thus avoiding the informality that was previously attached to the granting of such requests, owing to the absence of any special provision in the Land laws.

From Schedule XIV it will be seen that 952 certificates of conformity were issued in connection with conditional purchases under the repealed Acts.

8,591 transfers were received and 8,243 dealt with during 1895. The conditional purchases transferred were 16,099 in number, but, deducting those transferred more than once during the year, the actual number of conditional purchases affected by these transfers was 11,517. Stamp duty to the amount of £4,473 12s. was paid in connection with 3,292 transfers, the inference to be drawn from these figures is that only about 40 per cent. of the transfers represent actual sales. Further details will be found in Schedules XV and XVI.

During

During the year 2 conditional purchases and 8 conditional leases, containing an aggregate area of 4,469 acres 2 roods, were validated under the provisions of section 138 of the Act of 1884, and 23 conditional purchases, containing an area of 3,870 acres 3 roods 2 perches, which came within the provisions of section 44 of the Act of 1895, were also validated in accordance with that section. *Vide* Schedule XIX.

Particulars of the work carried out by Conditional Purchase Inspectors will be found in Schedule LXXIX. The total number of instructions issued during the year amounted to 15,704, and the reports received were 15,694 in number.

No resumptions from either conditional purchases and conditional leases on account of the land being auriferous were found to be necessary during 1895.

#### *Special Areas.*

The number of special areas proclaimed during the year was 212, representing an area of 62,294 acres, as compared with 332 proclaimed in 1894, and covering an area of 151,537 acres. 156 of these special areas included 54,951 acres of country lands, and the remainder, 56, embracing an area of 7,343 acres, represented lands within population or suburban areas. Further details will be found in Schedule LXXIV.

Full particulars with respect to special areas proclaimed from 1885 to the end of 1895 will be found in Schedule XII. From the details there given it will be seen that 91,151 acres 3 roods 33 perches of suburban or population area lands have been selected out of a total available area of 140,284 acres 2 roods 27½ perches, and that of country lands the selected area amounts to 762,076 acres 20 perches, the area available for selection being 1,010,780 acres 1 rood 17 perches. In connection with these alienations the amount of deposit money received has reached a total of £165,871 3s. 7½d., the price placed upon the land selected being £1,637,696 5s. 10d. The area still remaining available for selection on the 31st December, 1895, was 297,836 acres 3 roods 31½ perches.

The following figures, which have been taken from Schedule XII, previously mentioned, will serve to show the transactions in each of the several Land Board Districts:—

Land Board District.	Class of Land.	Quantity of Land Available.		Area selected.		Area unselected.	
		a.	r. p.	a.	r. p.	a.	r. p.

	Suburban or Population...						
Total ... ..	Country ... ..	1,010,780	1 17	762,076	0 20	248,704	0 37
	Suburban or Population...	140,284	2 27½	91,151	3 33	49,132	2 34½
Grand Total ... ..	.....	1,151,065	0 4½	853,228	0 13	297,836	3 31½

With reference, however, to the value of the land selected, which has been previously stated to be £1,637,696 5s. 10d., it should be mentioned that, in accordance with the provisions of section 36 of the Act of 1895, an opportunity of obtaining a re-appraisal of the value was afforded the holders of these lands by lodging an application within three months after the commencement of that Act on (June 1st, 1895). These selectors have availed themselves of this privilege to a large extent, but the appraisements by the Local Land Boards have not yet been carried out in the majority of cases owing to the limited time available between the date of receipt of the applications and the close of the year. Schedule XIII shows that 2,716 applications were lodged, and that 517 have been dealt with. In 358 cases reductions have been recommended to the amount of £25,637 11s. 4d.; in 8 instances the original values were increased to the extent of £261 8s. 6d.; and in 130 cases the Boards did not feel justified in recommending any alteration. It appears probable, therefore, that the total value originally placed upon these conditional purchases within special areas, viz., £1,637,696 5s. 10d., will be reduced to some considerable extent as the result of the re-appraisements.

#### *Improvement Purchases.*

The demand for the purchase of lands on gold-fields, under section 46 of the Act of 1884, by virtue of improvements, is still small, and has varied but little for the last three years. The applications received during 1895 amounted to 125; and those approved to 96; those refused were 66 in number; and in addition 15 were allowed to lapse. The land alienated during the year included 79 lots, and covered an area of 27 acres 2 roods 29 $\frac{3}{4}$  perches, the amount realised being £1,263 6s. 6d. Further details will be found in Schedule XXXIII.

There was also one application approved under section 2 of the Lands Act Amendment Act of 1875, for a country lot of 120 acres, the price paid for which was £240.

#### *Special Purchases.*

The transactions in connection with this class of alienation embrace applications for rescission of water frontage reservations (section 63, Act of 1884), for permission to reclaim and purchase land (section 4, Act of 1884), for the purchase of small, isolated areas, &c. (section 66, Act of 1884), and for permission to close and purchase unnecessary roads (section 67, Act of 1884).

The applications received during the year were 85, of which 4 were under section 63, 17 under section 64, 20 under section 66, and 44 under section 67.

The land alienated during 1895 amounted to 538 acres 28 $\frac{1}{4}$  perches, and the purchase money received was £4,720 12s. 7d.

In addition to the foregoing, 26 cases under section 42 of the Act of 1889 were completed during the year, and the area granted in connection therewith reached a total of 84 acres. This section, it may be mentioned, provides that where it is found necessary to resume land for the opening of a new road, or for the diversion of an existing one, any unnecessary existing road passing through the land from which the resumption is made may be granted in lieu of the land so taken.

Schedule XXXIV gives further details in connection with the above, and, in addition, the figures quoted below present the transactions of the year in a convenient form for reference:—

	Area sold.			Purchase money.		
	a.	r.	p.	£	s.	d.
Section 63, Act 1884...	0	2	14 $\frac{1}{2}$	567	10	8
" 64 " " ...	4	0	13 $\frac{1}{2}$	2,401	13	3
" 66 " " ...	142	1	12 $\frac{1}{4}$	700	18	4
" 67 " " ...	391	0	28	1,050	10	4
" 42 " 1889...	84	0	30	.....	.....	.....
	622	1	18 $\frac{1}{4}$	4,720	12	7

*Surrenders and Exchanges.*

It will be seen, on reference to Schedule XXXV, that 131 fresh applications were received during the year, and that in 55 cases the final stage of acceptance by the Governor-in-Council was reached. The area comprised in these latter amounted to 139,797 acres 2 roods 14 perches, as compared with 87,038 acres 22 perches included in the 27 applications completed during 1894. The applications refused or withdrawn during 1895 amounted to 40, and the number of cases outstanding at the close of the year reached a total of 239; the necessary action, however, in many instances was well advanced.

The increase in the number of exchanges completed during the year was in a large measure attributable to the desire of holders of expiring leaseholds in the Central Division to consolidate their estates while the opportunity remained. Under the provisions of the Act of 1895 exchanges may embrace land held under conditional purchase and may extend beyond the limits of a particular pastoral holding. The advantageous disposal to surrounding selectors of surrendered areas too small in extent for new settlement is also now possible. Provision has in addition been made to enable the completion of certain Eastern Division exchange proposals which lapsed in consequence of the expiry of the pastoral leases in virtue of which they were originally made.

*Deeds of Grant.*

The number of deeds of grant prepared during the year show a decrease when compared with those issued in 1894, but the area granted was greater in 1895. In the latter year the number of deeds prepared reached a total of 2,634, representing an area of 299,788 acres 1 rood 8 $\frac{3}{4}$  perches, whilst in 1894 3,302 deeds were issued, which included an area of 273,651 acres 23 perches. Schedule XXXVI gives further details as to the nature of the grants, and also as to the area comprised under the different classes of alienation.

*Volunteer Land Order Applications.*

These applications have not altogether ceased, three having been received during the year for land in the Tamworth district, and one in the Wagga Wagga district. One application for land in the former district was granted.

*Settlement Leases.*

These leases owe their origin to the Land Act of 1895, and the creation of this form of tenure, together with that of homestead selection, may legitimately be considered to be the leading feature of that Act, but as a general outline of the objects of leases of this description, and of the conditions upon which they are granted has already been given in a previous part of this Report, it will not be necessary to enter into similar details here.

The time that elapsed between the commencement of the Act on June 1st, 1895, and the close of the year, was not sufficient to admit of much being done, but the results which have so far been obtained cannot be considered otherwise than satisfactory.

From Schedule LXXVI it will be seen that settlement lease areas, containing 172 farms, of which the aggregate area was 526,621 acres 3 roods, were notified during 1895. In several instances, however, these farms did not become available for leasing until 1896, and the actual number that were therefore open for application prior to the close of 1895 was 103, comprising an area of 293,986 acres 1 rood. The annual rent at which these farms were offered amounted in the aggregate to £3,400 13s.

Applications were received for 75 farms, the total area and rental of which were respectively 206,913 acres and £2,712 1s. 6d.

The applications confirmed were 19 in number, the area being 46,512 acres 3 roods and the rental £632 3s. 7d. The next step that will require to be taken in connection with these applications is the formal execution of the lease by the Governor, but no applications were advanced to this stage during the year.

In seven instances the applications were disallowed or withdrawn, but in two cases fresh applications were lodged forthwith, and the number of farms comprised in the applications remaining undealt with at the close of the year was 51. Further details will be found in Schedule LIII.

*Annual Leases.*

The leases in existence at the end of 1895 were 8,924 in number, and included an area of 5,564,303 acres 1 rood 27 perches, the annual revenue derived therefrom being £39,510 14s. 6d.

1,214 leases lapsed during the year, the area and rental being respectively 759,752 acres and £5,583 2s. 1d. The cancellations numbered 34, and the area covered by these was 28,951 acres 3 roods, to which a rental of £255 5s. 1d. was attached. Further details will be found in Schedules LXIV and LXV.

The following table shows the number, area, and rental of the leases in existence in each division of the Colony at the close of 1895:—

Division.	Number.	Area.		Rent.		
		a.	r. p.	£	s.	d.
Eastern ... ..	7,818	4,676,669	2 31	31,112	15	9
Central ... ..	1,037	806,786	2 36	7,898	16	7
Western ... ..	69	80,847	0 0	499	2	2
	8,924	5,564,303	1 27	39,510	14	6

These figures show an increase when compared with those for 1894, the leases current at the end of that year being 8,343, covering an area of 5,423,383 acres 3 roods 26½ perches, and producing an annual revenue of £38,359 3s. 11d.

The applications received during the year have been more numerous than in either of the two preceding years, as will be seen from the following figures. The area offered at auction during 1895 as annual leases was 13,184¼ acres, of which 6,929¾ acres were sold at an annual rental of £95 18s. 10d.:—

Year.	Applications made.	Area applied for.		Area leased by auction.		
		a.	r. p.	a.	r. p.	
1892 ... ..	2,578	1,768,807	0 0	3,357	2	0
1893 ... ..	2,130	1,390,212	1 13	10,709	0	0
1894 ... ..	1,779	1,018,615	0 0	11,042	0	0
1895 ... ..	2,444	1,458,627	2 0	6,929	3	0

The number of applications disposed of during the year amounted to 2,071; of these, 1,725 were granted and 346 were disallowed or withdrawn. Some of these applications were lodged prior to 1895. The area leased in satisfaction of the applications granted was 1,030,941 acres 38 perches, and the rental attached to that area reached a total of £6,459 14s. 5d. Further details will be found in Schedules LXII and LXIII.

#### Conditional Leases.

Although the decrease in the number of applications received during 1895, when compared with the number received during 1894, is not so marked as in similar comparisons between previous years, it may fairly be assumed that the prospects of any increase in applications for leases of land under this particular class of tenure are somewhat remote, the principal causes of this, no doubt, being the steadily decreasing quantity of land capable of profitable occupation, and the opening up by recent legislation of other more popular systems of tenure. Schedule XXIV gives full details with reference to the applications received during 1895, and a summary of similar transactions for the last eleven years is appended below:—

Year.	Number.	Area.		Deposits.		
		a.	r. p.	£	s.	d.
1885 ... ..	3,816*	2,547,045	0 15*	21,225	7	6
1886 ... ..	2,500	1,207,953	0 8	10,066	5	6
1887 ... ..	2,228	1,242,380	0 0	10,353	3	4
1888 ... ..	2,623	1,424,753	1 25	11,872	18	11
1889 ... ..	3,470	1,569,949	3 30	13,082	18	4
1890 ... ..	5,466	3,056,774	2 26	25,439	7	2
1891 ... ..	3,952	2,177,810	0 15	18,140	17	10
1892 ... ..	2,692	1,171,971	1 18	9,769	5	1
1893 ... ..	1,800	715,611	0 34	5,943	8	4
1894 ... ..	1,338	528,612	2 30	4,409	9	10
1895 ... ..	1,120	478,301	3 20	3,985	1	8

\*This includes 1,094 applications, made under 54th section of the Act of 1884, representing an area of 1,198,617 acres 30 perches.

1,265 applications were dealt with during the year, 924 being confirmed for an area of 363,880 acres 10 perches, and 341 disallowed. Of the applications confirmed, 362 were made during 1895, and embraced an area of 138,213 acres 3 roods 20 perches, and of the applications disallowed 239 were lodged during the year under review. Schedule XXV gives further details.

2,865 transfers were passed during 1895, the actual number of leases included therein being 2,134, representing an aggregate area of 1,486,564 acres 33 perches. (Schedule XXVI.)

366 leases were gazetted as forfeited during the year. These embraced an area of 140,072 acres 3 roods, and the rental attached thereto was £1,547 15s. 9d. (Schedule XXVII.)

The conversions of conditional leases into additional conditional purchases under the provisions of section 25 of the Crown Lands Act of 1889 were 286 in number. In 159 instances the conversion covered the whole of the lease, and in 127 cases there was only partial conversion. The total area converted amounted to 98,657 acres 2 roods, and the rental that had been attached to that area was £1,518 16s. 7d.

The rents fixed by the local Land Boards were in 1,027 instances submitted for the Minister's approval, and no references to the Land Appeal Court in connection with any such rents were found to be necessary during the year.

In 470 instances extension of time for the payment of rent was granted, the amount thus deferred being £3,699 0s. 6d. In 348 cases forfeiture was provisionally, and in 422 cases absolutely, waived during the year.

The number of leases gazetted as approved during the year was 968, comprising an area of 377,823 acres 1 rood 6 perches, the rental attached thereto being £4,109 15s. 11d. The total number of gazetted leases in existence at the close of the year was 21,551, covering an area of 12,338,191 acres 3 roods 27 perches, and producing a rental of £149,079 17s. 4d. If, however, there are added to these the applications which have so far not been dealt with, the number in existence on the 31st December, 1895, becomes 22,483, with an area of 12,953,202 acres 2 roods 20 perches, and representing a rental of £154,204 19s. 2d. Further details will be found in Schedule XXIX.

#### *Pastoral Leases.*

The pastoral leases in existence on the 31st December, 1895, were 798, in number being 227 less than in the previous year, but this was due to the fact that a considerable number of leases in the Central Division expired during the year by effluxion of time, these being, however, in most instances subsequently converted into occupation licenses. The area of the leases current on the date above mentioned was 53,426,693 acres, and the annual revenue derived therefrom was £341,178 15s. 11d. Of these leases, 491 were in the Central and 307 in the Western Division. Further details are supplied in the subjoined Schedule, and also in Schedule XXXVII.

No. of Leases.	Division of Colony.	Area.	Rent.
		Acres.	£ s. d.
491	Central ... ..	14,814,475	161,910 3 10
307	Western ... ..	38,612,218	179,268 12 1
798	.....	53,426,693	341,178 15 11

Two leases in the Western Division were forfeited during the year. (Schedule XLIV.)

The area withdrawn from pastoral lease during the year amounted to 97,858 acres; the number of leaseholds affected was 107, and £3,610 1s. 7d. was refunded to the lessees on account of rent paid in advance upon the area so withdrawn. (Schedule XXXVIII.)

The number of pastoral leases transferred during the year amounted to 115; of these, 80 were in the Central and 35 in the Western Division. (Schedule XXXIX.)

Several

Several changes in the laws relating to pastoral leases have been brought about by the Land Act of 1895; but as these have already formed the subject of comment in the introductory paragraphs of this Report, it will only be necessary here to make some direct reference to the results of those changes.

In Schedule XLII will be found particulars of the applications lodged, in accordance with the provisions of section 9 of the Act of 1895, for the reappraisal of the rents of pastoral leases in the Western Division. It will be seen that in 263 instances the applications have been accepted, while 6 had to be declined on account of certain informalities.

Nineteen applications were lodged for the attachment of resumed areas to their respective leasehold areas under the provisions of section 8 of the Act of 1895. One of these applications has been refused, and in the others action is proceeding. Schedule XL gives further details as to the names, numbers, &c., of the resumed areas comprised in the above applications.

In Schedule XLV will be found full information as to the name and number of every pastoral lease still in existence in the Central Division, and also as to the date when each lease will expire.

In Schedule XLVI will be found details as to the pastoral leases which expired during the year, and also as to whether the lessces have availed themselves of their right to take a preferential occupation license over the land formerly held by them under pastoral lease.

#### *Occupation Licenses.*

The licenses held during 1895 were 1,626 in number, as compared with 1,454 during the previous year. The increase is, however, mainly due to the expiration of pastoral leases in the Central Division, and the consequent change of tenure into that of occupation license. The licenses in force covered an area of 40,817,284 acres, and the annual rental derived therefrom was £123,728 8s. 8d. (Schedule XXXVII.)

The figures appended below afford the means of comparison between the years 1894 and 1895:—

Current on 31st December, 1894.				Current on 31st December, 1895			
Division.	No.	Area.	Rent.	Division.	No.	Area.	Rent.
		Acres.	£ s. d.			Acres.	£ s. d.
Eastern (preferential)...	339	4,042,616	21,722 17 0	Eastern (preferential)...	313	3,580,773	18,673 11 8
" .....	316	3,626,788	11,636 15 1	" .....	315	3,671,019	10,567 2 1
Central .....	580	6,978,339	36,232 11 11	Central (preferential) ..	218	3,738,899	18,850 15 6
Western .....	219	24,256,773	48,601 11 6	" .....	568	6,399,972	33,539 6 8
				Western .....	212	23,426,621	42,097 12 9
Total .....	1,454	38,904,516	118,193 16 4	Total .....	1,626	40,817,284	123,728 8 8

The sales of occupation licenses over vacant Crown lands show somewhat better results than in the previous year, when the area offered is compared with that sold. The total number offered was 100, and these included an area of 1,226,905 acres; 26 were sold, containing an area of 361,773 acres. The area offered in 1894 was 3,036,765 acres, of which 486,504 acres were sold. Further details will be found in Schedule XLI.

Twenty-seven preferential occupation licenses in the Eastern Division were not renewed for 1895, in addition to 45 ordinary occupation licenses; 25 of the latter being in the Eastern, 12 in the Central, and 8 in the Western Division. (Schedule XLIV.)

Nineteen preferential occupation licenses and 95 occupation licenses were transferred during the year. Further details are given in Schedule XXXIX.

The sum of £5,890 18s. 8d. was refunded to licensees on account of rent paid in advance on 1,085,652 acres withdrawn from 387 occupation licenses by various processes of alienation or by reservation. (Schedule XXXVIII.)

From

From Schedule XLIII it will be seen that in 32 instances reappraisements of license fees were made and gazetted during 1895. The names of the resumed areas are given in the Schedules mentioned, and also other details.

The applications received during 1895 for the attachment of resumed areas to leasehold areas under section 8 of the Act of 1895 have been already referred to when dealing with the subject of Pastoral Leases. All details will be found in Schedule XL.

*Homestead Leases.*

At the close of 1895 the Homestead Leases in existence numbered 1,227, embracing an area of 10,250,437 acres, and producing a rental of £68,974 18s. These leases are confined to the Western Division of the Colony, and lie within the Land Board Districts of Bourke, Hay, and Moree. The numbers within each of those Districts are respectively 808, 298, and 121. Further details will be found in Schedule LII. 106 applications were lodged during 1895, being a slight decrease when compared with the number received during 1894. The following figures will probably be of some interest for purposes of comparison:—

Year.	No. of Applications.	Area applied for.		Deposits lodged.		
		Acres.		£	s.	d.
1885	391	3,323,235		15,880	2	11
1886	121	1,141,963		4,758	3	7
1887	128	1,198,286		4,992	17	2
1888	141	1,332,691		5,511	15	7
1889	238	2,187,837		9,113	19	9
1890	310	2,620,959		10,920	13	3
1891	191	1,515,629		6,278	2	1
1892	176	1,214,447		5,648	16	6
1893	135	870,044		3,582	10	4
1894	110	692,515		2,885	9	7
1895	106	613,723		2,557	3	7

The Homestead Leases granted during the year numbered 76, representing an area of 515,821 acres, and a rental of £2,340 15s. 3d. The applications refused or permitted to be withdrawn were 45 in number, leaving 93, in respect of which the necessary action had not been finally completed when the year closed. Schedules XLVII and XLVIII give further details.

Twenty-three leases were forfeited during the year, the area embraced therein being 158,034 acres, and the annual rental £766 15s. 1d. Particulars as to the localities in which these leases were situated will be found in Schedule L.

With reference to the rental obtained from the leases in existence, which has been previously stated to be £68,974 18s., it may here be mentioned that under the provisions of section 9 of the Act of 1895 the lessees were offered a new appraisalment of the rents of their holdings, where devastation by rabbits, deterioration of values, &c., had rendered the original rental excessive. The section further provided that the applications for new appraisalments must be lodged within three months from the commencement of the Act, on 1st June, 1895, and from Schedule LI it will be seen that a great majority of the lessees have applied accordingly. 740 applications were lodged, but of these 11 had to be refused on account of various informalities, leaving 729 cases in which it will be necessary to proceed with the appraisalment of a new rental; and it is not, therefore, anticipated that the revenue obtained in 1896 will equal the amount received in 1895.

*Special*

*Special Leases.*

The applications received during 1895 for this particular form of lease were more numerous than in 1894, being 269 as compared with 175. The number requiring action, including those outstanding at the close of 1894, was 478, and in 214 instances the applications were duly disposed of, 74 being declined, withdrawn, &c., and 140 granted, representing an area of 3,680 acres 1 rood 11½ perches, and an annual rental of £2,807 17s. 8d. Further details will be found in Schedule LIV.

The leases forfeited during the year were 33 in number, embracing an area of 872 acres 1 rood 31 perches, with an annual rental of £489 12s. 8d. (Schedule LV.)

The leases current on the 31st of December, 1895, were 575 in number, representing an area of 14,344 acres and 38¾ perches, and producing an annual rental of £14,628 6s. 8d. Fifty-three leases, covering an area of 311 acres 3 roods 11¾ perches, with a rental of £1,225, which terminated by effluxion of time on 31st December, 1895, are, however, included amongst the leases current at the close of the year. Schedules LVI and LVII supply further details.

These leases are granted under the provisions of sections 89, 90, and 92 of the Crown Lands Act of 1884 for the various purposes specified hereunder.

## Under section 89—

Floating docks, jetties, piers, and wharfs below high-water mark.

## Under section 90—

Accommodation house.	Guano (to obtain).	Skin-drying and packing.
Accommodation paddock.	Inn.	Slaughter-houses.
Bakery.	Irrigation.	Smelting works.
Ballast (to obtain).	Landing-places.	Smithy.
Bathing places.	Lime-kilns.	Stables and accommodation
Boats (building and repairing).	Limestone (to obtain).	paddocks.
Boiling-down works.	Loam (to obtain).	Store.
Brick earth (to obtain).	Machinery (erection of).	Sugar-cane growing.
Brick-kiln.	Mail stations in sparsely-populated	Storage purposes.
Bridges.	districts.	Tanks.
Dams.	Pipe-line.	Tanneries.
Drainage.	Punt-houses.	Tobacco growing.
Eucalyptus (cultivation of).	Quarries.	Vegetable garden.
Explosives (Sites for storage of).	Railway station and depôt.	Village settlement.
Factory.	Recreation.	Wattle growing.
Ferries.	Saw-mills.	Well.
Fisheries.	Sericulture.	Wharfs (above high-water mark).
Freezing works.	Shells (to obtain).	Wool-washing establishments.
Gravel (to obtain).	Ships (building or repairing).	Working mineral springs.
Grazing.		

## Under section 92—

Irrigation works and tramway purposes.

*Artesian Well Leases.*

No transactions in connection with this particular form of lease took place during 1895.

*Scrub Leases.*

The applications for scrub leases received during the year were 12 in number, and covered an area of 54,702 acres, and, in addition to these, there were 7 applications, embracing 59,120 acres, outstanding at the close of 1894, making a total of 19 that required consideration during 1895. Of these 5 were disallowed or withdrawn, and 4 were granted, the area and rental of the latter being, respectively, 19,210 acres 2 roods and £18 0s. 8d. One

One lease was forfeited during the year, representing an area of 10,240 acres and a rental of £8 10s. 8d.

Ten leases expired during 1895, the area and rental being, respectively, 74,957 acres and £16 7s. 6d. In nine instances, however, the lessees have applied, under the provisions of section 26 of the Act of 1895, for extensions of their leases.

The number of leases current at the close of the year was 21, the area under lease being 121,357 acres 2 roods, and the annual rental derived therefrom £272 19s. 10d. Further details will be found in Schedule LVIII.

#### *Leases of Inferior Lands.*

The leases granted during 1895 were 8 in number, representing an area of 19,900 acres and a rental of £14 12s. 6d. Two leases were declared forfeited, the area and rental being respectively 68,000 acres and £42 13s. 4d.

The number of leases current at the close of the year was 41, covering an area of 488,475 acres 3 roods, and producing an annual revenue of £421 16s. 10d. (Schedule LIX.)

#### *Residential Leases.*

The maximum area which may be granted in connection with leases of this character has been extended by the provisions of section 50 of the Act of 1895 from 10 acres to 20 acres, and that section also secures to lessees tenant-right in improvements; in other respects the law remains unaltered. The applications received during the year were 68 in number, and these, added to 44 outstanding at the close of 1894, gave a total of 112 requiring action in 1895. Of these, 37 were disallowed or withdrawn, and 33 were granted for an area of 273 acres and  $\frac{1}{2}$  perch, the rental attached thereto being £42 8s. 5d.

Eight leases were forfeited during the year, representing an area of 58 acres 10 perches and a rental of £13 10s.

There were 169 leases current at the close of the year covering an area of 1,583 acres 1 rood  $10\frac{1}{2}$  perches, and producing an annual revenue of £256 0s. 5d. (Further particulars are given in Schedule LX.)

#### *Snow Leases.*

These leases, which are practically confined to the Land Board Districts of Cooma and Wagga Wagga, are granted over Crown lands which are usually covered with snow for a part of each year, and are therefore unfit for continuous use and occupation.

Four of these leases containing 17,210 acres were granted during 1895 at a rental of £144 16s. 10d., and 11 were forfeited or cancelled. These latter included an area of 42,120 acres, to which a rental of £617 0s. 8d. was attached.

Eighteen leases were current on 31st December, 1895; these contained an area of 82,980 acres, and the rental derived therefrom was £618 1s. 5d. (Schedule LXI.)

#### *Dedications—Reserves—Resumptions.*

Reserves from sale to the number of 1,011, and representing an area of 1,978,326 acres, were notified during the year, while 2,332 reserves from sale, comprising 2,243,430 acres, were revoked during the year. (Schedules LXIX and LXX.)

The reserves from lease and license, annual lease, &c., notified during 1895 were 222 in number, and contained an area of 554,355 acres. The revocations of similar reserves during the year reached a total of 765, the area comprised therein being 556,010 acres. (Schedules LXXI and LXXII.)

The

The dedications for public purposes during the year were 136 in number, and the area thus dedicated amounted to 7,590 acres 1 rood 30 $\frac{1}{4}$  perches. Further details as to the respective purposes for which these lands were dedicated will be found in Schedule LXXIII.

The area resumed during 1895 under the provisions of the 105th section of the Act of 1884, and of the 41st section of the Act of 1889, reached a total of 1,961 acres 11 perches. Further particulars as to the locality, and ultimate disposal of the land so resumed, will be found in Schedule LXVIII.

#### *Newcastle Pasturage Reserve.*

Full details with respect to applications to purchase under the Newcastle Pasturage Reserve Act will be found in Schedule LXVII. There are 660 cases in which the payment of the purchase money is still proceeding, and the total amount paid prior to the close of 1895 was £18,655, leaving a balance of £22,726 still due on account of these sales.

#### *Cases of Trespass on Crown Lands.*

The number of trespassers on Crown lands, and particulars relating thereto, are set out in Schedule LXXVII, and these, inclusive of 375 which had not been dealt with prior to the close of 1894, numbered 1,112. During the year 671 cases were dealt with in various ways detailed in the Schedule previously mentioned, thus leaving 441 which had not been disposed of when the year closed.

#### *Applications for permission to Ringbark.*

One hundred and twenty-five applications were received during the year, comprising an area of 780,248 acres 3 roods, and the fees lodged in connection therewith amounted to £371. Fifty-four applications received prior to 1895 were allowed, and also fifty-eight of those received during the year, the total number allowed being therefore 112, covering an area of 677,453 acres. Eight applications were disallowed during 1895, and at the close of the year sixty-four were outstanding. Schedule LXXX gives further details in reference to these transactions.

#### *Cases dealt with by Land Boards.*

The cases that came under the consideration of the Land Boards during 1895 were 21,436 in number, of which 1,970 were adjourned. A comparison is instituted in the following figures between similar transactions for the past four years, and further details as to the places at which meetings are held, and the respective number of cases dealt with by each Land Board, will be found in Schedule LXXVIII:—

1892.	35,316	cases considered;	2,567	cases adjourned;	1,731	days occupied.
1893.	30,910	„ „	2,830	„ „	1,449 $\frac{1}{2}$	„ „
1894.	25,988	„ „	2,055	„ „	1,438	„ „
1895.	21,436	„ „	1,970	„ „	1,236 $\frac{1}{2}$	„ „

#### *Correspondence.*

During the year 118,226 documents were received and registered in the Head Office, representing an increase of 7,149 as compared with 1894.

The

The number of printed and manuscript letters, schedules, parcels, &c., despatched during 1895 amounted to 147,817, and in addition to these 2,006 telegrams were sent and 145 circulars were issued. (Schedules LXXXI and LXXXII.)

The letters received at the various Local Land Board Offices during the year were 120,362 in number, as compared with 124,797 received in 1894. The manuscript and printed letters, parcels, &c., despatched amounted to 114,483. Further details will be found in Schedule LXXXIII.

*Cost of Survey.*

Particulars as to the cost of the various classes of measurements carried out during 1895 by licensed surveyors paid by fees will be found in Schedule LXXXV.

*Chief Surveyor.*

The report of the Chief Surveyor and Director of Trigonometrical Survey is appended hereto.

H. CURRY,

Acting Under Secretary.

\* Application refused, the C.P. having been confirmed after passing of Act of 1895.

† Applications refused, not having been lodged within prescribed time.

## SCHEDULE XIV.

RETURN showing the Number of Certificates issued during the year 1895 (in connection with Conditional Purchases under the Repealed Acts) with the Number of Amended Certificates issued on account of alterations.

Number of Certificates .....	950
Number of Amended Certificates .....	2
Total .....	952

## SCHEDULE XV.

RETURN showing Number of Transfers of Conditional Purchases received from 1st January to 31st December, 1895, and the Number dealt with, inclusive of those on hand, during that period.

Number of Transfers received .....	8,591
"    "    intimated to Treasury .....	8,243
"    Conditional Purchases thereby transferred .....	16,099*
"    "    actually transferred .....	11,517
"    Transfers upon which stamp duty was paid .....	3,292
Amount of stamp duty paid thereon—	
Paid through Lands Department .....	£3,717 16 0
Paid prior to lodgment .....	£755 16 0
Total .....	£4,473 12 0
Number of Transfers registered in Registrar-General's office .....	8,247
"    in Registrar-General's office awaiting registration .....	Nil
"    Crown Solicitor's certificates received .....	459
"    Notices despatched, informing parties, Crown Land Agents, and Chairmen of Local Land Boards of registration of transfers .....	12,729

\* Includes Conditional Purchases transferred more than once during the year.

## SCHEDULE XVI.

RETURN showing the Number of Transfers intimated to the Treasury, the Number of C.P.'s. included therein, and the actual Number of C.P.'s. and area thereof transferred during the year ending the 31st December, 1895.

Land District and Land Board District.	No. of Transfers.	No. of C.P.'s.	Area actually transferred.		No. of C.P.'s actually transferred.	Land District and Land Board District.	No. of Transfers.	No. of C.P.'s.	Area actually transferred.		No. of C.P.'s actually transferred.

\* Included in Hay District return in 1894 report. † One of these leases was forfeited when report for 1894 was compiled, but forfeiture was afterwards reversed. ‡ In nine of these cases applications have been made for extension of term of lease under the provisions of Sec. 26 (Subsec. VI), C.L. Act, of 1895. § Included in Moree Land District return in 1894 report. ¶ One of these applications is partly in the Narrabri Land District and partly in the Coonabrabrau Land District.

\* Included in anticipation.

## Report of The Chief Surveyor to The Under Secretary for Lands.

Sir, Department of Lands, Survey Branch, Sydney, 15 January, 1896.

I have the honor to submit the Annual Report of the services performed in this branch of the Department of Lands during the year 1895.

Permanent Field Staff.

The permanent field staff numbered 63 officers, who were classified as follows, viz., 14 district surveyors, 12 first-class surveyors, 3 second-class surveyors, 15 third-class surveyors, 11 fourth-class surveyors, and 8 assistant surveyors. Of this staff, 3 surveyors and 8 assistant surveyors who had previously been temporarily employed, were appointed to the permanent staff during the year.

Surveyors temporarily on salary.

Four licensed surveyors have been employed temporarily on salary, 2 of whom were appointed for specific periods only.

Assistant Surveyors.

Twelve junior licensed surveyors have been employed as assistant surveyors, 4 of them on temporary service.

Contract Surveyors.

Ninety-one licensed surveyors have been employed on fees in carrying out surveys under contract; to many this employment was not of continuous character, a small number only having been fully engaged. The number of qualified surveyors for New South Wales is 633.

Inspection of contract surveys.

There have been 66 examinations of surveys performed under contract; and it is gratifying to report that in 4 cases only were surveys found to be not up to the standard of accuracy insisted upon.

Investigations for Registrar-General.

Thirteen applications for certificates of title under the Real Property Act were referred to this office by the Registrar-General; in 3 cases field inspection was found necessary. After the requisite investigations had been made in each case, the results were communicated to the Registrar-General.

Licenses under the Real Property Act.

The Board appointed for license to survey under the 100th section of the Real Property Act held 4 meetings, and 103 licenses were granted. Three first licenses were issued by myself, acting as Surveyor-General; making a total of 106 issued for the year. The fee of £1 1s. was received in each case, excepting one where a license was asked for by the Public Works Department for a surveyor duly qualified, who was employed on railway surveys.

### BOARD OF EXAMINERS FOR LICENSE TO SURVEY CROWN LANDS.

During the year a system of concurrent and identical examination for qualification to survey has been initiated in several of the Australasian Colonies. This is one of the steps towards reciprocity in the professional status of surveyors which was recommended by the Conference of Surveyors (Melbourne, 1892). A system of identical examination, so as to ensure uniformity in the standard of qualification, has been given effect to by collaboration of the representatives of each Board, the Secretary of the Board of this Department, Mr. T. F. Furber, acting as correspondent with the other delegates. The co-operation of those concerned enabled satisfactory arrangements to be made, and on 3rd September examinations, precisely the same in respect to the papers set, the mode of awarding marks, &c., were held at Perth (Western Australia), Adelaide (South Australia), Melbourne (Victoria), Sydney (New South Wales), and Brisbane (Queensland).

Two meetings of this Board were held in July for consideration of certain questions arising in the matter of concurrent examinations.

At the Board meeting held in September 12 candidates presented themselves for examination, of whom 4 passed, viz.:—

Mr. George Laurence Wilkins,  
Mr. Robert Derrinall Speed,

Mr. Octavius Lloyd,  
Mr. Edmund Woodhouse Hedgeland.

### TRIGONOMETRICAL SURVEY.

Mr. Brooks, F.R.A.S., F.R.G.S., the surveyor in charge of field operations, reports that the weather has been much less favourable for observing than during any previous year; bush-fires were very numerous during first and last quarters, and the consequent haze and smoke hung about the mountains for weeks at a time, and then it was only by patient watching and waiting up to sunset that, by slow degrees, any progress was made. Mr. Surveyor Gregson appears to have experienced even worse weather than Mr. Brooks, for, using the same-sized instrument, he obtained during the last quarter less than half the number of observations recorded by the latter.

The 18-inch altazimuth was used at 3 primary stations, viz., Warden Head, Durras, and Newstead, and 1,190 horizontal observations were made. Astronomical observations were made at those stations, and 215 stars were observed for azimuth, 31 stars for time, and 348 stars for latitude.

The 10-inch theodolite was used at 5 stations, viz., Currowan, Burrewarra, Moruya astronomical station, Wandera, and Comerong, the number of horizontal observations being 938. Vertical angles were also measured at these stations, 404 observations being noted. The magnetic declination, as indicated by compass of 6-inch theodolite No. 143, was also determined at these stations. Surveys connecting with neighbouring portions were made at 9 stations, and trigonometrical reserves were measured at 5 of them.

Moruya longitude station having been incorporated with the trigonometrical survey, there are now means for a comparison between the position as determined by astronomical observations and the position resulting from the trigonometrical operations. During the year 1896 a trigonometrical, as well as an astronomical, connection will also be established between Tathra longitude station and Sydney Observatory.

Mr. Surveyor F. J. Gregson has been employed with a 10-inch theodolite observing at 5 stations, viz., Ettrema, Coolumburra, Meangora, Tomboye, and Jillamatong. He measured 2,068 horizontal, 450 vertical, and 802 magnetic observations. He surveyed 14 reserves to include trigonometrical stations, and made 15 surveys connecting stations with adjoining portions, *i.e.*, alienation survey.

The piling overseers, Messrs. J. Healy and R. C. Gordon, formed 20 and 14 new stations respectively in the counties of Auckland and Dampier. Connection surveys were made at each of them; and in addition Mr. Gordon measured 19 reserves, together with 6 connection surveys at stations formed previously to the year 1895.

## MISCELLANEOUS MATTERS.

By request of the Government of Queensland, and with approval of the Minister of this Department, careful comparisons have been made between the standard 10-ft. bar used for triangulation in Queensland and the 10-ft. bars which have been provided for like purposes in New South Wales. The matter was the subject of special report, which with full particulars of comparisons was duly communicated through the proper official channel to the Colonial Secretary. Mr. D. M. Maitland, with the assistance of Mr. H. Shute, carried out this duty in a satisfactory manner; and inasmuch as this is a matter of some public interest I have attached in brief form a statement of the results. [Appendix A.] It may be mentioned that advantage was taken of the opportunity to measure and mark on a steel band lengths of 60 feet and 100 feet, which will be used for defining a convenient standard for ready reference in this building, for the adjustment of surveyors' measuring apparatus. Queensland  
standard bar.

During the year I attended the meetings of the Commission appointed by His Excellency the Governor to divide the unincorporated area of the Colony into municipal districts and shires, with a view to legislation for District Government; and the Commission duly made their report. Local  
Government  
Commission.

In the month of August a Board, comprising seven district surveyors, assembled, by direction of the Minister, to consider and report upon the more expedient course of procedure to be taken in respect of certain provisions in the Crown Lands Act of 1895.

## TRIGONOMETRICAL COMPUTING BRANCH.

Field-books of angle observations at the following stations have been received, viz., Warden Head, Durras, and Newstead, taken with 18-inch theodolite; and at Ettrema, Coolumburra, Mcangora, Pigeon House, Currowan, Burrewarra, Moruya, Wandera, and Tomboye, taken with 10-inch theodolite. The details of these observations have been reduced and entered in the record books, and the computations generally have been carried as far forward as the progress of the field work would permit.

The rigorous computation of the meridian series of triangles extending southerly from the Lake George base to the border of Victoria, which in the last report was mentioned as having been entered on, has been completed; and examination has been made of the data afforded by the whole triangulation in determining the form of the surface of the area which the triangulation covers. Computation of the spheroid of revolution best conforming to the observed data has been made by the chief computer, and a detailed report on the subject has been prepared.

Field-books of observations of the astronomical latitudes of stations Bherwerre (part), Tianjara, Warden Head, Durras, and Newstead, have been received, as well as of astronomical observations for azimuth at the last four-mentioned stations. The observations of latitude and azimuth at Sutton Forest and Bherwerre, notes of which were received in the preceding year, were reduced, and the calculations of the astronomical work at the other stations are in a forward state.

Proofs of the register of stations of the country triangulation have been revised in this branch in respect to the reference bearings, co-ordinates, and geographical positions of stations.

The usual diagram is attached which shows the scheme of the main triangulation to date.

The large stock of surveying and scientific instruments belonging to the Department was, during the year, removed to a suitable room in the dome, owing to the space in which it had been stored being required for occupation by the Department of Mines, and all repairs necessary to maintaining the instruments in good and serviceable condition have been from time to time effected. Survey instru-  
ments.

## DETAIL SURVEY FOR SEWERAGE OF SYDNEY AND ENVIRONS AND COUNTRY TOWNS.

Seven surveyors have been engaged on the work throughout the year.

The greater portion of the new work carried out was at Newcastle and neighbourhood; the surveys of that city and suburban municipalities, viz., Hamilton, Wickham, and Carrington, also of the town of Liverpool, and the suburban municipalities of North Sydney and Mosman, have been completed; and the surveys of the town of West Maitland and the municipalities of Merewether and Waratah (Newcastle environs) have been commenced.

The rate of progress of past years has been maintained, a larger number of tenements having been fixed than in the preceding year; but in consequence of the population being more scattered, involving longer traverse surveys, the cost per tenement is somewhat higher.

There have been about 12 miles of standard traverse through Waratah and Lambton, at a lower cost than any preceding survey of similar character.

The area covered by new work has been 2,633 acres, against 1,341 acres in 1894 and 1,975 acres in 1893, while the revision work has embraced 903 acres, against 703 acres in 1894 and 649 acres in 1893.

Estimated on an area basis, the cost of the new work was 14s. 10½d. per acre, against £1 5s. 2d. per acre for 1894 and £1 1s. 8d. in 1893.

In those parts of Sydney and neighbourhood where such extensive building operations have been effected that the published sheets have become obsolete, re-surveys for second editions of the lithographs have been effected. In addition to the new tenements fixed in these revisional surveys, alterations and additions numbering 4,176 have been fixed.

The surveys of 146 sheets of new work have been carried out, in addition to the revision for second edition of 69 sheets, and of 50 sheets prior to the publication of first editions.

The number of separate tenements fixed are: New work, 3,170; in surveys for second editions, 1,166; and in revisions prior to first editions, 305; making a total of 4,641, against 4,290 in 1894, 4,364 in 1893, 3,946 in 1892, &c.

The average number of tenements to each sheet surveyed during the year was: In new work, 21.71; in second edition revision surveys, 16.90; and in revision surveys prior to first publication, 6.10; the averages for 1894 in the same classes of survey being respectively 39.56, 21.67, and 3.62.

Incidental to the surveys during the year, about 64 miles of streets, 17 miles of railways, 3½ miles of tramways, 4½ miles of watercourses, 6½ miles of shore line, &c., have been accurately determined.

Numerous details which cannot be included as tenements have also been fixed; amongst them may be enumerated 7 railway stations, several bridges, a railway viaduct, 3 coal-pits, gas-works at Liverpool and West Maitland, as well as numerous public buildings at both those towns, show-ground with pavilions, General Post Office, &c.

Standard

Standard levels have been taken at Waratah, Lambton, and Liverpool, the latter series being also connected with the Parramatta levels, and consequently with the "plug" at the Lands Office and sea-level in Port Jackson.

Levels have been taken over 71 sheets; they show all important changes in the contour of the surface, the heights of the ground-floor and basement of all tenements, and the altitudes of bench-marks, relatively to mean high-tide; the average cost has been 1s. 7d. per acre, as against 4s. 4d. per acre for similar service in 1894.

By direction of the Under Secretary, assistance has been rendered to the officials employed in the preliminary arrangements for assessment under the Land Tax Act.

With regard to the duties carried out in the office, 2 plans of standard and 104 sheets or plans of detail surveys have been drawn and completed; 54 plans have been revised preparatory to the publication of second editions, and 24 plans have had extra particulars placed upon them prior to first publication.

Tracings of 44 sheets of Sydney and suburbs, and 34 sheets of Newcastle, have been made for lithography; 59 have been brought up to date, and 129 examined.

The plans drawn in 1894 showed 3,548 tenements, with an average of 29.3 per sheet; the work for 1895 showed 3,237, with an average of 31 per sheet. The majority of the Sydney suburban plans show a very considerable proportion of large detached residences, with extensive grounds, the plotting of which occupies much longer time per tenement than in more densely populated localities.

The public, especially surveyors in private practice, have largely availed themselves of the information in the branch, reference having been made by them to 1,600 plans and 318 field-books during the year.

Herewith is a tabular statement [*Appendix B*] showing the comparative cost of detail surveys from 1886 to 1895 inclusive, and 4 maps showing its progress during the year.

#### MISCELLANEOUS CHARTING BRANCH.

Business incidental to the new forms of tenure under the Crown Lands Act of 1895, viz., homestead selection, settlement lease, and improvement lease, has demanded much attention.

Proposed subdivision in anticipation of demand of the leaseholds in the Central Division have formed an important item in the work done; all leases with extensions up to two years have been reviewed at different stages, and 90 of them have been finally dealt with by notification for various classes of settlement. Action on the remainder is in an advanced stage.

The provision for consolidation of holdings has been applied, under the direction of the Minister, to several of the expiring Central Division leaseholds, and proposals have been formulated in 75 cases; formal applications for surrender and exchange of lands have been lodged in 25 cases.

Applications for surrender and exchange under the Crown Lands Acts of 1889 and 1895 show an increase. Altogether 755 registered papers passed through the branch relating to this class of work.

There has been a slight decrease in the new surveys charted, viz., 3,410 against 3,772 in 1894. The cost to the Department amounted to £200.

Auction work shows a further falling off during 1895. The area scheduled in 1893 being 411,221 acres; 1894, 86,922 acres; and 1895, 51,105 acres.

Progress in connection with the new register of reserves to replace the old books has been somewhat retarded, owing to other more urgent business; however, several of the books have been put into use.

#### COMPILING BRANCH.

*Miscellaneous Division.*—This Division is charged with the compilation and drawing of town, county, Colony, and miscellaneous maps; and the charting of feature surveys, connection surveys, new railways, &c.

The preparation of maps for starting the Information Bureau has needed a large amount of service in this branch, and has consequently diminished the usual production of new maps.

The new map of the Colony is nearly completed; the revision of the sheets is now proceeding. A map illustrating progress of the work is herewith.

There are ten new county maps in hand; of most of these the compilation was begun in 1894, viz., Ashburnham, Bathurst, Narromine, Roxburgh, Forbes, Harden, Finch, Leichhardt, Gregory, Dampier. It is expected that several of these maps may be ready for publication in the course of a few months.

There has been but little done in the way of new town maps.

Five Land Board District maps have been completed during the year, viz., Goulburn, Forbes, Wagga Wagga, Hay, and Bourke; and new editions of three other maps, viz., Grafton, Cooma, and Armidale, have been issued; these maps facilitate business in the way of promoting settlement.

Sixty-six plans, comprising 536 miles of feature and connection surveys, and 36 plans of connections to trigonometrical stations, have been charted upon parish and county maps.

There has been a considerable quantity of miscellaneous work done, the list of which is too lengthy to introduce here.

*Parish Map Division.*—This Division is engaged in compiling new maps of parishes for publication; and in adding to maps already compiled the recent information for new editions. The work for the year comprises 245 new compilations, and standard maps charted for new editions 66.

It may here be mentioned that the whole strength of the Compiling Branches and the Occupation Drafting Branch was applied simultaneously to the colouring of parish maps in office use, in a certain manner, to illustrate lands alienated and Crown lands available for settlement, for the better information of the public; the number of parish maps thus coloured was 4,800.

#### LITHOGRAPHIC BRANCH.

The publication of plans of areas for settlement under the new forms of tenure authorised by the Crown Lands Act of 1895 has been promptly effected; 177 separate lithographs have been prepared and printed for simultaneous issue with the proclamations.

The bi-chromate gelatine process of lithography has been utilised to advantage; the process dispenses both with the drawing of a special plan on the stone and with a photo-lithographic copy for transfer, thereby saving time and expense.

The following returns show the details of lithographic operations for the year:—

1. *Counties.*

County maps show measured areas, roads, reserves, features, and all other information which is capable of delineation on a scale of 2 miles to an inch; they are published at 5s. per copy.

Sixteen county maps were lithographed during the year, comprising 2,800 printed copies:—

Bourke	Gipps	Hawes*
Bourke*	Gipps*	Macquarie
Camden	Gloucester	Macquarie*
Camden*	Gloucester*	Narromino
Cumberland*	Hawes	St. Vincent.
Cumberland† (1 mile to an inch)		

† Published at 10s. per copy.

Of these maps, those indicated by the asterisk are on the scale of 8 miles to an inch, which are printed for use in this office.

2. *Towns.*

Town maps show the general design, measured lands and names of purchasers thereof, reserves and dedications within town and suburban limits. They are usually photo-lithographed from compilations prepared at this office to the scales of 4 or 8 chains to an inch, and sold at 1s. per copy.

Twenty-eight town maps were lithographed during the year, comprising 2,625 printed copies:—

Armidale	Cudal	Inverell	Tenterfield
Barnedman	Dandaloo	Moree	Tomingley
Bombala	Delegete	Mount Drysdale	Urunga
Boonoo Boonoo	Drysdale West	Murrurundi	Waleba
Byerook	Enngonia	Narrabri	Wariadda
Condoubin	Galargambone	Niangala	Wyalong
Coreen	Grong Grong	Peak Hill	Yalgogrin.

3. *Parishes.*

Parish maps are compiled to a scale of 20 chains to an inch for office use, and then with few exceptions reduced to 40 chains scale for publication and sale at 1s. per copy.

Three hundred and fourteen parishes were lithographed during the year, comprising 25,508 printed copies.

4. *Auction Sale Plans.*

Lithographs of all lands measured for auction are printed for use at auction sales.

Two hundred and sixty-two plans were lithographed during the year, comprising 25,305 printed copies.

5. *Miscellaneous.*

This class of work principally comprised the following items, viz., 124 sheets of detail survey for sewerage purposes, including the Parramatta survey (68 sheets); maps of the Land Board Districts of Bourke, Hay, Maitland, Moree, and Orange; travelling stock routes (8 maps); map of New South Wales railways, showing coach routes, &c.; map of New South Wales, showing stock routes, wells, trucking stations, &c.; map of New South Wales, showing Land Districts, &c., for new edition of Crown Lands Acts; map of the country between Hornsby and George's River, for military purposes; maps (8) to illustrate Annual Report of Department of Lands for 1894; Woronora Cemetery subdivision, 11 maps; 3 sketch maps, showing trigonometrical stations; 2 sketch maps in connection with scrub lands; 76 homestead selection areas; 22 settlement lease areas; 5 improvement lease areas; and 74 leasehold areas in Central Division.

Three hundred and fifty miscellaneous maps were lithographed during the year, comprising 50,095 printed copies.

6. *Other Departments.*

Maps, plans, and diagrams have been printed for the Departments of Chief Secretary, Public Instruction, Public Works, and Treasury, principally comprising maps of New South Wales and Port Jackson for Imperial Institute Year Book, and for the American Consul's report on the wood-blocking of the streets of Sydney; chart of circumpolar stars; 219 Local Government sketch maps; maps showing New South Wales railways and railway systems of Australia; sheet of level-bridge drawings; and map of the City of Sydney on 12-chains scale.

Two hundred and thirty-one maps, plans, and diagrams for other Departments were lithographed during the year, comprising 54,702 printed copies.

7. *Official Forms.*

These forms comprise circulars, decisions, forms, and memoranda required for use at head-quarters and at country offices.

One hundred and twelve official forms were lithographed during the year, comprising 62,850 printed copies.

*Comparative*

## Comparative Summary for 1894 and 1895.

Map, Plan, or Document.	1894.		1895.

Totals.....	928	235,306	1,313	223,885

The employment of contract draftsmen, on the drawing of sheets of the detail survey for sewerage, is found to be economical, the printing being done in this office.

Lithographic contracts have been completed during the year to the amount of £1,097 0s. 1d.

## ROADS BRANCH.

The Roads Branch investigates all applications for survey and opening of roads through alienated land and Crown land held under lease, and considers and advises upon all correspondence relating to roads and streets matters in general, including complaints of obstruction of roads, objections to roads projected, and claims to compensation advanced in consequence of their establishment. When survey has been effected the plans of roads are examined, and all necessary action taken to establish them under the Roads Act, 4th William IV No. 11, or the 42nd section of the Crown Lands Act, 53 Victoria No. 21, and thereafter to chart them upon office plans and maps, and to forward fully noted copies of the plans of survey to the Department of Public Works and to the Registrar-General.

Land Boards' appraisements of compensation consequent on the opening of roads are dealt with, and action taken to grant Crown land or unnecessary roads in lieu of land resumed.

Plans of streets surveyed for alignment in response to the applications of Municipal Councils are examined, and the cases prepared to conform with the requirements of the 128th section of the Municipalities Act. Applications for permission to erect public gates under Act 39 Victoria No. 10 are considered and dealt with; also applications under section 67 of the Crown Lands Act, 48 Victoria No. 18, for purchase of unnecessary roads, receive preliminary consideration, and when purchase has been completed all maps and office plans are noted.

During the year 315 applications for survey of roads and streets were received and dealt with; also 363 surveyors' reports (exclusive of reports transmitting plans of survey); 274 road plans, showing 648 miles of road surveyed; 12 alignment plans, showing 67 streets as marked for alignment of carriage-ways and footways; 32 applications for permission to erect 72 public gates; 53 applications for purchase of 94 unnecessary roads; and 398 objections and claims with regard to road and street surveys.

Three thousand one hundred and fifty-three letters, based upon information afforded by the branch, were written and forwarded in reply to communications and inquiries from members of the public, with regard to roads and street matters. In 128 cases action has been taken to grant Crown land or unnecessary roads in compensation for land resumed under 42nd section of the Crown Lands Act of 1889. There were 6,954 papers registered during the year, which, together with 567 papers relating to roads registered in other branches, make a total of 7,521 papers received and dealt with.

## OCCUPATION DRAFTING BRANCH.

The work of this branch has been similar to that of previous years, to which may be added extra miscellaneous work in connection with the Land Bill of 1895. Such work consisted principally in dealing with applications under section 3 for withdrawal of land within leasehold areas for settlement purposes, and in preparing tracings and heliographs of occupation licenses, pastoral leases, and homestead leases for re-appraisal. Applications were received for re-appraisal of fully 90 per cent. of the homestead leases in force in the Colony.

The branch assisted in colouring the parish and county maps in office use in order to more clearly show intending purchasers the land available for settlement.

A map has been prepared for the Public Works Committee showing the tenure of lands within 20 miles on each side of the proposed railway from Parkes to Condobolin. Particulars were also supplied with regard to any conditional purchases or conditional leases within 20 miles on each side of the proposed railway from Temora to Wyalong which have been transferred to the pastoral tenant.

In 1,095 cases the areas of occupation licenses and pastoral leases have been affected by withdrawals or reversions, and the necessary adjustments have been made; in 252 cases it was found expedient to carry out a thorough investigation of the areas under review.

Surveys of pastoral holding boundaries show a considerable falling off, 5 cases only having been dealt with during the year. Thirty-nine miles were surveyed at a cost of £126, of which £39 was collected from the pastoral lessees; and 11 miles common to homestead lease boundaries were surveyed, on account of which the pastoral lessee contributed £11.

Plans of 80 abandoned resumed areas were charted up and forwarded to the respective District Surveyors for report as to the best means of disposal of the vacant lands.

## MISCELLANEOUS CONTRACT BRANCH.

The year has been one of active service in this branch. The drawings issued exceed by 1,340 the number issued in the preceding year.

The work of drawing maps for lithographic printing, viz., maps to show lands set apart for settlement under the new forms of tenure of the Crown Lands Act of 1895, was assigned to this branch. To prepare these maps with the requisite expedition, in addition to the ordinary current work, demanded unremitting attention.

A considerable amount of business was involved in receiving, checking, and recording 6,510 maps, forwarded to this office by direction of the Minister from the several district survey offices, for use in preliminary arrangements for assessment for land taxation.

The work of the branch has at all times been well up to date, and at the close of the year all applications that had been received more than a week had been disposed of.

The total number of drawings prepared is 4,106, and the total number of applications dealt with is 1,161.

#### CORRESPONDENCE AND RECORD BRANCH.

The work performed in this branch is shown hereunder:—

Papers received from other branches and dealt with	...	...	14,522
Papers, plans, tracings, &c., received by post	...	...	2,606
Instructions issued to surveyors	...	...	1,346
Letters written and despatched	...	...	860
Memoranda, tracings, plans, &c., sent to surveyors	...	...	9,554
Minutes written to the Under Secretary	...	...	850
Ministerial decisions noted	...	...	530
Telegrams written and despatched	...	...	103

Registers, in which is recorded all leave taken by the survey staff (field and office), are kept in this branch.

The number of clerks employed is three, one having been transferred to a country office during the year.

#### PLAN RECORD BRANCH.

Approximate number of plans entered in books at end of year	...	...	271,168
Approximate number issued to and returned from officers in Head Office, Metropolitan District Office, and Mines Department	...	...	163,000
Cancelled maps received	...	...	742
Sent to plan-mounter	...	...	4,985
Issued to Inquiry Branch	...	...	600
Exhibited at counter	...	...	6,000
Surveyors' field-books in custody	...	...	6,600

Auction sale, special area, homestead selection, improvement lease, settlement lease, and other plans, altogether numbering 268, and consisting of 30,568 copies, were received to be issued gratis; the number of copies so disposed of was 19,230.

Lithographs sold, 3,327; value, £244 18s. 3d. Letters dealt with, 968; maps cancelled, 2,355.

PLAN-MOUNTING

PLAN-MOUNTING BRANCH.

The work performed comprises the following :—Plan-mounting, 15,471 pieces ; rollers, varnishing, corners, lists, and miscellaneous, 915 pieces ; binding, 530 pieces ; parcels post, 1,061 pieces. The binding included twelve large atlases of the counties for use in the Information Bureau, the covers half-bound in morocco 46 inches x 33 inches. This branch has been removed from the second floor to the dome, and the transport of the apparatus and rearrangement of the same occupied nearly three weeks, thus causing delay and consequent accumulation of work.

E. TWYNAM,  
Chief Surveyor.

APPENDIX A.

BRIEF statement by Mr. D. M. Maitland of the result of comparison of the Queensland 10-ft. Standard Bar with the New South Wales Standard Bars.

The Queensland bar, which is composed of steel, is octagonal in section, and when in use is kept floating in a trough of mercury. It was compared separately with the two standard bars of this Colony, known respectively as O 1 No. 4 and A<sup>2</sup>.

O 1 No. 4, which was prepared under the direction of Sir Henry James, of the Ordnance Survey of Great Britain, and imported in 1859, is composed of cast-iron, and is supported on double rockers. Its length at a temperature of 62° Fahrenheit is authenticated as 9.999921 feet, or 119.999054 inches.

A<sup>2</sup> is also composed of cast-iron, and is supported in a manner similar to O 1 No. 4. It was prepared by Messrs. Troughton and Simms', and sent to this Colony in 1881. Its length in the year 1885, according to a careful comparison with O 1 No. 4, was 120.000907 inches at 62° Fahrenheit.

In the comparisons of the Queensland bar with O 1 No. 4, there were 1,680 separate micrometrical readings, divided for convenience sake into 42 sets, taken under varying conditions of temperature and position, and they indicate that the Queensland bar is .000963 inch shorter, making its length 119.998091 inches.

Thirty-nine sets comprising 1,560 micrometrical readings, also under varying conditions, were made with bar A<sup>2</sup>, the result being that the Queensland bar was found to be .002793 inch the shorter, making its length by this comparison 119.998114 inches.

As the difference between the two results was so small, .000023 inch, which in 100 miles would only amount to rather less than 1½ inches, a mean of the two values obtained, viz., 119.998102 inches, may be regarded as the true length between the terminals of the Queensland bar at a temperature of 62° Fahrenheit.

A comparison of these tests with those made in 1879 and 1883 is of interest as indicating that the Queensland bar has been slowly shortening. During the four years 1879 to 1884 its contraction was .000178 inch, and in the eleven years following .000206 inch. The total difference, .000384, since it was first sent to Queensland would amount to 10.887 inches in 100 miles.

*Standard lengths for the use of Surveyors.*

The opportunity was taken to define on a steel band 66-ft. and 100-ft. lengths for laying down fixed standards in this office for reference in adjusting surveyors' measuring apparatus ; these lengths were marked by very fine lines inscribed on silver bosses inserted in a steel band. The lengths were marked off by means of the "Comparator" from bar O 1 No. 4, the test comparisons being also made with that bar. Three sets of comparisons were made of the 100-ft. and five of the 66-ft. length.

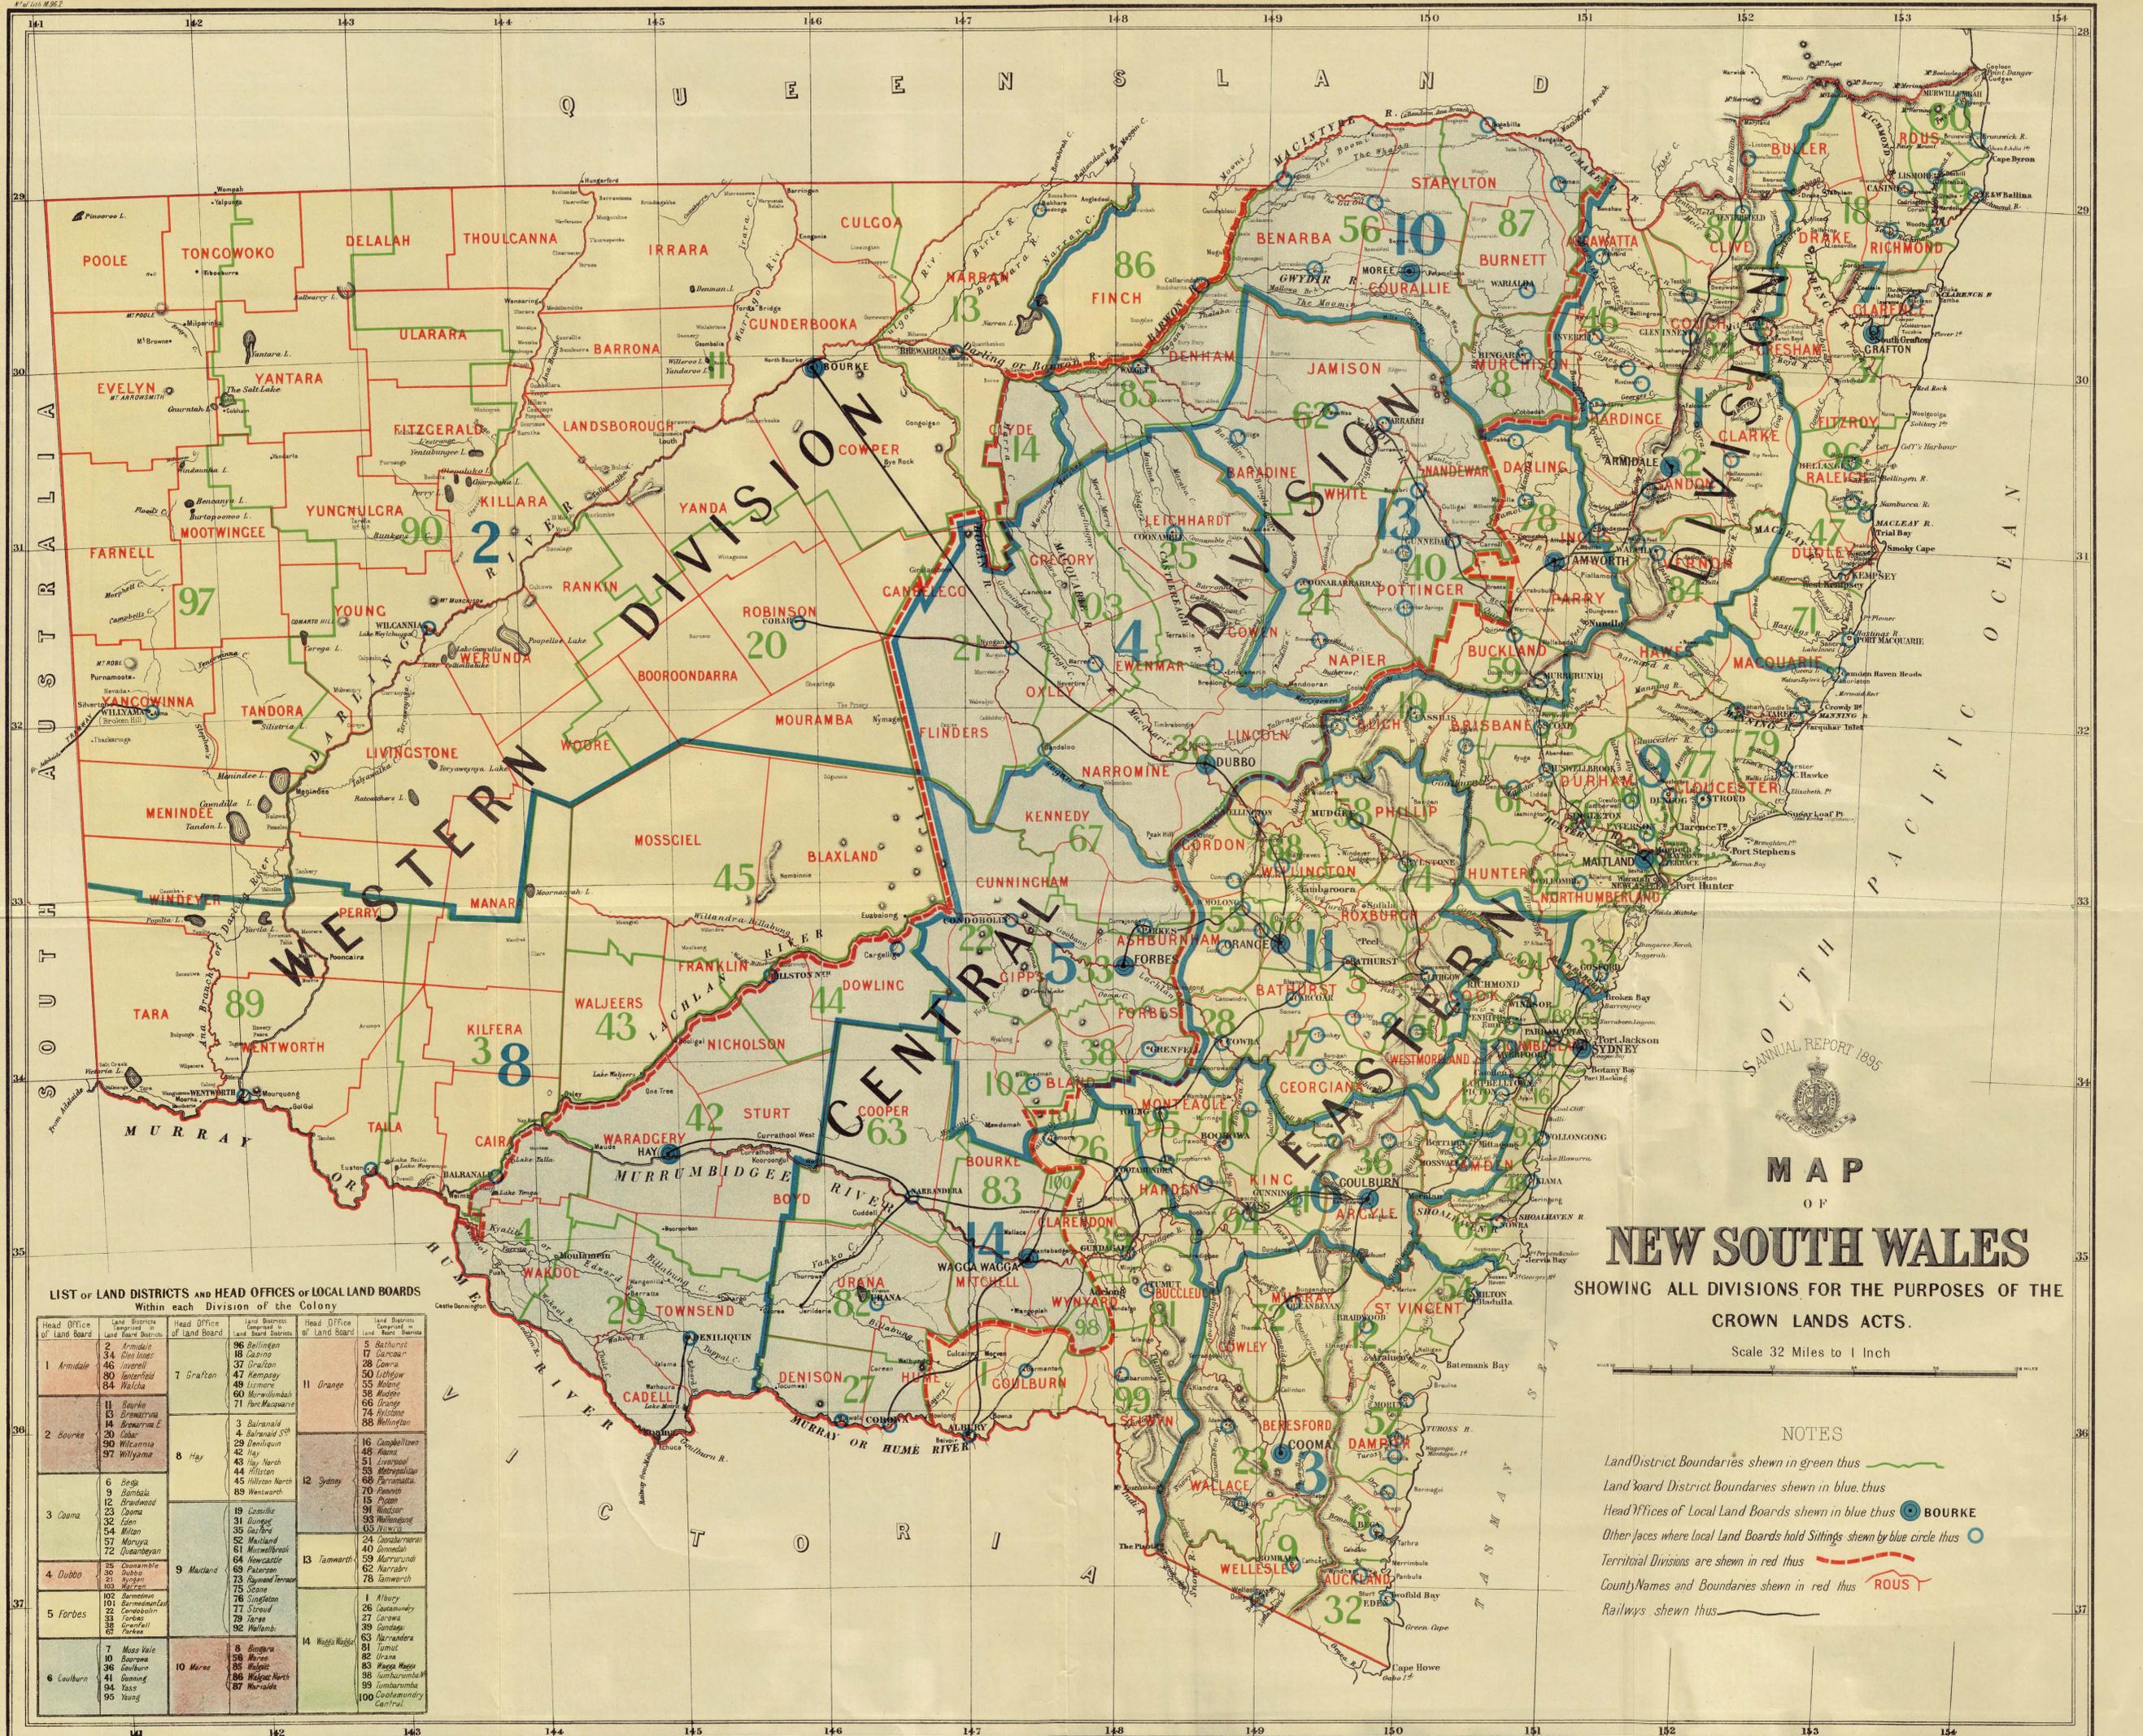

The mean of the readings of the 100-ft length make it 1199.99824 inches, or 99.9998 feet, the range being from .00166 inch above to .00261 inch below the mean. The 100 feet as marked is therefore about  $\frac{1}{10000}$  of a foot too short.

The mean of the 66-ft. length comparisons places it as 792.00051 inches, or 66.00004 feet, that is about  $\frac{1}{25000}$  of a foot too long.

APPENDIX B.

TABLE showing Comparative Amount and Cost of Detail Surveys from 1886 to 1895.

(DRAFT OF.)

*Printed under No. 27 Report from Printing Committee, 13 November, 1896, A.M.*

60<sup>o</sup> VICTORIÆ, 1896.

# A BILL

To Consolidate the Laws relating to Crown Lands.

**B**E it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the "Crown Lands Consolidation Act, 1896." Short title.

2. On and after the day when this Act takes effect, the following Acts are hereby repealed to the extent to which the same are expressed to be repealed: Repeal.

Year and Number of the Act.	Title of Act.	Extent of Repeal.
48 Vic. No. 18 ...	The Crown Lands Act of 1884 ...	The whole.
50 Vic. No. 39 ...	The Crown Lands (Auction Sales Balances) Act of 1887.	The whole.
51 Vic. No. 11 ...	The Crown Lands Act Amendment Act of 1887	Section 4.
51 Vic. No. 29 ...	The Conversion into Mining Conditional Purchases Validation Act of 1888.	The whole.
52 Vic. No. 7 ...	The Crown Lands Act Further Amendment Act	The whole.
53 Vic. No. 21 ...	The Crown Lands Act of 1889 ...	The whole.
54 Vic. No. 11 ...	The Crown Rents Act of 1890 ...	The whole.
55 Vic. No. 1 ...	The Crown Lands Act Amendment Act of 1891	The whole.
58 Vic. No. 16 ...	The Reserves Declaratory Act ...	Section 6.
58 Vic. No. 18 ...	The Crown Lands Act of 1895 ...	The whole.
59 Vic. No. 26 ...	The Crown Lands (Homestead Selections and Settlement Leases) Act, 1895.	So far as it would apply to applications made after the commencement of this Act.
60 Vic. No. 2 ...	The Conditional Purchaser's Relief Act	The whole.

Provided that such repeal shall not—

- (a) revive anything not in force or existing at the time at which the repeal takes effect; or
- (b) affect the previous operation of any enactment so repealed or anything duly done, suffered, or commenced to be done under any enactment so repealed; or
- (c) affect any right, privilege, obligation, liability or disability acquired, accrued, or incurred under any enactment so repealed; or
- (d) affect any penalty, forfeiture, or punishment incurred in respect of any offence committed against an enactment so repealed; or
- (e) affect any investigation, legal proceeding, or remedy in respect of any such right, privilege, obligation, liability, penalty, forfeiture, or punishment as aforesaid; or
- (f) affect any appointment, order, rule, application, affidavit, or award made, or any summons or writ issued, or any warrant granted, or any notice or certificate given under the said Acts or any of them before the commencement of this Act; and any such investigation, legal proceeding, or remedy may be instituted, continued, or enforced, and any such penalty, forfeiture, or punishment may be imposed and enforced, as if this repealing enactment had not been passed.

And all regulations made and forms prescribed under any Act in force on the day when this Act takes effect and hereby repealed shall be and continue in force and shall be deemed to have been made under this Act.

Interpretation of terms.

3. In this Act, unless the context necessarily requires a different meaning, the expression—

- “Board” or “Land Board” means the Local Land Board of the District in question, and includes Land Appeal Court in any case where an appeal or reference to that Court shall have been made.
- “Conditional purchase” excludes special purchase, or purchase by auction, or purchase by virtue of improvements.
- “Crown Lands” means lands vested in Her Majesty and not permanently dedicated to any public purpose or granted or lawfully contracted to be granted in fee simple under this Act or the previous Acts or any repealed Act.
- “City, Town, or Village”—A city, town, or village shall be such as shall have been declared to be so by proclamation of the Governor in the *Gazette*.
- “Frontage” means abuttal on or frontage to the sea-coast or to any lake, inlet, river, creek, stream, watercourse, road or intended or designed road prescribed as a boundary.
- “Governor” means the Governor with the advice of the Executive Council.
- “Land Agent” means any person duly appointed to the office of Crown Land Agent or Acting Crown Land Agent.
- “Land Appeal Court” means the Land Appeal Court as constituted under the previous Acts or this Act.
- “Land office day” means any day notified as such in the *Gazette* upon which Land Agents are required to attend at their Land Offices for the purpose of receiving applications for sale or lease of Crown Lands.
- “Lease” includes any unexpired engagement, contract, or promise of a lease.
- “Local newspaper” means a newspaper published or circulating in the particular district or place in reference to which the expression is used.
- “Leasehold area” means that portion of a pastoral holding for which a pastoral lease may have been granted under the previous Acts or which may be granted under this Act.

“Minerals”

*Crown Lands Consolidation.*

3

- “Minerals” means and includes coal, kerosene shale, and any of the following metals, or any ore containing the same, namely:—Gold, silver, copper, tin, iron, antimony, cinnabar, galena, nickel, cobalt, platinum, bismuth and manganese, and any other substance which may from time to time be declared a mineral within the meaning of this Act by proclamation of the Governor published in the *Gazette*.
- “Minister” means the Minister for Lands or other Minister charged with the administration of this Act or any part thereof.
- “Oath” means affirmation, promise, and declaration in every case where an affirmation, promise, or declaration is by law allowed instead of an oath.
- “Population boundaries or area” includes lands within areas as defined by proclamation in the *Gazette*, with boundaries distant not more than ten miles from the nearest boundary of any city, town, or village.
- “Prescribed” means prescribed by this Act, or any regulation made thereunder.
- “Previous Acts” mean and include the Crown Lands Act of 1884, the Crown Lands Titles and Reservations Validation Act of 1886, the Conditional Purchases and Leases Validation Act of 1887, the Crown Lands [Auction Sales Balances] Act of 1887, the Crown Lands Act Amendment Act of 1887, the Crown Lands Act Further Amendment Act, the Crown Lands Act of 1889, the Crown Lands Act Amendment Act of 1891, the Crown Lands Act of 1895.
- “Public purpose” means and includes, in addition to any purpose specified in any section of this Act, any purpose declared by the Governor, by notification in the *Gazette*, to be a public purpose within the meaning of such section.
- “Regulations” means the Regulations made under the authority of this Act.
- “Repealed Acts” or any repealed Act includes the following Acts, or portions of Acts, which were repealed by the Crown Lands Act of 1884:—

Year and number of Act.	Title of Act.
22 Vic. No. 17 ...	An Act to impose an Assessment on Runs in the Unsettled and Intermediate Districts, and to increase the Rent of Lands leased for Pastoral purposes within the Settled Districts of New South Wales.
23 Vic. No. 4 ...	An Act to include the Intermediate with the Settled Districts.
25 Vic. No. 1 ..	An Act for regulating the Alienation of Crown Lands.
25 Vic. No. 2 ...	An Act for regulating the Occupation of Crown Lands.
39 Vic. No. 13 ...	An Act to declare and amend the Laws relating to Crown Lands.
42 Vic. No. 26 ...	An Act to declare the Law as to the effect of Transfers before grant of Lands conditionally purchased under the Acts regulating the Alienation of Crown Lands.
43 Vic. No. 29 ...	An Act further to amend the Lands Acts of 1861, and the Act of 1875.
43 Vic. No. 33 ...	An Act to declare the Law in respect to Lands forfeited or reverting to Her Majesty by reason of non-compliance with the conditions of purchase by the conditional purchaser.
45 Vic. No. 8 ...	An Act to regulate Ringbarking on Crown Lands, and to limit claims for compensation under the fifteenth section of the Lands Acts Further Amendment Act of 1880.
45 Vic. No. 9 ...	An Act to extend the power of correcting designs or plans of towns and villages, and the limits of Suburban Lands.

“Representatives”

“Representatives” means the executors or administrators of the person with reference to whom the word is used, and includes all persons in whom the estate or interest of such person is vested.

“Resumed area” means that portion of a pastoral holding for which a pastoral lease may not have been granted under the previous Acts.

“Scrub” means any tree, undergrowth, plant, which the Governor may, by notification in the *Gazette*, declare to be scrub within the meaning of this Act.

“Series” or “the same series,” when used in connection with conditional purchases, means an original conditional purchase (whether taken up before or after the commencement of this Act, under any repealed Act, or the previous Acts, or this Act), and any additional conditional purchases, which may have been or may be made by virtue thereof.

“Vacant land” means land not alienated by or held under any lease or promise of lease or license from the Crown.

No dealing with Crown lands except under this Act.

Sec. 5, Act 1884.

4. Crown lands shall not be sold, leased, dedicated, reserved, or dealt with except under and subject to the provisions of this Act, and nothing in this Act shall affect the provisions of any Act regulating mining on Crown lands, or shall affect the prerogative of the Crown in respect to any lands reverting by escheat or forfeiture to Her Majesty otherwise than under the provisions of this Act or any repealed Act.

Provisions as to grants, leases, &c.

Sec. 6, Act 1884.

5. The Governor on behalf of Her Majesty may grant, dedicate, reserve, lease, or make any other disposition of Crown lands but only for some estate, interest, or purpose authorised by this Act and subject in every case to its provisions.

No Crown grant issued after the commencement of this Act shall be expressed or purport to be in trust for private persons or purposes.

Minerals reserved in all grants.

Sec. 7, Act 1884.

6. All grants of land issued under the authority of this Act shall contain a reservation of all minerals in such land and shall contain such other reservations and exceptions as may by the Governor be deemed expedient in the public interest: Provided that whenever it shall be found that land alienated under this or under the previous Acts or under any repealed Act contains any mineral, and such land has been alienated subject to the minerals being reserved to the Crown, the Governor may permit the owner of such land to remove such mineral upon payment of such royalty and upon such conditions as may be prescribed.

Proceeding by way of *scire facias*.

Sec. 137, Act 1884.

7. Every grant and registration copy of such grant issued under this Act or under the previous Acts or under any repealed Act shall, for the purpose of enabling the Crown to proceed by way of *scire facias* for the repeal of any such grant issued improvidently or inadvertently or in violation of the provisions of any such Act as aforesaid, be deemed to be a record of the Supreme Court notwithstanding anything in the Real Property Act or any Act amending the same to the contrary.

#### Divisions.

Establishment of Divisions.

Sec. 8, Act 1884.

8. For the purposes of this Act and the previous Acts New South Wales shall consist of Three Divisions, namely:—The Eastern Division—the Central Division—and the Western Division—and the boundaries of each Division shall, subject to the provisions of this Act, be as set forth in the First Schedule hereto.

Schedule.

Sec. 8, Act 1884.

9. The Governor may from time to time, by proclamation in the *Gazette*, alter the boundary of any division—

(a) so as to avoid the severance of any existing conditional purchase or lease or other lawful holding whatsoever;

(b)

- (b) by declaring lands held under lease or license, cities, towns, villages, and suburban lands attached thereto, or measured portions, which may be situated within any division or partly within two divisions, to be wholly within any one division.

And upon the publication of such proclamation the boundary as altered thereby shall be deemed to be the true boundary of the division referred to in such proclamation.

#### Land Districts.

10. The Governor may, within each division, by proclamation in the *Gazette*—

- (a) establish, and define the boundaries of, land districts; Sec. 9, Act 1884.  
 (b) disestablish, or alter the boundaries of, land districts; Sec. 9, Act 1884.  
 (c) declare lands held under lease or license, cities, towns, villages, and suburban lands attached thereto, or measured portions, which may be situated within any land district, or partly within two or more land districts, to be wholly within any one land district; and upon such proclamation the boundaries of such land districts shall be deemed to be sufficiently altered and defined for the purposes of this Act. Sec. 40, Act 1889.

#### Land Agents.

11. The Governor may appoint a land agent either for each land district or for several adjoining land districts, who shall perform the duties imposed on him by this Act or the regulations. Land agent. Sec. 10, Act 1884.

The Minister may at any time in the absence of any such agent appoint a person to act for him.

All things done by an acting land agent within the scope of his authority shall be of the same efficacy as if done by the land agent.

It shall be the duty of every land agent to forward to the Colonial Treasurer all moneys received by him by virtue of this Act, or the previous Acts, or any repealed Act, or the regulations in the prescribed manner, and in all other respects to conform to the regulations, and to carry out the instructions given by or by direction of the Minister. Duties of land agents.

Any land agent shall, by virtue, and during his tenure of office be deemed for the purposes of this Act, or the "Registration of Deeds Act" to be a Commissioner of the Supreme Court for taking affidavits; but any declarations required by this Act or by the regulations may be made before the land agent or any justice of the peace or commissioner for taking affidavits for the Colony of New South Wales. Sec. 22, Act 1889.

#### District surveyors.

12. For every land district the Governor may appoint a district surveyor and such other officers as he may think necessary for the purposes of this Act: Provided always that whenever required by the Minister such officers shall perform the duties connected with their respective offices in and for any land district, in addition to that for which they have been appointed. Appointment, &c., of district staff of officers. Sec. 16, Act 1884.

#### Local Land Boards.

13. There shall be a local land board for every land district or for several land districts, provided that it shall be lawful for the Minister from time to time to direct any local land board to deal with any matter, question, or inquiry that has arisen, or shall arise, without regard to the land board district or land district in which the land forming Local land boards. Sec. 11, Act 1884. Land boards may be authorised to deal with matters outside their own district. Sec. 5, Act 1889.

forming the subject of such matter, question, or inquiry may be situated. And the said land board shall have as full power and jurisdiction to deal with the matter as if the land aforesaid were situated within that board's proper land board district or land district.

14. The members of a local land board shall not exceed three in number, and shall be appointed by the Governor. One of such members shall be the chairman who shall be appointed in like manner, and shall be paid such salary as Parliament may sanction. Every other member of the board shall be paid such fee for each sitting as may be prescribed.

Suspension, removal,  
&c., of chairman of  
local land board.

Sec. 4,  
51 Vic. No. 11.

Acting chairman.

The Governor may suspend or remove the chairman of any local land board and appoint some other person in his place, or in the event of any chairman being suspended or being unable to act from any cause whatever, the Governor may appoint some other person as acting chairman, who while so acting shall have and exercise all the powers and authority and be subject to all the obligations applicable to the office of chairman.

Any member of a local land board who sits or acts in any way as a member of such board in any case in which he is or has been directly or indirectly interested shall be liable to a penalty not exceeding five hundred pounds.

Quorum.

Chairman's votes.  
Sec. 12, Act 1884.

15. A majority of the members of any local land board shall constitute a quorum, and the chairman shall, if present, preside at all meetings of the board, and have an original vote on any question brought before or referred to such board: Provided always that the chairman shall have a casting vote on any question on which the votes are equal.

Acting chairman  
in absence of  
chairman.

Vacancies.

In the absence of the chairman the members present at any meeting of the board shall appoint one of their number to act as chairman at such meeting, or any adjournment thereof, who shall, while so acting, have all the powers and authority of the chairman. The resignation, removal from office, insolvency, or absence from three consecutive meetings of the board of any member of the board without leave of the Minister shall cause a vacancy therein, and the Governor may appoint a person to supply such vacancy.

Duties and powers of  
local land boards  
under repealed  
Acts.

Sec. 13, Act 1884.

16. In addition to the matters hereinafter required, or permitted to be made the subject of adjudication, appraisalment, valuation, inquiry, or report by local land boards, it shall be the duty of every such board, and it shall have full power and authority to hear, examine, and report to the Minister or the land appeal court upon—

- (I) any matter referred for report to such board by the Minister or the land appeal court, which under the provisions of the repealed Acts 1861-1881 might have been the subject of any claim for compensation, or of arbitration, appraisalment, inquiry, or complaint.
- (II) any complaint or question as to the non-fulfilment of any condition of residence or improvement by a conditional purchaser under any of the said repealed Acts.
- (III) any allegation or complaint that land conditionally purchased under any of the said repealed Acts has been so purchased by the applicant in violation of any of the provisions thereof: Provided that nothing herein contained shall refer to any land for which a certificate of completion of the conditions of residence and improvements or grant has already issued.

As to lapse,  
voidance, and  
forfeiture.

Sec. 20, Act 1884.

17. Any question of lapse, voidance, or forfeiture, whether arising under this Act or under the previous Acts, or under any repealed Act, may be by the Minister referred to the local land board, and the decision thereon of the said board after due investigation in open court shall, unless appealed from in the prescribed manner, be final.

**Procedure**

**Procedure of Land Boards.**

18. For the purpose of regulating the procedure of local land boards under this Act, or under the previous Acts, and of empowering such boards to give full effect to the meaning and intent thereof, the following provisions shall be applicable to and be carried out by such boards—

- (i) Every such board shall have power to hear and determine all complaints and other matters brought before it, and shall conduct all inquiries sitting as in open Court, and shall take evidence on oath, and its procedure while so sitting shall be the same as the procedure before a court of petty sessions. General powers and procedure of local land boards. Sec. 14, Act 1884. Local land board to sit as in open Court.
- (ii) The chairman of every such board shall be a justice of the peace by virtue of his office, and shall have and may exercise the like powers and authorities as are possessed by a court of petty sessions to summon and compel the attendance of witnesses to give evidence on any matter before the board, and to produce all deeds and documents in their possession or under their control relating to such matter. And all witnesses so summoned to attend shall be entitled to the like allowances for attendance and travelling expenses as witnesses attending a district court are by law entitled to. Power to compel attendance of witnesses. Expenses of witnesses.
- (iii) Every party to a proceeding before such board shall have the same right to be heard by counsel, attorney, or agent, and to enforce the attendance of witnesses before such board, and to examine such witnesses as upon summary proceedings before justices. Parties may be heard by counsel, attorney, or agent.
- (iv) The chairman shall give the decision of the board (when unanimous) in open court, but if not unanimous the Board shall decide by vote (retiring for that purpose if it thinks fit). The decision shall then be given by the chairman as aforesaid, and no member shall comment upon or question such decision. Upon an appeal to the land appeal court as hereinafter provided any member of the board may assign in writing such reasons for his opinion as he may deem necessary, which shall be transmitted through the chairman to such court. Decision of board, how given.
- (v) Any person not authorised in that behalf by the Minister desirous of prosecuting any complaint before such board shall do so by lodging with the land agent a notice in the prescribed form verified by a statutory declaration setting forth the grounds of such complaint, and shall at the same time deposit with such land agent the sum of ten pounds as security for any costs which may be awarded against him by such board: Provided that should the board be of opinion that the sum of ten pounds will be insufficient to meet the probable expenses in any case, it may demand such further sum as may be deemed necessary, and should such sum not be deposited with the land agent within such time as the board may specify such complaint shall not be proceeded with. When the board gives a decision in favour of the complainant, he shall be entitled to a refund of the sum so deposited, and it may award such expenses for witnesses and such costs to the successful party as to it may seem reasonable, and such expenses and costs shall be recoverable in the manner prescribed by the Acts regulating the procedure in courts of petty sessions. Complaint by other than authorised persons.
- (vi) The local land board, instead of giving any decision or adjudication in any case within the jurisdiction of such board, may after taking evidence refer such case with the evidence for Reference to land court.

for decision by the land appeal court, which shall have power to deal with the case so referred in all respects as if it had been brought before it in the first instance.

Signature of  
summonses,  
documents, &c.

- (VII) Any member of the board may sign summonses, and the chairman shall sign certificates and other documents given or issued by the board, and immediately after adjudication or decision upon any case shall (if required) forward all papers connected with the case, together with any report required thereon, to the Minister or the land appeal court.

#### **Chairman may deal with certain matters not sitting in open court.**

Attendance before  
Board not required  
for formal  
application.  
Sec. 37, Act 1895.

19. The chairman shall have power, on behalf of a local land board, to deal with applications (whether made under this Act or under the previous Acts) for—

- (a) permission to inclose a road or water-course wholly or in part;
- (b) suspension of the condition of fencing attaching to a conditional purchase, conditional lease, or homestead lease, or extension of the period within which the condition shall be fulfilled;
- (c) exemption from fencing any portion of the boundary of a conditional purchase, condition lease, or homestead lease;
- (d) exemption to the members of one family in pursuance of section seventeen of the Crown Lands Act of 1889 or section eighty of this Act, from any condition of fencing or improvement, other than the erection of a ring fence; and for prescribing the character of such fence and fixing or extending the term within which the fence shall be erected;
- (e) such other formal orders as may from time to time be prescribed.

The chairman may deal with any such application as aforesaid, not sitting in open court, and after having given notice to the parties concerned; and where he does not grant the application the same shall afterwards be dealt with in due course by the local land board; and he may in any case, instead of dealing with an application as aforesaid, bring the same before the local land board.

#### **Enforcement of orders of board.**

Orders of local  
land board how  
enforced.  
Sec. 15, Act 1884.

20. In any case where a local land board, pursuant to the provisions of this Act or the previous Acts, and subject to the provision for appeal hereinafter provided for, shall make any adjudication or award, and to give effect to such adjudication or award shall make any order for the payment of money, whether as compensation, costs, appraised value, or otherwise howsoever, such order shall be under the hand of the chairman, and may be enforced by distress and sale of the goods and chattels of the person ordered to pay such money in manner prescribed by the regulations, or the same may be recovered in a summary way before any two justices of the peace by the person to whom such money is ordered to be paid.

#### **Parties may appeal.**

Procedure on appeal  
to land court.  
Sec. 17, Act 1884.  
Sec. 7, Act 1889.  
Sec. 39, Act 1895.

21. Either party to any proceeding, dispute, or claim before a local land board, and any caveator as hereinafter provided, may appeal from the adjudication, decision, recommendation, determination, or award of such board to the land appeal court at any time within twenty-eight days after the same has been given by giving written

written notice of such appeal to the chairman of the board, and to the other party to the proceeding (if any), and depositing with such chairman the sum of five pounds as security for the costs of the appeal. And every such notice shall state the grounds of appeal.

#### Land appeal court.

22. The land appeal court shall be as constituted by the previous Acts.

It shall be lawful for the Governor to remove any member of such land appeal court for inability or misbehaviour, provided that twenty-one days at least before the removal of such member of the land appeal court he shall have notice of the intention to remove him, and he shall thereafter and before removal have the opportunity of being heard before the Governor and the Executive Council in his defence.

Land appeal court  
to consist of three  
members.  
Sec. 8, Act 1889.

The president and each member appointed after the commencement of this Act shall be appointed by the Governor.

- (I) The president shall preside at all meetings of the court, but in his absence, through illness or other sufficient reason, any member may be authorised by the Governor to temporarily act as president, who, while so acting, shall have and exercise all the powers and authorities, and be subject to all the obligations applicable to the office of president. In the absence, through illness or otherwise, of any member, the Governor may appoint any person to temporarily act as member.
- (II) Any member who sits or acts in any case in which he is or has been directly or indirectly interested shall be liable to a penalty not exceeding *five hundred* pounds.
- (III) The land appeal court shall have power to hear and determine all appeals, and all matters referred to such court by the Minister, or by a local land board under the provisions of subsection (vi) of section eighteen of this Act, and to make such orders for payment of costs incurred in such appeals or proceedings as such court may think fit; and such appeals and matters shall, after the prescribed notice has been given to the parties, and at such times and places as the land appeal court may appoint, be heard and determined in open court; and the Crown may without having lodged a caveat, appeared before the local land board, given notice of appeal, or taken any preliminary step other than may be prescribed by the regulations or by rules of the land appeal court appear as a party in all proceedings in which its rights, interests, or revenues may be concerned, and all parties may be heard by counsel, attorney, or agent, but no fresh evidence shall be adduced before such court, except with the sanction of such court. In all cases in which the said land appeal court makes any order or award for the payment of money, whether as costs or otherwise, the said order or award shall, save as hereinbefore provided, be conclusive upon the parties, and have the force of a judgment of the Supreme Court at common law; and the party in whose favour any such order or award may have been finally or ultimately made may obtain a certificate of the amount due thereunder, which certificate shall be conclusive evidence of the facts therein stated, and he shall, upon production thereof to the prothonotary, be entitled to have judgment entered up thereon, without any judge's order to that effect, and to have execution for such amount and costs issued and enforced in the same way as may

be done upon judgments at common law; provided that, in any case in which a deposit has been made by an appellant, the same shall be available in payment or part payment of any sum which he may be ordered to pay, and the surplus, if any, shall be returned.

- (iv) If in any case it appears to the land appeal court that any evidence tendered before such court, or that further evidence, ought to be taken before the local land board, or that the case is incomplete, it may be remitted to the board for such action as the land appeal court may direct; and the board shall take such action, and may uphold, reverse, alter, or amend its previous decision in any way that may be considered necessary. The land appeal court shall have power to remit to the board any case in which an order has been made by the land appeal court with directions to the board to enforce or carry out such order, and in any such case the board shall be empowered and bound to act accordingly.
- (v) The land appeal court may return to the local land board for revision, rehearing, or further consideration any case or matter which to such land appeal court may appear to have been improperly or insufficiently considered or determined by such board.
- (vi) A majority of the members of the land appeal court shall constitute a quorum. The decision of the land appeal court upon any appeal shall, subject to the provisions of section twenty-five of this Act, be final and conclusive.
- (vii) Whenever any question of law arises in a case before the land appeal court, the land appeal court shall, if required in writing by any of the parties within the prescribed time and upon the prescribed conditions, or may of its own motion, state and submit a case for decision by the Supreme Court thereon, which decision shall be conclusive. Every such case shall purport to be stated under this section, and shall state the names of the persons who are parties to the appeal, reference, or other proceeding, and shall be transmitted to the prothonotary of the Supreme Court to be dealt with as to the setting down of the case for argument, and the hearing of the same, and its return with the decision of the Supreme Court thereon, as the judges, or any two of them, may direct. The Supreme Court, for the purposes of this section, may consist of two judges only, and shall have power to deal with the costs of, and incidental to, any case stated under this section as it may think fit.
- (viii) Any subpoena, summons, or other process issuing out of the land appeal court shall have the same force and effect as if issued out of the Supreme Court in any matter pending therein; and the land appeal court shall have the same powers of dealing with witnesses who fail to appear when called, or refuse to answer questions, or otherwise misconduct themselves, and for repressing disorders, or punishing contempts committed in the face of the said court, as are possessed by the Supreme Court or any judge thereof upon the hearing of any cause or matter within the jurisdiction of the said court. Any warrant to apprehend and to detain and bring before the land appeal court, or to keep in any gaol, prison, lock-up, or other place of detention, any person liable upon the order of the land appeal court to be so dealt with, shall be valid and sufficient if it be in the form appropriate thereto contained in the Second Schedule to this Act or the effect thereof; and the sheriff, his deputy

Rehearing.  
Subsec. vi, sec. 14,  
Act 1884.

deputy and assistants, and all officers of the police force, and gaolers to whom the same is addressed shall obey the same: Provided that no such warrant shall be issued against a person who fails to appear as a witness when called, unless it be proved to the satisfaction of the land appeal court that he has been duly served with a summons or subpoena, and that payment or tender of his reasonable expenses have been made to him.

- (ix) It shall be lawful for the Governor to appoint a registrar of the land appeal court and other necessary officers, who shall be paid such salaries as may from time to time be approved. The registrar shall have the custody of the official seal of the court and of its records, and shall sit in the court, and keep and sign minutes of the court's proceedings, and make reports of the court's decision in each case to the Minister. The registrar shall have power to seal with the official seal, and to sign and issue in the name of the court, subpoenas, summonses, certificates, orders, notices, and other documents; and the registrar shall perform the various matters and things in respect of which powers are hereinbefore conferred upon him, or which by any regulation in that behalf made as hereinafter provided he may be ordered to do. Any duties imposed or powers conferred upon the registrar as aforesaid may, in his absence or inability to act, be discharged or exercised by any person provisionally appointed as deputy registrar by the president or acting president of the land appeal court.
- (x) All courts of law and equity shall take judicial notice of the seal of the land appeal court, and of the signature of the president, acting president, registrar, or deputy registrar, when attached to any document issuing out of the said court.

#### References, by Minister to land appeal court.

23. The Minister may refer to the land appeal court any decision or recommendation of a local land board (whether made before or after the commencement of this Act), whereby the rights, interests, or revenues of the Crown may have been, or may hereafter be injuriously affected, and may likewise refer any case where it may appear that a local land board has failed or neglected to duly discharge its duty according to law, or that a local land board has exceeded such duty.

References by the Crown to the land appeal court. Sec. 59, Act 1895.

Any such reference shall be duly made, if and when a notice in writing that the Minister has referred the case to the land appeal court is given to the registrar of the said court, and no provision of this Act in respect of the lodging of appeals shall apply to the giving of such notice; but the land appeal court shall deal with the matter of such reference in the same way, and the rights and liabilities of the Crown in respect of such reference shall be the same as if such reference were an appeal by the Crown.

Nothing in this section contained shall affect any remedy by writ of prohibition, or mandamus, or in the nature of a mandamus, which the law now allows to the Crown or any person against a local land board.

#### Summonses to witnesses.

24. In any case it shall be lawful for the president or in his absence any member of the land appeal court or the chairman of any land board to summon and compel the attendance of any person whose evidence

Witness may be summoned and examined on oath. Sec. 9, Act 1889.

evidence such court or board may desire to hear, and to examine him, or allow him to be examined, upon oath, and to cause his examination to be reduced to writing and signed by him, and require him to produce any document relating to the matter in question in his possession or control.

No question put to any witness before the land appeal court or any land board shall be deemed to be unlawful by reason only that the answer thereto may expose him to any forfeiture or penalty under this or any repealed Act: Provided that no examination, or any answer thereto, shall be admissible in evidence against the witness in any criminal proceeding other than a prosecution against him for perjury, or for giving false answers, or making false declarations.

If any person who has been summoned as aforesaid by the chairman of the local land board, or subpoenaed as a witness in any proceeding before such board, and who has had payment or tender of his reasonable expenses made to him neglects to appear; or if any person summoned, subpoenaed, or examined as a witness in any such proceeding refuses to be sworn, or to make affirmation, promise, or declaration in lieu of an oath, or prevaricates in his evidence, or refuses to answer any lawful question, or to produce any document in his possession or control relating to the matter in question, which he has been summoned or subpoenaed to produce, or which is then in his possession or control, or to sign his examination when reduced into writing, it shall be lawful for the chairman to commit such offender to gaol for any time not exceeding *three* months, or to impose on any such offender a fine not exceeding *one hundred* pounds; and in default of immediate payment thereof to commit the offender to gaol for any time not exceeding *three* months unless the fine be sooner paid.

In any of the cases aforesaid a warrant in the form contained in the Third Schedule (A) hereto shall and may be issued by such chairman, and shall be good and valid in law without any other warrant, order, or process whatsoever; and the sheriff, his deputy, and all officers of the police force, and gaolers, to whom the same shall be addressed, shall obey the same.

Where any person who has been duly summoned or subpoenaed to attend as a witness before the local land board, and who has had payment or tender of his reasonable expenses made to him, fails to appear in obedience to his summons or subpoena, the chairman, upon proof of such person having been duly served with such summons or subpoena, and upon proof also that such person's non-appearance was without just cause or reasonable excuse, may issue a warrant in the form or to the effect of the Third Schedule (B) hereto to bring such person before the local land board to give evidence.

#### Rents and values.

Determination of  
rents, values, &c.  
Sec. 6, Act 1889.

25. Whenever any rent or license fee, or the price of any Crown land (other than of land to be sold or leased by auction, by tender, or by conditional purchase) is to be determined, or whenever this section is expressly referred to in connection with the determination of any value, an appraisement of the same shall be made by the local land board, and any such appraisement may be appealed against in the prescribed manner.

On receipt of any appraisement not so appealed against, the Minister shall either accept the same or, within one calendar month, refer it to the land appeal court with a statement of his reasons for so doing.

The land appeal court shall, both in cases of appeal and reference, determine the amount of such rent, fee, or price, and the amount

amount so determined shall be final and conclusive: Provided, however, that, if it appears to the Minister that further consideration or inquiry is necessary, he may return the case to such land appeal court for such purpose, and the determination of the land appeal court thereupon shall be final and conclusive.

In any appraisalment or reappraisalment under this Act or under the previous Acts, the rent or license fee of the holding in respect of which such appraisalment or reappraisalment is made shall be assessed, irrespective of the unexhausted value of improvements then existing on such holding, and effected or owned by the lessee.

Appraisalment or reappraisalment of rent or license fee of holding.  
Sec. 53, Act 1895.

The unexhausted value means the fair cost of making the improvement, less depreciation in value from use or otherwise.

### Classification and Survey of Crown Lands.

26. For the purpose of effecting a proper classification of Crown lands, the Governor shall have power, after such inquiry and report as may be deemed expedient, to declare by notification in the *Gazette* that the Crown lands comprised within any tract or area to be described in the notification shall be set apart for holdings (whether by way of purchase, lease, or otherwise) of the kinds which are specified in the notification; and thereupon the Crown lands comprised within the tract or area so described shall cease to be available, and any lands within the tract or area which may thereafter become Crown lands shall not become available for the purpose of any application for a holding of a kind not specified in the notification, except as hereinafter provided.

Power to classify Crown lands.  
Sec. 10, Act 1895.

For the purpose of effecting a proper survey and subdivision of Crown lands, the Governor shall have power to declare by notification in the *Gazette* that the Crown lands comprised within any tract or area to be described in the notification shall not be available for the purposes of any application until a further notification has been published in the *Gazette*; and thereupon the Crown lands comprised within the tract or area so described shall cease to be available, and any lands within the tract or area which may thereafter become Crown lands shall not become available for the purposes of any application, until such further notification has been published, or, if such further notification specify a future date, then until such date.

Power to withhold Crown lands until survey effected.

Any notification under this section (or any notification under the previous Acts) may in the like manner be corrected, amended, modified, or revoked, whether as to the whole or any part thereof; and it shall be sufficient for the purposes of any such notification if the description of lands is in any form of general description:

Provided always that no such notification shall affect—

- (a) the reservation or dedication for public purposes of any Crown lands; or
- (b) the granting or renewing of occupation licenses and annual leases, unless the same be expressly excluded; or
- (c) any lease in existence at the date thereof.

### What deemed Crown Lands under "Mining Act of 1874."

27. All Crown lands comprised in any tracts or areas which may be set apart for certain specified kinds of holdings, under sections twenty-six, forty-one, and one hundred and fifty-nine of this Act, shall be and be deemed Crown lands for the purposes of the "Mining Act, 1874," and any Act amending the same.

Crown lands set apart for specified holdings to be deemed Crown lands for purposes of Mining Act.  
Sec. 12, Act 1895.

### Qualifications,

**Qualifications, disqualifications, and limitation as to selecting,  
leasing, &c.**

Cases in which a second selection may not be made.

Sec. 22, 1884, and 21, Act 1889, 40, Act 1895.

28. No person who, on or after the first day of January, one thousand eight hundred and eighty-five, and before the first day of June, one thousand eight hundred and ninety-five, has made a conditional purchase shall make another, except by way of additional conditional purchase in virtue of an original purchase as hereinafter provided, unless he has first received a certificate from the local land board of fulfilment of all the required conditions (except payment of balance of purchase money), or that having made such conditional purchase *bonâ fide* and solely in his own interest he had been compelled through adverse circumstances to vacate or abandon the same, or unless (notwithstanding the non-obtaining of such certificate) the Minister shall approve of such person making another conditional purchase as aforesaid.

The mere fact that forfeiture of a conditional purchase has before or after the commencement of this Act been notified shall not bar the issue of the certificate of abandonment referred to.

The privilege of selecting, &c., when exhausted.

Sec. 40, Act 1895.

29. No person who, on or after the first day of June, one thousand eight hundred and ninety-five, has applied, whether before or after the commencement of this Act, for an original conditional purchase, or a homestead selection, or a settlement lease, or an original homestead lease, and has obtained a title thereto in pursuance of such application, shall be qualified to apply for another holding of that class whether of the same kind as, or of a different kind from, the holding first applied for, unless he has previously obtained a certificate as prescribed that he was compelled by adverse circumstances to abandon or to surrender the holding first applied for, or unless (notwithstanding the non-obtaining of such certificate) the Minister shall approve of such person making another holding as aforesaid.

For the purposes of this section title in pursuance of an application shall be taken to have been obtained—in the case of a homestead selection, settlement lease, and original conditional purchase—when the application has been confirmed by the local land board, and in the case of a homestead lease when the approval of the issue of the lease has been notified in the *Gazette*, and a valid notice of non-acceptance has not been duly given :

Provided always that if the holding first applied for were a settlement lease or an original homestead lease, the disqualification enacted by this section shall cease to operate upon the expiration of the term of the lease by effluxion of time, or if the lease have been forfeited, surrendered, or otherwise sooner determined, then upon the expiration of the period which the term of the lease would have had to run, but for such forfeiture, surrender, or other sooner determination :

**Limitations as to non-residential conditional purchases.**

Non-residential selections.

Sec. 47, Act 1884.

30. No person shall make more than one original non-residential conditional purchase.

No person who has made or shall make an original non-residential conditional purchase shall be permitted to make any other conditional purchase whatsoever, except by way of additional purchase by virtue of an original non-residential conditional purchase.

No person who has made any conditional purchase at any time, whether before or after the commencement of this Act, shall be permitted to make or to hold a non-residential conditional purchase.

**Limitations**

**Limitations based on area already held.**

31. No person shall be competent to apply for an original conditional purchase or a homestead selection, or an original homestead lease, or a settlement lease, who—

Disqualifications by reason of area already held.  
Sec. 41, Act 1895.

- (a) at the date of application owns; or
- (b) owned at any time previous to the date of application, and fraudulently divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do, in order to evade the foregoing provision;

an area of land (and for the purposes of the foregoing provision lands granted in fee simple, or conditionally purchased, or conditionally leased, from the Crown shall alone be taken into account), which area, added to the area of the holding applied for, exceeds as a total area the maximum area permitted by law to the class of holding applied for.

**Persons not natural-born or not naturalised.**

32. A person who is not a natural-born or naturalised subject of Her Majesty shall not be qualified to apply for an original conditional purchase, or a homestead selection, or an original homestead lease, or a settlement lease unless he has resided in New South Wales for one year, and at the time of making such application has lodged a declaration of his intention to become naturalised within five years from the time of making such declaration.

Persons not natural-born or naturalised.  
Sec. 41, Act 1895.

If such person shall fail to become so naturalised within the period aforesaid, he shall absolutely forfeit all land the subject of his application, together with all the improvements thereon.

**Married women.**

33. Any married woman who is, under an order for judicial separation made by any court of competent jurisdiction, living apart from her husband, may, out of moneys belonging to her for her separate use, select, purchase, or lease land, conditionally or otherwise; and such land shall form part of her separate estate, and she shall have the same powers of dealing with and disposing of the same, both at law and in equity, as if she were a *femme sole*, and her husband shall not be entitled to any interest in such land as tenant by the courtesy or *jure mariti*.

Married women.  
Secs. 47, Act 1889;  
14, Act 1895.

Except as aforesaid, a married woman shall not be entitled to lease or conditionally purchase Crown land under this Act:

Provided that nothing herein contained shall disentitle a married woman from holding any purchase or lease which may have devolved upon her under the will or intestacy of any deceased holder;

And further provided that if any conditional purchase has been made by an unmarried woman before or after the commencement of this Act, and she afterwards marry, she may continue to hold the same, and may make any additional conditional purchase or conditional lease during her coverture by virtue of any such conditional purchase or purchases.

**Minors.**

34. No person under the age of sixteen years shall be a conditional purchaser or homestead selector of Crown lands, but any person of or above that age (if under no legal disability except that of age) may be a conditional purchaser or homestead selector of such lands, provided that no person under the age of twenty-one years shall make a non-residential conditional purchase.

Minors.  
Secs. 23, 47, and 124,  
Act 1884, and 34,  
Act 1889; 14, Act  
1895.

No

No minor shall be capable of accepting or holding any lease or license under this Act or under the previous Acts except by way of inheritance, or except in so far as a minor, not less than sixteen years of age, is permitted to hold a conditional lease by virtue of a conditional purchase: Provided that a minor of or above the age of sixteen years (if of the male sex) may be a homestead lessee:

Minor may enter into certain agreements.

Sec. 123, Act 1884;  
22 Act 1895.

Any person between the ages of sixteen and twenty-one years who, after the commencement of this Act, becomes the owner of a conditional purchase or homestead selection or conditional or homestead lease, and during his ownership either personally or by an agent enters into any agreement for or in relation to the performance of any work or rendering of any services on such purchase, selection, or lease, or in relation thereto, or to the loan of money or the sale or purchase of goods and chattels of any description whatsoever, or in like manner enters into any agreement connected with the occupation, management, or general purposes of such purchase, selection, or lease not being in violation of the provisions of this Act, shall be subject to the same liabilities and have the same rights in respect of such agreement as if he were of the full age of twenty-one years.

#### **Applications shall be made in good faith.**

Good faith in applicants.  
Sec. 42, Act 1895.

35. Every application for a homestead selection or conditional purchase or for a settlement, conditional, or homestead lease, is hereby required to be made in good faith; and an application shall be taken to be made in good faith when the sole object of the applicant in making the application is to obtain the land or a lease thereof, as the case may be, in order that he may hold and use the land for his own exclusive benefit according to law.

The local land board shall disallow an application for any such holding as aforesaid, or in the case of a homestead lease shall recommend that the application be refused, unless it be satisfied that the application is made in good faith.

In any case where the local land board is satisfied that an application for any such holding as aforesaid has been made otherwise than in good faith, it shall have power to declare that any moneys lodged with such application shall be forfeited to the Crown, and the same shall be forfeited accordingly:

Provided always that the local land board shall not disallow an application for an additional conditional purchase or for an additional homestead lease as not having been made in good faith, merely because the original conditional purchase or original homestead lease is subject to a mortgage.

Every application for a conditional purchase or conditional or homestead lease, which was pending on the first day of June in the year one thousand eight hundred and ninety-five, shall be deemed to be within the provisions of this section.

#### **Forfeiture for want of good faith.**

Forfeiture for want of good faith.  
Sec. 43, Act 1895.

36. In any case where an application for a homestead selection, or a conditional purchase, or for a settlement or conditional lease has been confirmed, or an application for a homestead lease has been recommended for approval after the first day of June, in the year one thousand eight hundred and ninety-five, or after the commencement of this Act, and it appears to the satisfaction of the local land board—

- (a) that the application was not made in good faith; or
- (b) that the land is not held or used for the exclusive benefit of the selector, purchaser, lessee, or apparent owner thereof,

the

the Governor shall have power to forfeit, by notification in the *Gazette*, the selection, purchase, or lease in question, together with all moneys paid thereon.

Nothing in this section contained shall affect any person acquiring any interest in a homestead selection, conditional purchase, settlement lease, conditional lease, or homestead lease after the same becomes capable of being transferred, unless he has, before acquiring such interest, had notice of a violation of the provisions of the last preceding section, or of section forty-two of the Crown Lands Act, 1895, or of the intention to institute an inquiry as to such violation.

Any person who, before the issue of a certificate of conformity in respect of a conditional purchase, whether made at any time before or after the commencement of this Act, under this Act or the previous Acts, takes a transfer or conveyance thereof, or of any interest therein, shall be held to have taken the same with notice and knowledge of all facts and matters by reason of which such conditional purchase may be liable to be forfeited or declared void.

#### Certain contracts void.

37. Every devise, contract, lease, agreement, or security made, entered into, or given before, at, or after the date of any application to make a conditional purchase, or a homestead selection, or a conditional lease, or a homestead lease, with the intent or having the effect of enabling any person other than the applicant to acquire by purchase or otherwise the land applied for, shall be illegal and absolutely void both at law and in equity.

Devise, contract, lease, or security void in certain cases.  
Sec. 121, Act 1884;  
22, Act 1895.

The provisions of this section, so far as they apply to homestead selections, shall apply to those selections only until the grant thereof.

#### Illegal contracts a misdemeanour.

38. If any person knowingly and with intent to defeat or evade or commit any fraud upon the provisions or purposes of this Act shall induce or make use of any other person to make any conditional purchase or homestead selection, or to execute any will, or to enter into any contract, lease, or agreement declared by this Act to be illegal, or to become the purchaser, selector, lessee, or licensee of any land otherwise than for the use, benefit, and advantage of such purchaser, selector, lessee, or licensee, the person so offending shall be guilty of a misdemeanour, and shall be liable to be imprisoned and kept to hard labour for any term not exceeding two years and not less than three months.

Illegal contract a misdemeanour.  
Sec. 122, Act 1884;  
22, Act 1895.

The provisions of this section, so far as they apply to homestead selections, shall apply only until the grant thereof.

#### Penalty for false declarations, &c.

39. If it be proved by inquiry before the local land board that any statement in writing or any statutory declaration or evidence on oath has been made or given for the purpose of misleading any officer, authority, or person in the exercise of his duty or office under this Act, or under the previous Acts, or that any such statement, declaration, or evidence wilfully misrepresents facts, or that any fraudulent attempt has been made to prove that the conditions of this Act or the previous Acts have been complied with, then and in any such case the Minister may declare any conditional purchase or homestead selection or leasehold in connection with which such statement, declaration, or evidence was made or given to be forfeited, together with all moneys paid on account of or in connection with such

Liability to forfeiture for misleading statement, &c.  
Sec. 135, Act 1884;  
22, Act 1895.

conditional purchase, homestead selection, or lease: Provided that in the case of a conditional purchase no forfeiture shall be held to affect any transferee unless declared within twelve months after the local board has issued a certificate in accordance with the provisions of this Act or the previous Act that the conditions attaching to such conditional purchase have been fulfilled.

The provisions of this section, so far as they apply to homestead selections, shall apply to those selections only until the grant thereof.

#### Conflicting Applications—Ballot.

Priority of conflicting applications to be determined by ballot. Sec. 11, Act 1889; 7 of Vic. 55 No. 1; and 38, Act 1895.

40. When any applications lodged with the land agent at the same time are (or appear to the land agent to be) conflicting (whether severally or collectively), he shall determine by ballot in the prescribed manner the priority of the applications.

Where the land agent has omitted to hold a ballot, or has held a ballot but not in the prescribed manner, the local land board may direct the land agent to hold a ballot or a fresh ballot as the case may be.

Conflicting applications shall be dealt with by the local land board in the order of their priority as determined by ballot.

Applications for conditional purchases and conditional leases of the same series shall, for the purposes of any ballot, be deemed to form together a single application for the whole of the land comprised within the said applications taken conjointly.

Sec. 18, Act 1895.

In the case of homestead selections a conflicting application from a person intending to personally perform the obligation of residence shall in all cases have priority over any application for a homestead selection without residence before grant.

Any applicant shall be at liberty, either before or immediately after the ballot, to withdraw his application, and thereupon to receive from the land agent a refund of any moneys paid to such agent in connection therewith; but an application for a conditional purchase or conditional lease, which upon a ballot being had, has been or shall be determined to have priority over all other applications included in such ballot, shall not be withdrawn without the approval of the local land board in accordance with section sixty-eight of this Act.

The fact that two or more applications for conditional purchases or conditional leases included in any ballot for priority have been or shall be made by different applicants for the benefit of one and the same person shall be *prima facie* evidence that none of such applications has been made *bona fide* and for the applicant's sole use and benefit.

### HOMESTEAD SETTLEMENT PROVISIONS.

#### Subdivision for Homestead Selections.

Homestead selection areas. Sec. 13, Act 1895.

41. The Governor may, subject to the provisions of and under the power conferred by section twenty-six of this Act, set apart any tract of Crown lands for disposal by way of homestead selection; and any tract of Crown lands so set apart shall be dealt with as follows:—

(I) A subdivision shall be made thereof into blocks, no one of which shall be more than one thousand two hundred and eighty acres in area, and the standard to be adopted in regulating the area of each such block shall be that the selector thereof may, by agriculture or by agriculture combined with any other ordinary pursuits, be enabled to establish and maintain his home thereon.

(II) A valuation of the said blocks shall be made according to the capabilities and situation of the land, and in making such valuation

- valuation due regard shall be paid to the tenure of the holding and to the intention of these provisions that the selector may be enabled to establish and maintain his home thereon.
- (III) The value to an incoming tenant of any improvements on any such block may be appraised by the Minister after inquiry and report by the local land board in the prescribed manner, and such appraisal shall, as between the Crown or the owner of the improvements, as the case may be, and any person selecting the said block, be conclusive evidence of the value of the improvements at the date of the appraisal.
- (IV) A notification by the Minister shall be published in the *Gazette*, and in a local newspaper, giving particulars of the said blocks and of their respective areas and values, and of appraised value of any improvements thereon, and specifying a date from and after which the said blocks shall be available for selection; the value and area specified in the said notification, in respect of any block, shall be taken to be the capital value and area thereof for all purposes of the rent hereinafter provided.
- (V) The Minister may also notify that special conditions as to drainage, irrigation, the clearing, cutting, preservation, or planting of timber, or such other matters as require to be regulated in the public interest, will be made conditions of a homestead selection of any such block, and will be inserted in the grant of any such block when issued. Any such notification under this or the preceding subsection may be corrected, amended, modified, or revoked by notice in the *Gazette*.
- (VI) The setting apart of any tract of Crown lands for disposal by way of homestead selection and the notification required by this section may, whenever it shall be deemed expedient, be effectuated by one and the same notification in the *Gazette*, and in any such case any preliminary notification shall be deemed to have been unnecessary. Any subdivision whether made before or after any notification under this section or section twenty-six of this Act may be taken to be a subdivision within the meaning of this section, and one or more measured portions may by notification under this section constitute a block.

#### Applications for Homestead Selections.

42. From and after the date specified in the aforesaid notification, any person, who is not disqualified, may apply for any block so notified as a homestead selection. The application shall be made and lodged in the prescribed manner, and shall be accompanied by a half year's rent in advance and a survey fee according to the prescribed scale; or if the applicant desires to defer the payment of the survey fee, then by one-third of the total amount thereof.

The applicant for a homestead selection shall, upon the day appointed, satisfy the local land board that he or she is qualified, and that the application has been made in accordance with the provisions of this Act. The local land board shall confirm the application if so satisfied, unless it permits the applicant to withdraw the same. The local land board shall disallow any application if not so satisfied.

The title to any homestead selection applied for after the commencement of this Act shall commence from the date of application therefor,

Application and confirmation.  
Sec. 14, Act 1895.

Commencement of title of homesteads, selections, and settlement leases.  
59 Vic. No. 26.

therefor, if valid, and any such application shall withdraw such of the land therein described as may be available for the purpose from any annual lease or occupation license under which it may be held: Provided that the land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

Sec. 22, Act 1895.

Except as against the Crown, any land which shall be applied for as a homestead selection, and for which the application is valid, shall be deemed to be land contracted to be granted, and, except as aforesaid the receipt of the said application shall be deemed to be a sale of the said land.

*Trespass and Impounding on Homestead Selections.*

Trespass by stock on unfenced lands. Sec. 55, Act 1895.

43. No person occupying land under a homestead selection shall—

- (a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act;
- or
- (b) impound any stock trespassing upon the said land, unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused, or refer to any homestead selection for which a grant has been issued at the date of such trespass.

**Conditions precedent to a grant.**

Conditions to be performed. Sec. 15, Act 1895.

44. The applicant shall perform, to the satisfaction of the local land board, the following conditions, which shall be taken to be conditions precedent to the right to a grant:—

- (a) He shall within the prescribed time pay the balance (if any) of survey fee; and
- (b) He shall pay the value of the improvements as appraised, and interest on such value at the rate of four per centum per annum, the payment being made in four equal yearly instalments, at the dates and in the manner prescribed; and
- (c) He shall, within three months after the confirmation of his application, commence to live upon the homestead selection, and shall continue to have his home and place of abode there until the issue of the grant: Provided always that if the applicant die or be declared a lunatic, or become an insane patient within the meaning of the Lunacy Act of 1878, and the Acts amending the same, this condition may be performed by any member of his family or any other person to be approved by the local land board. The local land board shall have power to grant leave to the applicant to cease living upon the selection for such necessary causes as may be prescribed, and for such period as may be determined; and
- (d) He shall within eighteen months after the confirmation of his application erect upon the homestead selection and thereafter maintain a dwelling house of not less than twenty pounds in value; and
- (e) He shall at the prescribed date or dates pay an annual rent which shall be computed from the date of application and shall amount to one and a quarter per centum of the capital value of the block; the said rent shall be paid in two equal half-yearly instalments in advance; and
- (f)

Sec. 60, Act 1895.

- (J) He shall perform and observe the special conditions (if any) which have been notified by the Minister as hereinbefore provided.

#### Inquiry by Local Land Board.

45. The local land board may at any time inquire as to the performance of any condition; and at the expiration of five years from the confirmation of the application the local land board shall hold an inquiry whether the applicant has, up to the date of the inquiry, duly performed all conditions as aforesaid. Local land board to be satisfied of performance. Sec. 16, Act 1895.

If, upon the final inquiry, the applicant satisfies the local land board that he has, up to the date of the inquiry, duly performed all the said conditions, it shall issue to him a certificate to that effect.

If at any time the local land board is not satisfied that the applicant is duly performing any condition, or if upon the final inquiry the board is not satisfied that he has duly performed all conditions as aforesaid, the Governor may, by notification in the *Gazette*, forfeit the applicant's interest in the homestead selection, and thereupon the applicant's right to continue in occupation shall wholly cease and determine. The like notification may be made in any case where the applicant fails to duly pay the aforesaid rent or the balance (if any) of survey fee.

#### Homestead Grants.

46. The Governor shall issue a grant of the homestead selection (to be termed a homestead grant) to an applicant who has duly obtained a certificate from the local land board; and the Governor may, upon the expiration of five years from the date of the confirmation of the application, issue a grant to an applicant who has failed to obtain the said certificate in any case where the local land board reports that the applicant is nevertheless deserving of the grant. The grant of a homestead selection. Sec. 17, Act 1895.

- The grant of a homestead selection shall contain provisions for— The obligations under the grant.
- (a) The annual payment by the grantee, his heirs and assigns for ever of a perpetual rent, the yearly amount of which shall be two and one-half per centum of the capital value of the homestead selection as fixed under this Act; and
  - (b) The performance by the grantee, his heirs, and assigns for ever of an obligation to live upon the homestead selection, having his or their home and place of abode there; and
  - (c) Forfeiture to the Crown of the lands granted in case the obligation to live thereon or to pay any sums due as rent be not duly performed.

The obligations to live on the lands granted and to pay rent shall be incidents in perpetuity of the tenure of the lands held under a homestead grant; and the provisions to be inserted in a homestead grant for the purpose of defining the said incidents of tenure and securing the due performance thereof shall be in such form as may be prescribed.

The value of the homestead selection shall for the first period of ten years after the issuing of the grant thereof be the value, as notified in accordance with the provisions hereinbefore contained, and for every succeeding period of ten years shall be determined, irrespective of improvements, in accordance with the provisions of section twenty-five of this Act.

The Governor may from time to time by regulations define the minimum period of living on the land in each year which shall be taken to satisfy the aforesaid obligation, being not less than seven months in every year; and may in the like manner provide for the granting Regulations as to the performance of obligation to reside.

granting of exemptions from the performance of the aforesaid obligation or for the relaxation thereof in such cases of inability, difficulty, or hardship as are likely to arise, and may attach such conditions to the granting of an exemption or relaxation as may appear desirable to secure the proper user of the land and to carry out the policy of this Act, but no such exemption or relaxation shall be granted for more than one year either retrospectively or in advance.

In any case where, in pursuance of the regulations for the time being in force, an exemption or relaxation has been granted, and the conditions, if any, of such exemption or relaxation fulfilled, a forfeiture shall not be enforced for the non-performance of the obligation to live on the lands granted during the period of such exemption or relaxation.

The Governor shall not have power to discharge, release, or abrogate the obligation to live upon the lands held under any such grant or to pay the rent, and the acceptance of rent shall not of itself constitute a waiver of any forfeiture which may have accrued.

The grant of a homestead selection may contain provisions to secure the creation and maintenance of channels for drainage or irrigation purposes, and the preservation or planting of trees for timber and shade, and such reservations of rights, powers, minerals, and materials as may appear to the Governor necessary in the public interest.

Upon the forfeiture to the Crown of any lands held under a homestead grant, the Registrar-General shall make an entry of such forfeiture upon the folium of the register containing such grant, and the holder of the duplicate copy of such grant shall deliver up the same to the Registrar-General for the purpose of being cancelled.

No transfer of the lands described in a homestead grant shall be registered by the Registrar-General unless the Minister certifies, in the prescribed form, that all the obligations of the grant have been duly fulfilled up to the date of such certificate, and the registration of such transfer shall be evidence of the fulfilment of all the obligations under the grant up to the date of the aforesaid certificate.

#### **Homestead Selections with residence by deputy before grant.**

Homestead selections  
without residence  
before grant.  
Sec. 18, Act 1895.

47. In any case where the applicant for a homestead selection is debarred by his calling from living on the selection, the condition precedent may, until issue of a grant, be performed by a deputy, to be approved by the local land board; but in every such case—

- (a) The application shall be expressed to be made under the provisions of this section, and the full amount of survey fee shall be paid therewith; and the applicant shall, before his application is confirmed, satisfy the local land board that his calling prevents him living on the selection, and that he ultimately intends to establish his home thereon; and
- (b) A deputy to be approved by the local land board shall perform the condition of living on the selection; and
- (c) The annual rent, until issue of the grant, shall be three and one half per centum of the capital value; and
- (d) The dwelling house to be erected and maintained shall be not less than forty pounds in value; and
- (e) The applicant shall, within three years after the confirmation of the application, have not less than one-tenth of the area of the homestead selection in full tillage, and shall during the fourth and fifth years after the confirmation have one-fifth of such area in full tillage, to the satisfaction of the local land board.

Save

Save as aforesaid, all provisions as to homestead selections shall apply to a homestead selection under this section, and the grant thereof when issued shall be in the same terms as the grant of a homestead selection in other cases: Provided always that a conflicting application from a person intending to personally perform the obligation of residence shall in all cases have priority over any application under this section lodged at the same time.

#### Dispensation of requirements of residence in certain cases.

48. If a number of homestead selectors, embracing at least twenty families, with a view to greater convenience in the establishment of schools and churches, and to the attainment of social advantages of like character, ask to be allowed to settle together in a hamlet or village adjacent to their selections, the Governor may, in his discretion, vary or dispense with the requirements as to residence upon the homestead selection and substitute residence in such hamlet or village, subject to such conditions as he may prescribe.

Dispensation of requirements of residence in certain cases.

Sec. 19, Act 1895.

#### Surrender, &c., of Homestead Selections.

49. The holder of an estate in fee-simple in possession in any lands granted under a homestead grant may, with the consent of the Governor, surrender the said lands to the Crown by an instrument in the prescribed form; the surrenderor shall be entitled to tenant right (as the same is hereinafter defined) in improvements existing at the date of such surrender upon the surrendered lands.

Surrender, &c., of a homestead grant and tenant right.

Sec. 21, Act 1895.

Upon the forfeiture to the Crown of lands granted under a homestead grant the Governor (upon application in the prescribed manner) may, by notification in the *Gazette*, grant the last owner of such lands tenant right (as the same is hereinafter defined) in improvements existing at the date of such forfeiture upon the forfeited lands.

#### Protection of Homestead Selections.

50. The owner for the time being of a holding consisting of a homestead selection, whether granted or ungranted (and whether applied for before or after the commencement of this Act) may, in any case where his home is established upon such holding, obtain for such holding protection under this Act by registering with the land agent for the district, or any other prescribed authority, an instrument in the prescribed form; and the land agent or other prescribed authority shall enter such particulars as may be prescribed in a book to be kept by him for the purpose, and such book shall be open to inspection by the public at such times and subject to such conditions as to payment of fees or otherwise as may be prescribed.

Protection of homestead selections.

Sec. 23, Act 1895.

Any holding protected under this Act—

- (a) Shall not be sold under any writ of execution issuing out of any Court; and
- (b) Shall not vest in any official assignee or trustee, or be ordered to be conveyed upon the bankruptcy of the owner thereof, or pass by any assignment for the benefit of his creditors; and
- (c) Shall not in any other way be taken from the owner thereof for the satisfaction of any debt or liability under process or constraint of law.

Any transfer, assignment, alienation, conveyance, charge, or incumbrance of a holding protected under this Act (or under the Crown Lands Act, 1895) shall be absolutely void, but nothing herein or therein contained shall affect the validity of any such charge or incumbrance created before the holding, which is the subject thereof, was registered.

Registration

Registration shall not have the foregoing effect, if the owner is in insolvent circumstances at the date thereof; and the protection shall cease as to any holding—

- (a) When the owner ceases to live thereon as his home; or
- (b) When he obtains for another holding protection under this Act; or
- (c) When the owner transfers the holding :

Provided always that nothing in this section contained shall

- (a) Exempt the holding, or part thereof, or interest therein, from levy or sale for rates or taxes hereafter to be legally imposed ; or
- (b) Affect any remedy for any cause of action accruing before the registration, or for any breach of trust, or for any debt for rent, instalments of purchase money, or interest due to the Crown, or any power of forfeiture.

#### Conditional purchases and conditional leases.

What land open to conditional sale and conditional lease.  
Sec. 22, Act 1884.

51. All Crown lands if not within any of the classes of exemption specified in section fifty-three of this Act shall be open to conditional sale, and all Crown lands if not within any of the classes of exemption specified in section fifty-four of this Act shall be open to conditional lease under and subject to the provisions and conditions of this Act.

Conditional purchase with or without residence.  
Secs. 47, Act 1884; 29, Act 1895.

52. A conditional purchase may be made subject to a condition of residence or exempt from a condition of residence; but in the case of a non-residential conditional purchase the deposit price and annual instalments shall be double such as would be required in the case of a residential conditional purchase, and such non-residential conditional purchase shall be subject to the special provisions and conditions hereinafter set forth.

#### Classes of exemption from conditional purchase.

What lands exempt from conditional purchase.  
Secs. 21, Act 1884; 10, 19, 25, Act 1889.

53. Crown lands belonging to any of the classes hereinafter specified shall be exempt from conditional sale under this part. And for the purposes of this section it shall be immaterial whether the proclamation, dedication, reservation, setting apart, notification, lease, or application herein mentioned in connection with any such lands was made under this Act, or under the previous Acts, or under any repealed Act—

- (I) Lands held under conditional lease except by the conditional leaseholder having a preferent right of purchase as specially provided by this Act, or the previous Acts, or to which a right of conditional lease is attached; provided that no right to conditionally lease land shall be held to attach to land until application for the conditional lease shall be made.
- (II) Lands within the Western Division unless within special areas, or unless held by the conditional purchaser under conditional lease and not otherwise exempt from conditional sale.
- (III) Lands comprised within leasehold areas.
- (IV) Lands reserved or set apart for town or suburban lands or for village sites, except as provided in section fifty-seven of this Act
- (V) Lands reserved from sale or dedicated, reserved, or set apart for any public purpose other than as aforesaid.
- (VI) Lands in proclaimed gold-fields within areas reserved from conditional sale.
- (VII) Lands within population areas except as provided in section fifty-seven of this Act.

(VIII)

(VIII) Lands under lease or lawful occupation for mining purposes and lands of which a lease under any Act in force for the time being relating to mining has been applied for.

(IX) Lands held under any lease, other than annual lease, or than occupation license.

(X) Lands set apart for holdings other than conditional purchase or lands set apart for the purpose of effecting a proper survey and subdivision thereof under the provisions of section ten of the Crown Lands Act of 1895, or section twenty-six of this Act, provided that a notification that Crown lands are set apart for holdings of any kind shall not operate to prevent the lands situated within the tract or area so set apart being or becoming available for the purpose of an application for an additional conditional purchase, or a conditional lease of a series of which the original conditional purchase was made before the date of the notification in any case where—

Additional conditional purchases in classified areas.  
Sec. 11, Act 1895.

(a) The application is made not later than forty days after the date of the notification—and

(b) The applicant has been for six months previously and still is in *bonâ fide* residence on some conditional purchase or conditional lease of the same series at the date of the notification :

Provided always that—

(c) The area which may be added to any series by all such additional conditional purchases and conditional leases shall not exceed the area sufficient, in the opinion of the Local Land Board, to enable the holder thereof by agriculture or by agriculture combined with any other ordinary pursuits to maintain his home thereon, and shall not, in any case, exceed the area which may be taken under this Act; and

(d) that such additional conditional purchases and conditional leases shall be taken so as to conform to the general design of the subdivision, if any, of such tract or area.

#### Classes of exemption from conditional lease.

54. Crown lands belonging to any of the classes hereinafter specified shall be exempt from conditional lease—

(I) Any land exempt from conditional purchase.

(II) Any land reserved from conditional lease specifically, or reserved from lease generally.

(III) Lands within any special area.

What lands exempt from conditional lease.  
Secs. 48, Act 1884; 10 and 39, Act 1889.

#### Original conditional purchases not within Special Areas.

55. In the Eastern Division no application for an original residential conditional purchase shall be received for less than forty or for more than six hundred and forty acres, and in that Division no application for an original non-residential conditional purchase shall be received for less than forty or more than three hundred and twenty acres.

What areas may be purchased conditionally.  
Sec 24 and 47, Act 1884.

In the Central Division no application for an original residential conditional purchase shall be received for less than forty or more than two thousand five hundred and sixty acres, and in that Division no application for an original non-residential conditional purchase shall be received for less than forty or more than three hundred and twenty acres.

**Additional conditional purchases not within Special Areas.**

What areas available for additional conditional purchase. Secs. 42, 47, 48, Act 1884; 19 and 25, Act 1889.

56. Any holder of any original conditional purchase may (by application before, at, or after the confirmation of the application relating to such original conditional purchase or any additional conditional purchase of the series) make additional conditional purchases of Crown lands adjoining the original or any prior additional conditional purchase or each other, and for the purposes of this section it shall be immaterial whether the original or prior additional conditional purchase were made under this Act, or under the previous Acts, or under any repealed Act, or partly under one and partly under any other, provided that—

- (a) No additional residential or non-residential conditional purchase in any Division shall be of a less area than forty acres;
- (b) In the Eastern Division an original residential and additional residential conditional purchases shall not exceed in the whole six hundred and forty acres unless such additional conditional purchases shall be made of land held under conditional lease, in which case the original and additional purchases shall not exceed in the whole one thousand two hundred and eighty acres; and in that Division an original non-residential and additional non-residential conditional purchases shall not exceed in the whole three hundred and twenty acres.
- (c) In the Central Division an original residential and additional residential conditional purchases shall not exceed in the whole two thousand five hundred and sixty acres; and in that Division an original non-residential and additional non-residential conditional purchases shall not exceed three hundred and twenty acres.
- (d) The payment to the Crown of the balance of purchase money due upon any conditional purchase or the issue of a grant in respect thereof shall not prevent additional conditional purchases being made, and conditional leases being granted, in the same way as if the said balance had not been paid, or the said grant had not issued; and it shall be immaterial whether the payment of the said balance or the issue of the said grant took place before or shall take place after the commencement of this Act.
- (e) No application to make any additional conditional purchase of Crown lands whatever by virtue of any holding under the previous Acts or under any repealed Act shall be entertained or dealt with otherwise than in accordance with the provisions of this Act.
- (f) No conditional purchase made under the provisions of section twenty-two of the Crown Lands Alienation Act of 1861 shall be deemed to be an original conditional purchase within the meaning of this section.

Payment of balance of purchase money, or issue of grant, not to affect power to extend series. Sec. 31, Act 1895.

Sec. 3, Act 1884.

**Conditional purchases within special areas.**

Conditional purchases in special areas. Secs. 24 and 42, Act 1894, 18, Act 1889.

57. It shall be lawful for the Governor, by proclamation in the *Gazette*, to set apart from time to time, in the Eastern and Central and Western Divisions any areas of Crown lands (not being within pastoral or homestead leases) to be called special areas, which it shall be lawful to conditionally purchase in such areas not exceeding three hundred and twenty acres in the Eastern, or six hundred and forty acres in the Central or Western Division, or in the case of non-residential conditional purchases not exceeding three hundred and twenty acres in any Division, and at such prices (not being less than thirty shillings per acre), deposits, and instalments as may be notified in the proclamation. It

It shall also be lawful for the Governor, by proclamation in the *Gazette*, to set apart as special areas any lands within the suburban or population boundaries or population areas of any cities, towns, or villages, and such lands (without cancellation or revocation of such boundaries or areas) shall be open to conditional purchase on or after such dates, and in such areas, and subject to the payment of such prices, deposits, and instalments, and subject to the fulfilment of such conditions as to residence, improvements, fencing, or otherwise as may be specified in the proclamation. Any conditions so set forth shall have the force of law, and any breach thereof shall render the conditional purchase liable to forfeiture in accordance with this Act.

Special areas within suburban or population boundaries.

A conditional purchase may include land within a special area and adjoining land not within a special area.

An additional conditional purchase of land within a special area may be made by virtue of an original conditional purchase within a special area or by virtue of an original conditional purchase not within a special area.

An additional conditional purchase may be made of land not within a special area by virtue of an original conditional purchase within a special area :

Provided that in all cases—

- (a) the maximum area notified in the proclamation of the special area shall not be exceeded so far as regards such special area ;
- (b) where conditional purchases of the same series include land within two or more special areas, the total area of special area land shall not exceed three hundred and twenty acres in the Eastern Division or six hundred and forty acres in the Central or Western Division or in the case of non-residential conditional purchases three hundred and twenty acres within any Division ;
- (c) where conditional purchases of the same series include land within a special area and land not within a special area the aforesaid limitations shall apply with respect to the area of special area land, and the total area of the series shall not exceed the maximum areas limited by sections fifty-five and fifty-six of this Act ;
- (d) the privilege of making additional conditional purchases within suburban or population boundaries or population areas may be barred by the terms of the proclamation of the special area.

The Governor may at any time revoke or modify any proclamation, before or after the commencement of this Act, of any special area, or of any conditions applicable thereto, and any such revocation or modification shall take effect on proclamation in the *Gazette*.

Before any special areas are declared to be open for conditional purchase the same shall be surveyed, and shall, subject to the provisions of section sixty-nine of this Act, be taken in portions as measured.

#### Conditional leases.

58. Any applicant for an original or additional conditional purchase in the Eastern or Central Division, or any holder of an original or additional conditional purchase applied for after the first day of January, one thousand eight hundred and eighty-five, or after the commencement of this Act, in the Eastern or Central Division (not being a non-residential conditional purchase within either Division or a conditional purchase within a special area within the Eastern Division) may obtain a conditional lease, or additional conditional leases, to comprise (unless the Board shall allot a less area not being less

Application for conditional lease. Sec. 48, Act 1884; 26, Act 1889.

Inquiry in the matter of application for provisional reversal of C.P. 90-49, and conditional lease held in virtue of it, by the Assets Realization and General Finance Company.

THE decisions of the Local Land Board, at Nyngan, on 23rd October, 1894, 14th December, 1894, and 7th March, 1895, were tendered and received in evidence, and also the decision of the Land Appeal Court, No. 3,035, dated 2nd July, 1894.

W. C. CARDEW, Chairman.  
DANIEL SOANE, J.P. } Members.  
J. O. MACHATTE. }

Dubbo, 18th December, 1895.

Inquiry as to the matter of reversal of forfeiture *re* C.P. 90-49, Dubbo, now Nyngan, held by the Assets Realization and General Finance Company (Limited.)

Mr. Booth, solicitor, appeared for the Company.

MR. BURNS, of Nyngan, solicitor, applied to appear on behalf of one Jones, a subsequent applicant, on 25th September, 1895, for the land under inquiry.

[Mr. Booth objected to any appearance on behalf of Jones, on the grounds that he was no party to the proceedings.

Board sustained the objection].

W. C. CARDEW, Chairman.  
DANIEL SOANE, J.P. } Members.  
J. O. MACHATTE. }

Dubbo, 18th December, 1895.

Office Memorandum.

4 April, 1895.

Dubbo, now Nyngan.—C.P. 90-49; 640 acres; 20th February, 1890; confirmed 7th October, 1890; Henry Newell; transferred by the Sheriff to Adam Rae, 19th December, 1893.

THE facts in this case are set out in the *précis*, 94-5,729 Dep.

The Land Appeal Court, on 27th June last, recommended waiver of forfeiture of the conditional purchase.

The Minister, on 24th August last (*vide* 94-18,875 Dep.), expressed an opinion that he could not see any features in the case to warrant waiver of forfeiture, but before coming to a decision in the matter he desired that the Land Board should hold an inquiry as to Rae's *bona fides*.

The case was set down for hearing before the Board on three occasions, but Rae did not appear, owing, it is stated, to sickness.

On the last occasion the Board refused to grant a further adjournment, and took the evidence of Conditional-Purchase Inspector R. Sims, junr., and the Sheriff's officer, J. T. Steel, who sold Newell's right, title, and interest in the land.

The Board expressed no opinion as to Rae's *bona fides*, but forwarded the evidence for the information of the Minister.

In view of the evidence of Mr. Steel, and the letter from Mr. W. B. Wilkinson, which was read at the sale, there seems little reason to doubt that Rae or his agent (for Rae did not attend the Sheriff's sale) was aware of the fact that the original selector—Newell—did not comply with the conditions in connection with the conditional purchase.

Under the circumstances, it is submitted that there are no grounds for accepting the recommendation of the Land Appeal Court as to waiver of forfeiture, and that forfeiture be now notified.

ALFRED SALWEY,  
Acting in Charge Division.

F. H. Wilson, Acting U.S., 5/4/95. Forfeiture may be notified.—J.H.C., 8/4/95. Alienee informed, 18/4/95.

Office Memorandum.

Dubbo, now Nyngan.—C.P. 90-49; 640 acres, 20th February, 1890; confirmed 7th October, 1890; Henry Newell; transferred by the Sheriff to Adam Rae, 19th December, 1893.

On 22nd March, 1894, the Board held an inquiry subject to the 20th section, and found that the conditions of residence and fencing were not complied with by the original selector, Henry Newell, and recommended forfeiture of the conditional purchase.

Notice of appeal was lodged, and the matter came before the Land Appeal Court on 27th June, 1894, when the appeal was dismissed, but the Minister was recommended by the Court to waive the forfeiture incurred.

This recommendation was not, however, approved, as the Minister having gone through the papers could not see any features in the case to warrant waiver of the forfeiture incurred, but decided that before coming to a final decision an inquiry should be held by the Land Board as to Rae's *bona fides*, and as to the manner in which he had fulfilled the conditions since the date of the transfer to him (*vide* conditional sales 94-18,875 Dep.)

The case was set down for hearing before the Board on three occasions, but Rae did not appear owing, it is stated, to sickness. On the last occasion the Board refused to grant any further adjournment, and took the evidence of Conditional-Purchase Inspector R. Sims, junr., and the Sheriff's officer, J. T. Steel, who sold Newell's right, title, and interest in the land.

No decision was given by the Board as to Rae's *bona fides*, but the evidence taken was forwarded for the information of the Minister, who, on the 8th April, 1895, decided that forfeiture should be notified (*vide* conditional sales 95-7,878 Dep.), and, in accordance with this forfeiture, was gazetted on 31st July, 1895.

On the 4th September, 1895, a letter was received from the Assets Realization and General Finance Company (conditional sales 95-6,081 Cor.), asking for withdrawal of the forfeiture pending further inquiry in the matter, and pointing out that in their position as mortgagees they had advanced about £500 to Rae.

On

Provided that the land so purchased shall not, with any conditional purchases of the same series, exceed one thousand two hundred and eighty acres in the Eastern or two thousand five hundred and sixty acres in the Central or Western Division.

And in all such cases the remaining area of such conditional lease may be held at a proportionate part of the rental thereof, although such lease may, when taken with the land conditionally purchased, exceed one thousand two hundred and eighty acres in the Eastern, and two thousand five hundred and sixty acres in the Central or Western Division.

