1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**TRADE UNIONS ACT, 1881.**

(REPORT OF THE REGISTRAR OF FRIENDLY SOCIETIES AND TRADE UNIONS FOR THE YEAR 1895.)

*Presented to Parliament, pursuant to Act 45 Vic. No. 12, sec. 26.*

*Printed under No. 19 Report from Printing Committee, 24 September, 1896.*

The Registrar of Friendly Societies and Trade Unions to The Chief Secretary.

Office of Registrar of Friendly Societies and Trade Unions,  
Sydney, 15 September, 1896.

Sir,

I have the honor to lay before you for presentation to Parliament in terms of the Trade Union Act of 1881 (45 Victoria No. 12) a report with respect to matters dealt with in connection with Trade Unions for the year 1895.

Two new unions only were registered during the year, the "Eight Hour Demonstration Committee of 1895," and the "Sydney and Suburbs Master Butchers' Association."

Considering the large number (161) of Trade Unions registered since the Act came into force, it may appear remarkable that so few annual returns have been received. It is probable, however, that owing to the depression which has existed for some years, many Unions have ceased to exist, while others are in such a low condition, both as to membership and funds, that they are unwilling to give any information as to their affairs.

Amendments of existing rules were registered by the following Societies:—

New South Wales Operative Bakers' Association.  
New South Wales Locomotive Engine-drivers, Firemen, and Cleaners' Association.  
Masters and Engineers of Harbour and River Steamers Association.  
New South Wales Furniture Trade Society.  
Builders and Contractors' Association.  
New South Wales Typographical Association.

Although no special provision is made in the Act for the registration of trustees, yet notifications of their appointment were received from several Societies, and have been placed among the records of this office. These trustees, it may be noted, are the legal representatives of their respective unions, and in them is vested all real and personal estate, with power to bring or defend any actions concerning the property of their Associations, and with other privileges which would not be granted to trustees of unregistered bodies, one of them being that a trustee is not personally liable for any deficiency in the funds, but only for such moneys as he may himself have received.

In return for these advantages the Act requires certain conditions to be fulfilled, which have hitherto been almost entirely neglected, and as this default has probably arisen from ignorance of the duties of officers of Trade Unions, the following sections of the Trade Unions Act of 1881 are given in full:—

Sec. 17.—Every trade union registered under this Act shall have a registered office to which all communications and notices may be addressed. If any trade union under this Act is in operation for seven days without having such an office such trade union and every officer thereof shall incur a penalty not exceeding five pounds for every day during which it is so in operation. Notice of the situation of such registered office and of any change therein shall be given to the Registrar and recorded by him. Until such notice is given the trade union shall not be deemed to have complied with the provisions of this Act.

Sec. 18.—A general statement of the receipts, funds, effects, and expenditure of every trade union registered under this Act shall be transmitted to the Registrar before the first day of June in every year, and shall show fully the assets and liabilities at the date and the receipts and expenditure during the year preceding the date to which it is made out of the trade union, and shall show separately the expenditure in respect of the several objects of the trade union, and shall be prepared and made out up to such date in such form, and shall comprise such particulars as the Registrar may from time to time require, and every member of and depositor in any such trade union shall be entitled to receive on application to the treasurer or secretary of that trade union a copy of such general statement without making any payment for the same. Together with such general statement there shall be sent to the Registrar a copy of all alterations of rules and new rules, changes of officers made by the trade union during the year preceding the date up to which the general statement

statement is made out, and a copy of the rules of the trade union as they exist at that date. Every trade union which fails to comply with or acts in contravention of this section and also every officer of the trade union so failing shall each be liable to a penalty not exceeding five pounds for each offence. Every person who wilfully makes or orders to be made any false entry in or any omission from any such general statement, or in or from the return of such copies of rules or alterations of rules, shall be liable to a penalty not exceeding fifty pounds for each offence.

Sec. 25.—A trade union which fails to give any notice or send any document which it is required by this Act to give or send, and every officer or other person bound by the rules thereof to give or send the same, or if there be no such officer then every member of the committee of management of the union unless proved to have been ignorant of, or to have attempted to prevent the omission to give or send the same, is liable to a penalty of not less than one pound and not more than five pounds recoverable at the suit of the Registrar or of any person aggrieved, and to an additional penalty of the like amount for each week during which the omission continues.

Two appendices are attached, one (A) containing the names of all the Trade Unions registered in New South Wales prior to 1st January, 1896, and the other (B) such particulars as have been supplied by seventeen unions, which have furnished information with regard to their operations during the year 1895.

I have, &c.,  
ALFRED DAVIS,  
Registrar of Friendly Societies and Trade Unions.

## APPENDIX A.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**FRIENDLY SOCIETIES.**

REGISTRAR'S REPORT ON OPERATION OF, FOR YEAR 1895.)

*Printed under No. 27 Report from Printing Committee, 13 November, 1896, a.m.*

Presented to Parliament, pursuant to Act 37 Vic. No. 4, Sec. 45.

The Registrar of Friendly Societies to The Chief Secretary.

Sir,

Sydney, 12 November, 1896.

I have the honor to forward herewith my report for the year 1895, to which are appended tables compiled from the annual returns of Friendly Societies, and exhibiting their position at the close of the year 1894.

I have, &c.,

ALFRED DAVIS,

Registrar of Friendly Societies.

In a previous report reference was made by the Registrar to the general inadequacy of the contributions required from members of Friendly Societies to provide the benefits offered under their rules, and also to the unsoundness of the system of uniform payments to the sick and funeral funds.

Any proposal to alter the existing undesirable condition of affairs met with vigorous opposition from the majority of the officers of the various bodies, who were inclined to resent interference, and doubtless feared that a change would be productive of extra trouble in the performance of their duties. There were others, however, who were already aware of the faulty nature of the system then in vogue, and willing to exert their influence to bring about an amendment, and great improvements have since been made. Some of the most bitter opponents became converted into strong supporters, and although, chiefly through the efforts of the older members, in most cases but moderate increases have been made in the subscriptions of persons who had already been initiated as members, nearly all the societies have registered rules requiring much higher contributions from new members.

In the case of one of the most important orders of Oddfellows, known as the Manchester Unity, of which the districts and branch lodges varied very considerably in the value of the benefits which they offered, a most decisive step was taken. They have now a code of rules binding upon every branch of the society in New South Wales and providing for uniformity of benefits to be received from, and of contributions to, the sick and funeral funds, with the proviso that every member initiated since 1st October, 1894, shall subscribe according to an adequate scale graduated by age groups.

The Independent Order of Rechabites had already employed a graduated, although not quite adequate scale, and have now adopted one which has been certified to as satisfactory, and which applies to all new members. The same course has been followed by the Grand United Order of Oddfellows, the Independent Order of Oddfellows, the Order of Royal Foresters, the Sons and Daughters of Temperance, the Loyal Protestant Benefit Society, the Protestant Alliance Friendly Society, and the Free Gardeners. The A.H.C. Guild of St. Mary and St. Joseph (completely remodelled as an Order with branches), the Irish National Foresters, and the National Independent Order of Oddfellows have adopted an approved scale for all members alike. The remaining orders still continue to offer to the unwary a scale of sick and funeral benefits which the present weekly contribution is wholly inadequate to provide, and young men now joining them will, when too late, discover that the whole of their payments have been absorbed for the benefit of the old members.

One element which led to the improvement was the knowledge that the lodge funds were being rapidly exhausted owing to the increased demand for sick allowance, due to the recent bad times and lack of employment. Many members have been compelled to claim sick pay who, under better circumstances, would have declined to accept it, and it is freely stated that men in sound health, but out of work, have contrived to have their names placed on the sick list.

A very considerable amount of work has been entailed upon the office of the Registrar not only in the examination and revision of rules submitted for registration, the preparation of tables of contributions suitable to the varied scales of benefits proposed by the different societies, and the giving decisions in the numerous cases of disputes brought before the Registrar, but still more in the adjustment and correction of the annual returns required under section 45 of the Act. The discrepancies between the balance-sheets of branches of the orders and those of the Districts and Grand Lodges have been subjected to careful investigation, and the further inquiries were pushed the more clearly was it demonstrated that embezzlements and misapplication of the funds had been of far from exceptional occurrence.

The chief causes of this unsatisfactory condition of affairs have been the unfitness of secretaries, due to their ignorance, and the utter neglect of the auditors to observe the faithful fulfilment of their duties.

In the rules of some societies it is provided that if an office become vacant, and there be no duly nominated candidate, the roll of members shall be called over, and each member in turn refusing to accept the office shall be fined,—as if the fact of having been initiated has conferred upon each member the capability of properly performing the duties of secretary or auditor; and in this connection it has been stated that one on his appointment stated that he had never at any period of his life been required to add up a column of figures.

The errors into which secretaries have fallen are of various kinds. In one case great care was observed in entering in each member's pence book the amount which he paid on each lodge night, but no list was kept of the names of those from whom the money was received. A simple memorandum was made in the lodge books of the total amount collected, and handed over to the treasurer at the close of the meeting; so that no book is in existence to show what members are in arrears, nor to what extent. In another case, a refund to the society on account of over-payment from its funds was omitted from the receipts, although the gross amount paid away was inserted among the items of expenditure.

Some other vagaries in the way of account-keeping may be noted, which are somewhat remarkable. Moneys embezzled years ago, and amounts invested in bubble banks and in building societies which have long since closed their doors, and from which not a farthing can ever be realised, are still regarded as valuable assets, and scrupulously carried forward from year to year. Investments realised and amounts withdrawn from banks have in several instances been treated as a portion of the annual receipts; and in like manner sums invested have been taken as part of the annual expenditure. Amounts spent on repairs to a building or in replacing worn-out furniture have been added to the original cost, thus giving an unduly increased value to the society's assets. Bank overdrafts have occasionally been regarded as available assets, and appear to have been looked upon as a decidedly profitable investment. Deficiencies in the management fund at the end of a year, and sums of money, in many cases by no means inconsiderable, borrowed, illegally, from the sick and funeral fund, have been quietly ignored in the next year's returns, although the rules forbid such borrowing, and provide that, if necessary, a levy shall be made for management purposes. If the income for the year has been less than the expenditure, it is not an uncommon occurrence that the secretary adds the amount of the excess of expenditure to the amount of funds at the beginning of the year, so as to arrive at the funds at the end of the year, and then, by way of clinching the matter and providing a check on his calculations, to give detailed particulars as to bank deposits and other ways in which these total amounts are invested.

Strange as some of the above-mentioned blunders appear, it must be noted that the balance-sheets have not been challenged by any private or official member, and they have, of course, been passed and certified by the auditors.

Despite the distinct provision in the 40th section of the Act that a separate account shall be kept of the contributions and expenses in connection with management, many societies continue to keep one general fund for all purposes. As this is illegal the chief executive officers should at once take steps to remedy the evil, and have the contributions in future properly divided; and they should at the same time impress upon each secretary the necessity of ensuring accuracy in their returns of the number of members, financial and unfinancial. The numbers returned to this office frequently differ materially from those supplied to the District or Grand Lodge.

Unfortunately, certain causes have militated against improvement in these respects—the resentment felt by branch officers when any suggestions are made by their superiors, and the hesitation on the part of District or Grand Secretaries, elected from year to year, to find fault with those upon whose goodwill they depend for reappointment.

Every society established under the Act is required by section 28 to appoint one or more trustees, in whom all real and personal estate of the society shall be vested (section 33). The extent to which this provision has been neglected is surprising. From one or two cases which were brought under notice it was deemed expedient to make an investigation of the records of 605 existing registered Friendly Societies. Of these, 392 had the correct number of trustees as required under their rules, 31 had less than the required number, 37 had sent in notices of appointment which were informal, while 145 societies, some of which had been in existence for upwards of thirty years, had never registered even one trustee, and of those which had registered the correct number, it has since been found that many had made new appointments without registration.

Periodical valuations of the societies are necessary, as being the only means by which they can perceive plainly their position; but the only valuations which have as yet been made are those of the Manchester Unity, of the Grand United Order of Oddfellows, and of the Rechabites. The last-named society has not published the result, which cannot, therefore, be given here; but the condition of the two first-named was as follows:—

Name of Order.	Number of Members.	Average Age (in years).	Number of Wives.	Assets.	Liabilities.	Deficiency per Member.	Ratio of Assets per £ of Liability.
Manchester Unity I.O.O.F. ....	17,656	34½	11,271	£ 720,529	£ 924,798	£ s. d. 11 11 7	£ s. d. 0 15 7
Grand United O.O.F. ....	8,888	34	3,943	281,970	403,055	13 0 9	0 14 10

For the sake of convenience and comparison, the following abstracts of the returns for the years 1893 and 1894 have been compiled:—

**IMMIGRATION.**

(REPORT FOR 1895.)

---

*Printed under No. 1 Report from Printing Committee, 21 May, 1896.*

---

The Officer-in-Charge of Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, 11 January, 1896.

I have the honor to submit, for the information of the Chief Secretary, the report on Immigration for the year ending 31st December, 1895.

Operations under the Regulations have been confined to the nominations of wives and families by their husbands and fathers, of good moral and industrial qualifications, being residents in the Colony.

Of the total of thirty-seven immigrants who arrived, all were nominated in the Colony.

They consisted of eighteen individuals above 12 years of age and nineteen under 12 years of age.

No births or deaths occurred during the voyage.

The Appendices herewith annexed give full detailed information relative to Immigration during the past year :—

- A.—General Statistical Information.
- B.—Nationality of Immigrants.
- C.—Religious Persuasions.
- D.—Educational Attainments.
- E.—Distribution into Country Districts.

I have, &c.,

J. A. BRODIE,

Officer-in-Charge of Immigration.

**APPENDIX A.**

NEW SOUTH WALES.

## ROYAL COMMISSIONS OF INQUIRY.

(RETURN RESPECTING FEES TO MEMBERS, &amp;c.)

*Printed under No. 6 Report from Printing Committee, 25 June, 1896.**[Laid upon the Table of this House in answer to Question No. 6 of 24th June, 1896.]*

## Question.

6. MR. PERRY asked THE COLONIAL SECRETARY,—

- (1.) What Royal Commissions have sat during the last five years?
- (2.) What rate of fees has been allowed to the members of each of such Commissions, and what was the scale of remuneration allowed in each case to the shorthand-writers and secretaries?
- (3.) On which of such Commissions did the members of the Commission, the shorthand-writers, or the secretary charge for two sittings per day, and in how many instances did this occur?
- (4.) What was the total amount paid to each member of such Commission, and the total number of days of sitting, and the like information with respect to the shorthand-writers and the secretaries?
- (5.) Were any instructions given in any of such cases that the *Hansard* staff should supply the officers required, and on what terms?

## Answer.

(1 and 2.)

- Baldwin Engine Commission—President, £10 10s. per sitting; Members, £7 7s. per sitting; Secretary, at the rate of £300 per annum; Shorthand-writer, £2 2s. per sitting, and 1s. per folio for transcription.
- Bayview House—President, nil; 2 members, nil; 1 member, £3 3s. per sitting, from 1 January to 19 March, 1895; Secretary and shorthand-writer, at rate of £400 per annum.
- Battye Inquiry—No fees.
- Casual Labour Board Inquiry—President, £10 10s. per day; Members, £10 10s. per sitting; Secretary, at rate of £300 per annum; Shorthand-writer, £2 2s. per sitting, and 1s. per folio for transcription.
- Chinese Gambling—President and members, £3 3s. per sitting; Secretary and shorthand-writer, £3 3s. per sitting, and 1s. per folio for transcription.
- Coal-mining Bill Inquiry—President, £12 12s. per sitting; Members, £7 7s. per sitting; Secretary and shorthand-writer, £2 2s. per sitting, and 9d. per folio for transcription.
- Dean Inquiry—President, £10 10s. per sitting; 1 member, £7 7s. per sitting; 1 member, £3 13s. 6d. per sitting; Secretaries and shorthand-writers (2), £2 2s. each per sitting, and 1s. per folio for transcription.
- Fisheries Inquiry—Members, no fees; Secretary and shorthand-writer, salary at rate of £400 per annum.
- Gutzeit Inquiry—Commissioner, £10 10s. as fee.
- Johnson Inquiry—Commissioner, fee of £21.
- Kennedy Inquiry—No fees.
- G. D. Hay Inquiry—Members, nil; Shorthand-writer, for services and expenses, £4 15s.
- Dr. Matthews Inquiry—Commissioner, fee of £30.
- Military Service Inquiry—President, £5 5s. per sitting; Members, £3 3s. per sitting; Secretary, at rate of £250 per annum; Shorthand-writer, £3 3s. per sitting, and 1s. per folio for transcription.
- Public Service Inquiry—President, £3 3s. per sitting; 3 members, £2 2s. per sitting; 1 member, nil; Secretary and shorthand-writer, at rate of £400 per annum; assistant shorthand-writer, at rate of £200 per annum.
- Registrar-General's Department—Deeds and Search Branch Inquiry—Commissioner, fee of £105; Secretary and shorthand-writer, £3 3s. per sitting, and 1s. per folio for transcription.

Schey-Eddy

Schey-Eddy Inquiry—President, nil; Members, £7 7s. per sitting; Secretary, at rate of £6 per week; Shorthand-writer, £2 2s. per sitting, and 1s. per folio for transcription.  
 Statute Law Consolidation—Members, nil; Secretary, at rate of £200 per annum.  
 Trial Bay Harbour Works—Commissioner, nil; Shorthand-writer, £25 for services.

(3 and 4.)

Coal-mining Bill Inquiry—President, £680 8s., 54 sittings; 1 member, £396 18s., 54 sittings; 1 member, £396 18s., 54 sittings. Secretary and shorthand-writer, £950 12s. 2d., as under—54 official sittings, £113 8s.; 165 other sittings, £346 10s.; transcription, 12,385 folios, at 9d., £164 9s. 2d.; writing and engrossing report, £26 5s.—£950 12s. 2d. Exclusive of travelling and other expenses.

Dean Inquiry—President, £409 10s., 39 sittings; 1 member, £286 13s., 39 sittings; 1 member, £143 6s. 6d., 39 sittings. 1 secretary and shorthand-writer, £310 13s., as under—61 sittings, at £2 2s., £128 2s.; transcription, 3,651 folios, at 1s., £182 11s.—£310 13s. 1 secretary and shorthand-writer, £729 1s., as under—66 sittings, at £2 2s., £138 12s.; 12 sittings, at £4 4s., £50 8s.; transcription, 4,186 folios, at 1s., £209 6s.; writing and engrossing report, £5 5s.; secretarial work, correspondence, &c., £10 10s.; making *précis* of evidence, £315—£729 1s.

Public Service Inquiry—On one day only two sittings were charged for, the President at £3 3s., and two members at £2 2s. per sitting.

**FIRE BRIGADES BOARD, SYDNEY.**

(TWELFTH ANNUAL REPORT.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

Printed under No. 3 Report from Printing Committee, 4 June, 1896.

The Chairman to The Chief Secretary.

Fire Brigades Board, Head-quarters Fire-station,

Sydney, 19 March, 1896.

Sir,

Pursuant to Act 47 Vic. No. 3, section 7, I have the honor, by direction of the Fire Brigades' Board, to present, for the information of the Chief Secretary, the Report of the Board upon the administration of the Department of Fire Brigades within the Metropolitan District during the twelve months proceeding the 31st December, 1895.

I have, &c.,

CHARLES BOWN,

Chairman.

REPORT OF THE FIRE BRIGADES' BOARD FOR THE YEAR 1895.

In compliance with the direction of the seventh section of the Fire Brigades Act, 1884, we have the honor to report upon the administration of the Department over which we preside.

With regard to the Board, no alteration has to be chronicled, the biennial term of office not expiring until this year.

The list of contributory municipalities was extended from thirty-two, in the previous year, to forty; Annandale being separated from the Municipal District of Leichhardt, and proclaimed a separate borough, and Auburn, Canterbury, Concord, Enfield, Hurstville, Rockdale, and Strathfield being added to the list. The total assessed value of ratable property was £5,226,072, of which £268,527 was that of the added area. Excluding that addition, for the purpose of comparison, the assessment of the area under the operation of the Act was £339,346 less than that of the similar district in the year preceding; £209,209 of the decrease being in the city of Sydney. Penrith and Richmond were proclaimed under the Act, but did not become contributory until the beginning of this year. These are notable as being the first inclusions within the Metropolitan District of municipalities so distant from the centre, and it is matter for anxious consideration how a fair amount of protection is to be extended to them. We are of opinion that when application be made for the extension of the Act to any district within the county of Cumberland, such application should be referred to us for report as to whether the Department have any prospect of being able, under existing circumstances, to provide fire protection for the municipality within a reasonable time. The contribution paid in the ratio of the assessments was equivalent to 2s. 3-55d. per £100.

The returns of the sums held at risk by the Insurance Companies amounted in all to £59,340,096, which, notwithstanding the extension of the area for which the returns were made, represented a decrease of £504,605. The number of Companies was less by two, in consequence of the retirement of the "British and Colonial" from business, and of the "Straits" from the Colony. The disappearance of the former reduced to five the number of Insurance Offices having their head-quarters in the Colony. This, under the existing regulations, will practically have the curious effect of preventing any contest for the representation of these Companies upon the Board:—for only the Manager or Secretary of one of these Companies is eligible, and when such officer receive the requisite nomination by at least two of his brother-officers, there remain only one other eligible for nomination, and one with authority to nominate. The Insurance Offices having their head-quarters outside the Colony were thirty-four in number, and these are entitled, under section 17 of the Fire Brigades Act, to also return a representative to the Board. The contribution paid by the Insurance Companies for fire-brigade maintenance amounted to 2-4 pence in every £100 of their risks.

The estimate adopted for the probable expenditure for the current year was £18,900. This represents an increase of £900 upon that of the previous year, an amount which may be considered barely sufficient for the extension of protection to the greatly-enlarged area. The utmost care has been exercised to keep the expenditure at the lowest limit consistent with the efficiency of the service.

The fire-station referred to in our last report as being in course of erection in Walker-street, North Sydney, was opened on the 5th June. The intention to establish a branch of the Metropolitan Fire Brigade there was, however, somewhat modified by the formation of a partially-paid auxiliary corps, consisting of members of the disbanded St. Leonards Volunteer Fire Company, and placing an officer and two firemen of the permanent Brigade, assisted by these auxiliaries, in charge of the station and district.

The Volunteer Fire Station at Waverley has been rebuilt, and a pair of horses are now stabled there, to enable the company to protect a greater area than heretofore. A number of telephone fire-alarms have been connected to the station.

In Paddington, Redfern, and Burwood there is prospect of the establishment of well-equipped stations, with circuits of fire-alarms running through the surrounding districts.

Fires.

Particulars of the fires which have occurred during the year, within the Metropolitan District are furnished in several appendices. These show that 533 alarms of fire were received, of which 367 were for fires of greater or less magnitude, the others being for chimney-fires, or were false alarms. This represents an average of one fire per day, and a total increase of ninety-seven over those of the previous twelve months. Notwithstanding the larger number of fires, it is a pleasing fact that the amount of destruction by fire was considerably less—indeed, the Superintendent of Fire Brigades reports that it was below that of any year since his arrival in the Colony in 1884, and the inception of the present system. The reasons for so satisfactory a conclusion, which cannot but reflect great credit upon the fire service, are no doubt similar to those given in our last Report. In the list of fires supplied hereafter it will be noticed that three took place on vessels in the harbour. Others have occurred since the close of the year, and have been successfully extinguished by the Metropolitan Fire Brigade.

Floating service for protection of shipping.

By the recurrence of fires upon vessels at the wharves, and elsewhere, the desirability of affording better protection for them is forced continually into notice. The subject has been the theme of much anxious consideration, and previous reports have annually mentioned it. The Fire Brigades Act, in section 5, provides for the voting of money by Parliament to enable the Board to acquire floating-engines, &c., but no mention is made of the maintenance of a fire-float and crew. Herein lies a difficulty which we take this opportunity to submit. It is remarkable that although the Act makes the aforesaid provision for a floating fire-engine, it yet gives no power, so far as we are aware, for its own extension to the harbour waters. It would appear that the Act can only have operation within proclaimed municipalities (*vide* section 20, and Schedule A), while Port Jackson lies altogether outside borough boundaries, which, indeed, are represented by its shores in the case of those municipalities which adjoin it. The position is unsatisfactory as regards fire-protection for shipping. This question has never been lost sight of, and as the volume of commerce increases must become more and more pressing, but it appears to be one which can scarcely be satisfactorily dealt with without preliminary amendment of the Act. Writing under date 31st August last, the Superintendent of Fire Brigades addressed to us a report, in which he remarked, "In my opinion the time has now arrived for your Board to take action for the purpose of providing a steam fire-float for the protection of the shipping in the harbour, and also to have Port Jackson proclaimed under the Fire Brigades Act." With this we cordially agree, and annually have publicly commented upon the growing requirement for protection of the kind. The chief difficulty is with regard to maintenance of a floating fire-service. If it were possible to include the harbour waters within the Metropolitan District under the Act that question would necessarily arise; and it is obvious that any such extension of the Act, by its amendment or otherwise, should also provide for the collection of the requisite revenue. For this, it would manifestly be inequitable to tax the municipalities now contributing to maintain the fire service for the protection of their own interests on land, and similarly in the case of the Insurance Companies who take no marine risks, but contribute under the Act to safeguard the risks they hold on shore. When the subject is considered many complications become apparent. It may be taken as accepted that the principal interest in shipping and cargoes is that of the owner, and if either be partly insured, with certain reservations, that of the Insurance Offices, in so far as they may be interested. The goods in question, however, together with the hulls in which they are carried, are most largely owned and assured in Great Britain, Germany, France, or America. Under the circumstances it would appear that a small tonnage due would be probably the most equitable method of apportioning and collecting the necessary funds. This would fall lightly upon those directly interested in the preservation of the property in question, the amount required being estimated at about £1,000 per annum. Otherwise, the ordinary salvage rates might be charged for the Brigade's services in extinguishing a fire upon any vessel; but this method would be more burdensome upon the sufferers, and would have other objections.

No provision for extension of Fire Brigades' Act to Port Jackson.

Preliminary amendment of the Act.

Question of maintenance.

Water supply.

The primary necessity for dealing effectively with fires is a plentiful water supply, and that the Board of Water Supply and Sewerage is sparing no effort to improve. The reservoir mentioned in our last Report is still in course of construction in the Centennial Park, and the Hornsby-Chatswood water supply scheme is another large work which is already far advanced towards completion. The latter will furnish Willoughby and the heights on the north of the harbour with an ample supply under good pressure, while the former will be of inestimable advantage for fire-extinction purposes in the city. It is anticipated that it will have the effect of enabling this Department in many places to replace the more costly manual engine by the lighter and more economical hose waggon; two of which are now being constructed.

Building Act. Explosives.

So far as we are aware there has not yet been any movement for the enactment of a Building Act, by which the city would be improved in appearance, and the risk of fire lessened. The traffic in explosives is still carried on in the old hazardous fashion, notwithstanding the attention which has frequently been called to the necessity for its regulation in the interests of public safety.

Inflammable liquids.

While the Bill to better regulate the traffic in inflammable liquids has not been brought forward, a satisfactory innovation has been made with respect to the administration of the "Storage and Sale of Kerosene Restriction Act of 1871," which had been practically a dead letter. Some correspondence upon the subject took place between the Premier, the Collector of Customs, and this Department; and on the 21st June notice appeared in the *Government Gazette* of the appointment of Mr. Powell, the Collector of Customs, as Inspector of Kerosene. Mr. Powell thereupon issued an order to the Customs Officers to furnish samples of imported kerosene and similar inflammable oils, for testing before delivery for public consumption. All substances, therefore, which come within the definition of "Kerosene" under Act 35 Vic. No. 1, whether imported or manufactured in the Colony, are now, under Mr. Powell's direction, submitted to tests to assure that their flashing-point be not below the 110° required by the Act. This is a wise precaution which must tend to safeguard the public against the obvious dangers of dealing with untested kerosene.

Fire Brigades' Act Amendment.

Every successive year the need for amendment of the Fire Brigades' Act in many important respects, becomes more manifest; and the recent lamentable occurrence at Deniliquin points the moral that such amendment is requisite not only for the Metropolitan District, but also for the country. The necessity is accentuated by the fact that a town 40 miles distant from Sydney can without reference to us be declared within the Metropolitan District, although it must be apparent that the Metropolitan Fire Brigade can just as readily protect Bourke as Penrith or Richmond. We would therefore submit that our area is already too large and scattered to be strictly metropolitan. Such districts as Manly, and those municipalities lying at a greater distance than 10 miles from the General Post Office, are scarcely within reach

reach of personal aid from the Metropolitan Brigade, and must rely upon the protection afforded by local Volunteer Fire Companies. These are maintained by subsidies from this Department, and before being registered as Fire Brigades they have to satisfy the Superintendent as to their efficiency with regard to personnel, drill, and equipment. They are also continually subject to his supervision, or that of some experienced officer under his orders. In view of recent events the inauguration of some such system of supervision with regard to Brigades in the country would appear to be most desirable; and no doubt this Department could render valuable assistance in this respect to the fire service of the Colony generally, if power were given for us to act.

One hundred and thirty-nine telephone fire-alarms are now in operation in the city and suburbs; and Head-quarters Fire-station has telephone communication with the suburban Volunteer Fire Companies' stations as far as Parramatta. Twenty-six were installed during the year, including 10 in North Sydney, 8 in Waverley, 4 in Balmain, 2 connected with the North Botany Volunteer Fire-station, 1 in Wattle-street, Ultimo, and 1 opposite the Grafton Wharf. At the close of the year there were some 122 miles of wire erected for the service, for which maintenance at the rate of £1 a mile was paid to the Postal and Electric Telegraph Department. In view of the public service which these wires render, this is a tax which we consider might well be remitted. Experience has shown that the telephone fire-alarm system acts as a deterrent to incendiarism, as well as provides the most rapid method of communicating information of an outbreak of fire, and thereby is frequently the means of enabling the firemen to extinguish a fire before much destruction has taken place. As every year proves more surely the value of the system, it is proposed to extend it further, as opportunity offers; but the annual tax of £1 a mile upon the lines, added to the primary cost of erection, must militate to some degree against more rapid extension.

The strength of the Metropolitan Fire Brigade was increased during the year from fifty-two to sixty members, and the number of partially-paid auxiliaries from five to nine. The Superintendent of Fire Brigades reports the discipline and general efficiency to be "in all respects satisfactory." There has been considerable movement and redistribution of the Brigade's appliances during the twelve months, among which may be mentioned the stationing of a steam fire-engine at Newtown, in substitution for a manual engine.

The subsidies paid to the registered Volunteer Fire Companies (*Vide* page 7), together with sundry grants for purchase of horses, repairs, additions to stations, and other items, amounted to £2,779. The Companies generally have continued to perform useful service, which is acknowledged by the Superintendent of Fire Brigades in his report, which we append. In view, however, of the protection afforded by the permanent Brigade to the city, it has been decided to eventually discontinue to maintain Volunteer Brigades within its boundaries. As far back as June, 1894, the Superintendent was requested to prepare a scheme for the gradual extinction of subsidies to the city Companies, and it is anticipated that within two years at furthest the intention will have been carried into effect.

Grants of new hose, &c., and various repairs effected to the material in the possession of the Volunteer Brigades have represented a considerable addition to the amount above mentioned; and, in addition, many of them have received from the Government grants of amounts varying from £30 to £100. These have been made without our cognizance, and this, we submit, is a practice which is fraught with danger to the discipline and efficiency of the Brigades, and may sometimes result in defeating the very object of the donation. Sub-section 9 of the seventh section of the Fire Brigades Act provides for regulations for subsidising Volunteer Fire Brigades, &c., and under the regulations so made, as well as under section 19 of the Act, the certificate of the Superintendent of Fire Brigades as to any Company's efficiency is required before a subsidy or bonus be payable to it. But it has occurred that a Brigade from which such certificate was withheld until it could show itself to be qualified, has received a grant from the Government. The effect of such procedure must be to place a Company in a position to ignore the Regulations, to render it no longer necessary for such Company to make itself efficient to manipulate its fire-extinguishing plant, and generally to tend towards the deterioration and not the improvement of the firemanship of the body. The evil, unfortunately, stops not there, for the effects of the object lesson are liable to permeate other Companies. Again, a grant may be made for some special, and perhaps laudable object, such as the erection of a fire-station; but the amount being handed over to an irresponsible Company, without any safeguard as to its proper expenditure, it may be frittered away for other purposes, while the Board, which might well be entrusted with the trusteeship of such funds, has not authority even to inquire into the expenditure of the money. There is another evil which obtains with regard to the administration of the Volunteer Brigades, and which we hope that the long-looked-for amendment of the present Fire Brigades Act will rectify:—this is, that a Company established in a district, and having collected subscriptions from the public there, or obtained the funds from other public sources, for the purchase of fire-extinguishing plant, appears to have power to sell or to remove such plant from the district. We submit that it should not be diverted from the purpose for which its purchase-money was provided, viz., the protection of a special district, without the consent of responsible trustees, say the Mayor of the district and the Chairman of the local Fire Brigade Board. In the recent case in Deniliquin it would appear, from the meagre news to hand, that the Volunteer firemen, not alone declined to work when an outbreak of fire occurred, but also locked up the fire-extinguishing appliances; while portions of the gear could not be found until valuable time had been occupied in searching for them, after the doors of the station had been broken open. Their action, we presume, was taken in the belief that the property was theirs to do what they chose with. That is a faith which is widely held, and has been acted upon. Plant which has been paid for by what in one way or another was public money has at times been sold by those entrusted with it, and there is, so far as we are aware, no authority for anyone to step in and prevent repetitions of such an occurrence whenever any Companies may elect to disband, whether in town or country. If in the case given as an illustration the property had been vested in the Mayor, who *ex officio* is also Chairman of the local Fire Brigade Board, one difficulty which arose would have been obviated, and possibly much loss prevented.

The report of the Superintendent of Fire Brigades, and various returns supplying details of the operation of the Department, are supplied in various addenda.

CHARLES BOWN,  
Chairman.

Adopted at a meeting of the Metropolitan Fire Brigades' Board, at Head-quarters Fire-station, Sydney, on the 18th March, 1896.

Z. COLLIS BARRY, Secretary.

Having examined the books and vouchers of the Fire Brigades' Board for the year ending 31st December, 1895, and also this Abstract of Receipts and Expenditure, I certify the same to be correct.

JAMES ROBERTSON, F.S.I.A., F.I.A.V.

30 January, 1896.

APPENDIX V.

## APPENDIX V.

## Mr. Superintendent Bear's Report to the Fire Brigades' Board, Sydney.

Gentlemen,

Head-quarters Fire-station, Castlereagh-street, Sydney, 24 January, 1896.

I have the honor to submit my twelfth Annual Report on the working and general efficiency of your Brigade, and of the several Volunteer Fire Companies, together with the details of fires attended in the city and suburbs, for the year ending 31st December, 1895.

The total number of alarms for fires, or supposed fires, was 469. Of these, 82 were false alarms, 18 proved to be only chimney alarms, 367 were for actual fires, and 2 were casualties in which life was endangered or lost, but in which no damage was done to the building or contents.

Of the fires, 299 were slight or trifling, 20 were serious, and 48 resulted in total destruction.

Of the 367 fires, 159 were insured, 179 not insured, and in 29 instances the insurances on the buildings or contents could not be ascertained.

In addition to the ordinary fires, there have been 64 chimney-fires requiring the attendance of firemen with hand-pump only, making an aggregate total of 533 calls for fires, false alarms, chimney-fires, and casualties.

The fires of 1895, as compared with those of 1894, show an increase of 97; in the chimney-fires reported as houses on fire a decrease of 16, and those attended by firemen with hand-pump only an increase of 8.

In the fires which were slight there has been an increase of 93, in serious a decrease of 3, and in those which resulted in total destruction an increase of 7.

Among the buildings totally destroyed are classed sheds, weatherboard cottages, &c.

In reviewing the fires of the year, I may say that there has been less actual destruction of property in this than in any year since the Act came into operation.

The most notable fires of the year are as follows:—

Under the heading of serious—

8th March.—The Liverpool Arms Hotel, Pitt-street, City.

13th March.—The Adelaide Bond, Smith's Wharf, Miller's Point.

12th April.—The Colonial Sugar Company's Works, Harris-street, City.

9th July.—The Warehouse of Messrs. Sanders & Co., Pyrmont.

11th August.—The Boot Factory of Messrs. J. P. Wright & Co., Elizabeth-street, City.

22nd August.—The s.s. "Victorian" and "Emu," in Johnstone's Bay.

30th October.—The Warehouse of Messrs. Jules Renard & Co., 306, Kent-street, City.

19th November.—The Clothing Factory of Messrs. Weingott & Sons, 433 and 435, Kent-street, City.

Under the heading of total—

28th February.—The Furniture Shop of Mr. John Pearce, Newtown Road, Darlington.

22nd June.—The Boiling-down Works of Mr. W. W. Whatmore, Wilson's Creek, Lane Cove.

Appended are detailed statements of the various fires attended by the Brigade and by the Volunteer Fire Companies as well as those unattended, but which have been reported to the Brigade from various sources, and a member has been sent to obtain the necessary particulars.

The summaries appended show the particular dates, time of call, time of outbreak, trades, localities, insurances, hourly, daily, weekly, and monthly. There is also appended a summary of the supposed origin or cause of fires for the year.

Referring to the summary of localities, it will be noticed that in the city of Sydney alone there were 170 "calls," 99 of which were for actual fires, 20 were false alarms, 10 were for chimney-fires reported as houses on fire, 40 were for chimney-fires attended by firemen with hand-pump only, and there was one casualty.

In the suburbs there were 363 calls, 263 of which were for actual fires, 62 were false alarms, 8 were chimney-fires reported as houses on fire, 24 were chimney-fires attended by firemen with hand-pump only, and there was one casualty.

For full details of fires, and for the particular wards of the city, and the municipalities in which the same have occurred, see appendices attached. A summary of trades is also appended.

Full particulars of the strength of the Brigade (members and plant), together with that of the Volunteer Fire Companies, are here appended.

## MEMBERS OF THE BRIGADE.

Name.	Rank.	Date of Entry.	Salary.	Where stationed.
William Douglas Bear	Superintendent of Fire Brigades, and Inspector of Kerosene.	2 May, 1884	Government Officer.	Head-quarters.
Alfred Webb	Deputy Superintendent	26 June, 1888	£400	do
John J. Ford	Foreman	1 Aug., 1884	£182	No. 2 Station.
Sydney Watson	do	1 Jan., 1835	£182	No. 3 Station.
John Snelson	do	14 July, 1884	£182	No. 4 Station.
John McKnight	Engineer	14 July, 1884	£177	Head-quarters.
George Lang	Senior fireman	7 Jan., 1885	£162	do
Thomas P. Gordon	do	3 Jan., 1885	£162	No. 5 Station.
Thomas Gorman	do	18 June, 1885	£162	Head-quarters.
Samuel Holman	do	11 Feb., 1886	£162	No. 6 Station.
James Hancock	do	1 Aug., 1884	£162	No. 3 Station.
Thomas G. Cutts	do	19 Mar., 1888	£162	No. 2 Station.
Robert W. Nash	do	1 Jan., 1887	£162	No. 3 Station.
Joseph Stanchell	Veterinary and Farrier	1 July, 1884	£150	Head-quarters.
George C. Gray	1st-class fireman	1 July, 1884	£150	No. 4 Station.
Harris S. Davis	do	18 April, 1888	£150	No. 5 Station.
Francis Howard	do	19 April, 1888	£150	No. 3 Station.
Stephen H. Eyre	do	6 Aug., 1888	£150	Head-quarters.
Frank Jackson	do	7 Feb., 1889	£150	No. 3 Station.
John Graham	do	15 April, 1889	£150	No. 2 Station.
George J. Parsons	do	6 Sept., 1889	£150	do
George H. Dadd	do	13 Feb., 1890	£150	do
Augustus J. Gerard	do	21 Feb., 1890	£150	Head-quarters.
George Alehin	do	23 April, 1890	£150	No. 4 Station.
Albert E. Pickering	do	18 Sept., 1890	£150	No. 6 Station.
Charles May	do	3 Oct., 1890	£150	No. 5 Station.
Harrie B. Lee	do	19 Feb., 1891	£150	Head-quarters.
Edward Smith	do	7 May, 1891	£150	No. 3 Station.
John A. Becker	do	12 Mar., 1891	£150	Head-quarters.
William T. Corkill	do	25 May, 1891	£150	No. 2 Station.
James W. Morris	do	1 Dec., 1891	£150	Head-quarters.
Harry Skelton	do	24 Mar., 1892	£150	No. 2 Station.
Robert Hunter	do	16 April, 1892	£150	do
Edward Pember	do	23 April, 1892	£150	Head-quarters.
John A. Nicoll	2nd-class fireman "A"	3 Aug., 1892	£140	do
Alexander Jamieson	2nd-class fireman "B"	18 Nov., 1892	£130	No. 2 Station.
John T. Arnold	do do	3 Jan., 1893	£130	do
Francis W. Brooks	do do	6 Jan., 1893	£130	No. 4 Station.
Ephraim Stoneham	do do	6 Jan., 1893	£130	Head-quarters.
Edward J. Roberts	do do	9 Jan., 1893	£130	do
Herbert J. Houghton	do do	11 Jan., 1893	£130	do
James Jones	do do	1 June, 1893	£130	No. 3 Station.
Joseph Morris	do do	28 July, 1891	£130	No. 5 Station.
William Whitnall	3rd-class fireman "A"	19 June, 1893	£120	No. 3 Station.
George W. Barry	do do	21 Aug., 1893	£120	Head-quarters.
David Killia	3rd-class fireman "B"	19 Jan., 1894	£112	do
Christopher C. Digby	do do	30 Mar., 1894	£112	do
Charles L. Birmingham	do do	30 Mar., 1894	£112	No. 6 Station.
George E. J. Wills	do do	21 May, 1894	£112	Head-quarters.
Arthur Houghton	do do	4 Sept., 1894	£112	do
William Best	do do	9 Oct., 1894	£112	No. 3 Station.
Walter Haywood	Probation	5 April, 1895	£106	Head-quarters.
Joseph Chase	do	8 April, 1895	£106	do
Kenneth Arthurson	do	8 April, 1895	£106	do
Thomas L. Thomas	do	9 April, 1895	£106	do
Francis A. Tuck	do	4 May, 1895	£106	do
Archibald Murray	do	5 Sept., 1895	£106	do
James Carson	do	9 Oct., 1895	£106	do
James E. Pym	do	4 Oct., 1895	£106	do
Thomas P. Nance	do	6 Dec., 1895	£106	do
<i>Auxiliaries.</i>				
Thomas H. Cook	Auxiliary Fireman	4 Oct., 1893	.....	No. 5 Station.
David Anderson	do	23 Oct., 1893	.....	do
Walter D. Taylor	do	1 May, 1894	.....	do
David Vandine	do	17 June, 1895	.....	No. 6 Station.
John P. Deano	do	17 June, 1895	.....	do
John J. Davidson	do	17 June, 1895	.....	do
Charles B. Duncan	do	25 June, 1895	.....	do
Ernest C. Evans	do	8 July, 1895	.....	do
John Jones	do	23 Sept., 1895	.....	do

The total amount paid as subsidies and bonuses to the several Volunteer Fire Companies for the year was £2,779 5s. 8d. In addition to this, four Companies received at the rate of £12 per annum each for attendance on the telephone fire-alarms connected with their stations.

Besides that here stated, a large amount has been expended in the purchase of new plant and hose, and in executing repairs to damaged plant for the Volunteer Fire Companies.

The approximate value of the whole of your Board's plant, including the land and stations held in trust by your Board, I estimate at £88,348 12s. 6d. The value of the Volunteer Companies' plant is not included in this sum.

During the year 26 telephone fire-alarms have been erected, making a present total of 139. Orders have already been given for the erection of 7 others in the districts of Pyrmont, Balmain, and Darling Point.

Thirty new instruments have been ordered, and may shortly be expected to arrive.

I trust that by the end of this year the telephone fire-alarm system may be largely extended. During 1895 we received 164 calls from this source, of which 105 were for actual fires. To our excellent system of fire-alarms may be attributed the saving of life and much property, as through them we receive timely notice, and are thus enabled to be promptly on the scene and extinguish the fire before it reaches dangerous dimensions.

A complete list of the telephone fire-alarms erected to date is appended.

During the year telephonic communication has been established between the premises of Messrs. Elliott Bros., Balmain, the Messrs. Tooth & Co.'s Brewery, George-street West, and the Railway Department, Redfern. In addition to those named, the following places are also in direct telephonic communication with our stations, viz.:—Nearly the whole of the Volunteer Stations, the Police Stations, the University, the Government Printing Office, Darling Harbour Railway Goods Stores, the Theatres, and some of the principal business-houses.

Many of the Volunteer Fire-stations have been placed in telephonic communication with the local Post Office Exchange in their respective districts, and our stations at Marrickville, Newtown, and North Sydney are also connected with the Exchange in their districts.

Head-quarters station is connected with the General Post Office Exchange by two direct lines, and arrangements are in existence by which the watchmen employed by the principal business-houses report through regularly during the night. The Exchange is open to receive and transmit calls at any hour of the day or night.

The telephone fire-alarms and nearly the whole of the electrical appliances have been erected and kept in good order by the members of the Brigade.

The permanent staff attend to the work in the following departments:—Blacksmithing, carpentering, electrical, engineering, painting, plumbing, horse-shoeing, hose-repairing.

During the year considerable repairs have been effected to some of our engines. Some have been supplied with new fore-carriages, the boilers of some of the steam fire-engines have been refitted with new tubes, and new and more powerful brakes have been fitted to all the engines. In addition to this, the stations have been repainted and renovated by the men, and a considerable amount of work has been done in repairs for the Volunteer Companies—in fact, I may say that hundreds of pounds are saved annually by our own men doing the work in the several departments, and I may add that many of our men are excellent tradesmen.

The

The new station which was erected by your Board at North Sydney was opened on the 5th June, and it has been manned by a staff of three permanent men and six auxiliaries. The latter were taken from the old Volunteer Fire Company. There are ten telephone fire-alarms connected with this station, and I hope to have these supplemented by eight others. I consider this number necessary for the requirements of the large district to be protected. This station, including site, plant, and fire-alarms, cost £2,388. I am pleased to be able to speak well of the working of the station since its opening.

The Waverley Station has been rebuilt, and necessary alterations and improvements effected to modernise the building and enable two horses to be kept constantly in attendance. The station is in communication with Headquarters Station through Woollahra Volunteer Station, with the Randwick Volunteer Station, and with the local Exchange, and there are eight telephone fire-alarms connected therewith. The total cost (approximately) of the station, including land, building, alterations, and fire-alarms, has been £808. The Volunteer Company have been permitted to continue in occupation, and I trust, with the encouragement they have received from your Board, they may carry out their duties in an efficient manner.

The Balmain Volunteer Fire Company, which was placed in occupation of the station built in that suburb by your Board, has given every satisfaction during the year, and I hope they may continue to do so.

In my opinion the placing of volunteers in stations built by your Board in the outer suburbs is the best method to ensure success on their part, as it brings them under better discipline, and it also makes them more anxious to give satisfaction. Should they at any time prove incompetent your Board can easily replace them by permanent men.

I have repeatedly urged upon your Board the urgent necessity that exists for an extension of the permanent staff to those suburbs contiguous to the city proper.

The rapid growth of Paddington and Redfern makes it incumbent on your Board to provide better protection for the proper safeguarding of life and property in those important and very populous districts. Until permanent stations are built it is impossible to erect a proper system of fire-alarms, and at present those suburbs are almost wholly without alarms and without the proper means for saving life in case of fire.

I maintain that such thickly-populated districts should not be dependent on volunteers for protection; for, while they are following their ordinary avocations, or are absent at competitions, processions, &c., during the day, there is no protection afforded. It causes me very grave anxiety to think that those places should be permitted to remain in their present unprotected state. The volunteer system has done very good service in the past, but a better organisation and a more complete arrangement is required for such suburbs as Paddington and Redfern.

I here venture to express the hope that this year may see the last of the Volunteer Companies in the city and in the suburbs immediately adjoining. I have had to do what no other Superintendent of any Fire Brigade in the world has had to do, viz., work a permanent staff in conjunction with volunteers in such a large and very important city as Sydney; and I have done thus ever since the formation of the Brigade, and I must say that it has been a source of constant trouble and anxiety to me. The time, however, has now arrived when it becomes imperative on your Board to strengthen the permanent staff, and I therefore urge upon you the desirability of notifying the Volunteer Companies now in existence in the city and immediate suburbs that they can no longer receive the recognition or support of your Board. Adelaide, Brisbane, and Melbourne have abolished the volunteer system, and Sydney is the only city in the world of any importance where volunteers are recognised and receive financial support.

Owing to the outer districts being sparsely populated, I would recommend that the deserving Volunteer Companies there receive every encouragement from your Board, but in the city proper and its immediate suburbs the case is materially different, and our stations here must be manned by permanent men and auxiliaries who will be amenable to discipline and be thoroughly trained to the work.

I desire to point out that if our area continues to be increased at its present rate (without a corresponding increase in your income) the cost will become very burdensome on your Board.

Omitting the municipalities which have recently been proclaimed under the Act, the area under the jurisdiction of your Board comprises 136 square miles. The towns which have lately come within the operation of the Act, viz., Richmond and Penrith, are nearly 40 miles from the metropolis, and both towns are on different lines and are about 18 miles apart. It is therefore apparent that we cannot afford them that supervision which is necessary for their interests; and, in my opinion, a country Fire Brigades Act is much needed to meet the requirements of towns outside the metropolis.

I am convinced that our own district should be more consolidated, and that the outer and more scattered portions should be eliminated until such time as they become more thickly populated, and have a better system of water reticulation.

Such scattered and sparsely-populated districts as Canterbury, Concord, Fivedock, Kogarah, Mosman, Rockdale, and Willoughby cannot be benefitted by being within your Board's jurisdiction, nor can they be afforded protection commensurate with their contributions to your Board.

During the year the Water and Sewerage Board has made great strides in reticulating the water and in increasing the pressure in the suburbs. The improvements being carried out at North Sydney will so increase the pressure from Chatswood to Hornsby that your Board will be saved the expense of importing a steam fire-engine and the maintenance thereof for that district.

I trust when the Centennial Park Reservoir is completed we shall have only this and the Potts Hill Reservoir supply in the city, instead of Potts Hill, Paddington, and Crown-street, as at present. This will be a great advantage to your Board by making such an increase in the water-pressure that it will not be necessary for you to import many more steam fire-engines.

I have anticipated this by recommending your Board to have two hose-waggons built, and before the end of the year I hope to see my way clear to recommending the building of two more, to take the place of manual engines. You will, therefore, not require to import any more manual engines for the suburban districts, and those manuals which will be replaced by the hose-waggons can be removed to the more distant stations.

I deem it my duty to draw the attention of your Board to my report of last year concerning the necessity for providing a floating steam fire-engine for the protection of the shipping in our harbour. It is certainly strange that the largest and most important harbour in the Southern Hemisphere, with its large and expanding trade, its numerous wharves and stores, and its many bays and inlets, should be permitted to remain for so long a time without adequate means being provided for its protection against fire. It may be said that we have the pilot steamer "Captain Cook"; but owing to the difficulty in obtaining her services, and to the fact that she may be outside the harbour at the time of a fire, she is practically unreliable as far as we are concerned. I may here remind you that the northern station was built partly with the object of having the men stationed there available for service on board a float, which, it was expected, would be stationed at Circular Quay.

The strength of the Brigade now stands at sixty permanent men, including myself, and nine auxiliaries. As I have obtained your authority for increasing this number by four additional men, I hope soon to add that many to the staff, in order to have them thoroughly trained to take the places of those who may be removed from the city to suburban stations.

I regret to have to record three deaths in the Brigade during the year. William M'Knight, one of the engineers, died on the 16th of February. He joined the Brigade on its formation, and had previously served in the Insurance Brigade for a number of years. He was an excellent officer and a good mechanic, and I deeply regret his loss. Thomas E. Clarke committed suicide on the 21st April, and George Lawton was accidentally killed by falling off the ladder-van while proceeding to a fire at the premises of Messrs. J. P. Wright & Co., Elizabeth-street, City, on the 11th August. Lawton had only joined the Brigade on the 29th of July, and was, therefore, only a fortnight in the service.

I have to thank the officers and members of the Volunteer Fire Companies for their valuable assistance during the year, and also the officers and members of the Police Force for their very effective assistance. I have also to return my thanks to the turncocks and to the public generally for their valuable co-operation.

The discipline and general efficiency of the Brigade are in all respects satisfactory, and although the duties at times have been severe, the work has been performed cheerfully and well.

In conclusion, I desire to tender my most sincere thanks to your Board for the cordial support you have accorded me.

I have, &c.,

WILLIAM D. BEAR,

Superintendent of Fire Brigades and Inspector of Kerosene.

APPENDIX VI.

DETAILS of Fires which have occurred within the Metropolitan District during the Year ending December, 1895.

Date	When discovered.	Time of call.	Locality.	Name of tenant.	How premises occupied.	Construction of premises.	Origin or supposed cause of fire.	Insurances.		Extent of damage, &c.	Extinguished by
								Contents.	Building.		
Tuesday, 1 January.	11:10 p.m.	11:20 p.m.	Frederick and John Streets, Ashfield.	James Blackham	Dairyman	Weatherboard, and iron roof	Unknown	None	None	A wooden building, used as a cowshed and lumber room, roof partly fallen in, and contents damaged by fire and water.	M.F.B. and Ashfield V.F. Co., with one hydrant.
Thursday, 3 January.	3:0 a.m.	3:2 a.m.	Arbitration-street, City	Harrison, Jones, & Devlin	Wool-brokers	Stone, and iron roof.	"	Several offices, £75,000.	Several offices, £50,000.	A quantity of wattle bark damaged by fire and water in basement.	M.F.B., with one hydrant.
"	2:10 p.m.	2:17 p.m.	53, Albany-street, Peter-sham	E. Richards	Private dwelling.	Brick, and slate roof.	Tar boiling over.	None	None	About 2 gallons of tar destroyed by fire	Inmates and neighbours.
"	1:1 p.m.	1:1 p.m.	Ocean-street, Woollahra	All Saints' Church, Rev. W. Mort, Incumbent.	Licensed victualler.	Stone, with iron & shingle roof.	Gas bracket	Building and contents, Australian Mutual.	"	A small portion of weatherboard porch damaged by fire	Woollahra V.F. Co., with hand pump.
Friday, 4 January.	2:12 a.m.	2:14 a.m.	244, George-street, City	John Donnison, "Metropolitan Hotel."	Private dwelling.	Brick, and iron roof.	Light thrown down.	United Insurance Co.	None	A quantity of bedding burned in back room on third floor.	M.F.B., with one hydrant.
Saturday, 5 January.	11:50 a.m.	11:56 a.m.	Bishop-street, Marrickville.	H. J. Molone	Private dwelling.	Brick, and slate roof.	Turpentine boiling over.	None	None	A small portion of floor-cloth damaged by fire	Inmates.
"	8:40 p.m.	8:44 p.m.	Yule-street, Marrickville	Alec M'Kellar	"	"	Candle	"	Australian Mutual, £400.	Bed, bedding, and window curtains damaged by fire in front bedroom on ground floor.	Inmates and neighbours, with buckets of water.
Sunday, 6 January.	8:15 p.m.	8:15 p.m.	Botany Road, East Botany.	Quong Hing	Garden	"	Light thrown down.	"	None	A quantity of grass burned in garden at rear of premises	N. Botany V.F. Co., with bushes.
Tuesday, 8 January.	1:27 a.m.	1:33 a.m.	104, Fitzroy-street, City	Waugh	Grocer	Brick, and slate roof.	Unknown	Mercantile Mutual, £100.	Unknown	Stock in shop on ground floor slightly damaged by fire	Inmates, with buckets of water.
Thursday, 10 January.	2:42 p.m.	2:44 p.m.	165, William-street, City	Beaumont & Sons	Painters	Brick, and iron roof.	"	Caledonian	"	A small quantity of painters' materials damaged by fire and water in ground floor of workshop at rear of premises.	Employees and M.F.B., with buckets of water.
Thursday, 10 January.	9:5 p.m.	9:8 p.m.	Hay street, City	Tangye's (Limited); F. J. Waller, manager.	Machinists	Wood and iron, with iron and glass roof.	Gas stove	Several offices, £30,000.	City Mutual, £6,150.	Engineer's workshop on first floor and contents severely damaged by fire and water, and about 50 feet of roof damaged by fire.	M.F.B., with two steamers.
Friday, 11 January.	8:50 p.m.	8:53 p.m.	8, Mort street, Balmain	Thomas Kyle	Shed	Wood, and iron roof.	Kerosene-lamp	None	None	Side and roof of shed slightly damaged by fire	Balmain V.F. Co., with one hydrant.
Sunday, 13 January	4:35 p.m.	4:9 p.m.	24, Pitt-street, City	E. Durant & Co.	Jewellers	Brick, and iron roof.	Unknown	S. British, £100.	"	Back room on ground floor and contents severely damaged by fire and water. Front shop on same floor and contents slightly damaged by heat and water.	M.F.B., with one hydrant.
"	8:35 p.m.	9:3 p.m.	Fornhill-street, Canterbury.	John Thompson	Private dwelling	Wood, and canvas roof	Candle	None	"	A two-roomed dwelling with part of contents burned and fallen down.	Burned itself out
Tuesday, 15 January	6:10 p.m.	6:15 p.m.	Walkin-street, Newtown	H. Scott	Stable	Weatherboard, and iron roof.	Light thrown down.	"	"	Side of stable slightly damaged by fire	Inmates, with buckets of water.
Wednesday, 16 January.	11:54 p.m.	11:57 p.m.	387, Elizabeth-street, City	Elizabeth Stephenson, "Albion Hotel."	Licensed victualler.	Brick, and slate roof.	Candle	City Mutual	Unknown	Window curtains burned in front room on first floor	Inmates, with water.
Saturday, 17 January.	9:35 p.m.	9:30 p.m.	193, Castlereagh-street, City	Mrs. Burns	Boarding-house	Brick, and iron roof.	Candle	None	"	A small portion of furniture damaged by fire in front room on first floor.	Inmates.
Thursday, 24 January.	11:0 p.m.	None rec'd.	86, George's Road, Hurstville	William Martin	Private dwelling.	Weatherboard, and iron roof.	Unknown	"	Northwich Union, £100.	A weatherboard cottage of five rooms and contents burned out and fallen down.	Burned itself out
Friday, 26 January.	5:20 p.m.	5:12 p.m.	64, Drumm-street, City	J. H. Walker & Co.	Coach-builders' ironmongers.	Brick, and iron roof.	"	N. Zealand, £400	Australian Mutual, £5,000	About 3 cwt. of oakum damaged by fire in basement	M.F.B., with one hydrant.
Saturday, 20 January.	12:02 a.m.	12:06 a.m.	Margaret and Clarence Streets, City.	E. A. Viles	Draper	Brick, and slate roof.	"	Victoria, £300	North British, £200	Shop on ground floor and contents very severely damaged by fire and water.	M.F.B., with one hydrant
"	2:30 a.m.	2:34 a.m.	Off Bayswater Road, Woollahra.	Mow Lum	Gardener	Yard	Fireworks	None	None	A quantity of rubbish burned in yard at rear of premises	Inmates, with buckets of water.
"	2:57 p.m.	3:2 p.m.	197, Liverpool-st., City	Dr. W. W. J. O'Reilly	Private dwelling.	Brick, and slate roof.	Turpentine boiling over.	Unknown	Unknown	Wooden partition slightly damaged by fire in front room on second floor; carpet and furniture damaged by water.	"
"	8:35 p.m.	8:40 p.m.	35, Elizabeth-street, Waterloo.	John Stewart	"	Brick, and iron roof.	Candle	None	"	A small quantity of wearing apparel damaged by fire and water in back bedroom on first floor.	"
Sunday, 27 January.	8:5 p.m.	8:10 p.m.	19, Margaret-st., City	R. Jones	Tailor	Brick, and slate roof.	Gas-bracket	"	North British, £200.	Window curtain burned in front room on first floor.	"
"	9:40 p.m.	None rec'd.	Pittwater Road, Green-dale.	Unoccupied	Private dwelling.	Weatherboard, and iron roof.	Unknown	"	Mercantile Mutual, £200	A weatherboard cottage burned out and fallen down	Burned itself out.
Monday, 28 January.	4:28 a.m.	4:30 a.m.	337, George-st., City	Briscoe, Drysdale, & Co.	Machinery im-porters.	Brick, with iron and glass roof.	"	Several offices, £45,000.	Several offices, £10,000.	A small quantity of stock on fourth floor in York-street warehouse burned, and contents on floors under slightly damaged by water.	M.F.B., assisted by several Volunteer Fire Companies, with one hydrant.
Monday, 28 January.	6:49 p.m.	6:51 p.m.	Denman and Cottenham Streets, Glebe.	Patrick Smyth	Licensed victualler.	Brick, and iron roof.	"	None	Aust. Mutua, £700. Col. Mutual, £300	A quantity of wearing apparel burned, and furniture damaged by fire and water in front room on first floor.	Inmates and M.F.B., with buckets of water.
Tuesday, 29 January.	9:50 p.m.	9:55 p.m.	Railway workshops, Eveleigh.	Railway Department	Workshops	"	Spark from forge	"	None	Work bench damaged by fire in No. 6 fitters' shop	Railway employees, with one hydrant.
"	11:30 p.m.	None rec'd.	Birkenhead Road, Drum-moyne.	J. C. Jeffries	Bootmaker	Weatherboard, and iron roof.	Unknown	Manchester, £25.	Unknown	A weatherboard building of two rooms and contents burned out and part of roof off.	Drummoyne V.F. Co., with one hydrant.
Thursday, 31 January.	8:50 p.m.	8:51 p.m.	166, Macquarie-street, City.	Mrs. Whitley	Private dwelling.	Brick, and slate roof.	Candle	None	City Mutual	Window curtains burned in front room on first floor	Inmates and Standard Brewery Vol. Fire Co., with buckets of water.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES No. 16. TUESDAY, 16 JUNE, 1896.