A refund of the rental shall not be granted, until after confirmation of the application for the additional conditional purchase, but, when granted, shall be calculated from the date of such application.

#### Unmeasured land to be marked prior to application, land and improvements to be described.

60. When the land to be applied for as a conditional purchase is unmeasured land the intending applicant shall before lodging his application mark some corner of such land in the prescribed manner, and shall in his application describe such land in such manner as to permit of its identification by the description.

Land to be marked before application.  
Sec. 25, Act 1884.

If the land applied for has not a frontage it must be situated at a reasonable distance from a frontage.

When such land is measured land the applicant shall so describe it.

Description of measured and improved land.

And whenever the land so applied for contains improvements the applicant shall state that fact in his application and shall describe the nature and position of such improvements.

#### Tender of applications for Conditional Purchases and Conditional Leases.

61. Every application for an original conditional purchase shall be tendered by the applicant in person, and every application for an additional conditional purchase may be tendered by the applicant in person, or by any duly authorised agent to the land agent on some land office day.

Tender of application.  
Secs. 24, 26, 47, Act 1884, 11, 18, 26, and 28, Act 1889.

With the application there shall be lodged with the land agent a declaration made by the applicant in the prescribed form, a fee in accordance with the prescribed scale for the survey of the area applied for, and a deposit at the rate of—

Deposit to be lodged with application.

two shillings per acre in the case of a conditional purchase other than a non-residential conditional purchase, or other than a conditional purchase within a special area ;

four shillings per acre in the case of a non-residential conditional purchase not being within a special area.

Such deposit in the case of a conditional purchase within a special area, as may have been notified in the proclamation of the special area, provided that the deposit in connection with a non-residential conditional purchase shall be double such as would be required in connection with a residential conditional purchase.

With any application for a conditional lease a deposit of two-pence per acre of the area applied for, and a survey fee according to a prescribed scale, shall be paid to the land agent. Applications for conditional leases or additional conditional leases shall be made in the prescribed manner.

If

Declaration by applicant.

If any person shall make a false statement in any such declaration as aforesaid as to any of the matters contained therein, he shall forfeit all moneys paid by him in respect of the land applied for, and all right and title to such land. And any conveyance, transfer, mortgage, or disposition of such land made by such person shall be null and void if taken with notice or knowledge of such false statement.

Sec. 20, Act 1889.

The declaration in connection with an additional conditional purchase may be made, in such form as shall be prescribed, by a duly authorised agent of the applicant; but if such agent shall wilfully make a false statement in such declaration, he shall be liable to the penalties in that behalf made and provided; and the forfeitures provided in this section shall be held to have been incurred by the person for whom such agent shall have acted.

Where a conditional purchase is held absolutely by a corporation, company, or partnership, any application for an additional conditional purchase or for any conditional lease or any prescribed declaration in respect thereof may be made by any officer of such corporation or company or officer or member of such company or partnership duly authorised for the purpose.

Application for additional conditional purchase may be made by mortgagor.

When the transferee of any land conditionally purchased before or after the commencement of this Act (or in the case of a corporation, company, or partnership, being such transferee, any officer of such corporation or company, or any officer or member of such company or partnership) has made, or shall make, a statutory declaration showing that the transferee holds such land by way of mortgage or security only, the owner (subject to such mortgage or security) of the said land, or such transferee, may make an application in the prescribed manner for an additional conditional purchase or conditional lease to be registered in the name of the transferee, subject to the conditions of the additional conditional purchase or conditional lease being fulfilled by the aforesaid owner. With any such application by the owner as aforesaid the written consent of the transferee shall be tendered to the land agent. Any land purchased or leased under this provision shall be subject to the same equity of redemption as the land by virtue of which the same may be purchased or leased.

#### Duties of Land Agent.

Receipt for deposit. Secs. 27 and 28, Act 1884.

62. The applicant who shall have duly complied with all prescribed requirements shall be entitled to a receipt from the land agent for the deposit paid by him.

Applications to be transmitted to local land board.

The land agent shall enter the particulars of all such applications, deposits, and declarations in a register to be kept by him in the prescribed manner, and shall thereupon transmit such applications to the local land board, together with all documents relating thereto, to be dealt with as hereinafter provided.

A list of all such applications so transmitted to the local land board shall be kept by such land agent in the prescribed manner, and be exhibited by him for public inspection in some conspicuous part of his office.

All applications so transmitted shall be dealt with by the said board sitting as in open Court on a day of which at least fourteen days notice shall be given in the prescribed manner.

#### Caveats against applications.

Caveats against applications. Secs. 30 and 31, Act 1884.

63. Any person claiming a right to land applied for under conditional purchase may in the prescribed manner and within the prescribed

prescribed time lodge a caveat with the local land board setting forth objections against the confirmation of any such application, and shall at the time of lodging the same, deposit with the board the sum of ten pounds, to be dealt with by the board as hereinafter provided.

All applications in respect of which caveats have been so lodged shall be dealt with at a meeting of the board, holden after the prescribed notice thereof shall have been given to the applicant and the caveator, at which meeting the board sitting as in open Court shall hear and determine the grounds of objection set forth in the caveat, and if the caveator be not present, or if the board shall consider that the objections are not sustained, it may order the deposit of the caveator or any part thereof to be paid to the applicant by way of compensation, or may make such other order in the premises as it may deem just.

The board may upon such terms as it may deem fit postpone the hearing of any application under caveat to some day of which the prescribed notice shall be given to the applicant and the caveator.

Unless the caveator shall give the prescribed notice of appeal to the land appeal court, and with such notice deposit the sum of five pounds with the local land board, the adjudication of such board shall be final and conclusive, but if such notice shall have been duly given and such deposit made, the appeal shall be heard and determined by the land appeal court.

#### **Commencement of title. Effect of valid application on annual lease or occupation license.**

64. The title to any conditional purchase or conditional lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid.

Commencement of title to conditional purchase or lease.  
Sec. 12, Act 1889.

Any such application shall withdraw such of the lands therein described as may be available for the purpose from any annual lease or occupation license under which they may be held.

The land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for or any part thereof may be situated.

If land be allotted in satisfaction thereof of a less area than, or in a different position from, that applied for, such of the land described as may not be allotted shall, at the date of confirmation of the application, revert to the lease or license.

#### **Action by Chairman and Board.**

65. Upon receipt from the land agent of any application for a conditional purchase or conditional lease, the chairman of the land board may refer the same to the district surveyor.

Confirmation, modification, or disallowance of application.  
Sec. 13, Act 1889.

If the land therein described is unmeasured, and appears to be available, and to be capable, as applied for, of being measured in a proper form, the district surveyor shall cause the same to be measured.

But if the land is not, or is only partly, available, or if any other objection appears to exist, the district surveyor shall so report.

The board shall thereafter deal with the application, either by refusing it, or permitting its withdrawal, or directing the survey of such land as may be proposed to be allotted, and for this purpose may, subject to the provisions of this Act, allot land in a modified or different position from that applied for.

Any allotted lands which are not described in the original application shall, so far as the withdrawal of the same is concerned, be deemed to have been applied for on the date of the confirmation.

When

When the land has been measured, if no sufficient objection exist, and the local land board be satisfied that the applicant has, *boná fide*, applied for the land for his own sole use and benefit, either wholly or subject to the provisions of section sixty-one of this Act, the board shall, in open court, confirm such application as made or modified, subject to payment as prescribed of any necessary extra deposit.

The chairman shall, within the prescribed time thereafter, issue a certificate of such confirmation.

The board, in open court, may, for sufficient reason, with or without a report from the district surveyor, and either before or after measurement of the land, disallow any application, wholly or in part.

#### Trespass and Impounding.

Trespass by stock on unfenced lands.  
Sec. 55, Act 1895.

66. No person occupying land under a conditional purchase or conditional lease, or in virtue of an application for a conditional purchase or for a conditional lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

(b) impound any stock trespassing upon the said land, unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock :

Provided always that nothing in this section contained shall apply to any trespass wilfully caused, or refer to any conditional purchase for which a grant has been issued at the date of such trespass.

#### Errors of description, &c.

Error in description not to invalidate purchase.  
Sec. 57, Act 1884,  
14, Act 1889.

67. No error or uncertainty in the description of land conditionally purchased either before or after the passing of this Act shall invalidate the purchase in any case where the local land board is satisfied that the land occupied by the conditional purchaser is the land intended to be described in his application.

And if the board shall notify to a conditional purchaser the description of the land purchased by him as finally approved by the board such notification shall be conclusive evidence that the land therein described is the land conditionally purchased.

No error, uncertainty, omission, or misdescription in any application for a conditional purchase or conditional lease, made before or after the commencement of this Act, or in any declaration made in connection with any such application, shall invalidate the application in any case where the local land board is satisfied that such error, omission, uncertainty, or misdescription was not wilful, and made with intent to deceive.

The board shall have full power to authorise the correction of any error or omission in any application or declaration, so as to bring the same into conformity with the statutory requirements.

#### Withdrawal of application.

Applications may be withdrawn after six months.  
Secs. 12 and 15, Act 1889.

68. If an application for a conditional purchase or conditional lease shall not have been confirmed within six months from the date of such application, the applicant shall on giving, within one month after the expiration of such six months, the prescribed notice of withdrawal to the chairman, be entitled to withdraw the same and to receive a refund of moneys paid by him in respect thereof, unless the land board shall be of opinion that the application was not *boná fide*, or that the delay in obtaining confirmation was improperly caused or contributed to by the applicant,

Where

Where an application cannot be granted, except subject to modification, or where other sufficient reason may, in the opinion of the board, exist, the applicant may before or within twenty-eight days after confirmation withdraw his application, subject to the approval of such board.

In any case of withdrawal the board may deduct from the moneys deposited such amount as may be deemed necessary to defray the cost of survey and the expenses of dealing with such application.

The whole of the lands described in the application shall, at the date of approval of its withdrawal, revert to the lease or license from which the land may have been taken.

On the withdrawal, refusal, or modification of any application for a conditional purchase or conditional lease, the land ceasing to be affected thereby shall be held to have been available from the date of such application.

Any application made and not disposed of before such withdrawal, refusal, or modification as aforesaid, shall be dealt with as if the prior application had not been made.

#### Rules of measurement, &c.

69. Measured Crown land, upon being applied for as a conditional purchase or conditional lease, shall be taken in portions as measured, and if the area applied for, or any part thereof, is part of a measured portion, such portion may on approval by the local land board be subdivided, and the applicant shall pay the cost of survey for such subdivision, provided that in either case the limitations and provisions as to form of measurement of unmeasured land hereinafter contained shall, as far as practicable, be held to apply to applications for measured land. For the purposes of this section land measured originally for conditional lease under the fifty-second section of the Crown Lands Act, 1884, may be held by the local land board to be measured or unmeasured—

Measurement of land applied for under conditional purchase or conditional lease. Sec. 27, Act 1889.

- (I) No land shall be considered to be measured until the plan of the measurement shall have been approved by the district surveyor, or an officer duly authorised by the Minister in that behalf, of which approval the signature of the district surveyor, or such duly authorised officer on such plan shall be *prima facie* evidence: Provided that, where lands have been measured in pursuance of the provisions of the Crown Lands Act 1884, or any Act repealed thereby, and the plan of such measurement has been approved or accepted by the then surveyor-general, or some other officer, such lands shall, for the purpose of any of such Acts, or this Act, be considered measured lands.
- (II) Any land applied for as an original conditional purchase if unmeasured and having no frontage shall be measured in the form of a rectangle, the length of which shall not exceed twice the width; and if having frontage shall be measured with a breadth of frontage not exceeding one-half of the depth, and all such measurements shall have the boundaries, other than the frontage directed to the cardinal points. And any additional conditional purchase or conditional lease shall not, together or in combination with any original or previous additional conditional purchase or lease, have a greater breadth of frontage or length than as hereinbefore provided for an original conditional purchase of an area equal to the aggregate area of such original and additional conditional purchases or conditional

conditional leases; but whenever it shall appear necessary or desirable, the local land board may alter or modify the boundaries of any land applied for, or direct a measurement of the land as applied for, notwithstanding that such measurement may exceed the limitations or provisions of this section.

- (III) The intervention of any road, not being a frontage or intended frontage road, between an original conditional purchase and any additional conditional purchase or conditional lease shall not be an objection to the measurement of the land applied for, and in every such case the additional purchase or purchases or conditional lease shall be measured as herein provided. But no additional conditional purchase or conditional lease shall be allowed of land not on the same side of any frontage road or water-course or other prescribed frontage as the purchase or purchases, by virtue of which such additional conditional purchase or conditional lease is applied for, unless all the available land on that side has been exhausted. In the latter case such additional conditional purchase or purchases or conditional lease may be measured on the opposite side of such frontage as hereinbefore provided.

Modification of boundaries, &c.  
Sec. 60, Act 1884.

Notwithstanding any of the provisions of this Act whenever it shall appear desirable to the local land board or the Minister, Crown lands may be measured across any frontage road, or intended or designed frontage road, and the boundaries of portions having frontages may be made approximately at right angles with the frontage and may be so applied for, and may be otherwise modified, although such modification may have the effect of altering the frontage or depth of any portion or the direction of any other boundaries thereof as hereinbefore prescribed, and the boundaries of portions having no frontages may be modified in like manner, and necessary roadways, trigonometrical stations, and sites for and sources of water supply may be excluded from any measurement.

#### Encroachments.

Power of adjustment where encroachments made on exempt lands.  
Sec. 58, Act 1884.

70. In any case where any portion of land is found to encroach upon or be included within an area reserved or exempt from sale, or to encroach upon or be included within other land purchased, the title of the holder of or the claim of the applicant for any such purchase shall not be prejudiced or affected further than to the extent of the encroachment on or inclusion within such area if the residue be not less than forty acres.

#### Conditions to be fulfilled.

Residence to mean continuous and *bona fide* living on land.  
Sec. 29, Act 1895.

##### *Residence on original conditional purchases.*

71. Residence for the purpose of this Part shall be taken to mean continuous and *bona fide* living on the land as the usual home, without any other habitual residence, of the holder of the conditional purchase.

##### *Original purchases.*

Term of residence.  
Sec. 29, Act 1895.

72. The holder of any original conditional purchase (other than a non-residential conditional purchase) applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, shall hold the same, subject to a condition of residence, until the expiration of ten years from the date of the application for the conditional purchase, and the conditional purchaser shall, within three months from the date of confirmation of his application

application by the local land board, commence and thereafter continue to reside on his conditionally purchased land for the prescribed term :

Provided always that—

- (a) when a conditional purchase has been transferred *bonâ fide* by way of mortgage, the condition of residence may be performed by the owner subject to such mortgage ; and
- (b) when the beneficial owner of a conditional purchase dies, or is declared a lunatic, or becomes an insane patient within the meaning of the Lunacy Act of 1878, and the Acts amending the same, the condition of residence shall be suspended until the conditional purchase has been transferred or conveyed, and no longer.
- (c) When a conditional purchase has been transferred other than by way of mortgage after issue of a certificate by the land board that the conditions which attached to the conditional purchase during the first five years from the date of application have been fulfilled, the condition of residence shall be performed by each successive holder during such portion of the balance of the ten year period aforesaid as the conditional purchase may be held by such holder.

#### Residence on additional conditional purchases and leases.

73. The condition of residence defined in the preceding section shall attach to every additional conditional purchase or conditional lease applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, and it shall be immaterial whether the original conditional purchase of the series was made under this Act, or under the previous Acts, or under any repealed Act. The said condition shall not be taken to have been performed by the performance of the condition of residence which attached to the original conditional purchase, or any prior additional conditional purchase of the same series :

Residence on additional conditional purchases and conditional leases. Sec. 30, Act 1895.

Provided always that—

- (a) if the person fulfilling the condition of residence has, before the commencement of the term of such residence, continuously resided upon some purchase or lease of the same series, the term of residence shall be reduced by the period during which residence was previously carried on, but not so as in any case to be reduced to less than five years ; and
- (b) conditions of residence attaching to any number of purchases or leases of the same series may be performed concurrently ; and
- (c) a person residing upon any purchase or lease of a series shall, for the purposes of any conditions of residence, be taken to be residing upon every purchase or lease of the series ;
- (d) an additional conditional purchase if made out of a conditional lease, and if such conditional lease was applied for before the first day of June, one thousand eight hundred and ninety-five, shall not be subject to any condition of residence.

Sec. 30, Act 1895.

The performance of the aforesaid condition of residence in respect of an additional conditional purchase or a conditional lease shall be waived so long as the person, upon whom the performance of the said condition would for the time being devolve, is the person who applied for the original conditional purchase of the series and for the said additional conditional purchase or conditional lease. But this provision as to waiver shall not operate where the applicant for the additional conditional purchase or conditional lease—

- (a) has taken up a full area ; or
- (b) is the owner of a full area ; or

(c)

(c) has owned a full area at any time previous to the date of application, and has divested himself of the ownership thereof by transfer, conveyance, assignment, or otherwise, or purported so to do in order to obtain the benefit of the foregoing provision.

In the construction of the foregoing provision a full area shall be taken to mean an aggregate area of conditional purchases and conditional leases, whether of the same or different series, amounting to two thousand five hundred and sixty or more acres in the Central Division, or one thousand two hundred and eighty or more acres in the Eastern Division, or one thousand nine hundred and twenty or more acres if the said conditional purchases and conditional leases are some in one Division and some in another Division.

#### Residence by married women.

Residence by married women.  
Sec. 47, Act 1889.

74. If any conditional purchase has been or shall be made by an unmarried woman, and she shall have married, or shall marry, prior to the completion of the term of residence required for her conditional purchase, it shall be a sufficient compliance with the previous Acts, or this Act (so far as residence is concerned) if she shall have resided or shall reside for the remainder of such term, either upon her conditional purchase or upon any conditional purchase held by her husband, for which his term of residence may not at the time have been completed.

Or the husband may complete any term of residence required for his conditional purchase upon any conditional purchase held by his wife for which her term of residence may not at the time have been completed.

In either case notice as prescribed shall be forwarded to the chairman of the land board on the conditional purchaser's intention so to reside.

#### Residence by minors with their parents.

Residence by minors.  
Sec. 47, Act 1889.

75. In all cases where a minor shall have conditionally purchased land adjoining land held as a conditional purchase or conditional lease by the parent or parents of such minor, such minor may, up to the age of twenty-one years if a male, or twenty-four years if a female and unmarried, continue to reside with his or her parents on such adjoining land on making a declaration in the prescribed form to the local land board of the intention of such minor so to reside.

Such residence, if continuous and *bonâ fide*, shall be deemed to be a fulfilment of the conditions of residence within the meaning of this Act.

For the purposes of this section the word "adjoining" shall be deemed to include lands separated by roads or creeks or by conditional purchases or leases held by any child of the same parent.

#### Condition of fencing or improvements.

Condition of fencing or improvements.  
Secs. 33, 43, 51, Act 1884; 9, 11, 13, 14, Act 52 Vic. No. 7; 4, 16, 17, 23, 24, Act 1889; 33, Act 1895.

76. Every conditional purchase (other than a non-residential purchase) and every conditional lease applied for after the first day of June, 1895, or after the commencement of this Act (or the application for which shall have been confirmed within two years before the date of passing of this Act) shall be subject, at the option of the purchaser or lessee, and without any application in that behalf to a condition of fencing, or in the alternative, to a condition of improvement.

77. Every non-residential conditional purchase shall be subject to a condition of fencing, and in addition to a condition of improvements, but the condition of fencing may be superseded by a condition of extra improvements on application (within two years from the date of confirmation of the application for the land) to and with the permission of the Land Board.

78. The following provisions shall apply with respect to the condition of fencing in connection with conditional purchases and conditional leases:—

- (a) The fence shall be erected on the exterior boundaries of each conditional purchase and conditional lease; or on the exterior boundaries of the conditional lease and the conditional purchase by virtue of which it shall have been granted; but all conditional purchases of the same series, and all conditional leases granted by virtue thereof, shall, for all purposes of fencing, be deemed to be one holding, and it shall be sufficient for the fence to be erected on the exterior boundaries of such holding so as to enclose the whole area. Original and additional conditional purchase one holding.
- (b) Where the conditional purchaser or conditional lessee elects to fence, the fence shall be a substantial one, and prescribed by the Land Board; but such Board shall not prescribe any fence likely to be a harbour or shelter for rabbits or such other animals as may, by the Minister, be declared by notice in the *Gazette* to be vermin. Local Land Board to determine kind of fence.
- (c) Subject to the provisions of the next succeeding subsection the fence shall in the case of a non-residential conditional purchase be erected within one year from the date of confirmation of the application for such purchase, and in the case of any other conditional purchase or any conditional lease the fence shall be erected within three years from the date of confirmation of the application for the purchase or lease.
- (d) Upon sufficient cause the Chairman or Board may on application extend the period within which the condition of fencing shall be fulfilled. Extension of period for fencing.
- (e) Where a condition of residence attaches to the conditional purchase or conditional lease the holder of the conditional purchase or lease shall maintain the fence in good repair and condition during the entire period of the term of residence.
- (f) The Chairman or the Board on the application of the purchaser or lessee may grant him an exemption from fencing any part of his land which has frontage to a permanent river, creek, or other natural boundary held by the Chairman or Board to be sufficient, or Exemption from fencing frontage to river, creek, &c. Sec. 33, Act 1884.

Any boundary line fenced by the holder or occupant of adjoining land with a fence, which in the opinion of the Chairman or Board is of a sufficiently useful and substantial kind, or Sec. 11, 52 Vic. No. 7.

Any boundary line in any case where a fence although not erected upon the actual boundary line is, in the opinion of the Chairman or Board, a sufficient boundary fence. Sec. 23, Act 1889.

79. Where in any case the unfenced sides of lands, whether held by different persons and under different conditions or not, are separated by a road or watercourse, the Chairman or the Board, on application being made to the Chairman in the prescribed form and within the prescribed time, may grant permission for such road or watercourse to be wholly or in part inclosed, provided that gates or suitable substitutes such as the Chairman or Board may consider necessary and direct, shall be erected or made so as not to unnecessarily interfere with any traffic, or, to any large extent, divert the natural flow of water. Roads and water-courses—special provisions to fences. Sec. 14, 52 Vic. No. 7.

Any

Any such gate may on application to, and approval of, the Minister who may administer the "Public Gates Act" be made a public gate within the meaning, and subject to the provisions of that Act. And nothing in the Public Gates Act shall be held to have prevented or to prevent the foregoing provision from having its full effect and operation.

Upon complaint being made in the prescribed form to the Chairman of the local land board, such board may, for any sufficient reason, cancel any permission granted under this section, and may order any fence, gate, or other structure on any road or watercourse to be removed by such persons, and within such periods as such board shall determine.

The holder of any conditional purchase or conditional lease who shall obtain permission under this section shall be deemed to have elected to make improvements in lieu of fencing, but the Land Board, on application as prescribed, may exempt the holder of the land from making improvements in addition to the fencing erected or to be erected.

#### Ring-fences.

One or more conditional purchases may be enclosed by ring-fence.  
Sec. 17, Act 1889.  
Sec. 37, Act 1895.

80. Where conditional purchases (other than non-residential conditional purchases) or conditional leases adjoin so as to form one block, or are separated only by road or creeks, and such conditional purchases or conditional leases are held by members of one family, standing in the relation of parents and children, it shall be lawful for the land board, or the chairman of such board, upon a joint application made within the prescribed time and in the prescribed manner by the holders of the land, to exempt such holders from any condition of fencing or improvements in connection therewith further than the erection of a ring-fence of a character to be prescribed by such board on the external boundaries of the lands so as to enclose them as one holding.

The chairman or the board may, notwithstanding anything to the contrary in this Act, accept any such application, wholly or in part, and the board may disallow any such application, wholly or in part;

Provided that such chairman or board shall, in connection with any accepted application, fix the term (and may upon application as prescribed extend the term) within which the fence shall be erected, such term being determined as far as practicable with due regard to the respective dates of commencement of the purchases or leases.

If the ring fence be not erected within the term allowed, each and every purchase or lease shall be liable to forfeiture by notice in the *Gazette*.

#### Alternative Condition of Improvements.

Alternative condition of improvements.  
Sec. 33, Act 1895;  
the Act 52 Vic. No. 7  
Secs. 16 and 26, Act 1889.

81. Where the holder of a conditional purchase or conditional lease elects to perform a condition of improvement instead of a condition of fencing, the following provisions shall apply:—

The area embraced by any original conditional purchase, and any additional conditional purchases made by virtue thereof, and any conditional leases whatsoever granted by virtue of such conditional purchases, may, for all purposes of improvements, be held to be one holding, notwithstanding that one, or more, of such conditional purchases or leases may have been made or granted under the previous Acts or under any repealed Act.

The

The improvements, including any fencing, shall be of a fixed, permanent, and substantial character, and necessary for the beneficial occupation of the land.

Such improvements (including any fencing) shall within, and at the expiration of, three years from the date of confirmation of the application, be of the value of at least six shillings per acre, but shall not be required to be of a greater value than three hundred and eighty-four pounds; and within, and at the expiration of, five years from the date of confirmation of the application shall be of the value of, at least, ten shillings per acre, but shall not be required to be of a greater value than six hundred and forty pounds.

In the case of a non-residential conditional purchase where the Land Board shall have granted permission to substitute improvements in lieu of fencing, such improvements (including any fencing) shall be of the value of thirty shillings per acre within five years from the date of confirmation of the conditional purchase.

#### Suspension of conditions.

82. If the holder of any conditional purchase or conditional lease applied for before or after the commencement of this Act shall through illness, drought, flood, or other sufficient cause be prevented from fulfilling any conditions of residence, fencing, or improvements attaching thereto, the board or the chairman in the case of fencing may, on application as prescribed, and after inquiry in open Court, suspend for a specified period not exceeding six months any or all of such conditions, or the Board may refuse the application for suspension. On the expiration of such specified period the holder shall (if a condition of residence attaches to the purchase or lease) commence and continue to reside thereon for a period which (when taken with the period during which he may have resided thereon since the date of his obligation to do so) shall complete the full term prescribed by the Act under which the conditional purchase or conditional lease was made, and shall, during the term extended as aforesaid or otherwise, complete any other conditions, subject upon default in either case to forfeiture.

Suspension of conditions in case of illness, drought, flood, or other sufficient cause.  
Sec. 24, Act 1889.  
Sec. 37, Act 1895.

#### Payment of purchase money.

83. Every holder of a conditional purchase, the application for which shall be made after the commencement of this Act, shall at the end of the third year after the date of his application pay to the land agent an instalment on his purchase and

Thereafter shall pay in like manner a like instalment annually during a period until the balance together with interest at the rate of four per centum per annum thereon shall have been paid :

Three months grace shall be allowed for the payment of the first and for each and every instalment, provided that in the case of any moneys not being duly paid the provisions of section eighty-four of this Act shall apply.

In the case of a conditional purchase (other than a non-residential conditional purchase or a conditional purchase within a special area), each instalment shall be one shilling per acre, and the balance, after payment of the first instalment, seventeen shillings per acre.

In the case of a non-residential conditional purchase (if not within a special area) each instalment shall be two shillings per acre, and the balance, after payment of the first instalment, thirty-four shillings per acre.

Conditions for payment of residue of purchase money.  
Secs. 35, 38, 47, 126, Act 1884, 22, Act 1889, 23 and 48, Act 1895.

In

In the case of a conditional purchase within a special area, each instalment shall be at such rate as has been or shall be notified in the proclamation of the special area, provided that the instalment in the case of a non-residential conditional purchase shall be double the instalment which would be payable in the case of a residential conditional purchase.

After the last payment of such instalments and interest the conditions of payment shall be deemed to have been duly fulfilled:

It shall be lawful for the conditional purchaser to pay off the whole or any portion of such instalments at any time after the final certificate mentioned in section ninety shall have been granted to him.

Overdue moneys to bear interest accruing day by day.

84. Any sums which shall become payable to the Crown as purchase money or interest, shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums together with interest as aforesaid, and the acceptance by or on behalf of the Crown of any purchase money or part thereof in respect of any conditional purchase or of interest shall not be held to operate as a waiver by the Crown of any forfeiture accruing by reason of the breach of any condition annexed by law to the estate or interest of a conditional purchaser.

Forfeiture on default of payments.

85. In default of payment of any instalment after the day when such payment shall have fallen due, the conditional purchase may be declared by the Minister to be forfeited, and upon such declaration being published in the *Gazette*, the conditionally purchased land in respect of which such payment is due shall revert to Her Majesty and become Crown lands for the purposes of this Act. And any payment made in respect of such purchase shall in such case be forfeited to Her Majesty.

Conversion of holding under repealed Act as regards unpaid balance.

86. Any holder of a conditional purchase made before the first day of January, in the year one thousand eight hundred and eighty-five, and not brought under the instalment system, may, by writing addressed to the land agent, apply to convert his holding so far as regards the balance unpaid of his purchase money into a holding under the conditions of payment prescribed by the previous Acts.

Reduction in the rate of interest on repealed Act conditional purchases. See. 5, Conditional Purchasers Relief Act.

87. The rate of interest payable on the balance of purchase money for the time being unpaid upon conditional purchases applied for before the first day of January, in the year one thousand eight hundred and eighty-five, and subject to the provisions of section eight of the Lands Acts Amendment Act, 1875, but not brought under the provisions of section thirty-five of the Crown Lands Act of 1884, shall be reduced to four per centum per annum, such reduction taking effect as from the first day of January, in the year one thousand eight hundred and ninety-six.

Provided always that—

- (a) the aforesaid reduction in the rate of interest shall not operate in respect of any interest which may have accrued before the date hereinbefore mentioned for the taking effect thereof in any case;
- (b) nothing in this section contained shall affect the provisions of section forty-eight of the Crown Lands Act of 1895, or section eighty-four of this Act.

#### Reduction of payments.

Reduction of annual payments on conditional purchases. 60 Vic. No.

88. Subject to the provisions hereinafter contained, the Minister may reduce the rate of one shilling per acre per annum payable in respect of a conditional purchase (whether applied for before or after the

the

the commencement of this Act) to ninepence per acre per annum, or (if the case so admit) to sixpence per acre per annum, and where the rate shall have been reduced under this Act to ninepence per acre per annum, may further reduce the rate to sixpence per acre per annum; and in any such case any annual payments in respect of the said conditional purchase accruing due after the date fixed for the operation of the reduction may be made at the reduced rate as determined by the Minister.

The rate of annual payments in respect of a conditional purchase within a special area (whether the value of such conditional purchase has been determined by appraisalment or not) may, subject to the provisions hereinafter contained, be reduced to three-fourths or one-half of the rate payable previous to the first reduction under this Act: The like within special areas.

Provided always that the Minister shall in every such case so determine the rate that the annual payments, as reduced, will extinguish the balance of purchase money, together with the interest thereon within the period of sixty-six years from the date when the instalment of purchase money first succeeding the deposit became due.

Before any reduction is made by the Minister in respect of any conditional purchase, an application for such reduction shall be made in the prescribed manner by the holder of the conditional purchase, or if the same is held by way of mortgage, then by the person who holds subject to the mortgage, and shall be accompanied by a declaration and fee as prescribed; Conditions precedent to a reduction.

And a reduction shall not be made to any applicant whose home and place of abode is not established on a holding of which the conditional purchase in respect of which the reduction is applied for forms part.

A holding for the purposes of this section shall mean a continuous block, or portions separated by roads or watercourses, and may include land held in fee simple and conditional purchases or conditional leases of the same or different series.

Provided that the conditional purchases (included in such holding) in respect to which the reduction may be made shall not exceed an area of one thousand two hundred and eighty acres in the Eastern Division, or two thousand five hundred and sixty acres in the Central or Western Division:

Provided that nothing herein shall prevent the Minister from making a reduction (subject to such conditions as he may deem expedient) in any case where he is satisfied that the applicant, although not resident as hereinbefore required, holds the land *bonâ fide* for his sole use and benefit, and is not in a position to pay the instalments at the original rate, and is not the holder under any tenure of a greater total area in this Colony than is necessary for the maintenance of a family, such total area not exceeding in any case one thousand two hundred and eighty acres in the Eastern Division, or two thousand five hundred and sixty acres in the Central or Western Divisions:

Provided further that this reduction under the last proviso shall not run with the land, but shall attach only as a concession to the applicant personally.

In any case where the Minister is satisfied, with or without a report from the Local Land Board, that the holder for the time being of the conditional purchase, in respect of which a reduction has been granted (or, if the same is held by way of mortgage, then that the person who holds, subject to the mortgage) has ceased to keep his home and place of abode thereon, or that the declaration accompanying the application for the reduction contains any false statement, the Minister may direct that payments at the rate obtaining previous to any reduction shall be resumed; and in any such case payments at the said rate shall be resumed from and after such date as the Minister may specify for that purpose. Reductions may be cancelled in certain events.

**Suspension of payment of instalments upon Conditional Purchases.**

Suspension of  
payment of  
instalments.  
Sec. 28, Act 1895.

89. The holder of a conditional purchase (whether applied for before or after the commencement of this Act), may, in case of temporary inability to pay the instalments of purchase money thereon as they fall due, apply to the Minister in the prescribed manner that the condition of payment attaching thereto may be suspended; and the Minister may, either with or without reference to the local land board, upon the conditional purchaser paying the prescribed fee to cover expenses incurred by the Crown in consequence of the aforesaid application, suspend the said condition for one year under any one suspension.

During the period of any such suspension, interest on the balance of purchase money, calculated at the rate of four per centum per annum, shall be added to the balance of the purchase money owing, unless the conditional purchaser pays such interest on the date at which an instalment of purchase money would otherwise be payable.

The Minister shall not grant suspension of the condition of payment unless he is satisfied that the holder of the said conditional purchase, or if the same has been transferred by way of mortgage, that the owner thereof subject to such mortgage, is in residence upon the said conditional purchase, or upon some purchase or lease of the same series, and is the holder or owner thereof (as the case may be), *bonâ fide* for his sole use and benefit.

Suspension of the condition of payment shall be deemed to be determined:—

- (a) Upon the conditional purchase being transferred; or
- (b) Upon the holder or owner ceasing to reside upon the series;  
or
- (c) Upon an instalment of the purchase money being paid.

Upon the expiration of the period of suspension, payment of instalments, as prescribed by the Crown Lands Acts, shall be resumed, and no sums paid by way of interest as aforesaid shall be taken to form part of the balance of purchase money.

**Issue of certificate of fulfilment of conditions of a conditional purchase.**

Certificate of Board  
of fulfilment of  
certain conditions.  
Sec. 36, 37, Act  
1884, 22, Act 1889,  
29, Act 1895.

90. In connection with original residential conditional purchases applied for since the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, the local land board shall hold inquiries, after the expiration of five and ten years from the date of the application, whether all conditions applicable to the conditional purchase except payment of balance of instalments have so far been duly complied with, and if the board be satisfied of such compliance it shall issue certificates to that effect; and such certificates shall be designated the first and final certificate respectively.

And like certificates shall be granted by such board with respect to any additional conditional purchase when such board shall be satisfied after like inquiry that all conditions applicable thereto except that of payment of balance of instalments have been duly complied with: Provided that the board may issue a final (and if necessary dispense with the first) certificate before the expiration of ten years from the date of application for an additional conditional purchase if the condition of residence shall have expired before the expiration of such ten years.

In connection with a non-residential conditional purchase a certificate shall be granted by the board upon fulfilment of the condition of improvements, and may be granted before or after the expiration of five years from the date of confirmation of the application relating to the conditional purchase.

Any such certificate shall be transferable subject to the prescribed conditions and shall be *primâ facie* evidence of the title of the holder thereof to the land therein described subject to the fulfilment of the prescribed conditions of payment.

No such certificate shall be issued by the board before the expiration of thirty days from the date of publication in the *Gazette* of notice of its intention to issue the same, within which period any person may lodge in the prescribed form and manner a caveat against such issue, and every such caveat shall be disposed of by the board before issuing such certificate in manner hereinbefore provided for dealing with caveats :

Upon satisfactory proof being adduced that the original certificate issued has been lost or destroyed, the board may after the prescribed notice in the *Gazette* and in the prescribed manner, issue to the person entitled thereto a fresh certificate.

Subject to the issue of the final certificate and upon payment of the balance of instalments, stamp duty, and deed fee, a grant in fee simple of the land shall be issued upon application ; but the grant shall not be issued before the issue of the final certificate.

91. The conditions and obligations imposed by, and all other the provisions relating to, conditional purchasers contained in this Act shall be equally applicable and attach to persons deriving title through or under such conditional purchasers, and to all persons upon whom title shall devolve or be cast by operation of law ; but this section shall be read subject to the provisions contained in sections seventy-two, ninety-two, and one hundred and one of this Act relative to cases of death, lunacy, insolvency, or judgment debt of a conditional purchaser.

Applicability of conditions to representatives of conditional purchasers.  
Sec. 40, Act 1884.

92. If any conditional purchaser shall die or be declared a lunatic, or become an insane patient within the meaning of the Lunacy Act of 1878, or the Acts amending the same, before the fulfilment of the prescribed conditions of residence and fencing his conditional purchase may, together with any conditional lease or right of conditional lease attached thereto (if any), be held by his representatives or their assigns, subject to the fulfilment by them of all unfilled conditions, except the condition of residence (which condition shall, in accordance with subsection (b) of section seventy-two of this Act, be suspended until the land has been transferred or conveyed, and no longer), but in trust for and for the benefit of the persons rightfully entitled.

Cases of death or lunacy of conditional purchaser.  
Sec. 125, Act 1884.

#### Forfeiture for breach of conditions.

93. If the local land board or the land appeal court shall report to the Minister that after due inquiry held by such board the prescribed conditions of residence or fencing have not in the opinion of such board been or are not being duly fulfilled by any conditional purchaser or lessee or his representatives, it shall be lawful for such Minister to declare the conditional purchase or lease to be forfeited, and any payment made in respect of such purchase or lease shall in such case be forfeited to Her Majesty.

Provisions as to forfeiture on non-fulfilment of conditions of fencing and residence.  
Sec. 39, Act 1884.

#### Effect of forfeiture.—When forfeiture takes effect.

94. Every forfeiture of land conditionally purchased, whether under this Act or the previous Acts or any repealed Act, shall be deemed to operate as a forfeiture of all additional conditional purchases held in virtue of such first-mentioned lands as well as of all conditional leases or rights attached to the lands so forfeited, and whenever any land shall be forfeited under this Act such land shall become Crown Land and may be dealt with as such ; but no forfeiture of any purchase or lease under this Act or the previous Acts or any repealed Act shall take effect until the expiration of thirty clear days after notification of such forfeiture in the *Gazette*.

Forfeited lands.  
Sec. 136, Act 1884.

#### Transfers of conditional purchases and conditional leases.

95. An original conditional purchase, together with any additional conditional purchases made in virtue thereof before the first day of June, one thousand eight hundred and ninety-five, may be transferred

Transfers to be in prescribed form.  
Sec. 117, Act 1884.

transferred in the prescribed manner after completion of residence (if any) required: Provided that the original conditional purchase and additional conditional purchases made in virtue thereof shall not be transferred separately until all the conditions applicable to the whole area, except that of payment of balance of purchase money or of instalments thereof, shall have been duly fulfilled.

Sec. 29, Act 1895.

96. An original conditional purchase applied for after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, may be transferred at any time after, and shall not be transferred before the issue of a certificate by the local land board, after the expiration of five years from the date of the application for the purchase that all conditions applicable to the conditional purchase, except payment of balance of instalments, have so far been duly complied with: Provided that an additional conditional purchase made after the first day of June, one thousand eight hundred and ninety-five (or after the commencement of this Act), whether by virtue of an original conditional purchase made before or since that date, shall not be transferred separately from the original or any prior additional conditional purchases until after issue of the first certificate of fulfilment of conditions in connection with the last additional conditional purchase of the series.

Sec. 47, Act 1884.

97. The estate or interest of a non-residential conditional purchaser shall be incapable of being transferred, alienated, mortgaged, encumbered, or pledged until after the issue of the certificate of conformity by the local land board, but subject to the payment of instalments due on the land purchased may devolve or be transferred by operation of law.

Sec. 117, Act 1884.

98. All transfers of conditional purchases shall be notified to the land agent in such form as may be prescribed.

Sec. 118, Act 1884.

99. The holder of a conditional lease may transfer his right of lease in the prescribed manner; but a conditional lease shall not be transferred except with the land in virtue of which it was granted.

Sec. 119, Act 1884.

100. Every transfer of land conditionally purchased, if made by a person not under legal disability, shall, subject to the provisions and conditions of this Act, be deemed to pass to the transferee the whole estate and interest, whether at law or in equity, of the transferor of such land as effectually to all intents and purposes as if a conveyance or assignment under seal of such estate and interest to such transferee had been duly executed by such transferor; but this enactment shall be subject to the conditions following, namely:—

- (I) The equities of all persons claiming any estate or interest in any such land by matter prior to the date of execution of any such transfer shall not be affected by this section, but shall be capable of assertion and enforcement as if this Act had not been passed.
- (II) No transfer shall have the effect hereinbefore expressed, unless such transfer has been made, executed, and lodged in accordance with the regulations.
- (III) No such transfer shall prejudice or affect any conveyance or assignment, or any other assurance under seal relating to land conditionally purchased, if such conveyance, assignment, or assurance shall have been previously registered, as by law required, in the office of the general registry of deeds in Sydney.

Cases of death,  
lunacy, insolvency,  
or judgment debt.  
Sec. 125, Act 1884.

101. Any sale, transfer, or other disposition whatsoever of the estate, right, title, or interest of any conditional purchaser by an official assignee or other lawful authority upon the insolvency of such purchaser, or by a Sheriff or Registrar of a District Court, or any other person by virtue of or under the authority of any writ of execution or other process of any Court, or by the trustees of any deed  
of

of assignment for the benefit of creditors, or by any person under any decree or order of any Court shall pass to a purchaser or to any other person only such estate, right, title, or interest as the conditional purchaser himself was entitled to at the date of sequestration, writ, process, decree, order, or assignment respectively, and subject to all conditions remaining unfulfilled at such date.

102. The effect given to duly registered deeds and instruments affecting lands, hereditaments, and other property by the eleventh section of the Registration Act, seventh Victoria number sixteen, shall be deemed to be annexed and to be incident to all transfers within the meaning of this Act, if duly registered under the said Registration Act, after the prescribed registration or record thereof in the books of the Department of Lands shall have been duly effected. Sec. 120, Act 1884.

#### Subdivision of Conditional Purchases.

103. Any conditional purchase (whether made before or after the commencement of this Act) of not less than one hundred acres may, upon application by the holder at any time after the issue of a certificate of conformity in respect thereof, be subdivided into portions which shall in no case be less than forty acres each. Subdivision of conditional purchases. Sec. 34, Act 1895.

The application shall be accompanied by the prescribed deposit which shall be available for the payment of the costs of any survey and report which may be required; and the applicant shall surrender such land as may be necessary for providing roads of access to the subdivided portions, which land shall thereupon become Crown land free from any claim of the conditional purchaser thereto.

The local land board shall settle the line or lines of subdivision so as to conform to any regulations which may be made in that behalf, and shall determine the portion of the subdivided conditional purchase, to which any conditional lease acquired in virtue of the conditional purchase before the subdivision thereof shall be attached, but so that the conditional lease shall be attached to such portion thereof as the applicant proposes not to transfer.

After subdivision the balance of purchase money payable in respect of any portion of the subdivided conditional purchase may be paid up and a grant thereof issued, as if such portion were a separate conditional purchase.

No portion measured off in any such subdivision as aforesaid shall be capable of being separated by transfer, devolution, or otherwise from the residue of such portions, until a grant of such first-mentioned portion has been issued.

#### Conversion of conditional purchases and leases into homestead selections.

104. Any conditional purchase, together with any conditional lease held by virtue thereof, or any conditional purchases or conditional purchases and conditional leases (whether of the same or different series, and although including more than one block) held by the same person (whether such conditional purchases or leases were applied for wholly or partly before or after the commencement of this Act), may be converted into a homestead selection, subject to the general provisions of this Act in that behalf, and to the following provisions:— Conversion of conditional purchases and leases into homestead selections. Section 6, Conditional Purchasers' Relief Act.

- (a) Application for conversion shall be made to the Minister in the prescribed form, and the conversion shall be subject to the approval of the Minister.
- (b) If the land included in the application is the subject of any mortgage or charge, an application by the mortgagor shall not be valid without the consent in writing of the person having the mortgage or charge.

(c) .

- (e) The applicant shall be at the date of application, and shall have been for at least six months preceding that date in *boná fide* residence, within the meaning of section seventy-one of this Act, on the land included in his application.
- (d) No conditional purchase or conditional lease in respect of which a liability to forfeiture has been incurred shall be converted into a homestead selection while that liability to forfeiture continues.
- (e) It shall be immaterial whether the land was wholly or in part applied for before, or shall be applied for after, the commencement of this Act, or whether in the case of a conditional purchase a certificate of due compliance with the conditions applicable has or has not been issued: Provided that no purchase or lease applied for since the first day of January, one thousand eight hundred and eighty-five, shall be converted into a homestead selection unless or until the application for such purchase or lease has been confirmed.
- (f) An application for conversion shall not be approved unless payment has been made for such improvements on the land as are by any enactment directed to be paid for.
- (g) The fact that the area may exceed one thousand two hundred and eighty acres shall not be a bar to conversion, provided that the area shall not exceed one thousand two hundred and eighty acres in the Eastern or two thousand five hundred and sixty acres in any other Division, unless the Minister (who may refer to the Local Land Board for report) shall be satisfied that a larger area is necessary for the maintenance of a family.
- (h) After approval of conversion, the Governor may issue a homestead grant of the land.
- (i) All moneys paid as interest on land held under conditional purchase, or as rent on land held under conditional lease, shall be taken to have been paid for the occupation or use of the land while the land was held under conditional purchase or conditional lease; but all moneys paid by way of purchase money on land held under conditional purchase, and not applied, as in the next subsection mentioned, towards the payment of interest as aforesaid, shall be credited towards the rent of the homestead selection.
- (j) In respect of any conditional purchase converted into a homestead selection, interest on the balance of purchase money owing on such conditional purchase shall be paid up to the date of the issue of the homestead grant, but may be taken (wholly or in part) out of any moneys paid by way of purchase money as aforesaid.
- (k) Notwithstanding anything in section forty-six of this Act, the Governor shall have power from time to time to waive the condition of residence attaching to any homestead selection converted into such under the provisions of this Act in any case where the land is, at the date of commencement of this Act, held *boná fide* by way of mortgage or security: Provided that no one waiver shall operate over a longer period than one year, and during the period of waiver the annual rent shall be three-and-a-half instead of two-and-a-half per centum per annum of the capital value of the land.
- (l) Upon the forfeiture to the Crown of any land held under a homestead grant issued under the provisions of this section in any case where at the date of application for conversion the land was held by way of mortgage or security, the Governor may, for any reason which he may deem sufficient, grant tenant rights in the improvements on such land to the last holder of the mortgage or security. (r)

(I) The annual rent of the homestead selection from the date of issue of the grant shall be two and one-half per centum of the capital value of the homestead selection.

Rent of homestead selections.  
Sec. 7, Conditional Purchasers' Relief Act.

(II) Such capital value for the first ten years period, which shall commence from the date of issue of the grant shall be taken to be—

- (a) in the case of a conditional purchase (whether a residential or a non-residential conditional purchase not being within a special area), one pound per acre ;
- (b) in the case of a conditional purchase within a special area, at the price of the conditional purchase ;
- (c) in the case of a conditional lease, the sum represented by capitalising the annual rent of the lease on a two-and-a-half per centum basis ;

or, if the applicant make request in his application for an appraisalment, or at the direction of the Minister, the capital value of the whole land included in the application shall be determined by appraisalment ; and any such appraisalment shall, so far as procedure is concerned, be subject to the provisions of section twenty-five of this Act :

Provided that no appraisalment shall be made of land which has been appraised within the previous two years.

#### Conversion of Conditional Purchases into Mining Conditional Purchases.

105. The right of any holder of a conditional purchase made under sections thirteen, twenty-one, or twenty-two of the "Crown Lands Alienation Act of 1861" to convert such purchase into a conditional purchase for mining purposes, in accordance with any regulations in force for the time being made under the said Act, may be exercised subject to the terms and conditions contained in such regulations as if this Act or the previous Acts had not been passed.

Conversion of certain conditional purchases into mining conditional purchases.  
Sec. 7, Act 1884.

And all regulations made prior to the commencement of this Act, purporting to authorise such conversion, shall be deemed to have had the force of law, and any conversion effected or sanctioned in pursuance, or purporting to be in pursuance thereof, or any conversion approved or permitted by any Secretary for Lands or other person on his behalf, shall be deemed to have been and to be valid.

The Act 51 Vic. No. 29.

#### Improvement Purchases in gold-field.

106. Upon application (accompanied by the prescribed deposit and survey fee) by the owner of improvements in authorised occupation by residence under any Act in force for the regulation of mining on Crown lands of land within a proclaimed gold-field, the Governor may sell and grant such land to such owner without competition, at a price to be fixed by the local land board not being less than at the rate of eight pounds per acre for town lands, or two pounds ten shillings per acre for suburban and other lands, or two pounds ten shillings for any area less than one acre:

Improvement purchases in gold-fields.  
Sec. 46, Act 1884 ; and 11, Act 1889.

Provided that such sales be made in accordance with the general subdivision of the land, and embrace only allotments or portions on which the improvements may be, and that the areas to be sold shall not exceed—  
one quarter of an acre for town lands, and  
one acre for suburban or other lands :

Such price shall be exclusive of the value of the improvements.

For the purposes of this section improvements of value equal to the respective minimum rates hereinbefore provided for shall be sufficient,

No person shall be permitted to make a subsequent purchase within three miles of a prior purchase by him.

Any sums which shall be payable to the Crown in connection with any improvement purchase shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day; but nothing in this section shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest, as aforesaid.

Sec. 5, of 55 Vic.  
No. 1.

Any forfeiture of an improvement purchase shall be notified by the Minister in the *Gazette*, and shall take effect on the expiration of thirty clear days after the date of notification of forfeiture.

#### Auction sales.

Sale by auction of  
lands.

Sees. 61, 62, Act  
1884; Sec. 44, Act  
1889.

107. Crown lands, not exceeding in the aggregate for the whole Colony two hundred thousand acres in any one year, may be sold by public auction, at any place which may appear to the Minister to be most convenient for the purpose (whether such place be within or outside the land district in which the lands to be sold are situate), and at such times as the Minister shall direct and notify in the *Gazette*, not less than two months before the day of sale, and the upset prices per acre shall not be lower than—

For town lands eight pounds.

Suburban lands two pounds ten shillings.

Other lands one pound five shillings.

But such upset prices may be respectively fixed at any higher amounts.

The value of any improvements (within the meaning of section one hundred and seventy-nine of this Act) shall be added thereto, and when not the property of the Crown shall be refunded to the owner, or if it should appear that such improvements were made under misapprehension, or for other sufficient reason, the Governor (or the Minister, after report by the Land Board), may remit or refund the value thereof to the improver or his representatives.

Town lands shall not be sold under this section in areas exceeding one-half acre.

Suburban lands shall not be sold in areas exceeding twenty acres.

Country lands shall not be sold in areas exceeding six hundred and forty acres.

A deposit of not less than one-fourth of the purchase money shall be paid by the purchaser at the time of sale, and in case the purchaser fails to pay the deposit the land may be again offered by the land agent, who shall not accept any bid by the person so failing to pay.

Auction Sales  
Balances Act 1887.  
50 Vic. No. 39.

The balance of purchase money shall be paid within three months after the date of sale, provided that the Minister may make special terms of payment on auction sales of

Town lands,

Suburban lands, and

Lands which may have been or may hereafter be subdivided into areas not exceeding twenty acres:

Provided that in every case a deposit of one fourth of the purchase money shall be paid at the time of sale, and the time allowed for any deferred payments shall in no case exceed five years from the day of sale.

And that all such deferred payments shall bear interest at the rate of five pounds per centum per annum.

After

### After Auction Sales, &c.

108. The Governor may grant any town or suburban Crown lands or Crown lands within population areas which have been offered for sale at auction and not sold (whether such offering for sale was before or after the commencement of this Act) at the *last* upset price thereof to any person who shall duly apply for the same.

Provision as to sales after auction.  
Sec. 56, Act 1895.

The applicant shall, with his application, lodge a deposit of one fourth of the said upset price, and if the application be approved by the Minister shall pay the balance of the said price, subject to such terms and conditions as were notified in the *Gazette* in connection with the aforesaid offering at auction.

### Auction sales or after auction sales may be annulled.

109. On default of payment of any instalment for thirty days after the day when the same shall have fallen due, or on default of payment of any balance of purchase money, when the same shall have fallen due, in connection with any land sold at or after auction, the Minister may, by notice in the *Gazette*, annul the sale.

Auction sales, or after auction sales, may in certain cases be annulled.

Sec. 62, Act 1884;  
Auction Sales  
Balances Act; 56 Act  
1895; Act 55 Vic.  
No. 1.

On the expiration of thirty clear days after the date of notice in the *Gazette* as aforesaid, the land, the subject of such sale, shall be forfeited to the Crown and become Crown lands within the meaning and for the purposes of this Act, and all payments made in respect of such land be forfeited to Her Majesty :

Any sums which shall become payable to the Crown shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day.

Sec. 48, Act 1895.

Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums together with interest as aforesaid.

### Special sales without competition. Rescission of reservation.

110. The Governor may authorise the rescission of any reservation of water frontage on the sea-coast, or to any bay, inlet, harbour, or navigable river, or of land adjoining such frontage contained in any Crown grant either wholly or to such extent and subject to such conditions and restrictions as he shall think fit.

Rescission of reservation of water frontage.  
Secs. 63, 65, and 68,  
Act 1884.

The land the subject of such rescission may be granted to the owner of the land contained in such Crown grant on payment in the prescribed manner of the fair value thereof to be determined in accordance with section twenty-five of this Act, being not less than for—town lands, eight pounds per acre; suburban lands, two pounds ten shillings per acre; other lands, one pound five shillings per acre :

Provided that nothing in this section shall empower the Governor to grant any land used as a public thoroughfare, or any land set apart and dedicated for any public purpose :

Provided also that notice for four consecutive weeks shall be given in the *Gazette* and some local newspaper if any before the issuing of such grant, and that the applicant shall pay all costs of survey, reports, notification, and deed fee incurred in dealing with any application under this section.

At any time before the expiration of the four weeks referred to, any person feeling aggrieved may in the prescribed manner lodge a caveat with the local land board setting forth objections against the authorisation of any such rescission as aforesaid, and shall at the time

of lodging the same deposit therewith the prescribed sum, and all such applications shall be dealt with as provided in section sixty-three of this Act in reference to other caveats.

On the approval of any application to purchase made under this section such approval shall be notified in the *Gazette*. And if within three months after such notification the applicant shall fail to pay the full amount of purchase money, together with the deed fee and all costs as hereinbefore provided for, the right to purchase such land may be treated by the Minister as having lapsed, and the land itself may be sold by auction, or reserved, or otherwise disposed of pursuant to the provisions of this Act.

Any sums which shall be payable to the Crown shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing day by day, but nothing in this provision shall be construed so as to prevent or compel the enforcement of any forfeiture or the acceptance of any overdue sums together with interest as aforesaid.

### Reclamations.

Reclamation of lands by proprietor of adjoining lands. Sec. 64, 65, and 68, Act 1884, and 54, Act 1895.

111. The Governor may on the application of any proprietor in fee simple of land having frontage to the sea, or to any tidal water, or to any lake authorise such proprietor to reclaim any land adjoining thereto and lying beyond or below high-water mark :

Provided always that no such reclamation shall be authorised which may interrupt or interfere with navigation :

Provided also that notice of the application to reclaim such land shall be published in the *Gazette* and some local newspaper, if any, for four consecutive weeks before such authority for reclamation shall be given.

And that the applicant shall pay all costs of survey, reports, notification, and deed fee incurred in dealing with his application.

At any time before the expiration of the four weeks aforesaid, any person feeling aggrieved may in the prescribed manner lodge a caveat with the local land board setting forth objections against the authorisation of any such reclamation as aforesaid, and shall at the time of lodging the same deposit therewith the prescribed sum, and all such applications shall be dealt with as provided in section sixty-three of this Act in reference to other caveats.

In any case where after the commencement of this Act the Governor shall authorise the reclamation of any land (whether application for such reclamation has been made under the previous Acts or shall be made under this Act) the local land board shall appraise—

(a) the amount by which the value of the whole holding will be enhanced, by reason of the land to be reclaimed having been reclaimed and being held and enjoyed with the land held in fee simple, and

(b) the amount of the estimated cost of the reclamation ; and the excess (if any) of such first-named amount over such last-mentioned amount shall, within three months after the notice in the *Gazette* calling for the same, be paid by the applicant to the Colonial Treasurer; and in default of such payment the authority to reclaim may be declared to have lapsed, and the same shall thereupon become void and of no effect.

The applicant shall, within such period as may be allowed for the purpose, complete the reclamation to the satisfaction of the Minister, and upon the due completion thereof a grant of the land so reclaimed shall be issued.

If the reclamation be not completed to the satisfaction of the Minister, or be not so completed within the aforesaid period, the Minister

Minister may, by notification in the *Gazette*, declare the right to purchase the land, together with all moneys paid thereon to be forfeited, and the same shall become forfeit accordingly; and upon such forfeiture the said authority to reclaim shall become void and of no effect, and any land which may have previously been reclaimed under such authority shall revert to the Crown, freed and discharged from any right or claim of the applicant or any other person in or to the same.

Any sums which shall become payable to the Crown shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day; but nothing in this provision contained shall be construed so as to prevent or to compel the enforcement of any forfeiture or the acceptance of any overdue sums, together with interest as aforesaid.

The Governor in giving authority to reclaim (in pursuance of any application whether made under the previous Acts or under this Act) may give the same subject to such terms and conditions as may appear desirable in the public interest, and in particular to the conditions—

- (a) that the reclaimed lands or any portions thereof may be resumed for public purposes by notification in the *Gazette*, and that upon resumption the lands shall vest in the Crown, freed and discharged from all private rights, interests, titles, and estates in and to the same; and
- (b) that no other compensation shall be payable than the value of any improvements upon the lands resumed, effected with the written approval of the Minister first had and obtained, together with a repayment of the purchase money, and of the cost of reclamation, or if the land resumed be a portion only of the land reclaimed, of a fair proportion of such purchase money and cost as aforesaid;

and the grant of any land to be reclaimed under any such authority as aforesaid shall embody the terms and conditions subject to which the authority was given, or such of them as require to be so embodied.

#### Lands insufficient in area for Conditional Purchase.

112. Crown lands to which no way of access is attainable, or which are insufficient in area for conditional sale, or are situated between granted land and a street or road which forms or should form the way of approach to such granted land, or

are encroached on by buildings erected on granted land

may be sold after recommendation by the Minister or the local land board as the case may be to the proprietor or proprietors in fee simple of adjacent lands at a price to be determined in accordance with section twenty-five of this Act, being not less than—for town lands, eight pounds per acre; for suburban lands, two pounds ten shillings per acre; for other lands, one pound five shillings per acre. Purchasers under this section shall, in addition to the price of the land applied for pay the cost of survey report and deed fee incurred in dealing with such applications.

On the approval of any application to purchase made under this section such approval shall be notified in the *Gazette*. And if within three months after such notification the applicant shall fail to pay the full amount of purchase money, together with the deed fee and all costs demanded for survey and reports incurred in connection with the land applied for, the right to purchase such land may be treated by the Minister as having lapsed, and the land itself may be sold by auction, or reserved, or otherwise disposed of pursuant to the provisions of this Act.

Sales in special cases.  
Secs. 66 and 68, Act  
1884.

Any

Any sums which shall become payable to the Crown shall, from and after the due date for the payment thereof, bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day, but nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest as aforesaid.

#### Exchanges and Surrenders.

Exchange and  
surrender.

Sec. 46, Act 1889;  
47, Act 1895.

113. It shall be lawful for the Governor, on behalf of the Crown, with the consent of the owner, to exchange any Crown lands for any other lands of which a grant in fee-simple has been issued or may be called for, and to accept such surrenders and issue such grants as may be necessary for effectuating an exchange.

The surrenderor shall pay all costs and fees incurred in respect of the surrender and exchange of such land:

Provided that, if the land applied for by way of exchange is measured land, and is, in the aggregate, less than forty acres in excess of the land surrendered, such excess area may be granted to the lessee at a price to be determined in accordance with section twenty-five of this Act.

It shall be lawful for the Governor to accept a surrender of lands, in respect of which a balance of purchase money remains unpaid, if upon payment of such balance, with or without interest thereon, the right to a grant of the said lands in fee-simple will become absolute, and to grant Crown lands in exchange therefor; but in any such case the acceptance of the surrender shall not be taken to affect the aforesaid balance of purchase money, or any right, remedy, or liability in respect thereof, and a grant of the Crown lands allotted in exchange shall not be issued until the aforesaid balance of purchase money, together with interest, has been duly paid.

When any lands have been surrendered as aforesaid, and Crown lands have been allotted in exchange therefor, such provisions of such Act in respect of the payment of the balance of purchase money, together with interest, and of forfeiture upon default as applied to the surrendered lands, shall be deemed to apply to the lands so allotted in the same way as if the lands so allotted were the lands originally purchased.

The Governor may reserve from sale and lease any lands included in an application or proposal for an exchange.

The local land board shall inquire into and report upon any application or proposal referred to such board by the Minister, and the values of any lands included therein shall be determined in accordance with the provisions of section twenty-five of this Act, before the exchange is carried out.

In any such exchange the lands exchanged shall as nearly as practicable be of equal value, or if the Crown lands to be granted be of greater value the difference of value shall be paid before any grant is issued.

A surrender of lands to the Crown shall be evidenced by an instrument in the prescribed form, which shall, without enrolment in the Supreme Court, revert the surrendered lands in Her Majesty, Her heirs and successors according to law; and an entry of any such instrument shall be made in the register under the Real Property Act in all cases where it may be necessary.

Lands so surrendered shall become Crown lands for the purposes of this Act, but shall not be available for the purposes of any application until a notification to that effect has been published in the *Gazette*. And such surrendered lands may by notice in the *Gazette* be added to any adjoining lease or license or conditional purchase or homestead selection (notwithstanding that such lease, license, purchase, or selection may or may not already contain the  
maximum

maximum area prescribed by law), subject to such conditions as to payment of purchase money or rental as may be determined by the Governor and consented to by the lessee, licensee, purchaser, or selector.

Any improvements on the surrendered land shall, notwithstanding the surrender, remain the property of the surrenderor, subject to the provisions of section one hundred and seventy-nine of this Act, but it shall be lawful for the Governor, in any case in which the public interest seems so to demand, to require that any surrender shall be a surrender of the land together with any improvements thereon; and upon the surrenderor consenting in writing thereto, the said improvements shall, upon the acceptance of the surrender, become the property of the Crown.

Any application or proposal for exchange of land lawfully made before the first day of June, one thousand eight hundred and ninety-five, and not refused on its merits or withdrawn, may be completed, subject to all the conditions agreed upon under the original application or proposal, notwithstanding the expiration of the pastoral lease, in virtue of which such application was made.

Every proposal for surrender and exchange shall be notified in the *Gazette* and in a local newspaper.

114. The Governor may acquire, for the purpose of access or approaches to any natural water, tank, or dam, or for a road, or travelling stock route, or camping reserve, or watering place, or for any like purpose, any land of any tenure, either by way of purchase or by granting in fee-simple, or for any less estate, any Crown land of equal value in exchange for such land. And any land so acquired shall thereupon be deemed to be reserved from sale and lease, and may, on revocation of the reserve, be dealt with in accordance with this Act.

#### Volunteer land order selections.

115. Where in any Act relating to the Volunteer Force reference is made to the thirteenth section of the "Crown Lands Alienation Act of 1861" such reference shall, in respect to all claims to free grants of land unsatisfied at the commencement of this Act, be deemed and taken to refer to Crown lands open to conditional sale under this Act.

Volunteer land order selections.  
Sec. 22, Act 1884.

#### Authority to search for gold in alienated land within gold-fields.

116. Any Crown land within a proclaimed gold-field which, after the twenty-fifth day of May, one thousand eight hundred and eighty, has been sold conditionally, or by auction, or in virtue of improvements, or otherwise, as well as any such land alienated under this Act, shall be subject to the following condition, namely:—Any person specially authorised in the prescribed manner by the Minister shall be at liberty to dig and search for gold within such land, and should it be found to be auriferous the Governor may cancel, wholly or in part, the sale of such land; and upon the notification thereof in the *Gazette*, the proprietor shall be entitled to compensation for the value of the land as if it were not auriferous, and of the improvements thereon as appraised by the local board, and such land shall thereupon become Crown land within the meaning of the Mining Act, 1874, or any Act amending the same, and shall be reserved from sale until such reservation be revoked by the Governor: Provided that the person so specially authorised by the Minister to dig and search for gold shall, on the appearance of such notification in the *Gazette*, be deemed to be the first applicant for a claim or lease of such land, or a portion thereof; and the date of such application shall be reckoned from the day of publication of such notification in the *Gazette*, but in all other respects as to area, labour conditions, and other matters, such application shall be dealt with subject to the regulations in force for the time being authorising the occupation of Crown lands for gold-mining purposes.

Crown land within proclaimed gold-field.  
Sec. 45, Act 1884.

## CHAPTER II.

## LEASES AND LICENSES.

## General provisions as to Leases, &amp;c.

General provisions affecting lessees and licensees.  
Sec. 98, Act 1884.

117. The following provisions shall govern all leases and licenses and the holders of such leases or licenses, namely:—

- (I) No lease or license other than special lease shall confer any right to remove material from the leased land, or to sublet such land for other than grazing purposes, or to prevent the entry and removal of material by authorised persons.
- (II) Lessees and licensees may take from land under lease or license to them, not comprised within a timber or forest reserve, such timber and other material for building and other purposes upon the land under lease or license as may be required by them as tenants or licensees respectively.
- (III) No lessee or licensee shall prevent other persons duly authorised in that behalf either from cutting or removing timber or material for building or other purposes, or from searching for any mineral within the land under lease or license: Provided that nothing in this subsection shall apply to a conditional lease as regards the taking or removal of timber or other material for building purposes.

Sufficiency of general descriptions.  
Sec. 142, Act 1884.

118. For the purposes of any lease or license granted under this Act except a conditional or settlement lease it shall be sufficient if the land and the boundaries thereof be defined by a general description and no such lease or license shall be void by reason of the imperfection of any such description if the land therein described is defined with reasonable certainty.

Certification of boundaries.  
Sec. 144, Act 1884.

119. It shall be lawful for any authorised person who may have marked on the ground any boundary of a leasehold that has been accepted by the Minister, to certify by signature to any plan representing such boundary, that such representation is accurate, and such plan shall thereupon be *prima facie* evidence of such boundary.

## Liability to Forfeiture.

Liability of lessees on non-payment of rent.  
Sec. 96 and 136, Act 1884.

120. Every lease shall be liable to forfeiture if any rent be not paid within the prescribed period or upon breach of any condition annexed to such lease; but no forfeiture of any lease (other than an annual lease or occupation license) under this Act or the previous Acts or any repealed Act shall take effect until the expiration of thirty clear days after notification of such forfeiture in the *Gazette*. And whenever any land shall be forfeited under this Act, such land shall become Crown land, and may be dealt with as such.

## Overdue Rents.

Sec. 48, Act 1895.  
Sec. 126, Act 1884.

121. Any sums which shall hereafter become payable to the Crown, whether as rent or license fee or interest, shall from and after the due date for the payment thereof bear interest at the rate of ten per centum per annum, and such interest shall be considered as accruing due day by day. Nothing in this section contained shall be construed so as to prevent or to compel the enforcement of any forfeiture, or the acceptance of any overdue sums, together with interest as aforesaid. And the acceptance by or on behalf of the Crown of any interest or rent or other payment under any lease or license shall not be held to operate hereafter as a waiver by the Crown of any forfeiture accruing by reason of the breach of any condition annexed by law to the estate or interest of a lessee or licensee.

Acceptance of interest or other payment no waiver.

## Withdrawals.

### Withdrawals.

122. The Governor may withdraw from any lease or license any land required for the purposes of settlement for towns and villages, or as sites for towns and villages, or for any public purpose, and upon publication in the *Gazette* of withdrawal from any pastoral lease for towns and villages the lessee shall be entitled to such compensation, for the unexpired term of such lease, and for improvements lawfully made by such lessee upon the land so withdrawn from lease as may be determined by appraisalment.

Sec. 108 and subsec. 7, Act 1884.

### Reserve from Sale not a Withdrawal.

123. Crown lands within any leasehold now or hereafter temporarily reserved from sale under the provisions of the previous Acts or any repealed Act, or this Act shall not be deemed to have been or to be withdrawn thereby from such leasehold in respect of the ordinary use of such lands for the purposes of the lease, or to be exempted from reletting on the termination of the existing lease.

Reserves from sale not to take the land out of lease.  
Sec. 108, Act, 1884.

### Ringbarking by Lessees.

124. Every lessee or licensee of Crown lands desiring to ringbark trees upon his leasehold land or land held under license shall obtain a permission to do so from the local land board, and in his application in the prescribed form addressed to the land agent shall describe the boundaries and area of the land upon which he proposes to ringbark.

Permission ringbark.  
Secs. 93, 94, 95, Act 1884.

In regard to any land not comprised within a timber or forest reserve the board may, in their discretion, refuse or grant permission for the same, after such inquiry and upon such conditions as to them may seem necessary.

Any lessee or licensee who shall without such permission ringbark trees on a leasehold, or shall cause or knowingly permit or suffer the same to be done shall, on conviction before any two justices of the peace at the Court of Petty Sessions nearest to such leasehold, be liable for the first offence to a penalty of not less than *one* shilling nor more than *ten* shillings for each tree so ringbarked, and for a second or subsequent offence be liable to a like penalty and to the forfeiture of his lease.

Penalty for unauthorised ringbarking by lessee.

Whosoever shall ringbark trees or strip bark from trees on Crown lands without holding such permission, or in violation of any condition thereof, or without a written authority under the hand of the lessee or licensee of such Crown lands shall, on conviction as aforesaid, be liable to a penalty for each tree ringbarked or stripped of not less than *one* shilling nor more than *ten* shillings.

Unauthorised ringbarking by persons other than lessee.

Every information for an offence under this section shall be laid by some officer of police or person specially authorised by the Minister. And if at the hearing of such information any question shall arise whether any person holds a valid permission to ringbark the burden of proof thereof shall be on the person who claims to hold such permission.

Unauthorised ringbarking—proceedings before justices.

### Promise of lease.

125. In any action or suit brought to recover possession or to recover damages for trespass upon or otherwise in relation to any Crown Lands of which no lease from the Crown shall have issued, it shall be lawful for any party thereto to plead and put in evidence any promise, engagement, or contract from or with the Crown, or its agents,

Right of lease may be given in evidence in actions.  
Sec. 128, Act 1884.

agents, lawfully authorised in that behalf, and such promise, engagement, or contract shall as between the parties, and subject to the provisions of this Act have the same effect as if a lease from the Crown of such lands had been duly issued in pursuance of such promise, engagement, or contract to the party entitled thereunder, and any receipt by or on behalf of the Colonial Treasurer for rent of such lands for the year then current shall, according to the tenor thereof, be *prima facie* evidence that the party therein named is the holder of the lease or promise of lease thereof for the time being.

#### Annual Leases for Pastoral purposes.

Annual leases for pastoral purposes. Sec. 85, Act 1884, 34 and 38, Act 1899, 49, Act 1895.

123. The Governor may lease by auction, or tender, or by virtue of an application made in the prescribed manner for grazing purposes, in areas not exceeding one thousand nine hundred and twenty acres, any Crown lands not held under any lease or license, or not reserved from lease generally, or not reserved from annual lease specifically, or not reserved from license. Such leases shall be subject to the provisions following:—

- (I) Every such lease shall be for the then current year, and shall expire on the thirty-first day of December.
- (II) The right to occupy the land shall commence:—
  - In the case of a lease bought at auction, from the date of sale.
  - In the case of a lease for which tenders shall have been invited, from the date of notification in the *Gazette* of the acceptance of the tender.
  - In the case of a lease the subject of an application, from the date on which the Land Board (which Board shall have the power of modifying the land applied for) shall allot land in satisfaction of such application.
- (III) Such leases may be renewed subject to the payment of the annual rent. The Minister may at any time, upon giving three months' notice prior to the expiration of any year for which rent has been paid in advance, increase such rent by any sum not exceeding twenty-five per cent.
- (IV) The rent of all renewed leases shall be paid on or before the thirty-first day of December in each year for the ensuing year, and in the prescribed manner and time, to the Colonial Treasurer or land agent. And if such rent be not paid the lease will be liable to forfeiture and sale at auction or by tender.
- (V) Any lease offered at auction and bid for, but the price of which shall not be forthwith paid, may be again offered for sale at auction.
- (VI) A lease of any land which may have been offered for sale at auction and not bid for may be obtained on application to the land agent of the district and payment of the upset price, or may be again submitted to auction, unless the land shall have been previously otherwise dealt with.
- (VII) Crown lands may be put up to lease at auction at the lands office of the district or let by tender, either on application or otherwise, but no such sale of leases or letting by tender shall take place without one month's notice thereof having been given in the *Gazette*.
- (VIII) A lease under this section shall not exempt the land leased from sale or homestead selection or special or conditional or other lease.

No application for an annual lease made after any of the land applied for shall have been notified in the *Gazette* for lease by auction or tender shall prevent the land from being let as so notified.

Any

Any application under this section for an annual lease may be refused by the Minister in any case where the granting of such lease appears to him to be contrary to the public or general interest. Amendment of the law as to annual leases.

The rent for an annual lease shall commence from the first day of the month succeeding the date of the notification in the *Gazette*.

Of the Minister's approval thereof, or.

Acceptance of the tender for the same, or.

In the case of an annual lease sold at auction, from the first day of the month succeeding the date of such sale.

The first year of the lease shall expire on the thirty-first day of December then succeeding; and the rent for the first year shall be proportionate to the number of months between the commencement of the lease and the said thirty-first day of December.

The Minister may at any time cancel any annual lease by giving not less than three months' notice in the *Gazette* or otherwise of his intention to do so, such notice to terminate at the end of the then current year. Annual leases.

#### Trespass and Impounding on Annual Leases.

127. No person occupying land under annual lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; Trespass by stock on unfenced lands. Sec. 55, Act 1895.

or

(b) impound any stock trespassing upon the said land— unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock :

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

#### Artesian Well Leases.

128. Upon application in the prescribed manner (accompanied by a deposit of ten pounds to cover the expenses in dealing therewith) for permission to bore and search for water in any land in the Western Division, held by the applicant under occupation license or annual lease, the Minister may, by notice in the *Gazette*, set apart an area not exceeding ten thousand two hundred and forty acres in one block on the resumed area. Protection of artesian wells. Sec. 45, Act 1889.

Upon publication of such notice the land therein described shall be held to be temporarily exempt from sale or lease under this Act to other than the applicant, but shall not be withdrawn from the occupation license or annual lease.

Within sixty days after such notice the applicant shall commence to bore and search for water on such land, and shall forward to the Chairman of the land board by registered letter notice verified by statutory declaration of his having done so.

The work of boring and searching as aforesaid shall be continued until water be found, or until it appear to the Minister that the work cannot be pursued with reasonable hope of success or profit.

Within fourteen days after the discovery of water, the licensee or lessee shall, by registered letter, notify the fact to the Chairman of the local land board, and the said licensee or lessee shall, on approval by the Governor, become entitled to a lease for such a term as may be determined, not exceeding the unexpired term of the current pastoral lease of the leasehold area of the pastoral holding.

The rental of such area shall be at the rate then payable upon the land held under such occupation license or annual lease.

If the applicant shall fail to forward any prescribed notice, or If the Minister shall consider that the application has not been made *boná fide*, or

That reasonable efforts have not been or are not being made to discover water, or

That any water discovered is not sufficiently permanent, or

That the quantity of water is not sufficiently great,

he may withdraw the notice aforesaid, or the Governor may cancel the lease, and upon publication in the *Gazette* of notice of such withdrawal, or cancellation, the temporary exemption from sale or lease of such land, and the lease thereof, shall be held to be annulled.

Not more than one such area as aforesaid shall be leased under the provision of this section out of each sixty-four thousand acres of an occupation license, and not more than three such areas shall be leased hereunder in respect of one and the same occupation license.

Upon the expiration by effluxion of time of the term of any artesian well lease the last holder of the lease shall have tenant-right as the same is hereinafter defined in improvements upon the lands theretofore held under the lease.

Tenant-right.  
Sec. 7, Act 1895.

#### Homestead Leases.

Homestead leases in the Western Division Secs. 82, 84, 90, 118, 123, and 124, Act 1884, secs. 12, 30, 34, and 47, Act 1889, sec. 7, 4C, and 41, Act 1895.

129. In the Western Division the Governor may grant homestead leases within resumed areas or vacant lands subject to the provisions following:—

The following classes of lands shall be exempt from homestead lease:—

- (a) Lands within proclaimed cities, towns, and villages, and the defined limits of suburban lands to be attached thereto.
- (b) Lands under lease or lawful occupation for mining purposes.
- (c) Lands dedicated to any public purpose.
- (d) Lands temporarily reserved from sale for commonage.
- (e) Lands reserved from lease under any repealed Act until the reservation thereof shall have been revoked under the provisions of this Act.
- (f) Lands reserved from lease generally or reserved specifically from homestead lease.

What leases not to be held in combination.

130. No holder of a pastoral lease shall during the currency thereof hold or cause to be held on his behalf or in his interest a homestead lease, nor shall the holder of a homestead lease during the currency thereof hold or cause to be held on his behalf or in his interest a pastoral lease, nor shall any person hold or cause to be held on his behalf or in his interest more than one homestead lease, under penalty in every such case of forfeiture of every lease held by him or on his behalf or in his interest and any rent paid thereon. And for the purpose of this section every owner or part owner of any lease shall be deemed to be a holder thereof: Provided that any *boná fide* mortgagee for value may, on application to the Minister, be registered as the holder of more than one homestead lease, subject to such regulations as may be made in that behalf, although such mortgagee is the registered holder of one or more pastoral leases.

#### Applications for homestead leases.

131. Applications for homestead leases may be made in the prescribed manner upon any land office day, and with such application there shall be lodged a sum equal to one penny per acre for the area proposed to be leased.

*Area*

*Area of homestead leases.*

132. The area which may be granted and held under a homestead lease shall not, except as provided in section one hundred and eighty-two hereof, exceed ten thousand two hundred and forty acres, and shall not, subject to the provisions hereinafter contained, be less than two thousand five hundred and sixty acres.

Area which may be held under homestead lease.

Any applicant for or holder of a homestead lease, whether applied for before or after the commencement of this Act, may, in virtue thereof, obtain additional homestead leases adjoining the land comprised in the original or any prior additional homestead lease, provided that the total area of such original and additional leases shall not exceed ten thousand two hundred and forty acres.

An application for an additional homestead lease shall not be received for less than two thousand five hundred and sixty acres, unless such an area is not available, or cannot be taken up without causing the aforesaid maximum area of ten thousand two hundred and forty acres to be exceeded; but in no case, shall an application for an additional homestead lease be received for an area less than six hundred and forty acres.

No additional homestead lease shall be granted in virtue of an original homestead lease which, if applied for before the commencement of this Act, has not been granted subject to or brought under the provisions of the Crown Lands Act of 1889.

Where more than one applicant shall apply for the same land, or for any portion thereof, on the same day, the right of lease shall be determined in the manner prescribed by section forty of this Act.

*Term of homestead lease.*

133. Every homestead lease granted before or after the commencement of this Act shall have a term of twenty-eight years, and the term shall be divided for the purpose of the appraisalment of the rate of rent into four periods each of seven years, and a separate appraisalment shall be made of the rate of rent payable for each of such periods, if the same be a period commencing after the first day of June, in the year one thousand eight hundred and ninety-five or after the commencement of this Act.

Term of lease.

Provided always that—

- (a) In the case of a homestead lease granted before the first day of December, in the year one thousand eight hundred and eighty-nine, and not brought under the provisions of section twenty-nine of the Crown Lands Act of 1889, the rate of rent from time to time payable under the Crown Lands Act of 1884 shall be paid until the expiration of such seven-year period of the term of the lease as may have been current on the first day of June, in the year one thousand eight hundred and ninety-five.
- (b) Nothing contained in this section shall prevent or affect the reappraisalment of the rent of a homestead lease in pursuance of section nine of the "Crown Lands Act of 1895," or the coming into operation of any rent so reappraised.

*Effect of homestead lease application, &c.*

134. The title to any homestead lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid, and any such application shall withdraw such of the lands therein described as may be available for the purpose from any annual lease or occupation license under which they may be held.

Applications for conditional purchase, conditional lease, or homestead lease.

The

The land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

Any application for a homestead lease may, after report by the land board, be refused or the position and boundaries of the land may be altered, varied, or modified.

If land be allotted in satisfaction thereof of a less area than, or in a different position from, that applied for, such of the land described as may not be allotted, or if the application be withdrawn, the whole of the lands described therein, shall revert to the lease or license on notification in the *Gazette* of the approval of such lease, or of the acceptance of the applicant's refusal thereof.

Any allotted lands which are not described in the original application shall, for the purposes of withdrawal from lease or license, be deemed to have been applied for on the date of notification in the *Gazette* of approval of the lease.

#### *Non-acceptance of homestead lease.*

Non-acceptance of lease.

135. Should the Minister recommend the issue of a lease in a form other than as applied for, the applicant may, within ninety days after the notification in the *Gazette* of the approval of the issue of a lease, notify in writing to the local land board his intention of not accepting it, and he shall thereupon be entitled to a refund of the deposit paid; but in default of any notice of such intention, or of occupation within the time specified for either purpose, the deposit shall be forfeited.

Notice by an applicant of his non-acceptance of any homestead lease applied for before or after the commencement of this Act shall not entitle him to a refund of deposit, unless, in the opinion of the Minister, the land approved to be leased differs materially in form or situation from that applied for.

If the applicant shall have occupied or made use of any land by virtue of his application, the Minister may refuse to accept any such notice of non-acceptance.

The acceptance by the Minister of any such notice of non-acceptance shall take effect on notification in the *Gazette*.

In the event of the non-acceptance of the lease, the land shall revert to the holding from which it was taken.

#### *Survey of homestead lease.*

Survey of lease.

136. The Minister may direct a survey of the boundaries of any homestead lease, and upon such survey being made may demand from the lessee towards defraying the cost of such survey, payment of any sum not exceeding twenty shillings for each linear mile of the boundary so surveyed, and in default of payment of such sum within sixty days after notification of the demand in the *Gazette*, the lease shall be liable to forfeiture.

#### *Trespass and impounding on homestead lease.*

Sec. 55, Act 1865.

137. No person occupying land under a homestead lease, or in virtue of an application for a homestead lease shall—

(a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

(b) impound any stock trespassing upon the said land—  
unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock:

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

*Conditions*

*Conditions of homestead leases.*

138. Every applicant for a homestead lease shall, after the survey of the land subject to the provisions of section one hundred and thirty-six, and to the payment in the prescribed manner of the value of the improvements upon the land to be determined by the local land board, enter into occupation thereof within ninety days after the notification in the *Gazette* of the approval of the issue of a lease, and shall reside continuously on the leased land for six months of each year of the prescribed term of residence, and such term shall expire five years after the date of application for the lease.

Prior to the date of commencement of residence during any year the lessee shall notify the local land board to that effect; and such notice shall specify the date from which he intends to reside.

Within two years after such entry into occupation the lessee shall fence the outside boundaries of such land with a fence of such a character as may be prescribed by the land board. But for sufficient cause shown the time for completing such fencing may be extended by the land board or Chairman of such board.

The land board or Chairman may grant an exemption from fencing any natural or other boundary of the land held under lease.

Any original and additional homestead leases may, for all purposes of residence and fencing, be held to be one homestead lease.

The rents of homestead leases shall be paid annually in advance not later than one day prior to a date corresponding to the date of application. Rent shall be charged from the date of application, and pending determination a provisional rent of one penny per acre shall be payable.

Any homestead lease may be surrendered on giving the Minister not less than twelve months notice.

The term and periods of any additional homestead lease shall determine at the same respective dates as the term and periods of the original homestead lease, and the surrender or the forfeiture (otherwise than for non-payment of rent) of the original homestead lease shall involve the forfeiture or surrender of all additional leases.

The provisions of section eighty-two of this Act with respect to the suspension of conditions of a conditional purchase or conditional lease shall apply also to homestead leases.

Upon the application of any homestead lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed and shall be subject to a fee of twenty shillings.

**Transfer and subletting of homestead leases.**

139. The holder of a homestead lease may transfer his right of lease in the prescribed manner, but shall have no power to transfer the same until he shall have fulfilled the condition of residence, but no additional homestead lease shall be transferred apart from the original, or *vice versa*, unless and until the prescribed condition of residence has been fulfilled. Nothing in this or the previous Acts shall prevent any homestead lease being transferred by way of mortgage or security, at the risk of the transferee, before the expiration of the prescribed term of residence subject to the conditions of the lease being fulfilled by the owner, subject to such mortgage or security.

140. All agreements for the subletting of a homestead lease shall be in writing, and a copy of every such agreement shall be verified and sent to the chairman of the local land board in the prescribed manner. Any subletting which is not effected by an agreement in writing, or in respect of which a copy of the agreement is not verified and sent as aforesaid, may, in the absence of any sufficient explanation, be taken to be evidence that the homestead lease is not held or used for the exclusive benefit of the lessee or apparent owner thereof.

**Miscellaneous provisions re Homestead leases.**

141. If any rent due on a homestead lease be not paid within the prescribed time, or if any condition attaching thereto be not fulfilled, the lease shall be liable to forfeiture, and forfeiture shall take effect thirty days after notification thereof in the *Gazette*.

Tenant right in improvements.

142. Upon the expiration by effluxion of time of the term of any homestead lease, the last holder of the lease shall have tenant right (as the same is hereinafter defined) in improvements upon the lands theretofore held under the lease

143. On any determination of any homestead lease, the land comprised therein may be leased as a homestead lease by auction or tender, or otherwise disposed of, in accordance with the provisions of this Act.

Cases of death, lunacy, insolvency, or judgment debt of conditional purchaser.

144. If the holder of any homestead lease applied before or after the commencement of this Act shall die or be declared a lunatic, or become an insane patient within the meaning of the Lunacy Act of 1878 and the Acts amending the same, before the fulfilment of the prescribed conditions of residence and fencing his lease, may be held by his representatives or their assigns subject to the fulfilment by them of all unfulfilled conditions except the condition of residence, but in trust for and for the benefit of the persons rightfully entitled. And any sale, transfer, or other disposition whatsoever of the estate, right, title, or interest of any homestead leaseholder by an official assignee or other lawful authority upon the insolvency of such lessee, or by a sheriff or registrar of a district court or any other person by virtue of or under the authority of any writ of execution or other process of any court, or by the trustees of any deed of assignment for the benefit of creditors, or by any person under any decree or order of any court shall pass to a purchaser or to any other person only such estate, right, title, or interest as the lessee himself was entitled to at the date of sequestration, writ, process, decree, order, or assignment respectively, and subject to all conditions remaining unfulfilled at such date.

145. The holder of any homestead lease whether granted before or after the commencement of this Act may, subject to the provisions of section one hundred and sixty-seven of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres in area.

**Improvement Leases.**

Improvement leases. Sec. 26, Act 1895.

146. The Governor may, under this section, grant leases of Crown lands, which, by reason of inferior quality, heavy timber, scrub, noxious animals, undergrowth, marshes, swamps, or other similar cause, are not suitable for settlement until improved, and can only be rendered suitable by the expenditure of large sums in the improvement thereof. The granting of the leases shall be subject to the provisions hereunder contained:—

- (I) The term of the lease shall not exceed twenty-eight years, and shall commence from the date of the execution of the lease.
- (II) The area included in the lease shall not exceed twenty thousand four hundred and eighty acres.
- (III) The amount bid at a sale by public auction of the lease, or offered by an accepted tender, shall be the yearly rent of the lease; but an upset rent may be placed upon any such lease if offered by auction, and the Governor shall not be bound to accept any tender.
- (IV) The lease may contain such covenants and provisions as to the Governor may seem expedient according to the circumstances of each case, and all such covenants and provisions shall

shall be notified in the *Gazette* and in a local newspaper before the lease is offered for sale or tenders called for. The lease shall contain covenants and provisions for the improvement of the land leased and for the expenditure of money thereon, for the payment of rent, and for the determination of the lease upon any breach by the lessee of the covenants and provisions thereof.

- (v) Upon the expiration of the term of the lease by effluxion of time the lessee shall have tenant-right (as the same is hereinafter defined) in improvements.
- (vi) The holder of the lease may, subject to the provisions of section one hundred and sixty-seven of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of six hundred and forty acres.

#### Inferior Lands.

147. The Minister may, after report by the local land board, lease by auction or tender for a period not exceeding twenty years such vacant lands in the Eastern, Western, or Central Division as in consequence of their inferior character, or isolated positions may not have been held under any tenure, or having been held have been abandoned, subject to the following provisions—

Leases of inferior lands.  
Sec. 37, Act 1889.

- (I) Such leases shall be subject to such conditions as may be specified in the *Gazette* notice offering the land on lease.
- (II) No such lease shall be sold by auction, nor shall any tender be accepted until after the expiration of thirty days from the date of such notice, but when sold or granted shall commence from the date of sale or notification of acceptance of tender as the case may be.
- (III) The upset rental shall be determined by the Minister after report by the local land board.
- (IV) The amount bid at auction, or offered by an accepted tender, shall be the annual rental of the lease; and shall be paid, if the lease be sold at auction at the time of such sale, but if upon tender, within sixty days after the notification in the *Gazette* requiring payment thereof. If the rent be not paid within the time allowed, the lease and any amounts paid may be forfeited by notice in the *Gazette*. And any lease sold at auction, the price bid for which shall not forthwith be paid, may there and then be reoffered for sale.
- (v) Tenders shall be made in the form prescribed; and shall describe the land applied for in terms of the notice calling for tenders; and shall be accompanied by a receipt showing that a sum of two pounds has been paid to the land agent or Treasury as a deposit thereon. Such deposit paid by a person, whose tender may be accepted, shall be credited on account of the first year's rent, and the rent for the ensuing year shall in all cases be paid on or before a date corresponding to the date of commencement of the lease.
- (vi) A lease of any such land which may have been offered at auction, and not bid for, may be obtained on application to the land agent, and upon payment of the required upset rent, in accordance with subsection (III) of this section; or the lease may be again submitted to auction unless the land shall have been previously otherwise dealt with.
- (vii) Upon application being made by any person for the submission of land to lease under this section the Minister may demand such amounts as may seem necessary to cover the expenses of report in connection therewith.

(VIII)

- (VIII) If the Minister shall be satisfied, after inspection by an authorised officer and report by the local land board, that the holder of any such lease has failed, or is failing to fulfil any condition of his lease, such lease, together with any amounts paid, may, by notification in the *Gazette*, be forfeited.
- (IX) The Governor may, on application as prescribed, extend the term of any inferior land lease granted under the previous Acts to a term not exceeding twenty-eight years, on such terms and conditions as he may think fit, but such term shall be computed from the commencement of such lease under those Acts, and may grant to the last holder thereof tenant-right as defined in this Act.
- (X) The holder of any lease of inferior lands may, subject to the provisions of section one hundred and sixty-seven of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of six hundred and forty acres.

#### Lands exempt from Pastoral Lease in Central or Western Division.

Exemption from pastoral or homestead lease.  
Sec. 99, Act 1884;  
30, Act 1889.

148. The following classes of lands shall continue to be exempt from any pastoral lease in the Central or Western Division :—

- (a) Lands within proclaimed cities, towns, and villages, or within the defined limits of suburban lands to be attached thereto.
- (b) Lands under lease or lawful occupation for mining purposes.
- (c) Lands dedicated to any public purpose.
- (d) Lands temporarily reserved from sale for commonage.
- (e) Lands reserved from lease under any repealed Act, until the reservation thereof shall have been revoked under the provisions of this Act.

#### Pastoral Leases in the Central Division.

Pastoral leases in Central Division.

149. Every pastoral lease of a leasehold area in the Central Division in existence at the commencement of this Act may be held for the balance of such term or extended term as may have been approved or granted before or for any extended period which may be granted after the commencement of this Act, subject to the following provisions :—

- (I) Rent at the rate per acre as determined and payable before the commencement of this Act shall continue to be payable annually in advance on or before the recurring date of commencement of the lease.
- S. 80, Act 1884. (II) A pastoral lease in the Central Division may be subdivided upon application by the lessee to the Minister, who may approve of the line of subdivision, or may himself determine such line: Provided that the provisions of this subsection shall not conflict or interfere with the provisions of section one hundred and fifty of this Act.
- S. 31, Act 1889. (III) The holder of a pastoral lease in the Central Division may surrender his lease after having given the Minister not less than twelve months notice of his intention so to do, and such notice shall specify the date on which the surrender is intended to take effect.
- S. 43, Act 1889. (IV) Lands held under any pastoral lease in the Central Division which may have been or which may be forfeited or surrendered may be relet under pastoral lease by auction or tender, for the unexpired portion of the forfeited or surrendered term, upon such conditions as to the periods of appraisalment

appraisement of rent or otherwise as may be determined by the Minister, or may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

After forfeiture or surrender of any pastoral lease as aforesaid, the land shall not be deemed to be Crown Lands, and shall not be available as such until after notification in the *Gazette* that the same may be so dealt with.

- (v) After the expiration of the term or extended term of a S. 5, Act 1895. pastoral lease in the Central Division the lands theretofore subject to such lease shall become a resumed area on notification in the *Gazette* to that effect, and on such notification, and not before, shall cease to be a leasehold area within the meaning of this Act.

Upon the expiration of the term, or extended term, of any pastoral lease in the Central Division, the lands comprised thereunder, if not subject to and applied for under preferential occupation license, may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

- (vi) Upon the determination, by effluxion of time, of the extended Conversion of  
pastoral lease into  
occupation license,  
S. 4, Act 1895. term of a pastoral lease in the Central Division, and of all periods (if any) added thereto, the holder of the lease shall, if not less than two months prior to such determination he shall have paid a license fee as prescribed, be entitled to occupy the lands theretofore held under such lease under a preferential occupation license, which shall be subject to all the provisions of this Act in respect of occupation licenses, qualified as hereunder:—

- (a) The license fee payable in respect of the land held under the preferential occupation license shall be at the same rate as is payable in respect of the resumed area, unless the Minister shall direct an appraisement thereof to be made; or, if there be no resumed area, or if the resumed area be not held under occupation license, then at a rate to be appraised, and, until such appraisement, and subject to an adjustment of accounts thereupon, at a provisional rate of two pounds per section of six hundred and forty acres.
- (b) The Governor may, giving not less than three months' notice in the *Gazette*, refuse a renewal of the preferential occupation license; and in such case the preferential occupation license shall determine at the end of the then current year.

The provisions of these subsections (a) and (b) shall apply to the preferential occupation license of any lands withdrawn from pastoral lease under the power conferred by section one hundred and fifty of this Act.

- (vii) Improvements made after the first day of June, in the year S. 5, Act 1895. one thousand eight hundred and ninety-five, or after the commencement of this Act, being made with the consent of the Crown, upon any lands within the Central Division, which, at the date of the making of the said improvements, are held under pastoral lease, shall upon the said lands ceasing to be the subject of the pastoral lease, and becoming the subject of a preferential occupation license, be taken to be the property of the licensee for all purposes of section one hundred and seventy-nine of this Act, but if made without the consent of the Crown shall be the property of the Crown. The consent of the Crown to the making of improvements may be given by such authorities, and shall be evidenced in such manner as may be prescribed.

- (viii) Upon the application of any pastoral lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed and shall be subject to a fee of twenty shillings.

**Power of withdrawal from Central Division Pastoral Leases.**

Withdrawal from  
pastoral leases for  
settlement purposes,  
S. 3, Act 1895.

150. The Governor shall have power to withdraw from pastoral lease in the Central Division any lands held thereunder, whenever he shall deem it expedient so to do for the purpose of providing for settlement by other holdings :

Provided that prior to any such withdrawal being notified as hereinafter provided, the local land board shall make inquiry and report to the Minister with respect to the expediency of the proposed withdrawal, and the portion of the lease to be withdrawn, and, upon such inquiry, the lessee may be a party, without any right of appeal to the Land Court :

Provided further that the leasehold area shall be divided by the Minister into two parts as nearly equal in area as practicable, and the part from which withdrawals may be made shall be defined, and notice thereof given to the lessee.

The area withdrawn under one exercise of this power shall be in as compact a form as practicable, and the first withdrawal shall not be less than one-fourth, and the aggregate areas to be withdrawn under this power shall not exceed one-half of the area held under such lease at the commencement of this Act.

Every such withdrawal shall be notified in the *Gazette* and some newspaper published in the district, and shall take effect four months after the date thereof or at such later date as may be specified for that purpose in the notification ; and copies of such notifications, together with the reasons for the withdrawals therein notified, shall be laid upon the tables of both Houses of Parliament forthwith if Parliament be sitting, and if not, then within eight days after the commencement of the next session.

Upon any such withdrawal taking effect the pastoral lease shall cease to include the lands so withdrawn, but shall otherwise continue in full force and effect except as hereinafter provided.

The power of withdrawal conferred by this section shall be in addition to, and not in substitution for, the power of withdrawal conferred by section one hundred and twenty-two of this Act.

In compensation for a withdrawal under the power conferred by this section ;—

- (a) a period shall be added to the term of the pastoral lease ; and
- (b) the lands withdrawn may, upon payment of the license fee as prescribed, continue to be occupied in virtue of a preferential occupation license ; and
- (c) the rent for the succeeding years of the pastoral lease shall be reduced in proportion to the area withdrawn ; and
- (d) a proportionate amount of any rent paid in advance shall be credited on account of the first year's license fee for the withdrawn area, or refunded at the request of the lessee.

The period to be added to the term of a pastoral lease in consideration of a withdrawal shall be computed so that the added period shall bear the same ratio to the unexpired period as the area withdrawn bears to the area left.

The method of ascertaining the added period shall be by multiplying together the unexpired period and the area withdrawn, and dividing the product by the area left. And in the foregoing formula —

“ Unexpired period ” means the number of months which the lease has to run, reckoning from the date of the withdrawal up to the date at which the lease (including all periods previously added) would have expired.

“ Added

“Added period” means the number of months by which the term of a pastoral lease is to be extended in consideration for such withdrawal.

“Area withdrawn” means the number of acres included in such withdrawal.

“Area left” means the number of acres left under the pastoral lease at the date of withdrawal.

For the purposes of computation any fractional part of a month shall be reckoned as one month, and any fractional part of an acre shall be disregarded :

Provided always that upon application by the lessee within the time and in the manner prescribed, the rent of the area left shall be reappraised.

The Governor shall notify in the *Gazette* the length of the period to be added to the term of a pastoral lease in consideration of a withdrawal, and the date at which such added period will expire; and the added period shall determine upon the date so notified; and the Governor shall likewise notify the rate of the rent of the pastoral lease in any case where the rate has been varied, and the rate so notified shall be deemed to have been payable as from the date of withdrawal.

The period added to the term of a pastoral lease in consideration of a withdrawal shall be affixed to the extension (if any) of such lease under section forty-three of the “Crown Lands Act of 1889,” and the conditions of the lease during any such added period shall be the same as immediately prior to the commencement of such period.

#### Pastoral Leases in the Western Division.

151. Every pastoral lease in the Western Division shall have a term of twenty-eight years, and such term (which shall be deemed to have commenced when the term, as existing before the first day of June, in the year one thousand eight hundred and ninety-five, commenced) shall be divided for the purpose of the appraisalment of the rate of rent into four periods each of seven years and a separate appraisalment shall be made of the rate of rent payable for each of such periods as may have commenced after the first day of June, in the year one thousand eight hundred and ninety-five, or may commence after the commencement of this Act :

Pastoral and home-  
stead leases in the  
Western Division.  
S. 7, Act 1895.

Provided always that—

(a) In the case of a pastoral lease granted before the first day of December, in the year one thousand eight hundred and eighty-nine, and not brought under the provisions of section twenty-nine of the “Crown Lands Act of 1889,” the rate of rent from time to time payable under the “Crown Lands Act of 1884” shall be paid until the expiration of such seven-year period of the term of the lease as may have been current on the first day of June, one thousand eight hundred and ninety-five.

(b) Nothing contained in this section shall prevent or affect the reappraisalment of the rent of a pastoral lease in pursuance of section nine of the “Crown Lands Act of 1895,” or the coming into operation of any rent so reappraised.

(II) A pastoral lease in the Western Division may be subdivided upon application by the lessee to the Minister, who may approve of the line of subdivision, or may himself determine such line: Provided that such subdivision shall not conflict or interfere with the provisions of section one hundred and fifty-three of this Act.

S. 80, Act 1884.

(III)

S. 31, Act 1889.

(III) The holder of a pastoral lease in the Western Division may surrender his lease after having given the Minister not less than twelve months notice of his intention so to do, and such notice shall specify the date on which the surrender is intended to take effect.

S. 43, Act 1889.

(IV) Lands held under any pastoral lease in the Western Division which may have been or which may be forfeited or surrendered may be relet under pastoral lease by auction or tender, for the unexpired portion of the forfeited or surrendered term, upon such conditions as to the periods of appraisalment of rent or otherwise as may be determined by the Minister, or may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

After forfeiture or surrender of any pastoral lease as aforesaid, the land shall not be deemed to be Crown Lands, and shall not be available as such until after notification in the *Gazette* that the same may be so dealt with.

Upon the expiration of the term, or extended term, of any pastoral lease in the Western Division, the lands comprised thereunder may be offered by auction or tender under occupation license, or otherwise dealt with as vacant lands.

Tenant right in improvements.  
S. 7, Act 1895.

(v) Upon the expiration by effluxion of time of the term of any pastoral lease in the Western Division the last holder of the lease shall have tenant right (as the same is hereinafter defined) in improvements upon the lands theretofore held under the lease.

(vi) The holder of a pastoral lease in the Western Division may, subject to the provisions of section one hundred and sixty-seven of this Act, apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres.

(vii) Upon the application of any pastoral lessee the Minister shall cause to be issued to him a lease for the land held by him, which lease shall be in the form prescribed and shall be subject to a fee of twenty shillings.

#### Attachment of Resumed Area to Leasehold Area in Western Division.

Attachment of resumed area to leasehold area.  
S. 8, Act 1895.

152. In any case in which—

(a) the Minister, after inquiry by the local land board, is satisfied that any resumed area in the Western Division (not being within the land districts of Brewarrina, Hay North, or Walgett North) is not, and is not likely to be, required for purposes of settlement before the expiration of the pastoral lease of the leasehold area; and

(b) the occupation license or annual lease, if any, of the resumed area is not held by a person other than the holder of the pastoral lease of the household area

the Minister may, with the consent of the holder of the pastoral lease by notification in the *Gazette*, declare that the resumed area shall thenceforward be held under pastoral lease; and the occupation license or annual lease, as the case may be, of the resumed area shall thereupon expire, and any artesian well lease on the resumed area, held concurrently with the pastoral lease, shall be deemed to be surrendered, but not so as in either case to thereby render the improvements on the resumed area the property of the Crown.

The resumed area, or so much thereof as may be available, shall be added to the area held under the existing pastoral lease; and the rent of the area so added shall be fixed in accordance with the following provisions:—

(i) If the Minister and the lessee so agree, such rent shall be, at the rate per acre, payable for the leasehold area.

(ii)

- (II) If the Minister and the lessee do not agree, the rent for the area so added shall be appraised by the local land board in accordance with the provisions of the Crown Lands Acts as if it were the rent for a pastoral lease of the resumed area.
- (III) Any reappraisal of the rent of the pastoral lease shall be of the rent of the lease as including the whole area.
- (IV) Upon default in the due payment for the whole area of any sum due as rent, or added to the rent, the lease of the whole area may be forfeited in accordance with the provisions of this Act.
- (V) The accounts between the lessee and the Crown shall be adjusted, and for the purposes of such adjustment any rent and license fee shall be considered as accruing due day by day.

Any resumed area added to land under pastoral lease in accordance with the provisions of this section shall be deemed to be added subject to the provision that the Governor may (by notice in the *Gazette*) withdraw, without compensation, the whole or any part or parts thereof from pastoral lease whenever he shall deem it necessary or expedient to make the land available under any provisions of this Act. Upon such withdrawal (which shall not take effect until the expiration of six months from the date of notice thereof) the lessee shall (on application within the prescribed time and payment of license fee as prescribed) be entitled to hold the withdrawn area under preferential occupation license; and any improvements upon the withdrawn area (not forfeited or forfeitable to or vested in the Crown) shall be taken to be the property of the lessee for all purposes and subject to the provisions of section one hundred and seventy-nine of this Act.

#### Power of Withdrawal from Western Division Pastoral Leases.

153. The Governor shall have the same power of withdrawing land from a pastoral lease in the Western Division as by this Act is conferred upon him in respect of pastoral leases in the Central Division, except that:—

Withdrawal for extra-urban settlement in the Western Division.  
S. C. Act 1895.

- (a) The area withdrawn under one exercise of the power shall not be less than one-sixteenth, and the aggregate areas to be withdrawn under this power shall not exceed one-eighth of the area held under the lease, and this power shall only be exercised to withdraw land within ten miles of the boundary of a town containing at least fifty inhabitants; and
- (b) Any period to be added to the term of a pastoral lease in consideration of a withdrawal shall be affixed to the term of the lease as extended by this Act.

The lessee shall have compensation upon any such withdrawal in the like manner as is hereinbefore provided upon a withdrawal from a pastoral lease in the Central Division, and shall have tenant right in improvements as the same is hereinafter defined upon the land so withdrawn.

#### Transfers of Pastoral Leases.

154. The holder of any pastoral lease may transfer his right of lease in the prescribed manner. S. 118, Act 1884.

#### Occupation Licenses.

155. Subject to the provisions hereinafter contained the Governor may issue Occupation Licenses. And such licenses shall entitle the licensees to occupy for grazing purposes a resumed area or vacant lands or any portion thereof:—

Occupation Licenses.  
S. 81, Act 1884.

- (i) The right to occupation licenses for any portions of resumed areas or vacant lands which were not applied for by the runholder under the previous Acts, or which have been forfeited

- forfeited or surrendered, may be disposed of by auction or tender in the prescribed manner.
- (II) All occupation licenses or preferential occupation licenses in existence at the commencement of this Act may remain in force up to the thirty-first day of December, one thousand eight hundred and ninety- . . . . . And the rate of license fee payable at such commencement shall, subject to the provisions here following, remain unaltered ;
- (III) nothing in this section shall prevent the taking effect of any appraisement directed or applied for before the commencement of this Act ;
- (IV) the Minister may at any time direct a fresh appraisement to be made of any occupation license or preferential occupation license in any Division, and may require the licensee to pay his annual license fee on the basis of such fresh appraisement after the expiration of any current year during the continuance of the license ;
- (V) licenses shall be in force from the first day of January to the thirty-first day of December in each year, and the rates of license fee shall be published in the *Gazette*, and if within sixty days thereafter such fees be not paid into the Treasury by the licensee, the license shall after the thirty-first day of December be treated as forfeited (without any notification to that effect) unless the Minister shall renew such license.
- (VI) Where on the expiration of the term or extended term of any pastoral lease in the Central Division, or where on the withdrawal of land from pastoral lease in the Central or Western Division the land shall be held under preferential occupation license, the license fee payable in respect of the land held under the preferential occupation license shall be at the same rate as is payable in respect of the resumed area, unless the Minister shall direct an appraisement thereof to be made ; or, if there be no resumed area, or if the resumed area be not held under occupation license, then at a rate to be appraised, and, until such appraisement, and subject to an adjustment of accounts thereupon, at a provisional rate of two pounds per section of six hundred and forty acres.
- (VII) Improvements made with the consent of the Crown upon any lands within the Central Division which, at the date of the making of the said improvements are held under preferential occupation license, shall be taken to be the property of the licensee for all purposes of section one hundred and seventy-nine of this Act. Improvements made after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act upon lands within the Central Division, which, at the date of the making of the said improvements are held under preferential occupation license, shall, if made without the consent of the Crown, be the property of the Crown. The consent of the Crown to the making of improvements may be given by such authorities, and shall be evidenced in such manner as may be prescribed.
- (VIII) The Governor may, giving not less than three months' notice in the *Gazette*, refuse a renewal of any preferential occupation license in the Central or Western Division, and in such case the preferential occupation license shall determine at the end of the then current year, and if the Governor refuse to renew any such preferential occupation license of lands containing improvements, the last holder of the license shall have tenant right (as the same is hereinafter defined) in such of the improvements as were made with the consent of the Crown after the first day of June one thousand eight hundred and ninety-five or after the commencement of this Act.

- (IX) Upon the granting of any lease or the sale of any land under occupation license the licensee's right of occupation to the extent of such portion shall thereupon cease, but he shall be entitled to a refund of so much of the license fee paid in advance and to reduction in future rent as shall be proportionate to the area so withdrawn and from the date of withdrawal, and shall be entitled to be paid such compensation for improvements on any portion so withdrawn as may be determined after appraisalment by the Local Land Board.

#### Survey of Leasehold and Resumed Areas, &c.

156. The Minister may direct the survey of the boundaries or portions of the boundaries of any land held under pastoral lease or occupation license.

Survey of leasehold and resumed area and settlement of disputed boundaries. Sec. 143, Act 1884; 52, Act 1889.

If such survey be made at the request of the lessee or licensee the Minister may demand from the lessee or licensee the whole or any part of the cost thereof, but if otherwise, any sum not exceeding twenty shillings for each linear mile of the boundary so surveyed, and, in default of payment of such sum within sixty days after notification of the demand in the Gazette, such lessee or licensee shall become liable to the same penalties as attach to non-payment of his rent or license fee.

If at any inquiry or proceeding before a local land board concerning any application to purchase or lease Crown Lands, any question or dispute shall arise as to the extent or boundary or boundaries of any land comprised in any lease or license, it shall be competent for such board thereupon to inquire into the matter and recommend for the approval of the Minister (subject to appeal) any adjustment of such boundary or boundaries which may appear reasonable; or such adjustment of boundaries may, subject to the ultimate approval of the Minister, be determined by agreement between the parties; and for this purpose the description of any land applied for as aforesaid may be modified to conform with the boundary or boundaries so determined; and any such boundary or boundaries approved by the Minister as aforesaid shall, for the purposes of the previous Acts or this Act or any repealed Act, be held to be the boundary or boundaries of such pastoral lease or occupation license or other lands applied for.

The Minister may refer to the local land board for inquiry any question or dispute which may have arisen or may arise in respect of the boundaries of any land held under lease or license, and the board shall in due course deal therewith: Provided that in any case the board make such order as it may deem fit touching the cost of such inquiry, and of any survey which may be deemed necessary, which shall be borne by such persons and in such proportions as the board may direct.

#### Residential Leases.

157. It shall be lawful for the Governor, on the recommendation of the Warden of any gold-field, to grant leases for periods not exceeding fifteen years of areas not exceeding twenty acres of Crown Land within gold and mineral fields to any holder of a miner's right or mineral license for the purpose of *bona fide* residence, upon such terms and conditions as to rent, cost of survey, term of lease, erection of fences and buildings, and upon such other provisions for the protection of the public interest as may be prescribed.

Residential lease may be granted to holder of miner's right or mineral license. Sec. 48, Act 1889; 50, Act 1895.

All holders of residential leases, whether granted before or after the commencement of this Act, shall have tenant right in improvements as herein defined.

Scrub

### Scrub Leases.

Scrub-lands may be declared and leased. Secs. 35, Act 1880; 26, Act 1895.

158. The Minister may, upon the recommendation of the local land board, declare by notification in the *Gazette*, any Crown lands wholly or partly covered by scrub or noxious undergrowth to be scrub-lands; and may, on the recommendation of the local land board (and notwithstanding anything in the "Prickly-pear Act" contained), grant leases of such lands on application, or sell the same by auction or tender at such times and places and under such conditions and for such terms not exceeding twenty-one years as he may deem desirable.

Lands so declared to be scrub-lands shall not until leased in accordance with this section be withdrawn from any lease or license under which they may at the time be held.

No scrub-lease of lands within the outside boundaries of land held under pastoral lease or homestead lease shall be granted to any person but the holder of such pastoral or homestead lease, in which case such scrub-lease shall not be for a longer term than the unexpired term of such pastoral or homestead lease.

The term of a scrub-lease may be divided into such periods as the Minister shall fix, and the rent for the second or any succeeding period shall be determined in accordance with section twenty-five of this Act.

Notwithstanding anything in this Act or in the previous Acts contained, the Minister may, on the recommendation of the local land board, either before or after granting any such scrub-lease, cause the rental of the remainder of the land held under pastoral or homestead lease to be reappraised and redetermined.

No pastoral or homestead lessee shall hold or cause to be held on his behalf, or in his interest, any scrub-lease, except within the land held under lease by himself.

The applicant for any scrub-lease shall pay the cost of survey thereof, or in the event of his withdrawing his application, all costs of survey, reports, or inquiry incurred in dealing therewith.

And all such leases of scrub-lands and any scrub-leases granted after the commencement of this Act in pursuance of applications made under the previous Acts shall be subject to the general provisions here following—

- (I) Every such lease shall, if granted in pursuance of an application or by tender, commence from the date of the notification in the *Gazette* of the Minister's approval of the application or acceptance of the tender; and, if sold at auction, shall commence from the date of sale. And the land held thereunder shall (subject to the provision for withdrawal contained in section one hundred and twenty-two of this Act, during the whole currency thereof be unavailable for purchase or lease.
- (II) Rent for the first year of the lease shall together with the cost of survey, be paid within one month from the date of the notice in the *Gazette* specifying the amount thereof; and the rent shall for succeeding years be paid annually in advance on or before the last day of the current year of the lease.
- (III) Every holder of a scrub-lease shall, as conditions of his lease, be required to take all such steps as the local land board shall from time to time, subject to appeal, direct, for the purpose of destroying such scrub as may be specified in his lease or promise of lease, in and upon the land under scrub-lease, or in and upon any land within the boundaries of the lease, or in and upon any reserves or roads within such boundaries; and when so destroyed to keep such land free from the same; and shall commence to destroy the same within three months after the commencement of the lease.

And

And if rent thereon shall not be paid within the time allowed, or if in the opinion of the Minister, after report by the local land board, subject to appeal, the holder shall have failed to comply with any condition of his lease, the Minister may, by notification in the *Gazette*, declare such lease to be forfeited; and all improvements on such lands shall be the property of the Crown.

- (iv) Any land held under scrub-lease shall, on the forfeiture or surrender thereof, be added to the lands held under lease or license within the boundaries of which it may be situated, and rent therefor shall be payable at such rate per acre as may be determined by the local land board, and shall form part of the rent payable for such lease or license, which shall be liable to forfeiture if the rent for the added lands be not paid as prescribed.
- (v) If a pastoral lease or homestead lease be held in conjunction with a scrub-lease, neither of such leases shall be transferred separately.
- (vi) The Governor may, on application as prescribed, extend the term of any scrub-lease granted under the previous Acts or this Act to a term not exceeding twenty-eight years on such terms and conditions as he may think fit, but such term shall be computed from the commencement of such lease under those Acts.
- (vii) The Governor may grant to the last holder of any scrub-lease tenant-right as defined in this Act.

The holder of any scrub-lease not being within a pastoral or homestead lease, whether granted before or after the commencement of this Act, may, at any time during the last year of the term of the lease, apply, subject to the provisions of section one hundred and sixty-seven of this Act for a portion of the leasehold as a homestead selection, such portion not exceeding six hundred and forty acres in area.

### Settlement Leases.

#### *Settlement Leases for Agriculture and Grazing.*

159. The Governor may, subject to the provisions of and under the power conferred by section twenty-six of this Act set apart any tract of Crown lands to be disposed of by leases under the provisions hereinafter contained.

Settlement lease  
areas.  
Sec. 24, Act 1895.

Any tract which has been so set apart shall be dealt with as follows:—

- (i) A subdivision shall be made thereof into farms, which in cases where the land appears suitable for agriculture, shall not contain more than one thousand two hundred and eighty acres; and in cases where the land appears suitable chiefly for grazing shall not be more than ten thousand two hundred and forty acres in area; and the standard to be adopted in regulating the extent of each such farm shall be that the lessee thereof may be able to establish and maintain a home thereon by the use of the land.
- (ii) A valuation of the said farms shall be made according to the capabilities and situation of the farm, and in making such valuation, due regard shall be paid to the term and conditions of a settlement lease, and to the intention of these provisions that the lessee may be enabled to establish and maintain his home thereon.

- (III) The value, to an incoming tenant, of any improvements on any such farm may be appraised by the Minister after inquiry and report by the Local Land Board in the prescribed manner, and such appraisal shall, as between the Crown or the owner of the improvements, as the case may be, and any person taking such farm, be conclusive evidence of the value of the improvements at the date of the appraisal.
- (IV) A notification shall be published in the *Gazette* and in a local newspaper, giving particulars of the areas, values and qualities of the said farms, and of the appraised value of any improvements thereon, and specifying a date from and after which leases of the said farms may be applied for; the area and value of any farm as stated in the said notification shall be taken to be the area and capital value thereof for the purposes of the provisions hereinafter contained.
- (V) From and after the date so specified, any person not disqualified by this Act may apply to the Land Agent for any farm notified as aforesaid. The application shall be made in the prescribed manner, and shall be accompanied by one half years rent in advance, and by a survey fee upon the prescribed scale.
- (VI) The applicant shall satisfy the Local Land Board that he is qualified to make the application, and that the same has been made in accordance with the provisions of this Act. The Local Land Board shall confirm the application, if so satisfied, unless it permits the applicant to withdraw the same; if not so satisfied, it shall disallow the application.
- (VII) The title to any settlement lease applied for after the commencement of this Act shall commence from the date of application therefor, if valid, and any such application shall withdraw such of the land therein described as may be available for the purpose from any annual lease or occupation license under which it may be held: Provided that the land agent shall, within one week of the receipt of any such application, notify the same through the post to the holder of any annual lease or occupation license within which the land applied for, or any part thereof, may be situated.

Application for  
settlement lease.

Sec. 2, 59 Vic. No. 26.

160. The concluding part of subsection (v) and the whole of subsection (vi) of section forty-one of this Act shall, as far as applicable apply to this section.

#### Settlement Leases.

Settlement leases.

Sec. 25, Act 1895.

Sec. 2, 59 Vic. No. 26.

161. The Governor may grant to an applicant whose application has been confirmed by the Local Land Board a settlement lease of the farm applied for.

The term of the lease shall be twenty-eight years, and the lease shall be in the prescribed form, and shall contain provisions to secure:—

- (a) That the lessee shall pay an annual rent of one and one quarter per centum on the capital value of the farm as fixed under this Act, and such rent shall be charged from the date of the application for the lease;
- (b) that the lessee shall pay the value of the improvements as appraised, and interest on such value at the rate of four pounds per centum per annum, the payment being made in one instalment, or, at his option, in three equal yearly instalments, at the dates and in the manner prescribed;
- (c) that the lessee shall commence to reside on the farm within three months after the date of issue of the lease and shall thereafter continue to reside on the farm and make it his *bonâ fide*

- vide* residence during the whole term, or if the lease have been transferred by way of *bonâ fide* mortgage, then that the owner, subject to such mortgage shall so reside;
- (d) that the lessee shall fence the farm within five years from the date of issue of the lease;
- (e) That the lessee shall conform to any regulations made by the Minister relating to keeping the farm clear of rabbits and other noxious animals, and also to clearing the farm of scrub and noxious weeds;
- (f) that the lessee shall not assign or sublet without the Minister's consent;
- (g) that the Governor may forfeit the lease upon breach of any of the conditions, covenants, and provisions therein contained. The lease may also contain such additional provisions, conditions, and covenants as to the Governor may seem expedient in the public interest.

162. Upon the expiration of the full term of a settlement lease the last holder thereof shall have tenant right (as the same is hereinafter defined) in the improvements thereon.

163. The holder of a settlement lease may, subject to the provisions of section one hundred and sixty-seven of this Act apply during the last year of the term of the lease for a portion of the leasehold as a homestead selection, such portion not exceeding an area of one thousand two hundred and eighty acres.

#### *Trespass and Impounding on Settlement Leases.*

164. No person occupying land under a settlement lease shall—
- (a) bring an action for trespass committed by stock upon the said land, whether before or after the commencement of this Act; or

Trespass by stock on unfenced lands.  
Sec. 55, Act 1895.

(b) impound any stock trespassing upon the said land— unless the said land or the portion thereof trespassed upon was, at the date of the trespass, enclosed with a fence reasonably sufficient to keep out stock :

Provided always that nothing in this section contained shall apply to any trespass wilfully caused.

#### **Snow Leases.**

165. The Minister may, upon the recommendation of the local land board, lease by auction any Crown lands not being under pastoral or conditional lease, which may be usually covered with snow for a part of each year and unfit for continuous use or occupation.

Lensing of snow lands.  
Sec. 36, Act 1889.

Such land shall be leased in areas of not less than one thousand two hundred and eighty or more than ten thousand two hundred and forty acres, and during the currency of the lease shall be exempt from sale or other lease under the provisions of this Act.

Every such lease shall commence from the day of sale, and shall withdraw the land from any annual lease or license under which it may be held, and rent therefor shall be paid annually in advance not later than the last day of each year of the lease, subject in default to forfeiture, by notice in the *Gazette*.

No right of impounding any stock of the outgoing licensee or lessee shall vest in the holder of a lease under this section until one month after the commencement of such lease.

The prescribed fee for the survey of the land and the first year's rent shall be paid by the purchaser at the time of sale, and upon default the lease may there and then be reoffered for sale.

The

The lease shall have a term of seven years, and at the expiration thereof the lessee shall have a right of extension for a term of three years, subject to the payment of such annual rental as may be determined in accordance with the provisions of this Act, provided that he shall have notified to the Minister at least twelve months prior to the expiration of such term his intention of claiming such extension.

The Minister may determine any such lease by giving the lessee notice to that effect not later than one year prior to the date on which the term shall expire.

Not more than two of any such leases shall be held by, or in the interest of, one person.

### Special Leases.

Leases may be granted for special purposes.  
Sec. 90, Act 1884.

166. The Governor may lease Crown Lands by auction or otherwise for a term not exceeding twenty-eight years, in areas not exceeding in any case three hundred and twenty acres, and subject to such conditions and provisions and with such reservations as he may think fit.

Land situated under the sea or under the waters of any harbour, bay, lake, river, creek, estuary, or navigable stream, shall be deemed to be Crown Lands for the purposes of this section.

Crown Lands may be leased under this section for any of the purposes hereinafter specified, that is to say for dams, tanks, irrigation works, wharfs, jetties, piers, floating docks, bridges, punt-houses, ferries, bathing-places, landing-places, saw-mills, brick-kilns, lime-kilns, slaughter-houses, tanneries, wool-washing establishments, quarries, fisheries, building or repairing ships or boats, tramway purposes, obtaining guano, shells, limestone, loam, brickearth, gravel or ballast, or for an inn, store, smithy, bakery, or mail station in sparsely populated districts, or for business purposes, or for the erection of buildings, or for any purpose declared by the Governor by proclamation in the *Gazette* to be a purpose within this section.

Leases for wharfs, jetties, &c.  
Secs. 89, 90, 92, Act 1884, 46, Act 1895.

No such lease of land situated under the sea or under the waters of any harbour, bay, lake, river, creek, estuary, or navigable stream, and fronting any land held in fee-simple, shall be made, except to or with the consent of the proprietor of such land held in fee-simple.

No lease shall be made for the erection of any wharf, jetty, pier, or floating dock, which would interfere with navigation or with the rights of adjoining proprietors, and the intention to make a lease for any such purpose, or of land situated under the sea or under the waters of any harbour, bay, lake, river, creek, estuary, or navigable stream, shall be notified in the *Gazette* for four consecutive weeks, and not less than four times in some local newspaper, if any, before the lease is issued.

The Governor may determine the upset rent of any special lease if let at auction, or if let otherwise the annual rent shall be determined in accordance with section twenty-five of this Act.

If it should appear to the satisfaction of the Governor that the land comprised in any special lease, whether granted before or after the commencement of this Act, is not used and occupied *bonâ fide* for the purpose for which the same has been made, or that default has been made in any condition, he may declare such lease forfeited, together with any improvements erected on the land and any rent paid in respect thereof.

Leases for tramway and irrigation purposes.  
Sec. 92, Act 1884.

Subject to such conditions as may be prescribed, the Governor may make leases of Crown Lands, not exceeding three chains in width but without limit of length, for irrigation works, or for forming and maintaining tramways and crossing, and other necessary approaches

approaches and works in connection therewith. And notice of every application for a lease of this class, and of the purposes for which it is proposed to be made, shall be published in the *Gazette* for at least four consecutive weeks before the issue of such lease.

The term of any special lease (whether applied for before or after the commencement of this Act) may be fixed for or extended to any term not exceeding twenty-eight years. Sec. 46, Act 1895.

With any application for a special lease a fee in accordance with the prescribed scale shall be tendered for the survey of the land.

#### Homestead Grants out of Leases.

167. The holder of any pastoral or homestead lease in the Western Division, or of any scrub lease not being within a pastoral or homestead lease, or of any lease of inferior lands, whether granted before or after the commencement of this Act, or of any improvement lease, whose dwelling-house may be erected on Crown lands, may, at any time during the last year of the term of the lease, apply for the portion of the leasehold which contains such dwelling-house not exceeding six hundred and forty acres in area, as a homestead selection, subject to the provisions hereunder contained:— Homestead grants out of certain leases. Sec. 27, Act 1895.

- (I) The area which may be so applied for shall, before the date of the application for the same, have been improved by the holder of the lease or his predecessors in title with permanent, fixed, and substantial improvements to the value of one pound per acre, and the improvements shall at the date of the application be on the land and be the property of the applicant.
- (II) The application shall be made in the prescribed manner, and the applicant shall, before the grant is issued, pay the full cost of survey.
- (III) The land shall be measured in the same form as if it were an original conditional purchase, and the measurement shall be completed before the application is confirmed, and the Local Land Board shall have the same powers of modification, allotting land, and otherwise, in respect of any such application as it has in the case of applications for conditional purchases.
- (IV) The Governor may thereafter grant to the applicant the land for which the application has been confirmed as a homestead selection, the value of which shall be determined in accordance with the provisions of section twenty-five of this Act, and be subject to reappraisal as also hereinbefore provided.
- (V) Upon the issuing of the grant the land granted shall be withdrawn from the lease, but the lease shall otherwise continue in full force and effect.

The holder of a settlement lease may make the like application for a homestead selection out of the land leased, and the foregoing provisions (other than that requiring improvements to the value of one pound per acre) shall apply in any such case, except that the maximum area which may be applied for and grant shall be one thousand two hundred and eighty acres.

#### Proclamation of cities, towns, villages, &c.

168. The Governor may proclaim in the *Gazette*—
- (a) any city, town, or village;
  - (b) the suburban lands, or any extension of such suburban lands, to be attached to any such city, town, or village, or to any existing city, town, or village;
  - (c) population areas; and such population areas may be defined with lines directed to the cardinal points; or with boundaries other than lines directed to the cardinal points; but in any case

Sec. 4, Act 1884.  
Sec. 40, Act 1889.

case such boundaries or lines shall be distant not more than ten miles from the nearest boundary of the city, town, or village.

Lands in any proclaimed city, town, village, suburban boundaries, or population areas, shall be deemed to have been and to be set apart within the meaning of this Act.

#### Alteration of designs of cities, towns, &c.

Alteration of plan of town or village.  
Sec. 107, Act 1884.  
Sec. 57, Act 1895.

169. It shall be lawful for the Governor by notice in the *Gazette* to correct or alter the name, design, or plan of any city, town, or village, and the limits of any suburban lands attached thereto, or to wholly cancel any such design or plan or limits, and whether such city, town, village, or lands were dedicated or set apart under this Act or the previous Acts or any repealed Act or Orders in Council; and an abstract thereof shall be laid before Parliament within thirty days after such notification if Parliament be then in session, and if not then within thirty days after the commencement of the then next session.

Alteration of designs of cities, towns, &c.

When it is intended to alter or cancel the design or plan or limits of any city, town, or village, or suburban lands in which allotments or portions have been sold, notice of the intention and of the nature of the proposed alteration or cancellation shall be published in the *Gazette* and in some newspaper circulating in the district, and no such correction, alteration, or cancellation shall be carried into effect until the expiration of three months from the notification in the *Gazette* of such intention.

After notice in the *Gazette* of such intention as aforesaid the Local Land Board shall assess the loss (if any) of value which may be suffered by the holder of any allotment or portion if the proposed alteration or cancellation is carried into effect.

If the intention to alter or cancel the design or plan is afterwards carried into effect, the sum assessed by the Local Land Board shall be the total sum payable by way of compensation to the said holder, and all persons claiming under or through him; and such holder and all persons claiming under or through him shall be barred of any action or suit in respect of the alteration or cancellation of the design or plan or limits or the carrying out thereof other than an action for the sum so assessed as aforesaid: Provided however that compensation for loss of value shall be assessed only in cases where the alteration or cancellation of design or plan if carried into effect will deprive the said holder of access from his allotment or portion to the nearest street or road.

#### Reserves.

Reserves.  
Secs. 101, 103, 109,  
112, Act 1884;  
89, Act 1889.

170. The Governor may, by notice in the *Gazette*, temporarily reserve Crown lands, whether previously reserved or not and whether held under any lease or license or not—

- (a) from sale generally;
- (b) from sale in (or except in) such particular manner or manners as may be specified in the notification;
- (c) from lease generally;
- (d) from lease in (or except in) such particular manner or manners as may be specified in the notification;
- (e) from occupation license;
- (f) from conditional sale any Crown lands within a gold-field under the meaning and operation of any Act in force for the regulation of mining on Crown lands.

Crown lands may be reserved for such public purposes as—

- (g) for commonage;
- (h)

- (h) for the passage of any stock travelling pursuant to the provisions contained in the fifteenth section of the Act forty-first Victoria number nineteen, or any Act amending the same;
- (i) for camping places for travelling stock;
- (j) for the reservation of land within one mile on either side of any railway now or hereafter to be made or projected;
- (k) for the preservation and growth of timber;
- (l) as the site for any future city, town, or village;
- (m) for any other public purpose.

Public purpose means and includes, in addition to any purpose specified in this section, any purpose for mining for or removal of minerals, and any purpose declared by the Governor by notification in the *Gazette* to be a public purpose within the meaning of this section or the previous Acts: Provided that it shall not be necessary for the validity of any reservation under this section that any purpose should be specified in the notice thereof. Sec. 4, Act 1884.

Upon notice under this section the lands therein mentioned or described shall be, and remain, reserved accordingly until the reservation shall be modified or revoked in accordance with the provisions of section one hundred and seventy-one of this Act.

Within one month after such notice should Parliament be then in session, and otherwise within one month after the commencement of the next ensuing session of Parliament, there shall be laid before both houses of Parliament an abstract of all such reservations.

No reservation from lease under this section shall of itself operate as a withdrawal from any lease current at the date of notice of reservation, nor shall any reservation from occupation license under this section of itself operate as a withdrawal from any occupation license current at the date of notice of reservation.

No travelling stock route shall exceed one mile in width, and no camping place for travelling stock shall exceed one square mile. Any such route or camping place (if within any land held under pastoral lease or occupation license) shall be determined in the first instance by the Local Land Board, and the lessee or licensee of any lands within which such routes or camping places are situate shall not be entitled to impound any travelling stock as defined in subsection (h) aforesaid, or to maintain any action for trespass in respect thereof while such stock shall keep within the boundaries of the said routes or camping places. And a reduction of the rent or license fee by reason of setting apart such routes or camping places may be made by the Minister upon the recommendation of the Local Land Board in the prescribed manner.

#### Revocation of reserves.

171. The Governor may, by notice in the *Gazette*, revoke wholly or in part, any population area or any reserve, of any kind whatsoever which has been made at any time before or which may be made after the commencement of this Act, whether the setting apart or reservation has been effected by notice or proclamation in the *Gazette*. Revocation shall not, in any case, take effect until the expiration of sixty days after the date of notice of such revocation, and if the revocation be of a reserve from sale the land shall not be sold until the revocation shall have taken effect. Revocation of reserves.  
Secs. 102, 103, Act 1884.  
Sec. 39, Act 1889.  
Sec. C, 58 Vic. No. 16.

In any notice revoking the reservation of any land reserved within one mile of any railway line, or the reservation of any land within similar limits made under the repealed Acts, the Governor may prescribe the price, terms, and conditions on which such land may thereafter be sold, and the areas of the portions, and if deemed necessary may by notice vary such price, terms, conditions, and areas, the price not being less in any case than the minimum nor the area more than the maximum as fixed by this Act for town, suburban, or country land as the case may be, State

**State Forests—Timber Reserves—Licenses—Permits.**

State forests and  
timber reserves.  
Sec. 112, Act 1884.

172. It shall be lawful for the Governor, by notification in the *Gazette*, to proclaim any areas of Crown Lands therein described to be State Forests, and in like manner to reserve from sale any such areas as timber reserves, for the purpose in each case of preserving under regulations in that behalf to be made by the Governor the growth and succession of timber trees, and of preventing as far as practicable the destruction and exhaustion of such State forests.

Subdivision of State  
forests.  
Sec. 113, Act 1884.

173. State forests may be subdivided into such blocks as the Minister may think fit. For the purpose of carrying out such subdivision all existing forest and timber reserves may be reserved from sale, lease, or otherwise as the Minister may think proper until so subdivided.

Reserves for timber  
conservation.  
Sec. 114, Act 1884.

174. Any State forest or any portion thereof may by notification in the *Gazette* be dedicated or reserved for a specified period by the Governor for the conservation of timber, and upon publication of such notification such forest or portion thereof shall not during the term of reservation be open to timber or other licenses or permits under the provisions of this Act.

Regulations for  
State forests and  
timber reserves.  
Sec. 115, Act 1884.

175. It shall be lawful for the Governor to frame regulations for the issue of licenses or rights or permits to cut and remove live or dead timber on State forests or timber or other reserves or Crown lands whether held under lease or license or not, and of licenses and permits to dig for and remove from State forests, timber reserves, or Crown lands, whether under lease or not, any gravel, stone, clay, shells, or other materials subject to the following provisions:—

- (I) The rights or licenses to cut timber on a State forest shall be for one or more specified blocks in such forest, and may be sold by auction at such place as may be determined by the Minister, or by tender as the Minister may think fit.
- (II) Such rights or licenses in State forests shall be for a term not exceeding one year, unless in special cases the Minister may think fit to extend such term, but no such extended term shall exceed three years.
- (III) The upset rent shall be not less than ten pounds per annum for each block of six hundred and forty acres, and a proportionate amount for each one hundred and sixty acres in excess of that area. And every holder of a right to cut timber shall, in addition to his rent, pay such royalty according to the class of timber cut at such times and places and subject to such conditions as may be fixed by the regulations.
- (IV) Permits to cut and remove timber on timber reserves may be issued for a year or any less term, not being less than one month, at an annual fee of not less than six pounds, and a proportionate fee for shorter terms. Such permits may also be issued for any specified number of trees at a rate to be fixed by regulations for each tree. General permits may also be issued for the supply of saw-mills for any term not exceeding one year at an annual rate of six pounds, and subject to a royalty according to the scale fixed by the regulations.
- (V) Licenses may be issued to cut piles or props to be used for mining purposes, for the erection of jetties, wharfs, and for other purposes, on such terms and conditions as may be fixed by the regulations.
- (VI) All fees or sums of money, except royalty, payable in respect of any rights to cut timber or in respect of licenses or permits shall be payable in advance.

And

And such regulations may prescribe the forms and conditions to be contained in any such right, license, or permit, and may fix the rents or fees to be payable by the holder of any license or permit where-soever the same shall not have been fixed by this Act, and may provide for the forfeiture of any rights, licenses, or permits for the enforce-ment of rents, royalties, or fees, for the removal of felled timber, for the licensing of sites for saw-mills and the agistment of stock, for the limitation of girth of trees to be felled, for the issue of wattle bark permits, for the marking of logs of felled trees, for the seizure and sale of timber cut without authority or upon which the royalty has not been paid, and for defining the power and privileges conferred by rights, licenses, and permits. And such regulations may also provide for the imposition of penalties and fines for the infringement or viola-tion of any such regulation made under the authority of this Act, but no such penalty shall exceed the sum of *twenty* pounds exclusive of the value of the material taken or destroyed.

176. The breach of any condition or obligation, or the failure to perform any act or matter specified in any such right, license, or permit issued under the authority of this Act, shall have the effect of forfeiting such right, license, or permit upon a declaration of forfeiture by the Minister.

Forfeitures may be declared.  
Sec. 116, Act 1884.

#### Crown lands may be dedicated.

177. The Governor may, by notice in the *Gazette*, dedicate Crown Lands (whether previously reserved or not) in such manner as may seem best for the public interest for any railway or railway station—public road, canal, or other means of internal communication—public quay or landing place—public reservoir, aqueduct, or watercourse—the preservation of water supply—any purpose of defence—hospital, asylum, or infirmary, public market, or slaughter-house—college, school, mechanics' institute, public library, museum, or other institution for public instruction or amusement—town-hall, court-house, or gaol—permanent common—public health or recreation convenience or enjoy-ment—cricket ground—or racecourse—interment of the dead—use and general purposes of pastoral and agricultural associations—public baths—or for any other public purpose.

Dedication of Crown Lands to public purposes.  
Sec. 104 and 105  
Act 1884, and 41 Act 1889.

Upon any such notice being published in the *Gazette* such lands shall become and be dedicated accordingly, and may at any time thereafter be granted for such purposes in fee-simple.

An abstract of any intended dedication under this section shall be laid before both Houses of Parliament one calendar month before such dedication is made.

All lands heretofore permanently reserved or dedicated or here-after dedicated for any of the purposes aforesaid shall be deemed to be dedicated accordingly, and every conveyance, alienation, or disposi-tion thereof, except for the purpose for which such reservation or dedication shall have been made shall be absolutely void as well against Her Majesty as all persons whomsoever; provided that in any case in which the Governor shall be of opinion that the purposes for which any permanent reservation or dedication of Crown lands heretofore or dedication of Crown lands hereafter made have failed wholly or in part, or

That there is any doubt or uncertainty as to such purposes, or  
That the trusts annexed to any land dedicated or reserved under this Act or the previous Acts or any repealed Act have failed or cannot reasonably be carried out, or

That it is expedient in the public interest to resume the whole or part of the land so dedicated or reserved, or

To make an exchange of any portion of any such land for other land of equivalent value or nearly so to be dedicated or reserved on similar trusts or for like purposes,

Then and in every such case the Governor may direct a notice under the hand of the Minister to be published in the *Gazette*, which notice shall set forth the mode in which it is proposed to deal with the dedication, reservation, or land in question (hereinafter termed "Proposals"), a copy of which notice shall be laid before both Houses of Parliament within ten days of the publication thereof in the *Gazette* if Parliament be sitting, and

If not, then within ten days after the beginning of the next ensuing session. If Parliament shall within one month declare by resolution that it does not assent to the proposals set forth in such notice no further action shall be taken in the matter.

If no such resolution be passed, then after the termination of thirty clear days from the date when the notice was laid before Parliament, it shall be lawful for the Governor to direct the proposals so notified to be carried out, and the same shall be carried out accordingly, and for that purpose the Governor may revoke by proclamation in the *Gazette* any such dedication or reservation wholly or in part, and make any new dedication or reservation sanctioned by such proposals, and issue such grants and execute such exchanges, deeds, assurances, and instruments as the circumstances of each case may require.

The provisions of this section shall be held to apply and to have applied to Crown Lands which have been or shall be dedicated and granted by the Crown, and to any lands which, after grant by the Crown, shall have been or shall be resumed, purchased, or otherwise acquired by the Crown, and dedicated or granted for any purpose.

Upon revocation under the provisions of this section of any dedication, or grant and dedication, the lands shall forthwith be vested in Her Majesty, her heirs and successors, and shall become Crown Lands within the meaning of this Act.

#### Trustees may be appointed.

Appointment of  
trustees.  
Sec. 106, Act 1884.

178. The Governor may appoint trustees, not being less in any case than three in number, to be charged with the care and management of—

- lands already or hereafter dedicated,
- lands already or hereafter reserved, or
- lands already or hereafter resumed under the provisions of the  
Lands for Public Purposes Acquisition Act,
- lands already or hereafter purchased or acquired by the Govern-  
ment

for the recreation, convenience, health, or enjoyment of the inhabitants of any city, town, or district, or for any other public purpose whatsoever, and may confer such estate in such lands, and accompanied by such powers and with such conditions as he may think fit, and as may be included in any grant issued to such trustees.

The Governor may from time to time remove any trustee or trustees, whether appointed under this Act or otherwise, and fill an vacancies which may occur by reason of such removal, or by death or resignation.

Every such appointment shall only take effect upon notification in the *Gazette*.

The Governor may make rules and regulations enforceable by penalties not to exceed in any case *twenty* pounds for the management and control of any land reserved or dedicated or resumed for any of the  
public

public purposes hereinbefore mentioned without placing such land in trust, which rules and regulations, upon notification in the *Gazette*, shall have the full force of law.

#### Ownership of Improvements.

179. Any improvements made upon any lands, the purchase or lease or license of which has become forfeited, surrendered, or has expired, before or after the commencement of this Act, or have been made under colour of any application which may have been or which may be forfeited, disallowed, or withdrawn, shall (except as provided in section one hundred and thirteen of this Act) be the property of the Crown; but no lease or license which may be renewed or extended shall, whilst any renewal or extension continues, be deemed to have expired within the meaning of this section.

No improvements to bar conditional purchase, lease, &c., subject to payment of their value.  
Sec. 44, Act 1889.  
Sec. 102, Act 1884.  
Sec. 22, Act 1895.

Improvements effected subsequently to the first day of July, one thousand eight hundred and seventy-six on any land reserved from sale shall, on the revocation of such reservation or withdrawal of the land from lease, become the property of the Crown.

Improvements within the meaning of this section may include fencing, but shall be such as in the opinion of the Board are of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land.

No Crown lands shall be exempt from conditional or other purchase, or from homestead selection, or from any lease or license, by reason only that it contains improvements, but the purchaser or lessee shall pay for such improvements at their value.

Provided that when any land containing improvements shall be let under annual lease or occupation license the lessee or licensee shall not be called upon to purchase such improvements, but may be charged rent or license fee for the use thereof, to be ascertained by auction or tender, or in manner herein provided for the determination of their value.

Where the improvements belong to the Crown, their value shall be appraised by the Land Board, subject to appeal, and shall be paid for within such periods and in such amounts as such Board or the Land Appeal Court shall determine.

Where the improvements do not belong to the Crown their capital or annual value shall be paid by agreement between the parties, or failing such agreement (and on application by either party in the prescribed manner, accompanied by a deposit of ten pounds to cover the cost of dealing therewith), as appraised by the Land Board, and within such periods and in such amounts as the Board shall determine, subject to appeal under this Act.

Any appraisement of improvements made after the first day of June, one thousand eight hundred and ninety-five, or after the commencement of this Act, with the consent of the Crown, on land held under pastoral lease in the Central Division, or on land held under preferential occupation license in that division, shall be made on the bases of their value to the land taken and to an incoming tenant.

Before the determination of the value of improvements, such of them as are of a removable nature, may, with the permission of the Board, be removed by the owner, who, upon permission being granted, shall have full power by himself or his agents to enter upon the land within such period as the Board may allow, and to do all things necessary to effect their removal.

The value of any improvements on land sold at auction shall be added to the upset price, and when not the property of the Crown shall be refunded to the owner.

In

In cases where improvements may have been, or may be made through misapprehension as to the boundaries of land, or for any sufficiently reasonable cause, and the land containing them has been, or shall be purchased or held under lease or license by the owner of such improvements, it shall be lawful for the Minister, after report by the Land Board, to remit the value to such owner.

In any case in which the purchaser or lessee of land containing improvements has failed, or shall fail, to pay for them within the period allowed, his purchase or lease shall (together with all moneys paid in connection therewith) be liable to forfeiture by notice in the *Gazette*.

Nothing in this Act shall be construed to vest in the Crown any improvements upon land held under a pastoral lease in the Eastern Division, which having expired by effluxion of time has, under the provisions of section thirty-three of the Crown Lands Act of 1889, been converted into an occupation license if the said improvements shall not at the date of such expiration have been forfeited or forfeitable to or vested in the Crown.

#### Tenant Right in Improvements.

Tenant right in improvements.  
Sec. 51, Act 1895.

180. Tenant right shall accrue upon the determination of the lease or other holding by reason of which the tenant right is expressed to be conferred, and shall entitle the person in whom for the time being the tenant right is vested to receive the value to an incoming tenant of the improvements from any persons who make a purchase, or take a lease (not being an annual lease) of the land containing the improvements. And in the event of such persons not paying the amount then due and unpaid for the value of such improvements, such amount or so much thereof as remains unpaid for the time being shall be and remain a charge upon the land containing such improvements while in the hands of a purchaser or lessee until payment thereof. The value of the improvements to an incoming tenant shall be appraised by the local land board in the manner prescribed by section twenty-five of this Act, but shall be calculated on the basis of the value of such improvements to the land purchased or leased, and the payment of the value shall be made by such instalments, and at such dates, as may be prescribed.

The improvements, in respect of which tenant right is conferred by this Act, shall in all cases be—

- (a) of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land; and
- (b) the property of the person claiming to have tenant right in respect thereof;

and improvements which were forfeited or forfeitable to, or vested in, the Crown immediately prior to the accruing of the tenant right shall not be included:

Provided always that—

- (a) the tenant right shall lapse after the expiration of twelve years from the date of its first accruing, and thereafter the improvements shall be the property of the Crown; but such lapsing shall not affect any agreement, appraisalment, or order for payment previously made; and
- (b) the holder of the purchase or lease of the land containing the improvements shall be liable to pay any instalments of the value thereof, as appraised by the local land board, which shall accrue due during his holding; and
- (c) the value of any successful and useful well or bore for artesian water shall not be taken to exceed the first cost thereof, and no allowance shall be made for any unsuccessful or useless well or bore.

**Forfeited**

**Forfeited Lands containing improvements subject to tenant right or ownership.**

181. Where a purchaser or lessee of land shall have paid to the person having tenant right or ownership in improvements part of the value of the improvements, and the purchase or lease is forfeited, such share of the value of the improvements as is represented by the amount so paid at the time of the forfeiture shall vest in the Crown, and the remaining share of the improvements, or in the case of no such payment having been made, then the whole of the improvements shall continue to belong to the person having tenant right or ownership, and shall be subject to tenant right or ownership as defined by this Act; Provided that if the land be purchased or leased after the forfeiture fresh appraisement shall thereupon be made of such share of the value of the improvements as are vested in the person having tenant right or ownership.

Forfeited lands containing improvements subject to tenant right or ownership.  
Sec. 52, Act 1895.

**Reverters.**

182. Upon the forfeiture of any conditional or other purchase, or forfeiture or surrender of any homestead selection or of any conditional or other lease, or upon the revocation of any reserve from lease or license situated wholly or in part within the external boundaries of any pastoral or homestead lease or occupation license, so much of the forfeited or surrendered land comprised within such external boundaries shall (subject to the power of the Governor or the Minister to waive or reverse such forfeiture, or to cancel or modify such revocation) be added to the land under lease or license, and be included under such lease or license, and from the date of forfeiture taking effect or the notification in the *Gazette* of the revocation of the reserve, rent or license fee shall be payable for such unimproved lands at the same rate per acre as for the rest of the lease or license; and in respect of any land which may contain improvements the rent or license fee shall be determined in accordance with the provisions of section twenty-five of this Act.

Reverters.  
Sec. 32, Act 1889.  
Sec. 45, Act 1895.  
Sec. 22, Act 1895.

So much of any such forfeited or surrendered lands, situated within the external boundaries of any reserve from sale, or lease or license, or reserve from conditional purchase, or of any population area, or special area, or suburban lands, or gold-field, or area set apart or classified under the provisions of section twenty-six of this Act or section ten of the Crown Lands Act of 1895, shall be added to and form part of the same whether held under lease or license or not; and no specific notification of such reservation or addition as aforesaid shall be held to be necessary under this Act: Provided that where lands reserved or set apart as aforesaid are held under lease or license, any lands so added shall be also included under the lease or license, subject to payment as hereinbefore provided. The non-payment within the prescribed time of any sums due as aforesaid shall involve the forfeiture of the lease or license.

For the purposes of section thirty-two of the "Crown Lands Act of 1889," and of this section:—

(a) The external boundaries of any pastoral lease or occupation license are hereby declared to be and to have been so much of the external boundaries of the pastoral holding duly defined under authority or recognised by the Lands Department as together with the dividing line determined under section seventy-six of the "Crown Lands Act of 1884" form the ambit within which the pastoral lease or occupation license is situated:

(b) The external boundaries of any reserve from sale or lease, or license, or reserve from conditional purchase, or of any population area, or special area, or homestead selection area,

or

or settlement lease area, or suburban lands or gold-field, are hereby declared to have been and to be the boundaries as described in the *Gazette* :

Provided always that nothing contained in this section shall affect any conditional purchase or conditional or other lease for which the application has been confirmed, approved, or granted before the first day of June, one thousand eight hundred and ninety-five.

#### Validation of Purchases and Leases.

Provision for validation or avoidance of purchases and leases generally.  
Sec. 44, Act 1895.

183. Any purchase, homestead selection, or lease of Crown lands purporting to have been heretofore made or granted under the provisions of this Act or the previous Acts, or any repealed Act shall not be held to be void by reason of any breach or non-observance of the provisions of the said Acts, but every such breach or non-observance as aforesaid (if of a nature to affect the validity of the purchase, selection, or lease) shall render the same voidable only at the instance of the Crown.

If any such purchase, selection, or lease as aforesaid appears to be voidable at the instance of the Crown, the Minister may, in pursuance of section seventeen of this Act, refer the case to the Local Land Board, which shall investigate the matter and find whether or not the said purchase, selection, or lease be voidable; and where the said purchase, selection, or lease is found to be voidable, the Governor may, by notification in the *Gazette*, declare the same to be void, and the same shall thereupon become void to all intents and purposes: Provided always that if the application for such purchase or lease has been confirmed by a Local Land Board, the Minister may, in manner provided in section twenty-three of this Act, refer to the Land Appeal Court the decision of the Local Land Board confirming the same.

If the Crown elects to sustain any such purchase, selection, or lease as aforesaid, the Governor may, by notification in the *Gazette*, declare that the purchase or lease shall cease to be voidable by reason of any breach or non-observance of statutory provisions which may be specified in such notification, and the same shall become valid so far as regards the ground of objection so specified.

Nothing in this section contained shall affect—

- (a) any right accrued prior to the date of such purchase, selection, or lease;
- (b) any application for a conditional purchase or lease made before the thirteenth day of September, one thousand eight hundred and ninety-four, in reliance on the fact that the questioned purchase or lease was void;
- (c) any proceedings pending on the beforementioned day;
- (d) any remedy by writ of *scire facias* where a grant has been or shall have been issued for any such purpose as aforesaid.

The provisions of this section shall apply in like manner to purchases, selections, or leases purporting to be made or granted after the commencement of this Act; but the Governor shall not, in any such case, declare that the purchase, selection, or lease shall cease to be voidable, unless notice of the intention to make such declaration shall have lain before both Houses of Parliament for not less than ninety days, without being objected to by specific resolution.

#### Reversal of Forfeitures.

Validity and effect of reversals of forfeiture.  
65 Vic. No. 1.  
Sec. 22, Act 1895.

184. Subject to the provisions hereinafter contained, the Minister shall have power to reverse, whether provisionally or otherwise, any forfeiture which has heretofore been, or may hereafter be

be notified, declared, or otherwise asserted or enforced, under this Act or the previous Acts or any repealed Act, and for the purposes of this section and the three next succeeding sections, "forfeiture" includes the lapse or voidance of any contract with the Crown under any of such Acts for the purchase, selection, or leasing of Crown lands:—

- (I) A provisional reversal hereafter to be made of a forfeiture shall be deemed to have suspended, or shall suspend, as the case may be, the operation of the forfeiture, as from the date when such forfeiture has been or shall be notified, declared, or otherwise asserted or enforced; in any case, where such provisional reversal shall afterwards be revoked, such revocation shall have the same effect as if the provisional reversal so revoked had never been made.
- (II) Any absolute reversal of a forfeiture shall be deemed to have related back or shall relate back, as the case may be, to the date when such forfeiture has been or shall be notified, declared, or otherwise asserted or enforced, and shall be deemed to have had or shall have the same effect as if the forfeiture so reversed had never been notified, declared, or otherwise asserted or enforced.
- (III) In any case where a forfeiture has been or may hereafter be duly notified or declared for any cause other than the non-payment of money the Minister shall, before absolutely reversing such forfeiture, refer to the Local Land Board for inquiry and report as to any fact or circumstance in virtue of which he proposes to make such absolute reversal as aforesaid. And such Board, or the Land Appeal Court, upon an appeal or reference shall inquire into such fact or circumstance and make a report and recommendation thereon to the Minister: Provided that should the Minister decide in any case contrary to the recommendation of the Land Board or Land Appeal Court, as the case may be, he shall, on the day of so deciding, record in writing in the Lands Department his reasons for so doing; and the Minister shall, as soon as practicable, lay upon the table of the Legislative Council and the Legislative Assembly a copy of his decision, together with such reasons as aforesaid.
- (IV) Any reversal of a forfeiture hereafter to be made shall, as soon as practicable, be notified in the *Gazette*, but the date of such reversal shall be the date of the Ministers approval thereof.

And no provisional or absolute reversal hereafter to be made of any forfeiture shall defeat any valid application for a conditional purchase, homestead selection, or conditional or homestead lease, which shall have been lodged before the receipt by, or on behalf of, the Minister of a request in writing for such reversal, unless the applicant shall consent in writing to such reversal.

#### Waiver of forfeiture.

185. In any case in which a purchase, homestead selection, lease, or license has or shall become liable to forfeiture by reason of the non-fulfilment of any condition annexed by law to such purchase, selection, lease, or license, but in which the Minister shall be satisfied that such non-fulfilment has been caused by accident, error, mistake, inadvertence, or other innocent cause, and that such forfeiture ought therefore to be waived, it shall be lawful for the Minister to declare that such forfeiture is waived, either absolutely or upon such conditions as he may see fit to declare, and the forfeiture shall thereupon be waived accordingly; and

Waiver of  
forfeitures.  
55 Vic. No. 1.  
Sec. 22, Act 1895.

and when the forfeiture of any conditional purchase, homestead selection, or conditional lease shall have been waived, and the conditions, if any, of such waiver shall have been performed, the holder of any such conditional purchase or homestead selection shall, if otherwise entitled thereto, be entitled to receive a certificate of conformity in respect of the same, notwithstanding that such certificate may have previously been applied for and refused, and the holder of any such conditional lease shall be entitled to make additional conditional purchases of the land comprised within such lease as if no forfeiture thereof had been incurred.

### Boundary Fences.

Contributories to cost of fencing and maintenance.  
Sec. 141, Act 1884.  
Sec. 22, Act 1895.

186. Fencing within the meaning of this Act shall be deemed an improvement common to the land on either side of the line of such fencing.

The side of a reserved, intended, proclaimed, or other road shall not be held to form or be a common boundary-line within the meaning of this section.

Owners of fences made before the commencement of the Principal Act may claim contribution in respect thereto.  
Sec. 10, 52 Vic. No. 7.

For the purposes of this section fencing shall be held to mean or include fencing, whether erected before or after the first day of January, in the year one thousand eight hundred and eighty-five, or after the commencement of this Act, and whether prescribed by the local land board or not, provided it is, in the opinion of such board, of a sufficiently useful and substantial kind, and to fences which may under sections eleven or fourteen of the "Crown Lands Act Further Amendment Act" or section seventy-eight of this Act have been or may be made or treated as boundary fences.

Whenever land adjoining that which forms a conditional purchase or lease, or a homestead selection (before issue of the grant of such homestead selection), or a homestead lease, has been or shall be alienated or leased by the Crown, conditionally or otherwise, the person who shall fence his land may demand and enforce from the purchaser or homestead selector or lessee of such adjoining land or his alienee a contribution towards the cost of such fencing to the extent of one half of the appraised value thereof, but so far only as such fencing marks a common boundary-line.

And while such fencing is maintained in good repair and condition by such person, every owner, lessee, or occupant of adjoining lands shall be and remain liable as a contributory towards the cost of so maintaining such fence to the extent of one half of the estimated cost thereof.

No holder of an annual lease under this Act, and no holder of any lease having less than five years to run, shall be liable as a contributory under this section towards the original cost of fencing, but shall be liable as a contributory towards the cost of maintaining such fencing.

Fencing between adjoining or adjacent holdings.  
Sec. 23, Act 1889.

And in all cases of dispute in reference to the erection, completion, or repair of fencing, or to contributions towards the cost or maintenance of fencing upon or between adjoining lands or lands on opposite sides of roads or creeks, the board shall on application as prescribed by any party concerned, determine, subject to appeal, all questions in dispute, appraise all values, estimate all costs, determine the kinds of fencing to be erected within the meaning and for the purposes of this section, and make any order necessary or incident to the settlement thereof; and any such order shall be a sufficient authority and justification for entering upon any of the said lands, and doing such acts as may be necessary for carrying the same into effect.

**Removal**

### Removal of Trespassers.

187. On information in writing preferred in that behalf by any person duly authorised to any justice of the peace, setting forth that any person is in the unlawful occupation or use of any Crown land, or in the occupation or use of any Crown land in virtue or under colour of any purchase, lease, or license, although such purchase, lease, or license shall have been forfeited or otherwise made void, or although the conditions thereof shall have been broken or unfulfilled, or although such lease or license shall have expired, such justice shall issue his summons for the appearance of the person so informed against before two or more justices of the peace, at the nearest court of petty sessions to such Crown land, at a time to be specified in such summons. And at such time and place such Court, on the appearance of such person, or on due proof of the service of such summons on him, or at his usual or last known place of abode or business, shall hear and inquire into the subject matter of such information. And on being satisfied of the truth thereof, either by the admission of the person informed against, or on other sufficient evidence, such justices shall issue their warrant addressed to any officer duly authorised in that behalf, requiring him forthwith to dispossess and remove such person or any buildings from such land, and to take possession of the same on behalf of Her Majesty, and the person to whom such warrant is addressed shall forthwith carry the same into execution.

Sec. 131, Act 1884.

### Penalties for destroying Improvements.

188. If any person wilfully destroys or damages any dam, tank, well, excavation, boring, or other work lawfully constructed, sunk, or made, or in course of lawful construction, sinking, or making for the purpose of impounding or supplying water on any land, whether alienated by or under lease or license from the Crown under this Act or the previous Acts or any repealed Act, such person shall be guilty of felony and be liable to penal servitude for any term not exceeding *ten* years, or to imprisonment with or without hard labour for any term not exceeding *three* years. And if any person wilfully destroys or damages any fencing or improvement other than those before mentioned, lawfully constructed, or made by any holder of a conditional purchase, lease, or license, whether under this Act or the previous Acts, or any repealed Act (which lawfulness the Court shall have power to determine), such person shall be liable to a penalty not exceeding *fifty* pounds, or to be imprisoned with or without hard labour for any term not exceeding *six* months, and to pay in addition such fine by way of compensation to the person injured as the Court may order.

Penalties on destroying improvements.  
Sec. 132, Act 1884.

### Penalties for Trespass.

189. Any person unless lawfully claiming under any subsisting lease or license, or otherwise under this Act, or the previous Acts, or any repealed Act, or under any Act in force for the regulation of mining, who shall be found occupying or using any Crown land or land granted, reserved, or dedicated for public purposes, either by residing, or by erecting any hut or building or other structure thereon, or depasturing stock thereon, or by clearing, digging up, or enclosing or cultivating any part thereof, or by cutting or removing timber other than firewood not for sale thereon, or by obtaining stone therefrom, or driving piles or otherwise, or who shall strip or remove or cause to be stripped or removed the bark of any tree thereon, shall be liable on conviction to a penalty not exceeding *five* pounds for the first offence, and not exceeding *ten* pounds for the second offence, and not exceeding *twenty* pounds

Penalties for trespass or for unauthorised cutting or stripping bark on Crown lands.  
Sec. 133, Act 1884.  
Sec. 58, Act 1895.

pounds for the third or any subsequent offence: Provided that it shall not be lawful for the holder of any leasehold under this Act or the previous Acts to obstruct any Government surveyor or other authorised person from entering upon such leasehold whenever such surveyor or other authorised person may require to do so.

#### Removal of Boundary Marks.

Removal of  
boundary mark to be  
a misdemeanour.  
Sec. 134, Act 1884.

190. If any person shall unlawfully and wilfully obliterate, remove, or deface any boundary or survey mark, or any land mark or beacon, made or erected by the authority of the Surveyor-General, or by or under the direction of any authorised Government officer, such person shall be guilty of a misdemeanour.

#### Recovery of Penalties.

Procedure for  
recovery of  
penalties, &c.  
Sec. 139, Act 1884.

191. Whenever by any section of this Act, or by any regulation made thereunder, any person is made liable to a penalty or to pay any sum of money, whether as compensation or in any other way, and the mode of recovering such penalty or sum is not therein described, such penalty or sum may be recovered before any two or more justices of the peace in petty sessions in accordance with the Acts in force for the time being regulating summary proceedings before justices. And all sums of money ordered by any such Court to be paid, and all costs and expenses awarded by such Court, may be recovered and enforced by distress and sale of the goods and chattels of the person ordered to pay the same; and in default of sufficient distress, such person shall be liable to be imprisoned with or without hard labour for any term not exceeding *three* months, unless such money, costs, or expenses be sooner paid.

#### Resumption for Canal, &c.

Resumption for  
road.  
Sec. 42, Act 1882.

192. If at any time it shall be deemed expedient to open a canal, or cutting for irrigation purposes, through any land conditionally purchased or conditionally or otherwise leased or held in fee simple, or under homestead selection, it shall be lawful for the Governor by notification in the *Gazette* to resume so much of the land as may be required for the purpose, and in the like manner to at any time proclaim the same.

No such resumption shall be made until the expiration of one month from notice in the *Gazette* and in one or more newspapers published or circulated in the Land District wherein is situated the land as well as notice by letter to the reputed proprietors or occupiers of the said land, addressed to their last known abode or place of business of the intention to resume, during which time any person feeling aggrieved may address to the Minister any objection he may have thereto.

Subject to the provisions herein contained, a refund shall be granted of any moneys paid on account of the land so resumed; but in any case where the resumed land shall have been held in fee simple, or be a conditional purchase or conditional lease, the value thereof shall be appraised by the local land board, subject to appeal and the provisions of the twenty-fifth section hereof; and such value, or if any land shall be granted in part satisfaction as herein provided, the difference between such value and the value of the granted land to be appraised in the like manner shall be paid by the Crown.

An area of adjoining Crown land equivalent to the area resumed, if available, may be leased or granted to such owner in lieu of the area resumed.

No

No land shall be resumed under the provisions of this section which may be situated within two hundred yards of any dwelling-house if attached thereto and used in connection therewith, as a yard, garden, orchard, plantation, park, or avenue, unless the owner of such lands consent to the same being so resumed, or the purposes of the resumption cannot be otherwise secured. Any surveyor or other person duly authorised in that behalf may, for all purposes of this section, enter upon any lands proposed or liable to be resumed thereunder, and do all things necessary thereon without obstruction or resistance.

#### Roads of Access.

193. Every purchaser of Crown lands and every holder of a lease or license shall be entitled to a road of access, and also to free ingress and egress thereby to and from the lands held by him to the nearest reserved or proclaimed road through and over any Crown lands whether under lease or not if no access to the lands held by him by means of a reserved or proclaimed road or track shall be provided. And such road shall not interfere with any buildings, garden, stock, or drafting yards belonging to such lessee or licensee, and shall in every case follow such a direction, and be so marked as to occasion as little damage or inconvenience to the lessee as may be possible. And the Minister shall have power to close any such road upon giving three months notice to that effect in the *Gazette*.

Road of access through leased land. Sec. 111, Act 1884.

#### Acts of Surveyor-General,

194. When in this or the previous Acts or any other Act it is provided that certain acts or things shall or may be done, or directions shall or may be given by the Surveyor-General, such acts or things may be done and such directions may be given by any officer duly authorised by the Minister in that behalf.

Acts of Surveyor-General to be done by officer authorised in that behalf. Sec. 50, Act 1889.

#### Copies of Documents to be evidence.

195. A copy of any application, letter, document, or instrument of any kind whatsoever relating to any purchase, reservation, dedication, lease, plan, or right to or disposition of land under any repealed Act, or this Act, or the previous Acts, and whether of the original or of any press copy thereof, and of any indorsement or memorandum upon the same certified by the officer having the custody thereof to be correct, shall be admissible in evidence in every case in which the original would be admissible, and without proof that the person so certifying is the officer having the custody thereof if he shall state in his certificate that he has such custody.

Copies of documents to be evidence. Sec. 127, Act 1884.

#### Limitation of Actions.

196. All actions or other proceedings against any officer acting under the provisions of this Act for anything wrongfully done under or against the provisions of this Act, or the previous Acts, or any repealed Act, shall be commenced within twelve months after the matter complained of was committed, and not otherwise. And notice in writing of any such action and of the cause thereof shall be given to the defendant one month at least before the commencement of the proceeding. And in every such proceeding the defendant may plead the general issue, and give this Act and the special matter in evidence at any trial to be had thereupon. And no plaintiff shall recover in any such proceeding if tender of sufficient amends shall have been made

Limitation of actions. Sec. 129, Act 1884.

made before the same was commenced, or if a sufficient sum of money shall have been paid into court after such commencement by or on behalf of the defendant, together with costs incurred up to that time. And if a verdict shall pass for the defendant, or the plaintiff shall become nonsuit or discontinue such proceeding, or if upon demurrer or otherwise judgment shall be given against the plaintiff, the defendant shall recover his costs and have the like remedy for the same as any defendant has by law in other cases.

#### Royalty on Coal from Mineral Leases.

Provision for obtaining royalty on coal from mineral leases.  
Sec. 91, Act 1884.

197. The Governor shall, notwithstanding the provisions of the "Mining Act of 1874," impose a royalty of not less than sixpence per ton on coal raised from land which may be hereafter leased. And such royalty shall be in addition to or in substitution of any rent payable by such lessee under the said Act, but shall not affect or prejudice any other condition of the lease. And for the purpose of giving effect to the provisions of this section the Governor may make regulations prescribing the time and manner of payment of such royalty, and the manner of enforcing such payment.

#### Suits by the Crown.

Suits by the Crown for recovery of rents, &c.  
Sec. 49, Act 1889.

198. It shall be lawful for the Minister for Lands to bring under that name, and as nominal plaintiff on behalf of the Crown, any suit or action for the recovery of arrears of rent or of any other sums which, under any repealed Act or the previous Acts or this Act, may be due to the Crown. And no such suit or action shall be prejudiced, or abate, or require amendment merely because after the commencement thereof the Minister who brought the same may have gone out of office, or because another Minister may have been appointed, or the office may for the time being be vacant: Provided that costs may be given for or against such plaintiff in the same way as in any ordinary suit or action. And it shall be lawful for the Minister, for the purpose of recovering arrears of rent due to the Crown, to exercise by any duly authorised agent such powers of distress as are now given by law to any landlord.

#### Regulations.

Power to make regulations and rules.  
Sec. 145, Act 1884;  
53, Act 1889; 61,  
Act 1895.

199. Whenever in this Act the word "prescribed" is used in connection with any matter referred to in the context, and whenever, in any section of this Act, "regulations" are mentioned in connection with any such matter the Governor may in every such case frame regulations for the purpose of giving effect to the provisions of such section. And, for the purpose of carrying this Act into full effect generally, the Governor may make regulations, which shall, upon being published in the *Gazette*, be good and valid in law; and for the purpose of regulating proceedings before the Land Appeal Court, it shall be lawful for the Governor to make rules for the time and mode of procedure, and for the general practice of such Court, which shall, upon being published in the *Gazette*, be binding upon such Court, and upon the parties to any proceedings therein as the rules of the Court of Equity are binding upon that Court and the parties suing therein: Provided that a copy of all such regulations and rules shall be laid before both Houses of Parliament within fourteen days from the publication thereof if Parliament be then in Session, or otherwise within fourteen days after the commencement of the next ensuing Session.

## SCHEDULES.

## FIRST SCHEDULE.

## BOUNDARIES OF DIVISIONS.

## EASTERN DIVISION.

That portion of the Colony of New South Wales within the following boundaries :— Commencing at Point Danger ; and bounded on the east by the waters of the South Pacific Ocean southerly to Cape Howe ; thence on the south by the boundary dividing the Colonies of New South Wales and Victoria westerly to a point on the Murray or Hume River at the eastern boundary of the Land District of Corowa, as proclaimed in the Supplement to the New South Wales *Government Gazette* of the 2nd of January, 1885, No. 4 ; thence on the west by the boundary dividing the Land District of Corowa aforesaid and the amended boundaries of the Land Districts of Urana, Wagga Wagga, Grenfell, Forbes, Parkes, and Dubbo, as proclaimed this day in *Government Gazette* ; the Land District of Coonabarabran, as proclaimed 2nd January, 1885, and the amended boundaries of the Land Districts of Gunnedah, Narrabri, Bingera, and Warialda, as proclaimed this day, from the amended boundaries of the Land District of Albury, as proclaimed this day ; the Land Districts of Tumut and Gundagai, as proclaimed 2nd January, 1885 ; the amended boundaries of the Land Districts of Cootamundry, Young, Cowra, and Molong, as proclaimed this day ; the Land Districts of Wellington and Cassilis, as proclaimed 2nd January, 1885 ; and the amended boundaries of the Land Districts of Murrurundi, Tamworth, and Inverell, as proclaimed this day, northerly to the Dumaresq River ; thence on the north by the boundary dividing the Colonies of New South Wales and Queensland easterly to Point Danger aforesaid at the point of commencement.

## CENTRAL DIVISION.

That portion of the Colony of New South Wales within the following boundaries :— Commencing on the boundary between the Colonies of New South Wales and Queensland, at a point on the Dumaresq River where the eastern boundary of the Land District of Warialda, as amended by proclamation in the *Government Gazette* this day, meets that river ; and bounded thence on the east by the boundary dividing the Land District of Warialda aforesaid, the amended boundaries of the Land Districts of Bingera, Narrabri, and Gunnedah, as proclaimed this day ; the Land District of Coonabarabran, as proclaimed in Supplement to the New South Wales *Government Gazette* of 2nd January, 1885, No. 4, and the amended boundaries of the Land Districts of Dubbo, Parkes, Forbes, Grenfell, Wagga Wagga, and Urana, as proclaimed this day ; and the Land District of Corowa, as proclaimed 2nd January, 1885, from the amended boundaries of the Land Districts of Inverell, Tamworth, and Murrurundi, as proclaimed this day ; the Land Districts of Cassilis and Wellington, as proclaimed 2nd January, 1885, and the amended boundaries of the Land Districts of Molong, Cowra, Young, and Cootamundry, as proclaimed this day ; the Land Districts of Gundagai and Tumut, as proclaimed 2nd January, 1885, and the amended boundaries of the Land District of Albury, as proclaimed this day, southerly to the Murray or Hume River ; thence on the south by the boundary dividing the Colonies of New South Wales and Victoria westerly to the confluence of the Murray or Hume and Wakool Rivers, and by that river upwards to the south-west corner of portion No. 5, parish of Tararie, county of Caira ; thence by the south boundary of that portion bearing east to its south-east corner ; thence by the east boundaries of that portion and portions Nos. 3 and 4 bearing north to the north-east corner of the latter portion ; thence by part of the north boundary of that portion bearing west to a point south of the south-east corner of Canally Pastoral Holding ; thence by a line bearing north to that corner ; thence by the fenced boundary dividing Canally and Yanga Pastoral Holdings, being lines bearing northerly to the south boundary of Yanga South Run ; thence westerly to the south-west corner of that run, and thence northerly to the Murrumbidgee River ; thence by that river upwards to the Lachlan River ; and thence by that river upwards to its eastern and western branches at the north-east corner of J. Tyson's portion, No. 15, of 236 acres, parish of Tyson, county of Caira ; thence by the boundary dividing the Juanbung and Moon-mooncurra Runs, bearing north 33 degrees east to the Lachlan River, and thence again by that river upwards to the confluence of the Kalingalungaguy Creek ; thence on the west by a marked line bearing north 20 degrees west, being the western boundaries of the Kyargathur, North Kyargathur, Flanagan's Swamp, East Palisthan No. 2, Mombill, Wicklow block K, Wicklow block II, New Babinda, Hermitage Plains block A2, and Hermitage Plains block M Runs, to the western corner of the last-named run ; thence again on the north-west by a marked line bearing north 28 degrees east, being the north-western boundaries of Hermitage Plains block M, Hermitage Plains block K, and Hermitage Plains block I Runs to the most northern corner of the last-mentioned run ; thence by the south-western, south-eastern, and north-eastern boundaries of Glenariff block C Run bearing respectively south 46 degrees east, north 28 degrees east, and

and north 46 degrees west, to the most southern corner of West Bogan No. 10 Run ; thence by the south-western and north-western boundaries of that run bearing respectively north 22 degrees 30 minutes west 5 miles and north 70 degrees east 15 miles to the Bogan River ; thence by that river upwards to the fenced boundary dividing Colonel and Duck Creek No. 16 Runs ; thence by that boundary bearing easterly to Duck Creek ; thence by that creek upwards to the most southerly corner of Colonel Run ; thence by the south-eastern boundary of that run bearing north-easterly to the southernmost corner of Morbella West Run ; thence by the south-western and north-western boundaries of that run bearing north-westerly and north-easterly to the most easterly corner of Cookamunboin Run ; thence by the north-eastern boundaries of that run and East Bogan, No. 9 Run, bearing north-westerly to the south-western corner of Hermidon Run ; thence by the western and northern boundaries of that run bearing respectively north 10 degrees west about  $5\frac{3}{4}$  miles and east about 5 miles to Marra Creek ; thence by that creek downwards to the south-east corner of Thuara West Run ; thence by the south, the south-western, and the north boundaries of that run, bearing respectively west, north-westerly, and east to Marra Creek aforesaid ; thence by that creek downwards to the Darling or Barwon River, and again on the north-west by that river and the Macintyre River upwards, to the point of commencement.

#### WESTERN DIVISION.

That portion of the Colony of New South Wales within the following boundaries:— Commencing on the boundary between the Colonies of New South Wales and Queensland at the intersection of the twenty-ninth parallel of south latitude with the Macintyre River ; and bounded thence on the south-east by that river and the Darling or Barwon River downwards to the confluence of the Marra Creek ; thence on the east by that creek upwards to the north-east corner of Thuara West Run ; thence by the north, the south-western, and the south boundaries of that run bearing respectively west, south-easterly, and east to Marra Creek aforesaid ; thence by that creek upwards to the north-eastern corner of Hermidon Run ; thence by the northern and the western boundaries of that run bearing respectively west about 5 miles and south 10 degrees east about  $5\frac{3}{4}$  miles to the north-eastern corner of East Bogan No. 9 Run ; thence by the north-eastern boundaries of that run and Cookamunboin Run bearing south-easterly to the most easterly corner of the latter run ; thence by the south-eastern boundaries of that run and Eulagilma Run bearing south-westerly to the most western corner of Morbella West Run ; thence by the south-west boundary of that run bearing south-easterly to the most eastern corner of Colonel Run ; thence by the south-east boundary of that run bearing south-westerly to Duck Creek ; thence by that creek downwards to the fenced boundary dividing Colonel and Duck Creek No. 16 Runs ; thence by that run boundary westerly to the Bogan River ; thence by that river downwards to the north-eastern corner of West Bogan No. 10 Run ; thence by the north-western boundary of that run bearing south 70 degrees west 15 miles to the north-west corner of the run ; thence by the south-western boundary of that run bearing south 22 degrees 30 minutes east 5 miles to the most northern corner of Glenariff block C Run ; thence by the eastern, south eastern, and western boundaries of that run bearing respectively south-easterly, south-westerly, and north-westerly to the most western corner of the run ; thence again on the south-east by a marked line bearing south 28 degrees west, being the north-western boundaries of Hermitage Plains block I, Hermitage Plains block K, and Hermitage Plains block M Runs to the western corner of the last-mentioned run ; thence again on the east by a marked line bearing south 20 degrees east being the western boundaries of Hermitage Plains M, Hermitage Plains-block A2, New Babinda, Wicklow block H, Wicklow block K, Mombill, Palisthan No. 2, Flanagan's Swamp East, North Kyargathur, and Kyargathur Runs to the confluence of Kalingalungaguy Creek with the Lachlan River ; thence by that river downwards to the boundary dividing Juanbung and Moon-mooncurra Runs ; thence by that boundary bearing south 33 degrees west to the junction of the eastern and western branches of the Lachlan River, at the north-east corner of J. Tyson's portion No. 15 of 236 acres, parish of Tyson, county of Cairn ; thence again by the Lachlan River to the Murrumbidgee River ; and again on the south-east by that river downwards to the north-eastern corner of Benongal Run ; thence by the fenced boundary dividing the Canally and Yanga Pastoral Holdings, being lines bearing southerly to the south-west corner of South Yanga Run easterly to the north-west corner of Burrawang Run ; and again southerly to the north boundary of portion No. 4, parish of Tararie, county of Cairn ; thence by part of the north boundary of that portion bearing east to its north-east corner ; thence by the eastern boundaries of that portion and portions Nos. 3 and 5 bearing south to the south-east corner of the latter portion ; thence by the south boundary of the last-named portion bearing west to the Wakool River ; thence by that river downwards to its confluence with the Murray or Hume River ; thence on the south by the boundary dividing the Colonies of New South Wales and Victoria to its intersection with the one hundred and forty-first meridian of east longitude, being the boundary between the Colonies of New South Wales and South Australia ; thence on the west by that boundary northerly to its intersection with the twenty-ninth parallel of south latitude, being part of the boundary between the Colonies of New South Wales and Queensland ; thence on the north by that boundary easterly to the Macintyre River, at the point of commencement.

## Crown Lands Consolidation.

## SECOND SCHEDULE.

In the Land Court of New South Wales.

To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the Police force of New South Wales [and to the keeper of the gaol, prison, or lock-up at ]

It having this day appeared to the Land Court sitting at that A.B. of having been duly served with a subpoena or summons to attend and give evidence before the said Court in the matter of [here state the nature of the proceedings], and having had tender or payment of his reasonable expenses duly made to him has failed to appear when called. These are therefore to command you forthwith to apprehend the said A.B., and to detain him in custody; and to bring him before the said Court to abide the further order of the said Court.

Given under my hand this day of at aforesaid.

C.D., President.

(or) E.F., Acting-President.

(or) It having this day appeared to the Land Court sitting at that A.B. of has on the hearing of a certain matter [here state the nature of the proceedings] refused to make oath or affirmation before the said Court (or) to answer a certain question (or) to produce a certain document within his possession or control (or) to sign his examination reduced into writing (or) &c., &c., being lawfully required by the said Court so to do, and such refusal being without lawful cause or excuse (or) that A.B. of has obstructed the business of the said Court (or) has committed a contempt in face of the said Court (or) &c., &c. These are therefore to command you the said Sheriff and all the said officers as aforesaid to apprehend the said A.B., and to detain and convey him to the said gaol, &c., and to deliver him to the said keeper thereof, together with this warrant; and you the said keeper to receive him into your custody in the said gaol, &c., and him there safely to keep until the said A.B. shall have signified to the Land Court his submission to make the said oath or affirmation (or) &c., and the further order of the said Court in the premises shall have been made known to you under my hand (or) until the term of days from the date hereof shall have expired (or) until a fine of £ shall have been paid (or) until the said A.B. shall have been otherwise discharged in due course of law.

Given under my hand this day of at aforesaid.

C.D., President.

(or) E.F., Acting-President.

## THIRD SCHEDULE.

(A.)

In the matter of the "Crown Lands Act of 1884" and the "Crown Lands Act of 1889." To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the Police Force of New South Wales, and to the keeper of the gaol, prison, or lock-up at

These are to command you the said Sheriff and all officers as aforesaid to apprehend A.B. of and to convey him to the said gaol, &c., and to deliver him to the said keeper, together with this warrant; and you the said keeper to receive him into your custody in the said gaol, &c., and him there safely to keep for the term of [or unless the sum of shall be sooner paid], I, the undersigned, Chairman of the Local Land Board, sitting at , having now here adjudged the said A.B. [to pay a fine of and in default of immediate payment thereof] to be imprisoned for the said term, for that he the said A.B. [here state the offence to the following effect as the case may require] having been duly served with a summons or subpoena to attend and give evidence before the said Board in the matter of [here state the nature of the proceedings], and having had payment or tender of his reasonable expenses duly made to him has neglected to appear, such neglect having been without just cause or reasonable excuse (or) having been duly summoned or subpoenaed (or) examined as a witness on the hearing of a certain matter [here state the nature of the proceedings] has refused to make oath, affirmation, promise, or declaration in lieu of an oath before the said Board (or) has refused to answer a certain lawful question, that is to say [here state the nature of the question] (or) has refused to produce a certain document within his possession or control, that is to say [here state the nature of the document] (or) to sign his examination reduced into writing, &c., &c., being lawfully required by me the said Chairman so to do, and such refusal being without lawful cause or excuse (or) has perjured in his evidence.

Given under my hand this day of 18 at aforesaid.

C.D., Chairman of the Local Land Board.

(B.)

(B.)

In the matter of the "Crown Lands Act of 1884" and the "Crown Lands Act of 1889."  
To the Sheriff of New South Wales, his deputy and assistants, and to all officers of the  
Police Force of New South Wales.

WHEREAS it has this day appeared to me, the Chairman of the Local Land Board, sitting  
at            that A.B. of            having been duly served with a subpoena or summons to  
attend and give evidence before the said Board in the matter of [*here state the nature of  
the proceedings*], and having had tender or payment of his reasonable expenses duly made  
to him has failed to appear when called, these are to command you forthwith to apprehend  
the said A.B. and to detain him in custody and bring him before the said Board to give  
evidence in the said matter.

Given under my hand this            day of            at            aforesaid.  
C.D., Chairman of the            Local Land Board.

1896.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## CROWN LANDS.

(DECISION OF MINISTER FOR LANDS IN THE MATTER OF THE FORFEITURE OF CONDITIONAL PURCHASE 90-49, DUBBO, NOW NYNGAN, CONDITIONAL LEASE 15,833, BY HENRY NEWELL, AND THE REPORTS AND RECOMMENDATIONS OF THE LOCAL LAND BOARD AND LAND APPEAL COURT THEREON.)

Printed under No. 20 Report from Printing Committee, 1 October, 1896.

COPY of principal documents relative to the forfeiture of the conditional purchase No. 90-49 Dubbo, now Nyngan, and conditional lease No. 15,833, by H. Newell, and transferred to Adam Rae, together with the Minister's reasons for not carrying out the recommendations of the Land Board and Land Appeal Court, as required by sub-section (v) of section 3 of the Act 55 Victoria No. 1.

Decision of Minister for Lands in the matter of the forfeiture of conditional purchase 90-49, Dubbo, now Nyngan, conditional lease 15,833, by Henry Newell, afterwards transferred to Adam Rae, and the reports and recommendations of the Local Land Board and Land Appeal Court thereon.

I SEE no sufficient evidence to support the reports and recommendations of the Land Board and Land Appeal Court, or to remove the grave doubts created in my mind as to the *bona fides* of the selectors, and for those reasons, and for other reasons disclosed on the papers, I decide that the forfeiture incurred be not reversed.

J.H.C., 27/7/96.

. Crown Lands Act of 1884—(Part II, section 14, sub-section 4.)

Decision of Local Land Board.

Inquiry under section 20, C.P. 90-49, and C.L. 15,833; Dubbo, now Nyngan.

New South Wales, }  
to wit. }

WHEREAS on the 19th, 20th, and 22nd days of March, 1894, it became a matter for investigation before us whether the conditions had been fulfilled in connection with conditional purchase 90-49, of 640 acres, and conditional lease 15,833, of 1,920 acres, county Gregory, parish Gerard, Henry Newell now Adam Rae; and having taken evidence and inquired into the said matter, we find that Mr. Booth, solicitor, acting under instructions from Messrs. Creagh and Williams, solicitors, of Sydney, appears on behalf of the alienee, Adam Rae, who is not present. He has, therefore, not afforded us the opportunity of hearing him in evidence, but as the complaint is that the condition of residence and fencing has not been complied with, it appears to us that by the transfer only the right, title, or interest of the original conditional purchaser has passed to the alienee, and that section 26 of the Act of 1884, referring to notice or knowledge, does not apply, as there is no allegation of false declaration.

That the conditional purchase was confirmed to Henry Newell on 7th October, 1890; that Mr. Inspector Sim visited the land on 21st June, 1892, and again on the 1st August, 1893, on which latter date Newell was not residing, and had made default in the condition of fencing. By the evidence of the witness Davies, Newell left the conditional purchase about the end of 1892, and has not been on the land since.

That a writ of summons was issued against Newell on 13th January, 1893, when he could not be found.

That a writ of foreign attachment was issued by the Supreme Court on the 18th October, 1893, and that in pursuance of that writ the land was sold by the Sheriff to Adam Rae on the 19th December, 1893.

That

That on and before the date of the writ of attachment the conditions of residence and fencing were not complied with, therefore, we are of opinion the attachment does not protect the land from forfeiture, and we recommend that the conditional purchase with its dependent conditional lease be forfeited for that the conditions of residence and fencing have not been complied with.

Given under our hands at the Court-house, at Nyngan, this 22nd March, 1894,—

W. C. CARDEW, J.P., Chairman.  
DAVID BELL, J.P. } Members of Local  
DANIEL SOANE, J.P. } Land Board.

Now forwarded to the Under Secretary for Lands, in view of Board's recommendation hereon.—  
W. C. CARDEW, Chairman, 5/4/94.

Official Memorandum.

Dubbo, now Nyngan.—C.P. 90-49, 640 acres, 20th February, 1890; confirmed 7th October, 1890;  
Henry Newell; transferred by the Sheriff to Adam Rae, 19th December, 1893.

THE facts in connection with this case are to a certain date set out in the *précis* of 14th March, 1894, 94-5,729, Dep.

On the 22nd March last the Board, at an inquiry held subject to the 20th section, found that the conditions of residence and fencing were not complied with by the original selector—Henry Newell—and recommended forfeiture of the conditional purchase.

Notice of appeal was lodged against the Board's decision, and the matter came before the Land Appeal Court on 27th June last, when the appeal was dismissed, but the Minister was recommended under the circumstances to waive the forfeiture incurred.

The recommendation of the Land Appeal Court is submitted for consideration.

A.S., 9/8/94.

The case is submitted for consideration by the Minister as the Land Appeal Court has recommended waiver of forfeiture.—W.H.C., 15/8/94. F.H.W. (for U.S.), 16/8/94.

I have carefully gone through these papers, and I cannot see any features in the case which would warrant me in waiving the forfeiture incurred. The residential conditions were not fulfilled by Newell, nor does Rae appear to show any circumstances warranting a special consideration of his position. But, before coming to a final decision, I should like to have an inquiry held by the Land Board as to Rae's *bona fides*, and as to the manner in which he has fulfilled the conditions since the date of the transfer to him on 19th December, 1893.—J.H.C., 24/8/94.

Crown Lands Act of 1884—(Part II, section 14, sub-section 4).

Decision of Local Land Board.

New South Wales, }  
to wit. } Inquiry—C.P. 90-49; C.L. 15,833.

WHEREAS on the 7th day of March, 1895, it became a matter for us to receive evidence as to the *bona fides* of Adam Rae, and as to the manner in which he has fulfilled the conditions since the date of the transfer to the said Adam Rae of conditional purchase 90-49, of 640 acres, and conditional lease 15,833, of 1,920 acres, county Gregory, parish Gerar; and having taken evidence and inquired into the said matter, we find that Mr. Booth appears for the selector, and produces a medical certificate as to illness of selector, and applied for an adjournment, which we refuse, seeing that we have twice granted adjournments in this matter.

Having taken evidence, we forward the same for the information of the Honorable Mr. Carruthers, Minister for Lands.

Given under our hands, at the Court-house, Nyngan, this 7th day of March, 1895,—

W. C. CARDEW, J.P., Chairman.  
DANIEL SOANE, J.P. } Members.  
HENRY O. CERRICK. }

Forwarded for the Minister's information, in view of Board's decision hereon.—C.J. (for Chairman), 11/3/95. The Under Secretary for Lands.

Crown Lands Act of 1884—(Part II, section 14, sub-section 4).

Decision of Local Land Board.

New South Wales. } Inquiry, section 3, sub-section (v), 55 Vic. No. 1, C.P. 90-49, and C.L. 15,833;  
to wit. } Dubbo, now Nyngan.

WHEREAS on the 18th and 19th days of December, 1895, it became a matter for investigation before us under section 3, sub-section (v), of 55 Vic. No. 1, to inquire into the circumstances and merits of an application made by the Assets Realization and General Finance Company for the absolute reversal of forfeiture of conditional purchase 90-49, of 640 acres, and conditional lease 15,833, of 1,920 acres, county Gregory, parish Gerar; and having taken evidence and inquired into the said matter, we find that Mr. Booth appears for the company, who sent a former clerk, whose present whereabouts is not known, to Dubbo with instructions to purchase at Sheriff's sale this conditional purchase and lease for the late Adam Rae, at or under a certain price; that they were wholly unprepared for any objections, and apparently gave no instructions to the clerk as to how to act in the event of such being raised at the sale. We allow what Mr. Booth urges that when the letter of the witness Wilkinson was read, setting forth that there had been a default in the residence of the previous holder, there was no time for the clerk to inquire into the truth of the allegation, and that he had no time to come to any other decision than to implicitly carry out his instructions to purchase. We believe the company, who were then the mortgagees, are legally involved in the action of their clerk, but, as a matter of fact, it appears that the company, in the person of their secretary, Mr. Roberts, knew nothing of the objection raised until long after the land was purchased, and in view of this circumstance, and of their being induced to advance further

further large sum of money for fencing the land, on the Land Appeal Court's recommendation of waiver of forfeiture, together with the long delay in finally dealing with this matter, also in view of the whole evidence generally, we believe it would be very serious to enforce forfeiture at this stage, for the company have no doubt *bona fide* expended a large sum of money on the land.

We therefore recommend that the reversal of forfeiture be made absolute.

Given under our hands at Dubbo, in the Colony of New South Wales, this 19th day of December, 1895,—

W. C. CARDEW, J.P., Chairman.  
DANIEL SOANE, J.P. } Members.  
J. O. MACHATTE. }

Now forwarded for action.—H. ROXBURGH (for Chairman), B.C., 20/12/95. The Under Secretary for Lands.

Notice of Appeal to the Land Appeal Court from decision of Local Land Board.

WHEREAS on the 18th and 19th days of December, 1895, a certain matter, wherein an inquiry directed by the Honorable the Minister for Lands as to whether the Assets Realization and General Finance Company (Limited) had notice directly, or through Adam Rae or otherwise, of Henry Newell's default in fulfilment of conditions in respect of conditional purchase of 640 acres, No. 90-49, county of Gregory, parish of Gerar, district of Nyngan, together with conditional lease of 1,920 acres, No. 15,833, taken up in virtue thereof, forfeited 31st July, 1895, and as to the truth of the statements contained in a letter written by the secretary of the said company to the said Honorable the Minister for Lands on or about the 27th day of September last, and generally in respect to the said conditional purchase and conditional lease, came before the Local Land Board at Dubbo, in New South Wales for recommendation. And whereas the said Board on the said 19th day of December, 1895, recommended that the reversal of forfeiture be made absolute, as more fully appears by the decision of the Board hereunto annexed. And whereas I am aggrieved by such decision, and desire to appeal therefrom to the Land Appeal Court: these are, therefore, to give you notice that I appeal as aforesaid, and that I deposit the sum of £5 as security for the costs of such appeal. The grounds of such appeal are set out below. I desire that this appeal shall be heard in Sydney.

Signed this 15th day of January, 1896,—

To the Chairman, Local Land Board, Dubbo.

E. D. JONES,  
Nyngan.

Received the sum of £5 referred to above. Land Board Office, Dubbo, 16th January, 1896, 10:30 a.m.

C. JOHNSON,  
(For Chairman).

#### Grounds of Appeal.

1. That the Board should have allowed me to be a party to the inquiry.
2. That the recommendation of the Board was against the evidence and the weight of evidence.
3. That the Board refused to accept certain documentary evidence of previous transactions between Adam Rae and the Assets Realization and General Finance Company (Limited) (referred to in their Secretary's, Jeremiah Roberts', evidence), tendered by witness D. E. Burns.
4. That the Board refused to hear the evidence of one Henry Freeman with regard to the fencing of the selection.
5. That the Assets Realization and General Finance Company (Limited) advanced moneys to Adam Rae to purchase the selection under inquiry before taking any security from him, and that the security taken was given for £500 and further advances, whereas the amount advanced at the time was only £206 5s., which in itself was suspicious and proof that the sale and mortgage were not *bona fide*.
6. That the provisional reversal of forfeiture was in itself an act beyond the power of the Minister at the date the said provisional reversal was made and notified.
7. That the subsequent advances made by the said company were made by it with the knowledge that the title was bad.
8. That the inquiry was directed by the Crown, but the Crown was not represented, neither were the witnesses examined in any way by the Crown, nor any facts brought out except what were tendered voluntarily.
9. That Rae had at the time of the Sheriff's sale actual notice that the conditions required by him had not been fulfilled by Newell.
10. That Rae had at the time of sale by the Sheriff constructive notice that the conditions required by law had not been fulfilled by Newell.
11. That the said Assets Company at the time of the sale by the Sheriff had actual notice that the conditions required by law had not been fulfilled by Newell.
12. That the said Assets Company at the time of the sale by the Sheriff had constructive notice that the conditions required by law had not been fulfilled by Newell.
13. That the evidence all leads to the conclusion that Rae was not seeking to acquire the land *bona fide* and for his own use and benefit, but was merely to occupy the land and fulfil the necessary conditions so that the same might be secured by the station holder.

THIS deponent, Jeremiah Roberts, of Sydney, being duly sworn, maketh oath and saith as follows:—

By Mr. Booth: I am the Secretary of the Assets Realization and General Finance Company (Limited); I knew Adam Rae in his lifetime; the forfeiture of conditional purchase 90-49 and conditional lease held in virtue of it was provisionally reversed on my application, which provisional reversal was gazetted on 24th September, 1895; the letter of 27th September, 1895, to the Minister for Lands, Exhibit A. applying for provisional reversal, was written by me, now produced on the paper handed to me; I notice the Minister's minute referring my application to Board for inquiry; I first had business with Adam Exhibit B. Rae on 7th September, 1892; on 16th December, 1893, we first had dealings with him in connection with conditional

Exhibit C.

Exhibit D.

Exhibit E.

conditional purchase 90-49; we advanced him £206 5s. for the purpose of buying the selection in question; £200 purchase money, 4s. exchange, and £6 1s. travelling expenses to our clerk, who purchased; he had paid off a previous debt, and with this money conditional purchase 90-49 and conditional lease 15,833 were purchased at the Sheriff's sale about 16th December, 1893; inquiries had been made by me just previous to this about this conditional purchase; the inquiries were satisfactory in pursuance of this sale; the Sheriff transferred the land to Adam Rae; when Rae purchased a mortgage was prepared between Rae and the company; it is dated 29th December, 1893, and is from Rae to the company to secure £500 and further advances; it is registered 18th January, 1894, No. 748, book 529; there is a promissory note attached; further advances were made to Rae from this up to June last; at this latter date Rae was indebted to the company to the amount of £651 9s. 3d.; the ledger account produced shows the whole of the transactions between Rae and the Company in connection with this conditional purchase, and one held previously by him; this amount of £651 9s. 3d. is still owing to us under the mortgage; some of the further advances were made for fencing purposes; to the best of my knowledge the two amounts of £129 13s. 6d. and £69 7s. 6d. were advanced for fencing purposes; they are dated respectively 23rd April and 4th June, 1895; after the sale by the Sheriff, and after the mortgage, from hearsay, I heard that Rae had been ill; to the best of my knowledge he never informed us; I heard from a Government official from inquiries made that Rae was dead; at the time Rae bought the land from the Sheriff I was secretary to the company, and have been since its inception; at the date of the advance of £200 to Rae I had no knowledge of the alleged non-fulfilment of conditions by Newell; after the transfer to Rae I was aware of the inquiry by the Board as to fulfilment of conditions by Newell; I knew of the appeal against Board's decision to the Appeal Court; I was aware the Appeal Court recommended the forfeiture of the conditional purchase, as against Rae, should be waived; it was after this recommendation we made further advances to Rae; I am quite sure these further advances would not have been made to Rae but for the recommendation of the Appeal Court; the delay by the company in preventing forfeiture was owing to my absence in Queensland; on my return my attention was drawn to the *Gazette*; I have paid the instalments on conditional purchase and rents on conditional lease; the last payment was made in February last; all the statements contained in my letter of the 27th September, 1895, to the Minister are true and correct.

Marked A.

*By Chairman:* The Sheriff's sale was held at Dubbo; we sent an officer from Sydney to purchase for Adam Rae.

*By Mr. Booth:* We sent an officer to purchase at Rae's request; the officer was the accountant in our office at that time; I do not know where he is now; his instructions were to purchase, provided he secured it for £500 or under; £500 was the amount we agreed to advance him in the first instance; our instructions to the clerk were to bid to that amount.

Sworn at Dubbo, this 18th December, 1895,—

J. ROBERTS.

W. C. CARDEW, Chairman.  
DANIEL SOANE, J.P. } Members.  
J. O. MACHATTIE. }

THIS deponent, *John Thomas Steel*, of Dubbo, Sheriff's officer, being duly sworn, maketh oath and saith as follows:—

*To the Board:* On 14th December, 1893, at the Court-house, Dubbo, I sold, by virtue of a warrant of *feri facias*, issued at the suit of one William Alison *versus* Henry Newell; I sold all the defendant Henry Newell's right, title, and interest in conditional purchase of 640 acres, situated in parish of Gerar, county of Gregory, No. 90-49, and conditional lease 90-42, of 1,920 acres, same parish and county, to Herbert Stapley, of 70, Pitt-street, Sydney, accountant, as agent for Adam Rae, of 70, Pitt-street, Sydney, grazier, for the sum of £200; before offering the land I read a letter signed "W. B. Wilkinson."

[Mr. Booth objected to the production of this letter, on the grounds that it was not evidence as against the Assets Realization Company on their statements contained in the letter of the 27th September, 1895 (*Exhibit A*), as the clerk, Stapley, had no opportunity of inquiring into the truth of the allegations contained in Wilkinson's letter.

Board, by majority, overruled the objection. Mr. Soane dissenting.]

*Witness continuing:* Wilkinson's letter was addressed to the Sheriff, and I read it at the sale for what it was worth, not answering for its correctness or otherwise, that being a matter for consideration of intending purchasers; I produce the letter.

Exhibit F.

*By Mr. Booth:* At the sale I read the note in the margin; a Sheriff's sale always takes place at noon; I am bound to sell on that day at noon; Sheriff's sales are also for cash, which the purchaser has to pay on the fall of the hammer; the sale lasted from three to five minutes, including the reading of that document and the advertisement; I read the advertisement first, then the terms of conditions and sale, then the letter, and then offered the land immediately afterwards, about one minute elapsing from time of reading letter to knocking down the land; the purchase money was paid about five minutes after; Stapley had no time between my reading the letter to knocking down the land to inquire into truth or otherwise of allegations in the letter.

JOHN T. STEEL.

Sworn by John T. Steel, at Dubbo, this 18th December, 1895,—

W. C. CARDEW, Chairman.  
DANIEL SOANE, J.P. } Members.

THIS deponent, *William Boyce Wilkinson*, of Dubbo, agent, being duly sworn, maketh oath and saith as follows:—

*To the Board:* A sale was advertised by the Sheriff to take place on 14th December, 1893, of some land known as Newell's selection, in parish Gerar; on the 11th December, I wrote to the Sheriff of New South Wales; I was present at the sale on the 14th; the Sheriff's officer (Mr. Steel) offered this selection for sale; prior to offering it he read a notice, which was a notice from me to the Sheriff; I there and then made a statement which I prepared before, and read from the written statement at the sale

(now

On the 19th September, 1895, the Minister decided the matters should stand over for fourteen days, to enable the Company to furnish any further information on the merits of the case, and on the same date, 19th September, to prevent conflicting application, he decided to provisionally reverse the forfeiture. (*Vide* conditional sales 95-21,204 Dep.)

This provisional reversal of forfeiture was gazetted on 24th September, 1895.

On the 27th September, 1895 (*vide* conditional sales 95-6,441 Cor.), the Assets Realization Company wrote giving their reasons fully for claiming absolute reversal of forfeiture, and on the 2nd October the Minister approved of an inquiry by the Board under subsection v of section 3 of the Act of 1891, 55 Vic. No. 1. (*Vide* conditional sales, 95-22,189 Dep.)

On the 18th and 19th December, 1895, the Land Board at Dubbo held the inquiry as directed, and after taking evidence of the Secretary of the Assets Realization Company, the Sheriff's officer, W. B. Wilkinson, and others, decided to recommend, in view of all the circumstances set out in their finding (conditional sale 95-27,882 Dep.), that the provisional reversal of the forfeiture should be made absolute.

Against this finding and recommendation of the Board an appeal was lodged by one E. D. Jones, who, on 5th December, 1895 (*i.e.*, one day after the receipt of the letter from the Assets Realization Company asking for reversal of forfeiture), applied for the land as conditional purchase 95-6, Nyngan.

The Court, in the course of a long judgment, in which it is pointed out that the reference by the Minister under subsection v of section 3 of the Act of 1891 was not in accordance with the law, found that Jones had no *locus standi*, and could not be heard on the appeal, but with the concurrence of counsel the Court postponed its ruling on that point and proceeded to hear the case on its merits, with the result that the appeal by Jones was dismissed, and the recommendation of the Board as to making absolute the reversal of forfeiture was sustained.

Jones's application has not yet been dealt with, and it will rest with the Land Board, subject to appeal to the Land Court, to dispose of it. However, that is a question that need not now be considered, the point at issue at the present time being whether the waiver of forfeiture of Rae's conditional purchase is to be made absolute, or whether the provisional reversal is to be cancelled.

The writ of *fi. fa.* under which the right, title, and interest of the original selector (Newell) was sold by the Sheriff was on the suit of William Alison, the owner of the holding on which the land is situated. This holding (Canonbar) is now held under mortgage by Goldsbrough, Mort, & Co., and having in view the position taken by the Assets Realization and General Agency Company in the "Mercadool cases," it is submitted that the strict letter of the law should be enforced in this case.

As throwing some light on the question of Rae's *bona-fides*, it is pointed out that in 1887 he took up the following conditional purchase on Canonbar Holding, and later on an additional was made in virtue thereof:—

Conditional purchase 87-4, Dubbo, 607½ acres, 6th January, 1887, made by Adam Rae; transferred to the Assets Realization and General Finance Company on 28th July, 1892; to Goldsbrough, Mort, & Co. on 14th December, 1893.

Additional conditional purchase 93-3, Dubbo, 130 acres, 19th January, 1893, made by the Assets Realization and General Agency Company; transferred to Goldsbrough, Mort, & Co. on 14th December, 1893.

There seems to be very grave suspicion that the subject conditional purchase, 90-49, was made by Newell in the interest of the station, and that it is more than probable if the forfeiture is absolutely reversed the land will very soon become part of the station property.

In view of all the circumstances it is submitted that sufficient proof has not been brought forward by the holders of the conditional purchase as to their *bona-fides* in the transactions to warrant absolute reversal of forfeiture, and that the provisional reversal be now cancelled.

ALFRED SALWEY,

Head of Conditional Sales Branch, 17 June, 1896.

Sir,

Sydney, 4 September, 1895.

I have the honor to request that you will be good enough to withdraw from forfeiture, pending further action being taken, conditional purchase No. 49-90, in the name of Adam Rae, but selected by Henry Newell.

Prior to this, Mr. Robert Booth, solicitor, of Dubbo, has attended to the matter for us, but he advises me now that the selection has been gazetted for forfeiture, and that our only course to save forfeiture is to appeal for the temporary withdrawal as above.

Our position in the matter is that we advanced Rae (who has since died, and whose long illness was the cause of all the trouble) £200 to buy the selection at a Sheriff's sale, in addition to which we have advanced over £300 for fencing and other improvements. We hold a mortgage over the property to cover us for these advances, and trust that under the circumstances you will withhold the forfeiture till further inquiry is made.

I have, &c.,

J. ROBERTS,

Secretary.

The Under Secretary for Lands, Sydney.

The conditional purchase was declared forfeited on 31st July last for non-residence, and the writer now asks that the forfeiture be temporarily withdrawn, pending further inquiry. The papers are now with the District Surveyor, Dubbo.—J.R.Y., 5/9/95.

District Surveyor asked by wire to return papers.—J.R.Y., 5/9/95.

The papers in this case are with the District Surveyor. The case is one in which the Land Appeal Court recommended the Minister to waive the forfeiture (L.C. Reports, vol. 4, page 133), but after due consideration forfeiture was decided upon. The writer may, it is submitted, be informed that it is now found that no action towards consideration of the question of reversal of forfeiture will be taken until the papers are received from the District Surveyor.—ALFRED SALWEY, head of Conditional Sales Branch, 5/9/95.

Inform.—W.H., 5/9/95.

Secretary, A.R. & G.F. Co., informed, 5/9/95.

## Office Memorandum.

Dubbo, now Nyngan.—C.P. 90-49; 640 acres; 20 Feb., 1890; confirmed, 7 Oct., 1890; Henry Newell; transferred by the Sheriff to Adam Rae, 19 December, 1893.

THIS conditional purchase was gazetted forfeited on 31st July last, after special consideration of the question whether Adam Rae was aware of the fact that the original selector, Newell, did not comply with the residence condition. (*Vide* C.S. 95-7,878, Dep. herewith.)

Application was made on the 4th instant by the Assets Realization and General Finance Co. to have the forfeiture revoked, pending further action.

In view of the facts it is submitted that the application be refused.

ALFRED SALWEY,

Head of C.S. Branch, 9 Sept., 1895.

For refusal of the application of the 4th instant by Mr. Roberts, Secretary of the Assets Realization and General Finance Company (Limited), as the Company's monetary transactions with Rae is not in itself a circumstance that would justify the department in taking special action in the case.—W. H. CARRER, in charge, Sales Division, 10/9/95.

Submitted for approval of above memo.—W. HOUSTON, Under Secretary, 11/9/95. I am willing to let the matter stand over for fourteen days to permit the Assets Realization Company to furnish any further information on the merits of the case.—J.H.C., 19/9/95. To prevent conflicting interests arising, it is presumed that forfeiture may be provisionally reversed.—W. H. CARRER, in charge, Sales Division. Submitted.—W.H., 19/9/95. Approved.—J.H.C., 19/9/95.

Special.

## Assets Realization and General Finance Co. (Ltd).

Additional information as to merits of application for reversal of forfeiture, 90-49, Dubbo.

Sir,

Sydney, 27 September, 1895.

In reply to No. 95-21,204, Adam Rae, I have the honor to acknowledge receipt of your letter of the 20th instant, intimating that you had been good enough to provisionally reverse the forfeiture of conditional purchase 90-49, in the name of Adam Rae, in order to enable us to furnish you with additional information as to the merits of our application for a reversal of the forfeiture of the selection.

In the first place, I think it would be as well that you should know our interests in the land referred to.

The late Adam Rae, with whom we had previously done business, applied to us in December, 1893, for an advance not exceeding £500 for the purpose of enabling him to purchase Henry Newell's conditional purchase 49-90, of 640 acres, and conditional lease 15,833, of 1,920 acres, taken up at Dubbo on 20th February, 1890, and which was to be offered for sale at auction by the Sheriff at Dubbo.

Having made necessary inquiries, which resulted satisfactorily, it was agreed to make him the advance for the purpose named.

With this object in view, I sent one of the Company's clerks—Herbert Stapley—to Dubbo, with the result that he purchased the land on behalf of Adam Rae for £200.

Upon payment by us of the said amount a transfer was given by the Sheriff to the late Adam Rae, and was duly registered and accepted by the department.

To secure this Company, I took a mortgage over the lands to cover the amount of purchase money and further advances.

Later on we found that the fencing conditions had not been completed, and consequently we made the owner of the selection further advances to complete the same.

Subsequent to the purchase of these lands Mr. Rae was taken seriously ill, and was unable to permanently reside upon the selection, as he was under the doctor's treatment at Nyngan. He was consequently quite unable to attend the Land Board inquiries relating to his land, otherwise he could have satisfied the authorities of his *bona-fides* in the business.

I was totally ignorant of the non-fulfilment of the residence conditions by Newell, the original selector, at the time the advance was made to the late Adam Rae, and from the Land Court's recommendation it is very evident that Mr. Rae was also unaware of it.

This Company would never have lent the late Adam Rae further sums for the completion of fencing upon the lands in question were it not for the recommendation of the Land Court to the Minister to confirm the transfer from the Sheriff to the late Adam Rae, and which advice they relied upon the Minister accepting.

The late Adam Rae's estate is now indebted to this Company in the sum of £651, and we have nothing to look to for its return but the security, the subject of this letter.

Respecting the delay in taking action to prevent forfeiture, I can only repeat my somnolence arose from the belief that after the recommendation of the Land Court all further objection would be withdrawn. I certainly never anticipated that the department would go to the extreme of forfeiture. I had been absent in Queensland, and upon my return the *Gazette* notice was pointed out to me, whereupon I took immediate action to obtain the provisional reversal since granted.

I hope, therefore, that after considering all the circumstances you will take a sufficiently liberal view of the case as will relieve us, mortgagees in good faith, from what must otherwise be a serious loss.

I have, &c.,

J. ROBERTS,

Secretary.

The Under Secretary for Lands, Lands Department, Sydney.

I would further point out that up to the 20th February last the Treasury accepted the instalment of conditional purchase and rent on conditional lease in the name of Adam Rae without any demur or protest.—J.R.

Office

## Office Memorandum.

Dubbo, now Nyngan.—C.P. 90-49; 640 acres; 20th February, 1890; confirmed; 7th October, 1890; Henry Newell; transferred by the Sheriff to Adam Rae, 19th December, 1893.

THIS conditional purchase was gazetted forfeited on 31st July last, but the forfeiture was provisionally reversed on the 19th instant—gazetted 24th instant—to enable the Assets Realization and General Finance Company (Limited)—which Company claims to have advanced money to Rae to purchase the land—to furnish any information on the merits of the case.

The facts in connection with the case are fully set out in the statements C.S. 95-7,878 Dep., 94-18,875 Dep., and 94-5,729 Dep.

From the evidence of J. T. Steel, the Sheriff's officer, who sold the land, there seems to be no doubt that the officer of the Assets Company must have been aware that there was some doubt at least as to the fulfilment of the condition of residence by the original selector.

Mr. Wilkinson in his letter of 10th June, 1894, conditional lease 94-3,831, Cor., states that before the sale by the Sheriff, Messrs. Creagh and Williams, solicitors for Adam Rae, threatened him (Mr. Wilkinson) with an action should he slander the title at the Sheriff's sale.

It seems to me, in view of the facts, that the case is not one in which the Assets Realization and General Finance Company has made out a case strong enough to warrant an absolute reversal of forfeiture. If this view be taken, the provisional reversal should be cancelled in the usual manner.

ALFRED SALWEY,

Head of C.S. Branch, 30th Sept., 1895.

As provided in section 3, sub-section v, of the Crown Lands Act Amendment Act of 1891, it is submitted that an inquiry be instituted, and a report by the Land Board be furnished with the circumstances detailed in the communication of the 27th ultimo.—W. H. CAPPER, in charge Sales Division, 1/10/95.

For approval of inquiry under Act 55 Vic. No. 1.—WM. HORSTON, Under Secretary. Approved.—J.H.C., 2/10/95.

Exhibit "B"—Evidence of J. Roberts—Chairman, W. C. Cardew.

Exhibit "F"—Evidence of J. T. Steel—Chairman, W. C. Cardew, 18/12/95—Papers, L.B.D., Chairman.

To the Sheriff, New South Wales,—

Sir,

Dubbo, 4 December, 1893.

According to advertisement your officer here will cause to be sold here on the 14th, at the suit of W. Alison, all H. Newell's interest to a certain conditional purchase and conditional lease, parish Gerar, Gregory. I wish you to point out that the said selection has been abandoned by Newell, and has practically become forfeited, and is now set down for inquiry before the Local Land Board here on the 25th instant, and that you will instruct your deputy here to point out that there is no title, in order that the Crown Lands Act may not be prostituted. I am endeavouring to get this land thrown open at once for conditional purchase.

Yours, &c.,

W. B. WILKINSON,

Land Agent.

See previous paper. To be read at sale for what it is worth, the office not answering for its correctness or otherwise, that being a matter for consideration of intending purchasers.—13/12/93. The Sheriff for appl.—C.L., 13/12/93. The Officers, Dubbo. This letter read at sale for what it is worth, &c.—J. T. STEEL, S.O., 14/12/93.

This letter was put in as an exhibit at the Nyngan sitting of the Dubbo Land Board, on the 7th March, 1895, when I was giving my evidence. It appears it afterwards went before the Minister for Lands, and returned to me this 22nd day of August, 1895.—J. T. STEEL, 22/8/95.

In the Land Appeal Court of New South Wales.

Noted, 6/7/94.

APPEAL to be heard at Session to be held at Sydney, commencing on the 27th day of June, 1894.

Name and address of appellant—Adam Rae.

Nature of appeal—Against the finding of the Board in respect of his (formerly Henry Newell's) conditional purchase No. 90-49, and conditional lease No. 15,833, Dubbo, now Nyngan.

Names and addresses of any other parties interested—Adam Rae, care of Creagh and Williams, Sydney.

Now forwarded to the Minister for Lands, the case having been brought before the Land Appeal Court, sitting as above, on the 27th day of June, 1894.

A copy of the order of the Court will be found on the third page hereof.

J. KEATING,

Registrar.

To the Under Secretary for Lands, 2nd July, 1894.

Land Court No., 3,035.

Copy of Order of Court.

APPEAL dismissed, but the Minister is recommended, under the circumstances, to waive forfeiture. Deposit to be refunded.

Reserved Judgment, given 20th May, 1896.

No. 3,870, Ernest D. Jones.

THIS is an appeal against the recommendation of the Dubbo Local Land Board, upon an inquiry directed by the Minister, and purporting to be made under section 3, sub-section v, of the Act 55 No. 1, "into the circumstances" detailed in a certain communication bearing date 27th September, 1895, and addressed by the Secretary of the Assets Realization and General Finance Company (Ltd.) to the Under Secretary for Lands. That communication is, in brief, an application for the absolute reversal of the forfeiture of

conditional purchase 90-49 (640 acres) and its associated conditional lease 15,833 of 1,920 acres, county Gregory, parish Gerar. The Board, regarding this inquiry as an inquiry into the circumstances and merits of the said application for reversal of forfeiture, recommended that the provisional reversal of forfeiture of the subject lands should be made absolute. To understand that recommendation the previous history of the case may be briefly stated, partly from the papers in the case and partly from the report of the appeal *in re* Rae, 4 L.C.C., p. 133, in which appeal the fulfilment of conditions in respect of the same conditional purchase, which has become the subject of the subsequent proceedings, was brought up for review before this Court.

Sometime in 1890, one Newell took up a conditional purchase, 90-49, of 640 acres, and a dependent conditional lease of 1,920 acres on the resumed area of Canonbar (Nyngan), and the conditional purchase was confirmed in October of the same year. Subsequently, as the result of an inquiry under section 20 of the Act of 1884, held 19-22 March, 1894, the conditional purchase was by the Local Land Board recommended for forfeiture for non-fulfilment of the conditions of residence and fencing.

Before the last-mentioned date, *i.e.*, on 19th December, 1893, the Sheriff, pursuant to a *fi. fa.* under a writ of foreign attachment, sold the subject conditional purchase to one Adam Rae.

From the finding and recommendation of the said Board, Adam Rae appealed to this Court, which, however, on 27th June, 1894, dismissed the appeal, but with a recommendation to the Minister to waive forfeiture.

The Minister did not think fit to give effect to the Court's recommendation, his reasons being contained in a minute dated 24th August, 1894, in these terms: "I have carefully gone through these papers, and I cannot see any features in the case which would warrant me in waiving the forfeiture incurred. The residential conditions were not fulfilled by Newell, nor does Rae appear to show any circumstances warranting a special consideration of his position. But before coming to a final decision I should like to have an inquiry held by the Land Board as to Rae's *bona-fides*, and as to the manner in which he has fulfilled the conditions since the date of the transfer to him on 19th December, 1893."

Accordingly, the Board held such an inquiry, and adjourned the hearing on several occasions in consequence of Rae's absence through alleged illness, and ultimately took the evidence of the Sheriff's officer, the Conditional Purchase Inspector, and Mr. W. B. Wilkinson, agent, of Dubbo, and forwarded such evidence to the Minister, without any finding, for his information. The result was that the subject conditional purchase was gazetted forfeited on 31st July, 1895, but in consequence, it would appear, of representations made to the Minister by the Secretary of the Assets Realization Company (the mortgagees of the land), and following on the receipt by the Minister on 4th September, 1895, of a letter from the said company, asking him to withdraw the forfeiture, such forfeiture was on the 19th September, 1895, provisionally reversed, and the reversal gazetted on the 24th of the same month, to allow the company an opportunity of furnishing any information on the merits of the case. Such information was furnished by letter of the Secretary to the company, dated 27th September, 1895. In the meantime, *i.e.*, on the 5th September of the same year (1895), the present appellant lodged his application to conditionally purchase the land the subject of the forfeiture.

The next stage in the case is an inquiry directed to be made by the Local Land Board, pursuant to the Act 55 Vic. No. 1, into the statements made in the letter referred to, and the Company's application to make absolute the provisional reversal of forfeiture. This last inquiry was held as directed, and on the 19th December, 1895, the Local Land Board found and recommended as follows:—

"We find that Mr. Booth appears for the company, who sent a former clerk, whose present whereabouts is not known, to Dubbo, with instructions to purchase at Sheriff's sale this conditional purchase lease for the late Adam Rae at or under a certain price. That they were wholly unprepared for any objections, and apparently gave no instructions to the clerk as to how to act in the event of such being raised at the sale. We allow what Mr. Booth urges that when the letter of the witness Wilkinson was read, setting forth that there had been a default in the residence of the previous holder, there was no time for the clerk to inquire into the truth of the allegation, and that he had no time to come to any other decision than to implicitly carry out his instructions to purchase. We believe the company, who were then the mortgagees, are legally involved in the action of their clerk, but as a matter of fact it appears that the company, in the person of their Secretary, Mr. Roberts, knew nothing of the objection raised until long after the land was purchased, and in view of this circumstance, and of their being induced to advance a further large sum of money for fencing the land, on the Land Appeal Court's recommendation of waiver of forfeiture, together with the long delay in finally dealing with this matter, also in view of the whole evidence generally, we believe it would be very serious to enforce forfeiture at this stage, for the company have no doubt *bonâ fide* expended a large sum of money on the land.

"We, therefore, recommend that the reversal of forfeiture be made absolute."

This finding and recommendation are the subject of the present appeal upon the grounds following, though appellant's counsel abandoned the fourth and sixth grounds at the hearing:—

1. That the Board should have allowed me to be a party to the inquiry.
2. That the recommendation of the Board was against the evidence and the weight of evidence.
3. That the Board refused to accept certain documentary evidence of previous transactions between Adam Rae and the Assets Realization and General Finance Company (Limited), referred to in their Secretary's (Jeremiah Roberts's) evidence, tendered by witness D. E. Burns,
4. That the Board refused to hear the evidence of one Henry Freeman with regard to the fencing of the selection.
5. That the Assets Realization and General Finance Company (Limited) advanced money to Adam Rae to purchase the selection under inquiry before taking any security from him, and that the security taken was given for £500 and further advances, whereas the amount advanced at the time was only £206 5s., which in itself was suspicious, and proof that the sale and mortgage were not *bonâ fide*.
6. That the provisional reversal of forfeiture was in itself an act beyond the power of the Minister at the date the said provisional reversal was made and notified.
7. That the subsequent advances made by the said company were made by it, with the knowledge that the title was bad.

8. That the inquiry was directed by the Crown, but the Crown was not represented, neither were the witnesses examined in any way by the Crown, nor any facts brought out except what were tendered voluntarily.
- 9 That Rae had at the time of the Sheriff's sale actual notice that the conditions required by law had not been fulfilled by Newell.
10. That Rae had at the time of sale by the Sheriff constructive notice that the conditions required by law had not been fulfilled by Newell.
11. That the said Assets Company at the time of the sale by the Sheriff had actual notice that the conditions required by law had not been fulfilled by Newell.
12. That the said Assets Company at the time of the sale by the Sheriff had constructive notice that the conditions required by law had not been fulfilled by Newell.
13. That the evidence all leads to the conclusion that Rae was not seeking to acquire the land *bonâ fide*, and for his own use and benefit, but was merely to occupy the land and fulfil the necessary conditions, so that the same might be secured by the station-holder.

It will be sufficient, however, to consider the arguments advanced for and against the *locus standi* of the appellant, and that which dealt with the question of notice, actual or imputed, and whether on the part of the mortgagor Rae or the mortgagee company. But before doing so it may be well to draw attention to the terms of the Minister's reference of 2nd October, 1895, considered in connection with the sub-section of 55 Vic. No. 1, section 3, under which alone it could have been made, and with the Minister's minute of 24th August, 1894, set out above. That minute manifestly indicates on the part of the Minister a disinclination to absolutely reverse the gazetted forfeiture, whereas sub-section (v) of the section just cited appears to provide for an inquiry by a Board only where the Minister "proposes to make absolute" the provisional reversal of a forfeiture. The material words are: "In any case where a forfeiture has been or may hereafter be duly notified or declared for any cause other than the non-payment of money, the Minister shall, before absolutely reversing such forfeiture, refer to the Local Land Board for inquiry and report as to any fact or circumstance in virtue of which he proposes to make such absolute reversal as aforesaid, &c., &c." It will be seen, on looking at the Minister's reference, that "no fact or circumstance in virtue of which he proposed to make such absolute reversal" has been mentioned; but the subject of inquiry is simply described as "the circumstances detailed in the communication of the 27th ultimo, i.e., 27th September, 1895," that being an application made by the Assets Realization and General Finance Company (Limited) for the absolute reversal of forfeiture of the subject land, such absolute reversal not being proposed by the Minister, but by the company. The Minister had power to revoke the provisional reversal without reference to the Local Land Board. Reference to the Board is only required where the Minister himself proposes to reverse absolutely, and in that case the cited sub-section makes it compulsory on the Minister to direct a Board inquiry, and obtain a report before making a reversal absolute.

Then the terms of the reference itself can hardly be regarded as a sufficient compliance with the requirements of the Act 55 Vic. No. 1. The Minister, by sub-section v of section 3 of that Act, must refer to the Board for inquiry and report "as to any fact or circumstance" in virtue of which he proposes to make absolute a provisional reversal. Can it be said that "the circumstances detailed" in a letter are a "fact or circumstance" within the meaning of this sub-section? What circumstances so detailed are meant, for the letter details many "circumstances" which the Board evidently thought to be outside the scope of the inquiry, and do not appear to have investigated. On the other hand, the Board have investigated circumstances not detailed in that letter.

Our doubts, however, of the validity of the present reference on the grounds above indicated are not strong enough to require us to throw out the appeal; and the incongruity of the terms of the reference with the statutory authority, as also the insufficiency of the reference itself, are only pointed out now in order that a different course may be pursued in future.

Moreover, we are of opinion that the inquiry held by the Local Land Board, pursuant to the Minister's reference, did substantially raise the material question upon which the Minister ought to have been informed before making the provisional reversal of forfeiture absolute or revoking it, that question being: Did the Assets Realization Company take whatever interest it claims in the subject land with that notice (actual, constructive, or imputed) of the defect in their transferor's or mortgagor's title, which in a Court of Equity would (to use Lord Hardwicke's words) make that company a "*mala-fide* purchaser or mortgagee?"

We may therefore proceed to consider the arguments addressed to the Court at the hearing of the appeal, and we must begin with the preliminary objection to the *locus standi* of the appellant Jones, which was the subject of elaborate argument, but as to which the Court postponed its decision until the appeal had been heard on its merits, and apart from the technical objection to appellant's competency as a party. It was contended by respondent's counsel that Jones had been properly held by the Board to be incompetent as a party to the reference, and was also incompetent as a party to the present appeal, principally on the ground that—(1) The only parties before the Board for the purposes of the reference were the Crown and the Assets Realization Company; and also (2) because the effect of the application of that company for a provisional reversal of forfeiture (which application appears to have been received by the Minister on the 4th September, 1895) was, having regard to the concluding enactment in section 4 of the Act 55 Vic. No. 1, to defeat Jones's application for a conditional purchase bearing date the 5th September, 1895. On the other hand, it was contended by appellant's counsel that the subject land having been gazetted forfeited on 31st July, 1895, it became Crown lands open to conditional purchase thirty days after the *Gazette* notification, and inasmuch as the appellant lodged the application to conditionally purchase such land on 5th September of that year, and after the expiration of thirty days from gazetting of forfeiture, and when the land was Crown land open to conditional purchase, his title cannot be questioned or his right to appear before the Board and this Court as a party having a *locus standi*.

The Court holds that Jones, the present appellant, has no *locus standi*, and ought not to be heard on this appeal any more than on the proceedings before the Board. The concluding part of section 4 of the Act 55 Vic. No. 1 enacts that "no provisional or absolute reversal hereafter to be made of any forfeiture shall defeat any valid application for a conditional purchase or homestead lease which shall have been lodged before the receipt by or on behalf of the Minister of a request in writing for such reversal unless the applicant shall consent in writing to such reversal."

This

This must be taken to imply that if there has been a receipt by the Minister of such a request for reversal, then a provisional reversal will operate to defeat such an application. In the present case the Minister was, on the 4th September, 1895, in receipt of such a request in writing, so that the conditional purchase application of the appellant lodged the day after must be postponed by the operation of the provisional reversal of forfeiture. The operation of sub-section (11) of section 3 of the cited Act was in terms of that sub-section to suspend from the date of the notification of forfeiture the operation of such forfeiture, and to remit, as it would seem to follow, the holder of the forfeited land to his original title at least pending the further and final decision of the Minister either to revoke "the provisional reversal or to make it absolute."

We have considered very carefully the Supreme Court case of *in re Flood*, reported 15 N.S.W.R., p. 330, but there is nothing, so far as we understand that case, in the judgment of His Honor the Chief Justice, which should prevent us from interpreting the proviso to the 4th section of the Act under consideration as we have done, but, on the contrary, there appears, in a question put by the Chief Justice to the respondent's leading counsel, to be some countenance given to the view which this Court has taken of the effect of a provisional reversal of forfeiture. His Honor asked, "If the person who took up this land originally had the fee-simple vested in him during the suspension of the forfeiture, what estate had J.C. when she made the application?" The legitimate inference from the question so expressed is that suspension of forfeiture revives the original title during such suspension. If that inference be correct, then the title that was revived during the operation of the provisional reversal of the forfeiture in this case was the title of Newell that had been transmitted to Rae by the Sheriff's sale, and by Rae to the Assets Company. Inasmuch then as such provisional reversal was in operation when Jones lodged his application to conditionally purchase on the 5th September, 1895, by relation back to the date of notification of forfeiture, 31st July, 1895, Jones's title succumbs to the original title. Of course if Jones had lodged his application before the Assets Company had lodged with the Minister their request for provisional reversal, the result might have been different. As he lodged it after, he is postponed, and is without any interest in the subject land other than that of a bare subsequent applicant seeking to attack the original title.

With the concurrence of counsel, and to save time, the Court postponed its ruling on the competency of the appellant as a party, and proceeded to hear the case on its merits, and apart from the legal objection taken by respondent's counsel. The question of notice was argued at great length, and it remains for the Court to consider and decide how far the plea of innocent mortgagee for value answers appellant's contention.

Mr. Heydon contended that the letter or statement written by Mr. W. B. Wilkinson, land agent, of Dubbo, and read by the Sheriff's officer at the sale of Newell's right, title, and interest in the subject land, to the officer of the Assets Realization Company, as agent for Adam Rae, fixed Adam Rae with at least constructive notice of Newell's defective title, and that as the company can only stand in Adam Rae's shoes by virtue of the mortgage to them, their title has the same taint on it as the title of the mortgagor. The letter referred to was addressed to the Sheriff, and was by him read out, as he says in his evidence, "for what it was worth," about a minute elapsing from the time of reading the letter to the knocking down of the land to the agent of Adam Rae. The purchase-money, £200, appears to have been paid to the Sheriff's officer about five minutes after the land was so knocked down. The letter or statement read out by the Sheriff's officer is in these terms:—

"Statement made at Sheriff's Sale, 14 December, 1895.—H. Newell's conditional purchase.

"I give notice that this selection has been abandoned; that an adjourned inquiry is now before the Land Board; that the conditional purchase inspector has reported the holder Newell as non-resident; that his letters have been returned; and the police have reported that Newell has left the district.

"W. B. WILKINSON.

"I do this in the interest of people awaiting the forfeiture of the land who are anxious to avail themselves of the privileges of the Lands Acts.—W.B.W."

If the notice which a Court of Equity will presume to have come to the knowledge of a person, that is to say, constructive notice, is governed by the same rule as actual notice, so far as its binding effect on the conscience of a purchaser is concerned, some person interested in the property affected by the notice must give that notice, and during the negotiations for the purchase. This seems to be clearly established by the Privy Council's decision in *Barnhart v. Greenshields*, 9 Moore's P.C. cases, 18. What then was the nature of Mr. Wilkinson's interest in Newell's selection, even assuming that the reference in his "statement" to "H. Newell's conditional purchase," was a reference to H. Newell's conditional purchase of 640 acres. No. 90-49, county of Gregory, parish of Gerar, district of Nyngan, which it must be admitted is an assumption that might be repudiated by both purchaser and mortgagee. The interest of the writer of that statement in the subject land can best be ascertained by a perusal of his own sworn evidence before the Board taken for the purposes of the Minister's reference.

"I had been writing" (he states) "to different people about this selection, *i.e.* Newell's. I may have written to Goldsbrough and Company; I never wrote to Goldsbrough, Mort, & Co. that if they did not give me £50 that I would report it; I wrote to them demanding £50 they owed me; Mr. O'Connor, land agent here, made an agreement with me, which he made me reduce to writing, that I would not put anyone on to certain land on Canonbar, but to give them one Thursday's grace; I gave him the Thursday's grace; Mr. O'Connor came to me on Thursday evening, and said that through misquoting the basal conditional purchase to Goldsbrough, Mort they were unable to take up the land on Thursday, and asked me for another week, and if I would draw out the applications, so that there should be no mistake; I drew them out, and they were forwarded to Goldsbrough, Mort, & Co. on the following Thursday. . . . I discovered a flaw in applications for some of their land; this refers to part of it; the £50 was for myself; I was to get £50 for not taking advantage of this flaw; this transaction, I think, took place before the sale to Rae; I do not consider it blackmailing, because the information was worth far more to me than this for the public; I may have written to Goldsbrough, Mort, & Co. I think it will be some day to your interest to settle the £50 matter. . . . One of the flaws I discovered was that an agent had appointed another agent to take up a conditional purchase; I still think it to be to their interest to pay me the £50."

The

The conclusion that any reasonable and unprejudiced person would be justified in coming to on the evidence quoted above is, we think, that Wilkinson's interest in Newell's selection was the interest of a man who meant to use his knowledge of a supposed flaw in the holder's or vendor's title for his own pecuniary advantage rather than "in the interest of people awaiting forfeiture of the land who are anxious to avail themselves of the privilege of the Lands Acts;" but whatever the nature or peculiarities of that interest might be, we cannot think it such an interest as was considered necessary by the Privy Council in the cited case to give a binding effect to a notice emanating from the possessor of such interest. Some persons might not hesitate to pronounce the transaction, so naively described by Wilkinson, as "blackmailing" pure and simple. But this Court is loth to employ an expression which conveys so odious an imputation and suggests so disreputable a practice. It is sufficient for the Court to express the opinion that a flaw in title reported by the writer of that statement, in view of his own evidence, ought not to count for much at a Sheriff's sale, especially when we have a clear and express statement on oath by the secretary of the Assets Company that he had no knowledge whatever of the defect referred to when his company advanced the purchase money to Rae. In other words, the Court is distinctly of opinion that Wilkinson's "statement" was not one which should put an intending purchaser or mortgagee to inquiry as to the existence of the defect intended to be disclosed. If the law were otherwise, then any unscrupulous volunteer who might be possessed by a grudge or by a wanton spirit of doing mischief could effectually put a stop to any public sale of property the title to which he might choose to slander, and, if a man of straw, do so with perfect impunity.

Mr. Heydon contended that the subject matter of the Minister's reference was not whether the Assets Company had notice of the non-fulfilment by Newell of his condition of residence, but whether Adam Rae was fixed with such notice. In our judgment, neither was Adam Rae fixed with such notice nor was the Assets Company, and further, we are of opinion, following such authorities as we have been able to consult, that even if Adam Rae took with notice of such non-fulfilment of residence by Newell, the Assets Company, Rae's mortgagees, are not affected by such notice. [See Story's Equity Jurisprudence, 13th edition, vol. I, s. 490 and 416; also the well-known leading case of *Jones v. Smith*, 1 Hare, 43, affirmed on appeal 1, Phillips 244, where Wigram, V. C., laid it down that "If there is not actual notice that the property is in some way affected, and no fraudulent turning away from a knowledge of the facts which the *res gestæ* would suggest to a prudent mind, if mere want of caution as distinguished from fraudulent and wilful blindness is all that can be imputed to the purchaser, then the doctrine of constructive notice will not apply, then the purchaser will in Equity be considered, as in fact he is, a *bonâ fide* purchaser without notice."]

In *re Butler*, 15 N.S.W.R., the Chief Justice said, at page 93:—"Forfeiture is odious to the law, and, in constructing an Act of Parliament, it cannot be assumed that the Legislature intended forfeiture, especially against an innocent purchaser, unless the Legislature has used express words for the purpose. The liability to forfeiture is, in my opinion, confined to the original conditional purchaser, and does not apply to an innocent purchaser from the Sheriff." The present case differs from *in re Butler* in this very important feature, that here we have at most a liability to forfeiture for non-fulfilment of a condition subsequent. In *Butler's* case, the liability to forfeiture arose from a fraud on the Act, *i.e.*, a false declaration of the conditional purchaser, and fraud, it is well known, vitiates in a far different degree from default, so that the principle laid down in *Butler's* case applies with greater force to such a case as the present.

Mr. Heydon, towards the close of his argument, suggested that the Court, as an alternative, might send the case back to the Board for further investigation, so that the appellant Jones might have an opportunity of giving evidence. In answer to that suggestion, it is sufficient to say that the view we take of Jones' status does not allow us to adopt the suggestion. And, in the next place, we hold that the evidence before the Court is sufficient to enable the Court to arrive at a conclusion upon the recommendation made by the Local Land Board on the question of notice. For these reasons we must decline to send the case back for further evidence.

Dealing then with the appeal on the evidence before us, and after the best consideration we can give to the law as applicable to that evidence, we dismiss the appeal, and sustain the recommendation of the Local Land Board, appealed from, but the deposit will be refunded.

Mr. Heydon asked for extended time to appeal. The Court allowed six weeks from this date within which to lodge notice of appeal.

Dubbo, now Nyngan.—C.P. 90-49; 640 acres; 20th February, 1890; confirmed, 7th October, 1890; Henry Newell, transferred by the Sheriff to Adam Rae; 19th December, 1893.

THE conditions of residence and fencing were not carried out, consequently forfeiture was incurred, duly approved by the Minister, and notified on the 31st July last.

However, on the 24th September last, provisional reversal of forfeiture took place, and the Board was, in view of a communication dated the 27th September last, authorised under sub-section (v) of section 3 of the Act of 1891, 55 Vic., No. 1, to inquire into the circumstances detailed therein.

The Board, upon the evidence given by Mr. Roberts, Secretary to the Assets Realization and General Finance Company (Limited), Mr. Steel, Sheriff's Officer, and Mr. W. B. Wilkinson, report "that the purchase from the Sheriff was practically without notice of the non-fulfilment of the conditions of selection, and in view of this circumstance, and of the company being induced to advance a further large sum of money for fencing the land on the Land Appeal Court's recommendation of waiver of forfeiture—together with the long delay in finally dealing with this matter, also in view of the whole evidence generally, they believe it would be very serious to enforce forfeiture at this stage, for the company have, no doubt, *bonâ fide* expended a large sum of money on the land," and at the same time they "recommend that the reversal of forfeiture be made absolute."

The company, of course, did not appeal against this recommendation, but one E. D. Jones, who applied to conditionally purchase the land in question on the 5th September last, and was refused a hearing by the Board at the last inquiry, lodged an appeal on various (thirteen) grounds against the Board's recommendation.

The Land Appeal Court held that Jones had no *locus standi*, and ought not to be heard on the appeal any more than on the proceedings before the Board, but, with the concurrence of counsel, postponed its ruling on the competency of the appellant as a party, and proceeded to hear the case on its merits, and apart from the legal objection taken by respondent's counsel. The

The question of notice, referred to on page 11 of the judgment of the Appeal Court, was argued at great length. The Court was distinctly of opinion that Wilkinson's "statement" was not one which would put an intending purchaser or mortgagee to inquiry as to the existence of the defect intended to be disclosed, and after the best consideration was given to the law as applicable to the evidence, the appeal was dismissed, the Court sustaining the recommendation of the Local Land Board appealed from, but authorising the deposit to be refunded.

The question of "purchase without notice" is the one now calling for consideration, as although the Court may be credited with disposing of Mr. Wilkinson's "statement," the evidence given by Mr. Roberts, secretary to the company, indicates a class of business that carries with it a certain amount of suspicion, and the Board would have been justified in putting the witness to the most searching cross-examination.

This was not, however, done, and the Department is at a disadvantage in now disposing of the claim, as it seems that, although the forfeiture originally notified was apparently just, the whole facts were not at the more recent inquiries brought before the Land Board.

There appears to be no means available of bringing about a thorough investigation in this matter except by thrusting on the company the responsibility of initiating proceedings in the Supreme Court.

To give the company the opportunity of taking this case to the Supreme Court, and at the same time dealing with it as under all the circumstances it seems to deserve, it is submitted that the provisional reversal of forfeiture of the conditional purchase and dependent conditional lease, approved on the 8th April, 1895, and notified in the *Gazette* of the 24th September last, be revoked.

If the Minister decide upon the course suggested, it will be necessary for him, as such is contrary to the recommendation of the Land Board, to record, as provided by sub-section (v), section 13, 55 Vic. No. 1, his reasons for so doing. And the section further provides that "the Minister shall, as soon as practicable, lay upon the Table of the Legislative Council and that of the Legislative Assembly a copy of his decision, together with such reasons."

W. H. CAPPER,

In charge, Sales Division, 22/6/96.

The salient features of this case are fully set out in the reports herewith of Messrs. Capper and Salway. Although the case is evidently tainted with the strongest suspicion of bad faith, the fact of Rae having become the purchaser of the land in question at the Sheriff's sale without any notice of any defect in the title cannot, in view of the Supreme Court decision *in re Butler* (N.S.W.L.R., vol. 15, p. 87), be disregarded. Notwithstanding the decision of the Land Appeal Court on the question of notice to Rae, the proceedings so strongly resemble certain features of the Mercadool cases that further investigation would be very desirable, and I would suggest that counsel's advice be taken as to the best procedure that can be adopted to vindicate the law and to defeat proceedings which on their face bear evidence of *mala fides*. I would point out in this connection that while section 26 of the Act of 1884 provides for the protection of an innocent purchaser in a case of fraud, it omits any reference to a case where the conditions of the conditional purchase have not been fulfilled.—W. HOUSROX, Under Secretary, 30/6/96.

Appd. for counsel to advise.—J.H.C., 30/6/96. Crown Solicitor with papers, 1/7/96.

Sir,

Crown Solicitor's Office, Sydney, 9 July, 1896.

In compliance with the request contained in your letter of the 1st instant, I have obtained Mr. Canaway's opinion with respect to the course to be taken with regard to conditional purchase 90-49, Nyngan, Henry Newell (now Adam Rae), and now have the honor to forward herewith a copy of his advising thereon, together with the papers numbered as in margin.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

The opinion of Mr. Canaway, obtained in accordance with the decision on C.S. 96-16,608, Dep., is now submitted.—ALFRED SALWEX, Head of C. S. Branch, 10/7/96.

[Enclosure.]

*Re Newell's (now Rae's) C.P.—Mr. Canaway's Opinion.*

THE fact (if it were the fact) that Rae purchased Newell's conditional purchase without notice of the breach of conditions by Newell did not, in my opinion, prevent the forfeitures declared on 21st July, 1895, operating against him. Section 29 of the Act of 1884 gives an unqualified power of forfeiture if the conditions are not fulfilled; and in this respect it differs from section 26 of the same Act—the section in question *in re Butler*, 15 N.S.W. L.R. 87. The Court in that case held that under section 29 the penalty of forfeiture was something personal to the maker of the conditional purchase; not an incidental attaching to the conditional purchase. Section 29 makes the Minister's power of forfeiture an incident of the conditional purchase itself, and there is no restriction as to the persons against whom it may be exercised. By section 125 of the same Act Rae is declared to have taken only Newell's interest in the land; that is to say, an interest liable to be defeated when the Crown discovered and enforced the forfeiture. Forfeiture having once been declared, the question really becomes one as to the effect of the provisional reversal, made on 24th September, 1895; and it is plain from section 3 (1) of 55 Victoria No. 1 that the Crown retains the power to revoke the provisional reversal, and that this revocation would have the same effect as if the reversal had never been made.

Whether or not this power of revoking the reversal should be exercised is a question of policy with which I have nothing to do. The Local Land Board on 19th December, 1895, and the Land Appeal Court on 30th May, 1896, have recommended that the reversal should be made absolute; and these recommendations appear to have been based on Mr. Roberts' evidence that he had no knowledge whatever of the breach of conditions by Newell. The Crown was not represented either before the Board or the Court; and it seems to have been assumed that this want of knowledge was of the kind which calls for the clemency of the Crown. I am, however, struck by certain facts on looking through the papers. On 21st September, 1893, the Minister authorised an inquiry as to the fulfilments of the conditions by Newell. The case came before the Board on 19th November, 1893, when the Board, at the request of Mr. Robert Booth, adjourned the inquiry till 20th December. On 19th December, 1893, the Sheriff's sale took place, and Mr. Booth was present. [See his deposition on 4th February, 1894.] Next day, when the case came on before the Board, Mr. Booth appeared for Adam Rae, and obtained an adjournment on the ground that Rae had not received notice. It is not stated for whom Mr. Booth appeared on 19th November; but he, at any rate, must have known that an inquiry was pending. On 4th September, 1895, Mr. Roberts writes: "Prior to this Mr. Robert Booth, of Dubbo, has attended to the matter for us." It is, therefore, evident, that in Mr. Booth Mr. Roberts had a person from whom knowledge of the pendency of the inquiry could have been obtained before the Sheriff's sale or even at the sale. Short of a searching inquiry into the business of the Assets Company itself, it is not easy to suggest any method by which the underlying facts can be got at. The Minister's reference of 24th August, 1894, did not result in any finding by the Board; and following *re Black*, 12 N.S.W. L.R. 37, it might be renewed, being so framed as to bring before the Board the question whether Rae was the real purchaser at the Sheriff's

Sheriff's sale. Rae is, however, dead, and his evidence being lost, the attempt to get at the real facts—difficult in any case—might easily be defeated; and the more so as the Local Land Board has already recommended that the reversal of the forfeiture be made absolute.

Another possible course is to refer to the Land Appeal Court the Board's decision of 19th December, 1895, on the ground that the matter has been insufficiently considered; but seeing that the Land Appeal Court had the whole of the evidence before it on Jones' appeal, refused to send the case back to the Board, and expressed itself as doubtful of the validity of the Minister's reference to the Board, I do not advise that this course be adopted. If the Minister's power to refer is doubtful, then the power of the Board to enforce production of documents, &c., is subject to the same doubt, and therefore, not likely to be exercised.

A. P. CANAWAY,  
Denman Chambers, 7 July, 1896.

Dubbo, now Nyngan—C.P. 90-49; 640 acres; H. Newell, now Adam Rae.

In accordance with the Minister's instructions of the 30th June, the case was referred to counsel for advice.

Mr. Canaway's opinion is now herewith, and the Crown Solicitor also furnishes some extracts from certain letters between D. G. Peele and the Assets Company, which clearly shows that the Assets Company was the nominal mortgagee, Peele finding the money.

In view of Mr. Canaway's advice, it seems that the best course to take in the matter is to cancel the provisional reversal of forfeiture.

ALFRED SALWEY,  
Head of C.S. Branch, 17/7/96.

For approval that the provisional reversal of forfeiture, decided on the 8th April, 1895, and notified in the *Gazette* of the 24th September last, be revoked, for the reasons that the evidence produced, and the reports by the Land Board, and the decision of the Land Court, are not sufficiently convincing that the conditions of selection were carried out as contemplated by the law.—W. H. CAPPER, in charge Sales Division, 17/7/96.

There is at least a strong presumption that this case is one which deserves to be classed with the Mercadool cases, as regards the methods of manipulation practised by the persons concerned. There is, however, apparently nothing sufficiently tangible at present to warrant extreme proceedings, nevertheless certain possible courses are indicated in counsel's opinion of the 7th instant, herewith, which deserve consideration. A fresh reference, under section 20, might be made, but the fact of the selector being deceased would no doubt be a serious stumbling block to an inquiry designed to prove the case in all its parts. On the whole, I am inclined to question the expediency of further proceedings in this direction, and would suggest rather that the Minister, notwithstanding the finding of the Land Board and Land Appeal Court, take into consideration his power of revoking the notice of provisional reversal of the forfeiture of the 24th September, 1895. The revocation would have the effect of revesting the land in the Crown, and would perhaps be the most effective course, and certainly the speediest in the circumstances. If this be carried into effect it will be necessary, under 55 Vic. No. 1, to lay a copy of the decision, together with the reasons for overruling the findings of the Land Court and Land Board on the Table of the Legislative Council and Legislative Assembly.—W. HOUSTON, Under Secretary, 24/7/96.

Appd. to carry out this course.—J.H.C., 27/7/96. Provisional reversal of forfeiture (gazetted 24th September, 1895) revoked (*vide Gazette*, 10/8/96). Representatives of late A. Rae, Agent, Treasury, and Chairman informed, 18/8/96. These papers are now forwarded to the Registrar of the Land Appeal Court.—H. CURRY, Acting Under Secretary (*per E.F.W.*), B.C., 18/8/96.

VOTES, No. 28. TUESDAY, 14 JULY, 1896.

10. ANNUAL LEASES OF OWEN McCOSKER, COPE'S CREEK :—Mr. Moore moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon the granting to Owen McCosker of annual leases Nos. 12,238 and 12,244.
- (2.) That such Committee consist of Mr. Carruthers, Mr. Copeland, Mr. Hayes, Mr. Ashton, Mr. Thomas Brown, Mr. W. H. B. Piddington, Mr. Cruickshank, Mr. Macdonald, Mr. Waddell, and the Mover.
- (3.) That the Return to an Order, "Cope's Creek Preferential Occupation License," laid upon the Table of this House on 25th June, 1896, be referred to such Committee.
- Debate ensued.
- Question put and passed.
- 

VOTES, No. 75. THURSDAY, 29 OCTOBER, 1896.

11. ANNUAL LEASES OF OWEN McCOSKER, COPE'S CREEK :—Mr. Moore, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 14th July, 1896.
- Referred by Sessional Order to the Printing Committee.

**ANNUAL LEASES OF OWEN McCOSKER, COPE'S CREEK.**

---

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 14th July, 1896,  
 “to inquire into and report upon the granting to Owen McCosker of Annual  
 “Leases Nos. 12,238 and 12,244” beg to report to your Honorable House:—

Your Committee having examined the witnesses named in the List\* <sup>\* See List, p. 6.</sup>  
 (whose evidence will be found appended hereto) and considered the papers referred,  
 find:—

1. That the Bank of New South Wales being the holders of Cope's Creek preferential occupation license abandoned same on the 31st December, 1891 (a) by default, owing to non-payment of rent, and (b) by forwarding a written notice of abandonment to the Lands Department on that date.

2. That on the 8th April, 1892, Owen McCosker, having been informed by the Lands Department that the said preferential occupation license had lapsed, and that the land was then Crown land open to annual lease, applied in the usual way for an annual lease of 1,920 acres of it. Up to that time McCosker had been paying rent to the lessee of the run for the right to graze stock on this land, and after lodging his annual lease application, and paying the usual rent deposit to the Crown, he continued in occupation of the land while waiting for his application to be formally dealt with by the Local Land Board. Two months later (3rd June) after again satisfying himself by inquiry at the department that the land was available he applied for another annual lease of 640 acres.

3. That on the 20th July the department, on the application of the Bank of New South Wales, reinstated the preferential occupation license, “subject to any conflicting interests which might in the meantime have arisen.”

4. That on the 14th December the Land Board dealt with McCosker's applications, and allotted him 2,090 acres of the 2,560 acres applied for.

5. That the Bank having transferred to Swinton, and Swinton to Cooper, the latter (in October, 1894), brought a Supreme Court action against McCosker for trespass between the 8th April, 1892 (the date of the first application for annual lease) and the 14th December, 1892 (the date of allotment by the Land Board), and gained a verdict for 40s., with costs. On appeal to the Full Court the verdict was sustained, and McCosker was left practically ruined, his legal costs alone amounting to over £300.

6. There can be no doubt that McCosker exceeded his legal rights, in continuing in occupation of the land before the annual leases were actually allotted to him by the Land Board. But in view of the following considerations, viz.:—

(a) That he took up the annual leases on the distinct assurance of the department that the preferential occupation license had lapsed, and the land was then open to annual lease, and, therefore, he had only the Crown to deal with in respect of same.

(b)

- (b) That the reinstatement of the preferential occupation license by the department entirely altered the conditions under which he had been induced to become an applicant, vesting, for the time being, in a third party, a retrospective title (dating back seven months) to the land which had been under application to him for over three months.
- (c) That he was not notified of the said reinstatement.
- (d) That, having done all that was required of him to obtain an annual lease, it was most unfortunate for him that the department should have taken over eight months to grant him same, for, had the matter been dealt with expeditiously—(say) within three months—no trouble could possibly have arisen.
- (e) That, in occupying the land pending the granting of his leases, and while the department held his rent deposits, he was only following a practice, which the Committee understand is not usually taken exception to in such cases.
- (f) That he appears to have been led to defend the Supreme Court action on the strength of the information supplied to him by the Lands Office at Armidale, to the effect that the preferential occupation license was reinstated less the area covered by his annual leases.
- (g) That the course pursued by the department in reinstating the preferential occupation license—unknown to him—subsequent to the receipt of his annual lease applications, made him an unwitting trespasser against the holder of such preferential occupation license, which brought ruin upon him.

Your Committee consider that McCosker ought not to be left to bear the whole of the heavy loss which has fallen upon him, and they, therefore, recommend his case to the favourable consideration of the Government.

S. W. MOORE,  
Chairman.

No. 1 Committee Room,  
Legislative Assembly,  
29th October, 1896.

---

## PROCEEDINGS OF THE COMMITTEE.

---

THURSDAY, 13 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Cruickshank,		Mr. Macdonald,
Mr. Moore,		Mr. W. H. B. Piddington,
	Mr. Waddell.	

Mr. Moore called to the Chair.

Entry from Votes and Proceedings appointing the Committee, and referring the Return to Order "Cope's Creek Preferential Occupation License," read by the Clerk.

Papers referred, before the Committee.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

---

TUESDAY, 18 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Moore in the Chair.		
Mr. Ashton,		Mr. Copeland,
Mr. Cruickshank,		Mr. Hayes,
	Mr. Macdonald.	

Owen McCosker called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

---

TUESDAY, 1 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. Moore in the Chair.		
Mr. Thomas Brown,		Mr. Cruickshank,
Mr. Copeland,		Mr. Hayes.

Robert Henry De Low (*Officer-in-charge of Lease Division, Lands Department*) called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

---

WEDNESDAY, 16 SEPTEMBER, 1896.

MEMBERS PRESENT.—

Mr. Moore in the Chair.		
Mr. Ashton,		Mr. Thomas Brown,
Mr. Cruickshank,		Mr. Macdonald.

Committee deliberated.

Reassembling of Committee to be arranged by the Chairman.

Adjourned.

---

TUESDAY, 22 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. Moore in the Chair.		
Mr. Ashton,		Mr. Copeland,
Mr. Cruickshank,		Mr. Hayes,
	Mr. Waddell.	

Committee deliberated as to their Report.

Reassembling of Committee to be arranged by the Chairman.

Adjourned.

---

THURSDAY.

THURSDAY, 29 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Moore in the Chair.

Mr. Ashton,  
Mr. Copeland,  
Mr. W. H. B. Piddington,

Mr. Thomas Brown,  
Mr. Cruickshank,  
Mr. Waddell.

The Chairman submitted Draft Report.

Same read and amended.

Mr. Cruickshank moved—"That the Chairman report to the House."

Question put—Committee divided.

Ayrs.

Mr. Thomas Brown,  
Mr. Copeland,  
Mr. Cruickshank,  
Mr. W. H. B. Piddington,  
Mr. Waddell.

Noes.

Mr. Ashton.

And so it was resolved in the affirmative.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

ANNUAL LEASES OF OWEN MCCOSKER, COPE'S CREEK.

TUESDAY, 18 AUGUST, 1896.

Present:—

MR. COPELAND,	MR. MOORE,
MR. HAYES,	MR. CRUICKSHANK,
MR. MACDONALD,	MR. ASHTON.

S. W. MOORE, Esq., IN THE CHAIR.

Owen McCosker called in, sworn, and examined:—

1. *Chairman.*] You are the person who took up two annual leases on Cope's Creek Run, which formed the subject of an action for trespass—Cooper v. McCosker? Yes. O. McCosker.
2. How did you first come into possession of those lands? I had it, first of all, leased from Mr. Swinton, pastoral lessee of Cope's Creek. 18 Aug., 1896.
3. You rented it from him? Yes; and from what I heard I thought he was not paying rent for it, and I wrote to Mr. Cruickshank asking him to ascertain whether he was paying rent or not, or whether the land was open for annual lease.
4. Can you say when you wrote to Mr. Cruickshank asking whether the land was open to annual lease? I cannot say exactly: I think it was in March, 1892.
5. Did you get a reply from Mr. Cruickshank? Yes; I got a reply saying that the land was open to annual lease.
6. What did you do on the strength of that? I applied for an annual lease of 1,920 acres.
7. Do you remember the date of that? The 8th April, 1892.
8. What did you do next? I wrote to you then.
9. You still had some doubt? I had.
10. You wanted to be quite sure about it, so you wrote to me? Yes.
11. When was that? That was in May, I think.
12. Did you get a reply? Yes; you replied that the land was open for annual lease.
13. Do you remember what sort of a reply I sent you? You sent me a letter from the Department which said that the land was open for annual lease.
14. Then what did you do? I applied for 640 acres more.
15. What was the date of that? I think it was the beginning of June.
16. You said just now that you were in possession of this land before you applied for any annual lease, by reason of an agreement that you had with the lessee of the run, Mr. Swinton? Yes.
17. When you made this application, did you remove your stock, or did you allow them to remain? I allowed them to remain on the land. I did not think it was necessary to remove them, as it was Crown land.
18. *Mr. Ashton.*] Up to what date did you pay rent to the lessee? Up to the 8th April, the time when I applied for the annual lease.
19. Does that apply to the 640 acres as well as to the 1,920 acres? Yes.

- O. McCosker. 20. And you did not apply for the 640 acres until June? No; it would be early in June.  
 18 Aug., 1896. 21. *Chairman.*] The rent you paid was up to the 8th April? Yes. The lessee said the land was not open to lease. I said that I would pay him right on until the decision of the Board was given.  
 22. But the lessee was willing to accept rent up to the end of April if the Board subsequently allowed your application? Yes.  
 23. *Mr. Cruickshank.*] You have evidence of that? I have a letter from Mr. Swinton. I wrote asking him if he would acknowledge that I was renting the run from him, and he did acknowledge it.  
 24. *Chairman.*] What happened after this? After that I heard that Mr. Cooper had paid up the back rent after I had leased the land, and I wrote to Mr. Cruickshank.  
 25. What happened then? Mr. Cooper served me with a writ.  
 26. When was that? I think that was in January, 1894.  
 27. These applications which you made were dealt with by the Land Board? Yes; about nine months after.  
 28. Was that in December, 1892? Yes.  
 29. What did the Land Board do with those applications? They granted my application, but not for the whole of the 1,920 acres.  
 30. They granted both applications as modified? Yes; they did not grant me the whole area of 2,560 acres; they granted me 2,090 acres.  
 31. That was on the 14th of December? Yes.  
 32. Did you pay the rent? Yes; I have paid rent until now.  
 33. *Mr. Ashton.*] From when? From the time that the land was granted.  
 34. *Chairman.*] You were served with a writ by Mr. Cooper? Yes; he served me with a writ as lessee of the Cope's Creek Run. It was for trespass on the run. I went to Armidale, as I heard that annual leases were granted there. I paid a lawyer to go with me, and he inquired at the Land Office at Armidale into all the necessary points, and they were all favourable. He said that my title was good—that all that was necessary to establish my title was there.  
 35. Did the officer show any documents bearing on the subject? I did not see anything but what they read out.  
 36. Did they say anything to you at the Land Office at Armidale as to your position in regard to these annual leases and the question of Cooper's occupation license? A letter was read out which had been written to the department from that office with reference to the run being reinstated less 2,090 acres granted to McCosker.  
 37. Did they tell you that your title to the annual licenses was all right? Yes, that it was good.  
 38. You have no doubt whatever about that? None whatever.  
 39. In due course the action came off? Yes; it came off in October, 1894.  
 40. *Mr. Ashton.*] What was the date of the alleged trespass? It was from the 8th April to the 14th December, 1892.  
 41. That was the day on which the Land Board approved of the lease? Yes.  
 42. That is to say, they contended that you were in unlawful occupation from the date on which you applied for the land until it was granted to you? Yes.  
 43. *Mr. Cruickshank.*] The action was entered against you on the ground that you had no title to the annual lease? Yes.  
 44. *Mr. Hayes.*] They brought an action against you for trespass from the 8th April, the time you paid the rent, until the 14th December, the date when the Land Board confirmed your application? I understand that is what it was.  
 45. *Mr. Ashton.*] You paid rent to the Crown from the 14th December? Yes.  
 46. You paid none prior to that? No.  
 47. Do you contend that you were in lawful occupation of the land prior to the date at which you commenced to pay rent? I thought, it being vacant Crown land, having paid a deposit, I was entitled to the land. Of course I had my sheep there before, when I had the land under lease from the lessee, and I did not remove them. I thought I might be a trespasser as against the Crown, but not as far as anybody else was concerned.  
 48. *Chairman.*] In October, 1894, the trial came off in the Supreme Court at Armidale? Yes.  
 49. What was the result? A verdict was given against me for trespass.  
 50. For how much? For 40s.  
 51. Did the case come before the Full Court subsequently? Yes, at Sydney.  
 52. And what was the result then? My appeal was disallowed.  
 53. You lost the case? Yes.  
 54. Is it clear to you on what ground you lost it? It is not.  
 55. You had to pay the costs of the other side? Yes, and their costs amounted to £226.  
 56. Then, of course, there were your own costs;—can you say roughly what they amounted to? To something over £100, irrespective of loss of time.  
 57. *Mr. Hayes.*] Have you put stock on the land since the verdict was given against you? Yes. I have possession of the land now.  
 58. *Mr. Cruickshank.*] What stock have you on the land now? A few cattle. Before the action I had sheep on it too.  
 59. Did you have to sell the sheep to pay the law costs? Yes.  
 60. Have you bought any other sheep since? No.  
 61. *Mr. Copeland.*] To whom do you pay rent for the land now? To the Government.  
 62. *Chairman.*] What rent do you pay for the 2,000 acres? £12 a year.  
 63. *Mr. Cruickshank.*] When you applied for the land you paid a certain sum as a deposit? Yes.  
 64. The Crown held that money during the time that you were using the land up to the time when it was granted by the Board? Yes.  
 65. Were you under the impression that the Government getting that money you were paying the Government for the use of the land? I was.  
 66. *Mr. Hayes.*] You were aware when you made your application that it was necessary to deposit £2 per section? Yes.  
 67. *Mr. Macdonald.*] Before you made application to the Government for this land you had been a tenant of Mr. Swinton's and had paid him a rent for it? Yes.

68. And you remained in continuous occupation of that land from the date when you first entered on it as a tenant of Mr. Swinton's up to the time of the decision of the Supreme Court? Yes. O. McCosker.
69. And since then you have paid a rent to the Government, and the Government officials have received it? Yes, up to this date. 18 Aug., 1896.
70. And now you are in occupation of the same land? Yes.
71. Had you any notice prior to the action that you were in illegal possession of the land? None whatever.
72. So that actually your possession was undisputed? It was undisputed.
73. *Mr. Copeland.*] The Government still recognise these annual lease of yours? I understand that they do.
74. They accept rent from you? Yes.
75. And by virtue of your paying that rent you still hold possession of the land and run stock upon it? Yes.
76. The Crown has never taken any action against you as a trespasser? No, none.
77. What is your position now then with reference to the lessee Cooper? They threatened me sometime after I took possession the second time with an action at law.
78. How long is that since? About twelve months.
79. But they have taken no action? No.
80. So you now remain in quiet possession? As far as I know, I have not had any notice of any further action. Their solicitor told me that they could take action.
81. But they have not? No.
82. *Chairman.*] Have these leases been surveyed? Yes; by the Lands Department.
83. Did they charge you anything? No.
84. They surveyed the leases for you without charging anything? Yes. I wrote saying the lessee threatened to take action again, when the Hon. Member for Inverell, I think it was, made some inquiry, and the Government then agreed to survey the leases for me, to define the boundaries, so as to prevent any further action.
85. *Mr. Macdonald.*] Does the lessee run any of his stock upon this land that you have now under lease? His stock is on it now. I do not know that he claims it; but his stock is running through that part of the country.
86. *Mr. Cruickshank.*] You were in occupation of this land from the time you applied for it until it was granted by the Board? Yes.
87. Had you during that time any notice that the run had been reinstated? Only what I heard—no official knowledge.
88. When you first rented this land it was from Mr. Swinton? Yes.
89. Did Mr. Swinton at any time give you notice that he had sold his interest in this run to Mr. Cooper? He did.
90. Was that before or after the date of the action? It was before the action.
91. Did Mr. Cooper give you any notice to remove your stock from the land prior to the action? I recollect that Mr. Swinton, about the time that he sold the land, sent me a bill for the rent, and wrote saying that he had sold the run, and that he wanted me to pay up the rent.
92. Was this the time when you had been informed that the run was not under lease or license? It was.
93. Did Mr. Cooper give you notice to remove your stock, or did he show you that he had a title as against the intimation from the department that the land was not under lease or license? Mr. Cooper never gave me notice to remove the stock. I think it was in the way of a bill that Mr. Swinton sent word that he had sold the run.
94. Was it then that you applied again to the Lands Office to know whether the land was under lease? Yes.
95. And you were informed that it was not under lease? Yes.
96. *Mr. Hayes.*] Were you aware at the time when you made your application that you had no title to the land till it was confirmed by the Board? I did not clearly understand that I had no title. I thought that paying the deposit gave me a prior claim.
97. Did you read the section of the Act? I did not. The people in that part put their stock on immediately on paying the deposit.
98. *Chairman.*] You say it is the practice for people when they make application for a lease to go into possession? Yes; I know that no one ever had an action brought against them by the Crown.
99. If a man put his stock on land which he had applied for a lease of, and eat up all the grass, he himself would be the sufferer? Yes; because when the Board granted his application he would have no grass.
100. *Mr. Macdonald.*] I understand you to have been in possession for some years previously? No, for two months. When I had been renting the land for two months I found that it was open to annual lease, and I applied for an annual lease.
101. *Mr. Cruickshank.*] When you heard that Mr. Swinton was not paying for the leases, you took every precaution to ascertain if the land was under lease? Yes, I took every precaution. I first wrote to you, then afterwards I wrote to Mr. Moore.
102. You had no wish to be antagonistic to the lessee? No. I wrote and asked him to try and get the case brought on before the Board, so that as soon as the Board had dealt with it I could give the land up if my application was refused. If the Board had dealt with it at the ordinary time I should not have had an action against me at all.
103. When you gave the deposit, were you under the impression that it gave you a title to the land? Yes; I thought I had a prior title.
104. *Mr. Macdonald.*] Even if you were not sure about your title, were you not under the impression that no other person had a title except the Crown? No one except the Crown.
105. *Chairman.*] I understand that in order to meet the costs of the action, which went against you, you had to dispose of pretty well all your stock? Yes, I did, at a sacrifice.
106. *Mr. Copeland.*] Now you are in undisturbed possession:—the Government have taken no action, and the runholder has taken no action against you for the last twelve months? No.
107. So you remain virtually in undisturbed possession? Yes.
108. *Mr. Ashton.*] And you have been in undisturbed possession ever since the action? Yes.

O. McCosker. 109. When was the action? In October, 1894.

110. *Mr. Cruickshank.*] You sold all your stock to pay the costs? I sold all my sheep, and nearly all my cattle; I had to sacrifice them.

18 Aug., 1896.

111. Have you been able to buy stock since? No, I have not. I always bought on bills before; but since the action I could not get my bills endorsed.

112. *Mr. Copeland.*] Have you any reason to suppose that if you stock up the land the station-owner will take action against you, or are they allowing you to go on quietly because you are not stocking? I have not heard lately that they will take any action against me again. Sometime ago I heard that they would.

113. *Chairman.*] They did threaten you even after the Land Board had confirmed your application? They did. Since the lawsuit they have told me that they could at any time enter an action against me.

TUESDAY, 1 SEPTEMBER, 1896.

Present:—

MR. THOMAS BROWN,  
MR. COPELAND,

MR. HAYES,  
MR. CRUICKSHANK.

S. W. MOORE, Esq., IN THE CHAIR.

Robert Henry De Low called in, sworn, and examined:—

114. *Chairman.*] Will you state what you are in the Lands Department? I am head of the lease division.

R. H. DeLow.

115. Do you remember the Bank of New South Wales having a preferential occupation license of Cope's Creek pastoral holding in the eastern division? I believe they had.

1 Sept., 1896.

116. Did not the Bank of New South Wales hold a license in December, 1891? I believe they did.

117. On the 31st December the Bank wrote to the department expressing their intention of surrendering the preferential occupation license? On the 31st December the Bank did so write. They wrote notifying their wish to surrender their preferential occupation license. At that time the rent for 1892 had not been paid in accordance with the law, and it was doubtful whether the Bank intended to surrender when really there was nothing to surrender, because the 31st December being the last day of the year, and the rent only paid up to that date, the preferential occupation license lapsed by default of the licensee himself, being non-renewed. The department being in doubt as to the meaning of a notification that could have no possible effect seeing that it was dated the last day of the year when the occupation license really ceased by operation of law, wrote to the Bank to know its intentions; whether it really meant twelve months ahead, namely, December, 1892, and that letter was sent to the Bank on the 2nd February, 1892, asking them practically to interpret their letter of the 31st December, 1891, and the date they intended the abandonment to take effect from. The Bank taking about four months to reply, wrote on the 22nd June, 1893, asking to withdraw its letter of the 31st December, 1891.

118. You got a reply from the Bank to that letter written on the 2nd February? Yes.

119. What was the effect of it? It asked the department to allow the Bank to withdraw its letter of the 31st December, 1891.

120. *Mr. Cruickshank.*] Did they not write to you as follows, on the 7th April:—"Referring to your letter of the 19th ultimo, I have to inform you that it was the intention of the Bank to let the preferential occupation license lapse on the 31st December, 1891, and the occupation license as from the 31st December, 1892?" Yes; I have no doubt that that is correct. That would be the answer to the letter written by the department on the 22nd February, 1892.

121. Did the Government concur in the surrender of the lease from the 31st December, 1891? According to that letter the Bank seemed to have determined that one should be surrendered on the 31st December, 1891, and the other on the 31st December, 1892.

122. *Mr. Copeland.*] And that was approved of? Yes.

123. It was accepted on the 11th April, as dating back to the 31st December, 1891? Yes. On the 8th April, 1892, Mr. McCosker lodged an application for one annual lease on part of the preferential occupation area, and on the 3rd June following he applied for another annual lease of part of the same preferential occupation license.

124. Do you know whether the department had instituted any inquiries previous to McCosker applying for the land, as to whether or not the land was open to annual lease? I cannot say.

125. On the 22nd June, 1892, the Bank of New South Wales wrote withdrawing its letter of the 31st December, 1891? Yes.

126. And requested that the holding should be reinstated? Yes; and that was allowed.

127. *Chairman.*] And you informed the Bank to that effect? On the 12th July the Bank was informed to that effect.

128. *Mr. Copeland.*] What was the date of the Minister's approval? 9th July.

129. *Chairman.*] Will you read the letter which was written to the Bank? On the 12th July, 1892, the Bank was informed with regard to their application as to the preferential occupation license, that—"The amount of £13 18s. 7d., for the year 1891, and £118 0s. 11d., the proper fee for 1892, together with 10 per cent. fine, should be tendered to the Treasury first; and the question of renewing the occupation license subject to any claim which may have arisen in the meantime could then be considered."

130. The Bank was informed of that;—did you get any reply on the same date? On the 12th July the Bank replied to the Treasury, and paid in the amount of £129 16s. 11d.

131. What did they say? Their letter said:—"I may state that we abandoned these holdings in December last, and notified the Lands Department to that effect, but now we wish to withdraw such notice and have the holding reinstated."

132. What did the Treasury do? The Treasury reported that payment to the Lands Department, and on the 20th July the Minister approved of the acceptance of the money, and restoring the preferential occupation license or reinstating it subject to any conflicting claim.

133. What are the terms of the letter written by the department on the 20th July, 1892? They are as follows:—"I have the honor to inform you that the Secretary for Lands has approved of the surrender of preferential occupation-license and occupation license (mentioned in the margin) being reversed, and reinstating

reinstating Bank of New South Wales as licensee, but subject to any conflicting interest which may in the meantime have arisen." R. H. DeLew.

134. I presume that the intention of the department was to protect any such claim as this annual lease which had arisen in the meantime? That is the view which the department takes of conflicting interests. 1 Sept., 1896.

135. The idea being, of course, that if anyone had in the meantime applied for any portion of this land, such portion would not be included in the land reinstated to the Bank? Yes.

136. *Mr. Copeland.*] So that the intention was to restore the land, less the area which had been in the meantime taken up under annual lease? Yes.

137. Did the department follow up that action by withdrawing that area which had been applied for by annual lease from the preferential occupation license? No; not in the sense of withdrawing it under any provision in the Land Act. The area is allowed for in the readjustment of the area of the occupation license. In other words, the occupation license would have been reduced by that quantity when the annual adjustment took place.

138. On the next rent day? Yes.

139. *Mr. Cruickshank.*] What date was that adjustment made from? The 30th June is the period each year for closing the adjustments.

140. *Mr. Copeland.*] Did the department charge the squatter the full rent for the area, or having withdrawn the area of the annual lease, did he cease to pay rent for it? The license fee for the full area would be charged up to the date on which the annual lessee began to pay rent; the date of the allotting of the leased land by the Board.

141. The date when the Board approved of the annual lease application? The date of allotting it, and that I find to be the 14th of December, 1892.

142. *Chairman.*] Was Mr. Cruickshank informed, on Mr. McCosker's behalf, on the 18th March, that the land was available for annual lease? Yes.

143. Have you any note to the effect that I was similarly informed? Yes; that Mr. Moore was similarly informed by the Inquiry Branch.

144. Did Mr. McCosker apply for another annual lease? He did, on the 3rd June. The Board allotted the leases on the 14th December, 1892, and they were gazetted on the 28th February, 1893.

145. *Mr. Cruickshank.*] Do you not think it was an unusual delay in dealing with McCosker's application from the 8th April until the 14th December? Yes.

146. *Mr. Hayes.*] In the case of applications for an annual lease does the title vest until it is approved of and gazetted? The title starts from the date when the Board allot. The Minister approves of the application and the Board allots the land. The 33rd section of the Act of 1889 requires that the rent shall begin from the date of the allotting by the Board. A man who applies for an annual lease is not charged rent from the date of his application but from the date on which the Board allots the land.

147. Does the title vest till then? The title begins from the day when the land is allotted, not one moment before.

148. *Mr. Cruickshank.*] Did the Board hold that Cooper had any title to the land prior to the 14th December? The occupation licensee?

149. Yes? That would be a very difficult question to answer.

150. Do the Government hold his rental by way of deposit from the time that he applies for the land until it is dealt with by the Board? Yes, the money goes with the application.

151. *Mr. Copeland.*] When the Minister approved of the reinstating of the Bank, subject to any conflicting claim, was it known that McCosker had applied for an annual lease of some of the land? I think not.

152. I suppose the application would remain in the Lands Office? It would remain with the Local Land Board until the Board reported, therefore I think it was not known at the head office.

153. *Mr. Cruickshank.*] Have you a copy of a communication sent by the department to the local land office at Armidale, informing them of the reinstatement of the lease? No.

154. If McCosker says that on hearing that the lease was reinstated he rode into Armidale and asked the local agent if such was the case, and the land agent informed him that the run was reinstated, less the area of his annual license, would that be a correct reply? I think so. That would be correct at the time.

155. *Mr. Copeland.*] Are you aware whether the department made any provision at all with a view to the protection of McCosker's application? In question 36 of his evidence he is asked, "Did they say anything to you at the land office at Armidale as to your position in regard to these annual leases and the question of Cooper's occupation license," and the answer of McCosker was, "A letter was read out which had been written from that office with reference to the run being reinstated, less 2,090 acres granted to McCosker." Do you know whether the department took steps to protect McCosker's application by withdrawing that area when reinstating the forfeited leases? The department took no steps.

156. When was McCosker's area eliminated from the preferential occupation license? Practically from the day of allotment of the annual leases on the 14th December, 1892.

157. That was by virtue of the Board approving of his application? Yes.

158. Not by reason of any action taken by the department to protect McCosker's interests? No.

159. Then the department took no action, although it was approved by the Minister that the Bank was only to be reinstated subject to any conflicting interests that had arisen, still no action was taken to protect those conflicting interests? No; because it was not known whether the Board might not recommend the refusal of the leases. The Board have a discretionary power, and they may decline to allow the annual leases. It was not possible for the head office to know that.

160. As a matter of practice are not these applications for annual leases retained at the local land office? They are sent to the local agents, and from there to the Board office, and they do not come to the head office until the Board reports.

161. So the head office would not be aware that McCosker had made an application? Not unless there had been any correspondence to that effect.

162. *Mr. Cruickshank.*] McCosker would have no means of knowing whether this land was under any other occupation than by applying to the office in Sydney? I should say no reliable means. It would be the best for him to do that.

- R. H. DeLow. 163. If McCosker was told on two occasions that the land was open to annual lease, at the time when it was really reinstated to the lessee, would not McCosker have been misled by the department? 1 Sept., 1896. If he were told after the occupation license had been reinstated that the land was open for annual lease, undoubtedly he would have been misled. The department protects such interests to some extent as it protects the interests of all other persons; it reinstates the occupation license, subject to any conflicting claim that may have arisen prior to the date of the restoration. It was not competent for the department to say what claims had arisen. Twenty persons might have applied for land in Cope's Creek holding before the Secretary for Lands agreed to reinstate the preferential occupation license in July.
164. If you reinstated that license on the 22nd July it was not under occupation license on the 14th December? It was reinstated minus the quantity that McCosker put in a legal application for.
165. *Mr. Copeland.*] What evidence have we to show that the department did not reinstate the two areas? Only the phrase, "subject to any conflicting claims that may have arisen," and the correspondence with the Bank stating that, on their paying a certain sum into the Treasury, the land would be restored, and the statement that the application to reinstate the land would be considered, "subject to conflicting claims."
166. Can you tell when the Bank ceased to pay rent under the preferential occupation-license for the particular area for which McCosker applied? I believe that the preferential occupation license is in existence at the present moment.
167. What I want to know is this: When did the department actually eliminate that area that McCosker applied for from the preferential license? On the 14th December, 1892.
168. That was the time when the Board allotted the annual lease? Yes.
169. And the rent would not be charged to the Bank from that date? No.
170. So that, although on the 20th July, 1892, the Minister approved that the Bank should be reinstated with regard to their occupation area, subject to any conflicting interests; still, as a matter of fact, they were reinstated as regards the full area until December, 1892, when the Board allotted it to the annual lessee? Yes; the Bank paid rent for that down to the 14th December, 1892.
171. If it had been held as an occupation license it would not have been competent for the Board to have granted an annual lease? No.
172. How was it competent to the Board to grant an annual lease to McCosker seeing at the time that the land, having been reinstated, was still held by the Bank, the Bank paying rent for it? The difficulty there is that the law as regards annual leases provides particularly that the rent shall not commence from the day of application, but from the day of allotment. If it had been, as in the case of a conditional purchase, that the title began from the day of application, of course the annual lease would have dated back to the 3rd of June, 1892, and the 8th April.
173. The 8th April and the 3rd June being the dates on which the applications for the annual leases were lodged, the land was at that time virtually abandoned; the rent had not been paid; therefore the land was open for annual lease? Yes, it was vacant Crown land.
174. Because the Bank had failed to pay their license fees before the 1st January it became ordinary Crown land open to annual lease, and McCosker having lodged his applications on the 8th April and the 3rd June, that was before the Minister approved of the reinstating, therefore the land really was open for annual lease at the time when McCosker applied for it? Yes, it was open to anyone.
175. Therefore his application would stand good? Yes, it was a valid application.
176. Do you not think it was the duty of the department, seeing that the Minister had approved of the reinstating of the licenses subject virtually to McCosker's application, which was a valid application, to have temporarily withdrawn McCosker's area until you knew what the Land Board would do with it? It was not possible under the law. Land cannot be withdrawn from occupation license except for some public purpose.
177. The license had been abandoned? Then there was nothing to withdraw.
178. Then you reinstated it; but ought not that to have been less the area that McCosker applied for? That is the interpretation which the department put on it.
179. Ought it not to have been withdrawn? There is no power under the law to withdraw land from occupation license, except for public purposes.
180. But you have virtually undertaken to protect McCosker's interest? The department had no other way except to get the licensee to accept the restoration with the understanding that any legal claim that had arisen should be recognised.
181. But he did establish a right at law for trespass against McCosker? Yes; but as I understand the judgment of the Court, it is that the trespass occurred before McCosker's title started.
182. During the period between his application and the Board granting the application? Not for trespass after that.

**RYANS' CONDITIONAL PURCHASES IN THE WAGGA WAGGA LAND  
DISTRICT.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 4th August, 1896, to inquire into and report upon the cases of *Thomas Ryan, Ellen Ryan, and Anastasia Ryan*, selectors in the *Wagga Wagga Land District*, and to whom was referred, on the same date, the *Reports, Minutes of Proceedings, and Evidence of previous Select Committees on this case*,—beg to report to your Honorable House:—

Your Committee having examined the witness named in the margin <sup>Thomas Ryan.</sup> (whose evidence will be found appended hereto), and considered the Reports and Evidence referred, find:—

1. That Thomas Ryan, Ellen Ryan, and Anastasia Ryan selected land at the Wagga Wagga Land Office on 8th December, 1881, but, as a consequence of wrong information furnished by a departmental officer, and subsequent laches on the part of the Department, they were unable to profitably and peaceably use the lands so selected until a Validation Bill was passed on 23rd July, 1888.
2. That Thomas Ryan was put to considerable expense and trouble in travelling to and fro between Sydney and his selection, a distance of 334 miles, while endeavouring to get the Lands Department to give him a title to the land selected by his daughters and himself.

Your Committee, therefore, recommend the cases of Thomas Ryan, Ellen Ryan, and Anastasia Ryan to the favourable consideration of the Government.

THOMAS FITZPATRICK,  
Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

RYANS' CONDITIONAL PURCHASES IN THE WAGGA  
WAGGA LAND DISTRICT.

WEDNESDAY, 19 AUGUST, 1896.

Present:—

MR. ASHTON,		MR. CHAPMAN,
MR. CARROLL,		MR. THOMAS FITZPATRICK.

THOMAS FITZPATRICK, ESQ., IN THE CHAIR.

Thomas Ryan called in, sworn, and examined:—

1. *Mr. Ashton.*] Your case has been the subject of inquiry before two previous Select Committees, one of which sat twice? Yes. T. Ryan.
2. Have you anything to add to the evidence you gave before those Committees? Nothing, except that I had to fence two or three times owing to the boundary having been shifted so often. 19 Aug., 1896.
3. Was not that referred to in your former evidence? No, I said nothing about the trouble I was put to in fencing. That is the only thing I need explain that is new. I was put to the expense of shifting the fence each time the land was surveyed.
4. Did that entail very much expense? Yes, I was put to a lot of trouble in putting up fences and removing them again.
5. Beyond that, you think that the evidence you previously gave covers the whole ground and states your case fully? Yes.
6. *Chairman.*] In your previous evidence, I suppose, you referred to the number of visits to Sydney entailed upon you? Yes; this is the fifty-fourth trip to Sydney.
7. And those trips have been purely on this business? Yes; if it were not for this business I would not have come down. Of course, being in Sydney, it is probable that I did other business as well, but this business was the cause of my coming down.
8. *Mr. Chapman.*] You say you were put to a lot of expense in fencing;—will you explain how that was? When I went there first the land had all been surveyed by Mr. Bolton, and I made sure the boundary marked by him was the proper one, and put the fence up accordingly.
9. How much fencing was there? I suppose about a mile and a half.
10. And you put the fencing on the boundary given you by Mr. Bolton, the surveyor? Yes. He assisted to make out the application, so of course we were sure that he knew the boundary.
11. What did that mile and a half of fencing cost you? Something over £30 a mile.
12. Afterwards you were informed that the fence was on the wrong boundary? Yes.
13. And you had to pull the fence down? Not until the land was surveyed again.

- T. Ryan. 14. Who surveyed it the second time? I forget the name of the surveyor; he came from Corowa. He was one of the Government surveyors.
- 19 Aug., 1896. 15. *Mr. Ashton.*] Was it Mr. Lipscombe? No. Mr. Lipscombe surveyed it for Devlin.
16. *Mr. Chapman.*] On the second survey you were informed that you had the fence on the wrong boundary? Yes.
17. And you pulled it down? I had to shift it again.
18. You put it up on the proper boundary the second time? I put up a brush fence then to make sure.
19. At what do you estimate your loss owing to the removal of the fencing? The cost of all the shifting of the fencing at a low figure would be £50; it really cost me more than that. As Mr. Ashton has referred to Mr. Lipscombe, there is another thing I wish to add. Mr. Lipscombe came there to measure the land for the lessee, and to show that the Government survey was not correct, and he cut down a lot of useful pines that we left for our own use when we were scrubbing. He had six men of Devlin's with him, and I went to stop him. He said he was within a few chains of where he wanted to go, and he would finish it. I saw there were too many for me, and I picked up an axe and went to stop him. I was fined £12 odd over that—for stopping him from destroying the timber.
20. Is there anything further that you desire to add to your evidence? No.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

NATIONAL PARK.

(REPORT OF TRUSTEES FOR YEAR 1895.)

*Printed under No. 12 Report from Printing Committee, 6 August, 1896.*

The Chairman of the National Park Trust to The Chief Secretary.

Sir,

National Park Office, 3, O'Connell-street, Sydney, 29 July, 1896.

The Trustees of the National Park have the honor to present you with their Report for the year ended 31st December, 1895.

The Trustees have again very great pleasure in adverting to the high appreciation which still continues to be manifested by the public in the many attractions of this favourite public resort. The number of visitors has greatly increased during the year, so much so that the Trustees have found considerable difficulty in providing conveyances from the railway stations to the boats and the Audley and Warumbul pavilions, in consequence of the limited means at their disposal. Visitors to the Park.

As stated in former Reports, the preservation of the flora on the Park has been made a distinctive feature, whilst the rules prohibiting shooting and net-fishing have been strictly enforced. Flora, &c.

The principal works carried out during the year are as follows:—

The deviation on the Loftus-Audley Road at Audley has been completed, 24 feet wide. In extending the curves and forming an even grade the risk of an accident has been considerably reduced. Audley Road.

This road has been repaired, water-tables lowered, ballasted and blinded where required, and it is now in good order. The Mountain Road.

Several deviations have been made on this road, making the grades easier, and shortening the distance by about 200 chains. This locality is becoming a favourite camping-ground and fishing resort. Wattamolla.

The very heavy rains in the early part of February destroyed two bridges and washed away the approaches. These have been replaced, and the road is now in excellent repair. Lady Carrington Road.

The same flood washed away about 50 feet of the causeway on the Waterfall Road, and also damaged 39 chains of the road. The breach in the causeway has been repaired and the road mended, so that this favourite drive is again open for traffic. Causeway, Waterfall Road.

The Audley dam has, in the past, been a source of outlay after every flood, but it is now made perfect by being securely pitched with heavy dressed stone, which will prevent to a very large extent the filling-up of the river. Audley Dam.

A considerable amount of snagging has been done in the river, which has been kept free from obstruction. River, roads, and pathways.

The roads and pathways also throughout the Park have been kept in a good state of repair.

A large brick and concrete reservoir has been built at Audley for water storage for the supply of the pavilion and other buildings, and the lateral supply has been further distributed to meet the public convenience on the various flats and other picnic grounds. Water supply.

Standpipes and hoses have also been fixed for use in the event of any of the buildings accidentally catching fire.

Three new cottages have been built for the employés, and three others have had additional rooms added to them. Cottages.

When cutting down the road leading from Loftus to the dam, the fence around the Trustees' cottage had to be removed and certain alterations and repairs made to the building to enable this work to be carried out. The building has been up for many years, and has been much eaten by white ant.

Additional rooms have been built at Warumbul to meet the public requirements, and several alterations have been made to the main and out buildings. Warumbul.

The grounds have been greatly improved. A new floating jetty has also been made in a convenient position in deep water, so that there is no difficulty now in landing passengers.

Bush fire-places. Fire-places have been built in various parts of the Park for the convenience of picnic parties. This has been done by the Trustees in order to prevent the spread of bush-fires.

Latrines. Several screened bush and portable latrines have been placed at convenient places for the use of the public.

Buildings. The whole of the buildings have been kept in a good state of preservation.

Tree-planting. About 1,000 ornamental trees have been planted in the different parts of the Park suitable to their growth, including a number of red cedars in the brush near the river, more particularly in the neighbourhood of Bola Creek and the island. Those previously planted are making splendid growth, and in the course of time will become objects of some interest, and will form a striking feature in the landscape and scenery of the Park.

I have, &c.,

CRITCHETT WALKER,  
Chairman.

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

## ANNUAL REPORT.

---

Department of Charitable Institutions of New South Wales,  
Sydney, 1st December, 1895.

The Director of Government Asylums and Boarding-out Officer to  
The Principal Under Secretary.

Sir,

I have the honor to present, for the information of the Chief Secretary, my Annual Report upon the Government Charitable Institutions of the Colony for the periods ending 31st August, 1895.

In accordance with the recommendations made in my report for the year 1890, and repeated from year to year since, practical steps are being taken to provide in a broader, more humane, and more liberal sense for the requirements of the poor of the community, under a policy which must not only fully meet their necessities, but also secure more economical administration and better management in the Asylums Branch of the Department of Charitable Institutions. In order to carry out this work effectually, it is necessary to provide for the poor in pavilions adapted to the special circumstances of the several classes who from various causes have become a charge upon the State, instead of concentrating them in the obsolete barrack buildings which have in some cases for more than half a century been used as Government Asylums for the Infirm and Destitute. The unsuitableness of these buildings for such purposes has, however, been so often pointed out, and is so generally admitted, that it is not necessary to further refer to them here. The generous provision which Parliament has now made for ameliorating the condition of these unfortunates will admit of their proper classification in home-like buildings, in which the sick can be separated from the sound, and under a system that will admit of the majority of the inmates being treated and rewarded according to their merits, and receiving the wholesome exercise in out-door labour and other industrial occupations that is so necessary not only for their own well-being, but in the interests of the State.

It has been decided to expend £70,000 in erecting pavilions, each capable of accommodating from 50 to 60 inmates, on an estate of about 800 acres at Rookwood, on the model of the Government Asylum for Poor Women at Newington, so as to absorb the George and Macquarie street Asylums for old men at Parramatta, and the similar institution at Liverpool; and there is good reason to believe that within two years the new policy of dealing with dependent adults in this Colony will generally be in practical operation. Indeed, the nucleus of the new institution already exists, as there are now between 400 and 500 men on the ground; tenders for the erection of further pavilions have been accepted; the work of carrying out the full proposals is in the hands of the Government Architect; special efforts are to be made to complete it expeditiously; and in the meantime roads are being formed on the estate, the approaches planted with shrubs and trees, and the ground suitably laid out.

Turning to the operations of the past year, it will be seen that 3,721 infirm and indigent persons were admitted into the Charitable Institutions of the Colony during 1894, that there are now 3,252 permanent inmates in the Asylums, and that the daily average for the  
past

past twelve months was 3,356. The average capitation cost per annum for the maintenance of all the old men and women in the main Asylums was £14 7s. 3d. as against £14 12s. 1d. in 1893, or a decrease of 4s. 10d. per head; but when allowance is made for the maintenance cost of all the other kindred Institutions, such as the Cottage Homes, Boys' Home, Glenfield and Rookwood Asylums, the average capitation cost is £15 4s., or a total expenditure of £51,017 5s. 10d. as against £48,116 7s. 8d. in 1893, the gross increase in expenditure being consequent solely upon the natural advance in numbers. A marked and extensive feature in connection with the Asylums that does not exist to any large extent in any other community is the fact that they practically take the place of auxiliary Hospitals, in which the convalescent and incurable poor are transferred from the general infirmaries and provided with medical attendance, nursing, and all other necessary attention, but at smaller cost than is possible in such hospitals as the Sydney and Prince Alfred and cognate institutions. The annual average cost of maintenance in these general hospitals is £54 12s. per patient, and in the hospitals attached to the Asylums only £15 4s., so it may fairly be argued that a saving of £39 8s. per head was made by the Government upon the 208 persons who were transferred during the year, or a total of £8,195 4s., for which the Asylums are entitled to take credit.

#### STATE OF THE ASYLUMS.

Turning to the Institutions as they at present exist, it is satisfactory to be able to say that the abnormal increases which marked the depression of the two preceding years were not maintained, but the total numbers of Infirm and Destitute who were housed, fed, and clothed, in the various Asylums was nevertheless very large. The practical experience of many years has shown that in a general way the Asylum records act as barometers upon the social condition of the community, and it invariably happens that the pressure is as noticeably greater in times of financial depression as in periods of extreme inclement weather, when the indigent are driven by rain and cold alone from the Public Parks to seek shelter in the Institutions. At the end of 1893 there were 234 more dependents on the books than at the close of the previous year; at the end of 1894 the increase was only 106. There were 3,252 dependents in all the Asylums on the 31st December last, as against 3,146 in 1893, and 2,912 in 1892, and of this total 1,267 were new applicants, and 1,919 readmissions, or a total of 3,859 in 1894 as against 3,905 in 1893. These figures show a falling off in the admissions of 46, whereas, in 1893, there was an actual "increase" of 509 in the admissions over those of the preceding year. The discharges during 1894 were 2,988, as against 3,088 in 1893, or a decrease of 100. The number of deaths was larger by 44 than during 1893, the figures being 583 in 1893, as against 627 in 1894, a result which is attributable solely to the ravages of phthisis, cancer, nervous disorders, and influenza in the hospital divisions.

RETURN showing the number of Inmates sheltered and under treatment in the Government Institutions for Infirm and Destitute during the year 1894.

## THE ASYLUM HOSPITALS.

The most satisfactory results have attended the administration of the Hospital divisions of the various Asylums, into which the convalescent and incurable poor of the general Hospitals are periodically received. There were 117 more Hospital patients in the Institutions than in 1893. When the year closed in 1893 there were 1,300 patients in the Hospitals of the four larger Asylums (Liverpool, George-street, Macquarie-street, and Newington), and though the general admissions into the Asylums were 46 less than those of the previous twelve months, there are now 1,417 patients, or an increase of 117, in the Hospital wards. It will be seen that there were increases in all the Hospital divisions, amounting in all to 9 per cent. of the total, except at Liverpool, where there was a reduction of 2, and at the Cottage Homes at Parramatta, where the numbers were stationary. In the Hospital divisions at the other Asylums there were increases of 24 patients at George-street, 9 at Macquarie-street, Parramatta, 47 at Newington, 1 at the Boys' Home at Eastwood, 2 at the Glenfield Farm, and 36 at Rookwood.

AVERAGE number of Patients in the Institution's Hospitals during 1893 and 1894, and the ratio of increase or decrease.

\* Includes ophthalmic cases. † An increase of 9 per cent.

The deaths in 1894 exceeded those of 1893 by 44, the causes in the more important cases being bronchitis, phthisis, heart diseases, paralysis, cancer, and natural senile decay consequent upon extreme old age. In all the Institutions the members of the trained nursing staff have been most efficient in the discharge of their difficult duties, particularly at the Newington Asylum, and also at the Rookwood Asylum, where the result of substituting trained nurses for trained attendants has more than justified the wisdom of the change.

## AGES OF DECEASED INMATES.

The greater number of the 627 inmates who died during the twelve months in the public Asylums were over the age of 60. The figures show that 9 of those who died were over 90 years of age, 86 over 80 years, 168 over 70 years, and 149 over 60 years, whilst the balance was made up of 91 who were over 50, 54 over 40, 51 over 30, and 19 over 20 years of age.

RETURN showing the Ages of Deceased Inmates at the following Government Institutions for Infirm and Destitute for the year 1894.

## AGES OF INMATES.

The average age of the inmates in all the Asylums, including the Boys' Home at Eastwood, was 63·87 at the close of the year, as against 63·73 in 1893, and 64 in 1891-2. Two of these dependents—one at Liverpool, and one at Macquarie-street, Parramatta—are over 100 years old. There are 27 in the Asylums between the ages of 90 and 100, 310 between the ages of 80 and 90, 959 between the ages of 70 and 80, 884 between the ages of 60 and 70, and 505 between the ages of 50 and 60. In all the younger classes the numbers are small, and range from 26 who are under the age of 20, to 298 who are between 40 and 50 years old. In the boys' division three of the inmates are under the age of 10 years, and 21 under the age of 20.

RETURN showing the Ages of Inmates in the Government Institutions for the Infirm and Destitute, on 31st December, 1894.

Average age—63·87

## THE COST OF STIMULANTS.

Notwithstanding the increases in the number of inmates—more particularly in the number of Hospital patients—substantial reductions have been effected in the general cost of stimulants, which formerly formed a very large item in the expenditure. From the outset good results attended the substitution of nourishing heat-producing foods for the stimulants that appeared to be issued at all the Asylums for all sorts and conditions of complaints and weaknesses, and the expenditure fell from £2,800 in 1888 to £1,107 5s. in 1893, and the item has been further brought down to £983 2s. 5d. for the twelve months under review. The comparison is remarkable, viz. :—That in 1888, when there were only 2,348 inmates in the larger Asylums, an expenditure of £2,800 in stimulants alone was considered necessary; in 1894, with a daily average of 3,356 inmates, the expenditure only amounted to £983 2s. 5d., and the old men and women were admittedly better cared for, healthier physically, and more contented than they were five years previously, when the distribution of grog was largely unrestricted. It will be seen from the subjoined table that, although there was an increase of 127 in the average daily number of inmates, and an increase of 117 in the number of Hospital patients, and of 175 in the number of patients receiving “medical comforts,” the total cost of stimulants for the year was reduced by £124 2s. 7d., as compared with the previous year's figures. The capitation cost for stimulants for the 1,414 persons receiving it in the Hospitals was a fraction over 13s. 11d., but estimated upon the total average for the year, as was done in the Report for 1893, the cost of stimulants was only 5s. 10d. per head as against 6s. 10d. in 1893.