7. OLD-AGE PENSIONS:—Mr. Neild moved, pursuant to Notice,—

(1.) "That," in the opinion of this House, old-age pensions or outdoor relief should, as far as possible, be substituted for the existing asylum system.

(2.) That the Government should take the necessary steps to bring about the change in question without delay.

Debate ensued.

Mr. O'Sullivan moved,—That the Question be amended by leaving out all the words after the word "That," and inserting the words "a Select Committee be appointed to consider and report upon the subject of State Insurance or Old-age and Invalidity Pensions.

"(2.) That such Committee consist of Mr. Neild, Mr. O'Sullivan, Mr. Chapman, Mr. O'Reilly, Mr. Bull, Mr. Haynes, Dr. Graham, Mr. Cook, Mr. McGowen, and Mr. McLean," instead thereof.

Question proposed,—That the words proposed to be left out stand part of the Question.

Debate continued.

Question put,—That the words proposed to be left out stand part of the Question.

The House divided.

Ayes, 10.

Dr. Ross,  
Mr. Hogue,  
Mr. Haynes,  
Mr. Edden,  
Mr. Black,  
Mr. Simeon Phillips,  
Mr. Nicholson,  
Mr. James Thomson.

*Tellers,*

Mr. Neild,  
Mr. Thomas.

Noes, 54.

Mr. M. T. Phillips,  
Mr. See,  
Mr. Willis,  
Mr. Copeland,  
Mr. Wright,  
Mr. O'Sullivan,  
Mr. Schey,  
Mr. Jessep,  
Mr. Chapman,  
Mr. Sydney Smith,  
Mr. Brunker,  
Mr. Perry,  
Mr. Newman,  
Mr. Hurley,  
Mr. Travers Jones,  
Mr. McFarlane,  
Mr. Carroll,  
Mr. Barnes,  
Mr. Lyne,

Mr. Pyers,  
Mr. Mackay,  
Mr. Ferguson,  
Mr. Wood,  
Mr. Thomas Brown,  
Mr. Macdonald,  
Mr. Watkins,  
Mr. Anderson,  
Mr. Whiddon,  
Mr. Gould,  
Mr. Bavister,  
Mr. Millard,  
Mr. Cruickshank,  
Mr. Hughes,  
Mr. Hawthorne,  
Mr. Wilks,  
Mr. Cook,  
Mr. Ball,  
Mr. Wheeler,

Mr. Reid,  
Mr. Cann,  
Mr. Smailes,  
Mr. Lonsdale,  
Mr. Cotton,  
Mr. Young,  
Mr. Goodwin,  
Mr. Affleck,  
Mr. McGowen,  
Mr. Fegan,  
Mr. Miller,  
Mr. Garrard,  
Mr. Law,  
Mr. Morgan.

*Tellers,*

Mr. Moore,  
Mr. McLean.

And so it passed in the negative.

And Mr. Anderson requiring that the Committee be appointed by Ballot,—

Question put,—That the words proposed to be inserted in the place of the words left out be so inserted,—and voices given,—Mr. Speaker stated his opinion that the *Ayes* had it.

Whereupon Division called for, and Mr. Speaker having, in accordance with Standing Order No. 213, directed the Members to take their seats to the right and left of the Chair respectively, declared the determination of the House to be in the *affirmative*, as there were only two Members in the minority who had challenged his decision.

The following are the names of the Members in the minority, viz.:—Mr. Hogue and Mr. Affleck.

Question, as amended,—

(1.) That a Select Committee be appointed to consider and report upon the subject of State Insurance or Old-age and Invalidity Pensions.

(2.) That such Committee consist of

\* \* \* \* \*

put and passed.

Whereupon the House proceeded to the Ballot, and Mr. Speaker declared the following to be the Committee duly appointed:—Mr. O'Sullivan, Mr. Cook, Mr. Neild, Dr. Graham, Mr. Chapman, Mr. McLean, Mr. Wilks, Mr. McGowen, Mr. O'Reilly, and Mr. Schey.

## VOTES No. 21. THURSDAY, 25 JUNE, 1896.

3. OLD-AGE PENSIONS:—Ordered, on motion of Mr. O'Sullivan, that the following Message be carried to the Legislative Council:—

MR. PRESIDENT,—

The Legislative Assembly having appointed a Select Committee on "Old-age Pensions," and the Committee being desirous to examine the Honorable Sir Arthur Renwick, Knight, a Member of the Legislative Council, in reference thereto, requests that the Legislative Council will give leave to its said Member to attend and be examined by the said Committee on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,  
Sydney, 25th June, 1896.*

13. OLD-AGE PENSIONS:—Mr. Speaker reported the following Message from the Legislative Council:—

MR. SPEAKER,—

In answer to the Message from the Legislative Assembly, dated the 25th June, 1896, requesting leave for the Honorable Sir Arthur Renwick, Knight, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly on "Old-age Pensions," the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee if he think fit.

*Legislative Council Chamber,  
Sydney, 25th June, 1896.*

JOHN LACKEY,  
President.

## VOTES No. 24. THURSDAY, 2 JULY, 1896.

3. OLD-AGE PENSIONS:—Ordered, on motion of Mr. O'Sullivan, that the following Message be carried to the Legislative Council:—

MR. PRESIDENT,—

The Legislative Assembly having appointed a Select Committee on "Old-age Pensions," and the Committee being desirous to examine the Honorable Andrew Garran, LL.D., the Honorable Henry Norman MacLaurin, M.D., LL.D., and the Honorable Louis Francis Heydon, Members of the Legislative Council, in reference thereto, requests that the Legislative Council will give leave to its said Members to attend and be examined by the said Committee on such day and days as shall be arranged between them and the said Committee.

*Legislative Assembly Chamber,  
Sydney, 2nd July, 1896.*

11. OLD-AGE PENSIONS:—Mr. Speaker reported the following Message from the Legislative Council:—

MR. SPEAKER,—

In answer to the Message from the Legislative Assembly, dated the 2nd July, 1896, requesting leave for the Honorable Andrew Garran, the Honorable Henry Norman MacLaurin, and the Honorable Louis Francis Heydon, Members of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly on "Old-age Pensions," the Council acquaints the Assembly that leave has been granted to its said Members to attend and be examined by the said Committee if they think fit.

*Legislative Council Chamber,  
Sydney, 2nd July, 1896.*

JOHN LACKEY,  
President.

## VOTES No. 56. WEDNESDAY, 16 SEPTEMBER, 1896.

12. OLD-AGE PENSIONS:—Mr. O'Sullivan, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and Report this subject was referred on 16th June, 1896; together with Appendix.

**OLD-AGE PENSIONS.**

---

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 16th June, 1896, to consider and report upon the subject of *State Insurance or Old-age and Invalidity Pensions*, have agreed to the following Report:—

Your Committee find, from the extensive literature on the question of old-age pensions, that the subject is now engaging the attention of the leading statesmen, philosophers, and sociologists in Europe and elsewhere, and there can be no doubt that the proposal is well within the range of practical politics. Your Committee have inquired into the matter at considerable length, and after carefully studying the mass of information collected in the form of evidence, reports, enactments, and writings, they have arrived at the conclusion that it is both desirable and practicable to establish the following

*Recommendations.*

1. A system of old-age pensions by which every person in the community who is above the age of 60 years, who has been a resident of New South Wales for 15 years, and whose income does not exceed £50 per annum, should be entitled to a pension of 10s. per week when single, while married couples should be granted 15s. per week.
2. A system of invalidity pensions under which a sum of 10s. per week shall be paid to all persons who are sick or infirm (such pension to last while the invalidity prevails), provided that the recipient has subscribed 1s. per month for a period of five years to an invalidity fund worked through the medium of some Friendly Society of which the recipient is a member.
3. The boarding out of the more robust of the patients now in the Government old-age asylums, according to the circumstances of the case, namely:—
  - (a) By boarding them out with relatives at the rate of 10s. per week each, and 15s. for married couples.
  - (b) By boarding them out at the same rate with strangers, when relatives are unable or unwilling to receive them.
  - (c) By granting them pensions of 10s. per week each, or 15s. for married couples, and permitting them to provide for themselves, when they wish to do so.

All such cases should be subjected to a kindly but non-inquisitorial supervision by the inspectors who now have charge of the children boarded out by the State. The beneficial effect of boarding out these inmates would be twofold. In the first place, the old people boarded out would live in a healthy and bracing atmosphere, while their presence in country homes would be a safeguard for the wives and children of farmers and selectors when the head of the household was away; at the same time, the payment of the 10s. per week would be of material assistance to struggling settlers in the payment of their rent and other expenses. Your Committee would recommend as a tentative measure that (say) 100 persons who may be deemed most suitable for such an experiment be selected from the present inmates of the Government Asylums; that they be boarded out, part with their friends, and part otherwise, and that careful notice be taken of their welfare, comfort, satisfaction, &c., and that after twelve months a careful and comprehensive report be compiled as to the results. Should the report be favourable, a larger and wider experiment might then be entered upon in the light of the experience already gained.

*Arguments*

*Arguments in favour of Old-age Pensions.*

Pensions, when properly safeguarded and applied, are not objectionable from a democratic point of view. In the Republic of the United States the sum of £382,352,900 had been expended up to the end of 1895 upon the soldiers and sailors who fought for the Union in the great civil war and preceding conflicts from 1812. The payments for 1895 were 140,959,361 dollars, and there were then 751,456 invalids and 219,068 widows in receipt of these pensions. Great Britain also makes a fair provision for her disabled or aged soldiers and sailors. To some of the latter, outdoor pensioners of Greenwich Hospital, the average paid is £36 per year, while petty officers receive as high as £45 and £50 per year. Other countries also make liberal provision for aged or disabled soldiers and sailors. These are concessions to which no objection can be taken, save on the ground of abuse—a complaint sometimes alleged against the American system. Your Committee are therefore of opinion that while it is right to concede these pensions to aged or disabled men who have served their country on land or sea, it is equally just and humane to provide for the old age of all persons who have for a fair period assisted to create our civilisation, aided in the development of the resources of the country, and helped to bear the public burdens of the community by the payment of taxes. They hold, in fact, that men and women may serve their country as well in the paths of peace as soldiers and sailors do in time of war, and the former are, therefore, just as worthy of consideration as the latter.

*Safeguards for the System.*

As necessary precautions for the safeguarding of this provision of old-age pensions from abuse, your Committee would suggest that the following conditions should be imposed, in addition to those already stipulated:—

1. That the recipient is residing in the Colony at the date when the claim to the pension is established.
2. That the recipient has resided continuously for not less than three years immediately preceding the date of application, and intends to continue to reside in New South Wales. Such pension to be forfeited in the event of the recipient leaving the Colony; reasonable provision being allowed for temporary absence.
3. That the recipient is not the holder of a pension or allowance of 10s. per week from other sources.
4. That where the recipient has been in prison, the time thus lost to the community should be deducted from the fifteen years' residence necessary to establish a claim to an old-age pension.

*The Old-age Pension to go as a Free Gift from the State.*

That as the evidence shows that the compulsory system of State insurance or old-age pensions as worked in Germany is unsatisfactory to the working classes there, and would be likely to be still more objectionable to people of British origin, and also that a contributory scheme would not be generally sustained by the working classes, your Committee recommend that the old-age pensions should go as a free gift from the State in recognition of services rendered to it. The pension should be conceded as a right, not as a pauper dole, and its reception ought not in any way to be looked upon as making an invidious distinction. The invalidity pension being an extra benefit, in which all persons may participate for a small payment per month, your Committee think it possible that such a scheme might be worked on the voluntary contribution plan, more especially if country post-offices were utilised as a means of aiding the Friendly Societies to collect the money. The scheme would also have the effect of making Friendly Societies more largely availed of.

*Cost of the System Recommended.*

The evidence of the actuarial experts cited by the Committee goes to show that a system of old-age pensions to apply to all persons over 60 years of age would cost about £1,400,000 per year. Such a scheme is beyond the financial compass of the community, and your Committee therefore, while admitting the justice of allowing all taxpayers to participate in such a benefit, have been compelled to confine

confine their recommendation to a scheme of reasonable proportions—that is, for all persons over 60 who are in receipt of less than £50 per year, and have been fifteen years in the country. After making due allowance for the reduction of 5s. per week, saved with regard to married couples, for the large number of persons who will prefer to go on working after they have reached 60, and for those provided for by Friendly Societies or from other sources, it is estimated that the scheme recommended by your Committee could be worked for about £90,000 per annum. The Director of Charities, in his evidence, gives the sum of £36,634 per year as the amount that would be required to provide for all persons now receiving outdoor and indoor relief, exclusive of the asylums; but there is a great deal of poverty amongst elderly persons outside of those referred to by Mr. Sydney Maxted, and to provide for all persons above 60 in necessitous circumstances your Committee estimate that it will be necessary to add about £53,000 more, making a total of £90,000 per annum as the cost of the scheme recommended.

*Sources of Fund to maintain the System.*

Having thus outlined a scheme for old-age and invalidity pensions, your Committee now proceed to suggest the means by which the plan may be worked in a practical manner. In doing so, they are guided by the idea that some of the causes of poverty should be made the means of assisting to alleviate the distress they help to create. When people are given to self-indulgence and pleasure they are not likely to complain of a small addition to their expenditure. This would certainly be the case when they knew that the extra payments would go to make provision for their own old age, should misfortune overtake them, and remove that feeling of despair—an incentive to drink—which comes over many necessitous people when they reflect upon the blank and desolate future which lies before them. A tax upon pleasure and self-indulgence is, therefore, defensible on the ground that those who pay such an impost are entitled to share in the benefit of old-age pensions. In France a proportion of the profits of theatres is devoted to charities. In Denmark the old-age pensions are sustained by a tax upon lager beer. As the sport of horse-racing is largely productive of distress, your Committee have determined to utilise this prominent feature in the amusements of the people of this country as one of the means of revenue. They therefore recommend the following as a scheme for raising a sufficient amount of money per year for old-age pensions, without adding materially to the burdens of the people:—

	Per annum.
The legalisation of the totalisator, from which it is expected that a tax of 3½ per cent. will give ...	£35,000
The revenue from billiard licenses . . . . .	8,000
Fines for drunkenness and breaches of the Licensing Act, estimated at ... . . . .	6,000
Entertainment and sports tax of 1d. per ticket, estimated at . . . . .	8,000
A 2 per cent. donation from the revenue received from wines, spirits, tobacco, opium, and cigars (a total of £1,105,701) ... . . . .	22,000
Saving on the cost of 25 per cent. of the inmates now in the Asylums ... . . . .	11,000
Total ... . . . .	£90,000

By the foregoing it will be seen that a sum ample for the purposes of sustaining the old-age pension fund recommended by your Committee can be obtained without in any way distressing the community. There need be no extra duties imposed upon wines, spirits, tobacco, cigars, &c., for it ought to be an easy matter for any careful Government to save the sum of £36,000 per year—the loss entailed by devoting the percentage of revenue from wines, spirits, &c., the billiard licenses, and the fines for drunkenness, &c., to an old-age pension fund. While the necessary money will thus be raised for the object suggested, it is expected that the introduction of the totalisator will tend to rid the sport of horse-racing of some of its evils.

*Study*

*Study of Appendices Recommended.*

Your Committee would commend to the Members of your Honorable House the desirability of carefully studying the literature on the question of old-age pensions contained in the Appendices, in which many valuable ideas and suggestions will be found. The Bill of the New Zealand Government and the draft measure submitted by Mr. W. F. Schey, M.P., a member of this Committee (dealing with a tentative proposal for voluntary contribution), are also worthy of your attention.

*Synopsis of various Old-age Pension proposals.*

The following is a summary of the plans for old age and invalidity pensions now being worked or considered by various nations in Europe, Great Britain, and elsewhere:—

The first prominent fact that has struck your Committee is, that outside of private saving and endowment insurance, there is practically no provision for old age.

Although, at least, two of them are taking steps in this direction, none of our Friendly Societies provide for old age to any great extent. They confine their operations mainly to sickness, death, and burial. Some of them, under the name of superannuation, provide for old age and disability; and by thus providing a sort of old-age pension, under the name of sick relief, tend to reduce their financial soundness, as their contributions are based on statistics of sickness alone.

Many schemes have been propounded for old-age pensions, some eighteen having been put forward, mostly in England, during the last fifteen years, none of which have, up to date, been put into force in any country. Of these, four are on the basis of specific and compulsory contribution to create a specific fund; nine for the creation of a specific fund by voluntary contributions; and five more or less directly compulsory and providing pensions for all, without any direct contributions from the individual. Particulars of these will be found in the Appendices.

In addition, provident schemes directly administered by the State are in active operation in Germany, Denmark, and Austria. In Germany the old age law is compulsory on all men and women over 16 years of age in the following three classes—(1) Persons who are employed as workmen, assistants, apprentices, or servants, and receive for their services payment or wage; (2) persons who are engaged in business as assistants in shops, and apprentices whose yearly earnings do not exceed £100; (3) persons employed for payment or wage as members of the crews of German ships. The benefits are:—After five years' payments, invalidity allowance may be claimed, ranging from £5 14s. 8½d. to £7 0s. 3d. per annum, and from 70 years of age a pension ranging from £5 6s. 5d. to £9 11s. per annum, according to the wages received, which are divided into four classes. If death occurs before 70 years, one-half of the contributions is returned. Payments to the fund are 1½d. to 3d. per week, half paid by the employer, and half by the employee, the State merely enforcing, administering, and guaranteeing benefits.

In Denmark, since 1891, all *poor* over 60 are assisted. They are divided into *deserving* poor, to whom pensions are paid; and *undeserving* poor, to whom poor relief is given. Administration is by public but local authorities, who raise the necessary funds by a local rate, the whole being assisted by a contribution of about £111,000 per annum derived from a tax on lager beer. The fund is entirely distinct from parish relief, and the system is said to be very popular with all classes of the people except the loafers, whose lot is made harder by its enactment.

In Austria it appears that every man can claim a pension. The Emperor Joseph II decided that at 60 a man should have the right to claim from his native town or commune a pension equal to one-third of the average daily wage he had received during his working years. This pension was to be regarded in exactly the same light as the soldier's pension—not as a charity, but as a reward for past services. In Vienna are six old-age homes, an institution peculiar to Austria, the first of which was instituted as far back as the thirteenth century by the citizens of Vienna. Inmates may wear any clothes, and no uniform is permitted. They may have their own furniture so far as minor articles are concerned, and, instead of being provided with food, each inmate is allowed 26 kreuzers (about 5d.) per day to purchase just what they wish. A special restaurant is provided under strict supervision, and all food is supplied at contract prices. Otherwise it is carried on exactly the same as any other restaurant in the city. Improper expenditure entails first  
warning,

warning, then stoppage; and bad conduct causes exclusion from the home. Similar homes exist in various parts of the empire and seem to be popular and well liked both by the inmates and the people at large.

In Holland there is a voluntary pension fund, to which a number of employers pay an amount nearly equivalent to that paid by their employees. At present it covers only a few of the larger employers and their workmen, amounting to a few thousands only. It was established in 1888, and seems to be well thought of in its own country.

In Italy the Legislature discussed the subject in 1883, and in July, 1890, a Committee of the Chamber of Deputies presented a favourable report on a Bill to institute a State-aided scheme. A fund was to be founded by voluntary contributions, not necessarily continuous, and not beyond a yearly maximum of £25 per individual. The State was to add a small subsidy, but not to be responsible for benefits. Pensions according to payments made were to be payable at 60 to those who had subscribed for twenty years, and no pension was to exceed £25 per annum. The fund was to be open only to Italian workmen and workwomen belonging to some mutual aid society.

France has an old-age pension fund since 1850, the State assisting by a guarantee of 5 per cent. compound interest on all payments made by work-people, male and female. The fund has been used mainly by Government servants, priests, school-teachers, and small investors who wish good interest. Consequently it has largely failed to benefit the class it was intended for; and less than a million subscribers. The average amount of pensions is very small and does not exceed £2 14s. per annum. The French Government, however, a year or two ago, laid before the Chamber of Deputies the boldest financial scheme of State-aided pensions for old age which has yet been proposed in Europe. Under it contributions to a national fund are to be paid—three-tenths by the employer, three-tenths by the workman, and four-tenths by the State. Advantage is to be taken of existing benefit and similar societies in the collection of contributions and the payment of pensions. Membership is to be purely voluntary, and contributions to vary from a minimum of  $\frac{1}{2}$ d. per day to a maximum of 1d. per day while employed. Persons are expected to become contributors at 25, and to pay in for thirty years, after which time pension may be claimed, but must not exceed a total income to any individual of £24 (600f.) per annum. Membership is to be open only to those whose annual income does not exceed 3,000 francs (£120) per annum. The fund is to draw some 100,000 francs (£4,000) per annum from a tax on foreign workmen at the rate of 10 centimes (1d.) per day *per capita*, to be paid in every case by the employer of such foreigner.

In New Zealand there is now a Bill before the Legislature providing for old-age pensions for all persons whose income does not exceed £50 per year, who have been twenty years in that Colony.

*Thanks for Assistance.*

In conclusion, your Committee desire to place on record their appreciation of the valuable assistance they received from the various witnesses examined, and also from Mr. William S. Mowle, the Clerk of Select Committees of the Legislative Assembly.

E. W. O'SULLIVAN,  
Chairman.

No. 2 Committee Room,  
Legislative Assembly,  
16th September, 1896.

## PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 18 JUNE, 1896.

MEMBERS PRESENT:—

Mr. Cook,		Dr. Graham,
Mr. McLean,		Mr. Neild,
Mr. O'Reilly,		Mr. O'Sullivan,
	Mr. Schey.	

Mr. O'Sullivan called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Resolved,—That the Committee meet on Wednesday and Thursday in each week.

Ordered,—That the Government Statistician and Mr. Sydney Maxted be summoned to give evidence next meeting.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 24 JUNE, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,		Dr. Graham,
Mr. McLean,		Mr. Neild,
Mr. Schey,		Mr. Wilks.

The Chairman read a statement, which he had prepared, in reference to the witnesses proposed to be examined, the questions to be put to each witness, and the reports and other documents to be appended.

Ordered (*on motion of Dr. Graham*) to be printed and distributed to members of the Committee.William Ridley (*Acting Government Statistician*) called in, sworn, and examined.Witness handed in Return from Census of 1891, showing population of New South Wales, also occupations of persons of 65 years and upwards. [*Appendix A.*]

Witness withdrew.

George Henry Pitt (*Chief Compiler, Statistician's Office*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 25 JUNE, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,		Dr. Graham,
Mr. McGowen,		Mr. McLean,
Mr. O'Reilly,		Mr. Schey,
	Mr. Wilks.	

Motion made (*Mr. O'Reilly*) and Question,—“That the representatives of Friendly Societies be requested to nominate representatives to give evidence before the Committee,”—put and passed.Motion made (*Mr. Wilks*) and Question,—“That the proposals for the conduct of the inquiry, submitted by the Chairman at the last meeting, be adopted, subject to future additions,”—put and passed.

The Chairman read a letter from Mr. Wm. Ridley, Acting Government Statistician, in reference to the number of persons whom he considered would be benefited by a system of “Old-age Pensions,” as against the present Asylum system.

Sydney Maxted (*Director of Charitable Institutions*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at Half-past Two o'clock.]

WEDNESDAY, 1 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,		Mr. Neild,
Dr. Graham,		Mr. McGowen,
	Mr. Schey.	

The Clerk read the entries from Votes and Proceedings, containing Message to Legislative Council requesting leave for Sir Arthur Renwick to attend and be examined before the Committee, and Message from Council, intimating that leave had been granted to its said Member to attend and be examined if he think fit.

Sydney Maxted recalled and further examined.

Witness handed in copy of Dietary Table adopted in 1888 for the Benevolent Asylums. [*Appendix B 1.*] Blank form to be filled in, showing the history of each person admitted to a charitable institution. [*Appendix B 2.*] For admission for the country. [*Appendix B 3.*]

Ordered,—That Mr. G. H. Pitt, Chief Compiler, Statistician's Office, be summoned to give evidence next meeting, and that a letter be written to Sir Arthur Renwick, requesting his attendance on Wednesday next.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY,

THURSDAY, 2 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,  
Mr. McGowen,  
Mr. Schey,

Dr. Graham,  
Mr. McLean,  
Mr. Wilks.

George Henry Pitt recalled and further examined.

Witness handed in List of Friendly Societies, together with particulars of each. [*Appendix B 4.*]

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 8 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,  
Mr. McLean,

Dr. Graham,  
Mr. Schey,

Mr. Wilks.

The Clerk, by direction of the Chairman, read entries from Votes and Proceedings, containing Message to Council asking leave for the Honorable Andrew Garran, LL.D., the Honorable Henry Norman MacLaurin, M.D., LL.D., and the Honorable Louis Francis Heydon, to attend and give evidence before the Committee, and Message from Council, intimating that leave had been granted to its said Members to attend and be examined if they think fit.

The Clerk then, by direction of the Chairman, read a letter from Mr. G. H. Pitt, Chief Compiler, Statistician's Office, containing certain information obtained from Colonel Bell, U.S. Consul, on the question of State Pensions.

Ordered to be appended. [*See Appendix D.*]

Sir Arthur Renwick (*a Member of the Legislative Council*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 9 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham,  
Mr. O'Reilly,

Mr. McLean,  
Mr. Schey,

Mr. Wilks.

Edmund Walcott Fosbery (*Inspector-General of Police*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 15 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,  
Mr. McGowen,

Dr. Graham,  
Mr. Schey.

Joseph Creer (*Superintendent, Government Labour Bureau*) called in, sworn, and examined.

Witness withdrew.

Robert Thompson Paton (*Government Medical Officer and Vaccinator*) called in, sworn, and examined.

Witness withdrew.

Edward Maxted (*Manager of the Sydney Benevolent Asylum*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 16 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman,  
Mr. McGowen,  
Mr. O'Reilly,

Dr. Graham,  
Mr. McLean,  
Mr. Schey,

Mr. Wilks.

Edward Maxted recalled and further examined.

Witness withdrew.

James Anderson called in, sworn, and examined.

Witness withdrew.

George Henry Marsh called in, sworn, and examined.

Witness withdrew.

Alfred Davis (*Registrar of Friendly Societies and Trade Unions*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY,

WEDNESDAY, 22 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. O'Reilly, | Mr. Schey.

Alfred Davis recalled and further examined.

Witness handed in list of the principal Orders, and particulars of sick and funeral benefits under their rules. [Appendix E 1.] Statement showing the position of the various Orders, together with receipts and expenditure for the year 1893, the amount of funds at the beginning and end of that year, also the number of members. [Appendix E 2.]

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 23 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman, | Dr. Graham,  
Mr. Schey, | Mr. Wilks.

Cornelius Joseph Morrissey called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 29 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Mr. Chapman, | Dr. Graham,  
Mr. McLean, | Mr. Schey,  
| Mr. Wilks.

Herbert Harrington Greene called in, sworn, and examined.

Witness withdrew.

The Chairman handed in copy of Report from Select Committee of House of Representatives, New Zealand, on the question of "Old-age Pensions"; also copy of "Old-age Pensions Bill" (N.Z.)

Ordered to be appended. [Appendix F and F 2.]

John Alexander McCubben called in, sworn, and examined.

Witness withdrew.

Matthew Prideaux called in, sworn, and examined.

Witness withdrew.

Thomas John Iredale called in, sworn, and examined.

Witness withdrew.

John Hampton called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 30 JULY, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham, | Mr. McGowen,  
Mr. O'Reilly, | Mr. Schey,  
| Mr. Wilks.

John Maxwell Main (*City Missionary*) called in, sworn, and examined.

Witness withdrew.

Joseph Aloysius Beattie (*Medical Superintendent, Liverpool Asylum*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 5 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham, | Mr. McLean,  
Mr. Schey, | Mr. Wilks.

The Chairman handed in copy of Workhouse Act, 30 Vic. No. VI [Appendix G 1]; and read a letter from Mr. Alfred Davis, Registrar of Friendly Societies and Trade Unions, forwarding estimate of amount required to provide a pension for all persons of 60 years and upwards and 65 years and upwards. [Appendix G 2.]

David Carment (*Assistant Actuary, Australian Mutual Provident Society*) called in, sworn, and examined.

Witness withdrew.

William Roadley Dovey (*Actuary, Citizens Life Assurance Society*) called in, sworn, and examined.

Witness handed in extracts from speeches by J. P. Garvan, Esq., Managing Director, Citizens Life Assurance Society, delivered at general meetings in 1895 and 1896 [Appendix H 1]; copy of article from Bankers' Magazine on the subject of Friendly Societies' Old-age Pension Schemes [Appendix H 2].

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY,

13

THURSDAY, 6 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham,  
Mr. McGowen,|  
Mr. Wilks.Mr. McLean,  
Mr. Schey,

Henry Norman MacLaurin, M.D., LL.D. (*a Member of the Legislative Council*), called in, sworn, and examined.

Witness withdrew.

Andrew Garran, LL.D. (*a Member of the Legislative Council*), called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at a Quarter to Three o'clock.]

WEDNESDAY, 12 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham,

Mr. Schey.

Francis Kirkpatrick (*Under Secretary for Finance and Trade*) called in, sworn, and examined.

Witness withdrew.

Elizabeth Lilla Murray (*Matron, Brush Farm*) called in, sworn, and examined.

Witness withdrew.

Rev. Frederick Bertie Boyce called in, sworn, and examined.

Witness withdrew.

Hugh McLachlan (*Secretary to the Railway Commissioners*) called in, sworn, and examined.

Witness handed in scheme for the formation of Railway Employees Provident and Pension Fund.

[Appendix I.]

Witness withdrew.

[Adjourned till To-morrow at a Quarter to Three o'clock.]

THURSDAY, 13 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham,  
Mr. Schey,Mr. O'Reilly,  
Mr. Wilks.

The Chairman read a letter from Mr. Sydney Maxted, Director of Charitable Institutions, giving the probable number of deserving poor over 60 years of age in the Colony (outside the Government asylums) likely to be brought under the operations of a pension fund for that class. [Appendix J.]

Ordered to be appended.

William Francis Schey (*a Member of the Committee*) sworn and examined.

Witness handed in newspaper articles, by Dr. W. A. Hunter, on "Pensions for Old Age and Provident Assurance for the Working Man" [Appendix K 1]; article from "Nineteenth Century" for August, 1895, by Miss Edith Sellars, on "Old-age Homes in Austria" [Appendix K 2], Draft of Old-age Provision Bill [Appendix K 3].

Joseph Benjamin Oliffe (*Secretary of Tattersall's Club*) called in, sworn, and examined.

Witness withdrew.

Thomas Strettel Clibborn (*Secretary of the Australian Jockey Club*) called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

THURSDAY, 3 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan,

Mr. Wilks.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 8 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. O'Sullivan in the Chair.

Dr. Graham,

|  
Mr. Schey.

Mr. O'Reilly,

Committee deliberated.

The Chairman read a letter from S. R. Haseltine, Esq., Secretary of the Adelaide Racing Club, containing information in reference to the working of the Totalisator in Adelaide.

Ordered to be appended. [Appendix L.]

[Adjourned till Tuesday next at half-past Two o'clock.]

TUESDAY, 15 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. O'Sullivan, | Mr. Schey.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 16 SEPTEMBER, 1896.

Mr. O'Sullivan in the Chair.

Dr. Graham, | Mr. McLean,  
Mr. Schey, | Mr. Wilks.

The Chairman handed in newspaper paragraph referring to the levying of a tax on theatre receipts in Paris, and the handing over of portion of the stakes from the Grand Prix de Paris towards the support of the poor. [*Appendix M.*]

The Chairman then presented Draft Report, which was read a first time *pro formâ*.

Report considered.

Paragraphs 1 to 6 read, amended, and agreed to.

Paragraph 7 read and amended.

Question put,—“That the paragraph as amended stand part of the Report.”

Committee divided.

Ayes.	No.
Dr. Graham,	Mr. McLean.
Mr. Schey,	
Mr. Wilks.	

And so it was resolved in the affirmative.

Paragraphs 8, 9, and 10 read, amended, and agreed to.

Chairman to report to the House.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

OLD-AGE PENSIONS.

WEDNESDAY, 24 JUNE, 1896.

Present:—

MR. CHAPMAN,		MR. NEILD,
DR. GRAHAM,		MR. O'SULLIVAN,
MR. McLEAN,		MR. SCHEY,
	MR. WILKS.	

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Mr. William Ridley called in, sworn, and examined:—

1. *Chairman.*] What position do you occupy? I am Acting Statistician.
2. Can you lay before us any information concerning the question of pauperism in New South Wales and the adjoining colonies? Yes; I have some information here which I will read to the Committee. The first is as to the definition of a "pauper." I consider a pauper to be a person absolutely dependent upon the State or public charity. Children (persons under fifteen years of age), insane, and inmates of hospitals and reformatories do not come under this category. As the inmates of many of the institutions conducted by various organisations are, as a rule, required to work, there are necessarily very few persons who might be termed paupers outside the State institutions. It is open to question whether persons receiving constant relief of money and kind (either or both) from benevolent institutions should not be classed as paupers. Reliable data are not available to show the number of persons in receipt of such permanent relief in New South Wales. From the report of the Benevolent Society of New South Wales, Sydney, I give the following information:—

W. Ridley.  
24 June, 1896.

CLASSIFICATION of cases receiving relief on the 31st December, 1894.

- 200 widows, having the custody of 709 children.
  - 7 mothers, with 23 children whose fathers were insane.
  - 165 widows, whose old age and infirmities prevented their doing much work.
  - 3 blind men and 2 blind women.
  - 22 aged and destitute men, too infirm to maintain themselves without assistance, 3 having each a grown daughter, and 1 a grandchild.
  - 53 old and infirm married couples, 3 having 4 grandchildren.
  - 74 women with sick and afflicted husbands, there being 236 children.
  - 13 women, with 42 children whose fathers were in gaol.
  - 89 deserted wives, left to provide for 256 children.
  - 12 orphan children living with poor relatives.
  - 17 cases where husbands were temporarily out of work, and pressing in need of help for their wives and 39 children; 10 husbands were absent from home looking for work.
  - 3 women, with 9 children whose fathers were blind.
  - 14 destitute women, having 29 children depending upon them.
- Total:—664 cases, comprising 797 adults, 1,361 children—in all, 2,158 individuals.

3. Does that give a fair idea of the operations of that society? So far as I know.

4. *Dr. Graham.*] So far as the returns are furnished to your Department? Quite so. These are particulars with regard to the Government Institutions:—

The Government Institutions, exclusive of hospitals for the insane, gaols, the State Children's Relief Department, general hospitals (indoor and outdoor patients), and refuges, at the end of 1895 accommodated 3,358 persons (2,756 men and 602 women). The institutions supported by private charity, exclusive of the Benevolent Society of New South Wales, Sydney (the report of which is attached), house about 191 old people, distributed as follow:—Home for the Aged Poor (R.C.), Randwick,

W. Ridley. Randwick, 67; Sir Moses Montefiore Jewish Home, 10; Goulburn Benevolent Society, 3; Maitland Benevolent Society, 42; Newcastle Benevolent Society, 40; Grafton Benevolent Society, 2; and Windsor Benevolent Society, about 30. For purposes of comparison with returns of the other Colonies, the figures relating to Government Institutions alone have been used. The number of paupers in the Government Asylums of New South Wales is shown below:—

ADULTS in Government Asylums for Infirm and Destitute, and percentage to Population.

Year.	Number.	Per 1,000.	
		Adult Population.	Total Populat. o .
1890 .....	2,448	3.5	2.2
1891 .....	2,593	3.6	2.2
1892 .....	2,912	3.9	2.4
1893 .....	3,146	4.2	2.6
1894 .....	3,252	4.2	2.6
1895 .....	3,425	4.3	2.7
1896 (to 8th February) .....	3,540	4.5	2.8

I assume an adult pauper to be a person 15 years of age and over.

5. Those persons are supported as in-door patients practically;—there is no system of out-door relief as applied to these institutions, I presume? I think not; I have a return of the paupers in the Government Asylums of the Australasian Colonies, which gives these figures:—

Colony.	Total Adult Population (15 years and over).	Number of Paupers at end of year (latest available information).	Proportion of Paupers per 1,000 of adult population.	Expenditure.	
				Total (exclusive of cost of construction, &c.).	Per Inmate.
				£	£ s. d.
New South Wales .....	780,547	*3,356	4.30	51,017	14 7 3
Victoria.....	770,204	2,228	2.89	26,218	12 2 6
Queensland .....	356,936	837	2.34	11,270	13 9 4
South Australia .....	208,314	338	1.62	+15,912	.....
Western Australia .....	50,379	235	4.66	+10,700	.....
Tasmania .....	94,992	741	7.80	8,275	10 19 9
New Zealand .....	407,781	925	2.27	†	†

\* Includes cancer, consumption, and ophthalmic cases. † Including cost of out-door relief, which cannot be separated. ‡ Cannot be stated.

6. That gives the figures as regards the poor in Government Asylums;—have you any return showing the number of indigent people supported by other charitable agencies in these colonies—a return, for instance, similar to that you just read, showing the various benevolent societies in Sydney? I do not think we have that information with regard to the other colonies. The following table is from the Census Return of New South Wales:—

Sexes.	1861.			1871.			1881.			1891.		
	Total population	Bread-winners.	Persons of 65 years and upwards.	Total population	Bread-winners.	Persons of 65 years and upwards.	Total population	Bread-winners.	Persons of 65 years and upwards.	Total population	Bread-winners.	Persons of 65 years and upwards.
Males .....	198,488	132,408	3,471	275,551	171,320	7,284	411,149	262,691	11,566	608,003	382,385	16,649
Females .....	162,372	28,806	1,479	228,430	36,373	3,432	340,319	54,963	6,847	515,951	89,502	11,692
Total .....	350,860	161,214	4,950	503,981	207,693	10,716	751,468	317,654	18,413	1,123,954	471,887	28,341

Wage-earners, 1891.—The wage-earners (specified occupations) when the Census was taken in 1891 numbered:—

Males... .. 245,175      Females... .. 54,857      Total... .. 300,032

7. Whom do you include under the term "wage-earners;"—what exact meaning do you give to that term;—would it include the male population who are not paupers? All those returned in the Census Schedules as earning wages and salaries. The following information concerning breadwinners is taken from *Wealth and Progress*:—

## BREADWINNERS.

The breadwinners may be subdivided into divisions indicating their status as workers. Persons who were employed, but who neglected to state whether they were wage-earners or not, have been assumed to belong to the grade of wage-earners; and Civil Servants and other State employes have been included in the same category:—

Grade.	Males.	Females.	Total.
Employers .....	53,403	2,640	56,043
Persons working on their own account .....	49,482	14,123	63,605
Relatives assisting .....	8,943	7,526	16,469
Wage-earners .....	245,175	54,857	300,032
Persons not rightly classified either as employers or wage-earners .....	6,597	7,517	14,114
Unemployed .....	18,512	2,810	21,322
Not specified .....	273	29	302
Total breadwinners .....	382,385	89,502	471,887
Others .....	225,618	426,449	652,067
Total population, exclusive of Aborigines...	608,003	515,951	1,123,954

## ON OLD-AGE PENSIONS.

The employers comprise breadwinners who are assisted in their occupations by paid workers; the wage-earners whom they employ numbered 256,734, being the total stated above less 43,298 who were employed in domestic pursuits and not assisting the breadwinners. The proportion of wage-earners to every 100 employers was, therefore, 458, an average pointing to a very large number of small employers. Persons working on their own account are extremely numerous, and are especially strong amongst the farming classes and those following trading pursuits. W. Ridley. 24 June, 1896.

The persons not rightly assignable to any of the three classes just mentioned largely comprise those who derive incomes from sources which cannot be directly related to any occupation, and who are popularly styled as of independent means, the remainder being persons who vaguely described themselves as capitalists, householders, mine-owners, contractors, merchants, and the like.

The relatives returned as assisting do not form a very numerous class. They are mainly found engaged in agricultural pursuits, in which there were 7,617 males and 6,325 females; the fewness of the females is accounted for by the fact that domestic duties take up the whole of their time, and even if such were not the case the only branch of farming in which their services could be profitably utilised is dairying.

## DEPENDENTS.

The dependents may be grouped under four sub-divisions:—(a) persons employed in household duties without wages, and of these there were 210,799, viz., 210,701 females and only 98 males; (b) persons of tender years unable to earn their own livelihood, numbering 235,590, of whom 118,454 were males and 117,136 females; (c) relatives and others not performing household duties, who numbered 96,140 males and 94,123 females, in all 190,263; and (d) persons dependent on charity, or under legal detention; of this class there were 12,551 persons, viz., 8,593 males and 3,958 females.

The persons performing household duties without wages are chiefly wives and daughters of breadwinners; the number who could not be so described was 21,909. The relatives and others not performing household duties were for the most part aged persons, the parents or grandparents of the breadwinners. There were, however, some young persons returned under this category; these comprised daughters or wives, who could not be classed as performing domestic duties, or who desired not to be so described. The larger portion of the persons dependent on charity were living in public institutions, and, classed according to age, were as follow:—

Age Groups.	Males.	Females	Total
Under 5 years .....	187	151	338
5 years and under 15 .....	929	949	1,778
15 " " 20 .....	257	307	564
20 " " 25 .....	523	279	802
25 " " 45 .....	2,850	1,073	3,923
45 " " 65 .....	2,133	826	2,959
65 and upwards .....	1,701	460	2,161
Age not stated .....	13	13	26
Total .....	8,593	3,958	12,551

The indigent people of 65 years and upwards numbered 2,161; the total number of persons in the Colony of these ages was 28,365, so that it may be said that out of every 100 persons who reach 65 years, 8 will enter the asylums for the destitute.

I hand in, for the information of the Committee, detailed information concerning the foregoing, taken from the Census for 1891 [Appendix A]. Apart from the information given from my office, I have prepared a list of books which, I think, would throw considerable light on the subject in hand. The books are as follows:—The State and Pensions in Old Age (Spender); *Contemporary Review*, Jan.-June, 1891, vol. 59; Pensions and Pauperism (Wilkinson); Problem of the Aged Poor (Drage); Aspects of the Social Problem (Bosanquet); Some Poor Relief Questions (Lubbock); *Fortnightly Review*, 1891, vol. 50; Royal Commission on Labour (Blue Book); Foreign Reports—Denmark, Sweden and Norway, Spain and Portugal, Austria-Hungary, and Balkan States. I would also specially recommend that the Committee obtain a copy of the paper read before the Institute of Actuaries, on the 27th April, 1891, by Mr. T. E. Young, B.A., which deals with the German scheme, both from economic and actuarial standpoints, and which is reported to be by far the best treatise of its kind published; also, the Fourth Special Report of the Commissioners of Labour on Compulsory Insurance, 1893, which was prepared at the request of the United States Government.

8. I am not quite sure whether, among the figures quoted, you gave the percentage of people over 65 years of age to the total population of the Colony? No, I have not given that, but it can easily be worked out from the figures quoted.

9. *Mr. Chapman.*] What was the proportion of paupers per 1,000 of adult population in New South Wales? The proportion was 4.30.

Mr. George Henry Pitt called in, sworn, and examined:—

10. *Chairman.*] What position do you occupy? Chief Compiler in the Statistician's office.

11. I understand you desire to give some information bearing on the subject before the Committee? In the figures he gave Mr. Ridley omitted to state the percentage of paupers in the United Kingdom. In England and Wales the proportion of paupers was 7.13 per 1,000; in Scotland, 6.51; in Ireland, 9.60; and in the United Kingdom, 7.37. In this Colony the percentage is 4.8 per 1,000. I would point out to the Committee that *Hazell's Annual* gives particulars of the old-age pension schemes in a very concise form. There are twelve English schemes, including the Friendly Societies' scheme. Then there is the German scheme, which is now working; the Danish scheme, which is working; and then there are the schemes of France and Italy. Through the courtesy of Mr. Anderson, the Librarian, we have unearthed two more—those of Denmark and Sweden and Norway. Austria-Hungary and the Balkan States are also investigating the question. If the Committee desire it, I will mark extracts in *Hazell's Annual* and other books on the subject, which I think will afford them useful information. G. H. Pitt. 24 June, 1896.

12. *Dr. Graham.*] Do you think that the forms provided in this Colony with regard to poor returns are satisfactory? No. An immense amount of zeal is necessary on the part of anyone endeavouring to compile that portion of the statistics relating to our charities. The information, such as it is, I respectfully suggest, should be laid before the Committee. First of all I would point out that the sectarian bodies always have a suspicion that we are prying into their affairs with an ulterior motive, and they will only give us a few details. One prominent body generally works these things; the number of the institutions which other bodies control being very small indeed. Then, again, they will not understand the forms, no matter how plainly they are drafted. For instance, they will return 3,000 or 4,000 meals, and not

G. H. Pitt. not the distinct person to whom the relief was given. For this reason we cannot give accurate data as to the poverty existing outside the Government institutions and the extent of outdoor relief granted from private sources.

24 June, 1896.

13. So that such outdoor relief might or might not exist, so far as your returns go? I am quite certain it exists.

14. But you have no data to go upon? Well, I am exercised as to what constitutes a pauper. One of the authorities on this subject takes the same position on that point that I do. He says it is difficult to define what really is a pauper. We do not consider the insane as paupers; nor do we consider children as paupers, because the State stands in the position of a parent until they arrive at the age of maturity, and then it has nothing further to do with them. Then again outdoor hospital patients are not paupers. There is not the slightest doubt, however, that a tremendous number of those receiving doles from the Benevolent Asylum in Sydney should be classed as paupers. I have nothing to guide me in defining who are paupers. Possibly we could pretty well double the number returned as paupers. Some hard-and-fast definition should be laid down to determine what is a pauper.

15. Do you think that if you had some more complete form of obtaining returns it would help you very much? If we only had the law behind our backs the whole of the returns could be splendidly collected. I take the opportunity of mentioning that with regard to mills, manufactures, agriculture, and other industries, if we only had the law behind our backs our office would be ten times more useful than it is. The machinery is there, and it only wants to be put into operation.

THURSDAY, 25 JUNE, 1896.

Present:—

MR. CHAPMAN,		MR. O'REILLY,
DR. GRAHAM,		MR. SCHEY,
MR. McLEAN,		MR. WILKS,
	MR. MCGOWEN.	

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Mr. Sydney Maxted called in, sworn, and examined:—

S. Maxted.

25 June, 1896.

16. *Chairman.*] What position do you occupy? Director of Charitable Institutions.

17. You understand that this Committee is sitting to inquire into the question of State insurance, old-age and invalidity pensions, and the general system of pauper relief in the colonies? Yes.

18. *Dr. Graham.*] What designation had you before you had the designation of Director of Charities;—you had the same control, but under another name? I have had the same control that I have now for the last eight years.

19. Under what name? Under the name of Director of Government Asylums. There are several designations—Director of Government Asylums, Boarding-out Officer under the State Children's Relief Act, Chief Officer under the Children's Protection Act, and General Supervisor of subsidised institutions, when required under the Act.

20. So that you were familiar with the conditions of the poor before you became Director of Charities? Yes, for the last twenty years, I suppose, in one form and another. Before proceeding with my evidence I should like to explain an apparent difference in the percentage of State paupers in the Asylums for the Infirm and Destitute in New South Wales as compared with the other colonies. This was referred to yesterday by the Acting Statistician. The reason of this difference is that here we have a very much larger number of hospital patients. We include the consumptive, cancer, and ophthalmic patients, who, in the other colonies, are provided for in separate institutions apart from the Government Asylums for the Infirm and Destitute. We rank them here as ordinary paupers. The members of the Committee, and particularly Dr. Graham, will understand what I mean by reference to the death-table for the year 1895. You will see there the number who died from active diseases as compared with the number who died naturally from old age.

21. Does not that class of indigent poor also rank as an ordinary pauper in England? In connection with English workhouses, such cases as those of paralysis and rheumatism and others, which you would call chronic cases, would be so treated, but not so in regard to cancer cases and consumptive cases.

22. The former being diseases of old age? Yes. Last year there were 731 deaths at the Government Asylums for the Infirm and Destitute, and of that number 239 occurred from senile debility. I may say that at that time the total number of inmates was 3,200, men and women. The number has now reached nearly 3,600. There were 52 deaths from cancer, 102 from phthisis, 12 from asthma, 38 from bronchitis, 13 from pneumonia, 26 from influenza, and 17 from diarrhoea. The other diseases do not go beyond single figures. They include peritonitis, gastritis, dyspepsia, Bright's disease, diseases of the bladder, injury to hip, tumour, and malignant growth. No cases of that character are dealt with in the asylums of the other colonies.

23. The diseases you read out just now, such as bronchitis, influenza, diarrhoea, and pneumonia, are those which occur among old people, therefore the fact to which you allude should not account for the enormous increase of pauper patients in the asylums here over the number in other colonies? I am simply pointing out that in the other colonies they do not deal with that class of patients in the asylums similar to those under my control. They have separate hospitals for them.

24. But they have no hospital in Victoria for people with chronic diseases? They have for the consumptive, cancer, and ophthalmic cases, according to the information I obtained in connection with a recent inquiry, and I will give the figures directly. In regard to the other colonies, the following returns have been supplied for 1894-5. In the Victorian Asylums there is one inmate to every 546 of the population. The cost of the ordinary yard inmates was £13 3s. 9d. per head per annum. That would be exclusive of hospital inmates. The casuals—those are the people who go in and out of the asylum, and who just get food and occasionally lodge for a few days, and who are not supplied with clothing—cost per head £9 3s. 7d. This is not inclusive of cancer, consumptive, and ophthalmic patients. Our returns do include patients of that class. The cancer patients in Victoria cost £37 5s. 5d. In South Australia the proportion of paupers returned is 1 to every 1,095 of the population. This only relates to the asylums, and in that colony, I understand, they depend mostly on the outdoor relief.

25. The proportion, then, in South Australia is double that in Victoria? Yes; but they keep more people outside there than is the case in Victoria, and outside patients are not classified as paupers, because the relief is only partial. In South Australia the general average cost is £13 4s. 4d., as regards the asylums. The cancer, ophthalmic, and consumptive patients in that colony are not dealt with in the ordinary benevolent asylums, and they cost £53 5s. 7d. per head. In Queensland the proportion of classified paupers to the population is 1 to every 540, and the ordinary benevolent asylum cost is £13. It will be seen that there is scarcely any difference in the ordinary asylum cost in the three colonies, the highest being £13 19s. 9d., and the lowest £13 per head per annum. In Queensland, as elsewhere, the consumptive, ophthalmic, and cancer paupers are dealt with in separate institutions, and their annual average capitation cost is given as £71 2s. That is about equal to ordinary hospital cost here. Now we come to our colony, where the proportion to population, so far as the Government asylums are concerned, is 1 to every 431, and the general average cost is £14 7s. 3d., or an average of nearly £1 a year higher than the cost in the other three colonies. But these include something like 1,700 hospital patients out of a total number of inmates of 3,600, and of these hospital patients there will be fully 300 phthisical cases, 100 cancer cases, and 300 ophthalmic cases. I had an analysis made three months ago as far as possible of the two broad divisions of hospital and general inmates, technically known as yard inmates, so as to enable me to make a comparison with the other colonies, with the result that our general inmates cost £11 18s. 8d. per head, and the all-round hospital cases £19 1s. 11d. You will understand that I could not separate the medical comforts of the cancer and consumptive patients from those of the other ordinary inmates of the hospital.

S. Moxted.  
25 June, 1886.

26. Suppose a man of, say, 25, 30, or 35 years of age presents himself at the Government dépôt in Sydney, and is told that he has got some serious disease;—being destitute, he is not sent to the hospital, but is sent to one of your asylums? He would be sent immediately to Dr. Paton, who decides at once whether it is a case for the general hospital, or a case for one of my asylums. If he gives an order that the patient is a proper person for admission into one of my institutions, it is never questioned. But there is a safeguard at the institution. There is a check medical examination there, and if the Medical Superintendent finds that the case is one which should be treated in a general hospital, an order is obtained from the Medical Adviser to the Government, and the patient is immediately sent to one of the hospitals—the Prince Alfred Hospital, the Sydney Hospital, or perhaps the Coast Hospital.

27. What I want to emphasise is this: A patient goes to Dr. Paton, who is the Government officer for receiving the sick and sending them to your institutions, and if he finds that the patient is chronically ill, and is destitute, he sends him on to you? Yes.

28. In other countries such patients would go to some hospital? In Queensland some cases would go. For instance, suppose it was a consumptive or cancer case, in the other colonies it would go into another kind of institution altogether.

29. So that is how it comes about that our numbers are so high? To a great extent that is so; but whether the difference is altogether accounted for by that fact I cannot say, because I cannot get accurate returns from the other colonies.

30. *Mr. O'Reilly.*] Surely it is a fact that 95 per cent. of the patients in the asylums under your charge are over 60 years of age? The proportion is not as great as 95 per cent. We have 3,600 inmates, and about 2,300 of those are over 60 years of age. That would be about 63 per cent. roughly estimated.

31. *Dr. Graham.*] In proportion to the number in the asylums? Yes.

32. But could you give us the percentage of the population of the Colony over 60 years of age? I could not do so without working out the figures, but it could be very easily arrived at. The average age of the whole of the people in my asylums would be about 63 years. The younger inmates are generally those suffering from consumption. We have trained nursing staffs at the institutions, and, except in one case, daily medical attendance, and in all cases resident dispensers. So that it will be seen that our returns from the point of view of economy are very satisfactory, and if we could get the number of hospital patients in the other colonies separately, the percentage to population would possibly be equally satisfactory.

33. *Chairman.*] You have given a considerable amount of attention to the question of State insurance and old-age and invalidity pensions, and from your position, as Director of Charities, you are no doubt conversant with the various forms of relief in the country. Would you kindly give the Committee the benefit of your opinions on these various matters? Perhaps it would be as well if I first gave the Committee the leading features of some of the principal schemes for old-age pensions formulated in England during the past few years. With regard to Mr. Chamberlain's schemes, the first was based on voluntary contributions from the individual to be State-aided, the pension to be drawn at 65 years of age. Under this the depositor would give £2 10s. at the age of 25, and pay an annual subscription of 10s. afterwards. That would continue right up to the age of 65. The State adds £10 to the sum of £2 10s. deposited, and pays interest at 2½ per cent. on the whole amount. It is estimated that this would give a pension of 5s. a week at 65 years of age. That was a voluntary contribution scheme. Mr. Chamberlain's second scheme was for the depositor to give £5 at the age of 25 and pay £1 a year afterwards. To this the State is to add £15. If the depositor died before the third payment was made the deposits were to be returned to his widow. If he died after the third payment and before he was 65, the widow and children were to receive 12s. a week each until the children were 12 years of age. Mr. Chamberlain's third proposal was for co-operation with Friendly Societies and Trades Unions. Any person depositing 30s. if a male, or 25s. if a female, at the age of 25, and insuring in any society for £6 10s. or £3 18s. respectively, would have the pensions arising from these contributions doubled by State payments at 65 years of age. Mr. Chamberlain attached the most importance to this scheme, because he thought he would get the co-operation of the Friendly Societies in connection with it.

34. Would you give us your opinion as to the possibility of applying any of these schemes to New South Wales? I do not think you would get the people here to keep up the payments under any voluntary system. The three schemes I have described are all under the voluntary system. The contributions are subsidised by the State, but it is left entirely optional with the person whether or not he becomes a contributor to the fund.

35. Have you any other objection? I do not see any other objection than that.

36. *Mr. O'Reilly.*] Which you regard as a fatal objection? I think so, as far as I am able to judge of the habits of the people who would require to be benefited by these proposals, and I know as much about them as any man, for I have been among them all my life.

- S. Marted.  
25 June, 1896.
37. *Chairman.*] We will now take the next scheme? The next is Canon Blackley's scheme. It is a compulsory system of contributions. To secure an old-age pension of 4s. a week at 65 a person would have to pay £5 between the ages of 18 and 21, and the State gives subsidies to an equal amount. Canon Blackley calculated that if that money were invested it would return at 65 years of age a pension of 4s. a week. It is stated in the reports that Canon Blackley addressed 400 meetings with reference to that scheme, and he says that with one exception they were unanimously in favour of it.
38. Can you see any objection to it? The only objection I can see to it is whether it might not be considered that you were interfering with the liberty of the subject. It is something on the lines of the German scheme.
39. *Dr. Graham.*] The German scheme is compulsory upon the masters too? Yes, and the insurance companies as well. The pension would really be contributed from four sources in Germany—the employee, the employer, the insurance companies, and State subsidies.
40. *Mr. O'Reilly.*] But would this compulsory contribution of £5 be forthcoming from a large section of the community between the ages of 18 and 21? Nothing is said about that. It is, of course, a point to be considered whether it would be possible to get the contribution from these people. I do not think you would, and you would, consequently, exclude from the operation of the scheme the very persons who most require to be relieved.
41. In the great majority of cases the pauper and destitute at 60 is the penniless ragamuffin at 18? There is no doubt about that.
42. *Dr. Graham.*] Are you aware that no actuary of any standing would back up Canon Blackley in his calculations—that he did give some actuarial authority, but that authority is not acknowledged by the Actuarial Society? That objection was raised, I know. There is another objection, and that is that a pension of 4s. a week would not be of any use to a person 65 years of age. In order to get double that pension you would have to double the payments between the ages of 18 and 21, and that would increase the difficulty of obtaining the money. That does not seem to me to be a practicable scheme. Now I come to Charles Booth's scheme. That is a scheme for free and universal pensions. He would give pensions of 5s. a week at 65 years of age to everybody of that age in the United Kingdom, whether he was poor or rich. Mr. Chamberlain objected to this on the ground, as he put it, that it was outside the range of practical politics, because in order to carry it out in England and Wales it would cost something like £24,000,000 a year, and in Ireland and Scotland an additional £17,000,000. I suppose the same objection would be raised to the scheme here if it were attempted to go upon the same lines. The fourth scheme is Mr. Price Hardy's, which is a modification of Mr. Booth's scheme. Mr. Hardy suggested that every deserving and impecunious person—that is to say, all who are not able to support themselves—should receive 10s. a week at the age of 65, except in the case of married couples, when the pensions would be on a correspondingly reduced scale—he means that if two are living together he would not give them £1. This was to be purely a State pension, but its probable cost to the nation was not stated.
43. *Dr. Graham.*] It is a theoretical scheme really? Yes.
44. *Chairman.*] In using the words "State pension" there you mean, I presume, that there were to be no subscriptions whatever? No; it was to be paid wholly by the State.
45. How would such a scheme fit into our circumstances? It appears to me that it is about the only one that has been formulated that could be at all applied to the circumstances of this country.
46. *Dr. Graham.*] It could be applied, because its administration would be easier than in the case of the other schemes, where the administration would be very difficult, because you would want all kinds of agencies to collect the money and keep the books? Not only that, but this seems to be the only safe way of getting the funds. You would have to set apart, I suppose, special sources of revenue for it—take it perhaps from the probate duties and set apart some of the waste lands, or earmark some other sources of revenue, or otherwise you would require a special poor rate to meet the pensions.
47. That is the Danish principle? Yes, except that this scheme does not exclude what the Danish system proposes to exclude. There they exclude almost everybody, for it is proposed to give the pensions at 60 years of age "to any person who has not undergone a sentence, whose poverty has not been caused by his own fault, or by extravagance, or by making undue provision for his children or others, who has resided in the country for ten years, and has not during that period been found guilty of begging or receiving poor relief or been convicted of vagrancy." If you excluded all those classes you would have hardly anybody left. I do not think there are any other schemes worth considering except the four I have described. They are the principal schemes that have been considered in England.
48. *Mr. O'Reilly.*] You regard Mr. Price Hardy's proposal that 10s. a week should be given at the age of 65 to impecunious persons as the least impracticable? As the only practicable scheme, because it seems to me that that is the only scheme under which you could raise the necessary revenue. You would not get the voluntary contributions, and if you attempted the compulsory contribution system you would have to first arrive at the certainty of all these people between the ages of 18 and 20 being able to give the money required to build up the pensions.
49. Do you think Mr. Hardy's scheme would apply to us in the present condition of affairs? The objection to it is this—you might perhaps make it apply out of the 3,600 inmates in the Government asylums to 500 or 600, certainly not more. But then you open the door to this abuse—how are you going to prevent every person of 60 years of age, or whatever age you might fix, from coming and asking for this relief.
50. You would quadruple your number of paupers very quickly, I think? That is the objection that has been thrown at the heads of all these English people who have been trying to bring these schemes into existence, and I have noticed this peculiarity, that almost everybody directly concerned with the administration of charity in England is opposed to all these proposals for pensions of any kind.
51. *Mr. McLean.*] You say the scheme might be applied to 500 or 600 inmates in the Government asylums;—what reasons have you for believing that it could not be applied to all the inmates in the asylums? I will give you the figures: First, there are about 1,700 hospital patients. Hospital patients in the institutions could only be properly attended to in the hospital divisions, where they would get the proper nursing and medical attendance. Then there are some hundreds of mentally weak people in the asylums. You must keep them under some sort of liberal restraint—I do not mean to say within four walls, but you must keep them within enclosed ground, so that they cannot wander away and fall into the river, or anything of that sort. There are also hundreds of the class known as "casuals," who, if they received a pension to-day, would spend it in drink at once and return to the asylums to-morrow. None of these classes could be pensioned.

52. In other words, you think they are better cared for in the asylums and better provided for than they would be if they were the recipients of a pension? Yes. S. Maxted.  
25 June, 1896.

53. *Dr. Graham.*] They are protected, and being people who want systematic daily care they receive nursing which they could not get if living on a pension in their own homes? That is so.

54. *Mr. O'Reilly.*] Their death-rate is 25 per cent. per annum, or in other words 731 inmates die every year, and that will give a general idea of their weakness? Yes.

55. *Mr. Wilks.*] You stated that the authorities connected with the charitable institutions in England were opposed to any old-age pension scheme;—whom do you mean by the "authorities"—the secretaries of the charitable bodies? I mean all the officials concerned in the administration of indoor and outdoor relief, and all the Boards of Guardians. Then there was that large Parliamentary Committee on Mr. Chamberlain's voluntary scheme, which I think was composed of eighty members. The gist of their report was that they did not see their way clear to make any definite recommendation at present. They sat a very long time, and took an enormous quantity of evidence, bearing upon all phases of this question.

56. Why did the Boards of Guardians and charitable institutions oppose that particular scheme? They opposed all the schemes on the one ground—that any system of pensions would enormously increase the number of paupers.

57. That it would be cultivating pauperism? Yes; that is the objection raised in every instance. There is a scheme in operation in Germany founded on the compulsory insurance system. The Act under which pensions were given there came into full force in 1891. It was passed before that date, but it did not come into actual operation until 1891. It provides for old-age pensions and invalidity pensions, and makes provision against old age and infirmity compulsory upon all employees whose yearly income does not exceed £100. For an invalidity pension at any age five years' subscription to the fund is necessary, and for an old-age pension subscription for thirty years. But these latter classes are not granted until the applicant has completed his seventieth year. These pensions are contributed from four sources in certain specified proportions, namely—the insured person, his employer, the State, and the District Insurance Office. In 1892 the pensions granted amounted to 22,000,000 marks—I understand the value of a mark is about a shilling,—and in that year nearly 11,250,000 persons were insured. Within two and a half years after the Act came into force, there were 193,114 old-age pensions and 34,746 invalid pensions granted. Everybody appeared to be dissatisfied with the system, because of the insufficiency of the pension and the advanced age at which it was granted. Mr. Goschen, in criticising that pension scheme, expressed his opinion with reference to its application to a British community:—

I want to point out one of the cardinal dangers in connection with the system of compulsory insurance in its bearings on Socialistic projects. It means regulation, and regulation of labour as a whole. You cannot have a system of compulsory State-aided insurance without depriving working-men of liberty and of many privileges which they enjoy.

Those words were used by Mr. Goschen in a speech on the German system delivered about six years ago. He goes on to say:

To a German workman the threat can have but few terrors, or what terrors it has have mostly been exhausted. The regulation of labour as a whole has long been the policy of the German Empire."

58. *Chairman.*] Do you endorse that system? I think the verdict with regard to it is obvious. I do not think it needs a second's consideration. It certainly would not be tolerated in this country.

59. As a matter of fact, from your researches into this question you are possessed of the information that a number of the German people themselves are dissatisfied with the scheme? Yes.

60. Will you state the reasons of the dissatisfaction? There is a very general opinion in Germany that the pension is too small, and the age at which it can be applied too far advanced for the scheme to be really a remedial measure for the poverty of old age.

61. *Mr. O'Reilly.*] Whose statement is that? That is taken from Drage, who has given as much attention to the subject as anybody,

62. *Dr. Graham.*] And Spender gives reasons against it? Yes; he points out that you compel a man to invest, and you do not give him any substantial return for his investment, and you leave the relief until it is of no use to him.

63. And he often forfeits what he invests? Yes.

64. *Chairman.*] Have not the social democrats of Germany taken a strong stand against the system of State insurance? A very strong stand.

65. One of the reasons was that it appeared to relieve the rich of the proper amount of payment for the relief of the poor? Yes.

66. And another, that it led to a reduction of wages and increased taxation? Yes.

67. And on the whole there seems to be a strong feeling throughout Germany against the system? Yes; a very strong general feeling amongst the people whom it is presumably intended to benefit. The next system that was considered, both by the Charity Commissioners and Mr. Chamberlain's Voluntary Parliamentary Committee, was the Danish system. The Act granting old-age pensions in Denmark was passed in 1891. It ignored the principle of self-help altogether. One-half of the pension was to be borne by the communes and the other half by the State. The pension was to be granted at the age of 60 years. No amount was mentioned, it being simply stated that the pension must be sufficient for the support of the person relieved and his family, and could be given either in money or in kind. No particulars have been furnished up to the present to show how far the system is operating. The next scheme is the French scheme, which is very fully described by Spender, page 101. This was submitted to the Chamber of Deputies, but did not reach legislative maturity, although it was thought that it may form the basis of future legislation. Under this scheme, every person at the age of 25 years, and earning less than 3,000 francs, or £120, a year, would pay a contribution of 10 or 5 centimes a day from his 25th year, seventy-five days in each year being reckoned as holidays or festivals, upon which no payment would be required. For the 10-centime contribution he would secure a first-class pension, and for the 5-centime a second-class pension. Whichever sum the man elects to pay the employer is bound to double it, and the State to add two-thirds of the combined contributions—thus ensuring an annuity of either £24 or £12 a year.

68. Do you wish to express any opinion as to the possibility of adapting a proposal of that kind to our circumstances? There again comes the question of the man making provision for himself—that is the difficulty in the way. It does not seem to me that you will be able to make any system under which the individual is to contribute generally practicable; and that, of course, means that any person who did not contribute would, if impecunious, in his old age just drift into an asylum, as at present. 69.

S. Maxted. 69. *Mr. O'Reilly.*] The schemes you have mentioned are the only ones you think worth bringing before the Committee? Yes, I think so. With reference to these, I can give you the opinion of Mr. Chamberlain's Committee and of the Charity Commissioners. Mr. Chamberlain's Committee did not see its way to make any definite recommendation at present.

25 June, 1896.

70. *Mr. McGowen.*] In the schemes referred to, was any exception made in regard to men who had insured their lives? Having made sufficient provision for themselves they would be excluded.

71. Would they be excluded under the Danish system? I could not say without looking up the authority. The report of the Charity Commissioners, with reference to the subject generally, says:—

Having fully considered the various schemes of old-age pensions, as well as the question of dealing with the aged poor in asylums, we have come to the following conclusion:—These two forms of relief, namely, almshouses and pensions, are well fitted to meet the needs of the poor in old age, and it is unnecessary here to enter further into the question of their comparative advantage than to say, that while, on the one hand, an almshouse in which proper supervision and attendance are available, seems to be the best fitted for the relief of those who have no relatives capable of rendering them assistance, or who are wholly disabled; and relief, by means of pensions, on the other hand, gives more scope for the care of the aged poor by their families, and for enforcing those obligations to contribute to the support of relatives, the fulfilment of which is an obvious condition of all relief.

There is one feature to which I wish to direct your attention particularly. All the witnesses who opposed pension schemes used the out-door relief system in England as an illustration that they would be likely to increase pauperism, and they pointed out that in the Unions where the system does not exist the percentage of pauperism is low. But they do not show, in any case, what becomes of the poor people who ought to be relieved, who do not, according to the statistics, go into the workhouse, and whose poverty appears to be simply ignored. This appears to me a very easy method of securing a low percentage of pauperism; but the humanity of it is another question.

72. *Mr. Schey.*] In the Old Country there are a very large number of agencies connected with different churches and charitable institutions which look after aged people. Are there no means of getting returns of the relief granted to old age from those societies, many of whom are registered and well known? I have no means of getting that information.

WEDNESDAY, 1 JULY, 1896.

Present:—

MR. CHAPMAN,		MR. MCGOWEN,
DR. GRAHAM,		MR. NEILD,
MR. SCHEY.		

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Mr. Sydney Maxted further examined:—

S. Maxted. 73. *Chairman.*] Have you anything to add to the evidence given on the previous sitting-day? During my previous examination I was asked to state my opinion of the various pension schemes formulated in England, and I gave them in detail—so far as I thought they were of sufficient importance to submit to this Committee. I should now like to say briefly and clearly, in order that I may not be misunderstood in this matter, that I do not approve of the voluntary principle advocated by Mr. Chamberlain, because, although the theory is all right, I feel quite sure the payments would never be kept up by the particular class who would probably require to be pensioned in old age. Canon Blackley's compulsory proposals are objectionable, because they would not be tolerated in the first place; and it would also be next to impossible to obtain the necessary deposits of, say, £12 10s. between the ages of 18 and 21 years of age to entitle the individual to a pension of 10s. a week; and I do not think any smaller sum would be sufficient in this Colony to provide the pensioner with common necessaries. Besides, I am sure from the authorities I have looked up that Canon Blackley's figures are unreliable, apart from the objectionable features of his proposal. Mr. Charles Booth's scheme of free and universal old-age pensions, to be paid by the State to every person in the United Kingdom at 65 years of age, has been declared by several authorities to be the most logical and equitable, and to be impracticable only on the ground of its cost, which, according to the figures I have quoted, has been shown to be enormous. It may, perhaps, interest the Committee to know what the result would be in this Colony if it was determined to apply this scheme to all persons over 60 years; and I really think this age should be the standard fixed, in view of the difficulty of men above it obtaining employment, particularly at the mechanical trades. I shall say a few words on this phase of the matter, however, later on, when considering the question whether old-age pensions are likely to affect the wage-earners. With regard to the other point, there were at the end of this year 55,400 persons in this Colony of 60 years of age and upwards; and if these were pensioned under Mr. Booth's scheme at 10s. per week it would cost £1,440,400 per annum; and if you extended the age to 65 years it would cost, at the same rate, £839,202 per year, as there were in December (31), 1895, 32,277 persons of that age and upwards in the Colony. Turning to the last of the four main proposals which I placed before the Committee, I come to Mr. Price Hardy's, which I expressed the opinion was the only practicable scheme for this Colony if it is ever determined to carry out a system of old-age pensions. You will remember that it proposed to give a State pension to every deserving poor person, and if you fixed the pension age at 60 years it would probably cost the Colony at this time £36,634 a year to apply it to persons of that class who are now receiving indoor and outdoor relief throughout the Colony from the various charitable organisations. I believe I have succeeded in obtaining figures (which are approximately accurate) from almost every charitable organisation in this Colony since last meeting. I will give a brief statement of these, in detail, later. But with regard to the apparently-deserving persons over 60, first, there are about 500 inmates of the Asylums for Infirm and Destitute who could be thus classed, then the sectarian institutions relieve, in round figures, about 200 more. Thirty-eight aged persons are receiving relief from the Government Pauper Vote; there are about 325 aged persons receiving relief (outdoor) from the Sydney Benevolent Asylum, and the aged recipients of indoor and outdoor relief from other societies are as follow:—St. Mary's Benevolent Society, 4; North Sydney, 20; Bathurst, 39; Forbes, 10; Newcastle, 48; Tamworth, 20; Singleton, 11; Armidale, 10; Young, 4; Penrith, 19; Narrandera, 3; Queanbeyan, 6; Milton, 2; Cootamundra, 6; Mudgee, 14; Hawkesbury, 20;

20; Maitland, 50. There are a few returns to come in, but I do not think that they will increase the number over 60 years of age in receipt of relief by more than fifty or sixty persons. S. Maxted.

74. I presume the evidence you have just given with regard to the charitable organisations in the Colony is up to date? Yes, up to last week. 1 July, 1896.

75. And you have obtained the information from authentic sources? From the institutions themselves. There are thus about 1,409 deserving poor persons over 60 years of age now known to be in receipt of indoor and outdoor relief throughout the Colony. I do not mean to affirm that these are all the deserving poor of 60 years of age and upwards who merit relief from charity, but they are all who have asked for it, and the cost of pensioning them would be as stated. There would, of course, be the danger I have already pointed out of the numbers increasing very largely if once a pension system became a recognised policy. It will be seen from these figures that there are comparatively few aged dependents outside the metropolitan area and the Government Asylums for Infirm and Destitute. As a rule, when the country district authorities—even including the hospitals—take hold of a pauper, they pass him on as soon as possible to the central institutions; and I have had to report some cases in which my medical officers have reported that this has been so improperly done from the hospitals that the patients have died from exhaustion immediately after admission. Indeed, when I took over the asylums eight or nine years ago I found the system was being so abused by the country hospitals and local bodies which were in receipt of Government subsidy that I declined to receive patients from the country districts, and particularly the hospitals, unless the following conditions were complied with in every case:—1. That applicant was both infirm and destitute, and had not any relatives in a position to support him outside a public institution. 2. That applicant was physically and mentally fit to travel. 3. That the case was not one which should be treated in a local hospital, or by a local benevolent society, subsidised for that purpose. 4. That in every case when practicable a medical certificate must be obtained as to the applicant's eligibility for admission into, or treatment in, one of the Asylums for the Infirm and Destitute.

76. *Mr. McGowen.*] Have you imposed those conditions? Yes, since the issue of the circular. Previously patients were sent in, and were received without any inquiries being made. That circular was sent in January, 1889, to all the country hospitals. That was five months after these places were handed over to me. The first four months' operations of this circular brought the admissions down nearly 40 per cent. That is to say, instead of having 769 admissions from January 1st to December 31st, 1889, the admissions in the following year in which the circular came into operation went down to 627, a total decrease of 142, or nearly 19 per cent. Ever since that circular has been in operation, and that condition has been observed, this proportion of decrease has been maintained, notwithstanding the large increase of the numbers in the asylums. For instance, in 1889 the number was 769. From my report of last year, page 13, it appears that in 1889—that is the year in which this condition was not carried out—the admissions were 769; in the following year they went down to 627; in 1891 they went down to 618; in 1892 to 526; in 1893 to 485; and in 1894 to 465. There is one matter which I should like to explain at this stage in connection with my evidence on Thursday last. Mr. O'Reilly, looking at the death-table for last year, and applying it to the average daily number under treatment, asked me whether the death-rate had not been 25 per cent. Upon looking at the figures in the same way that Mr. O'Reilly did, I answered "yes," forgetting for the moment that the mortality during the year should not be estimated upon the average daily numbers, but properly upon the basis of the numbers who had actually been under treatment. The death-rate worked out in that way was 10·81 per cent. This is the plan adopted at the Sydney Hospital, where last year the percentage of mortality on admissions was 9·3. Of course the cases which are sent into the hospitals of the Government Asylums are supposed to be incurable cases, while the majority of those admitted into the metropolitan hospitals are for temporary treatment. There is a feature in connection with this death-rate to which I should like to draw the Committee's attention. I think it should be mentioned as showing the result of the improved method of dealing with inmates of the Government Asylums since the year 1888, because I assume the Committee desires to obtain the fullest information with regard to their treatment in the institutions in dealing with the question whether or not they could be better provided for outside. Up to the year 1887 the sole dietary of the inmates, apart from the hospital divisions, consisted, without variety, of dry bread and tea without milk, for the morning and evening meals; and soup, with the soup-meat, and vegetables in the middle of the day, except on Christmas Day and Queen's Birthday; and there was a custom of serving out the full allowance of 1lb. of bread for the whole day in the morning, which each man kept in a little bag, so that when the evening meal arrived numbers of men had really nothing left to eat. There were in that year about 2,100 inmates, and the grog-bill was something over £3,000 a year; and the death-rate properly computed had, for some years, under this method of treatment, been about 20 per cent. Dr. Manning was examined before a Royal Commission in 1887 in regard to this matter, and he gave the following emphatic opinion:—"He had had a considerable number of cases which having been cured by treatment in one or other hospitals for insane he discharged to the benevolent asylums, and which came back to him in a very short time. The impression he had formed with regard to these cases was that they had not been sufficiently fed, and that if they had been sufficiently fed they would not have been returned";—or, in plain English, that partial starvation had really driven a number of the feeble old inmates insane. Dr. Maher and Dr. Morgan gave equally strong testimony before that Commission. Upon taking over these Asylums in 1888, my first duty was to abolish, as far as possible, the free use of stimulants except where prescribed medically to hospital patients, and with the saving of cost thus effected to substitute a varied diet of heat-giving food. I submit a copy of the dietary table then adopted [*Appendix B*]. The result was very remarkable. The stimulant cost has been reduced since by nearly 75 per cent., and although the numbers in the hospital and general divisions have since increased year after year, and the average age of the inmates has slightly increased also, the death-rate in the first year of the changed system came down to 10 per cent., and this rate has only slightly varied since, but has never been higher. At my former examination Dr. Graham asked me if I could state the proportion of inmates of 60 years of age and upwards in the Government Asylums to those of similar age throughout the Colony. I could not answer that question off-hand, but I have since procured the figures. There were at the end of last year 33,088 males and 22,312 females of 60 years of age and upwards in the Colony, including 1,904 men and 378 women in the Government Asylums for the Infirm and Destitute. The proportion in the asylums to those out was thus:—Males, 6·105 per cent., or about 61 per 1,000; females, 1·723 per cent., or about 17 per 1,000. I was asked by Dr. Graham if I would state the method under which the inmates were admitted to the institution

S. Marted.  
1 July, 1896.

institution—to describe the process from start to finish. The plan adopted is this: A person applying within the metropolitan area for admission to one of these institutions goes in the first instance to Dr. Payton for medical examination. Dr. Payton certifies if he is fit, and I issue the order at once. We take a history of the applicant given by himself, with regard to which we make subsequent inquiries through the medium of the police, if our own inspectors are not in the district to do so. When the applicant is admitted the medical officer at the institution, in the first place, makes a careful examination, and then keeps him under observation. If it is found to be an improper case, that is to say, if the man is found to be fit, strong enough to work outside—because a good many get in through malingering in the first instance—he is discharged. If it is a proper case for the institution the man is kept. If it is a case in which an operation is required, or if it is a case for a general hospital, he is transferred to one of the hospitals. I hand in for the information of the Committee a copy of the blank form to be filled in, showing the history of the applicant. [Appendix B 2.] If it is a country admission the application is generally made through the medium of the Police Magistrate, the Clerk of Petty Sessions, or the police, or the applicant comes from the local benevolent society or the local hospital. Then this form [Appendix B 3] is sent up. It asks for information with reference to the name, birthplace, and age, the circumstances of entering the hospital or benevolent asylum as the case may be, the period of residence in New South Wales, occupation, and the names and addresses of relatives in full; also, whether the applicant has any relatives in any of the colonies willing or able to support him, whether the applicant has ever been an inmate of a charitable institution, whether he is an Army or Navy pensioner, or whether he has any other means of support; the amount of money in possession of the applicant or in the possession of friends; whether he has any legal claim to or is likely to become entitled to any land, investment, or other property. Then the medical officer in the town certifies as to whether the applicant is physically capable of earning a livelihood, and whether his case is not one which should be properly treated in a general or local hospital; and he is also required to state if the applicant is able to travel alone. When we get that information we send a railway-pass; or, if the case appears to be an urgent one, upon the first application coming in we send the railway-pass on in advance, so that there shall be no delay. When the applicant is admitted from the country he goes through precisely the same process at the asylum as if we had sent him on direct from Sydney. Perhaps I might here give a detailed statement of the existing methods of dealing with the various classes of dependent persons in this Colony. First, there are the Government Asylums for the infirm and destitute, containing between 3,000 and 4,000 inmates, whose average age is about 63 years. These are wholly supported at the cost of the Government; and the expenditure last year was about £60,000. Mr. Brunker, the Chief Secretary, who takes a most humane and personal interest in the requirements of the poor of all classes, has a Bill in the hands of the Parliamentary Draftsman which will probably reduce the number of inmates to some extent, or at least lessen their cost, as among many other matters it provides for compelling near relatives to pay towards maintenance cost, and makes grand-parents, children, and grand-children jointly and severally liable for each other's support according to their means. I have no doubt that this will prevent a good many persons from drifting into the asylums if it becomes law. The other class of dependents wholly supported by the Government without any voluntary contributions from the public are twenty-two aged married couples in cottage homes at Parramatta. This system may probably be extended in the near future, if Mr. Brunker's proposals are carried out, to about thirty aged married couples who are now separated in the different Government Asylums, and thirty to forty others who are awaiting admission. Then the Government contributes from the annual Parliamentary Vote for the relief of destitute persons, without any assistance from the public, to the relief of eighty-eight widows, twenty-four deserted wives, twenty-two aged persons, sixteen old married couples, thirty chronic invalids, and eight blind persons. The widows and deserted wives have families. I have had a number of typical cases from each division compiled for the information of the Committee. The Government Statistician has already supplied figures relating to several sectarian societies; and their methods are to supply indoor relief to the aged in some cases, and outdoor relief to both aged dependents and others. The largest State-aided relieving society in Australia is the Sydney Benevolent Asylum. It gives outdoor relief in the shape of partial rent allowance to 1,000 separate families, including widows, deserted wives, and the aged poor, and its expenditure under this heading last year was £4,235 1s. 4d. During the present year, however, the Government has extended the functions of the society to the relief of the families of the ordinary unemployed. There are now about 800 separate families receiving relief under this heading; and the cost this year may reach £5,000, judging by the manner in which the numbers are increasing.

77. You say there are 800 families of the unemployed now receiving assistance? Yes.

78. From whom do they receive the food or money? They apply to the Benevolent Asylum for it, and this money is given to the Benevolent Asylum by the Government from the Consolidated Revenue.

79. Mr. McGowen.] Last year the same people were relieved from the Labour Bureau were they not, in the same way? Not to that extent; nor as liberally. Mr. Orser will be able to give you the figures.

80. He gave them rations, did he not? Yes. I will deal with that a little later on. The Benevolent Society takes every precaution to prevent imposition, and has a report in every case of relief. The next largest society of this character in New South Wales is the Newcastle Benevolent Society, which is managed on the same lines as the Sydney Benevolent Society, except that it provides for aged inmates indoors, and has several cottage homes, as well as the outdoor relief system. It is supported by private subscriptions, subsidised by the Government. There are at present twenty men and twenty women in the institution all over 70 years of age; 320 families are receiving outdoor relief, a large number of which consist of widows with children, and there are also a number of deserted wives. The expenditure in outdoor relief last year was £2,606, or £500 more than in the previous year, and the cost of inmates of the asylum was £745 in addition. The following is a short statement of the methods adopted by nearly every other charitable organisation in this Colony:—Parramatta Benevolent Society—Outdoor relief. Thirty-four families (including fifteen destitute widows) on books, regularly receiving relief, and about six other destitute families who receive temporary aid. One husband in gaol, two years to serve, others away looking for work. About twelve beds supplied to indigent persons passing through the town every week. St. Mary's Benevolent Society, near Penrith—Outdoor. Seventeen families get occasional help—eight of these helped every month. Four of these old and unable to work, no means. Three widows with families. Expenditure in relief, £30 11s. 3d. Goulburn Ladies' City Mission and Benevolent Society—Outdoor.

106 separate families receiving relief at the present time. Last Christmas, 62 dinners provided for poor in their own homes, 565 parcels of groceries sent to poor families, which comprised 802 distinct persons, including widows and deserted wives. In other cases assistance given in raiment, shelter, beds and bedding, furniture, and train-fares, boots, board and lodging, and medicines. In addition to this, 412 hungry men (unable to obtain work) were supplied with rations during the year. North Sydney Benevolent Society—Outdoor. Relieved 233 families since August, 1894—many on books whole time—now issuing 130 relief orders for food. Majority of families in miserable condition, and nearly all living in bag-huts or in caves. Causes—old age, decrepitude, want of work—deserted wives and children. Local doctors give services gratuitously. Expenditure, £165 9s. 1d. last year. Sydney Rescue Work Society—Indoor and outdoor. Home of Hope, Stanley-street, Newtown, houses and provides for 52 women and 23 children. Open-all-night refuge houses, and feeds 48 women and 10 children. Jubilee Home provides for 3 women. Outdoor relief in the shape of food and rent paid in odd cases and sometimes train-fares; occasional gifts are made of clothing, beds and bedsteads, furniture, boots, and temporary board and lodging. Expenditure for 1895, £1,421 0s. 4d. Petersham, Marrickville, and Dulwich Hill District Benevolent Society—Only outdoor relief provided. Thirty-two families now in the books. Average expenditure £20 per month. Bathurst Poor Relief Society—There are 9 inmates in the home—4 women and 5 men—and 71 families receiving outdoor relief in the form of food, fuel, and clothing. Widows, unemployed, old and decrepid men and women, and the families of persons who are in gaol. Relief expenditure for year, £400. Kogarah Ladies' Benevolent Society—Outdoor only. Except in cases of sickness, when sufferers are removed to Cottage Hospital. Forty families in books, comprising 125 children. Expenditure, £284 3s. 11d. Forbes Ladies' Benevolent Society—Outdoor only. Twenty-eight families relieved with food, clothing, blankets, and fuel, including old men and women past work—deserted wives and children. Cooma Ladies' Benevolent Society—Outdoor only. Thirty-four families supplied with food, fuel, and clothing. Uralla Ladies' Relief Society—Outdoor relief only, orders issued for relief in 92 cases—53 regulars and 39 casuals—expenditure for half year, £20. Tamworth Ladies' Benevolent Society—Cottage home for aged and infirm, as well as outdoor relief. Now in home 2 old couples aged 68, 70, 74, and 78, and one widow who is a cripple. Outdoor relief given in 126 cases, to 318 individuals. Deserted wives painfully prevalent; only 24 families regularly in the books, 9 are aged and infirm widows, and 3 are aged and infirm couples, while the others are either too old to work, too ill to work, or unable to obtain work. Expenditure, £300. Liverpool Ladies' Benevolent Society—Outdoor relief only. Twenty-eight persons relieved during the half year. Fifteen now receiving relief. Rent paid in four cases. Hay Benevolent Society—Outdoor relief only. Mostly old men in search of work—few families. 260 cases assisted during year. Expenditure, £107 3s. 3d. Singleton and Patrick's Plains Benevolent Asylum—Indoor relief only. Eleven individuals now in asylum—7 males and 4 females. During year, 35 males and 16 females were admitted, which, with 17 in the institution at commencement of year, made up a total of 68 persons relieved. Expenditure, £400. Tumut Ladies' Benevolent Society—Outdoor relief only. Fifteen cases relieved during year, chiefly indigent persons suffering from typhoid. Expenditure, £25. Armidale Ladies' Relief Society—Outdoor relief only. Fifteen families constantly in books, including 5 very old couples, and about 18 casual cases dealt with each month. Expenditure for year, £180 4s. 2d. Young Benevolent Society—Outdoor relief only. Eleven families now in books, including 4 aged and infirm widows, 4 married women with children (husbands out of work), and balance infirm women. Expenditure, £22 7s. 6d. Narrabri Ladies' Benevolent Society—Outdoor relief only. Eighteen families now in books; nearly all cases in which husbands absent seeking but unable to obtain work; few old and infirm; 72 different families were relieved during year, consisting of 169 persons. Expenditure, £84 4s. 10d. Penrith District Benevolent Society—Outdoor relief only. Sixty-one families, comprising 271 individuals, were relieved during year. There are now 19 families on the books; old age, destitution, want of work. Expenditure, £118 7s. 7d. Newcastle Mutual Help Society—Outdoor, clothing only. To help distressed families to send children to school. 300 families, comprising 1,300 children, assisted during year; 1,991 garments cut out and distributed among 1,287 children, 14 men, and 39 women, at a cost of £109 12s. 7d. for material. Albury Benevolent Society—Outdoor relief society only. There are now 24 families receiving weekly supplies of food, clothing, fuel, and rent. Expenditure not given. Narrandera Benevolent Society—Outdoor relief only. Nine families now receiving relief; mostly widows with young families, and a few very old and infirm people helped monthly, comprising 9 permanent, and remainder casuals. Expenditure, about £120 per annum. Queanbeyan Benevolent Society—Outdoor relief only. Three families being relieved, including old married couple aged about 80 years each, and 2 widows aged about 70 years each, and 10 other cases relieved. The maximum relief given in each case was fixed at 2s. 6d. per week by the rules of the society. Expenditure, £32 7s. 6d. Newcastle Relief Society—Outdoor relief only. Relief in food and clothing given to families, widows, ordinary unemployed, and sailors waiting for ships. Expenditure, £86. Milton and Ulladulla Benevolent Society—Outdoor relief only. Eight families receiving relief (clothing, groceries, firewood, and rent). One very old couple quite destitute and unable to work. Thirty-six families, consisting of 150 persons, relieved during the year. Expenditure, £165 2s. Kiama Benevolent Society—Outdoor relief only. Thirty families getting relief (groceries, clothes, fuel, and, in some cases, rent). Expenditure not given. Cootamundra Benevolent Society—Outdoor relief only. Eight families receiving relief—old and infirm, and families; husbands away looking for work. Expenditure not given. Mudgee District Benevolent Society—Outdoor relief only. Seventeen families in books, 7 being aged widows, 2 young widows with children (invalids), 3 aged men, 2 aged married couples, and 3 married couples out of employment. Clothing, food, fuel, and, in six cases, rent. Expenditure, £140. Hawkesbury Benevolent Society—As an asylum this society affords shelter, food, and clothing to 104 persons, comprising 82 males and 22 females. At present there are 20 old and infirm paupers in the institution. 382 rations were supplied to outdoor paupers, and there are now 14 outdoor families receiving food, fuel, and clothing, and, in some cases, rent. The expenditure for the year was £1,086 9s. 2d. Wollongong Benevolent Society—Outdoor relief only. Eleven families and 3 individuals are at present receiving outdoor relief. The average relief is 5s. per week to each family. Expenditure, £105 15s. 2d. Maitland Benevolent Society—There are 50 inmates in the institution, and they are all old people. 154 old people were provided for in the asylum during the year. There are 80 families now receiving outdoor relief. The expenditure was over £1,000. Bourke Benevolent Society—Outdoor relief only. 145 families relieved during the year. Rations, nourishment in sickness, doctors, and nurses, clothing and bedding; expenditure,

S. Maxted.  
1 July, 1896.

S. Maxted,  
1 July, 1896.

expenditure, £162 11s. 5d. Balmain Benevolent Society—Outdoor relief only, 203 families receiving relief during year; expenditure, £253 4s. 8d. Bega Benevolent Society—Outdoor relief only. Nineteen families receiving relief; expenditure, £24 12s. 11d. Leichhardt Benevolent Society—Outdoor relief only; expenditure, £305 15s. 8d. for the year. Grafton Benevolent Asylum—In and outdoor. Ten inmates in Home, aged up to 75 years. Fourteen families receiving outdoor relief; expenditure, about £450. Hillgrove Benevolent Society—Outdoor relief only. Ten families receiving relief. Erskineville Benevolent Society—Outdoor relief only. Fifty families relieved. Randwick and Coogee Sick and Poor Relief Society—Outdoor relief only. Twenty-eight families receiving relief; expenditure, £202 12s. 10d. Glen Innes Ladies' Benevolent Society—Out-door relief only. Fifteen families relieved, 7 of whom are permanently on the books. Expenditure, £100. Sydney Charity Organisation Society—Outdoor relief only. Relief provided for 960 married couples, 397 widows, 169 deserted women, 17 single women, 636 single men, 2,732 children. Expenditure, £736 19s. 11d. per annum. Queen's Fund—Outdoor relief only. Relief granted to 193 widows, 31 married couples (husbands incapacitated), 23 single women. Expenditure, £791 14s. per annum. Wagga Wagga Benevolent Society—Outdoor relief only. Thirty-six families receiving relief. Expenditure, £50. Waterloo and Alexandria Branch of the City Mission—Outdoor relief only. Forty-six families receiving relief. Gulgong Relief Society—Outdoor relief only. Nine families wholly supplied throughout year as well as temporary relief given to numerous casuals, and large quantity secondhand clothing and new garments, boots, &c., distributed. Widows with children and families whose husbands are incapacitated or not able to get work. Broken Hill Benevolent Society—Outdoor relief only. Twenty-three families now receiving relief. Expenditure during the year, £368 1s. 3d.

81. *Chairman.*] Do any of these societies receive Government aid? Yes, many of them.

82. At what rate? Usually they receive pound for pound.

83. But in some cases they get special grants? Yes.

84. *Mr. McGowen.*] The Central Mission has started charitable work in York-street, opposite Wynyard-square. You are aware that they take up the waifs and strays, and supply nurses in cases of sickness, and give food? Yes. I have not obtained the figures in reference to that institution. It is included with a few others, which, from my knowledge of the circumstances, I have put down as affording relief to sixty cases in all. In my previous evidence I was questioned as to the cost of the inmates of the Government Asylums, and I accurately gave it under the usual method of dealing with this matter here and elsewhere, at between £14 and £15 a year, or about 10d. per day. This, however, only relates to all charges for maintenance and clothing, salaries, management, and so forth, and does not include interest on the value of buildings or estate, nor the yearly cost in repairs nor depreciation in value of property. If you include all these in the estimate, as should properly be done if the matter is dealt with on a purely business basis, the annual capitation cost will be increased by about £3 10s.—making it in all about £18 10s. a year, or a fraction over 7s. a week. I have already said that I do not think a person could live decently outside on less than 10s. a week, which would be a very moderate charge for lodging, food, clothing, tobacco, and the occasional comforts which old age frequently renders necessary. Of course where the aged poor could be placed with their own relatives this sum might be considered a liberal allowance. One very strong objection raised to old-age pensions wherever they have been suggested is that they would materially affect the labour market by enabling the pensioners to improperly compete with younger men by working for lower wages. I really do not think there is any force in that objection, for from what I know of the mechanical trades and other occupations requiring physical force there is very little chance of men of 60 years and upwards obtaining employment of this character. That is one reason why so many of them are content to remain inmates of the Government Asylums, and do necessary work about the place for small payments and a home. They realise quite well, and will tell you so, that it is useless for them to endeavour to compete with men of full vigour outside. But this is a difficulty that would in any case, I think, be easily overcome. The matter might be so regulated that the pensioner should forfeit the whole or a portion of his pension if he obtained work according to the amount which he earned. Spender has some interesting diagrams relating to this question in England, in his book "The State and Pensions in Old Age," pp. 26, 28, 30, 34, 35, 42. These diagrams indicate the rise and fall of wages during life. At 60 years of age a very small proportion of engineers are able to obtain work; smiths, fitters, turners, moulders, pattern and boiler makers become incapacitated at 60, and iron and steel workers at 50 years of age. After the age of 60, 10 per cent. lived on their previous savings; 50 per cent. depended upon relatives, unions, and clubs; and 40 per cent. helped out their resources by parish relief. The chief earning period for carpenters was between 25 and 50 years of age, while after 50 there was a rapid decline. The Amalgamated Union of Carpenters, therefore, fixed its superannuation age as early as 50. Miners become incapacitated at 60, and at that age their fate appeared to be much the same as iron and steel workers. It was impossible to find out what became of seaman after 45 years of age, as they could not obtain employment, and their average death-age was fixed as early as 30. It is stated that if seamen do chance to live to old age they become wholly dependent. In the railways the skilled workmen are generally incapacitated from work of that description at 60. Dockside and agricultural labourers are generally worn out before 60. The age at which persons in factories cease to be employed is generally under 60. I believe the figures here quoted will, upon inquiry, be found to fit exactly the conditions of labour in this Colony; and it should be easy to obtain the statistics from some of the labour organisations with sufficient exactitude to arrive at a fairly accurate test. At any rate I think they dispose of the objection that old-age pensions would be likely to affect the labour market in regard to wages rates, and show that the pension age should be fixed at 60 years. In reference to the question, "Is out-door relief of all descriptions increasing largely, and if so, to what extent?" I think I shall be within the mark if I say that during the past ten years it has increased quite 50 per cent., and the greatest increase has taken place during the past five years. You could, of course, obtain these figures with mathematical accuracy from all the charitable relief societies of which I have given you a list; but I think my statement will be nearly correct. During the past two or three years out-door relief has from time to time been afforded, and is now being given, to a class who never dreamed, as a body, of applying for it previously—I mean respectable unemployed working men. Apart from other agencies there are now 800 families of this class receiving weekly relief from the Sydney Benevolent Asylum. I cannot tell you how this has come about; and it may be that the prevailing distress is not abnormal, but that in former periods these classes remained in a state of partial want. I am unable to express an opinion upon

upon the point of any value, and my time has been so fully occupied always that it has been impossible for me to endeavour to arrive at the causes of all this distress, although I should very much like to have done so; and I dare say a solution of the matter might be arrived at by careful impartial inquiry. It would not, in my opinion, be of much use to listen to any theories on this subject, or any opinions that are not borne out by thoroughly reliable evidence. It is certainly sad that all these people cannot obtain work instead of charity; for I have observed that the present system of help completely demoralises many of them. I have frequently noticed that when these men or their wives first come for help they are thoroughly ashamed; the second time this sentiment is sensibly blunted; and, after two or three applications, they ask for relief as a matter of course, and are full of objections if it is not fully up to their conception of what it ought to be. I am sure this has been the experience of every observant official who has had to deal with this matter; and the worst of it is that not only are the fathers and mothers thus affected, but the children, who know how food and raiment are being obtained, are being trained, by observation, to believe that it is easier to beg than to work. This must be the inevitable result. It was supposed some time ago that a good deal of the distress was caused by the influx of unemployed and of paupers from other colonies. I had a careful inquiry made, so far as the Government Asylums were concerned, and last year I found that the number of inmates from outside the Colony did not exceed fifty out of a total of 4,000; and of those between twenty and thirty came from foreign countries or British ships. There were thus only about twenty-five from all the other colonies combined; and of these, I think, only seven came from Victoria. Of course I had no means of dealing with the unemployed in this way; but Mr. Creer may possibly have some statistics that would guide the Committee. I think, however, that the accuracy of information supplied upon this point from any source should be carefully tested, and not received as a matter of opinion. If it is eventually determined to try a pension scheme tentatively, I would suggest that the experiment be tested under a variety of methods, viz.—1. By selecting a number of the respectable old inmates of the Government Asylums and letting them endeavour to live outside upon any sum that would be considered a fair pension for the purpose, under a national policy. 2. By boarding a few out with families who might be found willing to take them. 3. By boarding others with their own relatives who might or might not be able to contribute towards their support. They could be kept under observation in the same way that boarded-out children are supervised; and it could easily be ascertained in the course of a few months whether it would be wise, on grounds of economy or expediency, or having regard to the welfare of the pensioners, to continue or extend the experiment. This tentative scheme would also, as it became generally known, enable the administrators to ascertain if the revenue was likely to be swamped by applications for pensions from aged persons who would not under any circumstances go into a Government Asylum if they could possibly exist outside.

85. *Chairman.*] With regard to what is known as the pauper vote, can you give the Committee any particulars as to the way in which it is administered, and who are the recipients? This vote is used for the relief of destitute persons of various classes who do not wish to go into a public institution. These include widows who wish to keep their own children rather than have them boarded out; also a number of aged persons—16 old married couples, 30 chronic invalids, and 8 blind people. The method is this: The application is made sometimes to me, sometimes to the Chief Secretary's office. If it is a country case, a circular is at once sent on to the police, in which they are instructed to make a report. If they find it is a case requiring immediate relief, they are to relieve it as far as they think fit without delay. Then the report comes into my hands, and I make a recommendation to the Chief Secretary. If it is a town case, one of my own inspectors is sent out to do the same thing, and the relief is generally given in accordance with the recommendation I send in. But it is given from time to time. The application is renewed every three months, in order that the recipient can be kept under observation, and it may be known if the conditions alter in any way so as to either cause the relief to be discontinued, or increased, or reduced.

86. Is not assistance sometimes granted to genteel people who may temporarily get into a state of distress? Yes, from this vote.

87. *Dr. Graham.*] Is there a fixed sum voted by Parliament? No; it is taken out of a vote for the relief of destitute persons. There is no fixed sum; but the expenditure this year I suppose will come to £12,000.

88. Is not portion of that money disbursed off-hand by the Colonial Secretary sometimes, or by the Principal Under Secretary, without your cognisance? Yes; but the case is sent on at once to me. It is very rarely it is not sent on at once to me for report, unless the case is absolutely known to Mr. Brunker or Mr. Walker. If it is obviously a case of distress, relief is given in the Colonial Secretary's office at once, so that there may be no hardship. Then a statement of the case is sent on to me, and I cause inquiry to be made, and a report to be furnished, and the Chief Secretary, I may say, has invariably been guided by these reports.

89. *Chairman.*] But in some cases relief is given in a confidential manner, is it not? Very rarely. I do not think you will find it has been done in half-a-dozen cases during the year; that is, where inquiries have not been made. Of course this business has to be conducted with tact, and I am guided by the nature of the case in regard to the officer whom I send to inquire into it.

90. *Dr. Graham.*] In your evidence just given did you give the Committee any idea of the systems adopted in other colonies? I have not done so because the information sent to me varies so much. I do not believe you will get any accurate information for the purpose of comparison in regard to the other colonies unless you send an officer round to inquire.

91. There must be some system, loose as it may be, adopted in the other colonies;—how do they take care of their paupers? I can tell you in a general way. With reference to Victoria, for instance, there they have benevolent asylums which are partly supported by Government subsidies and partly by voluntary contributions. They are pretty well on all fours with our Benevolent Asylum here. There is also a method of outdoor relief, but as far as Government funds are concerned it is a very limited one. I have written for figures on the subject, but have not received them.

92. What do they do with their old people then? Their old people go into the institutions I have just mentioned.

93. But there must be a great number there? Yes, a very large number, but I cannot give the figures accurately without referring to the reports.

94. Do they go on the system of isolating their chronic sick from the destitute people? To a limited degree it is done.

S. Maxted.  
1 July, 1896.

- S. Maxted.  
1 July, 1896.
95. So that their paupers include the chronic sick too? The proportion is very small. The manager from Victoria was here a few weeks ago, and he visited our institutions, and he said we were doing altogether different work from that done by the institution he had charge of in Victoria, particularly with regard to the class you are speaking about. In South Australia they have the institution and the outdoor relief system combined; but the outdoor-relief system is their main method of relieving distress. I am writing for returns on these matters, but I have not yet obtained the figures with sufficient accuracy to be enabled to place them before the Committee.
96. Can you tell us anything about Queensland? They have institutions there, and they have outdoor relief also.
97. I understand they have a specially comfortable way of dealing with old couples there? I call it ostracising them. They put them on an island. Here we deal with our old couples by putting them in cottage homes at Parramatta, where they can exercise the rights of free citizenship, and go in and out of the institution just as if they were in their own homes.
98. *Mr. Neild.*] But that only provides for very few? We have only twenty-two; but we have other cottages at Newington which I have suggested should be used for this purpose until the system is extended in connection with the general policy submitted by the Government for the consideration of the Public Works Committee a short time ago. In Queensland they do not touch these old couples at all unless they are 70 years of age or over, and then they put them on this island.
99. Is there a medical man on the island? That I cannot say. I suppose not, as there would be no other work for him there. I suppose he would go off only when sent for. But it must be a terribly dull life for the old people—they see nobody but each other.
100. The island is some distance from the city? It is some distance from the city, because there is a steam-launch which goes there with provisions and general supplies.
101. *Dr. Graham.*] Could you give us a summary of the English system of poor law relief? I can do so from memory. There is the workhouse relief, and combined with that there is the system of outdoor relief. I have not the figures with me showing the extent of each, but I can get them in a few moments in the office.
102. What form does the poor relief take—money? In some cases, yes; but it is the dual kind of relief in many cases, as at the Sydney Benevolent Asylum.
103. Do they get money there too? Yes; they get a contribution towards their rent. In nearly all the English Unions, however, they only get provisions.
104. Do you know what the outdoor relief comes up to in England per head;—does it exceed 2s. 6d. per week? I do not think it is quite so much as that. I know it does not exceed that, except, perhaps, in very rare and exceptional cases.
105. Is there any method adopted of ascertaining the antecedents of the people under your charge? Yes; I have already explained what is done in that respect. A history of each case is obtained in the first instance.
106. After an elaborate inquiry made in England regarding the antecedents of the destitute people dealt with in the institutions, the conclusion has been arrived at that only a very small proportion reach the poor-house by reason of old age *per se*;—is that your experience here? No; the fact that of the 3,500 people in my institutions the average age is 63 years answers that question as far as we are concerned. Patients for hospital treatment include the only young or comparatively young people admitted here.
107. Would not the fact that such a large number of destitute children are thrown on the care of the State in this Colony indicate a large proportion of destitution among comparatively young people in the community;—the mere fact of both the mother and father being unable to take care of their child or children would be an indication of the extreme state of their poverty? In most cases that would be so.
108. Do you not think that the number of young children thrown on the care of the State in this country is very large? Yes, I think it is large taken as a gross number, but I am not prepared to say that it is out of fair proportion to the general population, compared with elsewhere.
109. Do you not think that, in a measure, that is one way of ascertaining the amount of poverty which does not come under the eye of the State, because the chief aspect of poverty we see is that which is common to old age; the other we have to infer largely from signs such as are apparent from the fact I have just mentioned? I could get you some figures from the records of the State Children's Relief Department which would give you very positive information on that point. A disproportionate increase in the number of State children is undoubtedly an indication of the increase of poverty.
110. Not only the increase of poverty, but the extent of poverty among the younger people—the married people who have not reached the pauper age, and who are destitute? Yes.
111. We have no means of ascertaining their condition—they struggle on as best they can? Yes. The children we take are principally the children of widows or deserted wives, and in some instances of people who are unfit to keep their own children. A history of each case can be given if required.
112. *Mr. McCowen.*] You stated that some of the inmates of the asylums received small sums for work done in the institution. I understand the work they have to do consists in waiting upon their bed-ridden fellow inmates—those suffering from consumption and cancer, for instance? No, I did not allude to those. The inmates to whom I referred more particularly were the carpenters, tinsmiths, bootmakers, gardeners, cooks, and others of that class. Except in the case of cancer patients, where the duties are terribly disagreeable, the ordinary wardsmen are not paid.
113. The fairly strong man or woman in your institutions has to do something in the way of assisting others who are too weak to do anything for themselves? Yes; that is part of the system.
114. Do they have to sleep in the same ward? Yes.
115. Do you think there is any danger, from herding them together in this way, of these inmate attendants catching such a disease as consumption or cancer? There is no danger in the case of cancer. I should not have the slightest objection to sleep in a cancer-ward myself, so long as the place was kept pure. With regard to consumptives, that is another question. What we do in that case is to get the stronger consumptive men to wait upon the others. There are no contagious cases in the institutions except consumptive cases.
116. *Dr. Graham.*] These must form a very small proportion, inasmuch as consumption is not a disease of old age? Yes, a very small proportion.

S. Maxted.

1 July, 1896.

117. *Mr. McGowen.*] I should like to know the number of consumptive patients in your asylums, and their average death-rate? I have already given the information in the form of a table.

118. *Dr. Graham.*] You stated in the early part of your evidence that the reason why the cost of pauper maintenance in this Colony is somewhat high was because we included amongst our paupers a class who were really hospital patients? Yes. In my opinion hospital patients should be in a separate institution under hospital treatment, and I take such cases to include consumptive, cancer, and ophthalmic cases.

119. But that is the reason you give for our methods being more costly than those of other countries? That is one reason. Then we deal with a larger proportion of general chronic cases than are dealt with in the other institutions. We deal also with another class I have not mentioned. When Government patients are convalescing at the general hospitals they are very frequently sent on to one of the asylums. For instance, suppose a man has an accident, and breaks a leg. When he is fairly able to get about, instead of keeping him at the hospital at a cost of about £60 or £70, they send him on to one of my institutions, where it only costs for the hospital patients between £19 and £20 a year.

120. And these all go to swell your statistics as paupers? Yes; they are all down as paupers, because they are kept wholly at the public cost.

121. *Mr. McGowen.*] What is the average cost of the patients in your asylum? The average cost for yard patients is about £11 18s.—those are ordinary inmates. The average cost of hospital patients is from £19 to £20. I should like to mention that the dietary scale I handed in only applies to the ordinary patients, and not to hospital patients; the latter get whatever is prescribed by the medical man.

122. *Mr. Neild.*] With reference to the ages of the inmates of the asylums, do these inmates reach you at an advanced period of life, or are the majority persons who have grown old in the asylums? They reach us at an advanced period of life.

123. I do not suppose you have the exact figures, but could you give us any idea of the average age at which pauper inmates reach the asylums? I could give you the figures to a certainty by getting the returns compiled in the office. We have the age of every man in his history-form as he enters.

124. I think you stated the other day, with reference to the application of any system of outdoor relief or old-age pensions, that only 500 or 600 of the total number of inmates in your institutions would, in your opinion, be suitable to be recipients of such a system? Yes.

125. Would the disability for outdoor relief involved in your answer arise from old age, from sickness, or from habit? From habit in some cases; from incapacity to look after themselves in other cases.

126. That is practically old age? Senile debility, I suppose, you would call it. A lot of them are a class of people who, if they were not with me, would be with Dr. Manning. There are 1,600 inmates who are in and out of the hospital always.

127. Would it be possible for you to ascertain the proportion of those different causes of disability? Yes; I could give the numbers in each class.

128. *Dr. Graham.*] Are you quite sure about the number being 500 or 600? I am very close to the actual number in that estimate. Of course, it must only be an approximation, because I could not know the character of every one of the inmates. Some idea of the number is gathered by inquiry among the decent old people in the institutions, and by what is learnt in dealing with casuals. We know how the inmates behave themselves, because we have them coming up for one offence and another. We know also by the number of hospital patients, and we know by the other class—those who must be kept under some sort of restraint.

129. *Mr. Neild.*] Do you think you could supply the Committee with somewhat similar information with reference to the inmates at the time of entry? It would be very difficult, but I could arrive at a fairly approximate estimate by referring to the history-forms, and to the causes which led to their coming in, because there is a medical certificate in every case.

130. With reference to the figures you have been good enough to put before the Committee this afternoon, I should gather roughly that there must be a larger number of persons in distressed circumstances receiving outdoor relief in the Colony than the number that are in the asylums themselves? Yes, a very much larger number.

131. Do you think there is information available to show the proportion of outdoor relief in other colonies? It is very difficult to get that information. I do not know how it is, but I have got different returns on different occasions; and it appears to me that the only way to obtain this information would be to let one of my officers—I could not go myself, that would be out of the question—take a run round and observe the class of people, and from personal observation see whether or not they are similar to the classes of inmates with whom we deal here.

132. *Dr. Graham.*] Suppose we tried the experiment you suggest as being a feasible one, and took a certain number of people and put them on the relief system, do you not think that the mere knowledge of such a circumstance being spread abroad would create a sort of panic among destitute people who would clamor for the same privilege? There is no doubt it would. Pauperism is about as contagious as smallpox. That is one of the objections to the proposal. If you could keep it within limits I should not hesitate to say at once, adopt the proposal as our national policy of dealing with the deserving aged poor.

133. Is not the entrance into a poorhouse in England regarded as an automatic test of poverty? Yes; and they make the life inside so very hard, as far as I am able to judge, that a person would be very hard put to it before going in.

134. But do you not think that is a safeguard to society? Undoubtedly; but what about the humanity of it to the poor?

135. But what about the peace of society? That is the trouble. As I said the other day, it is very easy to talk about reducing pauperism, as some people do in England, by doing away with the outdoor relief system; but they do not say what has become of those people who have been subjected to this restrictive method, and they do not take them into the institutions. Therefore the logical conclusion is that they must leave them in a state of starvation.

136. *Mr. Neild.*] Or that they have gone elsewhere? Yes.

THURSDAY, 2 JULY, 1896.

Present:—

Mr. CHAPMAN,  
Dr. GRAHAM,  
Mr. SCHEY,Mr. MCGOWEN,  
Mr. McLEAN,  
Mr. WILKS.

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

George Henry Pitt, Esq., further examined:—

G. H. Pitt. 137. *Chairman.*] You desire to supplement the evidence you gave on the previous occasion? Yes.

2 July, 1896. 138. Will you lay before the Committee any further information you may have? Assuming that the risks incidental to wage-earners are alone to be considered, there are six forms of insurance necessary to cover all those to which they may be exposed, which are:—(1) Invalidity—(1) Provision for temporary sickness and accident. (2) Provision for permanent sickness or accident. (3) Loss of wages through want of work. (4) Annuity for old age. (5) Insurance to family in case of premature death. (6) Provision for burial. Germany, under the 1889 law, endeavoured to provide for all but class (3), making the insurance in each case compulsory; but for the sake of brevity, I will confine myself to remarks on old-age and invalidity pensions.