TABLE

## THE PERCENTAGE OF DEATHS.

As in the previous year there was a small increase in the percentage of deaths at the various Institutions in 1894, when calculated upon the increased daily average number of inmates. There were 44 more deaths in all the Asylums than in 1893, the numbers being 583 and 627 respectively. The average age of the patients was 63·61 in 1893, and 62·95 during the past twelve months. There was an increase of 47 deaths at Liverpool, 28 at Rookwood, 5 at Glenfield, and 4 at Newington, while there was a falling off of 28 at George-street, and 4 at Macquarie-street, Parramatta.

TABLE showing the Percentage of Deaths, and Average Ages of deceased inmates, during the year 1894.

Institutions.	Deaths.	Percentages		Average ages.
		Individuals.	Averages.	
Liverpool .....	280	17·92	32·90	59·28

Total.....	627	12·50	22·97	62·95

## COST OF MAINTENANCE.

The general expenditure upon the four principal Asylums reached the total of £41,724 17s. 3d. during the twelve months now under review, as compared with £42,196 5s. 9d. in 1893, which shows a substantial saving of £471 8s. 6d. upon the year's transactions, notwithstanding the increased daily average, and reduces the capitation cost from £14 12s. 1d. to £14 7s. 3d. This saving has been effected by careful supervision and the exercise of stringent economy, without interfering with the comfort and welfare of the inmates. Including, however, the other kindred Institutions, such as the Cottage Homes for old Married Couples at Parramatta, the Boys' Home at Eastwood, the Farm at Glenfield, and the large Asylum at Rookwood, where extensive works are in progress, the total expenditure is brought up to £51,017 5s. 10d., and the general capitation cost to £15 4s. per annum, a difference of 16s. 7d., that is due to the necessarily more expensive methods of dealing with married couples living in small communities together, the training of the boys in separate establishments, and the carrying out of new works at Rookwood. The sum of £21,671 1s. 9d. was expended in rations alone, while other large items comprised £1,166 13s. 6d. for medical comforts, £2,965 19s. 11d. for

for drugs, £1,504 16s. 11d. for fuel, £596 11s. for water, £611 14s. 5d. for light, £678 10s. 3d. for burials, £1,206 0s. 6d. for travelling expenses (conveyance of paupers), £1,824 7s. 3d. for fodder, £4,741 6s. 9d. for clothing, and £1,545 3s. 5d. for sundries. Savings were effected during the year in the items of medical comforts, £261 19s. 7d.; light, £57 19s. 4d.; and pigs and fowls, £100.

## FRUIT AND VEGETABLES.

There was a large output of fruit and vegetables from the gardens of the various Institutions, but the production was not up to that of the preceding year. The production was 192,128 lb., or 85 $\frac{3}{4}$  tons of fruit and vegetables, as against 204,090 lb., or 91 tons, in 1893, and the total for 1894 included 7,119 lb. of jam, which was used at the various Asylums. A large deficiency occurred in the supply of fruit and vegetables from the Boys' Home, owing to its removal from the well cultivated gardens at Rydalmere to a portion of the grounds connected with the Carpenterian Reformatory at Eastwood. The supplies were short at Liverpool, Macquarie-street, Glenfield, and slightly in excess of the previous year at George-street, Newington, and Rookwood.

† Included in this amount are 7,119 lb. of jam.

## THE ADMISSIONS DEPARTMENT.

In every instance the utmost care has been taken in dealing with applications for admission to the Institutions to prevent imposture, and the procedure which now obtains—having grown out of years of practical experience—is so complete that any permanent imposition upon charity is almost impossible. Apart from the antecedent investigation of the circumstances, character, and condition of all applicants for admission who do not come direct from the Hospitals, careful inquiries are made into every case when possible; persuasion is exercised with the view of obtaining some portion of the maintenance of the aged poor from relations who are known to be able to contribute. The income from this source will, however, not be large until there is legislation to compel relatives to contribute. In 1893 the sum of £66 0s. 6d. was collected from the relatives of inmates, and £83 17s. 10d. from a moiety of pensions received by the old men (Army and Navy pensioners) in the Asylums, making a total of £149 18s. 4d.; and in 1894 the relatives of 441 inmates were communicated with, and £121 13s. 8d. collected, which, along with £76 9s. 2d. from pensioners, brought the total for the year up to £198 2s. 10d. Only a few years ago the revenue from this source did not reach £10 per annum. There was an increase in the admissions in 1892 of 473 and in 1893 of 509; the year which has just closed takes credit for a decrease of 46 over the preceding year, the number being 3,905 in 1893 and 3,859 in 1894. The great majority of these dependents were found, upon being subjected to the usual tests, quite incapable of earning a livelihood at any occupation outside the Asylums, but a large proportion of them were able to do light duties inside the Institutions, and so contribute in a measure towards the cost of their maintenance. Out of a total 3,859 dependents, who were admitted during the year, no less than 1,267 were new cases, as against 1,269 in 1893, and 1069 in 1892; and

and 1,919 were readmissions, as against 1,947 during the previous twelve months. There was a further decrease of 20 in the number of inmates sent from the country districts, 320 came in on orders from Country Police Magistrates, and 140 from Country Hospitals. There were small increases in the admissions from the Metropolitan Hospitals—137 were admitted from the Coast Hospital, 49 from the Sydney Hospital, and 22 from the Prince Alfred Hospital. Owing to the careful supervision that has been exercised over the admissions from the country districts the numbers have gradually fallen off since 1889, during which year they numbered 769. They have, as a matter of fact, fallen off nearly 40 per cent. The subjoined returns show the sources of the admissions from the 1st January to the 31st December, 1893-4.

PROGRESSIVE INCREASE.

It has already been shown that during 1894 the proportion of increase in the number of dependents in the various Asylums was not maintained over previous years. The increases were 319 in 1892, 234 in 1893, and 106 last year, bringing up the total increases since 1887 to 1,217. The subjoined tables show the progressive increases in all the Asylums from year to year for an unbroken period of eight years.

NUMBER of inmates in the Institutions on 31st December of following years:—

## OVERCROWDING.

Though the overcrowding in the larger Asylums is still serious, the pressure upon the accommodation is not so great as during the preceding year, the improvements and extensions at Rookwood and Newington, and the falling off in the demand, having enabled me to relieve the tension considerably at the more crowded Institutions. There was accommodation at the various Institutions up to the end of February, 1895, for 2,877, but there were no less than 3,421 dependents housed there at that particular time, which shows an excess of 544. The excess in 1893 was 630; so that there has really been a reduction of 86.

TABLE showing the overcrowding on 9th February, 1895.

## STATE CHILDREN'S RELIEF DEPARTMENT.

When the year closed on April 5th, 1895, there were just 365 more children under the control of the State Children's Relief Department than in 1894, when the numbers were 272 in excess of the previous year, the figures being 2,809 and 3,174 respectively. The totals were made up of 1,606 boys and 1,203 girls. During the official year now closed there were 1,822 boys and 1,352 girls under control, or a total of 3,174, showing an increase of 365 upon the operations of 1894. The ages of the children varied from a few days—in some cases from the time of birth—up to the age of 17 years, when they are released from control, and being paid the money which has accumulated in the Savings Bank to their credit during the period of their apprenticeship, are permitted to go out into the world and earn their own livelihood. Generally speaking, they are well inclined and well equipped to do so successfully. There were 601 boys and 452 girls, or a total of 1,053 children boarded out during the year, as against 398 boys and 297 girls, or a total of 695 children, so dealt with in 1894, showing an increase of 358 in this branch alone. Nine boys and 10 girls died, in addition to 5 boys who were accidentally drowned in various parts of the country; 140 boys and 111 girls were discharged to relatives, after due inquiry and upon the recommendation of the officers of the department; 4 girls were transferred to the

Deaf

Deaf and Dumb and Blind Institution; 3 uncontrollable boys were sent on board the training ship "Sobraon"; 49 boys were sent to the Boys' Home at Dundas; 5 boys and 5 girls were handed over to the Benevolent Asylum, Sydney; 3 girls were sent to the Newington Asylum; 2 boys were sent to the Imbecile Asylum at Newcastle; 41 boys and 90 girls were sent to the Shaftesbury receiving Home; 4 boys were transferred to the St. Aloysius' Home; 1 boy was sent to the Ashfield Home; 2 boys were transferred to the St. Joseph's Provident Society; 1 girl was sent to the Consumptive Home at Thirlmere; 18 boys and 2 girls absconded; and 95 boys and 77 girls were discharged from control, they having reached the age of 17 years. Of the 2,094 children who are paid for by the State, 9 are in Hospital; 146 are in the Cottage Homes for Invalids at Parramatta and Mittagong; 10 at the Central Home, Paddington; 20 delicate infants are paid for at the rate of 10s. a week; 16 at 8s. per week; 15 at 7s. a week; and 45 at 6s. a week, whilst the whole of the remainder who come into the subsidy division are paid for at the rate of 5s. a week.

The particulars of the children under control on April 5th, 1894, and April 5th, 1895, are placed in juxtaposition for comparison in the following table:—

	Boarders.		Apprentices.		Adopted without Payment.		Boarded out without Payment.		Absconders' List.	
	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.
Boys ... ..	897	1,123	553	578	49	47	10	9	35	14
Girls ... ..	669	806	301	327	95	77	11	14	4	2
	1,566	1,929	854	905	144	124	21	23	39	16

	Unofficial Children.		In Hospitals.		In Cottage Homes.		In Depôt.		Total.	
	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.
Boys ... ..	4	7	3	5	44	35	11	4	1,606	1,822
Girls ... ..	6	5	3	4	109	111	5	6	1,203	1,352
	10	12	6	9	153	146	16	10	2,809	3,174

The total expenditure upon the Boarding-out division was £37,475 4s. 10d., and the net average capitation cost was £13 18s. 2d., or a decrease of 4d. per child on the previous year's transactions. It is estimated that this Department has saved over £110,000 to the State since its initiation 14 years ago, in the difference between the cost of maintaining children under this system, and in the barrack asylums. The total expenditure upon the Cottage Homes for invalid children during the year which has just closed was £3,652 12s. 5d., or £3,000 12s. 5d. for maintenance, management, medical expenses, salaries, &c., and £652, the value of clothing furnished to the inmates from the central store at Paddington, and the proportionate cost of inspection. The capitation cost has been £22, or a reduction of 2s. 2d. per head upon the operations of 1894.

#### CHILDREN'S PROTECTION ACT DIVISION.

Since the passing of the Children's Protection Act in March, 1892, there has been a total of 1,867 registrations of infants under Schedule A, which records the births of children, and full particulars relating to guardians, and arrangements for keeping the children; and 694 under Schedule C, which contains particulars of lying-in-homes and parentage of children. A return of 152 children who attained the age of 3 years, and consequently were exempted from supervision, has been

been made. Of the first quoted number, 338 deaths occurred. Strict supervision has been exercised over all these homes, and as a consequence humane treatment, if not tender nursing of the infants, has been secured. Whenever a semblance of necessity arose there has been special supervision; the parent has been communicated with and the child either returned to its mother or transferred to a better home selected by her. The number of deaths recorded may at first glance appear excessive, but it should be taken into account that the children were in the majority of cases the offspring of a class who, as a rule, probably resort to means to prevent maternity, failing which the offspring as a consequence has become weakened in constitution or by disease inherited from the parent during pregnancy. To discover a remedy for such evils does not come within the province of this Report, but there is no doubt the record of mortality is, in a very large degree, due to the causes stated. In no instance under observation during the past year has death occurred from neglect or ill-treatment by the guardian, and in all instances a medical certificate has been obtained. The registered foster-homes in which more than one child is permitted to be kept are conducted by kind, careful, respectable women. In these the tender nursing of the infants is assured. The charges for all these infants are paid by the mothers, and not in any proportion by the State. The amounts vary from 5s. to 10s. a week, and are properly considered by the guardians as insufficient for young infants. Some assert that they have been moved by feelings of compassion for the mothers, who are themselves only receiving small wages as domestic servants and cannot afford to pay more. The dread of exposure in many instances prevents the mother from suing the putative father in a Court of Justice, and thus he escapes the liability of contributing towards his child's support, and leaves the burden on the woman. Whenever specially requested an officer of this Department has sought an interview with the delinquent with a view to induce him to contribute. In some instances the appeal has been successful—in others it has been met with a denial of the obligation. During the year six persons have been prosecuted for breaches of the Act; in each case a conviction was obtained, and the offender sentenced to a period of imprisonment. It is gratifying to be able to state that the Children's Protection Act has been a most beneficent measure of social reform with reference to the various interests brought within the scope of its operations, and that "baby-farming," with its incidental horrors and enormities, has been pretty well stamped out. One lying-in home, situated at St. Peters, has been broken up, owing to the alleged mal-practices carried on there, and the proprietors (husband and wife) were prosecuted, convicted, and sentenced to fine and imprisonment. Two maternity homes, conducted by religious organisations, applied for and obtained exemptions under section 8 of the Act.

Speaking generally, the administration of the Act is accepted as a boon by most of the persons interested, and mothers possessing maternal instincts fully realise, as a rule, that owing to strict tactful supervision the kindly treatment of their offspring is secured.

#### THE BOYS' REFORMATORY.

I beg to point out that I have not included a detailed reference to the Boys' Reformatory in this Report, because it has only been in legal operation about four months. I have, however, furnished a separate departmental statement to the Chief Secretary containing a history of each inmate, which justifies the hope that the new policy of dealing with criminal boys will be attended with highly successful results, and will in the time to come have a most important influence, as it has had in older countries, upon the criminal statistics of the Colony.

Colony. In recommending the adoption of this policy I did so with a full sense of responsibility to the Government in this important matter, and with a firm belief, founded upon inquiries and observations elsewhere, that it would, under proper conditions, prove a blessing not only to the young offenders themselves, but to the community.

There are now twenty-six inmates of the criminal class at the Boys' Reformatory. They have all been convicted at the Courts, and several of them have been in gaol more than once. The superintendent is having very little trouble in dealing with them, and an evidence of this is afforded by the fact that for nearly three months he has only had to use the confinement division in one case, and then only for a few days. The principal objection that was raised to the establishment of this Reformatory—namely, that the boys would frequently abscond and be a nuisance to the community—has proved to be groundless. They are employed in orchard work and other industrial occupations; sufficient time is allotted for instruction in the school and for recreation; they appear quite amenable to discipline and to the kindly homelike influences that surround them, and on the whole there is every reason for believing that the Boys' Reformatory will realise the most sanguine hopes that were entertained with reference to it by the advocates of this humane and useful method of dealing with juvenile delinquents.

In concluding this Report I have to express thanks to the heads of the Government Departments and other officers of the Service, and particularly to the Inspector-General of Police and his officials, who have, as usual, rendered me much valuable assistance in carrying out the duties of my office.

I have the honor to be,

Sir,

Your obedient Servant,

SYDNEY MAXTED,

Director of Charities.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## ERECTION OF BUILDINGS AT ROOKWOOD FOR INFIRM AND DESTITUTE PERSONS.

### REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of erecting Buildings at Rookwood for the accommodation of Infirm and Destitute Persons, in place of the buildings now used for such purposes at Parramatta, Liverpool, and elsewhere," have, after due inquiry, resolved that it is not expedient that the proposed erection of Buildings at Rookwood for Infirm and Destitute Persons, at a cost of £108,350, exclusive of sewerage, as referred to the Committee by the Legislative Assembly, be carried out; but the Committee recommend that all inmates of the Asylums in Macquarie, George, and Harris Streets, Parramatta, be removed as speedily as possible, and that the healthy destitute be housed at Rookwood and Liverpool; and, further, that suitable accommodation be provided near Campbelltown, on available Crown lands, for the chronic and acute sick; and in accordance with the provisions of subsection IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. OFFICIAL DESCRIPTION.—Under the proposed scheme it was intended, according to the official description, to locate in one central establishment, to be erected at Rookwood, the whole of the inmates of the Benevolent Asylums situated at Liverpool, Glenfield, and in George and Macquarie Streets, Parramatta, and to provide accommodation at Rookwood for upwards of 3,300 inmates, exclusive of the necessary staff. It was not proposed to deal with the institution for women at Newington. The Rookwood Asylum estate consists of several hundred acres of land, a portion of which, on the western boundary, is detached by the Bankstown Road. The Government some years ago erected a number of buildings on this estate, intending to establish a Boys' Reformatory, but, in 1893, it was determined to adapt these buildings for the reception of the aged poor, for whom accommodation could not be found in the Benevolent Institutions. Subsequently there were and are, being erected, the following additional buildings—four pavilions, each to accommodate sixty inmates, costing £1,300 each; and two pavilions, each to accommodate sixty inmates, at £1,200 each. The scheme included classification of the whole of the inmates, and some further accommodation in a series of detached and distinct establishments, generally on the pavilion system, but so grouped as to be officially controlled from the central administrative buildings, to which would be attached the dining-halls, kitchens, &c. The scheme was worked out in connection with the existing group of buildings, and advantage was taken of the best aspects and sites. The classification proposed was as follows:—

- Group No. 1, Hospital for General Cases, to accommodate 1,000 inmates.
- Group No. 2, General Inmates, to accommodate 960 persons.
- Group No. 3, Casual Inmates, to accommodate 544 persons.
- Group No. 4, Isolation Buildings, to accommodate 800 inmates suffering from cancer, skin disease, ophthalmia, and consumption.
- Group No. 5, Central Administrative Block.

The detached buildings included a residence for the medical superintendent and two cottages for attendants and wardsmen. Fire appliances and an electric lighting plant were also provided. The

The Isolation Hospitals for cancerous, ophthalmic, and consumptive patients were designed with the necessary nurses' rooms, operating-rooms, special lavatories, day-rooms, shelter-sheds, and other conveniences. Non-absorbent and antiseptic material to be used in the construction of the walls and floors. Generally, the buildings would be constructed with external and internal walls of brick, and wide-spreading verandas and shelters, so that the inmates of the hospital and other groups could reach the central dining-rooms under almost continuous cover. The area occupied by the scheme submitted extended to 64 acres.

Estimated  
cost.

2. The estimated cost of the proposed scheme amounts to £108,350, but to this must be added, if the system of water-borne sewage be adopted, the sum of £21,632. If a system of precipitation and filtration and cremation be accepted the cost will be £9,935, making a total cost of £118,285. The sum of £70,000 was voted towards the cost of erection on the Loan Estimates of 1895-6. In a statement made to the Committee by the Government Architect, it was pointed out that the proceeds from the sale of the several institutions proposed to be vacated might fairly be placed to the credit of the capital cost of the proposed scheme, and in the event of this course being adopted, it was thought possible the net cost might not exceed the sum voted. The estimated cost of each group of buildings under the classification proposed is:—

<i>Group No. 1—Hospital for General Cases.</i>		Inmates	Estimated cost, £
Includes 8 pavilions already occupied	...	520	...
2 do now under construction (all these are already provided for)	...	120	...
6 pavilions for 60 inmates each; present dining-hall to be converted into dormitory, releasing one pavilion for store purposes	...	360	8,400

Sundry supervision, &c.	...	...	3,000
Total	...	3,304	£108,350

3. During his examination, the Government Architect furnished the Committee with the following particulars respecting the present condition of the several Benevolent Asylums which would be affected by the proposed scheme:—

Official statement respecting present condition of Asylums affected by proposed scheme.

*Liverpool Asylum.*—The institution at Liverpool, which is two storeys high, was originally erected as a military barracks, but has since been added to and used for Asylum purposes. The present number of inmates is 950, including infirm, sick, and cancerous patients, controlled by a staff of ten officers. Special provision is made for cancer patients, but it is rapidly becoming insufficient. The dormitories are well ventilated. The administrative buildings, including kitchens, are inadequate and insufficient in every respect. The meals are served to the able-bodied in an outer shed, which, however, is deficient in warmth during the winter months. It will accommodate 300 inmates at a time. The drainage is obsolete, and continually causes annoyance. The main buildings are fairly substantial, but are more or less in want of repair. The outer buildings are of a very poor description. Provision exists for checking fires, but it is not on a modern system.

*Glenfield Asylum.*—This Asylum accommodates 85 inmates, convalescents from the sick wards at the Liverpool Asylum, under a staff of two attendants. The estate consists of about 1,000 acres of land with farm buildings, leased up to June, 1896, at a rental of £150 per annum. Some of the inmates are engaged on the farm and in the dairy, which supply the Asylum at Liverpool with vegetables and milk. The sanitary arrangements are defective; the water supply is drawn from the creek.

*Macquarie-street Asylum, Parramatta.*—The main portion of this institution was originally used as a small barracks. There are 320 inmates, controlled by nine officers. The hospital ward, which embraces rather more than half the dormitory accommodation, accommodates the ophthalmic patients, but has low ceilings and is badly ventilated. The administrative buildings, including kitchens, are inadequate and badly arranged. The meals are served partly in open sheds and partly in the dormitories. Provision exists for a modified fire system. The buildings generally are old and difficult to keep clean. The sewage discharges into the river.

*George-street Asylum, Parramatta.*—The main buildings connected with this Asylum were originally a tweed-mill and factory. Accommodation is provided for 1,000 inmates, supervised by a staff of nineteen officers. The main building is a brick dormitory of five floors in height, in every way unsuitable for the purposes for which it is used. The staircases consist of skeleton steps, not suited to aged and decrepit patients. Meals are served in the recreation sheds, in the basement room of the main building, and in the hospital wards. This institution is much overcrowded. The buildings are partly in fair repair, but are old, and cannot be expected to remain substantial much longer. The fire appliances are incomplete, while, owing to the elevated construction of the main building, great difficulty would be experienced in removing the inmates in case of fire. The sewage is carried to the river.

4. The number of inmates in the institutions at Liverpool, Glenfield, and Parramatta was, at the commencement of the Committee's inquiry into the proposed work, 2,355; the inmates already at Rookwood numbered 450, and additional accommodation was being erected at Rookwood for 120 persons, making a total of 2,925.

Number of inmates in Benevolent Asylums.

5. Under the proposed scheme it was claimed by the Department that, if the major portion of the destitute population of the Colony could be concentrated at Rookwood, it would to some extent lessen the expense of administration, it being held by the Department that greater efficiency and economy must necessarily be obtained under such a scheme, as compared with the system now in operation of maintaining large numbers of indigent persons in widely-separated establishments. Therefore the object sought to be gained in putting forward this proposal was, as far

Reasons for the proposed scheme.

far as possible, to centralise the administration, and to effect a reduction in the expenditure. In order to effectually secure more economical administration and better management, it was considered necessary to provide for the poor in pavilions adapted to the special circumstances of the several classes, instead of continuing to house them in unsuitable buildings.

The Committee's inquiry.

6. THE COMMITTEE'S INQUIRY.—After obtaining from the Government Architect—under whose supervision the plans of the proposed buildings at Rookwood were prepared—a statement with reference to the subject, the Committee made visits of inspection to the Government Asylums in Macquarie-street and George-street, Parramatta, and to those at Randwick, Rookwood, Newington, and Liverpool, acquainting themselves with the features of each institution and the nature of the accommodation therein provided for infirm and destitute persons. Subsequently, the Government Architect was further examined respecting the details of the proposal. There were also before the Committee as witnesses Dr. J. A. Beattie, Medical Superintendent at Liverpool Asylum; Dr. I. Waugh, Medical Superintendent at the Parramatta Asylums; Dr. J. Ashburton Thompson, Deputy Medical Adviser to the Government; Dr. W. B. Violette, Government Medical Officer at Parramatta; Mr. J. Burt, Draftsman-in-charge, Information Bureau, Department of Lands; Mr. C. W. Darley, President of the Metropolitan Board of Water Supply and Sewerage; The Hon. Sir Arthur Renwick, M.L.C., President of the State Children's Relief Board; Mr. C. R. Scrivener, Staff Surveyor, Department of Lands; Mr. J. Davis, Principal Assistant Engineer for Country Towns Water Supply and Sewerage, Department of Public Works; Mr. Critchett Walker, C.M.G., Principal Under Secretary; Alderman J. Cole, Liverpool; Alderman F. Chapman, Mayor of Liverpool; Alderman P. Smith, Liverpool; Mr. T. W. Taylor, Liverpool; Mr. A. W. Green, Secretary to Charitable Institutions; Mr. Sydney Maxted, Director of Government Asylums; Mr. E. B. Price, Assistant Engineer, Department of Public Works; and Dr. W. Odillo Maher, Visiting Ophthalmic Surgeon to Government Asylums.

Opinion of Liverpool residents.

7. The Mayor and certain aldermen of Liverpool urged the removal of the asylum from that town, for the following reasons:—

- (1.) Because the presence of hospital patients in connection with the asylum is objectionable to the inhabitants.
- (2.) The limited area under the control of the authorities causes the inmates to frequent the town.
- (3.) The existence of any asylum is detrimental to the best interests of Liverpool.

Evidence of Director of Government Asylums.

8. The Committee do not agree with the views held by the Director of Government Asylums with regard to this centralisation scheme, and, in fact, that officer, under examination, expressed an opinion in favour of the removal of the hospitals to another site. Nor does it appear that the saving in administration to be effected by such a scheme is likely to be realised.

Opinions of Committee regarding the asylums.

9. The opinions of the Committee respecting the several benevolent asylums affected by the scheme put forward (based upon actual knowledge of the special conditions and circumstances surrounding each institution) are thus summarised:—

*Liverpool Asylum.*—The State would not be justified in abandoning so substantial a block of buildings as that at present in existence at Liverpool for housing infirm and destitute persons. The Government Architect's estimated expenditure of £2,400 at the utmost should prove ample to carry out any necessary repairs in connection with the main building and the out-buildings attached to the institution, and this outlay should render it a satisfactory home for about 800 healthy inmates. In the opinion of the Committee it would be both unwise and impolitic to house the chronic sick—especially such as are suffering from infectious or contagious diseases—at or near so important a centre of population as Liverpool. The consumptive, ophthalmic, cancerous, and other patients, who may be regarded as chronic sufferers, should be removed to a more suitable and a more isolated position.

*Glenfield*

*Glenfield Asylum.*—This institution, which, strictly speaking, may be regarded as an adjunct to the asylum at Liverpool, serves the purpose of a home for convalescents from the last-named establishment, those fit for service being employed in farm and dairy work. As the lease of this estate expires in June of the present year, an expression of opinion with respect to its utility is uncalled for, it being taken for granted that if able-bodied persons only are located at Liverpool there will be no occasion for the renewal of the lease in question.

*Macquarie-street Asylum, Parramatta.*—The description already given with regard to its unsuitableness is in keeping with the views of the Committee. The asylum should be closed at the earliest possible date.

*George-street Asylum, Parramatta.*—The statements made by the Department with respect to the condition of this asylum have been verified. The institution is unsuitable for housing the infirm and destitute poor, and no time should be lost in removing the inmates to a place of greater comfort. Some of the sick are located in the upper storeys, and in the event of a fire taking firm hold of the building the position of some of these sufferers, many of whom are aged and decrepit, would be absolutely hopeless. The Committee recommend that this asylum be closed.

*Harris-street, Parramatta.*—The houses in Harris-street connected with the George-street Asylum constitute a menace to the public health, and should be vacated.

*The Rookwood Buildings.*—Rookwood may be utilised for accommodating about 800 of the healthy aged poor.

*Newington Asylum for Women.*—The Committee inspected this asylum, and consider the arrangements generally leave little to be desired.

*Randwick Asylum.*—This fine block of buildings, situated at Randwick, and capable of comfortably housing about 700 persons, is at present occupied by about 140 children, and it appeared reasonable to inquire whether it could be utilised for temporarily accommodating some of the inmates of the Parramatta institutions. When investigating the matter, serious objections were disclosed, which appeared to be sufficient to justify the Committee in not recommending Parliament to utilise the buildings for the purpose under consideration. The reasons for adopting this course are :—

- (1.) It would cost a considerable sum of money to make the buildings suitable for the housing of infirm and destitute persons, and the expenditure of a like sum of money on modern pavilions would bring about a better result.
- (2.) The means of egress are not sufficiently good to justify the Committee in recommending the occupation of the highest storey.
- (3.) Further arrangements would have to be made to deal with the sewage of the institution.
- (4.) Further expenditure would be entailed in connection with the water supply.

10. THE POLICY OF CENTRALISATION.—The proposal, as detailed in the plans submitted to the Committee, to house some 3,304 chronic sick and destitute within an area of about 64 acres is in itself open to serious objection. The wisdom of bringing indigent persons from all parts of the Colony and massing them on a limited space is questionable. The individuals so treated would be of varied ages and temperaments, accustomed to different climates, and used to various modes of life. If possible, it might be better to arrange that the healthy aged poor should remain in those portions of the Colony to which they are accustomed, so that they might continue to live amid surroundings with which they are familiar; again, patients suffering from different ailments, especially those afflicted with infectious diseases, should not be housed in proximity to those suffering only from senile decay. Judging from the experience in all parts of the world, the question of dealing with the aged and infirm poor is surrounded by considerable difficulty, the ablest authorities differing materially with regard to the best method to be adopted. So far as the Committee are able to ascertain

The Committee's objections to the proposed scheme.

ascertain, there has been no previous experience in any country of a system of housing all the aged poor in one vast establishment—including individuals suffering from various infectious diseases and those of extreme old age—and this Colony, in their opinion, should not be the first to adopt what appears to be an untried plan. It may be possible—but even this, according to the evidence of competent witnesses, seems to be open to doubt—that there would be some saving in cost of administration, but the mere matter of expenditure cannot be regarded as dominating a question of this important nature; and further, it is clear that such a saving in administration, supposing it to take place, would not compensate for the total abandonment of such a block of buildings as the Liverpool Asylum, which will, as already stated, meet the requirements of at least a portion of our infirm and destitute population, nor would it be sufficient justification for the acceptance of any centralisation scheme embracing those suffering from contagious diseases and those who may be only decrepit.

Site chosen  
by the Depart-  
ment at Rook-  
wood.

11. There may possibly be a sentimental objection to massing the aged and dying at Rookwood, distant approximately half a mile from, and within full view of the Necropolis. This objection, however, might have been overlooked had Rookwood been found otherwise suitable. The important points which, admitting the accessibility of the Rookwood site, control a decision with regard to this proposed settlement may be briefly described as: (1) Salubrity of situation; (2) Nature of soil; (3) Water supply; (4) Possibility of the contamination of the Sydney water supply; and (5) Method of dealing with sewage. With regard to the whole of these an opinion must be pronounced adverse to Rookwood.

(1.) Salubrity of situation—

Viewed from this standpoint, the exposed position of the site chosen for the proposed buildings might alone be sufficient reason for its condemnation; but the Committee have definite evidence from the Visiting Medical Officer that it has already proved itself specially unsuitable for consumptives, who form by no means an inconsiderable portion of those who seek refuge in such asylums.

(2.) Nature of soil—

The soil is a cold clay, and possibly as unfit for the site of such an institution as could well be found.

(3.) Water supply—

A supply of water could be obtained from the Potts' Hill Reservoir, but not by gravitation, the height not being sufficient. For this reason, therefore, an additional expenditure for pumping would be required.

(4.) Possibility of the contamination of the Sydney water supply—

A glance at the plan will show that the proposed buildings would be located at distances varying from a few chains to half a mile from the Potts' Hill Reservoir, where some 80,000,000 gallons of water are stored for the use of the people of the metropolis. The plan shows some of the hospitals to be contiguous to the reservoir in question. It is probable that spores of disease would be carried by the wind into the reservoir. The science of bacteriology is not sufficiently advanced to enable it to be stated accurately what the danger would be, but that it is considerable is placed beyond doubt by the evidence of reliable witnesses, who are of opinion, without binding themselves to a definite statement, that the proposal is both impolitic and, on prudential grounds, objectionable. The Deputy Medical Adviser to the Government, Dr. J. Ashburton Thompson, expressed a definite opinion that no institution of the kind should be placed within half a mile of the reservoir, and in this view he is fully borne out by other well qualified witnesses. But without entering closely into the scientific aspect of the case, the Committee are of opinion that it would be highly imprudent to erect the proposed buildings at Rookwood.

(5.) Method of dealing with sewage—

The Departmental proposal was to deal with the sewage locally, and in the first instance appears to have been simply a continuation and enlargement of the present method by which the liquids are dealt with under a system of

of irrigation, the solids being used as fertilising agents in connection with the orchards and gardens, with additional appliances to cremate the sewage from the several hospitals proposed to be established. The continuation of such a method with a population of some 3,300, on a soil singularly unsuitable for the purpose, would eventually prove disastrous. The Committee were subsequently informed by the Department of Public Works that to bring the sewage from the proposed institution into touch with the Sydney system of sewerage would entail an expenditure of some £21,632. To deal with the sewage by precipitation, filtration, and cremation would cost £9,935, to which must be added an annual charge of £1,064 for working expenses. The fluids, after being rendered innocuous, would find their way into Haslem's Creek, and thence into the Parramatta River.

In view of these conditions, had the Committee not been influenced by the existence at Rookwood of housing accommodation for some 500 people, they would have rejected the Departmental proposal in its entirety.

12. Before finally dealing with the subject, an expression of opinion with regard to the general question of relief to the aged and infirm poor in New South Wales may not be out of place.

Number and Increase of Paupers in New South Wales.

The number of infirm and destitute poor in these institutions appears to the Committee to be excessive, and the evidence taken respecting the increase of pauperism shows that the number of persons in receipt of State relief is becoming rapidly greater, and the expenditure incurred in maintaining them in the several Government institutions is necessarily seriously increased as time goes on. The subjoined official return shows the progressive increase to be—

31st December, 1890	...	...	...	...	...	...	...	2,448
" 1891	...	...	...	...	...	...	...	2,593
" 1892	...	...	...	...	...	...	...	2,912
" 1893	...	...	...	...	...	...	...	3,146
" 1894	...	...	...	...	...	...	...	3,252
" 1895	...	...	...	...	...	...	...	3,425
1896, to 8th February	...	...	...	...	...	...	...	3,510

Taking our population into consideration, the proportion of poor provided for solely by the State is in excess of what it is in any of the other Australian Colonies. In view of the fact that the annual expenditure incurred in maintaining the aged poor is already so large, and, further, that this expenditure is growing yearly, the Committee feel it to be their duty to urge that legislation dealing with the question as a whole is absolutely necessary. The importance of this subject is sufficient justification for making the following suggestions:—

- (1.) Effective legislation dealing with the whole subject of State relief is urgently necessary.
- (2.) Special care should be exercised with regard to the admission into the several asylums of applicants for State relief.
- (3.) New South Wales should make provision for her own infirm and destitute only, except in special cases.
- (4.) Where it is possible the State should compel the relatives of the inmates in the several asylums to contribute towards their maintenance.

13. The difficulties in the way of making a centralization system effective and humane may be briefly stated as:—

The Policy of Centralisation further considered.

- (I) The absence of valuable local interest in the administration.
- (II) Removal of the infirm and destitute from those associations and companionships to which they have been long accustomed.
- (III) Loss of local interest and feeling as a consequence of such removal.
- (IV) Difficulty regarding effective classification with respect to character.
- (V) Difficulty regarding proper classification with respect to health.
- (VI) The inevitable overlooking of the unit which invariably results from the massing of large bodies of human beings.

Number of inmates for whom accommodation is required.

14. Recognising that the intention of Parliament with regard to the question of the relief of the infirm and destitute has not been definitely expressed, the Committee do not consider it wise to make provision for many more than the number at present housed in the various Government Asylums. The Liverpool Asylum, as already explained, can accommodate 800 healthy aged poor. At present, at Rookwood, provision is being made for the housing of 570; this number may be increased to 800. Accommodation being provided for 800 healthy poor at Liverpool and 800 at Rookwood, 1,400 chronic sick would remain to be housed in hospital buildings elsewhere. The numbers furnished to the Committee, as will be apparent from the evidence, vary considerably, but these figures may be regarded as a correct approximation.

Summary of Committee's recommendations.

15. The objectionable condition of the Asylums situated at Parramatta renders immediate action imperative, and it is therefore necessary to make suggestions which, if acceptable to Parliament, will enable the whole question of dealing with the aged poor to be considered without delay. The suggestions which are already partly embodied in this Report it may be well to epitomise as follows:—

- (1.) George-street Asylum, Parramatta, to be closed at the earliest possible date.
- (2.) Macquarie-street Asylum, Parramatta, to be closed as early as found practicable.
- (3.) The houses in Harris-street, Parramatta, to be vacated.
- (4.) The Asylum at Liverpool to be placed in order at an expenditure of (say) £2,400 for the accommodation of 800 destitute persons. All the consumptive, cancerous, and ophthalmic patients to be removed from Liverpool. It is also highly desirable, and indeed absolutely necessary, that a larger area of land should be acquired for purposes of recreation for the inmates of the Liverpool Asylum. Section 43 should be obtained under lease at an expenditure of £50 per annum. This, together with the land already in possession of the Asylum, comprises an area of 25 acres, which should be set aside as Asylum grounds. With this extent of land available for exercise and gardens, it will not be necessary for the aged poor to enter the town of Liverpool.
- (5.) Rookwood already accommodates 450 inmates, and provision is being made for a further number of 120. This number may be increased to a total of about 800, with the following restrictions:—
  - (a) No permanent hospital patients to be housed on any portion of the estate.
  - (b) No extension of the plan to be permitted nearer the Potts' Hill Reservoir than Group 1, as shown on the plan published with this Report.
  - (c) All lands within 30 chains of this reservoir to be reserved from alienation or use for habitation of any description whatever.
- (6.) That a site be chosen for hospitals to house the chronic sick, also embracing consumptive, cancer, and ophthalmic patients, in addition to those suffering from scabies, to the number of 1,400.

Site chosen by the Committee.

16. In choosing a site upon which to erect these hospitals, regard must be paid to the following considerations:—

- (1.) Isolation.
- (2.) Accessibility.
- (3.) The area must be large enough to provide ample space for the erection of separate hospitals for consumptive, ophthalmic, and cancer patients, and, if it should eventually be decided by Parliament to concentrate all the infirm and destitute in one locality, the land available must be sufficiently extensive to permit the erection of widely-separated buildings for housing those suffering only from senile decay.
- (4.) Salubrity.
- (5.) The large percentage of patients suffering from consumption and respiratory complaints precludes the selection of a site near the seaboard.
- (6.) Water supply.—This should be abundant, institutions of this kind requiring an ample supply of pure water.

(7.)

- (7.) Soil.—The soil should be of a porous nature, and such as can be readily drained.
- (8.) There must be no possibility of contamination of any existing water supply.
- (9.) It is imperative that there should be available a sufficient area of sandy soil suitable for a sewage farm, should it be found necessary to deal with the sewage locally.

After the fullest investigation with regard to available Crown lands in the county of Cumberland, an area of about 70 acres in the parish of St. Peters, surveyed into homestead areas Nos. 229 to 246, 248 to 249, 252 to 255, 258, 262, 223 to 226, and 269 to 271, was selected as being the most suitable site. Had it been possible to obtain a suitable area nearer the metropolis and closer to a railway station it would have been chosen.

The site recommended is isolated, the formation being sandstone. There is no population in the immediate vicinity. From Sydney to Leumeah Station is 33 miles by train; the distance thence to the site is  $1\frac{1}{2}$  mile from Leumeah, and an equal distance from Campbelltown. For administrative purposes the railway journey will be but twenty-two minutes from Liverpool, and the time of journey from Sydney one hour and a quarter.

The area is sufficiently extensive to afford ample space for separate hospital buildings for the treatment of consumptive, ophthalmic, and cancer patients. If it should eventually be decided by Parliament to concentrate all the infirm and destitute in one locality there will be plenty of room to house, also in isolated positions, those suffering only from senile decay and infirmity. There is also a sufficient extent of land for gardens, orchards, exercise grounds, and all other purposes.

With an elevation of 400 feet on sandstone country, combined with excellent natural facilities for drainage, the salubrity of the site selected is beyond doubt.

It is sufficiently removed from the sea to be suitable for consumptive patients.

The water supply is abundant—a dam costing £1,050 would impound 180,000,000 gallons of pure water, which will be continually replenished, and which can, by means of turbines, be lifted to a reservoir to command suitable building sites.

There is no possibility of contaminating any water supply.

An area of sandy soil, embracing 58 acres at the western portion of the site selected, is eminently suitable for a sewage farm, and would amply deal with the whole of the sewage from the buildings for all time to come.

The turbines which provide for pumping the water will be sufficient to supply the power for electric lighting and other purposes.

17. The estimated total cost of the scheme recommended by the Committee, which provides for 3,000 persons, is as follows:—

	£	s.	d.	Cost of scheme approved by the Committee.
<i>Liverpool</i> .—The Government Architect's estimate of expenditure to cover all necessary improvements, including alterations in system of drainage ... ..	2,400	0	0	
<i>Rookwood</i> .—A liberal estimate, including all incidental charges necessary for housing 230 inmates more than at present provided for—making the total 804 ... ..	8,500	0	0	
<i>Campbelltown</i> .—Providing suitable accommodation for 1,400 chronic sick poor—including consumptive, ophthalmic, and cancer patients—all necessary administrative buildings, water supply, electric installation, water power, drainage, fire appliances, laying out of estate, clearing, road making, supervision, and all incidental work ... ..	52,000	0	0	
	<hr/>			
	£62,900	0	0	
Departmental scheme for 3,300 persons, including sewage ... ..	118,285	0	0	
	<hr/>			
Saving ... ..	£55,385	0	0	

The Committee do not anticipate that any large sum would be obtained from the sale of the sites and buildings proposed to be vacated at Parramatta and at Liverpool.

The work of clearing the area at Campbelltown should be carried out judiciously, and no larger portion denuded of trees than is absolutely necessary for the efficient management of the institution. Extensive belts of timber should be left between the hospital buildings and adjoining the sewage farm.

Resolution of  
the Com-  
mittee.

18. The resolution arrived at by the Committee, and shown in the following extract from their Minutes of Proceedings, dated 11th March, 1896, is as follows:—

Mr. Wright moved,—

“That, in the opinion of the Committee, it is not expedient that the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons, at a cost of £108,350, exclusive of sewerage, as referred to the Committee by the Legislative Assembly, be carried out; but the Committee recommend that all inmates of the Asylums in Macquarie, George, and Harris Streets, Parramatta, be removed as speedily as possible, and that the healthy destitute be housed at Rookwood and Liverpool; and, further, that suitable accommodation be provided near Campbelltown, on available Crown lands, for the chronic and acute sick.”

The motion was seconded by Mr. Lee, and passed.

THOS. EWING,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 13 March, 1896.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### ERECTION OF BUILDINGS AT ROOKWOOD FOR INFIRM AND DESTITUTE PERSONS.

TUESDAY, 21 JANUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq., (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

ANGUS CAMERON, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee proceeded to consider the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Walter Liberty Vernon, Esq., Government Architect, sworn, and examined:—

1. *Chairman.*] The plans before us of the proposed buildings were prepared under your supervision? Yes.
2. You have a full knowledge of this proposal? Yes.
3. Would you like to make a statement on the subject? Yes. I will do so:—

W. L.  
Vernon, Esq.

It is proposed to locate in one central establishment at Rookwood the whole of the inmates of the old men's Benevolent Asylums, situated at Liverpool, Glenfield, and George and Macquarie streets, Parramatta, and to provide accommodation at Rookwood for upwards of 3,300 inmates, exclusive of the necessary staff. It is not proposed to deal with the institution for old women at Newington, but to retain it permanently. 21 Jan., 1896.

#### *Liverpool Asylum.*

This building was originally erected as a military barracks, and has since been added to and used for asylum purposes. The present inmates number 950, inclusive of infirm, sick, and cancerous patients, and are controlled by a staff of ten officers. The floor-space for sleeping purposes amounts to 46 feet superficial per inmate. The building is two storeys high, and the dormitories are well ventilated. Special provision is made for cancer patients, but it is rapidly becoming insufficient. The administrative buildings, including kitchens, are inadequate and insufficient in every respect. The meals are served to the able bodied in an outer shed, which, however, is deficient in warmth during the winter months. It will accommodate 300 inmates at a time. The drainage is obsolete, and continually causing annoyance. The main buildings are fairly substantial, have brick walls, stone dressings, and hardwood timbering, but they are more or less in a defective state of repair. The outer buildings are of a very poor description. Provision exists for checking fires, but it is not on a modern system.

#### *Glenfield Asylum.*

This building accommodates 85 inmates, convalescents from the sick wards at the Liverpool Asylum, under a staff of two attendants. The estate consists of about 1,000 acres of land and farm buildings, leased up to June, 1896, at a rental of £150 per annum. A portion of the inmates are engaged on the farm and dairy, which supplies the Liverpool Asylum with milk and vegetables. The sanitary arrangements are deficient, and the water supply is drawn from the creek.

#### *Macquarie-street (Parramatta) Asylum.*

The main portion of this building was originally a small barracks. It contains 320 inmates, at a dormitory floor-space of 44 feet superficial per inmate, and is controlled by nine officers. The hospital ward, which is rather more than half the dormitory accommodation, accommodates the ophthalmic patients, but has low ceilings and is badly ventilated. The administrative buildings, including kitchens, are inadequate and badly arranged. The meals are partaken of partly in open sheds, with the same inconveniences as at Liverpool as to weather, &c., and partly in the dormitories. The Matron-Superintendent has quarters of recent construction. The drainage is on a somewhat better system than at Liverpool, but to a certain extent is obsolete, while it discharges into the river to the annoyance of the Parramatta Council. Provision also exists for a modified fire system. The buildings generally are old, difficult to keep clean, and to a great extent may be considered makeshifts.

#### *George-street (Parramatta) Asylum.*

The main buildings and buildings connected therewith were originally a tweed-mill and factory. The buildings accommodate 1,000 inmates, giving a floor-space of 41 feet superficial per inmate, and are supervised by a staff of nineteen officers. The dormitories are divided into hospital, ordinary, and invalid wards, and the patients are fairly well classified. The main building is a brick dormitory of five floors in height, with little or no balcony, and in every way unsuitable for the purposes for which it is required. The staircases consist of skeleton steps, unsuitable for aged and decrepit patients. Meals are given in the recreation sheds, open to the same objections as before, and in the basement room of the main building, and also in the hospital wards. The administrative buildings have no proper arrangements, and are little more than a makeshift. This institution is in every quarter much overcrowded, the accommodation being far too limited. The buildings are partly in fair repair, but are old, and cannot be expected to remain substantial much longer. The drainage is carried to the river, with the same objection as applies to Macquarie-street. The fire appliances are incomplete, while owing to the elevated construction of the main building the greatest danger threatens the inmates.

W. L.  
Vernon, Esq.  
21 Jan., 1896.

## Summary.

The present number of inmates of the institutions is .....	2,355
Inmates already at Rookwood .....	450
Additional accommodation being erected at Rookwood for. ....	120
Total.....	2,925

The total accommodation at present provided, therefore, is for 2,925 inmates, and it is proposed to provide at Rookwood sufficient accommodation for 3,300, of which it may be found necessary in the first instance to provide for 3,000 only.

*Proposed Rookwood Asylum.*

The estate consists of several hundred acres of land, a portion of which on the western boundary is detached by the Bankstown-road. The Government erected a number of buildings on one of the upper portions of the site, intending to establish a Boys' Reformatory, but in 1893 it was determined to adapt these buildings for the reception of excess inmates, for whom accommodation could not be found in the old Benevolent Institutions. Subsequently there were, and are being erected the following additional accommodation—4 pavilions for 60 inmates each, @ £1,300 each; 2 pavilions for 60 inmates each, @ £1,200 each. These buildings also provide a dining-room and kitchen, intended for hospital purposes and matron's quarters. The new scheme includes a classification of the whole of the patients, and provides further accommodation in a series of detached and distinct establishments, generally on the pavilion system, but so grouped as to be officially controlled from the central administrative buildings, to which will be attached the dining-halls and kitchen, &c. The scheme is worked out in connection with the existing group of buildings, and advantage is taken of the best aspects and sites. The classification proposed, and the estimated cost are as follows:—

	Inmates.	Estimated cost. £
<i>Group No. 1.—Hospital for General Cases.</i>		
Includes 8 pavilions already occupied .....	520	...
2 pavilions now under construction (all these are already provided for) .....	120	...
6 pavilions for 60 inmates each; present dining-hall to be converted into dormitory, releasing one pavilion for store purposes .....	360	8,400
<i>Group No. 2.—General Inmates.</i>		
16 pavilions, 60 inmates each .....	960	22,400
<i>Group No. 3.—Casual Inmates.</i>		
8 pavilions, 68 inmates each .....	544	6,400
Kitchen .....	...	1,000
Laundry .....	...	1,500
Dining-room .....	...	1,500
Workshops .....	...	1,000
Quarters for Superintendent .....	...	1,000
Quarters for Wardsmen .....	...	1,500
<i>Group No. 4.—Isolation Buildings.</i>		
Cancer and Skin Disease Patients—		
2 pavilions of 4 wards, each for 25 inmates .....	200	4,800
Operating quarters, &c. ....	...	1,500
Ophthalmic Patients—		
3 pavilions, 100 inmates each, including offices and lavatories .....	300	6,450
Consumptive Patients—		
3 pavilions of 4 wards, each for 25 inmates (including nurses' rooms) .....	300	6,000
Enclosing airing-grounds, sheds, &c. ....	...	500
Kitchen .....	...	2,000
Special laundry .....	...	2,500
Mortuary .....	...	500
Nurses' quarters .....	...	2,000
Matron's quarters and offices. ....	...	2,000
<i>Group No. 5.—Central Administrative Block.</i>		
1 dining-room for 500 inmates .....	...	1,800
1 dining-room, used as recreation hall, 700 inmates .....	...	2,200
Administrative offices, Assistant Superintendent's offices, visiting rooms, clerks' quarters, &c. ....	...	3,000
Kitchen, scullery, and stores. ....	...	3,000
Laundry, including machinery .....	...	4,000
Workshops and Stores .....	...	2,000
<i>Detached Buildings.</i>		
Residence for Medical Superintendent .....	...	2,000
2 cottages for attendants and wardsmen .....	...	2,400
Fire appliances .....	...	2,000
Electric lighting plant .....	...	3,000
Drainage, irrigation, and general laying out of grounds .....	...	5,000
Water Supply (on the assumption that the W. S. & S. Board will supply H. P. water) .....	...	2,000
Sundries supervision, &c. ....	...	3,000
Total.....	3,304	£108,350

The cost of the present group of buildings (including the two pavilions in course of construction) is £27,378, so far as can be ascertained. The above scheme provides dormitory floor-space for inmates as follows:—

<i>Group No. 1</i> —General hospital, A. & B. ....	44 ft. super. each.
<i>Group No. 2</i> —General inmates .....	44 ft. super. each.
<i>Group No. 3</i> —Casual inmates .....	37 ft. super. each.
<i>Group No. 4, Isolation</i> —Cancerous patients .....	943 ft. cube, 74 ft. super.
Ophthalmic patients .....	943 ft. cube, 74 ft. super.
Consumptive patients. ....	943 ft. cube, 74 ft. super.

The various groups are designed with baths, latrines, &c., in the same proportion as in the recently-erected pavilions, which have been found ample for the purpose. The Isolation Wards for cancerous, ophthalmic, and consumptive patients are designed with the necessary nurses' rooms, operating rooms, special lavatories, day-rooms, and shelter-sheds, and with non-absorbent and antiseptic material for the construction of the walls and floors. The buildings generally will be constructed with external and internal walls of brick, with wide spreading verandahs, shelters, and seats, and the inmates of the Hospital and general groups will be enabled to reach the central dining-rooms under almost continuous cover. It will be seen from the foregoing schedule that the estimated cost of the new scheme amounts to £108,350 or £40 13s. 5d. per head of inmates. It is hardly possible to compare the cost per inmate for this institution with that of similar ones elsewhere, as the information cannot be obtained; but in comparison with general hospitals and hospitals for the insane, which necessarily require far more elaborate and special accommodation and appliances, the result should be most

most satisfactory. The sum of £70,000 was voted towards the cost of erection on Loans 1895-6. The general question of economy in supervision is one into which I am not able to enter, but it is apparent that greater efficiency and economy must necessarily be obtained in such a scheme as the one proposed, as compared with the existing establishments. I respectfully venture to point out that an expert opinion might be obtained as to the value of the several institutions proposed to be vacated, the proceeds from the sale of which might fairly be placed to the credit of the capital cost of this scheme, and by that means it is possible that the net cost might not exceed the sum voted.

W. L.  
Vernon, Esq.  
21 Jan., 1896.

- I assume that the Water and Sewerage Board will supply water at high pressure which at present is not done.
4. *Mr. Davies.*] There is a sort of sewage farm? We have an irrigation farm there. There are no sewers, at all at Rookwood, and unless special provision is made I do not think it is likely that there will be any, because the configuration is so very difficult. From Group No. 1 the sewage is conducted to irrigation beds which are kept constantly flooded. The present buildings are drained eastward into a series of irrigation plots where it is treated, the able-bodied inmates working there under a special supervisor.
5. *Mr. Cameron.*] I presume that there is no great difficulty about the drainage? No.
6. It is land that may be fairly easily drained? The sites where the buildings are can be well drained.
7. *Mr. Wright.*] I suppose there is no means of disposing of the sewage matter except by utilising it on the soil? I do not know of any except in the isolation block. There I propose to bring the sewage down in a southerly direction, then to deal with the sewage by a cremating process or by some system of precipitation which must yet be considered.
8. *Chairman.*] The whole of the sewage will have to be dealt with locally? Yes.
9. *Mr. Davies.*] Would the drainage be in the burial-ground? No. The drainage of Group No. 2 takes the course of a natural valley in a north-westerly direction, and will be treated by the casual patients in their own ground.
10. They will utilise it? Yes. They will utilise the labour of these casuals.
11. The buildings are to be on the highest point of the land at Rookwood? Yes.
12. Looking down on the cemetery? Group No. 1 looks on the cemetery, but from no other place can you see the cemetery at all.
13. *Mr. Humphery.*] How far is it from the cemetery where interments take place? I should think as the bird flies it is nearly half a mile from the centre of Group No. 1. It is 90 chains from the centre of the cemetery to the centre of Rookwood.
14. *Mr. Hoskins.*] Do you know how much money is available by vote of Parliament for the proposed buildings? £70,000 on the loans of last year.
15. And the difference between £70,000 and £108,350 has been expended? The cost of the new work is estimated at £108,000, against which £70,000 has been voted. The expenditure already incurred is not included in these calculations at all.
16. Then the difference between £70,000 and £108,350 the amount which the buildings are to cost will have to be voted? Yes. In the discussion on the Loan Bill I think it was stated that the proceeds of the sale of the existing properties should also go towards the payment of the expense of this scheme.
17. Did you originally report to the Government in favour of removing the existing buildings—that the buildings were not healthy or suitable? No. I have not reported on them.
18. You have simply given effect to the instructions which you received from the Government? Yes.
19. You do not estimate that the £70,000, the sum now available, will cover the cost of the whole of these alterations? No. If the whole scheme were to be erected at once it would not cover it.
20. Have you inspected the buildings at Parramatta, Liverpool, and other places where these poor people are housed, with the view of reporting to the Government as to whether they are suitable for the purpose? I have visited these institutions from time to time in connection with repairs which are constantly going on, and I have a fair knowledge of those buildings.
21. And have you reported to the Government that you think it would be better to continue to repair those buildings than to erect new buildings? No; I have not.
22. I suppose if you are frequently asked to repair the buildings and you think it is not desirable to repair you report to that effect, and recommend the erection of new buildings? In the ordinary way I would do so, but knowing that these buildings were being kept on from year to year till some scheme could be evolved, I have not thought it my duty to press the matter on faster than it is already going. It has always been in view since I have had to do with these buildings that they must be vacated sooner or later.
23. But how long have they been occupied for the purpose for which they are now being used? I could not say.
24. Looking at the fact that if your proposed scheme is carried out it will involve the expenditure of a large sum of money, do you not think it might be curtailed by still further utilising some of the buildings at present in use—say, for instance, the Liverpool Asylum? The main building of the Liverpool Asylum is in a fair state of repair, and its dormitory is well ventilated, but the administrative buildings are altogether out of character with the requirements of the institution.
25. But seeing that they have answered the purpose for a long time, would it entail any large expenditure of money to put those buildings into a suitable condition? They are not worth putting into a proper condition.
26. Have you ever inspected the Destitute Children's Asylum at Randwick? No.
27. I suppose you are aware there are upwards of 130 acres of land attached to that building? I know there is a good area.
28. Was it on your recommendation that Rookwood was selected as the most eligible site on which to group the asylums for the destitute and infirm? No; but it is a good site.
29. I have heard it stated by a member of the Committee that at Randwick there is room for 1,000 male patients, and the trustees are willing to give up the buildings to the Government. Would it not be worth while to have that building inspected to see whether it could not be adapted for housing some of these unfortunate people, instead of going to the expense of erecting new buildings at Rookwood? I think the scheme for erecting buildings at Rookwood is intended partly to centralise the administration and to reduce expenditure—instead of having the cost of four separate establishments, having only one. To occupy Randwick would only continue the present objectionable plan of having separate administrations. I can hardly imagine that there is room for 1,000 persons in the Randwick institution.
30. Would there not be this advantage that you would have no difficulty in draining the land at Randwick, whilst you have at Rookwood? I do not admit that there is any difficulty in draining the land at Rookwood except as regards the Isolation block. There is no difficulty about the drainage of the major part of it.

- W. L. Vernon, Esq.  
21 Jan., 1896.
31. Do you think it would be a nice thing to have a number of aged and infirm people grouped in a building not far removed from a sewage farm? There are 420 patients now close to the irrigated garden, and there is no objection, but they get some very good crops.
32. Are there not disagreeable exhalations from sewage farms? If the management were not good I admit that such might occur, but we have had no occasion to find fault with the present system at Rookwood.
33. What is the system at Liverpool? Liverpool is drained into the river, and there is very great objection to it.
34. You propose to have one-storey buildings;—will it not cost a great deal of money to group 2,900 people in buildings of that kind; a great deal more than it would cost if you put on second storeys? We have already constructed four pavilions at Rookwood, and two at Newington, and we are constructing two more at Rookwood at a cost per bed of from £19 to £21, which is an extremely low rate.
35. How much is that lower or higher than the cost per bed at the asylums at Liverpool and Parramatta? I have endeavoured to obtain it, but I cannot find out the cost of those buildings.
36. Do you really think that you can provide accommodation in one-storey brick buildings for 2,900 people at a cost of £108,000? I do. I have already had four pavilions built by different contractors at a cost of £1,300 each, to hold sixty inmates, each. That is in wood, and the difference between wooden walls and brick walls will not exceed £100. That would make £1,400 as against £1,300 each. I am perfectly justified in considering that I can build twenty-four more pavilions at the same price.
37. Would you have to build twenty-four more pavilions to accommodate the aged and infirm people at Liverpool and Parramatta? It will take more than twenty-four. There will be at least twenty-four pavilions of the same character as those already built, and there will be others of a rather different character.
38. Supposing this scheme is carried out, and these 2,900 people are removed to Rookwood, have you any apprehension, from what you know of sanitary matters, that the site will probably have to be abandoned on account of defective drainage? I have not the slightest fear of that.
39. Do you know of any establishments where large numbers of people have been congregated in a building in a flat country like Rookwood, where the drainage has not become a nuisance at last? You mean where there are no sewers.
40. Where there are no sewers? We have had a difficulty at Bathurst Gaol, but we have got over that by using prison labour for irrigating the garden.
41. *Mr. Cameron.*] Had you not considerable trouble with the sewerage at Darlinghurst Gaol? Not in my time; that is sewered. The drains at Darlinghurst were obsolete. We are taking one old drain up and putting a new one down now at the Courthouse.
42. *Mr. Hoskins.*] Have you no fear with regard to Rookwood if a large number of infirm people are collected there? Not if the sewage is properly utilised. It is extremely valuable as a fertiliser and inasmuch as the institution has a very large amount of labour to spare there should be no difficulty at all in disposing of the sewage in the garden without any detriment at all.
43. If the Committee think it advisable to inspect the building at Randwick to which I have referred would you have any objection to go with them? I should be very glad to attend upon the Committee there.
44. Have the residents of Liverpool ever complained of any offensive smells arising from the drainage of the Liverpool Asylum? Yes. They have constantly.
45. What is the nature of the complaints? The complaint is that we are fouling the river, and we are asked to do something to remedy it.
46. If the Liverpool Asylum is vacated the houses will be of no value to the Government will they? I do not think so. They ought to be burned.
47. *Mr. Cameron.*] They are very old are they not? Yes.
48. The people of Liverpool and Parramatta do not like the idea of losing those institutions do they? I think they would be very sorry to lose them although they are always grumbling about them.
49. *Chairman.*] In your statement you said you would take the water supply from the Sydney Water Supply if you could get a high pressure;—why did you make that qualification? The water supply at present comes from Potts' Hill which is alienated from the estate.
50. *Mr. Cameron.*] How far is it from the estate roughly speaking? I suppose about 20 chains. The water from the reservoir will only find its level at about 11 feet up the buildings of Group No. 1. Consequently there is no pressure. I have spoken to the President of the Water and Sewerage Board suggesting that he should carry out some scheme by which he could pump the water into an elevated tank to supply the institution, in preference to the institution doing it for itself. I think that the matter is still under consideration. Something must be done.
51. *Mr. Humphery.*] What is the elevation of the site on which you propose to build these different wards? Above the sea.
52. Yes? I could not tell you.
53. How far is it above Potts' Hill Reservoir? It is 11 feet below.
54. Is it below the pipe-line? The pipe-line is below that again.
55. Do these buildings occupy the highest site on the ground? The building stands on the highest portion which contains Groups No. 2 and No. 5.
56. Are the two Groups, No. 2 and No. 5, on the same level as No. 1? Practically; but some of the buildings are a little lower.
57. Would the several groups be 11 feet below the level of the water in the Potts' Hill Reservoir? Yes; 11 feet and more.
58. *Mr. Cameron.*] Would it carry water to the highest point in the building? No. Only 11 feet from the foundation upwards.
59. *Mr. Humphery.*] What difficulty is there in bringing the water from the Potts' Hill Reservoir to this site? It is necessary for the institution to have a head of water for fire purposes independent of domestic purposes. Therefore, it is absolutely necessary to get an elevation considerably more than 11 feet.
60. *Mr. Cameron.*] In the event of fire you would have no pressure? No; only 11 feet. We have constructed in connection with the present buildings a small water tower, but it would not be sufficient for a larger building.
61. *Mr. Humphery.*] Inasmuch as all your buildings are to have only one storey, would it be necessary to have a great pressure of water? We must have more than the Potts' Hill Reservoir gives.

W. L.  
Vernon, Esq.  
21 Jan., 1896.

62. Without the supply which you obtain from Potts' Hill, how could you provide water for 3,000 or 4,000 people? I could not do it except from the Potts' Hill Reservoir. There we have abundance of water.
63. Have you suggested any scheme to the Water and Sewerage Board? I have in an unofficial way to Mr. Darley.
64. In any case a pumping scheme would be necessary to give the supply which you require? Yes.
65. *Mr. Cameron.*] Then you would have a storage reservoir? It would be better for the Water and Sewerage Board to have it.
66. *Mr. Humphery.*] You say that the Liverpool Asylum drains into George's River? Yes, below the dam.
67. Into what part of George's River do the paper mills drain? Above the dam.
68. Does not that contribute very much to the pollution of the river? If they discharge offensive matter into it, it will.
69. Can you say whether the river is polluted by the drainage of the Liverpool Asylum only? It is polluted generally by the town of Liverpool.
70. Is not all the drainage into the river there? Yes.
71. So that though the people object to the pollution of the river by this particular asylum, I suppose there are other causes of pollution? Yes. But they conveniently lose sight of all the others.
72. From whom did you receive instructions to prepare plans for the construction of these buildings? From the Under Secretary for Works.
73. Were you desired to prepare a comprehensive plan so as to provide for the inmates of all the asylums? Recently; when I had notice that the Committee were about to take the matter in hand.
74. Are you aware that Mr. Maxted, when examined by a Royal Commission, considered it necessary to take in the inmates of the Asylums at George and Macquarie Streets, Parramatta only? I am not aware.
75. I think you mentioned that the cost of the four pavilions that you recently erected at Rookwood averaged £1,300;—but if they were constructed of brick the cost would be £1,400? Yes.
76. How many inmates have you provided for? Sixty for each building.
77. At an average cost of £1,400 for each pavilion the cost per head would be a little over £20? Yes.
78. If you can provide for the accommodation of 240 people at £20 a head, why does it cost £40 per head to provide for 2,000 or 3,000? The £40 per head is inclusive of all the administrative buildings. The cost—£20—of the pavilion is simply for the sleeping accommodation.
79. Have you provided other accommodation besides pavilions at Rookwood? Yes; dining-rooms, kitchens, workshops, laundries, &c. There are thirty pavilions estimated to cost £37,200, and there are three isolation blocks estimated to cost £17,250, and the difference between these two amounts and the £108,000 is the cost of the administrative blocks and general estate works.
80. That is to say the cost of housing the present inmates of the different asylums, numbering nearly 3,000, will be £55,000, and the administrative Department will cost as much more? Yes; that is so.
81. How many kitchens have you? One large kitchen for Groups 1 and 2 for 1,950 persons.
82. How many altogether? Three kitchens altogether.
83. Will you explain their positions with regard to the different groups of pavilions? The large kitchen is central, between Groups No. 1 and No. 2. The second kitchen is a distinct one for the casuals and is near Group No. 3, and the third kitchen is common to the three isolation wards for consumptive, cancerous, and ophthalmic patients.
84. How many pavilions are there in Group No. 1? Sixteen.
85. What is the distance between the groups? A chain between the nearest group and the dining-room.
86. What distance is the dining-room from the kitchen? It is about 60 feet from the dining-room to the kitchen window.
87. Assuming your designs to be carried out will it involve at least three separate services to provide for the different groups? Not complete services. I must tell you in these institutions the inmates are employed as cooks, and each kitchen must be supervised.
88. How many kitchens are there at present? There is one kitchen to dine 420 inmates. Two additional kitchens will be supplied, and the existing kitchen is to be used for other purposes.
89. Altogether you propose to have three kitchens in connection with the sixteen pavilions? The casuals have one kitchen.
90. How many groups of pavilions will you have for each class and how many pavilions in each group? There will be sixteen pavilions in the hospital Group No. 1.
91. In connection with that how many kitchen services? There is half a kitchen. In Group 2 there are sixteen pavilions, and the other half of the kitchen. In Group 3, the casual group, there will be a distinct kitchen. There will be three kitchens to the proposed establishment.
92. Are the whole of the buildings detached? The buildings are detached, but the verandahs are continuous.
93. What distance separates the different pavilions? The width of a 10 feet verandah in some cases. They are joined at the angles of the verandahs.
94. Is that the most economical way of providing accommodation for so great a number? Yes.
95. Is there any reason why the building should not contain more than sixty inmates? It is not safe to put more than sixty helpless old men in one room at a time for the reasons that at night they might disturb each other, and in case of any panic it would be difficult to deal with them if there were a larger number. Sixty or sixty-four has been fixed by practice as the limit for a dormitory of this character.
96. Of course you are aware that at present there are 700 or 800 in one building? They are on different floors, but that system is condemned.
97. Can you tell us what has been done in the other colonies, and in Great Britain and America? I can produce evidence as to what has been done in England.
98. Do you not think it will be as well to place before the Committee information as to the practice followed in other places besides New South Wales? I can do so, but I do not think I can find any information as to the pavilion system in connection with benevolent asylums. I can find plenty of examples of lofty buildings containing a number of rooms built on a very small space of ground, but that would not help the Committee at all in considering this matter.
99. Whose suggestion has led to the preparation of the plans now submitted to the Committee providing for the pavilion system? It is the outcome of the modern way of dealing with these matters, and especially where you have so much room as you have at Rookwood.

W. L.  
Vernon, Esq.  
21 Jan., 1896.

100. Does it admit of the concentration of the administration as much as buildings of two storeys would? Perhaps not quite so much as two storeys would, but the administration is equally central, as in the case of the hospitals for insane, which I know are built upon the most recent principles. For instance, at Kenmore, which is the result of the examination of the hospitals for insane in all parts of the world the administration is quite as wide as this.

101. Do you not think some distinction should be made between insane patients and those who are merely suffering from old age? There is a great difference made, and in order to show a comparison I may mention that Callan Park Asylum cost £308 per patient as against £40 per inmate of the Benevolent Asylum.

102. Do you think the same objection would apply to the construction of two-storey buildings for housing people who are simply old and slightly unwell as for housing insane patients? I think that all the old people in the institution should be on one floor. Many patients in the Hospital for Insane are comparatively young people and the staircase is nothing to them, but to old people it is a very different thing.

103. But are there not thousands of old people who sleep on the second floor? Yes, but not in large numbers as they do in asylums.

104. Out of 3,000 or 4,000 people do you not think a large number will be able to occupy a second floor ascended by an easy flight of stairs? I should prefer putting them on the ground floor if it is possible.

105. Do you not think that the management of the institution could be greatly economised by having fewer pavilions and having them of two stories? I do not think so.

WEDNESDAY, 5 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.  
The Hon. JOHN DAVIES, C.M.G.  
The Hon. JAMES HOSKINS.  
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.  
JOHN LIONEL FEGAN, Esq.  
THOMAS HENRY HASSALL, Esq.  
GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Walter Liberty Vernon, Esq., Government Architect, sworn, and further examined:—

W.L. Vernon,  
Esq.  
5 Feb., 1896.

106. *Chairman.*] With regard to the various instructions given by the Committee on the last occasion have you any statement to make? I have two or three exhibits to hand in. The first is a plan of a pavilion with two floors, sixty beds in each.

107. Do you desire to make any statement with regard to that? The only statement I will make is that the cost, according to two independent estimates, comes to just double the cost of a pavilion with one floor. That is caused by the fact that we have to build up two special stair-cases; otherwise the cost would be relatively smaller. Another exhibit is a plan of the Randwick Asylum, showing the possible accommodation. I have also a short report giving further information with regard to the methods adopted in the United States in dealing with the poor. This information, which I am sorry to say is very meagre, is as follows:—

At the request of the Committee I have made still further inquiries into the mode adopted by the United States in housing destitute poor. I find that the State has no control over this class, but that it is managed by the several Counties in the different States. In many of them the poor are placed on what are called "poor farms," in communities, in which the several families have their separate dwellings, and are employed in tilling the land,—sometimes with a pecuniary benefit to the State, sometimes at a loss. These communities do not, so far as I can ascertain, much exceed probably 100 inmates in number. In the case of towns with large populations the arrangements in some cases are somewhat different, and the poor are housed more closely; but in very few instances do I understand the latter to be of any considerable size or capacity; and, as much as possible, as in the former cases, they are placed in individual dwellings. In the cities again, what is called the "shop" system is adopted, comprising the employment of the indigent families in workshops at such occupations as they are most adapted for. I am informed that in a few cases the buildings are of the same character and extent as are common in the United Kingdom, in which the poor are housed in wards of one floor over another. I cannot, however, gather sufficient evidence to make a comparison of the means for housing the poor in the United States with that adopted for a similar purpose in the benevolent institutions of this Colony. In Pennsylvania, in 1891, there were seventy-two "poorhouses," thirty-seven of which were "county," and thirty-five "local," with 8,799 inmates, averaging 122 each, and costing annually £30 each, or 2.92 dollars per week.

107½. Have you a statement to make as to what will eventually become of the sewage from the Rookwood buildings? I have no written statement; but I would respectfully recommend the Committee, if the question of the removal of sewage by water carriage is considered, to call before them the Engineer-in-Chief for Public Works, who has the adjoining works more or less in hand. For instance, in Parramatta the scheme is still in his hands, and I think it would be more advisable to obtain his evidence on this point than mine—that is, in the event of the Committee considering the question of the water carriage of sewage. I hand in a statement of the cost of repairs and improvements to the three institutions during the last five years. This is only as far as the Works Department is concerned. At Liverpool the expenditure was £1,448; at Macquarie-street, Parramatta, £1,917; and at George-street, Parramatta, £823.

108. What else has been spent? I could not tell you. There has been some expenditure in connection with the Colonial Secretary's Department, and the institutions themselves; but I do not think there has been much.

109. *Mr. Davies.*] Was there a Board appointed, and did it make a suggestion for grouping the whole of the buildings at Rookwood? I am unable to say.

110. How, then, did the recommendation to group the whole of the buildings at Rookwood come about—what were your instructions? My instructions were to consult the Director of Benevolent Asylums as to what was required.

111. No Medical Board or Board of Works has sat to make this recommendation? There was a meeting of all the medical officers, with myself—that was subsequent to my instructions—and upon the deliberations of that meeting I based the grouping of the different classes.

112. Did the medical officers so far as you could gather, approve of massing the whole of the pauper people in institutions at Rookwood? No objection was raised in my hearing.

113. But there has been no absolute inquiry, so far as you know, into the condition of the different institutions that are being dealt with, by the erection of the proposed large group of buildings at Rookwood? The scheme is in its infancy; I do not think there has been an opportunity.

W. L.  
Vernon, Esq.  
5 Feb., 1896.

114. I want to know where it was born—where did it come from? I could not say.

115. All that you know is that the scheme was simply based on instructions you received from the Minister for Works? Quite so, through the Under Secretary.

116. But you are not able to tell us who proposed to erect this large number of pavilions, and mass the whole of the paupers from Liverpool, Parramatta, and Rookwood on one spot? I am not. I heard the discussion on the matter which took place in the Legislative Council, and in which the scheme was mooted. I happened to be present at the time.

117. Would you care to express an opinion as to the practicability of carrying out a scheme of that kind on the site proposed? I am of opinion that it can be done.

118. Can it be done with satisfaction? I think so.

119. With due regard to the safety of the people living in the neighbourhood and the inmates of the institution? Yes.

120. Do you think it a wise policy to concentrate the whole of the paupers of the country on one spot? Do you mean from a hygienic or from an administrative point of view?

121. Take both points? Well, from the sanitary or hygienic point of view I think it is perfectly possible. It is a community of 3,000 people, that is all. With regard to the administrative point of view, I could not express an opinion. I simply say that if the building were placed in the position which I have indicated it would be more economical than the present system.

122. With regard to the sanitary arrangements, if the present proposal were carried out, how would you provide for the drainage and sewerage, bearing in mind that the inmates at Rookwood would equal in number the population of many of our large inland towns, and that there would be a possibility of the number increasing? If it were determined to lay down a sewerage system and remove the sewage by means of water carriage, of course there would be no more difficulty in the case of 3,000 persons than in the case of 300,000. If you deal with the question outside of water carriage, I think under the circumstances you can do it without any difficulty or danger whatever.

123. Do I understand you to advocate the treatment of the sewage by conveying it to sea by water? No. My opinion is that at Rookwood you could very well utilise the whole of the sewage products upon the extensive lands that you possess there to the greatest possible advantage.

124. Have you made any estimate of the probable cost of the removal of all the sewage and faecal matter by water from these institutions, containing about 3,500 persons? I should suggest that you might call evidence from Mr. Hickson on that point.

125. You have made no estimate yourself? Only a very rough estimate as to the length of the sewer.

126. As you suggest that this would be a possible solution of the difficulty, it occurred to me that you might have made an estimate of the cost yourself? I might explain that that system is contingent upon providing some means of meeting the difficulty of outlet in the way of an irrigation farm, or filter beds of some description, and as to that I could not possibly give an opinion, because I do not know the locality, nor the circumstances under which the land could be obtained. Something of the kind would have to be done, so that the effluent waters running into the Parramatta River would be treated before they got there. I would rather not give an opinion upon that point. I know, roughly speaking, the length of the sewerage, and about the cost of it.

127. In reference to an irrigation or sewage farm is the soil on the proposed site suitable so as to assist you in the matter of treating sewage by means of a sewage farm? No; the soil is not the best. The soil is a stiff clay, but by working it it can be made considerably lighter.

128. What is the depth of the soil before you reach the clay? One spit I should think at the most.

129. Would that be suitable land for the treatment of sewage in the manner you suggest by a sewage farm? In dealing with a sewage farm of that description you are only dealing with the fluids and the slop water from the institution and not the nightsoil. But the scheme you have just referred to deals also with nightsoil, and of course that would have to be dealt with in an entirely different manner. There are several ways of dealing with the nightsoil. One is by deodorising, according to a scheme now under the consideration of the Government in connection with the Parramatta Asylums; another is by cremation, similar to a system we have at Bathurst Gaol. Those are the two most modern ways of dealing with nightsoil, and in an institution of that kind they can be both adopted most effectually.

130. Have you any idea of the cost of the treatment of nightsoil by either of these systems? There is an offer to the Government at the present moment to treat the nightsoil of the two institutions at Parramatta at a cost of £550 a year, or about that. The present cost of removing the nightsoil from those institutions by the Council of Parramatta is about £600. At Bathurst Gaol we cremate the nightsoil from about 340 prisoners, with a plant capable of doing considerably more work than that; but we could not make it smaller to make it effective, and the consequence is that the expense is over-weighting the result. It is costing 19s. 5½d. per prisoner per annum to cremate the nightsoil at Bathurst Gaol; but I could treat two and a half times as much nightsoil at the same cost.

131. *Chairman.*] What would be the cost at Rookwood with 3,000 people? We have an offer to deal with 1,300 people at the present moment for £550.

132. *Mr. Davies.*] Is the offer from the same party? There are three or four different patentees in Sydney, and there are agents for patents in the United States and England who are perfectly ready to take this matter up.

133. What is the original cost of the plant at Bathurst Gaol? The original contract was £800. That included the furnace, and everything complete.

134. And the cost is practically £1 per annum for each prisoner? Very nearly that.

135. In addition to the capital cost of the plant? Yes. But I should explain that at Bathurst, owing to some prison regulation, or other cause of which I am not aware, the urine is put with the nightsoil, and the consequence is we have to do more work in reducing the urine to steam and solids than we should have to do if we only had to deal with the night-soil. That is another point against Bathurst which would not occur in an institution of this kind.

136. What would be the cost of providing appliances similar to those used at Bathurst Gaol for an institution at Rookwood to accommodate 3,500 people? In considering the matter with an officer of mine,  
who

W. L.  
Vernon, Esq.  
5 Feb., 1896.

who has had a good deal to do with the details of this scheme, we came to the conclusion that we could do it at a cost of from 5s. to 7s. per head per annum.

137. Independent of the capital cost of the plant? Yes.

138. Could you furnish the Committee with an estimate of the probable cost of the plant? Yes.

139. You state that after the appliances are all provided, the cost would be from 5s. to 7s. per annum at Rookwood? That is our opinion.

140. That would be the only effective means of treating night-soil and sewage matter at Rookwood, with a population of 3,500 people—it would be effective beyond a doubt? I am certain of it.

141. Much more effective than establishing a sewage farm on a clay sub-soil only a few inches from the surface? I would not recommend a sewage farm for the disposal of night-soil in that position. The clay sub-soil would be a fatal objection. But in the case of slop waters the objection could be overcome.

142. But I am speaking of solid matter? I would not recommend putting solid matter on a farm.

143. What do you propose to do with it? I propose to cremate it.

144. You only propose that now;—you have not proposed it before in connection with your system of drainage and sewerage? I have put down a provisional sum of £5,000 in my estimate for dealing with that particular subject, in which particulars are not gone into. The item is this, "Drainage, irrigation, and general laying out of grounds, £5,000."

145. That applies to a sewage farm? That applies only to the irrigated gardens—an enlargement of the irrigated gardens which we have already commenced, and which are shown upon the plans. It is not a sewage farm at all.

146. It is what we saw the other day? It is not a sewage farm.

147. The process is the same? It is a modification of the sewage farm.

148. But you favour the system of treating all solid matter by fire? I think that is the best.

149. The matter so treated would make good manure for garden purposes? Fairly good. There is some quality in it, but not very much, after the fire has been through it.

150. Will you let the Committee know, when convenient, what would be the capital cost of machinery and plant required for treating the solid matter from an institution containing 3,500 people? I will do the best I can. I should like to say, with regard to the proposal, so far as it has gone, that there is a considerable amount of unutilised heat in connection with a crematory, and especially one of that size, and the proposal is, although the scheme has not been worked out, to utilise that waste heat in connection with the electric light, and therefore the two schemes are very much combined. I refer to the lighting of the whole of the institution by electricity.

151. *Chairman.*] That would be added to your estimate? No; there is a sum of £5,000 put down, which includes that.

152. But that refers to irrigation? It is supposed to cover the dealing with the sanitary point in connection with the scheme, though perhaps the item is not as explicit as it might have been.

153. *Mr. Davies.*] But you feel satisfied that although it might be costly the treatment of all solid matter by fire would be effective? I am of that opinion.

154. In regard to the proposed building the idea is to build hollow walls—brick walls? It was a suggestion I made that there should be hollow walls to the pavilion, and I think that ought to be done.

155. What is the object of that? To keep the damp from reaching the internal portion of the walls. The site is a very exposed one.

156. Would a 9-inch solid brick wall be as serviceable as a hollow brick wall? No, although the walls are protected to a great extent by verandahs, the place is so exposed that with a driving rain it is desirable to adopt hollow walls in order to be on the safe side, particularly with a second floor.

157. If a 9-inch brick wall were used instead of hollow 14-inch work, the verandahs being wide, would not a very large saving be effected in the cost of each pavilion? It would effect a saving of 4½ inches as regards the main walls of the building.

158. Would that represent £300 or £400? Nothing like that. Perhaps £60, £70, or £80, or something like that.

159. You have handed in to-day some plans with regard to the Randwick Asylum, and the possible accommodation there;—to what extent do you estimate the present buildings at Randwick would relieve one of the institutions at Parramatta? Omitting the top storey of the Randwick Asylum, which I do not propose to utilise at all, I find there is accommodation for 534 inmates.

160. That is without including the upper dormitory? Yes, without the one in the roof.

161. Could not that be utilised by those patients having pretty fair health and strength? Well, I think a third floor is objectionable.

162. That is the ground of your objection? Yes; it is perpetuating the present weak points of the George-street Asylum at Parramatta.

163. How many floors are there in the Randwick Asylum according to the plan you submitted? There is a ground floor, a first floor, and a second floor; but I do not take the second floor.

164. Then in your proposal there is only one set of stairs? Yes.

165. And this will provide for 534 beds? Yes.

166. What is your opinion as to the accommodation that building will afford at Randwick? I think it would be suitable, but before it could be occupied it would be necessary to alter the sanitary arrangements, also, I think, to enlarge the kitchen appliances, and possibly, build more shelter for the inmates, more weather-sheds or something of that kind. The baths, washing-places, and so on, and the drainage should certainly be overhauled, and I think very considerably altered and improved.

167. What do you estimate would be the cost of making the place suitable to receive, say 500 or 600 people? I have not formed an estimate yet.

168. Would it run into large figures? Well, you could spend £1,000 there.

169. Would £1,000 do it? A good deal would depend on the outflow of the sewage, and that is a matter that wants consideration. If you suddenly increased the occupancy from 147 to very nearly 600, you might cause a very great nuisance, the removal of which would involve considerable expenditure.

170. But the place would be thoroughly drained into the main sewer going to Coogee? I do not know the distance.

171. It would only be a haphazard estimate? That is all.

172. Does that include any expenditure that might take place in making further arrangements for the children? No; that is assuming that the building is handed over void. 173.

W. L.  
Vernon, Esq.  
5 Feb., 1896.

173. You paid a visit with the Committee to the George-street Asylum, Parramatta? Yes.
174. You saw the condition of things at Parramatta, and especially at the George-street Asylum? I did.
175. What was your opinion, as to the condition of those patients who are cooped up in the George-street Asylum, when we have a large building, like the Randwick Asylum, which might be utilised, even temporarily, to relieve that institution? I think the inmates should be removed from that large building without delay, and also from the hospitals in Macquarie-street.
176. There would be no great difficulty in relieving the George-street institution if you had at the disposal of the Government the pile of buildings at Randwick, even as a temporary means of relief? I think some discrimination should be exercised in the classification of the inmates to go to Randwick, but that is more within the province of the Director of Asylums. Without more special appliances I do not think it would be suitable for a hospital. Those appliances would have to be provided.
177. What extent of land have you at Rookwood? Originally there were 700 acres, but some portion has been alienated. I cannot quite find out how much.
178. Has not some portion been taken over by the trustees of the burial-ground? It is just possible; that I am not able to say.
179. You believe there are about 600 acres? I am under that impression.
180. If all the pavilions are erected at Rookwood according to the plans you have submitted to the Committee, what will be the total space they will cover; I mean including the existing buildings, as well as those proposed? I will endeavour to obtain the information.
181. I understand you estimate the cost of each of these pavilions at something like £1,200 or £1,300? At £1,400.
182. Are they likely to be more costly than the buildings erected at Newington? There will be an excess of cost by reason of the brick walls as compared with the wooden walls at Newington, and I have to allow for the fluctuation of contractors' prices. I built two pavilions at Rookwood at a cost of £1,200 each, and two others at a cost of £1,300 each, and two at Newington, I think, at a cost of £1,100; so that even those varied.
183. The pavilions at Newington for accommodating sixty beds each cost £1,100? Yes.
184. And the only difference in the cost of the proposed buildings at Rookwood will be in regard to the brick walls? Yes.
185. And these would cost £300 more? No; that is hardly the way to put it. The buildings at Newington, from my recollection, entailed some small loss upon the contractor; his price was rather too low. I take it that the Rookwood prices were much fairer, and ones upon which I could base calculations. I think about £1,250 is a very fair average price for any of these pavilions.
186. The wooden pavilions? Yes.
187. And the brick ones, you say, would cost £1,400? Yes.
188. Would the difference of £150 be a sufficient margin to allow for a brick building? Yes.
189. You say that £1,400 would be ample to put up brick walls? It is a fair price.
190. What was the cost of your new kitchen appliances at Newington? I am speaking now from memory, but I think the cooking apparatus cost about £700; and then we built a kitchen in addition.
191. Costing £100? Altogether it cost more—that is, the building and the plant together. These new appliances saved 115 tons of coal per annum. That is the saving effected in cooking alone.
192. For how many inmates do the new appliances at Newington provide? Six hundred and forty.
193. Could you increase its capacity without further expense? The cooking apparatus will provide for more inmates than it does at present. The cooking plant cost about £700, in addition to which there was a building to erect, but I cannot quite remember what the cost of the building was.
194. But the total cost was over £1,000? Yes, the two together cost that.
195. I want to know the capacity of the new kitchen. Supposing there were double the inmates—would it cook for 1,200? No, it would not cook for double; it might cook for from 950 to 1,000 with good management, and a good deal depends upon the management.
196. There would be no difficulty in cooking for 1,000? That would be the extreme number; I think that perhaps 900 would be about a fair number.
197. You have not any appliances like those at Newington in any other institution under your control? Not in any of the benevolent institutions, but we have in the lunatic asylums.
198. I mean in the benevolent institutions? That is the only one.
199. Was that imported or made in the Colony? It was designed in my office and made in Sydney.
200. What kind of cooking apparatus do you propose should be used at Rookwood? A similar cooking apparatus to that used at Newington. In the hospital kitchen a range would be necessary as well, but in the general kitchen the steam cooking apparatus would be sufficient.
201. In your estimate have you taken into account provision for these cooking appliances, or do you regard that item as outside the building? That is all provided for in the estimate.
202. Can you tell me what would be the cost of providing cooking appliances at Rookwood for 3,500 people? I can only give an approximate estimate. A large kitchen cooking apparatus would probably cost from £800 to £850, and the hospital kitchen would cost very much less—probably £450 or £500 would be sufficient in that case. This is necessarily an approximate estimate of cost, as I have no figures with me.
203. You might furnish the Committee with particulars of the estimate? I shall be happy to do so.
204. You say that £800 would be the cost of the main kitchen. Approximately.
205. If you had to pay £700 for a cooking apparatus for the Newington kitchen sufficient to provide for from 900 to 1,000 people, how do you expect to obtain a cooking apparatus to provide for 3,500 people for a sum of £800? The provision in the main kitchen is only for 2,000 people—actually 1,960. The central kitchen provides for the two main groups with an estimated accommodation of 2,000. The three hospital or isolation groups have a kitchen, and the casual group on the west side of the road has another kitchen, all of a much simpler description. So that there would practically be three kitchens—one principal one and two small ones.
206. What would be the cooking capacity of those three kitchens? Sufficient for 3,300 people—the gross capacity.
207. That would simply be provision for the number of paupers in the institutions at the present time? I am given to understand that the total number is 2,925; but on this point I cannot speak of my own knowledge.

- W. L. Vernon, Esq.  
5 Feb., 1896.
208. There would be cooking capacity for at least 2,900 or 3,000 people? Yes.
209. That would only be providing for the number of paupers at present in the institutions? The cooking provision is equal to a population of 3,300, while the existing number of paupers is 2,900.
210. What I want to know is, whether you provide in your scheme for a possible large accession of paupers at the Rookwood institution? Not to any large extent. But the pavilions at Rookwood, which are supposed to carry sixty beds, are at the present moment, as a matter of fact, carrying sixty-four beds, and they can carry sixty-eight, although I do not advise it.
211. How do you propose in your scheme to meet the necessity which may arise in the near future for additional pavilions? I have not considered that. I would not advise that the institution should be larger than that proposed.
212. You would not advise that the number should be increased? No, I would not.
213. You accompanied the Committee to Liverpool yesterday, when they inspected the asylum buildings there? Yes.
214. What is your opinion of the fitness and capacity of the two large main buildings at Liverpool for housing the indigent poor at present occupying it? The main building is suitable in all respects, except that it is overcrowded. I find that we have a clear space of 46 feet per bed, and as a large proportion of these wards is used as hospital wards, they should have more like 70 feet per bed. In the case of ordinary wards, a space of 46 feet is sufficient. There is no fault to find with it; in fact, it is very suitable.
215. What is the air space proposed at Rookwood? In the hospital wards the air space is to be 943 cubic feet per patient. In regard to the general wards, I have only reckoned the superficial feet per floor, which is quite sufficient in a case of that kind.
216. What would that be? Forty-four feet, and in the case of the hospitals, 74 feet.
217. *Mr. Wright.*] That is less space than at Liverpool? Yes, 2 feet less, in the case of the ordinary wards.
218. *Mr. Davies.*] Then in your new scheme you regard 2 feet less floor-space than is available at Liverpool as ample for housing the inmates at Rookwood? Yes; as regards the able-bodied inmates.
219. What do you estimate is the cost per bed of your hospital wards? I have only got the cost of the ordinary pavilions per bed, and not the hospital.
220. I think you estimate that the main pavilion, apart from the hospital, would cost about £19 per bed? The cost would be £23 at Rookwood with brick walls.
221. You are not able to tell the Committee what the cost per bed would be in the case of the hospitals? I attempted to get this estimate, but the hospitals contained so many adjuncts in the way of nurses' rooms, operating rooms, and so on; that I could not dissociate the actual sleeping accommodation from these necessary adjuncts, and therefore I could not get an exact estimate of the cost per bed of the sleeping accommodation only.
222. Could you give an approximate estimate? As administrative buildings would be included, such an estimate could not be useful as a matter of comparison.
223. Do you think the Liverpool buildings could continue to be used for the same purpose if additional ventilation were provided, verandahs erected, and perhaps a new kitchen obtained;—with these alterations do you think the institution could be utilised, the number of inmates being reduced? I am of opinion that if the proposed scheme of centralising all the institutions at Rookwood is broken into it would be very desirable to retain Liverpool as it is, with certain improvements.
224. Your estimate of the cost of the proposed group of buildings at Rookwood is £108,000? Yes.
225. After seeing the Liverpool buildings, do you think it would be wise to spend that large sum of money when the patients can be housed quite as well in good buildings such as those at Liverpool, with slight alterations that might be necessary—do you think it would be wise in the public interest? No. I think money can be saved by retaining Liverpool, and without injuring the scheme at Rookwood at all, because that is a progressive scheme.
226. You think the Liverpool buildings might be utilised? I think they might.
227. And to great advantage? I will go so far as to say so.
228. Supposing this scheme were carried out for centralising the whole of the pauper patients of the Colony at Rookwood, to what purpose would you apply a building like that at Liverpool;—what could be done with it; could it be sold, and if so what could be got for it. What could be done with a building like that? It is very difficult to say.
229. Would it be worth anything for any other purpose? No other purpose presents itself at the present moment.
230. What would be the probable cost of the erection of two brick buildings like those at Liverpool—I mean a rough estimate? There are three buildings. I should say from £20,000 to £22,000.
231. Even according to your own estimate as to a reduction in the number of inmates, this institution at Liverpool could safely house at least 600 people? Perhaps it could, with the outlying wards as well.
232. In view of the fact that you have a pile of buildings like those at Liverpool in a very fair state of repair, would it be an act of wisdom to abandon those buildings and proceed to spend a very large sum of public money in order to carry out some whim that somebody has—I cannot say who it is; you yourself say there has been no Board, so far as you know, that has met and decided on the matter—to carry out the whim of some public officer or some other person to concentrate the whole of the pauper patients of the Colony in one spot;—would it be an act of wisdom to do this in view of the pile of buildings you have at Liverpool, and which by a small expenditure could be made much more ample and acceptable to the patients who might be kept there in reduced numbers? I think it would be advisable to leave Liverpool for consideration until the last. But I am not prepared to condemn the scheme of unification.
233. Can you tell me the advantages to be derived from it? I understand there would be an advantage in regard to administration.
234. What proof is there that there would be such an advantage;—have you made any investigations with regard to the cost of administration under different systems in other parts of the world? One of the largest institutions of the kind is St. George's Union, in London, containing 1,844 patients.
235. Have you a list of the different institutions and their respective capacities? I have not attempted to make a list of them; I have only searched the records and books for information that might, perhaps, be of use to the Committee in comparison with the scheme now before us. I would point out that  
St.

W. L.  
Vernon, Esq.  
5 Feb., 1896.

- St. George's Union only embraces St. George's parish, while this scheme embraces the whole Colony of New South Wales, and, therefore, we can hardly make a comparison even in that case.
236. *Mr. Lee.*] You visited the Asylums in Macquarie and George Streets, Parramatta? I did.
237. In the case of both of those institutions the buildings, I believe, were utilised for their present purpose, and not specially built for the accommodation of indigent and sick persons? That is so.
238. At the George-street Asylum there are hospital wards in connection with the buildings? Yes; not distinct, but within the main buildings.
239. A very large proportion of the accommodation is used for hospital patients—that is to say, for the sick paupers? I think acute cases do not go to George-street, but only the bed-ridden cases.
240. There is a large number of sick cases there in hospital? Yes.
241. And a large proportion of the dormitories is taken up for the housing of sick paupers? Yes.
242. Does not the same remark apply to the Macquarie-street Asylum? Yes; except that perhaps the cases are more defined at Macquarie-street.
243. But is there not a large number of sick paupers there? Yes.
244. Is not a large proportion of the accommodation occupied by the sick? Yes.
245. And the same remark applies to Liverpool? In a smaller degree.
246. But even there is not a large proportion of the accommodation devoted to the sick? Yes.
247. So that all through the benevolent asylums of the Colony the same thing exists, as far as hospital accommodation is concerned? Yes.
248. In your proposed hospitals at Rookwood, for how many beds have you made provision? I have provided for 1,000 beds in what is called the hospital Group No. 1, and 800 beds in the isolation groups.
249. That will be 1,800 beds out of a total of 3,300? Yes.
250. That appears to be a very large proportion as compared with the number of inmates accommodated? I provided that proportion upon advice of a meeting of the medical men, and upon the result of their deliberations.
251. And from what has been observed in the existing asylums, you do not think that provision is excessive? I think it is about correct.
252. Of course you have been in consultation with medical officers in connection with all these institutions? I have at the one meeting—that is all.
253. It is upon the information derived from them that you have based your calculations as to space? Upon the decision they came to I formed this scheme; and the medical officers, I might say, not only discussed the relative proportion of accommodation of the different groups, but to a very great extent the relative positions of the different sites.
254. At all events, the necessity for providing so large an amount of accommodation for sick paupers is based upon previous experience? It is based on the recommendation of the medical men to myself in this particular case.
255. And they obtained their opinion from past experience? I presume so.
256. For how many patients do you provide in the proposed cancer hospital at Rookwood? I provide for 200.
257. And in the consumptive ward? For 300.
258. And in the other wards? I provide for 300 in the ophthalmic ward. I should explain that the cancer patients also include those troubled with skin diseases. I believe there are only about sixty cancer patients in the institutions at present.
259. How many beds would that be altogether in that group? Eight hundred.
260. And the balance would be provided for in the general group? No; there are 1,000 in the general hospital, and the balance in the general group.
261. So that hospital accommodation must necessarily be a very large feature in the institution? Necessarily so.
262. In other words, it would embrace over one-third of the inmates? Considerably over one-third. The provision is for over one-half.
263. After all that accommodation has been provided it will only meet the requirements of the present day? I presume that is the case; but I understand from Mr. Maxted that 2,900 represents the normal number of inmates expected to be accommodated.
264. Are you of opinion that the hospital accommodation in the George-street Asylum is suitable? I think it is very unsuitable. It is overcrowded. The cubic space per bed is very small.
265. The accommodation for hospital patients in the George-street Asylum is, in your opinion, inadequate? It is.
266. Is it not a fact that in order to afford means of egress in case of accident a double set of staircases has been erected? Yes; there has been a double staircase provided for that purpose.
267. Is there any water supply to cover the upper storeys in the building? I cannot say at the present moment; but I know the supply is very inadequate. There is a water supply in the general building, and, speaking from memory, I believe there is a hydrant on each staircase.
268. What would be the position of the sick paupers in the upper storeys in case of fire? Absolutely hopeless.
269. It would be absolutely impossible to remove them? Quite.
270. Is there not a carpenter's shop on one side of this very building? There is.
271. Is not the building in danger of catching fire at any time? I think it is very unwise to put that carpenter's shop alongside the main building.
272. Apart from that apparent danger, the building is altogether unsuitable for the accommodation of paupers? Altogether unsuitable.
273. It consists of two distinct buildings, does it not? Yes.
274. One at the termination of George-street, and the other on the wharf? Yes.
275. Both being connected by an over-head way? One over-head way on a lower floor.
276. Does that not render the administration very incomplete? Very incomplete indeed.
277. And expensive? I should imagine so. The bed space at George-street, I might say, is 41 feet per bed.
- 278-9. It was originally a tweed factory, was it not? I believe it was.
280. And built very many years ago according to the then existing ideas of accommodation? Yes, for factory purposes.
- 281.

W. L.  
Vernon, Esq.  
5 Feb., 1896.

281. Where is the sewage matter from that institution conveyed? It is conveyed into the river adjoining. The night-soil is carefully collected and disposed of elsewhere by the Municipal Council of Parramatta, but all the liquid sewage—slop-waters, bath waters, and urine—goes into the river.
282. And with regard to the night-soil? There are no water closets. It is all collected by the Parramatta Council.
283. At a cost to the Government? I believe that the cost altogether to the two institutions is about £600 a year.
284. And the Council undertake to do it? They are doing it now.
285. Is not the accommodation at the Macquarie-street Asylum equally as bad as that at George-street? Equally so. There are two fair wards there, but with that exception it is unequal to the requirements.
286. Have the Government erected any new buildings at Macquarie-street? In 1891 we erected quarters for the Superintendent, but there has been nothing else, except a few casual repairs.
287. That would not accommodate many patients, would it? No; except that the erection of the quarters for the Superintendent relieved the main building, so that it could accommodate more inmates.
288. Have the Government expended any money upon new buildings at the George-street Asylum? Nothing to speak of.
289. Consequently the amount given in the return handed in by you a short time ago would refer to the maintenance of the old buildings, and not to the erection of new ones? Yes, to a great extent. We have put up a few sheds.
290. In other words patched up the old buildings? Just so.
291. And the buildings are themselves very old? Yes.
292. Is not the present building in Macquarie-street the building that was used many years ago as a hospital barracks? I understand so.
293. And are not the ceilings very low? Very low indeed.
294. And is it not badly ventilated? Yes.
295. And altogether unsuitable for the accommodation of the inmates? Quite unsuitable. There is no outlet from the Macquarie-street Asylum except into the street.
296. Have you thought over the possibility of accommodating all our sick paupers in one place—the sick as distinct from the able-bodied portion? I have not. I think it would be rather difficult, because these old men are sick one day and well the next.
297. You say that the hospital accommodation in connection with each of these places is very large? It is.
298. I should like to know if you could offer any suggestion to the Committee by which all the sick paupers could be accommodated in one place, instead of being spread all over the country as they are at present? I think the scheme before the Committee, with regard to isolation wards, is one that could be well adopted, because there accommodation is found for the absolutely ill—those who are suffering from consumption or cancer—and there is no doubt that there you can embrace the whole of the acutely sick under one administration and one control. The general hospital is a matter, one cannot quite so easily give an opinion upon, because, as I understand, inmates are constantly shifted to and from the general hospital and the ordinary wards, as they may happen to be well or temporarily sick. There is a constant change going on in those cases; but with regard to the acute cases I first mentioned I think you could, with advantage, adopt a scheme of this kind.
299. There are acute and chronic cases which practically remain in the hospital until the patient dies? That is so.
300. Whereas, in the casual cases a certain percentage are ill to-day and well to-morrow, and many leave the institution, and come back again? I do not know how many leave.
301. But that is about the general course of things, is it not? I should imagine so; but I cannot say from personal knowledge.
302. Will you state to the Committee what have been the requirements at Liverpool in connection with the cancer hospital? Some short time ago it was considered desirable to remove the cancer patients from the main building. I think the Committee were shown the wards in which the cancer patients were originally accommodated. We built a temporary building across the railway, on a piece of detached ground. That pavilion is unfortunately now becoming too small to accommodate the patients sent there. It is not of a substantial character, and perhaps advisedly so, the object being that it might be burnt in the event of its being vacated. That is the only arrangement that has been made.
303. When any additional buildings are required at these asylums for any purpose, I presume you are consulted in the matter? Yes, generally.
304. And as a rule they are erected under your superintendence? With the exception of Newington they all are. There may be exceptions, even in the other institutions; but generally speaking they are.
305. What was your object in designing a wooden hospital building for the cancer hospital at Liverpool? Want of money, and the necessity of putting up a light structure of an inexpensive kind, because the larger question was looming in the distance, as to what was to be done with the whole of the institutions.
306. Not for any hygienic reason? No, not particularly; but it fell in with the scheme.
307. Have you considered the question of the modern systems adopted in Europe in regard to hospital buildings? To some extent I have.
308. Is there not a very large feeling on the part of the medical faculty in Europe in favour of hospitals being, as a rule, constructed of wood? It is a matter very much discussed between medical men, and I think it is very much hedged round with the class of patients to be considered.
309. Has the question been so far decided that the architects of the world have taken it up and adopted it? Not to an extent to be known. This Government has to some extent adopted the system in the case of the Little Bay Hospital, where a series of wooden buildings have been erected, with the intention, I think, that some day they may be burnt.
310. Do you remember when the question of finishing the Sydney Hospital was before the Public Works Committee? Yes.
311. Do you not remember that it was held very strongly by some of the leading medical men of the Colony that permanent buildings should not be erected for hospital purposes? I believe that opinion was expressed; but I think medical men have very diverse opinions even upon that point.
312. And was not one of the reasons assigned that all buildings used for hospital purposes became saturated with what is called "hospitalism," of which erysipelas is an instance? That opinion has been expressed.

313. If that is held to be the case, would it not equally apply to buildings proposed to be erected for housing the poor? I do not think so altogether. In this scheme you have other considerations as well. One of the main considerations is that the money to be expended is loan money. It would be a very improper thing to spend loan money upon buildings of a temporary character, and which can only last a short time, unless you provide such a sinking fund that the debt could be wiped out as the building was wiped out. That is one reason. The other reason is that in the case of old people there is no infection in the general sense of infection. You may have contagious cases, such as cancer and consumption, to some extent, but you have none of those virulent cases that occur among younger people. Such are not treated in a place of this kind.

W. L.  
Vernon, Esq.  
5 Feb., 1896.

314. Do you not think that the scum and dregs of the Colony being collected in a large institution of this kind would bring in every disease known to medical science? I do not think that these institutions admit infectious cases. But on that point I could not speak authoritatively.

315. The pavilion system would reduce the danger from fire and make the means of escape much easier? Yes.

316. These isolated hospitals which you say ought to be erected to stand for a large number of years are liable to become saturated with hospitalism? I did not say so.

317. Supposing that were the case, do you think it desirable to sink so much money in brick and mortar in the way proposed? I think the general custom in the erection of hospitals proves that the proposal is perfectly justified. In my report I have laid particular stress upon the fact that in these isolated hospital wards it is proposed to make the walls and the floors with non-absorbent antiseptic material. For instance, the floor would not be a wooden floor, and the walls and the ceiling would be treated as in the case of most modern hospitals; so that there would be no means by which infectious microbes or particles could adhere to the building internally in any shape or form. I mean every reasonable precaution would be taken.

318. Would not the accommodation already provided at Rookwood, together with the pavilions in course of erection, be sufficient to house the sick from all the male asylums? The medical men say it will not be quite sufficient. It requires six more pavilions, and I have shown those on the scheme in connection with the present buildings.

319. I mean if the present inmates were removed? Just so.

320. And if it were used entirely as a sick hospital? I understand so from the medical men. The convalescent inmates of the present buildings would be removed, and these would be filled entirely with sick men.

321. You say then it would require six more pavilions in addition to those you have erected? Yes.

322. Do you know the area of land at Newington? No; it is very confined on one side, but they have ample room on another.

323. Coming back to the question of dealing with the night-soil at Rookwood, I should like you to give the Committee a clear idea of what you really propose to do with it;—in general terms you told Mr. Davies, but the matter is of such vast importance that I should like you to be able to state exactly to the Committee how you are going to treat it, and what the cost will be? The view I take is this: If the Engineer-in-Chief for Public Works gives evidence before the Committee that sewers can be constructed there, and that the liquid from those sewers can be discharged into the river in a fairly good and clear state that will be one clear way out of the difficulty. With regard to the solids, my opinion is that you can deal equally well with them on the estate.

324. By what process? By the process of cremation, utilising the liquids—that is the soap-suds and so on—for irrigating the gardens, thus employing the man and enriching the soil.

325. Do you make a strong point of the treatment of the solid matter by cremation? I think it is better than treatment by desiccation, or by any chemical process. I think cremation is by far the best method.

326. Are you strongly of opinion that the nightsoil from the large number of inmates in the institution should be treated before being placed upon the land in the vicinity? Yes, I am of that opinion.

327. And in a manner that would destroy any germs that might exist? I am of that opinion. My scheme shows a crematory.

328. I think it shows it for the hospital only? That is so.

329. You propose to deal with it partially; but why not propose to deal with the whole matter collectively? In preparing the scheme I was in some little doubt as to how far the sewerage system could be adopted. Even at the present moment I do not know, and it has left me in some difficulty as to the formation of a definite scheme to place before this Committee.

330. You have not proposed any definite scheme for cremation? The actual details have not been thoroughly thought out, but provision has been made for dealing with it in the estimate submitted.

331. What is done with the solid matter at Rookwood at the present time? I think it is buried in the far part of the estate. Of my own knowledge I do not know what is done with it.

332. How do you dispose of the same matter from the Liverpool Asylum? The liquid is discharged into the river, and I believe the nightsoil is removed by the Liverpool Council, but I do not know of my own knowledge.

333. There is no system of cremation there? None whatever.

334. The Liverpool Asylum has been in existence for many years, has it not? I understand so.

335. And all the appurtenances are nearly perfect—the kitchen arrangements and the dining-room, and with the exception of the want of some little weather sheds and out-houses the system is rather a perfect one, is it not? No, the kitchen is not of the best description for the purpose, and the dining-room should be altered. It is long and narrow. It is an old shed, which has been filled in, and that makes it very difficult to work.

336. But there is no immediate necessity for an alteration? No immediate necessity, but I think the kitchen should be altered.

337. It has answered all purposes for some years past? I think money would be saved by altering the kitchen at once.

338. But as a matter of fact it would last for many years to come? The main building would.

339. And the administrative portion—that connected with the cooking and feeding of the inmates? I do not think so.

340. It is a substantial building is it not? Not very. I think the question of proper administration is even more important than the state of the building.

THURSDAY, 6 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
The Hon. JOHN DAVIES, C.M.G.  
The Hon. JAMES HOSKINS.  
HENRY CLARKE, Esq.

CHARLES ALFRED LEE.  
JOHN LIONEL FEGAN, Esq.  
THOMAS HENRY HASSALL, Esq.  
GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Walter Liberty Vernon, Esq., Government Architect, sworn, and further examined:—

W. L.  
Vernon, Esq.  
6 Feb., 1896.

341. *Mr. Clarke.*] Can you state the acreage covered by the proposed scheme at Rookwood? Yes. A ring fence enclosing 64 acres would cover the whole scheme. It would not necessarily include the orchard and the garden.
342. After giving the matter some consideration, I presume you consider that Rookwood is a suitable place at which to erect the proposed buildings? I do. I think it is an admirable place.
343. It has been recommended that the male paupers should be removed from the asylums at Parramatta, Liverpool and Glenfield, and located in the proposed buildings at Rookwood? My instructions covered some such scheme, and the scheme I have put before the Committee I have great confidence in.
344. Who gave you those instructions? I received general instructions from the Under Secretary for Public Works.
345. It is some time, I think, since a few of these people were located at Rookwood? The first batch were sent there in 1893.
346. Do you not consider that there would be great difficulty in getting proper drainage at Rookwood? No; I do not.
347. Where would you propose to drain to? There are two alternative schemes which might be considered. The first is the removal of the whole of the sewage by water carriage into one of the existing systems, or down to Haslem's Creek, to be dealt with there; and the other is to retain on the estate itself all the products of the sanitation.
348. But if the sewage were taken down to Haslem's Creek, would it not have to be conveyed into the Parramatta River? Eventually, I presume, the effluent waters would go into the Parramatta River.
349. Would it be possible to take the sewage to the nearest point of the present sewerage works at Ashfield? I have heard the Engineer-in-Chief for Public Works express an opinion upon that point; but I would rather he gave it than I did, because I do not know much about it.
350. Have you any idea as to the cost? No.
351. When the Committee were at Rookwood last week, I noticed that you were utilising nearly all the sewage on the orchard and gardens? We are utilising the whole of the slop waters.
352. What do you do with the most offensive portion—the faecal matter? Of my personal knowledge I do not know what is being done with it at the present moment. In the new scheme it would have to be considered.
353. What is the number of acres in the orchard and garden at Rookwood—the land under cultivation? We have fifteen beds under cultivation at the present moment, covering, I suppose, an acre and a quarter—not more.
354. Orchard and all? We do not irrigate the orchard. We have not sufficient liquid for the orchard.
355. If the sewage from that institution, containing 450 inmates, can be disposed of in the manner just mentioned, without being offensive, would it not be possible to continue the same plan on a larger scale over a larger area? I certainly think so, and I strongly recommend it.
356. Considering the large area of land available for cultivation by trenching, you think that the whole of the offensive matter coming from the proposed institution at Rookwood could be utilised without injury? Yes; excluding the night-soil. I do not think it would be advisable to irrigate the night-soil on the estate. But as regards the slop waters, washing waters, bath waters and urine, I am strongly of opinion that it would be desirable and efficacious.
357. It was pointed out the other day, when we were at Rookwood, that this matter was kept in pits for a considerable time before being utilised, and there appeared to be nothing offensive, as far as I could see? It can of course be done in that way; but the question is a much larger one when you are dealing with 3,000 people instead of 400.
358. If you have now a few acres of land in connection with an institution of 400 or 500 inmates, could not the offensive matter be utilised in the same way in connection with a larger institution to which is attached an area of about 600 acres? It could, but I think there are safer ways of dealing with it.
359. You think it would be better to deodorise it? Either deodorise it or burn it. Either system is good.
360. It would not then answer the purpose of manure for the farms so well, as a good deal of the strength would have been taken out of it? That is quite true. But the slop waters would be sufficient to irrigate all that it would be necessary to cultivate; so that it would not be required.
361. Can you say, in round numbers, how many people there are at the Liverpool Asylum? I think we were told the other day that there were 871. Formerly, I was informed, the number was 950, so that the number evidently varies from time to time.
362. Do you not think that the asylum at Liverpool could be utilised for the accommodation of sick cases—chronic cases such as consumption, but from which there would be no fear of contagion? I think the ordinary sick can be accommodated there, but not to the extent they are accommodated now, and certain improvements would be necessary. But I am of opinion that cases requiring isolation should not go there at all.
363. You would have to find room for them somewhere else then? Yes.
364. Do you think it would be a fair thing to send a lot of such people to the Randwick Asylum, situated in the centre of a large population? I do not think it would be very desirable. 365.

365. Besides I do not think the Randwick Asylum is drained any more than Rookwood? Only imperfectly.

W. L. Vernon, Esq.  
6 Feb., 1896.

366. Can you say whether the Randwick Asylum could be connected with the main sewer? I could not say.

367. *Mr. Fegan.*] What is the system of sewerage adopted at the Randwick Asylum? I do not know.

368. You do not for a moment suggest that room should be found in the Randwick Asylum for more than 40 or 50 of these people? I think that is the utmost capacity. Of course there is the upper floor, but I do not recommend that these cases should be put upon the upper floor at all. I think it is too high up. It would be perpetuating the evil you are trying to diminish at the present moment.

369. Therefore if only 50 patients were removed from the Parramatta Asylum to the Randwick Asylum, there would still be a large unoccupied space in the latter building? There would be the floor in the roof still unoccupied.

370. You would not, of course, keep the present inmates there? No; I have made no provision for them at all.

371. Do you know what was suggested in the event of their removal? I do not know.

372. You would not remove healthy children from an asylum like that, which is their only home at present, to give it to the inmates of the Parramatta Asylum, would you? I naturally assume that if they were removed provision would be made for them elsewhere. I cannot say more.

373. But do you not think that the removal of patients from the Parramatta Asylums should take place immediately? Yes; from George-street particularly.

374. Then some provision would have to be made for the children who now occupy the asylum at Randwick? If any of the inmates of the George-street Asylum were sent there that would be necessary.

375. And therefore it would be necessary that immediate steps should be taken on behalf of the children? Naturally.

376. So that one evil is almost as great as the other? The same difficulty would probably present itself.

377. In regard to the proposed buildings at Rookwood, when were you first asked to prepare the plans? It was after this Committee began to sit. I was informed that in about a week's time I should be required to go before the Committee to give evidence on the Rookwood scheme.

378. But when were you asked to prepare the plans for the scheme placed before the Committee? At that time.

379. Then, it has not taken you very long to prepare these plans? I put a great amount of assistance on to the work, and gave as much attention as it was possible to give to it, and I had it ready for the Committee.

380. While preparing these plans had you any consultation with the Engineer-in-Chief for Public Works? No, I had not—not specially, only casually.

381. Does it not seem strange to you, in your professional capacity, that in preparing these plans no proper system of sewerage was provided for? In my own mind the scheme I prepared was for using the whole of the sewage products upon the estate itself, and not dealing with water carriage at all, and hence I did not make any communication with the Engineer-in-Chief.

382. But as a rule, I suppose the Engineer-in-Chief takes a prominent part, as far as sewerage is concerned, in the preparation of plans and specifications for the erection of Government buildings? Not necessarily.

383. Is that portion of the work left to you? Yes, entirely.

384. So that really the question of the system of sewerage comes directly under your control independently of the Engineer-in-Chief? That would be the case, excepting where the sewers under the charge of the Engineer-in-Chief come within proximity to the establishment. Then, necessarily, I should go to the Engineer-in-Chief. But where the sewers are isolated, as in the case of Kenmore, for instance, the whole of the sewerage arrangements are under my charge.

385. What are your arrangements at Kenmore? We are carrying out a system of irrigation there.

386. With the solids and the liquids? Yes.

387. I presume it is a kind of sewage farm? It is not constructed yet. It will be.

388. That is your intention? Yes.

389. I notice that in your plans you have made provision for a crematory at Rookwood? I have.

390. I suppose you are aware that that system is largely in vogue in France? Yes, and Germany.

391. And the product of the crematory is sold at a high price? I am not quite so certain about that. It is often so stated; but I do not think in practice it has ever been a great success as regards the sale of the product.

392. Have you any data to go upon in saying it has not been a success? As far as I have ascertained, the products do not contain those chemical properties which they should do, and which they did in their natural state, and they are consequently so much less useful for fertilising purposes.

393. Neither are they so obnoxious? They are not obnoxious at all. That is entirely removed.

394. But I suppose you have heard that after the crematory has finished with the matter it is sold for manure? Yes; I have had to deal with such schemes myself in England.

395. And did you deal with them successfully? The sales at first were good, but in nearly every case they fell off.

396. I suppose you have been acquainted with large land owners in England whose farms have been entirely manured by excreta? I know several municipalities which dispose of the whole of the sewage on farms, but I do not know of any private owners who adopt that system.

397. Is it not a fact that the tendency on the part of municipal bodies in England, is to utilise the sewage by applying it to farm purposes? Yes, entirely.

398. The old idea of doing away with the sewage altogether is exploded, and the practice is to utilise it as much as possible? The old system of polluting the rivers is being put a stop to very severely, and municipalities are being driven into irrigating certain tracts of land in their own municipalities and disposing of the sewage, and this they are doing very successfully.

399. Since the adoption of this new system, has fever or any other disease been more prevalent than formerly? I think it has been less prevalent.

400. Therefore that experience should be a criterion to guide this country in the matter? I think so, decidedly.

- W. L. Vernon, Esq.  
6 Feb., 1896.
401. More especially seeing that we have a greater amount of sunshine than is the case in England? Yes, that is in favour of the system, and the land being drier is more absorbent.
402. You are acquainted with the nature of the soil at Rookwood? Yes.
403. Do you not think that even that soil would neutralise the excreta in time? I think it would; but it is not the best of soils for dealing with excreta.
404. Therefore, you think the plan you have proposed is the best under the circumstances? I think so, under the circumstances.
405. According to your plans it is proposed to make provision at Rookwood for 3,000 people? Yes, actually 3,300.
406. Since you have seen the various buildings have you looked at your plans again to see what buildings are really not necessary? I have had the matter constantly in my mind, and assuming that 3,000 people are there, I do not think any one building could be omitted.
407. You have said that there is a number of rooms in the Liverpool Asylum which could still be utilised for their present purpose? Yes, with certain improvements.
408. How many people could you safely put in the Liverpool Asylum—I mean without overcrowding? If only able-bodied inmates were put at Liverpool the Asylum would hold probably about 900.
409. How many are there now? The figures given to me are 950, but there is a discrepancy in those numbers which I cannot explain.
410. Do you say that, with the present provision existing there, there would be room for 900 able-bodied men? That is the number which has been given to me, and my own calculations have shown that there is sufficient bed-space for that number.
411. Did you include the hospital at Liverpool Asylum known as the long room? I have calculated that as part of the accommodation. It is not a satisfactory room at all.
412. And people when they come to the position of having recourse to a charitable institution, especially people who are physically unable to help themselves, ought to be fairly well looked after? Yes; if you were to take bed-ridden people it would not hold anything like that number.
413. How many bed-ridden people would it hold? I should have to increase the 46 superficial feet per bed to something like 74 feet, and consequently the number of inmates would be proportionately smaller. I am only assuming that Liverpool would take inmates who are, you may say, locked out of the bed-rooms during the day, or not allowed in.
414. Therefore, if the authorities were to look well into the matter and send the able-bodied men to Liverpool, that Asylum could be used with benefit even yet for 900 inmates? Undoubtedly it could, subject to certain expenditure.
415. What is your idea about the George-street Asylum at Parramatta? I think it should be shut up on the very first day possible.
416. It is not very creditable to the country? Quite the contrary.
417. It is not a suitable building for the purpose in any shape or form? It is quite unsuitable.
418. You said in your evidence yesterday, I think, that the buildings were formerly an old tweed factory? Yes, a portion of George-street Asylum.
419. Are the other buildings at Parramatta also unsuitable and dangerous from more causes than one? Yes.
420. The mortality there is rather large, is it not, through overcrowding? I cannot tell you.
421. For these reasons you would entirely abolish the present charitable institutions at Parramatta? I would certainly close those two—George-street and Macquarie-street.
422. And to what place would you remove the inmates? I would remove them to Rookwood.
423. Since your visit to the Liverpool Asylum, you are satisfied that that institution will accommodate 900 people;—would not that fact materially reduce the cost of your original proposal? It would necessarily reduce the accommodation required by 1,000; but the question of unification of administration would still remain undecided.
424. And you think that a very important factor in this proposal of yours? I think so. It is a matter upon which I cannot give much information myself.
425. If so many sick patients were housed in such a small space, would there be any fear of detriment to the health of the people outside? I cannot see that it is possible.
426. *Mr. Hassall.*] In reference to the estimate of cost of these proposed buildings, which I take it is a matter more nearly connected with your Department, is it absolutely necessary to erect buildings of such an elaborate character, costing large sums of money, in order to provide for the supervision of this proposed asylum;—take, for instance, £1,000 for a kitchen in the casual group? It is by no means elaborate. It is the plainest possible description of kitchen that could be built—just the four walls, roof, and floor. But it is the size of the building necessary for providing food for 544 patients that makes the cost appear large.
427. Does that item include all the necessary cooking utensils, or is it for the building alone? It is to provide for the kitchen and the laundry together, and will provide the necessary steam and cooking and washing apparatus. To some extent these are combined. The cost of the cooking apparatus itself in that particular kitchen is £265.
428. Leaving £735 for the building alone? Yes; and part of that is useful for the laundry.
429. But you allow £1,500 for the laundry as well? I allow £2,500 for the two, although they are stated separately.
430. With regard to the pavilions, some, in Group No. 2, are estimated at £1,400 each, and the pavilions in the casual group, No. 3, are put down at £800 each;—why should there be that difference? I propose in the case of the casual group to make the dormitories merely enclosed sheds, because the inmates, generally speaking, will comprise the lowest class of men accustomed to sleep in the open air. For these you require the most moderate accommodation possible. Therefore, in the casual group, we propose to build on that plan, and to have them more like ordinary farm-buildings than buildings of the character of an institution.
431. *Chairman.*] And are they to hold the same number? I have put them a little closer together. I have put sixty-eight instead of sixty. I give them 37 superficial feet per bed, instead of 44.
432. *Mr. Hassall.*] But you provide them with beds, and with the shelter of roof and walls, and so on? Oh, yes; but we only give them one front verandah, instead of a verandah all round. That makes a difference in the cost.

W. L.  
Vernon, Esq.  
6 Feb., 1896.

433. You do not think that style of building would be suitable for permanent inmates? No, it would not be sufficiently substantial. It would not be comfortable enough either. I understand that these casuals are constantly coming in and constantly going out, and the roughest description of accommodation, providing it is shelter from the weather, is really all they require.

434. Then, again, I see that you have a kitchen at a cost of £2,000, and a laundry at £2,500, making £4,500 for these purposes in the Isolation Group, No. 4;—is it necessary to go to such great expense? This kitchen and laundry provide for 800 inmates, instead of 544, and the kitchen is to include better appliances than in the case of the casuals, because the cooking is for invalids. I have calculated the cost of the kitchen—the cooking plant—at £480.

435. And you think that no lower sum than that would erect suitable buildings? I am afraid to put down any lower sum than that, because of the size of the place. There are so many rods of brickwork, and so many feet of flooring and roofing, that the estimate could not be reduced. Nothing is allowed for superfluous decoration or anything of that kind.

436. The nurses' quarters are to cost £2,000;—how many nurses will that provide quarters for? I understand about twelve; but I am not quite clear upon that point yet. I had to provide for from twelve to fourteen.

437. And for the matron's quarters and offices there is a sum of £2,000? That refers to the matron's quarters and the necessary offices in connection with the isolation group. There are also store-rooms, still-rooms, and a visitors'-room. It is a sort of administrative block really.

438. And what do you propose to do with the quarters at present occupied by the matron? We propose to retain those. She is the superintendent.

439. For the same purpose? I understand that the present superintendent is superintendent over the whole institution, and the matron is only matron of the isolation wards, and I should think she will have all her work to do to look after 800 patients there. You see they are sick patients, and are treated differently from the others.

440. Then, again, in Group No. 5 there is £3,000 put down for "kitchen, scullery, and stores," and £4,000 for a laundry; this makes altogether £14,000 for kitchens and laundries; do you not think these estimates are rather high? Not from my experience in connection with lunatic asylums. You are dealing with such an enormous scheme. The kitchen plant will cost at least £800. I went into the particulars very closely this morning. Then I have to provide boilers and laundry machinery and the big space required for washing clothes for 2,000 men.

441. In that particular group? It includes two groups—the hospital group and the general group.

442. You propose also to erect a residence for the medical superintendent at a cost of £2,000; that ought to build him a very nice house? Well, it would build a comfortable house. But it is to include all the outbuildings, the laying out of the grounds, fencing, and everything of that description. From my experience it is desirable to provide a medical superintendent at a place like this with comfortable quarters.

443. With regard to the pavilions, the total cost is estimated at £51,450, and the cost of the whole of the buildings is estimated at £108,350; therefore, the pavilions for the inmates are to cost only about half the total sum; the other half is to be swallowed up by buildings required for administration? That is not quite the case, because the cost of the pavilions at present at Rookwood should be added to the cost of the pavilions. It must be recollected that the administrative buildings you refer to are to be used in common for the existing institution as well as for the new one.

444. And have they not buildings at the present time used for these purposes? Yes. But they are not to be used for such. The dining-room you were in the other day will be used as a ward.

445. And these other buildings you propose to erect are in lieu of buildings now used for laundry purposes, dining-rooms, and so on? The present laundry will be used for farm purposes.

446. Do you not think that if this scheme is carried out, and the proposed expenditure incurred, the cost of the maintenance of paupers in this country will be something enormous? Not if you compare it with the cost in other places.

447. Have you any information upon that point? I cannot get very much, but I averaged the cost of five of the London workhouses, and they cost £46 per inmate.

448. Do you know how that item is made up? I have referred to a special work upon this class of building in which the cube contents of the buildings and the cost per foot are given. I have taken five good leading typical buildings, and I find the average cost is £46.

449. That is the cost for housing a pauper? Housing a pauper in London. He is housed there, and necessarily so, in very close quarters. There is not the same chance to keep paupers there by the pavilion system.

450. *Mr. Wright.*] And there is also a difference as regards the climate? Yes. This scheme is estimated to cost £40 13s. 5d. per inmate, as against £46 in London.

451. *Mr. Hassall.*] Have you any particulars of the cost per head in Victoria? No.

452. Or in any of the neighbouring colonies? No. I have particulars of the cost in the case of lunatic asylums and hospitals, but I have not been able to obtain the information in regard to institutions of this kind.

453. You could not get a fair estimate from the cost of patients in lunatic asylums and hospitals? This Committee recommended the construction of the Kenmore Asylum at a cost of £250 per bed; but we think we shall reduce that in the result to about £225, saving £25 per bed. Callan Park cost £308 per bed, Gladesville £108, and Parramatta £77. I admit that those establishments do not afford a fair comparison.

454. Because in the one case you are providing absolutely for paupers, and in the other case for people who are afflicted, and have to be kept under restraint? Yes.

455. How many paupers are there in the institutions in London where the average cost is £46 per inmate? According to the last returns, St. Luke's, in the City Road, had 1,251 inmates, St. George's Union 1,844, St. Olave's 377, and the Marylebone 744. These are poor infirmaries and unions.

456. And the average cost is £46? I would not say that they are necessarily the institutions I took, but I took five.

457. Then you do not think your estimate could be reduced without impairing the efficiency of the administration? Not if 3,300 inmates are to be provided for, and except I have favourable tenders—that is all I can hope for.

W. L.  
Vernon, Esq.  
6 Feb., 1896.

458. If the work were carried out by tender, do you think any material reduction would be made in the cost of these necessary buildings? I should hope a percentage would be saved; but I could not say how much.

459. *Mr. Black.*] In answer to a question by Mr. Fegan, I think you said that some difficulty would arise in housing the children at Randwick Asylum, if it were proposed to remove some of the paupers from other places into that institution;—do you not think it would be possible to house the children at present at Randwick, in the main building—in the building now used as a hospital. I mean the Catherine Hayes building. If the receiving house now in use at the back were used as a hospital, do you think the Catherine Hayes wing would be sufficiently capacious to accommodate the children now in the main building? No, not quite. The Catherine Hayes hospital carries eighty-five beds.

460. And how many children are there now in the institution? One hundred and forty-seven; and this makes no provision for a dining-room or a day-room, so that I am afraid you could not get them in.

461. Do you think that Rookwood is the best site available to the Government for such a scheme of grouping as you propose? So far as my knowledge goes it is the best site available.

462. How far is it from the nearest part of the city sewerage scheme? I would rather leave that question to Mr. Hickson, because I do not know where his sewers come to.

463. You think it is sufficiently elevated to be easily connected with city sewerage system? Oh, yes; the elevation is all right.

464. It is proposed to resume some land at Rookwood, if this scheme is carried out;—do you know the area? I was not aware of that.

465. I refer to the piece of land which you told me you thought Mr. Brunker proposed to resume? Two portions have been sold, and the proposal is to resume those. One of them has a house upon it.

466. You have no idea of the probable cost of the resumption? No.

467. Do you know anything of the sewage system that prevailed at Salford in England about thirty years ago? I must have forgotten.

468. If I remember rightly it is a system of desiccation. I think the sewage is dried by compression. The solid portion is sold in cubes for the purpose of manure. Those cubes are said to be without smell until broken up. The fluid which is filtered off, if I remember rightly, is said to be so absolutely pure and tasteless that it is the common drink of the visiting aldermen? I think that system is called the General Scott system. It was also adopted in a town in Middlesex; but gradually better systems have taken its place.

469. You propose, I believe, to destroy the solids at Rookwood by combustion? I do.

470. Is there any danger of the obnoxious gases that would be liberated by the consumption of the faecal matter falling when given ponderosity by contact with the upper air—when the wind is in that direction—into the waters of the Potts' Hill Reservoir? Not if the plant is so constructed that all the surplus heat and steam is carried again through the furnace; and in all properly-constructed crematories that is done.

471. You think, then, that if the plant is properly constructed it will be impossible for any noxious gases to escape? I do not see how such a thing would be possible with a properly-constructed crematory. The effluvia, or whatever is drawn off in the process of cremating, is burnt again in a properly-constructed crematory.

472. That would necessitate a double furnace, I suppose? No; there are double flues in the same furnace, and the gases pass through the fire again. It is used, really, as a draught to the furnace.

473. Under such circumstances there would be no unpleasant odors escaping—not through the chimney? There should not be. I do not think there would be.

474. That being so, I suppose even the smoke would be colourless? Yes; it is the case at Bathurst. We have no fault to find there.

475. I believe, from what has fallen from you previously, that one of the chief failures of the present system is the fact that the sick are not sufficiently isolated from the aged and delicate? That is one reason of the failure; and also not having sufficient cube space per bed.

476. You are aware that at Newington there is some proposal for isolating patients of the better class;—do you think that is advisable in a pauper system? I do not know of my own knowledge what the proposal is at Newington. We prepared plans some little time ago for a series of double-room cottages round a quadrangle, and the institution is carrying those out itself. What the precise object was I am not aware. We did not find either the money or the supervision.

477. Do you not think, if there is to be any classification of patients at all, that it would be better to classify them according to their behaviour, and not according to their origin or up-bringing? I should think that would be the best; but of course necessarily I am not versed in management.

478. Yesterday you were asked some question with regard to hospitalism;—do you not think that it is only the inner skin of a building that is likely to be saturated with the germs of disease; when I say the inner skin, I mean the plaster, the flooring, the doors, and the fittings generally? That is all.

479. If these were renewed at stated periods, there would be no necessity for the wholesale destruction of the building from any dread of the conveyance of disease? There would be no need at all, if the building were properly constructed in the first instance.

480. Do you know of any cheap system for the deodorisation of faecal matter by the use of chemicals;—is there not some German system by which they drench the faecal matter with chemicals, and render it odorless—kill all noxious properties? Yes; there is such a system in use now in the neighbourhood of Sydney, to some extent.

481. Is that an expensive process? No; and proof of that is given in the evidence I gave the other day. A firm is prepared now to treat this matter from the George-street Asylum Parramatta at a less cost than is now being paid for its removal. That, to my mind, is a proof that it can be done.

482. What would become of the matter so treated;—could it be used as manure? The proposal was to take it to Rookwood, and put it into the ground there.

483. Merely to bury it, not to use it for any purpose of improving the soil? They say it will fertilise the soil, but I am not quite so sanguine myself. It would lighten the character of the soil very much, and probably in that case you would get better pasture.

484. If it is still proposed to maintain, say, 1,000 patients at Liverpool, with some alterations there in the direction of increased hospital accommodation, which I think is possible, if I remember the site rightly, that would, of course, largely reduce the cost of your Rookwood scheme; it would possibly render it unnecessary

W. L.  
Vernon, Esq.  
6 Feb., 1896.

unnecessary to construct one group? That is so. It would save one group, and the administrative buildings would be proportionately smaller, or, in other words, they would be built in sections.

485. If the Committee were to make a proposal of that character, would you be prepared to recommend it? If the Committee gave up the idea of concentrating the whole, I think that would be the best proposal. But the inmates of Liverpool then should only be those who are able-bodied. I would remove all the sick. I would remove the isolated cases as well as the chronic sick.

486. How would it do then to retain the Liverpool Asylum as a refuge for casuals only? That would do very well.

487. That would render it unnecessary to go in for improved hospital accommodation at Liverpool? It would.

488. *Mr. Wright.*] I think, in answer to a question asked you some time ago, you said these plans had been hurriedly prepared? Not hurriedly; they were got up in a short time.

489. Were these plans prepared to meet the amount placed on the estimate, or was the estimate prepared to meet these plans? The sum voted by the House was voted months before I had any instructions at all.

490. Without any plans—before any plans were prepared? So far as I am aware.

491. So I take it these plans were prepared to meet the estimate? No; these plans were prepared to meet the requirements which I was instructed to provide for.

492. Yes; but to meet the estimate also? I was obliged to prepare these plans altogether independent of the estimate. I do not know what the estimate was based on; but I prepared them with a view to the greatest economy in every one of the buildings.

493. If plans are not prepared, is it competent for you or any architect to say what would be the actual cost? We can form a very close approximate idea of the cost of all our buildings before preparing any specifications.

494. You can cube them if you like, and make a rough estimate? That is one way of doing it.

495. But can you design the buildings, showing the elevation, and tell the cost of it with any degree of accuracy? Not the elevation only; the plans I could.

496. Plans and elevation, without any reference to the material or the finishing trades? Yes, we do it every day; we are obliged to do it.

497. But it is more or less guesswork, is it not? No, it is the result of experience. In this case I have six pavilions upon which I can base my further estimate. There the practice comes in.

498. You had the advantage of having built similar pavilions before, and these guided you in the present case? And our previous estimates of those were closely adhered to when the tenders came in.

499. So that, as a matter of fact, knowing the class of the buildings, as well as the finishing trades, you can form a pretty close estimate of the cost? Yes.

500. In view of the fact that the proposed asylum will contain a population of something over 3,000 old men, the bulk of whom are suffering more or less from diseases, some of which are of a most offensive kind, do you think it would be wise to treat any part of the refuse from that institution for irrigation purposes? Yes, I do. I think it is perfectly safe to treat the ordinary hospital sewage, and that from the general cases and the casual cases, in that way.

501. By that system you not only treat the urine of the patients, but also the slop waters as well as the water in which the bandages are washed and the sores are dressed? No; those are in connection with the isolated cases, and I would not treat those at all.

502. Only the general cases? That is all.

503. What do you propose to do with the fluid matter from the infectious or diseased cases? I propose to precipitate that, and I have marked the position for the crematory for these isolated wards.

504. What process of precipitation do you suggest? I have not gone into the details of the particular chemicals to be used. That is a matter which would hardly affect the scheme.

505. Are you aware that in Manchester very extensive works were constructed for precipitation at an enormous cost, and the undertaking was a total failure? No, I am not aware of that.

506. And that it was conducted by some of the ablest chemists of Europe? I am not personally aware.

507. You have no idea of the cost either of the work of combustion on the one hand, and precipitation on the other, or of utilising the fluids of one portion on the ground? Yes; I consider that the sum of £5,000 will cover the whole of the provision necessary.

508. That is an estimate? Yes.

509. And you still think that the ordinary sewage from the non-hospital portion of the building might with safety be used for the purpose of cultivating vegetables? I do.

510. I think you said that the kitchen appliances at Newington cost between £700 and £800? Yes.

511. That plant has sufficient capacity to cook for 900 people? Yes; that is the limit of its cooking power.

512. In a subsequent reply you said that the same estimate of cost would apply to a plant to cook for 3,000 at Rookwood? I do not think I said that. I said to-day that the cooking plant for Rookwood to cook for 2,000 would probably cost about £800. But I must explain that the cooking plant at Newington combines also a system of hot water and steam for baths and general purposes.

513. And a laundry also? Yes.

514. The cooking appliances at Newington, I understand, were made in the Colony? Yes, we are making others now for the gaols and the asylums. We are introducing all these cooking appliances.

515. I suppose they are of the most modern pattern obtainable? Yes, I have fitted up the very latest kind in Young Gaol, and it was finished about three weeks ago. It is the very latest improved cooking apparatus that is made, and it was made in the Colony.

516. You stated that the portions of the Randwick Asylum which you propose to utilise would accommodate over 500 patients? Yes.

517. Could you give the floor-space for which you provide the superficial feet? In the main asylum the floor-space varies from 50 feet to 47 feet per patient.

518. What do you consider should be the maximum space at Liverpool? The maximum accommodation for 900 patients would give 46 feet.

519. And at Parramatta? The accommodation there is 44 feet and 41 feet respectively in the two institutions.

- W. L. Vernon, Esq.  
6 Feb., 1896.
520. And what do you propose at Rookwood? I propose 44 feet, and 74 feet for the hospital cases.
521. Then, as a matter of fact, you propose less at Rookwood per patient for the non-sick than is now provided in the existing institutions? That is not so. The 44 feet at the Macquarie-street Asylum at Parramatta is necessarily an average over the whole of the inmates, including hospital cases as well as convalescent cases. But at Rookwood I have been able to separate the two, and I have provided 44 feet for the able-bodied and 74 feet for the hospital patients.
522. Referring again to Newington, can you tell the Committee what is the consumption of coal per annum at that institution? I do not know what is the annual consumption, but my officer who has charge of the cooking plant there tells me that since the erection of it the saving of coal has amounted to 115 tons per annum.
523. 115 tons per annum would alone seem to be a large consumption? Yes.
524. Having attained such a result at Newington, you expect of course to minimise the consumption of coal at other institutions? Yes. We can cook far cheaper under this new system and far better.
525. Following up the remarks of Mr. Hassall about the cost of these buildings, do you not think that £2,000 is a large sum of money to spend in the erection of quarters for the matron? It would be if the accommodation were for the matron only; but the matron's block includes other accommodation besides.
526. It was pointed out by Mr. Hassall that your estimate showed a total cost of £14,000 for kitchen and laundry appliances alone;—that seems a very large sum? It is; but the establishment is so large.
527. And I suppose it is possible that the estimate may be reduced? I hope it will work out in the same way as Kenmore is doing. There I am saving 20 per cent. on the estimate.
528. You said that possibly the heat used to cremate the solid matter at Rookwood would also be applied to produce electricity? What I meant was that it would be possible to combine the crematory with the electric lighting plant, and by that means to utilise all the waste and surplus heat from the crematory in the electric lighting plant.
529. For your electric lighting plant you have put down a sum of £3,000? Yes.
530. Do you propose to work that by an engine, or by water? By an engine. A powerful engine will be required, as it is a large installation.
531. Does not £3,000 seem a small estimate for supplying the electric light for the whole of the buildings including motors, dynamos, accumulators, and so forth? It looks small on the face of it; but it will not be necessary to light up the whole of the pavilions so that one may see to read in any position. As long as you give a general light through the pavilions it will be sufficient.
532. *Mr. Hoskins.*] Was it on your suggestion that the sewage and faecal matter in the Bathurst Gaol was disposed of by burning? No; it was not.
533. Have you yourself seen the way in which they dispose of the sewage at that gaol? Yes; frequently.
534. Is it burnt within the boundaries of the gaol wall, or at some distance from the gaol? Within the outer wall of the gaol.
535. Does not the smoke arising from the burning of that faecal matter smell disagreeably? No; we never had a complaint, and never detected a smell.
536. How far is the gaol building from the town? The gaol is, I suppose, three-quarters of a mile from the centre of the town; it is up on the heights.
537. There are not many houses built about the gaol? Not many.
538. And there are only about 350 prisoners there? That is the number.
539. In answer to Mr. Black you said that a number of towns in England had disposed of their sewage very readily; was that done by cremation or by means of sewage farms? By irrigation and sewage farms principally.
540. Are such farms considered a success in England? On the whole they are.
541. Is it not a fact that the smells arising from a sewage farm are very disagreeable? Not if the work is properly carried out.
542. Have not complaints frequently been made about the smell proceeding from sewage farms in different parts of England, say Croydon? Complaints have been made when the carriers have been allowed to surcharge themselves and become choked. I know of my own knowledge of cases when the carriers and the subsoil drains have become surcharged with solid matter on account of the non-absorbent character of the soil. But that has very often arisen from causes which can be removed, and have been. I know a case in Buckinghamshire at the present moment where Mr. Baldwin Latham, the engineer, has experienced that difficulty, and he has overcome it.
543. Then the satisfactory working of sewage farms, and their not becoming a nuisance to the neighbourhood, depends upon careful working and careful supervision? Yes.
544. And also primarily upon the nature of the soil over which the sewage is spread? Some soil is much better adapted for the purpose than other.
545. Have you ever been at the Botany sewage farm? Yes.
546. Have you ever smelt any disagreeable smells from that sewage farm? Not on the farm itself. I have in the outfall chamber, but not on the farm.
547. I suppose you will admit that it would be almost impossible to find a soil better adapted for absorbing sewage than that of the Botany sewage farm? It is capital soil—sand.
548. Therefore, per contra, the soil at Rookwood being non-absorbent clay it would be very difficult to deal with? It would not be nearly so good.
549. I think I may fairly assume that, in your opinion, the sewage from the proposed buildings at Rookwood must be disposed of either by the solid matter being burnt, or the fluid matter being taken by subsoil drains under the ground or otherwise by water carriage? Those are, in my opinion, the alternatives.
550. You have no idea what it would cost to convey the sewage of Rookwood to the nearest point of the Sydney sewerage system? I have not.
551. Did it never occur to you that if the sewage were conveyed by tunnel or pipes, and discharged into the Parramatta River, it would cause a nuisance there? Undoubtedly, if carried direct into the river, it would do so.
552. Seeing that according to your statement, in order to prevent the disposal of excreta and sewage from being a nuisance to the neighbourhood, everything depends upon its being carefully attended to, do you think that with a subsoil like that at Rookwood it would be safe to try the experiment? I think it would be safe so far as regards the slop waters. I am of opinion that the present system could be extended with perfect safety to any extent one liked,

553. You believe it would be perfectly safe to dispose of the excreta by burning? Yes.

554. Looking at the fact that there are only about 450 patients in the asylum at Rookwood now, and that the excreta is disposed of by being buried, I suppose you will admit that if that practice were persevered with, and there were 3,000 patients there, the ground would soon become poisoned, owing to the quantity of excreta that would be buried? To some extent. But considering that the acreage is so large, even under that system, if it were conducted under proper control, there need be no fear. But I think the other system is the safer one.

555. *Mr. Black.*] How long does it take buried sewage to undergo the process of conversion—say, with a clay subsoil? I think you can get evidence as to the actual time from the results at Rookwood, and that would be better than any opinion I might give.

556. *Mr. Hoskins.*] Supposing the Committee were to recommend that, say, 700 able-bodied paupers should still be kept at the Liverpool Asylum, and temporary arrangements were made at Randwick for accommodating 500 more, how long do you think it would take you to erect at Rookwood the necessary buildings to accommodate the patients remaining at Parramatta? That would be about 1,000. It could be done successively pavilion after pavilion, so that I think in a period of from nine to ten months we could get the whole done. With a special effort one might do it in a shorter time.

557. Seeing that you could not find accommodation for all the paupers under nine or ten months, and perhaps a year, and allowing for casualities, and having regard to the fact that the buildings at Parramatta are so ill-adapted for housing the helpless poor, do you not think it desirable that arrangements should be made at once by which the George-street Asylum should be relieved of the large number of patients who are now there? I think it would be desirable. In giving the opinion that it would take from nine to ten months to provide the whole accommodation, I would add that I could begin to give accommodation after the first three months, so that the men could go successively on to the ground as pavilion after pavilion was erected, the time taken to complete the whole being about ten months. In a case of emergency like the present, perhaps it could be done in a little less time.

FRIDAY, 7 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Joseph Aloysius Beattie, Esq., L.R.C.S.I., M.K.Q.C.P.I., Medical Superintendent, Liverpool Asylum, sworn, and examined:—

558. *Mr. Lee.*] You are Medical Superintendent at the Liverpool Asylum? Yes.

559. How long have you been in the service of the Colony? Since the beginning of 1878.

560. What positions have you occupied? First that of Medical Officer of Immigration, then in the Lunacy Department, subsequently in the Health Department, and now in the Charities Department.\*

561. How long have you been at Liverpool? Ten years next September.

562. Were you medical officer at any of the other charitable institutions prior to that date? No, not in the New South Wales Charities Department.

563. Have you served in a similar capacity in any other country? Yes; I was clinical registrar of a large public hospital in Ireland, and medical officer of a large institution there.

564. In the report of the Director of Government Asylums it is shown that at Liverpool on 1st January, 1894, there were 887 inmates, that the number admitted during that year was 868, the number discharged, 690; the number dying, 280; and the number remaining in the institution on the 31st December of that year, 785; according to these figures there were, at the close of the year, 102 inmates less than at the beginning of the year;—can you assign any special reason why that should be the case? Except possibly the transference of inmates to some other institutions. I know of no reason why there should be fewer applications; on the contrary, the number seems to grow larger and larger each year.

565. What do you consider to be the proper capacity of the Liverpool Asylum? I should say 800.

566. Could 800 be accommodated there without any serious overcrowding? Including the cancer wards—yes.

567. The report also shows that at Liverpool, in the same year, the deaths were 280, or an average of 32·90, while the deaths at George-street Asylum, Parramatta, containing a larger number of inmates, were 166, or a percentage of 15·79;—how do you account for the higher death-rate at Liverpool? By the difference in the class of cases. At Liverpool we have practically all the indigent consumptive cases in the Colony and the cancer cases.

568. I understand that after applications for admission to the asylum are dealt with the patients are classified and the chronic cases sent to Liverpool? Yes; chronic, sub-acute, and moribund cases of consumption, and pulmonary diseases—in fact, the worst cases are sent to Liverpool.

569. In other words, the hospital asylum of late years has dwindled to a large extent into a hospital for the incurables? I should say it has developed.

570. As much as for the relief of the indigent and infirm? Rather more so. It has changed its aspect. It may be considered as in a transition state—rather less of an asylum, and more of a hospital.

571. And a very large percentage of the inmates are sick persons? Yes, 50 per cent.

572. Do you find the cancer hospital overtaxed in regard to accommodation? We have ample accommodation for our cancer patients.

573. And with reference to the consumptive cases? The wards for the accommodation of consumptive patients are not in accordance with the most modern ideas of treatment.

574.

\* NOTE (on revision):—I have taken 6,000 immigrants from England to Sydney as senior medical officer of immigration. It was I initiated the substitution of steam vessels chartered from the Orient Company for the old sailing ships for the carriage of immigrants, with a marked decrease in our death-rate. I have had charge of the Quarantine Station. I have been boarding health officer, acting health officer, and first medical superintendent of Little Bay Hospital.