*Old-age pensions.*

*The German Scheme.*—The State directly undertakes the work, and administers it through local Boards. Contributions are obligatory upon three defined classes. Men and women, 16 years of age and upwards, employed as:—(1) Workmen, assistants, apprentices, and servants receiving wages. (2) Shop assistants, apprentices not earning £100 a year. (3) Persons employed in the mercantile marine. Optional to others to join at the discretion of the Federal Council. Benefits conferred.—To all the assured the State gives the right to an allowance in infirmity, that is, inability to earn wages, and an old-age annuity at the age of 70 years. Pensions are only granted for infirmity after five contributory years; and for old age after 30 contributory years. But, in order to embrace those who would otherwise be disqualified, it was provided that any person who, before the Act was passed, had been employed in an occupation in which contributions would have been payable had the Act been in force, should be treated as though he had actually paid the contributions. This difficulty, which is common to all initiatory schemes kindred to that under review, might have been avoided by confining the benefits to the rising generation, which step would have postponed the old-age pension in Germany for 30 years, and the invalidity pension for 5 years. Contribution rates have been fixed for 10 years at from 1½d. to 3d. per week (according to the amount of wages earned), to be paid in equal shares by employers and workmen. With regard to the old-age pensions, the amounts vary from £5 6s. 5d. to £9 11s. a year, and are not intended to provide sufficient means of support, but to supplement any other means possessed by the pensioner. The pensions are payable monthly in advance, and can be neither pawned nor sequestered. They also remain in abeyance so long as the pensioner is in prison or in a foreign country. The contributions are collected by means of cards divided into spaces for 47 weeks, and when paying him his wages the employer must affix a stamp representing the weekly contribution on each workman's card, deducting half the value from his wages. Forty-seven weekly contributions are reckoned as one full year's payments, and during certified illness not exceeding a year, or military service, the contributions are credited as if they had been paid. Any deficit in the fund at the termination of the first ten years of its existence must be met by the imposition of a higher rate of contributions for the next period of five years. Estimated cost to the State: Practically the fund is sustained by contributions of one-third each from the workmen, employers, and the State respectively. The first year's State subsidy was £320,000, gradually rising to £3,400,000 in the eightieth year, after which it is expected the State subsidy will be gradually extinguished, but this is only theoretical, and many contingencies may arise, such as strikes, depressions in trade, the occurrence of a war or a revolution, which must upset all calculations based on ordinary averages. The valuation is made on a 3½ per cent. basis, this being the average rate ruling for German Government stock. As the actuarial valuations are made periodically, any depreciation in the rate of interest must either diminish the benefits conferred or increase the contributions. The scheme includes some 12,000,000 of people, or about 25 per cent. of the total population.

*Danish Scheme.*—Denmark is the only other country which has a scheme in operation. In 1891 the Government announced the intention of imposing a tax on lager beer; the Opposition demanded that if the poor man's beer was to be taxed he should reap some benefit, hence the Government combined a pension scheme with the beer tax, devoting a maximum annual payment of £111,000 for the purpose of paying old-age pensions. The benefits extend to all persons over 60, not having sufficient means of support, who have resided in the country for not less than ten years, provided that during the ten years preceding the 60th year of age they were not inmates of poor-houses. The pensions are graduated, a larger pension being given to residents of the capital than to those of smaller towns, and country applicants receive still less. The pensions range from £6 15s. to £11 5s. for males, and from £5 12s. to £8 8s. for females, and are borne by the State and Communes.

*Compulsory Insurance in other Countries.*—The principle of State Insurance is old in theory as schemes have been propounded from the beginning of the present century. In England, as far back as 1772, a Bill for making provision for pensions to the aged was passed by the House of Commons, but the measure did not receive the approval of the House of Lords. I may here mention that papers on the subject have been read locally, one by Mr. A. Duckworth, of the A.M.P. Society; another by Mr. Anderson, Principal Librarian; also Mr. Colonna Close has given the subject careful attention. The Germans, however, were the first to legislate on the subject, and their action has had a stimulating influence on several European countries by awakening a general interest in schemes for the betterment of the masses. Germany and Denmark are the only two countries which have a system of State Pensions for the aged in operation, but a Bill passed the French Chamber in 1895 providing State subsidies to superannuation pensions for working men. For many years past the attention of political economists in England, Austria, Hungary, Italy, Belgium, Holland, Sweden, Norway, and Switzerland has been directed to the subject, and the adoption by Germany of the system has given a fresh impetus to their exertions, and

and public men in various walks of life, clergymen like Canon Blackley, statisticians like Charles Booth, politicians like Chamberlain, Morley, and Gorst, and actuaries like T. E. Young and R. P. Hardy are now engaged in investigating the scheme propounded. This is notably the case in England, where, in addition, a Royal Commission was appointed in 1893, to obtain evidence and report on the various schemes proposed, and to-day's (July 2nd) cablegrams inform us that further investigation is to be undertaken by a Commission of Experts appointed from the Treasury. The opinions of economists, statisticians, and others who have devoted considerable thought and time to the subject will prove of great value, and I have therefore selected, and herewith place before the Committee, the opinions of several eminent writers on the subject under consideration.

G. H. Pitt.  
2 July, 1896.

### *Entitling Age or Age Limit.*

#### Arguments against adopting a uniform or high limit.

##### American Consular Report on German Scheme—

The age of 70 was so high for the working classes that extreme indifference, or even hostility, was expressed. The report was everywhere the same: "Seventy years old! I shall never live to that age." The actual percentage of those who reach this age among the labourers is so small that this high figure is felt to be a weakness in the law. It was, however, thought better to begin at this age in order that the actuarial calculations could be safely made. The cost of insurance at age 65 was so much higher that it was found impossible to begin at that age; but all the English schemes propose to start at 65."

##### T. Mackay, *National Review* :—

To the poor—the ill-fed, the dockers, the riverside labourer, the weather-tortured hawkers, the busmen and cabmen—the age limit of 65 would be a mockery and a delusion, for to them the annuity age is a promised land they can scarcely hope to enter. Carmen, cabmen, and waterside labourers are not likely to enjoy a pension long after 65.

##### W. Chance, J.P. :—

Old age does not always begin at 65—it may commence at 50, or even earlier. On the other hand, many men will do a good day's work up to 75. It is, in fact, quite impossible to say at what time of life old age begins.

##### C. S. Loch :—

A little more than half of old-age pauperism commences before the age at which any of the proposed schemes would take effect.

##### Spender :—

The corn porter who works in the hold of a ship, filling his lungs with the dust of grain, is early worn out. It is rare to find a man at this work much beyond the age of 40.

### *Against Compulsory Schemes.*

#### The President of the Institute of Actuaries—Discussion on Mr. Young's paper on German scheme.

The paper demonstrated with tolerable certainty the impossibility of this particular scheme, at all events, ever being adopted in the free air of England. They had done much of late, and it was quite possible that under democratic domination they might do still more hereafter to restrict individual freedom; but not till Englishmen ceased to be Englishmen would they submit, under compulsion, to a system which brought in its train such irritating supervision and interference as might be possible to a people steeped to their eyes in militarism, and used from their birth to a system of State control so persistent and universal that a youth might scarcely grow into manhood without bureaucratic permission. He had arrived at that conclusion with great reluctance. Though he never sought to act the part of Balaam, he should have been glad, like the author, Mr. Young, if he had felt constrained to bless this particular scheme, for he had to the abstract idea of compulsion no necessary repugnance. But the importance of compulsion consisted in its application, and he agreed with Mr. Young, that compulsion after this fashion was for Englishmen an impossibility. No one recognised more fully than himself the way in which the manliness of Englishmen had provided in a large measure for their own needs, but he could not also forget that much as had been done there was a great problem still unsolved.

Mr. Young, in the concluding paragraphs of his paper, says :—

In taking a final retrospect over my labour, I seem to myself—and with genuine regret—to have sustained the reversed roll of the Prophet Balaam. I appear to have started with a deep impression of the benevolent motives and probably beneficent effects of the measure, but as my inquiry extended I seem to have merged the prophetic benediction into a regretful production of social disunion, national disillusionment, and financial loss. I retain my admiration of the value of the object, and of the careful and ingenious though doctrinaire methods by which the achievement of that end has been sought. I can perceive, however, though at the moment dimly, that a symptom of national disease has been temporarily prescribed for in place of a direct attempt at gradual extirpation of the cause.

Opinions of Münsterberg, Aschrott, and Böhmert, whom the United States Consul reports as being the most eminent authorities on charity in Germany.

##### Dr. Emil Münsterberg writes :—

My opinion is that the social legislation has already had a favourable result in lightening the burdens of the poor fund, both direct and indirect.

##### Judge Aschrott writes :—

I can only give my personal opinion that by the insurance laws quite a good deal of the burden on the town charities has been taken off everywhere. On our inquiries in that respect we got a number of letters from poor law authorities in the various towns and cities, all agreeing that there has been a great change in poor law expenditure.

Professor Böhmert, head of the Imperial Bureau of Saxony, during twenty-five years in constant and active relations with charity work, gives it as his opinion that these laws already show a distinctly favourable tendency to lighten the charity burdens. Each of these authorities acknowledges that the law has not been long enough in force to prove the correctness of the opinions. The actual returns, so far, do not bear out the theories expressed. Had the scope of this inquiry been limited to the original motion of Mr. Neild it would have been necessary—1. To define the classes of persons who would have to be included in a scheme of outdoor relief, and who may be briefly described as paupers; 2. To ascertain the probable percentage of persons who reach 60 and 65 years of age; 3. And the number of such persons who come within the above definition; 4. To examine the results that have followed the substitution of a boarding-house system for the barrack plan. The following definition is sufficiently comprehensive :—A pauper is an impecunious person, who either from age or infirmity—whether bodily or mental—is unable to earn a living; or who is a permanent inmate of any public, denominational, or private institution or

asylum,

G. H. Pitt.  
2 July, 1896. asylum, supported wholly or partially from State funds or private sources. The estimated population of New South Wales of persons 60 years and over, and 65 years and over, on the 31st December, 1895, was:—

Age.	Males.	Proportion to Male Population.	Females.	Proportion to Female Population.	Males and Females.	Proportion to Total Population.
60 and over .....	33,090	per cent. 4·83	22,310	per cent. 3·76	55,400	per cent. 4·34
65 and over .....	18,840	2·75	13,440	2·27	32,280	2·52

English tables show that of 100 persons who attain their 21st birthday, the number who reach

	Dr. Ogle's Tables.	Oddfellows' Tables.
60 years of age will be ... ..	54·01	59·47
65 years of age will be ... ..	43·90	49·19

The figures of the Oddfellows show better results than those of Dr. Ogle owing to the fact that only sound lives—those who can pass a medical examination—are permitted to join Friendly Societies. Sufficient data for the preparation of an Australian Table are not available, so any estimates must be to a great extent of a supposititious character, but the consensus of actuarial opinion is that owing to the existence of more favourable conditions—climatic and otherwise—amongst the working classes in these Colonies the longevity would be greater than those given in the English Tables. As probably other witnesses with special actuarial knowledge will be examined I will not enlarge on this aspect of the question. A return prepared for the Imperial Parliament (August, 1890) showed that there were 245,687 persons over 65 years of age in England and Wales who were in receipt of poor-law relief—out of an estimated total of 1,300,000 persons—nearly one in six of all classes, rich and poor alike. As the return was made during the summer at a period of specially prosperous trade, and did not include lunatics, vagrants, and some others, and only gave the number on a single day and not the number for the year, the total given is greatly below the actual number of paupers over 65 years of age. Another Parliamentary return gives the number of paupers over 60 years of age as 286,867, of whom 102,563 were men and 184,304 women. As the total population was 1,916,286, this return shows that one-seventh of the entire population of 60 was in receipt of poor-law relief, practically confirming the return previously quoted. The *London Times* says, "The poor seldom die in their own homes. In London one in five deaths occurs in a workhouse or public hospital. If we estimate those above the wage-earners the proportion will be something like one in three for all ages. If we take those of 60 years and upwards, one in two will more accurately represent the proportion." In New South Wales the 1891 Census showed that the indigent people of 65 years and upwards numbered 2,161; the total number of persons in the Colony of those ages was 28,365, so that it may be said that out of every 100 persons who reach 65 years 8 will enter the asylums of the destitute (*Wealth and Progress, Coghlan*). The Danish scheme which I have previously referred to practically abolishes the barrack system in favour of the plan proposed by Mr. Neild. A very good illustration as to which of the two systems is the more acceptable to the inmates themselves is that of the old Greenwich Hospital pensioners. When these old veterans were given the option of remaining in the old palace, which for so many years had served as their "Hospital," or to go to reside outside and take with them a pension less than the cost of their maintenance there, with scarcely an exception they elected to forsake the old associations and companionships for a corner in the humble cottage of some poor friend or relative. The results of the experiment in this Colony of the boarding-out of children and the cottage homes for aged married couples might offer some indication as to the probable effect of extending that plan to the aged inmates of our asylums and benevolent institutions.

*How wages would be influenced.*

Mr. Young, the English actuary, says:—

The employers will obviously seek to transfer a portion of their burden of enforced charges to the labourers' gains; hence, reduced wages with higher prices, all acting in combined power against the workman's impoverished condition. In our old poor-law history the taxes in aid of wages invariably meant a diminution of wages and a degradation of the position of the labourer.

The Special Report of the Commissioner of Labour (U.S.A.) on compulsory insurance quotes the following cases, showing that opinions are divided as to how wages will be affected by the employers having to contribute to the cost of the insurance of their workmen:—An agricultural labourer of 76, still able to work, is employed upon a noble's estate. As soon as his pension was secured his employer lowered his weekly wage 1 mark, which was 10 per cent. of his earnings, and adds "employers of all sorts are so pressed by competition that the temptation is great to lighten their expenses at any possible point," and "wages must be lessened to some extent, not only from what is actually paid out by the insured, but in some degree by the influence of that portion of the employer's contribution, which still has its traditional character as charity." Other employers of labour in country districts say:—"The attractions of the city are such that it is a constant fight to keep an adequate number of labourers upon the farms. Our labourers say to us impudently, 'You must pay our contributions under the old-age and invalidity law or we shall not stay.' This tendency is so strong and can be so easily controlled by the labourers in their own favour that it bids fair to become practically universal"; and some employers in towns say, "We find it pays us to keep our men and women in good humour not to make the subtraction, so we pay it ourselves."

*How Friendly Societies will be affected.*

The Hon. Joseph Chamberlain says:—

Unless something is done and done speedily, either in the shape of assistance from without or in the shape of new regulations made for the government of these societies, then it is perfectly certain that the embarrassment which is already beginning to be felt will become very serious—it will be very serious for the societies, and it will also be very serious for the nation.

And again: Their (Friendly Societies') embarrassments in the past have largely proceeded from the difficulty of dealing with superannuation and the impossibility of distinguishing after 65 years of age between the incapacity caused by ordinary sickness and that induced by advancing age. It would be a great advantage to the societies to disencumber them of old-age claims, or at least to assist them to meet them separately from their other obligations. (*National Review*, February, 1892).

The

The Rev. J. Frome Wilkinson says:—

It is my firm conviction that Friendly Societies will have nothing to lose but everything to gain by the adoption of a universal free State endowment list.

R. P. Hardy, F.I.A., says:—

Upon the whole, so far as the mass of existing Friendly Societies go (excepting the affiliated orders, the Hearts of Oak and a few others), I consider that no sound, and in none a sufficient, provision exists for old-age relief in the sense now called for by public opinion.

The Rev. T. Fowle says:—

They (Friendly Societies) feel, and rightly so, that State-aided institutions for relief will, of course, provide a better investment for saving than they can do, and so, inasmuch as, like all businesses, they live by attracting new customers, they will perish from the effect of unfair competition. Hence their resistance to all State-aided schemes of pensions, a resistance which would alone justify the nation in rejecting them, even if there were no objection from the Poor Law authorities.

I hand in to the Committee a list of the Friendly Societies of New South Wales, giving particulars of each, which were taken from "Wealth and Progress" (Coghlan) [Appendix C] Co-operative and benefit building societies do not come within the scope of the scheme, therefore further reference need not be made to them.

139. *Mr. Schey.*] As far as you are aware, has any proposal ever been made for a State subsidy to Friendly Societies to enable them to make provision for old age on the part of their members? I have not heard of any such proposal. As to the financial position of Friendly Societies the same doubts are expressed here as in England. It is a fact that several of the local institutions are existing in a state of insolvency. In conclusion, I may be permitted to add that the cablegram published in this morning's (2nd July) papers (to which I have previously incidentally referred) states that a Commission of Experts has been appointed from the British Treasury to inquire if any practicable scheme can be devised for granting pensions to the aged poor, which shows that the work of the recent Imperial Parliamentary Committee is likely to evolve some rational means of providing for old age, and of dispensing with a large portion of the present unsatisfactory system of poor relief, or at least to bring the subject within the range of practical politics. In addition to not a few proposals emanating from foreign countries, no less than twelve have been placed before the British public, the details of which time will not allow me to enter into. Those, however, of Mr. Charles Booth (the statistician) and Mr. Hardy (the actuary) are the most popular proposals. The plan of the former is that every man and woman shall, without any previous contribution, upon attaining the age of 65, receive a pension of 5s. per week; and he estimates that the cost of this would be about £17,000,000 per annum, after making allowance for the savings effected by the consequent very great diminution of the existing form of in and out door poor-law relief. The scheme of Mr. Hardy in most points closely resembles that of Mr. Booth, the principal difference between them being that Mr. Hardy proposes to place a portion of the cost upon the local centres, instead of it being wholly borne by the State. After having studied the various schemes, it is my opinion that the adoption of some such proposal as is advocated by Messrs. Booth and Hardy would be the best solution of the question for this Colony, as the German law, with its coercive and ever-active interference with individual liberty, would not be acceptable to the citizens of a free country like New South Wales. The Danish plan, to my mind, is too limited in its operation, and is merely an extension of what in England would be called "outdoor relief," and the same remark applies to the scheme proposed by Mr. Neild. Any scheme benefiting one section of the community at the expense of another appears to me to be inequitable, and I think it would be preferable that the whole body of taxpayers should contribute towards the cost of a universal old-age pension scheme, so that any person upon attaining the stipulated age might demand as a right, and not *in forma pauperis*, an annuity for the last years of his life, and so be relieved of the stigma that pauperism casts upon the recipient of charitable doles. The cost of such a scheme would, of course, be very large, but not necessarily insurmountable. If a contributory scheme were adopted it would be found that the cost of administration, in a country where a million and a quarter people are scattered over an extensive territory, would, *pro rata*, far exceed that of even the partial scheme in operation in Germany, the cost of which, notwithstanding the very complete machinery at the disposal of the State, amounts to 1s. per head per annum. Where, however, the benefits to be conferred are so enormous the question of cost should not be the only lion in the path, although, I must admit, a most formidable one, and should a universal pension scheme for New South Wales be the outcome of the present inquiry a sunbeam of hope will have been caused to shine upon those who at present have nothing to look forward to beyond passing their declining years within the precincts of an asylum, or institution for the aged, or in the homes of relatives, where their absence would be more appreciated than their presence.

140. *Mr. Wilks.*] You mentioned that in the Danish scheme the pension given was higher in the towns than in the country—was that because of the greater cost of living? Yes; I think that must have been the reason.

141. They differentiate between the country and the towns? Yes.

142. What we have just had the pleasure of hearing is, especially as regards the earlier part, a collection of extracts from works on the subject? I consider that the opinions of the eminent men I have quoted are far above any opinion I could give. In addition to the information obtained from various sources, which it has taken some time and trouble to prepare, I have ventured to give some comments of my own which I thought might be of interest to the Committee. The first part, giving a description of the German system, is my own, except that the dates have been supplied from the books. Extracts are shown as quotations.

143. You consider that the German system would be impracticable in this country? Undoubtedly.

144. Your opinion is that the pension system should be applied to all or none? Yes. My opinion, as expressed at the end of the paper I have read, is that the scheme of Charles Booth is the most worthy of attention, as he is a man of eminent ability, who has made the subject a lifelong study. The only objection to his scheme is from the financial aspect. Otherwise it is very simple, the only process being that of paying out; there is no paying in connected with it.

145. *Chairman.*] But how would you propose to raise the money for paying out? First of all you would have to find out what it would cost. Then I think we should recognise that the Government is already paying a very large sum directly. It does not matter whether you pay these old people 5s. a week direct as a pension, or pay the money through the Government administration of the asylums. A rough estimate might be obtained of what the Treasury would have to pay for the first year by taking the total number

of

G. H. Pitt. of people of 60 years of age and upwards, or 65 years and upwards, and calculating the amount at 5s. per head. But I considered that would be a schoolboy's way of arriving at the result, and I have left it to the Committee to ask people more competent to express an opinion on that subject than I am. It would entail special actuarial work.

2 July, 1896.

146. But it must be clear that 5s. would not suffice in Australia for an old-age pension? I think it would, because the weekly or monthly contribution in Germany is not supposed to support the pensioner wholly, and put him absolutely beyond want. On that point I would again draw attention to the German scheme, which, "with regard to the old-age pensions the amounts vary from £5 6s. 8d. to £9 11s. a year, and are not intended to provide sufficient means of support, but to supplement any other means possessed by the pensioner."

147. That scheme would hardly provide for the retirement of these people from active employment? I think it would. I was told by a gentleman the other day that at Liverpool he saw three little children who were each boarded out for 5s. a week, and they were very happy and comfortable. In the same way I think many persons would be only too glad to take some of these old people, though they might perhaps be a little more troublesome than children, for 5s. per week.

148. *Dr. Graham.*] Your work in the Government service is in the nature of actuarial work? Not at present. That is the reason why I have suggested that the Committee should obtain the services of the Registrar of Friendly Societies and Actuary to the Public Service Board.

149. Have you had any practical acquaintance with the working of asylums in the Colony? No, except that I have several times gone through them.

150. But you have not been attached to that Department in the course of your Government service? No.

151. *Mr. McLean.*] Have you been attached to any charitable institutions? No.

152. Have you any personal experience of the class of people likely to be relieved under a system of State pensions—I mean apart from statistical records? Do you mean simply as paupers?

153. Have you been brought in contact with that class of people so as to be able to form any estimate of their character and habits? Having a friend who was matron in one of these institutions, I have been several times in that asylum.

154. *Dr. Graham.*] Which institution? George-street Asylum, Parramatta.

155. Have you been to any of the Continental institutions? No.

156. *Chairman.*] Have you any knowledge of the American system of pensions to the army and navy who fought in the Civil war? No. The only thing I remember reading about it is that the pension scheme has been greatly abused.

157. Do you know the total cost of that scheme? No; but if you wish I will endeavour to find out.

WEDNESDAY, 8 JULY, 1896.

Present:—

MR. CHAPMAN,		MR. MCLEAN,
DR. GRAHAM,		MR. SCHEY,
	MR. WILKS.	

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Sir Arthur Renwick called in, sworn, and examined:—

Sir A. Renwick. 158. *Chairman.*] What positions do you occupy? President of the Sydney Hospital; President of the Benevolent Asylum of N.S.W.; President of the Deaf, Dumb, and Blind Institution; and President of the State Children's Relief Board.

8 July, 1896.

159. You have had a very long connection with charitable organisations in this country, and you have also had opportunities of observing the operations of such organisations in other countries? Yes.

160. Will you give the Committee the benefit of your advice, and also your opinion, as to the proposal before us with regard to State insurance or old-age pensions, and the general question of pauper relief?

With regard to my experiences in other countries they would only be similar to those of any intelligent visitor to those countries, more particularly in regard to the systems adopted in Great Britain and the United States of America, where I have been recently. Most of the information in connection with these two countries will be well understood by the Committee perhaps without my entering very fully into the subject. With reference, however, to the direct object of the Committee, I may state that, as far as I observed, with the exception of a pension system, so called, adopted in connection with sailors and soldiers in the United States, very little has been done in that country in the way of providing for the civil community in the direction now under consideration by this Committee. In England, however, I found that a considerable amount of discussion was taking place principally amongst persons engaged in public life. For instance, the Right. Hon. Mr. Chamberlain had taken action in connection with the Voluntary Committee of the House of Commons, a Committee which originated in consequence of dissatisfaction to some extent with the reports submitted by other Committees appointed by the House of Commons, and also, I think, by the House of Lords in connection with this subject. I also found when I was there that a number of public meetings had taken place in various parts of the country, and some occasionally took place when I was in London, at which lectures were given by gentlemen interested in the subject, including Canon Blackley and others. I also found, on examining a little more carefully into the matter, that there was a considerable literature on the subject, and that those who were interested in the management of charitable institutions in Great Britain, being wholly dissatisfied with the system in vogue, were thoroughly aroused to the necessity of making some new provision in this particular direction.

161. Will you give us your opinion as to the probability of the working of a system of State insurance or old-age pensions in New South Wales? I suggested some little time ago to a number of gentlemen who had some acquaintance with the charitable institutions of this Colony that it would be very desirable that we should take action in this matter in New South Wales, and I pointed out to them that no time was more opportune for the purpose than the present. The institutions in which our aged poor are housed are quite unsuited for the purpose. They have become old and dilapidated, and in some cases, to my certain knowledge, were never built for the purpose to which they are now applied. They are overcrowded, there is no system of classification, there is a separation of the sexes in old age, which is extremely undesirable, and none of those comforts which a civilised community should provide for its old people, and

in

in many cases deserving old people, are to be obtained. There was an exception introduced by Sir Henry Parkes a few years ago when he established a few cottage homes for the purpose of providing for old couples, but this was only in a very limited degree. Taking all these matters into consideration, I asked the gentlemen to whom I have referred to meet me, and we formed a committee to bring this question under the attention more particularly of the public and the Legislature. The result was that a public meeting was held, and steps were taken to interest the community in the movement. A platform was drawn up, for a league "for providing pensions for old age," which contains nearly all that can be said in connection with this matter in a concise form. My object in writing it was not to be sensational, but to calmly and deliberately place this question before the public of New South Wales. The platform is as follows:—

Sir  
A. Renwick,  
8 July, 1896.

The question of a pension for the aged in the case of those who are unable to maintain themselves, and who thus require assistance, from the State or from some charitable source, is one that has been the subject of practical legislation in some countries, and is a matter of investigation and inquiry, with a view to the best possible solution, in others, at the present time. The conditions which surround this question are so diverse in different countries and amongst different peoples that the experience of the systems which have been adopted in European countries, for example, serves only as an object-lesson for us in New South Wales, where the circumstances surrounding the poorer classes needing this aid, and the habits and customs of the people generally, are so different from those in older lands. At the same time, it is true, that in view of the history of the administration of relief to the poor up to the present time in this country, the practical experience already obtained, and the very unsatisfactory condition of the present state of charitable aid, an opportunity now presents itself for dealing with this branch of the question, which demands the consideration of all those interested in charitable work. As a public question, it is of the highest importance in relation to our social economy.

*The necessity for a provision of this kind.*

That there is a necessity for a provision for the needs of the aged poor is only too apparent. In New South Wales at the present time there are no fewer than 3,358 old men and women in the various institutions; of these, 2,756 are men, and 602 are women. According to the evidence of the Director of Government Asylums, given in March, 1896, before the Parliamentary Works Committee, the buildings at Parramatta and Liverpool in which the old men are placed are thoroughly unfit for the purpose for which they are occupied. No system of classification is possible in consequence of the overcrowding, and no provision exists for the purpose of separating and classifying the inmates who are affected with various diseased conditions. In fact, to quote the words of the Director, "the sick and the sound are at present indiscriminately mixed together in the separate institutions without any chance of classifying them." When it is remembered that the circumstances thus briefly referred to entail residence together of about 500 persons, requiring regular medical treatment in consequence of their being affected with cancer, consumption, and ophthalmic disease; of about 1,000 persons affected with paralysis, rheumatism, epilepsy, heart-disease, senile decay, and the like, who do not usually require much medical treatment beyond tonics, stock medicines, and special diet; and of 1,000 who are simply old and destitute, together with about 500 who may be reckoned as casuals,—it must be admitted that a state of things exists which, in the name of our common humanity, requires immediate remedy. So greatly are the officials dealing with these matters impressed with the need of a remedy that a proposal was recently submitted to the Parliamentary Works Committee to accommodate the whole of the inmates of the various asylums at Rookwood at a large expense to the State—a proposal which happily has been rejected.

Independently of the poor aged persons who have been compelled to seek the inadequate refuge of the Government asylums, there are many persons needing aid in the form of a small pension who would not under any circumstances accept the hospitality of the asylum, but who must necessarily drift deeper and deeper into poverty if not afforded the aid of the pension. The Benevolent Society of New South Wales and other similar institutions do noble work in this direction, and their records present lamentable instances of cases of aged poor men and women who, generally through no fault of their own, have to seek the allowances furnished by them.

At present the practice is to separate old married couples before admission to the asylums, an unnatural practice which the establishment of a pension system would avoid.

*The aim and object of this League.*

At the present stage the Old-Age Pensions League considers it proper to define the objects it has in view. And, in the first place, it may be well to state that having before it the proposals made in other countries, and the history of the movement elsewhere, the League does not propose to submit for consideration any scheme to promote a sick fund in connection with old-age pensions, nor to interfere in any way with the already well-established provisions made by the various Friendly Societies, or by any employers' aid fund. Nor does the League aim at making definite proposals for the solution of the great problem of old-age poverty by some universal scheme based on compulsory or voluntary contributions, or on a direct subvention from the State. The League does not at present propose to put forward any scheme to encourage those who are willing and have the means to invest in deferred annuities, secured by State subventions or guarantees.

All these and similar proposals the League considers to be subjects for inquiry and investigation, and it is believed that the course at present about to be adopted in the mother country should be followed in New South Wales. The object of the League in connection with the various plans proposed for the provision of old-age pensions will be to obtain the consent of the Government to the appointment of a Royal Commission, or some similar body, for the purpose of dealing with the question in all its various details.

To afford relief to the overcrowded state of the Government Asylums, in which the aged poor are now housed, and to assist those who need aid, but who will not avail themselves of the institutions, the League proposes to urge on the Government a temporary and tentative scheme which could be adopted at once. Of the classes of inmates of the institution already referred to a very large proportion could be pensioned, so that they might live among their friends and relatives or other suitable persons, the League believes, at a cost to the State not exceeding that already paid for their maintenance in the asylums. Similar small pensions should be paid after investigation of the circumstances of each case by a proper official, to those in special need outside the asylums. To effect these purposes the present official staff of the Public Charities Department, this League believes, would be sufficient. The Director of Public Asylums (in whose statement before the Parliamentary Works Committee there is ample evidence of his sympathy and approval of this provision) might be asked to report as to the best, most effective, and most speedy mode of carrying out these suggestions for the relief of many deserving poor old men and women.

The State has already made provision for destitute children in the way of boarding out, and in the provision of cottage homes, with family life for invalid children, and it has also satisfactorily introduced to a limited extent the system of cottage life for old couples.

The League believes that the purpose it has in view will meet with the support of the people of New South Wales. They consist, in a word, in an attempt to obtain for those who are subject only to senility and poverty the advantages which the State has already provided for its unfortunate young waifs and strays, and the removal of the discreditable circumstances which at present surround the aged poor now housed in the asylums.

The League recognises fully that any attempt to discourage the principle of thrift and personal effort should be discontinued, and in the objects of their association now briefly stated this cardinal principle is not in any way interfered with.

I may state that since the appointment of this Committee the League has determined to rest and see what the result of the labours of the Committee will be. We are desirous as a League to do everything that we possibly can to assist the Committee, and any members of the League whose evidence would be of value will be only too glad to render what assistance they can in this matter.

162. You are President of the League, are you not? Yes.

163. As far as I can gather, your League does not make a definite proposal, but is simply now investigating the question? We are merely trying to educate public opinion on this subject, We are about to circulate

Sir  
A. Renwick,  
8 July, 1896.

circulate pamphlets and slips of paper amongst persons to whom such information would be useful to enable them to form an opinion upon this matter. As far as we ourselves are concerned we have no doubt whatever about it.

164. Did you note in this morning's telegrams the information that the New Zealand Government are about to bring in a scheme? Yes, I saw that; and I also saw a cabled report from England to the effect that they are taking active steps there. I expected nothing else from what I knew of the energy of the present Colonial Secretary.

165. In Great Britain they appear to have appointed Treasury officials to do the work? That is for the purpose of determining the amounts, and what public expenditure would be involved in the establishment of a system of the kind—actuarial work, chiefly.

166. The Committee would like some information from you in regard to the way in which they work the charitable organisations in the United States? In the United States every State has its own system. I shall be very glad to leave, for the perusal of the Committee, a work from which I think they will be able to obtain all the information necessary as regards the United States. It is by Professor Amos G. Warner, and is entitled "American Charities: A Study in Philanthropy and Economics."

167. From your own observation, what do you think of the American system of working the charitable organisations? I think it runs pretty much on the same lines, with a good deal more enlightenment, as the English system. In fact, I am sure the Americans have borrowed their system from the English system. There is nothing much to be gained in the direction of State-aid pensions from them.

168. *Mr. McLean.*] From your experience in connection with the benevolent asylums here, can you say whether the relief is given in most cases to aged people, or do you find the claims for relief come as much from younger people who are incapacitated from work or unsuccessful in obtaining employment? The larger proportion of persons assisted at the asylums consists of widows, deserted women, and aged persons.

169. *Mr. Wilks.*] Do I understand from the information you have given so far that you are strongly opposed to the present asylum system in this country? No; and it is as well that this should be clearly understood. In my opinion, we can never totally dispense with the asylum system. Such a thing would be altogether out of the question. Those who believe that the asylum system can be done away with are labouring under a mistake. There are numberless cases for which it is absolutely necessary to have an asylum. For instance, old men who are dissipated in character, whom no one would take in as lodgers, and who are really unfit to mix in civil society, must be provided for in some way. Then there are old chronics of different kinds; they must be provided for, and they can only be provided for adequately in a home under control.

170. Are you acquainted with the working of the system introduced by Sir Henry Parkes of which you spoke just now? The practical details are not known to me, but I know something of its working from having seen it, also from reports that are brought to me about it, and from consultations in connection with its working, and so on. I am quite sure that if it were properly carried out it would be a very good system indeed. It runs on the lines adopted in England in connection with a number of private charities, such as the Freemasons, the Guild Homes, and so on. Of course, here it is under the control of the Government.

171. I think the Masonic body have a few homes, have they not? I do not know whether they have any homes of that kind, but I know they have wards at the Carrington Hospital for convalescents.

172. *Chairman.*] Did you take any interest in the English charitable organisations when you were in Great Britain? When in London I had an opportunity of consulting with many of the persons connected with the various charities, some of whom were also members of the London County Council, and as a result of the conferences I had with them, I embodied my views on the question of boarding out children in a letter covering several columns to the *Times* newspaper, which led to some subsequent correspondence on the matter. In this letter I pointed out that although the system of boarding out children had been established for a longer time in England than in New South Wales, yet in this Colony we had carried it to a more perfect degree, and with far better results, than was the case in England. I am still in correspondence with some of those who are deeply interested in this particular form of charity.

173. Do you think it is possible to apply the boarding-out system to a large number of old people? I fear that in the case of old persons it can only be done in a limited degree. Old persons have not the attraction that children have. They are more troublesome to manage, and more difficult to keep under domestic control. For these reasons the results would not be so satisfactory as in the case of children. But with a limited number, I believe the plan could be adopted. With a much larger number, I believe that if they were assisted by a pension either their friends or relations, or some persons with whom they were intimate, would be only too glad to receive them.

174. And you think it would be more conducive to the happiness and comfort of these old people to be boarded out with their friends, and even with strangers, than to be kept in an asylum? I cannot conceive of any more miserable life than for a poor old man to be separated from his wife and everything dear to him, and to be placed in one of the wretched barrack institutions we have in this Colony at the present time. No life, in my humble judgment, could be more intolerable than that. The very fact of giving liberty to a man, whether he be young or old, makes all the difference in regard to the happiness he may acquire otherwise.

175. The sum of 5s. per week appears to be sufficient in the case of children to be paid to persons willing, and even anxious, to take them for that payment, but do you think it would be sufficient in the case of grown-up people? It depends, to a large extent, upon the character of the people who take them in. In the case of benevolently-disposed people the 5s. would be a perfect Godsend, because it would help to pay the rent. The rent is the great difficulty in these cases, as far as my experience goes. People who might be charitably disposed towards these old men might not be charitably disposed when their rent had accumulated from week to week. The rent money is the great bugbear in the case of all these people, who would, in all probability, be asked to take charge of these old men.

176. If families in the country districts could obtain two or three of these old men it would be a material assistance to them, I suppose? Undoubtedly it would, and also to families in some of the suburbs of the city. As far as my experience goes in connection with the Benevolent Asylum, when you assist persons to pay their house rent you at once succeed in removing a most important disturbing element in the family life.

Sir  
A. Renwick.  
8 July, 1896.

177. Then, I presume, what you would suggest would be that a selection should be made of the best patients, physically and mentally, for the purpose of making an experiment? Quite so. My idea is that it would be rash, indeed, to attempt for one moment to take all these people and board them out. Such a thing could not be carried out in practice. But there is a large proportion of these old men, and also of the old women at Newington, who could certainly be placed with friends of former days who would only be too glad to take them if they could get 5s. a week with them. Speaking roughly, I think it would be a low estimate to say that about a fourth of the inmates of Newington might be taken in that way from the institution. In regard to the others, from the statement I have made it will be seen that there must be some hundreds who could be placed out in this particular manner.

178. Do you consider that the German system—that is, compulsory State insurance or old-age pension scheme—could be carried out in a British community? I am quite sure that it could not be carried out in our community. In Germany it is not carried out with satisfactory results. There are really only two schemes that could be adopted. One is to pay for these aged people, as they make their claims, from the Consolidated Revenue, through the Charities Vote, and the other is to attempt, in some way or other, to get these people to pay compulsorily, and then to give them an opportunity afterwards of deriving benefit from their payments. I am afraid that the latter scheme could scarcely be carried into effect in this country. We are such an unsettled population, while in Germany they have every possible means of watching their people and keeping them under control, and they have an admirably-constructed State system of officialism. Where the scheme has been unsuccessful in Germany, I am sure it would be even much more so amongst our population. Besides, I have always considered that it is the duty of the State itself to look after the aged poor, except where people have placed themselves out of the bounds of obtaining this relief.

179. Do you think it would be possible to work any old-aged pension scheme in connection with our insurance societies, or even with the Friendly Societies? With regard to the insurance societies, I received a communication from the Citizens' Life Insurance Society in which they gave certain tables they had drawn up, and certain proposals they made in connection with this very matter; but it strikes me that there would be very great difficulty in connection with these very old people to get even these payments made. The class of people who are in our charitable institutions are quite outside the range of either Friendly Societies or life insurance societies, and it is for that class, and that class alone, I imagine that the State would make provision.

180. *Mr. Wilks.*] The tables to which you refer were sent round generally? I received a copy of them, and I looked into them carefully, and the defect, to my mind, was that the people were expected to pay something, and these old people are utterly unable to pay for their own maintenance.

181. *Chairman.*] Putting aside the inmates of the asylums, do you think it would be possible in any shape or form, either in a compulsory, voluntary, or semi-voluntary way, to work out an old-age pension scheme for the people of New South Wales? I doubt it very much. The French tried it. They have tried it over and over again ever since the days of the Revolution, and it has always turned out a failure. They introduced a system of allowing these people to pay small sums of money upon which they received interest, so that they might be provided for in their old age. That has turned out a failure. In this Colony we have an unsettled population, especially as regards the class with whom we are now dealing, and I am very doubtful as to whether the result would be satisfactory.

182. *Dr. Graham.*] Some of the advocates of an old-age pension scheme hope that the scheme once introduced would eventually take the place of our present system of charity by dole;—do you share that opinion? No. I have explained to the Committee already that this scheme is to touch a certain class, and that it can only touch a certain class, and that it would be impossible to wipe out our poor-houses, which must be provided for the particular class to whom I have referred.

183. It would touch a very small class of the present inmates of our asylums? It would touch a larger class than you would imagine, for this reason: I understand it is the intention, and it is a thing that must be carried out ultimately, to put the consumptive inmates in a certain place, the cancer inmates in another place, to provide for ophthalmic diseases, and so on. If that is all done there will be a balance of only about 2,000 persons left. Of these 2,000 persons, 500 may be considered as casuals. The other 1,500 are persons who can be worked out by a system of old-age pensions.

184. Dividing them as you have done, Mr. Maxted gives only 500 persons out of the 3,500 in the asylums who are eligible for such a scheme? He is an official, and, of course, he looks at it from an official standpoint. I am looking at it from a general standpoint, which is quite a different thing. No one has more respect than I have for Mr. Maxted, and I know the value of his opinion; but it must be remembered that an official who is dealing with these matters does not look at them in exactly the same way as a person outside of officialism would do. My impression is that it will be found that a great many more than 500 casuals can be placed out. During the few visits I have made to these charitable institutions I have seen a great number of men, who, I am certain, could easily be placed out; and with regard to the women, I have already said that I am sure one-fourth of the inmates of Newington could, at 5s. per week, be placed out amongst their relatives, or, at any rate, amongst old acquaintances.

185. Would not the introduction of a general scheme of old-age pensions increase the class that would apply to the Government for relief? The same argument was used in regard to boarding out State children. As soon as the Government took that matter up, and it was understood that instead of being placed in barracks the children would be put where their parents could see them whenever they liked, it was said that there would be a vast increase in the number. The result, however, has been the reverse. Allowing for the circumstances of the Colony, and for the increase of population, the number of children now boarded out is not greater than naturally would be expected.

186. You are aware that the Commissioners of Charity in Great Britain have stated that the effect of a system of out-door relief, loosely carried out, has been to enormously increase the number of applicants for charity? That is the result. But it must be remembered that in the case of the class of persons with whom the Commissioners had to deal, and who are to a large extent affected by the hereditary taint of pauperism, there would naturally be an increase in the number of such persons applying for out-door relief.

187. Do you think that the number of people at present in our Government Asylums, who are dependent wholly on Government aid, adequately expresses the number of destitute poor in this Colony? No.

188. Is there any way of ascertaining a reasonable estimate of their number? A rough idea might be obtained by getting the authenticated statements from the Benevolent Asylum, from the St. Vincent de Paul

Sir  
A. Renwick.  
8 July, 1896.

Paul Society, and one or two other societies of that kind. I should place very little reliance, however, on any of the little associations that have sprung up within the last few years, because I am very much afraid they are leading to a duplication of charitable effort, which ought to be better arranged in the interests of charitable relief. My own idea has always been that it would be well if such a society as the Benevolent Society were to establish branches under the control of the ladies who are now forming these little district associations, so that the whole thing could be properly supervised and carried out by one large body, instead of being distributed and reduplicated as at present.

189. I asked the Chief Compiler of Statistics this question, "Do you think that the forms provided in this Colony with regard to poor returns are satisfactory?" His reply was, "No; an immense amount of zeal is necessary on the part of any one endeavouring to compile that portion of the statistics relating to our charities." Do you think anything could be done in the way of legislation to initiate a system for procuring these returns on a satisfactory basis, because it is obvious that before we could recommend any system of old-age pensions for this Colony we should have to know the extent to which poverty has actually existed;—is not that a reasonable proposition? I do not attach the same importance to statistical results as you do, for this reason: When we started the State Children's Relief Department we did not know how many children would come under our care. We knew how many were in our institutions, but we did not know how many there were outside who would require assistance. I am quite sure it would be the same in this particular matter. Whatever statistical returns you obtained they would never be complete. There are numberless cases known personally to me where people will never confess their poverty, but are only too glad to receive a little assistance. For those two reasons I think it would be almost impossible to obtain accurate statistics in a matter of this kind.

190. Do you think you could reasonably apply your experience in dealing with State children to the case of aged people? I think so, but of course in a different degree. I have already pointed out that I am quite sure the proportion of old persons who could be boarded out with their friends and relations would be very much smaller, and the persons themselves would be very much more difficult to manage. In this view of the matter there are difficulties such as do not exist in the case of children.

191. *Mr. Wilks.*] You said just now that there were some people who from motives of delicacy did not like to confess that they were in a state of destitution;—how would you arrange to deal with such persons under a system of pensions? They would have to make an application. Suppose you had a branch of the Charities Department devoted to this particular matter—as would necessarily be the case—some of the friends of these persons, or perhaps their clergyman, would know all about them, and they would apply to the department where they would not apply to a benevolent asylum.

192. They would do it surreptitiously? Yes; they would think it more respectable. That would be the sort of feeling they would have.

193. *Mr. McLean.*] Do you not think that in itself would lead to a very much larger number of claims being made upon the State? I am afraid that at first it would, and under the present peculiar circumstances of the Colony there are sure to be a large number of people of that class. I have had at least thirty letters within the last three months from persons setting out the very circumstances to which the Committee are now referring, and stating how glad they would be to receive a small pension if possible. There was one letter in which the writer begged I would go on with this matter, but not close up the charities, because there were many persons like herself who might require charitable aid, and who had no friends to whom they could possibly apply. That shows the general trend of the matter. There is no doubt whatever that provision must be made in the shape of an asylum. My impression is that by the system of outdoor relief the number of persons requiring asylum aid would in time be considerably reduced.

194. *Dr. Graham.*] Are you in favour of isolating the people at present in the asylums who are ill from the general pauper inmates? Certainly; separating them.

195. In the English system of housing the poor they put the chronically ill who are destitute along with the others? That is done in some institutions. But if you read the later reports published in the *British Medical Journal*, you will find that in many instances at the present time they not only have hospital wards, but they have infirmary wards for that class of cases. But what I especially aim at, and in which I am sure I will have the sympathy of the Committee, is this:—At the present time in our asylums the 3,000 odd people are all mixed up together. There is a cancer case beside a scrofulous case, an ophthalmic case between them and a healthy poor old man lying in the next bed—a most discreditable and disgraceful state of things.

196. Then you think some change is wanted? I have not the remotest doubt on the subject. The evidence of officials who deal with these matters, and which I have heard with my own ears, not to speak of what I have seen with my own eyes, is sufficient to show me that in the absence of a system of classification, no good can be done to the sick, and a great deal of harm can be done to the healthy. Let anyone go to Newington, which is perhaps one of the best managed of these institutions, and what will he find? He will find a certain class of patients separated and pretty well treated; but the great majority of these old women are so mixed up together that you will find an old harridan of the very worst character sitting beside some poor old person who has been respectably brought up. Then near them you will find a consumptive case—a poor old woman with chronic bronchitis, or something of that kind; and further on a cancer case, and so on. There is an utter absence of classification which is discreditable.

197. *Chairman.*] Have the superintendents or managers of these asylums no power to make a classification? They do the best they can, but the space at their disposal is very limited. I do not blame the authorities in connection with the matter. I blame the country for not doing its duty in regard to it.

198. *Dr. Graham.*] I suppose no one gets any form of relief from the Benevolent Asylum who may possess a small sum of money? Not if it is known. Cases of imposition of that kind have occurred, but when they are found out the people are struck off the list.

199. Do you not think it is a hardship that where, say, a domestic servant who has worked hard for many years, and being a thrifty and decent woman has saved £50 or £60, that she should not be eligible for any kind of relief until she has spent that money? Yes; very likely under the new proposals you are going to make you will make provisions for a case of that kind. But at the Benevolent Asylum the object is not to provide for the persons in full, but only to assist in such a way that the people may possibly, by their own efforts, be able in time to do without such assistance.

200. Do you not think that the fact that in England the old-age pension scheme and all the schemes suggested have been found to be impracticable in the opinion of experts is a good proof that we should be very careful before we initiated any such scheme here? There is no doubt care is required, and I suppose that is the reason why this Committee has been appointed. But the point is this, that in England nothing of a practical character has been done; the report of the Committee of the House of Commons was to the effect that they should wait for further information. In New Zealand they have taken the bull by the horns and introduced a Bill at once. I may mention also that a Bill has been introduced into the House of Commons by a private member—I think Sir John Lubbock.
201. *Mr. Wilks.*] I suppose you have noticed that the overlapping of charitable organisations in this country has been detrimental by reason of the duplication of machinery, each separate organisation requiring a secretary and so on? Yes, that is one defect; but what I considered infinitely worse is this, that a person gets more in his poverty than he could earn depending upon himself.
202. Then the effect is to offer a premium to persons to profess poverty? Certainly.
203. *Dr. Graham.*] Do you not think it would be a much more economical plan if the contributions by the State for charitable purposes were given through one fixed channel? As it is now they are given through different channels—they are given through the Colonial Secretary's office, in some cases through the Treasury, and through other channels;—do you not think there ought to be some kind of Board? I think it ought to be under one department, undoubtedly. Our object should be first of all to avoid, if we possibly can, the institution of any poor law in this country. The second object should be to get as much voluntary aid in the management of our charities as possible; in the third place to provide a complete system of inspection; and in the fourth place to have all the charitable assistance brought under one control as far as possible, so that there should be no overlapping. Those are the most important points, though of course I could elaborate them. For example, I am perfectly satisfied that if the State Children's Relief Department, or any other great charity that I know of, were not managed by voluntary efforts, the cost to the country would be a great deal more than it is at the present time, and what I consider to be the curse of all charity would be introduced—that is, officialism. That is the curse of all charity the wide world over. However good a man may be, and however benevolent, when he first commences as an official he gradually gets into a routine and treats the cases just as a matter of business, and not in that spirit of pure philanthropy by which he was originally actuated. That is a thing I have observed over and over again in the course of my experience, and it is a thing that ought, as far as possible, to be discountenanced.
204. *Chairman.*] I suppose the official becomes a mere machine, and has no strong sympathy with the sufferers? He has sympathy, but it is so frequently called upon that it gets exhausted in course of time—it wears out.
205. *Mr. Wilks.*] Do you not think, on the other hand, that the voluntary management in connection with some of the local benevolent societies has the effect practically of encouraging destitution;—do they not fossick it out and encourage it? I have noticed that too, but I say there should be a proper system of inspection. Inspection is a cardinal principle in connection with all charities.
206. *Dr. Graham.*] Do you not think that the sentiment of repugnance to the term "pauper" has been more or less a safeguard against abuse? I have not the slightest doubt about it. We have had experience of that in an institution very near to this building. At one time we had placed upon our dispensary cards something about paupers or something like that. There was a long discussion by the Board about how unfeeling it was, and the words were removed. Then we had an increase in the number of applicants. This was some years ago when Sir Edward Deas-Thomson was President of the Sydney Hospital. Then the words were replaced again with a corresponding effect. The idea attaching to the term "pauper" has undoubtedly a deterrent effect; but whether it is or is not a wise thing to use it is another question altogether.
207. The number of paupers in this Colony is stated to be much larger than the number in the other colonies, the figures being respectively 4.30 for New South Wales, 2.89 for Victoria, and 2.34 for Queensland per thousand of the adult population;—do you think the system of looking after our poor is more liberal than in the other colonies; and, if so, do you think that accounts for the larger number of paupers? There are two reasons. The first is that nearly all the other colonies have Acts in force prohibiting the importation of poor persons without relations or others to take care of them. In the second place, there is no doubt we are a much more liberal community, and have not the same class of inspection that they have elsewhere in connection with our charities. There is no doubt that we have to bear the burden of a good deal of the pauperism or poverty of the other colonies; because, although the statistics may show a small number of paupers from the other colonies—I do not know whether they do or not—it should be borne in mind that people, after they have been here a short time, regard themselves as belonging to the place, and do not state that they are Victorians or New Zealanders.
208. I notice that the expense per head for maintaining these poor people is much higher here than in the other colonies. Mr. Maxted explains that by the fact that we house our chronically ill with the ordinary yard patient;—do you think that is a sufficient explanation? It explains it to a great extent; but in regard to some of our charities I know that our expenses are lower.
209. *Mr. Wilks.*] Have you considered the question of the age that it would be desirable to fix for the operation of a system of pensions in this country? Yes.
210. What age would you suggest? Between 60 and 65—any age above 60. I think there ought to be some arrangement by which a report should be made on the class of cases in which relief was applied for. For instance, I have seen persons of 70 years of age whom you would think were not 60 years of age, and *vice versa*.
211. *Dr. Graham.*] Still the difference in the number of people destitute at 60 and the number destitute at 65 is very great? It is great.
212. So that we should have to fix the age definitely. It makes a great deal of difference as far as the cost of the system goes? Yes; but I should like to point out that the total number is not very large.
213. Still, the average age of those in our asylums now is 63 years? Yes.
214. And we have 3,600 of those? Yes. I should prefer to begin at 60. If a man at 60 years of age is in such a position that he needs this assistance, I think I would give it to him. I should think 60 would be a proper age to begin at.
215. Do you think if such a system were initiated it could be worked through such an organisation as the

Sir  
A. Renwick.  
8 July, 1896.

Benevolent Society? No. I think it ought to be a Government institution, for this reason, I think inspection is imperative—there must be a continual control. Voluntary effort is very excellent in its way, but voluntary effort alone would not be adequate. I speak from my experience in connection with the State Children's Relief Department. In connection with that institution we have voluntary lady visitors all over the country, and we have also a voluntary Board; but without the assistance of the paid inspectors, who must necessarily do a certain duty, and who must necessarily carry out instructions, I am afraid the system would not work so well; and I am sure any arguments of that kind would have far greater force in the case of old people.

216. Would not the fact of having the system entirely under the control of a Government department give it more the character of a poor-law organisation? I do not say it should be entirely under the Government control. I say it ought to be a Government institution. If I were permitted to make a suggestion to the Committee, I would put it in this way. That a plan similar to that in connection with the State Children's Relief Department should be adopted. The Crown appoints a certain number of members as a Board, and places under them an officer of the Crown having distinctive duties, and so on. You would then get over all this difficulty. No one feels any shame in placing a child or children under the State Children's Relief Department. It is not regarded in the same light as placing them in a benevolent asylum. If you had a similar Board in connection with old-age pensions it would lead to the same result in regard to the matter of feeling. But there should be a deterrent effect also, and that precautionary measure should be adopted by making the Chief Inspector of Charities the principal officer in connection with the carrying out of the scheme.

217. In regard to the State Children's Relief Department, have you got agencies all over the Colony? Yes.

218. And are they all voluntary workers? Yes.

219. And do you find that works well? Yes. We can find out whether or not it works well, very easily, from the reports that are sent in—by comparing the report sent in, first, with the report of the school-teacher, the parish priest, or the clergyman, and also the inspector's report. All those four reports are furnished in regard to these homes. Then they are compared together. If there is any laxity on the part of a voluntary visitor, attention is called to the fact at once, by a letter, and then greater care is taken; or perhaps the lady may resign, and we may get someone else who will pay more attention to the work.

220. You have read the ordinary schemes—Canon Blackley's, Mr. Price Hardy's, and so on;—do you think any of these schemes would be applicable to this Colony? No; I do not believe in them at all—not for this Colony.

THURSDAY, 9 JULY, 1896.

Present:—  
Dr. GRAHAM,  
Mr. McLEAN,  
Mr. O'REILLY,  
Mr. SCHEY,  
Mr. WILKS.

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Mr. Edmund Walcott Fosbery called in, sworn, and examined:—

E. W.  
Fosbery.  
9 July, 1896.

221. *Chairman.*] What are you? Inspector-General of Police.

222. We would like your opinion upon a proposal for State insurance and old-age pensions, and also with regard to the best method of arriving at a system of pauper relief. Will you kindly give the Committee the benefit of your advice on these points? Your question would require rather a long answer as regards the administration of State relief. We start, of course, with the assumption that the State undertakes the responsibility of providing for the infirm, destitute, and aged, and the question, therefore, resolves itself chiefly into one of administration. A bad system well administered would be preferable to a good system indifferently administered; so that the question of relief to the aged and destitute would resolve itself, as I say, chiefly into a question of discriminate and fair appropriation of the dole of the State. For my part I think that the practice of associating all the worn-out paupers in barrack life is a bad one. It must be in operation to a considerable extent, because some of the inmates require constant attention and medical aid, and from their habits they would be unfit to be allowed at large. But there is a very large class of deserving people who from no fault of their own have drifted in old age into a position of utter helplessness. Not from any want of prudence or industry, or from dissipated habits, but just from the ordinary misfortunes that fall upon humanity they find themselves in their old age stranded; and it must be a cruel thing that their self-respect should be destroyed by their being separated, if man and wife, in order to herd with a large number of unfortunates, some of whom are of depraved character. Therefore if some means could be found whereby they could be assisted by the State to live in decent privacy it must be obvious that it would not only be to their advantage, but that it would be just. If they could be allowed, on the payment of a small sum by the State, to live either with friends or people whom they did not know of respectable character, who resided in the country, it would be manifestly to their advantage. The mere presence of a man, however old, about the premises would be some sort of protection to the homestead when the bread-winner was absent; in addition to which, however old and feeble a man or woman may be, they can always perform many little domestic offices and other labour about the home which would indeed almost pay for their keep, and if there was a small honorarium given to the people charged with the care of these old folks it would not cost more than it does to herd them together in asylums.

223. *Mr. O'Reilly.*] Would you define a small honorarium? I think about £15 a year, that being the average cost for the maintenance of a pauper. In a system of this kind the administration is everything. It should be so conducted as to prevent unworthy people, who are the victims of intemperance, dissipation, or unthrift, from becoming pensioners upon the State, as, counting upon such relief, would, perhaps, be an incentive to many to avoid the necessity of making provision for themselves.

224. *Chairman.*] From your long experience in the various positions you have filled, you have come a good deal in touch with human nature;—do you think it possible that we could work in this community a compulsory system of State insurance, or old-age pensions, such as that now upon its trial in Germany and Denmark? I consider that it would be wholly impossible in this Colony, simply from the fact that the class

E. W.  
Fosbery.

9 July, 1896.

class whom you desire to assist are almost all of them of a migratory character. Even when they are apparently settled they are constantly breaking up their homes, and shifting from one place to another. If you traced the great majority of the paupers who are now receiving State aid you would find that they had been waifs and strays in the community for years past, counting no doubt upon the fact that when their means of subsistence failed they would be well cared for by the Government. This, of course, is a drawback to any system. Indeed, I may say that in numberless cases where men have disregarded their obligations to their wives and their children, they have said, "Oh, when I go away, if I desert them, my children will be better cared for by the Government than ever I could hope to look after them." Therefore, it would not do to offer too great facilities to people to neglect the responsibilities of life.

225. Have you noted the proposal of the New Zealand Government now before the Parliament of that country? I just saw it mentioned that they proposed to give every one above the age of 65 years a pension of £26 a year.

226. Do you think it would be possible to work such a scheme in New South Wales? I do not think it would be just. I do not think that all people, indifferently, should be provided for in that way at 65 years of age. Many a man at 65 years of age is in a very good condition to work. In addition to that I do not think that the hand should be open to provide for people who systematically live upon their fellow-members of the community. I should only make provision in the case of deserving persons. The others I do not feel so much interest in; I do not care how they are provided for, or how coarse their food is, as long as they are kept alive.

227. *Mr. O'Reilly.*] I think we may gather from your remarks so far that you regard favourably a proposal to board out a certain percentage of our aged poor? Undoubtedly.

228. And you suggest in connection with that scheme that the maximum payment should be £15 per annum, or about 5s. a week? Five shillings a week is £13 a year; I should go a little higher than that. I should make it about £15 a year. I do not think 1s. a day would be exorbitant, and that would be £18 a year.

229. You propose that that £18 per annum should be paid to the owner of the house into which the old man went? Certainly. The old man, or the old woman, would be, as it were, boarded out to these residents.

230. Would you propose that the householder should have any authority over that old man or woman? That would be unnecessary. Discipline would be well enough maintained by the fact that if the inmate did not behave himself properly his license to live there would be cancelled, and he would lose the advantages of the place. You would have no difficulty with that. The chief difficulty with these old people in the asylums, or anywhere else, is that they are constantly wanting to get abroad into the street to induce the open-handed people to give them drink.

231. Do you not think that the inevitable restlessness of old age would interfere with this proposed boarding-out scheme? I do not think so if the old people were stationed a reasonable distance, say 2 or 3 miles, from any town or public house. Old age is not apt to become so restless that under such circumstances they would not settle quietly down in their homes.

232. But I thought you alluded to this particular class whom we propose to assist as a migratory class? I look on the great majority of them as rather undeserving people after all, because they have not only made no attempt to provide for their old age, but they have not behaved themselves decently when they were wage-earners. For instance, I make no excuse for a shearer who earns £30 and takes thirty sovereigns to a public-house and knocks it down in three days. He is unworthy of anybody's sympathy. The days when such things were done, however, are fortunately passing away.

233. So that although in some cases this boarding-out system might apply, you do not consider that it would in any way solve our present difficulty in connection with the asylums? No, I do not, except that it would decrease, to a great extent, the necessity for large buildings being erected in addition to those we have at present. I do not believe in palatial premises being erected for the aged poor. I think they would be just as happy in buildings that were a little less pretentious.

234. *Chairman.*] You have had a considerable acquaintance with the charitable organisations of this country? Yes, some of them.

235. And I think you are at present the recipient of donations from well-to-do people for the purpose of helping deserving cases? Yes. There is a society, of which I was one of the founders, and of which I am chairman, for relieving cases of acute distress.

236. Do you find such cases to be numerous? Yes, very numerous. Times are very bad just now.

237. And these funds are devoted by private individuals without any regard to sect or class? Undoubtedly. Such consideration never enters into the matter.

238. As a matter of fact, you do relieve many of the genteel poor, do you not? The most deserving people are very often those who make the least clamour. They will sell every stick of furniture that they have accumulated for years, and almost every article of clothing, before they will ask for charity. Those are the kind of people whom I say it seems cruel to thrust into an asylum to herd with hundreds of paupers.

239. In cases like those to which you refer, would it not be a desirable thing to give them some weekly relief, so that they might live either with their friends or with some other reliable persons? The way my committee deals with them is this: We only attempt to assist in acute cases, where people have fallen into misfortune by sickness. For instance, the bread-winner may have broken his leg by a fall from a ladder, and the wife may be near her confinement. If the butcher, the baker, and the landlord are paid while the husband is in the hospital and until the wife has got over her sickness, they are then put on their feet again to make a fresh start. But if the man were dying of consumption, or in failing health, and might live, perhaps, for ten years growing worse every day, the distress would then become chronic, and I should be obliged to pass him on to the Benevolent Asylum for relief. In such cases the Benevolent Society frequently pay the rent and give a small allowance of money. I do not approve of all classes, irrespective of their antecedents, being thrust together into an asylum. That is the point I wish to emphasise.

240. With regard to the scheme of compulsory State insurance or old-age pensions, do you think it would work in a British community? I do not think so. I do not think that the members of the community themselves, even if you gave them ten times the advantages of their contributions, would like to be compelled to make any payments of the sort.

E. W.  
Fosbery.  
9 July, 1896.

241. I suppose you hear of some very distressing cases in the country districts as well as in the city and suburbs? Yes. But I do not think there is a country in the whole world where a case of acute misfortune or distress is dealt with with the same liberal hand that it is in New South Wales. You can tell by the questions that are asked in Parliament sometimes concerning persons in distressed circumstances suffering from sickness. Only yesterday I sent a trained nurse to a case, and ordered all necessary comforts to be provided, and a doctor to attend, and the only claim for the relief was that arising from misery, distress, and sickness. Of course that may lead, and does lead, no doubt, to a great number of unscrupulous people taking advantage of the State instead of being self-helpful, but you cannot avoid that.

242. *Mr. McLean.*] Do you approve of the system of temporary relief that is doled out by the private benevolent asylums—the district benevolent asylums—throughout the country and suburban districts? There must always be a very great number of organisations, local and general, for the relief of the sick. If I heard there was a poor woman living at the foot of my garden whose children were starving, and whose husband was in Western Australia, I should naturally send down a blanket and some food for them. In that way acts of private benevolence are taken in hand by small committees of ladies, and then the same thing extends to the larger societies.

243. But you have no reason to believe that the existence of these societies directly encourages pauperism? I think that relief is sometimes given a little too indiscriminately—without due inquiry. The aim of the society, of which I spoke just now, is to check these unscrupulous people, of whom there are a great number, and detect professional mendicants.

244. You do not think it would be possible for these cases of indigent old persons to be dealt with purely by private benevolence? No; it often is done. You notice that there is 1s. a week paid, perhaps, by fifteen ladies in a small neighbourhood to keep some old woman for the rest of her days—and a very good thing too. I am afraid that the tendency of State aid in this direction is to paralyse private effort more than otherwise would be the case. At the same time it would be a very unfortunate thing if private charity were stopped altogether by the State undertaking the whole of this work.

245. *Mr. O'Reilly.*] You said, and I think very truly, that there is perhaps no country in the world in which the class of poor with whom we are now dealing are more liberally dealt with than in New South Wales? Yes.

246. Do you think our reputation for liberality in that direction tends to attract the pauper residuum from the other colonies? It may have that effect to a slight extent, but not materially.

247. *Mr. Wilks.*] Do you think that the mere fact of State aid being suggested would create a class of hereditary mendicants? I think it would be necessary to institute a very close investigation into every case by a very strict inspector before the Government was committed to making any such allowance.

248. You do not conceive of any scheme from which you could eradicate officialism? No; it could not be laid down on paper; it is a matter of intelligent administration. As you know, there are a great number of people in the community who have a tremendous horror of what they call the poor-house.

249. *Mr. O'Reilly.*] I should like to know how our present police administration works in with the existing system? That is a very pertinent question. As the Charity Organisation Society is administered, we receive a very large number of inquiries from private individuals, and also a large number of references from the Charities Department. It is fortunate that I have such a large number of police scattered over the country who can investigate these cases, which they would still have to do under any system. In the administration of out-door relief we must make the police cover the whole country. At present we detect a large number of cases of imposture.

250. *Chairman.*] I gather from one remark you made that you consider a system of old-age allowances to the extent, say, of £15 or £16 a year to deserving people would not only be advantageous to the old people themselves, but also to the persons who boarded them? Most undoubtedly. They would be a kind of protection, and they would not live in idleness; they would be employed about the homestead in bringing in the cattle or milking the cows, or cleaning up the premises, and they would protect the home while the bread-winner was away.

251. While the husband or bread-winner was away splitting or clearing land or driving there would be some male person at home who would be a protection to the family? Yes; and he would be just as good with a weapon in his hand as an able-bodied man would be.

252. And the money granted to the person boarding the old inmate would be a very great assistance to struggling selectors and farmers in the country district? Yes, if it were only 7s. a week. That would buy a quantity of provisions.

253. *Mr. O'Reilly.*] But we are to clearly understand that these remarks have not a general application to the indigent poor now in the asylums? No. I should say that to begin with the system should only be applied to exceptional cases. The history of each case would have to be investigated before relief was granted.

254. *Chairman.*] Have you given any attention to the American method of dealing with charities? Only as regards the young; I know nothing about their aged poor.

WEDNESDAY, 15 JULY, 1896.

Present:—

Mr. CHAPMAN,  
Mr. MCGOWEN,

Dr. GRAHAM,  
Mr. SCHEY.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Joseph Creer called in, sworn, and examined:—

J. Creer.  
5 July, 1896.

255. *Chairman.*] What position do you hold? Superintendent of the Government Labour Bureau.

256. You have noted the proposals that have been before Parliament for the establishment of a system of State insurance or old-age pensions? Yes.

257. Would you give the Committee the benefit of your advice in that matter? I have not studied the question very closely, nor have I read very much regarding it, although I have given it some thought, having had a large number of old men to deal with from time to time. I am not altogether favourable to

J. Creer.  
15 July, 1896.

a system of pensions. No doubt it would be beneficial for one section of the infirm unemployed, but on the other hand, I do not know that it would do very much good. In a very large number of cases a pension would be put to a bad use, though in other cases there would be plenty of old men who would very well and wisely appropriate a pension for their maintenance in old age. I may say at once that I am not at all in favour of the system of maintaining our old people at present in vogue in the Colony.

258. At the Labour Bureau you did, for some time, administer Government funds in the way of giving relief to the poor? Yes, and we do now to some extent.

259. How do you administer this money? Last winter we had a very large number of men—not only old men, but all sorts of destitute men—working for rations at the Centennial Park. That has, to a large extent, ceased; but we still have from 160 to 170 per week of old men from 60 to 75 years of age, who have families—some of them very young families—unable to do heavy manual labour, and we send them out to the park now, and they get rations for so many hours' work.

260. Did you not also give small sums of money per week to the heads of families among them? No; we gave no money except in the shape of rent, for which they work.

261. And are you giving rent now? No.

262. From your wide knowledge of distressed human nature, having seen a great deal of it of late years, do you think we could work a system of old-age pensions among the class whom you have been in the habit of relieving? A large number of them could be supported by pensions, and no doubt would make very good use of the pensions; but at the same time a large number of these old people, if they got a pension consisting of so much cash per week, would make a very bad use of it. There is a great difference in the style of living and the disposition of our old people. But I think the system of separating old married people in their old days is the most barbarous that could be adopted in any Christian community. If ever there is a time in the life of a married man and his wife when they should be together, it is in their old age. The system I should like to see in operation would be a kind of community of old people, where they would have a large area of good land, attached to which would be a barrack system of small cottages, where the man and wife could live together and work on the land, cultivating vegetables and flowers, and a variety of produce that would be marketable, the returns from which would, to a large extent, go to support the community. The very exercise that these old people would get by a little light work of that nature would be of the greatest benefit to them, and living together in a community like that they would be happy and peaceful, and would enjoy life a thousand times more than they do now, being shut out, as it were, from the world. Under judicious management and good discipline the place could be made very comfortable indeed. With a system of light work, such as I have suggested, the cost per head of supporting them would be less than it is now, owing to the services they would render, and the life they would lead would be much better in every respect.

263. What do you think would be the amount per head required to sustain these old people? It is rather difficult to say; but if you had small cottages with a kind of barrack where they could reside, the cost of maintaining them, in my opinion, would not be much more than from 5s. to 6s. per week—hardly that in a community of old people.

264. Would you prefer to see that system carried out rather than the one that has been suggested of boarding out the old people with families in the country districts and suburbs? Yes, I certainly would.

265. But would not these old people, as they grew more advanced in years, require someone to take care of them? Of course they would require caring for; but one section of the old people would take care of the others. If you had a community of old people living together, as I have suggested, they would form a kind of colony of their own, and the social life among them would be most beneficial. Some of the old people might afterwards be drafted into private families—men, for instance, who would be capable of doing a little work about the house, attending to a garden, cleaning up, and one thing and another. There are plenty of families who would be glad to have a respectable old couple, whose respectability would be proved by the fact of their living in this community, and whose services could be utilised in this way.

266. Would you suggest that they should work as a community, putting all their profits into a common fund for the common benefit? Yes, for the support of the community.

267. Would that not be something like the village settlements which have been tried here and have failed? Yes; it would be on the same principle. But, in the first place, for a community of that kind you should have thorough good land and a suitable site. These old people would not be able to work hard or do very much, but they could do sufficient light work to assist materially in defraying the cost of their maintenance.

268. Did you have anything to do with the village settlement movement that took place a little while ago? Yes; I was on the Board from the commencement.

269. What were the reasons of the failure of those settlements? In the first place, I believe, because the management was bad, and selection of men; and in the second place, because the land was not at all suitable for a village settlement, and too many people were sent to the settlement. The land was most unsuitable; it was not good enough for cultivation purposes—it was badly watered.

270. Is it not a fact that those who have preferred to work an adjacent settlement on an individualistic plan have succeeded? They have succeeded to some extent. I am satisfied that a village settlement on the individualistic plan might succeed, while as a communistic settlement it would not succeed.

271. Still you suggested just now that we should work these communities of old people in that way? But the two cases are very different. These old people would be put there for their own comfort and to assist towards their maintenance. You have to maintain them somewhere and somehow. They would not be put there with a view of making a permanent living, such as you would expect in the case of a village settlement. It would merely be a resting-place for their old age.

272. Would you suggest that in each of these communities there should be a Government representative as manager? Certainly; there should be a manager, and a very good one—a man who would be full of sympathy for the old people.

273. *Dr. Graham.*] What were the village settlements started for chiefly;—were they started to provide a kind of home for the pauper class? They were started for the purpose of alleviating the distress then existing among the unemployed.

274. Irrespective of age? Yes.

275. So that it really was not a method of dealing with the pauper class? No; the object was to try and permanently settle a number of the unemployed—to put them in a position in which to live without Government aid.

- J. Creer. 276. But there was no limit as to age? No; there were very few old men. You might say that they were men in the prime of life.
- 15 July, 1896. 277. And numbers of the men you send out to the Centennial Park are between 60 and 75 years of age? Yes.
278. Have you many of them? We send about 160 or 170 a week.
279. If these men had not that work, would they naturally drift into the poor-house? They would have to live on the Benevolent Asylum or the poor-house. There would be no alternative, because no employer would select them to do heavy work. They are past that, but they can fill a barrow of sand and wheel it, and they are not driven.
280. So that if there was a system of old-age pensions in vogue these men would take the pensions and would not do the work? There is no doubt they would. If they got the pensions they would not work.
281. *Mr. McGowen.*] The maximum number of these old men working in the Centennial Park is 170? Yes.
282. And they are between the ages of 60 and 70 years? Yes.
283. Therefore, they are fit for State pensions? Yes; some of them are 75 years of age, and one or two 80 years.
284. Does the number increase, or is that the limit? That is the limit.
285. Then 170 is the limit you have ever reached? Yes; in the case of the old people—that is, this winter; but last year, when we were sending everyone there, old and young, we had 1,500 odd at times.

Robert Thompson Paton called in, sworn, and examined:—

- R. T. Paton. 286. *Chairman.*] What position do you occupy? I am Government Medical Officer and Vaccinator.
- 15 July, 1896. 287. *Dr. Graham.*] This Committee has been appointed with the view of ascertaining whether it is possible for the State to initiate a system of pensions for people of old age which will, in a measure, do away with the pauper system at present adopted. You have a great deal to do in your position as Medical Officer with receiving destitute people? Yes.
288. You have charge of what is known as the Government Dépôt, to which all sick and destitute people are sent? Yes.
289. How many of these a week do you receive? Last year I think I had something like 9,000 applications by people of both sexes.
290. Chiefly old people? Yes; the majority of them were old people.
291. I believe it is your duty to classify these people, and draft them into the various institutions? Yes.
292. If a man is chronically ill and destitute, where do you send him? He goes on to one of the Government asylums—either Rookwood, Liverpool, or Parramatta.
293. And if a man is purely destitute, without being chronically ill, where does he go? I do not get many of the purely destitute. Most of the people I get are ill as well as destitute.
294. Suppose he was a man over 60 years of age and not able to earn his living, where would you send him—to Parramatta? I would give him a recommendation to the Asylums Department, and they would send him on. I would certify that he was suffering from senile debility—that is, presuming he was old and unable to work.
295. Do you know whether in these asylums to which you send these old people any distinction is made between the sick and the pauper—by way of housing or caring for them? There is a hospital at each asylum—a portion of the asylum which is called the hospital. The class who are very ill are admitted there, and I understand they are seen every day or two or three days a week by the visiting medical officer.
296. I suppose you have often visited these asylums? No; I have only visited the asylums, I think, three times altogether.
297. Of course the mere fact of the chronically sick going to these asylums causes them to be ranked and classified in the returns as pauper patients? Yes, they are all returned as pauper patients.
298. Do you think that is either fair to them or fair to the State;—do you think it is a fair thing for us to publish to the world that we have so many paupers made up in this way;—do you not think that a man whose chief fault is chronic ailment should be drafted off to a hospital, not as a pauper, but as a hospital patient? My opinion is, that if you had some of the institutions with, it may be, greater facilities for attending to the sick, and you called them hospitals for chronic and incurable diseases, that would be a much better way of classifying the inmates than sending them on to an asylum as paupers.
299. It would also affect the returns as regards the number of paupers—subject of course to the definition of a pauper? Yes.
300. As things stand now the way we deal with our destitute sick is that if they are acutely ill you send them to a general hospital in Sydney? If they are acutely ill I send them to the nearest hospital.
301. If they are chronically ill you send them to the asylum? Yes; and if they are acutely ill, but are able to bear the conveyance, I send them to the Coast Hospital.
302. Suppose a man was chronically ill with a disease like cancer, where would you send him to? They have a sort of pavilion in connection with the Liverpool Asylum which is called the cancer hospital. I would certify that he was suffering from cancer, and if it was not a suitable case for operation, I would send him to the Charities Department, and they would send him on to Liverpool.
303. And the same with regard to phthisical cases? Yes; they have another ward at Liverpool where phthisical patients are treated.
304. We are told that these patients are all mixed up heterogeneously with the general run of the pauper inmates;—do you know if that is the case? I understood that it was not so. I understood that the cancer patients remained in one pavilion, and that the pulmonary cases were also treated in a separate pavilion.
305. If a system of State pensions was initiated in this country, the pension being of a reasonable amount, do you think it would in a great measure be adapted to such a case as that of a chronically ill man—that is to say, do you think it would meet his wants without his having to go to a place like an asylum? I do not think so. A man who is chronically ill requires medical attendance, and it would cost more to have him treated in a house than you could reasonably expect any pension to meet.

306. Do you think from your general knowledge of these cases that the pension system would meet a case of senile debility simply? There would be a difficulty in keeping a very old man in any family. For instance, he is often unable to retain his urine and fæces, and he has to be bathed, and so on. I do not know how a very old man, or a sick man, could be attended to in a private-house except at very great expense.

307. You think that is true of the majority of old men and women who are now inmates of the asylums? Yes, it applies to the majority.

308. The great majority? As far as I am able to judge they would not be very desirable in an ordinary family as boarders. I do not think that the ordinary family would go to the trouble of seeing that they were bathed, and that they had their medicine, and so on. They could not do it except for a considerable sum, because they would have to wait upon them.

309. Still you think that there is a type of man and woman who gets very old, and who having a little money, say a few shillings a week, might possibly with comfort be boarded out in that way? Yes; there is a certain percentage of them with whom that could be done.

310. But you think the percentage is very small? Yes.

311. Do you think it is far beyond the mark to say that half the people going into the asylum might well be boarded out under the pension system;—do you think that would be an exaggeration? I only see the sick poor, and from my experience I should say that you could not do that with one-half of them. I should doubt if 10 or 15 per cent. of the people who pass through my hands could be boarded out. As a matter of fact a very large percentage of the people who pass through my hands are alcoholics.

312. *Mr. McGowen.*] Could you state the exact percentage? I could not state exactly; I know a great number of them come to me. When I speak of the number who come to me, I mean applications, not separate persons, because the same man comes perhaps two or three times a year. A good number of those applying have just come out of the asylum. They have been out for two or three days, and when they come to me it is evident that they have been drinking the day before or that morning. I can smell liquor on them, and they do not appear to be absolutely sober.

313. *Dr. Graham.*] Do you think from your general knowledge of these things that any system of relief which carried with it a certain money grant would be just the kind of system liable to be abused by these people, if they had the opportunity? The alcoholics I speak of I am inclined to think would abuse it.

314. That would not apply to all? It would apply to a good percentage of them.

315. As a medical man you know that nearly every system of medical charity is liable to be abused—take the out-patients of the hospitals for example, and the members of benefit societies, and institutions of that kind. Do you not think the same abuse would prevail among old people if a system of old-age pensions were established, irrespective of necessity? It would depend a great deal on what form of application was necessary to obtain the assistance of the Government. If it were easy to obtain a pension and a thing that very few people would know about, I daresay it would be abused.

316. You do not know how the police relieve poor people with money grants? As far as I am aware the police do not give money.

317. The Inspector-General of Police has told us of some fund which he distributes? With regard to what the police do in this matter, I may mention as an illustration that I have only to-day received from them the addresses of two people whom they asked me by telephone to visit, both of whom are described as sick and destitute. I will visit them some time this evening. If they are urgently ill I will send them to the hospital. If they are cases which can be treated in the Coast Hospital, and they can go to the dépôt to-morrow, I shall send them on to the Coast. If they are suitable cases for the Benevolent Asylum, I will inform the Charities Department, and get them to remove them to an asylum.

318. *Chairman.*] And who would remove these people for you? If they are able to be removed in a cab, and they are very sick, I will pay for the cab there and then, and give them a note to the hospital. I carry a lot of forms in my pocket for the purpose. This is what is called an interim order. I fill up one-half and send it to the Medical Adviser, and I give the patient the other half to take to the hospital. That is the cheapest way. If they are not well enough to travel in a cab, I have to get the hospital people to remove them in an ambulance; and if the case is one for the Coast Hospital, we have an ambulance which goes every morning to the Coast Hospital, and I should send the patient in that. If they are fit to go to an asylum they are quite fit to be taken to the station in a cab and sent on. If they are not fit to be taken in a cab that way, I would send them to the hospital—I would not send them to an asylum.

319. *Dr. Graham.*] Do you think it is a correct thing for the State to house chronic sick in the hospital of a poor-house? People who are chronically sick should, I think, be in a hospital something like the Longmore Hospital—a hospital for incurables and for the chronic sick.

320. As it is now they can only go to the Benevolent Asylum? Yes. Another thing I should like to say is, that there are a number of people who will not go to the Benevolent Asylum; they say they would rather die in a hovel or in the streets than go to a benevolent asylum. But if the place was a hospital for incurables and chronic cases I think they would go without demur. They do not like the name of a benevolent asylum.

321. Those are the people who would gladly take a pension? Yes.

322. *Mr. McGowen.*] You know that the average age of the inmates of our asylums for the infirm and destitute is 63 years? Yes.

323. What percentage of these inmates do you think would go to a hospital for incurables? A good number of people go into the benevolent asylums without coming near me; but I should say that the majority of people who go through my hands would go to a hospital for incurables. For instance, I have cases of chronic Bright's disease, the patients are sent to a hospital, and they come out again, expose themselves to the cold, and so on, and they get an attack of uremia. They become very ill, and I send them to the hospital again. They come out again in two or three weeks time, they eat unsuitable food, or become exposed to cold, and they get bad again, and I have to send them on to the asylum. The duration of their life would probably be five or six years, or even longer, and I could not keep them in the hospital all that time. I must send them somewhere, and the only place I can send them to is the Asylum for the Infirm and Destitute. That applies equally to cases of phthisis. The patients get a little better in an asylum; then they come out and are exposed to cold, or over-exert themselves, and have hemorrhage again, and I have to take them into the hospital and keep them there until they are built up a little again, and then I must send them on to an asylum. Sometimes we have a lot of trouble to persuade them to go to the

R. T. Puton.  
15 July, 1896.

R. T. Paton. the institution. They persist in coming out into the street, and it is only a matter of time when they come back to me worse than they were before. Every time they come back they are a little further down the ladder.

15 July, 1896.

324. *Dr. Graham.*] And you think that by sending them to a benevolent asylum you increase the length of their days? Well, we give them a certain amount of comfort, shelter, and food.

325. Do you think they would live long? In some cases they would; but I do not know that those suffering from phthisis would.

326. But kidney troubles? Yes.

327. If these people got a little pension, and lived in their own homes, they would not have even the same comfort that they would get at the Benevolent Asylum? The pension would probably only provide them with shelter, food, and clothing. In addition to these, medicine and medical comforts would have to be provided. Probably the pension would not be sufficient for that purpose.

328. *Mr. McGowen.*] Would all the patients passing through your hands, and whom you now send to Liverpool or Parramatta, be sent to a hospital for incurables if such an institution existed? I do not say that all of them would, but the majority of them would.

329. Would you say 75 per cent.? Yes; I should say about 75 per cent. of all the people who pass through my hands.

330. Then, with regard to the other 25 per cent. who pass through your hands, having regard to what you have said as to the attendance required for these old people, do you think it would be possible to board them out;—you would not send them on to a hospital for incurables if they were still able to move about a bit and help themselves? I get a number of people who would be suitable for the proposed pension system. I get very old men and old women who are bright and cheerful and clean, but some of whom are lame with rheumatism or something of that kind, and are not able to earn their living.

331. You do not think there would be more than 25 per cent. of the cases that go through your hands that could be boarded out? I do not think there would be more than 25 per cent.

332. The persons whom you would send to a hospital for incurables, no matter what their complaint might be, would, I suppose, be utterly destitute? They are all destitute before they come to me. They must be destitute before I can assist them.

333. *Dr. Graham.*] You have been in different parts of the world? Yes.

334. Have you had occasion to observe the method of dealing with the poor in any other part of the world besides this? No, except Scotland.

335. In Japan? No; I do not know how they deal with their paupers in Japan.

336. In China? With regard to China and Japan I was a foreigner there, and perhaps not able to judge very well; but as far as I could see everybody seemed able to earn their own living—how they did it I do not know. There were a few beggars, but not many.

337. *Mr. McGowen.*] Do you know anything about the mode of treatment adopted in the other colonies? No.

338. *Chairman.*] From your evidence I gather that only about 15 per cent. of the inmates of the asylums could be boarded out under an old-age pension system? When I speak of percentages in this connection I wish to explain that I do so entirely from recollection and without professing to be accurate. Allowing rather a big margin, I should say there are from 15 to 25 per cent., not more.

339. You say that only about 25 per cent. of the cases that go through your hands would be suitable to be boarded out under the old-age pension system? That is the case, assuming that under the old-age pension system the old people are to be allowed a certain sum of money, and to be boarded out like the State children.

340. Do many persons get into the asylums without passing through your hands? I have no means of knowing the number; but I fancy cases are sent from the country districts.

341. When the destitute poor or sick are sent down from the country districts, do they pass through your hands? No; only those who make direct application to me.

342. Then there must be a large number in the asylums who do not pass through your hands? Yes.

Edward Maxted, Esq., called in, sworn, and examined:—

E. Maxted. 343. *Chairman.*] What position do you occupy? Manager of the Sydney Benevolent Asylum.

15 July, 1896. 344. Will you make a statement to the Committee showing the amount of pauper relief given at your asylum, and the method by which you deal with it? I will first explain with regard to the unemployed. Of these we have about 943 men on the books, representing 943 families, each averaging five persons. If you multiply the 943 by 5 that will give you the number of individuals of this class whom we are assisting.

345. What relief do you give them? The quantity of food varies. It ranges from twelve loaves of bread to four loaves per week, 6 lb. of flour, 6 lb. of meat, and  $\frac{1}{2}$  lb. of tea. We give also blankets and boots after the inspector has made an investigation and reported that these items are absolutely necessary.

346. *Mr. McGowen.*] The persons receiving this relief have to be absolutely destitute? Absolutely destitute. A visit is made to the neighbourhood, and inquiries instituted as to the character of the persons, and the inspector furnishes a report in each case, which is considered at a meeting of the Committee, who decide whether or not the persons are entitled to relief.

347. You pay rent in some cases, do you not? Not in the case of unemployed families.

348. You say that you make inquiries, therefore, besides being utterly destitute, must not the case be also deserving? Yes; it must be deserving as well as destitute.

349. If the man was in the habit of getting drunk, would you give relief then? If we saw that the conditions of the home were such that it was undesirable for the man or the woman to remain in the house, we would say, "Bring your children down to the institution, and we will care for them there." But that would be a very rare case.

350. *Dr. Graham.*] You offer to assist the children, but what do you do in the case of the man or woman? We report the matter to the police. I cannot, however, call to mind at present where that has been done. The cases we discover are almost without exception deserving cases. Knowing the machinery we have for making inquiries, I do not think an application would be made to the institution unless the case merited relief.

351. *Chairman.*] Are there any cases in which you pay for the rent? Yes; we pay in the case of widows with children, deserted wives with children, and in the case of old age and decrepitude. E. Maxted.
352. What do you generally give? The sums range from 3s. to 1s. per week. Last year they ranged from 5s. to 1s. a week, but the calls upon the Society were so great that the finances would not stand the strain, and we had to reduce the allowance. But in my opinion the relief we give is not nearly sufficient. 15 July, 1896.
353. *Dr. Graham.*] With regard to the so-called unemployed cases, are the persons relieved the families of men who are all physically capable of working? Yes; otherwise we would transfer them to the ordinary list, and call them cases of sickness.
354. Where are the fathers of these thousand families who are destitute, and to whom you give relief? The bulk of them are living at home, but many of them are away looking for work in different parts of the country. Some have been sent away fossicking, and so forth, and some have gone to Western Australia.
355. Are some of these families without a head—without a father? Yes; many of them are without a head at home. But we satisfy ourselves that the man is away looking for work. If he has deserted his family we insist on the wife issuing a warrant against him.
356. Then you do not classify the deserted wife with the purely unemployed;—you say that of the families of unemployed men who are able to work and cannot get it there are 1,000? Yes.
357. Do you think if there had been very many more you would have known of them? We can only speak of the number who apply at the institution.
358. And yours is the chief institution giving relief to the poor and destitute of the city? Yes; the others are comparatively poor and insignificant.
359. *Chairman.*] Will you now give the Committee information concerning the relief afforded by the Benevolent Society to cases other than those of the unemployed of which you have just been speaking? At the beginning of the year there were 211 widows whose old age and infirmities prevent them from doing much work; 264 widows, with 919 children—these will be all young children; 82 deserted wives, with 263 children.
360. *Dr. Graham.*] Unable to work for themselves? These women can do a little washing, but their families are so large that they cannot earn enough to support them, and in these depressed times they cannot find work as they used to do. It is within my recollection that women could formerly get work at washing where they cannot obtain it now.
361. You find a little relief goes a long way with these people? It enables them to keep the children from becoming a burden on the State, and in that way it really means economy to the Government. If the children were maintained by the State it would cost so much per annum for their maintenance, whereas the relief given by our Society, in the shape of a few loaves of bread and 2s. or 3s. a week, enables these women to keep a little home together, with great benefit to themselves and the children. In addition to the numbers just mentioned, there are fifty-eight aged and destitute couples.
362. *Chairman.*] How much a week do you pay to these, or how do you sustain them? We allow them 1s. or 2s. a week, but, in my opinion, it is really work not well done. Some seven or eight years ago, with the honorary secretary of the time, I took up the matter very strongly. I went round to the homes of many of these aged couples, and found that they were living in a very destitute condition. I brought up reports to my committee which led to a deputation taking place to the Colonial Secretary, and finally a number of cottage homes for aged couples were established at Parramatta, as the result of the steps thus taken.
363. What does your institution do for these aged couples? I have a book here which gives some old typical cases, illustrated by portraits. Here is the case of an old woman 93 years of age. She gets two loaves of bread, 1 lb. of meat, 1 lb. of flour, a little tea and sugar, and a couple of shillings a week, and she makes periodical visits for boots and blankets, which we never refuse, because we know the case to be a deserving one.
364. *Dr. Graham.*] How does she pay her house rent? She lives in a room with another family. I think the rent of the room is about 3s., and she makes up the difference, she says, by selling wares—tapes and so on; but I fancy people do not buy them, but give her sixpences and shillings, and she makes up the difference in that way. But, in my opinion, she ought not to be called upon to make up the difference in that way. I think she ought to be provided for.
365. *Chairman.*] What, then, would be the total cost of the maintenance of this woman per week, including the bread and boots and other things you give her? It would run to about 3s. 6d. a week, or £9 2s. a year. I am giving you an illustration of the lowest amount it is possible to support existence upon.
366. *Dr. Graham.*] Would you give us the case of a married couple? Yes; I will take one of the typical cases we have had on the books for many years—a couple called Darby and Joan—very respectable old people. In the ordinary way, if we withdrew assistance in this case, we could not send these two people to the cottage homes for aged couples, because there is no more room there, and these unfortunate people would have to be separated and placed in different asylums, which, in my opinion, would simply kill them, they are so fond of each other. They are both about 70 years of age. The relief given to them at the Benevolent Asylum consists of four loaves of bread, 2 lb. of meat, 1 lb. of flour, and some tea and sugar, and I think they get 2s. a week for both. That comes to about 6s. a week. The rent of their room is 5s. The man does a little bit of cobbling, and earns a shilling or two in that way.
367. Suppose he was too old to earn even 6d., what would you give him then;—would the Society increase his allowance? We should have to hesitate considerably before doing so, because there are such a large number of widows with young children requiring the maximum amount of rent money, viz., 3s., that it would only be in a very extreme case where we should give a married couple 3s. a week, especially in the present condition of our finances.
368. And 3s. a week would not keep them? No.
369. In other words, if this man were really thrown upon your care in dire necessity he would have to go to the Benevolent Asylum? Precisely. The couple would have to go to two different institutions—one to Newington and the other to Liverpool.
370. How many of these cottages are there at Parramatta? I think there are twenty, and they are always full.
371. And they originated as the result of your investigation of certain cases? Yes; I believe that they originated as the result of my investigations, aided by Mr. Josephson, at that time the Society's honorary secretary. 372.

- E. Maxted. 372. And you think it is only a drop in the bucket compared with what should be done? Yes; it is quite inadequate.
- 15 July, 1896. 373. *Chairman.*] What amount would you recommend for a couple like that to keep them in comfort—as a pension? In this particular case, supposing the man did a little work, I should say 5s. a week each. If he paid 5s. for his room, and earned 2s. or 3s., that would leave 7s. Yes, I should say 5s. each under present conditions.
374. Would that keep them in food and clothes? Yes; with the little the man could earn.
375. *Dr. Graham.*] Suppose he could not earn anything, what would keep them? I fancy they could live on 7s. 6d. a week each, or less.
376. And be as well off then as they are now? Yes; in thinking of the old-age pensions scheme, it occurred to my mind that the bulk of the cases would require something like 8s. or 10s. a week to keep them—that is individual cases.
377. With regard to this old man who does a little work, you say that if he got a pension he probably would not do any work;—do you think he would be as comfortably off and as happy? It would be a wrong thing to give him a pension while he had the power to work. You would want an officer to investigate and report whether he was shirking his responsibility. There is no doubt that the pension would be an inducement for him to leave off work at once.
378. But in any system of old-age pensions there would have to be an age fixed, and if he reached that age he would be entitled to the pension? From my knowledge of these cases, I believe it is only human nature that if a man is doing a little work, and you say to him, “I will give you so much a week to live upon,” he will knock off work immediately.
379. *Chairman.*] You think then that from 7s. 6d. to 10s. a week would be sufficient to keep aged persons in comfort, whether male or female? I think 10s. would be ample.
380. That is supposing they were doing no work? Yes; and supposing they did not want a guardian. That is another phase of the question. Many of these persons are, to a large extent, helpless, or comparatively helpless, and they would want a little nursing and so forth. They would require to live with somebody who would look after them, and for this service payment would have to be made. We have many people receiving assistance from our Society who really should be in an institution. But they refuse to go. They regard an institution in the light of a prison, in which they are deprived of their liberty. We have refused them assistance, and have said, “No, you are not fit to be about; there is nobody to look after you; we will give you no money or provisions; you must go into an institution.” They go in and they come out again, and rather than force them back into the institution the committee reluctantly make them an allowance. In these particular cases it is necessary in their own interest that they should have a custodian—practically be boarded out.

THURSDAY, 16 JULY, 1896.

Present:—

Mr. CHAPMAN,	Mr. McLEAN,
Dr. GRAHAM,	Mr. O'REILLY,
Mr. MCGOWEN,	Mr. SCHEY,
Mr. WILKS.	

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Edward Maxted called in and further examined:—

- E. Maxted. 381. *Chairman.*] Do you wish to say anything with reference to the evidence you gave yesterday? Since putting forward a statement as to what I thought would keep old people I have thought well over the matter, and I have a few remarks to make, if the Committee would care to hear me. In my opinion the maximum pension to a single person should be 10s. per week, and the minimum pension 4s. a week. For aged couples I think the maximum should be 12s. 6d. a week, and the minimum 4s. These amounts should be graded from the maximum in accordance with the circumstances of the pensioners—their conditions of life, and their ability or otherwise to do a small amount of work. The pensions should be granted to aged men and aged women who are capable of attending to themselves in such homes as they might select. Those who are capable of attending to themselves would be in a comparatively independent position, and I think they might be allowed sufficient liberty to select homes for themselves. Pensions should also be granted to old men and women who are not capable of properly caring for themselves, and who need custodians—who need to be boarded out in the manner adopted in the case of State children. In these cases the pensions should not be paid to the people themselves; they are not capable of controlling their affairs, and the pensions should be paid to the guardians. In the case of aged couples pensions should be granted, as in the case of aged single men and single women, on the lines I have previously referred to. All the pensioners should be subject to State supervision, so that the pensions should not be misapplied, and as a precaution against intemperance, and the State should see that the money is expended in the maintenance of these poor people. For instance, at the Benevolent Asylum, when we give a person a few shillings a week for rent money, if we did not exercise supervision that rent money would not be paid to the landlord, but would be misapplied. Therefore, to protect ourselves, we insist that each person who receives rent money shall obtain a receipt from the landlord, showing that the money goes to the object intended by the Society. Aged persons who are hopelessly diseased, and who need constant medical supervision, should not be given pensions at all, but should be wholly maintained within asylums.
382. *Mr. O'Reilly.*] With reference to State inspection, do you propose something similar to that accorded to the boarded-out children? Yes, precisely upon those lines, and the lines adopted by the Benevolent Society. A Board should be appointed, with a staff of inspectors, and a report should be brought up from time to time as to the conditions under which these people live—whether they are living happily, and in accordance with the pension scheme generally.
383. And the total charge of supporting the old man or woman would have to come from the maximum of 10s. a week? Precisely.
384. Do you wish that the agreement between the pauper and the householder should be capable of being destroyed, either by the householder or the old man, at will? For instance, the old man has a quarrel.

quarrel; he will not chop wood on some cold morning, and he decides to take his swag and clear out;— is he to be at liberty to do that? If up to that stage his mental condition would warrant the severance of the agreement on his part, I should say decidedly. But in the case of persons of a weaker mental condition, who are incapable of judging for themselves, I think the Board or some other controlling influence should decide for them. E. Maxted.  
16 July, 1896.

385. *Chairman.*] How are the funds administered by the Benevolent Society raised? We have voluntary contributions from the public. Our income last year was £10,000 from all sources. The ordinary subscriptions from the public amounted to £800. Then I issued a special appeal, entitled "A Thousand Children in Need of Food," and we realised £2,500. This will become a permanent source of income, and I think we shall obtain that much again this year. Then there is interest on old invested sums, and there is a sum of £2,500 special subsidy from the Government towards our system of relief. The balance of our income is made up of sundries.

386. Is that the ordinary subsidy from the Government, or a special subsidy for this year? It is a special subsidy, which has been granted now for a few years.

387. In addition to that the Government gave you £2,000 a little while ago? Yes; but that was for the unemployed only. I am only now referring to the ordinary cases. That £2,000 was exclusively for the purpose of affording relief in connection with the unemployed, and a separate account is kept showing how the money is expended.

388. Referring more particularly to the usual operations of the Society, and putting that £2,000 out of sight altogether, what is the ordinary expenditure of the Society every year? The expenditure last year was £9,854.

389. And you relieved men, women, and children in distress in every part of the city? We do not relieve able-bodied men, except under this new arrangement with the Government. We relieve indigence in the form of old age, in the form of widows and orphans, and deserted wives and children. If a man is able-bodied we consider that our funds will not warrant assistance being given in such a case; but the applications recently were so numerous, and the cases appeared to be so distressing, that we made representations to the Government, pointing out these applications and the apparent distress, and the Government granted us the £2,000.

390. And that £2,000 you administered to the unemployed? It will all be exhausted in about four or five weeks' time.

391. *Mr. Chapman.*] Do I understand that you are expending that £2,000 along with the ordinary funds, or do you deal with it as a special fund for the maintenance of these adult persons? We are keeping an entirely separate account.

392. And it is really being expended to help the male adults who are in distress? To help the wives and children of the male adults. If a male adult were alone we would not assist him.

393. But if he was a married man with a wife and children, you would help him out of that fund? Yes.

394. At about what rate per week have you been expending that fund? From the 20th February to the 30th June we have expended £1,200, but the number of cases is increasing week by week.

395. I suppose you have a great number of applications—far more than you can deal with—in connection with that fund? No; we have never refused a case yet. Of course we have money in hand, and it would not be right to do so. When the money is gone we shall have to refuse.

396. But suppose you had a larger sum at your disposal—suppose the Government had given you £4,000—would you not have expended it much quicker than you have expended this money, and would you not have relieved more people? No; because the Society considers that the amount of relief given is sufficient to stave off suffering without pauperising; and, in my opinion, if they had more money no more relief would be given.

397. *Chairman.*] How is your Society managed? By a Board of Directors appointed by the subscribers at the annual meeting. Some of the directors are very old members.

398. Does the Government exercise any supervision or control over your institution? A Government officer comes round from time to time and checks the maintenance accounts.

399. But the Government have no voice in the management? No.

400. *Mr. Wilks.*] You stated just now that you would recommend that the maximum pension for a single man should be 10s. a week, and the minimum 4s.;—what is the reason for such a marked difference between the maximum and the minimum? The reason is this: A man who is absolutely helpless, and can earn nothing at all, should not be in the same position as a man who can do some work and earn something for himself. I cited a case yesterday of a man who could earn a few shillings a week by doing a little cobbling, and so forth. I think it would be very improper to give that man 10s., as against an absolutely helpless man, on the simple ground that he can work, and, if you give him 10s., he will leave off work.

401. If a man is absolutely helpless, why not place him in an asylum? Certainly, if he is absolutely helpless he should be placed in an asylum. Perhaps I should not have said absolutely helpless. What I mean is one man has less capacity for earning money than another man. One man is capable of earning more than another, although the amount may be small, and, therefore, I think a larger amount should be given to the man least capable of earning. I should have said that if a man were absolutely helpless, and required constant medical supervision and nursing, he should go into an asylum.

402. And with regard to a man of weak mental condition, would you also place him in an asylum? Yes.

403. In answer to Mr. O'Reilly, you said that you would give one of these old men freedom of will to break off his agreement with a householder? If he had sufficient mental power to look after his affairs, I should give him that freedom.

404. And if he had not the mental power, he would not be in a private home, but he would be in an asylum? Precisely.

405. *Dr. Graham.*] Are there any other branches of work carried on by the Society besides that of pure benevolence? It is a reception-house for destitute children, and for destitute women with children, and it is also a lying-in hospital.

406. *Chairman.*] Do not the Government give you some funds to pay for the expenses of some of these people? They make an allowance per head in accordance with an arrangement made in 1862.

407. The buildings belong to the Government, do they not? The whole of the grounds and the buildings belong to the Society.

- E. Maxted.* 408. Were they purchased by the Society? There was a grant by Governor Macquario in 1819. The history of the Society dates back as far as 1813.
- 16 July, 1896. 409. But originally the buildings were erected by the Government? They were erected by the prisoners for the purpose of an asylum for the poor, blind, aged, and infirm. An inscription to that effect is still over the door. In 1819 the buildings were transferred to the Society.
410. Then it is one of the oldest organisations in the country? I think it is the oldest.
411. And the Society has been carrying on its operations ever since that date? Yes, without intermission.
412. And since 1819 have you worked upon the same system as that now carried out? Not precisely. Up to 1862 the Society sheltered old women and old men, but in 1862 the old women were transferred to the Hyde Park Barracks, and subsequently to Newington, and the old men were sent to Liverpool and Parramatta. Since 1862, when there was a new constitution, the Society has carried on out-door relief and lying-in work, and has been an asylum for the reception of destitute women and children.
413. And for the assistance you give in lying-in cases and other cases the Government make you some consideration? Yes; they make an allowance.
414. An allowance equal to defraying the whole of the expenditure of the Society? Sometimes it is equal, and sometimes we have a loss.
415. *Mr. O'Reilly.*] I think the sole purpose of this Committee is to discover, if possible, some method of dealing with absolute paupers. You suggested just now that the minimum weekly assistance of 4s. might go to a man who, for instance, could do a little cobbling or other work, but who did not rank with the average worker in his particular trade? Yes.
416. If you once admitted any class who could work, and were capable almost of supporting themselves outside of Government assistance, would not the effect be to enormously enlarge the scope of the old-age pension scheme? I should think it would reduce the expenditure.
417. But increase the demand? It might increase the demand, but I should think it would decrease the expenditure, because, instead of giving 10s. in every case, you would only give 4s. in these particular cases. There are some instances where the 2s. or 3s. a week and the few loaves of bread which we give to these old people are sufficient. In such cases I would not give them 10s., because they would not want it.
418. *Chairman.*] But would it not increase the number of persons who would get old-age pensions if you departed from the idea that the pension should only be given to those who could not work;—would not the scheme then become too burdensome and expensive? There is that possibility, I daresay.
419. *Dr. Graham.*] How would you regulate the amounts you proposed to be given to these old people according to the various grades of strength? Only by careful investigation in each case, and by reports from the inspectors as to the conditions of life of these people, the same as is done by the Benevolent Society at the present time. For instance, the Committee will say, "We will give 3s. to this old man. To the next one we will give no money, but simply food"—the difference being determined by the conditions of life.
420. *Mr. Wilks.*] Have you given any consideration to the question of invalidity, and from your experience can you say whether there is a large percentage of malingering or imposture? Only two or three days ago I was speaking to the inspectors with reference to this point, and they could give no authoritative opinion, beyond stating that the percentage of imposture was extremely small. I think the reason is that people know that if they apply to the Benevolent Asylum their homes will be inspected, and if there is any imposture it will be discovered.
421. And the percentage of such cases is small? Very small indeed; but I believe it would be large if the inspection were not good.
422. And the percentage of impostors in the case of sickness is equally small as in the case of destitution? Of course it is easy even for a layman of experience in our work to deal with a sick person, but if we have any doubt—of course in seeking assistance at the asylum they would have to be very much enfeebled—we make them get a certificate from a doctor.
423. *Mr. McLean.*] Have you any way of discovering whether the cases that go up for relief at the Benevolent Asylum are dealt with by the district benevolent societies that are in existence in the suburbs? During the last month or two a large number of these small societies have sprung up in the different suburbs. I sent round a few days ago a circular letter to each of the twenty-three minor charities asking for a list of the names and addresses of the persons who were receiving relief, and we are comparing those with the names on our books. But in the case of the larger organisations—say the Charity Organisation Society, which is the largest, next to our institution—the returns are compared every month.
424. But there has hitherto been no method of checking these cases that have been relieved by the district benevolent societies? No; not in the case of the smaller societies.
425. But you are now endeavouring to prevent any overlapping? Yes.
426. *Dr. Graham.*] Your institution practically dispenses the bulk of the charity? Yes; the others are comparatively unimportant institutions, with two or three exceptions.
427. Suppose a system of old-age pensions were introduced by the Government, do you think the machinery available at the Benevolent Asylum would be sufficient to work such a system? Yes, I should think so, with additional assistance. In putting forward my idea that an old-age pension scheme is desirable, I am to some extent recommending that I should lose part of my occupation, because if this work were undertaken by the State we should not have to do it at the Benevolent Asylum, so that it is really an honest conviction that I hold.
428. Have you found within recent months that the calls upon your relief have been very much increased? The ordinary cases have increased at least 20 per cent. within the past seven or eight months. With regard to the unemployed, we started with half-a-dozen in February, and now we have between 900 and 1,000 families.
429. *Mr. McLean.*] Do you think the publication of the fact that large sums of money have been placed at your disposal by the Government has anything to do with increasing the number of claimants upon your funds? I could not say that it has increased the number of claimants, but I know that every home is inspected, and absolute destitution discovered before relief is administered.
430. But have these claims quickly followed? No; we watched that carefully, and we discussed it amongst ourselves. We said, "Now the statement has gone forth that £2,000 has been granted by the Government,

- Government, and we shall be overwhelmed at the next meeting." But the increase came gradually from week to week, until it worked up to the present number.
431. *Mr. O'Reilly.*] You had half-a-dozen cases you say in February? Of course we had to make a start, and we started with a few.
432. *Dr. Graham.*] But those persons whom one sees round the door of the asylum—do you not think the bulk of those cases have arisen from the time that statement was made? I do not think so.
433. In your opinion there is no relation between the two things? I would not like to say that. I can only say that the destitution exists in the homes. I do not think the people would have suffered without applying, even if there had been no statement as to a Government grant.
434. I noticed round the door to-day, for example, a great many men of the type whom you would expect to be working-men, who have not reached a decrepid age—men of 30, 40, and 50 years of age? Those are the unemployed cases. Those men are capable of work. What we call an unemployed case is a man who is capable of work, but cannot get it.
435. On the other hand, you have a great many old decrepid people too? We pass them on to what we call the ordinary list.
436. *Mr. Wilks.*] Do you not think that the rush of unemployed to your asylum was caused, to a great extent, by the Labour Bureau closing down upon them some two or three months ago? No doubt that had a great deal to do with it.
- 436½. They have simply transferred their operations from the Labour Bureau to your asylum? No doubt that has a great deal—a very great deal—to do with it.
437. *Dr. Graham.*] Did the Labour Bureau give them rations last year? They used to work for rations in the Centennial Park, and then the Park was closed. Of course, if the Labour Bureau had continued its assistance we should not have undertaken these cases. We should have said, "Go to the Labour Bureau, where you can get work, and food in return." But the Labour Bureau having closed, and the people being left in destitution, they come to our place.
438. Is a careful history kept of the inspectors' reports as to the condition of the homes of those who have applied for relief? Yes. We have a comprehensive report in every case.
439. Does the sum total of the thing reveal a serious state of things? Yes. Some of the homes are in a wretched condition, the inspectors tell me, with regard to want of bed-covering and boots, and want of sustenance.
440. Is there anything like systematic overcrowding in the homes? No; I do not think so.
441. Five or six children in a room, or anything of that sort? Not to any great extent, I think.

Mr. Robert Anderson called in, sworn, and examined:—

442. *Chairman.*] What position do you hold in the Highland Society? I am Vice-President.
443. In connection with that Society they work a pension system, do they not? Yes; it has come to that now.
444. *Dr. Graham.*] Are you also a director of the Benevolent Asylum? Yes.
445. So that, apart from the Highland Society, you have a good deal of experience in connection with the charitable work of the city? I am on the House Committee of the Benevolent Asylum, and I have been attending for two days a week for a long time.
446. The Highland Society have a benevolent fund at their disposal? Yes.
447. And they have had so for some years? For nearly fourteen years.
448. This fund is raised by subscriptions among the members? Yes, and also by what we make on New Year's Day in connection with the sports and concert.
449. To what purposes is this fund devoted? When we started we gave a good deal of relief to unemployed and others, but when I was honorary secretary I recommended that, seeing that we could do but little, we should devote our funds almost exclusively to the relief of aged and infirm widows who had seen better days, and were destitute through no fault of their own, and it is on those lines that the work is now carried on. I may say that we also assist widows with young children, and some aged and infirm men.
450. How many are there on the list? I think there are about twenty-seven at present; the number varies.
451. Are they all widows? No; there are two or three men.
452. Are there any married couples? There is one married couple, but assistance to them will soon be discontinued. The man is suffering from some incurable internal complaint, and has been twice operated upon at the Prince Alfred Hospital. Our funds are rather low, and I intend to try to get him assisted by the Benevolent Asylum.
453. What is the average age of these people whom you assist? From 60 to 87 years.
454. What weekly allowance do you give them? We have not been giving more than 20s. a month. It is now from 10s. a month to 20s.
455. How do these people come to you? They are generally brought under the notice of some member of the council in some way or other. Members of the council take charge of cases and visit them, and so forth. For example, I have six under my care.
456. Do you find that systematic aid given by the Society a great service to these people? A very great service. I may mention, in illustration, a case of one old woman 80 years of age, and who, I may say, is a daughter of a major-general of the British army. Seeing that she was getting very feeble, I asked her a few weeks ago if she would require more assistance, because I thought I could get her something from the Benevolent Asylum, but she told me she could manage very well with, perhaps, some little assistance she got otherwise, and she told me she could live comfortably on 2s. 6d. a week. That is what it actually costs her for her food. She is living in St. Peter's-lane, Woolloomooloo, where she has a room.
457. Is she able to attend to herself? Yes, at present; but she is now getting very feeble.
458. What does she pay for rent? Three shillings a week.
459. And what does the Society give her a week? We give her £1 a month, and she gets some little assistance from private sources.
460. So that what you give her does not actually keep her going? No; it is supplemented to a slight extent by private charity.
461. So that 5s. a week does not keep her? No; it would not keep her.

- R. Anderson. 462. From your experience, what sum do you think would be sufficient to keep an aged and infirm person with reasonable comfort? That is a matter to which I have paid a good deal of attention, and I should say about 10s. a week.
- 16 July, 1896. 463. *Chairman.*] How do you raise the funds of your Society? By our annual subscriptions and by our Highland Gathering and Concert on New Year's Day.
464. I suppose you devote a portion of the proceeds of the Gathering and Concert to this fund? We devote it all to the fund. Our only expense consists in the rent of a room and £26 a year paid to a secretary.
465. The net profit goes to sustain these widows and poor people? Yes.
466. *Dr. Graham.*] How much a year do you spend in that way upon them? About £300 a year. At the end of this year we will have spent about £3,500 from the time we started.
467. And you are able to relieve twenty-seven people by the expenditure of that sum? Yes, about that number.
468. *Mr. O'Reilly.*] Partial relief? Yes.
469. And do you think that 10s. a week is the lowest sum that would keep one of these old people, including clothing, food, and board? That is if they were not capable of doing anything, and were entirely helpless. But I have no doubt that some of them could be maintained for less—some of the old people, for example, who live with their children, and for whom it would only be necessary to pay for food and clothing. In this respect it would be, as it were, a domestic education to have the old people living with the family, instead of in one of these gaols, as I call them, and which I think is the proper name for them.
470. *Dr. Graham.*] Have you any case in your mind's eye where you found some people willing to take charge of an old man or old woman on condition that you guaranteed them a few shillings a week? Yes; I know several cases where that could be done.
471. *Mr. McGowen.*] Do you know where it has been done? We have not the funds to do it; but I know some in my own neighbourhood at Marrickville who would be prepared to take in these old people, highly respectable persons.
472. *Mr. O'Reilly.*] On what terms? They would keep them for 10s. a week, I am sure.
473. *Dr. Graham.*] And this old woman you speak of in St. Peter's-lane—suppose you allowed her 5s. a week, and she was not able to do anything at all for herself, do you think you could house that woman with any respectable family for that sum? Not for 5s.
474. For what sum then—10s.? I am stating what we are able to give; I am not saying that it is enough. I should say 10s.
475. *Mr. McGowen.*] What does she get for the 3s. rent—only one room? Yes; but she has the use of the fire.
476. Would it be possible for two of them to club together? Yes; and that is what I expect would be done if this system were in operation. Two could live in a room together, and they could certainly live very comfortably for even less than £1.
477. You said it only cost the old woman of whom you spoke just now 2s. 6d. a week to live? I merely mentioned that case for the information of the Committee. She said she could live on that. But there are not many such cases, I think.
478. *Mr. Wilks.*] That 2s. 6d., I presume, would only cover the food supply, and would not include the clothing? That is so.
479. *Mr. McGowen.*] Where a couple occupied one room, as suggested just now, paying 1s. 6d. a week each rent, and being in receipt of 5s. each, there would be left a sum of 7s. a week to feed them, or a balance of 3s. 6d. each, instead of 2s. 6d.? That is so.
480. *Chairman.*] Is this relief given to persons other than those of Scottish birth or descent? We do not inquire into the nationality, because we appeal to the people at large on New Year's Day. They are chiefly of Scottish birth; but there are others, and we never inquire their religion or anything of that kind.
481. I suppose they are recommended by members of the Society? Yes.
482. *Dr. Graham.*] Do the people whom you relieve get aid from any other charitable source? There is one old couple who get £26 a year from the Freemasons' Benevolent Fund, beside the £12 a year we give them.

George Henry Marsh called in, sworn, and examined:—

- G. H. Marsh. 483. *Chairman.*] What position do you occupy? Honorary Secretary of the Freemasons' Benevolent Institution.
- 16 July, 1896. 484. *Mr. McGowen.*] Can you inform the Committee the method adopted of relieving the poor in connection with your benevolent institution? In connection with Freemasonry we have what is called the Grand Lodge Board of Benevolence. All Freemasons are taxed 4s. per head per annum to support that fund. There is a Board appointed by the Grand Lodge, which meets once a month, considers all cases brought before it, and grants temporary relief to the extent of £20, or recommends the Grand Lodge to increase it to £50. In the case of an aged Freemason, a man over 60 years of age, a lodge is able to bring such a case from the Board of Benevolence on to our Freemasons' Benevolent Institution, which is separate altogether, and is supported entirely by voluntary contributions from the craft. Our committee meet to consider the case, and if they think it good enough they grant from 10s. to 20s. a week—mostly 10s. a week. At the present time we have sixteen annuitants, from 60 to 87 years of age. Our institution is only four years old. We started with £1,400, which we got from an old source, and which had been lying in the Bank for many years, and we now have £3,500. We are working to build up a fund of (say) £10,000, and then we hope to be able to launch out and do a large amount of good for aged Freemasons and their wives and widows.
485. *Mr. O'Reilly.*] Do you consider that 10s. a week is sufficient to keep them in comfort—an old couple? Yes, if they are able to live with relations or friends, who will look after them.
486. And is that the case with these? Yes; in nearly every case we have arranged for the old people to live either with a grandson, granddaughter, or other relation, or with some friend.
487. *Dr. Graham.*] Are there any cases under your supervision where the old people have to live entirely by themselves, supported entirely by the money you give them? No; I think in every case they live with

with someone who is looking after them. They are not entirely away from friends, as far as I can remember. G. H. Marsh.