W. L. Vernon, Esq.

J. A. Beattie,  
Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.

- J. A. Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.
574. In what respect? Eight or nine years ago, I recommended to Sir Henry Parkes the advisableness of making a balcony all round those two large wards, which the members of the Committee saw on the occasion of their visit, and opening some of the windows and making doors of them, so that we could put the patients out on their bedsteads and enable them to get an airing and lie in the sun, out of the wards. That was promised, but it has never been done. Although the ventilation in the wards is adequate, still the patients who are just able to move about are not able to get up and down stairs with facility, and consequently they are restricted to the vitiated air of the wards.
575. The simple addition recommended by you would meet the case? It would mitigate the evil. But the wards were not built as hospital wards. We are merely utilising them for that purpose. If there were a space round about the wards, and they were on the ground floor, the patients could drag their feeble limbs about and sit on seats amongst the grass and flowers, and that kind of thing. Only a very few can do this now, and those who can get down stairs have to be carried up again frequently.
576. Large as the accommodation is for that class of patients, it still requires adding to for their proper treatment? We might so classify the patients as to accommodate the consumptive patients on the ground floor; but, even then, the wards are scarcely of a character that would be advised, according to the most modern principles, for the treatment of consumptive patients.
577. I suppose, as a rule, the consumptive patients never leave the institution? Not as a rule. Some have gone to the Thirlmere Hospital, the Carrington Hospital, and other similar institutions, and some have come back to die at Liverpool.
578. I should like to hear your views as to the policy of having some place where all the incurables could be dealt with solely, without being mixed up with other patients, as they are at Liverpool at the present time? The advantages of a more systematic arrangement and more complete classification of the patients, as well as a more efficient nursing staff, are so apparent that it is not necessary that I should dwell upon them.
579. Could you not suggest some means by which the incurables could be housed in one position? I think the scheme proposed for the removal of patients to Rookwood, so far as it affects the patients themselves, is a very admirable one. I am quite aware that there are objections, more practical than sentimental, to the adoption of that scheme—the proximity of the waterworks, for instance. I am not prepared, and it would be difficult if not impossible, to assign any scientific basis for the objection, with regard to vitiated air and so on. But it is a little more than a sentimental objection, it is rather a practical one, I think.
580. Rather a serious one? I would consider it an objection, as regards the selection of a site, to this extent, that if another site could be obtained for the treatment of consumptive cases their removal to such a site would be a judicious preference.
581. Do you visit Parramatta occasionally? I have been there—not lately. I have sometimes been at Rookwood and I have also been to Newington.
582. I suppose it has occurred to you that there is a large proportion of hospital patients at each of these asylums? Quite so.
583. Would it not be possible to have some place where the whole of these hospital patients could be dealt with, instead of having a series of hospitals, as is the case at present? Such a scheme as the present one would facilitate the executive work, and diminish the expenses in regard to many details. The carriage of provisions and medicines and other things would be much less, and I think the change would be altogether beneficial. It would be on parallel lines to such a place as Callan Park or Gladesville where large numbers of insane persons are maintained.
584. Are there any insane in your institution? From my experience in the Lunacy Department, I think we have very many cases of senile dementia which I could not distinguish from similar cases I have had under my care as medical officer in hospitals for the insane.
585. Would they be classed among the incurables? They certainly could not be cured.
586. You think they are fairly fit subjects for a lunatic asylum? Yes.
587. And for treatment such as is carried out at Callan Park? Yes, but of course that would involve a very considerable expenditure. The per capita cost for the maintenance of a lunatic is very much more than that of a pauper.
588. But apart from that I wish to draw a distinction between the ordinary indigent and infirm being treated at our asylums and incurables being treated there also. At present it is a mixed system. Could not the institution be relieved to a certain extent by the removal of incurable cases? I should think so.
589. And would you recommend that in future great care should be taken that only such cases as are really indigent should be admitted to these asylums? So far, we have not had any serious inconvenience from the presence of semi-demented cases in the asylum at Liverpool. During the nine and a half years of my medical superintendence we have had less than a dozen deaths from suicide. I have repeatedly sent cases to one of the asylums for the insane that have developed suicidal mania afterwards.
590. Would it not be possible to convert an asylum like that at Liverpool into an institution solely for the treatment of incurables, of whom there are so many at present in that asylum? Yes, I think it would be very feasible indeed.
591. By the removal of the healthy inmates? Quite so.
592. And convert the Liverpool Asylum into a home purely and simply for the treatment of these incurables? Yes.
593. It simply means that they go in there to stay until they die? I think I would suggest the removal of the consumptive cases for the reasons I have stated. They have not room round about for walking. The people of the town object to their presence in Liverpool;—so much so, that I had to prevent the admission of these patients into the little park in front of the asylum.
594. Where would you suggest they should be removed to? Perhaps the Government might subsidise such a place as the Goodlet Home, at Picton.
595. Do any of the consumptive patients leave your institution? Some have gone to the Goodlet Home, and some have come back from there.
596. Do they go at their own expense? I think the matron there makes some arrangement to defray the expense, and sometimes we defray the expense.
597. Have you any arrangement with the Goodlet Home, for the transfer of patients? No.

598. Do you know whether that institution would be willing to take any number of that class of patients? J. A. Beattie, Esq., L.R.C.S.I., M.K.Q.C.P.I.  
It would have to be very considerably enlarged;—it is on a very small scale at present.
599. You think then that the Liverpool Asylum would be suitable for the treatment of the class of patients you have just indicated? Yes; chronic cases, paralytic cases, chronic surgical cases, deformities, and all cases other than consumptive.
600. And cancer? No; I think we could accommodate the cancer patients.
601. As a rule, is not the class of people with whom you have to deal at Liverpool Asylum, the scum of the Colony? Certainly.
602. And do they not bring in every disease under heaven? Yes.
603. The nature of their lives outside would necessitate their herding in all the worst localities? Yes.
604. Supposing the Liverpool Asylum were devoted to the accommodation of patients such as you have enumerated, how many do you think it would accommodate? I should say 600.
605. That will be 200 less than the number you have there now? Afflicted patients require larger space than healthy patients. The number I have given would include cancer patients. A few people of the town object strongly to the presence of cancer patients. But this objection only arises from a prejudice, and an ignorant prejudice.
606. Is there any danger to the town from the presence of these cancer patients? Certainly not.
607. Do you think there would be any danger to the public if they were planked down within an easy distance of the water supply? No; I do not think so. I regard consumption as a more dangerous disease in that respect.
608. How many patients are there in the cancer ward? There were forty-two on the date of the last report, and we have accommodation for over 100.
609. How many consumptive patients are there? Over 100 at present; the average is from 100 to 120.
610. How long have the new wards been erected? One pavilion has been erected for about twelve months, and the other for nearly two years.
611. In dealing with the return of the Director of Government Asylums as to the number of inmates remaining at Liverpool, it is necessary, is it not, to take into account the number admitted during the course of the year? I presume so.
612. For instance, although Liverpool started the year with 887, and ended the year with 785, it admitted during the course of the year 868. So that as many inmates as those remaining at the close of the year passed through the institution during the year? Yes. We have also an average of about 100 inmates at an institution in connection with Liverpool about 2 miles distant, called the Glenfield Farm. This farm is rented by the Government, for the purpose of supplying the institution with milk, poultry, and eggs and of enabling the pigs to be removed from the vicinity of the Liverpool Hospital to a less objectionable place.
613. Is it proposed to continue this other institution or to close it? That I could not say. It supplies the inmates of the Liverpool Asylum and the Glenfield patients with milk, of which we use a very large quantity. It also supplies poultry, and of course the pigs are disposed of. It is practically a farm, and is very largely self supporting, being worked principally by the inmates.
614. In the event of the Liverpool Asylum being continued for the class of inmates to which reference has just been made, would it be necessary to maintain the present staff. I refer more particularly to the nurses and attendants? I think you should re-arrange the nursing department altogether—not have so many inmate wardsmen, who are male nurses practically, and introduce perhaps some women nurses into the institution. Our nursing at present is defective.
615. Would the cost of management be thus reduced or increased? Rather increased.
616. Would it be necessary to build any additional buildings or repair any of the existing ones? I think some slight alterations in the details of the buildings would be necessary. Nurses quarters would have to be erected.
617. Any outhouses, weather-sheds, or anything of that kind? Our shelter sheds are certainly insufficient for the present number of inmates. But for those who would be able to go about and avail themselves of outside walks and so on under the conditions you have indicated I think the sheds we have would be ample.
618. What is the system of drainage adopted at Liverpool? We use dry earth closets, and the sewage is regularly removed and buried at the back of the cancer ward. It is removed by the inmates, under the supervision of one of the attendants. It is buried near the bank of George's River.
619. In pits of what depth? From 4 feet to 6 feet.
620. Is it treated chemically before it is deposited there? No, it is simply covered in with earth. It is removed from the pans, and with it there is of course a percentage of chloride of lime and other disinfectant and deodorants in ordinary use in hospital wards.
621. And what eventually becomes of it. Is it removed from the pit? No, it remains there.
622. And that has been going on for many years? Yes.
623. How are the liquids disposed of? The liquids and solids are all emptied by a tip-cart into those pits every day.
624. And is that the only system of drainage? That is the only system. In regard to the spittle of the consumptive patients, we treat that with a solution of bi-chloride of mercury. That also goes in with the others.
625. I presume that would be taken from the vessels in the wards? Yes.
626. How do you dispose of the sewage from the cancer wards? In the same way.
627. Have you any suggestion to make with reference to a more complete treatment of the sewage? The present plan, of course, represents a very elementary method of dealing with sewage, and especially hospital sewage. I suppose the most modern method would be by burning.
628. If the institution were maintained, do you think it would be necessary to adopt some other system of dealing with the sewage? No, not in the absence of consumptive cases. Those are the cases that I dread.
629. Do you think that the depositing of the excreta in pits in a position adjacent to the asylum has contributed to the high death rate? Certainly not. I think the presence of the grave-yard on the other side of the town is just as objectionable.
630. Have you had any cases of typhoid? Not in the asylum.
631. It appears somewhat remarkable that in an institution through which so many patients have been passed since the year 1890 there has not been a single death from typhoid. How do you avoid the disease? The age of the patients of course minimises the danger of typhoid infection. It is almost exclusively a disease

7 Feb., 1896.

- J. A. Beattie, disease of youth or early life. Then I suppose the general cleanliness of the institution and the tolerable sanitary arrangements have something to do with it.
- Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.
632. Where do you get your water supply? Until the last two years principally from an underground tank inside the front centre gate, and from the roofs of all the buildings. The drinking water is now chiefly obtained from this source. For lavatory and culinary purposes we obtained water from the railway tank. There was a pump above the dam by means of which tolerably pure water was obtained from George's River. We have now a good supply from the Nepean source.
633. *Mr. Davies.*] The water that is supplied to the city of Sydney is also supplied to Liverpool? Yes, I believe it is the same water.
634. *Mr. Lee.*] Is this water available all through the building? Yes.
635. And through the upper storeys? Yes.
636. Is there any hydrant or other service in case of fire? Yes, we are provided with those. I regularly have exercises amongst the inmates, under the attendants, in case of fire.
637. And is the pressure of water sufficient to cover the roof? Yes, that has been tested I believe.
638. In what state of repair are the main buildings? A very fair state of repair. Some of the floors of the older buildings are a bit shaky, but I do not know to what it is attributable.
639. And with regard to the additions or the wings? They are in tolerable repair.
640. Is the building dry throughout? Yes.
641. I gather that the only objection you have is that the institution being so largely used for consumptive patients the bed space or air space is insufficient? That is the principal objection.
642. In every other respect you think it answers the purpose very well? It is quite on a par with the county hospitals in England—the county hospitals for general cases.
643. Is not the accommodation there now much superior to what it was ten years ago? Very much indeed.
644. I suppose in arranging your patients you place the stronger ones in the upper storeys? Yes; the epileptics and cripples and very aged inmates are placed in the lower storey.
645. As far as possible you keep your hospital patients on the lower floors? Yes.
646. If there was a serious outbreak of fire at night what possibility of escape would there be for the inmates? I think the means of egress would be tolerably good.
647. Would the patients in the upper storeys be able to get down themselves? Yes: there might be one or two exceptions, but I do not think there is very much danger from fire. During the ten years I have been there, there has not been the slightest danger. The cancer wards and the long room are, however, built of wood, the former being detached from the main building and an old structure.
648. There is a large number of very old inmates in the block? Yes.
649. That is somewhat a danger, is it not? Well, of course, a stupid old man lighting his pipe might do some damage. The present Director of Asylums has altered the conditions altogether and improved them in various ways. He has appointed a night watchman who has to go round each ward and at every hour of the night touch a tell-tale clock.
650. At the present time the institution I understand is taxed to its full capacity for accommodation? It is overtaxed.
651. You would not have room for three hundred more? Oh no.
652. What is the custom in other countries with regard to the treatment of pauper patients? In this Colony we are very much more liberal in our allowance of food. We give the paupers a more generous dietary scale, and a more liberal allowance all round. The conditions of life in an institution such as the Liverpool Asylum are very much less irksome than they are in a parish poor-house in the old country.
653. Does the same system prevail in other countries of admitting almost every applicant and permitting inmates to leave whenever they like? Yes, I think so. The methods of application may be different. I think in England, an applicant must obtain an order from a clergyman in the parish, a magistrate, or some other influential person.
654. In other institutions with which you have been connected, are the patients permitted to leave whenever they desire? No, they have to go through a certain form. I think there is a greater delay in that respect than is the case here. They are more readily admitted and discharged in this Colony than is the case in similar institutions at home.
655. Have you found that any of the discharged inmates have returned to Liverpool for re-admission? Yes, they have done so frequently. One of the evils of the present system is that if a man is insubordinate, or renders himself objectionable by peccation, drunkenness, or the use of abusive or vile language, and he is discharged from the institution, he can change his name and be admitted to another one. For instance, he may be discharged from Parramatta and admitted into Liverpool.
656. If he were discharged from Liverpool and applied to be admitted at Parramatta, without changing his name, would he be admitted there? No, the ordinary channel of admission is the officer in Cleveland-street, but practically we are at the mercy of such inmates in the matter of admission.
657. What is the ordinary method of gaining admission? A man is unable to get employment; he has bronchitis, is 70 years of age, and unable to procure food, and would be taken up by the police if he were found begging. Perhaps this man has slept for a fortnight in the Domain. A policeman tells him to go to the Government office at Cleveland-street, or to the Government Medical Officer. He presents himself there, and his name, religion, nationality, occupation, and social condition are entered in a book. He is then sent by an official in Cleveland-street to one of the asylums for indigent and destitute persons. I cannot exactly say what reason guides the official in selecting the particular institution, unless it may be that one may be less crowded than the others, or may require the services of the particular trade to which the man may belong.
658. When he reaches the asylum what takes place? If he comes to Liverpool I examine him to see if he requires the ordinary house diet, or if he wants medical comforts; and if he is ill I see what medicines are suitable to his case. He is either a hospital case, or he is an inmate. If he is an inmate I ascertain whether he is able to do any work, and, if he is, I put him into one of the wards to clean up, or be employed in some domestic duty, or in the garden. If he is a hospital case I give him special diet and the requisite medicines.
659. When he presents himself from Cleveland-street, have you the power to admit or reject him? If he were an objectionable character, or if he came in a state of drunkenness or smashed the windows, as one man did—he broke every pane of glass in my windows—I should not admit him.

J. A.  
Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.

660. Practically on presentation of the order from Cleveland-street, and after the necessary medical examination, you admit such applicants? Yes.
661. All you have to do as medical superintendent is to see that the man is not bringing in some disease, and you classify him accordingly? Quite so. I have also to ascertain his mental condition. Then there are cases where a man would come to the asylum who had been found travelling along the road with a rupture or stricture, or some disability of that kind. It would be an act of cruelty to send such a man down to Sydney to get an order, and I take the responsibility of admitting such a case myself.
662. Have you, during your term of office, found many cases of loafing where men would make a convenience of the institution for a month or two? Yes. We have some of the most objectionable class of ruffians of the kind. They have come out of gaol and been too clever to find their way back there again.
663. I presume this class of men are not necessarily over 70 years of age? We have some old terrors even at that age.
664. Have you not many under that age? Yes.
665. I suppose the question of age does not guide you altogether in deciding applications for admission? No.
666. These people are then at liberty to leave the institution at any time they think proper? I do not know what may be the practice in the other asylums, but at Liverpool when a man says "I am going out" he is detained until I ascertain what are his motives for leaving.
667. As a matter of fact you have had many applications for re-admission, and the men have been again taken in? Yes.
668. Can you suggest any means by which undesirable applicants could be dealt with and refused re-admission? I think that where a man has been admitted and re-admitted several times, and has proved of a recalcitrant character, the hands of the medical superintendent or local head of the institution ought to be strengthened in the direction of compelling him to work.
669. Do you ever find any of the old men leave for a week or two and have a gentle spree and then come back again? Yes.
670. Considering the large number of paupers compared with our limited population, can you suggest any means by which the number admitted to these institutions might be limited? I think ships coming into the harbour sometimes bring cases that are only fit for hospital treatment. I have several cases under treatment now—consumptive sailors—Norwegians and others. The native born who seek hospital treatment in the asylum bear a very small proportion to the total number of patients.
671. Have you reason to suppose that we are housing more than our fair proportion of paupers? Yes. It seems an anomaly that people from Ireland, Scotland, England, Sweden, Germany, or any other European country should come out here to be a tax upon the Government.
672. Have you any reason to suppose that any proportion of the population of the adjoining colonies come here for admission to these asylums? Yes; we have people that have drifted in here from Victoria, Queensland, South Australia, Tasmania, and New Zealand. I have cases in my mind from all those places.
673. Leaving out of view merely casual cases, do you think there is any concerted action on the part of the people of the other colonies to send their relatives here to be taken care of? If the conditions of eleemosynary existence are less irksome here than in other colonies it is only human nature that people will get rid of the weaklings and send them here.
674. Is there any better system of housing the indigent in any of the other colonies than we have here? I am not in a position to say.
675. Have you noted any large number of colonists from Victoria, or any other of the colonies, as applicants for admission? No, not a very large number.
676. As a medical superintendent of large experience and many years standing, must it not have occurred to you that there is some outside reason for the enormous number of applications for admission to benevolent institutions in this Colony? Yes.
677. How do you account for it? One fact is the comparatively wandering life of many of the poorer classes here. They go from mining centre to mining centre—they never settle down anywhere—they have no home as it were. And then the conditions of depression have been so marked within the last few years that the number of applications would naturally be increased on that account.
678. I presume if an applicant said he was from any of the adjoining colonies that would not be a bar to his entering the asylum? I do not think so. The Director of Asylums has initiated a system of inquiry from reputable people as to the correctness of the statements made personally by every applicant for admission. For instance, if a man says he comes from Victoria, and his father was a squatter or a large grocer, the Department makes inquiries at the place mentioned as to whether or not the relations of the applicant are able to pay, and, if so, how much they are able to pay. These inquiries are probably made through the police.
679. And do any of them pay? Yes.
680. Many? I must refer you to the Secretary of the Department for that information.
681. Do you happen to know whether there are in your asylum any inmates whose relatives are in a position to contribute towards their support? Yes; that is the case.
682. Do you consider it would be wise in the interest of our institutions to legislate for the protection of the really indigent, and for compelling relatives to pay towards the support of inmates, and also to prohibit the landing of pauper patients in the Colony? Yes; I have held that opinion for a considerable time.
683. *Mr. Hassall.*] Do you not think a material saving would be effected if all the chronic cases now in the various institutions were concentrated in one particular place? I should say, obviously so.
684. And, in addition, to have a convalescent hospital attached, where patients who were on the road to recovery might be further treated, and be able then to pass out of the institution altogether? Quite so.
685. You think that would be beneficial, and be a great saving in the cost of administration? I am quite satisfied of that.
686. In an institution like Liverpool Asylum, where there are about 900 inmates, the majority of whom, as most bushmen do, carry swags, do you not think it would be advisable to have a disinfecting room erected in which these swags could be fumigated, so as to prevent the introduction of contagious diseases? Quite so. I have upon many occasions suggested this.

J. A.  
Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.

687. You think that in the interests of public health such a thing is absolutely necessary? Yes; and obviously for purposes of personal cleanliness.
688. Do you think it would be advisable to concentrate the whole of these patients at a place like Rookwood, so close to the water supply of the city of Sydney, on the ground of public health? Certainly not on the ground of public sentiment.
689. Or on the ground of public health? Well, I think it would be difficult to establish a scientific base of objection with any degree of certainty; but as a matter of sentiment such a proposal is repugnant, and I can only answer generally, that if it were a question between two sites, the one more remote from a water supply would be the more desirable.
690. Would Liverpool, in your opinion, be a good site on which to concentrate these chronic cases? I do not see any objection to Liverpool at all for such cases referred to by Mr. Leo.
691. At Liverpool you get your water supply from the Nepean River? Yes.
692. You are not dependent on George's River? No.
693. Does the drainage from the asylum go into the river? Yes, partly.
694. And is partly dealt with on the surface, I suppose? Yes; the fluid excreta, I should say, percolates through the earth towards the river, and that is one of the most perfect conditions of drainage. The asylum drainage goes into the river below the dam, and up to the dam there is a tidal stream.
695. In an institution of the kind at Liverpool the sewage could be suitably discharged into the tidal waters of the river, and no additional expense would be required in disposing of the sewage? That is my opinion.
696. There is no danger of polluting the water supply above the dam? No.
697. The drainage from the town and the drainage from the hospital both go into the river below the dam? Yes.
698. There is thus no danger to the population of Liverpool in regard to the water supply from the river? Certainly not.
699. In the event of steps being taken to concentrate the class of cases referred to at the Liverpool Asylum you would recommend that certain additions be made to the hospital ward in the shape of balconies and verandahs? Yes; I believe we can get land round about, and we want a little more space for walks and gardens and that kind of thing.
700. Additional breathing space? Quite so. There is a strong feeling against the presence of the hospital in the town on the part of a few of the Liverpool aldermen.
701. You think that land might be acquired at a reasonable cost to give you sufficient space so as to enable the inmates of the institution to breathe fresh air when opportunity offers? Quite so.
702. It would not be necessary to go beyond the limits of the institution, or to interfere with the town? No; we should go towards the river.
703. Would that additional accommodation enable you to increase the number of your patients? Yes. I have said that there is accommodation for about 600 ordinary hospital cases, exclusive of consumptive cases. There is space for the erection of pavilions in the paddocks attached to the institutions. There is a paddock there where the old fellows sit down in the intervals between meals, and it is capable of extension on two sides.
704. Crown lands adjoining? Yes, and other unused land to the extent of, say, 30 acres, which might be bought at the price for which it was sold by the Government.
705. So that you have ample space there for the erection of one or two additional pavilions if the number of patients were increased? Yes; there would be space for four pavilions.
706. I think you said that every precaution was taken to ascertain whether the relatives of patients were in a position to contribute towards their support? Yes.
707. Are you in a position to state whether this liability on the part of relatives is evaded? Yes, it is attempted to be evaded. I admitted a man on Wednesday last who came under the name of Beresford, and that was his sixth alias; he had five other names.
708. Did you find out whom his relatives were? He is a chronic old loafer.
709. I presume you have a good percentage of these men? Yes, a large percentage.
710. In your experience you know for a fact that many people apply for admission to the institution whose relatives are in a position to support them? Yes, many. As an illustration, I may say that there is at present very keen competition among the undertakers in Liverpool. When I went to Liverpool there was only one undertaker, who was employed at intervals, and now there are four. These persons have got into the habit of making inquiries surreptitiously from the wardsmen, and in any way they can, in reference to the relatives of inmates who are about to die. Acting on the weakness of these people a letter is sent somewhat to this effect: "Surely you would not like your brother to be buried as a pauper." The result is that money is forwarded, and the defunct pauper has a grand burial, sometimes as much as £10 or £15 being paid, and there is a most imposing funeral ceremony. Last Sunday fortnight a man was buried with military honors.
711. This goes conclusively to show that there are men taking advantage of the privileges of the institution who have a better claim upon their relatives? Yes. At the same time, I may repeat that the Department, as arranged by Mr. Maxted, take every precaution to find out the social position of the relatives with a view to making them contribute.
712. Can you give us any idea how many additional pavilions would be required if all the chronic cases were concentrated at Liverpool--I mean the bed-ridden cases, those who would never go out of the institution? I do not know the exact number in the other asylums. We should also have to make allowance for the increase of population.
713. Have you a sufficient staff in the institution to deal with violent and unruly inmates? Yes; we are able, if necessary, to expel them.
714. *Mr. Fegan.*] Does it not seem rather a contradiction that with so many bad characters in the institution, as would appear from your evidence, up to the present time you have had no trouble whatever with them? We have had trouble. For instance, as I told you, one man smashed all my windows. My house was burnt down, and I believe this was done by two men whom I put out for being drunk, although I have no proof of that.
715. During the ten years you have been at Liverpool, I believe you have had no cases before the Police Court? Yes, I have.
716. How many? About a dozen.
717. And on an average you have had 700 or 800 people there? Yes.

J. A.  
Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.

7 Feb., 1896.

718. Considering that these men come from the most depraved and the lowest stratum of society, do you not think that fact speaks well for their conduct? Yes; as a general rule, I think so.
719. In the unions in Ireland, with which you are well acquainted, I suppose a greater number of cases of breach of discipline occur? I think so.
720. Even under the strict rule of the Board of Guardians? As a general rule, the conduct of the inmates at Liverpool is exceptionally good.
721. Creditable considering the class of society to which the men belong? We have some malingerers and some mischief-making people who are constantly writing and fault-finding and inciting others to insubordination. The recent committees of inquiry and so forth, which have placed a premium upon the information of such worthless characters as these, have done a good deal of damage in this direction.
722. It is not the only class of society where the same thing is observed? No; but we meet a very vicious class of individuals in these asylums, floating from one to the other, capable of any rascality.
723. A class you would really expect to find, I suppose, from the bitterness of their lives? Yes, and more especially from their own innate perversity.
724. Caused by their surroundings I suppose? Well there are some of them of whom it might be said they have not one good element in their character.
725. But those are very few I suppose? They are very few.
726. You would not say that of the institution as a rule? No; among the inmates are many most respectable and well-conducted people. I have seen some amongst them who were gentlemen in every way, including lawyers, doctors, and clergymen.
727. And some of the poorest who have not been educated to that extent? Yes; many are most amiable, and lead good, Christian lives.
728. And, therefore, some consideration should be given to these persons in their old age when they need assistance? Every consideration, of course.
729. Have you an assistant at the asylum? I have a dispenser.
730. And you have to look after these asylums at Glenfield and Liverpool, as well as the cancer room without any medical assistance? Except a dispenser.
731. The dispenser does not deal with patients? No; he merely mixes the medicines. I have to sign certificates for everything.
732. Therefore, as far as that is concerned, whether at Rookwood or elsewhere, the work could not be done cheaper than at present? I do not think so.
733. Do you not feel, sometimes, when you have so many cases to deal with, that you could do with an assistant? Yes.
734. In answer to Mr. Lee you said that the nursing at the institution was not as good as it ought to be, and that although it might be a little more costly the work would be more efficiently done if you had more nurses? Yes.
735. That is really necessary for the comfort of the patients? Yes, absolutely necessary if the consumptive patients are to be retained at the institution.
736. Do you know the system in vogue in England and Ireland in regard to the admission of patients? I believe an application has to be made to the relieving officer, backed up by a testimonial or recommendation from a clergyman or magistrate or some other person. As far as I remember, in the South Dublin Union, the practice was, for the applicant to be first placed in the casual ward, where he had a bath and his physical requirements were attended to. After a period of probation he is brought before the Master or the Board of Guardians.
737. Who can refuse him admission? Certainly.
738. But you think our system is better and more humane? I think so.
739. Have you ever made any representations to the authorities that your space or accommodation is not sufficient? Yes, repeatedly.
740. Dealing with the question of convenience or efficiency, you would not under any circumstance recommend a consumptive ward or pavilion to be erected either at Liverpool or at Rookwood? I would not go quite that length. I would not recommend it at Liverpool at all. With regard to Rookwood I suppose there would be a difference of opinion amongst doctors. I thought I had made myself understood in reference to that.
741. You said there would be a danger by reason of the reservoir being so close to the institution at Rookwood? I think it would be considered hazardous by a number of people.
742. And by yourself I suppose? Well, I think in view of the possible increase of hospital accommodation necessary there, the proximity of the reservoir would be an objection.
743. Therefore as a medical man you could not recommend such a building to be erected at Rookwood? I think a more eligible site might perhaps be obtained.
744. You would only build there if you were unable to obtain a more suitable place? Quite so.
745. Only for that reason? That is my opinion.
746. But if a more suitable place could be got with a little expense, you would be entirely in favour of that? The possibility of pollution of the water would be entirely through the medium of either the earth or the air. I believe the altitude of the dam at Potts' Hill makes the former impossible. There is another little matter that comes into my mind. I had three cases of suicide by drowning in the Liverpool Asylum. We shall always have an occasional suicide in these institutions. I have had three, and there have been a good many more at Parramatta. If one or two of these cases occurred at the dam—if that is possible, I do not know whether it is possible or not—it certainly would be an objection.
747. There would also be the danger of microbes getting into the water in the dam? As I said before, it would be difficult to prove scientifically that there is really a danger in that respect. But there is a very widespread sentiment on the subject, and there is a natural repugnance to the idea. I can only go the length I have gone and say that if a more eligible site is obtainable I think it ought to be selected.
748. Do you think there is any danger from the burying of solid excreta? No, I think it can be treated chemically so as to realise the minimum of danger. I do not apprehend any danger.
749. I suppose you have given the matter a great deal of consideration? In a general way—not in reference to Rookwood. Clay soil is the worst soil for that purpose, and I believe it is clay soil at Rookwood.
750. And would there be danger in the case of clay soil? I do not think so, under conditions of safe-guard.

- J. A. Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.  
7 Feb., 1896.
751. Therefore, as far as that phase of the matter is concerned, there is not so much danger as some people think? No.
752. I suppose in dealing with these people with various diseases you would prefer a building on the pavilion plan, instead of a building of one or two storeys? Yes, I think the pavilion is more generally approved by the latest medical authorities.
753. I suppose you know it is proposed to build pavilions at Rookwood instead of buildings of one or two storeys? Yes.
754. Therefore, that proposal has your approval? Yes.
755. The pavilion style of building is much more convenient? It is much more convenient, and is easier of egress in case of emergency, and it involves the least physical exertion on the part of debilitated inmates.
756. And after the first cost it is less expensive? Yes.
757. Do you know that it is proposed to build hollow walls for the pavilion? I think that a very great improvement.
758. In nearly all the hospitals built in England, or anywhere else where science is supposed to have made anything like rapid strides, they pursue that course? Yes.
759. It provides against dampness and is better for ventilation? Quite so, and produces a more even temperature inside.
760. Reference was made yesterday to the question of the absorption of poisons by hospital buildings—will you give us your opinion with regard to that? The incaustic tiles proposed to be used are now usually adopted in the erection of buildings of this kind. I saw them in the London hospitals four or five years ago.
761. Is it correct, as pointed out by Mr. Vernon in his evidence, that without some such preventive hospital buildings are liable to absorb the germs of disease? Yes; medical analysts have scraped the lining of the walls of hospitals, and have found there different varieties of these spores.
762. *Mr. Black.*] I gather from something you said with regard to the management of these asylums that a little more power should be given to the superintendent? I meant the Department generally with regard to the exclusion of objectionable characters.
763. Have you any heating appliances at Liverpool for warming the buildings in cold weather? We have large open grates.
764. You find those sufficient? Yes; they are better than steam, as they cause a draught.
765. With regard to patients who have well-to-do friends outside, I believe you have in Liverpool the brother of a manager of a city bank? Yes.
766. Has that gentleman been applied to? That is a matter as to which the Secretary would be able to speak.
767. Still I suppose you report in these cases? Yes. On the occasion of the visit of the Director or Secretary or any other of the officials, I mention anything in reference to any particular inmate or patient that seems to me worthy of notice.
768. I gather from what you said to Mr. Fegan that you think the use of incaustic tiles in hospitals is an advantage? Yes.
769. It would do away with the necessity for the continual renewal of the inner skin of the hospital? Yes, of the walls.
770. Except, perhaps, so far as the floor is concerned? Yes.
771. I suppose the spores are likely to get into the floors? Yes; but we wash our floors with chloride of lime in solution of boiling water.
772. Do you think that destroys the spores? Yes, practically.
773. What is your opinion of the system of destroying excreta by combustion? I think, after direct removal, it is the best. It is the best of all destructive processes.
774. You think removal by water carriage is preferable? Yes, where practicable.
775. Do you think there is no danger of contamination of the water supply at Rookwood by the liberation of noxious gases, or the falling of soot from the chimney? The air which in the summer time, I believe, blows from the asylum towards the reservoir, would take up a certain proportion of dust of all kinds, and the most dangerous dust that could be taken up and borne anywhere would be the desiccated sputum of consumptive patients—dried and pulverised spittle.
776. *Mr. Hoskins.*] I suppose you know that the adjacent reservoir is uncovered? I should suppose so.
777. *Mr. Black.*] You think that independently altogether of the combustion system there is always danger of the water supply being sullied by the presence of sick people in large numbers in close proximity? I think it is an objectionable condition of affairs if it can be obviated. As to the exact degree of danger I am not prepared to speak.
778. If it were considered inadvisable to have cancerous, consumptive, or ophthalmic patients at Rookwood, do you think the presence of large bodies of fairly healthy paupers would be objectionable? I do not think so—less objectionable than the indiscriminate, motley collection of a rural town.
779. It would not be more objectionable than an extension of the town of Rookwood on the other side? No; probably not so objectionable, because there would be supervision of the sanitary surroundings.
780. Then if Rookwood were reserved merely for the reception and maintenance of the indigent and infirm poor, you think that, so far as the water supply is concerned, there would be no great objection to it? That is exactly my opinion.
781. Do you not think your hands would be very much strengthened if some legislation were passed for the purpose of preventing the admission of people sent here from the other colonies, as Mr. Lee hints, in some cases, with the knowledge of the pauper authorities in the other colonies, and which would also compel well-to-do people to support their pauper relatives;—do you not think legislation of that character is urgently required? Yes. I remember the Inspector-General of the Insane reading a paper before the Royal Society on that subject with a view to the introduction of some measure of prohibition against undesirable people who are simply deposited upon our shores to be maintained at the expense of the Government.
782. *Mr. Hoskins.*] I suppose you are aware that in America a law prevails by which persons not being able to obtain employment and maintain themselves, can be sent back to the country from which they came? Yes.

783. In the event of its being determined to clear out the asylums at Parramatta, and make other arrangements, do you not think that the asylum at Liverpool would suffice for the satisfactory housing, as regards healthy inmates, of a fair and reasonable proportion of the indigent poor of the Colony—I refer to the indigent poor generally? Yes. It would be desirable to separate the hospital cases from the others, and to have a hospital, pure and simple, and an asylum, pure and simple. The objection to the institution of which I have charge is that at present it is half and half.

J. A.  
Beattie, Esq.,  
L.R.C.S.I.,  
M.K.Q.C.P.I.

7 Feb., 1896.

784. *Mr. Humphery.*] Were you in charge when the most recent addition to the building at Liverpool was erected? I was in charge during the erection of the cancer wards, but not during the erection of the brick building.

785. The most recently erected brick building, I think, is of two storeys, with a ground floor and one floor above? Yes.

786. As far as you are able to express an opinion from long experience of Liverpool, do you think that that building is suitable, both in regard to economy of administration and convenience, for the purpose to which it is now applied? I do not think it is as suitable as the pavilions proposed to be erected at Rookwood. For instance, there are stairs, and it is difficult for these old fellows to get up-stairs, and it would be difficult for them to get down-stairs in case of fire. Although I believe there would be ample time for them to get out, still I think, considering the difficulty which old people with stiffened joints, gouty legs, defective sight, and so on, would experience in mounting the stairs—supposing, for instance, they had to go out to the closet at night—a pavilion with one floor would be better.

787. How many inmates are there in the most recently erected building? I should say there are 200 or 300.

788. Is that too many in your opinion? We are generally overcrowded, and especially in the hospital division.

789. For the purpose of supervision, would it be more convenient to have 200 inmates in one building than to have them spread over four pavilions? I think for the purposes of administration, and for the comfort of the inmates, the one-storey pavilion is the more desirable.

790. I am not speaking with regard to the first cost, but as to convenience and economy of administration? I do not think the difference in that respect is at all appreciable.

791. Would you not require a larger number of nurses for the one-storey building? You would not require nurses at all if there were inmates. I do not think that the difference in the expense of administration, as between a double-storey building and a number of pavilions within a reasonable distance of each other, is appreciable.

792. Could the accommodation at Liverpool be increased? Yes.

793. Having regard to the area of land attached to the institution? Yes; it is capable of extension.

794. To the extent of how many acres of land? I am not in a position to tell you the acreage. We have not many acres. That is the one objection to Liverpool—that it is so near the town, and there is so little land round about it. There is, nevertheless, quite enough space for the erection of two or three hospital buildings—I think I said up to four—because, of course, these people do not take a long range in their walking.

795. What is the maximum number of inmates that you think could be suitably provided for at Liverpool, having regard to the additional buildings which you think might be erected there? I should think you could provide for miscellaneous hospital cases up to 600.

796. Mixed patients? Ordinary cases.

797. Such cases as you could not deal with at the present time? At present we have no proper classification, and patients with different diseases are huddled together. I have no doubt that ordinary cases—that is, excluding consumptive cases, and including cancer cases—could be treated in the present buildings with whatever additions were considered necessary up to 600.

798. How would you propose to treat the consumptive cases, which I observe are very numerous, and also the cancer cases? The consumptive cases are very numerous, and should be treated specially in a separate hospital replete with every modern appliance. Cancer patients are not objectionable. They are objectionable, of course, but they can be treated there, because, as a rule, they only come in to die.

799. *Chairman.*] It is laid down by medical authorities that the danger of infection from smallpox exists for a distance of 1,500 yards;—I suppose you think we might reasonably believe that to be the case? Yes.

800. That being so, and as the Potts' Hill Reservoir is situated within a quarter of a mile of the site of the proposed hospitals, there is a possibility of the water becoming contaminated? I think the possibility is very remote; but there is a prejudice, with more or less ground for it. I think it would be a very difficult matter for medical experts to prove. Going through the Red Sea, you will often notice, if you are sitting on the quarter-deck any length of time, that there is a deposit of sand on your clothes, and even on your face, so that it is evident that particles of dust are carried in the air. With regard to Glenfield, although the situation is more bucolic and more in the country, surrounded by trees, I would not allow a consumptive patient to go there, as I should be afraid that his spittle on the grass might give consumption to the cows.

801. *Mr. Black.*] It struck me from time to time, when you were speaking, that you thought that, although medical science did not at the present time perhaps sufficiently understand how infection is conveyed, yet, it was within the bounds of possibility that discoveries might be so extended in the future that, after having established such a hospital at Rookwood, we might find out that we were in reality contaminating our water supply? That is exactly what I meant.

802. *Chairman.*] Your evidence in regard to the pollution of the water, put in general terms, is "better not"? That expresses my opinion.

803. *Mr. Humphery.*] In your view, then, it would be undesirable to concentrate as many patients as proposed in close proximity to the water supply—mixed patients? I do not think there is any objection to that. I think it is probable that the conditions of life in an institution of that kind would be less detrimental than the conditions of an ordinary township.

TUESDAY, 11 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq., (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood, for Infirm and Destitute Persons.

Isaac Waugh, Esq., M.B., Medical Superintendent, Parramatta Asylums, sworn, and examined:—

I. Waugh,  
Esq., M.B.

11 Feb., 1896.

804. *Chairman.*] Are you Medical Superintendent of the Hospital for Infirm and Destitute at Parramatta? Yes.
805. How long have you been in charge? Since the 1st May, 1892.
806. *Mr. Clarke.*] Have any complaints been made by the public against the asylums at Macquarie and George Streets, Parramatta? I am not aware. I know nothing officially except what comes to me from the head of the Department.
807. Are you of opinion that the asylums of which you are Medical Superintendent are suitable for the inmates? I decidedly think that the George-street Asylum is perfectly unsuitable. It was formerly a flour store, it was afterwards a woollen mill, and it is totally unfit for the purpose for which it is at present used.
808. Why? On account of the height of the building, and the number of old inmates who cannot get up and down stairs. They are virtually imprisoned.
809. What is your opinion with regard to the Macquarie-street Asylum? There might be objections to it on account of its being in the centre of the town; but it could be made useful for a certain class of patients.
810. Are the buildings suitable? They are very low, and they are not at all in accordance with modern ideas as to what such an institution ought to be.
811. For what class of patients would either of the asylums be suitable? I do not think they are suitable as asylums at all. The Macquarie-street Asylum might be useful as a central hospital for the reception of certain cases.
812. You are aware that it is intended to build near Rookwood? I have heard of that for a long time.
813. It is proposed to have buildings erected on the pavilion system to accommodate about 3,000 people? I have been over the proposed site, which is near the present asylum. I have been attending at that asylum as medical officer.
814. Do you consider the site a good one for the purpose? Taking into consideration all the surroundings, I consider it is a suitable position. I could offer some objections to it; but taking it round and round it is a suitable site.
815. Are you aware that there will be some difficulty with reference to drainage at Rookwood? The site could be very easily drained; but objections might be taken by the owners of private property which might be injured by the drainage being taken through it.
816. Can you suggest the way in which the drainage could be carried out from the present site? That is a very difficult question, and it is one more for an engineer than for me.
817. What are your objections to the proposed site at Rookwood? I know from personal experience that it is an exposed position; in strong westerly wind it is exceedingly bleak. There is not sufficient shelter, and in cold wintry weather the inmates would have to remain very much indoors.
818. Are these the only objections you have to the proposed site? I have no objection to the site. I am certain the drainage could be made good.
819. Are you aware that at the present time the refuse at Rookwood is utilised in gardens and orchards? I have heard of it, but I do not know personally.
820. If the proposed buildings were erected, do you think they would be injurious to the water supply at Potts' Hill, which is in the immediate vicinity? I do not see how it could be injurious to Potts' Hill Reservoir, so long as there is no drainage from the institution to Potts' Hill.
821. Is it intended to have a hospital within a quarter of a mile of the reservoir at Potts' Hill;—would not that be objectionable? I do not see that there could be any objection if it were certain there would be no contamination through drainage. It might be said that the water would be contaminated by microbes floating in the atmosphere; I do not pay much attention to that. Judging from what I have seen in connection with the metropolitan hospitals at home, I do not believe there would be any appreciable danger.
822. Would it not be better to have the hospital erected in some other portion of the ground, instead of where it is now proposed? If the hospital could be separated from the other buildings it would be much better.
823. Is it possible to erect the hospital on any other portion of the ground? I have been over the ground with Mr. Vernon, and I went over it myself. I think the site actually fixed upon is the best. That is the elevated ground some distance away from the main building on the spur of the hill.
824. *Mr. Fegan.*] Do many deaths occur at the Parramatta Asylum? Taking everything into account there are comparatively few. I think they are only equal to the ordinary death-rate outside.
825. Under better conditions would there be a smaller number of deaths? That might be the case. Of course if persons were removed to a better position the number of deaths would probably be reduced.
826. Is any nuisance caused by the river near the existing institutions? Yes; the smell from the river is sometimes very objectionable.
827. Is that caused by refuse from the asylums? No; it is caused by the town, and not by the asylums.
828. Have you heard that the residents of the town charge the asylums with causing the stench from the river? If they do so it is not correct.
829. Have you heard of that charge? I may have heard it said, but I took no notice of it. I have heard nothing officially about it.
830. Then it is really the people of the town, and not your asylum, who create the nuisance? I am certain that the George-street Asylum does not create the nuisance.

831.

831. Have you a large number of cases in the upper storeys of the George-street Asylum? Yes; they are equally distributed. There are five storeys. I. Waugh,  
Esq., M.B.
832. Is it a fact that some of these people have not been downstairs for twelve months? Yes; some of them are bedridden, and even if they were on the ground floor, they could not get out. 11 Feb., 1896.
833. Are there some not bedridden who cannot get down very easily? Yes.
834. Therefore, they cannot get the fresh air which the old and infirm should get? They get plenty of fresh air through the windows.
835. Can that properly be called fresh air? The wards above are exceedingly well ventilated, as there are plenty of windows. The patients very often do not like fresh air, and we find it difficult to get them to keep the windows open. On account of the height they undoubtedly get the purest and best air.
836. Would you favour the pavilion system or the one-storey building? Undoubtedly. A great many of these men are practically in prison by not being able to get in and out.
837. Have you been consulted with reference to the plans of the new buildings at Rookwood, or as to the necessity for removing patients from Parramatta to Rookwood? I have heard that that was intended, and I got notice that after a certain time the patients would be removed together from Parramatta, and that I would have to reside at Rookwood. That is a long time ago.\*
838. Have you ever been consulted as to the suitability of the place, or as to the buildings proposed to be erected at Rookwood? I am not aware that I ever wrote a report on the subject. I have only inspected the ground in a general way. I do not remember that I was ever asked to put anything in writing.\*
839. Have you ever made complaints about the unsuitableness of the buildings at Parramatta? Yes; I made constant complaints. The question has given me a great deal of anxiety, particularly on account of the danger of fire.
840. What would be the consequence if a fire broke out? Many of the inmates would be burnt to death before they could be saved. That is, if a fire once got hold of the building properly. We have the very best appliances for dealing with fire, and if the water supply lasted, I do not anticipate that there would be much danger. But if a fire got hold of the building, I am almost afraid to say what would be the result.
841. Considering how disastrous the results might be, do you think that better provision should be made for housing the inmates of your asylum? I have not the slightest hesitation in saying that the George-street Asylum is not a fit place to house over 1,000 people.
842. Being Superintendent of these large asylums, do you not think that you should have been consulted before any serious steps were taken to remove the patients? I think my opinion might be asked; I might be consulted.
843. You were not consulted? I cannot quite say whether I was or not—I cannot remember. I have no written document to prove that.
844. Have you any record in your books that you were called upon to consult as to the best methods of housing the infirm and destitute people in your asylums? The only way in which that would be done would be by calling me before a Board as in the present instance. I have been asked over and over again if I could discharge certain inmates, because the place was over-crowded. Of course, I always answer that it is impossible to discharge inmates, who were incapable of earning their living, and who would have to starve in the streets or go to gaol. The place is over-crowded, but I know that there are very few old men in George-street Asylum who could be turned out into the streets.
845. Seeing that this question has been before Parliament, that plans have been prepared, and a scheme proposed, do you not think it very strange that your opinion was not obtained with reference to a system which it seems some people are ready to adopt? I may have been asked in that way, but I am not aware that I ever wrote any communication on the subject. I have no record that I have ever been asked to put my views on paper.
846. If you were asked would you say that Rookwood was a suitable place for housing the poor? Yes.
847. Would you say that from every point of view? No, I consider that it is a very exposed position for people of chest complaints—consumptive cases might suffer in winter.
848. Do you think good drains could be obtained at Rookwood? Yes.
849. Do you think there would be any danger to the reservoir if consumptive cases were kept in the neighbourhood? I do not think so so long as there is no drainage or effete matter conveyed from the asylum to the reservoir. It would be most dangerous if any of the effete matter from the patients escaped into the reservoir.
850. Supposing the excreta were buried in the soil near the reservoir would there be any danger then? I am afraid there might be percolation through the soil. There is a danger of soakage.
851. Might germs be conveyed through the atmosphere to the reservoir? That would almost altogether depend on the closeness to the water.
852. You can see on the plan where the hospital for consumptives is to be placed. It is about a quarter of a mile from the reservoir. Do you think there would be any danger of germs being conveyed through the atmosphere to the reservoir? I do not think so.
853. You are aware that there is a proposal to bury the excreta. When the land in which the night-soil is buried, is disturbed, will there be any danger of the atmosphere conveying germs to the water? When the offensive matter is buried and particular vegetation takes place the offensive matter is decomposed, and it becomes perfectly harmless.
854. What would be the proper depth at which that matter should be buried? About 4 or 5 feet. If that were cropped over with a green crop the offensive matter would become so decomposed as to become perfectly innocuous.
855. Are there a large number of eye patients in your hospital? Yes.
856. Are they treated separately from the other patients? Yes, they have their own bath-rooms and so on. We keep the really bad cases in Macquarie-street, because there is an ophthalmic surgeon appointed by the Government to attend to these cases. They get separate treatment there.
857. But are they not kept in the same yards as the other patients? At Macquarie-street they are kept pretty well apart, but under the present circumstances it is impossible to keep them entirely apart from the other patients.

858.

\* NOTE (on revision):—In December last I was requested by the Director to visit Rookwood, in conjunction with Dr. Beattie and Dr. W. S. Brown, to inspect and give my opinion as to the proposed site of the new buildings.

I. Waugh,  
Esq., M.B.  
11 Feb., 1896.

858. Has it not been recommended that a separate asylum should be built for these special cases? In my opinion if there was an ophthalmic hospital so as to keep all the ophthalmic cases apart, it would be more in keeping with the times. It is impossible to isolate cases in a large building such as we have got.
859. Are not a great many of these eye diseases contagious? Yes.
860. Therefore, it is necessary to have separate treatment? It is very dangerous to have patients mixing together, because you cannot prevent healthy patients from using towels which have also been used by ophthalmic patients.
861. *Mr. Hassall.*] Why do you condemn the George-street Asylum? In the first place it was never built for a hospital. It was built in a straggling way, the buildings are too high, and a large number of the inmates are in such a condition that they cannot go up and down stairs.
862. How many storeys high is the building? There are five storeys altogether, and four storeys we use for patients.
863. In case of fire there would be an appalling loss of life? Yes.
864. How many storeys are there in the Macquarie-street Asylum? Only two—the basement and one storey. It was built originally as a military barracks. I think it was built in the time of George III. It is something like the building at Liverpool, only that the building at Liverpool is much more modern.
865. Is there any room for building increased accommodation at Macquarie-street? No.
866. Would it be possible to retain either of the buildings at Parramatta? Under certain circumstances, if the Macquarie-street Asylum were retained, it might be of advantage as a sort of depôt for receiving certain patients. There is a certain class of patients which could be kept there without detriment to the town.
867. What class of patients could be kept there? There are some of the old pensioners of known good character who would be perfectly harmless to the town, and if they were allowed to remain they would not feel that they were being exiled, as will be the case if they are taken to another place.
868. Are there any men whose health is fairly good? Yes; they are only suffering from the infirmities of old age.
869. Could the men you refer to go up and down stairs at the Macquarie-street Asylum? Yes.
870. With regard to people suffering from disease, do you think that the pavilion system would be preferable to the buildings at present used? If I had the building of a place I would prefer building two storeys. I believe that it is healthy to sleep in a second storey. I would keep the basement for those who could not get up and down stairs.
871. Would you recommend a two-storey building on the grounds of health and economy? Most undoubtedly. You could accommodate twice the number of people in the same space, and under equally good conditions.
872. Could you supervise them with a smaller number of attendants? Yes; I could supervise them better than if all the patients were on the ground floor.
873. Do you think it would be desirable to concentrate the chronic cases of disease at one particular spot, instead of having so many cases at one asylum, and so many cases at another;—do you think it would be better to concentrate the whole of the cases of disease at one spot? I think it would be better to concentrate all cases simply of old age and the infirmities arising from old age at one place, leaving out all cases of cancer and things of that kind. It would save considerable expense.
874. Could such cases be concentrated at Macquarie-street Asylum? I should say that Macquarie-street Asylum would be a very suitable place for those who are not suffering from actual disease.
875. Do you think that chronic cases of disease, such as cancer, consumption, and so on, could be concentrated at another place, say, Liverpool? At present all cases of cancer are sent on to Liverpool. There is an order to that effect.
876. Do you think that course would be advisable? My opinion is that all cancer cases should be treated in one hospital—that is done in the old country.
877. Which would be the best place to concentrate such cases, Rookwood or Liverpool? I think Liverpool is very suitable for cancer cases.
878. Do you think that consumptive cases should be treated at Liverpool, rather than at Rookwood? At some periods of the year Liverpool is exceedingly close and debilitating. The heat is very oppressive, and would be injurious in advanced cases of phthisis. The position at Rookwood would be good for such cases except for the cold in the winter. It is very hard to draw the line, but taking it altogether, with proper buildings, Rookwood would be a suitable site.
879. Would the George-street property be of any value? I do not think it is of much value. As far as the buildings are concerned they have no value, and I doubt whether the land would bring much money. It might sell if it were cut up into small allotments.
880. Have you any fear of contagion through being in the same atmosphere as the patients? No; it is my profession, and I take precautions.
881. Do you think that the fear of contagion through germs being carried by the wind to the water supply is more a matter of sentiment than anything else? I think it is greatly exaggerated, and it is mostly sentiment.
882. If germs did get into the Potts' Hill Reservoir, would they not float on the top of the water? They would float in the air, or become absorbed before they reached the reservoir. I would not hesitate to use the water.
883. The water supply being obtained at a considerable depth below the surface, is not the fear of contagion groundless? I do not believe there would be any danger. I would have no fear for my family if they used the water. It cannot be proved that the germs would float for that distance. The ozone in the atmosphere and other constituents would decompose or neutralise the poison.
884. Do you think that the only danger would be from defective drainage? Yes. The only danger would be if there was any chance of the drainage going direct into the water supply.
885. *Mr. Black.*] Do you think that cancerous and consumptive cases should be isolated from the ordinary destitute people? Yes, particularly cancer cases.
886. Do you think that Rookwood would be unsuitable for consumptives because of its exposure? I say it is very much exposed to cold winds from the west.
887. Do you not think that popular opinion would be very much against the planting of any hospital for the treatment of cancer or consumptive patients in the vicinity of the water supply? I do not know what

I. Waugh,  
Esq., M.B.

11 Feb., 1896.

what prejudices might be entertained. In the old cities of the world you will find the hospitals in much closer proximity.

888. In the old cities they have no alternative—here we have. Do you not think that popular prejudice should be considered in this matter, when it is likely that a scare would arise among the people. Is it not even possible that people may contract disease through fear? I do not see how they can contract disease in that way—it is a mere matter of funk.

889. If some site could be discovered which would not be so much exposed as is the Rookwood site, and which would not be near the water supply, would it not be preferable to the Rookwood site? If you can get a better place of course it would be preferable.

890. Would you be inclined to recommend Liverpool as a site for a cancer and consumptive hospital? In the summer months Liverpool is very hot and oppressive, and that would be injurious to many consumptive cases.

891. Would Liverpool be a good site for ordinary hospital cases? Yes, a very fair place.

892. If a scheme were brought under your notice which proposed to somewhat increase the accommodation at Rookwood, for the housing of the infirm, and destitute poor, closing up both the Parramatta asylums and taking patients from there to Rookwood, and if that scheme also proposed the housing of ordinary hospital cases at Liverpool, and in addition the securing of a favourable site for cancer and consumptive patients, in some climate which had the advantage not only of elevation, but of protection from extremely cold winds, would that scheme have your approval? Yes.

893. Do you know if many persons come from the other colonies for admission to our asylums? Yes, I know that many come from Victoria and Queensland, and a few from New Zealand. They come particularly from Victoria.

894. Do you think that those people were sent from Victoria by their relatives, or have you any reason to believe that any of them were sent over here by some body of the people in Victoria, whether connected with charitable institutions or not? I do not know, and it would be unfair for me to say so. I have this knowledge that people come from Victoria to New South Wales knowing that they will be better treated in our asylums.

895. Do you know if the expenses of these people as far as the New South Wales border, were provided for them by their friends or other people interested in having them taken out of Victoria? I cannot say that. I know that very often they cross the border and shortly afterwards they are found destitute. They then get a railway pass from Albury in to Parramatta.

896. You say that you are in favour of the erection of a two-storey building; would you propose to house the more vigorous patients overhead? Yes. I prefer to have hospital cases on the second floor for health's sake.

897. Is there not an objection to that system in the fact that those underneath would be exposed to the noise, and a certain amount of vibration caused by people moving about overhead? I do not think those things can be taken into account. If the building were properly constructed and proper discipline were maintained I do not think any inconvenience would arise from that source.

898. *Mr. Wright.*] What previous experience had you of these institutions before you were appointed in 1892? In some of the principal hospitals in Dublin. In the Richmond, Whitworth, and Hardwich hospitals in Dublin. They are three large hospitals. One was a special surgical hospital. There was a hospital for mixed diseases, the other hospital was for fevers and all sorts of infectious diseases. The three institutions were separate, although they were in the same ground.

899. Were you ever in a similar institution where the patients were exclusively confined to the aged and infirm? No; but I was in one of her Majesty's Naval hospitals.

900. Did you ever have any experience of work-houses? No, except for a short time when I was on duty for another. I know something of the working of the Irish poor-houses.

901. Is our system of housing the poor as good as, or is it worse than the Irish system? I think it is very superior here. The poor here have much to be thankful for, especially in the matter of food.

902. Was there any difference between the housing of the patients? The work-houses I have seen at home were good substantial stone buildings, and no fault could be found with them. I am speaking of the year 1860. They were far and away better than the buildings in George-street. They were new and properly built.

903. You say that the percentage of deaths in the Parramatta Asylums was very small? Yes; taking into account the ages of the patients. If you compare them with the general death-rate outside, you will find that they compare very favourably.

904. Is the percentage 14 per cent. less than the average percentage of the whole Colony? Yes. But of course you have to take into account the fact that there is great infant mortality outside.

905. But then, there is a great deal of mortality in the asylums from senile decay? Yes; there are a great many broken down men.

906. Does not that show that the provision made for these people is not very inadequate? I think the provision made for the poor, with the exception of the building in George-street, is very adequate and liberal.

907. Even taking the state of the buildings into consideration, does it not show that the poor are well treated? Yes; even under present circumstances I think the poor have nothing to complain of.

908. Is cancer an infectious disease? I think that an open sore inoculated by cancerous matter would probably take on a cancerous character. There is a great objection to other people associating with cancer patients.

909. According to medical science cancer is not infectious? It may not be considered infectious; but I believe you can inoculate it.

910. Would it not be possible for flies to convey poison from a cancerous patient to a comparatively sound person? Yes. I knew a case myself of a skilful surgeon who operated in a cancer case, and who died within a fortnight through becoming inoculated.

911. Because you think it is possible to inoculate persons with cancer, you are of opinion that cancer cases should be treated separately? Yes.

912. Does not one of the highest authorities in the world say that cancer is not infectious, and cannot be communicated in any way except by direct contact with the blood? There are differences of opinion, and there is a great difference between infection and contagion. In the case of infection there must be a

medium.

I. Waugh,  
Esq., M.B.  
11 Feb., 1896.

medium. Contagion is where a person is brought into direct contact. A disease may be contagious and not infectious. I do not believe cancer is infectious.

913. With regard to consumption you said that you saw no objection to a hospital for consumptives being erected within a reasonable distance of the water supply of Sydney. The Potts' Hill Reservoir covers several acres, and the water is open and exposed. Is it not a fact that the expectorations of consumptive patients are always carefully destroyed by medical men? Yes; and they ought to be.

914. When you cannot destroy the expectorations of consumptive patients, when they dry and become exposed to the wind, what is the consequence? My argument is that it should not be allowed in a well-regulated place. No matter of that kind should be allowed to get into the atmosphere in any place, much less near a water supply.

915. But it is proposed here to have a consumptive hospital, with patients in various degrees of illness—some would be in bed, but others would be taking daily exercise. How could you possibly guard against the danger to other people outside? You cannot prevent them from spitting on the ground.

916. Do you contend that the germs or spores contained in the expectorations of patients walking about the grounds, could not by any possibility be carried by the wind into the water supply? That is a very large question. I doubt it very much. I know that dry expectoration will float for some distance in the atmosphere, according to the way the wind blows, but it is very difficult to say whether the oxygen in the air will not render it harmless.

917. It is stated by very high class men, that these spores in the atmosphere may enter the lungs of sound persons and infect them with tuberculosis? It certainly would be injurious for healthy persons to inhale the breath of a consumptive.

918. But I am speaking of dry expectoration? I think the ozone and oxygen in the atmosphere would so decompose the injurious matter that it would be rendered harmless.

919. Supposing that medical scientists hold the opinions that I have stated, would it be satisfactory to a population of 400,000 in Sydney and its neighbourhood, to know that in the immediate vicinity of their water supply there was a number of consumptive patients who might possibly infect that water? I think that wiser men than myself will have to answer that question.

920. If scientists and medical men make such assertions as I refer to, what would be the sentiments of the people on the subject? I do not know. But I know that public sentiment runs very high sometimes on very trifling questions, when there is no reason for it.

921. Do you think that, notwithstanding the danger of having consumptive and cancer hospitals close to the water supply, we should be justified in erecting these buildings on the proposed site? I am only giving my own opinion on the subject, and I do not believe the purity of the water would be affected.

922. Have you given any attention to the question of sanitation and the treatment of disease germs? I have read all the best books on the subject. I get the *Lancet* and the *Medical Journal*, and I read the views of all the best men of the time on the subject.

923. Do you say that if excreta is buried 4 or 5 feet deep, and the ground on the surface is cultivated, there will be no possible danger? Yes; vegetation would convert the poison into its component parts and render it harmless. It is only by combination of certain component parts that poison is produced.

924. Are you aware that recent scientific researches have proved that the germs of anthrax and typhoid exist for twenty years under the surface of the soil, and are as virulent as ever? I am not aware of that; but if the oxygen, nitrogen, hydrogen, and other component parts are separated, the injurious matter is rendered innocuous.

925. Would you modify your opinion if you were informed that the subsoil at Rookwood is known to be impermeable clay? I never inquired into the geological formation there.

926. Are you quite clear in your opinion that the establishment of a cancer hospital and consumptive hospital on the proposed site at Rookwood would not be injurious to the water supply of Sydney? That is my opinion.

927. If you had the direction of this proposal would you have a separate hospital for ophthalmic patients, another for cancer patients, and another for consumptive patients? Yes, that would be much better; there should be a fair distance between them.

928. Would the hospitals shown on the plan be far enough away to procure isolation. In the main building there would not be sufficient isolation—the hospital ward should be further away. The patients should be prevented from coming into contact with the other inmates.

929. Would you have them a mile or two apart? No; a quarter of a mile would be sufficient.

930. If the hospitals were a quarter of a mile apart, do you think there would be no risk of infection? Yes, it would be much safer.

931. Let me point out again that the Potts' Hill Reservoir is only 10 chains from one of the hospitals, and 22 chains from the furthest one? If you have a block of buildings you must take into account the space that there will be around them. If you take the recreation grounds of the two buildings there will not be that distance between them. I am taking the distance between the two blocks of buildings.

932. Do you approve of concentrating 3,200 patients, with all the administrative force, on this particular site? I would not concentrate them all there; it would be better to have some separation and isolation. It is not a good system to create a town consisting of diseased and infirm persons.

933. If a counter proposal were made that the asylum at Liverpool should be retained as a hospital for the most serious cases of cancer and consumption, and to have all the other patients removed to Rookwood, would you approve of that? I do not think it would be well to take all the cases on to the one site. For a certain class of cases Liverpool should be retained, and Macquarie-street Asylum should be retained for receiving another class of patients. Then I think the present buildings at Rookwood would meet the requirements of the case.

934. Is it necessary to have a casual place at Rookwood? There must always be some place of that kind where patients can be kept under observation.

935. But this is a casual ward for newcomers? I do not see any necessity for that.

936. I understand the patients are treated first as casuals; they are examined and properly cleaned before they are admitted to the main building? That system prevails everywhere.

937. Personally, you see no necessity for this casual pavilion? Not in that way. I do not see that people needing charity should be kept under observation unless for some particular reason.

938. Do you think there should be any classification of the inmates of these institutions who are comparatively healthy? I think it would be very difficult to do so.

939. Do you think it would be possible to keep away the vicious and criminal from the others? If a man is a criminal he is not kept in the institution.

940. A man may have been a criminal? I do not think he should be branded on that account. The moment I find that a man commits an offence against the law, I turn him out and inform the police, and he is then tried before the Bench.

941. Do you say that none of the inmates of the Parramatta asylums are able to earn their living? I have gone over them carefully, and the only men who could earn a living are those who are employed in doing some work, such as cleaning up, and so on.

942. Are they not earning their living? They are paupers; but they are actually assisting to do the work of the institution.

943. Do not patients in the Parramatta Asylum earn their living by doing gardening work outside? I do not permit it; I am not aware of it. If a man was earning money outside, I would give him something to do inside.

944. If it is generally stated that such is the case, do you consider that it is untrue? Yes. If it is done it is without my knowledge or permission.

945. Do not the patients go in and out at their own pleasure? No.

946. Cannot they leave whenever they like? A man can get his discharge if he pleases by putting down his name. If a man asks his discharge I give it to him; but I have to certify that he is fit to travel.

947. What proportion of the men obtain discharges at one period of the year and come back again? They are constantly coming in and out. A large proportion go out in the summer months; but they come back tattered and torn in the winter.

948. In that case some of them attempt to earn their living? They wander all over the country. I cannot say whether they attempt to earn their living.

949. Do you give those men who do work in the institution any extra pay? They get extra tobacco and a few perquisites.

950. *Mr. Hoskins.*] Do you know whether any provision is made in the colony of Victoria for suitably housing the indigent and sick poor? I do not know anything about the provision made there. The people who come across from Victoria have acknowledged to me that they do so because they are so much better treated here than in Victoria. I believe they have no institutions in Victoria similar to what we have here.

951. Is not the Macquarie-street Asylum very much overcrowded at present;—are not the beds too close together, and are not beds made up on the floor? We have to put beds on the floor. It is overcrowded according to proper hygienic principles.

952. How many patients are there in the Macquarie-street Asylum at present? Three hundred and two.

953. You admit that it is overcrowded? Yes.

954. Are not the ceilings in the Macquarie-street Asylum very low? Yes.

955. Are not the windows very small? Yes.

956. Is not the ventilation very defective? Owing to the way in which the windows are placed, and the number of windows, there is a fair amount of ventilation. There is not sufficient ventilation according to the views of the present day. It is a very old building.

957. When the Government are making fresh provision for housing the infirm and destitute, do you think it would be wise to continue the occupation of these asylums at Parramatta? With a little expenditure, I think, the Macquarie-street Asylum could be made very useful as a receiving place, and for keeping a certain class of inmates.

958. Supposing your views were carried out, how many persons do you think ought to be housed at Macquarie-street Asylum with due regard to health? Two hundred and forty or two hundred and fifty.

959. Are you not aware that there is a special pavilion in the asylum, at Liverpool, for housing cancerous patients? Yes; I do not know how many are there.

960. Is not that the only place where cancerous patients are housed? I forward all cancer cases to Liverpool. I do not know what is done elsewhere.

961. *Mr. Humphery.*] Will you look at the plan on the table. It is a design by Mr. Vernon for a building to accommodate about 240. You will observe there are two wards on the ground floor, and two wards above, with a passage in the centre;—in your opinion would a design of that kind be more economical as to cost and for purposes of administration than the proposed pavilion system, each pavilion containing sixty beds? I should say it would be much more economical, and I would much prefer this plan to the other system.

962. Will you state your reasons? In the first place, it would be more economical in the general administration; in the second place, in a great many instances it is much better for patients to sleep on the floor above the basement, so far as health is concerned. I am speaking from a hospital point of view.

963. About what proportion of the inmates of the Macquarie-street and George-street Asylums would be able to use the second floor? One half of the inmates of the George-street and Macquarie-street Asylums could use the second floor.

964. Would there be any objection to a second floor on the ground of difficulty in ascending? No, I prefer to see a second floor myself.

965. *Mr. Davies.*] Were you and the rest of the medical officers in connection with these asylums, consulted with reference to the proposed concentration of the whole of the pauper patients at Rookwood? I am not aware that we ever were consulted together. I do not remember that there was any official communication. If there had been we would have had to send in a report in writing.

966. Have there been no representations made by the medical staff? There may have been representations made separately but there was no meeting where the matter was argued out.

967. There was no medical board or conference as far as you know? I am not aware of any.

968. As far as you know has any representation been made by the officials or medical superintendents of the different institutions to the Government as to the inadequate space for housing the poor? I think I have on more than one occasion remarked as to the unsuitableness of the George-street Asylum as a Government institution. I have put it pretty strongly.

969. In writing? I think so.\*

970. Have you seen the plans on the pavilion system to accommodate 3,500 people, and do you favour the principle of concentration in that way? I do not favour it. 971.

\* NOTE (on revision):—I can find no record amongst my papers of having communicated in writing re the unsuitableness of George-street Asylum, therefore I wish to qualify my reply to that question. The unsuitableness of the building has on many occasions been the subject of conversation, and I feel certain that no one recognises the fact more than the head of the Department to which I have the honor to belong.

- I. Waugh,  
Esq., M.B.  
11 Feb., 1890.
971. If the matter had been referred to you, as one of the medical officers, would you have protested against such a proposal? I think on general principles the housing of such a great pauper population in that radius would not be advisable.
972. Do you think that the site at Rookwood could be drained effectively? Yes, but there might be detriment to private property.
973. In what direction should the drainage take place to be effective? It should follow the natural gulleys and be conveyed by a tunnel or something of that kind to some place. There is considerable natural drainage there, and it should be followed.
974. Would that be through the cemetery? It would run somewhere near the cemetery.
975. Does not the creek at present run right through the end of the cemetery? I am not certain, but I think it does.
976. Do you know where it empties itself? No.
977. In connection with provision for housing so large a population of poor old men, suffering from all kinds of disease and decay, would it not be necessary to provide, first of all, a thorough system of drainage and sewerage, not only for the safety of the patients but of the population round about? One of the principal things before the place is built is to provide for a drainage.
978. In the absence of a thorough system of sewerage, what is your opinion with reference to destroying all the fecal matter by fire? That is a very effectual way, but it is very troublesome.
979. Is there any other system next to a good system of drainage with a good outfall which is equal to the system of destruction by fire? There are systems which I have seen in some parts of England where they have sewage farms;—they convey the drainage to a suitable place, where they grow green crops, which decompose the fecal matter and render it innocuous.
980. But that leaves the microbes behind? I do not think so.
981. Would you be surprised to learn that at the sewage farm on Webb's Grant there are millions of microbes to be found? That is because the matter was never properly decomposed.
982. Would you recommend a sewage farm at Rookwood, with a population of 3,500? No.
983. What do you think would be most likely to be effective, supposing this project is carried out? I would favour a proper system of drainage, following as nearly as possible the natural drainage from the site to some suitable place.
984. Supposing that is impracticable, what would you propose? Unless there is some means of that kind it would be very difficult.
985. What is the character of the soil there? Stiff clay.
986. Is that suitable for a sewage farm? It is not very porous.
987. Unless the officers of the Department can find the means of carrying out a thorough system of drainage for the proposed building, would you be favourable to the erection of these buildings at Rookwood? No; a proper system of drainage from this large and crowded place is absolutely necessary for the comfort and health, not only of the inmates, but of the people in the neighbourhood.
988. Have there been any complaints about the sewage from the George and Macquarie-street Asylums? People are constantly making complaints.
989. Have the municipal authorities made complaints? No; I do not think they can. We do not pollute the town, we are more likely to be polluted by water flowing from the town. I have found very bad effluvia from the water coming from the town. When the wind backs up the tide we very often get offensive odours in the George-street Asylum. I have seen offensive matter thrown up on the foreshore.
990. What is your system at George-street and Macquarie-street with regard to fecal matter? It is carried away by the council in pans.
991. Do you know what it costs? I will supply the figures afterwards.\*
992. To what extent are you overcrowded at George-street Asylum? By fully 150.
993. Have you not 1,125 inmates there at present? Yes; I think it will accommodate at least 950. I think the place is unsuitable, but if it were to be continued 950 could be accommodated.
994. Do you not think the number ought to be reduced by one half, who should be removed to some temporary shelter until permanent buildings are erected? I do not know how that could be managed.
995. Would it not be advisable in the interests of these poor people? If 150 or 200 could be taken out it would be better every way.
996. Who is your assistant? I have none—only a dispenser.
997. Is your time absolutely devoted to the two institutions? Yes.
998. Does it take up the whole of your time? Yes.
999. Are you allowed to enter into private practice? No; I am allowed to go into consultation, but I am not supposed to do any private practice, and if I were I would not have time to do it.
1000. *Mr. Lee.*] Did I understand you to say that the mortality at the Parramatta asylums was about the same as the mortality of the general community? I have not looked up the matter, but I do not think you will find that it is greater than the general mortality.
1001. I would draw your attention to these figures, so that you may make a further statement if you wish. In the Statistical Register for 1893-4, the mean mortality of the Colony is given at 18.56 per 1,000, whereas the last printed report of the Department of Charitable Institutions gives for the George-street Asylum an average of 15.79 per cent. of deaths for that year. You will see that one is based on per 1,000 of the population, while the mortality in the asylum is based upon per 100 of the inmates. Consequently to put them both on the same level the death-rate in the asylum per 1,000 would be 158? But you have to take in all the ages. In the general community you have a large healthy population. What I meant to say when I was questioned on that subject was that if you take into consideration the ages of the inmates, the mortality in the asylums would compare favourably with the general mortality.
1002. But that would be misleading? If the Committee will give me an opportunity I will provide the figures at a later stage.
1003. You have stated that you have charge of the George-street and Macquarie-street Asylums. Is there not another building in Parramatta in which the poor are housed? There are several small buildings that I have nothing to do with.
1004. The places I refer to are in Harris-street? Yes; they come under the George-street Asylum.
1005. In Harris-street there is a terrace of houses consisting of ten buildings, which are used in connection with the George-street Asylum? Yes.
- 1006.

\* NOTE (on revision);—I have ascertained that the cost is about £250 per annum.

1006. Do you know what rent is paid per annum for that place? No.
1007. To what purposes do you devote that building? Principally for isolation purposes. Scabies principally, commonly known as the itch.
1008. Are there some occupants there at present? Yes; we always have some cases.
1009. Do you not also use it as a sleeping apartment? Yes; but the beds are separate.
1010. Do from 100 to 120 sleep there? About that.
1011. Are they provided from the George-street Asylum? They actually belong to the George-street Asylum.
1012. What is the system of drainage for those buildings? That is done by the Municipality. Some runs into the gutter, and there is a nasty creek at the back.
1013. Does not the bulk of that drainage run into the open drains of the town, and thence into some receptacle? Yes.
1014. At whose suggestion was that building rented for the purpose? I have no idea.
1015. Did you recommend it? No.
1016. Do you think it is a proper thing that in the heart of the town there should be a hospital of that kind for infectious disease? Certainly not. It would not be there if I could help it.
1017. Do you suggest that George-street Asylum should be abolished? Yes, I would abolish Harris-street first and the other afterwards.
1018. Is it not an eyesore? Yes, and a menace to the public health. It should be dispensed with. There is a danger of scabies being spread among the surrounding population on account of it.
1019. Questions have been asked about the concentration of the sick and destitute at Rookwood. Let me put before you these figures. At the commencement of 1894 you had in the George and Macquarie Streets Asylums 1,316 inmates. You passed 1,416 through both institutions during the year, making a total of 2,732. Of these 733 passed through the hospital, or 27 per cent. Do you not think that under conditions of that kind it would be wiser and more humane to have some special building set apart for the sole treatment of the sick? That ought to be done. At present we have hospitals at various parts of the institution at George-street. They are not actually separated.
1020. As medical officer are you prepared to suggest any plan, or do you approve of concentrating these sick people in one central hospital. If so perhaps you will suggest how it could be done? A great many of these hospital cases are men with deformities, and unreduced dislocations. They are treated as hospital patients.
1021. That is not the answer I want. Are you prepared to suggest or do you approve of a proposition for concentrating the sick in a central hospital instead of having hospitals attached to every asylum? There are hospitals attached to every asylum.
1022. Do you approve of that? Each asylum must have a hospital.
1023. Is it not possible to classify cases and draft them to a hospital? It would be very difficult to manage. You would have the ambulance going from noon to night. It would be impracticable except at very great expense.
1024. Therefore, you are not prepared to make any suggestion? I am not prepared to make a suggestion. If cases occur that I cannot deal with I have power now to make application to have those cases transferred to the Prince Alfred or Sydney Hospitals.
1025. Is it not a fact that the asylums are largely used as benevolent asylums for incurables? Yes.
1026. Under these circumstances, do you not think it would be advisable to have some central and permanent hospital where these people could be treated? Of course it would be desirable if it could be done.
1027. Would it not be more economical and desirable? I doubt that very much. The more places you have the greater would be the expense.
1028. *Chairman.*] How many paupers could a competent staff supervise? With proper buildings and accommodation, with the class of cases which I have at present at George-street, I could supervise 1,000 or 1,200 men with four good hospital attendants. I could manage all the medical work of the place myself with that assistance. Of course I would also have the assistance of inmates in cleaning up.
1029. Would there be any great saving by abandoning the present institutions and housing the whole of the paupers together—some 3,000 of them? I think there would be some saving, but I do not think there would be a great deal. There would be some saving on account of the staff. The more scattered the thing is the greater the expense. Concentration might save something in the expense of management. It would be hard to work it out, but I do not think it would be very much.

WEDNESDAY, 12 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY,  
The Hon. JOHN DAVIES, C.M.G.  
The Hon. JAMES HOSKINS.  
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.  
JOHN LIONEL FEGAN, Esq.  
THOMAS HENRY HASSALL, Esq.  
GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

John Ashburton Thompson, Esq., M.D., Deputy Medical Adviser to the Government, sworn, and examined:—

1030. *Chairman.*] Are you Deputy Medical Adviser to the Government? Yes.
1031. Have you had an opportunity to see the proposal now before us with regard to Government asylums? For the first time, yesterday.
1032. Have you a knowledge of the proposal in general terms? In quite general terms.
1033. Have you been consulted with regard to this scheme? No.

I. Waugh,  
Esq., M.B.  
11 Feb., 1896.

J. A.  
Thompson,  
Esq., M.D.  
12 Feb., 1896.

J. A.  
Thompson,  
Esq., M.D.  
12 Feb., 1896.

1034. Although you hold the position of Deputy Medical Adviser to the Government? Yes.
1035. What is your opinion with regard to utilising professional experience when matters of this kind are under consideration? I think a very important scheme such as this, which touches medical matters, and is based upon medical considerations at bottom, ought to be referred to the chief medical officer to the Government.
1036. And your Department has no knowledge whatever of this? That is the case.
1037. From the plan you see that the buildings are contiguous to the Potts' Hill Reservoir? Yes; I am now aware of the locality in its general features. On the whole I do not think there would be any objection to placing the institution some where on that block of 54 acres; but I do think that it would be quite wrong to place it in the position shown on the plan, that is so near to the reservoir.
1038. What are your reasons? There is always a certain amount of uncontrolled waste and excreta however carefully you may deal with the matter, and I think it would be more prudent to place the buildings at a greater distance.
1039. Do you believe there is a possibility of some contamination by the wind carrying matters to the reservoir? Yes.
1040. Do you believe it might be possible to place the buildings on that site of 64 acres at a sufficient distance from the reservoir to be tolerably safe? Yes.
1041. Can you offer us your opinion as to whether there are sites available on that land? No.
1042. Do you take it for granted that there are? Yes.
1043. Have you seen the land? I have never been there.
1044. You are speaking now purely as a matter of distance that it should be moved further away if possible? Certainly.
1045. You believe, then, that there is a practical objection in having a large body of buildings, and especially hospitals, in a position where the easterly winds might blow anything objectionable into the reservoir? I quite agree with that view.
1046. Going into the question of drainage, there is no proposal with regard to drainage set before us; but the Departmental proposal is to bury the solids, and to burn the more objectionable matter that comes from the consumptive, ophthalmic, and other hospitals;—do you approve of that? Generally speaking, yes.
1047. There is a clayey subsoil;—do you think that that proposal could be safely adopted? I think that is a very bad feature about the site—not with regard to the disposal of sewage, but as a place for erecting an institution of this kind.
1048. Do you believe that the solids from a large population of between 3,000 and 4,000 can be safely buried in a clayey subsoil? If I understand what is proposed to be done is to have a triple method of disposal. From the hospital wards, and especially from the consumption wards, the solids are to be burnt. Then with regard to the ordinary inmates the solids are to be buried, and the slop waters are to be disposed of by irrigation. Perhaps that is unnecessarily complicated. I agree upon the whole that it is better to burn the solids which come from such a hospital ward as that for consumptives. But an institution for 3,000 people is rather a large place, and there is no reason why the sewage should not be water-carried, and why the solids and the slop waters should not together go to a little filtration area.
1049. Therefore in general terms you agree with the Departmental proposal, except that it appears a little complicated? Yes; but that is rather an important point. The difference between burying and disposing by water-carriage is considerable as regards cost.
1050. Do you believe that that could be safely dealt with locally? Yes.
1051. But you prefer to have it water-borne to an irrigation area? Yes; for all reasons.
1052. Do you know the character of the soil at Rookwood? Yes.
1053. Do you believe that soil is suitable for an institution of this kind? I think in casting about for a site for an important institution of this kind, one should consider soil among other features guiding to a decision; and unless one is obliged to go to a clay soil no one would think of doing so. It is less healthy than any other sort of soil.
1054. Do you regard that as an important matter? Yes; when there are to be 3,000 people there, all told, all susceptible, and some chronically ill.
1055. Is it sufficient to condemn the site if a more suitable one is available? It is sufficient to govern the decision; it is an important point.
1056. What is the objection to a clay subsoil compared to any other soil? Sand is a good subsoil; clay is cold and wet—it is not porous.
1057. *Mr. Hoskins.*] Is there not this danger to be apprehended, that with a clay subsoil the constant use of excreta and sewage water from a large congregation of people would so poison the soil as to render it a danger to the locality? Not if the disposal were carried out according to reason, and intelligently.
1058. *Chairman.*] Could that process be carried out satisfactorily with a clay-soil such as you have at Rookwood? Not without preparation and breaking-up the ground. There would have to be under-draining, and a rather costly preparation in all probability.
1059. The proposal is to mass some 3,300 paupers in one institution—does that meet with your approval? No.
1060. Why? Such an aggregation of persons who are either sick or in feeble health, who may be considered as invalids, is almost universally condemned. It is rather a mistake to think that good ventilation, ample cubic space, and ample floor space, within the buildings, will compensate want of external space, and external natural aeration. It is observed that if, under whatever hygienic and scientific principles of architecture you adopt, you accumulate more than an indefinite number of persons to the acre, your hospital or institution will not keep the inmates in the same health that they can be kept in if the proportion of inmates to total area is something less.
1061. What do you believe would be a fair number to house in one of these institutions? For hospitals 50 metres of the total area to each bed is considered a fair proportion—that is about 60 square yards; but it is very seldom observed. In referring to that question it must be taken that I only point out that the preliminary matter to be considered is whether you ought to accumulate on the same area about 3,000 people.
1062. In your opinion you should not? Yes. My opinion further is that the chronic sick—the incurables—ought to be separated entirely from those who are merely aged and infirm.
1063. Do you suggest that there should be a separate asylum for the chronic sick? Yes.
1064. The proposal before us is to build pavilions necessarily spreading the occupied area considerably. If these buildings were two-storied it would be possible to concentrate the occupants, and it would not be necessary

J. A.  
Thompson,  
Esq., M.D.  
12 Feb., 1896.

necessary to go so far for administrative purposes. Do you think it would be wise to have single or two-storied buildings? I can only tell you as regards sick people it is considered best to have one storey for surgical and infectious cases, and that as regards medical cases that are not infectious, two storeys are admissible. But I think one storey is justly preferred, and the objection you raise is really a matter for the architect and the administrator. I do not think there need be any real difficulty on that score. By grouping the wards, and by arranging the day-rooms and eating-rooms near the kitchens, by sub-dividing the kitchens, and so forth, without increasing the expense of administration, one could, I think, supply buildings covering a very large area.

1065. They might be grouped around the kitchen instead of having the kitchen at one end? Yes; something of that kind.

1066. As a general principle, do you think the pavilion system is the best for sick people? Yes.

1067. In the case of the hale paupers do you object to two storeys? No. I should have thought that one storey would be cheaper; but that is a question for the architect. For the chronic invalids, for the bedridden, I think it is very important that they should be all on the ground floor.

1068. *Mr. Fegan.* How long have you held your present appointment? Eight or nine years.

1069. In speaking about the drainage you said you had no objection to part of the solids being burnt. Have you ever been called upon by the Government to inspect any part of the Colony where crematory works of this description have been erected? Yes, at Orange, Katoomba, and Newcastle.

1070. Have you found that there were any bad effects from the burning of the solids, or that it was injurious to the people in the vicinity? Certainly not.

1071. Do you remember the report you sent in with reference to the crematory at Newcastle? Yes.

1072. Was it not condemned after that? It was given up; there was a continued local dispute.

1073. Not on your report? No.

1074. When you went up there did you find that it was a matter of sentiment more than anything else with a number of people? I should not say that. It is very difficult to satisfy one's self as to whether a nuisance is being caused.

1075. Do you think a nuisance was caused? I was not satisfied on the point. I do not know whether it was the case or not. I do not know that when the apparatus was in good working order there was a nuisance.

1076. Were some very reliable witnesses—persons of high character—called with regard to the question of nuisance? Yes.

1077. Was their evidence to the effect that a nuisance had been created to the detriment of the health of the people? Yes.

1078. Do you not think that the same thing would occur here? That was a particular kind of apparatus. There are many different patterns, and I do not know that the same objection would apply to all of them. I am satisfied that the crematory at Katoomba does not cause any nuisance. It is quite different from the one that was erected at Newcastle.

1079. Do you believe that such works can be carried on without causing any nuisance to the people in the immediate vicinity? Yes.

1080. Were you never consulted with reference to the proposed site for this institution? I was not.

1081. Do you know whether your chief was consulted? I am sure that he was not.

1082. Do you not think it is rather strange seeing that you are the advisers of the Government, that your opinion was not taken on a matter like this? I do.

1083. Do you say that medical cases should be separated entirely from the healthy patients? Yes.

1084. Is there any site in your mind's eye that you think would be suitable? No; because I do not know what land is available. But somewhere on the Church and School lands, within a short distance of Sydney would, I think, be a suitable situation.

1085. Do you know that it was recommended by a previous Medical Adviser to the Government to use the Randwick Asylum for such cases? I remember that about eighteen months ago something of that kind was said.

1086. Do you remember that Dr. MacLaurin, when he was Medical Adviser to the Government, recommended that very strongly? Yes.

1087. Do you think that would be a suitable place? It would be a suitable place; but I do not know whether it would be a suitable building—probably it would not be. It would be a bad plan to begin an establishment of that kind by taking an old building erected for some other purpose. However, I have not considered it from that point of view.

1088. You have not given any consideration to the question as to whether or not Randwick would be a fit place for carrying out the recommendations made by Dr. MacLaurin? I have not.

1089. Do you think that building would suit the aged and infirm who are not sick? I do not know the building well enough to say. I have never considered the building, in relation to its conversion to either of these uses. I have not been over the building for seven or eight years.

1090. Was not this suggestion made as far back as 1887? The suggestion for separating the chronic sick from the aged and infirm was first made, as far as I know, by the late Mr. T. K. Abbott and myself, who sat as a Committee of Inquiry into the Benevolent Asylums, which were at that date being mismanaged in some respects. One of our recommendations—perhaps the most important—was that all the sick should be gathered in one building together, and dealt with quite differently from the aged and infirm.

1091. Do you think that Liverpool would be a good site for a chronic hospital? I cannot help saying that this very important proposal is, or ought to be, rather far-reaching, and really concerns the medical administration of the Colony.

1092. Of which you are the representative? Undoubtedly, as far as we are referred to.

1093. Do you believe that the consumptive cases should be kept apart from all others? Yes.

1094. And that Rookwood is not a very fit place for consumptives for the reasons you have given? I do not think that the particular situation chosen on the available land at Rookwood is quite suitable.

1095. More especially on account of the soil? On account of the soil. I think the whole site is not as suitable as some sites which might be found.

1096. Do you think that Thirlmere or some other place there would be more suitable? There are many points to be considered which are not merely medical. Thirlmere is in the mountains, but I do not know whether that would be a suitable place for these old people in the winter.

1097.

J. A.  
Thompson,  
Esq., M.D.  
12 Feb., 1896.

1097. It is proposed here to have a consumptive ward; under the circumstances do you approve of that? I think not.

1098. Therefore this plan does not receive your approval as a whole? I think not. I say, I think not, because I have never seen the site itself; and I have seen this plan for the first time to-day—half an hour ago.

1099. Do you approve of the pavilion buildings for the housing of the poor and destitute, instead of two-storied buildings? I have no objection to two-storey buildings for the infirm and destitute.

1100. Do you not think it would be rather a strange recommendation to put the sick in a two-storied building, and to put them in the second storey instead of on the ground-floor? That would be quite wrong.

1101. Do you not think they would get purer air on the second storey? Yes; but they would certainly have less of it than on the ground-floor, where they could walk out or be wheeled out on to the verandah.

1102. Do you give that evidence on the condition that the soil is suitable? That is a very important matter to consider.

1103. *Mr. Black.*] Would not the erection of balconies on the second storey get over your objection to some extent, because they could then be wheeled out or walk out on to the balcony? I do not think so, because these sick people are rather a peculiar class. They are there for their lives, and I do not think it would be well to confine them to a room and a balcony. A great many of them could be wheeled out into the grounds, if they were on the ground-floor.

1104. *Mr. Fegan.*] Would not that be far better than being wheeled out on to a balcony? It would make all the difference in the world.

1105. And the extra cost would not be so great when we consider that the erection of staircases would be avoided? No; but that is a question for the architect.

1106. *Mr. Hassall.*] Do you consider it would be advisable in the interests of economy and efficient administration to concentrate all the chronic cases in one particular spot? Yes.

1107. Do you think it would be advisable to concentrate them as far as possible in what you might call a hospital asylum to which might be attached a convalescent ward in which they might hope to regain their health, and when fit that they should be drafted to other institutions? I am strongly of that opinion. I formed it after long inquiry seven or eight years ago, and I have held it ever since.

1108. Do you know the Liverpool Asylum? Not so well as the others, but I do know it.

1109. Do you think that that would be a desirable site on which to concentrate the chronic cases of disease;—it has been proved by evidence here that the drainage from the asylum goes into George's River below the dam so that there would be no danger of pollution of the water supply? In the abstract I think that Liverpool would be a suitable place for the purpose. When I say in the abstract, I mean apart from all consideration of cost and administration and having to pull down old buildings and to erect new ones, because I do not think the buildings at Liverpool are suitable for the sick.

1110. We had the evidence of the Medical Superintendent that the buildings at Liverpool will very fairly answer the purpose, and that there is room to build additional accommodation there—on the ground attached to the asylum? I am of opinion that the chronic cases should be concentrated in one institution.

1111. Do you think that the George-street Asylum, Parramatta, is a suitable site for the purposes for which it is occupied? The Committee, which I have already mentioned, and of which I was a member, condemned the George-street Asylum eight or nine years ago.

1112. Do you think the Macquarie-street Asylum buildings could be retained if the very old and chronic cases of disease were removed, leaving it to be used by men who, although gradually dying from old age, are not altogether incapable? The buildings have been used for a number of years, and I do not know that anybody's life has been shortened; but it is a very unsuitable place, it is not a creditable place.

1113. Do you think it would be better to remove the inmates from both the George-street and Macquarie-street Asylums? I think it would be much better. But I quite agree that the Macquarie-street Asylum is much better than the George-street Asylum. The buildings at George-street are not suitable for use as an asylum.

1114. With regard to the site at Rookwood, do you think it would be better, instead of keeping the site near the Potts' Hill Reservoir, to go further north towards the proposed site for a medical superintendent's house? I should like to walk over the site first before giving a strong opinion. But if that alteration were made I think it would remove the objection I have as to the proximity to the reservoir.

1115. In your opinion is there any great danger of pollution of the water supply on account of germs being carried through the atmosphere? There is no great danger.

1116. Is it more a matter of sentiment than anything else? I think it is purely a matter of prudence.

1117. Is it necessary to take precautionary measures, lest such a thing should be possible? Yes; certainly.

1118. *Mr. Black.*] I gather from your evidence that you are in favour as far as possible of the concentration of the indigent and infirm poor in one group, in order that administration and inspection should be more perfect than if they are left in their present scattered state? No; I do not think I expressed any opinion as to the desirableness of concentrating the aged and infirm in one place; but I am quite clear that the sick should be separated from the aged and infirm, and the sick should be on one separate site. As for the aged and infirm, it may or may not be better to separate them or put them in different places.

1119. Why do you think that the sick poor should be concentrated as much as possible? Because they require different treatment from the simply infirm.

1120. But why have them concentrated in one place? Their number, for the present at all events, is only enough to make a manageable institution.

1121. Would the number who would remain after the sick were taken away be in excess of those who would be manageable in one institution? As this is not in my office, I really do not know what the number would be.

1122. After removing all the chronic cases, there might be about 3,000 others;—do you think that would be too great a number to concentrate in one spot consistently with good management and administration? I do not know that I do.

1123. But the fact is that there are certain institutions in a sufficiently good condition for housing the merely infirm, namely, Liverpool and Newington. But Newington is for women, and they are not included

included in the 2,000;—I believe you are of opinion that decency, sanitation, and other reasons demand the closing of the three institutions at Parramatta? I can say "yes" without hesitation with regard to George-street.

J. A.  
Thompson,  
Esq., M.D.

12 Feb., 1896.

1124. Do you think there would be any objection to the housing of these people who would thus be rendered homeless at Rookwood in the fashion proposed in the scheme now before the Committee? No.

1125. If both of those institutions were closed there would be between 1,300 and 1,400 people who would have to be provided for. Do you know of any objection to their being situated at Rookwood? No.

1126. You do not think that such a great increase of population there, considering that they would be fairly healthy people, would be more likely to prejudice the water supply in any way, or excite popular feeling against the water supply than would the extension of the suburb of Rookwood on the other side? I think I should like to place them a little further from the reservoir—on the other side of the reservoir. I do not know whether they could be put there or not.

1127. Do you think that there would be no objection to the placing of 1,300 men who are merely suffering from the infirmities of old age, or through being worn out by overtoil, on the Rookwood site, providing that the buildings in which they are to be housed were not erected within a distance of half a mile of the reservoir? Yes.

1128. Your objection to placing them in proximity to the water supply, is, not because you are aware or positively certain that such proximity will result in poisoning or polluting the water supply? No.

1129. But because you think that there is a danger that under such circumstances the water supply might be polluted? I think it would be more prudent to place the buildings at a greater distance.

1130. I suppose you argue that, although science does not directly say that the presence of human beings in close proximity to open water, must result in poisoning that water, yet eventually, science may be able to discover that, under certain circumstances, it does result in such contamination? I do not know whether I should put it in that way, and I do not quite know whether it is really necessary to be very definite about it. The fact is that in the older cities of the world, the water reservoirs are usually open and in the cities in the very middle of the houses. I should be inclined to say that I think it is a very reasonable suggestion or requirement, that a large institution should not approach a water reservoir nearer than half a mile. I cannot give any very definite reason for that. Wherever you have a large number of persons there is a good deal of waste of one sort and another, excremental in part, which as a rule is gathered up and taken away, but which also no doubt is liable in part to dry upon the surface and thus be blown about. Now the reservoir in question is the sole source of water supply for the whole of this city—for 400,000 people and more. I think a requirement of half a mile of distance is merely reasonable, and I do not care to say more than that.

1131. I inferred from something you said just now, that you thought a better site than Liverpool might be obtained for the housing of chronic cases of illness; but I also thought that you were of opinion that that building being in existence, and in fair repair, for the saving of expense and other reasons it would, perhaps, be advisable to use it as a place for the concentration of such cases? No; I do not think it is suitable for concentrating the chronic sick. I think that very likely it is suitable for housing the mere aged and infirm; but I do not know it very well.

1132. Would you prefer to recommend the retention of Liverpool as a place merely for the housing of the aged and infirm, and the erection of a hospital group at Rookwood for the concentration of the chronic cases? I think I may be allowed to say that when you asked me whether I recommend, it embarrasses me a little, because I am well aware that the whole question is a very large one, and I am not seized of the necessary details. I fear I can only properly answer general questions.

1133. I do not want to place you in a delicate position; but we want accurate information? May I explain that it is not a delicate position that I am contemplating, but merely the fact that I have not the information. The chief medical officer to the Government should, no doubt, be one of the first persons consulted when such a move as this is to be made; but he has not been, and I do not know anything about the details of the proposition. All I know about it I have learned in this room.

1134. *Chairman.*] Do you think that if you went to see this proposed site to-morrow morning you would be able to give us more valuable information? Yes.

THURSDAY, 13 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

John Ashburton Thompson, Esq., M.D., Deputy Medical Adviser to the Government, sworn, and further examined:—

1135. *Chairman.*] Have you a statement to make? Yes, I have drawn up the following statement:—

I visited Rookwood Asylum this morning, in company with Mr. Green and Mr. Dickson the outdoor overseer. The following are remarks on special points mentioned by members of the Committee which they desired me to consider:—

13 February, 1896.

J. A.  
Thompson,  
Esq., M.D.

13 Feb., 1896.

*Aspect, Exposure, Site, &c.*—Although the area (which I was informed measures more than 500 acres) is undulating, the variations in level are apparently not great. It is but little sheltered by bush, the clearing being very extensive. The buildings are consequently exposed to prevailing winds, and westerly winds must be much felt in the winter. The soil is a rather stiff clay, which is not, as a rule, more than 18 inches or 2 feet in depth; the subsoil is either of shale or dense clay-beds; I was informed that on the whole estate there were probably not so many as 50 acres of good (or loose) soil 3 feet or more in depth, and this amount existed in small patches widely scattered. If the conditions of climate were free a site having these characters would not be selected for the purpose under consideration.

J. A.  
Thompson,  
Esq., M.D.

13 Feb., 1896.

*Sewerage and Drainage.*—This is a very important matter which should be thoroughly considered, and even worked out, before proceeding to examine other points. Supposing 2,500 or 3,000 people to be housed at this place, and connection with the Western Suburbs Sewerage Scheme to be for the present impossible, then a scheme for disposing of the liquid and solid wastes must be shown to be economically practicable, or else the position will be untenable. I think there can be no difference of opinion that so large an establishment should be systematically sewered on the water-carriage system, and that disposal should be by filtration, arrangements being made to draw off as much of the flow as might be required on cultivation areas. All surface and roof waters should be conveyed by separate gutters to any natural outfall; and then the sewage to be dealt with would be nearly invariable in quantity. I do not suppose it could be less than 14 gallons a head a day, or about 50,000 gallons from a population of 3,000. On this plan there would be water-closets or latrines, which, if they can be had, are vastly preferable on all counts to pail-closets. I know of no alternative to this plan; the liquid wastes must be thus provided for, and to deal otherwise with the solid wastes appears to me a complication for which there is nothing to be said. If the filter-beds were scientifically laid out and managed, the effluent would be fit to enter any natural watercourse not drawn upon for drinking purposes. But if there be no alternative, then it is a prime necessity to ascertain whether this plan can be carried out on this area. There is no doubt that it could not be done on an area of soil such as has been described without a great deal of expensive preparation. But, of course, it could be done; the governing consideration is cost, and that is one on which engineers alone can speak.

*Relation of Buildings to the Reservoir.*—Through the balance reservoir at Potts' Hill passes the whole of the water for Sydney; it has an exposed water-surface of 1,200 x 600 feet. According to the plan the corner of the cancer hospital block would be about 5 chains from the foot of the reservoir embankment; and many others of the buildings would be at a much less distance therefrom than the existing buildings, which are themselves not so much as half a mile distant. The screening-tank will be nearer still to some of the projected buildings. In other words, the proposed extension of the existing buildings is to be towards the reservoir. I was not able to see anything in the appearance of the estate to prevent the extension from being made to the east or thereabouts of the existing blocks—that is, away from the reservoir. After viewing the site, I find that I must object in terms stronger than I used before, when I had seen the plans only, to the arrangements thereon shown. If the asylum is to be erected on this site at all it should certainly be placed on land farther from the reservoir than the existing buildings, and not nearer. I base the objection in part only on grounds which may be called sentimental, and mainly on others which are more properly described as prudential. I do not feel inclined to speak more exactly; but many things are done perforce in old and crowded cities which are, nevertheless, not what would be chosen were the circumstances such as ours, and which would probably be altered there were it possible or practicable.

*As to retention of Liverpool Asylum.*—I was desired to consider, as I understood, whether Liverpool Asylum might not be continued in use for one of two purposes—either to be turned into a hospital where the sick might be massed and separately treated from the merely aged and infirm, or whether it might not be utilised for housing a part of the merely aged and infirm, the rest of them and the sick being otherwise disposed. I have the honor to repeat the opinion I have already expressed on the first proposal: Liverpool Asylum is entirely unsuitable for use as, or conversion into, a chronic hospital. But I know of no reason—though I have not lately visited it—why it should not continue to be used for housing the merely aged and infirm. Perhaps I may add, since the question has already been put, that, after reflection, I think it would not be wise to continue to use Macquarie-street Asylum for this purpose; I think it should be relinquished. As to George-street, I joined in condemning that asylum in 1887; and I am still of opinion that it is entirely unfit for the use to which it is put, and should now be condemned without any reserve whatever.

*Whether the proposed Eye, Consumption, and Cancer Wards are suitable.*—I do not think they are suitably placed with reference to the reservoir; but I am not aware of the details of the plan of these or any other wards proposed to be erected. The position is, in my opinion, as suitable as any for treatment of cancer and eye cases. I do not think it is unsuitable for consumption, the class of cases which will be received being considered. What is under consideration now is not a hospital for consumption; it is a refuge for consumptives who are beyond hope—of whom, at all events, but very few ever leave the asylums, once they have entered them. Were the proposal to treat consumptives with a view to recovery, three or four differently situated hospitals would probably be thought necessary—for the same climate does not suit all such cases.

*Economy from Centralisation.*—The question was: Would there be much saving effected by massing the whole number on one area, over a distribution of them among institutions erected at three or more different points? A rough guess can alone be given without going into details, not of numbers merely, but of management. I have already expressed a strong opinion, both in 1887 and yesterday, that the sick should be treated apart from the merely aged. But, of course, they might be treated on the same estate, only their establishments would be practically independent. Then, supposing there were 2,000 merely aged and infirm to be dealt with besides the sick, it would be either necessary or expedient to divide them into two bodies at all events, which, though housed on the same estate, would still be managed independently. Under these circumstances I scarcely think that any remarkable saving would be effected by massing them on one estate. There would, no doubt, be but one chief superintendent or manager on the spot, one superintendent of works, one large laundry, one large bake-house, and so forth; but, generally speaking, the actual executive staff in all branches must be proportioned to the numbers dealt with, and one large laundry, &c., in place of three or four, would, as it seems to me, save but an almost insignificant capital sum. But a hasty opinion such as this necessarily is cannot be relied upon;—a careful consideration of details, and, besides that, of the requirements of the work to be effected, of the persons to be served, and of the details of management, is necessary.

In conclusion, I beg leave to mention two points which the Committee have no doubt had in mind, by way of memoranda; and in order to avoid being taken to concur in this scheme—I do not either wish to be thought to express dissent from it,—but merely to say that I have had no opportunity of examining it in detail. The first point is, that I am satisfied from my knowledge of the asylums that it is very desirable that the indigent should be brought under legal control; this was actually done for a time just thirty years ago—it was recommended by my late colleague and myself in 1887, and it has been strongly urged lately by the Director of Government Asylums. The other point is, that the medical and quasi-medical relief of the sick poor of the Colony is not sufficiently organised, and that so important a departure as the present should, perhaps, not be taken until a comprehensive view of the present state of affairs has been had.

J. ASHBURTON THOMPSON,  
M.D., D.P.H.

1136. *Mr. Black.*] On such a large area of ground as there is at Rookwood, would it be possible to construct hospitals sufficiently isolated for the treatment of cancer and consumption? Certainly.

1137. Do you think that they could be constructed so as not to be dangerous in any way to the other aged and infirm? There is no doubt at all about that.

1138. Do you think that as the consumptive poor in most cases are too far gone when they reach the hospitals to be capable of cure, the site is not a matter of very much moment? From observation and information given to me this morning by Mr. Green, I know that almost all of the consumptives who reach the asylum go there to die. They are already in a hopeless condition.

1139. Therefore, under the most favourable circumstances, compared with those less favourable, the difference would probably be merely the extension of life for a few weeks? I doubt very much whether their condition is not already beyond any consideration of that sort. What they want is a home until they die.

1140. Do you not think that this site is somewhat too exposed for the treatment of such cases? I should not choose that site for the treatment of such cases.

1141. Do you not think there would be an alleviation of suffering with a less exposed site? I do not think so.

1142. You do not think the exposed site would aggravate the symptoms? I do not think so.

1143. Do you think it would be advisable, with all the disadvantages of soil, and the difficulties about connection with the water supply, to increase the number of infirm poor now situated at Rookwood, and

if

J. A.  
Thompson,  
Esq., M.D.

13 Feb., 1896.

if you do think so, to what extent would it be advisable to increase their number? That is a very difficult question for me to answer, because one wants to know what is the object in view. I do not know that the need for pumping water in order to supply the wants of the institution is a very serious objection. There would be a little extra expense.

1141. Without the advantage of water carriage for the solids, what number of inmates do you think could be safely massed at Rookwood if a compulsory system of destroying the solids by fire is adopted? I scarcely think that is an important point, because what I have shown is that you must have sewers for the slop waters, and in that case there is no reason why water closets should not be attached to them.

1145. But the proposal before us is to use the liquids for irrigation purposes, as at present? The solids all break down in the course of a very short run, and there is nothing to see but grey liquid.

1146. With a continuance of the present system, and with a slight alteration in the direction of burning the solids, if that were deemed preferable, how many people would it be safe to place at Rookwood? There is no limit to the number if you like to choose that way of doing it. It is only a question of money.

1147. Do you think there is no objection to the destroying of the solids by combustion except on the score of expense? Yes.

1148. Water carriage, if possible, would be cheaper? Yes.

1149. Leaving combustion out of consideration, would it be advisable to increase by 500 or 600 the present population at Rookwood, disposing of the faecal matter after the fashion now in vogue there? I do not see any objection to that.

1150. Would the matter be more complicated if the consumptive and cancerous patients were also housed at Rookwood? Not at all.

1151. You do not think their excreta requires special treatment? That would be applied on the spot by disinfectants. That is done at the Coast Hospital.

1152. Do you know of any site in the neighbourhood of Sydney, or within reach of railway communication, and possessed of a water supply, which would be more adapted to the concentration of the aged and infirm poor than Rookwood? The sole objection I see to Rookwood is the soil. If the choice were free, and without knowing what areas are available, I should say that any area possessing the qualifications you mention, and having a more open soil, would be more suitable.

1153. You would prefer a sandy soil? Yes, or gravel.

1154. Do you think the Church and School lands between Kensington and Maroubra Bay would be suitable for such a purpose? Yes.

1155. Do you think the air there would be too strong for the aged and those suffering from pulmonary complaints? I do not think they would do well at Maroubra Bay. We have never been able to keep consumptives at the Coast Hospital.

1156. I do not allude specially to consumptives, but to those who suffer from chest and bronchial trouble? They would do fairly well there if placed away from the sea front.

1157. Such a site could be connected with the tram system? Easily, I should think.

1158. *Mr. Wright.*] Are you of opinion that if the new buildings were placed on the present proposed site of the doctor's residence, there would be no objection as far as the water supply is concerned? Yes.

1159. From the features of the ground, do you think that would be a suitable site? Apparently it is just as good as the other site where it is proposed to put those buildings.

1160. Is there any objection to Rookwood so far as the suitability of the approach is concerned? When people are old and very sick you do not want to move them at all; but you have to do it in these cases. In the case of ordinary chronic disease the consideration, perhaps, is what sort of vehicle you have to carry them in, rather than the distance. If you have a good ambulance for such a purpose it does not make much difference practically whether you have to go 4 miles or 8 or 12.

1161. You do not apprehend any difficulty so far as the short journey to Rookwood is concerned? I think the evidence of the manager would be more valuable than mine on that point.

1162. Do you think the surroundings of Rookwood, with the Necropolis in front of it, would be conducive to the longevity of the patients? One sees very little of the Necropolis from this site.

1163. *Mr. Hoskins.*] Supposing the number of people at Rookwood is increased to 2,000, and supposing the Works Department report that it is impossible to connect the institution with the Western Suburbs Sewerage Scheme, how would you dispose of the sewage from the institution? I do not know whether I should choose that site; but if I were obliged to choose it, I should call in an engineer and ask him to estimate the cost of constructing the necessary filter-beds. I should also want to know the cost of finding an outfall for the effluent, which might go anywhere where it would not be drawn upon for drinking. There would be no difficulty about doing that. It would cost more on that soil at Rookwood than it would on sandy and other sorts of soil. So that if the place could not be connected with a sewer, there would not be any practical difficulty, only a question of cost.

1164. Supposing your views could not be carried out in consequence of physical difficulties, such as differences of level, and so on, so that the sewage could not be conveyed by water, how would you propose to dispose of the sewage? It could not be done.

1165. *Chairman.*] You must abandon the site? Certainly.

1166. *Mr. Hoskins.*] If there were 3,000 people on that site, how would you dispose of the sewage, the liquids and solids, if you could not connect with the Western Suburbs Sewerage Scheme? In the manner I have mentioned, by filtration. It would be done very much as you do with drinking water in water-works filter-beds.

1167. Would not that necessitate the erection of expensive works for filtration? It would not be expensive, except in as far as the soil of this particular site might entail an expense that would not be experienced on another site. This soil is peculiar. The filter-beds would have to be 6 feet deep, and you must have an outfall at 6 feet below the surface.

1168. Do you think that the sewage of that establishment, with the large number of people proposed to be placed there, could be safely disposed of by conveying the slop water by pipe and below the surface, using it perhaps for a garden and farm, and disposing of the excreta by fire? Yes; it could be safely done.

1169. Do you think the fumes from the fire consuming the excreta would have a prejudicial effect on the water reservoir? I think it would not have such an effect.

J. A.  
Thompson,  
Esq., M.D.  
13 Feb., 1896

1170. *Mr. Humohery.*] After treating the sewage by filtration, how would you deal with the effluent? It would be pure enough to run in any ditch or natural watercourse.

1171. Upon the assumption that the drainage must reach the Parramatta River on the one hand, or Cook's River on the other, according to a report which has been submitted to us, if there were objections to such a course being taken, would you deem this site altogether unsuitable? Yes; because I do not know of any other way of dealing with the sewage. You must deal with it by filtration, and, therefore, you must have an effluent.

1172. Is it your opinion that the effluent must be carried away from the ground, either to Parramatta River or Cook's River? Yes; undoubtedly.

1173. Assuming that as many as 3,000 people would be on this site, would you consider it wise to deal with all the fluids upon the ground itself? I assume that all the liquid wastes should be brought into one outfall sewer, and that that should be delivered at the filtration-beds. The effluent from the filtration-beds would be so pure that it could, quite harmlessly, be allowed to flow away. In other words, it could be treated as flood-water.

1174. Would that do away with any proposal for irrigation? No. What I mean is that the backbone of the plan should be to dispose of these wastes by filtration, because a filter can be constructed according to size which will deal with all you have to deal with. When, as you are doing now, you try to dispose of the sewage by irrigation, and when you make irrigation the backbone of your plan, you will find that it constantly happens that you have more sewage to deal with than you can dispose of in that way, and consequently you will be compelled to allow unpurified sewage to escape from your estate. The filter-bed must be the foundation and backbone, because that will deal with all that you can possibly have. They do at present dispose of their slop waters, but not the solids, at Rookwood, by irrigation. The land is laid out in little shallow tanks, which are planted, and according to the needs of the plants the carriers are opened and the tanks are flooded. As far as that process goes it results in giving as pure an effluent as anyone could wish for. But the quantity coming down is much greater than the land can use under all conditions of weather. Sometimes it may, perhaps, be able to take up the whole of it, but to-day it was not able to take up more than a very small proportion—I do not know how much—consequently the rest of the sewage is allowed to flow through the irrigation area, and pass over an uncultivated slope, which extends down towards Cook's River. As long as there are only 400 or 500 people there, and there is no local offence, the neighbours have nothing to say about it; but when you get 2,000 or 3,000 people there it will be different. You must be able to make sure of dealing with all the sewage at all times. If it is found that one filter-bed is not sufficient you can have two or three. But under this plan you can also take advantage of the sewage for cultivation by having a cultivation area along the line of flow, and by having means of tapping the sewer, and taking off exactly what you want for cultivation; then agricultural exigencies no longer interfere with the main object.

1175. *Mr. Davies.*] I gather that you are most emphatic in your opinion in condemning this site for massing the whole of the pauper patients? Merely as far as the character of the soil goes.

1176. Do you approve of having twenty-four or twenty-five pavilions erected on that site in order to concentrate there the whole of the pauper patients? I see no objection to erecting twenty-four or twenty-five pavilions there for that purpose on that area, except with regard to the soil, which is not what I should choose. But I regard that point as a minor objection, and not one which is to block an important scheme.\*

1177. Supposing the site were all that could be desired, and it could be well drained, do you favour the erection of buildings to house people from all the institutions, making this a pauper town? I have carefully guarded myself against being taken as either approving or disapproving of the scheme as a whole. My reason is that I have not the information. I do not know enough of the facts on which a decision should rest.

1178. Have you not always advocated the classification of the inmates of these institutions? Yes.

1179. You still hold to that opinion? Certainly.

1180. Would not that be much more preferable than to concentrate the whole of the inmates of these institutions at Rookwood? I do not see why they could not be classified on this large estate. You could have groups of buildings for the different classes, and they would be practically separate institutions. For instance, the chronic sick would go to the hospital group, and that would be complete in itself. It would be under one management, it would have one superintendent, it would get its bread from a single bakery which supplied the whole institution perhaps, but it would be a separate establishment for all practical purposes.

1181. Am I to understand that you would favour one great institution or number of pavilions for housing all the poor from Liverpool and Parramatta at Rookwood? No; that is precisely the point on which I guarded myself.

1182. I want your opinion? I must reply that I have not the necessary information, and I do not see how I could get it in a short time. I should want to know the requirements of the class to be dealt with, and some of the results of dealing with them in separate institutions as at present; what was the benefit expected to be obtained from putting them on one spot. I should also like to know something about the method of construction and cost. It might possibly be that methods of construction might be chosen which would show a very small capital cost at this stage, and which would, perhaps, turn out not to be suitable.

1183. Are you aware that it is contemplated to spend £108,000 on this proposal when complete? Yes; I have noticed that.

1184. Are you of opinion that a much less costly building could be erected than is proposed? No; so far as I know, it is a moderate sum for 3,000 people.

1185. Do you come directly into contact with the administration of these different institutions? I do not; that is my difficulty.

1186. Having visited the Rookwood site to-day, are you in favour of that site? Upon the whole, I am not.

1187. Do you believe that a more suitable site could be obtained? Yes.

1188. And quite as convenient? Yes.

1189.

\* NOTE (on revision):—I should withdraw this sentence, which must have been in answer to a further question. I think the soil and exposure of this site a major objection, as my earlier replies show. Rheumatism and chest complaints would probably become very frequent there among the inmates. However, four or five hundred people have now been kept there a long time. On this point the visiting surgeon could speak with some authority.

1189. Would it be possible to move the whole group of buildings further away from the water supply so as to prevent any possibility of contamination? As far as I can see, it would.
1190. To move them further down in the direction of the railway? Yes.
1191. Would that remove the objection you have to the possible contamination of the water? Yes.
1192. Would it only partially remove that objection? I think it would remove it.
1193. *Mr. Clarke.*] You say that this site is rather exposed;—would you prefer some other site in the neighbourhood of Sydney, say, near Little Bay, fronting the sea? No; not so far over as that. I should prefer a site near Kensington, at the Randwick end of the Church and School Lands.
1194. At Maroubra Bay, or near Little Bay, or Long Bay, would it not be easier to drain into the sea than on the western side of the range above Kensington? I think not. As far as I remember, you could effect a junction there quite easily.
1195. You could connect with the present water supply? Yes.
1196. If it was not possible to drain the Rookwood site to the sewerage system at Cook's River, what would you suggest? I think that would be a fatal objection.\*
1197. If the sewage of the 408 people who are at Rookwood can be disposed of at present by using it for an orchard and garden, would it not be possible on that large area to dispose of all the sewage when there is a large number of inmates there by an extension of the present irrigation system? I have already explained that that plan is defective, and that the whole of the liquid waste from the people at present on the ground is not purified. If you had 1,000 people there instead of 450, the present system with the solids could still be carried out quite safely. You can do away with any solid waste by the present system, but it is the liquid waste that would give you trouble if you had a large number of people there.
1198. Do you think that the proposed site for the hospital being within 5 chains of the Potts' Hill Reservoir might be dangerous to the public health through germs or microbes being blown into the reservoir? Yes; there would be a risk of that.
1199. Do you think there would be any such danger if they were erected half a mile away? I do not think so.
1200. You are aware that all the sweepings and decayed vegetable matter from the streets of Sydney are deposited at the back of Mount Rennie, near the Randwick Road? I know that very well, and I am very glad when it all goes there, instead of being used as foundations for houses.
1201. Ought not that to be more dangerous than the present state of affairs at Rookwood? It might be; but there is no open reservoir near Mount Rennie.
1202. Have you heard of any disease arising from the refuse at Mount Rennie? I can say that the neighbourhood is not as healthy as it might be.
1203. *Chairman.*] Are we justified in believing in general terms that you object to the site at Rookwood on account of its being rather too exposed? Yes.
1204. Do you also believe that the soil there is unsuitable? Yes.
1205. Do you think that the question of dealing with the sewage is surrounded with considerable doubt? Yes.
1206. Do you regard the proposal as objectionable on account of the contiguity of the Potts' Hill Reservoir? Yes; as at present arranged.
1207. Do you regard the system of concentration of all the paupers of the Colony as being of very doubtful advantage? I should prefer to say that it is unascertained. I have no information before me.
1208. A large number of those in the asylums are consumptives? Yes.
1209. A site on the sea-coast or adjacent to it would be unsuitable for consumptives? Certainly.
1210. If you were given the choice of two good sites—one on the sea board and one inland—which would you take? Inland, of course. I thought you asked the question with reference to consumptives.
1211. Is the number of consumptives in these institutions sufficient to cause you to choose an inland site? I do not think so, because I repeat that the consumptives are already hopelessly ill, and we are not projecting an hospital for consumption, but merely a refuge for people who know their fate, and who are there to die. We are not treating consumption, and although that point has some importance, it has not very much. If it were proposed to place 180 consumptives who are in these asylums on the cliffs facing the sea, I should object very much, because although they are going to die that would distress them. There would be no choice between 10 miles and 30 miles from the sea.
1212. Supposing the choice were 1½ mile back from the sea, and 30 miles back from the sea, and a number of these people were suffering from consumption and chronic illness, which site would you choose, other things being equal? That is cutting it rather fine, 1½ mile is rather close. If it were a choice between 10 miles from the sea and 30 miles, then I should say there was no choice for the class of cases we are speaking of.
1213. Supposing a site could be obtained some distance inland within a mile or two of the railway, with tolerably good soil and water supply, would you say that that was a suitable place on which to put an establishment of this kind? On hygienic grounds alone, I should say, "yes."
1214. From an administrative standpoint, would you see any great difference between an establishment at Rookwood, 19 miles away from Sydney, and an establishment at, say, 30 miles distance? Most of the inmates would have to start from Sydney; they come to Sydney first, and then they go to the institution. They would have to be carried the whole distance.
1215. Would they not go by train? No doubt.
1216. So that the difference in a journey once in a lifetime, say between Liverpool and Rookwood, would not be very great? No.

William Bradley Violette, Esq., M.B., Government Medical Officer, Parramatta, sworn, and examined:—

1217. *Chairman.*] Are you Government Medical Officer for the Parramatta district? Yes.
1218. How long? Since 1887.
1219. What institutions have you charge of? The Cottage Homes, the Industrial School for Girls, the Gaol, the Police, and I visit the Rookwood Asylum.
1220. Have you anything to do with the George and Macquarie Street Asylums? No; but I had charge of them at one time.

1221.

\* NOTE (on revision):—My recollection is that the question included the words "and if the sewage could not be disposed of on the estate" after the words "Cook's River."

J. A.  
Thompson,  
Esq., M.D.

13 Feb., 1896.

W. B.  
Violette, Esq.,  
M.B.

13 Feb., 1896.

- W. B.  
Violette, Esq.,  
M.B.  
18 Feb., 1896.
1221. *Mr. Hoskins.*] Are the Cottage Homes tenanted by aged people? Yes, married couples; there are twenty cottages which are occupied at present.
1222. Is it intended that they should be removed from those homes? I have not heard of any proposal of the kind.
1223. Do you not think that the George and Macquarie Street Asylums are excessively overcrowded? Certainly. In 1889 I reported that they were overcrowded. At that time in George-street there were only 730, and in Macquarie-street 240.\*
1224. Do you not think that those asylums are unsuitable for housing aged and infirm persons? Certainly.
1225. Therefore it would be in the interests of humanity to remove those people, if possible? Yes, from both asylums.
1226. Are you in favour of having so large a number as 3,000 indigent and sick persons concentrated at a place like Rookwood? I do not; I do not see any advantage in it.
1227. What disadvantages do you see in the proposal? I do not think it is well to have them altogether in one place. There should also be more inquiry before persons are admitted. At present they are all sent out from Sydney, and it is impossible to obtain information.
1228. Do you think that the liberality of the Government, in providing refuges for the aged and infirm, is abused because sufficient inquiry is not made? I have no doubt that is the case.
1229. Do you not think that the number of persons who are receiving such aid is excessive for the small population? Yes; and recently the numbers have grown enormously.
1230. Do you think that arises primarily from abuses in granting admission to the asylums? Yes.
1231. Do you know what means are provided in Victoria for dealing with the indigent and sick? There are several establishments there, but they are in different districts—in the Ovens, Ballarat, and other districts. A local Board makes inquiry into each application.
1232. What kind of buildings have they? Very fair. The Ballarat buildings are very good.
1233. Do they deal with them in the matter of food as liberally as we do? I think so. I have seen the inmates, and they seemed to be hearty and well, and to compare favourably with ours, man for man.
1234. Is there as large a percentage of recoveries from illness and weakness in asylums, where there are not so many grouped together, as there is in asylums where the inmates are concentrated, as is proposed here? I think that is necessarily the case, because they get more attention in small institutions.
1235. In the George-street Asylum there are 1,125 patients;—is the number of assistants there much in excess, compared with the number of inmates of the Macquarie-street Asylum? No; numerically there are more, but not taking the number of patients.
1236. Does not that go to show that concentration leads to economy in administration? I do not think so, because you must have a certain number of attendants. The only economy would be in the building space.
1237. Do you say from experience that the concentration of inmates does not necessarily imply more economical administration? Not over a certain number. You could work, say, 1,000 inmates, with a few more attendants than you could work 500 inmates. But when you go over 1,000, you have to increase your number of attendants proportionately, so that you would lose.
1238. Does that show that the number of persons in the asylums should not exceed a specified number, say, 1,000? Yes; you will find that that is the case with regard to hospitals for the insane. They are scattered about in different places, and the inmates do not exceed 1,000 in each institution.
1239. *Chairman.*] Do you fix the limit for competent administration at 1,000 inmates? Yes.
1240. *Mr. Hoskins.*] Do you think it is probable that the number of persons who would regain their strength and health would be larger in an institution where the inmates would not exceed 1,000? Yes.
1241. Do you visit the Rookwood Asylum at present? Yes; twice a week.
1242. Do you consider that that is a good site for grouping together a large number of persons, having regard to the contour of the land? I dare say a more eligible site could be found, but we are committed to that site to a certain extent, as the buildings are there now.
1243. Is the health of the patients at Rookwood at present pretty good? It is fairly good.
1244. Is the mortality there very great? During the hot weather I have been very fortunate. In some of the asylums they have complained that the hot weather affected the inmates very disastrously.
1245. Do you ascribe the good health of the inmates at Rookwood to the fact that the buildings are of a modern character? Yes; it is well ventilated, and we have never had any fault to find with the structure.
1246. What is your view in regard to pavilions of one storey, such as you have at Rookwood, or having buildings of two storeys? I see no objection to two-storied buildings. I think they are preferable, they are more economical, and they are more beneficial to the inmates, because there is a purer atmosphere.
1247. Do you think there should be some two-storied buildings at Rookwood? Yes.
1248. Would you like to see the number of inmates at Rookwood increased to 2,500 or 3,000? No.
1249. Why? There is certainly a large area of ground there, but I do not think it would be well for all classes of inmates to increase the number too largely. I do not think that cases of phthisis do well at Rookwood. Cases of cancer are always sent away to Liverpool, and there is a very good cancer ward there. I have to send away many cases of chest complaints, such as asthma, from Rookwood. I have to send some to Parramatta, and Liverpool, where they are further away from the sea air, and the bleak air at Rookwood.
1250. If the number of patients at Rookwood were increased five-fold, would there be any great difficulty in dealing with the sewage? That is an engineering question. A defective system of drainage would impair the health of the inmates.
1251. If the number of inmates at Rookwood was largely increased, would the present system of disposing of the sewage be suitable, having regard to the health of the people in the neighbourhood, and the proximity of the water supply? No, they could not use up all their sewage under the present system.
1252. Then the original proposal to bury the excrement would be absurd in your view? The excrement is not all you have to deal with, you have the fluid matter.
1253. The last witness told us the fluid matter could be dealt with by filtration beds, and that the effluent would be pure or clear? It would be pure to the view.
1254. Do you think that there would be any possible fear of contagion or injury to the health of the inhabitants of Sydney from the poisoning of the water supply at Potts' Hill Reservoir if the excreta were disposed

\* NOTE (on revision):—My answer to this question should be "At that time there were in the George-street Asylum 885 inmates, and 303 inmates in the Macquarie-street Asylum, whereas there was only accommodation for 730 in the former, and for 240 in the latter asylum."

W. D.  
Violette, Esq.,  
M. B.

18 Feb., 1896.

disposed of by fire, and the liquid conveyed away as at present, or to filter beds? I do not think there would be any danger to the water supply from the burning of the solid matter.

1255. Have you any experience of the disposal of solid matter by fire? No.

1256. On the whole, do you consider that it would be wise to largely increase the present number of persons located at Rookwood? No.

1257. *Mr. Davies.*] How long have you been medical officer for Rookwood? Since the beginning of 1895.

1258. Were you consulted by the Government or the Inspector of Charities, or by any other official with reference to the proposal before the Committee? No.

1259. Did you ever see the plans before you saw them in this room to-day? No.

1260. Were you absolutely ignorant of what was proposed by the Government or the Charities Department with reference to providing accommodation for housing the poor? I never heard of it except in the newspapers.

1261. From what you know of Rookwood, would you recommend the concentration of all the inmates of the asylums there? No.

1262. If typhoid, or any other epidemic, broke out there, would it not be very dangerous? The age of the patients precludes the possibility of typhoid. The diseases we have are mostly skin diseases, and they are noted and isolated at once.

1263. Have you any cases of consumption among your patients? I suppose there are about thirty-five or forty cases in the asylum.

1264. Do you retain them at Rookwood? Yes.

1265. What cases, as a rule, are transferred from your institution, and from the George and Macquarie Streets Asylums? Cancer cases always go to Liverpool. Occasionally phthisical and asthmatic cases are transferred. Rheumatic patients occasionally complain that Rookwood is too bleak.

1266. Have the patients under your control been withdrawn from George and Macquarie Streets? Yes, a great many of them.

1267. How are other inmates, who are not inmates of the other asylums, sent to you? They first appear before the Government Medical Officer of Sydney who examines them, and sends them to the Department of Charities, they then receive an order and a railway pass up to Rookwood.

1268. Would it not be more convenient to have the examination made by the medical officer of each of the institutions, rather than to send them to Sydney and back again? They find their way to Sydney first, except in the case of those who are sent in by country magistrates. About 1 in 15 is sent in from the country.

1269. *Mr. Lee.*] Have you had occasion to report for or against the buildings used for the poor in Harris-street? No; I believe they were only taken while I was there, to accommodate the excess in George-street. I had remonstrated against the overcrowded condition of George-street, and those buildings were then taken to relieve George-street temporarily.

1270. Since then have they gone into permanent use, and is a portion of them now used for a skin-disease hospital? I do not know any thing about that. When I first went to George-street, there were 550 inmates there. In 1889 there were 889, and it was overcrowded then. The number in George-street is now very much in excess of that.

1271. In consequence of the imperfect drainage in Harris-street and the surroundings, generally, do you think it is dangerous to the inhabitants of the town to retain those Harris-street buildings? It is from the drainage, but not from the inmates. That part of the town is very badly drained.

1272. Could you suggest where the inmates of the Parramatta Asylum could be sent? My own opinion is that there should be subdivisions of the Colony. In the northern district the people would know the condition of the applicant better than we can, and there could be more scrutiny with regard to the admission of patients. Then, there could be a southern division and a western division.

1273. Are you altogether opposed to the concentration of the pauper population? Yes.

1274. You are aware that the present proposal is to extend the pavilion system now existing at Rookwood? Yes.

1275. In a return dated 31st December, 1894, I notice that the number of inmates at Rookwood for the year was stated to be 293, and the cost was £7,516, whereas at Macquarie-street Asylum, which is a two-storied building, there were 348 patients and the cost was only £5,443? Yes; the Macquarie-street Asylum is an old established place, whereas the Rookwood Asylum is only developing.

1276. Can you offer any opinion as to why the cost was so much greater at Rookwood? No.

1277. Do you think it has anything to do with the pavilion system? There are a great many more attendants at Rookwood, in proportion to the number of inmates, than at Macquarie-street? I noticed that when I went there at the beginning of the year.

1278. Supposing we had to consider the question at its inception, and we were not committed to several places, as at present, would you favour the idea of concentrating the inmates on a large area of land 20 or 30 miles in the interior, or would you favour their being treated in smaller numbers in their respective districts? I would prefer the district system.

1279. Would not that prove more expensive? Not necessarily.

1280. Do you not think that for want of competent supervision abuses might grow up in a number of smaller institutions? I do not think it would be much more expensive. The prisons are situated in different centres, and I do not think the cost is much higher in one centre than in another.

1281. Have you considered the question of the proximity of the water supply at Rookwood? Yes.

1282. What are your views on that question? There is the question of sentiment on the part of the public.

1283. Do you think it is safe or unsafe? As many of the consumptive patients can walk about, and get near the water supply, and as their expectorations are contagious, and might possibly contaminate the water, I do not think it is desirable that they should be there.

1284. That being the case, and the country being partly committed to the Rookwood scheme, do you think it would be desirable to have some central place where the consumptive and chronic cases should be treated? Yes.

1285. Do you know anything of the Liverpool Asylum? I do not know it intimately.

1286. Would it be suitable for the concentration of consumptives? It is a good building, and I do not see the necessity for doing away with it, like the George and Macquarie Streets Asylums; but I do not think Liverpool is a good place for consumptives. I do not think any place near the coast is good for consumption.

1287.

- W. B. Violette, Esq., M.B.  
18 Feb., 1896.
1287. Do you think it would be better to go further away in the country for consumptive cases? Yes; and also for chest complaints.
1288. If asked, would you submit such a scheme as that now before us? No.
1289. Although there may be a certain amount of sentiment about the matter, do you think there is a certain amount of unknown danger? Yes; there is a possible danger.
1290. When you say there is a question of sentiment about it, do you keep in view the fact that the 400,000 residents in the city and suburbs contribute very largely towards the support of the pauper population? Yes.
1291. And that they might be supporting the pauper population at Rookwood to poison themselves? Yes.
1292. *Mr. Fegan.*] In answer to Mr. Lee, you said that the cost at Rookwood is a little higher than at the other asylums? I said that from the figures given by Mr. Lee.
1293. Have you not a lower average of deaths at Rookwood than at the other asylums? I do not know, but I see that is the case from the figures you hand to me with regard to 1894.
1294. Then the statistics will be much more in your favour this year, because you say that very few died at Rookwood during the hot weather? Yes; very few from heat.
1295. What is your reason for preferring two-storied buildings to one storey? They are more compact, and I prefer the second floor for many cases of sickness. They get a purer and lighter atmosphere than is obtained in the denser atmosphere on the lower levels.
1296. Do you not think there is a great deal of imposition in district asylums, and that there is a number of people in them who have no right to be there? There is a number of people in the institutions with regard to whom there has not been sufficient inquiry. Cases have come under my notice where inmates should not be there, as their relatives were in a position to support them.
1297. Do you know that in nearly all of the large cities and towns of the colony they have their own institutions? Yes.
1298. Have you heard many complaints against them? No.
1299. Do you think that such institutions should be left to the management of a ladies' committee? Certainly.
1300. When you speak of the Victorian institutions, do you speak from intimate knowledge? I only speak of them from my experience as a visitor three or four times, when I have gone on trips to that colony.
1301. Apart from sentiment, do you think that the burning of night-soil would be injurious to the people in close proximity to the institution? No.
1302. *Mr. Black.*] In reply to Mr. Lee you said that you thought the only economy arising from the concentration of large bodies of paupers would be in the building space; do you not think that there would be more economy in superintendence? No; a certain number of men require a certain number to look after them.
1303. If you have three asylums with 1,000 inmates in each, if you do away with them and group them into one asylum, do you not think that the man who has to manage and superintend any one of those asylums would be competent to manage the amalgamated institution? He would want more assistants.
1304. But in saving the salaries of two superintendents, would there not be a great deal of money saved? More assistants would be required. You would save a few pounds, but nothing considerable.
1305. *Chairman.*] I find by a return that there were 170 deaths in the asylums last year from such diseases as phthisis, asthma, bronchitis, pneumonia, and complaints of that character. It is evident, therefore, that the proportion of patients suffering from those ailments must be considerable in the asylums? Yes; but those cases have less chance of recovery than others.
1306. Still the number affected in that way must be considerable? Yes.
1307. With a knowledge of that fact, if you were called upon to find a home for these people, would you go for a site near the sea or inland? Inland, beyond doubt.

FRIDAY, 14 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

James Burt, Esq., Draftsman-in-charge, Information Bureau, Department of Lands, sworn, and examined:—

- J. Burt, Esq.  
14 Feb., 1896.
1308. *Chairman.*] Are you Draftsman-in-charge of the Information Bureau of the Lands Department? Yes.
1309. Do you produce certain maps which the Committee desire to obtain from your Department, and what are they? Yes; a map showing the situation of the Newington Asylum and the Asylum for the Infirm and Destitute at Rookwood; another, showing the situation of the Government Asylums at Parramatta, and the Benevolent Asylum in the same place; also, the Benevolent Asylum at Liverpool; also, a map of the county of Cumberland, showing, by green tint, the reserved land, and by pink tint, the vacant Crown land in that county.
1310. What is the area of the land at Campbelltown? The plan shows all the areas; but, roughly speaking, there are about 2,500 acres.

Cecil West Darley, Esq., President of the Metropolitan Board of Water Supply and Sewerage, sworn, and examined:—

- C. W. Darley, Esq.  
14 Feb., 1896.
1311. *Chairman.*] You are a civil engineer, and President of the Metropolitan Water Supply and Sewerage Board? Yes.
1312. *Mr. Davies.*] Do you know the site on which it is proposed to erect a pile of buildings for housing the destitute sick and poor at Rookwood? Yes.

1313. Do you think it is desirable to erect a cancer hospital, and a hospital for incurables suffering from contagious diseases, on the site shown on the plan, and so close to the Potts' Hill Reservoir? As a matter of sentiment, I do not think it is. C. W. Darley,  
Esq.

1314. Do you think it would create alarm in the minds of the people living in the city and suburbs? I think, as a matter of sentiment, it would be unwise to put those hospitals so close to the reservoir. Personally, I do not believe that it would be likely to do harm; but sentiment must be respected in a case of this kind. You cannot be too particular in the case of a water supply in keeping any appearance of contamination away from it. 14 Feb., 1896.

1315. Would there be a possibility of contamination owing to the close proximity of these hospitals? I take it that is to a great extent a medical question; but I think that the most danger would be from the consumptives. I do not think that there is anything contagious about cancer that could be transmitted in water. We know that with dust blowing about the microbes of consumption might be carried into the water at night-time. In the day-time my opinion is that the sun would destroy the microbes.

1316. But cannot microbes stand great heat? Sunlight destroys them very rapidly. I do not favour those three hospitals being put in the position marked on the plan.

1317. As head of the Water and Sewerage Board, are you entirely opposed to that proposal? Yes; seeing that there is plenty of space for the three blocks in question to be put further north of the present buildings.

1318. Do you favour the removal of those buildings to a greater distance from the water supply? Yes.

1319. What is the nature of the soil on the proposed site? It is clay soil overlying Waianamatta shale.

1320. Would it be possible on that soil, without enormous expenditure, to provide for a system of irrigation and sewage farms? It would not necessarily require great expense. It would only require under-drainage. It is not the best sort of ground, of course, but it could be used for that purpose.

1321. Could it be made suitable for the purpose of a sewage farm? It would have to be under-drained. There are such farms in the same sort of soil.

1322. Are you of opinion that the sewage from over 3,000 patients could be properly and safely treated on that area? I would sooner see it taken away by water carriage from the site—that would be more desirable.

1323. Do you know of any means by which the sewage could be taken from that site into the existing sewerage system? The present system of sewerage was only designed to be extended to Burwood. It would be costly to connect with the sewerage there. I think the nearest sewer would be about 2½ or 3 miles from the proposed site.

1324. What would be the probable cost? I cannot give any idea, as I have not considered that question.

1325. From your knowledge of the sewage farm at Webb's Grant, which is in sandy soil, would you advocate the treatment of sewage and refuse at Rookwood from 3,500 patients in the same manner as at Webb's Grant? At Webb's Grant the downward filtration system is adopted, but there are plenty of towns in England where large quantities of sewage are dealt with on very limited areas by other processes equally as applicable as the downward filtration system. That system is only adopted where you have suitable soil. There are other processes of chemical treatment and precipitation, running off the effluent water, and burning or calcining the solids. That is very easily done.

1326. Have you any experience of the cost of treating sewage matter, especially solids, by fire? No personal knowledge.

1327. Do you know whether it is an expensive process? Where there is a large population it is not very expensive. The sewage in many large towns in England is treated by companies in that way, and the taxation is not higher than where there is water carriage.

1328. For a place such as Rookwood, which would be the most inexpensive system of drainage next to the ordinary system of sewage? I should say a system of precipitation and filtration. Filtration through coke-beds is found to be one of the best methods.

1329. Which would be the most economical method? It would be cheaper to treat the sewage locally than to take it away and connect it with the southern outfall sewer. It would be cheaper to treat it locally by a system of precipitation and filtration than to connect it at Burwood and take it out to Cook's River.

1330. Do you favour the concentration of 3,000 or 4,000 paupers at Rookwood? I do not see any objection to it myself, so long as the buildings are kept sufficiently far away from the water supply.

1331. Would it not possibly imperil the lives or health of those living in the locality to mass such a large number of people there suffering from all kinds of diseases? I do not think so. To commence with, it is a very sparsely-populated district.

1332. Would not a population of 3,500 paupers at Rookwood be equal to the population of many inland towns? The pauper population at Rookwood would be under proper regulations. Cleanliness would be properly attended to, and, therefore, I do not see that there would be any objection to having them there. Sanitary matters will be properly attended to, and the place will be far healthier than many inland towns where sanitary matters are decidedly neglected.

1333. Should it not be one of the first principles that in providing for the housing of the poor, and for those suffering from chronic disease, that the site chosen should be one that can be thoroughly well drained by an efficient system of sewerage? Yes.

1334. The next thing would be a thoroughly good supply of water? Yes.

1335. In this case you have the water supply, but not a system of drainage? A system of drainage does not exist there at present, but it could be provided.

1336. As far as you know, there is no possibility of connecting this place with the general system of sewerage until the completion of the Burwood sewer? That would be the nearest point.

1337. In the absence of a thorough system of sewerage, would you advocate the construction of these buildings on the Rookwood site? I see no objection to the site, because naturally the drainage system would be carried out as you were erecting the buildings, which will take some time to erect.

1338. *Mr. Lee.*] Where would you suggest that the hospitals should be erected? I think the three hospitals could be erected immediately to the north of the present buildings. There is a fine high spur there suitable for buildings. There is a large area of land there between the present buildings and the place marked on the plan for the Medical Superintendent. His building could be moved to another site.

1339. Do you think those buildings would then be a sufficient distance from the water supply? Yes.

C. W. Darley, 1340. Do you take any other objection to the plan generally? No.

Esq. 1341. Take the question as a whole. Here is a proposal to concentrate all the male destitute people at Rookwood, within a short distance of the Potts' Hill Reservoir. There is no system of drainage proposed at the present time, and no system of dealing with the solid matter. Under these conditions, would you advocate the erection of these buildings and the massing of these people on that site? I take it that common sense would dictate that sufficient provision for sewerage would be made in the scheme. I take it for granted that such provision would be made. I would not approve of the congregation of the paupers there unless proper provision were made for drainage.

14 Feb., 1896.

1342. If a proper system of sewerage were provided, and these hospitals were moved to a greater distance from the reservoir, you would have no objection to the proposal? Yes.

1343. Supposing a system of sewerage were not carried out, and the solid matter were simply collected and buried in the earth, without chemical or other treatment, would you object to the proposal then? I think it would be unwise.

1344. Do you not think it would be dangerous? I think it should be treated.

1345. *Chairman.*] Would it not be unwise to bury all the solids in the ground at Rookwood without previous treatment? It should be done carefully. It should only be done for a limited time.

1346. *Mr. Lee.*] If that plan is carried out with 3,500 patients on the ground, would not the soil become absolutely poisoned in fifteen or twenty years? I think it is desirable to remove the sewage from the site. It should either be treated or removed.

1347. What will be the danger of contagion twenty years hence when the whole surface will be poisoned? The soil would really not become poisoned. The air and sunlight destroy all the organic matter. At the same time it would be an unwise thing to bury all nightsoil continually over that area. It is better to remove it away from the site, and treat it at a special place. At the same time I wish it to be understood that a large quantity of nightsoil can be buried in a very limited space if properly done. Nature acts as a destroyer of the germs.

1348. It is held by medical authorities that some germs do not perish when buried in the ordinary soil, and they retain their vitality for many years? That may be the case with some.

1349. That being the case, every time the earth was disturbed would there not be a danger of the germs being scattered and finding their way to the water? I do not favour keeping everything on the premises. Where there is a large population it is better to remove it and treat it.

1350. In the absence of a proper sewerage system, what system would you advocate for dealing with the solid matter? There are several modern systems which are very good. By adding lime and proto-sulphate of iron to the water, the sludge is precipitated, and you can run off an effluent into coke filter-beds. The water can then be safely sent down the nearest creek. Then the sludge can be mixed either with sawdust to burn it, or with ashes, and thus cremated.

1351. That would be partially a crematory system? Yes.

1352. It has been shown that consumptive patients would necessarily be in various stages of convalescence, that some would be moving about the ground and expectorating;—would there not thus be a danger of germs finding their way into the water supply? I took that into consideration when I recommended that the hospital buildings should be removed to a site further away from the reservoir.

1353. Supposing you were called upon to give an opinion upon the whole proposal, and the country were not partially committed to the Rookwood scheme, would you select Rookwood as a suitable site for the concentration of all the paupers of the country? I cannot call to mind any site within a reasonable distance of Sydney which is equally suitable.

1354. Viewing it from an engineering point, and with regard to sewerage and water supply, would you select Rookwood? I do not see any particular objection to Rookwood if the buildings I refer to are removed a little from the reservoir.

1355. Do you think you will ever be able to disabuse the public mind of the idea that their water supply is impaired on account of this institution being placed alongside of it? I do not see that any person of sense would have any objection to it. The main reservoir of New York is in the middle of a dense population, with houses built up closely on two sides of it.

1356. But possibly the sewerage requirements are complete there? Yes; they have underground drainage, but they have houses alongside of the reservoir. Of course, I assume that this scheme will be carried out with proper sewerage. Common sense dictates that you must have sewerage for 3,000 people.

1357. There is some question about the pressure of water at Rookwood;—could the present pressure be increased? Water will have to be pumped up to an elevated tank. The pressure there at present is not sufficient.

1358. Would direct communication with the reservoir give greater pressure? No.

1359. *Mr. Clarke.*] Would it be possible to connect at some future time with the ordinary sewerage at Burwood? No survey is made, but I have no hesitation in saying that it would be quite possible to do so.

1360. Would it cause greater expense to connect with the sewer at Burwood than to deal with the matter locally? I think so. At first, at any rate, it would be cheaper to treat it locally.

1361. Would it be possible by trenching the land, and utilising the liquid sewage, to treat the sewage in the same way as is done at Webb's Grant without causing any offence? Yes.

1362. Could the faecal matter be destroyed by that means? Yes.

1363. Is the site at Rookwood bleak and cold, or in any way unsuitable for an asylum? I do not think it is unsuitable. It is on a hill top, but that is desirable, in order to get the breezes.

1364. *Mr. Hassall.*] With regard to drainage, would the asylum now existing at Randwick be equal or superior to any other site you know of? The advantage of the site at Randwick would be that we have got the drainage there already, or very close to it. I am not quite sure whether it is connected at present, but it is intended to be connected.

1365. If that site were connected with the drainage, do you think it would be a good site for an asylum for the aged poor? No; I think that would be bringing the people into a more dense population. It would not be so desirable as Rookwood, which is more remote.

1366. Would the facilities for drainage at Rookwood be so good as at Randwick? Of course, Randwick could be regulated more readily, because the sewer is closer to it, but when the drainage is extended to Rookwood it will be equally good.

1367. But it would be more expensive at Rookwood? It would be more expensive in the first instance.

1368. *Chairman.*] Are you roofing the Centennial Park Reservoir? Yes.

1369. Why are you doing that? Because it is so close to the street and houses, and there is so much dust blowing about. C. W. Darley, Esq.
1370. Then you think the water might be contaminated by the wind-borne substances? Yes; within towns it is always desirable to roof in reservoirs. 14 Feb., 1896.
1371. Are you roofing the Centennial Park Reservoir because you fear contamination from wind-borne particles? There is a further reason. We had no right to the ground, and there was a promise made that a roof would be put on that reservoir to enable the people to have the use of the surface. In any case it would have been necessary to fence off the reservoir to prevent dead cats and other objectionable things being thrown into it. There is no fear of that at Potts' Hill, because we allow no trespass there.
1372. When a reservoir is placed in the middle of a town is there not a certainty of contamination, unless it is covered? Yes.
1373. The further you get away from population the purer the air is likely to be? Yes.
1374. That being so, is it a wise thing to place within a quarter of a mile of a great reservoir, supplying 400,000 people, a population of 4,000 composed of the most decayed and broken down portion of the community? I think, if the buildings I have referred to were moved as I have suggested, they would be kept at least half a mile from the water. I would not object to that. I think the present buildings are rather more than half a mile away—about three quarters of a mile.
1375. Do you say that half a mile away would be sufficient? Yes; about that. If dangerous cases were not kept within that distance, I think there would be no risk.
- 1376-7. As head of the Water and Sewerage Board, do you disapprove of any population being brought within half a mile of that reservoir if it can possibly be helped? I do not say any population, but a limited population.
1378. Would you have no objection to little tenements being built just on the other side of the reservoir? We have got two caretakers there as it is living close to the water. We do not object to that.
1379. Is it your opinion that it does not matter whether population surrounds an open reservoir or not? There is an objection to people living too close to the reservoir, but if they are kept a certain distance away, and sanitary matters are attended to, I do not object.
1380. Do you fix the limit at half a mile? Anything over a quarter of a mile for ordinary houses would be quite sufficient.
1381. You say a quarter of a mile for ordinary houses, but for such buildings as you refer to on this plan you would say half a mile? Yes, for infectious cases.