488. *Mr. O'Reilly.*] That is to say, you are putting into practice the system we would like to see practised by the State? Yes, I believe so. 16 July, 1896.

489. *Mr. McGowen.*] The old couples are really boarded out at the expense of the Freemasons' Benevolent Institution? Yes.

490. Amongst friends? Yes; friends or relations—some one who will guarantee to us that they will look after them. In Sydney I go round and see these people periodically, and see how they are getting on. In regard to cases sent down from the country, I will give one as an illustration. There was an old Freemason at Kempsey; he had been a Mason for many years, and his age was 69. He suddenly became paralysed, and total blindness ensued, and he was unable to move. His lodge voted as much as they could raise—I think it was £10. It was only a small lodge in the country. They then applied to the Board of Benevolence, and they granted £20, which was sent up at the rate of 10s. per week. It was sent to the master of the lodge there, who looked after this old brother, and paid the 10s. a week towards his support. He was living with friends, and as soon as that £20 was done our institution was able to come to the rescue: otherwise that old man would have had to be sent into a Government asylum. But our institution stepped in and gave him 15s. a week for nine months, when he died. We guaranteed to keep him until his death.

491. *Mr. O'Reilly.*] Are you able to tell us the annual sum voted by your institution for this purpose? Last year we gave £277 away amongst eighteen people. Two have died recently.

492. And your revenue has always exceeded your expenditure? Yes; our revenue last year was £536, after giving away £277.

493. *Dr. Graham.*] Then your aim is to get a fund the interest of which will keep you constantly at work? Yes. We have £3,500, and we are not launching out now, but hoping to build up the fund until we get £10,000, and then we will work on the interest of the money, as well as the annual subscriptions. Up to the present time we have never used any of the interest, but have been adding it to the principal. When we raise £10,000 we hope to launch out and do more than we are doing now.

494. *Chairman.*] In addition to this fund, does the Masonic order dispense other relief? Our Grand Lodge Board of Benevolence gave away over £1,100 last year.

495. *Mr. McGowen.*] But the relief in that case was not in the nature of a pension, such as that administered by your benevolent institution? No; it was simply for temporary relief. The relief afforded by our benevolent institution is in the shape of a pension pure and simple, and the work is voluntary. It is supported entirely by voluntary contributions, and the committee please themselves as to who shall be assisted.

496. *Mr. Wilks.*] Have you any homes here? No. We do not believe in asylums. We hope eventually to have a cottage or two, where we can keep two or three old couples who have no friends; but we do not want to go into that, because it means expense. The work in which we are at present engaged entails no expense at all. There is no office rent, no secretarial pay, and nothing at all is charged besides the stamps and stationery.

497. *Mr. McGowen.*] I suppose there have been applicants whom you have had to refuse? Yes.

498. What percentage have you refused? During the year, which commenced with twelve annuitants on the books, nine applications for annuities were received. Of these, six were granted, two were postponed, and one was refused.

499. Practically then you have only refused one case? Yes, last year; but I think the year before there was a case.

500. Yet you say you want to launch out to a greater extent when you have only refused one application? We know that many lodges refuse to send cases on to us because they are hoping that we may build up this fund. They are endeavouring in country places to look after their own old people, rather than come upon us, in the hope to see this fund grow.

501. Do the lodges in the country grant pensions? No; only temporary relief.

502. As a matter of fact then there are legitimate cases for this fund with which you are unable to cope at the present time? Yes; if we took every case that was sent to us I suppose it would be so, or if we invited cases.

503. *Mr. O'Reilly.*] But the country lodges by affording temporary assistance relieve you considerably? There are cases where they have written to me saying they would like to put so-and-so on our books, but they would continue to help him for the present until we could build up this fund upon a firmer basis.

504. *Mr. McGowen.*] And practically they keep that person? Yes.

505. *Mr. Wilks.*] Do not suburban lodges vote fairly large sums of money for their own destitute that you hear nothing about? Yes.

506. *Chairman.*] With regard to the pensions you grant, have you any complaints from the recipients as to the insufficiency of the amount? No, none whatever.

507. Does the money keep them in clothes as well as food and lodging? Yes; we have never had any complaint. Of course they know it is purely a voluntary matter, so far as we are concerned, and that if they complained they might lose the pension altogether.

508. And the average is 10s.? Yes.

509. For the individual? Yes. There is an old couple at Waverley who live with a great granddaughter; they get 10s. a week between the two of them, and the Highland Society gives them 4s., and that keeps them comfortably. The great grandson could not afford to keep the old people unless he got something from an outside source. If it were not for our fund that old couple would be in an asylum, and would be separated. The old man is 87 and the old woman 85 years of age, and they have been married for over sixty years.

510. *Dr. Graham.*] If they had to live by themselves, could they live on the money you give them? No, I do not think so, because they are too infirm. They could not do anything for themselves at all.

511. Have you any standard of decrepitude that entitles these people to apply to you for aid;—do you fix any age? No; the committee have great discretionary power, and are guided by the circumstances of the case.

512. What usually are the circumstances—old age and inability to work? Old age, inability to work, and infirmity. The committee are guided by the circumstances as placed before them.

- G. H. Marsh. 513. *Mr. Wilks.*] What is the average age of the applicants? Over 60; we rarely deal with any case under 60.
- 16 July, 1896. 514. *Mr. O'Reilly.*] As a matter of fact, these pensioners could not be kept at the cost mentioned without the affectionate assistance of the people they are with? That is so.
515. It is not remunerative on the part of the persons to take these old people? I think that 10s. a week pays them well enough.
516. You think it covers the expense of clothing and food? In the case of a single man or woman, but not in the case of a couple. We have some single cases where we do not give as much as 10s., but only 7s. or 8s. They are people, however, who do something for themselves as well. In most cases the sum given is 10s., but we have power under the rules to give husband and wife up to 25s. a week.

Alfred Davis called in, sworn, and examined:—

- A. Davis. 517. *Chairman.*] What position do you hold? Registrar of Friendly Societies and Trade Unions and Actuary to the Public Service Board.
- 16 July, 1896. 518. With what Department are you connected? The Chief Secretary's Department. It is a sub-department.
519. What are your duties in connection with Friendly Societies? To register the rules, and make an examination to see whether they are in conformity with the law, and to receive the annual returns and tabulate them.
520. Have you any knowledge of the operation of these societies? Yes.
521. Do you know if any of them besides the Highland Society and the Masonic body maintain a pension system? Yes; nearly all of them.
522. *Mr. McGowan.*] And the amount ranges, I believe, from 6s. to 5s.? Yes; and from 7s. 6d.
523. *Chairman.*] Can you give us any definite information as to the amounts paid and the method of distribution? No, I cannot.
524. *Mr. O'Reilly.*] Could you give us an idea of the annual income of all these Friendly Societies? I could obtain that information.

WEDNESDAY, 22 JULY, 1896.

Present:—

MR. O'REILLY. | MR. SCHEY.  
E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Alfred Davis called in and further examined:—

- A. Davis. 525. *Chairman.*] Have you prepared any information for the Committee? I hand in a list of the names of the principal Orders, and particulars of the sick and funeral benefits which are offered under their rules. [*Appendix E 1.*] There are a number of miscellaneous societies which have not been included. I also hand in a statement showing the position of the various Orders at the end of 1893, giving the receipts and expenditure for the year, and the amount of funds at the beginning and end of the year, and also the number of members. [*Appendix E 2.*]
- 22 July, 1896. 526. *Mr. O'Reilly.*] What is the annual expenditure of all the Friendly Societies? £227,000; the amount paid by way of sick allowance being about £57,500.
527. What is the total number of subscribing members of the societies? 63,433; and the total amount of their funds is £486,547.
528. *Mr. Schey.*] Does the return you have handed in distinguish between societies that pay a superannuation benefit and those that do not? No.
529. You are aware that some of the societies pay a superannuation benefit and others do not? In some of the societies there is what is called a superannuation fund. If a person is desirous of getting upon that fund he has to make application. He is then allowed so much per week from the fund. But it is at the option of the lodge—he has no right to it.
530. Taking a society, a copy of whose rules you have before you—the Manchester Unity Lodge of Odd-fellows—you do not say of your own knowledge that a member has to specially apply to become a participator in the superannuation fund? In the Manchester Unity the sick-pay is continued during the whole term of life.
531. You mean the liability to pay sick-pay continues during the whole term of life? Yes.
532. Is it not a fact that in cases of incapacity which cannot be remedied they draw a distinction between sickness and incapacity, and in cases of incapacity they allow a pension of 7s. a week; according to those rules they would not come under the head of sick-pay;—that is what is called a superannuation allowance, is it not? The Manchester Unity rules in this Colony have no provision for a superannuation fund. It is simply a continued sick-pay. The lowest rate of sick-pay—I think it is 7s. 6d.—is continued during the remainder of the illness.
533. Do you know anything of the Order of Royal Foresters? Yes.
534. Have they not a superannuation fund? In the case of societies that have superannuation funds, a man will be put on the fund if the district officers at their meeting choose to put him on the fund. If they do not want him to be on they need not put him on. He has no legal claim.
535. It is at the option of the members in every case? Yes.
536. It would be very useful if you could show us the societies that have a superannuation fund and those that have not, and also the conditions prescribed before incapacitated members can take advantage of a superannuation fund? In the Ancient Order of Foresters the sick-pay for six months is 21s., and for the next six months 10s. 6d. After twelve months of continuous illness the member can then be placed on the superannuation fund. But he must make an application for it—he has no legal claim. He can claim his sick-pay.
537. Is it not a fact that every one of these Friendly Societies recognises a claim for sick-pay so long as the sickness may last at the lowest scale of pay? That is virtually superannuation.
538. But is it not also a fact that some of the societies continue the sick-pay, and others have a special rule providing a superannuation fund, on which a man may go if he is not sick. To claim sick-pay from

a Friendly Society a man must be ill and receive a doctor's certificate. There are many members who are not ill, and do not want a doctor's certificate—they are merely incapacitated;—do not some of the Orders provide for that condition of incapacity? Most of the rules are to the effect that if a man is incapacitated from following his usual occupation he shall draw sick-pay. He need not necessarily be sick, but unable to follow his usual occupation. There is a great deal of laxity among them no doubt. If a man is a favourite in his lodge he will be put on, and another will not be.

A. Davis,  
22 July, 1896.

539. *Mr. O'Reilly.*] You stated that the total number of subscribing members in these societies is about 68,000? Yes.

540. Of that number, how many do you think are over 60 years of age? I have no mean of ascertaining.

541. Do you not think that these Friendly Societies relieve the Government of a large amount of responsibility that would otherwise devolve upon them? Decidedly so.

542. And in the event of a pension system being introduced, is it not likely that a large amount of work now done by the Friendly Societies would devolve upon the Government? I do not think so, because it appears to me that the chief reason for people joining Friendly Societies is for the sake of obtaining cheap medical attendance and medicine.

543. *Mr. Schey.*] And pay while they are sick? Yes. The chief thing is the cheap doctor, and, of course, they would never get that under a pension system.

544. In reference to the answer you have just given to Mr. O'Reilly as to the ages of the members of the Friendly Societies, is it not a fact that when Mr. Coghlan was Registrar of Friendly Societies he went into actuarial calculations in the case of a number of the societies, and practically compelled them to raise the rates of contribution, because a certain proportion of the members were of considerable age? No; the scales of contributions are calculated in exactly the same way that the rates of an insurance office are calculated. It has nothing to do with the average age of the members of the society.

545. But did not Mr. Coghlan make a special calculation, and point out to some of the societies that their scales were too low, bringing into view the fact that they had been established a number of years, and that consequently a number of their members were of advanced age? The rates do not depend upon the number of people in a lodge of any particular age, but on the actual ages. It would not matter if there were a number of people of the age of 60 in a lodge, or if there was only one in the lodge. Each one of that age would have to pay the amount that is calculated. It is immaterial whether there are a number of old people or a number of young people in the lodge if a properly graduated scale of contributions has been adopted.

546. That would not apply to the raising of the weekly contributions, which was done during the last two or three years; some of the Friendly Societies made a row about it, because Mr. Coghlan determined that they should increase their contributions;—if what you say was the only fact taken into consideration, that would result in the raising of the entrance fee? Certainly not. The entrance fee is nearly always put to the management fund—spent and wasted.

547. *Mr. O'Reilly.*] How do you mean wasted? The expenditure is far too large. Instead of saving it up, as it ought to have been saved formerly, and put to the sick and funeral fund, it was used in the management.

548. But are you speaking of present conditions? Not at the present time, because for the last few years the entrance fee has not been taken into account at all in adjusting the rates of contributions. In some of the societies the original tables were, no doubt, drawn up by competent persons. In the Guild, for instance, the highest entrance fee was £10.

549. *Mr. Schey.*] Are there any societies with a higher entrance fee than that? No. Whoever drew up those tables evidently did so on the principle of which you speak—of arranging the entrance fee, and then fixing a uniform contribution. If that entrance fee were graduated properly to make up for the extra value of a man's contributions it would be all right; but what first drew my attention to it was getting hold of a return from one of the guilds, and finding that though a good number of members had been initiated their total entrance fees only amounted to 5s. or 10s.

550. Then there was practically no entrance fee at all? Certainly not, although according to their rules there should have been a very heavy entrance fee.

551. *Mr. O'Reilly.*] But that is all remedied now? Yes.

552. *Mr. Schey.*] You say that the entrance fees usually go to the management fund, and are consequently wasted? Yes.

553. If the entrance fees did not go to the management fund, would it not be necessary to pay other moneys into that fund to make it sufficiently large to pay the managerial expenses? Certainly; but as a rule the societies have been in the habit of grading their entrance fees according to age. If the money all goes into the management fund, why should a member who is 40 years of age pay any more than one who is 20 years?

554. *Mr. O'Reilly.*] As a matter of fact he should, if anything, pay less, if the money is devoted to the management fund, because he will probably receive benefit for a shorter period of time? Yes.

555. *Chairman.*] Have you made any calculation of an actuarial character as to the amount that would be required for an old-age pension scheme? Yes, I have some figures here. A pension of 5s. a week for all persons at present of the age of 65 years and upwards would for the first year require £343,875.

556. *Mr. Schey.*] That is on the supposition that every person arriving at that age would claim and receive the amount? Yes; that everyone has a right to demand it.

557. Your calculation is on the basis that everybody would be paid that amount, and for the full year? Yes.

558. *Chairman.*] Is your calculation based on this year's population? I took this year's population, using as a basis the population according to the Census, and making an allowance for the deaths.

559. Have you any other calculations? I have some figures with regard to Mr. Chamberlain's scheme. Everyone before the age of 25 years should deposit £5, and should pay £1 a year up to the age of 65. When the survivors reached the age of 65 there should be in some fund the sum of £963,000 to provide pensions of £13 a year.

560. That applies to the population of New South Wales working a scheme like Mr. Chamberlain's? Yes; these figures apply to males only.

561. *Mr. Schey.*] Why did you take the males only? Because I happened to work out the figures relating to males. It would be easy to calculate the females also. I estimate that nearly 6,000 would

A. Davis.  
22 July, 1896. survive at the age of 65 out of a total of 11,939 at the age of 25. The value of the future pensions at the age of 65 would be £740,500, which would be less than the value of the annual contributions only up to that date, which would be nearly £778,000. But no allowance is made for the expenses of management and conducting the business, which would probably be very heavy. If, as some suggest, in case of death before the age of 65 years, the contributions should be returned, it would make a difference of £278,000. The contributions of £1 a year would then be insufficient, as the increased annual contribution to enable those contributions to be refunded would be nearly £7,000. Should allowances be made for widows and children it would probably require £17,000 for the widows of those who died before the age of 65, and the allowance for children would be £581,000; in other words, about £15,000 a year would be required to provide the benefits for widows and children. The original deposit proposed by Mr. Chamberlain of £5 before the age of 25 would be worth about £3,000 per annum during the 40 years, and the State would have to provide the difference of £12,000 a year. Mr. Chamberlain proposes that the Government should pay £15 for each person, not to bear interest, and to be paid when called upon; that is manifestly insufficient.

562. Do you think it possible for New South Wales to work a scheme like that proposed by Mr. Chamberlain? No, I do not.

THURSDAY, 23 JULY, 1896.

Present:—

MR. CHAPMAN, | MR. SCHEY,  
DR. GRAHAM, | MR. WILKS.

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Cornelius Joseph Morrissey called in, sworn, and examined:—

C. J. Morrissey.  
23 July, 1896. 563. *Chairman.*] What position do you occupy? I am acting secretary of the A.H.C. Guild.

564. Do you carry out any system of superannuation with regard to the members of the Guild? No; only the mortuary donation.

565. That is given to the widow and children? Yes. In case of the wife dying it is given to the member; but in that case the amount is not so large.

566. Then you have no system of pensions? No.

567. After the period when a member has received full sick benefit, does he then go on to any superannuation fund? No.

568. For how long does a member received the sick benefit? He receives a guinea a week for twenty-six weeks in succession; 15s. a week for thirteen weeks in succession; and 10s. a week for thirteen weeks in succession after that, and then he receives 6s. a week for twelve months. That brings it up to £56 11s. That is the total amount a member can draw. After that he cannot draw any more for five years.

569. *Mr. Wilks.*] Have the claims for mortuary donations been increasing during the last few years? No.

570. You have no invalidity pensions? No.

571. *Mr. Chapman.*] What is the amount of the entrance fee? It depends upon the age—from 2s. to £10 10s.

572. What is the greatest age at which you admit a member? Forty years.

573. What entrance fee do you charge at 40? £10 10s.

574. How long has a member, admitted at 40 years of age, to belong to the society before he is entitled to sick pay? Six months.

575. I suppose he is always entitled to medical attendance? Yes; from the time he joins.

576. Does he also get medicine free? Yes, always.

577. And you find that on the basis of an entrance fee of £10 10s. at 40 years of age it is profitable for the fund to take the risk of providing medical attendance and medicines and insuring the member for a total amount of £56 11s.? No; as in nearly all cases of 40 years of age it is not a profitable investment to admit a member, and the object of the entrance fee, £10 10s., is more to debar them from entering than encouraging them to do so.

578. *Mr. Wilks.*] You have no cottage-home system in connection with the Guild? No; it is purely a benefit society.

579. *Mr. Schey.*] What is your opinion of a system by which Friendly Societies would be enabled to found a superannuation fund on a voluntary basis, receiving from the Government a subsidy of (say) £1 for £1;—do you think that would be an advantage? I do not think it would be an advantage to have Government subsidy £1 for £1.

580. Do you think your own society, for instance, would be agreeable to the foundation of such a fund? I do not think so.

581. In your opinion that would be a distinctly good thing? I do not think so, inasmuch as members of my society would consider it pauperising, and prefer to carry on under the old regime of a self-supporting society.

582. What would be the disadvantages? I think, for instance, that a number of people would avail themselves of the benefit society in order to draw the pension.

583. Would that be a disadvantage? Decidedly.

584. How would that be so, supposing that the contribution imposed upon them was sufficient to pay all the expenses? Of course that would alter the matter altogether.

585. I am speaking of a fund which each society would start separately, making a conditional contribution, such contribution to be sufficient to cover the benefit to be received, with a pension, at whatever amount might be fixed, payable at 60 years of age? If the rate of contribution was fixed so as to safeguard the fund against imposition, I do not think there would be any objection.

586. So long as it was no burden on the funds of the society as at present existing, you see no disadvantage in it? No.

587. You think that all the other arguments would be in favour of such a scheme? Yes.

588. *Mr. Wilks.*] What system of check do you adopt in your society to prevent imposture? We have official visitors, who see that the sick members are properly attended by the doctor, and that there is no malingering.

589. You do not assist anyone outside of your own society? No.

WEDNESDAY,

## ON OLD-AGE PENSIONS.

WEDNESDAY, 29 JULY, 1896.

Present:—

MR. CHAPMAN,		MR. McLEAN,
DR. GRAHAM,		MR. SCHEY,
MR. WILKS.		

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Henry Harrington Greene called in, sworn, and examined:—

590. *Chairman.*] What position do you hold? Grand Secretary of the Independent Order of Oddfellows.
591. The Committee are desirous of ascertaining if you have any method by which you pension off old members of your society, either in the way of a superannuation fund or by means of a pension;—have you any such system? We do not call it a superannuation fund, but it is practically the same thing, although we have the right to say when it shall be abolished. We superannuate at 5s. a week.
592. How long does that payment last—is it at the will of the society? Yes; during the will of the society.
593. I suppose in most cases it is paid until death? Yes; the intention is to pay until death, but we have found that that does not work out quite satisfactorily.
594. What do members contribute extra for that? They do not contribute anything at present.
595. Have you many members pensioned off in that way? I could not give you an estimate of the number. That is a matter generally dealt with by the branch lodges; the payments do not come directly from the Grand Lodge funds.
596. *Mr. McLean.*] Are they paid out of a superannuation fund or out of a sick fund? They are paid out of the sick fund at present.
- 597-8. Are the sick funds of the Order separate funds in connection with each lodge or are they amalgamated—that is to say, does the district manage the whole of the sick fund? The management of the sick fund is entirely in the hands of the branches.
599. And, I suppose, some of the branches are very small? Yes.
600. Then you have not got a guarantee from the district behind the branches as far as that sick fund is concerned? No.
601. *Mr. Wilks.*] You have a great number of people, I suppose, on your books;—it is a very powerful organisation, is it not? Yes; it is very strong.
602. And you have had a long experience in connection with it? Twenty-five years.
603. Then you would be very competent to give an opinion with regard to an old-age pension system;—what is your private opinion about it? So far as I have examined the question, and taking authorities capable of expressing an opinion, such as Mr. Reuben Watson, who is acknowledged to be one of the best authorities on the subject in England, it is a matter that requires a great deal of consideration, so far as the work of the societies is concerned. We find now that the societies have been operating for some years while financially unsound. I do not think there is any society in the Colony that can be said, according to an actuarial test, to be working on sound principles, and the trouble has been with us to readjust our affairs in such a way as to meet the approbation of the authorities, considering the great liabilities we have undertaken.
604. I suppose you rather respect that actuarial decision? All those who have any knowledge of the working of Friendly Societies appreciate it, but I may say that there is a great preponderance of feeling the other way.
605. Do you think an old-age pension system would run in conflict with your system;—how would your members receive it? As applied to Friendly Societies, I think it would be repulsive to their feelings.
606. How would it be repulsive? Well, it has this effect—that State aid is not a desirable thing where the principle of co-operation prevails.
607. Have you considered the question of fixing any age at which people should come under the operation of a pension system? That is one of those problems in connection with Friendly Societies in regard to which there is a great deal that you have to take for granted that is not fair to the society. Of course the age would make a difference—that is, if you fixed a specific age for a charge against the superannuation fund. But at present Friendly Societies, owing to that large amount of sympathy that runs through their operations, do not treat their business as it really should be treated from a business point of view, and very often the liabilities are very much larger than they ought to be for that reason.
608. Have you any system for preventing malingering? That is the great weakness in connection with Friendly Societies.
609. Malingering does exist then even now? There is no doubt about it.
610. *Chairman.*] The Friendly Societies of Great Britain took a stand hostile to Mr. Chamberlain's proposal, did they not, at first? Yes.
611. But since then the Manchester Unity Order have passed resolutions in favour of an old-age pension? The difficulty, I understand, with the Manchester Unity in the old country is as to whether they should make it compulsory or voluntary—that is, the maintenance contribution towards the superannuation fund.
612. I gather, then, from your evidence that the Friendly Societies here would not be favourably disposed towards a Government scheme of old-age pensions? As far as I am able to gauge the opinions of the societies—I am speaking for my own society now—they seem to think that the whole thing would be repulsive, from the fact that anything in the form of Government State aid would involve Government supervision in some shape or other, which they think would be objectionable to the working of the societies, and remove to some extent their independent feature.
613. Do you think that the establishment of an old-age pension scheme, say at the rate of from 7s. to 10s. per week, would militate against the success of the Friendly Societies? That is a matter to which I have not given much consideration. The only objection we see to that is that perhaps the thrifty and provident men would be placed somewhat at a disadvantage. But I do not know whether it would affect in a general way the members of the Friendly Societies. The provident people join Friendly Societies with the view of providing independently for something of the kind.
614. But one of the main objects of the persons who join Friendly Societies is to get medical relief and assistance during the time of sickness? Yes, that is the chief object.
615. That would not be provided, of course, under a scheme of State pensions; therefore, all those who  
care

H. H. Greene.

29 July, 1896.

H. H. Greene. care to work in the Friendly Societies with those objects in view would not be likely to be deterred from doing so by the existence of a State system of old-age pensions? No; taking that view of the question, I do not think it would seriously affect Friendly Societies, because, as you remarked, the chief object of a man in joining a Friendly Society is to provide for medical benefits.

29 July, 1896.

616. *Dr. Graham.*] Do you know anything about Canon Blackley's English scheme, and have you given any consideration to it? We have only casually examined it with the view of introducing a system of superannuation.

617. The Friendly Society authorities in England objected to Canon Blackley's schemes on the ground that it would interfere with their line of operations? I believe that view has also been advanced by Mr. Reuben Watson, as a member of the Manchester Unity, not as an actuary.

618. But the English Benefit Society authorities objected to Canon Blackley's scheme, chiefly on the ground that it interfered with their methods of work—with their function, in other words;—is that the objection you have to it? Well, no, we do not object to it on that ground, because we do not think it would really affect the Friendly Societies to a very large extent. It may affect them slightly, but not, I think, very largely.

619. But what objection would your people raise to it suppose it were initiated by the Government? If it were applied to the Friendly Societies themselves we should object to it on the ground of State interference with our affairs, as we object particularly to State subsidies for Friendly Society purposes.

620. Still, if it dealt with a social evil the Friendly Societies would be as much interested in the solution of that social question as anyone else? Well, there is not much sentiment in the matter, because ordinary co-operative societies do object to having their affairs interfered with by the Government, because they consider they are perfectly capable of managing their own affairs and disbursing their benefits according to their laws. We have committed errors of judgment, I admit, and the actuary has had to call our attention to certain irregularities in respect to provision made for proposed benefits; but these matters are now in course of adjustment, and I do not think they are likely to be a source of trouble to us in the future. I am speaking now for my own society only.

621. I did not hear whether you said just now that you dispensed a system of pensions in your Order? We do not call it by that name, and we arrange so that we can cut off the allowance at any time should any misconduct occur on the part of the recipient. In such an event the branches are at liberty to say, "We will discontinue this payment."

622. What is the scale? Five shillings per week.

623. Is that in some cases carried on for life? Practically so.

624. After disability, I suppose? Yes; we find that is one of the mistakes we have made. We find that our contributions are scarcely adequate to meet that expenditure.

625. So that you do not encourage it? It is still in operation, but it is rather more limited now than it was a few years ago.

626. Is it within the scope of your functions to some day aim at getting an old-age pension system in your Order? That scheme has been before us at our annual meeting for some time—that is, the principle of superannuation—but the difficulties that have arisen in connection with the actuarial view of the matter have suspended its serious consideration.

627. Could you give us any idea what the actuarial view of the matter was? The Friendly Societies, according to the actuarial view, have been carrying on their business upon scarcely sound principles, and their attention has been called to these matters on several occasions with such an amount of pressure that they have been forced to consider the situation. My own society, I know, has reduced its benefits very considerably on account of the pressure brought to bear by Mr. Coghlan, when actuary for the Friendly Societies. We fully realised that we would not be able to pay the prospective benefits. During the earlier years of our experience, of course, we were prosperous; but as years went on the liabilities of the society began to grow, and after a reference to other actuaries we found that Mr. Coghlan was correct, and we have attempted to readjust—in fact, practically we have readjusted our affairs on a different basis. Then there has been a suspension of the superannuation question, pending the adjustment of the actuarial conditions.

628. The type of man who joins your Order is not the type of man who eventually reaches the poor-house? No; our members are provident, as a rule.

629. Your society does not practically embrace the improvident class or the pauper class? No; not as a rule.

630. *Mr. Wilks.*] Have you discovered in your long experience that the objection to State pensions is based mostly on sentiment—on the fear of the stigma of pauperism if a State pension were accepted? So far as my experience has gone, that is the tendency. There is a repulsive feature attached to State aid when the principle of co-operation is introduced. The only thing is that men who usually form Friendly Societies do not give sufficient thought to the necessity for making due provision for the benefits they propose to give.

631. If the State decided to establish a voluntary system of old-age pensions, applying to everyone of a certain age, to which all were entitled on application, and which they could accept or refuse, how do you think it would work—I mean in connection with the societies themselves? I think if you were to ask the great majority of our members they would not refuse to take such a pension if it were given to them. We know to our own cost that very often they expect a great deal more than is even now provided for them.

632. You think that they would have a fear of admitting that they were paupers? That appears to be a repulsive feature in connection with such a system.

633. They would be willing to receive the pension, but not willing to ask for it? Yes; you may put it that way.

John Alexander M'Cubben sworn and examined :—

J. A. M'Cubben.

9 July, 1896.

634. *Chairman.*] What position do you hold? Grand Secretary of the Grand United Order of Oddfellows.

635. Have you, in connection with your society, any system by which you grant old-age pensions or superannuation payments to the members of your Order? We have not.

636. You have no method by which you relieve the older members outside the ordinary payments from your society? No.

637.

637. How do you think the members of your society would view a proposal to establish a State system of old-age pensions? I believe they would view it with very much disfavour.

638. What objections would they have to it? I can only speak for myself, but I would not be favourable to a State subsidy or State pension.

639. On what grounds? Because I do not believe the Government ought to fund everything.

640. Do you think the establishment of a system of State old-age pensions would militate against the operations of societies like yours? I am not prepared to say that.

641. Would it prevent men from joining such societies? I am not prepared to say that it would do so.

642. Do you think it would work detrimentally in any way towards the societies? I do not know as to its detrimental operation or otherwise, but I do not believe the members would be willing to accept it. I think they would decline to accept it.

643. Do you mean to say that they would decline to accept the pension if it were made general, and they were entitled to receive it as well as other people, after having contributed towards the taxation out of which it came? That might depend upon whom it was for—as to whether it was only for members of Friendly Societies or for the whole Colony. I have no knowledge as to how the system would be applied.

644. Your society is firmly established here, is it not? Yes, fairly well. There is a membership of about 10,000, with a value of about £7 a member.

645. *Dr. Graham.*] You have no old-age pension system now in force in your Order? No.

646. What system you have simply applies to sick relief? It is a system of sick pay which is continued, according to law, whether the member may be old or young.

647. But the sick factor is the essential factor? That is so.

648. You have no old-age people among them? There is no provision specially for old age.

649. *Mr. Wilks.*] I take it that your present opinion is that a State system of old-age pensions would have a tendency to destroy the independence of your societies? I am quite satisfied that it would destroy their independence. It would also bring in State control, and I know the members are utterly opposed to State control.

650. You think it savours too much of Continental legislation, and has not enough of British independence about it? Just so.

651. *Dr. Graham.*] You think it induces a feeling of pauperism among the people? Just so.

652. Which is a bad thing for the people? Yes; they will come to depend on it, and those who spend most will get most.

653. *Mr. McLean.*] Your objection is really founded on the belief that the State will assume some control over the Friendly Societies? I take it for granted that the State would do so.

654. Apart altogether from the Friendly Societies, have you any objection to urge against the Government providing State pensions for aged persons? Personally, I have an objection to State pensions in any shape or form, either to members of Friendly Societies or to others. I do not say that the aged, when they come to a condition in which they can do nothing for themselves, should not be provided for. At the same time I think that if a pension were provided for them they would, to use a common term, "go for it."

655. You think that all aged persons would claim the pension whether they required it or not? I take it for granted that they would not be able to claim it if they did not require it—that is to say, that there would be proper inspection and investigation. But I mean to say that if I knew there was so much lying by for me (say 10s. a week) when I reached the age of 65 years, I might not be so provident when I was 60 years of age, knowing that I would be taken care of, and would not starve.

656. Are there many members of your society who have reached the age of 65 years? Yes, a good many.

657. And are any of them in poor circumstances? No doubt there are some, and there are also young members who are in poor circumstances.

658. But you have a number of aged persons who are in poor circumstances because they are unable to work? Yes, I have no doubt we have.

659. Have you any benefit fund for the relief of cases of that kind? There may be some benefit fund in connection with some of the branch societies, but there is none in connection with the head organization—that is to say, we have no benefit fund established.

660. Have you been brought into contact with any aged persons in poor and distressed circumstances in connection with your own Order? No, not particularly.

661. Are you of opinion that the majority of the members of Friendly Societies are provident people who do not require the kind of relief contemplated under an old-age pension system? I am of opinion that the members of Friendly Societies generally are provident, and do not wish to partake of such State relief.

662. And you do not think that a very large proportion of them are in absolute poverty in their old age? I do not.

663. *Dr. Graham.*] You think that very few of them ever reach the poor-house? I am not aware that any have done so; it has not come under my notice.

664. And you have been a long time in the Order? Nearly forty years.

665. Is there a certain rate of contribution per week or month which the members of your society are expected to pay in order to retain their full membership? There is a graduated scale of payments. A young member from 16 to 20 years of age pays 7d. a week. I am only speaking now of the payments that would provide sick benefits and funeral donations. The scale then increases at different intervals of age until the contribution reaches 1s. a week. Then, if the contingent expenses were 8d. per week that would be 1s. 8d. for that member. That would apply to the highest age at which members are accepted. We do not take members in—at least, we are not supposed to take them in—over 40 years of age.

666. When does the rate increase from 7d. per week? Over 20 years of age they pay 8d.; at 25 it is raised to 9d.; at 30 to 35, 11d.; and from 35 to 40 it is 1s., which is the maximum—7d. being the minimum.

667. Do they continue paying the shilling rate as long as they are members? Yes; but they pay the shilling in consequence of their coming in at an older age.

668. Have you ever had any calculation made as to the average amount your members pay in a given time—say, in twenty or thirty years? I have calculated it, and I have always found that the member is the gainer.

669. Suppose a young man joins at 20, and remains until he is 60, how much will he have paid in that time?

J. A.  
M'Cubben.  
29 July, 1896.

J. A.  
M'Cubben.  
29 July, 1896.

time? I should say about £45. I am only speaking now of sick benefits and funeral benefits. That does not include medical attendance and medicine.

670. The member pays extra for these? Yes.

671. Do your members, as a rule, stick to the Order? We lose large numbers, as is the case, I think, with every other Order, judging from the returns I have perused.

672. You say that the average contribution from each member as soon as he becomes a member and pays up to 60 is about £50? Yes; you might put it down at about that.

673. *Mr. Wilks.*] Do you approve of our present system of sending cases of absolute destitution to the large asylums? I prefer the cottage or almshouse system to the asylums.

674. What do you think of an old-age pension system which proposes to maintain old couples in their own homes? Just before coming to the Committee I read something about the system proposed to be introduced in New Zealand, where it was proposed to give them 10s. a week. That would not be much use in placing them in their own homes. Possibly we might be more liberal in New South Wales.

675. *Dr. Graham.*] A member of your society entering at 20 years of age, and beginning with a contribution of 8d. per week, and continuing in the society until he was 60 years of age, would pay a total contribution of £69 8s.? That may be so. When I said £45, I spoke without having had time to make the calculation.

676. Supposing he paid the sum that he now pays weekly, and got no sick benefit, do you think you could give him a pension of the amount of 10s. a week at the age of 60 years? I have not calculated that out. It has not struck me in that way, because I believe people would be very unwilling to make such payments in prospect of a pension at a remote age.

677. They want something tangible for their money? Yes; they want something now—they do not want to wait too long.

678. *Mr. McLean.*] As a matter of fact, they pay for sick benefits during their membership in the lodge, and do not look forward to an old-age pension? That is so. There are opportunities now in connection with our society for participating in a fund, which members simply scorn, though the contribution is only 4s. per annum, and the payments very liberal in proportion.

679. *Dr. Graham.*] What do they get in prospective? The payment on death is £10 in case of a membership of five years, and £20 for a membership of ten years. Still members do not avail themselves of this opportunity.

680. *Mr. McLean.*] They avail themselves of the benefits that are immediate, and do not look forward to the distant future? That is so.

681. *Dr. Graham.*] You think that if you were to initiate in your Order a weekly-payment system to provide for an old-age pension above 60 years you would get very few to contribute to it? Very few indeed. At our last bi-annual meeting, fourteen months ago, there was a proposal for the establishment of an insurance fund, and there was then a prospect of a conference of members from the different colonies, which took place last September. Some evidence was placed before us concerning the insurance fund, as it is worked in America. For my part, I declined to take any active part in getting the thing up, because it did not look a very good scheme, in my opinion; but I contend that members do not want more than they already have, until they show that they are willing to avail themselves of the present opportunities.

Matthew Prideaux called in, sworn, and examined:—

M. Prideaux,  
29 July, 1896.

682. *Chairman.*] What position do you hold? Grand Secretary of the Manchester Unity Order of Oddfellows.

683. Have you, in your Order, any system of old-age pensions, or any means by which you superannuate the old members? No.

684. You give nothing more than the ordinary benefits for sickness and death? That is all. The sick pay commences at 21s. per week for the first six months, 15s. per week for the second six months, 10s. per week for the third six months, and 5s. per week afterwards.

685. Then the member receiving sick benefit is entitled to 5s. per week so long as he is sick? Yes.

686. But you make no provision for an aged member who may not be sick, but still be unable to do any work? No. But I may state that this question will most likely be brought forward at our next annual meeting. It was discussed at the last annual meeting, held at Bathurst, and our directors were instructed to prepare a scheme to be submitted for consideration at the next annual meeting, which will take place in May next year.

687. The Manchester Unity Order in Great Britain have expressed themselves as favourable to old-age pensions, have they not? To my knowledge they have had that question before them for some years. I have here a copy of the *Bristol Times and Mirror* of the 30th May last, which contains a report of the annual meeting of the A.M.C., held at Bristol, from which it will be seen that the question of State-aided superannuation was discussed, with the result that it was decided by a majority of forty-seven, the total number of delegates being 611, that the Order might receive State aid, but on no consideration would they allow State interference. I gather this conclusion from the speeches made during the debate. The resolution submitted to the meeting by Brother Cardew (London) was as follows:—

That, inasmuch as under the general rules of our Order, it is illegal for lodges to grant sickness pay to members who are incapacitated through the infirmities of old age, and it being admitted by the highest authorities to be a practical impossibility to provide a superannuation allowance for such members, they are left dependent on the kindness of relations and friends, or on the parish authorities, for their subsistence, this A.M.C. is of opinion that any well-considered and suitable scheme propounded by the legislature, having for its object the relief of the aged and infirm, which would have the effect of benefiting our unfortunate brethren under conditions that would not degrade the recipients, and be less repulsive to our common humanity, than the present poor-law system (without interfering with our independence and self-control) would be welcomed by our members, and receive the hearty support of our Order, and that the Board of Directors issue voting schedules to every lodge for the purpose of obtaining the votes of the members for and against the proposals.

An amendment to that resolution was proposed, and, after discussion, a vote was taken on the question for or against State aid, with this result: For State aid, 283; against, 248; majority for, 35. A vote was afterwards taken by districts, 290 delegates voting for State aid and 243 against, showing a majority of 47. Eleven delegates voted neutral, and 67 were absent, making up the 611 deputies to be accounted for.

688. So that you may say that the voting was fairly equal? Yes. This has been a subject of controversy in

in our society in England for years. It has been brought forward at our annual meeting in England for several years. M. Pridaux.

689. Has it been brought forward in a practical way;—has there been any special scheme proposed? 29 July, 1896.  
No. Mr. Reuben Watson, who, I suppose, is one of the best actuaries in the world in connection with Friendly Societies, has laid down tables in the English laws for providing certain weekly sums, but the members have not availed themselves of these tables. Then, again, at our last annual meeting in this Colony, held at Bathurst, we passed the following resolution:—

That the G.M. and Board of Directors be empowered to formulate a scheme for superannuation benefits in connection with our Order, and submit the same at the next G.A.M.C.

690. *Chairman.*] Do you think that the rates of contribution now paid by your members will be sufficient in the future? I think not. What is killing nearly all the lodges is the system of continuation of payments. My private opinion is that cases of permanent blindness, permanent insanity, and permanent infirmity from old age should not, strictly speaking, receive sick pay, although that has been the custom.

691. Your contention is that the prolonged payments to members is too great a strain upon the fund? Just so. I will give an example taken from my own lodge. At the present time we have two cases where the lowest contribution of 5s. a week is paid as sick pay. It takes eleven members' contributions to support one of these cases. Therefore, in my own lodge, to support these two members it takes the contributions of twenty-two members to the sick fund. Then, again, if there is a man who is on full sick pay it takes the contributions of forty-six members to support him.

692. Then, it is very evident that with your present rate of contributions it would be impossible for your Order to sustain a system of old-age pensions? There would have to be special payments. A scale was laid down by Mr. Coghlan as sufficient to meet probable sickness, and, if we established a superannuation fund, our members would have to pay an additional contribution. In connection with our Order a superannuation fund was established in Queensland. But there were separate payments made voluntarily, and the consequence was that it was a failure.

693. *Dr. Graham.*] How many actually joined? I could not tell you. In a communication received from the Chief Secretary of the Order that gentleman said the system was a failure. He said, "We have tried superannuation, and it is a failure." If such a system were made compulsory the chances are that you would get no one to join the societies. The contributions of a working man to his society are quite sufficient at present.

694. *Mr. Wilks.*] What is your opinion as to the necessity for State pensions in this country? My opinion is, as far as our society is concerned, that we would rather work it by ourselves, without any State interference whatever.

695. Then I understand that you are afraid that the providing of a State pension would weaken the force of the Friendly Societies? It would weaken their independence; it would make them paupers.

696. That is the sentimental objection; but do you think it would also weaken them in the sense of material strength, such as the membership of the lodges. If men knew they had a State pension coming to them, would they neglect to join Friendly Societies for other benefits? That might possibly be the case; I could not say. But as soon as the State interfered with Friendly Societies it would weaken their independence, and I think our society would object to any such thing as interference by the State.

697. Your society is rather a powerful body in this country, is it not? Yes; we are at the present time worth £12 16s. 10d. a member, and our numerical strength is something like 17,400 in New South Wales.

698. *Dr. Graham.*] Have you ever felt any need in your Order for such a fund as a superannuation fund? I never saw any great need for it, but there is no doubt it would become very acceptable to a certain class. For instance, in my own lodge we have a member who is blind, but who, otherwise, as far as his constitution is concerned, is as healthy a man as we are. There is no doubt that to a man like that it would be acceptable.

699. How does he live? We give him 5s. a week.

700. But that does not keep him? Certainly not.

701. How does he make it up otherwise? I cannot say; his family are grown up.

702. If you did not give him 5s. a week, what would he do;—would his family keep him? I could not say.

703. Do you think many of your people ever reach the poor-house? I do not know that any reach the poor-house while they are members.

704. How many years have you been in the Order? Over 20 years.

705. You have never had any appeals from old members who have left the Order begging for some assistance, otherwise they would go the poor-house? Members have applied to their own lodges for distress gifts.

706. On the whole, the members of your Order are a provident class of people? Yes. It will be admitted that, on the whole, the members of Friendly Societies are the most provident of the working classes. We have had members who while receiving the 5s. sick pay have also been receiving something from the Benevolent Asylum.

Thomas John Iredale called in, sworn, and examined:—

707. *Chairman.*] What position do you hold? Grand Secretary of the Protestant Alliance Friendly Society of Australasia. T. J. Iredale.

708. Have you in connection with your society any system of old-age pensions or superannuation payments? No, nothing of the kind. 29 July, 1896.

709. What benefits do you give contributors? The sick benefits are 21s. per week for the first six months, then 15s., and afterwards 5s. a week so long as the sickness continues—it may be for six, eight, ten, or twelve years.

710. And I suppose there are certain fixed payments at death to the widow and children? Yes; £15 on the death of the wife, and £25 for a member of twelve months, and after he has been associated with the organisation for five years he is entitled to £30. That is the outside limit of the funeral donation.

711. Have you given any attention to the question of old-age pensions? The matter has never cropped up in connection with our legislation for the institution.

- T. J. Iredale. 712. Do you think it would militate against Friendly Societies generally if such a system were in vogue? I do not think it would be acceptable to the general body of our members, judging from past experience in connection with the organisation.
- 29 July, 1896. 713. *Mr. Wilks.*] Do I understand it would not be acceptable from fear of State interference? I think that would be one of the objections, and also possibly because they would feel that it was pauperising the institution.
714. You are afraid that the stigma of pauperism would attach? The institution of Friendly Societies naturally involves thrift on the part of the members. That is the backbone of these institutions.
715. Have you had any experience to enable you to form an opinion favourable or unfavourable with regard to the present system of maintaining destitute persons in asylums? I have had no experience to enable me to express an official opinion.
716. What is your personal opinion? It is unfavourable to such a system.
717. Suppose a system of State-aid pensions were introduced applicable to the whole of the people above a certain age, who would receive the pension merely on application, do you think it would be availed of? I think it would in some cases, where men were not thrifty, and would know that at a certain age they would be able to draw a pension from the State.
718. You think it would be liable to be abused? Yes. Malingering takes place even in our societies.
719. *Dr. Graham.*] The bulk of your people are thrifty people? Yes.
720. We have it in evidence that in connection with one large Friendly Society when a system of superannuation was initiated no one would contribute, and it was a failure. Evidently even thrifty people in that case had difficulties in the way of looking forward and providing for a pension;—do you think that would be the experience with your people? Yes, I should think it would.
721. They do not like to provide for a distant date? No. I was looking over some of the Victorian statistics on this subject, and I think it would, perhaps, interest the Committee if I read the following:—
- One of the main objects for which societies may be, and have been, registered in Victoria is “for the relief or maintenance of members in sickness, infirmity, and old age”; but, when the lowest rate of sick-pay is payable until recovery, a member in receipt of the allowance is required to send at stated intervals to his branch a doctor's certificate declaring his continued inability to follow his usual occupation, which must thus be due to sickness alone, no provision having hitherto been made in any society to grant an allowance to aged members whose incapacity for labour arises from weakness due to old age or senility. The rules of the M.U.I.O.F. in England have, for some years, empowered districts to form a superannuation fund with a separate contribution thereto, whence a weekly sum might be payable to those members who reached the age of 65, quite independently of the state of their health at the time. In consequence of the remoteness of the benefit in the case of young members, however, and the probability of but few surviving to enjoy the pension, the scheme has not been popular, scarcely any members having assured under it.
- So that in a large Order of that kind in England they looked upon the thing as very remote, and did not subscribe to it.
722. *Mr. McLean.*] Have you any benevolent fund, or fund for the relief of distress among your members? Several of our lodges have benevolent or contingent funds.
723. Out of which they vote moneys for the relief of distress? Yes; but only those who contribute to the fund participate in the benefit.
724. From your knowledge of the societies and the members generally, do you think these cases of distress are mostly those of aged people? There are men who from fortuitous circumstances have become almost in a state of destitution, and they apply for relief, which is given from the benevolent fund or contingent fund.
725. You think no large number of aged persons seek relief from your funds, either by trying to get sick pay or by trying to get relief from the benevolent fund? Not many have come under my knowledge.
726. Have you very many old members in your Order? I could not give the aggregate number of members over 50 years of age, but it is proportionately small. Our average, I think, is under 35.
727. How long has the Protestant Alliance Society been established? Since 1872.
728. You have not the same age and experience as some of the other Orders—your members have not aged so much? No.
729. *Dr. Graham.*] Do you limit the age at which you take members? At present we do; we do not take them over 40. We have a graduated scale now in operation approved of by the Registrar. It has been in operation for two years, and members pay in proportion to their age. It may be from 1s. 2d. up to 1s. 8d. per week.
730. I suppose all these Friendly Societies have a uniform rate? No; that is what we want to aim at.
731. Do they not give uniform benefits? No; the Manchester Unity goes as high as £50 funeral benefit.
732. But the sick benefits are uniform? There are three scales of payments. We have a lodge relief fund from which weak lodges are assisted by the Grand Lodge to enable them to tide over difficulties arising from a heavy drain of sickness. We advance £10 or £20, as the case may be, until the lodge is again in a financial position.
733. *Mr. McLean.*] Really the lodges have to paddle their own canoe, as far as the sick fund is concerned? Yes.

John Hampton called in, sworn, and examined:—

- J. Hampton. 734. *Chairman.*] What position do you hold in the Royal Foresters? Chief Secretary.
- 29 July, 1896. 735. Have you in connection with your Order any system of old-age pensions or superannuation allowance? No, we have not.
736. *Dr. Graham.*] Is your Order a very old Order? It was established about 1845, but at first it progressed very slowly. Formerly it was in connection with the English Royal Foresters, but for many years it has been a New South Wales society.
737. What is its present strength? About 1,800 members.
738. Are there many old people in it? There is a reasonable number of old people in the oldest courts.
739. I mean over 60? Yes, over 60.
740. *Mr. McLean.*] Have you any idea of the proportion of men over the age of 60 in the lodges or courts? I should say 10 per cent. at the least.
741. Do you find more claims from the fund from these older members? No, not as a rule; if they get to the age of 45 we consider that the worst is passed. We have more sickness among those under 45 years than among those above that age.

742. *Mr. Wilks.*] Have you considered the question of old-age pensions? It has not been discussed in our grand lodge, but some of the members have casually seen it mentioned in the newspapers. The nearest approach we have to old-age pensions are those cases in which the doctors place upon the fund old men who are not positively sick, but are too old to work—men suffering, for instance, from senile decay. Our sick pay is intended only for those who are actually sick, and the rule says that the doctor shall state the nature of the complaint. J. Hampton.  
29 July, 1896.

743. *Chairman.*] How would your members generally view a proposal for State old-age pensions? I could not answer that question, unless the subject had been discussed amongst us.

744. Do you think it would militate against the interests of Friendly Societies? Personally, I do not think it would.

745. Would it affect them in this way—that when men knew they were entitled to an old-age pension from the State they might not be inclined to contribute to Friendly Societies? I do not think that would hinder them. It is the provident men who join Friendly Societies.

746. You think then they would join all the same for the sake of the sick benefits and funeral donations? Yes; our benefits are very great. They run up as high, after a number of years, as £45 for a man alone, and for the wife £15. We are responsible to some men for £60, and that is a large insurance.

THURSDAY, 30 JULY, 1896.

Present:—

DR. GRAHAM,		MR. O'REILLY,
MR. MCGOWEN,		MR. SCHEY,
MR. WILKS.		

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

James Maxwell Main called in, sworn, and examined:—

747. *Chairman.*] What position do you hold? That of city missionary.

748. Where are you stationed? In Waterloo and Alexandria.

749. Do you merely attend Waterloo and Alexandria, or do you cover the whole city? That is my district. J. M. Main.  
30 July, 1896.

750. *Dr. Graham.*] But you know the other districts too? Yes; I have been in the other districts. I have visited round with the other missionaries. We interchange from time to time, but we all have special districts given to us. I have been in my present district for fourteen years without a break.

751. *Chairman.*] Can you give us an idea of the amount of poverty and distress that exists in that district among persons likely to be benefited by a system of old-age pensions? I may say, in the first place, that it is a working-man's district, and we necessarily have a very large proportion of the excessively poor, and a large proportion also of men who have made no provision for old age. Various causes have, of course, contributed to that condition. There are steady, sober, hardworking men who have not been able to make provision for old age, owing to various causes. They have fallen sick, or got out of a lodge, or perhaps have not gone into a lodge, and, striving against difficulties, old age comes upon them, and finds them quite unprepared for it, without indulgence in drink or extravagance on their part. I come across a very large number of men of that description.

752. Do those persons receive any relief at all from the Government? Not the class of whom I am speaking now, except when old age comes upon them. I am talking of men who are gradually getting towards old age, and who are just in that state that they have been unable to make provision for themselves. People of that class, if they have any family at all, always make a great effort to keep out of the hands of the Government. I may say there is a strong antipathy on the part of the ordinary working-man to go into a Government institution. As a rule, only real want drives them to take a step of that kind.

753. Do you think there are many of those persons who would be benefited by the institution of a system of State old-age pensions? Yes, I think there are a good many; but I can see a danger in such a system. I know there is always a difficulty in dispensing charity at any time. There are degrees of want, and though you may see the degrees the people themselves fail to do so if they are the ones not benefited. There is the difficulty. There is always a certain class of people who, if their parents have to go into an institution, will strive to keep them out rather than suffer the disgrace of its being said that they are in the Parramatta or the Newington Asylum. But if it was made a legal matter, and they could get a pension, there are many who would unhesitatingly throw their parents on to the pension who would not seek such Government aid under existing circumstances.

754. If it were made a matter of right, and not a matter of pauperism, that class would be glad to avail themselves of it? There are, undoubtedly, a very large number who would do so. That is where I look upon it as a danger, because it might be overdone.

755. Have you given any attention to the question of old-age pensions? I cannot call myself a specialist in the matter, but I have thought it over like anyone else who is engaged in the work with which I am connected, and I can see that if such a thing were brought about equitably it would be a very great advantage to a large number of people. If it were possible to bring it about in a way that would safeguard the State from imposition, I think it would be a very great benefit; but as far as I have looked at the matter, that is where the difficulty lies—the difficulty of safeguarding the State from imposition.

756. I suppose what has been your experience of the poor of Waterloo and Alexandria would be pretty much the same as the experience of the other city missionaries in other parts of the metropolis, making allowance for a little difference in the character of the population? Yes.

757. *Mr. Wilks.*] You are afraid that under a system of pensions the State could be imposed upon;—what system of inspection would you suggest to counteract that? I do not know that I could give a straight answer to that, because I am afraid the matter has not been sufficiently threshed out to enable anyone to introduce a system of inspection that would give satisfaction.

758. Do you think the system of inspection would virtually kill the idea of old-age pensions—that is to say, the officialdom connected with it? It would always have that tendency.

759. What is about the average age of the indigent persons with whom you have to deal? About middle age. 760.

**J. M. Main.** 760. About fifty years? Yes; somewhere about forty-five or fifty. I think, if you refer to the Benevolent Asylum books, you will find I am pretty correct in saying that. I have sent hundreds of applicants to the Benevolent Society for relief.

30 July, 1896.

761. People incapacitated from working—very old people? I was referring more particularly to people who were in want—widows, wives deserted by their husbands, and people in distressed circumstances arising from sickness and infirmity of different kinds. I find that when people get up to about 60 years of age, either their own people make an effort to keep them, or they are sent to some of our homes. I do not think many very old people get help from the Benevolent Asylum, and that is the principal institution for the purpose.

762. At what age would you suggest that the pension should begin to operate? I think you would be safe to fix it at 60.

763. Have you considered the amount of the pension to be allotted? The common talk has been 10s. a week.

764. Have you no idea of a graduated scale? No, not particularly. I think you would have a difficulty in bringing about a graduated scale. I think your difficulties would commence if you started that. While I have sent a great many to the Benevolent Asylum, I have given a great deal of help privately, and it is one of the most difficult things imaginable to give satisfaction in dispensing charity when you have to discriminate. For instance, take half a dozen families in a street. You take three out of those, and you give them charity. The other three, you think, are not so badly off. But they get to know that you have given the other three charity, and they come at you, and they say, "You have given so-and-so help, and we are as badly off as they are," and you cannot convince them that they are not as badly off. There is the difficulty.

765. Therefore you would be in favour of a uniform rate? Yes, I think so.

766. *Dr. Graham.*] Have you been long engaged in mission work? Fourteen years.

767. Chiefly in the district of Waterloo and Alexandria? Always in that district.

768. Have you had any experience of similar work in other countries? No.

769. Have you any practical knowledge of the conditions of the poor in other countries? No. I have not been engaged in the work elsewhere.

770. Are you a native of this Colony? No; I am a native of Scotland.

771. From your knowledge of the conditions of the poor, such as you have seen them, do you think they are in a worse plight, from the point of view of poverty, than the poor that you have seen in other countries—Scotland, for example? I would answer, yes and no.

772. What part of Scotland do you come from? Ayrshire.

773. Do you know anything about Glasgow? Not much.

774. Edinburgh? I have been in both places, but I cannot say that I have any practical knowledge regarding the state of the poor there.

775. You have never gone systematically into the poorer districts? No; I was young when I left.

776. You speak of giving charity to the people of your district;—what form of charity do you give? Orders for groceries, and sometimes a little money, but in the latter case you have to be careful—you want to know with whom you are dealing.

777. Where does this money come from? It is given voluntarily—sometimes through our General Secretary, sometimes it is given to us personally. Sometimes I can take the liberty of giving a family an order on a grocer or a butcher. I have that discretionary power.

778. Do you give sums of money systematically to any destitute families? No.

779. You do not maintain as a matter of routine any old people? No; we allow the institutions to do that, such as the Benevolent Asylum. We send on persons with whom we cannot deal ourselves to institutions that lay themselves out for special things. For instance, I send a number along to the Nurses Institution in Hay-street, to the Benevolent Asylum, and to places of that kind. Where we can deal with them without sending them to the benevolent institutions we do so.

780. Are the homes of these poor people very bad—do they look very poor? Many of them do.

781. For example, I have visited hundreds and thousands of destitute homes in different countries in the world, and I have found many without a bed, and without a chair;—do you find such homes here? Yes. I have sometimes said this, that while we have not got the filth and degradation in our community, we have in a number of instances a condition of poverty that cannot be exceeded anywhere.

782. Could you describe such a house? Yes; a house without a chair, without a table, and without a bed in it—*sans* everything, the inmates sitting on boxes and kerosene-tins, and lying on the floor. They are not numerous, but we do come across cases of that kind.

783. Are such houses often inhabited by old people? No, not by old people as a rule—by middle-aged people, who have either been brought down to that state by sickness, by getting into debt, or getting behind with the rent, and who have been sold out, and sometimes drink has brought them to it.

784. An old-age pension is not supposed to reach persons of that class, but is intended for old age;—are many homes of that sort inhabited by old people? No; and I think I can give you a reason for that. There is an amount of charity, and a disposition to help amongst the people in the city and suburbs that when they know of old people in that state they will come to their assistance. There is a great deal of Christian sympathy and charity brought together apart from our institutions. I will give you one case that will illustrate a number. It is that of a family who had lost everything through the man taking ill. Everything was sold off partly for rent, I believe, and they were without furniture and without bedding. All I had to do was to mention the case to a number of people, and they at once provided the necessaries without having to send the people to an institution.

785. But the old people—not the particular family you have just mentioned—want some systematic pension from week to week and from year to year;—do they get that? The old people can always make sure of getting help, if they are incapacitated, from the Benevolent Asylum, and not from private sources. People will make a spurt to provide them with some particular things, such as furniture or clothing, but the systematic relief must come from the institutions. You cannot get that from the public. When it comes from the public it comes spasmodically.

786. *Mr. O'Reilly.*] You have said twice, in answer to Dr. Graham, that these old people are referred to the Benevolent Asylum for assistance? That is where they have no one they can depend upon to keep them.

787. But in answer to Mr. Wilks you said that very few of these old people go to the Benevolent Asylum? I do not think my statements were contradictory in that respect.

788. Very few are sent by you to the asylum? As far as my knowledge goes there are not very many old people at the Benevolent Asylum. J. M. Main.  
30 July, 1896.
789. And I think you also said that in normal cases these old people have relatives or friends to stand by them in their declining years? Yes, as far as my knowledge has gone. Fuller information in this respect could be obtained from the Parramatta and Liverpool Asylums.
790. Those who go to these asylums do not come from that normal class of people whose incapacity for work is due simply to their increasing age and infirmity? No, I do not think they do.
791. What class do you think these asylums are generally recruited from? Wanderers, I think, as a rule.
792. And wanderers, I suppose, are men who have been wanderers more or less all their lives? Well, I think so pretty well, though, of course, there will be exceptions.
793. You spoke of certain cases in the city which, I have no doubt, came under your personal knowledge, where people were living in a state of absolute destitution, *sans* everything, sitting on kerosene-tins, and so on;—do you not trace the majority of those cases to some external cause? Yes; in the majority of cases I think that drink has to do with it. Of course, there are exceptions.
794. And in those cases would there be a resident breadwinner with the family, or would they be cases of deserted families? Both. Sometimes the man has been sick, though, perhaps, only temporarily, and things have gone behind with them.
795. From the contact you have had with paupers—to use a somewhat harsh term—over the age of 60 years, your general experience is that where they have been honest and hardworking during their life they have friends to take care of them, and where they have been otherwise they go into asylums, and must go into asylums? Where they have no friends to take care of them.
796. That seems to suggest that the asylum is an evil necessity that must always be with us? Unless we can bring about a better state of things. These people look upon it as an evil, and they do their best to keep out of it. I will give a case in point. There was an old couple living in one of the lanes at Alexandria. The man had been a compositor, and some few years back he got out of work, and things went behind with him. I used to give them a little help, but, of course, I could only give it spasmodically. The difficulty is in such a case to give it regularly. One morning I went down to this man and saw him before he went out on his tramps, and I said, "Look here, I will give you a letter to the Benevolent Asylum." "But," he said, "I am just going over to Balmain to answer an advertisement; they want some compositors over there." He was putting me off so that I would not be in time for the asylum. So I said, "You can go to the asylum when you are coming back," and so I drove him into a corner to get him to take the letter down to the Benevolent Asylum, and when I had him fairly cornered, and he was sure to get there if he liked, he turned round and said, "Look here, I would rather go out and die in the street like a dog than go to the Benevolent Asylum and ask for help." In saying that he voiced the sentiments of a number of others whom I have come across. It will be understood that I am not reflecting on the asylum, because they are doing a power of good, and meeting a lot of genuine cases of distress; but I am giving you an instance of what I have experienced with that class of men. He was an old man, and his wife was also old—they are both dead now—but he never went to the asylum. He managed to call on his friends and acquaintances, and by a little bit of quiet begging in that way, having no children, they managed to eke out a living.
797. Being a respectable man he was able to keep out of the asylum? He did keep out of the asylum.
798. You are speaking of the universal prejudice that exists in the minds of all people against what is termed pauper relief? Yes; there is a very strong feeling against it. If any plan could be adopted by which people could claim such relief as a matter of legal right, I am sure it would be of very great benefit to many deserving old people.
799. *Dr. Graham.*] Would you say from your experience that, in your opinion, the poor in this city have as hard times as have the poor elsewhere? Just now, perhaps, it may be so.
800. But this may be an exceptional time? It is a very exceptional time.
801. Would you say that on the whole the poor of this city have a better time than is the case elsewhere? Yes, a long way; anyone who has lived in Scotland must see that.
802. Have you visited the asylums for infirm and destitute persons and seen the working of those institutions? Yes. I have been to the Parramatta Asylum. I have not been to the Liverpool Asylum.
803. Would you say that the old people in the Parramatta Asylum are much better off for physic and surrounding comforts than are poor people in their own homes? I daresay they are. That idea impressed me—that they were very comfortably taken care of; but you know there is something more than that wanted—and that is what we really want to get at—to remove the stigma of going in as a pauper. It is not altogether a question of comfort. You may throw a leg of mutton at a man, and hit him with it, or you may throw half-a-crown at him, and he will take it as an insult, and if you give him sixpence in a kindly, pleasant way he will take it as a blessing. There is the difference.
804. Have you come across any genuine cases of extreme poverty which you could really say arose from old age? Yes.
805. You think that old age itself is a fairly common cause of poverty? It occurs from time to time—old age where the man has been unable to work, and where his old wife has not been able to go out and do any washing.
806. You think such a man may have been a temperate and correctly living man for the most of his life? That is a very hard question to answer. There are so many men who do not live a very temperate life, and so many men who take drink, that it would be difficult to answer that question.
807. Do you know a book, "How the Poor Live," by Charles Booth? No.
808. He draws a conclusion that a certain number of destitute poor people become so in consequence of their age;—from your experience, you think that is quite possible? Yes; there are a number of people who become poor because they have been unable to keep on working.
809. And who may have been correct living people? Yes; in the ordinary sense of the term—an honest workman, an honest woman, never got drunk, never squandered their money, but just lived as ordinary people lived.
810. Do you keep a record of each visit you make? We jot down at the end of the day so many visits made that day.
811. But you do not enter fully into the particulars of each visit the conditions of poverty, and so on? Only if a certain case strikes us as an interesting one.
812. Have you any such interesting cases you can tell us of with regard to old age and poverty combined? Yes; there is a case in which a man and his wife in Alexandria are living on charity in consequence of old age.

- J. M. Main.  
30 July, 1896.
813. What are their ages? I should have to guess, but they are above 60. They have no family, with the exception of a daughter, who is away from home. The old lady is beginning to get a bit paralysed, and the husband is waiting on her. They are getting help from the Benevolent Asylum, but not sufficient to keep them, and we manage to supplement it. I have two or three friends who call and see them, and I give them a little myself, just as I can, and so they are able to scrape along. But their poverty has arisen simply through old age. He is a decent old man, and I have known him for two or three years. I have seen no sign of drink during that time, nor do I think he is a likely man to have taken drink.
814. They would not go to the asylum? They will be compelled to go if they cannot be kept in any other way. It was suggested to him that they ought to go the asylum, and he came to me about it. I said, "You know I applied to get you into one of the cottage homes at Parramatta, but they were all full. To go into an asylum would mean that the Mrs. would have to go into the Newington Asylum, and you would have to go into either Parramatta or Liverpool. You will have to make up your mind to that." He said, "I should like to stay with her while she lives, if I possibly could." And I said, "We will make an effort and try"; and we have been trying to keep them there. If they are driven into an asylum it will be because we cannot keep them out. There is no desire on their part to enter an asylum; but, on the contrary, they would not like to do so.
815. If these old people had an income of 15s. a week between them, do you think they could live on in a little house? They could live on 10s. a week between them, and be happy.
816. And pay the rent and clothing? Yes; they would be able to manage. Old people like them do not wear out much clothing.
817. But they would pay at least 5s. a week for the house? No; the old man now has two rooms for 4s. a week.
818. Then that would leave 6s. a week for food and fuel? It takes very little to keep these old folks going. He is a very handy man, and does the sewing. She cannot do anything.
819. And you think the 10s. a week would put these people in affluence, comparatively? Yes, comparatively.
820. *Mr. O'Reilly.*] And being respectable people they would still have occasional assistance from friends around? Exactly; and I think that ought to be considered. I do not think it would be wise to overlook that.
821. *Mr. McGowen.*] Would 10s. a week be sufficient to keep such a couple as you have mentioned without any outside assistance? You put me in a bit of a fix there. I am not one who would be willing to screw old people down; but at the same time when you want to apply a principle like this you must apply it broadly, and that will mean that you will require to take in a great many more people than the Government or semi-Government institutions are dealing with at the present time, and it would not be wise to be too liberal to begin with. The family I have mentioned, if they were assured a payment of 10s. a week, would be in affluence compared with their present condition. They get 1s. 6d. a week from the asylum, and what provisions are sent. Then we give them what little we can to make up the difference between the 1s. 6d. and the 4s., and also a little clothing from time to time to keep them going. Ten shillings a week with a little assistance from friends, who would take a pleasure in helping, would keep an old couple like that in affluence compared with the way they are living now.
822. I gather from what you say that to keep such an old couple without any outside assistance would cost 7s. 6d. each? I suppose it would, without outside assistance. I am sure, considering the way these old people live, they could do very nicely on 15s. a week for the two, and in many cases, such for instance as the one I have just mentioned, they could do with 10s.
823. *Dr. Graham.*] The case you cited is that of a respectable old couple? Yes.
824. But there are many people who reach old age and who still retain their vicious habits, and for whose support 10s. or 15s. a week would be a mere waste of money? There are always very difficult families to deal with under any circumstances—people who have lived a vicious life, and who are still addicted to drink. My experience is that old couples do not live together much when they lead that kind of life. They seem to manage to separate. There is not sufficient cohesion between them to keep them living together. The woman goes floating about, and gets into Newington Asylum, and the man drifts into the Parramatta Asylum.
825. *Chairman.*] You used the words "our homes" just now;—are we to understand that the City Mission has certain homes to which the poor can go? No; we have no such institutions.
826. Did you mean the cottage homes at Parramatta? Yes; I should like to say a word about those homes. In thinking over the question of an old-age pension system it occurred to me that the object might be attained better if we proceeded by degrees, instead of trying to jump at it straight away. Could we not grow to it, so to speak? One of the methods might be to extend our present systems. For instance, take the cottages for old couples at Parramatta. Could not these be multiplied? They are wanted. Take the old couple I have mentioned. They want to get into a cottage home, and I cannot get them there, though I have applied two or three times, because the cottages are full. There are twenty of them, but 200 or 300 are necessary. If we were to extend the system, and take in a larger number of old people, and give them a living in that way, I think it would be possible gradually to grow up to the old-age pension system. But if an extension of the system were adopted, I think it would be unwise to put all the cottage homes in one place. I think it would be a better plan if ten or twenty were built in various parts of the city and suburbs. In that way there would not be the degradation that I fear would follow from so many being grouped together. I think it would be as great a mistake to have them all together as to continue the congested state of our existing asylums.
827. *Mr. Wilks.*] How about housing these old people with farmers in agricultural districts? If some plan of that kind could be adopted it would be a very good thing, and in that way you might gradually work up to the old-age pension system. By having ten or twenty cottages in different places you would avoid the congested condition which obtains at the present asylums, and you would give an outlet for private philanthropy. Many persons would like to visit these old people and minister to their comfort in various ways, and by placing them in different districts that could be accomplished.
828. They would live at a cheaper rate with the farmers? I daresay.
829. If a system of old-age pensions were instituted, the pension to be given as a matter of right, do you think the tendency would be that persons would transfer the responsibility for the support of their parents on to the shoulders of the State? That would depend partly on the lines upon which the old-age pension

pension scheme was drawn. If it were made to apply only to those who were in need you would find a larger number in need than is the case now, because the dread of going into a Government institution induces many to get their friends and children to support them, who otherwise would not do so. J. M. Main.  
30 July, 1896.

S30. *Mr. McGowan.*] Are you acquainted with the present system of boarding out State children with families, under which the children practically become one of the family, the State paying 5s. a week for maintenance? Yes; I know of that system, and it is a very good one.

S31. What do you think of that boarding-out system as applied to the old people to whom we have just been referring? I daresay it could be done very nicely. Of course, you would require to take care. The same difficulty would come in that was just mentioned—the children would throw the old folk on to the State if they possibly could.

S32. Do you think you could get people to take charge of an old man or old woman, as is done in the case of one of the State children, for a payment of 7s. 6d. a week? Everybody would not care about them—some would take them.

S33. You belong to a very large district with a population of the poorer classes with whom very likely these old people would be boarded out, and whose earnings would thus be supplemented;—what proportion of the people do you think would take these old men and women? I do not think you would find many in our city and suburbs who would care about taking them. I think it would be done more in the country places. Old people are very crotchety; they are not like children. I should not like to have an old couple in my house unless I knew them.

S34. Practically, you do not think the scheme could be worked out in regard to old people? Not in the same way as it is worked out in the case of children. It might be worth a trial. I believe in trying anything like that, but I do not think it would work out as successfully as the State Children's Relief system.

Joseph Aloysius Beattie called in, sworn, and examined:—

S35. *Chairman.*] What position do you occupy? I am Medical Superintendent of the Liverpool Asylum. J. A. Beattie.

S36. *Dr. Graham.*] How long have you held that position? Ten years next September.

S37. Had you previously held any other positions in the Government service? I have been in the Government service since 1878, and during that time have held the position of Medical Superintendent of Lunatic Asylums, and have served in the Little Bay Hospital and in the Immigration Department, besides holding the position I now occupy. 30 July, 1896.

S38. How many old men have you at Liverpool? Nearly 1,000.

S39. What is the average age? I should say about 50. We have a large proportion of hospital cases.

S40. You have some pretty young men in the institution? We have some at 22—from 22 to 106.

S41. So that it is not a poor-house for old people? No; it was originally constructed as an asylum, but it has undergone transition, and is now more of a hospital and less of an asylum. We have about 400 cases in bed constantly in our wards, of all ages.

S42. Of what diseases? General surgical and medical cases. They come to us from the metropolitan hospitals and from Little Bay, and isolated cases are sent in by the Government Medical Officer in Sydney.

S43. Why are they sent there, and not kept in the other hospitals? Their chronic character precludes them from occupying a bed in a metropolitan hospital, and they do not cost so much in one of our hospital wards.

S44. Do you think any of these chronically-ill people feel the stigma of entering an institution of that kind, which is partly a poor-house and partly a hospital? There is a sentiment of that kind entertained by some, and while it is to be deplored in reference to the minority who entertain it, I think it is a very salutary thing that a man should be ashamed when he has brought himself into the condition requiring sick and charitable assistance.

S45. But if chronic illness, especially of age, thoroughly incapacitates a man from earning a living, do you think it is a fair thing that he should be forced to seek the protection of the poor-house? I think it is compulsory in every country in the world.

S46. But does the sick element enter into the working arrangements of our poor-houses in England, Scotland, and Ireland? This is a benevolent asylum, and it corresponds in its functions in this connection with what we call county hospitals or infirmaries in Great Britain.

S47. Do you think it would be a good thing and a fair thing to establish in this country similar institutions to the county hospitals or infirmaries in England;—do you think it would give a distinctiveness to your institution? I do not know that I follow you; but I think that the establishment of small homes for aged people, male and female, in connection with our hospitals, such as the Parramatta Hospital—I mean the district hospitals—would be perhaps worth trying, to avoid the barrack system, which has many objections.

S48. What proportion of cases are there in your institution arising from causes attaching purely to old age—half of them? Yes, more than half; I should say three-fourths of them.

S49. Do you think that if these old men had any source of income, to the amount, say, of 10s. a week, they could be trusted to live outside upon that income. No. I am very positive in my opinion upon that point.

S50. Do you think any proportion of them at all could be trusted? There would be an exceptionally small number.

S51. How small—a fourth? No, I do not think so. I do not think there would be more than 10 per cent.

S52. Why would you be afraid to trust them to look after themselves on a small income? I think the sources of danger would be—first, their own incapacity to look after their affairs, and, secondly, the prevalence of that peculiarity in human nature which influences people to get the most they can out of the Government, and do as little as they possibly can for it. I do not think that any of our inmates in the Liverpool Asylum could get anything like the same degree of comfort, the same quantity of food, be kept with the same care as to change of linen, and have the same medical aid available, for 10s. a week or £1 a week; while there are cases of paralysis, rheumatism, and cases both medical and surgical, chronic cases—in fact, age itself is a disease, as Cicero says—in which I do not think £3 a week would procure for them an equivalent, as regards maintenance and comfort, to what they receive in the asylums.

- J. A. Beattie. 853. In other words, you do not think that any system of pensions could take the place of the present system of treating old-age paupers? I am quite satisfied on that point.
- 30 July, 1896. 854. On general grounds? Yes, on general grounds.
855. *Mr. O'Reilly.*] You spoke of the stigma that attaches to pauper relief as having a salutary influence in preventing people from presuming on the Government? Yes.
856. You also seemed to imply—in fact, I think you plainly stated—that a large majority of the inmates of these asylums get there through their own fault? Yes.
857. You said that, perhaps, not more than 10 per cent. were men who were forced into these asylums by circumstances over which they had no control? I did not quite mean that. I understood Dr. Graham to ask me what percentage could be trusted.
858. You said that not 10 per cent. could be trusted outside with an independent income? Yes.
859. That is to say, that not 10 per cent. would be able to look after themselves? Quite so.
860. Do you include in their incapacity drink and bad habits and extravagance, and so on? Principally drink.
861. And also illness and physical decrepitude? Yes.
862. To a large extent? Yes.
863. *Dr. Graham.*] The Director of Government Asylums told us that out of the 4,000 odd paupers now in the asylums a system of old-age pensions could be applied to between 500 and 600 of them—is that your opinion? I think it would be nearer the mark to say 10 per cent., knowing individually the 1,000 people in my institution at present.
864. Would you like to see the sick portion of your institution separated from the purely benevolent portion;—do you think it possible to do it? It is possible to do it, and it would be advantageous. But you will always have some of them getting sick day after day, and going from the hospital wards into the dormitories, and from the dormitories into the hospital wards. You will always have a certain current number going backwards and forwards.
865. I suppose you are familiar with the boarding-out system in connection with the State Children's Relief Department? Yes.
866. You do not think that system could be applied to old men? I do not think it is a parallel case.
867. *Mr. McGowan.*] Do you find any objections on the part of these old men themselves against the present barrack system? There are some cases where old fellows get discontented with being in the asylum, and when they are able to move about a little, and the weather is favourable, they think they can go out fencing or boundary-riding—some of them who cannot walk half a mile.
868. According to your system of work at Liverpool, I believe the inmates who are a little stronger than the others assist the warders in attending to the bed-ridden and consumptive patients? They constitute the wardsmen and deputy wardsmen under three or four paid attendants.
869. Then all the attendance is done by the old men themselves, with the exception of the three or four paid officers? Yes.
870. Do the inmate wardsmen raise any objection to attending to the consumptive patients? Some of them do.
871. Do they fear contagion? Yes. The average age of our wardsmen I should put down at 50. We have young men who come in with, perhaps, a heart affection, or perhaps a rheumatic affection of the joints, and who get better, and whom we improvise as wardsmen for a period of six or twelve months, giving them a little tobacco or a tot of rum in return for their services.
872. In your opinion, is there any danger of contagion from their attendance on consumptive patients? I do not think I should be warranted in putting a healthy man to sleep in a consumptive ward with a lot of consumptive cases.
873. As a matter of fact, you have very few healthy men there? I mean men without any taint of consumption—comparatively young men. If I employed such an inmate as a wardsmen, I should not oblige him to sleep in a consumptive ward where there would be (say) thirty or forty cases of consumption.
874. The people who attend on these consumptive cases, I gather, are men who have some symptoms of the disease themselves? Some of them.
875. The majority of them? Some of them are free from any taint of consumption, but their hours of attendance on the consumptive cases are limited.
876. *Mr. O'Reilly.*] And they do not sleep in the ward? No.
877. *Mr. McGowan.*] You also said that you would not like to put a healthy man in that position, because there might be a possibility of contagion? Yes.
878. Is there any danger under your system to the rest of the institution, inasmuch as nearly the whole of the patients are in the one building? Yes; there is a theoretical danger. For instance, if the desiccated sputum, or dried spittle, of a consumptive patient, having become pulverised, were taken into the air and deposited on the window-sills, the roof, or gutters of the building, and so got into the water, that, I should say, would be a very objectionable state of things.
879. Do you isolate your cancer cases? Yes.
880. Any considerable distance from the main hospital? I should say, quarter of a mile.
881. Would it not be better, according to your evidence, to isolate your consumptive cases? Certainly.
882. How is the attendance on the cancer cases conducted? The attendant at the present time is a clergyman's son. His father is a vicar in Yorkshire, and his two brothers are clergymen in England.
883. Is he a cancer patient himself? No. I do not think there is much danger of contracting cancer.
884. And yet you have isolated the cases at a distance of quarter of a mile? On account of the offensive character of the disease.
885. *Mr. Wilks.*] Do I understand that the trend of your evidence is that you consider the old-age pension scheme more or less a fad? Yes; that is exactly what I do consider it.
886. And if such a system were instituted you believe a large increase in impostures would occur? Certainly.
887. What is your opinion with regard to the cottage homes at Parramatta that we have heard so much of? I think they are very excellent things. I do not think they are absolutely necessary, because when people get old I think there is a danger of their becoming supersensitive in the matter of sentiment, and the class of people who benefit by these charitable institutions are not so very squeamish. Sometimes a husband and wife like to separate of their own free will. If they got the choice of living together in one of these cottages

cottage homes they would, by preference, go to different institutions—the woman to Newington, and the man to one of these asylums. I know of a few cases of indigent old people in Liverpool who would not take advantage of these institutions at all.

J. A. Beattie.  
30 July, 1896.

888. *Dr. Graham.*] Private citizens outside of the asylum? Yes.

889. *Mr. Wilks.*] Then you think the objection to the asylum or barrack system is merely sentimental? I think it is largely so.

890. And that sentiment soon wears off with residence in an institution? Yes; it does not last very long.

891. *Dr. Graham.*] Supposing your old men got the option to-morrow of remaining in the institution or getting 10s. a week to go and board out? I know the bulk of them would take the 10s. a week, but they would be back again the week afterwards.

892. *Mr. Wilks.*] You consider that the only practicable system of dealing with this class is by the maintenance of asylums? I am aware in a general way of the tentative efforts of philanthropists at Home and in Europe, but I do not think we have quite arrived at the stage when we could adopt such schemes here.

893. *Chairman.*] In your estimate of 10 per cent., did you intend that to apply to the 1,000 inmates under your direct supervision, or to the 4,000 scattered about in the various asylums? I restrict it to the 1,000 under my own supervision.

894. We have had it from Mr. Maxted that about 25 per cent. of the inmates might be boarded out? I do not think so.

895. Putting the inmates of your asylum aside altogether, and applying the old-age pension system to old citizens, do you think it would be a practicable plan to board them out with country residents, or residents in the suburbs, in the same way that State children are boarded out? No. I think that with regard to about 10 per cent. of the inmates of the Liverpool asylums I could select that percentage of decent old men who would conform to the ordinary usages of society, and who would be allowed into decent places to live in at a small premium, say, 10s. a week: but I am quite satisfied with regard to the remainder of the inmates that such a system would be disastrous to the individuals themselves, and to the people who took them in, and would be entirely unworkable.

896. You think, then, that if these old people were boarded out they would not be treated so well for their complaints in isolated positions as they are now in your asylums? I am perfectly satisfied of that. The typical old man would not be a desirable lodger. Some of them are weak in their loins and cannot hold their water, and they often have bleared eyes, and require medical and surgical attendance.

897. *Mr. McGowen.*] You are speaking from your experience as Medical Superintendent of the Liverpool asylums? Yes.

898. And, according to what you state, the bulk of your patients should go into a hospital for incurables? Yes.

899. The asylums at Rookwood and Parramatta are not on all fours with your asylum at Liverpool? No; we have a larger proportion of hospital patients among the inmates.

900. *Chairman.*] And those inmates you refer to would, no doubt, be more fit for an asylum than for outside treatment? Yes.

901. Putting those aside altogether, and dealing only with those who are afflicted with senile decay and minor complaints, do you think it would be better for them to live out in the bracing air of the country if they were well treated? Certainly.

902. Do you think an old-age pension system might be safely applied to cases of that character—cases not suitable for an asylum? I think it might be tried, and probably with advantage in the case of a small number.

903. *Mr. O'Reilly.*] You have had eighteen years' experience of this sort of work? Yes.

904. So that your experience has not been confined to hospital cases such as you now have under you at Liverpool? No.

905. Have you had experience in Parramatta? I have had experience in the lunacy department there, and in the general hospital at Little Bay, and I brought out 6,000 immigrants to this country.

906. And are you ready to go quite as far, if not further, than Mr. Maxted when he says, or rather implies, that 75 per cent. of the inmates of the Parramatta Asylum would still have to be cared for by the Government in the event of the remaining 25 per cent. being pensioned out? I quite approve of every word of that. That is exactly my opinion.

907. And even more? Yes; I do not think there are 10 per cent. of them. You would find that it would become very expensive to maintain these old men out of an asylum, on account of the frequent medical attendance, and so on.

908. *Mr. McGowen.*] Will you briefly state whether, in your opinion, the present system can be improved? I think, under the directorship of Mr. Maxted, we are improving the present system very steadily and very satisfactorily. There has been the greatest possible improvement during the ten years of my residence at Liverpool. There are a great many means of further improvement, and I think we are proceeding upon those lines.

909. *Dr. Graham.*] Have you any suggestions to make which you would like to see carried out as to fundamental changes in the system of dealing with your destitute old men;—do you think the present system is good? I am satisfied that it is very good, and that it will gradually become better under the present régime.

910. *Mr. O'Reilly.*] You stated that these old men now receive regular medical attendance and medical comforts in the asylums;—in the event of 25 per cent. of them being boarded out, they would require just the same medical comforts, would they not? I think you would find that the cost would amount to very much more than 10s. a week.

911. They would require the same comforts and attention and regular medical supervision that they get in the asylum? Yes. I think the barrack system is objectionable. I think that may be predicted of the system as it applies both to old age and to children, and I think the boarding-out scheme with regard to children is a very salutary one. But children easily ingratiate themselves into favour. We all feel the influence of childhood, and affection grows as a natural thing. In the case of old age it is repulsion that grows. The infirmities are so patent and increasing that people get tired of them, and especially out here. In these Colonies people get tired of their old parents very frequently. There are numerous cases where the relatives of inmates in the Liverpool Asylum deny them, and change their names, and all that kind of thing.

J. A. Beattie. 912. *Mr. Wilks.*] An old-age pension system would give such people a chance to still further shirk their responsibilities? Yes.

30 July, 1896. 913. *Dr. Graham.*] You are aware that there are many houses in the city and suburbs occupied by destitute old people who have a distinct objection to go to an asylum, and who are living in a condition of squalor and great misery;—do you not think it would be a fair thing, and a humane thing, for the State to give such people a pension of (say) 10s. a week? I think it would be proceeding on a wrong basis. I think a properly-conducted State institution ought not to bring with it any opprobrium. If I were reduced to indigence by disease or age, or any blameless cause, I should have no hesitation to seek the shelter of one of these places myself. Much better people than ever I was, or will be, have lived and died in them, to my knowledge.

WEDNESDAY, 5 AUGUST, 1896.

Present:—

DR. GRAHAM,  
MR. McLEAN,

MR. SCHEY,  
MR. WILKS.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

David Carment called in, sworn, and examined:—

D. Carment. 914. *Chairman.*] What position do you hold? I am Assistant Actuary to the A.M.P. Society.

6 Aug., 1896. 915. The Committee would like your opinion in regard to old-age pensions, from an actuarial standpoint? I should be inclined to say that probably the most practical way of effecting any object of that sort would be to give a pension either to everyone in the community or to all who were proved to be necessitous on the attainment of a certain age, without attempting to charge anything for it, or to create a fund for the purpose, because, in the first place, if you attempted to create a fund there would probably be a great difficulty in getting the necessary payments from those who were not in constant work, and, in the next place, the fund, before many years had elapsed, would assume such enormous proportions that it would be costly and difficult to manage, and it would be difficult to invest the accumulations satisfactorily. That I think would be found to be a great difficulty. In Germany, where they have established a system of old-age and invalidity pensions, they embrace both sick pay before the attainment of superannuation and also a pension in old age. Then, again, there is the scheme which was advocated by Canon Blackley, in England, to the effect that every person in the receipt of wages should pay, some time between the ages of 18 and 21 years, the total sum of £10, which it was intended should provide them with sick pay while they were unable to work, and also with a pension in old age. But it seems to have been proved before a Select Committee of the House of Commons that the amount that Canon Blackley thought to be sufficient would not be adequate for the purpose, and no doubt various other difficulties would arise in working out the scheme. The scheme proposed by Mr. Charles Booth seems most nearly to approximate to what I understand is the idea of this Committee. His idea was that all the deserving poor should be provided with a pension in old age without being charged anything for it. Another scheme of which I have recently heard is in force in Denmark, where the tax on beer has been appropriated to give a pension in old age, subsidised partly by the Government. I do not know exactly how that is likely to work out. It has been stated that to give a pension to everyone of the population of England above 65 years of age would cost about £17,000,000 per annum, and I believe the cost for Scotland and Ireland would be about £6,000,000 more. Those figures, I think, are on the assumption that everyone would claim the pension. I have not before me just now the figures as to the number of the population in this Colony over 60 years of age. Some figures were given by Mr. Sutton, the actuary of the Friendly Societies in England, before a Committee of the House of Commons, appointed in 1891, in connection with a scheme proposed by the London School Board for the superannuation of their teachers, and Mr. Sutton there showed what it would cost to provide a pension at either 60 or 65 years of age. That cost would vary according to the present age of the person subscribing. It was estimated by Mr. Sutton that a pension of 5s. a week, to commence at the age of 65, would require a payment of 3½d. a week to be made continuously from the age of 20 up to the age of 65. A person starting at an older age than 20 would, of course, have to make a larger weekly payment for the same pension; and for a pension of 10s. a week the weekly payment would, of course, be double that just mentioned. That was on the basis of 3 per cent. interest, and I do not think you could rely upon any higher rate than 3 per cent. with safety. That did not include anything for the cost of working the scheme.

916. You say that in Booth's scheme the estimate of cost was £17,000,000 for the people of England only? Mr. Frome Wilkinson, in his book entitled "Pensions and Pauperism," says:—

Mr. Booth inclines to the view that any person attaining the age of 65 should be entitled, without a specific contribution, to a pension of 5s. a week for the remainder of his life. Adopting recent returns relating to the number of persons over 65 years of age in England and Wales, he estimates that a universal pension list would attain to the dimensions of £17,000,000 per annum.

It is stated that the cost for Scotland would be £2,500,000, and for Ireland about £4,000,000, the pension age being 65 years.

917. That would be a cost of £23,500,000 for a population of (say) 40,000,000;—could we not arrive at the cost with regard to this Colony by proportion? The cost for this Colony could be arrived at by ascertaining the number of people in the Colony over the age of 60 and 65 respectively. Mr. Sutton, the actuary of the Friendly Societies at Home, published in September full tables showing what was required to be paid at certain ages for pensions of different amounts. It was based on the mortality rates for the whole of England and Wales, and on a 3 per cent. rate of interest. There is also a calculation based on 2½ per cent. interest, which, of course, would require a larger payment for a given pension. According to Mr. Sutton's calculations, at the age of 30 years a payment of rather more than £4 a year was necessary to provide a pension of 10s. a week after the age of 60 years—that would be equivalent to 1s. 6d. a week. At the age of 20 the cost would be about 10d. a week. At subsequent ages the rates increase rapidly.

918. *Dr. Graham.*] Is there much difference where the pension begins at 65? Yes, there is a very great difference. In that case the pension would probably be paid for a shorter time, while the premium would have to be paid for a longer time. Sixty-five years seems to be the age mostly talked of at Home. According to the same tables, I find that at the age of 20, to provide a pension of 10s. a week, beginning at

at 65 years, the cost would be a little over 6d. a week, and, starting at the age of 30, the cost would be about 10d. per week for a pension of 10s. a week to begin at the age of 65. There is little doubt that any scheme which depended for its working upon the exaction of contributions like these would be found to be impracticable, on account of the difficulty of getting the money from the people, and of taking care of it after it was received. I find that by the census of 1891 there were at that date about 48,500 persons aged over 60, the number over 65 being about 23,300. Allowing for some increase in these numbers during the last five years, I estimate that to provide a pension of 10s. a week to every one over 60 would require about £1,300,000 per annum; while if it were confined to those over 65, £780,000 would probably be sufficient.

D. Carment.  
5 Aug., 1896.

919. *Mr. Wilks.*] Then I understand that from your study of the question you are of opinion that if any system of old-age pensions were established it should be without specific contributions? Yes; I think that would be the only practicable way.

920. The difficulty being, in the first place, the collection of the premiums, and, in the next place, the investment of the accumulated funds? Yes; in the course of forty or fifty years the fund would become enormous.

921. And you believe that the pensions should apply to all or none—that it should be, as it were, a gratuitous system, of which the people might avail themselves? The question of whether you should offer the pension to everyone, rich or poor, is a difficult one, because, if that were done, the probability is that a certain proportion of the people would not avail themselves of the pension.

922. *Dr. Graham.*] As a matter of practical working of the various schemes put forth the best is that which applies to all? Yes, I should think so.

923. *Mr. Wilks.*] Under the other scheme it would be difficult to differentiate the necessitous cases and to determine what constituted necessity? Yes.

924. At what age do you think that in a country like this an old-age pension system should start? That is not a very easy question. In many occupations a man will be able to work until he is 65 years of age, or perhaps older, while in others he will not be able to do so. It is shown in Spender's book that men employed in some occupations rapidly fall off after the age of 45 or 50. On the other hand, in the case of clerks and others employed in indoor work, there is no reason why they should not continue working until 60 or 65 years of age, and possibly later.

925. *Dr. Graham.*] But in regard to the class of people who reach the poor-house, and who really come from the artisan class, their wage-earning capacity diminishes from the age of 45 years? Yes; but you could not provide them with a pension at that age. I should think, if you are going to do anything of the sort, your pension should begin at the age of 60 years.

926. *Mr. McLean.*] You say that the difficulty in connection with an old-age pension scheme would be with regard to the collection of the premiums. From your experience in connection with life assurance, can you say whether a very large proportion of those who enter into life assurance contracts in their younger days fall out through non-payment of their premiums? Yes; there are a very large number in these Colonies. I attribute that largely to the fact that, as we canvass actively for business, a good many people insure without sufficiently considering whether they will be able to keep up the payment of the premiums, and there is no doubt a great number relinquish their policies; but a large proportion of these insure again. They allow their policy to lapse in one year, and take out another policy next year or a few years afterwards. I do not know to what extent that is the case.

927. Have you any idea as to the class of people who neglect to make provision by life assurance. Do you think that the class we understand as the artisan class, as a rule, make this provision? We have in our office a very large proportion of the working classes who have taken out policies of over £100 and upwards. Of course, a large number of them insure with the industrial companies; but we have a very large number of policies effected on the lives of working men as low as £100. We do not assure for any sum lower than that. A large number of £100 policies have been taken out by railway men, miners, and artisans of all kinds, and a good many by ordinary labourers, though perhaps we do not get so many of the casual labourers.

928. You issue policies assuring amounts to be given at certain ages? Yes.

929. Is not 60 years the average age? No; that is rather beyond the average age. The average age at which these policies are made payable is from 50 to 55.

930. Do the working classes avail themselves very largely of these tables? Yes; to a considerable extent. Policies of that kind form half of our whole business now.

931. Policies maturing at about 55? Yes; some of them mature as early as 35, and some of them not till 65. The average would mature at 55 or earlier.

932. You do business also in the way of providing annuities? Yes; but we do not do much of that business.

933. Not many people avail themselves of that? Very few indeed. I suppose they consider they can do better with their money, or something of that kind, but we have very little annuity business. Many companies at home and in America do a large annuity business, but here there is very little of such business done. I do not think we have more than 200 or 300 annuity policies altogether at the present time.

934. That would seem to show that if people were left to make voluntary contributions to an old-age pension scheme it would not be largely availed of? That is quite certain. They would not avail themselves of it at all. It would have to be compulsory, or else it would be entirely futile. There is no doubt about that.

935. *Chairman.*] Do you think the establishment of a scheme of old-age pensions would militate against the business of provident institutions like yours? No, I do not think so. I should think that any pension the State could guarantee would be very small.

936. *Mr. Wilks.*] Have you considered the amount per week that would be required for an old-age pension in this Colony? The sum that was mostly suggested at home was 5s. a week, but that was considered by some authorities to be too little. I should think that in these Colonies, where food is cheap, a person could exist on 10s. a week, or less.

937. *Chairman.*] Or 15s. a week for a married couple? Yes. They would not get much comfort on that, but probably they might carry on existence. I do not think you could fix the pension at less than that.

William Roadley Dovey called in, sworn, and examined :—

- W. R. Dovey. 938. *Chairman.*] What position do you occupy? I am actuary of the Citizens' Life Assurance Company.  
 5 Aug., 1896. 939. Do you work any pension or superannuation scheme in connection with that society? Yes; we have benefits of the nature of old-age pensions.  
 940. Will you kindly explain them to the Committee? The company issue policies, payable by weekly payments, providing for endowments at the age of 65 years, coupled with assurance at death.  
 941. What is the rate of payment? There are three tables altogether, giving various benefits, the payments being 1d., 2d., 3d., and 6d. per week respectively.  
 942. For how long do the payments run? Up to the age of 65 years.  
 943. And do the policy-holders start to pay at any age? Yes. The present tables do not go beyond the age of 21.  
 944. And they pay up to 65? Yes.  
 945. And what benefits do they receive? The benefits vary according to the age at entrance.  
 946. Will you give us a few illustrations from the various tables? Entering at the age of 12 a payment of 6d. a week gives to the insurer an endowment of £135 at 65 years of age, with an assurance of £20 at death.  
 947. Could the endowment be converted into an annuity? Yes; they have the option of buying an annuity with it.  
 948. *Mr. Wilks.*] What would be the value of the annuity? About 6s. a week.  
 949. If they allow their payments to lapse can they regain their lost ground? If they discontinue their payments after five years they get a cash sum down. It is in the nature of a surrender value. After the policy has been a certain number of years in force they are entitled in addition to a cash payment to a paid-up policy. The payments are tabulated for each year of duration.  
 950. Will you give us an illustration showing what is done when the payments are discontinued? If the payments are discontinued after the policy has been ten years in existence the person receives £4 18s. in cash as surrender value. If the payments are discontinued after the policy has been twenty-six years in existence, there is a cash payment of £20, and a paid up policy of £46. If the payments are discontinued after thirty-five years, the cash payment is £20, and the paid up policy £44 10s., payable at the age of 65. If the payments are discontinued after forty-six years, which would be near the end of the time, there would be a cash payment of £20 as before, and a paid up policy of £70, payable at 65. The paid-up policy is graduated until the end of the period, when it nearly comes up to the amount of the endowment.  
 951. *Chairman.*] Do you find that your subscribers maintain their contributions? A certain number discontinue them.  
 952. What proportion discontinue them? Many discontinue after they have been only a few months assured. As a rule, the rate of discontinuance decreases with the duration of the insurance.  
 953. *Dr. Graham.*] Are these small payments collected by your society? Yes; they are collected from week to week by special agents.  
 954. That adds a good deal to the expense? Yes.  
 955. Do you pay the collectors a commission or a salary? We pay them a commission.  
 956. *Mr. Wilks.*] Is it a costly system? It is naturally more expensive than if the premiums were paid at the office. We should give the same benefits at a less cost if the premiums were paid at the office. We have a branch in which that is done.  
 957. You practically dun them for it now? The collector has perhaps to call once or twice, when they may not be in. Very often two calls are made for the same 6d. or 3d. or 1d.  
 958. Do you find this system of insurance becoming popular with the industrial classes? The company has issued about 13,000 policies under these tables alone, and have in existence about 180,000 under all tables—not in New South Wales, but throughout Australia.  
 959. How long have these tables been in operation? The tables in question have only been about nine or ten months, but the other tables have been in force for varying periods up to ten years.  
 960. *Dr. Graham.*] Suppose you did not have the collector system, do you think you would have the same number to come forward and voluntarily submit to this method of providing for their old age? No, I do not think so.  
 961. You think it is essential that they should be constantly reminded in this way? Yes.  
 962. Canvassed, in fact? Yes.  
 963. *Chairman.*] If these tables have only been in existence for nine or ten months, and you have obtained in that time 13,000 subscribers, it is hardly a fair test as to the possibility of the continuance of most of the policies? No; we can only judge from the experience under other tables.  
 964. *Dr. Graham.*] Most of those who are assured under these tables of which we have been speaking are children really? Yes.  
 965. So that the provision for their old age is thought out for them by others? Yes.  
 966. *Chairman.*] From your experience, do you think it is a system of insurance that is likely to become more popular? I think so. We are issuing more policies now than we did a few months back—that is to say, we are issuing about 500 a week under these three tables.  
 967. *Mr. Wilks.*] What is the average age of the entrants? Under the infantile table I should say about 4 or 5 years. Under the other two tables the ages run from 11 to 21. I suppose they would be pretty evenly distributed over those ages—say 14 or 15.  
 968. Then you have no table applying to ages from 25 to 30 years? Not at present.  
 969. *Dr. Graham.*] Do you propose to try such a table? We may do so. At first the infantile table was started, and then the next, which carried the age up to 21.  
 970. Under a table applying to an older age the weekly payment would, of course, be very much higher? Yes, it would be higher.  
 971. *Mr. Wilks.*] What prompted you to fix the age at 65 years for the payment of the endowment? It has been the usual age in England for these transactions.  
 972. And the conditions in this country do not warrant you in lowering the age in your calculation—the mortality tables, for instance? We do not think that the mortality here is less favourable than in the old country, or that people age more quickly. I have myself made a close investigation into New South Wales mortality, and, as far as the figures could be accurately compared, the result, as regards mortality, was in favour of this Colony.

973. *Dr. Graham.*] Do you think the average duration of life here is as good as that anywhere, taking the ordinary death-rate? As compared with England, I should decidedly give the preference to Australia. I should give the preference to New Zealand as against New South Wales. W. R. Dovey.  
5 Aug., 1896.
974. The average duration of life is longer there? It is.
975. You are aware that that is not a fair test, because where there is a dense population the rate is bound to be higher than where there is a sparse population? Yes; I was merely dealing in my own mind with the actual figures, without regard to the causes.
976. *Mr. Wilks.*] Are the people who assure with your company confined to the artisan class, or do they include those engaged in clerical and similar work? For the most part those who assure under these tables are of the artisan class, but we have a fair number of others.
977. *Dr. Graham.*] Do you do a large business in the ordinary forms of assurance, apart from these tables? Yes.
978. Do you conduct it on the same principle—that of weekly collection? The company has two branches; one is worked on the plan of weekly payments, and the other on the plan of quarterly, half-yearly, or annual payments. It occasionally happens that after entering under the weekly system policy-holders come under the other system.
979. *Mr. McLean.*] Is it necessary for applicants for assurance under the three tables mentioned to undergo a medical examination? It depends on the amount of the proposed assurance. Under the infantile table it would not be necessary. In those cases we have an inspector's report in the place of a medical report.
980. *Dr. Graham.*] The inspector sees the child as a layman? Yes; he looks at the child and asks a few questions. In the case of most of those who have reached the age of 21 years a medical examination would be necessary under these tables.
981. An applicant for assurance under the table giving an endowment at the age of 65 years of £135 and a certain amount at death would, I suppose, have to submit to a medical examination? In that case, the sum assured being £20, an inspector's report would be taken as sufficient?
982. But would you insure a man for endowment without insuring his life at the same time;—is it possible to provide for old age without at the same time covering one's life by assurance? At present all our tables combine the two.
983. That practically throws a man out who could not pass a medical test for the larger amount? Yes.
984. If a man wanted to insure for £100, for example, he would have to undergo the usual rigid examination? Yes; or even if the amount were only £30.
985. *Chairman.*] Have you given any attention to the question of State old-age pensions? I have given a good deal of attention to the question of thrift among the poor. I was one of the actuaries appointed under the Friendly Societies' Act of 1875 in the old country.
986. *Dr. Graham.*] What was the range of your investigation under the Friendly Societies' Act? We were engaged in the work of valuation and calculation of rates for Friendly Society benefits.
987. *Chairman.*] From your knowledge of the subject, do you think, if the public were asked to make a small payment every year, they would be likely to keep it up in order to entitle them to an old-age pension? I think that in respect to a considerable class of the population there would be a difficulty in obtaining from them a payment for a protracted period for the purpose of providing for old age, especially in Australia, where there is so much changing of residence.
988. You think it would be a very precarious system that would depend upon voluntary contributions? If the contributions were to be purely voluntary, without any systematic machinery for their collection, I think the system would fall through.
989. I suppose to make it a success it would be necessary to have machinery something like that which you have in your society, where very active canvassing goes on? I think so. The Post Office insurances and deferred annuities in the old country have only been taken out on the most limited scale.
990. Have you had any experience in connection with those? I have only occasionally noticed the statistics as to the number in existence.
991. *Dr. Graham.*] Have you taken any interest in the social conditions of this country, apart from the question of insurance? I have.
992. Do you think the conditions of the poor in this country are on a parallel with those you know of in other countries? I think the conditions here are very much better. On account of the superior climate poverty is more endurable here than in England with its rigorous winters.
993. The conditions of life, even for the poor, are easier on that account? Yes.
994. *Chairman.*] And I suppose we have not the same keen competition here for employment as they have in the more thickly-settled countries? I can hardly speak as to that.
995. *Dr. Graham.*] The kind of people who insure with you are really the better class of artisans? Yes.
996. You do not get any of the very poor or of the degraded class? No; as a rule, they are people in receipt of regular wages. Mr. Garvan, the Chairman of our Company, has on several occasions referred to this question of old-age pensions, and, if the Committee desire it, I shall hand in pamphlets containing speeches delivered by Mr. Garvan at our last two annual meetings, in which he dealt with this subject. [Appendix H1.] I also hand in for the perusal of the Committee an article from the *Bankers' Magazine*, containing information on the subject of Friendly Societies. [Appendix H2.] I should like to add to what I have already said on the general subject that, in my opinion, one of the main difficulties in connection with a scheme of old-age pensions is the fact that many of the working classes would probably spend their pensions as they had previously spent their wages—too often in thriftless ways.
997. *Chairman.*] But not if that was all they had to depend upon? I can only say I hope not.

THURSDAY, 6 AUGUST, 1896.

Present:—

DR. GRAHAM,  
MR. MCGOWEN,

MR. WILKS.

MR. SCHEY,  
MR. McLEAN,

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

Henry Norman MacLaurin, M.D., LL.D., called in, sworn, and examined:—

H. N.  
MacLaurin,  
LL.D.

6 Aug., 1896.

998. *Chairman.*] What position do you hold? Doctor of Medicine, and Member of the Legislative Council.

999. Have you given any attention to the question of old-age pensions? I have not gone very minutely into the details of it, but I have thought of it, as every person must who has to do with public affairs.

1000. Do you think it would be possible to work a scheme of that character in New South Wales? It depends on the principles upon which you proceed. The only place of which I am aware where an attempt has been made to carry out such a scheme is Germany, where there is a system of compulsory insurance against old age for the working classes.

1001. But in Germany it is a compulsory system? It is a system of compulsory insurance by the working classes for themselves against old age, supplemented by contributions from the Imperial funds, and also, I believe, contributions from the employers.

1002. Do you think it would be acceptable to the British people to have a compulsory system in New South Wales? I do not think it would be acceptable, and, moreover, I do not think it would be just.

1003. You are aware that in Germany there is a great deal of discontent, even among the working classes, with regard to the system of State insurance and old-age pensions? Yes. I believe there is a great deal of dissatisfaction.

1004. If such a system were proposed in New South Wales, upon what lines do you think it should be worked? It seems to me that if there is to be an insurance against old age—that is to say, to provide a pension when the persons reach a certain time of life—it ought to be contributed to by the whole of the public, and not by any one section of the public. But it is when you come to consider the details of a scheme of that kind that you find the difficulty. It is very easy to lay down a principle, and say so-and-so ought to be done, but it is when you come to work out your scheme without hardship upon people that the difficulty occurs.

1005. You think, then, that if the scheme were applied in New South Wales all should contribute to it, and all should have a right to receive the pension? All should have a right to receive the pension, certainly.

1006. You are aware that such a scheme would be very expensive, costing over £600,000 per year? That is one of the difficulties of detail.

1007. Do you think it would be right, then, to limit it to necessitous cases? If you limit it to necessitous cases, then you mark the persons who accept pensions as being somewhat different from other people, and to a certain extent the character of pauperism attaches to them.

1008. In view of the fact that our financial resources would not possibly allow us to give the scheme a general application, do you think we should be justified in applying it to necessitous cases only? There can be no doubt whatever that we should be not only justified, but bound to see that every person escapes the risk of dying of starvation, and therefore every man, and especially every man over 65 or 70 years of age, who is no longer able to work, ought to be protected against death from starvation. But whether it would be wise to call that an old-age pension or not is another question. A pension is a reward for services. It is given to every person who has done the service, so long as he has not forfeited his right to the pension by some misconduct. If, however, you say that a pension is not to be given, except to those who are necessitous, then you introduce the element of pauperism. The recipient would always be looked down upon. People would say to him, "You get a pension, but it is not because you have served well as a citizen, but because you are so poor that we cannot run the risk of letting you die of starvation." Under those circumstances it is not a pension.

1009. *Mr. Wilks.*] How would you regard an old-age allowance? The same thing applies. If you were to give an allowance to an old man who is no longer able to work, and who would die of starvation if he did not get it, every person would approve of such a proceeding, because it would be wrong if the man were allowed to die of starvation. But you must not suppose that such a payment is on the same footing as a pension given to a man for good service, because the element of poverty comes in, and poverty, although it is no crime, is looked upon generally as a kind of mark.

1010. *Chairman.*] Do you think it would be wise to rely upon the people subscribing to this fund voluntarily? They certainly would not subscribe at all. Nobody would subscribe.

1011. You have read, no doubt, of the Danish system of old-age pensions? I have read something with regard to that scheme. I may say that I have not made a very minute study of this question, and I am giving you more my own ideas than those I have acquired from any experience. I have read something of the Danish scheme.

1012. In Denmark they profess to give the scheme a general application, but, in point of fact, it is limited to a considerable extent by conditions. One of these conditions is that no person who has been in receipt of a charitable allowance at any period of his life should have an old-age pension; and another condition is that those who have offended in any way against the law should not have a pension;—would you be in favour of introducing those conditions in New South Wales? The Danish system is, I think, much more nearly a system of pensions than the German system, for, as you say, they exclude persons who have had to get any charitable allowance, and persons who have offended against the law, and they also exclude persons whose conduct by an extravagant or foolish way of living may have conduced to their being brought into a poor condition requiring the pension. There is no doubt that the Danish system embodies the most scientific idea of a pension. The question arises, first, whether we can afford to apply the money in that way, and, secondly, whether the vast mass of the people could not apply the money better themselves than by having it stored up in the hands of the Government to be kept for the purpose of a pension.

1013. But, as a matter of fact, we find that they do not save the money themselves, and as a result a large number of persons are thrown upon the care of the community, and have to be maintained by the State?

State? Those are the class of persons that would be excluded under the Danish system, because of their having been recipients of charitable relief, or having by their extravagant living contributed to their miserable condition in old age. So that the Danish system would exclude them.

H. N.  
MacLaurin,  
M.D., LL.D.  
6 Aug., 1896.

1014. *Dr. Graham.*] Not altogether, because we have many people here entering our asylums for the first time at 60 years of age; such persons in Denmark, provided their past history had been clean, and they had not been recipients of charitable relief, would be entitled to a pension; here we have only one way of dealing with those people, and that is to put them in the poor-house? I have not had much experience of our asylums for a considerable number of years, but at one time I was medical officer at one of the asylums, and I knew the old men very well, and used to chat and talk with them, and hear their stories, and there were very few of them who could escape the charge of having contributed to their position by their extravagant and foolish mode of life. There are exceptions, but the men who go to the asylums, as a rule, have not led wise lives.

1015. Do you think it is possible to deal with the inmates of our asylums in any other way than the present method—for instance, do you think it would be desirable to give them a little weekly allowance and board them out? Judging from my experience in the past, I should think a number of them would be very much better with a boarding allowance. On the other hand, there are some who would not. There are some who are exceedingly difficult to deal with. They have the wandering spirit in them. They like to go into the asylum in the winter-time, when it is cold and miserable, and at the beginning of summer they prefer to come out and become, in fact, vagrants—they enjoy it.

1016. You do not think, then, that the initiation of a system of weekly relief, or a system of pensions, whatever you like to call it, would be an adequate substitute for our present system? Weekly relief and pensions are two different things. A pension is a thing which a man has earned, and to which he has a right; weekly relief is what is given to a man to prevent the sentiment of the community being shocked by his dying of starvation. If we are going to consider a system of pensions it is right we should keep those two things perfectly distinct. A pension is what a man has earned, and, if he has earned it, he has a right to it, and you have no right to take it from him because he is not poor, or to say, "We will only give to those who are poor." The moment you bring in the element of poverty then the payment partakes of the character of relief, which is altogether a different thing.

1017. *Mr. McGowen.*] How could the man earn it by your showing if he were not a contributor to the fund? The notion I gathered from the Chairman was that it would be believed that every respectable man, by working hard in the country for thirty, forty, or fifty years, would have so far contributed to the general wealth of the country that the State would be justified in crediting him with a certain sum of money for the rest of his days. I say that is not pauperism at all.

1018. That is contributing by performing a certain function in the community? He would not be directly contributing—he would be hypothetically contributing.

1019. In such a case as you mention, where the State gave a man over 60 years of age, say, 10s. a week, would the element of poverty come in? I think 60 years of age is too low; but if you say that every man of 65 years of age, or every woman of 65 years of age, who has led a respectable life, has earned the right to a contribution from the State, that is an intelligible principle. It might not work well in practice, but it would be intelligible. But if you say that every man over 60 years of age who is poor has earned the right to something from the State, then a great number of other considerations come into play.

1020. *Mr. Wilks.*] Do I understand from your evidence that it is your opinion that the inauguration of a scheme of old-age pensions would have a tendency to make the people still more improvident? It seems to me that the class of persons, taking them as a whole, who become a burden upon the State in their old age are so improvident that nothing you could do could make them more improvident. They seem never to think of the future.

1021. It would not accentuate the improvidence? I do not think it would. I do not think it would produce any effect whatever on the class who have already become a burden upon the State, and I suppose your scheme is intended to be confined to those who will become a burden upon the State.

1022. *Chairman.*] You have had some experience of the pensioners at Greenwich Hospital, have you not? I had many years ago.

1023. Can you tell the Committee whether men in receipt of those pensions are glad to avail themselves of the chance of retiring from the institution and living upon the pensions, or do they prefer to remain in the institution? They all prefer to go out. As soon as the system of out-door pensions was adopted, I think every man, without exception, who had the option, selected the out-door pension. Although, perhaps, he was not quite so well off as he would be within doors, on the other hand he had greater freedom. He was more his own master, and could live as he liked. Then, again, if he had a wife or any person dependent upon him, as was very often the case, then they could keep a common establishment, so that the wife or dependent children shared in the benefits he received from the institution.

1024. What sums were allowed to these out-door pensioners? The average was about £36 per year. It depended upon the service, because the pension there was considered as a reward for service done. The lowest pension, which was for very short service, was 6d. per day, amounting, I think, to £9 2s. 6d. per annum. The next pension was 1s. per day, or £18 5s. per annum. But no man was expected to leave the hospital as an old man and go out upon 6d. or 1s. per day. It was recognised that it would be absurd to expect a man who had served his country well to go out and starve on that sum. So that the pension given, so far as I remember, was £36 a year, which is about 2s. a day. That was the average pension. Some went as high as £45, and, I think, in some very exceptional cases, over £50. These were given to men who had long service as superior petty officers, and so forth.

1025. Did the able-bodied seamen receive any sum as high as you have named? An able seaman who was over 60 or 65 years of age, and who elected to leave the hospital upon a pension, would receive £36 10s., or about 2s. a day. As far as I remember, £18 5s. was the ordinary pension of an able seaman who had finished his time in the Navy at about 39 years of age. A petty officer, according to his rating, was allowed a little higher pension. A second-class petty officer would get about £27 7s. 6d.; a first-class petty officer would get about £36 5s.; a chief petty officer—I am talking of thirty years ago—I do not know the figures now—would get about £45 odd. That was after 39 years of age, when he had served his twenty-one years in the Navy and left it. But in regard to pensions for old men who had been taken into Greenwich Hospital, and who elected to leave the hospital, the question of their rating did not come into play

H. N.  
MacLaurin,  
M.D., LL.D.

6 Aug., 1896.

play so much; for it was considered, "What can a man live upon?" And it was thought that the very lowest sum you could fix in the case of a man who had served his country well was £36 6s.; and if he was of a superior rating he would get more—£45 and £54.

1026. *Dr. Graham.*] Could you give us your idea of the present method of conducting our asylums for the infirm and destitute. We have it in evidence that there is only one institution into which all and sundry who are poor and ill are sent. I should like to know your opinion, as one who has been Medical Adviser to the Government, of such a system? I always thought it was bad, and I wrote a report upon it to the late Sir Henry Parkes, when he was Colonial Secretary and I was Medical Adviser—for it mixed up two totally different classes of persons—the sick people who were confined to bed from chronic illness, and old people who were prevented from doing work because they were too old to move about and look after themselves. It was injurious because the sick people did not at that time, in my opinion, get the amount of attention they ought to get, and it was very expensive because the old people were treated a little better than was necessary, and the sick were treated not quite as well as was necessary; therefore the average cost was higher than it ought to have been. I think what I recommended at that time was that the present asylums should be practically confined to old persons—persons who were unable to earn their living from old age—and that a new establishment should be opened where the chronically sick poor should be received and made as comfortable as circumstances would permit, receiving all the medical attention and nursing that their cases required. I contemplated that the treatment of these people would cost a good deal more than the cost in the asylums at the time; but that, on the other hand, the expense of keeping the old people who were in health would be very considerably reduced. At that time the system of mixing up the chronically sick with those who were merely there from old age was very bad, and fatal to administration.