Hon. Sir Arthur Renwick, M.D., M.L.C., President of the State Children's Relief Board, sworn, and examined:—

1382. *Chairman.*] Are you President of the State Children's Relief Board, and of the Benevolent Society of New South Wales? Yes, also of the Sydney Hospital and the Deaf Dumb and Blind Institutions. Hon. Sir Arthur Renwick, M.D., M.L.C.
1383. *Mr. Lee.*] Have you had a very long experience in connection with our charitable institutions and asylums? Yes. 14 Feb., 1896.
1384. Are you acquainted with the proposal now before the Committee to concentrate all the male paupers at Rookwood? Yes.
1385. Do you know the Parramatta Asylums? I have been in both of them, and I remember when they were first instituted. I was then honorary physician to the Benevolent Society of New South Wales, and the buildings in Sydney being overcrowded, it was determined by the Government to still further remove the patients to Parramatta and Liverpool. They were then taken from under the control of the Benevolent Society and placed under the control of the Government.
1386. Have you seen those asylums recently? Not within the last three or four years.
1387. What was your opinion at that time as to their suitability? That they were not first-class buildings for the purposes for which they were used.
1388. Are you aware that the pauper population has increased very much of late? Yes.
1389. Can you ascribe any reason for that? In the first place there is the increase in population generally; in the next place, during recent years there has been a great deal more hardship and suffering amongst the working class of the community; but I do not know of any special reason.
1390. Have you any reason to suspect that we are keeping more than our fair share of the poor? That is very difficult to answer. There is no doubt the proportion is now much greater than it used to be ten or twelve years ago.
1391. In dealing with State children have you found that the system of boarding-out is a success? It has been an eminent success.
1392. Do you think that that system could be applied to old men and women? It would have to be applied with very great discretion to their case; but there are allied schemes which might be more suitable.
1393. For what purpose is the Randwick Asylum used at present? For the purpose of maintaining orphans, or the children of people who are able to pay some small portion of the maintenance money.
1394. Are the children kept there until they are old enough to board out? No; the Randwick Asylum does not at present come under the provisions of the State Children's Relief Act. In the first place, the Randwick Asylum has certain funds of its own by which it is able to maintain a certain number of children. While those children can be maintained there with those funds, which could not be otherwise applied, we have felt that it would be injudicious to remove the children at present.
1395. Are the whole of the premises used? No, only a small portion.
1396. Would there be any objection on the part of the authorities to lease a portion of that building to the Government for the temporary housing of the poor? So far from that being the case, I understand that a few years ago a proposal was made to the Government in connection with that matter, but I do not remember the precise terms.
1397. Are you aware of any local objection to housing the poor there? There might possibly be an objection on the part of the inhabitants in the neighbourhood. I think they would object under any circumstances to paupers going there.
1398. Providing that difficulty were got over, would it be possible to come to terms with the directors? I have no doubt whatever that it could be done.

Hon.  
Sir Arthur  
Renwick,  
M.D., M.L.C.  
14 Feb., 1896.

1399. What are your views as to the best method of dealing with our paupers? I may state that some few days ago I had a conversation on this subject with Mr. Maxted, who I think is at present in charge of most of the charitable institutions of the country. He was introduced to the Service in his present prominent position in connection with the State Children's Relief Board, and I have always been in most confidential relations with him. It is with very great regret indeed, knowing the ability and experience of Mr. Maxted, that I disagree with him on this particular matter. I disagree with him first of all, because, even when the proposal was made by Sir Alexander Stuart that Rookwood should be employed as a kind of reformatory for children, I then thought the site unsuitable. I think that it would be still more unsuitable as a site for adults, on account first of all of its exposure, on account of the character of the soil, which is clay, and also on account of its proximity to the water supply of a great city. On these grounds, as well as some others, I explained to Mr. Maxted that my views were entirely out of harmony with his. Of course, Mr. Maxted, as an official, looks at the matter more from the standpoint of management and expense, but a country like ours, in treating questions of this character, should look at something beyond that. That is another reason why I disagree with him. My own idea is that it is a mistake to herd together so many persons in one building who are so dissimilar in their characters, so different in their experiences, and so different in the nature of the diseases to which they may be subject at the period of life when they are placed there. I think it is extremely desirable in all cases when people are massed together that they should be classified and separately treated and attended to. I think it is very unwise to place people affected with cancer near those affected with consumption, and especially to place either of those near people who are healthy and only affected by senility. The great drawback in connection with the management of a large institution of this kind is always the want of classification. That is really the great blot on our present system in connection with the barrack treatment of our aged male paupers, and the treatment of females too for that matter. I think the best course to take under the circumstances would be to relieve the present buildings which are so overcrowded and unsuitable, by removing some of the inmates, if local feeling could be done away with, to the asylum at Randwick. Those buildings are at present to a great extent unused, and they are very suitable in some respects for these very people. It would be impossible to retain the Randwick Asylum as an institution for adults and children at the same time, especially for these old men. I can foresee great dangers if these two classes are placed in the same building or in proximity to each other. Therefore, if it is intended to utilise the Randwick building in this way, the children ought to be boarded out at once, and arrangements might be made through Parliament or otherwise, for the utilisation of the funds left for the Randwick institution, not forgetting, of course, to make provision in any such Act for the recognition of the great and valuable services and claims of those who have given funds to that institution. Ultimately, it would be well for the people of this country to make provision for the old people by providing old-age pensions and separate homes for married people, and for the large proportion who can never be treated in those ways, by establishing suitable institutions. The Parramatta institution was originally a tweed factory or something of that kind. It was never intended for hospital purposes at all. These are the general suggestions that I would throw out.

1400. What is your opinion as to the advisableness of having a central hospital for the treatment of acute and chronic cases? They ought to be separated.

1401. At present is there not a large portion of the space at each asylum used for hospital purposes? Yes.

1402. What is your opinion as to having some central system for acute and chronic cases? In hospitals we always treat the acute cases only, and chronic cases are treated in convalescent hospitals, or institutions of a similar character. That is a distinction well recognised in every civilised community. It would be impossible to confine all the acute cases to one building. We must have separate buildings in separate centres. There was one remark I forgot and that is in connection with the water supply, and the dangerous proximity of these buildings at Rookwood to the reservoir. In this country we have severe dust storms, and there is no doubt that dangerous particles are carried to a far greater distance here than in other countries which are not semi-tropical. There is no doubt that would be a source of danger.

1403. *Mr. Lee.* Do you apprehend danger from the consumptive patients seeing that consumption is a communicable disease? I have no doubt about that. In Italy it is called the English disease, simply because it is supposed that the English visitors communicated the disease to each other. There is no doubt in my mind that it is communicable by touch and close proximity.

1404. Do you recognise that in a large hospital specially set apart for consumptive patients, some of them must necessarily move about the ground and they would expectorate, and that expectoration might be conveyed to the water supply? I am sure that your suggestion is perfectly correct. The sputum dries up and is blown about in all sorts of places. I am sure that the great prevalence of the disease in Australia is due to that very cause to a large extent. Phthisical people walk about the streets, they spit on the ground, the bacteria get into the lungs of healthy persons, and so the disease is established. I have known cases where individuals have become affected with consumption, although there was no trace of the disease in their families, and no doubt that has arisen from local causes such as you refer to.

1404½. You think that the Committee are bound to take into consideration the gravity of placing so large a number of people in close proximity to the water supply? Yes.

1405. If you were consulted in the first instance as to a proper site on which to place our destitute, would you have selected such a site as Rookwood? No; I am quite decided about that. I do not think it is suitable for hospital purposes under any circumstances.

1406. If you were selecting a site would you go into the interior? Yes; there are plenty of sites. This is not a small country.

1407. You do not think it would be wise to concentrate our destitute and infirm at any one place? Quite so.

1408. And you think it is very inadvisable to concentrate them at Rookwood? Yes.

1409. If the Committee determine to recommend the use of the Randwick Asylum temporarily, could the children there be dealt with? Yes; they could be boarded out within a week. We have on our books at present 500 applications of a suitable character.

1410. What arrangements would the trustees want? I know pretty well what their feelings are, and I do not believe that they would stand in the way of such a proposal.

1411. But the children at Randwick are not orphans, and they could not be boarded out without the sanction of their parents? We can board them out under the Act at present. 1412.

to 800. But I understand the proposal is to separate those affected with diseases of certain kinds, to classify the inmates, and then provide a staff. If it is a staff for poor old infirm men who occasionally get ill, I imagine one medical man would be sufficient for 800. But for 800 inmates affected with disease you would require a greater number of medical men to attend effectually to them. It is a matter of experience and can only be dealt with as it arises in each particular case.

1465. *Mr. Clarke.*] I presume you are aware that the Randwick Asylum is a semi-Government institution partly supported by private subscriptions? I am aware that the buildings were principally built with Government money, but it is not supported now by any Government money.

1466. But it used to be? Yes, until the State Children's Relief Department took out the children.

1467. You are aware that Dr. Cuthill left a very large sum of money to assist in the building of that institution? Yes.

1468. Seeing that the children there are not orphans, would it not be advisable to have an Act passed by Parliament to legalise the removal of the children? I am sure you can do nothing without an Act of Parliament in connection with that matter.

1469. Do you think that the buildings at Randwick being two or three storeys high would be as useful as the pavilion buildings? To a large extent the system at Randwick now is the pavilion system, but of course the building is of two storeys. I would have no difficulty in managing that institution, and in placing the old people there. There would be no difficulty in placing some of them upstairs and others downstairs.

1470. Do you think it would be fair to the residents of a populous suburb like Randwick to locate there 600 or 800 of these old infirm people? If I lived at Randwick I perhaps would not like it, but I am looking at the matter as a general public question. Some little time ago a proposal was made to turn that asylum into a branch of the lunatic asylum. Then there was a great popular outcry. I infer from that that there would necessarily be the same outcry if pauper patients were put there. I think the Randwick Asylum has done wonderfully good work, but I think the time has gone by for any barrack system to be applied to any poor child in this country.

TUESDAY, 18 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL PEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Charles Robert Scrivener, Esq., Staff Surveyor, Department of Lands, sworn, and examined:—

1471. *Chairman.*] What are you? Staff Surveyor in the Lands Department, in charge of the Metropolitan District.

1472. On the northern railway line, where does your district terminate? The Macdonald River is as near the boundary as possible. On the western railway line it extends as far as Lawson or Katoomba; on the southern line as far as Mittagong.

1473. Within those boundaries have you a fair knowledge of the country and of the Crown lands embraced therein? Yes; I produce a litho. map of homestead selections at Campbelltown.

1474. Do you know the area bounded on the north partly by the Campbellfields Estate, and running eastward to a road between portions 200 and 231, then south to portion 242, and thence along the road in a north-westerly direction towards the Campbellfields Estate? Yes.

1475. Will you describe that area? It is all sandstone country. About half or a little less than half is practically level, sandy soil with a mixture of gravel and stone. There is a patch of very deep sandy soil of about 40 or 45 acres lying within the reserve 23-266, portions 248, 249, 252, and 255, and part of portion 234. I have a coloured sketch showing the positions of these lands.

1476. How far is the site from Leumeah? From  $1\frac{1}{2}$  to 2 miles—about  $1\frac{1}{2}$  mile I suppose from the nearest point. About 3 miles from Campbelltown.

1477. How does it compare with Campbelltown with regard to altitude? I daresay it would be from 150 to 200 feet above the main street of Campbelltown.

1478. How far is it from George's River—the nearest point? About 25 chains.

1479. What is the area of the land, approximately? It would embrace about 450 acres. I hand in a coloured sketch showing deep sandy soil, 45 acres, at the north-western corner. The rocky portion of the area is shown by a purple tint, and the level sandy land, which embraces pretty well half the area, is shown by a blue tint. The brown tint shows the portions already selected. There are only three portions—261, 247, and 208—contiguous to the land in question.

1480. Would there be any trouble in pumping water from George's River? None that I know of.

1481. I see you have a point marked at portion 230 as being 2 miles from Leumeah? Yes; I have marked two points there, the distance is about 2 miles in each case.

1482. One going by the road east, and the other going by the road that passes through the land in question? Yes.

1483. What is your opinion in regard to the approach to Leumeah? It is very fair. The grade over the worst part would be perhaps 1 in 14, possibly 1 in 13.

1484. Could that be improved? Yes.

1485. Is it your opinion that plenty of good building ground is to be found within the area in question? Yes; at least 150 acres would be quite suitable for building.

1486. Where would the drainage from the land in question go? To Peter Meadow's Creek, and thence ultimately into George's River.

Hon.  
Sir Arthur  
Renwick,  
M.D., M.L.C.

14 Feb., 1896.

C. R.  
Scrivener,  
Esq.

18 Feb., 1896.

- C. R. Scrivenor, Esq.  
18 Feb., 1896.
1487. Is there any population along George's River? There is no population either near Peter Meadow's Creek or George's River—not near the banks—for some distance down.
1488. When you say near the banks, what do you mean? Within 10 chains. Usually there is none within half a mile.
1489. It is a sandstone bluff? Yes; almost impracticable.
1490. Therefore, any drainage from the land in question would pass for the first 6 or 8 miles through unoccupied country? Yes; practically unoccupied country.
1491. Could water be brought to this land from the Sydney supply? I could only give an opinion about that by running a series of levels.
1492. Where would the water come from? I suppose the nearest point would be near the crossing of the road from Campbelltown to Menangle.
1493. You regard the soil on the site in question as good, dry soil? Yes, it is a suitable soil, because it is porous throughout.
1494. Are you aware that in the county of Cumberland there are large areas of Crown lands down towards Heathcote, on the southern side of the George's River? Yes.
1495. For the purpose in contemplation by the Committee, would you regard those areas equally as satisfactory as the Campbelltown area? Certainly not.
1496. Why not? First of all, the difficulty of water supply would be much greater. Then, again, the country is much more broken, as a rule, than is the case at Campbelltown—the gorges are deeper.
1497. Then take another area—the Field of Mars—how do you view that? I think most of the land of a suitable character near the railway has been alienated.
1498. Why do you reject the rest? Up towards the Lane Cove River it is rugged country.
1499. On the northern line, towards Berowra and Cowan Creek—how do you regard that country? The country there is simply a series of spurs from the railway line.
1500. Too broken, too abrupt? Usually I should say too abrupt, and there would be a difficulty about the water supply.
1501. Then we have areas around Pitt Town? There is Mulgrave, on the road to Windsor. There are 300 acres close to the railway station.
1502. At what elevation? Most of it would be above flood-level.
1503. Only just above? Some of it I should say would be well above; but the floods rise pretty high there.
1504. What is the character of the soil? The soil is not good. It is generally a very stiff clay, and in places there are deposits of river gravel. It has been at one time the bed of a river.
1505. How would you deal with the water supply question at Mulgrave? It would have to come from the Hawkesbury, a distance, perhaps, of a couple of miles.
1506. Do you approve of Mulgrave as a site for the purpose contemplated? I think the soil would be unsuitable.
1507. And it is low-lying? No, it is not low-lying; it commands very extensive and beautiful views. But it has a stiff clay soil which would require drainage.
1508. Comparing these other sites with Campbelltown, which would be the most suitable? I prefer Campbelltown.
1509. There is a large area shown on the south side of Richmond, known as Ham Common;—what do you think of that? Most of it is some distance from the railway.
1510. And the portion close to the railway is already occupied by the Agricultural College? This land occupied by the Agricultural College is nearly all low marshy land, and Ham Common is of the same description.
1511. Low-lying, marshy country? Sandy soil—marshy here and there throughout.
1512. Would it be a wholesome site on which to place a hospital? It is marshy, and I presume that description of land would not be suitable. It would require extensive draining. It could be drained.
1513. But as it stands in its natural state it would not be a wholesome place for a hospital? I should say not.
1514. After a heavy rainfall in winter would there be a large quantity of water left upon it for any time? I have seen the water lying over a good deal of it in large quantities. With regard to the area shown north-east from Castlereagh parish and Londonderry parish, on the whole I do not approve of it. It is low-lying, and after rain the water lies for a considerable time.
1515. Comparing Campbelltown with the other sites on Crown lands with which you are acquainted, do you regard it as the best for the purpose? Yes; I know of no other so suitable.
1516. There can be no Crown lands of which you do not know? I do not know of any near the railway line that would be suitable. Of course, there is part of Pitt Town Common. This would be more than a mile from the railway by any existing road, though some of it lies pretty close to the railway. The difficulty there, however, is, that there have been alienations.
1517. It is already broken up by alienations, and has not a sufficient elevation? Some of the land at Pitt Town is very well elevated, but there would be a difficulty about water, which would have to be brought a long way.
1518. Then there is something against all these other sites more than against Campbelltown? Campbelltown appears to me to possess many advantages over any other site I know of.
1519. Passing to the county of Camden, is the village of Thirlmere in your district? I know it.
1520. How far is the hospital from the railway station? It is about 4 miles from the Picton railway station.
1521. Between the villages of Thirlmere and Couridjah there is a large area of land extending on the west around the lagoons or the lakes, and about a similar distance on the east;—do you know that area of land? I know a good deal of it.
1522. Could a site be found there? The only doubt I have is as to whether you would be able to get sufficient level land.
1523. You cannot speak definitely with regard to it, in detail? I know the railway runs along a spur, which for a good distance is very narrow. You do not go far from the railway before you get into rocky country as a rule.
1524. Is not the land level about the Picton lagoons? The Picton lagoons are a good deal below the railway line.

1525. Is the water in the lagoons good? Yes; I believe it is good enough for domestic use. The drainage from the large area coloured red, parish of Couridjah, flows into the Bargo River, below the point where the river furnishes the water supply for Sydney. Therefore, no portion of the area between Thirlmere and Couridjah finds its way into the Sydney water supply.

1526. With regard to this area of land at Thirlmere, you cannot say anything very definite? No; except with regard to the general character of the country. It is of sandstone soil, with an elevation of something like 1,000 feet.

1527. Do you know Glenbrook? Not very well: I only know the general character of the country.

C. R.  
Scrivener,  
Esq.

18 Feb., 1896.

Joseph Davis, Esq., M. Inst. C.E., Principal Assistant Engineer for Country Towns Water Supply and Sewerage, Department of Public Works, sworn, and examined:—

1528. *Chairman.*] What are you? Principal Assistant Engineer for Country Towns Water Supply and Sewerage. J. Davis, Esq., M.I.C.E.

1529. I believe you have prepared a proposal for dealing with the sewage from the buildings proposed to be erected at Rookwood for infirm and destitute persons? Yes. Perhaps it would be convenient if I read a statement to the Committee which I prepared for the Engineer-in-Chief for Public Works. It is as follows:—

18 Feb., 1896.

In accordance with your instructions I have gone very carefully into the question of the drainage and treatment of the sewage from the proposed Rookwood Asylum, which is now before the Parliamentary Standing Committee on Public Works, and I have the honor of submitting the following observations and recommendations thereon. As the proposed buildings are situated on high ground, if the water-carriage system be adopted, the sewage can readily be removed by gravitation; but the method of treating the sewage afterwards, is not so easily disposed of. The excrement could be collected by the ordinary dry-earth system in pans, and buried in the asylum grounds, or it might be cremated in a properly constructed destructor. The collection and disposal of large quantities of stuff of this description is very troublesome, and unless done daily and with the greatest care, must inevitably create a nuisance. Often, whatever steps may be taken to remove it quickly and regularly, it will create unpleasantness. Preference must be given to the water-carriage, if efficiently constructed, as being the cleanest and most convenient method of removing the excrement in such cases as the one under consideration, where the quantity is large and aggravated by the description of service to be performed. It is usual to adopt the dry-earth system where it is not possible to get the faeces removed by water. But it must not be forgotten that with the dry-earth system dealing with a part of the sewerage question, a set of drains for carrying off the liquid sewage and some means of treating it would have to be provided in addition to the pans. In rural districts, where the population is not concentrated, and the pans can be readily emptied, no doubt, the dry-earth system is admirably suitable, but with the conditions under review the best plan is to deal with the whole of the sewage, both liquid and solid, by one system. When it is borne in mind that the refuse from 3,300 persons has to be treated, involving something like 132,000 gallons of sewage per day, it is apparent that the prime question involved is how to get the sewage disposed of in a way so as to cause no nuisance.

I have had under consideration three methods of securing this:—

1st. An outfall sewer might be constructed from the institution to the head of the Western Branch of the Western System, at the intersection of Redmyre Road and Homebush Road, Strathfield, where it can be discharged and eventually flow into the Botany Sewage Farm.

2nd. It may be conveyed across the intervening country by means of a pipe sewer to the proposed Sewage Farm at Duck Creek, and there treated, or,

3rd. It may be intercepted by a system of drains converging at a suitable point, where the sewage could be treated by precipitation and filtration, and the effluent discharged into the Rookwood Cemetery Drain.

A longitudinal section has been taken along the line of the proposed sewer between Homebush Road and the asylum. The sewer would be 3 ft. 3 in. x 2 ft. 2 in., and 186 chains long and is estimated to cost £21,632 excluding the amount which would have to be paid for land resumptions. This expenditure would, however, provide for including a considerable area in the Western Suburbs system which is not at present drained. On the score of economy I do not favour this method. The continuation of the Western Sewer from the present termination at Strathfield to the asylum would cost more than by treating the sewage by the precipitation and filtration process in the grounds. Moreover, if the sewers of the Metropolitan Board of Water Supply and Sewerage were used, the institution would be liable to a sewerage rate which is now 7d. in the £. The asylum being 5 miles from the proposed sewage farm at Duck River, it is clear that method No. 2 is out of the question on account of the great cost it would entail. I propose that the sewage should be collected by a system of drains as shown on general plan, and that these drains should converge at a point, also shown, lying between East-street and the road dividing the asylum from the Necropolis, where it should be treated by passing it first through precipitating tanks, where the grosser particles held in suspension would be removed, and then, after it leaves the tank, passing it through coke filters. The effluent, upon leaving the filters, would be conveyed by a 9-inch stoneware pipe to the head of the Rookwood Cemetery Drain in East-street, and find its way through that drain to Haslem's Creek. Provision has been made for 132,000 gallons, half running off in eight hours. This means that 3,300 persons will be served at the rate of 40 gallons per head per day. In addition to the sewage, the sewers will be sufficiently large, and the outlet works of sufficient capacity, to admit a portion of the rain-water from the roof surfaces being carried away by the same system of drainage. The roof-water will be admirably suited for flushing the sewers. No provision has been made, however, in the capacity of the proposed works, for carrying off the water from paved and other surfaces, beyond what is admitted from the roof, for flushing purposes. Failing the flushing which will be available under ordinary circumstances from the roof surfaces, an automatic flushing chamber is to be constructed at the head of each main branch, which would be used during periods of dry weather.

#### DESCRIPTION OF PROPOSED WORKS.

*Drains.*—The drains immediately surrounding and connected with the proposed buildings, will be on the same lines as those carried out by the Metropolitan Board of Water Supply and Sewerage in Sydney and suburbs, with inlet and outlet shafts fitted with cowls for ventilation.

*Outfall Sewers.*—The sewage will be intercepted and conveyed to the outfall works by means of two 9-inch stoneware pipe sewers, encircling the high ground on which it is intended to put the proposed buildings, converging at a suitable point near the disposal works. These intercepting sewers will be provided with shafts for ventilation and inspection.

*Sewage Disposal Works.*—The two intercepting sewers discharge into a distributing chamber from which the sewage passes through inclined screens which are situated between the distributing-chamber and the settling-tanks. Before the sewage has been screened, the precipitant is added by means of compressed air. The compressed air will have the effect also of agitating the sewage and mixing the precipitant and sewage, and at the same time of breaking up the solids, as well as facilitating the absorption of oxygen. The screening-chamber is in duplicate, and controlled by valves, so that one screen may be used while the other is being cleaned.

*Settling Tanks.*—The settling-tanks, of which there are three, side by side, are designed on the continuous system. They are rectangular in plan, with segmental sides and bottoms, and are each divided into three compartments by cross-walls, which, being slightly lower than the weir, allows the sewage to flow over from one compartment to another in a thin film. In addition to the cross-walls, the tanks are fitted with wave and scum boards. By these means the forward movement of the sewage is sufficiently retarded to admit of the grosser portion of the solids held in suspension, being deposited. The bottom of the tank, along which runs a semi-circular channel, is graded to a fall of 1 in 80 towards the sludge tank, so that the sludge may be run off by gravitation. Along the front of the settling tanks there is a distributing trough which is fitted with sluice-boards so arranged that the sewage enters the settling tank in an even sheet. As the clarified sewage leaves the tank it falls over a series of steps or cataracts, which are designed to expose it to the air, and to facilitate the absorption of oxygen. From thence it passes through coke filters, and is discharged into an effluent drain 9 in.

J. Davis, Esq., in diameter, being a continuation of the Rookwood Cemetery Drain, and by that means eventually finds its way into Haslem's Creek, below the Parranatta-road. The capacity of the tanks is equal to 50 per cent. of the total dry weather flow, and it is intended, during periods of maximum flow, sufficient tank accommodation shall be in use to admit of the sewage being two hours in its passage through the tanks, that being the time it has been found by experience it will take for the solids to deposit. After the tank has been in use for two or three days, it will require to be cleaned. To effect this, the sewage will be shut off, and the clarified sewage in the tank drawn off by a floating arm, so as not to disturb the sludge which has settled at the bottom of the tank. After the water has been drawn off, the sludge flows into the sludge reservoir. When it has stood in the reservoir for some two hours, the fluid which rises to the surface is drained off, and the sludge is run off into the metal sludge vessels. As the sludge is lifted from the vessels to the filter press, about 4 per cent. of lime is mixed with it, to facilitate the pressing. About 70 to 75 per cent. of the liquid sewage will be strained off in the pressing process, after which the sludge will be sufficiently hard to allow of it being removed and used in the grounds as manure.

*Filter Beds.*—The walls and floors of the four filters are formed of concrete, each filter being 70 ft. x 25 ft. x 3 ft. deep. The filters, which are provided with the necessary inlet and outlet channels and sluice gates, will be constructed as shown on detail plans. With regard to the efficiency of coke filters, reference might be made to a report dated October, 1895, of Mr. W. J. Dibdin, Chemist to the London County Council, giving details of experiments which have been made at the London Outfall Works during 1892-3-4, and 5. There were two series of experiments made. Small filters were first used in order to ascertain the best and most economical filtering material. For this purpose "burnt ballast," "pea ballast," "coke breeze," "sand," and a "proprietary material" were respectively used. After the materials had been in use for about three months, Mr. Dibdin reported "from the results obtained it appeared that a considerable amount of purification could be effected by any filtering material, the desiderata evidently being porosity and consequent power of re-absorbing atmospheric oxygen. For foul waters sand proved too fine; whilst the burnt ballast used was too coarse. Coke breeze seemed to unite the necessary qualifications, and as it is also a cheap material it was selected for the further trials on a large scale. There can be little doubt, however, that the question of cost of material should be allowed to decide what should be used for a filter in any given place, since burnt ballast or gravel may be made much more efficient by using a greater depth of more finely granulated material combined with a slower rate. The proprietary filter excelled the coke breeze only in appearance, the actual purification not being quite so much, while the cost is prohibitory." The second series were then undertaken, and a filter was constructed covering exactly one acre of ground. The land was levelled and embanked where necessary, and perforated drains laid, meeting in a common trunk for discharge. The filtering material consisted of three feet of coke breeze, covered with three inches of gravel. After this filter had been in use up to September, 1895, Mr. Dibdin states, that "the experiments, taken as a whole, show that sewage, especially if previously clarified by precipitation, may be purified to any desired degree,—the actual amount of purification depending upon (1) the length of time during which the effluent is allowed to remain in contact with the filter; and (2) the length of time allowed for aeration. If a reduction of 75 per cent. in the oxidisable organic matters in solution be considered as sufficient, the quantity that can be treated per diem on one acre of coke breeze is 1,000,000 gallons, which gives a required area for the treatment of the whole of the metropolitan sewage—taken at 180,000,000 gallons—of 180 acres only. This rate is probably the highest that can be worked under all conditions of seasons;" or, in other words, one acre of coke-filter will purify the sewage from 25,000 persons.

His conclusions are as follows:—"The action of a filter is twofold—(1) It separates mechanically all gross particles of suspended matter, and renders the effluent clear and bright. (2) It effects the oxidation of organic matters, both those in suspension and those in solution, through the agency of living organisms. It is the preliminary establishment and subsequent cultivation of these organisms which is to be aimed at in the scientific process of purification by filtration. The ordinary putrefactive and other similar organisms commence the work by breaking down the organic compounds and converting them to less complex forms, principally water, carbonic acid, and ammonia; the nitrifying organism then acts upon the ammonia, the nitrogen being converted into nitric acid. For this process to go on, three conditions are essential. Firstly, the organisms must be supplied with plenty of air; secondly, there must be present a base, such as lime, with which the nitric acid can combine; and thirdly, the biological action must take place in the dark, i.e., in the body of the filter, and not in the water exposed to the light above the filtering material. Filtration, on biological lines, of sewage or other foul water, containing in solution but little free oxygen and a large quantity of oxidisable organic matter, therefore means:—

"(1) That the filter, by cautious increments in the quantity of effluent, which in itself contains the necessary organisms, must be gradually brought to a state of high efficiency. This condition will be shown by the existence in the filtrate of a constantly increasing proportion of nitric acid.

"(2) That the contact of the micro-organisms with the effluent to be purified must be effected by leaving such effluents at rest in a filter for a greater or lesser time according to the degree of purification required, the process being analogous to that of fermentation. The system employed at many places is to run the water straight through the filter, and thus allow insufficient time for the work, with the result that the filtrate is soon in an unsatisfactory condition.

"(3). That after each quantity of effluent has been dealt with the micro-organisms must be supplied with air, which is readily affected by emptying the filter from below, whereby air is drawn into the interstices. The filter must stand empty for one hour or more previous to another filling, and a longer period of aeration, say, twenty-four hours, must be allowed every seven or eight days.

The life of a coke-breeze filter worked in this manner is practically without a limit.

"From the general results obtained by these several trials under various actual working conditions, it is apparent that there is no difficulty in obtaining any desired degree of purification by means of a system of filtration conducted on biological principles. If a higher degree of purity be required than that indicated by the foregoing, it can be obtained by an augmentation of the filtering appliances at a comparatively small cost."

*Machinery.*—It is proposed to have one 7-h.p. oil-engine working an air-compressor providing power for raising and forcing the sludge from the sludge-vessels through the filter press. It also works the lime mixer which supplies lime to the sewage for precipitating the suspended matter, and supplies lime for mixing with the sludge in the sludge-vessels before it passes into the filter-press. In addition, it supplies compressed air for agitating and breaking up the sewage, and incorporating the precipitant therewith before it passes into the precipitating tanks.

#### Estimate.

I estimate the cost of the proposed works will be as follows:—	£	s.	d.
Intercepting sewers, including branches to buildings, and ventilation.....	4,153	0	0
Disposal works, complete .....	2,890	0	0
Effluent drain to join Rookwood Cemetery Drain.....	625	0	0
Add for contingencies, &c. ....	767	0	0
<b>Total estimated cost.....</b>	<b>£8,435</b>	<b>0</b>	<b>0</b>

The annual working expenses I estimate as follows:—	£	s.	d.
Wages.....	100	0	0
Oil, &c. ....	127	0	0
Precipitants .....	160	0	0
Repairs .....	33	0	0
<b>Total .....</b>	<b>£420</b>	<b>0</b>	<b>0</b>

The annual charges will therefore be:—	£	s.	d.
£8,435 at 3·616 per cent. interest at 3½ per cent. and repayment in 100 years .....	305	0	0
Working expenses .....	420	0	0
<b>Total annual charge.....</b>	<b>£725</b>	<b>0</b>	<b>0</b>

or equal to a yearly cost of 4s. 5d. per head with a population served of 3,300. This cannot be considered large compared with the amount at present being paid at Parramatta simply for the removal of night-soil. There the Government pay £632 17s. for a population of 1,000, or 6s. 8d. per head. A proposal is at present under the consideration of the Council in connection with the proposed Parramatta sewerage works to pay the Council, if these works be carried out, for the removal of the whole of the sewage (liquid and solid) by the proposed sewers at the rate of 10s. per head. J. Davis, Esq., M.I.C.E. 18 Feb., 1896.

*Destructor.*

As I understand a proposal is before the Committee to destroy by fire the excrement and other refuse in a suitable destructor, perhaps it might be well to refer to the matter before concluding. A suitable destructor would probably cost about £1,500 to erect, and about £339 per annum to work, made up as follows :—

Fuel .....	£164
Wages.....	100
Horse and cart .....	75
	<hr/>
	£339

It would be costly to work a destructor at an institution of this description, where the proportion of excrement would be so great compared with the other refuse. In ordinary town destructors the garbage almost consumes itself, and requires very little fuel, whereas in the present case, about 15 cwt. of coal would be used per day. As already pointed out, a destructor would simply destroy the solids, and there would be still remaining the liquid sewage to be dealt with, which would necessitate the construction of a system of drainage such as the one I have proposed. This is obvious, as only about  $\frac{1}{4}$  of sewage could be treated by the destructor, leaving  $\frac{3}{4}$  to pass through the drains. If a destructor is decided upon, I would advise that instead of the excrement being destroyed it should be dried, as it could be more economically treated in this way, and at the same time the resultant dust could be used as manure on the grounds.

J. DAVIS,

Principal Assistant Engineer, C.T. Water Supply and Sewerage.

Forwarded for the information of the Works Committee. The proposal of Mr. Davis has had considerable consideration from me, and I am of opinion it would prove efficient and economical. I would refer the Committee to my pamphlet on Sewage Purification, and also to Mr. Dibdin's report referred to by Mr. Davis.

ROBT. HICKSON,

Engineer-in-Chief for Public Works.

18/2/96.

1530. *Mr. Clarke.*] Then, I presume, that of all the different plans mentioned by you in your statement, the one you there recommend is the one of which you approve? Yes; the system of treating the sewage by precipitation and filtration.

1531. Is there no other mode of getting rid of the sewage, except by such an expensive system as that? There is no other way so cheap as that in my judgment.

1532. Would it not be as cheap to connect by pipes in the ordinary way with the Metropolitan Sewerage System which has been extended to the neighbouring suburbs? No; the cost would be two and a half times greater.

1533. Then there is no other mode of getting rid of the sewage except the one you have just explained? I think that is the most economical and the wisest way of getting rid of the sewage.

1534. You have stated that some portion of the sewage might be drained into Haslem's Creek? The effluent from the disposal works would go there, through the Rookwood Cemetery Drain.

1535. And where would it go afterwards? Into the Parramatta River. Haslem's Creek flows into the Parramatta River.

1536. And would not that give cause for complaint on the part of people residing in the neighbourhood? No, because before the sewage was discharged into Haslem's Creek it would be purified; all the injurious and objectionable matter would be removed.

1537. The drainage of the sewage into Haslem's Creek is a portion of the plan you now propose? Yes; but I do not propose to discharge the sewage in its crude condition into Haslem's Creek. I propose to take from the sewage all the objectionable matter, and then discharge the effluent into it.

1538. Is there any possibility of conveying the sewage into George's River? No; I think that would be out of the question.

1539. What distance is George's River from the Rookwood site? It is certainly as far as Haslem's Creek, and then you would have to tunnel through a hill to get on George's River water-shed.

1540. But it could be done, I presume? It could be done. Before it was discharged into George's River it would be advisable to treat it in some way, and not discharge it into the river in its crude state, for it would certainly cause a nuisance there unless treated fully.

1541. I have been told that it is only about 2 miles from the proposed site at Rookwood to George's River? I should say that it was fully that distance.

1542. Have you any idea of the expense of carrying the sewage into George's River? The cost would be fully £20,000, and this sum would not provide for sewage disposal works.

1543. You think the plan you propose is the best that could possibly be adopted? I certainly think so.

1544. And the least costly? Yes.

1545. You do not recommend any other plan? No; the whole of the sewage might be turned in its crude state on to filter beds, but the area of the filter beds would have to be considerably larger than what I have proposed, and what the extra filter-beds would cost would fully equal the cost of the precipitation tanks, so that there would, in my judgment, be no advantage in treating the sewage wholly by filtration.

1546. Could the sewage be utilised in any way on a sewage farm, as is being done to a certain extent at Rookwood now? I do not regard the land as suitable for a sewage farm. I have taken that matter into consideration, and I do not think the area would be large enough, nor is the land suitable.

1547. Do you know the total area available? I do not know the total area, but I am speaking of the land that would lie below the buildings, and would be suitable to irrigation by gravitation.

1548. I believe the area is about 600 acres? Some of that would be much too high for the purpose.

1549. In what way do you consider the land unsuitable? I do not think it would absorb the sewage readily without underdraining. It is clayey, ironstone soil, that would not be likely to absorb sewage readily.

1550. Supposing it was thoroughly trenched—say three or four feet deep? Even then I would not advise that the sewage should be put on that ground, unless the clay from the excavation were first of all burnt. If the clay were subjected to fire then it might be very good filtering material, but otherwise it would not be.

1551. If it were possible for that to be done would it not be very much less expensive than that plan you propose? I do not think so. I think what I propose is the most economical way of dealing with the sewage from the institution, considering that coke breeze can be obtained so cheaply.

- J. Davie, Esq.,  
M.I.C.E.  
18 Feb., 1896.
1552. *Mr. Black.*] You estimate the cost of your proposed system of drainage at £8,495? Yes.
1553. That, of course, includes the whole area of the proposed scheme? It includes the drainage of the whole of the buildings shown on the plan.
1554. If a scheme were proposed which did not include the lower or isolation group, and which also omitted the casual group, your system could be carried out, I suppose, with only one arm? Yes.
1555. Would that very much lessen the cost? It would. The reason why the estimate is so high is on account of the way in which the buildings are scattered. They could not be located in a worse manner, as regards drainage, than in the way proposed.
1556. If it were proposed to increase the present number of inmates at Rookwood by only 600 or so, and to extend the buildings further north from the Potts' Hill Reservoir, I suppose that would involve a still further great reduction? It would materially reduce the cost of the drains.
1557. And I apprehend we should be so much nearer to Haslem's Creek? Yes; it would materially reduce the cost of the scheme on that account, because there would be so much less length of drains to put in.
1558. Would it reduce the cost to one-third? Scarcely, because the disposal works would not be reduced in the same proportion.
1559. The extensive system of treatment of the sewage which you have explained to us occurs at the place marked on the map as the outfall works? Yes; that is the place where the sewage would be treated.
1560. There is no independent treatment on each arm? No.
1561. You say you think the effluent which would be discharged into Haslem's Creek would be so pure as not to involve any offence to people in the vicinity? There would be no pollution. It is the standard that is generally adopted in all sewage disposal works, even when the effluent has to be discharged perhaps into a river where the water lower down is consumed by the people.
1562. Is it proposed to extend the metropolitan sewerage works to any suburb nearer Rookwood than the one to which it is at present carried? No.
1563. Are the people in the suburbs further on not desirous of being connected with the sewerage system? They are scarcely ready for it. There is not yet sufficient population there to feel the need of a sewerage scheme.
1564. You do not think that if the people in the suburbs lying between Rookwood and Strathfield took the matter up, the cost of construction would be so greatly divided that the expense in connection with the Rookwood scheme would be trifling? For many years to come the people living in the intervening district would not ask for sewerage connection, and the cost would be borne, in the first instance, by the institution.
1565. *Mr. Hassall.*] Do you think it possible to erect the proposed group of buildings at Rookwood on the more northerly portion of the land, near the medical superintendent's house? I should prefer to see them there for two reasons—in the first place, the sewage would be dealt with more economically; and secondly, it would be further away from the Potts' Hill Reservoir.
1566. It would do away practically with a great deal of the objection which might exist to the erection of buildings for the housing of consumptive, ophthalmic, and cancer patients in such close proximity to the reservoir? Yes; I should prefer to see them further north.
1567. And another result would be to materially reduce the cost of the sewerage scheme which must of necessity accompany the erection of those buildings? Yes.
1568. I think you said it would reduce the cost fully one-third? Scarcely one-third, because the disposal works would not be reduced in the same proportion.
1569. The main cost, then, would be in connection with the works for the disposal of the sewage, and not so much in the matter of drainage? The main cost would be for drainage. The sewers above the disposal works would cost, if carried out as shown on my plan, £4,153. If you can reduce the length of sewers by one-half, then the cost would be reduced one-half.
1570. By the erection of the proposed buildings, or whatever buildings might be necessary, on the site proposed for the medical superintendent's residence, the sewerage scheme would be brought very close? Very close.
1571. And it would do away with some thousands of feet of sewers? Probably if the buildings were put there the costs of sewers above the sewage disposal works would be brought down to £1,000, instead of £4,153.
1572. Have you taken any notice of that site? I walked over it.
1573. Do you think it would be too low for the erection of these buildings? I do not think so.
1574. There would be sufficient fall to allow of the drainage of the institution? Certainly.
1575. Do you think it would be too close to the Necropolis? I do not see why it should be.
1576. In the statement you have submitted to-day, you distinctly say that you embody a proposal which is the most economical for dealing with the drainage of an institution containing such a large number of men? I certainly think so, and I add further that it is absolutely necessary that some such scheme should be carried out to deal with such a large number of persons concentrated under such special conditions.
1577. Do you think it is desirable to mass such a large body of indigent persons, the majority of whom must be unhealthy, in one particular spot? I think it would be very undesirable. I simply give my opinion for what it is worth. It does not seem to me to be desirable. I have gone about these institutions a good deal during the last few years, and I would say that it is undesirable.
1578. *Mr. Humphery.*] In estimating the cost of connecting the drainage with the metropolitan sewerage system, did you take into consideration the fact that there would be no annual charge if the cost of connection were borne by the Government? I have not taken that into consideration in my estimate. I drew attention to the fact that if the Board's sewers were used below the intersection of Redmyre Road and Homebush Road, in my opinion the institution would be liable to pay a rate.
1579. Then it was upon the assumption that, although the cost of connection would not be borne by the Metropolitan Water Supply and Sewerage Board, the Government would have to pay all the same? I think so, because they would use 6 or 7 miles of the main sewer, and then the sewage from this institution, in common with that from all the other suburbs, would have to be dealt with on the Bondi farm. It seemed to me, under these circumstances, to be only fair to suppose that the institution would have to pay an annual charge to the Board.

1580. Is it not customary for the Water Supply and Sewerage Board to charge rates only where the Board incurs the cost of providing the connection? That is correct. But in this case it would not be likely that the Board would go to the expense of £21,000 in order to get revenue from this institution, when they would get nothing like a return for it. The Board acts upon the principle of getting a revenue—5 per cent. I believe—from any expenditure it incurs.

J. Davis, Esq.,  
M.I.C.E.  
18 Feb., 1896.

1581. Supposing that instead of a number of pavilion buildings, each containing about sixty persons, it was proposed to erect a smaller number of buildings containing 240 inmates each, and that in this way the number of buildings would be reduced—say, to one-fourth—would that lessen the cost of the sewerage system? Yes.

1582. Materially? It would depend on where the buildings were.

1583. Assuming they were placed on that portion of the ground where you see the pavilions, coloured black? It would reduce the cost of the drainage above the sewage disposal works to the extent probably of £2,000, which would make the total cost of my proposal £6,000.

1584. It would have a very material effect, therefore, upon the first cost? Yes. The buildings in the proposed scheme are so scattered as to necessitate putting down  $3\frac{1}{2}$  miles of drainage.

1585. And if they were not so scattered, and fewer in number, the drainage system proposed by you would be much less costly? Yes.

1586. At present there are about 480 inmates in the buildings now on the ground;—are you aware how the sewage is disposed of? Yes.

1587. Do you see any objection to the system at present pursued? Yes, I do, certainly.

1588. Is it possible for any nuisance to arise from it? I should say there is a nuisance now, or at least there was when I visited the place.

1589. Will you describe the system at present in use, and explain how the nuisance arises? At present the ground is trenched to a depth of about 3 feet, it being composed of hard unabsorbent clay. The clay is then put back again into the excavation, in the state in which it was got out of the ground, and the sewage turned on to that. I do not think that the beds themselves are constructed as well as they might be. If the material were burnt before being put back there would be much better results. Furthermore, I do not think it is worked carefully. I noticed when I was there that sewage was ruining all about the place.

1590. You are speaking of the land upon which the sewage is deposited? I am speaking of the irrigation beds prepared at the institution to receive the fluids.

1591. How are the solids treated? They are taken away into a manure heap, and there deposited with horse manure and other manure, and then dug out as required, and put into the ground.

1592. Is that objectionable? I should think it was highly objectionable.

1593. Will you explain what way, in your opinion, the present system is a nuisance? I noticed very strong objectionable smells at the irrigation beds, as the result of sewage being allowed to run in all directions—not over the bed so much, but so as to overflow the channels, and run about the ground below the beds.

1594. Then, even supposing the number of persons at Rookwood was not increased, it would, in your opinion, still be necessary to introduce some different system of sewerage to that now adopted? Yes, certainly.

1595. Assuming that the number were increased to 1,000, I suppose it would be wholly impracticable to deal with the sewage by the present method? That is my opinion.

1596. You think it would not be a proper or safe thing to continue the present system? No, I do not think so. If the clay were burnt, and then put back again over perforated drains, the liquid sewage could, no doubt, be purified. With regard to the excrement, I should say that it is very much behind the times to deposit it in the way now being done. It would be far better to take it on to the ground at once, and bury it daily.

1597. At what depth? Well, a foot deep.

1598. Are you of opinion that we might safely house 1,000 people in that locality, and by treating the sewage as you have now suggested, dispense with an expensive system of drainage such as that described in your paper? If you come to 1,000 persons, I should say it would be necessary to carry out a scheme such as that described by me.

1599. What would be the cost of a simple method of dealing with the sewage from, say, 800 or 1,000 people? The method I would recommend would be that which I put before the Committee. That would involve an expenditure of £4,000, assuming that the buildings were erected on the northern site instead of where proposed, and assuming also that instead of having pavilion buildings containing 60 inmates, there were fewer buildings each containing 240 inmates, and being close together instead of scattered.

1600. Would there be also a reduction in your scheme in regard to the cost of maintenance under the conditions just mentioned? Yes; the cost of the working expenses would be reduced to about £200, bringing the cost down to £220, or about 4s. 5d. per head, for the working expenses, and about the same for the capital cost.

1601. *Mr. Clarke.*] You say that if the inmates were housed in fewer buildings the cost of the removal of the sewage would be much less? Yes.

1602. How can that be the case when you have precisely the same number of people to deal with? For the reason that instead of being housed in a number of small buildings scattered over a large area, they would be housed in fewer buildings of larger dimensions occupying a smaller area, and consequently the length of drainage to be constructed would not be so great.

WEDNESDAY, 19 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Critchett Walker, Esq., C.M.G., Principal Under Secretary, sworn, and examined:—

C. Walker,  
Esq., C.M.G.

19 Feb., 1896.

1603. *Chairman.*] What are you? Principal Under Secretary.

1604. Your Department deals with the whole of the charities of the Colony? Yes.

1605. *Mr. Fegan.*] You know the scheme proposed to concentrate the asylums for the infirm and destitute persons in one place at Rookwood? Yes.

1606. Were you consulted about that scheme? I was not consulted with regard to the plan of the buildings now before the Committee. I never saw the plan until I saw it here. But I may tell the Committee that I was instrumental in proposing that the majority of the poor people should be sent to Rookwood to occupy the buildings erected there some years ago for the purpose of a reformatory, but which, not having been utilised, were lying there idle for some years, going to pieces. On account of the overcrowding of the different institutions, I suggested to Sir George Dibbs when he was Colonial Secretary that these buildings might be utilised for the accommodation of some of the inmates crowded in the other asylums, and 300 or 400 of these inmates were removed to Rookwood. The step thus taken was very successful, and, as I subsequently found on going over the Parramatta asylums that they were still overcrowded to such an extent that it was cruel and inhuman to keep the unfortunate inmates there, I wrote the following minute, which I submitted to the present Chief Secretary. It is dated the 20th February, 1895:—

When visiting Parramatta recently, in company with the Chief Secretary, it was again very apparent that some change is necessary to relieve the overcrowded state of the Government asylums there. In the Mill-side establishment, a five-storied building, the inmates number over 1,000, with little more than an acre of ground for exercise and recreation. Such a state of things, I need hardly remark, is both unhealthy and dangerous, and I would therefore suggest that all the inmates be removed to Rookwood, where there is a large area of land available for asylum purposes, with more healthy and cheerful surroundings. To carry this out it would be necessary to erect two wings in addition to the existing pavilions at Rookwood, to accommodate 1,500 each. These new pavilions, I would point out, should contain 100 beds each instead of sixty, which the present ones hold, as by this means, in my opinion, there would be less trouble and care involved.

If this is done the whole of the inmates can be transferred from Parramatta and Liverpool, which I am quite sure would result in greater economy in management, as one medical superintendent would be able to supervise the whole institution, with a matron in charge of each wing.

Before taking any action I would suggest that reference be made to the Director of Government Asylums for report.

That minute was the start in regard to these additional buildings at Rookwood, and it was referred to Mr. Maxted for report. I did not see the plans that have been submitted to this Committee.

1607. Did you receive any report from the Director of Government Asylums? Yes; I have his report here, and it almost endorses what I state in my minute, and on this report a sum of £70,000 was placed on the Estimates. Mr. Maxted's minute, dated 12th March, 1895, is as follows:—

I have the honor to report, as briefly as possible, with regard to the Principal Under Secretary's recommendation, that the Government Asylums for Infirm and Destitute at Liverpool and Parramatta should be removed to Rookwood. After careful investigation, I have no doubt that if the recommendation is adopted it will result in many substantial advantages to the chronic sick and destitute classes of the community, who now largely avail themselves of these asylums, and also, under a proper system of classification and industrial employment, effect a very large saving in actual maintenance cost and the expenses of the administrative staff. Before dealing with statistics, I may point out that the matter which I have been directed to report upon has become one of extreme urgency, particularly as far as it concerns the institutions at Parramatta. The Government Asylums for Infirm and Destitute, which were formerly refuges for the aged poor only, have during the past few years been so far diverted from their original purposes that they are now hospitals for chronic and incurable diseases, as well as homes for the infirm and indigent. They are also relieving-houses for the metropolitan and country hospitals, from which, in order to save the larger general hospital cost to the Government, many patients are transferred when they are partially convalescent; and they further deal with all the consumptive and cancer patients in the Colony. It is thus apparent that buildings and conditions of management which might have been suitable enough for these institutions a few years ago are now obsolete and inadequate to their present requirements. It is, therefore, desirable that the lines of a comprehensive and permanent system of administering relief to the dependent adults of the Colony should be laid down with as little delay as possible, in order that their condition may be improved, and also to avoid further useless expenditure in several of the existing institutions, which are all very much overcrowded. This applies specially to the Parramatta asylums, which the Chief Secretary has recently visited, and if the proposals now under consideration are approved, I would suggest that these institutions be the first dealt with under the new policy. In the male division of all the Government asylums there are at present 2,740 inmates, who are distributed at the following institutions in the numbers stated:—George-street, Parramatta, 1,026; Macquarie-street, Parramatta, 328; Cottage homes for destitute married couples, Parramatta, 41; Liverpool 877; Glenfield Farm Home, near Liverpool, 70; Rookwood, 398. The total number to be provided for will probably for many years not exceed 3,000. In considering any scheme for the centralisation of these institutions on the basis of cost per bed, the number now at Rookwood may of course be excluded from the estimate, as they are already accommodated in buildings which have been erected specially with a view to the whole of the asylums being placed upon this central site. It is thus necessary to provide only for the 2,342 inmates now at Parramatta and Liverpool, and any further increase of numbers up to the maximum I have mentioned can be arranged for from time to time as the necessity for more buildings arises. The Rookwood Estate comprises about 700 or more acres, and there is, therefore, an ample area on which to erect buildings suitable for the requirements of all classes of inmates. Plans have already been approved by the Chief Secretary for the main hospital block, which is now partially built, and which, when completed, will accommodate 1,300 patients. The new buildings erected under these plans consist of wooden pavilions of one floor, each capable of accommodating sixty inmates, and although they are comparatively inexpensive, they certainly serve their purpose well. The contrast at George-street Asylum, Parramatta, where, in one division, several hundreds of sick or feeble inmates are confined in five stories of one building, from which it is not possible to remove them, because of the difficulty of getting them downstairs, strikingly shows the humane advantages of the Rookwood method, which admits of patients of this class, who are not actually bedridden, being frequently taken out to enjoy the sunshine and pure air. Without, at this stage, going fully into details which will have to be determined after consultation with the Government Architect, I may point out that in connection with future buildings it will be necessary to so subdivide the general block that some of the pavilions will have to be completely isolated, in order that the different classes of inmates may be effectively dealt with. Separate provision, for example,

must.

must be made for the consumptive patients, of whom there are between 200 and 300. They should be placed as far as possible from the other inmates, in pavilion buildings differing altogether from those now on the ground, and having inside walls which may be lightly covered with cement and glazed, so that they can be frequently flushed and cleansed with antiseptic fluids. These hospitals should have their own enclosed gardens and grounds, and they must possess extra facilities for the destruction of all infectious and unsanitary matter by fire. Similar separate provision will also have to be made for the cancer patients, who will probably number about seventy-five. Dr. Beattie, the Medical Superintendent of Liverpool Asylum, has repeatedly drawn attention to this matter, and pointed out that unfortunates suffering from this frightful disease ought to be treated at some distance from other inmates, as such a course "would be less hurtful to their own feelings, and less horrifying to those obliged to witness their sufferings." There were 117 deaths from consumption and thirty-seven from cancer last year. An infirmary with suitable appliances is needed for the eye patients, of whom there are generally between 200 and 300 under treatment, and who are now necessarily compelled to mix with the general inmates. Dr. Odillo Maher, the visiting ophthalmic surgeon to the asylums, has on several occasions urged that these patients should be completely isolated from other inmates in a suitable building, "in order that they should not associate with others whose eyes are healthy, and thus the danger of contagion would be avoided." A small isolated lock hospital is required, as syphilitic patients are occasionally received from the various infirmaries. All the foregoing divisions would have to be carried on in buildings and with appliances particularly adapted to the requirements of each class of patients, and the pavilions must consequently differ in these respects from those erected for the general inmates. A separate division is also required for the better-behaved and more educated class of inmates, whose presence in the institutions has not resulted from any fault of their own; and also (in order to lessen the expense of the present system of dealing with them) for the decent old married couples, who are now accommodated under a distinct and comparatively costly method of management in the cottage homes at Parramatta. There are always many respectable old colonists in these asylums, whose decline from prosperity is due to illness or misfortune, rather than to vice or other causes for which they might fairly be held responsible. Finally, an entirely distinct division, and different method of treatment, are necessary for that numerous class of inmates who are technically known as "casuals." They pass in and out of the institutions many times during each year, and they are generally drunkards and vagrants. Some years ago, Sir James Martin carried through Parliament a Workhouse Act, which was specially intended for the treatment of persons of this class in penitentiaries, but it was never carried out practically, and it was eventually repealed; and these offenders against decency and good order—for such they virtually are—have, for obvious reasons, continued to find refuge in Government asylums, instead of being sent to the gaols. Hitherto, for want of separate buildings, and of sufficient land area, it has not been possible to make any material difference in the treatment of such inmates, and of their more deserving fellows, but if the Principal Under Secretary's recommendation is adopted, this difficulty will be overcome, and they can be dealt with, under legislation, upon their merits. In a former report upon this subject I suggested that the "dietetic system, providing for dieting inmates according to their physical needs and conduct, which has been adopted with remarkable success in connection with prisons and charities in one or two American States, might be applied throughout the whole of the Government establishments as a method of rewards and punishments, in conjunction with exclusion from recreating grounds, reading-rooms, and amusements." Suitable employment might be added, not only for the purpose of making the whole institution partly self-supporting, but in order to reduce the number of objectionable inmates, many of whom would probably leave rather than work up to their capabilities. It will thus be seen that the remainder of the buildings required for the complete institution could not, if the best results are to be secured, be placed in one compact block, but there is at Rookwood, as I have explained, an ample area over which to scatter them; secure a most complete system of classification; and at the same time leave plenty of land for the farm, dairy, piggeries, poultry-yards, and workshops, in which inmates able to do light work could be suitably employed. The Principal Under Secretary has suggested that the future pavilions should, on grounds of economy, each contain 100 inmates, instead of sixty as at present. I concur in this proposal, and I understand the Government Architect is favourable to its adoption. The foregoing is, of course, the mere outline of a scheme, but the details can be filled in without difficulty after the general proposals have been dealt with by the Chief Secretary. Suitable buildings in every division need not be of an expensive description; and, as I shall show presently, the sale of the Parramatta and Liverpool properties would largely contribute towards their cost. I have pointed out that it is necessary to make permanent provision at Rookwood for probably 2,500 inmates, in addition to those now on the estate. The buildings recently erected there have cost about £21 per bed; but with the increased number which it is proposed should be accommodated in each of the new pavilions, and considering the present value of materials and labour, it is not likely that it will cost more than £20 a bed to erect the complete institution, with (say) an additional £20,000 for the administrative block, kitchens, dining-rooms, workshops, officers' quarters, and out-offices. The whole establishment would thus cost about £70,000 which, if provided under the Loan Act, as it properly should be, would represent an annual 4 per cent. interest charge of £2,800. As against this I have very little doubt that the Parramatta and Liverpool properties could be disposed of for at least £30,000—probably more—in the event of the Liverpool buildings being required for railway purposes, as I understand they may be in the course of time, and this will leave only £40,000 to be provided for from the Loan Vote at an annual interest charge of £1,600. The centralisation of the institutions at Rookwood will effect a general saving in management expenses, cost of maintenance, medical attendance, rent, &c., of at least £6,000 a year. Thus the entire cost of the complete institution at Rookwood could be provided by Loan Vote without expense to the country, and, at the same time, a total profit to the Government, by the new policy, could be effected to the extent of about £4,400 per annum. I have been very careful over these figures, and I am convinced that the change will be attended with even more satisfactory financial results when it comes to be worked out practically. With reference to the estimated cost per bed (£20), or including the administrative block and officers' quarters, (say) £28, I beg to point out that in other institutions intended for the treatment of the insane, and of the sick poor, £250 a bed for buildings alone has been considered a very moderate charge. The new buildings which it is proposed to erect in connection with the Government asylums will, however, be thoroughly suitable in every way, and quite sufficiently permanent in character to make any larger expenditure undesirable. In carrying out these suggestions it will, in my opinion, be necessary to completely alter the present method of local management: but I will submit proposals on this point when the scheme has reached a more advanced stage, and it becomes necessary to re-organise the managing staffs. The system of having medical superintendents, and matron superintendents, to control the management of the various institutions has, in some cases, resulted so unsatisfactorily, as I am fully prepared to show by records and results, that it should not be continued longer than is absolutely indispensable.

All that was done on this, so far as our Department is concerned, was to have £70,000 provided on the Loan Vote.

1608. In other words, the Director of Asylums is carrying out your suggestions in these plans that have been prepared? These plans have been prepared without being approved of by the Department. They have never been submitted to me. I do not know how they came on to the Public Works Committee. I for one would never have consented to buildings being located so close to the Potts' Hill Reservoir as those marked on the plan.

1609. In suggesting the removal of some of the inmates from Parramatta to Rookwood, the number you contemplated, I believe, was about 3,000? Making allowance for increase, all I proposed to place there at present was a little over 2,000.

1610. And you think 2,000 is a sufficient number to place in one centre at Rookwood? Yes. You could provide for some of the others in the Liverpool Asylum, or in the old buildings in Macquarie-street, Parramatta, until other provision could be made. I refer to the ophthalmic and consumptive patients.

1611. Would your Department, do you think, consent to a consumption hospital being located amongst a number of healthy paupers? Certainly not.

1612. You do not think that Rookwood is a proper site for such a hospital? No; I do not think it should be there at all.

C. Walker,  
Esq., C.M.G.  
19 Feb., 1890.

C. Walker,  
Esq., C.M.G.  
19 Feb., 1896.

1613. Therefore, if the plans before the Committee had been submitted to your Department, in all probability the scheme in its present shape would not have been before us to-day? It certainly would not have been. In the first instance all the inmates would necessarily have been taken to the new institution in a body; but I should afterwards have weeded out the patients suffering from the diseases I have mentioned, and placed them at Liverpool or elsewhere.

1614. They ought to be entirely removed from the other inmates. Yes.

1615. Have you received any complaints with reference to the overcrowding of the Parramatta Asylums? No. I formed my opinion with regard to these asylums from what I observed there myself, and from the reports of the Director.

1616. But I suppose complaints have been made from time to time that the George-street Asylum has been overcrowded? Yes. It appears so from the papers, but I could not mention any particular complaint.

1617. Has any suggestion been made as to the necessity for legislation of a more effective character to deal with the admission and discharge of the inmates of these institutions? I have heard the matter mentioned, but there has been no official communication with regard to it.

1618. Has it come to your knowledge that such a step is necessary? I certainly think it is necessary.

1619. We are not strict enough? No. Something is necessary to prevent paupers from coming into our institutions from the other Colonies.

1620. Has the number of people applying for admission to the asylums largely increased during the last few years? During the last five years the number has increased by about 1,100. On the 31st December, 1890, the number of paupers was 2,448; in 1891, 2,593; in 1892, 2,912; in 1893, 3,146; in 1894, 3,252; in 1895, 3,425; and in 1896, to 8th February, 3,540. These figures represent the total number of paupers, including inmates at Newington and other asylums.

1621. Could you recommend a place where a separate hospital for consumptives could be established? I was thinking the other day whether some arrangement could not be made by which some of them could be admitted to the Goodlet Convalescent Home at Picton. There is accommodation there now I think for about sixty, but the buildings could be very easily added to if necessary.

1622. In any scheme submitted to your Department, you would not sanction a hospital for consumptives being placed amongst the healthy inmates? I should recommend the Colonial Secretary not to sanction any such step. I do not think it would be a proper thing to do.

1623. Looking at the plans of the proposed buildings at Rookwood for housing 3,000 people, do you think the scheme is likely to commend itself either to the people of Rookwood, to your Department, or to the medical officers? No. I am quite sure that neither the ophthalmic, the cancer, nor consumptive wards should be there. The buildings for these cases should be somewhere else.

1624. Do you know of any other place where they might be located besides the Goodlet Home? I thought that if you emptied the Liverpool Asylum these patients might be removed to that institution temporarily. There are cancer cases there now.

1625. Do you know that the people of Liverpool are up in arms already against continuing the asylum there? I am aware of that. But the question is, where else could you put them.

1626. Do you not think that the people of Liverpool should be considered in a matter of this kind? Yes; I think they should be considered. But perhaps these patients might be placed in the Liverpool Asylum as a temporary measure until some other place was found for them.

1627. You would only put them there temporarily? Yes; I think they ought to be altogether isolated from centres of population.

1628. Would you recommend their removal to the Randwick Asylum? The same objection would apply in that case. There is even a larger population at Randwick—some 6,000 or 7,000 people.

1629. Do you approve of the scheme for concentrating the infirm and destitute old men at one institution? I think it is a cheaper mode, and I think it would answer very well as long as you have only the infirm and destitute, who are not suffering from disease.

1630. Do you think one medical officer could do the work of attending to so many people? Yes; there are nearly as many lunatic inmates at Callan Park where only two medical officers are employed.

1631. At present there is a doctor at Parramatta, another at Liverpool, and another at Newington, and you propose that these three institutions should be concentrated, and that one medical officer should do the whole work? There is only one doctor for Parramatta and Newington, and there are 1,500 inmates in the former asylum and 600 at Newington; and there is one for Liverpool.

1632. *Mr. Hassall.*] Had you any idea when this scheme was submitted that it was to cost £108,350? No. It is quite new to me. I know nothing at all about such an estimate.

1633. You have no idea how the extra cost, beyond the sum of £70,000 placed upon the Estimates, has arisen? I think it must have been suggested by the Government Architect, who has I think taken the matter up and made the plans. He states that he is responsible for the plan before the Committee. It ought to have been sent to our Department before being acted upon.

1634. The Government Architect in his evidence states that the total cost of £108,000 would be equal to a cost of £40 13s. 5d. per bed? The cost would not be anything like that under the £70,000 scheme.

1635. Do you think the higher estimate mentioned is excessive? I think it is based on altogether wrong principles. Many of the things proposed are not wanted. I do not know on what data the Government Architect prepared his plans. It may have been according to his own views, but it is certainly not what was contemplated when I submitted the matter to the Colonial Secretary.

1636. You think that many of the buildings proposed in the scheme before the Committee need not be erected at all? No; because the existing buildings at Liverpool and Macquarie Streets, Parramatta, could be utilised for the accommodation of certain classes of patients. Although the George-street Asylum should be sold, the Macquarie-street Asylum might be retained and be utilised to a certain extent, and if the healthy cases were removed from the Liverpool Asylum a certain amount of space would be available there, even if it were necessary to place the consumptive and cancer patients elsewhere.

1637. In the scheme before the Committee it is proposed to expend a total sum of about £14,000 upon kitchens and laundries? I can safely say that the Department was never consulted as to this proposed expenditure. The matter has been sent on to the Committee by the Works Department. As far as I know, the Colonial Secretary has never approved of it.

1638. This estimate has never been considered by the Department? No. We put a lump sum down as

a rough estimate, to cover what was required for making alterations and the necessary arrangements. Before anything was done with the £70,000, plans and specifications would be prepared and submitted to the Colonial Secretary. The custom is first to place a lump sum on the Estimates, and to work out the plans afterwards, and consider how the money is to be spent. In this case, however, the matter has not been brought under the notice of the Minister who has control of the matter.

C. Walker,  
Esq., C.M.G.  
19 Feb., 1896.

1639. Do you not think that the sum of £2,000 for the residence of the medical superintendent is rather an extravagant estimate, considering the cost of building at the present time, and that nothing would be paid for the ground? I think you ought to be able to do it for about £1,000, or certainly £1,200.

1640. *Mr. Black.*] The Director of Government Asylums in his minute read by you just now estimated that the buildings at Parramatta and Liverpool might be sold for £30,000. Do you think they would be saleable at all? Yes, I think they would be saleable. There are always new enterprises starting, and people will want stores and buildings of this kind. They were used as a woollen factory before.

1641. In reply to *Mr. Fegan* you said that you thought something should be done to limit or restrict the admission of paupers from the other Colonies? I think there ought to be some measure of the kind.

1642. Have you any idea of the number of paupers that annually come from the adjacent Colonies? Last year about twenty-four or twenty-five came from the Colonies of New Zealand, Victoria, and Queensland.

1643. Those were cases that were traced, but there might be two or three times as many without its being found out? Just so.

1644. I suppose you are of opinion that in conjunction with legislation of that character something should be done to make the relatives of these infirm and indigent poor pay for their maintenance? I think so. I think the relatives ought to pay something.

1645. You have no means of getting at them now? None whatever.

1646. *Mr. Wright.*] I understood you to say that in your original minute, you contemplated an expenditure of about £70,000? Yes.

1647. Is it customary when a minute of that kind has been prepared by you, for the work to be taken up by others, and submitted to Parliament without the plans going back to you? No.

1648. The procedure taken in this case has been altogether unusual? Yes; I put it down to some mistake.

1649. When a scheme is propounded by a Department of the Government to cost a certain sum, is it customary for the Government Architect to almost double that amount in his plans and estimate? No; it is usual for him to say whether or not the work can be done for the amount we suggest, and not to increase the estimate. He has to say either that the work cannot be done for the money, and report against it, or to provide plans for buildings that could be erected for the £70,000.

1650. Then I gather from your remarks that you were rather surprised at the course of procedure adopted in this case? Yes, I was certainly astonished.

1651. It is a departure from the usual practice? Yes.

1652. Was it any part of your original scheme to amass the whole of these indigent people in one pauper town? Certainly not. I had an idea that we might deal with what I might term the clean men—the old and decrepid.

1653. Bearing in mind that the number of inmates is increasing year by year to an alarming extent, did your proposal contemplate that, say, in eight or ten years' time the whole of the pauper population should be located at one spot? I do not think I had that idea. My main object was to relieve the unfortunate men who were in such a wretched condition in the George-street Asylum. I thought that if we were going to be charitable at all we might as well be charitable in a proper way, and not treat people like dogs. The treatment of these people in the George-street Asylum was inhuman, over 1,000 of them being confined in buildings five storeys high and about one or two acres of land.

1654. Would you approve of putting what you call the clean people at Rookwood—the really indigent and infirm—in view of the fact that the number is increasing so much every year—in other words, would you make at Rookwood a permanent home for all these people? I think it would be cheaper and better in the long run, and I think they would be better treated.

1655. Do you think it would be beneficial to create a town of, say, 8,000 or 10,000 of these people—for they will assume that proportion in a very few years at the rate at which they are now increasing? It would be much better that they should be located at one spot, instead of being distributed all over the Colony.

1656. Have you looked at the plans before the Committee? Yes.

1657. In your opinion are the buildings there shown suitable for the purpose intended? I object to the use of two-storied buildings, except for the accommodation of the stronger inmates.

1658. You refer in your minute to pavilions accommodating 100 each, which you say would be preferable to pavilions with a capacity of sixty each? My idea was that by this means a saving would be effected in the number of matrons and wardsmen required. In the one case a single staff would be sufficient, and in the other a double staff would be necessary. While favouring the pavilion form of building with a ground floor for the infirm, I think that each building should have a larger capacity than is proposed in the plans before the Committee.

1659. You have had considerable experience in the administration of the poor laws of this colony? I have been dealing with them for twenty-five, if not thirty years, and I ought to know something about them.

1660. Has it not struck you that some legislative action should be taken to limit the demands now made on the Government? Yes; I think something should be done, and that the Government should not bear the whole expense. I think there ought to be a poor rate; it would be a very small charge upon the population.

1661. Some years ago a poor law was passed in New South Wales at the instance of the Government of Sir James Martin, and it was afterwards repealed? I think that must have been the Workhouse Act passed by Sir James Martin. I am not aware of any law having been in existence imposing a tax on the people for the maintenance of the poor.

1662. From your minute it would appear that these asylums for the aged and indigent are being turned into hospitals? Their character has been altered from that originally designed.

1663. It appears that even now nearly 50 per cent. of the inmates are hospital patients? Persons entirely bedridden.

- C. Walker, Esq., C.M.G.  
19 Feb., 1896.
1664. Has it struck you that in the plans before the Committee the fittings and appointments are rather of a superior character, considering the purpose required? I think they are a little extravagant—a little more expensive than I thought they ever would be or than is necessary.
1665. Do you think it advisable, for instance, to have in the hospital building handsomely carved gorgons and things of that kind? No; I do not think so. It is only necessary that the buildings should be plain and healthy.
1666. Your idea is that they should be plain, substantial well-ventilated, lofty buildings? Yes.
1667. Sufficient only to ensure the health and comfort of the inmates? That is all.
1668. *Mr. Hoskins.*] In reply to Mr. Wright, you said you were in favour of housing these people in buildings similar to those now at Rookwood? Yes.
1669. Would not that plan be much more expensive than to house the most feeble of the inmates in one-storey pavilions, and the others in buildings of two storeys? I have already pointed that out. I think they should be classified and separated, and that the stronger inmates should be placed in two-storey buildings, and the feeble ones in one-storey pavilions.
1670. Was this matter of housing all the old and sick poor, and the transference of such persons from Parramatta to another place, formally brought before the Colonial Secretary, and if so, did the Minister give his assent or express his approval of housing all the persons so transferred in one place—that is to say, taking the whole or a portion of the inmates from Liverpool, and the whole of the inmates from Parramatta, and housing them at Rookwood? All that the present Colonial Secretary saw was the minute of the Director of Government Asylums and my own minute, in which I suggested that the inmates should be removed from Parramatta to Rookwood. After seeing the Parramatta institutions the real object was to have the inmates removed to Rookwood.
1671. And reducing the number of inmates, I suppose, in the asylum at Liverpool? Yes; £70,000 was suggested to be put on the Loan Estimates, but, of course, we could not remove the inmates until we got the new buildings erected. We had to get the money voted first. The money was voted, and a reference was made to the Government Architect to get the plans prepared. Instead of sending to the Department to know how we were going to accommodate the inmates, and so forth, he or some one else appears to have gone on with the matter, and to have sent plans to the Public Works Committee.
1672. I gather that the late Colonial Secretary, Sir George Dibbs, gave his assent to the removal of nearly all the aged and destitute to one institution at Rookwood? Yes; the object being to put a stop to the overcrowding of the Parramatta and Liverpool institutions. It was proposed to remove all the inmates from Parramatta, and to reduce the number at Liverpool. The object of the proposal really was to relieve the existing institutions, and not to establish a big central charitable institution for all sorts and sizes at Rookwood.
1673. How many would be removed to Rookwood under your scheme? I do not suppose there would be more than 2,000.
1674. Added to the 480 already there that would make a total of 2,480? Yes; that would be about the total.
1675. Did those who were responsible for this scheme, and submitted it to Sir George Dibbs, ever explain how it was proposed to dispose of the sewage from buildings containing 2,480 people? The sewage could be taken down to Saltpan Creek; the drainage is all down that way, and the distance is not two miles.
1676. Is that the way you propose to get rid of the sewage? Only as regards the dirty water; the faecal matter would be utilised.
1677. What was it proposed to do with the faecal matter? To utilise it for cultivation purposes, as is done on the sewage farm at Botany.
1678. Before launching into a scheme of that kind, do you not think that the responsible officers of the Department should have ascertained whether the soil at Rookwood was of such a character as to absorb the faecal matter emanating from an institution with 2,500 inmates without any danger to those in the institution itself, or to the persons living in the neighbourhood, and without any possibility of polluting the water in the reservoir adjacent to the site? The faecal matter has been so treated at Rookwood for two years. The sewage matter is now being used for cultivation purposes, and the inmates have not been affected in any way—the number being about 450.
1679. If that number were increased five times, do you not think it probable that the health of the inmates would be effected? I do not think so with the system now adopted. If it could be done with 450 people, surely it could be done if there were 4,000 people.
1680. At all events, the Department never asked the officers of the Board of Health, or any other competent persons, to give them a report on the subject? No, because we have not had a chance of doing so. The matter has not come before us to be dealt with, and to decide whether or not the scheme is feasible.
1681. If the usual course had been followed in this case, and if the plans had been forwarded for the inspection of the Department and the Minister, would not the Department, first of all, have consulted the Board of Health to ascertain whether in the scheme proposed there was anything likely to be prejudicial to the health of the people or dangerous to the Sydney water supply? I am sure they would have asked for such information. The Minister has not approved of the plans.
1682. As a matter of fact the scheme has come before the Committee in a very crude state? It has come before the Committee, in my opinion, before it is ripe, and before it is in a proper state to be submitted to the Committee.
1683. Do you happen to know what provision is made in the Colony of Victoria for housing the infirm and destitute? I could not give you an exact description of the system adopted, but I know they apporportion them out to different institutions, and I think also they have a kind of boarding-out system. I am not quite certain, but I think they board out the adult poor just as we board out children in this Colony. I think, also, they are classified, and sent to different institutions.
1684. Therefore the system in force in Victoria is entirely opposite to that proposed in the present case—that is, to locate all the sick and indigent paupers in one place? Yes; but in Victoria they have some very large establishments on the same principle.
1685. *Mr. Humphery.*] Are you aware that the number of infirm and destitute provided for by the Government of Victoria is very much less than the number provided for in this Colony? I think it is about 350 less, which is not a very large number, considering that our population exceeds that of Victoria by nearly

nearly 200,000. The cost per head in Victoria is £13 13s. 9d; in South Australia, £13 4s. 4d.; in Queensland, £13; in New South Wales, £14 7s. 3d in the case of the four main asylums, and £15 4s. for all institutions. In Great Britain the cost per head is £19 6s. 4d.

C. Walker,  
Esq., C.M.G.  
19 Feb., 1896.

1686. In the design prepared by the Government Architect you will observe that there are three groups of buildings. In the suggestion you made to the Colonial Secretary was it your intention to place the group coloured red in such close proximity to the Potts' Hill Reservoir, or was it your idea, by adding wings to the existing buildings, to locate the whole of the paupers in the vicinity of the site where the buildings in the plan are marked black? No. The wings I proposed to add to the existing buildings would be fully half a mile from the Potts' Hill Reservoir. The groups marked on the plan, Nos. 2, 3, 4, and 5, embracing the casuals, the general cases, and the three hospitals, were not contemplated, and are all now to me. The site for the Superintendent's house is an absurd one, and should be in another position. The Government Architect told me he was responsible for all these proposals. He may have consulted with the Director of Government Asylums, but it appears that the plans have been sent on without being first submitted to the Department. If I had seen them I certainly would not have allowed them to go.

1687. I understand you are of opinion that it would be better to separate the chronic sick from the healthy paupers? I think so.

1688. Did you propose that the chronic sick should be placed at Rookwood? Yes; except those suffering from cancer and consumption.

1689. Men suffering, say, from rheumatism? Yes; rheumatism or gout, or old cripples.

1690. You intended to put the whole of these at Rookwood? Certainly.

1691. Did you intend separating them from the healthy? I intended that they should be classified.

1692. But did you intend that they should occupy the same pavilions or buildings? That they should occupy the same locality, but not the same buildings.

1693. What you intend is that all the patients should be housed at Rookwood except the consumptive, cancer, and ophthalmic patients? That is so. I would exclude those three classes, and I should classify the others. I would not put a strong man alongside a sick man, because one would disturb the other at night.

1694. Having regard to your evidence respecting the George-street Asylum, could that asylum be used for a certain number of patients? I think it is quite unfit for any purpose of the kind. It ought never to have been used as an asylum. Objection has been raised to the proximity of the Necropolis to Rookwood, but very few people seem to be aware that 200 or 300 of the inmates of the George-street Asylum, Parramatta, look at a burial-ground all day long. The burial-ground lies to the north, and there is nothing else for them to see.

1695. Assuming that you will have to make arrangements for the housing of the pauper population pending the carrying out of any scheme that may be decided upon, would you propose using the George-street Asylum for certain patients,—instead of patients occupying three, four, or five floors, could they occupy the ground floor? I think that might be done as a temporary measure, but the buildings are quite unsuitable for permanent use in this direction.

1696. You do not see any objection to it? No, as a temporary expedient.

1697. With regard to the Macquarie-street Asylum, could it be utilised for 250 or 300 patients? It now has 350 inmates and is full. There is only an acre of land there. I do not think that asylum is capable of decently accommodating more than 200 people.

1698. Therefore you think it should be abandoned as soon as practicable? Yes. I have known it since I was a boy—it is a very old building.

1699. Do you think it necessary to abandon the Liverpool Asylum also? The Liverpool Asylum is a very substantial and good building. Although the establishment is old, it has been so altered and renewed that it is almost as good as a new building. I have thought that it might be utilised for the ophthalmic, cancer, and consumptive cases.

1700. You would not recommend that the institution should be abandoned? I do not think it ought to be abandoned, but it might be relieved a good deal.

1701. *Mr. Clarke.*] Would there be any possibility of the drainage from Rookwood going into George's River? I think it could. The matter would, of course, have to be looked into before the scheme is carried out.

1702. You have no idea of the expense? No.

1703. It was stated yesterday in evidence that the cost would be £20,000, and that it would be necessary to put a tunnel through a hill? I do not think the cost would reach that amount. I would not suggest that this proposed scheme should be carried out unless the question of drainage was first thoroughly investigated.

1704. You do not approve of more than 1,500 or 2,000 paupers being sent to Rookwood? I think a little over 2,000 would be quite sufficient. I do not think it would then be a very large asylum. I should like to see it established as a home for the infirm and destitute.

1705. Do you think the site is rather bleak? No; I think it is a healthy site for the purpose. I have been there at all times and at all seasons. At one time I used to go there regularly nearly every Saturday, and I know the place well.

1706. *Chairman.*] In the minute read by you, mention was made of lock hospitals;—have you any knowledge as to the number of inmates? No. The Director of Government Asylums would be able to give you detailed information on that point.

1707. On what ground do you justify the centralisation of all the paupers at Rookwood? On the ground of economy. I believe we should save in supervision, in the carriage of goods, and in various other ways of which I am not prepared to give the details, but I believe the information could be obtained from the Director.

1708. With regard to the George-street and Macquarie-street Asylums, Parramatta, if a number of the inmates were removed, so that there was no longer any overcrowding, and no use was made of the upper storeys, would you still recommend the absolute abandonment of these buildings as permanent asylums? Yes. I think they should both be abandoned as unfitted for the purpose. It is really a brutal sight to see them at present.

TUESDAY, 25 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
 The Hon. JOHN DAVIES, C.M.G.  
 The Hon. JAMES HOSKINS.  
 The Hon. WILLIAM JOSEPH TRICKETT.  
 HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.  
 JOHN LIONEL FEGAN, Esq.  
 THOMAS HENRY HASSALL, Esq.  
 GEORGE BLACK, Esq.  
 FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Alderman John Cole, Esq., Liverpool, sworn, and examined:—

J. Cole, Esq.  
 25 Feb., 1896.

1709. *Chairman.*] Are you an alderman of the Borough of Liverpool? Yes.  
 1710. Have you a statement which you desire to place before the Committee? Yes.  
 1711. Are you deputed by the Council to appear here to-day? Yes.  
 1712. Do you think the statement you are about to read represents public opinion in this matter? Yes.  
 The statement is as follows:—

To the Chairman, Parliamentary Standing Committee on Public Works,—  
 Sir,

Town Hall, Liverpool, 24th February, 1896.

We, the aldermen of the Municipality of Liverpool, desire to lay this statement before your honorable body, urging upon you the early necessity of the removal from our township of the poor, destitute and diseased persons' asylum; and, as a responsible body, we do this in the interest of a mass of living beings, old and young, numbering 3,350 souls, to whom this asylum is a hideous menace. We can assure your honorable Committee that in this institution there are men dying daily from the most aggravated cases of cancer, consumption, and venereal diseases; and these packed premises, containing these poor creatures, the healthy mixed indiscriminately with the diseased, in the proportion about one-half, are situated on the east of this extensive population above referred to, with the prevailing coast winds from the north-east, south-east, and due east blowing directly across the town. Of a night-time people complain that there are heard the lamentations of these poor suffering creatures.

In the interests of humanity, we beg to point out that these people suffer in buildings which are cold, draughty, and unsuitable.

The inhabitants whom we represent complain that they are sickened to see the cancerous and consumptive men walking the streets, and other ailing patients sitting about hotels and recreation grounds.

Again, we desire emphatically to point out that the site upon which this institution is built is perfectly flat, and drainage from it is impossible—it must either percolate the soil or find its way into the river, which it undoubtedly does, and this drainage consists of the most dangerous organic matter.

The ground is too limited for the crowded suffering humanity required to exist upon it, and there can be no doubt that the health of Liverpool has been diminished, and the district progress retarded by the improper location of this asylum in our midst.

We, therefore, beg that, in the interest of an old and important district, your honorable Committee will, in their wisdom, be pleased, for the objects of sanitation, humanity, and administration, to relieve us of this burden so detrimental. And while we in no way wish to presume to say what should be the course adopted in dealing in the future with this great public question, we would like to point out that if an asylum must be in our district for the purposes of an old man's relief home, "The Glenfield Farm," situated some four miles from town, is an excellent site for such, but not for an incurable diseases hospital. The ground is extensive in area, adjacent to the railway, elevated, well watered, of good soil, and in every way suitable for a rural indigent asylum, such as they have in other countries.

I have, &c.,

FRED. CHAPMAN,  
 (On behalf of the Council.) Mayor.

1713. *Mr. Humphery.*] Does the document which you have just read sum up the objections of the Council to the existence of the present buildings at Liverpool? They are the chief objections. We might have enlarged on those very much; but we thought it better to put the objections before the Committee concisely.

1714. When did you last visit Liverpool Asylum? Probably six months ago.

1715. Do you believe that the building is unsuitable for the purpose for which it is used? Yes.

1716. In what respect? There are large corridors all through the place, and windows on either side, and I have heard the old men complain of the draughts and cold, especially in winter.

1717. Do you not know that those windows and corridors are necessary for ventilation? Of course they are to a certain extent. Still it is a cold draughty place.

1718. The chief objection, I take it, is that there are a large number of inmates in this building? No; our chief objection is that the place is so entirely unsuitable, being right in the centre of our town, so that old men have no ingress or egress without coming into our streets.

1719. What distance is the building from the Town Hall? 400 or 500 yards.

1720. Within what radius does the population of 3,000 reside? Probably within 2 or 3 miles of the Town Hall.

1721. You do not mean that there are 3,000 people living in the immediate vicinity of the asylum? No, they are scattered about; but the largest number of them are in the main part of the town, which is not far from the asylum.

1722. Do you say that some of the consumptive and cancerous patients are permitted to leave the asylum and sit in public-houses? Yes.

1723. Is that within your own knowledge? Yes. Probably there is not a fine day when you will not see a large number of the consumptive patients walking our streets.

1724. Are they under no restraint? No; they will come into a shop or hotel and sit down—some of them can hardly speak. They frequently come into my own shop, and they cannot tell me what they want; they are coughing and expectorating all over the place. A week ago one of them became so bad that he ran out of the shop and sat down on the adjoining doorstep coughing and expectorating for a considerable time.

1725. What distance is your shop from the asylum? 400 or 500 yards.

1726. What objection would there be to the continuance of the institution at Liverpool if it should be considered expedient to remove all the inmates except the healthy ones? The chief objection then would be the material detriment it is to the progress of our town.

1727.

1727. Do you think there would really be no objection to the institution being continued as an asylum for old people who are destitute? The Council whom I represent are unanimous in their desire to see the whole place removed. We have complaints from business people frequently that when they wish to sell their business, and a probable buyer consults the agent in Sydney, as soon as it is known that the business is situated in Liverpool, they say that they will not have anything to do with it, owing to the presence of the asylum. That statement has been made to me repeatedly. J. Cole, Esq.  
25 Feb., 1896.

1728. Does not the drainage of the institution go into the river below the dam? Yes.

1729. It does not pollute the water in any way? There are people residing on the salt water portion of the river. They sink wells, and the water percolates through.

1730. Then the objection you have urged on that score does not apply to the town of Liverpool in any way? The drainage runs in below the town, but the river is a tidal one, and it is only in flood times—which is very occasional—that all the stuff is carried away. The offensive matter goes down the river with the ebb tide, and it comes back again with the flood tide, and the smell is very offensive at times.

1731. Do you think that the Glenfield Farm will be suitable in every respect for an asylum of this description? Yes.

1732. What is its area? About 900 acres.

1733. Is there a railway platform on the farm? No; it is lower down—perhaps a quarter of a mile from the building.

1734. Have you visited that place lately? Not for twelve months.

1735. Do you know that already there are seventy-five or eighty patients there? Yes.

1736. When you say that you think that would be a suitable locality for an institution of this kind, do you speak only of the healthy destitute? Yes; not for the sick. We would not recommend them to be so near our town.

1737. Have you any suggestion to make with regard to the sick? No.

1738. You want to get rid of them and the whole institution from the town, so that you are not so much moved in your objection by a desire to provide for the indigent as you are by a wish to shift the asylum to some other locality? Not at all. I think it is much better for the inmates. It is an impossibility to confine so many men in a building of that sort. They must come out to get fresh air, consequently they come out and intrude themselves upon us.

1739. *Mr. Trickett.*] Is not this a rather new-born objection to the institution? No.

1740. When was any objection ever raised? The Council have made objections on previous occasions when I was not a member, and the matter was brought under the notice of the Government. I cannot say how far back that goes, but twelve months ago I think they protested against the enlargement of the cancer ward.

1741. Then it is the cancer ward you chiefly object to? No; we object to the whole thing.

1742. Is the Council backed up by any medical opinion as to the effect of such an institution? I think the evidence given before this Committee by medical men is directly in favour of separating the consumptive and cancerous patients from the healthy old men. Four or five years ago it was proposed by the Railway Commissioners to take the present asylum buildings, and convert them into engine-sheds and workshops.

1743. Judging by the answer that you have given, the only real objection to the institution is that the consumptive patients are allowed to go about the town? Our Council is unanimous in the opinion that it would be in the interests of the town that the whole asylum were removed.

1744. Have there been any public meetings held on the subject? Not to my knowledge.

1745. Was there any public agitation on the subject? No; but I may say that I was returned to the Council unopposed on that very question. That shows that the ratepayers in my ward were in favour of my view. I brought it prominently before the public twelve months ago in a letter to the press. I was interviewed on the question many times, and pressed repeatedly to stand as a candidate for the Council. I did so, and no one saw fit to oppose me.

1746. Supposing the number of patients was reduced to 500 or 600, and the objectionable cases of sickness taken to another institution, would there be any objection to the asylum then? As far as the Council is concerned, our desire is to see the whole institution removed from our midst.

1747. But must not the institution be placed somewhere? There are plenty of sites in the country, without putting the asylum at our front door. Liverpool is an important place. We are, as it were, within a stone's throw of Sydney, but we can make no progress, simply because the name of Liverpool has become a by-word and a reproach. It is regarded as a poor-house town. It is the first place that travellers see when they are going through in the train, and it makes a very bad impression.

1748. Would that not also apply to Parramatta? No doubt; but in Parramatta the institutions are not so prominent.

1749. In passing through Liverpool, I saw a number of the inmates located in a paddock, where they inhabit little humpies;—are they members of the institution? Yes; but some of these little places are simply business places. They come out into the town and pester our lives out of us for stamps, writing paper, newspapers, and so on, which they take down to the asylum and sell in those little places you refer to. Those buildings are not used as sleeping-places.

1750. *Mr. Davies.*] Have you any evidence to show that disease has been carried from the asylum to any home in your Municipality? I am not in a position to prove that, but I can say that we have had several deaths from consumption, and we have other cases where the patients are at present at death's door.

1751. Would not that apply to every other part of New South Wales? Yes.

1752. Does not the drainage from the asylum go into the salt-water portion of the river, a long way from the town? No.

1753. Does not the drainage go into the river 300 or 400 yards below the dam? Not so far.

1754. Where is the populous part of the town;—is it close to the asylum? It is within 400 or 500 yards from the asylum, and it is so situated that almost all the prevailing winds carry everything right across the town.

1755. Where are there 100 people living within 500 yards of the asylum? I cannot say.

1756. Is not the asylum practically outside the town? No; we have houses surrounding it.

1757. Which is the greatest nuisance—the paper mills, the wool-scour, or the asylum? The asylum.

1758. Was there not more agitation in Liverpool to abolish the paper mills and the wool-scour than to remove the asylum? It was not proposed to abolish the mill or the wool-scour, but only to remedy the nuisance.

J. Cole, Esq. 1759. Was not the nuisance caused by those works so great that the people who had to pass through the towns in the train made complaints? That has not been the case since the drainage was taken out of the fresh water.

25 Feb., 1896.

1760. Is not the asylum building a very good one? It is a very strong building.

1761. Are you a property-owner at Liverpool? I have leasehold property.

1762. Do you think that the presence of the asylum depreciates the value of your property? Yes.

1763. Do several other aldermen hold the same view? Yes.

1764. Long before your time, were not the people of Liverpool anxious to get the asylum there? I do not know.

1765. Was not the asylum the life of the place? I do not remember that to be the case.

1766. If you took away the paper-mill, the wool-scour, and the asylum, what would there be left at Liverpool? We are only asking to have the asylum removed. We are very glad to have the other industries there.

1767. Was there not an agitation by a large section of the people there to abolish both of those industries? I cannot answer the question.

1768. Was not the late proprietor of the wool-scour compelled to spend a large sum of money in order to abate the nuisance? I do not know.

1769. As a matter of fact, you do not know much about Liverpool? I know a little about it.

1770. Would you like to have these poor old men sent anywhere so long as they are sent away from Liverpool? I presume that the Government would see that they are well housed.

1771. At present are not the old men as well housed as you are yourself? I think so.

1772. *Mr. Lee.* How long have you been in Liverpool? About seven years.

1773. Do you know that this asylum has been established at Liverpool for a great many years? Yes.

1774. Of late years has the asylum been made more than an asylum for chronic cases of cancer? Those and consumptive cases have increased largely of late.

1775. The inhabitants naturally feel aggrieved because a number of men with infectious diseases have been placed in their midst? Yes.

1776. Have you been able to trace the spread of disease in the town since the asylum has been made a hospital for those cases? I am not in a position to prove that.

1777. Has there been any serious outbreak of cancer, or any of these diseases? I am not aware of it.

1778. And has there been any outbreak of consumption? We have had several cases of consumption during the last few years, and we have them at present. It should be remembered that Liverpool is regarded as a very healthy town.

1779. Supposing that the objectionable cases you have referred to were removed to some remote asylum, would the objection of the townspeople to the asylum be as strong as it is now? Perhaps not; but at present they are all in favour of having the whole place removed.

1780. Are you aware that a large amount of money has been spent on the buildings of late years? Yes.

1781. What difference would it make to your town if only a reasonable number of infirm people were accommodated in the asylum? Of course that would not affect the town very much. There would only be the fact of our property being kept down to a minimum price owing to the presence of a poor-house in our midst. It would be very acceptable to the people of Liverpool if the sick people were all removed.

1782. If the consumptive and cancer patients who at present parade the town were taken to another asylum, would not that remove the alleged danger? Certainly.

1783. As far as the old infirm people moving about the town are concerned, if they did so in limited numbers, could there be any possible objection to that? There is this objection, and a very serious one, that it affects the morals of our town and of our children. Gentlemen who have not visited Liverpool at certain times have no idea as to how these men carry on in our public streets. At times our wives, sisters, and daughters cannot go outside their doors without being afraid of running up against some of these old men with their clothes greatly disarranged. They get drunk, they lie about in our streets, they insult you if you speak to them, they come into your shop begging for 3d. for a drink, and if you order them out they insult you and use the filthiest language. You will see crowds of children following these old men in the streets, and the old men swearing at them. If that is not stopped, how can we get on?

1784. While these inmates are acting in such a manner do they return to the asylum? They do not return to the asylum while they are drunk. I have taken one down myself to the asylum, but he was refused admission. They have to lie about the streets all night. When I have been going to my bake-house early in the morning I have frequently seen them. Last Friday morning three of them came into my shop as drunk as they could be. They had probably been out all night, and they wanted more drink. I had none to give them, and they insulted me. The police can do nothing, because if the men are arrested they are only discharged with a caution. These things take place frequently. We see them committing acts of indecency in the streets in front of our shops.

1785. Do you consider that the asylum is a public nuisance? Yes; the town is practically in a state of siege at times.

1786. But supposing the supervision were more strict, and the inmates were not permitted to go to the town? Then we say the place is not suitable for confining so many men. The walls are very high, and in the hot weather it would be inhuman to compel them to remain within the precincts of the institution, but they cannot go out without coming into our town.

1787. Is there not an open paddock in connection with the asylum? There is a very small paddock adjoining.

1788. Is it not sufficient for some hundreds of men? But there are 900 or 1,000 men in the asylum.

1789. But it is not necessary for them to go into the town to get fresh air? No.

1790. Do you think the inmates should not be allowed to patrol the town? I do not say that, but the place being situate just at our door-steps, it is impossible to confine them to the asylum. So long as it is an asylum we shall be troubled by these men, and it is a great drawback to the progress of our town.

1791. During the seven years you have been at Liverpool has there been any organised action on the part of the townspeople to obtain the removal of the asylum? Not that I remember. There has been no public meeting. Of course, the people of Liverpool generally let the Council take up these matters.

1792. What steps have the Council taken? The Council twelve months ago protested against these men being allowed to walk the streets, and also against the extension of the cancer ward, but that was taken no notice of.

1793.

1793. But that was a very modified protest;—was there any action taken to procure the removal of the J. Cole, Esq. asylum? Our protests have all fallen to the ground.

1794. Considering that the asylum has been in existence for a number of years, and that no action for its removal has been taken, how is it that on the present occasion, when the question of housing the poor of the colony comes up, that you ask that the asylum should be removed? I imagine it is because of this inquiry. We thought the time had arrived for the people of Liverpool to speak out on this question. 25 Feb., 1896.

1795. If the abominable nuisances to which you have referred have existed for a long time, do you not think that the inhabitants of Liverpool would rise up in a body and demand the abolition of such an institution? A great many of the people there have become so used to these things that they are utterly callous, and many of them take no notice of it; but when a stranger goes to the town and sees these things he is utterly astounded, as I was when I first went there. If I had not invested in property in the district I would immediately have left it. Now that I am there no person will buy me out.

1796. *Mr. Clarke.*] If the consumptive, cancer, and ophthalmic patients were removed to some other asylum, would there be any objection to the other patients being retained at Liverpool? Our objection would still stand good, because of the material and moral influence which the presence of that asylum has upon our town.

1797. Do you not think that it is the fault of the management to a great extent that the consumptive patients and others go through the town? I am not in a position to answer with regard to the management. I do not think it is the fault of the management, because when there are too many men in a small place they must get out.

1798. Is there not a small paddock attached to the institution? Yes, and it is crowded. The sheds there are crowded, and so are the streets at times.

1799. Your object is to get rid of the whole thing? Yes.

1800. If the asylum is properly managed, do you not think the people of the colony generally should be consulted as well as the people of Liverpool? I think the people of Liverpool have a perfect right to say that the Government or anybody else should not gather up men from the whole colony who are suffering from all kinds of diseases, and put them down at our door.

1801. Would not that apply also to Parramatta? For many years the Parramatta people have been trying to get rid of those asylums.

1802. Does not the ebb tide take away a great deal of the objectionable matter which goes into the river from the asylums? No; it goes down so slowly that it is deposited on the sides and bottom of the river. When the tide comes up again it floats back to the dam.

1803. Are there many people residing on the river below the asylums? There are several.

1804. Do they complain about the nuisance? Of course they do. The prevailing winds blow the bad smell over the town.

1805. We have evidence before us that the Liverpool Asylum is a very good site for keeping about 600 patients, if the objectionable chronic cases of sickness are removed;—what have you to say with reference to that? I can only say that it resolves itself into a pure matter of opinion. Our opinion differs from that.

1806. *Mr. Fegan.*] Do you say that you were elected unopposed on account of the position you took up with regard to this asylum? Not altogether on that question; but the ratepayers knew my views upon that question.

1807. Was any other alderman elected unopposed whose views coincide exactly with yours with regard to the removal of the asylum? Yes.

1808. The first objection you raise against the asylum is that it is cold and draughty on account of the wide corridors and windows;—does not that show that there is good ventilation? Yes; but it is not very nice if you cannot keep out the wind in the winter.

1809. Would you think it wise if the Government proposed to erect an asylum without windows or corridors? No.

1810. How long have you been in the asylum at one time? Perhaps an hour.

1811. Do you think you are a competent judge as to the asylum after being in it for only an hour? It is not necessary to stand there for even an hour. It would soon make you shift.

1812. Can you give evidence on oath that it is not a fit and proper place when you have only had one hour's experience of it? I think so.

1813. How long have you been an alderman? For one month.

1814. How is it that you take precedence of the mayor in giving evidence to-day? For the reason that the mayor was unable to attend on the first day appointed by the Committee for taking our evidence. That day was changed, and we were unable to make any different arrangements.

1815. Do you remember that your Council protested twelve months ago against consumptives going into the town? Yes.

1816. Was any notice taken of that protest? I heard that no persons with contagious diseases were to be allowed to parade the streets.

1817. Has that not been strictly adhered to since? No.

1818. Are you willing to make complaint to the officers that that regulation has not been carried out? I am prepared to say that those people do come out into the town. I do not know what instructions have been given.

1819. Now, with regard to the progress of the town, what was its population ten years ago? I cannot say.

1820. You will admit that, if your Municipality has made equal progress with other municipalities which have equal facilities, your statement that you are going back would be incorrect? I do not think I made a statement that we are going back. If I did make that statement I withdraw it. We are not making progress.

1821. What was the population eight years ago as compared with the present population? I can only say that our population now is 3,350.

1822. Do you know the death-rate of the Municipality? No.

1823. What are the facts on which you base your statement that the town is not making the progress that it ought to? Because of the presence of the asylum; people object to reside in what is looked upon as a poor-house town. Then the men are allowed to parade the streets, and there is the presence of diseased patients.

1824.

- J. Cole, Esq. 1824. What have you to go on with regard to your statement with reference to the progress of the town? We can only judge by seeing the progress of other towns. Liverpool is one of the oldest towns of the colony, and towns which are only a few years old have made much greater progress.
- 25 Feb., 1896. 1825. Do you know other towns which have made less progress than Liverpool? No.
1826. Take the case of an ancient town like Windsor? They have not the same facilities that we have; they are not nearly so close to Sydney.
1827. Has Parramatta made more progress? At Parramatta the asylum buildings are not so prominent, and the men are not allowed to parade the streets.
1828. If the instructions which were issued were heeded, would not that get rid of a great deal of your objection? I have no doubt it would; but we do not know whether there are any regulations with regard to these men.
1829. Have you ever sent a petition to the Chief Secretary for the removal of this asylum? I do not know.
1830. Is it not a very serious request that you are making, seeing that there is such a large number of unfortunate people in these asylums—that they should be thrown out of their place of refuge? We are not asking for that to be done.
1831. Are you not asking that all the inmates of the Liverpool Asylum should be taken out and placed elsewhere? Certainly; but we are not asking that they should be thrown out into the bush.
1832. But what about the buildings now existing at Liverpool? I have a document here showing that the Railway Commissioners, about four years ago, were anxious to obtain these buildings, in order to convert them into engine-sheds and railway workshops. I believe that idea exists at the present time.
1833. If the Commissioners have altered their minds since then, what would you do with those huge buildings? We cannot do anything with them.
1834. Would you put the Government to unnecessary expense in putting up other buildings? That is for the Government to decide.
1835. Have you property in the neighbourhood of Liverpool? I have some, but not a great deal. I have freehold land over the river.
1836. Is that the reason why you protest against the asylum being at Liverpool? That is one reason—it prevents our advancement and progress.
1837. Have the poor people of Liverpool ever asked for the removal of this asylum? I do not know whether they have ever done so publicly, but they have talked about it.
1838. Has all this nuisance and depreciation of property grown up in the space of the last twelve months? No; it has been in existence ever since I have been in the town.
1839. As a representative of the Council, when have you shown your disapprobation of the asylum heretofore? We are never too old to learn. We are now beginning to make a move. We have a progressive Council at present, and we are trying to remove this obstacle to our progress. Of course we have a perfect right to do that.
1840. Do you not think the Government have also a perfect right to ask you, when you are giving evidence, to give some facts in support of your demand for removing the asylum? Yes.
1841. Yet you are unable to give us any? I think we have given them.
1842. But have you not admitted that you do not know what the population was eight years ago compared with its present population? That is the case; but perhaps my colleagues can give the information.
1843. On what do you base your evidence, seeing that you are only making assertions? I think I have given sufficient proof that this asylum is a standing menace to our town.
1844. Is it not a help to tradespeople to have this asylum near the town? A great number of us derive pecuniary benefit from the asylum, but we consider that whatever is brought into the town by the asylum, twice as much is kept out by its presence, so that we are actually losers.
1845. *Mr. Hassall.*] Do you base your request for the removal of the institution on the fact of its proximity to the town, and because the patients perambulate the streets? That is one great objection.
1846. Do you not think there must be some fault in the management when the patients are allowed to perambulate the streets? I am not prepared to answer that question; but the patients do perambulate the streets, and you can almost see through some of the poor creatures.
1847. What percentage of those who perambulate the streets are suffering from disease? I cannot say. But if you go to any hotel in town you will see the bar full.
1848. But are all the patients bad? No; there are some very nice men there.
1849. Would there be any serious objection on the part of residents of Liverpool if the Government still made use of the institution for fairly healthy men? That would remove the chief objection; but, speaking personally, and for the Council, I am in favour of the whole thing being removed.
1850. Failing that, you would be in favour of removing the most serious cases of illness? Yes.
1851. If that property belonged to the Council, would you feel justified in giving it up and erecting buildings elsewhere for the same purpose? Perhaps not. We are giving up a great deal in asking that the asylum should be removed now. For instance, the Council gets £200 a year for the consumption of gas by the asylum, but we are willing to sacrifice those advantages.
1852. Has Liverpool grown up around the asylum, or has the asylum grown up around Liverpool? In the immediate neighbourhood of the asylum I believe only four dwellings have been built during the last ten years.
1853. When you went to Liverpool did you not know that there was an asylum there? I knew there was such a place, but that is all. If I had known as much about it then as I do now I would not have gone there.
1854. Do you say that Glenfield Farm would be suitable for an asylum of this kind? It would be for the aged and infirm, but I would not recommend that diseased patients should be sent there.
1855. What do you think Glenfield Farm is worth? From £10 to £12 an acre.
1856. If it was removed there, would there not still be an objection with regard to the drainage? We would recommend that the sewage should be used on the farm.
1857. But would not the surplus sewage have to find an outlet in the river? Yes; in George's River.
1858. Would not there be serious objection with regard to the drainage whatever site might be selected? Yes.

1859. Would the asylum property realise a sufficient sum to enable the Government to erect buildings elsewhere? I do not know. The building would be of some value, but it could only be used as railway workshops or a factory. The land itself is in a low situation, and is subject to surface floods. J. Cole, Esq.  
25 Feb., 1896.
1860. If the buildings were removed, would there be any rush for the land? There is no doubt the Railway Commissioners will have to resume the land. The line is as close as possible at present to the buildings, and it is within a few yards of the bank of the river, which is being washed away.
1861. Are there no precautions being taken to prevent that? No.
1862. Is not the soil a stiff clay on that side? Yes.
1863. *Mr. Black.*] You appear to have visited the asylum only in cold weather? That was the case when I went right through it; but my business takes me occasionally there.
1864. If you visited the building in warm weather, might you not have thought that it was not sufficiently cold and draughty? Yes.
1865. Do you not agree that this is a very valuable building, and that it could not easily be replaced? Yes.
1866. Are you not also aware that the building and the land is Government property, while Glenfield Farm is only leasehold? Yes.
1867. Are you not aware that so far from people objecting to live in the neighbourhood of asylums, in every instance in the memory of man when an asylum of this kind has been erected, a town has sprung up around it? I do not know that that is the case. I should say that that occurred in spite of the presence of the asylum, and not because of it.
1868. After people have built a town about an asylum, is it not astonishing that they should petition the Government against the existence of the very thing that made the town? That is not a very strange thing, because some of those who are protesting now were not alive at the time when people petitioned for the erection of an asylum. Ideas have changed in the meantime, medical science has progressed, and so have we.
1869. Under the circumstances I have mentioned, do you not see that it is an impossibility for the Government to suitably house the poor, and, at the same time, please the people in the neighbourhood? I am not in possession of such evidence as you refer to.
1870. You say that you object to the present system of drainage at the asylum, that it is a menace to the town; you say that the sewage is carried down by the ebb-tide, and carried back again by the flood-tide;—can that sewage matter, which you say is brought back, possibly go beyond the dam? The tide never reaches the top of the dam.
1871. When you speak of sewage, do you mean the solid excreta? I speak of all kinds of sewage.
1872. Do you think the solid excreta from the asylum is discharged into the river? No.
1873. Then what is the good of telling us that it floats up and down the river, and that microbes float over the town? We were talking of all the sewage of the asylum.
1874. Do you mean to say that the slop-water and urine from the asylum, when largely diluted with salt-water, is in any way likely to breed microbes or foul smells? I could not give you an expert opinion. I have simply to go by expert opinion.
1875. But you only make a number of assertions without any facts to support them? We can only say that the drainage from the asylum drains into the river. All these people cannot live there without creating a lot of dirt, filthy water, and so forth.
1876. That is not the case with regard to them any more than it is with regard to the other inhabitants of the town? No.
1877. Are you not aware that the solid excreta from the asylum is all buried, and that it is only the effluent from that which can find its way into the river? I cannot answer that question.
1878. If that be so, do you not think that you have attempted to deceive the Committee by making statements of that character? No; I am addressing a body of intelligent men, and you must know that with an institution of that sort, there must be a great deal of foul drainage and filth which must flow into the river, and we ought not to create dangers for ourselves.
1879. You have spoken of this asylum being in your midst—on which side of the railway is it? On the western side.
1880. How many buildings are on the eastern side of it? There is a wide stretch of country there.
1881. Are there any buildings within half a mile of the asylum on the eastern side? Yes; there is one just on the other side of the railway.
1882. As a matter of fact, on the eastern side there are very few buildings? Yes.
1883. Is it not a fact that so far from the asylum being in the centre of the town, it is on the very outskirts? It is on the side of the town, but it is on that side from which the winds blow right over the town.
1884. Do you not think that if all the sick were removed from that asylum, and if the number of inmates were reduced by 200, and if instructions against parading the streets were carried out, the objections of the people of Liverpool would be wholly removed? They would not be wholly removed; they would only be partly removed.
1885. Is there not a lot of people about Liverpool who will be deprived of their means of livelihood if the asylum were removed? I do not know that that is the case, except with regard to officials of the institution.
1886. Is there no revenue derived directly or indirectly from the inmates of the asylum? I have admitted that that is the case.
1887. If you admit that to be the case how can you say that there would be no people who would lose pecuniarily by the removal of the asylum? I say we would lose something. Most of the business people benefit by the asylum, and the Corporation would lose, because at present there is a large consumption of gas. Still, we are willing to give up that.
1888. On whose behalf are you speaking? On behalf of the Council, who represent the people.
1889. Are you perfectly sure that in this matter the Council do represent the people? We are supported by the vast majority of the people.
1890. If the consumptives, cancerous patients, and chronic sick were removed, if the number of the inmates were so reduced that the accommodation indoors would be sufficient, and if the regulations against free trading were carried out, do you not think that the people of Liverpool, as a whole, would prefer to have the asylum retained there? I do not think so. That is my individual opinion, and the opinion of the Council, but, of course, a very great objection would be removed.

J. Cole, Esq. 1891. Do you not think that the depreciation of the value of property at Liverpool has been due to the same causes which have depreciated the value of property in every other town? Yes; that has been partly the case.

25 Feb., 1896.

1892. *Mr. Wright.*] I gather from your evidence that you look upon the inmates of the institution as foul, physically or mentally? Not altogether that. There are many intelligent men there.

1893. You have spoken of the foul conversation of the men? Those are probably only a small proportion, but when they come into the streets in numbers they seem to be a large proportion. I should say that only a small proportion of all the inmates annoy us, but still that is repeatedly being done.

1894. I understood you to say that the public-houses are crowded with these people, that they expose their persons in the streets, and so on? That is the case very often. But even when you see the public-houses crowded with them, or a large number of them in the streets, a great many of them are decent men, who annoy no one. Only we seem to have no control over the few who do make a noise, and so on.

1895. Supposing the Government determine to abolish the asylum, to pull down the building, and sell the land, would you be in favour of such a course of action? Yes; personally.

1896. Would you prefer to see the people removed and no use made of the land and buildings? Yes.

1897. If a law were passed in this country by which the inmates of poor-houses would be confined to the poor-houses, and not allowed to roam about and get drunk, would there be any objection to 600 or 700 inmates being kept in the Liverpool asylums? Yes; I think the place is too small for them.

1898. If medical authorities state that the asylum can accommodate 700 or 800 people, do you think there would be any objection on the part of the residents if that number of healthy inmates were kept at Liverpool? I do not think the objection would be so great; but there would still be some objection.

1899. Is the agitation in favour of the removal of the institution based on the assumption that the buildings and land would be utilised for engine-sheds and railway workshops? Not altogether. We fully believe that these large premises would not be allowed to remain idle.

1900. Do you think that if you got rid of the asylum you would get in substitution for it a factory of some kind? Yes.

1901. *Mr. Hoskins.*] Are you aware that the Government now expend in Liverpool on account of this asylum £12,760 per annum, and do you think the people of Liverpool would like to lose an institution which brings them so much money? They are quite willing to stand the loss.

1902. Where is the proof of that? I am here to represent the Council.

1903. Have you only been imbued with that view during the last four months? I have held that view ever since I have been in Liverpool; that is for seven years.

1904. Why did you not take action before? I drew attention to the matter twelve months ago.

1905. Are you not aware that the Railway Commissioners have large workshops at present at Eveleigh? Yes.

1906. Are you not aware that they are concentrating their railway workshops in Sydney and at Newcastle? Yes.

1907. Supposing these buildings were used as railway workshops, do you think more money would be spent in Liverpool amongst the people employed in those workshops than is spent now in the maintenance of the asylums? I cannot say; but still we are willing to chance that.

1908. You would actually prefer to see the buildings razed to the ground? Yes; as far as I am concerned.

1909. Do you think there are many people who would seek to reside in Liverpool as a matter of choice? I have heard several people state that they would like to live there.

1910. Is not all the country already occupied in the neighbourhood? There is plenty of available land there.

1911. Is it not all private land? No; some of it is Crown land, but most of it is private.

1912. Does not that apply to all parts of the Colony? Yes.

Frederick Chapman, Esq., Mayor of Liverpool, sworn, and examined:—

F. Chapman, Esq. 1913. *Chairman.*] Are you Mayor of Liverpool? Yes.

1914. Have you heard the evidence given by Alderman Cole? Yes.

25 Feb., 1896. 1915. In general terms do you agree with his evidence? Yes. The aldermen are deputed to urge the removal of the asylum, and I think Alderman Cole has endeavoured to do his duty in that respect.

Alderman Pollard Smith, Esq., Liverpool, sworn, and examined:—

P. Smith, Esq. 1916. *Chairman.*] Are you an alderman of Liverpool? Yes.

1917. Have you heard the evidence given by Alderman Cole? Yes.

25 Feb., 1896. 1918. In general terms do you agree with the evidence he has given? Yes.

WEDNESDAY, 26 FEBRUARY, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

A. W. Green, Esq.

Alfred William Green, Esq., Secretary to Charitable Institutions, sworn, and examined:—

26 Feb., 1896. 1919. *Chairman.*] Are you Secretary to the Charitable Institutions Department? Yes.

1920.

1920. Do you produce certain returns for the information of the Committee? Yes. They are as A. W. Green, Esq., follows:—

RETURN of Deaths in the Government Asylums for the Infirm and Destitute during the year 1895:—

PROGRESSIVE increase in Number of Paupers :—

Year.	Number.	Year.	Number
31st December.		31st December.	
1890	2,448	1894	3,252
1891	2,593	1895	3,425
1892	2,912	1896, to 8th February.	3,540
1893	3,146		

Cause of increase is chiefly owing to the depressed times.

SHORT history of the several institutions for the poor, &c., under the control of the Director of Government Asylums :—

*Parramatta.*—The largest institution is situated in George-street. The main building was formerly the military barracks, and about forty years ago was converted into a home for male infirm and destitute persons. Subsequently, another large structure adjoining, and used as a tweed factory, was purchased by the Government from Mr. Byrnes, and is connected to the main building by a bridge over the tram-line, which separates the two blocks. The area is 26,707 square yards. In consequence of the overcrowded state of the asylum a terrace of houses has been rented from Mr. Whitworth at £280 per annum, in which 140 inmates sleep. These houses are situated in Harris-street, adjacent to the main asylum. Patients suffering from scabies are isolated in these cottages.

Present inmates.....	1,128
Accommodation for .....	869
Excess .. .. .	259

*Parramatta.*—*Macquarie-street Asylum* stands on an area of 15,210 square yards, and in former years was also a military barracks. It was, in the first instance, converted into a home for poor persons suffering from erysipelas, but is now a general asylum for the aged destitute. The bread for all the other institutions (with the exception of Liverpool and Glenfield Farm) is produced at this institution. Ophthalmic cases, heart diseases, and the blind are chiefly treated here. Additional grounds are rented from Mr. Gibson at 20s. per week, and Mrs. Cranney at 6s. per week.

Present inmates.....	308
Accommodation for .....	240
Excess.....	68

*Parramatta.*—Twenty-two Cottage Homes, with matron's quarters, have been erected near the Parramatta Railway Station for aged couples. The land was purchased in 1889 from Mr. John Taylor. Mr. A. Ross was the contractor for the buildings.

Present inmates.....	44
Accommodation .....	44

*Newington Asylum*, on the banks of the Parramatta River, is the home of the aged women. They were formerly located in the Immigration Barracks, Sydney, but in February, 1886, were removed to Newington, the house and estate, which occupy 50 acres, having been bought by the Government from the Blaxland family. Farming and dairying are barely carried out at the institution. A paddock is rented from Mr. Wetherill at £36 per annum. Since purchased by the Government.

Present inmates .....	658
Accommodation for .....	625
Excess.....	33

*Liverpool Asylum.*—This building was erected for district military barracks, and about thirty-five years ago was converted into an asylum for the aged and destitute. In addition to the housing of general inmates, special provision is made for the treatment of consumptive and cancer patients. In addition to the bread for own use, supplies are baked for the Glenfield Farm Home requirements. A paddock is rented at £2 per annum from Sir D. Cooper.

A. W. Green,  
Esq.  
26 Feb., 1896.

Present inmates.....	880
Accommodation for .....	670
Excess.....	211

*Glenfield Farm Home.*—In 1891, the asylum at Liverpool being so overcrowded it was found necessary to give relief, and the Glenfield homestead and estate (1,200 acres) were leased from Mr. Throsby for five years, at £150 per annum. Farming and dairying are carried out here, and the production of milk, in conjunction with Newington and Rookwood, is sufficient for all institutions, and shows a profitable investment.

Present inmates.....	83
Accommodation for .....	65
Excess .....	18

*Rookwood Asylum.*—The buildings on this estate were originally erected by the Government for a Boys' Reformatory. After being vacant for some years (never having been utilised as a reformatory), the property was handed over in March, 1893, to this Department, so that a portion of the inmates could be transferred from overcrowded institutions. Irrigation works are being carried out, and farming on a large scale is maintained.

Present inmates .....	436
Accommodation for .....	405
Excess.....	31

*Carpenterian Reformatory and Boys' Home.*—These premises and land, including a large orchard, were leased from Mr. John Bennett for ten years, at an annual rental of £500. A cottage for the accommodation of the officials has been rented from Mr. King at £50 per annum.

1921. You see this map of Liverpool which is before the Committee, the cancer hospital being in section 45? Yes.

1922. Is the management of the asylum in occupation of sections 44 and 45? Yes. No. 2, adjoining section 44 on the south, is rented by the asylum at £3 a year.

1923. Parallel to section 44 and allotment No. 2, across the street, there is an area marked 43,—is the asylum in occupation of that? No.

1924. Could it be obtained, and at what rent? Yes, I understand so; at £50 a year.

1925. Does it contain about 7 acres? Yes.

1926. What area of land can be obtained by lease adjoining the lands at present in the occupation of the Liverpool Asylum? A total area of about 25 acres can be obtained. Of that area 17 acres would be Crown lands at present in occupation of the asylum. The residue can be obtained under lease for about £50 a year.

1927. In using this land would it be necessary to leave open the streets shown on the plan of the town of Liverpool? Yes.

1928. Therefore they would form a number of isolated pieces of land? Yes.

1929. Could those various areas be used for recreation and other purposes in areas up to 7 acres? Yes; they are enclosed now.

1930. Would the use of the whole of this land be attended with any inconvenience in working the institution? None whatever. It is used daily by the inmates at the present time, so far as the larger portion of it is concerned.

1931. With an area such as you have described, would there be any need for the inmates of the asylum to wander about the streets of Liverpool? No.

1932. Can the inmates leave the asylum without reference to the officers managing the institution? No; a man cannot get back into the asylum without a ticket, and therefore he gets leave before he goes out.

1933. Have you heard that the state of Liverpool, from a municipal standpoint, is very bad owing to the inmates having access to the town? We believe that there is competent police supervision at Liverpool, and if such a state of things did occur we should be sure to hear of it. The police would prosecute, as they have done in other cases.

1934. Do you find that the train travelling of 22 miles from Liverpool to Sydney is a serious matter in dealing with the poorer portion of the community? No.

1935. Are we justified in inferring that 8 or 9 miles further travelling by rail would not be inconvenient? Yes; if the place is alongside the railway.

1936. How far is it to Little Bay Hospital from Sydney? About 9 miles.

1937. Do you regard that as rather a long distance to take patients over the road? I have no experience in the class of cases taken to Little Bay.

1938. Do you regard 9 miles as an extreme distance by road? Yes.

1939. What is the distance of the main building at Rookwood from the railway station? One and a half mile.

1940. Are we justified in believing that 1½ mile by road is not a serious matter in such cases? Yes.

1941. Would any suitable situation within 1½ mile or 2 miles of a railway station with a fairly good road, and not more than 30 miles or so of railway carriage from the metropolis, be regarded as an inaccessible position? No.

1942. *Mr. Hoskins.*] Have you ever heard the people at Liverpool complain of any offensive smell, owing to the disposal of sewage from the Liverpool Asylum? No.

1943. Have you ever experienced any inconvenience yourself? No; I visit the asylum weekly, and I have never had any experience of bad smells.

1944.

\* This information cannot be given with accuracy, as the old people are naturally very reticent as to even the existence, let alone the position, of their relatives; and experience shows that the most reliable method of obtaining information of this nature is to question each inmate periodically. This plan was commenced in 1894, and the information obtained since then is being compiled by the local officials, but will not be completed for a few weeks, as the record of over 3,000 persons is very voluminous. Of course, an inmate who presents himself for the first time is closely questioned, both at head office and at the asylum.

- A. W. Green, Esq., 1944. *Mr. Trickett.*] Has any complaint ever been made to your Department with regard to the objectionable practices referred to yesterday by Alderman Cole? No; we have never had a single complaint.
- 26 Feb., 1896. 1945. Has any other representation ever been made? No; if there had been, of course the matter would have been remedied.
1946. *Chairman.*] Do you know the public school at Liverpool? Yes
1947. Is that fairly well on the outskirts of the town? Yes; it is just above the railway station, and practically on the outskirts of the town. There is only one building between it and the asylum. That is the railway station-master's residence. That is the nearest point to the asylum.
1948. According to the plans is the asylum building about 300 yards beyond the school? Yes, as the crow flies; but it is about a quarter of a mile by the road.
1949. Have your Department any method for defining what constitutes residence in New South Wales? No.
1950. Is any person in needy circumstances entitled to make use of any of the institutions? Yes. I hand in some statistics showing the death rate, 1890 to 1894:—

Institutions.	1890.	1891.	1892.		1893.		1894.	
	Average.	Average.	Individuals.	Average.	Individuals.	Average.	Individuals.	Average.

TUESDAY, 3 MARCH, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHRY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

The Hon. WILLIAM JOSEPH TRICKETT.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Thomas Whitford Taylor, Esq., auctioneer and land valuer, Liverpool, sworn, and examined:—

T. W. Taylor, Esq.

3 Mar., 1896.

1951. *Chairman.*] You have held an official position in the Borough Council, Liverpool? I have been eight years an alderman, and three years Mayor.

1952. *Mr. Davies.*] Have you any statement to make? I think it is a most inhuman thing to keep 903 men in the asylum at Liverpool, entrenched round by a sewer. The Committee have examined the place at a time when they can form no fair conception of it. The Committee ought to see the place in winter-time. Where these men are supposed to parade and exercise I have seen a foot of water. The main sewer runs right around it, so that even if there were only 100 men there instead of 900 it would still be most inhuman to keep them there. Mr. Green has misled the Committee in regard to certain matters with which he is not familiar. The population is all around the asylum. As a matter of fact, there is one house in the very building; there is another immediately across the line with eight people living in it. There is also Moore College only 66 feet away. There is also the railway yard, which is only separated by 66 feet. There are hundreds of people passing there every day. Then there is the public school within a distance of 200 yards.

1953. Your contention is that the place is overcrowded? No; I say that if there are only 100 people there it would be the same objection.

1954. During the eight years you have been Mayor and alderman have you taken any active part in seeking to remove this building and the people housed in it? Yes; Mr. Maxted will tell you I petitioned the Government several times, and asked that they should remove the drains too.

1955. But have you ever taken any practical steps to abolish the institution before to-day? We have had no opportunity of taking practical steps. There was no such thing as a Public Works Committee during my time.

1956. Did you ever make any representations? I have done so publicly on the platform time after time.

1957. Is not there a new-found zeal on the part of the Council of Liverpool? No; the place has been an eyesore for years.

1958. Has not the institution existed for thirty-five years? Yes; but it is a most difficult thing to move any Government. It is only now that the thing is practical, because you have a place of 1,000 acres to which you can remove the building. In those days there was no such thing.

1959. The whole of your objection is that the place is overcrowded? I do not say that. I say it is not a fit place to put anyone in. We have fresh water and salt water, and everything conducive to make a good town at Liverpool, but what is the result? As a land valuer for the Government I have to value the land at Liverpool at 50 per cent. less than any other land around Sydney. It is not only inhuman to keep the men there, but it is an injustice to the town.

1960. Have not your assessments increased during the last five years? I should say not. I have not the statistics, but certainly the land about Liverpool has not increased in value.

1961. What was the value of your annual rates from all sources when you took office? About £1,000 a year.

1962. What is the value to-day? About £1,200.

1963.

1963. That is an increase? There is a perceptible increase.

1964. And has there not been a great depreciation of the value of property all over the Colony during the last three years? Yes.

1965. Notwithstanding that depreciation, the rates have increased by £200 or £300 a year? There are a great many reasons for that. From the way in which you ask the question it would appear as though the district were increasing in spite of the asylums, but as a matter of fact large estates 5 or 6 miles out of the town, which were formerly left alone, have been cut up. Hoxton Park, with some 3,000 acres, has been cut up. It is an impossibility as long as the asylum is there to sell any property unless you happen to get what may be termed a victim. A number of large estates outside Liverpool, not affected by the asylum, have been cut up, but in the centre of the town people will not look at property because of the asylum.

1966. Do you call the centre of the town the place on which the asylum stands? It would be if it were not for George's River.

1967. What is the population on the other side of George's River? It is not very large.

1968. Could you not count them on your fingers? True; but if it were not for the river it would be central, because it is adjoining the station.

1969. You state that the asylum is practically in the town? No; I do not. I say it is a central position, the railway being alongside it. The Town Hall is a little under 300 yards away, and the post office 350 yards away. The public school is 180 yards away. If that is not a central position, I do not know what is.

1970. I should like to know what the objections to the asylum are, provided the inmates are classified and the number greatly reduced? It is not a fit place for them in winter. It is not a fit place for any man to live in. The Committee have only gone there in summer-time, when the place has been at its best.

1971. Do I understand you to say that Liverpool is not a fit place to live in in winter-time? No; I do not. I say that the position of this asylum is not fit for any human being to parade on in winter-time.

1972. For what reason? It is entrenched by the main sewer of Liverpool, and in winter-time, when there is a flood, it is under water to the extent of 6 to 12 inches. It is surrounded by a sewer of the most filthy character.

1973. But there would be no difficulty in curing that defect? And there would be no difficulty in removing the building.

1974. All you wish is to see the building removed? No; but I would like to see the old men removed.

1975. Do you know of any better building in Australia than the one in which these men live? I know of many. The buildings in Parramatta are much more suitable. The coldest building you could select in winter-time is that asylum. It never was intended for old men.

1976. Then you regard the George-street and the Macquarie-street buildings as far more suitable? They are more comfortable for old men.

1977. Would you be surprised to hear that those buildings are a sort of prison for them, and that they never see the outside? That is a matter of discipline.

1978. But are the buildings to be compared with those at Liverpool? They are much more preferable as far as comfort is concerned.

1979. I suppose you know the Committee have been through these buildings? Yes.

1980. Do you not think that they are able to form an opinion about the matter? I do not say they are not, but very often we form preconceived opinions, which it is difficult to remove.

1981. At any rate you have only just woke up to the fact that the buildings at Liverpool are undesirable? No; I preached it on the public platform for the last ten years.

1982. Have you any public record of that? I swear it.

1983. Have there been public meetings denouncing the asylum? Yes; as the biggest nuisance we have.

1984. On what date? I could not tell you.

1985. You simply want the asylum abolished? Yes.

1986. For the reason you have assigned? The two special reasons are that it is a most inhuman place to keep the men in in winter, and it is a terrible blight upon the district of Liverpool.

1987. *Mr. Massall.*] I was under the impression you were going to give some evidence to refute the evidence of Mr. Cole? No.

1988. You are here to substantiate everything he has said? Yes. I can go further back than he. He has only resided there seven years, and I have been there fifteen years.

1989. Did Liverpool grow up around the asylum or did the asylum grow up around Liverpool? Since the asylum has been there the houses have gone away from it. There has not been a house built there—with the exception of some alterations to the convent—for the last ten years.

1990. But you are so geographically situated that you can only build in one direction? No.

1991. The river confines you to one position? No; there is one place around Moore College where you can build.

1992. In the event of these patients being removed, would the land and the buildings upon it be of any value? Undoubtedly.

1993. For what? For many things. I think the Railway Commissioners would only be too happy to get them.

1994. Would the land sell to a private individual? It would. I think you could sell the buildings as they are for £10,000 or £12,000.

1995. Do you think you could erect similar buildings for £12,000? I do not suppose you could. But if they were required for a factory there would have to be certain alterations.

1996. But there is no necessity to sell? I understand there is a certain amount of money voted to place an institution of this kind in a proper and better place. We are asked the question whether Rookwood is not a more suitable place than Liverpool. I say that Rookwood is the more healthy place. The building would be no detriment to people there, and the home would be a healthy one for the old men.

1997. You say it is an inhuman act to keep these men there in winter-time? Yes.

1998. Then it must follow that it is an inhuman act to keep the residents of Liverpool there in winter-time? No; I can take you to half an acre of ground upon which it would be an inhuman act to keep a man, but at the top of it it would be a pleasure for him to live. They are in a gully, and we are on an elevation. They are "partaking" of our sewage all the year round.

T. W. Taylor,  
Esq.  
3 Mar., 1896.

- T. W. Taylor, Esq.  
3 Mar., 1896.
1999. Is there an open sewer? Yes; you will see cats and dogs floating in it now. The water used to supply your cancer patients runs right through the sewer.
2000. Does that drain run through the town of Liverpool? The greater part of it. [*Witness here explained by means of a sketch the course of the sewer.*]
2001. It must follow that in the event of the removal of these people from Liverpool the land and the buildings must be sacrificed;—the Government must suffer loss;—they will have to erect buildings in some other locality to house the patients? Whatever loss there is, I have no hesitation in saying the first loss would be the best.
2002. *Mr. Fegan.*] When was your last petition to the Government? I do not remember that we ever did petition the Government. I think we petitioned Mr. Maxted.
2003. When? About six years ago.
2004. Do you know what was the gist of your petition? We tried to bring pressure to bear on the Government by saying—"Now that we have taken action against the paper-mill and the wool-wash, in order to make the place presentable, we ask you, in all fairness, to take action with regard to the asylum."
2005. Was any notice taken of that? Yes; Mr. Maxted wrote to me, and I had an interview with him. He said something definite would be done before long.
2006. With what result? None. The only result, I think, was that they buried for some time the excreta of the place.
2007. Were you Mayor after that time? No.
2008. Or alderman? Only for one year. I have been out of the Council for four years.
2009. Then during the two years you were in the Council, after representing this matter to Mr. Maxted, you took no action? You can imagine how slow the Government are to get to work. We had agitated for ten or twelve years to get even a bridge.
2010. Have you asked for a railway there too? Yes; but we have not got it.
2011. Have there been public meetings about it? Yes.
2012. Because it was thought to be a necessity for the district? Yes.
2013. Were the meetings well attended? Yes.
2014. Mr. Parkes and Mr. Scobie addressed the meeting? That was an outside railway from Liverpool.
2015. Then a large meeting was called to condemn a Bill before Parliament, in reference to the vine disease? Yes; that matter did not affect Liverpool alone, but the districts surrounding it.
2016. Liverpool joined with the other districts in convening a meeting? Yes.
2017. Then in regard to any improvements to the district, public meetings are convened to express an opinion? Yes; in regard to anything of pressing importance.
2018. Is it not strange, if this building is a hot-bed of fever and pestilence, and not fit for a human being to live in, that the people of Liverpool have not raised their voice on behalf of the inmates? That is not quite correct. I have done it myself. Of course people are very apathetic about matters which are every one's business. What is every one's business seems to be no one's business.
2019. Is it not a fact that every one's business is looked after by the Council, and that that business is transacted by eight or nine men in the Council? Yes; by nine men.
2020. And the Council never convened a public meeting to petition the Government against the asylum continuing in Liverpool? I do not think they have; never during my time. We found in Liverpool it was impossible to shift the Government upon anything. Time after time complaints have been lodged. But presuming we have not agitated as we should have done, it is still inhuman to keep the patients there, irrespective of our apathy.
2021. Why is it inhuman? Because of the position.
2022. Is it a bad position? The worst position.
2023. What is the death-rate? I could not say.
2024. Is the death-rate greater than elsewhere? I could not say. About one person dies a day.
2025. Are you basing your assertion on fact? As far as I can. A man might come there to-day from another institution, and he might be dead before he got there. It would be unfair to put that down as against the institution.
2026. Do you say the asylum impedes the progress of the town? Yes.
2027. Why? I, for instance, bring gentlemen there time after time to look at property, but as soon as they find there is an asylum there they are off.
2028. Do you sell land there? Occasionally.
2029. Have you any for sale now? I have lots of property about there to sell.
2030. And you think the land would sell if the asylum were removed? I personally have none to sell.
2031. But if the asylum were removed it would give you, as an auctioneer, a better opportunity of selling land? No doubt it would.
2032. And that is one reason why you think the asylum should be removed? I would not give that as one reason. I have given you the two primary reasons.
2033. You think by the removal of the asylum the land in the vicinity of Liverpool would sell at a better price than it does? Yes.
2034. Do you think the paper-mill is to the detriment of Liverpool? No.
2035. Is there no stench from the works? No. The water is filtered before going into the river.
2036. You had rope-works there at one time? Not in my time.
2037. Is the wool-scouring no detriment to the health of the people? Not now. They have to filter everything. It was formerly a great nuisance.
2038. *Mr. Black.*] You have no personal feeling in regard to this matter? No.
2039. You do not own any land? Only about 3 miles out.
2040. Do any of your clients own land? I have no special clients. Anyone may be a client to-morrow.
2041. Where would you propose to remove these old men to? There are many places which would be more beneficial to the old men, and to my mind to the country. I think the one which has been selected is a very appropriate site. There are some 700 acres there, and if the patients were divided there would be 200 or 300 acres to each lot.
2042. Could you give any guarantee that if the asylum were removed the whole town of Liverpool would not follow it? I think I could venture to give you that guarantee.
2043. Is it not a fact that about half the people in Liverpool are dependent for the money distributed in the

- the town on the presence of the asylum? It is not a fact. There are only two or three people who gain anything out of it—the butcher, the baker, and the grocer.
2044. Is it not true that about £12,000 a year is spent by the asylum? I do not think so. Mr. Kidman, of Sydney, gets the greater portion of what is spent. T. W. Taylor,  
Esq.  
3 Mar., 1896.
2045. With regard to the drain which you speak of as being so obnoxious to the old men, would not that drain be equally obnoxious to those who have business in its vicinity even if the asylum were not there? Yes.
2046. Then, do you not think it would be better for the safety of the people of Liverpool to remove the drain, and not the old men? It is not only the drain I complain of—it is the natural position of the ground.
2047. I know the ground is lower on the other side? Yes. In flood-time these old men are fairly swamped, and the consequence is they have to ramble about the town.
2048. You say the building is all right in summer, but unfit as a residence for these old men in winter? Undoubtedly.
2049. Do you not think that with the expenditure of a little money that objection could be removed? I think it would be better to commence the expenditure by erecting a new building. It is too good a building to tinker with.
2050. Do you think you could erect a similar building anywhere else at a less cost than £30,000? I could not say. But if we were erecting a building, we would not erect a two-storied one for old men.
2051. How is it if you do not believe in the two-storied buildings for old men at Liverpool, you believe in the six or seven-storied buildings at Parramatta? I would not erect the six or seven-storied building if I had the erection of it. But I say that the George-street building is more comfortable than that at Liverpool.
2052. Are you not somewhat prejudiced in favour of the asylum at Parramatta, because it is not in Liverpool? I can assure you I am not. If you visit either building in winter time, you will find that one is much more comfortable than the other.
2053. You say that gentlemen who come to look at land in Liverpool, would not complete their purchases when they hear there is an asylum there;—do you not think there is some other reason for that;—are they people going into business, or people retiring from business? Both. There is a number of people who desire sometimes to build a sort of country home.
2054. Do you mean to tell me, that even if the asylum were removed, any man desirous of settling down in a suburban retreat, would, after seeing the town of Liverpool, select it as such a retreat;—is there any beauty in the surroundings? Yes. We have one of the finest districts a little out of Liverpool to be found anywhere. There are 400 acres and 900 acres along the ridge of the railway belonging to Sir Saul Samuel and Mr. Thorsby.
2055. How far is that from the railway? From 1½ to 3 miles.
2056. How could anyone be prejudiced against buying the land situated 1½ mile from the asylum by the presence of the asylum? It is so. Time after time, in my capacity as agent, I have met with the same reply. It has occurred to me more than twenty times.
2057. Have you any idea as to how the death-rate of Liverpool compares with that of any other similar town? No; but I believe we are living in as healthy a district as any in the country.
2058. In spite of the asylum? Outside the asylum.
2059. Do you know how the death-rate in the asylum of Liverpool compares with that in the Parramatta Asylum? I do not, but it ought to compare favourably, because they have the run of the whole town in Liverpool.
2060. According to your argument, the patients having the run of the town would be the means of reducing the death-rate of the asylum, and increasing the death-rate of the town? I think it would have that effect. We never had consumption or cancer until lately at Liverpool.
2061. If the Committee decided, and the Government approved of the removal of all consumptive, ophthalmic, and cancerous patients from the asylum—if it removed all the chronic sick, and housed only healthy old men unable to work, reduced their number, and increased the comforts of the building by slight additions, and also improved the surroundings by the covering in of the obnoxious drain, do you think there would be anything objectionable in the presence of the asylum to the town of Liverpool? There would be a strong objection. You could never lift the land high enough to make the place habitable in the winter. It is a blight to the place, and it is a great detriment to the old men to be kept there.
2062. You do not think that if the asylum were removed the town of Liverpool would shut up? No; I think it would be of advantage to the town.
2063. *Mr. Wright.*] How long is it since you were first elected alderman? 1884.
2064. Are you well acquainted with the ancient history of Liverpool? Yes.
2065. What is the present population of the Municipality? About 3,300.
2066. What was it fourteen years ago when you first went to live there? About 3,800.
2067. Do you mean to say the population has decreased? I believe it has.
2068. If Mr. Scrivener, the ex-Mayor of Liverpool, writes to the Committee and tells them the population has largely increased, he tells us what is untrue? I will not say that, but he is under a misapprehension.
2069. You tell us the population was larger twelve years ago than it is to-day? Formerly the population was not taken as accurately as it is now. It was an estimated population, and it was given as 3,800.
2070. Can you give us any idea of the population of Liverpool thirty-five years ago? No.
2071. Was it 2,000? I could not say.
2072. Do you think it was more than 1,000? I could not say.
2073. Before the establishment of the paper-mill, the wool-scouring works, or any other works, do you think the population was likely to exceed 1,000? I could not form any idea.
2074. How many people are employed in the paper-mill and other establishments? About 200.
2075. And as each man is supposed to represent a family of five, I suppose they maintain 1,000 people? Very likely.
2076. Do you think it reasonable to suppose that before the establishment of these industries the population was not more than 1,000? I would not doubt it, but I am not in a position to say.
2077. It is thirty-five years ago since this institution was turned into a benevolent asylum? Yes.

- T. W. Taylor, 2078. I venture to say that during that time the population of Liverpool has quadrupled? Very likely.  
Esq. 2079. And yet you say that the asylum is such a detriment to the place that no one will come and live there? I am only speaking from what experience teaches me. I venture to say that if you remove the asylum the population will be doubled within seven years.
- 3 Mar., 1896. 2080. But this establishment was put there thirty-five years ago, when the population was 500, and to-day it is 3,300 in spite of it, therefore that destroys your theory that the asylum has prevented the population from increasing? If you remember that Liverpool is the third oldest town in the Colony, you will naturally ask the question how it is that there are only 3,300 people there.
2081. What is Liverpool remarkable for in regard to products? Both fruit and farming.
2082. Where are the farms? Within a radius of 3 miles you will get as good farms as in any part of the country. I have 100 acres of land which I have had let at £100 a year.
2083. Where? Three miles out of Liverpool, on the Cabramatta Creek. Peter Miller has about 400 acres, and it is as good as any land in the country.
2084. What is there to make the town go ahead? We have better facilities there than in most parts of the country. We have fresh water and salt water. We can bring a steamer of 400 tons up there.
2085. Has one ever been brought up? Yes. They used to supply the paper-mill before the railway was built. All the grass and old bags used to be brought up by the river.
2086. Does the paper-mill employ as many men as formerly? Yes.
2087. Is the woollen industry the same? Yes.
2088. So that the manufacturing industries have not been retarded by the asylum? No.
2089. But you think the institution prevents Liverpool becoming a favourite residential site? Yes; it prevents people building there.
2090. Do you think, under any circumstances, you could persuade any man that Liverpool is a favourable residential site? I do. I left Sydney broken in health, and I have never lived in so healthy a place as Liverpool. I came down to Sydney for a year, and I had bad health.
2091. In the interests of Liverpool, then, you protest against the maintenance of the asylum? In the interests of the old men and of Liverpool I do.
2092. If medical men say that the asylum is eminently suitable, you reply by saying that it is eminently unsuitable? I say the position is unsuitable. As far as experts are concerned, I do not value them in the slightest. The Government may get a dozen of them on one side, and I could get a dozen of them on the other.
2093. You say that during the winter time this ground is from 6 inches to 1 foot under water? Yes.
2094. Is not that ground within 150 yards of the river banks, which are nearly 20 feet high? Yes.
2095. How often is the flood period? Generally once a year, when the banks of the salt-water river are flooded. There is a danger of the asylum being washed away altogether if it is not protected, because it is on the bank of the river.
2096. *Mr. Hoskins.*] You stated in reply to a question that if the Government removed all the inmates from the asylum at Liverpool the buildings could be applied to other purposes, and that the Railway Commissioners might purchase them? Yes; I was speaking with Mr. Eddy, who was in treaty for a small part of 8 acres in front of the asylum. They offered us £2,000 for it. The Government were contemplating the resumption of the asylum for workshop purposes.
2097. How long ago? Five or six years.
2098. Are you aware that the Government, for the Railway Commissioners, acquired by purchase about 60 acres of land at Redfern, and that the Commissioners are contemplating having all their repairing works at two or three principal sheds in Sydney or Newcastle? Yes.
2099. Therefore, the probability of the Commissioners using that building for railway purposes does not appear to be very rational? It would only be in connection with what may be termed the country lines. I understand the Commissioners are concentrating all the workshops for the suburbs.
2100. Would the residents of Liverpool like to see the Government use this building for railway workshops? I would not mind what they used it for, so long as it were used for a healthy purpose.
2101. But would there not be a danger of the river rising and washing it away? Not of the Asylum itself; but where the old men parade, it is right on the brink of the river.
2102. Does it not occur to you that if the Government resume this building there would be more money spent in Liverpool than now? Yes.
2103. Then as a matter of personal advantage, the people would prefer to have the buildings converted into workshops? Yes.
2104. Is not the greater portion of the open sewer which has been referred to, embraced within the area of the Municipality? Yes.
2105. Is it not the duty of the Municipality to abate the nuisance arising from it? You cannot abate it very well without going through Government property; but even if we could abate it we have not the money for the purpose. The matter is now before the Government. They had two schemes before the Council about it.
2106. *Chairman.*] Did you consider the offer of the Railway Commissioners, of £2,000 for the Moore Park, a reasonable one? I thought it was rather a small figure; I thought it was worth £3,000.
2107. What is the area of it? I think it is 8 acres 2 roods 15 perches.
2108. What do you regard as the present value of it;—has it altered since that day? It may have depreciated a little; but I think it is worth £3,000.

Sydney Maxted, Esq., Director of Government Asylums, sworn, and examined:—

- S. Maxted, 2109. *Chairman.*] You are aware of the scheme before the Committee? Yes.  
Esq. 2110. Has it been prepared under your notice, and in accordance with your views? Yes; with the exception of the design in detail. I may say at once that I have never seen the design in its completed form.
- 3 Mar., 1896.

2111. You have already sent us a sworn statement in regard to the matter? Yes; I desire that statement to be published as part of my evidence. It is as follows:—

S. Maxted,  
Esq.

PROPOSED Erection of Buildings at Rookwood for Infirm and Destitute Persons—Statement by the Director of Government Asylums. 3 Mar., 1896.

*Memorandum.*

Charitable Institutions of N.S.W., Government Asylums Branch,  
Cleveland-street, Redfern, 26 February, 1896.

Sir,

In order that the Parliamentary Standing Committee on Public Works may be informed of how the Rookwood site came to be proposed and selected as a central site for the Infirm and Destitute Asylums of this Colony, I beg to present the following very brief memorandum relating to the matter, leaving details to be dealt with in connection with my examination, which I desire, in view of some of the evidence that has been given thus far, shall be very full and exhaustive.

These Government institutions were officially handed over to my charge in August, 1888, consequent upon alleged mismanagement, which had been the subject of investigation by a Royal Commission whose inquiries extended over a year. It was apparent to me (and the Royal Commission, of which Dr. Ashburton Thompson was a member, had also determined) that several of the existing asylum buildings were unsuitable for their purposes and ought to be abolished. They were also very much overcrowded, and were in many respects undesirable either as homes for the merely aged indigent, or for the chronic sick poor. It therefore became necessary to make better provision for these unfortunates, and in due course the question of sites for a new institution was considered. As an evidence of the urgency that existed in this matter, I here beg to submit for the information of the Committee a letter to the Chief Secretary, dated 14 February, 1893, containing a *précis* of correspondence relating to the overcrowding, dating back as far as October, 1888.

I also forward your Committee a letter which was sent to the Chief Secretary on 24th June, 1890, suggesting that as a means of obviating the overcrowding, the existing Rookwood buildings should be used as an auxiliary asylum; or, as an alternative plan, that the buildings at Randwick should be utilised.

In consequence of my letter and *précis* of 14th February, 1893, the Chief Secretary visited and very carefully inspected all the Government asylums, and the result was the following direction:—

*Minute Paper.*

Utilisation of building at Rookwood, known as the Reformatory Buildings, for an Asylum for the Infirm and Destitute.

Chief Secretary's Office, Sydney, 18 February, 1893.

REPRESENTATIONS having been made with regard to the overcrowding of the Liverpool Asylum, the George-street Asylum, Parramatta, and the Macquarie-street Asylum, Parramatta, I paid a visit to these establishments yesterday in company with the Principal Under Secretary, the Director of Asylums, and the Honorable Dr. Creed, with a view to inspecting and seeing for myself what was the nature of these complaints. In going through these institutions, which, I must admit, are very neatly and cleanly kept and excellently managed, I was horrified to find that the unfortunate inmates were crowded to an alarming extent, many of them having to lie on the floor. As far as I can ascertain from Mr. Maxted, the Director, there are in the Liverpool Asylum in excess of the number for whom there is proper accommodation 200 inmates; in George-street, Parramatta, 350; and in Macquarie-street, Parramatta, 75.

After leaving these institutions, I paid a visit to the buildings known as the Rookwood Reformatory. These buildings were erected for a reformatory institution, and have been built for many years, having been left unoccupied ever since they were erected. They were, I believe, built by the Stuart Government, and were intended for boys committed to reformatories.

In view of the more pressing requirements of the above mentioned asylums, and, in order to relieve the overcrowding, these buildings, which I understand have been authorised by the Governor-in-Council to be proclaimed as a reformatory, should be utilised as an additional asylum for the infirm and destitute, and the minute authorising their proclamation as a reformatory should be rescinded, and steps immediately taken to drain the grounds and buildings so as to make them habitable for this purpose.

(Signed) GEORGE R. DIBBS.

Ask the Director of the Asylums for Infirm and Destitute to furnish a report and prepare the necessary documents for transfer of Reformatory from Department of Justice.

(Signed) C.W., B.C., 21/2/93.

The result of this minute was that, as directed, I made a detailed report (a copy of which I understand has been furnished to the Committee), and as soon as the existing buildings at Rookwood were placed in order the overcrowding at several of the institutions was relieved; and further relief was afforded by the erection at Rookwood as soon as possible of four additional wooden pavilions. It is necessary that I should state here that not one step was taken with regard to these suggestions or recommendations without consultation with and advice from the medical officers of my Department, and on the occasion of the Chief Secretary's visit he discussed the whole matter very fully with them, particularly with regard to the proposed Rookwood policy of centralisation, which had then been formulated by me, after most careful consideration, on what I conceived, and still believe, to be good grounds, and which I am prepared to show had their full approval. This question, however, in consideration of some facts now before me, appears to me to be sufficiently serious to make it advisable that I should not make any detailed reference to it until I am personally before the Committee.

In the beginning of March, 1895, I was directed by a minute from the Principal Under-Secretary to report further on the Rookwood proposals, and I did so on March 12, 1895. This Report, which is before the Committee, was sent on in the usual way to the Department of Public Works, and then to the Government Architect. That, I may mention, is the customary official routine in the first instance in these matters. I heard nothing more until 3 December, 1895, when Mr. Edwards, the Assistant Government Architect, called upon me and stated that it was desired to pass the scheme through the Public Works Committee before Parliament was prorogued, and asked me for statistics as to the numbers and classes of inmates to be provided for. I furnished him with some statistics, but pointed out that it would be necessary to consult the medical officers of the Department with regard to the hospital arrangements, and impressed upon him that in preparing the plans for the consumptive, cancer, and ophthalmic hospitals, these divisions should be isolated and enclosed with about 100 acres of ground each. I have Mr. Edwards' note to that effect. A day or two afterwards I consulted Mr. Vernon, and on the 10th December, 1895, a board consisting of Drs. Waugh, Beattie, Brown (representing Dr. Violette, who was absent on leave), Mr. Vernon, Mr. Edwards, and myself met at Rookwood, and very fully discussed the whole question.

(In

S. Maxted,  
Esq.  
3 Mar., 1896.

(In connection with this point I beg to direct the Committee's attention to Dr. Waugh's evidence, questions 965 to 967, upon which I think it unnecessary to comment here.)

965. *Mr. Davies.*] Were you and the rest of the medical officers in connection with these asylums consulted with reference to the proposed concentration of the whole of the pauper patients at Rookwood? I am not aware that we ever were consulted together. I do not remember that there was any official communication. If there had been we would have had to send in a report in writing.

966. Have there been no representations made by the medical staff? There may have been representations made separately, but there was no meeting where the matter was argued out.

967. There was no medical board or conference as far as you know? I am not aware of any.

The representations which were made at that meeting I reserve until I am giving evidence, because they hardly touch the purpose of this memorandum. I have, however, had the following correspondence with the Government Architect on the subject, which I think the Committee should have before it:—

Dear Mr. Vernon,

Paddington, 17 February, 1896.

I cannot go down to see you, and hence I am constrained to write and ask if your memory is clear enough to enable you to answer the following questions relative to our recent visit to Rookwood:—

1. Did I not explain very fully the details of the scheme to Drs. Waugh, Beattie, and Brown, and invite them to make any objections, suggestions, &c., and to open their minds freely for the guidance of you and myself in the matter at issue?

2. Did not they then accompany us all over the sites and fully approve of them; and were not your plans (particularly for the sick divisions) drawn in accordance with the opinions they then expressed as to the suitability of the sites, the question of contiguity to water supply receiving special consideration? Mr. Edwards was present throughout, and if your memory enables you to give an affirmative reply to these questions, you might perhaps permit him to state his recollection of what took place.

My mind is perfectly clear.

Will you kindly return your answer, and Mr. Edwards', on this note.

Yours sincerely,  
(Signed) SYDNEY MAXTED.

I must be examined. I hope to be able in a day or two.

Dear Mr. Maxted,

17 February, 1896.

My answers are as follows:—

1. The scheme was fully explained by you to the medical officers (3) in my presence, and a general discussion followed, and the scheme placed before the Committee was the result of that consultation.

2. The site was traversed by the three medical officers and yourself and myself, and Mr. Edwards, and it was upon the expression of opinions then made that I based the scheme. Mr. Edwards was present, and he would, I am sure, confirm what I say. My evidence refers to the medical officers and their consultation. Ifansard gave Mr. Brunner's initiation of the scheme when placing Loan Bill on the Table.

(Signed) W. L. VERNON.

Rookwood Asylum, *re* General Scheme.

MEMO.—10th December, 1895, accompanied Government Architect to Rookwood, with Director of Asylums, to meet (by Director's arrangement) Medical Officers (Drs. Beattie, Waugh, and Brown) to consult upon the general scheme.

Walked over the site of proposed buildings generally, the Government Architect and Mr. Maxted explaining the scheme more or less in detail.

The proposed site for hospital blocks (cancer, ophthalmic, and consumptive) being particularly dwelt upon.

Personally, I remember reference to the proximity of these blocks to the reservoir being canvassed; but did not hear details, nor did I hear any pertinent objections urged to any portion of the proposed scheme by any of the medical authorities.

(Signed) A. G. EDWARDS.

24/2/96.

While the plans were being prepared by the Government Architect, I attended at his office to give whatever information I could; but I was unfortunately stricken down by illness, and have never yet seen them in their complete form. I may, however, say that I have been very much surprised to find that notwithstanding my representations the whole of the buildings have been placed on an area of 64 acres, while the estate over which it was proposed they should be scattered comprises nearly 600 acres.

In conclusion, I just think it necessary to point out that the plans appear to me to have been prematurely placed before the Committee. In the ordinary course they should have been sent to the Chief Secretary first, and then to Dr. Ashburton Thompson, who would finally have consulted with me, and then the Committee would have had the whole matter before it in a completed form.

I have not, in this statement, attempted to go into the merits of the question at issue, because I feel I can only do that fully and fairly as a matter of evidence.

I have, &c.

SYDNEY MAXTED,  
Director of Charities.

P.S.—I gratefully acknowledge the consideration that has been shown to me by the Committee during my illness; and I most earnestly beg that its inquiry may not be closed until I am afforded an opportunity of being examined. This must be now within a day or two. Indeed, I should have gone to-day but for Dr. Creed's prohibition.

The within statement, dated February 26, taken and sworn before me, at Paddington, on same date.

J. F. PLUNKETT, J.P.

Witness—J. S. CHEAGH.

The Chairman, Parliamentary Standing Committee on Public Works.

2112. *Mr. Trickett.*] Will you kindly give your views as to the necessity for making better provision for the class of patients known as the infirm and destitute? The necessity arises from the fact that all the institutions are very much overcrowded, that the hospital and the general patients are indiscriminately mixed up together, and that the present system is, in my opinion, a most unnecessarily expensive one to work.

2113. Have you from time to time impressed upon the authorities the necessity for making better provision for these people? Yes; I cannot tell you how many times, but many times dating from four or five months of my appointment to this particular branch of the Charities, eight years ago, I should be within the mark.

2114. I ask you that question because Mr. Walker seems to imply that there has been no very specific objections raised on the ground of overcrowding? I may say at once I have not read his evidence, but I think there must be some misunderstanding of the question.

2115. In question 1,617 and 1,618, Mr. Walker is asked :—

Has any suggestion been made as to the necessity for legislation of a more effective character to deal with the admission and discharge of the inmates of these institutions? I have heard the matter mentioned, but there has been no official communication with regard to it.

Has it come to your knowledge that such a step is necessary? I certainly think it is necessary.

Has this been impressed upon the Government? Yes; upon the Government and upon Parliament also, as far back as 1890, and in my annual reports. Mr. Walker, of course, means that no direct official communication was made to him as Principal Under-Secretary, and in that report he is quite right.

2116. By verbal representation? No. I have here a complete code of legislation suggested.

2117. Have you always urged this in your yearly reports of the work of your Department of Charities? Yes; here I have an Act of 37 clauses suggested in my report for 1890.

2118. What did you recommend there? Under the heading of "Outlines of necessary legislation," I recommended "Providing for maintenance cost of inmates to be paid by relatives. Providing for uniform intercolonial legislation to prevent the transfer of paupers from one colony to another, and making relatives liable in whichever colony they may reside. Local rates to be chargeable for maintenance (wholly or in part) of all dependent persons transferred from their respective districts to Government Asylums. Hospitals receiving Government subsidy to be charged with a portion of the maintenance cost of patients who, being under treatment for illness or accident, are in their convalescent stage forwarded to the Government Asylums for Infirm and Destitute for subsequent treatment at the Government cost." I should like to explain the necessity which arose for that. I found that the country hospitals and the benevolent asylums were taking the Government subsidy under which they are supposed to receive all local patients without cost to the Government, and all local paupers, and that as soon as they had made these people to a certain extent convalescent they were passing them on to the central institutions, that is, the Government asylums, as they are technically called. At that time it appeared to me that no proper inquiry was made into the class of patients they were forwarding. They simply seemed to be able to go to the local Police Magistrate, or to get a certificate from the local medical hospital or a benevolent asylum, as the case might be, and send on these patients. A system of inquiry was instituted, which was attended with a singular result. On page 38 of my report for 1890, you will see that a circular was sent in response to every application from the country districts, and particularly from the hospital authorities, intimating that admission orders could only be granted under the following conditions:—1. That applicant was both infirm and destitute, and had not any relatives in a position to support him outside a public institution. 2. That applicant was physically and mentally fit to travel. 3. That the case was not one which should be treated in a local hospital, or by a local benevolent society, subsidised for that purpose. 4. That in every case when practicable a medical certificate must be obtained as to the applicant's eligibility for admission into, or treatment in, one of the Asylums for the Infirm and Destitute. That circular was sent in January, 1889, to all the country hospitals. That was five months after these places were handed over to me.

2119. That was acted upon with what result? The first four months' operations of this circular brought the admissions down nearly 40 per cent. That is to say, instead of having 769 admissions from January 1st to December 31st, 1889, the admissions in the following year in which the circular came into operation went down to 627, a total decrease of 142, or nearly 19 per cent. Ever since that circular has been in operation, and that condition has been observed, this proportion of decrease has been maintained, notwithstanding the large increase of the numbers in the asylums. For instance, in 1889 the number was 769. From my report of last year, page 13, it appears that in 1889—that is the year in which this condition was not carried out—the admissions were 769; in the following year they went down to 627; in 1891 they went down to 618; in 1892 to 526; in 1893 to 485; and in 1894 to 465.

2120. These inmates are inmates who come from sundry country hospitals? Yes, and country benevolent asylums.

2121. And may be looked upon as permanent inmates of the head institutions? Yes.

2122. Does that include all the people who come from the country districts? Yes.

2123. Are there not some who are sent on by local magistrates? These include all those.

2124. But they do not all come from local institutions;—they may be poor decrepit people? I have them classified—both the magistrates orders and the hospitals. The magistrates orders in 1889 were 514, and the hospitals 255. The magistrates orders went down to 325 in 1894, and hospitals went down to 140 in 1894.

2125. From that you gather that of late years there has not been so much abuse of this system as existed prior to that regulation? There is no doubt of it.

2126. Although the number of patients who come from the country by magistrates orders, and from similar institutions to hospitals and benevolent asylums still continues to a considerable extent, do you think that the system is much abused at the present time? I do not think it is, because in addition to this circular we get a report from the police authorities on every case.

2127. What was the matter with those cases that used to be sent on in such numbers? They were cases that ought to have been maintained by the local authorities instead of at the cost of the Government.

2128. Those societies get certain money for doing that? Yes.

2129. And instead of doing it, they used to send the patients on to your institutions? Yes.

2130. It was only the benevolent asylums, I suppose, which were subsidised—not the hospitals? No; it is a condition in both hospitals and benevolent asylums.

2131. They are supposed locally to keep this class of people? Yes; of course the abuse prevailed most largely in connection with the hospitals, because they are numerous, and the benevolent asylums are not so numerous.

2132. Seeing then that this abuse of the system has discontinued, will you explain how it is that there are such large numbers at the present time in these institutions? I cannot explain it, except on the ground of the destitution of the people who are admitted. I will explain what they have to go through before getting into these institutions. They have first to go to Dr. Paton, the Government Medical Officer in Sydney, who examines the applicant, and certifies that he is a fit case for admission on the ground of old age and destitution, or old age and chronic disease. Then the applicant goes to my office at Redfern and gets an order to go into one of these institutions. There is a written instruction from me to the Medical Superintendent that the applicants be taken in upon Dr. Paton's certificate, and they are

S. Maxted,  
Esq.  
3 Mar., 1896.

S. Maxted,  
Esq.

3 Mar., 1896.

are then examined by the Medical Superintendent of the Government Asylums. If they are found to be suitable cases, they are retained, and the Medical Superintendent has written instructions that if in his opinion they are not suitable cases to be retained, they are to be discharged after three days.

2133. What do you mean by a suitable case? A case in which, in the opinion of the Superintendent, a man is able to earn his living outside, and has succeeded in getting a certificate from Dr. Paton by malingering. He has to send him about his business in three days.

2134. That state of affairs applies only to people who are dealt with in Sydney? The great bulk.

2135. Will you explain the course adopted, with regard to inmates from the country? The inmates from the country get the orders from a magistrate. They are dealt with by the Medical Superintendent of the asylum in precisely the same way as the others.

2136. Does not a magistrate consult a local medical man? Yes; it is precisely the same form in the country as in Sydney, only that the matter is locally inquired into. I had a medical examination of every inmate made in 1890, and in that year, out of 2,560 who were then in the institutions the medical officers returned only nineteen as being able to work outside, and they were over 60 years of age. I had a similar return made two and a half years ago, and then the number was declared to be only thirty-five out of a total of nearly 3,000.

2137. So that on the ground of not being able to work, you think there is very little abuse? I am sure there is not—that is, in not being able to get a living outside. Of course, a man of 60 years of age can do a good deal of work in the institutions, and yet he may not be able to get his living outside.

2138. Seeing that all these precautions are taken, and that in three or four years the number has grown to over 3,000, can you account for the increase? The hospital admissions have increased in the largest proportion.

2139. Have you any means of ascertaining whether these people belong to this Colony, or whether they come from other Colonies? Yes; I have a return on the subject:—As to the statement that large numbers come in from other Colonies—During year ending December, 1895, fifty-six applicants, all of whom arrived in this Colony within twelve months of the date of their admission, were received into the Government Asylums for Infirm and Destitute. Of this number, seventeen are still inmates, while thirty-nine left, after having been treated and cured in the asylum hospitals. The following are the details:—From England, 15; Ireland, 4; Scotland, 4; Victoria, 7; Queensland, 5; South Australia, 1; New Zealand, 6; Tasmania, 4; India, 1; Canada, 1; Germany, 2; Sweden, 1; Norway, 1; Ceylon, 1; Austria, 1; South Africa, 1; Cape de Verde, 1.

2140. Do you think that that is a reliable return? I think it is. It is compiled from 4,000 admission forms, to every one of which a report is attached.

2141. In these returns is the place where they come from stated? Yes; and there is a check return made at the asylum. For instance, when a man comes to the office of the asylum in Sydney for his application form his history is taken from him there. Then the Medical Superintendent of the asylum has an instruction to subsequently take his history also.

2142. So that the suggestion which one hears sometimes as to numbers of people coming from other countries to the institutions has small weight? I saw the evidence of my medical officers on that point, and I say advisedly that they are simply talking at random.

2143. You think there is no foundation for the suggestion that the institutions are filled with large numbers who come from other countries and Colonies? I do not think it is possible. Occasionally we find that a family has been sent on improperly from another Colony, and we always send them back.

2144. If you find that a person has come from a similar institution in another Colony he is sent back? Yes; if his state of health permits.

2145. How long have you been doing that? I should say within the last four years.

2146. You mean where they have come direct from an institution in another Colony? Yes; or where relatives have sent them on. I know of an instance in which a son sent his mother from Queensland three times, and we sent her back each time. He got rid of her by paying her passage from Brisbane to Sydney.

2147. I suppose he put her in one of the institutions in Queensland, and they possibly found out she was not a fit subject to be there, and he sent her on here? Probably they refused to take her there. These cases are not numerous, but we have a few of them.

2148. In your report for 1889 in your suggested legislation you point out the necessity of making provision for relatives contributing to the support of such people;—will you give a reason for that suggestion? I have the history of a number of relatives who were applied to and who would not contribute.

2149. Do you think there are many inmates whose near relatives could well contribute to their support? Of course it is difficult to give a strictly accurate statement about that, but approximately I should say there would be from 200 to 300 in the Government asylums whose relatives might keep them at home or pay a fair amount for their support in the institutions. They are always applied to.

2150. How do you find that out? We get the statement from the inmate first, and then we have inquiries made as to the ability of the relative to pay, and if we find he is able to pay we apply.

2151. What is the result of an application of that kind generally? They pay very seldom. I had the father of two postmasters, and his daughter was married to a third postmaster in the colony, in the Liverpool Asylum. I applied to these three people, and not one of them would contribute. I have a number of such cases set forth in my report under initials.

2152. I have heard it stated that well-to-do relatives of inmates of these asylums sometimes drive up in private vehicles to see their relatives? I have not known that to be done.

2153. But there are cases of this kind—that when they shuffle off this mortal coil, their relatives give them a good burial? Sometimes. I think last year there were upwards of 100 private funerals.

2154. At any rate, the system has been so much abused that you have found it necessary to point out the desirableness of legislation to make relatives pay? Yes.

2155. Somewhat similar, I suppose, to the working of our new Lunacy Act? Yes; on the same line.

2156. Did you get the legislation you have suggested from any other colony? Yes; there is legislation in South Australia, Victoria, and, I think, New Zealand.

2157. Have you pointed out to the present Government the desirableness of legislation of this kind? No, not to this Government, beyond stating it in my annual reports; but I intend to do so.

2158.

2158. Is the Government utterly powerless at present to get any compensation from relatives? Yes.  
 2159. And although you may know they are well able to contribute, still, if they have not the decency to do so, you cannot compel them to pay? No; and I cannot allow the old people to remain in the streets to starve. They must be housed.  
 2160. How many people have you in these various asylums? At present time, including old women, about 3,500.  
 2161. Roughly speaking, there are 2,900 men and 650 women? Yes; that is about it.

S. Maxted,  
Esq.  
3 Mar., 1896.

WEDNESDAY, 4 MARCH, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	CHARLES ALFRED LEE, Esq.
The Hon. JOHN DAVIES, C.M.G.	JOHN LIONEL FEGAN, Esq.
The Hon. JAMES HOSKINS.	THOMAS HENRY HASSALL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Sydney Maxted, Esq., Director of Government Asylums, sworn, and further examined:—

2162. *Mr. Trickett.*] I think you have certain returns to present? Yes; I present a return showing the number of inmates in the institutions during 1895:—

S. Maxted,  
Esq.  
4 Mar., 1896.

RETURN showing the number of inmates in the following Institutions during 1895.

Institutions.	In institutions, 1 January, 1895.		Admitted during 1895.		Discharged during 1895.		Died during 1895.		In Institutions 31 December, 1895.		
	Men.	Women.	Men.	Women.	Men.	Women.	Men.	Women.	Men.	Women.	Total.
Liverpool .....	785	.....	1,075	.....	751	.....	265	.....	844	.....	844
George-street, Parramatta .....	995	.....	1,061	.....	785	.....	195	.....	1,076	.....	1,076
Macquarie-street, Parramatta .....	321	.....	353	.....	318	.....	65	.....	296	.....	296
Newington .....	27	612	47	647	39	535	...	122	35	602	637

Rookwood .....	379	.....	614	.....	438	.....	78	.....	427	.....	427
Total .....	2,571	612	3,346	647	2,557	535	604	122	2,756	602	3,358

2163. How many people were there in the asylums at the end of 1895? 3,358, including 637 women at the Newington Asylum.

2164. Is the cost of the maintenance of the women about the same as that of the men? It is a little less. I think the net cost at Newington is between £11 and £12 per head.

2165. And what is the cost per male? In the yards £11 18s. 8d., and in the hospitals £19 1s. 11d.

2166. You say the cost in the female wards is a little less than in the male wards? Yes.

2167. Does it not strike you that it should be the reverse, because the men, I suppose, are working about the place? Yes, but I have not dealt with it in that way. I have taken the actual charge. The women, of course, work about the institutions as well. They do all the washing and the laundry work. The same rule applies fairly to both. I do not think there is any difference on that ground.

2168. Can you contrast the cost of maintenance in New South Wales in the yard establishment with one or two of the other colonies? Our cost is about £11 18s. 8d.; in Victoria, £13 13s. 9d. for the ordinary inmates and £9 3s. 7d. for the casuals, but the casuals do not receive clothing. They are only housed. They are never asked to work; they go in and out. They are received at a place called the Immigrants' Home. In South Australia the cost is £13 4s. 4d., and in Queensland £13.

2169. Are those figures obtained from authentic sources? Yes; some of them were telegraphed for, and others were obtained from official returns.

2170. And they are all based on the same outlay? Yes.

2171. For instance, do you debit the institutions of New South Wales with any interest on the cost of construction? No; that is not done in any case.

2172. So that really, in addition to this cost in all the Colonies, that would have to be added? Yes.

2173. Your statement shows that the New South Wales establishments are conducted more economically than those of the other colonies? As far as the yard patients are concerned there is no doubt about it.

2174. What would be the cost per head if there was the concentration that you contemplate in the Rookwood establishment? I have a table prepared that shows it exactly. The total saving in the cost of administration, that is in salaries and wages only, would be £4,225 a year. Of course, that is exclusive of the probable saving in rations and in other matters. That would pay the interest of 4 per cent. on the proposed £70,000 loan, and leave a surplus of £1,425 a year.

2175. Are you able to tell us what the saving will be per head, or what the cost will be per head, if your ideas are carried out? I can furnish that information. Of course, the estimate of the savings, apart from salaries and wages, is only approximate, but I do not think it would be less than from £4,000 to £5,000 a year.

2176. Would not the saving in the way of delivery of rations and that kind of thing to one place be considerable? Yes, I have included that; I have calculated that the whole saving will be from £8,000 to £9,000 a year at least.

2177. Do you agree with the representations which have been made from time to time as to the thorough unsuitableness of the Parramatta building, especially for the housing of these people? Yes, in every respect.

2178.

- S. Maxted,  
Esq.  
4 Mar., 1896.
2178. The evidence that has been given by other people, and the Press, and other reports which have been handed in from time to time, are not in any way exaggerated? No, they could not be in my opinion.
2179. It is absolutely cruel, dangerous to life and health; and the premises are thoroughly unsuitable for the purpose for which they are at present occupied? Yes, in every particular.
2180. And if any alarm of fire or a panic occurred in any of the buildings with these unfortunate people huddled together on two or three floors, the damage and loss of life would be something frightful? There is no doubt about it.
2181. Therefore on the ground of the unsuitableness of the present buildings you are in accord with the evidence that has been given and with the recommendations that have been made? Yes.
2182. Does that apply to other places besides the Parramatta Institution? I do not think the Liverpool buildings are suitable for sick people.
2183. That is the stone buildings? None of the Liverpool buildings are suitable for sick people—that is for the class of sick housed in them at present.
2184. Then you agree with Mr. Taylor that they are draughty and cold? I do not think they are suitable. Take the consumptive people for instance. They can never get downstairs; they are always kept in one room.
2185. They cannot get the benefit of the sun and fresh air? No; I may say, as far as Mr. Taylor is concerned, that I do not agree with anything he has stated. I do not think he spoke about the sick people at all. He spoke about the Liverpool buildings being unsuitable for any people because they are draughty. That is all nonsense. Fires are provided everywhere through these buildings during the winter months, and they are provided very liberally.
2186. You have heard the evidence of the Liverpool aldermen as to the irregularities said to go on in Liverpool on the part of the old men from the institution. Have any representations been made to you on that score? None whatever. An isolated case may have occurred when an old man has been discharged from the asylum to go elsewhere, with a shilling in his pocket. He may have got an extra glass of grog, but I have no hesitation in saying it has not occurred to any appreciable extent.
2187. Then the accounts are exaggerated? Yes.
2188. Will you provide the Committee with a copy of the regulations of the institution? Yes.
2189. I suppose the regulations in regard to patients going outside the institution are very strict? Yes.
2190. Are they adhered to? I am sure they are. Besides we have never had any complaints.
2191. Then, as regards the Liverpool institution, you do not think it is suitable for consumptive people, and people suffering from chest complaints? No.
2192. Is it suitable for a limited number of fairly healthy patients? Yes; my objection to the retention of the building does not arise from that reason at all.
2193. You are agreeable to that building being wiped out altogether? I agree for reasons I am prepared to state, to that place being removed after the Parramatta institution is disposed of, simply on the ground of economy. I think it would be unnecessary to keep a number of healthy patients there in a limited area, and at additional cost, who could be removed to an institution on that large Rookwood estate, where they might be profitably employed. That is my only objection to that place. As an institution for healthy old men, I think, if an additional area of ground could be secured it might be used very properly.
2194. But as head of the Department, you are in favour of the concentrated system? Very strongly—under a system of separation of the institutions on the Rookwood Estate; not exactly on the system shown on the plan which I saw yesterday for the first time.
2195. You have handed in a statement dated 26 February, 1896, of your views regarding the Rookwood proposal? Yes.
2196. I notice from that statement that you wish to amplify it, and I would ask you to give any further reason you have for locating the whole of these people at Rookwood? The site appeared to me to possess special advantages—1. Because it afforded a chance of placing in separate institutions on a large area, so that they should be properly classified the various classes of inmates dealt with in the Government asylums; the sick could be separated from the sound, and as easily confined to their own respective grounds as if they were in different towns. 2. The site is elevated and healthy; a good water supply is near; I was assured by the professional advisers of the Government long ago that there would be no difficulty with regard to drainage; and I see they have stated so in their evidence. 3. There were buildings already on the ground, erected at a cost of between £20,000 and £30,000 that were suitable, with alterations, for asylum purposes, and could not be used for any other purposes. 4. The centralisation of these asylums on this ample site, under a proper system of separation, will save a very large annual expenditure, although this would not have weighed with me if I had not thought, as I still believe, that the general scheme which I have proposed would secure the comfort of the sick poor, and the other classes of inmates who occupy these asylums. While upon this point, however—which seems to me to be a very material one—I may mention that the saving in cost of administration that could be effected by my proposals would amount to £4,225 per annum in salaries and wages, which would pay the interest at 4 per cent. upon the loan vote of £70,000 and leave a surplus of £1,425 from the present working cost. This is exclusive of the probable saving in rations and other matters which can only be ascertained after a year or two's experience, but I should think it would amount to at least from £4,000 to £5,000 per annum. I am responsible for the selection of the Rookwood site, acting upon my own belief, and upon consultations from time to time with the medical officers of the institutions, and also upon the opinions expressed by two chief secretaries, who carefully considered the whole question after visiting the locality, and one of whom was accompanied by no mean medical authority when paying his official visit with the Principal Under Secretary and myself. I wish to impress upon the Committee that no important step with regard to hospital arrangements has been taken without the advice of the medical officers, and that the hospital plans have been prepared solely upon their recommendations as stated by Mr. Vernon and the Assistant Government Architect.
2197. If these buildings which were erected for the boys' reformatory had not been there, would this site have entered into your mind as a place for the location of infirm and sick people? I think it would. I thought of several sites, and I may say that step by step, as far as that site is concerned, I have consulted the medical officers of the Asylum.

2198. And they, you say, have approved of it? They have, right through. They approved of it, as you see by Mr. Vernon's evidence, when they were called together; and when the whole matter was explained to the three of them together, they most strongly approved of it. I should like also to say with reference to the site, that two Colonial Secretaries have been over the ground,—one of them was accompanied by a good medical authority at anyrate. The whole scheme was discussed then, and Sir George Dibbs most strongly approved of the proposal.

S. Maxted,  
Esq.  
4 Mar., 1896.

2199. What I want you to be clear upon is, that it is not because there happens to be those buildings there that you are fixing upon the site? No. Of course the buildings were there, and I would have asked for them under any circumstances at that time to relieve the overcrowding, but that did not weigh with me.

2200. But with regard to the statement of yours, that you were backed up by the advice of the medical officers of the Department, there seems to be a little difference of opinion? I have seen their evidence, and I am quite incapable of understanding it. I have here a statement of Mr. Vernon in his own handwriting, and I have the statement of his assistant, Mr. Edwards; and here, now, is my own evidence upon oath which distinctly contradicts them. I feel bound to say that, although I say it with extreme regret.

2201. If you look at the top of page 2 of the memorandum to which I have just referred, you will see with regard to some question which Mr. Davies asked, that you state—

The representations which were made at that meeting I reserve until I am giving evidence, because they hardly touch the purpose of this memorandum.

Will you explain that? The purpose of this memorandum I took to be to make the Committee acquainted with the history of the site, because I saw from one or two questions put that the point was not quite clear; but in addition to that I may state that I called these three medical gentlemen together in the presence of the Government Architect, and the assistant Government Architect.

2202. What are their names? Dr. Waugh, Dr. Beattie, and Dr. Brown. I impressed upon those gentlemen that, so far as the medical aspect of the matter was concerned, they would be held wholly responsible. I pointed out exactly what the details of the scheme were as I had suggested it. Then I suggested that they should go over the ground with the Government Architect, and his assistant, and myself, and fix the sites which were in their opinion best suited for hospital purposes. I have Mr. Vernon's endorsement of that in writing, and Mr. Edwards' endorsement also. They were called together on the 12th December, if my memory serves me correctly.

2203. Now you see that they have somewhat gone back on that? I see by questions 965, 966, and 967, put by Mr. Davies to Dr. Waugh, that they were not there at all—that they were not consulted.

2204. Of course that is a matter which remains between them and you; but I would refer you now to another important medical opinion on this site, and that is the opinion of Dr. Ashburton Thompson;—you, no doubt, have read his evidence? Very carefully.

2205. And you see it is not altogether favourable? It is not altogether favourable. As that question has been put I should like the Committee to put that matter before Dr. Ashburton Thompson again when he is before it—that is, the question of the suitability of this site with regard to all the inmates now in the Government asylums with the exception of the consumptive people. I may say at once that I submitted to Dr. Ashburton Thompson this proposed classification.

2206. When? Since he has given evidence. I will read it:

		<i>Divisions.</i>	
Division 1. 500	{	Cancer ... .. Consumptive ... .. Ophthalmia ... ..	} Approximately 500 to be classified. Require regular medical treatment.
Division 2. 1,000.	{	Paralysis... .. Rheumatism ... .. Epileptics ... .. Heart Disease ... .. Senile decay ... .. Convalescents from the general hospitals suffer- ing from fractures, &c., sent on account of difference in cost.	} To be classified. Do not usually require much medical treatment beyond tonics, stock medicines, and special diet.
Division 3. 1,000 (approx.)	}	Old age and destitution ...	} To be classified
Division 4. say, 500.	}	"Casuals."	

As the question has been raised, I would ask that when Dr. Thompson is examined again that may be submitted to him—as to whether that proposal has not his absolute approval, provided the four divisions are placed on suitable sites on the Rockwood ground. I may say at once that as far as I am concerned, I would prefer to have the consumptives right away from the estate altogether. I also think it would be better to have the cancerous and ophthalmic cases away too. I do not want those hospital people there at all. But we have them, and we have to provide for them, and on medical grounds I was assured there would be no difficulty in providing for them on this estate. That matter was left absolutely in the hands of the medical officers.

2207. But apart from those objections, Dr. Ashburton Thompson raised certain objections to dealing with the sewage from this large number of people which seemed to be rather weighty? I can only say again that the opinion of the officers of the Government who should be best qualified to deal with that question has been taken, and you will remember what it was—that there would be no difficulty if dealing with it.

2208. One of his objections was as to the character of the soil—that possibly it might not be sufficiently absorbent for a number of persons, and also that the effluent, which must be of considerable quantity, would have to be taken from a great distance, possibly to the Parramatta or Cook's River? I saw that.

2209. Are not those very weighty objections? Yes; I have the very highest respect for Dr. Thompson's opinion upon any matter of that kind; but as I have just pointed out, the scientific officers of the Government who deal specially with these questions—Mr. Vernon and Mr. Darley—give a distinctly opposite opinion.

S. Maxted, Esq. 2210. Will you look at questions 109, 110, and 111, put to Mr. Vernon.

4 Mar., 1896. *Mr. Davies.*] Was there a Board appointed, and did it make a suggestion for grouping the whole of the buildings at Rookwood? I am unable to say.

How, then, did the recommendation to group the whole of the buildings at Rookwood come about—what were your instructions? My instructions were to consult the Director of Benevolent Asylums as to what was required.

No Medical Board or Board of Works has sat to make this recommendation? There was a meeting of all the medical officers, with myself—that was subsequent to my instructions—and upon the deliberations of that meeting I based the grouping of the different classes.

I understood you to say a little time ago that Mr. Vernon acted upon the advice of the Government medical officers? With reference to the hospital sites.

2211. *Mr. Lee.*] But what medical officers are you referring to? Messrs. Waugh, Beattie, and Brown.

2212. *Mr. Trickett.*] Not to the official Medical Board? No; the ordinary official routine course would be this—plans would be prepared by my Department upon the recommendations made by my Department. They would go in due course to the Chief Secretary. Then they should have gone on to Dr. Ashburton Thompson, as the independent consulting medical authority of the Board of Health. Then Dr. Thompson, if he had seen anything to object to, would have consulted in the first instance with me, or he would have gone to Mr. Critchett Walker, who would have directed him to come to me. His opinions would have been noted upon the plans. He would have made a report on the matter which would have gone before the Chief Secretary. Then it would doubtless have been referred back to Mr. Vernon. There would have been a general consultation, and the plans would then have come on to the Public Works Committee in due course in completed form.

2213. Then you repeat your own opinion, and also the endorsed statement of Mr. Critchett Walker, that this scheme is really prematurely before the Committee? Yes. Mr. Bruncker has never seen the thing at all.

2214. You state distinctly that you have not been consulted as to the details of this plan, or as to the group or location of the various buildings? I was present at the meeting on the ground that day, with the medical officers, and the Government Architect, and twice afterwards I went to the Government Architect's Office as they were drawing the sections to supply them with details of numbers, the rooms required, kitchens, and so forth. They had just commenced this general plan. They had the proposed hospital group in it, also Group 2 and Group 3. Group 4 had not been reached.

2215. In your statement you say you are very much surprised to find the whole of the buildings had been placed on an area of 64 acres, whilst the estate over which it was proposed they should be scattered comprises an area of 600 acres. Did you point out to Mr. Vernon that it was your scheme that the buildings should be separated? Here is the statement in the Assistant Government Architect's own handwriting. This is the memorandum of instructions sent to the Assistant Government Architect. He called at my office and asked for some short details as to numbers. This is what he took down as I spoke to him—

ROOKWOOD GENERAL SCHEME.—Data obtained from Director on 3/12/95.

Classification *a sine qua non*.

1. General class (to be provided for)	...	...	...	...	...	...	1,000
2. Undesirable (idle loafer class)	...	...	...	...	...	...	500
3. Consumptives	...	...	...	...	...	...	200
4. Cancer	...	...	...	...	...	...	100
5. Ophthalmic	...	...	...	...	...	...	300
6. Hospital (present group of buildings)	...	...	...	...	...	...	400
7. Additional, against future	...	...	...	...	...	...	500

3,000

Construction, brick; Hospitals, tile-lined;

Consumptives in Wards of 25 each	} enclosed with about 100 acres of ground each.
Cancer " " " " "	
Ophthalmic " " " 50 "	

2216. If your suggestion had been carried out the ophthalmic, cancerous and consumptive hospitals would have been half a mile apart? I think about a quarter of a mile; it means that each hospital was to have an area of 100 acres of ground.

2217. Would not separating them to the extent you propose have increased the cost of drainage? Yes; but I think that would have been a minor consideration in view of the necessity for separating them.

2218. Coming back to the question of drainage—beyond the evidence of Mr. Vernon and Mr. Darley, which you rely on, do you not think that treating the refuse from over 3,000 people in thick clay-soil, and then having to let the effluent find its way to such a distance as Parramatta or Cook's River by open drainage, would be a serious objection? I can only make this reply—that that, in my opinion, was a question purely for the scientific officers of the Government to deal with, and their evidence was very clear upon the point. Of course the same statement was made to me with regard to the drainage—that there would be no difficulty whatever about it.

2219. You do not set up your opinion against that of Dr. Ashburton Thompson, and, I may add, Dr. Renwick, who is very strong upon the subject? I, of course, have the highest respect for Sir Arthur Renwick's opinion, but so far as I remember, he was only strong on the point of aggregating these people. He did not offer an opinion on the question of drainage.

2220. If such an eminent authority as Dr. Thompson, who is one of our leading men connected with the Board of Health, is of a certain opinion, do you not think that that opinion should have a certain weight? Certainly; and it should be weighed in conjunction with the evidence given by Mr. Vernon and Mr. Darley. It is just a question of doctors' differing. It occurs to me that it is rather an engineering than a medical question after all.

2221. Have you read Mr. Davies' evidence? Yes; but I would like to know whether he proposes to put in a sewer which a man could walk through, and whether such a sewer would be necessary.

2222.

2222. Look at page 42 of the evidence of Dr. Thompson, and you will see the following:—

S. Maxted,  
Esq.

4 Mar., 1896.

*Sewerage and Drainage.*—This is a very important matter which should be thoroughly considered, and even worked out, before proceeding to examine other points. Supposing 2,500 or 3,000 people to be housed at this place, and connection with the Western Suburbs Sewerage Scheme to be for the present impossible, then a scheme for disposing of the liquid and solid wastes must be shown to be practically possible, or else the position is untenable. I think there can be no difference of opinion that so large an establishment should be systematically sewered on the water-carriage system, and that disposal should be by filtration, arrangements being made to draw off as much of the flow as might be required on cultivation &c. All surface and roof waters should be conveyed by separate gutters to any natural outfall; and then the sewage to be dealt with would be nearly invariable in quantity. I do not suppose it could be less than 14 gallons a head a day, or about 50,000 gallons from a population of 3,000. On this plan there would be water-closets or latrines, which, if they can be had, are vastly preferable on all counts to pail-closets. I know of no alternative to this plan: the liquid wastes must be thus provided for, and to deal otherwise with solid wastes appears to me a complication for which there is nothing to be said. If the filter-beds were scientifically laid out and managed, the effluent would be fit to enter any natural watercourse not drawn upon for drinking purposes. If there be no alternative, then it is a prime necessity to ascertain whether this plan can be carried out on this area. There is no doubt that it could not be done on an area of soil such as has been described without a great deal of expensive preparation. But, of course, it could be done; the governing consideration is cost, and that is one on which engineers alone can speak with authority.

Do you not think on an establishment of this kind containing 3,000 people, it is rather a dangerous experiment, seeing that these old people are supposed to work it largely themselves, and seeing that it is a long way from the Parramatta or Cook's Rivers, it is rather a dangerous experiment to have the sewerage of this mass of people treated in this artificial way, when a very slight hitch might throw the whole system out of gear and imperil the whole of the surrounding districts? So far as working it by the old men is concerned, it would be done under competent oversight. I can only say as Dr. Ashburton Thompson said, "The question is one on which engineers alone can speak with authority."

2223. But you must admit, seeing that there is a large number of people, it is a serious and primary consideration in dealing with the Rookwood site? Undoubtedly.

2224. With regard to the detailed plans, you still emphasise your statement that you were not consulted with regard to them, owing to your being laid up ill? I was largely consulted, but I have not seen them at their fully developed stage.

2225. If you had been consulted, I understand you would have recommended the buildings being placed much further apart than the plans proposed? Certainly; the memorandum from the assistant architect shows that. Of course, that can easily be done now.

2226. According to the memorandum and your evidence, you appear to have been guided and assisted by the evidence and advice of the medical officers of the various institutions? With regard to the hospitals and general suitability of the site for so many people.

2227. Independent of these medical gentlemen, did you have any other advice to assist you in selecting the Rookwood site? No, I do not think I had in the first instance—not when I proposed it. Of course, I brought my own experience, as far as I considered it to be valuable in the management of these places, to bear upon the question.

2228. Then, I understand that the real reason for the site being selected by you was, in the first instance, the visit in company with Sir George Dibbs, the fact of these buildings being there which could be partly utilised, the subsequent addition to those buildings, and then the subsequent visit of yourself, the Colonial Architect, Mr. Edwards, and the three medical gentlemen? Yes, and my own independent belief, that the site was, in all respects, a thoroughly suitable one.

2229. Do you approve of the plans submitted to our consideration or not? As they stand, I do not.

2230. Will you explain what you take exception to? With regard to the cancer, ophthalmic, and consumptive hospitals, or Group 4, I object to them, because they are in the wrong position.

2231. They ought not to be in the southern part of the ground? It was Dr. Waugh who, in the first instance, suggested that site. I suggested that it should be nearer to the Medical Superintendent's residence, on the northern portion facing west. Dr. Waugh said that would not be a good aspect, and he pointed out the other.

2232. Why did he point out the other? He said you could get there a north-easterly aspect, particularly for the consumptives.

2233. Mr. Davies.] You were pointing out your objections to the arrangement as shown on the plan;—will you describe your objections? My objection is particularly with regard to the three hospitals referred to.

2234. You are strongly opposed to the location of those three hospitals? Yes, they would be better away.

2235. Did you read Dr. Waugh's evidence? Yes.

2236. You find he swears he has never been consulted? Yes.

2237. Do you find Dr. Beattie also swearing he was never consulted? I do not think he went so far as that. I saw at any rate that he had tried to disconnect himself from the matter.

2238. Did you see that Dr. Violette also said that he had not been consulted? Dr. Brown was acting as Dr. Violette's *locum tenens*.

2239. Who went over the ground with you and apportioned the sites? Drs. Waugh, Beattie, and Brown.

2240. Would these gentlemen have any purpose to serve by declaring an untruth to the Committee? I do not wish to impute a motive at all in the matter; but I am here simply to state facts. I believe these gentlemen of course to be absolutely truthful, but here is the official record against them. It is nonsense for them to talk like that.

2241. They are good and faithful officers? As far as Dr. Beattie is concerned, I have found him to be an excellent officer for attending upon the sick—an able man in his profession; and I may say that if I discussed this question once with him, I have discussed it twenty times; and I think if he were recalled and the question were put to him he would not deny it.

2242. But you observe from the evidence you have perused that he has denied it? Yes, he has. Here, however, is the evidence of the Government Architect—his sworn testimony. I have also the written testimony of the Assistant Government Architect, and here is my own evidence. There is also the official record of the visit to the ground. If you notice Dr. Waugh's evidence in other places, when he was asked if he were consulted from time to time, you will see that he is very shifty, and says he might have been spoken to about it.

2243.

- S. Maxted,  
Esq.  
4 Mar., 1896.
2243. Is the idea for the concentration of the whole of the pauper inmates of the different asylums an idea of your own? Yes; the idea originated with me in the first instance.
2244. Have you in any document, other than those before the Committee, put that view before the Colonial Secretary? Not in writing. I have had discussions from time to time. When the idea first occurred to me I consulted my own officers. Then the question was put before the Colonial Secretary, and he visited the ground.
2245. But there is no official document to show that you made representations to the Colonial Secretary direct of the great necessity for concentrating the whole of the pauper patients at Rookwood? Not other than those which have been shown, and my report of five years ago.
2246. In the statement which you sent to the Committee the other day you suggested that the buildings should be spread over the whole of the land? Yes.
2247. You also stated that in conjunction with the Medical Superintendents and the Colonial Architect you went over the land and picked out a site? Yes.
2248. Did you pick out the site where the buildings are grouped together on the plan? I suggested the site for the casuals or Group 3, and also Group 5.
2249. Did you suggest Group 2? No; that was Mr. Vernon's idea.
2250. Did you agree with him? Yes.
2251. If you proposed or suggested that the buildings should be spread over this large area of 600 acres, how does it come about that they are all pretty well blocked together on 62 acres? Because, as I tell you, the matter was brought before the Committee before its time. As far as my suggestion for the separation goes, I have handed in a memorandum from the Assistant Government Architect which thoroughly endorses that suggestion, with regard to the hospitals at any rate.
2252. But does it not appear to be a contradiction of your own statement when you say that you, in conjunction with the medical officers and Mr. Vernon, met on the ground, went over it, and located the different buildings, and then that you should say that the buildings were not located where you agreed to? I did not say that. I have stated that the hospital sites were located absolutely in accordance with the recommendations of the three medical officers. Mr. Vernon has so stated in his evidence.
2253. He does not state that he was instructed by you to locate these buildings distances apart? I have no power to instruct him to do that. When the details were furnished to Mr. Vernon the matter was, practically, out of my hands, except with regard to furnishing him with whatever information he might require with regard to accommodation. It is for Mr. Vernon to make the plans.
2254. Are we to understand you are the officer responsible for the proposal to concentrate the whole of the paupers at Rookwood? Yes.
2255. And you are actuated with a desire to secure economy in management? Yes, and the better treatment of the various classes of inmates in these institutions.
2256. Can you point to any similar institutions in which large numbers of patients are concentrated as you propose, and in which the results have been as satisfactory as they have been in smaller institutions? I can give you a list of instances where there are larger numbers.
2257. Can you tell us what the results have been? No.
2258. I have asked you if you did not state that you went with Mr. Vernon and the medical superintendents of the institutions to Rookwood to locate the different buildings? Yes.
2259. Then I asked you if the buildings have been located according to the decision of that board, or whatever you like to call it? So far as the casuals were concerned we were unanimous.
2260. Are the buildings, as shown on the plan, located according to the positions you, and the medical experts allotted along with Mr. Vernon? No, not altogether. I have explained that I object to the hospitals.
2261. That is the only part you object to? Yes; but I would rather see Groups 1 and 2 put 100 acres apart. It would cost more, of course, because they would want separate treatment. I do not know whether you have noticed the class of patients it is proposed to put in Group 1. There are patients who require very little medical attendance—paralysed people, people suffering from heart disease, and so on.
2262. Are not 50 per cent. of the entire inmates in the hospital? No, about 1,400. That includes the consumptive, cancerous, and ophthalmic patients. As far as Group 1 is concerned you have to take from that number the consumptives, the ophthalmic, and the cancerous patients.
2263. They are all included in the gross number? Yes; but they would not be accommodated in Group 1.
2264. How many are permanently in hospital out of the 2,800 patients? The numbers vary very much, but you could make sure of 600 always being there.
2265. From your knowledge of the treatment of the inmates of the different institutions, you say that at least 40 per cent. are sick in the hospital? Yes, they are chronic cases—cases which do not require regular medical treatment, but tonics and plenty of nourishment.
2266. Then you are responsible for the idea of concentrating the whole of the paupers of the Colony in one spot, simply on the ground, as you believe, of economy? The evidence I have given is that the reasons which actuated me in suggesting this scheme were, first, that I thought it would secure the better comfort of the sick, and next, a cheaper administration.
2267. How do you arrive at that conclusion? I pointed out yesterday that the sick and the sound are at present indiscriminately mixed together in the separate institutions, without any chance of classifying them.
2268. There is a failure of space for classifying them? Yes. Then with regard to the site for the sick, as I have already explained, I have consulted the medical officers of the institutions from time to time. With regard to the question of economy, I have worked out the figures.
2269. What do you consider would be a fair and reasonable number of patients for one medical superintendent to see to? It depends on the class of cases. One medical officer, with an assistant to act as dispenser—and on that point I particularly consulted the three medical officers—could manage all the duties appertaining to 2,600 inmates. Most of his trouble would lie amongst the cancerous, ophthalmic, and consumptive cases. The superintendent would manage the rest. The epileptic, heart disease, paralysed, and rheumatic people require very little medical assistance.
2270. A large portion of the saving would be in the salaries of medical officers and others? Salaries and wages.
2271. On the 9th February the inmates numbered 3,540, of which 650 were women? Yes.

- S. Maxted,  
Esq.  
4 Mar., 1893.
2293. You recommend that the patients should be treated in one block at Rookwood to effect a saving of £4,000? Not in one block, and not for the purpose of saving £4,000 at all, but on the same piece of land in separate blocks, for the purpose of securing the better comfort and treatment of the inmates, and effecting better classification, and finally on grounds of economy.
2294. Is the treatment at present very bad? I do not say it is. Of course it is not bad.
2295. To effect a saving of £4,000 a year, and to obtain greater efficiency, you have recommended that the whole of the patients should be located at Rookwood? Yes.
2296. You say you would have greater efficiency;—can you point out any instance where paupers have been massed together where greater efficiency has been the outcome as compared with smaller institutions? I do not know of any other institution in these colonies which has so many patients, but I can give you a list of instances elsewhere, and they are institutions which are under very keen supervision.
2297. Would efficiency be more thoroughly secured by one Medical Superintendent than by three? I do not think it would. I have suggested two instead of three.
2298. When you made choice of Rookwood as a spot desirable for housing all the poor out of the institutions, did you give any attention at all to the system of drainage and sewerage? The question was first raised when Sir George Dibbs was up there. Then, when the Assistant Government Architect was carrying out the drainage there, it was declared that there would be no trouble whatever about it.
2299. Where does the drainage empty itself? It is only a system of irrigation beds.
2300. Are they not a disgrace;—do you call that treatment of sewage matter scientific, or in accordance with the principles of a sewage farm? I did not propose to adopt that system. That is a matter which the engineers of the Government could advise about. It is a matter for which I am not responsible.
2301. Is not the first consideration in connection with hospital treatment the provision of a proper system of drainage and a good supply of water? Certainly. Mr. Vernon and Mr. Darley have both declared that there would be no difficulty about that.
2302. Have you read their evidence? Yes. That is the evidence also which has been given by Dr. Ashburton Thompson.
2303. That there will be a great difficulty in effecting a thorough system of drainage? Mr. Vernon says there will be no difficulty. He was asked the following question:—
- Supposing this scheme is carried out, and these 2,900 people are removed to Rookwood, have you any apprehension, from what you know of sanitary matters, that the site will probably have to be abandoned on account of defective drainage? I have not the slightest fear of that.
- That is very clear.
2304. But if you go a little further you will find he has very grave doubts? Mr. Vernon does not contradict that.
2305. You know the character of the soil? It is clay. Of course it would have to be very much broken up before it could absorb anything.
2306. Your own common-sense, apart from any engineering knowledge, is sufficient to point out that that is not the character of land to absorb sewage matter? No; not to absorb sewage matter, of course. It is the same sort of land as that which the Callan Park Asylum is built upon. They get rid of their matter mostly by the pipes, but they bury some of it. Dr. Ashburton Thompson says it is a question after all which must be left to the engineers, and the engineers say that there is no difficulty about it.
2307. The best sanitary engineer who has come before the Committee swears that there is a great difficulty, but that it can be got over by a large expenditure? Yes; I saw that Mr. Davies differed to some extent both with Mr. Vernon and Mr. Darley.
2308. Notwithstanding the defective nature of the locality for drainage, you are still in favour of the scheme? I say that, weighing the evidence as it is before me, with reference to the question of drainage, I do not see any reason to shake my opinion that it would be a good scheme to have these buildings there, as I have pointed out, with the exception of the three hospitals to which I have referred.
2309. How many cancer patients have you in the whole of the asylums? About forty or fifty; they are all at Liverpool.
2310. Could they not be taken to Little Bay? They could undoubtedly.
2311. Would it not be more satisfactory? It becomes a question of cost. These cases are sent to us because they can be more economically managed in the Government Asylums.
2312. Do you know the cost per head of the patients at Little Bay? I think about £33.
2313. And there are a number of people located at Little Bay who could be treated at your institutions? No. As it is considered they can be treated at my institutions, they are forwarded on because of the greater economy. I see no reason why the cancer patients could not be treated at Little Bay beyond the question of costs.
2314. Do you know the cost of the cancer patients in the Liverpool building? £19 to £20 per head.
2315. How many ophthalmic patients have you in the different institutions? They are centralised pretty well at the Macquarie-street Asylum. In round numbers they will be about 200.
2316. How many consumptive cases have you in the different institutions? At present nearly 200.
2317. Where are they principally located? Liverpool.
2318. Have you any consumptive cases at Rookwood? A few in the early stages.
2319. Do you draft patients suffering from consumption from the other institutions to Liverpool? Yes; if they are at all serious cases they go to Liverpool in the first instance.
2320. Then at Liverpool you have no proper system of classification? No; you cannot secure one.
2321. That all arises from a want of space? Yes.
2322. Then your idea is, if this or some other scheme is carried out to house these poor people, to classify them? Yes.
2323. Have you made representations to the Government, independent of what we have before us, as to the necessity for classification? Not independently of what you have before you, but I think there are about half a dozen representations.
2324. You are aware that a Commission some years ago recommended a classification of the patients in connection with all these institutions? I do not recollect it; but I have no doubt they did.
2325. And nothing has been done from that time to this? There has certainly been an improvement in that respect, as far as it could be effected.
2326. Your great difficulty has been a want of space? Yes.
2327. How does it come about that there has been such a great increase of paupers seeking admission to the

the institutions during the last three years? I cannot tell you. I described yesterday the method under which they get in, and showed pretty well that it was almost impossible for a man to get in unless it was absolutely necessary that he should get there.

2328. If the increase keeps on *pro rata*, you will want a larger institution than is now proposed? It is obvious that if the increase goes on we shall want a very much larger institution. I suppose it arises from the depressed times. We got a good many from the hospitals.

S. Maxted,  
Esq.  
4 Mar., 1896.

THURSDAY, 5 MARCH, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAVIES, C.M.G.

The Hon. JAMES HOSKINS.

The Hon. WILLIAM JOSEPH TRICKETT.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Sydney Maxted, Esq., Director of Government Asylums, sworn, and further examined:—

2329. *Mr. Davies.*] You have some statements to present to the Committee? I was asked yesterday to prepare a statement of the saving in the cost per head under the proposed new policy. Assuming my figures to be correct, it comes to nearly £3 per head. You asked me to obtain a statement showing the distribution of the charity vote. I have it here for the last year. Reference was made yesterday to the difference in the management cost of the Liverpool and George-street Asylums. For the moment I was unable to give the cost. The cause is that £280 of the Medical Superintendent's salary at the George-street Asylum is charged to Macquarie-street. He has the two places. There is a baker at £130 a year at the Liverpool Asylum, who is not employed at George-street. The baker who bakes for the George-street and Macquarie-street Asylums, bakes at Macquarie-street, and there is an extra matron and assistant matron at the Liverpool Asylum at £60 a year. The difference between the two places is £190. The items I have just enumerated total £470; so that the figures are, excepting for numbers, in favour of the Liverpool Asylum.

S. Maxted,  
Esq.  
5 Mar., 1896.

2330. But the number of inmates at George-street and Macquarie-street are much larger than at Liverpool? Yes; the figures still show in favour of the Liverpool Asylum.

2331. How do you account for the expense of Rookwood? At Rookwood it will be less this year. In that year the irrigation works were charged.

2332. *Chairman.*] You were to furnish the number of paupers in this and the adjoining colonies with the cost of maintaining them? I have that return here:—

Cost of Paupers, 1894-5.

Country.	Population.	Number of Paupers.	Proportion of paupers to population.	Cost.	Cost per head.

\* General average; but dividing the inmates into "Yards" and "Hospitals," so as to make a comparison with other colonies, the result is:—Yards, £11 18s. 8d.; hospitals, £10 1s. 11d.

I should like to explain that they do not deal as largely in the other colonies with what are called the general hospital cases. I shall have to get those figures in order to make a fair comparison. For instance, they have separate institutions for cancer, consumptive, and ophthalmic cases—they do not come into the general pauper institutions. You questioned me very closely with reference to the matter of drainage. I should like this short statement to be made portion of my evidence:—In reply to some of the questions put to me yesterday with reference to the alleged difficulty of carrying out a proper sewerage system at the Rookwood Asylum, I stated that it appeared to me that the best engineering authorities of the Government had already given evidence to the effect that such a system could easily be provided. I was asked to point out the evidence justifying that statement. At the moment I could not find it. I have, however, since looked through the Minutes of Evidence, of which the Committee has kindly allowed me to be furnished with a copy, and I now with very great respect, in support of my statement yesterday, direct the Committee's attention to the following questions and the replies thereto: Mr. Vernon, Government Architect, questions and answers Nos. 5, 30, 38, 346. Mr.

Darley,

- S. Maxted,  
Esq.  
5 Mar., 1896.
- Darley, President of the Metropolitan Board of Water Supply and Sewerage, Nos. 1335, 1337, 1354. But principally in support of my statement I draw attention to the report of Mr. Davis, C.E., which recommends that the sewage be treated by precipitation and filtration, and the effluent discharged into the Rookwood Cemetery drain. The total cost of dealing with the sewage under this method, including interest on machinery, is fixed at £725 a year, but Mr. Davis stated, in reply to Mr. Black (questions 1554-55) and Mr. Hassall (questions 1569 to 1571), that if the isolation hospitals were dispensed with and any other buildings (say the casual group) placed on another site some thousands of feet of sewers would be done away with, and the cost of the sewers, above the sewage disposal works, would be brought down to £1,000 instead of £4,153. There is so much land available in a northerly direction that this change of site could be effected, and still allow full scope for carrying out the principle of separate institutions. These figures reduce the cost of the works from £8,435 to £4,282. The interest upon this, at 4 per cent., would be about £177 a year. Then add Mr. Davis's estimate of the working expenses of the sewage scheme, £420 a year, and it appears to me that the difficulty which has been raised as to drainage, &c., can be solved by an annual outlay of about £597. Now seeing that, as Mr. Davis states, the Government are at present paying £652 17s. a year merely to remove the nightsoil from the Parramatta institutions, the cost of successfully disposing of this important question of drainage at Rookwood can hardly be considered as worthy of consideration, if it is held to be the principal objection to carrying out the proposed scheme. Of course, if Mr. Davis's proposal is carried out, there will be a large saving in labour in connection with the present irrigation works, and the great saving per annum that will be accomplished under the general proposals for concentration will, I submit, justify a very much larger expenditure to secure good drainage than Mr. Davis has proposed. I would just point out that Mr. Hickson, Engineer-in-Chief for Public Works, declares Mr. Davis's scheme to be "efficient and economical." I respectfully ask that this brief explanation may be made a portion of my evidence.
2333. *Mr. Trickett.*] In answer to questions 1545, 1546, and 1547, Mr. Davis states that he does not regard the land as suitable for sewage farms—he does not think the area large enough nor the land suitable? I see that.
2334. *Mr. Davies.*] Mr. Vernon, in his second examination, also goes back on his former statement? I was told he had done so, but his evidence does not show it.
2335. *Mr. Hoshins.*] The statement made by Mr. Davis as to the area not being large enough is very explicit? Yes. The figures I have presented seem to me to be very economical. It would cost less to work this scheme than it is now costing to remove the soil from the two Parramatta institutions by the Borough Council.
2336. *Mr. Davies.*] When the Committee rose yesterday I was endeavouring to elicit the cause of the great increase in the admissions into the institutions during the last three years;—can you explain it? I cannot explain it, except that we have a very large number extra from the hospitals. I can obtain the details. No doubt the depression has had something to do with it.
2337. How many do you think have been admitted from the different hospitals? From the Coast Hospital last year 137 patients were sent on to us, as against 132 in the previous year, as against 80 in the year before that, as against 98 in the year before that, and 82 and 81 in the preceding years.
2338. Did they come to the institution for admission by the order of the Government? They were pauper patients, taken from the metropolitan hospitals when convalescent, and sent to the Government asylums to be treated in order to save cost at the other hospitals.
2339. That system is quite new to me, as the Director of the Sydney Hospital? It has been done for years.
2340. Does not the Government give an order for these paupers and send them straight to Little Bay? No; the application is made, and we send the orders for the transmission of these people from these hospitals.
2341. You want the Committee to understand that the sick poor treated temporarily in the hospitals are sent to this institution? Yes. Supposing a man is taken in with a broken leg, and the bone is setting, he is sent to us. He would, perhaps, be sent to Liverpool or Rookwood with his leg in plaster to save the cost of completing his cure in the general hospital.
2342. Can you give a list of patients who are sent in that way? Yes; I have a history of every one of the cases.
2343. Does that account for the great increase in the additional admissions? No; it does not affect it very materially.
2344. You do not get a very large number from the other colonies? No.
2345. Having these large annual accessions in the number of inmates, and you only provide in the new buildings for 3,300 patients, what provision do you intend to make in the future for the great increase which must take place? I cannot say. If the increase goes on, and every case admitted is a deserving one, provision will have to be made.
2346. You are only making provision practically for those who are now housed? About 500 extra.
2347. The accommodation of this building will be 3,300, and you have now 2,900? Yes.
2348. So that there will be provision made for about 400 extra, who will come in probably in one year? Possibly. There was a decrease last year of fifty.
2349. More by deaths than anything else? The death-rate was not above the usual proportion.
2350. How do you account for the larger proportion of deaths at Liverpool than at George-street, where there is a larger population? Because of the consumptive and cancer patients. There are no consumptive or cancer patients at George-street.
2351. But the whole of the cancer patients are a small item? There are fifty. There is not much difference in the proportion of deaths—it is about equal.
2352. Are there healthier patients at Rookwood. On the whole I think they are.
2353. You have not taken the ophthalmic patients from there? They have not any there.
2354. All you have there are the sick? The chronic sick—people who would be under Group 1, and the others who would be under Group 2.
2355. If you carry out your project to house the whole of the 3,300 patients, you will have the chronic sick, as well as those who are hale and hearty, together? Yes; in separate institutions on the one estate of 600 acres.
2356. And the cancerous and consumptive patients who might be termed convalescent would be able to walk about the ground? Yes; within their own area.

S. Maxted,  
Esq.  
5 Mar., 1896.

2357. Right up to the water supply? No. For instance, the consumptive hospital is placed further away from the water supply, and that is the only thing there is any danger about. They only could possibly convey any contagion, and I should be glad to see them away from the institution altogether; also the cancerous patients. The cost is the only objection. There are fifty of them. We are keeping them at £19 a year, and the cost was really £60 a year at the Coast Hospital.

2358. In this charge of £60 a year, did they take into consideration the cost of the building of the institutions? No.

2359. Is it a fair thing to charge the capital cost of the land against this project of yours? It is not done in any Government institution in the country.

2360. Why should it not be done? It is never done. It is not done in connection with the Sydney or Prince Alfred Hospitals or any other institution.

2361. *Mr. Black.*] You mean, I suppose, that as a matter of comparison it would not be fair to do it in this case because it is not done in others? Yes.

2362. *Mr. Davies.*] If your suggested proposal is carried out you will have ample accommodation for 3,000 patients? Yes.

2363. And with the annual growth we have had lately it would soon become necessary to increase that accommodation? Of course, if the annual growth went on it would be necessary to provide for it.

2364. Is it not fair to presume that the annual growth will go on in the future as it has done in the past? It is impossible to answer that question.

2365. Do you think we are likely to increase our pauper patients? I hope not. It is difficult to foresee what the social or commercial condition of the country is likely to be. I can only say that no patient is admitted without going through the fire of a very rigid examination.

2366. You are not able to tell the Committee whether there is likely to be increased accommodation required within the next two or three years? It would be impossible to say.

2367. We have had statements from the aldermen of Liverpool to the effect that cancerous and consumptive cases are permitted to leave the building and mingle with the people in the town;—is that true or untrue? I am most emphatic in saying it is untrue. It is absolutely untrue.

2368. Do your regulations prevent the possibility of cancer patients who are isolated on the banks of George's River going into the town of Liverpool? They could not get in. They would have to be in collusion with two or three attendants, and they could not possibly get in.

2369. Have you at any time had a complaint that any one of them suffering from cancer has been in the town? I have never had any representation of the kind made to me.\*

2370. Have you had any complaint with reference to consumptive patients mingling with the townspeople and being a nuisance to them? No. Indeed we are so careful that I may state that at one time I found that a few of these unfortunates who walk about were allowed to stroll into the park, which is opposite, and seeing in the course of my reading that that was dangerous, I consulted Dr. Beattie about it, and they were never allowed to go out afterwards; but there was no complaint made.

2371. I presume you have read the evidence of Alderman Cole and other evidence to the effect that cancerous and consumptive patients were allowed to go about the town? Yes.

2372. And they attribute some of the diseases which have broken out in the homes of some of the people to contact with these old men from the asylum? I can only say I have never had any complaint, and I cannot believe their statements can possibly be correct.

2373. Are your regulations sufficiently stringent to prevent the possibility of anything of the kind? There is a printed regulation which prevents any of them going out without getting an order from Dr. Beattie. I produce a copy of the regulation:—

REGULATION 4.—*Inmates' Leave of Absence.*

Permission to leave the asylum premises should not be granted excepting as a reward for good conduct, unless upon official business, or for private reasons likely to benefit the inmate. The system of leave should be firmly discouraged by the Medical Superintendent, and in no instance should an inmate be permitted to leave the asylum without first obtaining a written order upon the forms provided for the purpose from the Medical Superintendent. This rule should be rigidly adhered to in order that rations may not be drawn for men who have left the Institution. A record of all "leaves" should be kept by the clerk who is held responsible for the proper ordering of rations and the correct records connected with the Asylum inmates.

2374. Is this regulation posted in such a position at the entrance, and in different parts of the institution, that the inmates will know what it is? It is posted near the office.

2375. Is there only one place where it is posted? As far as I remember there is only one place where it is posted. There is a man at each gate and they could not get out.

2376. Would it not be wise to have several large copies of it posted in different parts of the building? It might be; there has really never been any necessity for that regulation, though it was made.

2377. If the number at present housed in the Liverpool Asylum were reduced to 600 healthy patients, and certain alterations which have been suggested by the Medical Superintendent in regard to verandahs were made, could there be any possible objection to their being so housed? Certainly not. My only objection is that you would be keeping up an unnecessary additional management cost, and if you keep 500 or 600 healthy patients there, you deprive the general institution of the value of what their services might be on this large area, which I think would be very considerable.

2378. But at present you utilise the labour of some of the healthy inmates? To a certain extent.

2379. On the farm at Glenfield? To a certain extent; it is proposed to abolish amongst other things the Glenfield farm.

2380. What do the old men receive in the shape of gratuities for the work they perform on the farms? It varies. They are on the farms and in the workshops. They go from 3d. to 1s. a day.

2381. Do many receive 1s. a day? Very few; in fact, I think those payments ought to be cut down. I did it once, and there was a great row about it.

2382. What was the total amount paid last year in that way? About £3,000. I think it should be reduced to £1,000.

2383. That was paid for work done in the shape of gardening, and so on? Yes; also for cooks, washmen, making boots, carpenter work, tin work, and so on.

\* NOTE (on revision):—I find that in February of last year the Liverpool Council alleged in papers, which are at the Chief Secretary's office, that cancer patients were allowed to walk about the streets. The statement was then fully reported upon by Dr. Beattie, and found to be an error, and the Council were so informed.

- S. Marted,  
Esq.  
5 Mar., 1896.
2384. Are you sure that the gratuities earned in that way are not spent in the public-houses of Liverpool and other places? That was one reason why it was cut down.
2385. Is not that the case? I do not know that it prevails to any great extent now. It used to be so at Liverpool, because I have seen the people in the public-houses, and that was one of the reasons for cutting down the gratuities.
2386. *Mr. Black.*] I thought you said they could not get out? The workmen get certain leave. A man after getting his month's pay asks for three days' leave. He saves his gratuities, takes his discharge, has his spree out, falls ill, and has to come back again.
2387. *Mr. Davies.*] The same men come back? Yes, in many cases. We have substituted extra allowances of tobacco and tea for money.
2388. Are you not altogether opposed to money gratuities? Yes.
2389. You state that you know of no objection yourself to Liverpool? Except the one I have mentioned. You will be unnecessarily paying additional management cost, and herding a lot of healthy men whose services you cannot very well utilise.
2390. Do I understand you to advocate the abolition of the asylum at Liverpool, and the abandonment of the buildings there? Yes.
2391. *Mr. Lee.*] When Sir George Dibbs brought this matter under your notice in 1893, I believe the action he authorised was the reduction of the overcrowding in Parramatta? Yes, that was the commencement of this matter.
2392. Some time after that it would appear that an idea had arisen that it would be a good thing to concentrate these people;—how did that idea come about? I had that idea two or three years before.
2393. But inasmuch as very little was done to lessen the overcrowding at Parramatta, will you explain why you then suggested a general scheme of concentration? Because I believed it to be the best way of dealing with these people. I did not act upon my own opinion only. Except in regard to matters of administration, I never take a single step without being well advised professionally.
2394. At all events you take the responsibility of having recommended that these people should be concentrated? Yes; that is, to be scattered in separate institutions on the one estate.
2395. You recommended that for several reasons—on the ground of efficiency and economy? Yes; and the greater comfort of these people. It would give us better control. I notice that some of the witnesses have stated that they do not believe in this scheme, but they have given no reasons for it.
2396. Before you took upon yourself the recommendation to the authorities of this system, you consulted what you call your medical staff? Yes.
2397. Are they not medical men in charge of the separate institutions? Yes.
2398. Those are the only people you have consulted? And Sir George Dibbs, who went there and judged for himself.
2399. Is there any one of these medical officers who has ever seen in any part of the world a system of concentration or dealing with paupers on a large scale? I should say Dr. Beattie has.
2400. Have not these medical men been in these colonies a number of years? Within the last seventeen or eighteen years Dr. Beattie has paid quite a dozen trips to England. He has paid one trip to England since he has been medical officer.
2401. In dealing with a matter of this extreme importance to the country, how is it you did not take into consultation the medical officers of the Government of the highest standard, such as the Medical Board, the Board of Health, Dr. Manning, and men of that stamp, who have given these matters their special consideration? That is not my business. If it had been desired, in the first instance, that that should have been done, my suggestions would have been forwarded from the Chief Secretary's office. In the usual course the plans and that report would have gone on—if they had not reached this Committee—to that Department before coming to this Committee.
2402. As a whole, you do not approve of the scheme as submitted on the plan? I approve of it, except in regard to the ophthalmic, cancer, and consumptive hospitals—they are too close. I should like to see them placed on the proposed site of the Medical Superintendent's residence.
2403. Then, as a matter of fact, there is a scheme before the Committee which you, in its entirety, do not approve of? I do not approve of it as a whole.
2404. I presume if the Committee had not been in existence that scheme would have been carried out? Possibly it would, or it might have been referred back to the Chief Secretary.
2405. Will you tell the Committee why you propose to concentrate all the paupers of the Colony alongside the main water supply of the City of Sydney? I do not consider there is any danger except with the consumptive people; and you have had better opinions than mine upon that point.
2406. You do not consider that there is any danger of infection? There is no infectious disease there.
2407. There are medical authorities who differ from you on that? It is not on the evidence.
2408. Your reply is that you do not consider there is any danger from polluting the water? I do not consider there is any danger.
2409. And you have never had the opportunity of consulting the Board of Health or the highest medical officers of the country as to whether there is or is not any danger? I have not had that opportunity.
2410. And, as a matter of fact, the proposal is to be carried out without that inquiry being made? Without that inquiry being made.
2411. You are also aware that, with that proposal, as originally submitted, there was no provision whatever to deal with the sewage matter in the asylum? No; as far as I know Mr. Vernon did not submit any proposal.
2412. As you have made yourself responsible for the concentration of these people at Rookwood, did you not take into consideration the prime question of drainage? That is not my business—that is the business of the Government Architect's Department.
2413. But you are the father, as it were, of the idea, and surely you have taken into consideration all these matters before committing yourself to the proposal? I answered yesterday that on the occasion of Sir George Dibbs' visit the Government Architect had to deal with the question of drainage, and I was assured there would be no difficulty whatever in connection with it.
2414. Whether there would be an actual danger of the pollution of the water supply or not, do you think you would ever disabuse the mind of the public that the water would be free from such pollution whilst the whole of the pauper element of the country would settle on the land? If you took the consumptive people away I think you would.
- 2415.

S. Maxted,  
Esq.

5 Mar., 1896.

2415. How would the removal of the consumptive people a few roods away from the proposed position affect the matter? You have had Dr. Ashburton Thompson's opinion upon that point. He says that if you take them a quarter of a mile away there is no danger.

2416. Less danger? No danger.

2417. Is it a reasonable provision to put this contaminating disease so near the water supply which supplies so many thousands of people? It should not be so close, there is no doubt about that.

2418. Should it be there at all? Of course, if there is no danger there can be no harm in its being there.

2419. Have you considered the question of treating a portion of our paupers in their own homes? Yes.

2420. What is your opinion about that? I should like to see it done.

2421. Of course it would only apply to such cases as those who have homes, but who are in indigent circumstances? Yes; the only objection, I think, would be on the ground of expense.

2422. What would be about the difference? I should not think a man could live under 15s. a week.

2423. Are there not married couples living on 15s. a week at the present moment? I know there are, in the mining district of Newcastle, on a good deal less, unfortunately.

2424. But under the charities of the country? Not that I know of.

2425. At all events you think that that is a phase of the question which might fairly be considered? Yes. If you have noticed the class of inmates of these institutions you will have seen that a great number of them, unfortunately, could not be dealt with in that way. Some few years ago I asked the inspectors of the State Children's Relief Department, when travelling about the country, to see if they could get the farmers to take these old fellows at so much a week, but they would have nothing to do with them. The English Charity Commissioners have just been dealing with this question, and this is what they say:—

These two forms of relief, namely, almshouses and pensions, are well fitted to meet the needs of the poor in old age; and it is unnecessary here to enter further into the question of their comparative advantage, than to say that while, on the one hand, an almshouse, in which proper supervision and attendance are available, seems to be best fitted for the relief of those who have no relatives capable of rendering them assistance, or who are wholly disabled, relief by means of pension on the other hand, gives more scope for the care of the aged poor by their families, and for enforcing those obligations to contribute to the support of relatives, the fulfilment of which is an obvious condition of all relief.

It is proposed there to confine it really to people who have families. I should propose to extend it very much beyond that if it could be done.

2426. In view of the peculiar circumstances of the housing of the poor in the colony at the present time, would you favour the concentration in different localities of small numbers? I do not believe in that. There would be the difficulty of management, the difficulty of oversight, and the very much greater expense.

2427. Would you favour the erection of suitable hospitals for cancer, ophthalmia, and consumptive patients in some country place within easy reach of Sydney, where the whole of that class of patients could be housed, and the housing of the more able poor in the existing institutions outside the town of Liverpool? Do you mean in the institutions we already have?

2428. Existing, but excluding Parramatta? In reply to the first question my answer would be yes. In reply to the second it would be no.

2429. Are not the buildings at Liverpool in a good state of repair? Yes.

2430. And could not they be utilised for many years to come for the able poor? Undoubtedly. I have stated that the only objection I have is not on account of the buildings at all.

2431. But you are strongly of opinion that the chronic sick should be removed? Yes.

2432. And you are strongly in favour of the erection of chronic hospitals in some remote place away from population? Yes.

2433. Your greatest trouble at the present moment are the Parramatta Asylums? Yes.

2434. You are of opinion that the removal of the men from both of these is very urgent? Yes.

2435. Is there any building you know of which could be used temporarily for housing the Parramatta poor until such time as buildings might be erected? Not unless Mr. Davies would lend us the Randwick Asylum.

2436. But is it suitable? You could put about 600 healthy men there.

2437. What would it cost for repairs? For healthy men not very much. But at one time it was proposed to make it a chronic hospital, and Dr. MacLaurin estimated it would cost from £10,000 to £11,000 to make it suitable.

2438. Have you any objection to it as a temporary asylum for the more able poor? No.

2439. In addition to Macquarie-street and George-street you have some buildings at Harris-street? Yes.

2440. At what rent? £270.

2441. Do you pay rates? I think we are exempt.

2442. Were those buildings rented at your suggestion? They were rented with my consent. We did not know what to do. They were taken as a sleeping place for the purpose of relieving the George-street Asylum. I had to stop admissions for nearly a month after consulting Dr. Manning.

2443. How many houses are there in that terrace? Ten, I think.

2444. A portion of which are devoted to skin diseases? Dr. Waugh uses one section of it for scabies cases.

2445. A most undesirable position for anything of that kind? Any place in the town would be an undesirable position; but no ill-results have followed. You probably rub against people in Sydney every day who are suffering from scabies, and you do not know it.

2446. But there is something even worse than that about those buildings—the filth and drainage which finds its way into the gutters of the main streets? There is no filthy drainage from those places. All the clothing and dressings and so on are burnt. Of course, I cannot argue for a moment that the place is suitable—it ought to be shut up as soon as possible.

2447. Supposing the whole of these asylums in Parramatta were emptied, what would you suggest should be done with the buildings? The buildings, unless they could be used for some factory purpose, would not be worth very much.

2448. Do you not think in the case of the Macquarie-street buildings they ought to be burnt? They ought to be destroyed, undoubtedly.

2449.

- S. Maxted,  
Esq.  
5 Mar., 1896.
2449. The George-street portion might be used for some other purpose? Yes; for some factory purpose.
2450. The position you have suggested at Rookwood is about sufficient to carry the existing poor? Yes.
2451. In the event of the numbers increasing, and as pressure is brought upon you in a few years' time and the Parramatta Asylums are vacant, do you not think you would be likely to use them again? Not if I can prevent it—at any rate never the Parramatta Asylums.
2452. You would never willingly go back to them? No.
2453. Have you any suggestions to make by which you can obtain some place at the present time to which these people can be removed? There is no other place I know of excepting the Randwick Asylum.
2454. You have made reference to the numbers who come to the institutions from the country hospitals and asylums;—I understood you to say that the hospitals were endowed? They get subsidies.
2455. For the purpose of treating these cases? Yes.
2456. Would you not qualify that statement by saying "by taking them into the hospitals and treating them whilst the proper authorities were obtaining their admission to the benevolent asylum?" No. What I want the Committee to understand is this—that people are taken into the country hospitals to be cured, and they are subsequently sent on before they ought to be discharged at all. I have had people sent from these places on more than one occasion who have been in such a state that they have died as they got into the asylums. In several cases I have had inquests held.
2457. What is your opinion of the pavilion as against the two-storey system? I like the pavilion system best, because of the infirmities of the sick. It enables them to get outside.
2458. Could not suitable two-storey buildings be erected at less cost? I do not think so. You would have staircases and so forth in a two-storey building.
2459. Take one of the two-storied buildings at Newington;—what objection could there be to a building of that kind for healthy people? Of course it can be used for healthy people.
2460. Surely it must be less expensive? I do not think it is; but I do not think there is much difference.
2461. Could you not adopt a varied system—partly two-storey and partly pavilion? It might be done.
2462. There is no absolute necessity to have the whole of the buildings on the pavilion system? No. If you thought proper you might have the casuals in the two-storey buildings.
2463. You propose to erect what appears to me to be very expensive buildings for the casuals? Those buildings are, in my opinion—I say this with great diffidence—really too good. I never contemplated that there should be hollow walls. I know, of course, it is best; but I wonder how many wealthy families have hollow walls to their residences.
2464. You think something less expensive would do? I think the £70,000 on the Estimates ought to cover the whole thing.
2465. Ought it not to be made sufficient? It ought. Look at the class of buildings at Newington. There is a pavilion there which cost £1,000 only, which is good enough for anything. It is of wood, certainly. I am sure that £200 more would have made that brick.
2466. How many does that pavilion accommodate? Sixty. I understand the objection to single walls is that the buildings are likely to get damp from the outside. There are 10-feet wide verandahs around these places. We have a brick pavilion at George-street of 9 inches thick, and the weather side is exposed, and it is never damp.
2467. It would be impossible for any brick wall to get wet under a verandah? Undoubtedly. Of course, I can understand that the Government Architect's Department like to have buildings which do them credit.
2468. But the Committee are anxious to know your opinion;—they have a proposal before them which represents really a first-class dwelling house? Yes; it is too good altogether. I say that £70,000 ought to be quite sufficient, and it ought to be made sufficient.
2469. You are acquainted with the proposal of Mr. Davis to drain this place? Yes.
2470. Mr. Davis's scheme is estimated to cost £8,435? Yes. He says that can be reduced by £3,000 if you put the casuals further north.
2471. But even if that system is adopted it will require competent men to work it? The whole cost is taken into consideration, and that would actually cost less to carry out than what we are paying the Parramatta Council to take the night-soil from the two institutions.
2472. What are you paying at Parramatta? £632 17s. per annum.
2473. Unless the sewerage system is carried out your suggestion would fall to the ground? Yes; but that is provided for. It is a most important factor, no doubt, and Mr. Davis's report shows clearly how it can be done, and at a very low cost.
2474. Supposing it is not found feasible to put the whole of these people there together, what is the next best thing to do? You must take them away from Parramatta, and if you do not put them at Rookwood you must build somewhere else for them, and I am not at present prepared to name any better site.
2475. *Mr. Fegan.* A witness named Taylor, from Liverpool, states that whilst he was in the council he sent you a petition on behalf of the inhabitants of Liverpool for the removal of the asylum;—did you ever receive that petition? No; it is not on my records at all. If I had received it it must have been on my records.
2476. Can you vouch for the inaccuracy of his statement? I did not receive the petition.
2477. Have you heard recently any complaints of the scenes which are alleged to take place in Liverpool and in the hotels, owing to the misconduct of the inmates in the asylum? I have never heard of any annoyance of that kind. Of course when people are discharged from the institution they are beyond my control.
2478. Is it not one of the latest recommendations of medical authorities that buildings used for hospital purposes should have hollow walls? Yes, for general hospital cases of course, but my asylums are not for such cases.
2479. Because these people are poor is it any reason why medical investigations should be ignored in the building of places to house them? Certainly not.
2480. Do you not think it is better to have hollow walls in connection with your hospitals? I will tell you why I do not think it is necessary. These are not ordinary hospital patients, except in Group 4.
2481. Would it not be necessary in regard to Group 4? Undoubtedly it would be better.
2482. Is the expense to be considered before the welfare of the unfortunate patients? I should be sorry to consider the expense if the comfort of the inmates was in question.
2483. You have seen places with verandahs to them which became damp from the soil? Yes; but if you run a damp course in, you stop that.

S. Marted,  
Esq.

5 Mar., 1896.

2484. The soil at Rookwood, however, would be worse than sandy soil for damp? Undoubtedly.
2485. What is the difference in expense between a hollow and a solid wall? I have about two or three different estimates. It has gone from £80 to £150.
2486. Are not the hollow walls much cooler than the solid walls? Of course you can keep a more even temperature.
2487. And is not that necessary with sick people? Yes; but the majority of these people are not sick, except in Group 4.
2488. Then you would recommend hollow walls for the Group 4 hospitals? I see no objection to them.
2489. You were asked yesterday whether you recommended to the present Government the necessity for making provision for the better housing of the people under your charge, and I believe you answered no? That is so.
2490. Does it not strike you that the submission of the plans to this Committee shows that the matter has been recommended to the present Government? What I wished to convey was that I had not made separate recommendations to this Government. The matter has been going on for the last four years, and the papers are always reproduced.
2491. Then this matter must have been brought prominently before the present Government? Undoubtedly; I know it was the most earnest desire of Mr. Brunner to give this better accommodation.
2492. You do not agree with the plans as they are placed before us? I do not agree with the sites of Group 4. The medical officers are responsible for those sites.
2493. In the majority of cases you have women as superintendents? I am changing that system. We have not got it in the majority of cases just now.
2494. You have it at Liverpool? No.
2495. The matron there is really the person who gives orders? No; Dr. Beattie is the Managing Medical Superintendent. Every paper is dealt with by him. Mrs. Burnside and her daughters simply attend to the domestic comfort of the inmates.
2496. For a long time she was the head? Not in my time, at any rate.
2497. You have a matron at the head of George-street Asylum? No; Dr. Waugh is the head, and under him there is an assistant male lay superintendent. The place used to be in charge of a matron.
2498. What about Macquarie-street? That is under Dr. Waugh, too. That was under a matron also.
2499. But Dr. Waugh cannot be present at both places; he only lives at one of them, I suppose? He lives close by both of them.
2500. Who is responsible in his absence? A woman.
2501. Do you find her administration in his absence all that can be desired? She is an exceptionally able woman. Nevertheless, I am changing the system.
2502. What are your reasons for changing? I do not believe any woman is capable of managing an institution of that character. I have never met the woman yet, at any rate.
2503. A man has more control? Men were in charge of these places originally, and when they died, their widows somehow or other got the positions.
2504. You have a woman at Rookwood? Yes; I may state that that is only a temporary arrangement.
2505. With reference to the nursing staff—are not women more competent nurses than men? Yes; I am introducing that system too. I have introduced it at Rookwood, and the reason for not doing it at the other buildings was that I had this scheme in view, and we would have had to erect buildings for the accommodation of the female nurses.
2506. Dr. Beattie has more than once pointed out that the nursing could be more efficient if it were done by female nurses? He has never pointed out that at all. He opposed that suggestion first when I made it, and afterwards he fell in with it.
2507. Has he not acknowledged by his evidence that women are more efficient nurses than men? Yes; of course we would have to have a fair proportion of both.
2508. Is there any truth in the statement that at Newington there are separate quarters allotted for what may be termed the pauper aristocracy? No; it is not a question of education. The sole qualification for inhabiting the separate quarters is good behaviour and nothing else.
2509. How many will that pavilion accommodate? Sixty.
2510. And you have 630 inmates at Newington? Yes.
2511. Do you mean to say that it assists the discipline of that institution by only having sixty beds in the pavilion for those who have been of good conduct? I have one pavilion used there for that purpose now.
2512. Do you mean to say there are only 60 or 100 well-behaved inmates there? No; but I hope the system will be very materially extended if it can be.
2513. Do you not think it is a dangerous system, inasmuch as it seems to cast a slur on the remaining portion of the inmates as ill-behaved? No; it is only carrying out the principle of classification which exists in all the English institutions, at any rate. I may say that in these institutions I have never met the educated poor who would not associate with the uneducated poor so long as they were decent men.
2514. With reference to the difference in the cost between a pavilion and a two-storied building, you have, I suppose, to erect staircases in the two-storied buildings, and to have a second floor? Yes.
2515. And double roof? There is the roof and foundation.
2516. You would not make the foundation as great in the pavilion as in a two-storied pavilion? It would not be necessary. Mr. Vernon has stated that the cost is slightly in favour of the pavilion system. I do not think there is any practical difference.
2517. You believe that the pavilions would be more easily managed than two-storied buildings? Yes. A man might easily govern four pavilions. He cannot always be running up and down stairs.
2518. Then you are of opinion that the pavilion style of buildings for the decrepit is the best? Yes.
2519. Have you not thought of any other site for the hospitals? No; I understood the matter had been placed in the hands of Dr. Ashburton Thompson, and I did not suggest any.
2520. Could you suggest any other site? There is a site a portion of which, I think, might be made suitable, and that is the Glenfield Farm, about  $1\frac{1}{2}$  miles beyond Liverpool. It is close to the railway line.
2521. What kind of patients have you there? The convalescent patients from Liverpool; and we have the dairy there.
2522. What progress do they make there? Very good. It is a particularly healthy site, a very healthy place, and a very pretty site.

- S. Maxted,  
Esq.  
5 Mar., 1896.
2523. And in the event of Group 4 not being added to this scheme, would you suggest a portion of the Glenfield Estate for them? It would be very suitable. It is a good undulating estate. The soil is good.
2524. Where would Glenfield drain to? I think it would drain into George's River, and, of course, that would not do. I did not think of that at the moment.
2525. Under those circumstances you could not arrange for the hospitals to be there? No.
2526. Some of your medical officers do not give you credit for asking their opinions on this matter? No; but I hope I have made the minds of the Committee clear from the independent evidence I have handed in. I may state that Dr. Waugh says that he was never on the site at all, and yet on the 12th December he was there with six of us. I do not believe he made that statement deliberately.
2527. I suppose a great deal of your tailoring and shoemaking is done in these institutions? Yes.
2528. Who is the contractor for clothing? It is provided in different ways. Most of the boots are now made by our own men on the spot. We get shoemaker inmates, and pay them so much a pair.
2529. I suppose that of the 3,000 people you have to deal with there are very few who are not bound by your regulations? Very few.
2530. How many court cases have you had from your institutions? I suppose that during the eight years I have had charge of them, not more than a dozen altogether.
2531. *Mr. Hassall.*] The hospital and general pavilions are estimated to cost £1,400 each; the casual pavilions are estimated to cost £800; is there an absolute necessity for such a difference in cost? Yes. I should have liked to have seen the casual hospitals made better. I think £1,200 a pavilion would be a fair average cost. Of course I do not take into consideration the ophthalmic, cancerous, and consumptive patients.
2532. Are you aware that in that estimate it is proposed to spend £14,000 in kitchens and laundries? I think they can be done for less.
2533. It is proposed to erect Medical Superintendent's quarters at a cost of £2,000; do you not think that is an elaborate proposal? It is too much.
2534. And it will increase, in a marked degree, the cost per head of the patients treated? That has never been taken into consideration; but it ought to be.
2535. The proposed cost of these buildings is £108,000? Yes.
2536. The cost of the land itself is £15,000? I have not the slightest idea what the land cost; but it is worth that at any rate.
2537. Then there is £8,000 or £9,000 to be added for the sewerage scheme? And of course you have to take into consideration the cost of the buildings already there. Buildings worth £25,000 have been there to my knowledge for thirteen years.
2538. I presume the buildings and land up there would bring it up to £150,000? With the £70,000 and the buildings already there, it would come to £100,000. Then you have to add the value of the land.
2539. Can you give any explanation of the remarkable increase in the number of patients during the last ten years? No.
2540. In 1886 there was a total of 1,768, and in 1896 there were 3,540? I have not worked out whether it is largely out of proportion to the increase of population. A very large increase has been in the chronic hospital cases.
2541. You say you have tried the boarding out system? I asked the inspectors of the State Children's Department to see if they could get farmers to take these old fellows at so much a week, but they would have nothing to do with them. Whether in the poorer circumstances of some of them they would take them now, I do not know.
2542. If that system could be initiated, would it not be a great relief, and a much cheaper way of dealing with these old men? It would not be cheaper. We keep them now for 10d. a day.
2543. *Chairman.*] Does that include the cost of the buildings? No—management, salaries, clothing and so on.
2544. *Mr. Hassall.*] Is the £3,000 you pay away to these old men included in the cost of management? Yes under the head of salaries and wages.
2545. You are of opinion the amount should be reduced to £1,000? Yes, and in process of time I hope to abolish it altogether.
2546. What necessity is there for giving these men wages at all? We have to put them to work. Otherwise we should have to employ large numbers of people outside.
2547. Do you not think, in view of the protection which these asylums afford them, they should give some little return if they are able to do it, leaving of course, the monetary consideration out of the question? Undoubtedly.
2548. It has been stated that by reason of the payment of this money to them, they get out into the town, get intoxicated, and become a public nuisance? They do undoubtedly go on the spree occasionally when they leave.
2549. If you remove the cause, you would do away with the effect? Undoubtedly.
2550. I notice that in 1893, the sum of £66 0s. 6d. was collected from the relatives of inmates, and in 1894 £121 13s. 8d. Is it not a well-known fact that the relatives of many of the inmates are in a position to maintain those inmates if they were compelled? I am sure of it.
2551. And your opinion is that the only remedy for that is legislation? Yes.
2552. I see that as far back as 1887, Dr. MacLaurin furnished a report on the Randwick building, and suggested the advisability of removing the children from that institution and using it as a chronic hospital? Yes.
2553. There is no doubt there would be strong objections to that being turned into a chronic hospital? Yes.
2554. And you think a more suitable place could be found? Yes.
2555. Would not that be a good place to send some of the aged men to who were not suffering from disease, but who were merely in a state of senile decay? The buildings are suitable enough for the healthy old men who are able to get up and down stairs.
2556. The land at Randwick is very valuable? Yes; and they must have over 100 acres of it.
2557. Do you think the sale of the Randwick site would give the Government a large sum of money? Yes.

2558. Which would go a considerable way towards the cost of erecting a building elsewhere? Yes. I think I could board the children at Randwick out in three days. Certainly a large number of them would go to their own parents. The Randwick Asylum has a reserve fund of £50,000, which was contributed for the purpose of keeping a certain class of children, but there are not many of that class of children in the institution now.

S. Marted,  
Esq.  
5 Mar., 1896.

2559. I gather that you are not absolutely desirous of seeing these institutions established at Rookwood in preference to upon any more suitable site? Not if there is a more suitable site. You have now the nucleus of the scheme there. You have a large number of buildings there now, and if you go elsewhere you will have to remove those buildings. You cannot use them for any other purpose.

2560. You suggest the removal of the Liverpool Asylum altogether? Yes; that falls into the centralisation policy.

2561. Also the Parramatta Asylums? Yes.

2562. Their removal is more urgent? Yes.

2563. You think that by the concentration of these establishments, economy in administration will be effected? Yes.

2564. And that £70,000 for the purpose of providing accommodation is amply sufficient for all requirements? Yes.

2565. *Mr. Black.*] Do you think, in view of the character of the buildings at Liverpool, their original cost to the country, and their present state of repair, it would be advisable to close those buildings as an asylum? I do, if you save money by it. I understand it is proposed in any case to remove the sick from there. I do not give that as my prime reason.

2566. Do you think any sum, which you imagine may be saved by the concentration of the indigent poor at any site, no matter where, would be likely to repay to the Government the cost of buildings to be substituted for those at Liverpool within any reasonable period? The statement I have put in shows clearly that you can pay the interest on the loan, and save £1,400 a year besides.

2567. Do you think if the buildings at Liverpool were closed the site could be readily sold? I do not see what you could sell it for.

2568. Do you attach no importance to the statement of Dr. Renwick with regard to concentration—that when you mass large bodies of poor people together the unit, just as in the case of the individual in gaol, or the man in the army, is lost sight of, and the individual becomes a mere number, who is not much regarded, except that he goes to make up the sum of the whole? I think Dr. Renwick must have been under the impression that we were going to concentrate them on the same principle as they are concentrated now at George-street, and not to place them in separate institutions on a big estate.

2569. With regard to the matter of drainage, it appears to me you have somewhat misunderstood Mr. Davis's remarks with regard to a saving which might be brought about by altering the proposed site of the buildings. I asked Mr. Davis if the buildings were moved from the site which was near Potts' Hill to a site so much nearer Haslam's Creek, it would reduce the cost of the drainage by one-third, and he said, "Scarcely, because the disposal of the works would not be reduced in the same proportion." It appears to me that Mr. Davis thought the cost would be reduced, firstly, because under the present system there would be a sewer of two arms, which would meet at what was called the disposal works, where the sewage would be treated, and that if the buildings were all massed to the northern side of the existing buildings only one arm of the sewer would be necessary. But in your report I see you say you are surprised, notwithstanding your representations that the whole of the buildings have been placed on an area of 64 acres, whilst the estate over which it was proposed they should be scattered comprised nearly 600 acres. If you proposed to scatter those buildings so widely, the saving, which Mr. Davis appears to think would arise from the fact of centering the buildings to the north of the present site, would be a very problematical one. He also made the statement that the sewer work at Rookwood would be expensive, because of the buildings being so much scattered. That expense would still be maintained, because you evidently believe that sanitation and other reasons demand that if the paupers are concentrated at Rookwood, the site of the buildings in which they are housed should be scattered? I will take his first full cost, and it only then means an additional £120 a year interest to the figures I have presented to you to-day. That only means £70 or £80 more a year than we are already paying the Parramatta Council for taking the stuff away from the two institutions.

2570. Is it a fact that at one time it was the custom to pay the inmates able to perform daily labour in connection with the institution amounts of 3d. and 4d. a day in return for their work? Yes.

2571. Is it a fact that that system has been almost discontinued at Liverpool? It is very largely modified. I have stopped a great deal of it.

2572. I have a letter here from the *Australian Workman*, which I believe is written by an inmate of the Liverpool Asylum, in which he states that one-third of the amount formerly distributed among the healthy poor at Liverpool is now saved, because of the reduction of the gratuity, and that in place of money, they get tobacco and so on. Is that true? Yes.

2573. The writer goes on to say that the objection of the aldermen now arises from the fact that men, who had at one time the sum of 3d. and 4d. a day to spend after their own fashion, have not now that money to spend, and consequently the tradesmen in the town do not derive that profit from the institution which they previously did? I could not tell whether that is so or not.

2574. You do not think that is one of the reasons for the aldermanic activity with regard to the removal of the asylum? I should be very sorry to think so.

2575. If it were proposed to house all the healthy together, and all the sick together, you would then require to hire nurses, cooks, and attendants to wait on and cook for the sick poor who are housed in isolated positions? Yes; I handed in a summary of the scheme to the Chairman with the figures attached to it.

2576. I suppose that additional expense could be got over by detaching a number of the healthy poor from their companions in misfortune, and allotting them to the work of attending on the sick? That is done now. That is part of the scheme. For instance, we would not want trained nurses in Group 2.

2577. So that if it were proposed by this Committee to house a number of the healthy poor at Rookwood, and a number of the healthy poor at Liverpool, and all the sick people on some other site, you would still consider it advisable to detach from the healthy poor a sufficient number to perform some of the menial offices required by the sick? Yes.

2578.

S. Maxted, 2578. Have you read the evidence of Dr. Violette? I read it at an early stage.

Esq. 2579. Look at page 48, Question 1303—

Mar., 1896. If you have three asylums with 1,000 inmates in each, if you do away with them and group them into one asylum, do you not think that the man who has to manage and superintend any one of those asylums would be competent to manage the amalgamated institution? He would want more assistants.

But in saving the salaries of two superintendents, would there not be a great deal of money saved? More assistants would be required. You would save a few pounds; but nothing considerable.

? That is incorrect.

2580. You think there would be a greater saving? There would be a saving of £4,200 in salaries alone.

2581. In thus concentrating all the patients, you would not be able to save more than one medical officer? Yes, one.

2582. And one dispenser? Yes; you would. You could get an assistant medical officer, who would be able to do the dispensing with assistance.

2583. You think, then, that one chief medical officer, and one assistant medical officer, who would also dispense the drugs, would be sufficient for the whole concentrated pauper sick? I have no doubt whatever about it.

2584. You would also save the wages of two superintendents? Yes.

2585. That would involve the engagement of deputy or under-superintendents? Yes. I provided for a lay superintendent, for a chief medical officer, and an assistant medical officer.

2586. Would not your proposal to substitute in many instances paid women nurses for male nurses, who are now chiefly healthy inmates, somewhat increase the cost of your proposed scheme? We have a good many male trained nurses at present.

2587. I understood you to say you proposed, in many instances, to substitute women for them? Yes; and it would rather lessen the cost.

2588. Are these male nurses paid the ordinary wage of hospital nurses? Yes; some of them are paid very good salaries—as high as £35 a year with board and lodging, or a rent allowance of £12 and a ration.

2589. Are you not of opinion that the clayey soil of Rookwood, its tendency to hold damp, its exposure to extreme cold and extreme heat, render it an unsuitable site for consumptive cases? For consumptive cases. I do not want the consumptive cases there at all. I have said that all along. I want to get rid of them. I have said, too, that I should be very glad if the cancer cases could go to the Coast Hospital. The only objection to that is the cost.

2590. Otherwise you approve of the concentration scheme? Yes; I am strongly in favour of it for the reasons I have given, and I have seen no reasons yet given against it.

2591. You have no site you would specially recommend for the consumptives? No; I have not had occasion to think that question out.

2592. You are aware that the Glenfield Farm is a leasehold? Yes. Of course you could resume any quantity of it you wanted.

2593. And that the lease expires in June? Yes.

FRIDAY, 6 MARCH, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JOHN DAYLES, C.M.G.

The Hon. JAMES HOSKINS.

The Hon. WILLIAM JOSEPH TRICKETT.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rookwood for Infirm and Destitute Persons.

Edward Bellingham Price, Esq., M.I.C.E., Assistant Engineer, Department of Public Works, sworn, and examined:—

E. B. Price, 2594. Chairman.] You visited the site near Campbelltown? Yes; on three occasions.

Esq., 2595. Mr. Lee.] On one occasion you were present on the visit of the Public Works Committee? Yes; M.I.C.E. on the second occasion I was there with them.

6 Mar., 1896. 2596. You are thoroughly conversant with the contemplated position of the buildings? Yes.

2597. And the nature of the soil? Yes; it is light sandy soil.

2598. And you have devoted special attention to the question of a water supply combined with electric lighting? Yes; I find there is a very good supply to be obtained from the George's River. I examined the river on three different occasions—the last time accompanied by Mr. Scrivener, the District Surveyor.

We found that the river consists of a chain of water-holes with rapids and falls between. One of the water-holes is a very large one—about 1 mile long with no fall. At the lower end we found a very good site for a dam. The river there is confined between two large sandstone rocks, about 25 feet high, and the water is only 40 feet wide at this spot. It is an admirable site for using an arched dam. By using an arched dam, you reduce the quantity of concrete by more than one half, and the dam is really stronger. The advantage of that site is, not only that the dam will be very cheap, but that it will impound a great quantity of water. I estimate that a dam which will raise the surface of the water 25 feet will back it 2 miles. I took out the quantities, and found that a dam could be constructed of concrete for a little over £1,000. The pond which that would make would hold about 180,000,000 gallons—more if anything. That would provide 1,000,000 gallons a day for 180 days, supposing the river ceased to flow. The river has never been known to cease to flow yet, so that it would be a sufficient amount to allow for storage. It would be sufficient to pump 100,000 gallons a day up to the asylum, providing the power and water at the same time. The height to which the water would have to be raised may be taken at about 280 feet—that is from the mean surface of the water in the river to the top water-level in the service reservoir. These are only aneroid levels, but they have been carefully checked.

2599.

2599. What will be the height of the reservoir? The height above sea-level is about 465 feet, and the height of the proposed site for the asylums is 390 feet. That would give a pressure of 75 feet from the surface of the water in the reservoir to the surface of the ground at the asylums, which would be sufficient to command a three-storey house.

2600. Would be more than sufficient to command a roof of a two-storey building? Yes; I do not think a two-storey house would be over 50 feet high to the top of the roof. We should have 25 feet to spare. It will only be a short pipe, and there will be ample pressure. I have prepared an estimate of the cost of the scheme as follows:—

E. B. Price,  
Esq.,  
M.I.C.E.

6 Mar., 1896.

PUBLIC WORKS DEPARTMENT.

Abstract of Estimate for Water Supply for Asylums proposed to be built near Campbelltown, including power for Electric Light.

Description of Work.	Quantities.	Rates.	Amount.	Total.
		Per c. yard.		
		£ s. d.	£ s. d.	£ s. d.
Dam, concrete arch, 100 feet radius, 30 feet high, 4 feet wide on top, 8 feet at base.	600 yds.	1 5 0	750 0 0	
Rock excavation .....	.....	.....	100 0 0	
Temporary dams, &c. ....	.....	.....	150 0 0	
Valves, &c. ....	.....	.....	50 0 0

Total cost of water and power supply .....	.....	.....	.....	£ 5,170 0 0
Add, for dynamos, wire, accumulators, and fittings, complete..	.....	.....	.....	1,000 0 0
Estimated total cost for water-power and electric lighting and electric-power for sawing firewood, chaff-cutting, churning, &c.	.....	.....	.....	£ 6,170 0 0

4th March, 1896.

EDWD. B. PRICE,  
Assistant Engineer for Public Works.

2601. Do you think you have made ample provision to cover the whole cost of this work;—you propose to do a good deal—to get water, provide electric lighting, and surplus power? I have only allowed, in estimating for the electric light, for a population of about 1,000.

2602. That would be for two or three buildings. If you put the whole 4,000 people there at some future time you would have to add to that item? But I have provided in the water-power sufficient power for turbines, and I have allowed pipes large enough to supply power for over the 4,000. It would provide over 100,000 gallons per day for water supply and irrigation—that is sufficient for a population of over 3,000 or 4,000.

2603. Supposing, in the course of years, it were decided to increase the number of the people there, by about what amount would you supplement that estimate? I would provide another turbine, at a cost of about £200. That is all that is required. Also a small pump.

2604. And what about lighting? In connection with the electric light you would have to provide another dynamo and more wires and fittings for the extra buildings, which would probably come to another £1,000. With another £1,000 added to that, I think you could double the water supply and electricity. I have provided for a 15-inch pipe, but 12-inch is quite sufficient for present purposes. I have also made the dam 25 feet high, whereas 15 feet would be high enough at present. If it were to be a building to contain only 1,000 persons, I might provide for a 12-inch instead of a 15-inch pipe, and for a 4-inch instead of a 6-inch rising main.

2605. The increase is with a view to future extension? Certainly; to a population of 4,000 or 5,000.

2606. There is nothing to prevent an additional dam being built on the river, or this dam being added to? You can add to the height of arched dams without increasing the width of the base.

2607. What would be the cost of working that power? The principal cost would be the payment of an engineer to work the electric lighting plant. If it were only pumping water ordinary labour would do, but you would have to provide a man who understood electric appliances. If you provided him with a house free you would get him for £150 a year.

2608. And he could do all that was required without superintendence? Yes; because during the day he could leave the turbines working. They would require no attention, and he could attend to the overhauling of the electric fittings, and so on. He could pump all the water required in ten hours, and generate all the electricity in four hours or less.

2609. Can you tell the Committee anything as to the disposal of the sewage and effluent matter? The simplest way to dispose of it is to use that deep sandy area of 45 acres as a sewage farm. It is wonderfully well adapted for the purpose—in fact, the same seems almost of unlimited depth. In any way, if it is 4 feet thick it is quite sufficient; and it is well suited, because there are creeks at both sides at which the effluent would finally drain out.

2610. The effluent, after it made its appearance, would do so after it percolated through? Yes; it would have to percolate a great distance.

2611. Consequently it would be almost pure? It would be absolutely pure.

2612. To which of the creeks would it find its way? To Smith's Creek or to Peter Meadow's Creek.

- E. B. Price,  
Esq.,  
M.I.C.E.  
6 Mar., 1896.
2613. Do they empty into George's River above the dam? Peter Meadow's Creek empties about 4 miles below the dam, and Smith's Creek a great many miles below.
2614. In time of flood the effluent might become surcharged, but it would certainly purify itself before reaching the river? Falling over waterfalls and travelling through sandy beds would purify it.
2615. Would there be any danger of that percolation contaminating George's River? Not the slightest. I do not think any chemist could detect it where the creeks met the river.
2616. On what basis do you estimate the capability of the sewage farm? In England, where these farms are used pretty generally, they allow a population as great as 1,000 persons to every acre. This is particularly suitable soil—it is much better than the average, and it would be quite safe to allow more. That 45 acres when properly cleared of timber, and with vegetables growing on it would completely purify the sewage of 50,000 inhabitants.
2617. Would the assistance of water from the surface reservoir, of which in your opinion there will be an ample supply for the purposes of irrigation? Yes. At first they could not supply enough sewage to irrigate all that land. The water supply from the river would not only make up the deficiency in the shape of water for irrigating that portion, but it would also supply water for irrigating other parts of the land suitable for fruit-growing and vegetables.
2618. The soil you say is particularly suitable, and being situated at a great distance from Campbelltown, it is not probable that any surface nuisance is likely to arise? It is utterly impossible. It would soak away so fast that it would never be seen again.
2619. Now as to the disposal of the solid matters? They would be entirely taken up by the vegetation.
2620. Is there enough land in the vicinity to admit of this stuff being disposed of, and the ground utilised? Yes, ample. All the land there is particularly suited to manure, it is light and porous and would be greedy of manure.
2621. Most of that large area is covered with eucalyptus? Yes.
2622. Would you suggest the destruction of that? No; a large area should be cleared. For instance, the irrigation area should be cleared to let the sun in, but the other area should be cut into belts. If a good belt of timber were left between the asylum and the irrigation farm, it would be a great prevention of any possibility of smells, and it would be a good shelter as well. I also think a belt of timber should be left between the George's River and the asylum.
2623. You suggest a judicious clearing? Yes; leaving it in belts.
2624. Do you know anything of the purity of the water in the George's River? I never had it analysed, but I do not see how it can be anything but pure. There is practically no settlement on the river.
2625. Of course you have to look a good many years ahead? I believe you could run sewage 10 miles above George's River, and you would get no trace of it lower down.
2626. *Chairman.*] In point of fact, the catchment area of the river is likely to be for all time very sparsely settled? Yes. Any good land that is about the river is on the other water-shed as it were. It does not drain into the river, but away from it.
2627. *Mr. Lee.*] You know the site which the Committee thought would be suitable for the buildings? Yes.
2628. What is your opinion as to the natural drainage of the storm waters on that site? It would be absolutely perfect. The site lies between two creeks running parallel—a branch at Smith Creek and Peter Meadow's Creek. They run parallel, and the proposed site is a rocky rise between the two. There is a 70-foot fall into the creeks on each side.
2629. Which would admit of natural drainage? Yes.
2630. So that in case of extremely wet weather that part of the country is not likely to become sodden? No; the ground is porous or very steep. The surface is so sandy that twenty hours after heavy rain it would be quite dry.
2631. Do you consider the position which is easy of access from Campbelltown? Yes; there are fair roads leading to it, and they could be improved by cutting off the tops of two hills.
2632. Then there would be no difficulty in obtaining supplies and removing patients to and from the asylum? None whatever.
2633. There is another point as to the situation of a cemetery there? I did look for a site for a cemetery, but there are plenty of sites about there which would be quite suitable—of sandy soil, and well drained.
2634. And which would drain into Peter Meadow's Creek? Yes.
2635. *Mr. Wright.*] What fall have you for your pipe-head? I have taken the 50 feet as the mean fall. I could have 60 feet when the river is in flood, and rather less in time of drought. I can depend on 50 feet.
2636. With a 15-inch pipe? Yes.
2637. The same fall with a 12-inch pipe would not work a Pelton wheel? A Pelton wheel is not supposed to be economical under 100 feet.

Sydney Maxted, Esq., Director of Government Asylums, recalled, sworn, and further examined:—

- S. Maxted,  
Esq.  
6 Mar., 1896.
2638. *Chairman.*] How do you account for the difference in the number of paupers in Victoria and New South Wales,—is there anything in the two systems which would account for it? We deal very largely in hospital cases here, and they do not there. For instance, they do not have cancer patients in the Government asylums, nor the consumptive or ophthalmic patients. That would make one difference.
2639. Would it account for the whole difference? No.
2640. Therefore, you have no definite statement to make with regard to that? No.
2641. The Victorian system deals with the aged poor separate from the sick poor? Principally separate from the sick poor.
2642. What is the Victorian system? Partly Government and partly voluntary. They are subsidised.
2643. And different asylums in different parts of the country? Yes; they have an asylum at Ballarat, and two in Melbourne—the Benevolent and the institution known as the Immigrants' Home.
2644. You approve of the whole of the paupers of the colony being concentrated on one site and not kept in various parts of the colony? Yes.
2645. With regard to Queensland, have you any explanation to make with reference to the apparent difference in numbers of paupers in proportion to the population? I know they do not deal as largely there

there with hospital cases, but that will not account for the whole difference. The cancer patients in Victoria cost £73 per head.

2646. How many out of the 1,000 in Group 1 may be regarded as permanent hospital cases? Quite one-third.

2647. You have seen the statement made in the first instance by Mr. Vernon with regard to the people to be accommodated in Groups 1, 2, 3, 4, and 5? Yes.

2648. That totals up to 3,300? Yes.

2649. Taking the same proportions, and regarding the number as 2,900, we get a fair approximate of the number? You would get then from 1,400 to 1,500 hospital patients.

2650. You told us that one medical man will be enough to look after 3,000 of the aged poor? Two medical men.

2651. You said one and a dispenser? A medical man and an assistant at £300 a year to act as dispenser as well.

2652. *Mr. Humphery.*] In reply to Mr. Trickett you spoke about a local rate to cover the cost of the maintenance of paupers;—how would you carry that suggestion out? The plan would be to have that matter dealt with under the Local Government Bill.

2653. I thought, as you had referred to a local rate, you had given the matter some consideration, and had devised some scheme by which it could be carried out? I have the schemes here of other places.

2654. Tell me how you purpose to apply it? I will read what I state in my report for 1890:—

Local rates to be chargeable for maintenance (wholly or in part) of all dependent persons transferred from their respective districts to Government asylums.

That is intended to apply only to special applications? Yes, to the subsidised districts which would improperly get rid of their poor. I do not mean a general poor rate.

2655. I called your attention yesterday to the fact that the group for casuals would be about half a mile from the nearest administration group of buildings, assuming your present suggestion be carried out? Yes.

2656. Will not that entail a separate service? It would entail having a separate kitchen, and somebody, of course, to look after it. That is provided for in the figures. That would not want much looking after.

2657. That would not increase the estimate of the cost of management at Rookwood? No; I have been considering the figures since, and I am perfectly sure I left a very considerable margin.

2658. The suggestion for the removal of the consumptive, cancer, and ophthalmic patients is not part of the scheme placed before the Committee? No; they are included.

2659. That is a new suggestion? Yes.

2660. Wherever they are placed, will it not be necessary to have medical attendance? Yes.

2661. Therefore the expenses incidental to providing for these particular patients would be additional to the estimate of £5,620? Of course it would bring about a reduction in this way: If you took them away you would only want one medical officer for the remainder of these people.

2662. Without an assistant? Yes; the greater part of his time would be taken up in attending to the isolation groups.

2663. After the removal of these particular patients, you would then have from 1,000 to 1,500 hospital patients? One thousand.

2664. Would not their presence at Rookwood necessitate a resident medical officer? It would.

2665. Would that resident medical officer be able to attend to the whole of the 3,000 patients without any assistants? He would not have 3,000 patients.

2666. But they would be under his care, although the majority of them would probably be healthy. The whole of them would receive his care if it were required? Of course, if they fell sick, they would receive his care.

2667. So that practically he would have charge of something like 3,000 patients, of whom from one-third to one-half would be inmates of the hospital wards? Not 3,000; he would have 2,500. There would be 500 casuals; 1,000 in Group 2; and 1,000 in round numbers, in Group 1.

2668. But you are making provision for about 3,300 patients, and must always keep that in view? Of course, if the institution expanded, you would want more medical assistance.

2669. Therefore, as a matter of fact, after the removal of the consumptive, cancer, and ophthalmic patients, you would really require a resident medical officer and an assistant to deal with 3,000, of whom 1,500 would be permanent hospital patients? I might answer that by saying "Yes," because if we did not have an assistant, we would require a dispenser at £150 a year. Of course, if you took away the three isolation wards, you would have to provide a distinct service.

2670. Now with regard to the comparative cost of the different asylums. What is the cost per head at Newington? £12 17s.; George-street, £13 16s. 3d.; Macquarie-street, £14 17s. 2d.; Liverpool, £15 19s. 4d. They are fairly close in each case, except in regard to the women, who are less. Rookwood is high—£22—for the reason I explained the other day. It will be lower this year.

2671. At Newington you have mixed inmates—inmates of all classes; healthy women, consumptives, and women suffering from cancer and rheumatism? Yes.

2672. Therefore, the £12 17s. may be taken as a fair estimate of the cost of economically managing an institution of from 600 to 700 patients? Yes.

2673. Do you consider that a high or a low cost? I think it is an exceedingly low one, considering you have all the other hospital cases there.

2674. Do you expect to do better than that at Rookwood? If this scheme is carried out in its entirety I expect to do it at about that.

2675. Including all expenses, do you expect to maintain the inmates at Rookwood at less than £12 17s. 6d. per head? At £12 per head, I should say.

2676. At Parramatta you have two doctors? One—Dr. Waugh.

2677. Have you not Dr. Brown as an assistant? No; Dr. Brown is the visiting medical officer to the Newington Asylum.

2678. Do you propose to dispense with Dr. Waugh, supposing the institution is removed? One of them will have to be dispensed with, of course.

2679. He is at present the manager of 1,500 patients, besides being medical officer? Yes.

2680. And you propose in his place to appoint a lay superintendent at Rookwood, at a cost of £400? Yes.

2681. Where will the saving be effected in regard to that particular item? We have an assistant superintendent who helps Dr. Waugh now pretty much at the same salary. 2682.

S. Maxted,  
Esq.  
6 Mar., 1896.

- S. Maxted,  
Esq.  
6 Mar., 1896.
2682. Would you dispense with him? No; probably he would be transferred. There would only be one superintendent at Rookwood.
2683. What will you do with the matrons at Parramatta? There is one who will be transferred. I have provided for two. There is one already there and another would be transferred.
2684. Will not the effect of the proposed change be this: that you will have to place one of the present matrons on the retired staff, or transfer her at a reduced salary to Rookwood? That will be the effect of it.
2685. It appears to me, if you are going to retire all the officers at Parramatta, and appoint new ones at Rookwood, that the result will not be a saving? But you retire a number of officers, and simply reduce your staff. It is simply a question of reducing the staff. I propose to reduce the staff to one which costs £5,625.
2686. At Parramatta, Liverpool, and the other asylums, you have provided for £2,800 in wages and allowances to inmates? Yes.
2687. And in your estimate of £5,600, you have reduced that to £1,000? Yes.
2688. What is to prevent you, without moving to Rookwood at all, saving the difference between £2,800 and £1,000? Because you must have a certain number of working inmates at each of these institutions, and the number can be reduced if I had them concentrated.
2689. In what way can you reduce the number? If the institutions are concentrated, there will not be so much work to do.
2690. Will you explain how that is practicable? I cannot give you any other answer than that, which seems to me very clear.
2691. What necessity is there to pay £2,800 now if you think that, by going to Rookwood, it will only be necessary to pay £1,000? Because where you have separate scattered institutions, you must have separate working staffs.
2692. You propose to reduce the gratuities from £2,800 to £1,000? Yes.
2693. Is it not just as practicable, at the present moment, to reduce those gratuities to inmates from £2,800 to £1,000, as to effect a reduction by simply removing from Parramatta and Liverpool to Rookwood? No, it is not; because you have separate institutions, and you must have separate working staffs.
2694. Why would you not require the same number of assistants amongst the inmates if you removed to Rookwood? Because you would not have the same ground to go over.
2695. Are you not aware that, according to the scheme you are proposing, to have fifty or sixty pavilions scattered over 60 or 70 acres of ground? Yes.
2696. And do you not propose to have a group of buildings half a mile from No. 1 Group on the plan? Yes.
2697. And yet you say the necessary attendance required for the inmates will be less than that which is required at the present time? It will be very largely reduced.
2698. I suppose Newington is a well-conducted institution? As well as anywhere.
2699. And there are between 600 and 700 inmates there? Yes.
2700. And the most you hope to effect, by concentrating 3,000 people at Rookwood, is a reduction from £12 17s. to £12? That is not it—not from £12 17s. to £12, because the men cost more; but from an average of £15 to an average of £12. At Liverpool the cost is £15 19s. 4d.; at George-street it is £18 16s. 3d.; and at Macquarie-street, £14 7s. 2d. If you strike an average you will get pretty close to £15.
2701. You say it is more costly to maintain males than females? Yes.
2702. How does the additional cost arise? Probably the rations cost more in proportion.
2703. In Newington, as opposed to George-street, you have every description of inmate? Yes.
2704. And the medical comforts of the patients there ought to cost more? The medical officer's salary is a good deal less, and the cost of inmates is always less.
2705. If you were to remove the inmates from Liverpool to Rookwood, would you be able to dispense with the medical officer there? Unless you transferred, he or Dr. Waugh would have to go to the place, that is quite clear.
2706. How would you provide for the consumptive, cancer, and ophthalmic patients;—would not a medical officer be necessary if you removed that particular class of patients from Rookwood? Of course if you break up the scheme you would want a new service altogether.
2707. But do you not suggest breaking up the scheme in that particular? Yes.
2708. Would you not want a medical officer then, and a separate staff? Yes.
2709. Assuming that the estimate of £1,800 to be saved in gratuities is a doubtful one, and that you would have to provide additional service and kitchens for the casual group, which you propose to place half a mile from the existing group at Rookwood, and that you would have to provide also for the pensions of the officers, who would not be required, and for new attendants at reduced salaries, would not your proposed saving of £4,225 be very greatly diminished? The pensions come from another fund altogether, not from the Consolidated Revenue, but from a fund in which these people have a right. I may say that I do not propose to provide a separate service for the casuals. None is necessary beyond what they have now.
2710. But you will have to place them half a mile away? But they have their own kitchen attached to the place now.
2711. Could not the proposed saving of £250 to the ophthalmic surgeon be as easily effected at the present time without moving the patients to Rookwood? That saving could be effected by another Department.
2712. Why could not the ophthalmic surgeon be dispensed with now as later on? I think he could.
2713. Assuming the £1,800 to be equally doubtful, that would bring your saving to £2,000? I do not assume it to be doubtful. I am very emphatic about that.
2714. Is it not a fact that you now pay £2,800 in gratuities? Yes.
2715. And you propose to reduce it to £1,000 by going to Rookwood? Yes.
2716. Could you not reduce it at present without going to Rookwood? I do not think you could. You have to pay for separate services at each place.
2717. Assuming you could reduce it, would it not bring the total saving to be effected by removing the patients to Rookwood to about £2,200? Is it fair to ask me to say "yes" upon an assumption which I consider to be wrong? My answer is that I do not think that saving could be effected now, unless I struck off all the gratuities.
2718. That £1,800 forms portion of the £3,700 total you expect to save by going to Rookwood? Yes.

S. Marted,  
Esq.  
6 Mar., 1896.

2719. In any case you would want a resident medical officer at Rookwood? Yes.
2720. To look after the consumptives? Yes, and others.
2721. Where is your medical officer in this scheme for attending to the consumptive patients? I can only answer that by saying that the scheme provides for the consumptive patients being dealt with at Rookwood; and that two medical officers are provided for.
2722. But according to your suggestion you are going to get rid of them, and are going to put them under separate management? Then you would want a new staff.
2723. It seems to me, then, that taking the view I have endeavoured to present to you with regard to the gratuities, and the necessity for an additional medical officer to look after the consumptives, the total saving upon your own estimate, without regard to the number of matrons you would have to retire in order to make place for those who are to be paid on a reduced scale, would not reach £2,000? Not if you break up the scheme.
2724. If you bring it down to less than £2,000, and propose to place there nearly 3,000 paupers, how can you save £3 a head, which would amount to £9,000? You cannot do it if you break up the scheme.
2725. Therefore it is impracticable? It is, if you break up the scheme.
2726. Seeing that with less than 1,000 inmates, Newington is as perfectly managed as any institution in the country can be, why should not Liverpool be placed upon a precisely similar footing if you remove from Liverpool all the sick and hospital patients? There is no reason why Liverpool should not be well managed if you retain it for healthy patients, but I have told you that if you do you will keep a lot of healthy men in an unnecessary institution needlessly idle.
2727. I am speaking now of retaining Liverpool with the maximum number of inmates you can place there, without concentrating the whole of the patients at Liverpool. I want you to think of healthy paupers. Can that be done? It can be done, undoubtedly.
2728. Assuming you have healthy paupers at Liverpool, would you require a medical officer at all? You would only require a visiting medical officer. You would require a lay superintendent to manage the place, and a visiting officer to go over it every day.
2729. That would considerably reduce the cost of management? Yes.
2730. You say it is far better, instead of having a matron in charge, to have a male superintendent? Yes.
2731. Would there be any difficulty in effecting that change without removing the whole of them to Rookwood? That change is already suggested.
2732. Therefore, a portion of the economy you propose to effect by removing to Rookwood you have already suggested with regard to Liverpool? Yes.
2733. Assuming that at Rookwood, instead of having, as you propose to have, 1,500 permanent inmates of the hospital wards, you have only the healthy paupers, would you need a resident medical officer? No; not if you have only healthy patients.
2734. Then we come to this—that by effecting a change at Liverpool, having healthy paupers only, and having similarly healthy paupers at Rookwood, you require medical officers only to deal with the hospital patients? Yes.
2735. And the consumptives? You have not suggested where you are going to put that 1,000 in Group 1—the group which contains the epileptics, and people suffering from heart disease, &c.
2736. Assuming that you have at Rookwood similarly healthy patients to those you might have at Liverpool, you would not require a resident medical officer? No.
2737. Therefore, if we put together the whole of what may be regarded as hospital patients that group alone would need a resident medical officer? It would.
2738. By dividing the whole of the pauper inmates in that way, do you not think that a great saving could be effected upon the proposed scheme,—that is, to provide specially for the permanent hospital inmates and the consumptives, leaving Liverpool and housing 1,000 inmates? I take it under the proposal you have just made that you would first have Liverpool with healthy inmates, a separate management staff, and a visiting medical officer. If you propose to keep the healthy inmates only at Rookwood—say, 1,000 of them—you will require a separate management staff and a visiting medical officer at (say) £300 a year. Then you will have Group 1, which contains 1,000, who may be classed as sick people, to be separately dealt with in addition to the cancer, ophthalmic, and consumptive people.
2739. Roughly speaking, there would be 1,800 healthy paupers and 1,200 sick? From 1,600 to 1,800 paupers, and from 1,200 to 1,400 sick.
2740. Would it be advisable to deal with the 1,200 sick persons apart entirely from the healthy paupers? Of course it would, and that is part of my scheme. That would include the cancer, ophthalmic, and consumptive patients, and the 1,000 in the other group.
2741. Would it be advantageous to concentrate the whole of the sick in one locality on a large area of ground? That would mean a tremendously expensive scheme. It would be more expensive than the present separate institutions. Of course it would be possible. I think the Group 1 people would have to be apart from the Group 4 people.
2742. But would it not be advantageous and desirable to deal with the sick entirely apart from the healthy so as to concentrate the attention of the medical officer? But I want to know which you consider the sick people. Are Group 1 considered among the sick people, because we have not dealt with them yet at all?
2743. If you were asked to classify them, how would you do? I would put the cancer, ophthalmic and consumptive divisions away by themselves somewhere.
2744. Numbering about how many at the present time? Between 400 and 500. Then I would classify the patients suffering from epilepsy, heart disease, rheumatism, and paralysis, and the patients who come from the metropolitan and country hospitals to be built up. That is the second division, numbering nearly 1,000.
2745. You will have to provide, therefore, for 1,400 sick and consumptives? Yes.
2746. For that class, would it be desirable, in your opinion, to make special provision? For the consumptives, cancer and ophthalmic patients only. For the others no special provision is necessary.
2747. Instead of having a mixed institution as you have now? There is no special provision necessary for the second class—the patients who do not require constant medical attendance. They should be near the healthy patients I think—at least on the same estate.
2748. In the same buildings? No; not in the same buildings.

2749.

- S. Maxted,  
Esq.  
6 Mar., 1896.
2749. You think, instead of separating them from the healthy patients, that they had better be mixed with them? No; kept in a separate group on the same estate.
2750. You see no necessity for separating them? No, except as described.
2751. After classifying them, you think they might occupy the same locality? Yes.
2752. And that one resident medical officer would be sufficient? Yes; if you take away the hospitals.
2753. *Chairman.*] If provision is made for 1,000 hospital patients at present, will it fairly well cover the number of patients we are likely to find in the present pauper population of 2,900, including the cancer, consumptive and ophthalmic patients? I do not think so.
2754. Would 1,200? The hospital returns given to the institution are 1,400 or 1,500.
2755. Would you say that room for 1,400 would cover the hospital patients? I should think so.
2756. Would you stand by it? I cannot stand by it until I get the correct figures, but approximately that would be about correct.
2757. *Mr. Humphery.*] You are aware that Mr. Davis, the engineer, expressed the opinion that there would be a large saving effected if the buildings were not scattered as proposed, and that if, instead of buildings containing fifty or sixty, you had buildings of two storeys which would hold 240 or 250 each? Yes, put closer together.
2758. So that you would have them under less scattered supervision? But that would do away with the principle of classification. It would be lumping them up together which I object to. I understand Mr. Davis proposed to put the inmates in two-storey buildings, which would carry 240 each, all close together.
2759. You have certain buildings there at the present time? Yes.
2760. And if in addition you make provision by having two-storey buildings containing 240 inmates instead of cottage buildings containing sixty each, the drainage would cost some £3,000 less? Yes, but he said the same thing would be secured by putting Group 3 nearer the medical superintendent's residence to the north of which is as good a site as you can get.
2761. What distance from the proposed site? Close on half a mile.
2762. Would it not be attended with considerable inconvenience to have two groups separated by half a mile? No, they would have their own kitchen, and their own cooking there.
2763. Would it not be practically two institutions? Yes, that is just what we want. That is proposed at present, the only difference being that you would put them on the northern spur, instead of on the other side of the road.
2764. So that the economy which would be effected by concentration would be very considerably lessened, if instead of grouping the whole of the buildings together as proposed by the plan, you were to separate the groups by half a mile? It would not; I have explained that very often.
2765. *Chairman.*] Then you think we may come to the conclusion that there are 1,500 healthy paupers, and 1,400 chronic sick? In round numbers that is approximately correct.
2766. *Mr. Trickett.*] You were pressed yesterday to state whether the present number of 3,000 paupers was not likely to increase as the colony increases? Yes.
2767. Do you think that if the provisions suggested in page 41 of your report for 1890, in regard to relatives providing for the maintenance of inmates, and in regard to the provision of uniform intercolonial legislation, and so on, were carried out, they would have a tendency to reduce the number? Yes, to very largely reduce it.

TUESDAY, 10 MARCH, 1896.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
The Hon. JOHN DAVIES, C.M.G.  
The Hon. JAMES HOSKINS.  
The Hon. WILLIAM JOSEPH TRICKETT.  
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.  
JOHN LIONEL PEGAN, Esq.  
THOMAS HENRY HASSALL, Esq.  
GEORGE BLACK, Esq.  
FRANCIS AUGUSTUS WRIGHT, Esq.

The Committee further considered the proposed Erection of Buildings at Rockwood for Infirm and Destitute Persons.

William Odillo Maher, Esq., M.D., Visiting Ophthalmic Surgeon to the Government Asylums, sworn, and examined:—

- W. O. Maher,  
Esq., M.D.  
10 Mar., 1896.
2768. *Chairman.*] What is your position? I am Visiting Ophthalmic Surgeon to the Government Asylums.
2769. You are also engaged in private practice in Sydney? Yes.
2770. Have you any knowledge of the scheme before this Committee? I have not very much knowledge of the scheme. I only saw the plans here a few minutes ago.
2771. Do you require your examination to be limited solely to the ophthalmic patients? Yes.
2772. Not to general principles? No.
2773. If you care to make a statement, the Committee will be glad to hear your views in regard to things as they are, and whether you think that this proposal will be an improvement or not? I certainly think that the buildings and the arrangements for the treatment of ophthalmic patients could be improved upon, and I do not hold with having ophthalmic patients—many of whom suffer more or less from contagious disease—associated with the other inmates of the asylums. I think that they should have a separate institution for themselves.
2774. Do you approve of the present buildings at Parramatta? They could be improved upon very much.
2775. Is it well to have a population of ophthalmic persons in the centre of a town? No; it is not a desirable thing to have.
2776. You think that, as a general principle, an ophthalmic hospital ought to be widely apart from any population at all? It ought to be fairly isolated.
2777. From hospital patients or the ordinary public? Yes.

2778.

2778. *Mr. Fegan.*] I suppose you were not consulted in any shape or form as to the advisability of grouping these persons, and amongst them the patients you are more particularly interested in? No; I have not been consulted in any way about it.

2779. I suppose, as far as the position of Rookwood is concerned, is it not against the treatment of ophthalmic patients? In what respect? W. O. Maher,  
Esq., M.D.  
10 Mar., 1896.

2780. I mean as regards the climate, the soil, or the surroundings? Not that I know of, except that I do not think it is a desirable thing to have patients who have a quantity of discharge coming from their eyes near a water reservoir. But as far as the treatment of the patients goes, the locality is good enough.

2781. Your great objection is that it is so near to the reservoir from which the people of Sydney obtain their water? Yes; I think that is a tangible objection to the proposition.

2782. Have you in your mind's eye any suitable place which you can recommend? I have not thought of any.

2783. Parramatta would not be a suitable place? It is rather a populous place, but still I do not know that it is so very unsuitable.

2784. How many patients have you there at present? A little over 200.

2785. In one asylum? Yes; but there are other inmates also.

2786. Have you any at Liverpool? No. All the patients are transferred from the different asylums to the Macquarie-street Asylum, where I attend to them.

2787. They are treated separately, and kept separately from the other patients? No. They are supposed to have separate wards, separate basins, and separate towels, and as far as possible we avoid the discharge getting from their eyes into the eyes of the other patients. But still there are other inmates who have not ophthalmic disease.

2788. It is only recently that these people have been kept separate? They are not actually kept separate, because there are other inmates in the asylum who have not ophthalmic disease.

2789. It is not very long since the separate treatment was brought into vogue there? I could not say definitely when it was introduced, but I should say it was introduced six or eight years ago.

2790. There has been a time since the institutions have been established when the patients have been put together, no difference at all being made? Yes; they used to be distributed amongst the different asylums at Parramatta and Liverpool.

2791. Did not that show great ignorance as regards the necessity for the separate treatment of these people;—I suppose you were astonished when it first came to your knowledge that they were not treated separately? I think the doctor who preceded me also pointed out the necessity of having one institution for the treatment of these patients.

2792. Have you been over the ground where it is proposed to establish the new institutions? No.

2793. You have not seen the ground? No.

2794. As far as the site is concerned, you have no knowledge except from the plan you saw on the easel here? That is all.

2795. Was no information given to you that this idea had entered into the minds of the Department? None.

2796. Do you mean to say that you have been treating over 200 patients and have not heard of any proposed alteration being made? I have heard of a proposed alteration, but I have been in no way consulted in the matter. Incidentally I have heard people talking about it.

2797. Has not Dr. Waugh, the Medical Superintendent of the Parramatta Asylums, mentioned the matter to you? I have had no conversation with him on the subject. I have not met him to speak to excepting once.

2798. You believed that the ophthalmic patients should be kept entirely separate from any other patients? Yes; they should be kept apart from the others.

2799. Looking at the plan of the proposed three hospitals, do you think that the consumptives' hospital and the cancer hospital will be too near to the ophthalmic hospital? I presume the ophthalmic patients would also be able to walk about the ground.

2800. They would associate with the other patients in the ground? That would be objectionable. They should be kept entirely by themselves.

2801. Therefore, you would recommend that there should be a separate institution with separate grounds for ophthalmic patients? Yes.

2802. *Mr. Black.*] Do you know of any site which you would suggest as a suitable one for the treatment of ophthalmic patients? No; but I think there are very many sites that there is no objection to if the patients are kept to themselves and are not associated with the other inmates of the asylums.

2803. There would be no objection to the grouping together of hospitals for the treatment of cancerous, consumptive, and ophthalmic cases, provided, I suppose, that the institutions are erected at a distance of 100 or 200 yards from each other? Provided that the patients do not associate together.

2804. If the patients were prevented from associating with the others, then the distance which the hospitals would be removed from one another would not matter so much? No.

2805. Of course, the further the hospitals are apart the less the danger of their intermingling? Certainly.

2806. There are no especial climatic conditions favourable to ophthalmia;—has the sea air any effect at all? I do not think it has any very material effect on ophthalmia. The heat and glare of the sun have far more effect on it than anything else.

2807. The glare off the white sand, I suppose? Yes; and the heat.

2808. But I suppose a sheltered position and the absence of strong winds would be advantageous? Certainly.

2809. *Mr. Wright.*] I understood you to say that you believe in the perfect isolation of ophthalmic patients? I believe it is preferable that they should be kept to themselves.

2810. Is it customary in other parts of the world to perfectly isolate people suffering from ophthalmia? I cannot tell you. I do not know much about the systems in the old country, but I know that there are many cases on record in which this disease has spread to a great number of the inmates in poor-houses, and where it has spread through regiments of soldiers.

2811. The danger from infection, I presume, is considerable? It is not very great, but still it exists, and at times one does not know why it does at certain times—it spreads to a great number of individuals.

2812. Given a hospital of the size of the hospital indicated on the plan, built on 40 or 50 acres of land, and surrounded by a secure fence, do you think that would secure perfect isolation? Perfect. It would not be necessary to have such a quantity of land in order to secure isolation.

- W. O. Maher, Esq., M.D.  
10 Mar., 1896.
2813. That, you think, would secure perfect isolation? Yes.
2814. Irrespective of what the other surroundings might be? Yes.
2815. As regards the proposed site at Rookwood, the country is rather high, and completely denuded of timber, and would be exposed, not only to a considerable amount of heat, but to all the prevailing winds—the strong westerly winds, and to strong north-easterly winds;—would you consider that objectionable? I should think it preferable to have a more sheltered position.
2816. Sheltered by timber, I suppose? Yes.
2817. You have 200 ophthalmic patients? There are about 207 or 210 of the inmates who are on my books, but they are not all suffering from ophthalmia. They have had diseases which have effected their eyes, producing more or less blindness, or suffering from some progressive disease of the eyes.
2818. Are you aware whether there are any such patients in Rookwood and Liverpool Asylums? I think there cannot be, because the medical attendant at each place has been instructed to send all ophthalmic cases to the Macquarie-street Asylum.
2819. You consider that the whole lot numbers about 200? I think so.
2820. You have not been on this site? No.
2821. You are aware that within a very short distance of the proposed site, there is an open reservoir containing 36 acres of water, from which the water supply of Sydney is drawn? I understand that there is.
2822. I understand that you consider it very unwise to put an ophthalmic hospital near that open reservoir? I think so.
2823. *Mr. Hoskins.*] You expressed a wish to be examined by the Committee? No; I merely mentioned the fact that if the Committee thought that my evidence would be of any value, I should be very pleased to attend, but beyond that I expressed no wish.
2824. Did you not express a desire to be examined by the Committee with a view to expressing your opinion that it would be very unwise to have ophthalmic patients located in any place where hospital cases were located? I think it is unwise.
2825. That is your principal reason for coming here? That is my principal reason.
2826. *Mr. Davies.*] In all well-conducted hospitals is it not the usual practice to isolate the ophthalmic patients? They have their wards to themselves.
2827. The inmates of the hospitals at Parramatta, especially at the Macquarie-street one, have been allowed to mingle together? Yes; there has always been a number there who have not been under me, on account of their having no disease of the eyes.
2828. There has been no practical isolation of the ophthalmic patients? No; except that as far as possible, all ophthalmic cases have been sent to the Macquarie-street Asylum. But at that asylum there have always been other cases as well as ophthalmic cases.
2829. You are of opinion that these cases should be absolutely isolated? I think it would be wisest to have them isolated.
2830. What has been the result of the isolation of ophthalmic patients in the case of the city hospitals? I think it allows no possibility of the spread of ophthalmia. I think it is desirable to have ophthalmic patients away from the general hospital.
2831. Have these patients improved to a much larger degree than they would have done had they been associated with the other patients in the hospitals? I think they have.
2832. Your contention is that provision should be made for the absolute isolation and treatment of ophthalmic patients? Yes.
2833. It is the only effectual way of giving relief? I do not say that, so much, as that it is a great preventive of the disease spreading among the other inmates.
2834. During your visits to the hospital at Parramatta have you noticed any great spread of the contagion? I have not noticed any great spread of it, but I have noticed isolated cases. Of course, they adopt certain precautions. Those who have ophthalmia have separate wards, separate basins, and separate towels, in order, as far as possible, to prevent any contagion; and if these precautions are scrupulously taken the risk is not great.
2835. That is done to a large extent? Yes; but still we know that an epidemic from time to time in the old country has broken out amongst these institutions and among soldiers, and it has spread very rapidly. Why it occurs at certain times and not at others I am not in a position to say, but that it does occur is an undoubted fact. It is to guard against the possibility of that that I think these patients should be isolated.
2836. What has been the largest number you have treated at any time for ophthalmia at Parramatta? I could not say definitely for ophthalmia.
2837. For affection of the eyes? There are on the books about 210. That is as large a number as there has ever been.
2838. You do not attribute that large number to the want of isolation? I do not think so. There are a few who have contracted the disease in Macquarie-street Asylum, but the number is few.
2839. Have those who caught the contagion in the hospital been cured, or does it stick to them? It may stick to them for years if they get true granular ophthalmia.
2840. Have you many extreme cases? There are, I should say, about seventy cases with more or less discharge from the eyes, but the very bad cases are always sent down to the Moorecliff Hospital, as I see them more frequently there than I would at Parramatta, and they get more skilled nursing.
2841. You do not favour the proposal to concentrate the whole of the paupers suffering from all kinds of ailments, old age and infirmity, in one block at Rookwood? Not with the ophthalmic cases.
2842. Would you like to express an opinion with reference to the others? I should prefer not to do so.
2843. *Chairman.*] Have you any further statement to make? No.

Walter Liberty Vernon, Esq., Government Architect, sworn, and further examined:—

2844. *Chairman.*] You desire to hand in a statement to the Committee? I beg to hand in the following statement:—

W. L.  
Vernon, Esq.  
10 Mar., 1896.

Department of Public Works, Government Architect's Branch, Sydney, 4 March, 1896.  
To Public Works Committee,—

BENEVOLENT ASYLUM SCHEME.

I HAVE the honor to submit for your information the following memoranda relative to dividing up the single scheme of Rookwood into three schemes of Liverpool, Rookwood, and Campbelltown:—

1st. Liverpool—To permanently accommodate 800 able-bodied patients, an expenditure of £1,000 would, I find, do little more than put the present buildings in a proper state of repair.

Assuming that the 800 are able-bodied patients, I consider the following works should be carried out:—

New store-room .....	£350
Improvements to kitchen and bake-house .....	400
New cooking-boilers, &c. ....	200
Improved drainage .....	250
New shelter shed, &c. ....	200
General repairs, &c. ....	1,000
	<hr/>
	£2,400

2nd. Rookwood.—If accommodation is to be found in the present group for 1,000 healthy old men, seven more pavilions will be required, and it will be necessary to build administrative buildings in proportion, and it will not be necessary to build a residence for a resident medical superintendent.

3rd. In choosing a new site for the 800 isolated cases and 600 chronic cases, that could not then be accommodated at Rookwood, namely, 1,400, the buildings should take the form of a general hospital, as much as possible on the pavilion principle, and in that case a medical superintendent's residence would be necessary. It is of course possible, and was always anticipated, that the residence could be built for £1,500, but when stables and outbuildings, and laying on light and water, and other things are considered, my experience has shown that the total cost is little under £2,000 for a building of moderate but comfortable accommodation.

The cost approximately of this scheme would be as follows:—

Cancer and skin disease patients .....	£6,300
Ophthalmic patients .....	6,450
Consumptive patients .....	6,500
Chronic patients .....	8,400
Medical officer's residence .....	1,500
Matron's residence .....	1,000
Nurses and attendants' quarters .....	2,000
Kitchen .....	2,000
Special laundry and machinery .....	2,500
Mortuary .....	300
	<hr/>
	£36,950

Some of the above items, it will be seen, are modifications of the original estimate, but considering that these buildings must be treated as a hospital, I do not see how they can be reduced, and when it is pointed out that exclusive of drainage, lighting and water, which must necessarily be guided by the circumstances of the locality, the cost comes up to only £31 per bed, I am of the opinion that it would be the cheapest hospital of a permanent character ever erected. It must be recollected that the foregoing contains also no provision for workshops, farm buildings, lodges, and the laying out of the estate. For an institution of this kind these outlays are inevitable.

4th. These pavilions might, I think, be cut down from £1,400 to £1,200, if a number are built together, and certain finish on the existing pavilions is omitted. The quarters for superintendent at £1,000 might be reduced perhaps £150 to £850, but not more. The wardsmen's quarters at £1,500 is quite moderate enough. The class of these buildings is not necessarily expensive, but they must be sufficiently commodious to accommodate the number.

5th. The operating quarters at £1,000. The operating rooms include nurses' night rooms, sculleries, lavatories, &c., and all the adjuncts of the isolation group beyond the dormitory accommodation itself, and I do not think could be safely reduced. The number of nurses for 1,200 patients, even allowing the excessive number of fifty patients per nurse, means a staff of twenty-four, and the matron's quarters include the necessary store-rooms, offices, &c., and is not exclusively for the accommodation of that officer. By an oversight on my part, I believe a sketch for the matron's quarters exclusively is one of the exhibits; my intention was to provide for business purposes, as well as for the accommodation of the matron.

6th. Liverpool being occupied by 800 will save a considerable sum, namely, the cost of pavilions, and the proportionate cost of administrative buildings.

7th. The total reported cost, £108,000, is subject, as is also mentioned in the report, to a deduction, consequent upon 3,000 only being provided for instead of 3,300, and therefore the net amount would be £101,000.

8th. The total future cost, therefore, of housing 3,000 patients under your proposed scheme would be as follows:—

1,000 at Rookwood (with new shelter sheds, &c.) .....	£16,000
1,200 on new site .....	36,950
800 at Liverpool .....	2,400
	<hr/>
	£55,350

The saving on the scheme is, therefore, £46,000, but against this would have to be charged the cost of the drainage, lighting, fire appliances, laying out estate, sundry provisions, supervision, &c., possibly amounting to £8,000, or a net saving of £38,000.

9th. Rookwood.—In finding accommodation for 1,000 at Rookwood, it would be necessary to build new kitchens and administrative buildings, and I have therefore estimated the total cost of the work there to be £16,000, which is included in above statement.

Yours, &c.,  
W. L. VERNON.

2845. Is there any point which requires elucidation? I simply want to make it clear that this is an approximate estimate.

2846. Will you take the various items, and tell us why you adopt these particular amounts, beginning with the Liverpool Asylum first? I consider it will cost £2,400 to put Liverpool Asylum into a proper state of repair as a permanent institution for the accommodation of 800 inmates. To erect a complete hospital to accommodate 1,400 patients, including isolation and chronic cases, would cost, assuming the site is a reasonable one, £36,950, to which must be added the cost of lighting, draining, and water supply.

2847. *Mr. Lee.*] What do you mean to convey by the term "suitable hospital;"—do you mean a series of hospitals? I certainly strongly recommend the pavilion system.

2848. Does your estimate provide for one large building? No; I should keep cases of cancer and of skin diseases in one block; ophthalmic cases in another block; consumptive cases in a third block; and chronic cases, making up a total of 1,400, in a fourth block.

2849. Your scheme actually provides for four distinct buildings? I think it would be more correct to say four distinct groups of buildings.

2850.

- W. L. Vernon, Esq.  
10 Mar., 1896.
2850. In the Rookwood scheme you put three almost in one group? I would not put 600 chronic cases into one building.
2851. You would have a group for the chronic cases? Yes.
2852. You would place the chronic cases in pavilions? Yes.
2853. That would be a chronic group? Yes.
2854. Would you deal in the same way with the ophthalmic cases? Yes.
2855. And in the same way with the consumptive cases? Yes. The fact is that I have adopted these plans here for these three isolated groups.
2856. You have strongly committed yourself to the pavilion system? Undoubtedly.
2857. On that basis you have made your calculations? I have.
2858. And £36,950 is to cover the cost? Yes; exclusive of other items.
2859. Why do you adhere to the pavilion system for the chronic cases;—why would not a two-storey building do for them? A pavilion system does not necessarily mean a series of one-floor buildings; it may also include two-floor buildings, but they should not be above a certain size, and they should be to some extent separate one from another.
2860. But has not your proposal up to the present time, as regards the pavilion system, been strictly confined to a one-storey building? Certainly. I prefer one storey, but I do not see any great objection to two storeys.
2861. At all events your estimate is for one storey? Yes.
2862. What is your great objection to two storeys for chronic cases? Because I think the tendency in all modern institutions of this character to obtain a one-storey building, and there is no reason why it should not be adopted, when you are making a new departure.
2863. Can you tell me the difference in cost, if any, between housing this number of chronic cases in one storey and housing them in two storeys? The difference in cost, if one staircase only is provided is, as far as I can tell, about £175 less than double the cost of a single floor. For instance, a pavilion of one floor would cost £1,200, and with two floors it would cost £2,400 less £175, that is when one staircase only is required. It would cost £2,225 as against £2,400.
2864. *Mr. Black.*] You would save £175 on each pair? Yes.
2865. *Mr. Wright.*] One roof and one basement would cost as much as your staircase? Yes. I must consider other things as well. I have to thicken the walls of the ground-floor, I have to make a staircase sufficiently roomy and easy to admit of persons being taken up and down on stretchers in time of panic, and so on. I cannot see how the cost can be very much reduced.
2866. *Chairman.*] It means a saving of £4,000 in the case of 1,400 people? It is a saving of nearly £3 per head.
2867. *Mr. Humphery.*] Have you taken into consideration the cost of the verandah? I have not. I do not think it comes much into the calculation.
2868. *Mr. Lee.*] You estimate that it will cost £2,500 for the laundry and £2,000 for the kitchen;—what class of building do you propose to erect? In both cases the class of building would be of the simplest and cheapest description possible, consistent with being of a substantial character to stand the wear and tear of machinery. It would be built with brick, and have a slate or iron roof.
2869. What machinery do you require? In the laundry you would require a complete set of laundry machinery, commencing with washers, and going through with the centrifugal driers, the wringers, the drying closets, and the mangles.
2870. There is nothing very particular about that—nothing more than could be carried on in an ordinary slab building? You would not build a slab building with loan money, I should imagine.
2871. The machinery you mention could be erected in an ordinary wooden building? It could.
2872. It appears to the Committee that it is a large item, and we want some information upon this point? I can only compare it with the laundries which have been erected. I could not give you the rates just now, but I assure you that a laundry for 600 or 700 patients has, in other cases, cost considerably more than this laundry for 1,400 patients is estimated to cost.
2873. Does your estimate of £2,500 cover the building or the machinery? It includes the building and outfit.
2874. What will be the size of the laundry? I presume it will be built in proportion to the number of the inmates. The laundry will be built with, first of all, a receiving-room to receive the dirty linen and the necessary pits in which to put the worst of the linen; then a large room in which it is washed, probably a room measuring 60 by 40 or 45, including the machinery; then a drying closet, measuring 20 by 20, or 25; then an ironing room, of almost the same size as the large washing-room; and, finally, the dispensing-room, in which all stored clean things are dispensed.
2875. With reference to the kitchen, I presume the £2,000 is intended to provide for stoves and other appliances, as well as the building? Inclusive.
2876. Boilers if necessary? I have not distinguished between boilers for the kitchen and laundry, because I understood that the joint cost of the two would cover the cost of the boilers.
2877. Of what do you propose to build the new hospital? Brick walls. In the case of the cancer patients I should put down a solid floor—not a wooden floor—and I should plaster the walls with the cleanest and hardest plaster which is suitable, with Kean's cement, or an anti-septic cement of some description, and I would line the ceilings with small corrugated iron.
2878. As nearly fire-proof as you can make them? Yes. For the chronic cases I certainly would have brick walls, but wooden floors would do in their case; and the roof in each case would be lined with small corrugated iron.
2879. How would the roof be covered? With large corrugated iron.
2880. No tiles? I do not propose to use them.
2881. *Mr. Fegan.*] I understood you to say when you first appeared before the Committee that you had consulted the medical officers in reference to these plans of yours? I did.
2882. Where were the medical officers when you consulted them—in your office? We first met at the office of the lady superintendent at Rookwood, and then we walked over the different ridges of the estate, and jointly visited the different sites.
2883. You say “we walked”;—to whom do you refer? The three medical officers, Mr. Maxted, Mr. Green, myself, and my assistant, who has Rookwood in his charge.

2884. The three medical officers were Dr. Beattie, Dr. Waugh, and Dr. Brown? Yes.
2885. You are sure of that? Absolutely sure.
2886. Would it be strange to you to hear that some of the medical officers have told the Committee that they were not consulted in the matter? It would not be correct to say that these three gentlemen were not consulted, because they were.
2887. And their opinion is embodied in the shape of a plan here? The plan exactly follows the concensus of opinion expressed on that afternoon; but I do not think these medical officers saw the plan. In fact, I know that they did not.
2888. You were led by their opinion to present the plan in this form to the Committee? The opinion was unanimous.
2889. Should a saving of £3 per head be considered of greater importance than a suitable building for these people? I do not think it should. My opinion is strongly in favour of the one-floor pavilion system. I do not say that the other system is not a good one.
2890. You believe that one floor would be far more convenient as regards the management of the hospitals, and of the wards, and ultimately as regards the working of the institutions as a whole? That is my opinion.
2891. *Mr. Black.*] Do you think that in the erection of hospitals at Campbelltown any considerable sum could be saved by using the timber growing on the ground in the construction of the stables, laundries, weather-sheds, workshops, and so on? I do not know the particular estate to which you refer.
2892. If the timber is all right there would be some saving? I do not think it would be advisable, as loan money is to be spent, to erect a building that would not last some considerable time.
2893. If the timber on the ground is ironbark and blackbutt it would be likely to last a considerable time? I do not think if slab or other buildings were erected properly they would be likely to give in for twenty years.
2894. In your estimate did you include the drawing of the bricks for the erection of the laundry and the stables? I imagine that if you built at Campbelltown, where there is a brick soil, the contractor would naturally make his own bricks on the site.
2895. You think there is clay to be got there? I should think so. Anywhere around Campbelltown you can get brick earth.
2896. You do not think there would be any great saving from the utilisation of the timber? I would give a very guarded opinion as to the timber, because my own impression is that all the timber has been so culled that there is very little left which could be put into a permanent building. I know that that is the case down Goulburn way.
2897. *Mr. Wright.*] Coming back to the question of kitchens and laundries, in your plans here you have three hospitals grouped together with one kitchen to serve three institutions? Yes.
2898. If it were deemed necessary that the three hospitals should be kept 200 or 300 yards apart from one another, it would necessitate having a kitchen for each hospital? Not unless they were a very wide distance apart.
2899. Supposing it were considered necessary to put each hospital in an area of 20 acres by itself? I would not recommend that it should be done, because it would be scattering the administration, which would be hardly advisable.
2900. Supposing we are advised that it is necessary that the ophthalmic hospital should be distinctly isolated from the other buildings, and that the ophthalmic patients should have a moderate amount of ground in which to exercise themselves apart from the other patients, I suppose it would be necessary to provide a separate kitchen for that hospital? If it were, say, 300 yards away from the main building, I think it would be necessary.
2901. An expert has stated that there should be no commingling of ophthalmic patients with the other patients;—would that add materially to your estimate? It would mean the cost of another kitchen.
2902. Would it reduce the cost of the large kitchen also? Very little.
2903. Say we require a kitchen for 200 patients, would it cost the same amount to build that kitchen as it would cost to build a kitchen for 800 or 900 patients? My proposal is to build a kitchen for 1,400 patients, and if you deduct 200 patients from that number the reduction in the cost would be very small.
2904. Will it add materially to the cost? I would not propose, in a separate kitchen for 200 patients, to put down what is called a kitchen plant. I would be content with something very much simpler.
2905. A simple, inexpensive building would answer the purpose? I do not say it would answer so well. I would not recommend it at all.
2906. Under the circumstances I mentioned it would become a necessity to have a separate kitchen and separate cooking appliances? Such a case has never come under my notice before. I think it is a very extreme opinion, even from a medical man.
2907. What will it cost to build a kitchen to cook for 200 patients? Probably £600 or £700. It does not mean a kitchen only; it means the adjuncts to a kitchen—larders and a scullery.
2908. Your estimate would be increased by that amount if we decide to have a separate hospital? It would.
2909. Can you state roughly the superficial area of the laundry which is to cost £2,500. You can build a first-class residence for a gentleman in Sydney for £2,000 or £2,500, and it strikes me that £2,500 is a very large sum to pay for a mere laundry? It is not when you come to consider that you are providing washing accommodation for 1,400 inmates and drying accommodation as well. The fact is, it is very small.
2910. I suppose a great deal of the amount is for the boilers? Yes; you must have the best machinery, and you must pay for the patents.
2911. I suppose the bulk of the expense is for the machinery and boilers? I should think it is about 50 per cent. machinery and about 50 per cent. building.
2912. *Chairman.*] If that power were found you otherwise, you could save that sum? I could save the steam power.
2913. *Mr. Wright.*] The building would cost £1,200? From £1,200 to £1,500.
2914. You ought to put up a pretty large building with only bare walls and no interior fittings for £1,500, or even for £600 or £700? It is the extent of a building of this description which runs into the cost, no matter how inexpensive the material is which you may use.
2915. In your estimate, you have not gone in for any unnecessary expensive work? None whatever.
2916. They are all plain substantial buildings? As plain as possible, but substantial. 2917.

W. L.  
Vernon, Esq.  
10 Mar., 1896.

W. L.  
Vernon, Esq.  
10 Mar., 1896.

2917. *Mr. Hoskins.*] Have you ascertained the probable cost of altering the Randwick Asylum to accommodate temporarily 700 or 800 patients from the Parramatta and Liverpool Asylums, provided that the Government obtain the consent of the trustees of the Randwick Asylum to its being used for that purpose? I have had the following estimate prepared:—

Floors, general repairs, and stairs...	£300
Verandahs, roof, posts, plates, &c.	250
Guttering, roof and down pipes	100
Painting, cleaning down, new doors, &c.	300
Abolishing internal lavatories, baths, &c., and making good floor	200
Drainage taken up, remodelled, and relaid, properly trapped and vented, keeping present main to "farm"	400
Cement baths altered and drained	100
Two shelter-sheds	250
Gas service renewed and remodelled	250
Fire service renewed and remodelled	200
Total	£2,350

Then I have a separate item of £1,000 for a new kitchen, laundry, and cooking plant, which, of course, is an approximate amount, making a grand total of £3,350 to accommodate 543 patients.

2918. Have you not also to provide for the children? Provision would have to be made for the children.

2919. *Mr. Trickett.*] What did you put down in the statement you handed in for the ophthalmic branch? £6,450.

2920. Does that include a kitchen and administrative buildings for that particular branch? No. It includes the buildings connected with the patients only.

2921. Then the kitchen, scullery, laundry, workshop, and stores in connection with that branch you propose to use in common with the other two? I do; in fact, in common with all four.

2922. Dr. Maher, an eminent ophthalmic authority, has stated here that there would be a great fear of contagion if the ophthalmic branch were in any way connected with any other part of the buildings to be erected; that it ought to be provided with a separate wash-house, and separate appliances;—if that idea were carried out, would it not considerably increase the expense of the ophthalmic branch? If the ophthalmic wards could not be treated administratively with the others, it would necessarily cost more.

2923. I understood Dr. Maher to say, distinctly, that the ophthalmic branch must be perfectly isolated—in fact, almost fenced round, so that the patients could not mingle with the other patients;—I suppose that would increase the expense considerably? It would.

2924. To what extent would it increase that estimate of £6,450? It would involve the cost of another kitchen, and the cost of a small complete laundry, and possibly it might necessitate the building of a separate nurses' establishment.

2925. And separate operating quarters? I certainly am not prepared to follow the opinion of a medical man in that respect, because I have never heard that opinion advanced before.

2926. I do not want to ask you whether you agree with his opinion, but I wish to know whether, if the opinion is a correct one, it will not necessarily increase the cost? It would increase the cost from £1,000 to £1,200 at least. The laundry, of course, would be on a small scale, and it would have to be worked without machinery.

2927. There would have to be another kitchen? Yes.

2928. If the same procedure were required with regard to the cancer and the consumptive hospital, that would also increase the cost of the buildings? Undoubtedly, in the same proportion. I think the consumptive hospital would be rather more, because the proportion of inmates is larger there than it is in the case of an ophthalmic hospital.

2929. Can you state in round numbers what would be the extra expense if these three kinds of disease had to be treated separately, either at Rookwood or at Campbelltown? About £4,000, exclusive of any special arrangement for nurses.

## PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## Erection of Buildings at Rookwood for Infirm and Destitute Persons.

## APPENDIX.

## A.

[To Evidence of F. Chapman, Esq.]

INFORMATION RESPECTING RESIDENCES CONTIGUOUS TO LIVERPOOL ASYLUM.

Sir,

Town Hall, Liverpool, 2 March, 1896.

According to a report of Mr. Green's evidence (re Rookwood Asylum question), given before your Committee, as published in *Daily Telegraph* of 27th February, I notice he is made to say that the nearest house to the Liverpool Asylum is that of the station-master, some 300 yards away. I wish to point out that this is erroneous, as the pencil line on the accompanying tracing will show. The dotted line on same tracing (a radius of 440 yards from Asylum) shows twenty-nine residences, or a population of, say, 145 persons; the public school, with between 300 and 400 scholars; and the Orphanage (R.C.), with about 70 children. A 500 yards radius from the Asylum would take in portions of Macquarie-street, the principal thoroughfare of the town.

I have, &amp;c.,

F. CHAPMAN,

Mayor

(on behalf of the Council).

The Chairman, Parliamentary Standing Committee on Public Works.

## INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR 1895.)

Presented to Parliament, pursuant to Act 42 Vic. No. 7, sec. 73.

Printed under No. 19 Report from Printing Committee, 24 September, 1896.

### The Inspector-General of the Insane to The Chief Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 14 September, 1896.

I do myself the honor, in accordance with the 73rd section of the Lunacy Act of 1878, to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1895.

I have, &c.,

F. NORTON MANNING,  
Inspector-General.

On the 31st December, 1895, the number of insane persons under official cognisance was 3,720, and their distribution was as follows:—

Institution.	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville .....	514	334	848	5	20	25
Do Parramatta (Free) .....	672	381	1,053	9	9	18
Do do (Criminal) .....	39	13	52	.....	.....	.....
Do Callan Park .....	444	392	836	6	8	14
Do Newcastle .....	156	151	307	1	.....	1
Do Rydalmere .....	300	131	431	.....	.....	.....
Do Kenmore .....	146	.....	146	1	.....	1
Licensed House for the Insane, Cook's River.....	16	21	37	.....	.....	.....
Do do Ryde .....	.....	4	4	.....	.....	.....
Do do Picton—Swiss Cottage .....	.....	1	1	.....	.....	.....
Do do Picton — Woodland Cottage .....	.....	1	1	.....	.....	.....
South Australian Hospitals .....	2	2	4	.....	.....	.....
Total.....	2,289	1,431	3,720	22	37	59

The number at the close of 1894 was 3,587, so that the increase during the year amounted to 133, of whom 91 were males and 42 females.

The increase was above the average for the last twenty years, but somewhat below that for the year 1894. In the four years 1892 to 1895 inclusive, the number of insane persons under care has increased by 586, and this has added very materially to the cost of this unfortunate class, not only in the charge for maintenance, but in the necessary provision of buildings in which to accommodate this abnormal influx. The increase in number for the last twenty years is shown in the following return:—

Year.	Increase.	Year.	Increase.	Year.	Increase.
1876.....	43	1883.....	96	1890.....	128
1877.....	89	1884.....	121	1891.....	32
1878.....	87	1885.....	119	1892.....	178
1879.....	95	1886.....	74	1893.....	113
1880.....	88	1887.....	104	1894.....	162
1881.....	119	1888.....	76	1895.....	133
1882.....	98	1889.....	76		

Total for twenty years, 2,031, or an average of 101 a year.

The causes which led to an unusual increase during 1892-3 and 4, and which were pointed out in my report for the latter year, appear to have been still in operation during 1895.

The proportion of insane to population, which from 1872 to 1891 was nearly stationary, and in the latter year stood at 1 in 371 to 2·69 per thousand, has, during the last four years, slowly risen and now stands at 1 in 343 or 2·91 per thousand. The following return, however, shows that the proportion of insane to population has not yet reached that which exists in England, Scotland, or Ireland.

The proportion of insane to population in New South Wales for the last twenty years, and also the proportion in England for the same period, and the proportion in Scotland and Ireland for each year from 1881 to 1894 is shown in the following return—

Year.	Population of New South Wales.	Total Number of Insane in New South Wales on 31 Dec.	Proportion of Insane to Population in New South Wales.	Proportion of Insane to Population in England.	Proportion of Insane to Population in Scotland.	Proportion of Insane to Population in Ireland.
			Per M.	Per M.	Per M.	Per M.
1876	629,776	1,740	1 in 361 or 2·77	1 in 368 or 2·71	.....	.....
1877	662,212	1,829	1 in 362 or 2·76	1 in 363 or 2·75	.....	.....
1878	693,743	1,916	1 in 362 or 2·76	1 in 360 or 2·77	.....	.....
1879	734,282	2,011	1 in 365 or 2·74	1 in 363 or 2·75	.....	.....
1880	770,524	2,099	1 in 367 or 2·72	1 in 353 or 2·83	.....	.....
1881	781,265	2,218	1 in 352 or 2·84	1 in 352 or 2·84	1 in 370 or 2·70	1 in 386 or 2·59
1882	817,468	2,307	1 in 354 or 2·82	1 in 348 or 2·87	1 in 369 or 2·72	1 in 372 or 2·68

Of the total number on the register at the close of the year 3,720—3,657 were in the Hospitals or Licensed Houses in this Colony, 59 were absent on leave under the provisions of the Lunacy Act, and 4 were in Hospitals for the Insane, in South Australia.

The returns from the Institutions show an increase of 38 on the registers at the Hospital at Rydalmere, of 1 at Parramatta, free, 4 at Parramatta, criminal, 1 at Newcastle, and 1 at the Licensed House, Ryde, whilst there was a decrease of 59 at the Hospital at Gladesville, 1 at Callan Park, and 2 at the Licensed House at Cook's River. The Hospital for the Insane at Kenmore, near Goulburn, appears on the list for the first time, and 146 patients were on the registers at the close of the year. These were all transferred from the overcrowded wards at Gladesville, Parramatta, and Callan Park; patients as a rule being selected who came from the southern districts of the Colony, and whose mental condition was such as would permit of their occupying the rooms temporarily set apart as dormitories in the administrative buildings, workshops, &c., erected under the first contract taken for the new Hospital for the Insane of the southern district of the Colony.

In several prior reports I have dilated on the hardships to the patients, and the expense to the Government which attended the transfer of insane persons—often in an acute stage of the malady—from the district of Broken Hill to the Hospitals for the Insane in the neighbourhood of Sydney.

During the year 1895 an agreement was concluded with the Government of South Australia, under the provisions of the Lunacy Convention Act of 1894, by which the South Australian Government receives and treats in the Hospitals for the Insane in that Colony persons becoming insane in the district of Broken Hill, and dealt with by the justices at that place. This arrangement has worked in a most satisfactory manner, and at the close of the year 4 patients belonging to this Colony were in the South Australian Hospitals.

The following tables show the admissions, discharges, and deaths, the proportion of recoveries, the rate of mortality, the causes of insanity in those admitted, those who recovered, and those who died, the causes of death, the length of residence in those who recovered and those who died, and also the ages, condition as to marriage, religious profession, nationality, and previous occupation of those admitted, and of all under care, as well as the form of mental disorder in those admitted, those who recovered, and those who died during the year:—

TABLE 1.

SHOWING the Admissions, Readmissions, Discharges, and Deaths in the Hospitals and Licensed Houses for the Insane during the year 1895.

In Hospital on 31st December, 1894 .....				Male.	Female.	Total.
	Male.	Female.	Total.	2,198	1,389	3,587
Admitted for the first time during the year .....	389	220	609			
Readmitted during the year .....	61	45	106			
Transferred during the year .....	205	68	273			
				655	333	988

Admissions.

The number of patients admitted during the year was 715—450 males and 265 females—and was larger than the number admitted in any former year. Sixty-two of the admissions were received from the Asylums for the Infirm and Destitute, and the greater number of these patients were aged and demented. Of the total number, 609 were admitted for the first time, and 106 had at some previous period been under treatment in one of the Hospitals for the Insane in this Colony. The proportion of readmissions, though not larger than usual, shows the liability to relapse in cases of mental disease. The ratio of admissions to the general population or the amount of "occurring insanity" during the last twenty years—1876 to 1895 inclusive—is shown in the following return:—

Year.	Admissions.	Population.	Proportion to Population.	Year.	Admissions.	Population.	Proportion to Population.
1876.....	360	629,776	1 in 1,749	1886 .....	567	1,030,762	1 in 1,817
1877.....	457	662,212	1 in 1,449	1887 .....	532	1,042,919	1 in 1,960
1878.....	424	693,743	1 in 1,636	1888 .....	588	1,085,740	1 in 1,846
1879.....	410	734,282	1 in 1,668	1889 .....	550	1,122,200	1 in 2,040
1880.....	476	770,524	1 in 1,618	1890 .....	611	1,170,000	1 in 1,914
1881.....	494	781,265	1 in 1,581	1891 .....	596	1,165,300	1 in 1,935
1882.....	473	817,468	1 in 1,728	1892 .....	666	1,197,050	1 in 1,797
1883.....	476	869,310	1 in 1,826	1893 .....	688	1,223,370	1 in 1,778
1884.....	493	921,129	1 in 1,868	1894 .....	712	1,251,450	1 in 1,757
1885.....	567	980,573	1 in 1,729	1895 .....	715	1,277,870	1 in 1,787

The number of admissions from places beyond the Colony, reported under the provisions of section 4 of the Lunacy Act Further Amendment Act, was 7 only, a much less number than during any preceding year. Steps were taken to recover maintenance for these patients under the provisions of the statute, and only 3 remained in the hospitals at the close of the year.

Transfers.

The number of patients transferred from one hospital to another was 273, and of these 152 were sent from Gladesville, Parramatta, Rydalmere, and Newcastle to Kenmore on the opening of that hospital, 78 were sent to Rydalmere from Gladesville and Callan Park to fill vacant beds in that hospital, 6 were sent from the Hospital for Criminals to the Hospital for Free Patients at Parramatta on expiry of sentence, and 6 weak-minded children sent in error to Gladesville, Callan Park, and Parramatta were transferred to the hospital specially set apart for these cases at Newcastle. The remainder were transferred from one hospital to another for change of air and scene and with the hope of benefiting them in either mental or general health.

Discharges.

*Discharges.*

The number of patients discharged during the year was 360, and of these 308 had recovered and 52 were relieved, and were so far well that they could be taken charge of by relatives or friends. The recoveries give a percentage of 43·08, and the cases relieved a percentage of 7·21 on the admissions, so that upwards of 50 per cent. so far recovered under hospital treatment as to admit of discharge. The recovery rate is much the same as for some years past.

*Deaths.*

The number of deaths was 223, and the percentage on the daily average number resident 6·24.

In 1894 the death-rate was 5·77, but the average rate for the last ten years has been 6·73. This rate is decidedly below that in Victoria, where the death-rate for 1895 was 8·27 and the average for the previous thirteen years 7·21, and also below that in South Australia, where the rate in 1895 was 8·00 and the average rate for the previous twenty years 8·4 per cent.

The death-rate at the different institutions was as follows:—Gladesville, 5·96; Parramatta Free, 7·26; Parramatta Criminal, 2·00; Callan Park, 6·36; Rydalmere, 5·08; Kenmore, 2·77; Newcastle, 7·16; and Cook's River, 2·85.

In Table 4 the causes of death are shown. Of the total number, 223, no less than 106 were due to cerebral disease, 65 to thoracic disease—pulmonary consumption being the cause in 24 instances—and 22 to general debility and old age. None of the other causes ran into two figures.

*Total number under care.*

The total number of patients under care and treatment during the year was 4,575, of whom 2,853 were males and 1,722 females, and the daily average number resident was 3,574.

*Leave of absence on Probation.*

This system has been continued during the year with the usual satisfactory results.

At the close of 1894, 83 patients were absent, and leave was granted during the year to 103, making a total of 186 on leave during the year. Of these, 83 were discharged recovered, 43 were returned to hospital, 1 died whilst on leave, and 59 were absent at the close of 1895. The period for which leave is granted is usually three months, and it is extended from time to time if the patient remains well enough for home care, though cannot be certified to have recovered from mental illness.

The following return shows the particulars as to leave of absence during the year:—

RETURN showing particulars as to Leave of Absence during the year 1895.

Institution.	Remaining on leave 31st December, 1894.			Number granted leave during the year 1895.			Discharged recovered			Returned to Hospital.			Died whilst on leave.			Remaining on leave 31st December, 1895.

Total .....	32	51	83	32	71	103	27	56	83	14	29	43	1	...	1	22	37	59

*Casualties.*

The casualties during the year were fewer than usual. Three cases of suicide occurred, 2 at Parramatta and 1 at Cook's River, and all of these formed the subject of departmental inquiry in addition to the usual Coroner's inquest. One death resulted from an accidental fall on the back of the head, and another was due to an epileptic seizure. Several determined attempts at suicide were made, but were happily frustrated, and the other accidents which occurred were attended by no serious result.

The receipts of the department from all sources amounted to £14,727 6s. 10d., of which £13,772 6s. 10d. were collected by the Master in Lunacy as contributions towards the maintenance of patients. The sum of £209 17s. 8d. was paid by the Imperial Treasury for maintenance of convict patients. £676 11s. 4d. was received from the sale of fat, old stores, &c., and £68 11s. for rent. The details are shown in the following return:—

TABLE showing Total Receipts on account of Institutions for the Insane during the year 1895.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of Fat and old Stores.	Rent of Land.	Total.
Hospital for the Insane, Gladesville .....	£ 4,011 3 11	£ .....	£ 214 2 2	£ .....	£ 4,225 6 1
Do Parramatta .....	2,125 10 7	179 18 0	254 9 11	...	2,559 18 6
Do Callan Park .....	5,832 13 7	...	146 17 6	...	5,979 11 1

Do Rydalmere .....	905 13 11	...	43 6 2	...	949 0 1
Do Kenmore .....	73 3 8	...	...	...	73 3 8
Licensed House for the Insane, Cook's River .....	17 10 0	...	...	...	17 10 0
Reception House for the Insane, Darlinghurst .....	3 0 0	...	...	...	3 0 0
Inspector-General's Office .....	...	...	...	68 11 0	68 11 0
Total .....	£ 13,772 6 10	209 17 8	676 11 4	68 11 0	14,727 6 10

The total expenditure amounted to £104,846 10s. 7d., and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £100,551 14s. 4d.; maintenance of patients in Reception House, Darlinghurst, £1,589 13s. 3d.; payments to South Australian Government for patients from the District of Broken Hill, £35 3s. 6d.; and general expenses—including cost of Inspector-General's Office, payments to official visitors, maintenance of steam-launch, "Mabel," &c.,—£2,669 19s. 6d.

The daily average number of patients resident was 181 more than during the preceding year, and this, together with the opening and outfit of the new hospital at Kenmore, accounts for the increased expenditure in the hospitals as compared with the year 1895.

The average weekly cost per patient, without deducting collections, was 10s. 11½d., and when collections were deducted, 9s. 4d.

The cost at Kenmore was very high, as the general outfit of stores, bedding, &c., as well as the many expenses incidental to the starting of a new institution, were included in the calculations, and this serves to raise the average cost at all the hospitals.

The following returns show—(1st) the average weekly cost at the hospitals for the last ten years 1886 to 1895; (2nd) the weekly cost at each hospital from 1870 to 1895 inclusive; and (3rd) the particulars of expenditure in the hospitals during the year 1895.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**ABORIGINES.**

(REPORT OF BOARD FOR PROTECTION OF, FOR YEAR 1895.)

*Printed under No. 1 Report from Printing Committee, 21 May, 1896.*

The Aborigines Protection Board to The Principal Under Secretary.

Sir,

Office of Board for Protection of Aborigines, 105, Phillip-st.,  
Sydney, 31 March, 1896.

In accordance with the usual practice, we have the honor to submit, for the Chief Secretary's information, the following report of our operations during the year 1895, together with information regarding the number, location, and present condition of the Aborigines, and a detailed statement of the expenditure of the funds voted by Parliament for their assistance.

We regret to have to record the death, on the 19th August last, of the Honorable Richard Hill, M.L.C. Mr. Hill had been a Member of the Board from the date of its inception, 5th June, 1883, and, giving unfailing attention to his duties, took a deep interest in furthering every object for the welfare of the Aborigines.

Mr. James Richard Hill accepted a seat on the Board to fill the vacancy thus occasioned, his appointment dating from the 20th September last.

The Census Returns of the Aboriginal population of the Colony (*Appendix A*), compiled from information collected by the Police on the 15th October, show a total of 3,660 full-bloods and 3,386 half-castes, or 7,046 in all.

These figures exhibit, as compared with the previous year, a decrease of 96 full-bloods, but an increase of 121 half-castes—a net increase of 25.

Year by year the number of full-bloods continues to decline. The decrease of 96 for 1895, however, is below the average annual rate which took place during the four preceding years—234.

The deaths amongst the full-bloods exceeded the births by 31. There were, however, 25 more births and 13 less deaths than during 1894. The natural increase amongst the half-castes was 104, births showing an increase of 26 and deaths a decrease of 22, as compared with the previous year. These figures would, however, account for a total increase of 73 in the Aboriginal population, instead of an actual increase of only 25. The difference is probably owing to some of the Aborigines on the Border having crossed into Queensland or South Australia.

In last year's return it was pointed out that the total numbers of full-bloods and half-castes within the Colony were assimilating. It will now be seen that there is a difference of 274 only in favour of the full-bloods.

A total sum of £17,050 0s. 11d. was expended by the Government on behalf of the Aborigines during the year. [*See Appendix C.*] This includes an expenditure of £12,345 0s. 5d. by the Board—£8,595 18s. 4d. on Aborigines generally, £951 18s. 3d. for the fares of Aborigines travelling on the railway, and £2,797 3s. 10d. in liquidating claims incurred specially in connection with the Cumeroogunga (Murray), Warangesda (Murrumbidgee), and Brevarrina (Barwon) Aboriginal Stations; £862 14s. 8d. by the Medical Adviser to the Government; £1,046 13s. 8d. by the Minister of Public Instruction; £2,736 14s. 8d. by the Controller-General of Stores; and £58 17s. 6d. by the Principal Under Secretary.

The expenditure by the Board is given in detail. [See Appendix D.] The year has been an unfavourable one for the Aborigines in the interior, the drought having rendered their means of subsistence more than usually precarious. Native game has now become scarce in a great many districts—in some extinct; and by the discontinuance of rabbiting on nearly all the sheep-stations the Aborigines have lost one of their main sources of employment. The demands upon the Board have in consequence been more than usually numerous.

Nine additional reserves, as under, aggregating an area of 1,145 acres, have been set apart for the use of Aborigines during the year:—

*Boambolo, Yass District.*—Area, 100 acres. An Aboriginal, his wife, and seven children have been placed in occupation of this reserve. The land has been enclosed with a good fence and is being cleared, rations being issued by the Board to the family while the work is going on.

*Cuppacumbalong, Queanbeyan District.*—Area, 270 acres. This land has been set apart for the use of the Aborigines of the Queanbeyan District, to enable them to carry on cultivation and make homes for themselves.

*Forster (Extension).*—Area, 12 acres. By this reservation the area at the disposal of the Aborigines has been increased to 22 acres. The land has all been enclosed with a good fence, and seven comfortable huts have been erected upon it. The Aborigines purpose cultivating a portion. A number earn a good living oystering and lobster-catching. The remainder—aged and infirm, and children attending school—are supported by the Board.

*Wilberforce.*—Area, 164 acres. This land was set apart for the use of Aborigines in lieu of the Reserves at Sackville Reach.

*Wellington.*—Area, 20 acres. A number of Aborigines are in occupation. They have fenced in the whole of the land. Some comfortable dwellings are also in course of erection.

*Walgett.*—Area, 320 acres. This Reserve was obtained in place of one adjacent to the township, and on that account in an objectionable location.

*Walkallow.*—Area, 150 acres. Fifty-five Aborigines are in occupation. Eight comfortable two-roomed slab huts, and about half a mile of six-wire fencing have been erected.

*Terry Hie Hie.*—Area, 102 acres. This locality has always been a favourite camping-ground for Aborigines. About 50 occupy the Reserve. Twenty-five acres have been fenced, and a number of dwellings erected. The land is used by the Aborigines as a run for their horses. The able-bodied men find employment at neighbouring sheep-stations; the aged and infirm and a number of children are supported by the Board.

*La Perouse.*—Area, 7 acres. This Reserve, which has a frontage to Botany Bay, is the land upon which a number of Aborigines who earn a living by fishing, &c., have for a number of years been camped.

The Reserves at Sackville Reach (180 acres), Wauchope (18 acres), and Walgett (100 acres) have been revoked.

On the 31st December last there were 105 Reserves in different parts of the Colony, with a total area of 24,978 acres.

On a large number of these Reserves fair progress in the cultivation of the land continues to be made by the Aborigines. During the year several have been enclosed with good substantial fences, the Board supplying the necessary wire, and the Aborigines providing the posts and rails and carrying out the work. In a number of instances comfortable dwellings have also been erected, and other desirable improvements effected, and in this direction the Aborigines receive every encouragement and assistance from the Board.

Schools for the instruction of Aboriginal children are now established at Barrington, Brewarrina, Brungle, Cumerogunga, Forster, Grafton, Mulyan, Rollands Plains, Wallaga Lake, Warangesda, and Wauchope. The school at Cabbage Tree Island (Richmond River) has been temporarily closed owing to the diminished attendance of pupils. The reports received from time to time from officers of the Department of Public Instruction show that satisfactory progress continues to be made by the majority of the children.

The number of children now receiving instruction is 633, 607 at Public Schools and the schools mentioned above, and 26 privately. Every inducement is held out by the Board for the children to regularly attend, chiefly by gifts of suitable clothing and the issue of weekly rations.

The

The Board are gratified to be able to state that steady progress continues to be made at the Home for Aborigines near Grafton. There are now 41 full-bloods and 9 half-castes in regular residence, and visits are frequently paid to the settlement by numbers of Aborigines from different parts of the Clarence District. A great improvement is noticeable as regards industry, sobriety, cleanliness, and conduct generally. The aged and infirm have comfortable homes, and receive every attention from the manager and matron; the able-bodied work cheerfully in the cultivation of the land and effecting general improvements, and expend the greater part of the money so earned in the purchase of clothing and other necessaries. One death and three births occurred during the year, all full-bloods. The health generally has been good. The children regularly attend the school conducted at the Home, and are making very satisfactory progress. The value of the work effected during the year—clearing, tank-sinking, construction of causeway, erection of dwellings, &c., is estimated at £230. Twenty-nine acres are now under cultivation—maize, pumpkins, &c.—and an abundant supply of vegetables has been maintained throughout the year.

The number of Aborigines at the settlement at Brungle, Tumut District, on 31st December last was 90, of whom 41 were full-bloods. Seven births and 6 deaths occurred during the year. Sickness was rather prevalent during the last six months, pulmonary diseases and hydatids being the chief complaints. The average quarterly enrolment of children attending the school was 22, and the District Inspector under the Department of Public Instruction reports that since his previous visit satisfactory progress is to be noted. Cultivation has been carried on with, considering the untoward season, very fair results—wheat, 27 acres; hay, 3 acres; potatoes, 2 acres; and maize, 3½ acres.

In our report for 1894 we had to record that the amount of donations received by the Aborigines Protection Association during that year was the lowest received during any similar period since the formation of the Association. We regret having now to report that the total for 1895—£109 12s 10d.—shows a further decrease of £58 6s. 9d., and is altogether inadequate to meet even the Council's expenses at head-quarters.

Under the regulations prepared by the Board, and approved by the Chief Secretary early in the year (copy attached), good progress has been made at the three Aboriginal Stations at Cumerogunga, Warangesda, and Brewarrina. The Local Boards appointed at the time have been assiduous in their duties, and to their efforts in a large degree are attributable the present generally improved condition and happy and contented demeanour of the Aboriginal residents.

The amount expended on the three stations by the Treasury during the year, through the Board, was £2,797 3s. 10d.

In conclusion, we desire to record our appreciation of the valuable assistance cheerfully rendered to us by the several District Boards of Advice, and the members of the Police Force generally, in furthering our aims for the welfare of the Aborigines.

We have, &c.,

## APPENDIX I.

Reports of Local Boards.

Sir,

Local A.P. Board, Grafton, 10 February, 1896.

We have the honor to report that during the past year much valuable work has been done at the Home, and that the average population has been fairly well sustained.

In the way of permanent improvements, some 10 acres have been cleared, broken up, and planted. Thirty-two acres have been partially cleared, some stumping done, also ploughing. A tank has been excavated and two causeways besides other road work. Four houses have also been erected, and we estimate the total value of the improvements at over £200.

Some hay has been sold which realised (net) some £12 12s., which funds are being used for sundry expenses accounts in connection with farm implements, &c.

The stock at the Home suffered in condition with the severe winter and dry spring, but are now doing well with the good season, and we anticipate soon to make a considerable reduction in our accounts for butcher's meat.

The Board have approved of the Manager keeping the Aborigines occupied with gardening to a certain extent, so as not to compete with gardeners outside, but sufficient to supply the people, keep the children occupied, and any surplus to be sold to meet incidentals.

The health of the people has been very good, as will be seen by the Manager's report, and it is generally admitted that the living of our Aborigines has greatly improved the last two years.

The school has been well attended, and the children are progressing very well.

In concluding our report we have great pleasure in saying that both the Manager and Matron have worked industriously to make the Home a success. The work has been creditably performed by each, which must eventually be of great benefit to the inhabitants.

Yours, &amp;c.,

THOMAS PARKER, Chairman.

JAS. C. WILCOX, Member.

The Chairman of A. P. Board.

Manager's Report on the Home for Aborigines, Clarence River, for the year ended 31st December, 1895.

There are 49 Aborigines (full bloods—10 men, 11 women, and 19 children; half castes—5 men, 2 women, and 2 children) who consider that the Home is their regular dwelling place, and have houses, besides a number of people who frequently visit the Home and come here when they can get no work on the farms.

Permanent improvements effected during the year:—10 acres new forest land cleared of all but largest trees, stumped, ploughed, and planted with maize; 4 acres partially cleared and ploughed; timber burnt off 8 acres and ground ploughed; 20 acres felled and partly burnt off; other clearing and burning in paddock; tank excavated; two large causeways, and sundry road work; four houses erected.

*Cultivation.*—About 3 acres of winter potatoes were planted in the beginning of the year, the produce was issued to the Home people. Seven acres were ploughed for oats, the weather was too dry to plant them, therefore though the ground is poor it was planted with maize, and is now bearing enough to pay for the labour. Four acres of maize were planted in September on good land, 3 acres on medium land, and 8 acres on good land have since been planted, making a total of 22 acres under maize. The crop now shows from inferior to excellent, according to the quality of the land. One acre is planted with pumpkins, ½ acre with sweet potatoes, 1½ acres is under cucumbers, watermelons, and tomatoes, 1 acre is under feed stuff for stock, 3 acres are also under a catch crop of pic melons, making a total of 29 acres under crop. With moderately favourable weather, the net cash return for the season's work should not be less than £100.

*Vegetable Garden.*—The first crop was spoilt by the swamp backing in on it. The second gave the people as much cauliflower, cabbage, and some other vegetables as they chose to cut, and 2 tons of sweet potatoes. The Home people have now a fair supply of vegetables and tomatoes.

*Stock.*—The three Home horses are in good condition. The cattle have grown well, and increased in value. In a few weeks slaughtering for Home use may be recommended, and continued the greater part of the year. Four calves were dropped during the season, and are doing well.

*Health of Aborigines.*—One death occurred from consumption, one child was treated for inflammation of the lungs, all the children who had not previously had whooping-cough had it and recovered. General health good.

*Deaths.*—One; full-blood; female, aged 18 years.

*Births.*—One boy, 2 girls; full-blood.

Conduct

*Conduct of Aborigines.*—During the year, one man came home under the influence of liquor and commenced a fight with his wife. This was immediately stopped, and although there have been 186 Aborigines here at one time, this is the only case of drunkenness or fighting at the Home during the twelve months. For morality, they could set a pattern to some of the white inhabitants of the district.

The men have worked cheerfully, and considering their race and that the greater number of aborigines that are together the less they will do in proportion, they have done very well. At least three-fourths of their wages have been carefully spent in clothes and necessaries, and very little, indeed, of the money has gone for liquor. More than 182 articles of clothing have been made by the women from material purchased from Home wages.

*School.*—The children have attended regularly. They have made fair progress, and the enrolment has increased.

*General Remarks.*—The land and roads have been greatly improved; the preliminary work is so far forward that an annual and increasing remunerative return should be produced. The Home people have improved in industry, sobriety, and cleanliness, and the Home has the confidence of the Aborigines of the district as the best place for Aborigines.

F. C. CURREY,  
Manager.

Sir,

Aborigines Protectorate, Local Board, Warangesda, 25 January, 1896.

In compliance with your request, I hereby furnish you with a brief report upon what has been done at Warangesda during the past year.

A Local Board was appointed in the early part of the year, and it is felt on all sides that its existence has been productive of much good.

Owing to the long continued drought the wheat crop proved a failure, but between 30 and 40 tons of excellent hay have been gathered and stacked.

Fifty acres of agricultural land have been cleared and grubbed, which the Local Board desire to see put under cultivation. In addition to this, a considerable area has been cleared of suckers.

When the Local Board took office they found much dissatisfaction existing among the residents owing to the irregular manner in which rations arrived at the station, but on strong representations being made to the Board this difficulty was entirely removed, and the people are happier and more contented now than ever they have been.

Changes took place in the staff of officers during the year. Mrs. Swift, Matron of the dormitory, died from consumption, and Miss Parsons was appointed to succeed her. Miss Parsons has proved herself eminently qualified for the duties. Mr. Pridham succeeded Mr. Harris as Manager, and under his vigorous and kindly rule everything is going on in a thoroughly satisfactory manner. Mrs. Pridham is doing much useful work.

The conduct of the residents has been fairly satisfactory, and their health has been good.

I am, &c.,

G. R. F. NOBBS,  
Hon. Secretary.

The Secretary A.P. Board, Sydney.

#### Report, Cumeroogunga Aboriginal Station, 1895..

Aborigines Protectorate, Local Board, Cumeroogunga, 5 February, 1896.

*The Village.*—Neat and tidy whenever the Local Board visited the station.

*Houses.*—Kept fairly clean.

*Dormitory.*—Always in order.

*Store.*—Everything systematically arranged.

*Water Supply.*—Large tank has been erected to supply village with water.

*Stock.*—In poor condition, owing to the scarcity of feed.

*Farm Blocks.*—Crops, owing to the dry season, were very small. The men, however, got a small return, which we regret some of them did not put to a proper use.

*Land.*—The main portion of the land is being cleared, which, when finished, will be a great improvement.

*General Conduct.*—Fairly improved. A few, however, have to be punished for either drink or immorality.

*Change of Management.*—So far, very satisfactory.

C. F. DAVIS,  
Hon. Secretary.

#### APPENDIX J.

#### Regulations for the Management of Aboriginal Stations at Cumeroogunga, Warangesda, and Brewarrina.

Office of Board for Protection of Aborigines, 105, Phillip-street, Sydney, 1st February, 1895.

The following Regulations for the management of the Aboriginal Stations at Cumeroogunga, Warangesda, and Brewarrina, have been made by the Board for the Protection of Aborigines, and approved by the Colonial Secretary.

A. BERCKELMAN,  
Secretary.

#### *The Board for the Protection of Aborigines.*

This Board is appointed by the Government to administer the funds appropriated by Parliament for the Aborigines, and is hereinafter called "The Board."

#### *The Aborigines Protection Association.*

This Association is supported by voluntary contributions, and is represented by and hereinafter called "The Council." The Board will avail itself of the assistance of the Council in the management of the Aboriginal Stations at Cumeroogunga, Warangesda, and Brewarrina, and in the appropriation of the funds provided by Parliament for the support of the Aborigines located thereon, with the voluntary assistance of Local Boards.

#### *Local Boards.*

Local Boards to consist of not more than five members, of whom three shall form a quorum, shall be appointed by the Board for each station. The superintendent of Police in whose district the station is situated, shall be *ex officio* a member.

Such Local Boards respectively shall:—

Inspect the stations not less often than once a month, and furnish the Board with a brief report on the same, together with desirable suggestions.

Inquire into all complaints affecting the management of the stations.

Advise with the managers of the stations as to discipline, work to be carried out, and generally as to the management.

To forward to the Board any reports or suggestions brought under notice by the Manager, with recommendations thereon.

To countersign all requisitions for stores, or applications for expenditure, other than such as is provided for under the heading "Articles for free distribution to Aborigines," with explanations.

#### *Manager's and Overseer's Appointment and Duties.*

The Manager and Overseer shall be nominated by the Council, but no appointment shall be made until the approval of the Board has been obtained.

The duties of the Manager shall be:—

To have the general management and control of all persons on the station, buildings, stock, and other property, and to devote all his energies to the moral and social welfare of the Aborigines resident on the station.

To report, in a prescribed form, at the end of each month, to the Council, for the information of the Board, as to the general condition of the station, i.e., the number of Aborigines located thereon, and the daily average for the month, distinguishing in all cases the sexes, and the full-bloods from the half-castes; the number of children attending the school; the nature and extent of the work done during the month, and what work it is proposed to go on with; the number of births and deaths during the month; information as to the general health of the Aborigines; and any other matters of interest.

To discourage any further introduction of half-castes, which should be allowed only on the recommendation of the Local Board.

To keep a diary of all occurrences at the station, together with the usual statistics, and submit the same, when required, to the Local Board for inspection, and to Members of the Board or Council on visit.

To

- To exercise supervision over the Aborigines at the station, to restrain them from leaving the station and visiting public-houses, and to endeavour to see that they do not squander their earnings.
- To be accountable for all rations, clothing, medical comforts, &c., and their distribution as authorised.
- To keep daily accounts of all moneys and supplies received and disposed of, and to furnish to the Council monthly abstracts of the same, for the Board's and Council's information.
- To forward all moneys received from the sale of wool, or produce, &c., to the Council at the end of each month, accompanied by a statement showing the various items.
- To consult the Local Board as to the supply of stores and materials, and on any matters affecting discipline at the stations, and to seek their advice on matters generally.
- To submit requisitions for supplies of rations, clothing, &c., monthly through the Local Board.
- To submit to the Council, with the endorsement of the Local Board, all applications by Aborigines at the stations who desire to occupy blocks of land on the Aboriginal Stations, to be cultivated by them to earn a livelihood thereon for themselves and their families; and to report fully as to the locality and suitability of the land applied for, and the character of the applicant. Such applications to be submitted to the Board before final decision by the Council.

The Manager and Overseer must assist in and supervise the erection of and repairs to buildings, fencing, &c., and the cultivation of the land, and do their best to make the Aborigines as comfortable and contented as possible, and to take an interest in their work and recreations.

The Manager must understand that he will be held personally liable for any expenditure incurred without authority.

Application for leave by the Manager or Overseer must be submitted to the Council through the Local Board, the Board to be promptly informed of any such leave granted.

All correspondence must be promptly attended to and recorded for inspection.

As it is impossible to form rules to meet every contingency that may arise, the Manager may use his own judgment in any case of emergency or not herein provided for, but the management must be firm and systematic, regularity of hours being strictly observed. The Local Board should be consulted when practicable.

#### *Matron's Duties.*

The Matron shall have special oversight of all the women, with special charge of girls and young children; shall daily visit the dwellings of the married and unmarried women, and give instructions in cooking, washing, sewing, and other domestic duties, and shall be responsible to the Manager for the cleanliness of the women and children, together with the buildings they occupy.

#### *Officers' Rations.*

Rations, according to the under-mentioned scale, will in future be issued to the Managers and Overseers (where not Aborigines) of the stations:—Full weekly ration for the Manager and his wife: Flour, 16 lb.; tea,  $\frac{1}{2}$  lb.; sugar, 4 lb.; meat, 14 lb.; potatoes, 14 lb.; butter, 1 lb., if procurable.

#### *Articles for Free Distribution to Aborigines.*

Rations and clothing for free distribution to the Aborigines may be purchased by the Council without any special authority from the Board, but must be confined to the under-mentioned articles:—

*Rations*—Flour, tea, sugar, tobacco, salt, soap, oatmeal, and rice.

*Clothing*—Moleskin trousers, crimean shirts, knicker suits, wincey, flannel, and calico.

A supply of medicines, and such *medical comforts* as rice, sago, arrowroot, oatmeal, and maizena, shall be kept in stock and issued to any Aborigines on the station who may be sick or otherwise in need of the same, without any payment being demanded.

All aged, infirm, or sick Aborigines on the stations, as well as any children depending on them, shall be provided with rations at the expense of the Government, a full weekly ration to be:—Flour, 8 lb.; sugar, 2 lb.; tea,  $\frac{1}{4}$  lb.; meat, 7 lb.; tobacco,  $\frac{1}{2}$  lb. Salt and soap to be also issued as required. Adults at discretion of Manager to receive up to full rations, children under 10 and over 2 years old half rations.

Rations may also be issued in cases of emergency or distress, where able-bodied men or women are destitute and unable to obtain employment, care being taken to see that the regulation is not abused. Encouragement should be given to the men to go out and obtain employment from time to time on station or general country work.

All children, especially those attending school, should be cleanly and decently clad, and attendance at school encouraged and judiciously enforced.

Authority for the purchase of ration sheep must be obtained from the Board. The application should be forwarded through the Local Board, and should give full particulars as to number of sheep required, price, by whom offered for sale, &c. An account must be kept of the use made of them, or how disposed of.

No articles except rations, clothing, medical comforts, and medicine, must be purchased without first obtaining the approval of the Board.

#### *Sale Store Account.*

All goods, according to an approved list, required for sale from the stores on the stations to be purchased by the Council from its own funds, and an entirely separate account, to be called "Sale Store Account," to be kept.

All charges for the freight of such goods to be paid by the Council, and not by the Government as heretofore.

All such goods to be kept in a separate part of the store, away from the articles purchased by the Government for free distribution to the Aborigines.

All proceeds of sale of such articles to be forwarded by the Managers of the stations to the Council at the end of each month. The re-expenditure of the amount on articles for sale to be left in the hands of the Council, who will deal with all requisitions for such goods, but at the end of each quarter a debtor and creditor statement must be furnished the Board by the Council.

#### *Proceeds of Sale of Stock and of Wool and other Produce.*

All money received from the sale of sheep, cattle, and other stock, from the sale of wool, sheepskins, and agricultural produce, or for agistment, must be placed to a separate account in an authorised Bank to the credit of the Council. This account is only to be operated upon with the approval of the Board.

Quarterly debtor and creditor statements, under the heading "Stock and Produce Account," must be furnished the Board by the Council.

#### *Donations to Association.*

A quarterly detailed debtor and creditor statement, showing the donations received and the expenditure thereof, in payment of salaries, commission, office expenses, &c., to be furnished the Board by the Council.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

STATE CHILDREN RELIEF ACT.

(PETITION FROM A. M. TAIT, MODERATOR OF THE GENERAL ASSEMBLY OF THE PRESBYTERIAN CHURCH OF NEW SOUTH WALES, PRAYING THE HOUSE TO SO AMEND THE STATE CHILDREN RELIEF ACT AS TO ENABLE BOARDED-OUT CHILDREN TO BE PLACED IN CHARGE OF THEIR OWN MOTHERS.)

---

*Received by the Legislative Assembly, 21 July, 1896.*

---

To the Honorable the Legislative Assembly in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

That your Petitioners regard it as a serious defect in the otherwise excellent State Children's Relief Act that no action has been taken under the provisions of the Act for boarding-out fatherless children to their own widowed mothers where it is clearly shown they are worthy and capable, but unable to pay for their maintenance.

To deprive such mothers who are left destitute of the care of their own children and hand them over to strangers is, in the opinion of your Petitioners, unnatural and cruel, inasmuch as it must be apparent that as a rule no one is so competent and fit for the charge of children as their own mothers.

We therefore pray your Honorable House to so amend the present Act as to enable the administrators of this Act to place children, when they think it desirable, in charge of their own mothers.

And your Petitioners, as in duty bound, will ever pray.

A. M. TAIT,

Moderator of the General Assembly of the Presbyterian Church of New South Wales.

---

Similar Petitions were received:—

- On 21 July, from William G. Taylor, President, Wesleyan Conference.
- „ from His Eminence, Cardinal Moran, Archbishop of Sydney.
- „ from the Office Bearers of the Benevolent Society.
- „ from the President and Honorary Secretary, Baptist Union of New South Wales.
- On 22 July, from W. J. L. Closs, Chairman, Congregational Union of New South Wales.

# ANNUAL REPORT.

To The Honorable Sydney Smith, Esq., M.P., Minister for Mines and Agriculture,  
&c., &c.

Sir,

I do myself the honor to submit the following report upon the working of that division of the Department under your control, which deals with mining interests, also the progress of mining and the results obtained during the year 1895.

The following statement conveys some idea of the clerical work of the Department during the year :—

STATEMENT of the Number of Papers registered and Letters despatched by the several Branches of the Department of Mines and Agriculture.

	Papers Registered.		Letters Written.	
	1894.	1895.	1894.	1895.
Mines proper.....	21,297	*62,799	13,112	†32,647

\* Including Agriculture, Forestry, and Public Watering Places papers.  
letters. † Including forms and recommendations to fossickers for passes.

† Including Agriculture, Forestry, and Public Watering Places

The Mining on Private Lands Act came into operation on the 18th June, 1894, and since that date its provisions have been fairly well taken advantage of, although it cannot be stated that any very important discovery has been made on any of the private lands thrown open by this Act.

The number of applications for Special Leases received under section 25 was 138, comprising an area of 2,335 acres 0 rood 34 perches. Of that number 16, embracing an area of 229 acres, were refused.

The number of ordinary Leases applied for during the year was 205, comprising an area of 2,479 acres 3 roods 24 perches; but 55 of these, comprising an area of 574 acres 2 roods, were refused. A very large area of private land is occupied by the miners under authorities to search granted by the Wardens, under agreement with the owners (section 33) or under Prospecting Licenses, but it is difficult to arrive at the extent of the area so occupied.

The only minerals brought under the Mining on Private Lands Act are gold, silver, lead, tin, and antimony, and the areas comprised in the applications to lease for the purpose of mining for these minerals are as follow :—

Gold.			Silver.	Lead.	Tin.	Silver and Lead.						
a.	r.	p.	acres.	acres.	a.	r.	p.	acres.				
3,671	3	18	...	50	...	62	...	237	1	0	...	20

The above does not include an aggregate area of 684 acres which has been applied for as water races, dams, machine sites, &c., &c.

This Act has had the effect of stopping the issue of Permits to search on private land for the above-named minerals, viz., gold, silver, lead, tin, and antimony, and of cancelling all the Permits issued before the Act came into force.

Another effect is the loss of royalties payable under Permits granted under section 7 of the Crown Lands Act of 1884.

With regard to the acquisition of Crown lands for mining purposes:—

The number of applications made to lease Crown lands for mining purposes during the year was 1,429, or 672 more than the number for 1894. Of the 1,429 applications so made 1,246 were for auriferous land comprising an area of 7,655 acres 0 rood 26 perches; and 183 were for mineral land, embracing an area of 12,226 acres 0 rood 25 perches.

The number of applications dealt with during the year was 906, which also shows an increase of 140 as compared with 1894.

No effort is spared to deal speedily with these applications, while great care has to be exercised to guard against the creation of conflicting titles.

Of the 906 applications dealt with during the year, 779 were for gold-mining leases, comprising an area of over 4,822 acres, and 127 were for mineral leases, embracing an area of 8,213 acres.

The area of auriferous land applied for in 1895 was more by 4,731 acres than in 1894, and the mineral land 2,608 acres 2 roods 18 perches more during the same period.

#### SCHEDULE I.

TABLE showing the Land applied for to be leased during 1895 and the Minerals to be mined:—

Minerals.			Minerals.		
	a.	r. p.		a.	r. p.
Gold.....	7,655	0 26	Cinnabar.....	40	0 0
Silver.....	1,474	0 30	Jasper.....	12	0 0
Silver and lead.....	1,091	3 30	Ironstone.....	20	0 0
Silver, lead, and ironstone.....	608	0 0	Manganese.....	45	0 33
Silver, lead, and limestone.....	40	0 0	Limestone.....	20	0 0
Silver and ironstone.....	40	0 0	Graphite.....	80	0 0
Silver, lead, copper, and iron.....	261	2 5	Turquoise.....	10	0 0
Silver, lead, zinc, and copper.....	80	0 0	Opal.....	44	0 0
Silver, lead, and copper.....	140	0 0	Platinum.....	40	0 0
Silver and bismuth.....	63	0 0	Diamonds.....	260	0 0
Tin.....	245	2 0	Diamonds and tin.....	169	0 0
Tin and wolfram.....	179	0 0	Pigments.....	90	0 0
Tin, silver, and lead.....	80	0 0	Coal.....	2,288	0 0
Copper and iron.....	40	0 0	Coal and Shale.....	4,118	3 7
Copper and silver.....	80	0 0	Shale.....	320	0 0
Copper.....	80	0 0			
Antimony.....	120	0 0			
Chrome iron.....	40	0 0			
			Total area.....	19,911	1 11

As shown by the foregoing table, the aggregate area applied for is 7,339 acres 2 roods 18 perches more than that applied for in 1894.

The increase occurs principally in gold, silver, and silver and lead, silver lead and ironstone, coal, and antimony, but a considerable decrease occurs in coal and shale, and tin.

#### AREA held under application to lease on 31st December, 1895.

	a.	r. p.		a.	r. p.
Gold.....	4,505	0 0	Shale.....	320	0 0
Coal.....	250	0 0	Graphite.....	80	0 0
Coal and shale.....	4,323	0 0	Bismuth.....	20	0 0
Antimony.....	40	0 0	Pigments.....	80	0 0
Tin.....	141	0 0	Cinnabar.....	40	0 0
Tin and diamonds.....	80	0 0	Ironstone.....	40	0 0
Silver.....	984	0 30	Copper.....	120	0 0
Silver and galena.....	40	0 0	Diamonds.....	360	0 0
Silver and copper.....	88	0 0	Platinum.....	40	0 0
Silver and lead.....	771	2 0	Tin, silver, and lead.....	80	0 0
Silver and bismuth.....	63	0 0	Silver, lead, and ironstone.....	428	0 0
Silver, bismuth, and cerium.....	69	2 0	Silver, lead, zinc, and copper.....	80	0 0
Silver, copper, and manganese.....	40	0 0	Opal.....	4	0 0
Silver, copper, and lead.....	140	0 0			
Silver lead, copper, and iron.....	263	0 35			
Manganese.....	45	0 35			
				13,535	2 20

The area of Crown lands held under application to lease on the 31st December, 1895, shows a marked increase, the area being 13,535 acres 2 roods 20 perches, as against 5,764 acres 1 rood 0 perches so held the previous year. The principal increase is in coal and shale, gold and silver.

THE

The following table shows the area of Crown lands held under lease and the area to be mined :—

There is a slight decrease in the foregoing table due to cancellations made during the year for non-observance of the labour conditions, but principally for non-payment of rent due. From the following figures it will be seen that the leases so dealt with embrace an area of over 13,080 acres :—

Mineral Leases—		a.	r.	p.	a.	r.	p.
For non-work .....	40	1,167	1	23			
For non-payment of rent .....	127	8,904	3	12			
Surrendered .....	1	40	1	27			
	168	10,112	2	22			
Gold Leases—		a.	r.	p.			
For non-work .....	133	848	0	31½			
For non-payment of rent .....	308	2,078	0	39			
Surrendered .....	4	41	3	16			
	445	2,968	1	9½			
	613	13,080	3	31½			

The number of applications received for permits, or authorities, under sections 27 and 23 of the Mining Act, 1874, to mine on or under reserves during last year was 270—an increase of 10 on the number received during 1894. The number of applications dealt with was 182—an increase of 42 on the number so dealt with in 1894.

As will be seen from the following table the area of the land embraced by the permits and authorities granted in 1895 is less by 16,456 acres 0 roods 3 perches than the area so granted during the previous year. The principal decrease is in coal and shale, which was less by 15,634 acres, and in coal, which

which decreased by 7,108 acres. The large decrease under the headings of "Coal and Shale" and "Coal," as compared with the previous year, may be accounted for by the fact that a very large area of land was taken up on the striking of a payable seam of coal at Cremorne, near Sydney, by the Government diamond drill.

Table showing area of reserved land comprised in permits and authorities granted during 1895 and the minerals to be mined thereunder:—

	a.	r.	p.
Coal .....	2,749	3	36
Coal and shale.....	5,986	2	0
Shale.....	5,920	0	0
Tin.....	60	3	19
Chrome.....	164	2	0
Antimony.....	39	0	0
Gold.....	117	0	33
Gold, silver, and copper.....	1	3	0
	<hr/>		
	15,039	3	8

Table showing area of reserved lands comprised in authorities sections (27 and 28), issued prior to 1895 in force:—

	a.	r.	p.
Coal .....	17,792	1	31
Coal and shale.....	1,317	2	8
Shale.....	659	2	32
Limestone.....	10	0	0

Copper and cobalt.....	4	0	28
	<hr/>		
	29,585	3	17

The number of applications for authorities under the Mining Act of 1889 to dig and search for gold and other minerals was 360, which is 328 less than the number received the previous year. The number dealt with was only 169 as compared with 713, the number dealt with in 1894—a decrease of 544. The number of authorities in force at the end of the year was 195—a decrease of 116 on the previous year. The number of applications for permits under section 7 of the Crown Lands Act of 1884, to win and remove minerals reserved in the Crown grants of private lands was only 15 as compared with 160 the previous year. Of these 15 applications, 10 were granted and 5 refused. The number in force at the 31st December was 195.

The foregoing table, &c., embraces all lands held for mining purposes, other than alienated lands which do not come under the provisions of the Mining on Private Lands Act, and freehold and Crown lands held in virtue of miners' rights and mineral licenses. The area comprised in these exceptions is considerable. The royalty received during 1895 was, from alienated land £402 8s. 2d., and from Crown lands £13,818 7s. 4d. Under the Mining on Private Lands Act, 1894, the Crown receives no royalty from gold, silver, tin, and antimony, won from private lands.

The return showing the gold and mineral leases and permits under sections 27 and 28 of the Mining Act is still being published half-yearly instead of quarterly, as in former years, and no complaints have been received so far with regard to the alteration. This return gives information which should be of great value to the mining community generally, and more especially to the working miners.

## PROSPECTING BOARD.

The Prospecting Board during the year 1895 visited the following places, amongst others, for the purpose of inspecting and inquiring into applications received for assistance from the Vote:—

Adaminaby	Byrock	Grenfell	Nundle
Adelong	Byron Bay	Gulgong	Oberon
Albury	Cadia	Gundagai	O'Connell
Alectown	Onloola	Harden	Pambula
Araduen	Canadian Lead	Hargraves	Parkes
Armidale	Canowindra	Hazelgrove	Peak Hill
Back Creek	Captain's Flat	Hill End	Rockley
Bald Nob	Carcoar	Hillgrove	Rylstone
Ballina	Cargo	Hillston	Sebastopol
Barmedman	Carino	Home Rule	Sofala
Barraba	Clear Creek	Inverell	Stockiabungul
Bateman's Bay	Cobar	Jenabacumbene	Tamworth
Batlow	Cobargo	Jindabyne	Taranna
Bear Hill	Cobbora	Junee	Tareutta
Bega	Colinton	Kerr's Creek	Tenterfield
Bell's Creek	Condobolin	Linckilns	Tin
Bermagui	Coolac	Lionsville	Tingha
Bethungra	Coolongolook	Lismore	Trundle
Bingara	Cooma	Lucknow	Trunkey Creek
Blayney	Copeland	Macksville	Tuena
Bombala	Corowa	Marulan	Tumut
Boonaroo-Boonoo	Cowra	Michelago	Uralla
Boro	Crookwell	Milparinka	Wagga Wagga
Bowling-alley Point	Cudal	Mogo	Walbundrie
Bowring	Cudgegong	Molong	Walcha
Bowraville	Dalmorton	Moruya	Wangat
Box Ridge	Davisville	Mossiel	Welcome Reef
Braidwood	Deepwater	Mount Hope	Wattle Flat
Bredbo	Delegate	Mount M Donald	White Cliffs
Brimbramalls	Drake	Murrumbateman	Wideyer
Brown's Creek	Dungog	Murrurundi	Woolgoolga
Bulli	Eden	Muttama	Wyalong
Bundarra	Emmaville	Nadgingomar	Wyndham
Bungendore	Euabalong	Nana Creek	Yass
Bungonia	Forbes	Nelligen	Young
Burruga	Forest Reef	Nerriga	
Burrowa	Gulgui	Newbridge	
Byng	Glen Innes	Nine-mile	

There was a large increase in the number of applications received for aid, the number being 1,843, as compared with 1,068 received during 1894. The following table will show how they were disposed of:—

	1894.	1895.
Aid granted in .....	397 cases	620 cases.
Aid refused in .....	584 „	818 „
Applications abandoned..	27 „	42 „
Applications not dealt with .....	60 „	363 „
Total.....	1,068 „	1,843 „

The following extracts are taken from reports by Wardens and other officers instructed to measure up the work of parties in receipt of aid from the 1895-6 Prospecting Vote:—

1. W. Wakelin and Party were aided to drive from their 40-foot shaft on Tucker's Hill, near Hargraves, and were successful in striking a vein about 2 feet wide, the first crushing of 5 tons from which yielded 31 oz. 2 dwt. of retorted gold. The party has now taken up a 3-acre lease.

2. Rathbone, Delore, and Colson were aided to continue their shaft on the Queen of Bulby Claim, near Coolongolook. After working without success for some time, they at last succeeded in striking the reef 3 feet thick, the stone showing splendid specimens of gold. The claim has been taken up by a syndicate, with a view of carrying on extensive operations, and a large area in the vicinity of the claim has been pegged out.

3. Adam Stenberg and Charles Remfleish were aided to prospect for alluvial gold by sinking a series of shafts on Ford's Creek Station, 12 miles from Cobbora. After doing a considerable amount of work, payable gold was ultimately discovered at a depth of 10 feet, the wash being 2 feet thick, ten loads of which yielded 4 oz. 2 dwt. of coarse, heavy gold. A large number of men are prospecting between the new find and the Cobbora Diggings, a distance of about 6 miles.

4. Walter Booth and Party were aided to continue shaft on Mount Morgan, *via* Coolac, to a total depth of 75 feet. At the 45-foot level the party struck some very good stone, which widened out to 2 feet at the 57-foot level. Eighty bags, containing 4 tons 15 cwt., were sent to the Clyde Works, Sydney, for treatment, which returned 14 oz. 11 dwt. free gold. The last report from this mine states that the reef is much wider at the 80-foot level, and the returns are expected to be much better than the above.

5. C. Butler and Party, of the Dust-hole Claim, near the Junee Reefs, reported on the 16th May that the reef struck in the 70-foot shaft (as stated in last year's report) had widened out considerably at the 95-foot level, and that a parcel of 4 tons sent to Sebastopol for treatment had yielded 16 oz. of gold. Several parties have started sinking with a view of striking this reef, with every prospect of success.

6. R. Stoncham and Party received aid to prospect for alluvial gold to the north-west of Milparinka. Struck wash at 130 feet, resting on a slate bottom. The party have a good show of wash-dirt, which yields about half a dwt. of gold to the dish. The party are starting to drive to the dip, when the prospects are likely to improve.

7. Field and Boehme were aided to drive from the bottom of their shaft on the Trickett's line of reef at Stuart Town, have been successful in striking some very good payable stone. This is looked upon as a valuable property and is now under offer for a considerable sum.

8. The Angus Gold-mining Co., were aided to further test the Lucky Hit Mine, near Tuena, and were successful in striking some very rich stone.

9. W. H. Campbell, Whalen's Hill, Wattle Flat, received aid in April, 1894, to continue his 35 feet shaft a further depth of 100 feet. When that level was reached the indications were so promising that the Board in May, 1895, recommended that further assistance be granted to continue the shaft. At 225 feet the reef was struck carrying very good gold and yielding specimens here and there. From the 200-foot level to bottom the reef averages from 1 to 3 feet in thickness, consisting of ferruginous quartz highly mineralised.

10. Henry McCudden, Bateman's Hill, 5 miles east from Wattle Flat, was aided to sink a shaft on the reef to a depth of 100 feet. At 50 feet the vein widened out to 7 inches, and when the 100 feet level was reached it was 2 feet thick showing good gold. A rich shoot of gold was struck at the 72 feet level, and several crushings taken out have averaged 2 oz. of gold per ton.

11. Hill, Scott, and Party, prospecting on the Sawyer's line of reef, 3 miles north of Hargraves, were aided to continue driving from the 230 feet cross-cut. When the drive had reached 220 feet, the officer at Hargraves reported on it as follows:—"The reef is now looking well and the party are erecting a 5-stamper battery, and they hope to make it a profitable investment. There is a splendid body of quartz showing colours, with the reef getting wider and it is now over 2 feet. There is no doubt but the reef is a permanent one, and likely to be worked with profit for a great many years to come.

12. Charles Harrigan was aided to test a run of alluvial ground situated near Scrub Yards, struck bottom at 98 feet. The wash was 9 inches thick and yielded 2 dwts. per load. The party propose continuing this shaft as there is a doubt whether they have yet reached the true bottom.

13. Martin Hennessy received aid to continue prospecting operations 9 miles south-east of the Overflow Homestead, and 35 miles easterly of Nymagee. Struck a very large lode which assayed—1 oz. of gold per ton; 5 oz. of silver per ton; lead, 8 per cent; and copper, 3 per cent. The extent of the deposit has not yet been proved, but it must be considerable, as four shafts have been sunk on it over a mile of ground, and it can be traced on the surface for miles. A large area of land has been pegged out along the line of the lode, and prospecting work is being carried on vigorously.

14. Messrs. Rafferty, Kilday, and Party were aided to continue their shaft on the Zulu Reef at Tiltbuster, 7 miles northerly from Armidale. At 54 feet the reef was struck, and on a trial crushing of 7 tons 17 cwt. being taken from that level and treated yielded 9 oz. 17 dwt. of smelted gold. The reef averages 9 inches wide, and is not troubled with water at that level.

15. Harry Thomas and Party, of the Pioneer Claim, Mount Carrington, near Drake, have been continuing their shaft under aid from the Prospecting Vote. At 130 feet some very rich stone was struck in the shaft, the reef being over 1 foot wide, and promising well. Some of the specimens from this find were richer than any yet seen on the field.

Taken as a whole, the discoveries under the Vote during the year are satisfactory. Many of the finds are made by poor parties of working miners who have great difficulty in securing the capital necessary for development. It often happens also that large areas of the adjoining land are taken up by speculators and others who have no intention of testing the land themselves, but hold in the hope of disposing of their title at a profit should indications in the prospectors' claim warrant such. This practice often prevents the value of a find being proved at once, as it should be, and locks up the land to legitimate miners who would go to work at once. On the Board's recommendation the Minister approved of one of the largest Government diamond drills being sent to the Forest Reefs district to prove the deep alluvial leads in that locality. Should the operations prove successful a great impetus will be given to deep alluvial mining in this promising district.

Several parcels of ore have been brought down to Sydney by the Board during the year for treatment, as they considered that in some cases it was better to ascertain the value and character of a deposit before spending money in testing it at a depth.

The ore was treated under the supervision of Mr. James Taylor, the Government Metallurgist, who readily rendered the Board all the service possible.

#### THE "FOSSICKING" BOARD.

This Board was formed to assist the Government Labour Bureau with advice in drafting the unemployed of Sydney to suitable localities within the Colony where it was considered they had a chance of earning a living by fossicking on the old gold-fields. The men were supplied with a railway ticket to the station nearest their destination, and a miner's right, on credit; and it is fair to state that a fair percentage of the men have seen their way to refund the cost of such to the Government. It is also an indication that the men appreciate the assistance rendered, and the fact that many of them removed their families to the gold-fields would seem to show that they have improved their positions by proceeding there. The number of men recommended for passes in 1894 was 9,572, and from 1st January to 30th June, 1895, 4,081.

The decided increase in the yield of gold within this Colony during the past four years is no doubt partly due to the work of this large body of men throughout the Colony, who, from all reports received, were able to at least earn rations, and some of the more industrious, good wages. The following table will show the quantity and value of gold won in New South Wales:—

	oz	Value
1892 .....	156,870	£569,178
1893 .....	179,238	651,286
1894 .....	324,787	1,156,717
1895 .....	360,165	1,315,920

Many of the men whom circumstances compelled to apply for a miner's right on credit were able to renew their rights at the beginning of 1895 at their own cost.

The

## GEOLOGICAL SURVEY.

The Government Geologist's time has been divided between practical work in the field and the supervision in the office of the general work of the Branch under his control. In February he was engaged in an inspection of the then recently-discovered Bulgandra reefs, near Culcairn, and he subsequently reported thereon. He made two visits to the Garangula gold-field, and furnished reports in connection with the proposed resumption of the land by the Government.

In conjunction with Professor David, he made a geological survey of the Talbragar fish-beds, the results of which were subsequently published as an introduction to Mr. A. S. Woodward's memoir on "The Fossil Fishes of the Talbragar Beds." This work is of special importance as establishing the occurrence of rocks of Jurassic age in New South Wales.

In May, Mr. Pittman made an inspection of the Appletree Flat gold-field, and furnished a report dealing with the reduction of the gold-field reserve.

In September he was engaged on a geological examination of the country to the east of the road from Narrabri to Moree. The information gained during this examination was of considerable importance in connection with the question of artesian water. A report was furnished showing that the Moree and Coonamble bores (which yielded excellent supplies of artesian water) were not, as had previously been supposed, in the Lower Cretaceous rocks, but in sandstones and shales of the same age as the Clarence River Coal Measures and the Ipswich Coal Measures of Queensland. Mr. Pittman points out that in view of this discovery it is evident that the area of our artesian water-bearing country is much larger than was previously supposed, as these Triassic (Ipswich) coal measures extend a considerable distance to the eastward of the eastern boundary of the Lower Cretaceous basin, as hitherto shown on the geological map of the Colony.

In October, Mr. Pittman reported on the probability of obtaining artesian water on the Clarence River, and he subsequently visited Queensland for the purpose of studying the Ipswich coal measures and the Blythesdale braystones in the type districts. He was then engaged until nearly the end of the year in examining the country north and north-west of Inverell, and in mapping the eastern boundary of the newly-discovered artesian basin.

He also, while in that district, made a geological examination of the Ashford coal-field, and reports that although the field is narrow and the seam is inclined at a high angle, in view of the great thickness of the seam (about 27 feet) and the excellent character of the coal for steam or smelting purposes, the deposit will be a valuable one in the future. The Government Geologist also examined and reported upon a recently-discovered deposit of diamondiferous drift, near Boggy Camp, about 17 miles south-west of Inverell. The diamonds in the Prospectors' claim appear to be numerous, though in size and quality they do not differ, to any appreciable extent, from those found at Bingara.

During the year the Geological Surveyors' time was, to a considerable extent, devoted to Prospecting Vote work, nevertheless some important reports were submitted. The following were furnished by Mr. J. E. Carne:—

1. Further report on the chrome deposits of Gundagai and Tumut Districts.
2. Report on Toolong and Bogong Gold-fields.
3. Report on the Bywong Gold-field.
4. Report on auriferous deposit at Batlow, near Adelong.
5. Report on Big Hill reefs, near Bateman's Bay.
6. Report on a deposit of cinnabar near Lionsville.
7. Report on the Coramba and Bucca Creek reefs.
8. Report on the auriferous beach sands of the Esk River and Jerusalem Creek, Clarence and Richmond District.

Mr. Geo. A. Stonier resigned his position on the 31st October.

Mr. J. B. Jacquet furnished reports upon:—

1. The geology of the country around Melrose.
2. The Drysdale and Mount Billagoes Gold-field.
3. The auriferous drifts of the Talbragar River.
4. The chrome deposits at Berthong.
5. The Mullengandra Gold-field.
6. An auriferous reef near Woodstock.
7. The platinum deposits at Fifield.
8. An auriferous deposit at Specimen Hill, near Cowra.

Collections of minerals and fossils have been supplied to eighteen different institutions during the year, and no less than 4,816 samples have been assayed or analysed.

## MINING SURVEYORS, &amp;c.

The number of mining surveys made during last year was 1,163; of these 660 were gold leases on Crown lands, 46 mineral leases, 181 mining tenements, 38 mining permits, and 238 gold leases on private property; 900 were made by the salaried and 263 by non-salaried surveyors. This a great advance on the returns for 1894, when the total number of surveys was 704, of which 458 were performed by salaried and the balance by non-salaried surveyors. This result is owing partly to the fact that one of the surveyors who was disabled during the whole of 1894 was again on duty in 1895, and partly to the fact that the surveyor to whom the colliery surveys are entrusted was during the past year able to give more of his time to the ordinary survey work.

## CHARTING.

The total number of gold and mineral applications dealt with during the year was 855 against 663 during 1894; the number of 27th and 28th section applications dealt with was 189 against 115 during the previous year. The number of applications in hand at the end of the year for leases and authorities was 178 and 40 respectively.

Work of all descriptions has been coming into the branch very freely for some time past, and especially in connection with the Mining on Private Lands Act. The applications under this Act cannot be dealt with so expeditiously as those under the Principal Act owing to the delays caused by the investigation of titles, the determination of very old boundaries, and the settlement of numerous points upon which decisions by the Crown Law Office are necessary.

Amongst the miscellaneous work the notation of plans is very important and responsible, as it is our strongest safeguard against issuing a lease of land which is not available; 5,417 plans were noted during the year, and 21 maps examined and put into office use.

The mining maps have been kept charted up to date as rapidly as possible; during 1895 416 copies of mining maps were charted up to date and forwarded to Wardens, 68 to District Surveyors, and 59 to Mining Surveyors.

## COMPILATIONS.

During the year 20 locality maps, embracing 78 parishes or parts of parishes, were completed, 21 put into office use, and at the end of the year 7 remained on hand in various stages; 46 proofs of parish and town maps, showing mining measurements, were received from the Department of Lands, 48 were revised and returned, and 32 were adopted as mining maps and put into office use.

In addition to the above, good progress has been made with the series of maps of the Mining Districts of New South Wales. Two sheets were published embracing parts of the Hunter and Macleay, Peel and Uralla, Tumut and Adelong, and Southern Mining Districts, covering an area of about 24,864 square miles; 4 other sheets are in various stages.

The following is a list of new maps or new editions of maps published during the year, and also a complete list of mining maps in use.

## LIST of new Maps and new Editions of Maps published during 1895:—

Parish or part of.	County.	Parish or part of.	County.
Bulgandramine, Gundong . . . . .	Narromine.	Kempfield, Copperhania . . . . .	Georgiana.

## Mining District Maps.

Bathurst Mining District.	Southern Mining District (part of).
Hunter and Macleay Mining District (part of).	Tamboora and Turon Mining District.
New England Mining District.	Tumut and Adelong Mining District (part of).
Peel and Uralla Mining District (part of).	

## INSPECTION OF MINES OTHER THAN COAL AND SHALE MINES.

Mr. Slec, F.G.S., Chief Inspector of Mines, reports 36 fatal and 28 non-fatal accidents in connection with the metallic mines during the year, which is an increase of 8 fatal and 1 non-fatal over the previous year.

Of the 36 fatal accidents, 5 were in quartz, 7 in alluvial gold-mining, and 20 in silver-mining, principally at Broken Hill; also 1 in copper, 1 in chrome, and 2 in limestone.

I observe that the percentage of fatal accidents is greater during the year 1895, being 1.25 as compared with 1.16 during 1894, and the non-fatal .97 as against 1.12 during the same period.

The number of men employed in and about the metallic mines in the Colony has considerably increased during the year, the number being 28,923, as compared with 24,038 in 1894.

The undermentioned localities were visited and inspected during the year:—

*By the Chief Inspector.*

Cootamundra, Wyalong, Reefton, Barmedman, and Temora twice; Ryepark, Gundagai, Adelong, Bowring, Yass, Gunning, Yarrawa, Boorowa, Young, Grenfell, Bywong, Captain's Flat, Murrumburrah, Garungula, Albury, twice; Bulgandra, Bowna, Corowa, Marulan, Bungonia, Broken Hill, twice; Tarrawingee, Milparinka, Tibbooburra, Mount Brown, Cobar, Mount Drysdale, Byrock, Coolabah, Bald Hills, Nymagee, Gilgunnia, Overflow, White Cliff (Wilcannia), Tenterfield, Boono Boono, and Drake.

During the visits of the Chief Inspector of Mines to these districts he also inquired into applications for aid from the Prospecting Vote, and also acted as Warden at several localities during the year.

*By Inspector Milne.*

In the Northern District.—Armidale, Barraba, Bingara, Bear Hill, Borah Creek, Crow Mountain, Dungog, Elmore, Glen Innes, Glen Elgin, Guy Fawkes, Hillgrove, Inverell, Kookabookra, Moonan Brook, Monkerai, Murrurundi, Narrabri, Niangala, Nundle, Stewart's Brook, Seone, Swamp Oak, Tamworth, Tia, Tibbuster, Tingha, Uralla, Walcha, Wangat, and Warraldi.

In the Southern District—Araluen, Braidwood, Bungonia, Bateman's Bay, Brimbramalla, Moruya, Mogo, Nelligen, Welcome Reefs, Nerriga, Shoalhaven River, Snowball, and Tarago.

In the Western District—Capertee, Clear Creek, Caloola, Cobborah, Dark Corner, Brown's Creek, Bathurst, Blayney, Burnt Yards, Box Ridge, Forest Reefs, Gratti, Hill End, Hargraves, Leadville, Lucknow, Lewis Ponds, Long Creek, Mudgee, Mount McDonald, Molong, Macquarie River, Menindee, Newbridge, Ophir, Orange, Pyramul, Palmer's Oakey, Sunny Corner, Slattey's Creek, and Sofala.

The Inspector reports that the regulations are generally complied with. As a member of the Prospecting Board Mr. Milne reported on a large number of applications for aid from the Prospecting Vote throughout the different districts inspected by him.

*By Inspector Hebbard.*

Besides making frequent inspections of the various extensive mines at Broken Hill, Mr. Hebbard visited all the outlying portions of the district with the exception of Mount Brown.

*By Acting Inspector Godfrey.*

Broken Hill, where he was stationed for the first three months of the year.

In the Western District—Newbridge, Barmedman, Reefton, Sebastopol, Temora, including Possum Power and Combaning, Trunkey, Yalgogrin, including Mulyan and Nariah, Young and Wyalong, where I remained for two and a half months.

In the Southern District—Adaminaby, Bywong, Bega, Bombala, Braidwood, including Major's Creek and Bell's Creek, Burrowa and Frogmore, Bateman's Bay, including Bimbimble, Big Hill, Brimbramalla, Bungonia, Burrier, Captain's Flat, Cooma, including Cowra Creek, Fiery Creek, Macanally, Myalla and Arable, Cootamundra, Candelo, Delegate, Gundaroo, Dairy Creek, Kiandra, Murrumburrah, Mount Dromedary, Marulan, Nerriga, including Mountain and Tim's Gully; Nadgingomar, including Manton Reef and Welcome Reefs, Nerrigundah, Pambula, Queanbeyan, Thawa, Wyndham, Wolumba, Wallendbeen, Wagonga, and Yalwal.

The Inspector found that the regulations were generally complied with, and care exercised in the conduct of mines.

During his visits of inspection, Mr. Godfrey reported on a large number of applications for aid from the Prospecting Vote.

Diamond

## DIAMOND DRILLS.

The total depth bored in 1895 was 299 feet, or 285 feet less than during the year 1894.

The average cost per foot for boring in 1895 was £1 10s. 9½d., as compared with £1 16s. 5½d. in 1894.

Diamonds used in 1895 cost 3s. 9½d. per foot, as compared with 9d. per foot in 1894, the large increase being due to the hard nature of the rock bored through.

The earnings of the diamond drills during the year was £153 18s. 1d., and the amount paid into the Treasury was £171 16s.

## GOVERNMENT METALLURGIST.

This officer reports that the progress made in this Branch during the year has not been so satisfactory as he could wish, mainly owing to financial reasons; but towards the end of the year a better state of affairs began to prevail, and, as a result, the construction of the Government Metallurgical Works is now in actual progress.

In May, he visited Victoria to investigate the Christmas Process of extracting gold from antimony ores by the addition of lead to the fused antimony sulphide as it flowed from the hearth of the liquation furnace.

He took the opportunity of visiting various engineering works in Melbourne in which special types of metallurgical and mining machinery are manufactured, and he inquired into certain processes which have been partially or completely installed there. He also paid a rapid visit to Ballarat to see the well-known mining school there, and the chlorination works at Sebastopol, to which considerable quantities of our ores and concentrates, notably from Wyalong, are sent.

In August he paid a short visit to Newcastle to inspect a site for special smelting works proposed to be erected in that district.

In December he made a rapid visit to the Cornish Copper Company's Mine at Gulf Creek, near Barraba, to advise the directors as to the installation of a water-jacket furnace for copper-smelting in place of the reverberatory furnace hitherto employed there.

Of gold-saving appliances proposed as new, or remodelled, which have been specially submitted to the Department, there has been quite an average number. Of the round dozen looked into, not more than one or perhaps two are actually at work, the rest of them are not yet out of the experimental stage.

A special method of working up Broken Hill sulphides was brought under the notice of the Minister by Messrs. Garland and Climo, being part of a scheme submitted to the Minister in 1894 by Mr. John Plumb, and on which he reported at the time. Messrs. Garland and Climo brought some tons of the sulphides to Sydney with which to demonstrate the efficacy of the process. By direction of the Minister he attended the experimental work, which extended over several months; unfortunately the result did not come up to the expectations of the inventor, and, so far, it has not been demonstrated the process has any special value.

He is receiving a steady stream of inquiries as to the treatment of the various ores found in greater or less quantity in the Colony.

## METALLURGICAL WORKS.

After much delay, the site recommended on the Duck River, near Clyde, for the construction of these works, has been resumed at a cost of £517 for about 4½ acres. There is navigable water on one side, Duck River; thence by Parramatta River to Sydney Harbour; and a railway siding has been run in from the adjoining Clyde sidings.

With the aid of Mr. J. A. Griffiths, B.Sc., &c., for a short time, plans for most of the necessary buildings have been got out, and the block containing offices and laboratory has been erected at a cost of £448. The contract for the erection of the main buildings has been let at the price of £698, the work to be finished by the end of March.

As soon as the building is ready for machinery the erection of this will be put in hand; most of it has been collected, and is now lying in Sydney. The following list will indicate the plan according to which it is proposed to commence operations:—

Babcock and Wilcox steam boiler, 45-horse power actual, capable of working up to a pressure of 160 lbs. per square inch.

Tangyes' compound high pressure steam engine of about 19-horse power nominal, capable of developing more than double that amount.

Gates' No. 1 rock-breaker.

Clarkson's Nos. 1 and 5 rapid samplers.

Tustin's large size roller mill.

Fraser and Chalmers' sample grinder.

Besides these copper tables, classifiers and concentrators have yet to be procured.

As

As soon as this portion is at work, provision will be made for the treatment of platiniferous concentrates, which it is hoped will be produced in considerable quantity from the black sands of the Northern Beaches. Chlorination plant will next be put in hand, and that will be followed by the appliances required for the cyanide process.

It is intended to have the works in operation within the first half of 1896. Already numerous applications are being received from miners anxious to send ore for treatment, and there is every indication that the establishment of the works will be appreciated by the mining community.

#### SCHOOL OF MINES.

The School of Mines, which was established at the Sydney University, with the aid of this Department, is now in full working order, and it is very gratifying to know that the University authorities have received excellent accounts of the quality of the work performed by those graduates who have obtained appointments. The two students, who were the first to obtain the degree of Bachelor of Mining Engineering, received junior positions in the Mount Morgan Mine in Queensland. During the past year they were promoted, and the manager of the mine (Captain Richards) not only expressed great satisfaction with their qualifications and work, but has since given employment to three other graduates of the school. No higher tribute could be paid to the excellence of the course of instruction provided at the School of Mines, and there is every reason to believe that it will have a beneficial effect upon the Mining interests of the Colony. All the graduates have obtained employment, and this fact will probably induce many other students to enter the School.

#### MINERAL PRODUCTS.

The aggregate value of the mineral products of this Colony to the end of 1895 amount to £113,888,865 9s. 7d. The value of such products for the year 1895 was £4,552,018, a decrease of £504,118 upon the value of the minerals won in 1894. There is a very marked increase in the value of gold, copper, and shale, won during the year, but there is a very considerable decrease in the value of the silver lead, and ore produced. The very low price of silver and lead which prevailed during the year, combined with the disastrous fire which caused the temporary stoppage of operations at the Proprietary Company's mine at Broken Hill is no doubt responsible for the decrease. With the recent valuable discoveries made in the system of treating sulphide ores, there is every probability that the decrease in this product will not continue. Although there is an increase of 66 513 tons in the output of coal during the year, as compared with 1894, still there is a decrease of £60,246 in the total value. This unfortunate result is directly due to the very low price of this product, the average price per ton being lower than any recorded since the opening of our coal-fields.

The total value of the minerals won during the year under notice exceeds the decennial average by £220,914 which taking into account the very low price of coal and silver more particularly, I venture to assert very satisfactory.

The following table shows the aggregate value of minerals, the product of New South Wales, for the years 1894 and 1895 respectively compared:—

Minerals.	1894.			1895.			Increase in Value.			Decrease in Value.

## GOLD.

The output of gold from the opening of our gold-fields to the end of 1895 amounts to 11,394,562 oz., valued at £42,326,588 3s. 9d. For the year just past the output was 360,165 oz., valued at £1,315,929 5s. 4d., an increase of £159,211 17s. 9d. over 1894. Without a doubt this gratifying result is in a measure due to the large number of unemployed men sent to the gold-fields as fossickers, as the marked increase dates from the inauguration of that scheme. Although the earnings of these men were much restricted by the exceptional drought experienced throughout the Colony during the year, the increased yields from the Lucknow and Hillgrove mines did much to make up the decrease from this cause. There is every reason to believe that the yields from these fields will be maintained, and in face of the prospects of a large increase in the yield from the Wyalong, Pambula, and Bulgandra Gold-fields, a very much larger output of gold may be confidently expected during 1896. It is also important to note the satisfactory progress made in the methods of treating the auriferous refractory ores which abound throughout the Colony. Should some inexpensive system be discovered for treating these pyritous ores, it will have the best possible effect on the gold-mining industry of the Colony, by opening up large deposits of this class of ore, which, under the present system of treatment, can only be made to pay expenses.

The following information taken from the reports sent in by the Wardens and Mining Registrars of the various Mining Districts indicate pretty clearly the condition of mining in New South Wales during 1895:—

## THE BATHURST MINING DISTRICTS.

*Corra Division.*

This Division is rapidly improving its position as a gold-producing district, the returns being 1,810 oz. as compared with 802 oz. in 1894. The recent discoveries on private property at Binni Creek are responsible for the increase, and as prospecting work is being rapidly carried forward further satisfactory developments may be looked forward to. Good work is being done at Scrubby Rush, where some very promising reefs have been opened out, one of the leases being floated for a large sum. A little gold is being got on Crown lands by a number of fossickers, but the principal operations are being carried out on private land. A small rush took place during the year at Woodstock, where some good-looking stone had been struck, but nothing worthy of special notice came of it.

*Mount M'Donald Division.*

Mining operations in this Division have been extremely dull during the past year as will be shown by the returns, the quantity of gold won being 421 oz. as compared with 996 oz. in 1894. The Balmoral Company is still carrying on prospecting work, and intend to thoroughly test their property. Several other parties are at work in the Division, and it is expected that some important developments will be reported before long. The work of the fossicker in the district has been greatly retarded owing to the scarcity of water, but so far they have been able to procure sufficient gold to keep them in rations.

*Carroar Division.*

There is a very large decrease in the output of gold from this district, as compared with previous years, the total value being £4,356, a reduction of £3,243 on the yield for 1894. The decrease in the yield can, however, be satisfactorily explained by the fact that the whole of the mines at Galley Swamp have been taken over by the Anglo-Australian Exploration Company (Limited) of London, who for the last six months of the year, have been devoting their sole attention to the sinking of shafts, the erection of machinery and other development-work. The machinery being erected embraces all the latest improvements and gold-saving appliances. A very large increase in the yield for 1896 may be anticipated. Woodward and Party put through 70 tons for 326 oz., and Smith and Son 47 tons for 151 oz. Very little work has been done at Burnt Yard during the year, but a good deal of prospecting work is being carried on at Flyer's Creek and Slattery's Creek, the principal company at work being The Slattery's Creek Gold-mining Company. A few men are still at work in the alluvial with varying success.

*Blayney*

*Blayney Division.*

There are 162 men at work on the alluvial ground in this division, and the yield of gold was 612 oz., valued at £2,285, as compared with 2,333 oz. won in 1894. The large decrease is principally due to the extremely dry season which prevented work being successively carried on in the alluvial claims, and retarded the work of the fossickers in the creeks and gullies. The Compagnie des Mines D'Or, at Brown's Creek, employ 120 men, and during the year have expended a large sum in the erection of works and machinery for treating their lode-stuff on a large scale. The operations of the company are expected to largely swell the returns from this Division during 1896. Several parties are still at work at King's Plain with promising indications of success.

*Nowbridge Division.*

There is a very gratifying increase in the yield of gold from this Division, viz., 811 oz., as compared with 150 oz. in 1894, a large proportion of the gold being got from land thrown open under the provisions of the Mining on Private Lands Act, 1894. Prospecting work is being vigorously carried on at Caloola Creek and at the Sugar Loaf, where several parties are being assisted from the Prospecting Vote to further test their claims. A considerable number of men still manage to earn rations by fossicking in the district.

*Trunkey Division.*

This Division also shows a satisfactory increase, the yield being 2,340 oz. as compared with 1,423 oz. in 1894. There were 250 men employed in gold-mining throughout the Division during the past year, and all have been able to make a living, while some of them have done very well. The continued dry weather prevented sluicing all the year round, otherwise the yield would have been greatly increased. As an instance of the severity of the drought, it is stated that the Mulgunnia Creek has not been running since October, 1894. At Colo Creek, Messrs. Clarth and Company have erected a 30-head battery, and a 12-head battery has been started to work near the Alma Dam. Messrs. Crees and Party erected a 9-head battery on Wilson's Reef to treat the mullock which is plentiful in that locality, but were prevented from starting owing to the want of water. The Bathurst Mines Company (Ltd.) is also erecting a new battery on its property. Mount Gray was re-started during the year, but is again idle, as the machinery failed to treat the stone profitably. A Melbourne syndicate have taken up 35 acres of the old workings at Pine Ridge, and intend giving the place a thorough trial. Several parties are in receipt of prospecting aid in the Division, but so far have not succeeded striking anything payable.

*Tuena Division.*

The yield of gold from this Division during the year was valued at £6,495 as compared with £5,777 the previous year. There has been a very evident revival in alluvial mining throughout this District, and at the present time about 360 men are employed in the work. The Ames Gold-mining Company which is in receipt of aid from the Prospecting Vote, struck some very rich stone in its claim, one small parcel of about 5 tons yielding 150 oz. of gold. The Dyke Company crushed 150 tons for 8 dwt. per ton, and as the stuff can be got cheaply and is easy to treat, it should pay well with suitable machinery. M'Vicar and party put through 30 tons for 1½ oz. per ton, and Brennan and Party had a trial crushing which gave a return of 1 oz. per ton. At Junction Point, Martin and Party put through 200 tons which yielded nearly 2 oz. per ton. It is expected that a large number of men will be at work in this Division during 1896.

*Rockley Division.*

The yield from this Division is a little more than double that of 1894, being 1,540 oz. as compared with 750 oz. the previous year—the bulk of the gold being won from alluvial ground. The depression existing throughout the district compelled a number of men to turn their attention to mining, with the result that the old alluvial workings in the district have been fossicked over again, in some instance excellent returns being obtained. One party on Stoney Creek, working on a point that has been occasionally worked for over thirty years, averaged £10 per week for over three months. Rutherford and Party working a reef at Gilmandyke on private lands put 200 tons through their own battery for a yield of 227 oz. valued at £883 8s. 2d. Work at Mount Maud is in abeyance pending settlement of the prospector's, David Croziers, title to the land. A trial crushing of several tons of stone from the reef went over 6 oz. to the ton. On Church and School land at Caloola Creek three parties are at work on a sedimentary slate lode. They have erected a Huntingdon mill and have put through 1,300 tons for a yield of 214 oz. of gold. About twenty parties are working in this Division under section 33 of the Mining on Private Lands Act, some of whom are doing very well, others just making a living.

*Burruga Division.*

About 265 oz. was the yield from this Division, as compared with 185 oz. in 1894; but this return is likely to be largely increased in 1896. The Burruga Gold-mining Company which has been at work putting in a tunnel about 1 mile east of Mr. Lloyd's Copper-mine, have at last struck the reef, which is 10 ft. wide. A parcel of stone from it sent to the Clyde Works for treatment yielded half an ounce of free gold per ton. The company has erected a 10-head battery but unfortunately have not been able to start through the scarcity of water. M'Vicar, Phillips and Party, working on the Isabella River, are sinking on a very promising reef, assays from which have gone as high as 4 oz. per ton. The reef is now 2 feet wide and appears to improve as it goes down. A large number of men are fossicking in the district, but it is questionable if they earn more than rations, the dry weather having retarded work very much. Tuto and Lawler have a gold-saving machine at work on Mount Werong, and are said to be doing fairly well, the machine treats about eighty loads per day but could put through more with a plentiful supply of water.

*O'Connell Division.*

The only mining work carried on in this Division is by a few fossickers who won during the year 130 oz. valued at £390 which barely keeps them in rations.

*Oberon Division.*

The value of the gold won in this Division during the year was £1,450, an increase of £150 on the previous year. One of the old reefs has been taken up, and a small plant erected, and as parties have commenced work on nearly every available site, the locality is now in a fair way to be thoroughly tested. There are still a few fossickers working in the locality, some of whom appear to be doing fairly well.

*Bathurst Division.*

This Division shows a slight increase in the yield of gold over the previous year, the value being £4,617 as compared with 4,540 in 1894. This return would undoubtedly have been much larger had the season been a wet one. There is a good deal of prospecting work going on in the direction of Poel, where several very promising reefs are being tested at a depth. It is estimated that 425 Europeans, and sixty Chinese, were engaged in mining work in this district at the end of the year. James Dewar, who is receiving aid to sink on the Bald-Hills, struck wash in the drive 2 feet thick, carrying fine colours of gold. Another shaft is being put down to test the deep ground.

*Wyagdon Division.*

There were 215 oz. of alluvial gold won in this Division during 1895, a slight increase over the previous year. Bel and M'Lennan are being aided from the Prospecting Vote to test their claim on the high hill lying between Wyagdon and the Limekiln Road, and Thomas Brett to further test the "Black Monkey" reef situated about 2 miles west of the Limekiln Public School. A number of fossickers are still at work in the locality, with varying success.

*Sunny Corner (Mitchell) Division.*

There are 228 gold-miners working in this Division, and they won among them 3,645 oz. of the precious metal, an increase of 1,479 oz. on the previous year. The "Paddy Lacey" is still the principal gold-producing mine in this district, and employs from twenty to thirty men all the year round. A number of parties are working in this Division under aid from the Prospecting Vote, and some important developments are expected from this expenditure. When a sufficient supply of water is available, the men working in the creeks and gullies do fairly well.

*Hartley Division.*

A few parties are still prospecting on Cox's River, who obtain very fair prospects; but nothing really payable has been obtained so far.

Orange

*Orange Division.*

This Division now ranks as the largest gold-producing centre in New South Wales, the value of the gold won during the past year aggregating £292,229, as compared with £128,197 in 1894. The Wentworth Proprietary Company, at Lucknow, is responsible for the large increase in the returns, as it put through 9,381 tons of stone for a yield of 53,100 oz., valued at £203,350. This company employs over 300 men, and has erected plant on its property to the value of £50,000. Good stone is now being raised from the 800-ft. level. The Alladin's Lamp Gold-mining Company has also extended its operations during the year, and put through 3,889 tons for 23,078 oz., valued at £80,773. This company employs 100 men, and is working at the 700-ft. level. The Amara Company did very little work during the year, and has now ceased work. Derrett and party have put in a tunnel for a distance of 200 feet on Carroll's private land, and have very promising indications of obtaining payable gold. The D'Arcy Estate Gold-mining Company is still pushing forward prospecting operations, and employs twenty-five men on the work. At the Forest Reefs a little prospecting work has been carried on during the year, with varying success. The Ballarat Boring Company, which has obtained the use of a Government diamond-drill, is about to test the deep leads, and little other prospecting work will be done in this locality till the result of the boring is known. At Cadia some prospecting has been done in quartz and alluvial without any important results. In the neighbourhood of Byng a great deal of prospecting work has been done by the Witney Green Gold-mining Company, and the crushing it put through of 164 tons yielded 525 oz. 19 dwt. of gold, valued at £1,868 15s. 4d. The scarcity of water seriously interfered with mining operations at Lewis Ponds during last year; but, nevertheless, the alluvial miners were able to make rations. A 6-head battery has been put up, and there are several reefs it is thought will pay to work with this crushing facility. About forty men are working at Summer-hill Creek, and good-looking stone is being got at about 60 feet. Prospecting work is still being carried on on the Blatchington Estate in search of the lode being worked at Lucknow. Very promising indications are reported to have been met with.

## THE MUDGEE MINING DISTRICT.

*Cobbora Division.*

There are about 300 alluvial miners working in this Division, principally in the Tucklan district, 13 miles from Cobbora, and the returns state that they won 333 oz. of gold, valued at £1,244. It is doubted, however, whether these figures represent all the gold got, as it is very difficult to obtain correct returns. Payable gold was first reported by Steinberg and party, who were working near Ford's Creek, under aid from the Prospecting Vote, who, from April to December, washed 200 loads for 100 oz. of gold. Payable gold was reported by Marshall and party as having been discovered by them at Stringy-bark Point, 35 oz. being washed from six loads of dirt. This discovery was made in November, and by the end of the year there were thirty claims on gold,—the prospects varying from 6 dwt. to 2½ oz. per load, the sinking being from 10 to 30 feet deep. The great drawback on this, as on many of the gold-fields of the Colony, is the want of water, which is being retailed for domestic use at 3d. per bucket, none being available for mining purposes. Should the year 1896 prove more favourable, large returns are expected from this locality.

*Denison Town Division.*

Very little mining is being carried on in this Division at the present time, work being confined to the vicinity of Cranky Jack's Gully, where a few fossickers are obtaining just sufficient gold to keep them in rations.

*Gulgong Division.*

The gold won in this Division during the year amounted to 4,000 oz. of alluvial gold, valued at £15,200, nearly double the quantity won the previous year; the average number of men employed being 650. About the month of July a rush took place to Yamble, where payable gold was discovered on the private land of Mr. C. M. Lowe. At one time 500 men were on the field, but by the end of the year the number was reduced to about 250, half of whom are getting payable gold in ground varying from 16 to 50 feet in depth. The English Company, under the management of Mr. Frame Fletcher, has temporarily suspended work. The following report on the work being done by the Star Lead Gold-mining Syndicate has been supplied by Mr. W. S. Brice, the manager:—"During the twelve months the Star Lead Gold-mining Syndicate has taken charge of the claim known as the No. 1 Mine, Star Lead, Gulgong. The work has been chiefly prospecting. The shaft required to be sunk to a greater depth, so that the deeper ground could be tested. Twenty-five feet was sunk in very hard pyritous quartz, leaders being cut through as the work progressed. As these leaders were cut the flow of water became stronger, in some instances 2,500 gallons per hour being baled out of the mine. This heavy flow of water exhausted itself down to 2,000 gallons per hour; which is the rate being maintained at the present time. After the shaft being sunk to the required depth, a drive was begun at 195 feet from the surface, and continued in an easterly direction to cut the Star lead, which is known to run almost due north and south. I may here state that the Star lead has been traced from its head down to the present workings into deeper ground. On account of its great depth, and the quantity of water to contend with, small parties of working miners could not command the necessary appliances to cope with such difficulties. Since the taking over of the mine by the present syndicate 240 feet has been tunnelled in an easterly direction, and on account of the hard diorite bars being met with the use of explosives had to be resorted to for more than 100 feet. At a distance of 74 feet from the shaft a cross-cut was put in in a south-easterly direction. This drive was continued for 86 feet, the country tunnelled through being very hard. At 69 feet in this direction a pyritous bar was cut through, the country being heavily charged with arsenical pyrites, which, upon examination, showed slight traces of gold. This bar to all appearance was a dyke, 20 feet through, cleanly bedded with a south-easterly dip of 47°. From the lower part of this face strong water was met with, but following the same strata of country as was met with in sinking the shaft to its present depth, our flow of water did not increase, but continued maintaining the flow of 2,000 gallons per hour. A drive has been tunnelled nearly in an opposite direction to our south-east drive, and extending in a north-easterly direction 40 feet, the hard country has not been met with in this drive, only decomposed diorite being cut through. Water comes strongly from overhead, apparently from higher ground. The water, unlike that met with from the southern side of our workings, holds lime in solution, whereas on our southern side the water carries a quantity of iron in solution. Sixty feet has been tunnelled in an upper level, proving a run of wash which existed in the upper strata; this wash, so far as proved, having an easterly dip, proving beyond doubt the existence of a deeper channel. The wash or gravel being, in some instances, compact and intermixed with cemented sand, caused without doubt by the infiltration of ferric salts held in solution in our southern water. Ninety (90) feet have also been tunnelled in this upper level to prove the dip of country, and, in some instances, auriferous gravel has been met with carrying fine and, sometimes, coarse gold. But the syndicate, in a true spirit of prospecting, decided to push on and prove once and for ever the existence of auriferous drifts and gravels in the deep ground of Gulgong. Summary of the year's work for the year ending December, 1895.—Distance of tunnelling completed by present syndicate, 456 feet; sinking shaft 25 feet, making a total depth of present shaft 207 feet; average number of men employed, 23."

*Hargraves Division.*

There is a very substantial increase in the yield of gold within this Division during the year, the quantity being 3,245 oz., valued at £8,920, as compared with 1,100 oz., valued at £4,125, won the previous year. The principal revival has been in quartz-mining, and the battery owned by Laing and Company has been kept going all the year through, treating 4,600 tons of stone for 1,470 oz. A battery is about to be erected on the Old Sawyer's reef, in which a tunnel has been driven in 180 feet by means of aid from the Prospecting Vote, when the reef 18 inches wide was struck, carrying fair gold. This is said to be a good property. Messrs. Scott and Company's "Lizzie Watson" 5-head battery was working during eight months of the year, and put through 300 tons for 175 oz.

*Mudgee Division.*

This Division produced gold to the value of £27,353, an increase of about £7,000 on the yield during 1894. The Old Rhobardah Gold-mining Company, near Cudjegong, has restarted work, and the New Peacock Gold-mining Company, near Limestone, is at work with powerful machinery, and good results are anticipated. The usual amount of fossicking has been carried on at Apple Tree Flat, Pipeclay, Limestone, Merredree, &c., &c., and small patches in various localities have been found payable, but nothing to last. At Slashers' Flat, about 9 miles from Mudgee, the old workings have afforded rations to a number of men during the year.

Winderyer

*Windeyer Division.*

There is a satisfactory improvement in the return of gold from this Division, the quantity being 2,400 oz. as compared with 2,000 oz. won in 1894. Mining matters have improved generally throughout this Division during last year, with every prospect of a continuance, Messrs. Leffley and party have a splendid claim, their last crushings of 230 tons yielded 450 oz. of gold, the stone being raised from the 60-foot level, where the vein is 2 feet wide. Townsend and party have three promising claims at work, from which they have raised 334 tons for 140 oz. This party have erected a 5-head battery, valued at about £800. Several other claims are at work, and a good deal of prospecting work is going on. Very little has been done during the year in alluvial mining, no water being available for sluicing purposes.

*Peak Hill Division.*

A scarcity of water has greatly retarded mining operations within this Division during the year, which accounts for the decrease in the quantity of gold won, viz., 8,192 oz. as against 12,231 oz. won during 1894. The Proprietary Company has partially suspended operations, and has let several parts of the mine on tribute. The tributors are said to be doing very well, owing to their careful selection of the ore crushed. No attempt has yet been made to treat the pyritous ores which occur in this mine below the 320-foot level on a large scale. There is a great body of this ore available, and could it be treated profitably, employment would be found for a large number of men. It is stated that the ore could be calcined and treated in bulk for 12s. 6d. per ton, which would yield a handsome profit, as the stone is said to carry about  $\frac{1}{2}$  oz. of gold per ton. The water from this mine contains a metallic salt which interferes with the amalgamation of the gold. The Crown of Peak Hill Gold-mining Company is down 300 feet in their main shaft, and expect within the next three months to strike the pyritous lode coming from the Great Eastern mine. This mine is also worked by tributors. The Great Eastern Syndicate crushed 735 tons for 654 oz. The gold in this mine occurs in a hard quartzite resembling flint, and the deposit is extensive. Wythes and Mooney crushed 915 tons for 552 oz. of gold. The ore containing the free gold is nearly exhausted in this mine, but there is apparently an inexhaustible quantity of pyritous ore, which should pay with economical treatment. Work is still being carried on in the Bobby Burns mine, where shoots of ore occur similar to that found in the Proprietary mine, but the yield of gold is low. Very little work is being carried on in alluvial ground, and till a large supply of water is available there is no chance of any revival in that direction. At Tomingley five leases have been sold to an English syndicate for £42,000, and the mine will in future be known as the Myall United Gold-mining Company. The prospecting shaft on gold lease 2 was, during the year, sunk through an intrusion of country about 50 feet, when the reef was again picked up, 4 feet wide, with gold evenly distributed through the stone, 78 tons of which yielded 228 oz. of smelted gold. An important development has taken place in Cavin and Party's claim during this year, when a new make of payable ore was found, 8 feet wide, which yielded 260 oz. of gold from 206 tons of stone. The last crushing of 114 (included in the 206 tons) yielded 205 oz. An unusual feature in this lode is the fact that the wider the lode the richer the stone. There is no alluvial mining of any importance being carried on in the Tomingley district at the present time.

*Wellington Division.*

The returns from this Division show a very gratifying and substantial increase in the yield of gold during the past year, which are as follows:—789 oz. from alluvium and 7,032 oz. from quartz, valued at £29,723, an increase of £10,339 on the value of the gold obtained in 1894. The Mitchell's Creek Freehold Gold Estate Company at Daviesville is the largest gold producer in this Division, as it treated 9,260 $\frac{1}{2}$  tons for a yield of 6,720 oz., valued at £25,610. This company has a very large and complete plant, which is valued at £20,000, and the average number of men employed by it is 650; and main shaft has now reached the depth of 680 feet from the surface. The alluvial mining being carried on in the Division at the present time, is confined to a number of men fossicking in the beds of the Macquarie River and its tributaries, the Ningala and Wuulmanu Creeks, where men with some experience in the work can make a fair living.

## THE TAMBAROORA AND TURON MINING DISTRICT.

*Hill End Division.*

The yield of gold from this Division shows an increase of £1,502 over 1894; the quantity being 4,359 oz., valued at £16,569. The best returns were obtained from Hawkins' Hill, where several parties are on payable gold. In fact, all the claims at work in that locality at the present time are looking well, and it is expected that the number of claims on payable gold in this neighbourhood will be shortly increased. A number of the large mine-owners find that, to properly develop the ground, large capital is required, and several of the properties, such as the Hill End United, Emmett and Hughes, and others, are in course of disposal to English syndicates, and the introduction of English capital into the field when the ground can be properly tested will be the salvation of the District, and perhaps be the means of again winning the large quantities of gold which made Hill End famous in the early seventies.

At Tambaroora, the Tambaroora Creek Gold-mining Company is pushing on with the erection of its machinery at Red Hill, and hopes to have it completed shortly, when employment will be given to a large number of men. At Sally's Flat, Mullaney and Gough, who were assisted from the Prospecting Vote, have found a reef carrying fine gold, which would pay with a battery on the ground. At Macquarie River a number of men are employed quartz-mining, but have not been successful so far, with the exception of Trevethick and party, who have been on payable gold all through the year.

*Sofala Division.*

There is a slight decrease in the value of the gold won in this Division during the year; the figures being £14,250 as compared with £16,576 in 1894, which is directly traceable to the continued dry weather, which made sluicing operations impossible. Several parties at Palmer's Oakey have done very well during the year, and at a place known as Rowly Bob's Creek, in the same locality some very rich patches were found. On the Upper Turon several parties are doing well, one party of four men averaging £6 per week per man for four months. About 150 men are fossicking in the vicinity of Wattle Flat, but making little more than a bare living. At Crudine about seventy men are at work on the private property of Messrs. John Smead and M. O'Brien, where some very rich patches have been struck. About forty men are working at Box Ridge, and they seem to be doing fairly well. Messrs. Cox and M'Peake, prospecting at Redbank, got £200 worth of gold in one day, and 7 oz. the next. There are signs of a revival in quartz-mining in this Division. The Turon Gold-mines Company (Limited) has lately been floated in London with a capital of £100,000, and intends carrying on operations on a large scale. The company will start crushing as soon as water is available. The Queensland mine is still working, but cannot crush through want of water. W. H. Campbell, on Whalen's Hill, struck a payable reef at a depth of 225 ft. This discovery was the result of aid from the Prospecting Vote. Minni and party are still working at Big Oakey, and it is stated the property is in course of flotation on the London market. The Solitary Gold-mining Company, has commenced to sink a large shaft to cut the lode at a depth of 500 ft. The claims on Surface Hill have been leased to a Newcastle syndicate, which intends working the ground on the open-cut system and building a tramway to the river, 2 miles long, where a large battery is to be erected. About 250 quartz and 300 alluvial miners are employed in this Division, amongst whom are fifty Chinese.

*Rylstone Division.*

There are ninety-two gold-miners working in this Division, but the quantity of the gold won by them could not be ascertained. The men are chiefly employed prospecting and fossicking in the creeks and gullies.

*Ironbarks Division.*

This Division shows a slight falling off in the value of the gold won, the quantity being 1,994 oz. from alluvial and 700 oz. from quartz, valued at £10,508, as against £12,590 won in 1894. The decrease is in the alluvial gold, the dry season retarding sluicing operations. A large number of parties are prospecting in this Division, several in receipt of aid from the Prospecting Vote. Seven applications were made to lease private lands, embracing an area of 1'5 acres.

## LACHLAN MINING DISTRICT.

*Molong Division.*

Although a considerable amount of prospecting work is being carried on in this Division, no discovery of any public interest has been made. Several permits were granted by the Warden to search on private land, but with the exception of a little gold got at Delaney's Dyke, by Egglestone, and party there were no results. Several parties are working under aid from the Prospecting Vote in this locality, but, so far, have not struck anything payable. The return from this Division is only 50 oz. of gold, valued at £187 10s.

*Cargo Division.*

There were 246 oz. of gold won in this Division as compared with 150 oz. in 1894. The Ironclad Mine is still shut down, and an attempt is being made to form it into a company. Prospecting work is still being vigorously carried on, and as some of the parties have very promising indications in their claims, next year's report may be of a more flourishing nature.

*Cudal Division.*

There is no report of any gold having been won in this Division during last year. Three parties have been prospecting at Loup Corner all the year around, but were unable to find anything payable, and abandoned the search. Fair prospects are obtainable in many places, but all attempts to trace the source of the gold have failed. Good prospects are also to be found on Kearney's land, at Paling Yards, and an application for a permit to mine on the land has been lodged with the Warden. Daniel Curry is receiving aid to sink a shaft on Dwyer's land at Barragan, where the indications are good; but the shaft is not yet bottomed.

*Canowindra Division.*

The quantity of gold won in this Division during the year is just about double that of the previous year, being 677 oz., valued at £2,440. The Lady Burdett-Countts Gold-mining Company put through a parcel of 149 tons, which yielded 280 oz. of gold. The Red Jacket, the Blue Jacket, and the Perseverance Companies were at work during the year, but did not crush much stone. The majority of the men employed in alluvial mining only work during the winter months, when plenty of water is available.

*Forbes Division.*

There is little of importance to report in connection with the gold-mining carried on in this district, and although complete returns could not be obtained, the gold won may be put down as about 300 oz. Some excitement was occasioned about the beginning of October by the discovery by Pennington and party of some very rich specimens in a lode, which was known in the early days of the field as the "Rise and Shine." The discovery was made at the 60-ft. level, and a crushing of 4 tons yielded between 4 and 5 oz. per ton. The lode—decomposed granite—is well defined, between slate walls, but has not yet been crossed by the prospectors. It is thought to be between 30 and 40 feet wide. Between thirty and forty men are at work near Strickland's Reef, and it is stated that one party washed sixty loads for half an ounce to the load. It is the opinion of the miners in the district that a payable lode will be found in this locality in deep ground. Several parties are at work on the Bald Hills, but have been badly hampered in their operations through the scarcity of water. A good many claims are at work in the neighbourhood of the Pinnacles, with fair prospects.

*Parkes Division.*

A very satisfactory increase is shown in the returns from this Division, the gold won amounting to 10,372 oz. as compared with 9,725 oz. in 1894, the number of men employed being 574. The principal mine in the district is the Bushman's Hill Gold-mining Company, which has erected very expensive machinery and other works. When the tribute expired in April last the mine was worked by the company, and the erection of machinery proceeded with. The underground workings of this mine are in an advanced state—1,800 feet of levels being now open, and being worked. The company estimate that 27,000 tons of stone is in sight. The last crushing of 800 tons by this company yielded 1,327 oz. of gold. If the supply of water would allow of the mine being fully worked, 150 men would find constant employment. On the west side of the above company a large area has been secured, to be called "The Bushman's Freehold," and leases have also taken up to the north and north-west of the Bushman's Hill Company. To the north of the land held by the Bushman's Freehold Syndicate, 40 acres have been applied for, with a view to form a company to cut the Bushman's Reef at a depth of from 1,700 or 1,800 feet from the surface. Still further north, Boyle and party are on a line of reef having the same underlay as the Bushman's; but it is a different line of reef. From this claim to the Dayspring all the land is leased, including Crown and private land. The Dayspring is being worked by a syndicate, who have proved the reef to a total depth of 375 feet, and driven along the course of the lode at the 200-foot level, a distance of about 500 feet. Quail's mine is let on tribute, but not much work has been done during the year. Hazlehurst's mine is also worked by tributors, and the last crushing taken out by them proves that payable stone still exists in the mine. The tributors of the Gladstone mine expect to strike payable stone shortly. A party of miners from Peak Hill have started work in a systematic manner on the old Caledonian Hill, and intend proving the ground thoroughly. The Koh-i-nor is also let on tribute, and the men seem to be doing well. The men working Wright's Reef have very promising prospects, and their last crushings show great improvement. Many other claims are at work on the Parkes Gold-field at the present time on ground which has been allowed to lie idle for a surprising period, and consequently some important discoveries may confidently be looked for during 1896. The unusual scarcity of water in the district during 1895 greatly retarded the returns of alluvial gold, and in fact, seriously affected quartz-mining.

*Alectown Division.*

The returns from this Division show that 594 oz. were won as compared with 362 oz. in 1894. The increase in the returns would have been much greater had a sufficient supply of water been available for treating the large quantity of wash-dirt at grass. A party of miners from Peak Hill took up an abandoned claim situated 7 miles from Alectown, on the Alectown-Peak Hill Road, and were fortunate, after very little work, in striking some very rich stone near to the working shaft. They raised 31 tons, 20 tons of which yielded 9 dwt. per ton, the other 11 tons at the rate of 33 oz. per ton, and there is a quantity of equally rich stone in sight. It is understood that this claim is under offer to a syndicate for £9,000. To show the apathy of miners in this locality at the present time, I might mention that the adjoining ground was left for several weeks notwithstanding the apparent richness of the stone in the locality, and in face of the fact that another claim in the immediate vicinity had just had a crushing of 33 tons which yielded 2 oz. per ton. A good many parties are, however, now at work, and some valuable discoveries are likely to be made during the present year. A large number of fossickers are still working in this Division, but it is difficult to obtain any information as to the gold won by them. They appear, however, to be making sufficient to keep them in rations.

*Orenfell Division.*

The value of the gold won during the year in this Division was £5,292 as against £5,620 in 1894, a slight decrease, which is directly traceable to the scarcity of water for mining purposes, preventing the treatment of over 500 tons of stone now at grass. There are undoubted signs of a marked improvement in quartz-mining in this Division, the number of men employed in that class of gold-mining being increased from 100 to 170, and fourteen claims which were idle during 1894 are now in full work. The Young O'Brien Mine-owners are still raising good stone, the quantity treated by them during the year being 852 tons for 322 oz.; the Enterprise tributors, 306 tons for 214 oz.; the Homeward Bound, 357 tons for 227 oz., and Holton and party, working the Missing Link Claim, 74 tons for 32 oz. A large number of small crushings brought the total quantity of stone treated in the division to 2,024 tons, which yielded 929 oz. of gold. Clapperzouli and party have erected at Weddin machinery for treating alluvial quartz and sand, but in consequence of the scarcity of water have not been able to make a start. About fifty fossickers are now working in the Division evidently making a living if nothing more.

*Murrumburrah Garangula Division.*

The returns from this Division show that 1,994 oz. of alluvial gold were won during the past year but no quartz gold, which is a considerable decrease on 1894. There are still about 200 men employed in alluvial mining, but there are only a few remaining in M'Kay's Paddocks. Barwang, or Tout's Paddocks are entirely deserted, but at Kemp Hill,

Hill, Cunningham Creek, several parties of miners are at work and doing fairly well. The quantity of gold won at Garangula may be put down at 4,302 oz., valued at £16,670. At the beginning of the year over 500 men were on the ground, but by the end the number had dwindled down to 250. The alluvial ground at the main camp and Strawstack Paddock are nearly worked out and this is the principal cause of the diminished population, a few men working in Osborne's Paddock are getting a little alluvial gold, and that part of the field is being further prospected. The reefs found in Strawstack Paddock are being vigorously prospected, with the result that Adam's reef seems payable. It varies in thickness from 6 inches to 24 inches, at the 100-foot level it is 22 inches. A considerable quantity of stone taken from the shaft yielded at the rate of 1 oz. 6 dwt. per ton, crushings from Lightland's claim returned 17 dwt. per ton; from English's 15 dwt. per ton; Notts' 1 oz. 3 dwt. per ton, and 235 tons from Mauly's yielded 176 oz. A 5-head battery was started early in the year, but it has now been increased to 10-head. The average yield from the alluvial at Garangula was a little over 9 dwt. per load. A small portion of the Prospecting Vote was allotted to test some ground near Frogmore, but nothing payable has been met with so far. A little alluvial gold is being got at Bramah, on the Fish River, in small patches. Some alluvial gold is being got at shallow depth at Grassey Creek, but, although a lot of prospecting work has been done, it proves nothing of importance. Tout and party prospecting near Galong discovered a reef from which high assays were obtained, and which is now being opened out. The old Marshal Macmahon Reef at Cunningham has been started again, and the owners anticipate good results.

#### Temora Division.

The quantity of alluvial gold won in this Division during the year could not be ascertained, but it must be considerable as there are a large number of fossickers working in the district, and they all appear to be getting a little gold. The quantity won from quartz was 7,473 oz., valued at £28,214, an increase of over £20,000 in the value of the gold won in 1894. New finds of quartz reefs have been made from time to time during the year in the vicinity of Scrub Yards, and a number of parties have been aided out of the Prospecting Vote to test their value at a depth. Hall and party have crushed 236 tons for 1,782 oz. 12 dwt. This vein is from 3 to 15 inches in thickness, and has been worked to a depth of about 100 feet, and the reef has been traced for a distance of over 400 feet along the surface. A 10-head battery has been erected which will start work immediately water is available. In the immediate neighbourhood of Temora, an effort has been made to prove the deep alluvial which was found in Parko's Prospecting Claim and the Golden Gate, and a grant from the Prospecting Vote has been made to assist in the work.

#### Barmedman Division.

Gold mining has practically been at a standstill during the past year in this Division, the total yield being only 117 oz., valued at £447, which is a large decrease on the 1894 yield. During the latter two or three months of the year, however, signs of renewed activity were manifested, and some of the old ground taken up. The Fiery Cross Lease, which had been cancelled for non-fulfilment of the labour conditions, has been taken up by a party who intend erecting powerful pumping machinery, and give the reef a good trial below water level. Klink and party are opening up an old reef to the west of the Fiery Cross, from which they took a trial crushing which yielded 14 oz. of gold. Maschivitz and party have taken over Nessel and party's claim and battery, and are now arranging to give this property a thorough good trial. The reef averages from 5 to 10 feet wide, in slate country, containing fine gold which requires careful handling to save. About 6 miles north-west of Barmedman, Roberts and party are working a prospecting claim and were successful in striking a reef, 23 tons from which, put through the battery at Barmedman, gave a return of 29 oz. 8 dwt. This locality which is quite untried country and something similar to that at Wyalong, being flat and covered with mallee scrub, is attracting some attention, and several parties are now vigorously carrying on prospecting operations and have already discovered several very promising veins. A syndicate has been experimenting with a heap of quartz tailings, of which there are about 40,000 tons in the locality, and have met with much success. A small and simple concentrating machine was erected at a cost of about £100, which driven by the crushing engine, enables them to put through from 130 to 150 loads per week. The concentrates which reduce the tailings by about one-sixth, are sent away for treatment, and so far has yielded a fraction over 3 oz. per ton, giving a clear profit of between £7 and £8 per ton. The whole of the 40,000 tons mentioned are not expected to give anything like the above return, yet the syndicate are so satisfied with the prospects of their venture that they are proceeding with the erection of another plant capable of treating 300 tons per week. This matter is really one of great public importance, more especially to those quartz-mining centres containing vast heaps of tailings which might be treated profitably and give employment to a large number of men.

#### Reefton Division.

This new mining Division, established during the year, previously formed part of the Barmedman Division, and its growing importance may be judged from the returns, which were 1,603 oz. of quartz, and 20 oz. of alluvial gold, valued at £5,075. Confidence in the prospects of the field is shown by the fact that several abandoned reefs have been taken up by experienced miners, who are determined to give the ground a thorough trial. In November last a rush took place to Nixon's conditional purchase, where a good thickness of wash had been discovered by Slattery and party, at a depth of 17 ft., which yielded 7 dwt. per load. The Christmas holidays coming on, little work was done to prove the find. By the end of the year the number of men on the ground had dwindled to fifty, and it is doubtful whether that number will be again exceeded unless a deeper channel is discovered. The wash is angular, and about a quarter of a mile from the quartz reef; but the wash found further away from the reefs is finer, and more water-worn, but does not contain payable gold.

#### Wyalong and Wyalong West Divisions.

Although the population on this field has decreased, owing to discoveries in other parts of Australia, the claims have been steadily developed during the year, and the quantity of gold won has increased from £35,946 in 1894 to £91,863 the value of the gold won in 1895. The want of water for crushing purposes, combined with the refractory nature of the ore below the water level, has tended to keep the returns down, although it has been proved that the reefs are payable at and below the water level. Among the deepest shafts on the field are:—

Hilderbrand's .....	245 feet	White Reef.....	185 feet
Hidden Treasure .....	225 "	Barrier.....	180 "
Pressers .....	210 "	Dickson's Bantam.....	170 "
Boltes' .....	193 "	Curragong .....	160 "
Snowden and party .....	185 "	Welcome Stranger.....	150 "

The foregoing are all considered payable claims. The old "Called Back" line of reef is again being worked with every prospect of success. The owners of No. 1 North sold to a Sydney Syndicate 23 tons of ore they had at grass at the rate of £10 per ton. The White Reef, Curragong, and Welcome Stranger Claims especially have given splendid returns, and shares in them have changed hands at large figures. A number of the claims have been under suspension for various causes, such as excess of water, refractory ore, but they will soon be at work again. As far as can be ascertained, the total yield of the field for the year is 24,337 oz. from 15,634 tons of stone crushed, but this does not include the return from small lots sent to the several Works in Sydney for treatment which would make the yield for the year little short of £100,000. It is considered that there are 90 payable claims on the Wyalong Gold-field at the present time, and the following returns are from some of the principal claims:—

Curragong .....	1,000 tons	2,620 oz.	Klink's .....	39 tons	311 oz.
White Reef .....	1,213 "	2,447 "	Four's.....	275 "	860 "
Welcome Stranger .....	318 "	1,782 "	Golden Fleece .....	152 "	332 "
True Blue .....	1,060 "	1,426 "	Wye and party.....	115 "	300 "
Perseverance .....	260 "	621 "	Cunning and party .....	32½ "	177 "
Hilderbrandts' .....	458 "	468 "	Christmas Gift .....	127 "	165 "
Neild's .....	205 "	433 "	Kelly and party .....	10 "	25 "
Mousetrap .....	97 "	496 "	Pioneer .....	6 "	18 "
Boltes'.....	71 "	390 "			

During the last quarter of the year Nicholas and Raymond's new battery started work, and has been kept constantly going. Climo and Company are erecting large works at a cost of about £8,000, and are expected to be at work about March.

March. The works for the treatment of tailings are just completed, and should prove of great benefit to the field generally. There are about 6,000 tons on the field now. A few figures with regard to the work done by the batteries on the field may prove interesting:—

Cough's No. 1 Battery	5,799 tons	9,099 oz.	Cox's .....	1,161 tons	1,170 oz.
West's .....	3,112 "	2,516 "	Nicholas and Raymond's	774 "	1,246 "
Channan's .....	2,153 "	3,793 "	Ashcroft's .....	821 "	620 "

Billy's Look-Out is now included in the Wyalong Division, and there are about 100 miners at work, who have won a fair amount of alluvial gold, but their operations were much retarded by the unusual scarcity of water in that locality, many of the claims yielding payable gold having to cease prospecting operations altogether. There is every prospect that payable reefs will ultimately be found in this locality, and when rain sets in sinking for reefs will be vigorously carried on.

#### *Yalgogrin Division.*

The quantity of gold won in this Division during the year is a little more than double that of 1894, being 804 oz., valued at £3,116, all quartz gold. This comparatively new field, situated westerly from Wyalong about 26 miles, has suffered quite as much from the drought of last year as any other field in the Colony; and although a few men have kept at work under great difficulties up to the end of the year, they must very shortly cease work unless rain sets in. An Otis Ball Crusher was able to work during four months of the year, and during that time treated 434 tons for a yield of 804 oz., and there is still about 150 tons at grass waiting treatment. The claims vary in depth from 30 to 100 feet, the reefs varying in thickness from 3 in. to 3 feet. With a favourable season important yields might be expected from this division. Prospecting for payable alluvial gold is still being carried on at Narriah, about 8 miles from Yalgogrin.

#### *Young Division.*

There were 2,228 oz. of alluvial gold won in this Division during 1895, which is an increase of nearly 300 oz. on the previous year. In the early part of the year a big rush set in to Spring Creek, where Staines and party had struck it very rich in their claim, where the sinking was 35 feet deep, the ground dry, and the wash yielding about 10 dwt. per load. Although several other parties are on good wash, the prospectors' claim is the richest, with a body of wash that will take some time to work out. More recently, a small rush took place to Eastlake's farm, near Wombat, where 30 or 40 miners find employment, and average about 3 dwt. to the load. Numerous other small rushes have tended to keep the mining industry in a state of healthy vitality, and combined with the dearth of other employment in the Division, systematic prospecting has been encouraged, which has reaped a reward in the shape of an extra output of gold. Sluicing has been almost at a standstill owing to the small rainfall. The South Burrangong Company are still at work, and their shaft is now down 93 feet. It is hopefully anticipated that the company will reap the reward of their enterprise during the coming year.

### TUMUT AND ADELONG MINING DISTRICT.

#### *Albury Division.*

A very satisfactory improvement in the quantity of gold won in this Division is reported, the figures being 2,322 oz., valued at £8,860, as compared with 1,200 oz., valued at £4,200, won in 1894. Towards this total the new discovery contributed 940 oz., which was the yield from 1,244 tons of stone. Although this field was discovered in 1894, little work was done until April of last year. By August 450 men had arrived on the field, but owing to all the finds being on private property, and the owners insisting on a 10 per cent. royalty, the men left, and by the end of the year the number had dwindled to fifty men, leaving over twenty-five claims idle. The field covers an area of nearly 10 square miles, and eight distinct lines of reefs have been proved auriferous, some of them very rich, their thickness varying from 2 to 18 inches. The three principal lines of reefs are the "Lone Hand," which was floated in Melbourne; the "Goodwood," and "Show Day." Several shafts were sunk for alluvial gold, but were all abandoned without anything payable having been struck. The field has the advantage of a running stream, and with such a large area of auriferous country giving such promising indications, substantial returns may confidently be expected in future from this locality. In the vicinity of Albury a little prospecting work is still being carried on, on the Nail Can Ranges. Although nothing very rich has been met with, still the indications are sufficiently encouraging to warrant the hope that rich finds may be made in that locality. A few fossickers working in the Division manage to make a bare living.

#### *Germantown Division.*

There is very little mining being carried on this Division. A few men have been employed working the old abandoned quartz reefs on a small scale, but the returns are not very rich. A party is working the Old Sam Claim on The Four-mile Gold-field, but have not been able to bottom their shaft owing to the influx of water.

#### *Corowa Division.*

As far as could be ascertained, the only gold won in this Division during the year amounted to 50 oz. from quartz and 5 oz. from alluvium. A strong company is being formed to work the deep lead, supposed to cross the Murray River from Victoria. These leads are very extensively worked on the Victorian side of the river, and the proving of them at Corowa is a question of the utmost importance to the Colony. Substantial assistance has been granted from the Prospecting Vote to effect this object, and as very promising prospects have been obtained by means of boring, the company are pretty confident of success. The Hillside Gold-mining Company is also in receipt of Government assistance to prove its ground, in which operations have been begun.

#### *Adelong Division.*

There is a large falling off in the quantity of gold won in this Division, the quantity being 3,923 oz., as compared with 6,357 oz. won in 1894. The decrease in the yield is, however, considered only a temporary one, a considerable revival being noticeable about the end of the year. Some of the mines adjacent to the township are in course of being reopened, several of which have been idle for a long time. The Gibraltar mine, lately sold to an English Company, is being worked on an extensive scale. Three shafts are being sunk, and a complete plant of a superior character is on its way from England. The Great Victoria United Gold-mining Company holds 17 acres of land, which includes the old Annette and Research claims, which were worked some twelve years, and gold to the value of something like £50,000 taken from them. Since then they have been lying idle until taken over by the Gibraltar Hill Syndicate, who have worked the mine continuously for the past eighteen months. The main shaft is down 1,075 feet, the deepest in New South Wales, whilst three other shafts have been sunk on the property, viz., 770, 700, and 460 feet. The present syndicate have put in a drive at the 600-foot level in main shaft, about 420 feet south, and they are now cross-cutting east and west in hopes of striking the reef. During progress of the work, gold-bearing leaders were met with, likewise some pyritous quartz, from which about 150 oz. of gold were obtained from a crushing of 164 tons of stone. The Gibraltar Consolidated Gold-mines are still at work, and during the year raised a fair quantity of good stone. About 70 men were employed on the mines.

The Adelong Proprietary Company raised 327 tons for 353 oz., and the Lady Mary Company, at the Gap, 757 tons for 541 oz. Sheppard's alluvial claim, which still maintains its yield, has been sold to the Gibraltar Company, the "water rights" being the valuable property in their eyes. Quite a large number of men are making a living along the old workings of the Adelong Creek, and occasionally a very fair patch of ground is met with. About 320 men are employed gold-mining in this Division.

#### *Gundagai Division.*

This Division shows a substantial increase in the quantity of gold won during the year, which was 1,876 oz., as compared with 1,235 oz. in 1894. There is a considerable amount of quartz mining going on in the Division at the present time, but it is questionable if the owners are doing more than paying expenses, with the exception of one at Jones Creek, where some good gold is being got. This mine is 4 miles west of the town of Gundagai, on private land. A lot of prospecting work has been done during the year on Mount Parnassus, without any discovery being made, and the veins which fed the rich alluvial discovered at its base are yet to be found. The Kimo Ranges are being prospected in many places where rich gold was obtained in the old days, but, so far, without success. The Jackalass alluvial field at South Gundagai still affords a living for a considerable number of men, but no large finds are reported. This lead is continuous, but very patchy. Numbers of men are making rations by fossicking among the old workings throughout the Division.

#### *Cootamundra*

*Cootamundra Division.*

Little work has been done within this Division during the year, with the exception of prospecting, and no discovery of any importance has been reported.

*Junee Division.*

There were £996 worth of gold won in this Division last year—very little in excess of that obtained in 1894. C. Butler and party, working on the "Old Dust Hole," under aid from the Prospecting Vote, suspended operations during the year, and abandoned the ground. It was then taken as an extended quartz claim by a party of eight men from other fields. After sinking about a foot in No. 1 shaft, abandoned by Butler and party, they struck a reef about 3 feet wide, a trial crushing of 4 tons from which yielded 16 oz. of smelted gold. Several other crushings from the reef have taken place with very satisfactory results. Shares in the claim are now changing hands at a good figure. A party of miners from New Zealand are erecting a cyanide plant for the purpose of treating the large quantity of tailings lying near the mines. Samples sent over to New Zealand and treated yielded gold to the value of about £6 per ton. Mining matters have improved in the vicinity of Eurongilly during the year. From a reef struck on Doyle's Lease, the following crushings have been taken:—

2 tons 8 cwt. yielded	.....	14½ oz.
1 " 3 " "	.....	21 " "
3 " 0 " "	.....	6½ " "

Some very good-looking stone, none of which has yet been tested, has been taken from a reef just discovered in King's Lease. A few miners are at work in the alluvial, but the want of water is retarding their progress. At Wantiool very little is doing in quartz mining at present; but a few men are working the alluvial, and making fair wages.

*Tumut Division.*

There were 105 oz. of alluvial gold won in this Division during the year. Although the yield is small, much activity is displayed in prospecting both for quartz and alluvial in this locality, but with little success so far. At Billibalula, about 15 miles north of Tumut, a long line of reef is being prospected, the ground being pegged out for several miles. The trial from the reef has not reached expectations; but the reef, being large, would probably pay were a battery erected on the ground, as there is abundance of wood and water close to the reef. The "Flats" along the Gilmore Creek, supposed to be very rich so long as they were closed against the miner, have proved on trial not payable. It is thought the highest levels of the valley towards Batlow are likely to prove richer.

*Tarcutta Division.*

As far as can be ascertained only 33 oz. of gold were won in this Division during the year. Mining matters have been very slack in this Division during the past twelve months. Three quartz claims have been working at intervals at Lower Tarcutta, but, although they are in receipt of Government aid, very little work has been done. There are always a few fossickers on the Humula and Carabost Creeks, but they manage to make a bare living only.

*Batlow Division.*

There are 164 European and 10 Chinese alluvial miners in this Division who won among them 930 oz. of gold, valued at £3,565, nearly £1,000 of an increase on the yield for the previous year. As the bulk of the mining is carried on by ground sluicing the dry season had a very serious effect on the yield, many of the claims having applied for, and been granted suspension. No new finds are reported during the year, the principal work being confined to the old workings, which a few years ago were not considered payable. On the Gilmore Creek an extensive race is being blasted through a hard bar, and sluicing operations will be stated as soon as water is available. There is a very large dyke formation at the head of Adelong Creek which has been worked by hydraulic sluicing for some years. It is understood that a syndicate has been formed to crush the debris which cannot be treated by sluicing. On Bago Creek three races are being put in to sluice the creek flats, but as the rock is fairly hard progress is slow. Scattered patches of gold are still found under the basalt in the neighbourhood of Laurel Hill on the Range that divides the tributaries of the Murray and Murrumbidgee Rivers.

*Tumbarumba Division.*

Gold to the value of £6,290 was won in this Division during the year, which is a considerable increase on 1894. The Tumbarumba Sluicing Company are still at work with varying success. The Tumbarumba Basalt Deep Lead Gold-mining Company has restarted work and has been successful in striking good-looking wash in its western drive. A good deal of prospecting work is being carried on, and some very rich specimens are occasionally met with in the quartz veins at the junction of the dyke and granite country. The usual number of fossickers are met with in this Division, and when water is abundant they appear to do fairly well.

*Narrandera Division.*

The returns show that 964 oz. of quartz-gold, valued at £3,856, were won in this Division during the year, which is an increase of 406 oz. on the return for 1894. The Harry Smith Gold-mining Company is the principal mine in the district, and last year it crushed 1,242 tons for 960 oz. The main shaft is now down 200 feet, and when in full work the company employs 30 men.

*Cooma Division.*

The total value of gold from quartz and alluvial, won in this Division during 1895 was £5,072, as compared with £6,079 the previous year. The decrease is directly due to the extremely dry season, which completely paralysed mining during the year in some parts of the district. At Cowra Creek many of the mines from which good results were expected were idle the greater part of the year, being unable to crush. Whithy's battery, however, managed to crush 753½ tons for various miners, which yielded 478 oz. of gold. Lewis and Company also crushed 159 tons from the Victorian Gold Lease for 54 oz., and 47 tons from Brogan and party's claim for 20½ oz. Bartlett and William crushed 100 tons for 40 oz., and have 550 tons at grass awaiting water; and other miners have about 500 tons, which will be put through when water is available. The Star of Cooma Gold-mining Company own some 33 acres of leased land, and has a good machine, site, and water, but is at present idle for want of capital. During the year the company crushed 900 loads for a yield of 336½ oz. of gold. John Murray has put in a tunnel on the north side of the Bredbo River, for a distance of 204 feet, but lost the reef at about 150 feet. He is now trying to pick it up by cross-cutting. From another lease of his, known as the Democrat, he crushed 100 tons for 130 oz. This reef is about 15 inches wide, and appears to be a permanent and payable one. At Buckley's Crossing a large number of men are making a living on the river, owing to its lowness, and a reef is also being prospected on private land in the locality. At Brown's Campa party are opening out a reef, and several men are doing well on the Little Plain River. The Nelbothery mine is idle, and so far as can be seen, there is little prospect of its being worked. At Colinton, the lease owned by the Colinton Gold-mining Company was sold for wages, and was bought up by the men, and aid from the Prospecting Vote being granted to them, they took out of this drive 42 tons, yielding 19 oz. of gold. They have now opened up a large block of backs, and good results are expected from their next crushing.

*Kiandra Division.*

There were 810 oz. of alluvial gold got in this Division during the year, valued at £3,006, which is a decrease of about £930 on the yield for 1894. The New Chum Hill tributors did nine months' work for a return of 16 oz. of gold, and the mine is now for sale. The tunnels at the Twelve-mile have been steadily pushed on during the year, but without results, so far, although the prospects are considered good. John Robyns has put in his tunnel a distance of 400 feet, by means of aid from the Prospecting Vote. There suit of his operations are closely watched, and in the event of them proving successful, a large area of land will be eagerly taken up. Hooper and party, on Township Hill, anticipate striking the wash very shortly and if their expectations are realised, a large field for mining under the basalt will be opened up. This party has received every assistance from the Prospecting Board. Moulb and party, have struck a reef 4 feet 3 inches wide showing good gold. The shaft is now down 43 feet, but being an east and west reef some doubts are expressed as to its permanency. Weselman and party, close by, working a reef running north and south, 5 tons from which crushed at the Adelong battery, went 2 oz. per ton. Several other quartz claims are working in the vicinity, and a battery is about to be erected. Fossickers still continue

continue to make a fair living in the neighbourhood, and there is no question that the prospects of Kiandra, from a mining point of view, are brighter at present than they have been for some time. At Toolong, a number of miners still make a living, but the gold is very scattered, and uncertain as to quantities. At Grey Mares, Boogong, a tunnel is being put in under aid from the Prospecting Vote to test a reef at a depth. The sluicing claim in this locality continues to yield good wages. Prospecting operations are still being carried on at Bark Huts, but no discovery of any moment has yet been made.

#### *Nimitybelle Division.*

Very little gold is being got in this Division, at the present time the principal work carried on being purely of a prospecting nature, from which little has resulted so far. The lease taken up by Messrs Turbot and party, at Bunberra Creek, has virtually been abandoned, and will probably be reported for cancellation. The gold won during the year in the locality may be set down at at 50 oz.

#### *Captain's Flat Division.*

The Lake George United Mining and Smelting Company saved in connection with their copper and silver mining operations 2,164 oz. of gold. Since the amalgamation of the two companies, *i.e.*, The Lake George and the New Kohinoor, the number of hands employed has been greatly increased, and a second furnace has been put in blast. The company have hired one of the Government Diamond Drills to further prove the lode, and should their expectations be realised work will be found for a large number of extra men. The number employed at the present time is over 300.

#### *Queanbeyan Division.*

There were £1,368 worth of gold won in this Division during the year, as compared with £377 10s. during 1894, which is highly satisfactory, seeing the principal mining centres, *viz.*, Bywong and Macs' Reef, were cut off, and embraced in the new division of Bungendore. A good deal of alluvial mining has been carried on throughout this Division during the year by small parties of prospectors with very fair results, which would certainly have been better had the season been favourable and a good supply of water available.

#### *Bungendore Division.*

This new mining Division proclaimed during the year, returned 814 oz. of quartz gold, valued at £3,260. The rush to Bywong terminated somewhat suddenly, the dry season making work nearly impossible. Several of the claims still continue to put out good stone, the last crushings from Lowe's and Cartwright's claim going about 1 oz. per ton. Johnston and McAllistair raised 700 tons for 200 oz.; Giles, Wilson, and party working the Energetic Claim, 62 tons for 114 oz.; The Bywong Gold mining Syndicate, 120 tons for 400 oz.; and The Coolgardie Prospecting Claim, 113 tons for 50 oz. A large quantity of good-looking stone is at grass, which will be treated immediately water for the purpose is available.

#### *Gundaroo Division.*

There were 65 oz. of alluvial and 48 oz. of quartz gold won in this Division during the year. About the middle of the year a slight rush set in to Dairy Creek, situated 7 miles S.E. of Gundaroo Township, consequent upon the discovery of a gold-bearing vein on the property of Messrs. Batt, Roid, and Purves. Several leases have been applied for, but so far little work has been done to prove the value of the discovery. Subsequent to this discovery another gold-bearing vein was found on the gold reserve adjoining the above property. Although narrow and difficult to follow, it is rich, and has proved payable. A gold-bearing reef has also been struck on Hurdwick's land which has been reported payable. As prospecting work is being vigorously carried on in this Division some valuable discoveries are anticipated during the coming year. Alluvial mining in this Division is restricted to Brook's Creek, where about twenty men are fossicking among the old workings.

#### *Wagga Wagga Division.*

Prospecting was very active during part of the year round Wagga Wagga, but the results have not reached expectations. The deposits of stream-tin carrying a fair quantity of gold, to be found near Pulltop, would, it is thought, prove payable were sufficient water available for sluicing purposes. There is a large area of payable ground in this locality, if the water difficulty could be overcome.

### SOUTHERN MINING DISTRICT.

#### *Braidwood Division.*

There are 82 alluvial gold-miners working in this Division, including 12 Chinamen, who won among them 800 oz. of gold, valued at £3,080, which is 135 oz. less than the quantity won in 1894. Although a slight decrease is shown, the returns must be looked upon as satisfactory, in view of the fact that the year 1895 will long be remembered throughout the District as one of the most disastrous on record, both from an agricultural and mining point of view. The greatest portion of the small rainfall fell during the early part of the year, consequently the crops were a failure and the carrying on of mining operations rendered nearly impossible. Four batteries were thrown idle from want of water, and many of the streams considered permanent are now dry. The most important work carried on in the District during the year was the cutting of the granite-bar at Snowball by The Enterprise Sluicing Syndicate, by means of aid from the Prospecting Vote, a work that has been talked of by the local miners for the last thirty years. Notwithstanding that the operations of the Company have been greatly curtailed by want of water for sluicing purposes, gold in sufficient quantities to pay actual working expenses has been got, which goes to prove that the venture will be a profitable one when rain does fall. The dimensions of the race are  $4\frac{1}{2}$  chains in length by 9 feet deep, through solid granite, it will serve to drain a large area of auriferous country hitherto unworkable.

#### *Araluen Division.*

Gold to the value of £11,577 was won in this Division, which is a little short of the yield during 1894. The effects of the late drought were severely felt in this Division, and when rain sets in a large increase in the field may be looked for. A party at Bell's Creek received aid from the Prospecting Vote to further test their claims—and have been successful in striking very good-looking stone. Efforts are now being made to raise money to develop the discoveries. At the Bell's Creek battery, 188 tons of stone were put through for a yield of 167 oz., and another 50 tons are ready to treat when water is available.

#### *Major's Creek Division.*

The returns show that the value of the gold won within this Division during the year, was £5,863, an increase of about £600 on the returns for the previous year. With few exceptions, no new discoveries have been made during 1895 in this Division, the gold being won principally from old abandoned ground. During the dry weather when sluicing work was stopped a great many of the claim-holders on the old workings were breaking down banks of earth into their ground-sluicers, which they expect will pay well when the wet season sets in. At Long Flat the puddling machines have been idle more than half the year, and great heaps of wash-dirt are stacked, awaiting rain. Snobs Reef has been reopened and the present owners mean to give it a fair trial. During the year they raised 1,430 tons, which yielded 257 oz. free gold; and 525 oz. from pyrites, which were treated at Maryborough in Queensland. The shaft is now down 186 feet, and 24 men find constant employment. So far only one party has taken advantage of the 33rd section of the Mining on Private Lands Act, 1894. Many of the miners in this District complain of the 10 per cent. royalty and the 10s. per month license fee, which they state is exorbitant for ground that has been worked off and on for the past forty-four years. It is confidently expected that some good quartz reefs will shortly be found in this locality.

#### *Little River Division.*

The extremely dry season had the effect of reducing the yield of gold in this Division from 2,260 oz. in 1894 to 1,669 oz. in 1895, the principal work being confined to mere fossicking in the vicinity of the river. Several quartz leaders were found by some of the parties and followed to water level, the crushings weighed in the aggregate 25 tons, from which 100 oz. of gold were got. This was, of course, picked ore, the lower grade stone being stacked for future treatment. A syndicate is said to be in course of formation to work the Day Dawn reef below water level 205 feet, at which point the water is unusually heavy, and requires powerful machinery to deal with it. The Homeward Bound and Scotch Lassie Leases stopped work at the 100-foot level—the water beating them out.

*Nerriga*

*Nerriga Division.*

The yield from this Division was 700 oz. of alluvial and 90 oz. of quartz gold, a decrease of 357 oz. due to the scarcity of water for mining purposes, the men being driven from the table land to work in the bed of the Shoalhaven River. During the early part of the year a large number of men from Sydney started work on the banks of the river, but the short stay made by them would indicate that their expectations were not realised. A sluicing Company has been formed to work certain alluvial claims at Colombo, and an English company has purchased the Beaula property, near Nerriga, whereon it proposes expending a sum of £30,000. Other companies on the river intend improving their water supply, and on the whole there is a marked improvement on the river in connection with this class of mining.

*Nelligen Division.*