1027. *Mr. McGowen.*] Do you express an opinion as to the wisdom of providing a system of pensions as a substitute for the existing system? The question is, whether you mean a pension to everybody, or outdoor relief, for that is what it comes to? If what is meant is outdoor relief, I think, in many cases, it would be a very good thing; but it would have to be carefully administered by judicious officers. Outdoor relief judiciously administered would, I believe, in many cases be very proper and very suitable—much better than having enormous barracks of paupers.

1028. You said, in your evidence, that you did not believe the citizens would voluntarily subscribe;—do you favour a tax being imposed by the State for the purpose of providing this outdoor relief? For outdoor relief it is perfectly proper that a poor rate should be levied. No person could object to that. There ought to be a poor rate. I think the system they have in England is a very good one, whereby every place is compelled to contribute to the support of the poor within its bounds. The question of pauperism has been very much complicated by the changes in industrial life that have taken place within the last 100 or 150 years. The abolition of the old law of settlement, for instance, has been a serious injury to the poorer classes. The abolition, also, of the old guilds and bodies of that kind was a very serious injury to the working classes. Still that has been done, and we must recognise that when people become old, and unable to work for themselves, they must not be allowed to die of starvation. The funds must be found in some way, and I think the best way to find the funds is by a poor rate.

1029. You said that in your experience of Greenwich Hospital, thirty years ago, it was considered that £36 a year was little enough for people to live upon who had served their country;—what do you think should be the maximum allowed for each adult under this poor-relief system that you have mentioned? The two things are totally different. A seaman who has served his country, and, perhaps, had his leg shot off in a battle, or received some similar injury, is a man of position, and might be regarded as a man who had made his mark in the world.

1030. You defined the class of man who would be worthy of this relief? That was not considered relief; it was considered his share of the funds of the hospital—a share it was reasonable to give him.

1031. But I am speaking about the people who would be eligible to come in under this system, whether you call it outdoor relief or a pension. In your opinion a man who had performed his duty in the State, and who through no fault of his own found himself in old age unable any longer to earn a living—such a man you say will be eligible for the assistance given by the State? Eligible for poor relief on the ground of his being a man and old, and so that he should not die of starvation. The seaman was quite a different man. The seaman who by devoting his life to the public service had acquired the right to certain consideration—in fact, had acquired the right to participate in a certain fund, for Greenwich Hospital has a special fund of its own amounting to about £150,000 a year. He had acquired a right to participate in that fund, which right he could not forfeit, except by some disgraceful offence—for instance, if he committed a felony, or anything of that kind.

1032. Do you think 10s. a week would be sufficient in the shape of poor relief? It depends entirely upon the place where the man lives. Many things have to be taken into consideration. That is a matter of detail which you would have to inquire carefully into. For my part, if I were going to deal with what one may call the pauper classes of the country, I should not like to fix definitely the amount that should be allowed them. I would say that a rate should be struck, according to what was desired in different places, that that should be administered with as much economy as possible, and that a sufficient sum should be given to the people to enable them to live, not in luxury, but in reasonable comfort.

1033. The reason I ask is because we have had evidence from several gentlemen to the effect that 10s. a week would be adequate to keep each adult? It might be; but it would be a great pity to fix the amount by Act of Parliament, for in some places it might be too much, and in other cases it might be too little. If you have a man and his wife together, and they are going to get £1 a week, that is a lot of money.

1034. *Dr. Graham.*] You would fix the maximum by Act of Parliament, would you not? Well, I do not know; I think it would be much better to fix the amount according to the circumstances of the case, as they do in England. They never dream of saying there that the maximum of the poor relief shall be so much a week.

1035. *Mr. McGowen.*] Not for the classes or grades you mentioned? The people I spoke of were not paupers at all—in fact, you might call them gentlemen living upon their own estate. There was £150,000 a year devoted to them, and that was divided amongst them. A pauper who has to live upon the poor rate is another man altogether. If you are going to raise a tax which is to be distributed amongst the people by reason of their being poor, you can cover it up in any way you choose, but it will be a poor rate after all, and what you have to do then in the interests of other poor people not quite so poor, but struggling people

people who have to pay the poor rate, is to see that the allowance given is not too high, and if you fix it by Act of Parliament you will give a great deal of trouble.

1036. *Mr. Wilks.*] Do you consider that the institution of a system of old-age pensions would cause children to neglect their filial duty? I do not think it would cause any respectable man to do so, because it would really be a pension, something to which the old man or woman has a right, and the children could supplement it if they thought proper. A pension is quite a different thing from a poor-relief allowance.

1037. I will put the same question with regard to poor relief? Any grown-up son or daughter who allows his or her father or mother to become a pauper without some very grave reason ought to be looked upon as a very contemptible person.

1038. We have instances now of people in well-to-do circumstances who throw the care of their parents upon the State;—would the institution of a system of State relief have a tendency to increase that practice? I knew a case of that kind where a man was an inmate of the Parramatta Asylum when I was surgeon there. His son was a very respectable man indeed, in good business in Sydney, and the old man complained to me about his son not looking after him. I wrote to the son, and I said, "Here is your father, an inmate of the Asylum at Parramatta. Do you not think it would be better for you to take him out and look after him, as you are fairly well off?" He said, "Take him out; of course I will take him out. I have taken him out half a dozen times. He knows there is a room in my home ready for him, but he will not stay. He comes here; he stays a few weeks, and then the vagrant spirit comes over him, and away he goes into the country, and when he gets exhausted and worn out he is picked up by the police and sent to the Parramatta Asylum." So you see you have that class of people to deal with also.

1039. *Dr. Graham.*] In the event of a poor rate being levied, is there any source of revenue you could suggest that might be tapped for this purpose which is not already tapped;—it has been suggested, for instance, that a tax might be levied on horse-races, stud horses, theatres, and other amusements;—in Denmark the revenue for this purpose is derived from a tax on beer? The drawback to that is, that where you have an indirect origin of that kind it is very apt to lead to extravagance in administration. Every act of extravagance that you commit in administering poor relief, as distinct from pensions, is an act of injustice to the class immediately above who are supporting themselves. If you keep a pauper a little better than is absolutely necessary you make him approach very much to the class immediately above him, and these think to themselves, "Why should I go on working; if I were a pauper, like so and so, I should be very nearly as well off." Therefore, of all things in the world, pauper relief ought to be administered with the utmost regard to just economy.

1040. *Chairman.*] Would it not be wise to endeavour to convert the causes of relief into the means of relief? If you could, but then, you see, you are very apt to introduce some new cause of evil. If you begin to be lavish, as you would when you had a large fund to draw upon, you create a sense of dissatisfaction in the minds of the respectable working classes who are not well off, and who are only able perhaps in times of adversity and distress to keep themselves a little better than paupers, but who still are independent persons.

1041. *Mr. Wilks.*] Merely coming back to the question I asked you about encouraging improvidence? We are now talking of poor relief, which is a very different thing to a system of old-age pensions. I say that in my opinion the best way is to impose a rate directly for that specific purpose. In that way the persons who paid the rate would have an interest in seeing that it was judiciously and economically expended; and I am pointing out that evils which arise from a lavish expenditure of a poor rate are not merely those that arise from any lavish expenditure which is bad, but they have this particular evil effect, that by unduly raising the condition of the pauper they discourage the man who is a little better off, and make him discontented.

Andrew Garran called in, sworn, and examined:—

1042. *Chairman.*] What position do you hold? Member of the Legislative Council, and Vice-President of the Executive Council.

1043. Have you given much attention to the question of State insurance or old-age and invalidity pensions? I have read and thought of it to some extent, but I must confess I have not kept up with all the literature on the subject.

1044. Would you give the Committee the benefit of your advice upon these matters? For a great many years past I confess to have had a leaning towards the system of old-age pensions for two reasons: First, because it seemed to me to be a natural and consistent part of the democratic programme which is inevitable in these days; and, secondly, because I think it adds to the happiness of a great many people's lives, or rather takes away a great deal of misery, if they have a feeling that when they are helpless in old age they will have some provision upon which to rely, instead of looking forward to a blank and desolate time. I think those two things are both important.

1045. Have you formed any opinion as to the best method of applying an old-age pension scheme? All my leanings are in favour of a contributory system, but the difficulty I find from reading on the subject is that no one has ever been able to find a practical method of raising this contribution. Canon Blackley proposed a method which was very good in theory, viz., that you should levy it upon all the young men between the ages of 17 and 21, when their wages are high compared with their responsibilities. But he makes no allowance for long periods of want of employment, or for long strikes, or for long illness, and it does not apply to women as it does to men. Otherwise it is quite true that if a young man were forced to contribute between the ages of 17 and 21—still more if you extend the age to 23—he could very comfortably, without any trouble to himself, furnish enough out of his wages during that period to give him an old-age pension after 65. The difficulty is to collect the money, and nobody seems to have hit upon a plan of voluntary contribution which is feasible. Under these circumstances, I think the best thing we could do would be to extend as far as possible the influence of our Friendly Societies and insurance companies. These institutions have both done a great deal in educating the people in the matter of thrift, but there is a great deal more yet to be done. The age is improving, however, and insurance companies are expanding, and introducing new principles and new methods, and adapting themselves to the wants of people of small means; and the Friendly Societies, against whom the only objection is that there are so many of them actuarially unsound, are becoming better, and their management is improving.

1046.

H. N.  
MacLaurin,  
M.D., LL.D.  
6 Aug., 1896.

A. Garran,  
LL.D.  
6 Aug., 1896.

A. Garran,  
LL.D.

6 Aug., 1896.

1046. *Mr. McGowan.*] Do you believe in subsidising them? That is another question. I am averse to the principle of subsidy. I should prefer self-reliance, pure and simple, if we could have it, because then everybody would feel that he had earned his pension.

1047. How could you make use of the Friendly Societies if you did not subsidise them? You might be obliged to subsidise them to some extent, but at the same time the Government might assist them in all their actuarial matters, and give them the benefit of advice in that way.

1048. *Chairman.*] Then, if you applied the old-age system, you would like to see it made general, so that it might be the right of every person? If you make it contributory you make it the right of a man who has done something for himself, but you still have your residuum of poverty in the thriftless class.

1049. But in the event of a non-contributing system being recommended? It is a tremendously expensive thing if you are going to give it to everybody, and if you do not give it to everybody then you put a brand upon those who have to take it, and it is practically out-door relief instead of in-door relief. It is giving your dole outside instead of putting the recipient into the house. It is the same as in England. There the general tone is that out-door relief is rather injurious to the spirit of self-reliance.

1050. *Dr. Graham.*] You could not remove the stigma attaching to the dole by Act of Parliament? I do not think you could.

1051. Do you think the system as a whole could take the place of our present method? I should be very glad to see the present method either got rid of or modified, because I confess that when I go either to Liverpool or Paramatta I do not come away happy. I do not like the idea of seeing the old men kept as they are kept there. At the same time I feel very strongly the difficulty that is felt in England—that if you make any kind of a poor-house too attractive you will tend to break down the self-reliance of the people, and we all know that the character of the people is one of our greatest national assets, and that we should do a fatal wrong to the community if we sapped the spirit of self-reliance. That is why I feel that if the State by assisting people to save, and to keep their savings tight, which is one of the difficulties, could strengthen this spirit of self-reliance, all the State action then would be in favour of the character of the people; whereas, on the other hand, if the State says, "Come what may, whether you are careful or careless, there is 10s. a week for you after you are 65 years of age," the tendency is to make people careless and improvident. There are two difficulties—first to save, and then to keep their savings. If the State could make it compulsory upon them to save, and could then keep the savings for them, it would get rid of both those difficulties.

1052. *Chairman.*] Do you think we could work the compulsory system in a British community? All my own feeling, and that of the school in which I was educated—the school of English liberalism—is dead against that principle. But as I am getting older I think that the feeling amongst the mass of the people against compulsion is not as strong as it used to be when I was a young man. You must remember that there is a very strong socialistic element now among the people, and it is growing to a practical amount. People are coming to see that if the State can do things for the community better than the community can do them separately, or individually, for themselves, there is justification for State action. Of course, you have to prove what are the cases to which that rule would apply. If you could show that the State could garner these savings of the people and keep them better than the people could garner and keep them themselves, then you would make out a case for the State action, and I do not think the feeling against compulsion would be so strong. There would then be a law imposed upon the people for the good of the community as a whole.

1053. You know that even in Germany, where the principle of State old-age pensions has been applied, and where the socialistic spirit exists very strongly, the workers complain bitterly of the operation of the system? They do not like it, but that may be owing to some details of the working, which we do not know enough of. No doubt, from the books on the subject, there would appear to be a strong feeling against it in Germany.

1054. The complaint is that the compulsory system there, falling, as it does, partly upon the employers, has caused a reduction of wages and an increase of taxation? I think it will naturally cause a reduction of wages, because you cannot increase the cost of production indefinitely. The wage must depend, to some extent, on the profit to be made out of the employment of the labour.

1055. You think that may possibly be the reason why they complain somewhat bitterly against the compulsory system? I think so.

1056. With regard to the asylums, I think you implied by your remarks that you would like to see some reform? Yes; I am not satisfied.

1057. Do you think it would be possible, from your knowledge of the matter, to board out a fair proportion of the present inmates of the asylums? It might. The only danger I see is this, that you might induce people then to put their relatives upon the care of the State who would not do so if they had to send them to an asylum. They would say, "Well, if we can get 10s. a week for keeping the old man, we will put him on to the State at once. We have got him here, we have to keep him now, and if we put him into the asylum for a week, and then take him out again and board him, we shall get 10s. a week from the State for maintaining him."

1058. *Dr. Graham.*] That argument was used when the present system of dealing with State children was discussed, and experience has shown that there was really nothing in it as applied to State children? I am not so sure there is nothing in it.

1059. At all events, Sir Arthur Renwick and Mr. Marted, who are acquainted with the operations of the State Children's Relief Department, stated that that argument was not very strong, according to the experience of the Department? I admit that may be so to a certain extent, but during a discussion in the Legislative Council the other night on the State Children's Relief Bill very strong objection was made to taking the children of widows and deserted wives, on the ground that it would lead to the throwing upon the State of a great many children. There is no doubt there are people in the Colony who have relatives in the asylums to whose maintenance they can well afford to contribute.

1060. *Chairman.*] Would you approve of taxation being imposed upon race meetings, race-horses, book-makers, and sweep consultations, and also upon sports, including cricket matches, and theatres and other entertainments, for the purpose of creating a pension fund, to be supplemented by revenue from wines, spirits, and tobacco? Generally speaking, I should object to complicate the system of taxation, because I think the simpler the system of taxation is in a country the better. But one of your objects, apparently, is to try to make the causes of poverty pay for the effect. The advantage of the system you speak of is simply

simply this—that you levy the tax from people who have money to spend on pleasure, because these are all matters of self-indulgence, and, as a rule, the expenditure that should go to make provision for old age is spent in indulgence in youth and in the prime of life. People cannot resist the temptation to pleasure. People who go to these places do not have to go without their bread and butter because they put a shilling on a horse. It would be levying a tax, no doubt, on luxury and pleasure, and it is defensible on that ground. It might be complicated, but it would be perfectly fair. But even then some people might say, "One section of people are called upon to pay for another section of people. It is true I have spent this money in horse-racing, and so on; but I shall not come upon the State, and you are taxing me to pay for the people who will come upon the State, and who perhaps have not been horse-racing people, but simply public-house people."

A. Garran,  
LL.D.

6 Aug., 1896

1061. But, then, in spending his money upon sport a man indirectly, possibly, is causing poverty and distress on the part of other people? He may; but you cannot prove that he has done so. A great many of these young people who are now spending will in a few years marry and settle down, and perhaps become steady men.

1062. You will admit, I suppose, that it would be difficult to find a fairer system of taxation in order to provide for this purpose? No; I think it legitimate, because you really go to a class of people who can afford to pay.

1063. You annex some of their extravagant expenditure, really? You do not tax the careful, frugal people in such a case; but you tax the free-handed people.

1064. *Dr. Graham.*] You think it would be an element of complexity in the position? It would, though it would not, perhaps, very materially interfere with it. It is quite outside the fiscal question as between freetrade and protection.

1065. Some of those sources of revenue for this purpose are proposed in the New Zealand Bill? Yes; then if you tax theatres, managers will say, "If we have to pay that tax we must cut down the actors' wages."

1066. *Mr. Wilks.*] Speaking of the contributory scheme, do you not think the cost of collection would be very great? In all cases of employment, in large factories, you could collect the contribution through the manufacturer—from the wages.

1067. The difficulty arises where there is intermittent employment, where a man may be at work one week and idle the next? That is where Canon Blackley's scheme is weak, owing to the difficulty of collection.

1068. Would you feel inclined to discard the contributory scheme? I like it theoretically, because I want the people to feel that they have contributed part, if not the whole, of the sum. It seems to me that if a man says, "In my old age I am going to have a pension," he comes upon the State just as much as if he goes into a poor-house.

1069. Do you think the compulsory scheme could be applied to a community like this, with British instincts? I think that the feeling against compulsion is giving way. Where you can show that the compulsion is good in the interests of the community as a whole, I do not think the objection to it is so strong as it was. I was brought up with a very strong feeling against compulsion in any form, but as I am getting older I see that there are cases where compulsion is good for us all.

1070. *Mr. McGowan.*] You are aware that nearly all of the Friendly Societies have a superannuation fund, from which, after a member becomes too feeble to work, he receives weekly payments ranging from 5s. to 7s. 6d.? Yes.

1071. There is no element of poverty in that? Not at all, because the man has contributed. The only thing I want to see in connection with the Friendly Societies is that they should be on a sounder basis. I think there will be a tendency towards amalgamating them more, because the broader the basis of any insurance society the safer it is, and the whole population affords the broadest possible basis.

1072. *Mr. Wilks.*] Do you approve of a system of old-age pensions in preference to one of out-door relief? On the whole I do, because it seems to me that out-door relief is simply a form of charity. It is outside the house instead of inside; and you could not fix any definite sum for out-door relief. Relief should always be graded according to the necessities of the case. A payment of 5s. a week might be ample in some cases, while 10s. would not be enough in other cases.

1073. Then you believe in a graduated system of old-age pensions? Yes.

1074. Do you not think there would be great difficulties in the way of a graduated system;—would there not be constant complaints? We have that now. We have people in our asylums complaining. Go out any day you like and you will find any number of complaints.

1075. Do you not think it would be difficult for the officials to say where there was absolute necessity? There would be great difficulty. Skilled men become practised in detecting imposture, but they are often taken in.

1076. Still, with all these difficulties, you prefer the graduated scale to a fixed amount? If the fixed amount were very small, I should not; but if the fixed amount were large, I should.

1077. What would you think would be a fair amount in a country like this? You could not say, because it would depend upon the rate of wages current at the particular time. The amount would have to be in proportion to the rate of wages.

1078. *Chairman.*] We have evidence from some of the executive officers of the Benevolent Society that a State pension of about 10s. a week would be sufficient to keep an adult in comfort, and 15s. for a married couple? I know there are many young women in Sydney now who are keeping themselves on 10s. a week.

1079. You think that, as a rule, a maximum of 10s. would suffice? Yes.

1080. In the event of the Committee recommending the contributory scheme, do you think the Friendly Societies would afford a safe machinery for the working of that contributory scheme? If you subsidise the Friendly Societies you must exercise control over them. I do not think any Parliament would consent to give away money to a society over which it had no kind of control.

1081. Supposing we were to institute a contributory scheme, and the pension were granted in this way, that every man or woman should join a Friendly Society, and pay a small sum per week, and then at the end of a certain number of years they would be entitled to an old-age pension; do you think the Friendly Societies would afford a safe machinery for the working of that system, if they were properly controlled and supervised by a Government official? They should be sound financially. It would not do for the Government to give this money, and for the Friendly Society to burst up, and then, when the Government money had all gone, for the people to come clamouring to the Government for their pensions.

- A. Garran, LL.D.  
6 Aug., 1896.
1082. *Dr. Graham.*] Would you be inclined to say on general economic grounds that many people become paupers purely from poverty, and from no vice whatever? There are some, undoubtedly; but I do not think that has been the case in this country during the last forty years to any large extent. Since the discovery of the gold-fields until the recent reverses employment was fairly good, and wages were fairly good; but what may lie ahead of us I do not know. There are many cases of poverty arising from sickness; one meets with them continually. A young man gets ill from rheumatism, and he may remain so for six months, or for a year or two years, and he may have a wife and half a dozen children. In consequence of his illness the family drift into poverty, and have to sell everything.
1083. *Mr. McLean.*] From the experience of older countries, we are justified in assuming that a large proportion of men and women in their old age will be in necessitous circumstances? I think they will; they ought not to be so much in this country as they are in England, because they have better chances. At the same time the love of expenditure is stronger, perhaps, here owing to the greater freedom of life and the temptation to spend being greater.
1084. This inquiry is supposed to cover the question of invalidity, at any time of life, as well as the question of old-age pensions;—what is your idea of a pension granted in case of injury? Where there was only temporary invalidity a pension would not be required; but there are some cases where people are permanently laid up, and incapable for life of any kind of work. For the treatment of those cases there should be special hospitals if they cannot be treated at home.
1085. You are aware that in Germany they apply the pension to injured persons? Yes.
1086. There are many persons who suffer permanent injury when they are 35, 40, or 45 years of age to whom a pension should be granted? There are cases of men injured in their work who get a little help from their employers, which lasts perhaps for a year or two, and then they are dropped, and are unable to earn a livelihood.
1087. *Mr. Wilks.*] Do you think our present asylum system could be advantageously used for cases of invalidity? I think it might; many invalids would be better treated in an asylum; but there are cases where treatment is no longer of any use—permanent cripples, for instance.
1088. *Chairman.*] You would not care to maintain such persons in the asylums? No; there is no need for it.
1089. Would you grant them an invalidity pension? Yes; I think they are entitled to it, unless their relatives are thoroughly well capable of looking after them. They are much more particular in Germany about making the relatives pay than we are under the English law.

WEDNESDAY, 12 AUGUST, 1896.

Present:—

Dr. GRAHAM,

MR. SCHEY.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

Francis Kirkpatrick called in, sworn, and examined:—

- F. Kirkpatrick.  
12 Aug., 1896.
1090. *Chairman.*] What position do you hold? That of Under Secretary for Finance and Trade.
1091. You produce a return relating to the question before this Committee? Yes; I produce a Statement of Revenue received for the past five years from Spirits, Narcotics, Billiard Licenses, and Beer.

STATEMENT of Revenue received for the past five years from Spirits, Narcotics, Billiard Licenses, and Beer.

	1891.	1892.	1893.	1894.	1895 & 6.	Total.	Yearly Average.
	£	£	£	£	£	£	£
Wines .....	49,377	38,740	27,553	23,792	24,061	163,523	32,704
Spirits .....	869,751	813,772	685,351	655,708	651,409	3,675,991	735,198

Beer .....	80,890	71,482	48,484	54,172	53,528	308,556	61,711

Elizabeth Lilla Murray called in, sworn, and examined:—

- E. L. Murray.  
12 Aug., 1896.
1092. *Chairman.*] You recently held the position of Superintendent at the Newington Asylum? Yes.
1093. How long were you there? For seven years as superintendent.
1094. How many inmates were there at Newington Asylum? 650; at present I believe there are 670.
1095. What proportion of those do you think would be suitable for being boarded out under a system similar to that which prevails in the case of State children? I think that, at most, one-third of them. About that number would be able to earn their own living, but a certain proportion would only do so if they abstained from drink. I should think there are 300 in the Asylum who ought to be taken care of. There are about 200 moderately sick, and about fifty girls who are silly. We were always finding that some of the inmates had relations who ought to keep them.
1096. The women to be boarded out would have to be free from chronic complaints, and they would not be dipsomaniacs or persons likely to become an absolute burden upon those with whom they were boarded;—do you think that out of the total number of inmates at least 200 would be fit to be boarded out with their relatives or with strangers? Yes; I think 200 would be suitable.
1097. *Dr. Graham.*] Could you give us any ideas as to the average age of the inmates of Newington? We have about forty or fifty young people who pull down the average very much. If you excluded those I think the average age would be about 60.
1098. Have you any system of isolating the sick from the ordinary yard patients? Yes; we have hospitals. There are about 200 inmates in the hospitals. We could not exactly say that they are all quite sick, but they all want a little more attention than they could get without nurses and attendants.

1099.

## ON OLD-AGE PENSIONS.

1099. Are their ailments those of old age chiefly, such, for instance, as rheumatism and debility? Yes; I should think about 120 of them are of that character. We have about six or eight cancer patients, and a dozen or so of consumptives, who, of course, are not old people, and a few suffering from accidents. E. L. Murray.  
12 Aug., 1896.
1100. The number of sick people then is 200? There are about 200 on the doctor's book.
1101. These would have to be looked after by some hospital authorities—they could not be boarded out? No.
1102. You say there are about fifty who are simply demented, and these, I suppose, would have to be looked after in some asylum? There are about forty of that class who would have to be looked after.
1103. Are they cases that are too mild for the ordinary asylums? Yes; most of them have been sent to us from the ordinary asylums to be cured, but they are still too wild to be allowed their liberty.
1104. That leaves 400 old women, excluding the sick and the imbecile girls? Yes.
1105. You say that 200 of these, if they had, say, 10s. a week, could be allowed to go out, and could do very well on that allowance? Yes; I think 10s. is a great deal too much.
1106. You think they could live comfortably on that sum? Oh, yes. A great many of these women could earn their own living. For instance, when I was there I always used to take a cook out of the asylum, and she could easily earn her own living if she did not drink. Such a woman can earn her own living quite well in an asylum where she is protected; but it is different when she is outside.
1107. How many are there, really sober women, who have reached the asylum through pure destitution—do you think there are very many? I am afraid I cannot say there are many. I think, perhaps, seventy old women, including the sick, and excluding fifty silly.
1108. You think the others are chronic drunkards? I think that none of the others can keep away from drink.
1109. It is obvious that a woman who is addicted to that habit is not fit to be boarded out, even though she may be able to earn her living? No, because nobody would keep such a woman in the house.
1110. So that you think if a system of pension were introduced by the State as a substitute for our present method of dealing with the poor, only a very small proportion of the inmates of Newington would be eligible for such a pension? Yes. I should like to say that there would not be half the present number of inmates if some system existed by which the town or place from which the people came was made responsible for their maintenance—if, for instance, there was some system of local government, under which the destitute person would be charged to the locality to which she belonged, something similar to the Scotch law at home. A great many people are sent to Newington to be got rid of by their friends, because, perhaps, their own people dislike having a grandmother in the house who is a little trouble. These people ought to be compelled to maintain their aged relatives. No doubt if there was an allowance of 5s. a week, or something like that, it would be a great inducement to them to keep their relatives.
1111. It would be a standing contribution which would make all the difference between poverty and comfort in the home? Yes, and 5s. a week goes a long way in a family.
1112. You think there is a good proportion of the women to whom the allowance of 5s. a week could be given, and who would find their way back to the family home and be comfortable? They would have to be sent back.
1113. Do you think the 5s. a week would remove the disagreeableness on the part of the family who objected in the first instance to keep them? I do not know as to the disagreeableness. We were always having cases sent to us from country places which ought to have been investigated more than was possible by those in Sydney, and where, if the poor person had been left among the people who knew her, she would never have become a burden upon the State. There is one case I can remember now. It was that of an old woman who had property in Young. Some respectable people from the neighbourhood told us that the son of this woman had taken her property and turned his mother out, and he would not keep her, though he was quite able to do so. There were several other cases of a similar nature.
1114. Where do most of these women come from? From all parts of the country.
1115. Mostly I suppose from Sydney? Yes, I suppose the most of them come from Sydney.
1116. Do you keep a complete history of the women who are admitted and of their antecedents as far as you can ascertain them? Yes.
1117. Do you find that many of them reach Newington from causes of pure poverty, or from crime or drink? The longer I was there the more I saw of the curse of drink.
1118. Are there many married women whose husbands are also old and decrepit? Not so very many. We had an investigation in regard to that some time ago. Some of them have husbands in other asylums, but a great many of them are widows.
1119. I suppose they are very comfortable in Newington? Yes, very comfortable.
1120. Do you think they would be just as comfortable in a private home if they had 8s. a week? No; that is why there are so many. Old people say, "We do not like living with our daughters; the children make a noise, and that kind of thing." That is one reason why they come to Newington. On the other hand, I think it is a very bad system to take people in as easily as they are admitted into Newington. I think it is pauperising the country dreadfully. One of my strongest reasons for leaving Newington was because I could not live there any longer with a good conscience. I felt that it was really doing harm to a young and growing colony like this. I felt this very much during the last two or three years. Newington is a very comfortable home for these people, and it is no disgrace now for daughters and sons to send their mothers to the institution, because they know they will get the very best attention—and, of course, you must do all you can for these old people.
1121. *Chairman.*] You seem to think that 10s. a week would be too high a rate to be paid for the boarding out of the old women? I think so.
1122. Do you think 7s. 6d. would be ample? I think 5s. would be ample. The old women would be able to help in the house; they could mind the children and do a little cooking or a little housework.

Francis Bertie Boyce called in, sworn, and examined:—

1123. *Chairman.*] What position do you hold? I am the clergyman of St. Paul's Church, Sydney. F. B. Boyce.
1124. You are taking an active part in a movement to provide for old-age pensions? Yes; I called a meeting for the formation of a league, asking Sir Arthur Renwick to take the chair. The league has been formed, and we have had regular Committee meetings. There has been a large amount of public interest apparently in the matter. 12 Aug., 1896.  
1125.

F. B. Boyco. 1125. Sir Arthur Renwick gave us particulars of the operations of the league, and its manifesto is embodied in his evidence. We should like your ideas on the question of old-age pensions generally? Sir Arthur Renwick drew up the manifesto, to which we all agreed. I look upon that manifesto as constituting the best ground work for the carrying out of such a scheme. I think the question ought to be treated in two parts. The first part should be that to be dealt with at once by the State, so as to help all those over 65 years of age who are really destitute. The State pays so much towards keeping those persons in the asylums, and I think there are those who are outside the asylums who are equally deserving. In many cases they ought to be supported in a like manner. The asylums at present do not reach the larger number of the destitute, and if the State were to give, say, £60,000 a year for the purpose of providing for those outside the asylums, numbering probably 3,500, it appears to me that would meet the case at present and for some years to come, leaving some system of State insurance, compulsory or voluntary, to be brought in to provide for the future. As regards the present, it appears to me the only plan is for the State to subsidise these old people. The amount that I would suggest is 1s. a day. I may say that there is one old man in my district 82 years of age. He is supported by Major Fanning, in England, and he gets 6s. a week. Out of this he has to pay 3s. a week for rent, and he manages to live upon the balance, and he keeps himself very respectably. There are two old persons living in Dangar-place, both about 70 years of age, and they get 6s. a week between them, which I believe is a pension from the Order of Druids. This pension is really the backbone of their living, and they receive rations from the Benevolent Asylum. Having that 6s. a week they are able to live together, instead of being separated, and being sent one to Newington and the other to Liverpool. I should prefer very much, as I presume we all would, a higher pension, say 10s. a week. But looking at the increased amount that would be required from the Government, and the difficulty in obtaining the larger sum, it appeared to me that if we fixed an allowance of 1s. a day it might meet all present wants.

1126. *Mr. Schey.*] You think that 1s. a day is sufficient to meet the wants of each old person? Yes; I would rather that it were 10s. I admit, but looking at the difficulty of getting Parliament to assent to a very large outlay, 7s. a week as a minimum would be very satisfactory.

1127. And that would only be where they lived with their own family? I do not think we could fix that for them; they would be able to live where they liked.

1128. But would that sum be sufficient, even as a minimum, for them to live anywhere else except with their own family? I think they could make arrangements. This old man I speak of, 82 years of age, gets 6s. a week, and he gets on fairly well.

1129. I suppose those arrangements would have to be made by some agency or some society such as that with which you yourself are connected? Yes; or the arrangements might be made by the Inspector of Charities through some person appointed for that particular purpose.

1130. In your experience, I suppose, there are other societies that pay pensions to these old people as well as the one you have named? Some of the churches have been paying pensions to old people.

1131. I am referring to Friendly Societies? I do not know of any Friendly Society in this Colony that pays pensions to old people. I only belong to one society myself, and I know that they do not do so. In reference to this part of the subject I have twelve typical cases that have come specially before me during the last month. The first is that of E.B., a widow, aged 71; receives rations from the asylum; no children living; has been helped by her granddaughter; she suffers from rheumatism. She is applying for relief. The next case is that of a man, aged 69, to whom an order was given on the Benevolent Asylum for blankets; he lives near the Eveleigh Railway Station, and exists in a hand-to-mouth way begging about. J.B. and his wife live together; one is 74 years old and the other is 72; they are both very weak and practically destitute; they have been begging for the last three or four years; they are very respectable people, and lost their money through the failure of one of the building societies three or four years ago. Mrs. E., aged 69, a widow, very poor; her children will not support her; she also gets rations from the Benevolent Asylum. L.C. and his wife live at Petersham; they are both about 80 years of age, they are both very weak, it is almost impossible for them to get work, and there is every prospect of their being separated, one going to Newington and the other to Liverpool. The next case is that of A.M., aged 74, and his wife, aged 51; the man is sick and deaf; he sold his bedstead a week or two ago to pay his rent, and has no means of support. The next case is that of N.G., a widow, aged 72; she gets rations from the asylum; complains of want of something for a fire in the very cold weather; she has some children, but they are out of work, and having families of their own cannot do anything for her. Then there is Mrs. M., an old woman aged 82; she is receiving 5s. a week from a certain source, without which I do not know how she would get on. She lives in a small place by herself and is helped in sundry ways, but it is a very miserable existence for her. Then J.S., aged 65, has a wife and five children, the oldest being 15—no work or means of any kind. W.S., aged 70, is a widow, very weak; has rations from the asylum; no means of support otherwise. H.S., aged 68, staying with a Mrs. Roberts, is a widower; no means of support; wanted blankets to cover him in cold weather; very respectable old man. Again, L.G., 64 years of age; no work; very respectable; no means of support; an old strain goes against him and prevents him from doing any hard work.

1132. *Chairman.*] Those are twelve typical cases which you think might be relieved by the payment of old-age pensions? Yes.

1133. And do you think that 7s. a week to each of those individuals would keep them in comfort? It would provide the bare necessities of life.

1134. Then 15s. a week would keep a married couple? Yes. Of the twelve I have mentioned, three of the cases are those of a man and wife, and if they had 14s. a week they could live.

1135. You said just now that some of the churches paid pensions;—could you give the Committee one or two illustrations? I do not like to refer to my own church. We, however, have not done so much lately, but for some years we paid 2s. 6d. a week to a number of old persons. It was begun by Canon Stephen, my predecessor, at Redfern, and it was carried on for a long time. Those people have died off, at least there is only one case living.

1136. That money I presume was provided by voluntary contribution? Yes; from the church offertories.

1137. *Mr. Schey.*] I suppose you are acquainted with the different old-age pension schemes that have been put forward in England from time to time? Yes. In giving my ideas just now I spoke of what I understood as the present necessity. As regards the future, I think there ought to be a system of compulsory insurance by which persons should be enabled to provide their own pensions, and the State should subsidise

subsidise their contributions to a certain extent. I think that persons when they arrive at the age of 21, and up to the age of 31, should be required to pay in so much as may be decided by Actuaries every half-year towards a fund. If it were understood that that would provide a pension of 7s. or 10s. a week, I think the payments would be cheerfully made by a great majority of persons. I think it ought to be done, because it is a fundamental principle that every one should so provide for himself that he should not be a burden upon the country in his old age. I take that as a fundamental principle of the scheme.

F. B. Boyce.  
12 Aug., 1896.

1138. Do you not think it would be much wiser for such payments to be made as often as the man or woman received wages, rather than half-yearly or yearly? I think in all these matters we need an open mind as regards details. But if the payments were required to be made too often the thing might come to be regarded as a nuisance and a worry. I would rather see it all done within, say, ten years, the payments to be made either quarterly or half-yearly. Quarterly payments would be very fair, I think.

1139. But you think the payments should extend over a period of, say, ten or fifteen years during the best working period of life? Yes; when the children are young, before the expenses of the family have increased, and when the man is at his best. The amount he would have to pay would not be very much. It would be understood that it would be for the purpose of providing an old-age pension, and the great bulk of the contributors would not live to have an old-age pension, but would die before reaching the pension age. Therefore, everything those persons had paid in would go towards the survivors. At the same time, to prevent complaints, I would say that half of the amount paid—supposing the man died at an age not less than of 40—should go to his widow, leaving the other half to go towards making up the fund. The State would also have the interest and compound interest for the fund.

1140. At what age do you think the pension should be applicable to the great majority of persons—at what age should it commence? Looking at the matter from a practical point of view, and having regard to the possibilities, I should say 65 years. I should be very glad to see it commence at 60; but if we knocked off five years, the extra sum required would be so large that one hardly sees how the Government could provide it.

1141. Have you ever gone into the question of how many persons who would subscribe for ten years from the age of 21 to 31, according to your plan, would be likely to survive to the age of 65—how many per thousand? The adult population of New South Wales is about 600,000, and the number that would survive at 65 would be about 30,000, so that the payments need be very small in consequence of the large number of deaths.

1142. Therefore the large bulk of those who would actually make these contributions would not survive long enough to enjoy the benefit? That is quite true.

1143. But if it were practicable you think the pension should commence at 60? I think we should all be glad that it should commence at 60 from a humane point of view; but in dealing with a matter of this kind one aims at something that the State might take up and work out.

1144. To what extent do you think the State ought to subsidise the individual contributions? That is not a point I have specially studied. I think the subsidy ought to be to the extent of the present cost of the maintenance of the old people in the asylums. I think if the State at the present time gave towards the compulsory insurance fund £100,000 a year that would be ample.

1145. Would you make it a fixed amount, irrespective of the number? Yes; it would probably be the best way.

1146. What proportion, in your opinion, should the State subsidy bear to the amount privately contributed? I think if the State gave one-fourth it would be fair. I am speaking of a matter applying to all people. The idea is to remove any taint of pauperism, and the rich and the poor alike would have to insure. If the rich did not care about receiving the pension they need not do so; they might give it to a hospital.

1147. Do you think the contributions to such a fund should be confined to the State and the individual, or do you think the employers of working people should also contribute a portion during the working period? No; I think that is a weakness of the German system—introducing the employer. I think it ought to be done by the State and the individual alone. It is then freer from the taint of pauperism.

1148. Do you think that at the present time anything might be done by voluntary effort to prepare the way, and accustom people to the idea before commencing a compulsory system? I daresay something might be done. If nothing is done to establish a compulsory system of insurance, I should then be very much in favour of some system of voluntary insurance subsidised and guaranteed by the State, and which might begin at once.

1149. If it were proposed, for instance, to subsidise benefit societies who chose to establish funds for the sake of making provision for the old age of their members, as a tentative proposal, would you be in favour of such a plan? I should be in favour of it, but I do not think it would be so good as a compulsory system.

1150. Speaking of it merely as a tentative proposal, and as preparing the way for a general compulsory scheme, do you think it would be a good thing to do? The danger is that it might shut out the better and more complete scheme. In anything that is done care should be taken to see that it would not be possible to alienate or mortgage a pension.

1151. Have you any scheme of your own to propound beyond what you have already given us? Nothing beyond the scheme that people should pay between the ages of 21 and 31, and that they should then have the full right to a pension. I have already pointed out that the amount they would have to pay would be very small, because of the number of deaths before the pension age.

1152. *Dr. Graham.*] What would you do with regard to those who could not contribute; there would be a certain proportion who only obtained irregular work, and others who only came to the Colony late in life;—would you give them a pension? I should have their cases specially considered by a magistrate or by a Board, with the expectation that the time would come when they could make the necessary contribution.

1153. But suppose they arrived in the Colony at the age of 50, and on reaching 65 years of age found themselves utterly destitute, and having had irregular periods of work they were unable to make any contributions to the fund—those are cases that come largely upon the State? Of course in working out a scheme of this kind you could scarcely deal with those exceptions, which are not very numerous. I think we could only apply the scheme to people regularly resident in the Colony. Persons who have spent nearly all their lives in other countries could not expect a pension here.

Hugh McLachlan called in, sworn, and examined:—

H.  
McLachlan.  
12 Aug., 1896.

1154. *Chairman.*] What position do you hold? Secretary to the Railway Commissioners.
1155. Some time ago the Railway Commissioners formulated a scheme for the establishment of a Providence and Pension Fund among the employees of the Department;—will you kindly give the Committee the history of that scheme? Particulars of the scheme were embodied in a Bill which was formally submitted to Parliament in 1890. I hand in a paper giving a summary of the provisions of the Bill, showing the conditions and information regarding the scheme. [*Appendix I.*] The proposed fund was to meet cases of sickness and to provide for accidents, and for an allowance in case of death from natural causes; there was also a provision for old age.
1156. That scheme was not legalised by Act of Parliament? No.
1157. Was not some scheme afterwards proposed and submitted to the vote of the men? That is the scheme.
1158. Did the men vote in favour of it or against it? A very large number of the men expressed themselves in favour of the scheme; but, on the other hand, a considerable number showed some feeling against it. As it would cost the Commissioners a large sum of money, and was intended solely for the benefit of the men, and the men did not seem to appreciate it, the Commissioners said they would not go on with it, and it was dropped.
1159. But was not some other scheme tried later on? No; that was the only scheme. For many years the men have had their own departmental Sick and Accident Societies, of which there are sixteen or seventeen, some large and some small. Some have not been very successful, while others have a balance in hand. The railway employees at Darling Harbour have a Sick and Accident Society, and so also have the traffic employees and the permanent-way branch. The whole of these societies embrace a membership of 3,000 or 4,000. I understand there is a movement on foot to have them amalgamated, as the cost of governing so many separate societies must be large.
1160. Do you know what are the allowances that are made to injured members of the societies? I could not say; but I think the benefits are similar to those of ordinary Friendly Societies.
1161. *Mr. Schey.*] So far as you know, none of these societies provide pensions? No, I think not.
1162. They are confined exclusively to sick benefits? Sick and accident benefits.
1163. *Dr. Graham.*] You compel all your men to insure, do you not? Yes; it is a condition in the Railways Act. That, however, only applies to appointments made since 1888, and the old employees are not required to insure. Under the Railways Act one of the conditions of permanent employment is that the employee shall insure his life.
1164. According to the amount he receives? Yes—according to a sliding scale. The following is a copy of the section of the Act:—

No probationer's appointment shall be confirmed until he has effected, in some life insurance company carrying on business in this Colony, an insurance on his life providing for the payment of a sum of money at his death, should it occur before the age of retirement from the Railway Service; or, if he survive until that age, of a sum of money or annuity on the date of such retirement. Such insurance shall be continued, and the amount thereof fixed and increased, from time to time, in the prescribed manner, and no policy of insurance so effected shall, during the time such person remains in the Railway Service, be assignable either at law or in equity.

1165. *Mr. Schey.*] About how many men was the scheme of the Railway Commissioners, to which you have referred, designed to embrace? I think that practically everybody in the Service could come under it.
1166. About how many? About 10,000 persons.
1167. What percentage did the Commissioners propose to contribute to the fund, as against the contributions of the members? An amount not exceeding 75 per cent. of the contributions. But, personally, I think that the Commissioners expected to contribute equal to about 50 per cent. The clause dealing with this point stated:—"The Commissioners shall contribute to the fund an annual sum equal to 75 per cent. of the contributions of the employees, or such less amount as the actuary shall certify to be sufficient to secure the stability of the fund." The Commissioners thought they would require to contribute an amount equal to the contributions of the employees, or about £10,000 a year. Speaking from memory, I think that was about the sum mentioned at the time. I may say that most of the large railway companies in England have established provident and pension schemes in which the contribution of the company is equal to the amount contributed by the officer. I know that in England, as regards at all events the salaried officers, there is a deduction of 2½ per cent. per year from their salaries, and an equal amount is contributed by the company. It was an equitable arrangement, because if an officer resigned he received his money back. The only thing that would debar him from participating in the benefits would be dismissal for misconduct. In case of his death his widow would receive certain benefits, equal, at any rate, to the amount he had subscribed. Looking over the conditions of one of these English funds some years ago it struck me that they were very equitable. Our Civil Service Superannuation Fund is very inequitable, because a man may subscribe for forty years, and, if he resigns the Service at the age of 59, he loses every penny he has subscribed.
1168. Can you tell us what reason guided the Railway Commissioners here in fixing a smaller amount of contribution than that provided for by the English Railway Companies? Certain benefits were laid down, and the Commissioners wanted those benefits to be given. As a matter of fact, I think the estimate was that they would be required to contribute in about the same proportion as the English companies. I think the impression was that the contribution would amount to about 50 per cent.—that is £ for £.
1169. *Chairman.*] Do the men complain about this compulsory insurance? I think a few of them do, but the majority do not complain. We have had complaints—in fact, some of the men have not paid up. But we have power to deduct the contributions from their wages.
1170. *Mr. Schey.*] You compel all new employees to insure? It is compulsory under the Act.
1171. *Chairman.*] I suppose they are glad to get employment on those terms? Yes.
1172. *Mr. Schey.*] They are what are called endowment insurances, are they not—that is to say, payable at 60 years or previous to death? I think in practice they are made payable at death. The section says: "An insurance on his life providing for the payment of a sum of money at his death, should it occur before the age of retirement from the Railway Service; or, if he survive, until that age, of a sum of money or annuity on the date of such retirement." I think the practice is in most cases to make the amount payable at death. It is the wiser provision.

1173. But the idea of the provision was to relieve the Government of the necessity of paying the men who had to retire from the Service, was it not? No.

1174. Therefore it was provided that they should insure themselves and receive the money when they left the Service at 60? No, because there is no obligation on the Government to pay them a pension on retirement.

H.  
McLachlan.

12 Aug., 1896.

THURSDAY, 13 AUGUST, 1896.

Present:—

DR. GRAHAM,		MR. O'REILLY,
MR. SCHEY,		MR. WILKS.

E. W. O'SULLIVAN, ESQ., IN THE CHAIR.

William Francis Schey called in, sworn, and examined:—

1175. *Chairman.*] What position do you occupy? Member of the Legislative Assembly.

1176. The Committee understand that you desire to present some documents bearing on the question of old-age pensions? I desire to present some newspaper articles by Dr. W. A. Hunter, lately a member of the House of Commons, representing Aberdeen, in Scotland, who wrote a series of articles in the year 1892, which give, I think, the best information in a short form on this subject. Included in the articles is a summary of how the matter is dealt with in the various countries of Europe, and there is a copy of a draft Bill by the French Government for the purpose, also a draft scheme, and a number of tables showing the pensions provided by different provident societies established in England and Scotland, also a scale of contributions and benefits. There is a complete draft scheme with tables showing how the pensions might be paid by voluntary contributions during a certain period, and also by general rates raised from the community the same as rates for other purposes. [*Appendix K 1.*] In the *Nineteenth Century* for August, 1895, there is a very valuable article by Miss Edith Sellers on the Old Age Homes in Austria, containing a particularly valuable table as to the way in which the elderly people are treated there. They have a sort of asylum system, and the old people are allowed a fixed sum of money per day, and have a restaurant of their own where they can choose their own meals exactly as they like, paying by a fixed scale, which is ridiculously low according to our ideas [*Appendix K 2.*] I should like to say, that after giving the matter a considerable amount of study, while I desire to see a scheme initiated which will be general and compulsory in its character, more on the lines of the scheme in existence in Germany, I think that part of the object might be served by initiating a system which would be perfectly voluntary on the part of every person; and, to save the large expense which must be necessary in providing any new machinery for the purpose, I propose to avail myself of the machinery already in existence in connection with the Friendly Societies, by allowing all the Friendly Societies, if they so choose, to form a separate fund for the superannuation of their members, to which either an entirely separate subscription should be paid, or a certain portion of the ordinary subscription should be set apart; the fund to be perfectly optional on the Friendly Society in the first place, and perfectly optional on every member of the society in the second place. Whatever moneys were paid into the fund should be deposited in the Savings Bank of New South Wales, and be subsidised by an equal amount paid by the Government from the Consolidated Revenue every month. On arriving at the age of 60 years those who had been paying into the fund should receive the sum of say £1 a week as a pension.

W. F. Schey.

13 Aug., 1896.

1177. Have you drawn up an outline of the scheme? Yes. When this Parliament met I sought for leave to introduce a Bill, and the motion is now on the Paper for discussion on the 12th August. I hand in to the Committee a draft of the Bill, to be printed as an appendix to the report. [*Appendix K 3.*]

Joseph Benjamin Oliffe called in, sworn, and examined:—

1178. *Chairman.*] What position do you hold? At present I am a contractor, and I am also secretary to Tattersall's Club.

J. B. Oliffe

13 Aug., 1896.

1179. It has been suggested that we ought to make the causes of distress a means of assisting to alleviate the distress of the people; and as amongst the causes of distress are considered horse-racing, intoxicating drinks, billiard-playing, and all amusements of that kind, it has been thought desirable to have the opinion of yourself and other gentlemen as to whether anything could be done by the State to raise a revenue from these various descriptions of sport. In the first place, I should like to ask you how many bookmakers are enrolled in your club? There are sixty-four members in Sydney now on the roll; there are fifty-two on the roll from Melbourne, and there are twenty-eight members who are unfinancial, and who have gone out.

1180. What do these bookmakers pay to the club? They pay £3 3s. a year.

1181. What do they pay to the various racecourses at which they bet? I believe they pay sums varying from £5 to £7; but as to that I am not in a position to say.

1182. I believe there is another betting club besides Tattersall's—one higher up Pitt-street? Yes.

1183. Do you know how many members they have? Speaking approximately, I think they have between thirty and forty members.

1184. Outside of these two betting clubs, are there not a number of bookmakers who do not subscribe to any club, but who carry on a very active business on the racecourses, and also in various meeting-places in the city? Yes; there are a number of people who get a living in that way. They are generally designated as "rats."

1185. I mean the men who bet in the Leger Stand? I have no knowledge of them; I never visit the Leger.

1186. Then there are others who visit the Flat? Yes.

1187. And there are betting men in various parts of the city? Yes; and men who bet outside the racecourses.

1188. These men are supposed to be carrying on an illegitimate business, as compared with the legitimate bookmaker? Yes.

1189.

- J. B. Olliffe. 1189. Would it be a good thing—would it tend to purify speculation if a license fee were imposed upon what may be called legitimate bookmakers, provided it had the effect of preventing these men to whom you refer from carrying on the business? I do not think it would have any effect upon them at all. I think they would carry on the business just as they do now.
- 13 Aug., 1896. 1190. But could they carry it on on the racecourse? They could carry it on on the racecourse just as they do now. If they paid a fee, that would be entirely within the province of the Parliament in framing provisions with regard to them. Of course, in doing that, you would legitimatise an illegal game.
1191. The idea is that these games do go on under existing conditions, and will go on, and the question arises, ought we to turn them to good account by levying a tax upon them in order that they may contribute to the assistance of the aged poor? If such a thing could be done, I believe it would be beneficial, as regards obtaining revenue from the source you suggest. But I do not think the amount received would be as large as you anticipate—in fact, I think it would be a mere bagatelle, because the great majority of the bookmakers, including legitimate bookmakers, are more or less paupers at the present day. I am satisfied that the majority of the sixty-four members of Tattersall's, in Sydney, are not in a good position.
1192. *Mr. Wilks.*] I suppose if you were to enforce a license probably only about forty would pay the fee? I think it probable that all the members of our club would take out a license; but as to others outside, I am not in a position to say. Judging from the character of those latter men, I should say they would very probably adopt some means to evade the law, if possible, or, failing that, they would not take out a license. I am now speaking in a speculative way, because I have no idea as to the amount of impost that would be levied on these people. If you were to put an extortionate sum upon them, I think you would drive them to other means of obtaining the end they have in view. On the other hand, if you charged only a small sum the revenue derived would be insignificant as compared with the purpose for which it is intended.
1193. Then you practically mean that the enforcement of any fee—even so extortionate a sum as £100 per annum, which would, undoubtedly, be an extortionate amount—would not recoup the expense of collection? I am sure you could not collect it.
1194. *Chairman.*] Could you not collect it through the A.J.C. and similar institutions? No: the A.J.C. is simply a horse-racing club, and has nothing to do with bookmakers, except to register them and give them permission to ply their avocation within a certain area of their racecourse.
1195. But we have in view the passing of a law to empower the A.J.C. to make such a levy upon them? That would be a different thing. Of course if you empowered the A.J.C. to compel them to pay such a license fee, then of course there would be a revenue from it. The A.J.C. have ignored bookmaking altogether up to the present, and you would be imposing upon the club a liability which it does not at present have, and to which I am satisfied it would be entirely opposed.
1196. You say the A.J.C. have ignored bookmaking—still it flourishes on the course? What I mean by ignoring it is, that if a bookmaker proceeds on the course to make a book he simply obtains a register from the A.J.C. That is all they do with him, beyond this: If I see a bookmaker on the course, and I know he is what they term a “brusher,” or a man who does not pay his debts, and if, being a member of the A.J.C., I complain to the Secretary, the Secretary will take notice of this man, and if he does not pay he is turned out. That is all the A.J.C. do with regard to bookmakers.
1197. *Mr. O'Reilly.*] From your view, so far expressed, you think that, presuming any reasonable levy were made upon these bookmakers, the sum raised would be insignificant? I think so. I think it would not pay for the cost of collection.
1198. And supposing a heavy sum were imposed, you think the effect would be to drive men who are at present registered into the ranks of those whom you have described as “rats?” Yes.
1199. That is to say, it would really have a deleterious effect upon the status and tone of the betting community? Yes, it would. I do not mean to say it would exactly drive the registered bookmakers into the ranks of the class referred to, but it would have such a tendency among those whose tastes might be in that direction.
1200. Do the fifty-four Melbourne bookmakers who are enrolled in Tattersall's pay the same annual fee? Yes; £3 3s. a year.
1201. They come over for big events? Yes; but if you imposed a fee of £100 a year, I do not think you would see many of them.
1202. I gather that, roughly speaking, there are about 150 recognised bookmakers? There are ninety-four bookmakers registered with the A.J.C. This number includes the members of the other club referred to just now by the Chairman, the members of Tattersall's Club, and the members of the Melbourne Club.
1203. Then you might say 100 registered bookmakers in New South Wales? Yes. These are registered with the A.J.C., but there are other bookmakers of the class I have designated as “rats” and “brushers.”
1204. But, roughly speaking, there are about 100 registered bookmakers of what you might call the better class—reliable men;—therefore I am right in believing that this tax could only be made applicable to about 100 bookmakers? Yes.
1205. So that, even if it were £10 a head, which seems to me a heavy tax, that would only mean a revenue of £1,000 a year? Yes.
1206. And there are a large number of unrecognised bookmakers—men who evade the law now, and who would evade the law in any case? Yes.
1207. And no legal enactment could get at them any more than it seems able to put down “totes” and other forms of illicit gambling? Quite so.
1208. *Chairman.*] A license fee of £10 a head on 100 bookmakers would return £1,000 a year;—do you think that would be possible in the case of the bookmakers of the legitimate class to whom you have referred? I hardly think it would be possible under present circumstances. I am speaking now of depressed times and a depressed country.
1209. Would it be more advantageous to the bookmakers to pay a fair tax per year rather than see the totalisator legalised? I think it would be much better for them to pay a tax of so much a year than to compete with the totalisator.
1210. You think if a choice were given to them they would prefer to pay a fair tax per year, and be legalised, rather than see the totalisator brought into existence as a legal instrument? I am quite satisfied about that. I would go further, and say that if you introduced the totalisator, and it became successful,

successful, you would, to a very large extent, extinguish bookmaking. That is my impression of the situation. I am now speaking in the light of the experience of other countries. For instance, I have heard people from New Zealand say that the totalisator there has more or less extinguished the bookmakers; at all events it is detrimental to them, and I know they are adverse to it, and look upon the whole subject as distasteful. I think they would be willing to submit to a tax rather than face the totalisator.

J. B. Oliffe.  
13 Aug., 1896.

1211. *Mr. Wilks.*] What do you think would be about the highest fee that could be imposed upon bookmakers—a fee that they could pay? I do not think you could extract more than £10 a year from them.

1212. That would mean that they would pay, in the aggregate, £1,000 a year? Yes.

1213. The revenue derived from the totalisator would be much greater? Of course it would. You would get much more from the totalisator, because you would get all their profit of 10 per cent. on the gross takings. Most of the money that now passes through the hands of the bookmakers would pass through the totalisator, and you would get your 10 per cent. from the totalisator, or whatever you agreed to charge.

1214. Then you consider, as a private citizen, that to collect £1,000 from such a source for the assistance of a fund for the aged poor would be really absurd? I think so. I do not think it would pay for the cost of collection.

Thomas Strattel Clibborn called in, sworn, and examined:—

1215. *Chairman.*] What position do you hold? Secretary to the Australian Jockey Club.

1216. You heard the idea suggested to the previous witness, that it has been thought that the causes of distress might be made a means to assist the aged poor by contributing towards a pension fund, and as sporting is considered an indirect cause of distress, it has been suggested that we might ask your opinion as to the probability of working the totalisator in New South Wales, and also as to whether it will be possible to register racecourses, and obtain a certain fee. Let us first take the totalisator; you have, I presume, given some attention to that subject? Yes. I will first go back to what Mr. Oliffe said. I perfectly concur in what he said, but without wishing to be invidious, I may say that the bookmakers as a class are not men of any standing. I know myself that, with the exception of five or six, these men, as they say in the vernacular of the ring, could not stand to be shot for any amount at all—in fact, if they made a heavy loss they could not pay. I now come to what is the curse of the whole thing—too much racing; and, without presuming to give this Committee any advice, I may express the opinion of one who has been for some thirty years connected with the turf. Racing is now purely a matter of business, while in days gone by it was a sport which we all honored, and most of us loved. The best thing the Government of this country can do, in my opinion, is to legislate for horse-racing—to say what number of race-meetings shall be held, and what amounts shall be added. The effect of that would be to minimise racing, and do away with the curse of the present day, pony-racing, which has created a class of some 4,000 or 5,000 people in Sydney who do nothing else. There are two methods by which this can be done. In the first place, you could say, if it is possible to make it law, that you will not permit a race-meeting to be held within 50 miles of Sydney to which less than £500 per day is added, with a maximum charge of one sovereign entrance for each race. That would effectually settle the pony-races, because at these places they could not give more than £200. In regard to these smaller or proprietary clubs I may say one or two words, without wishing to cast a stone at any of the gentlemen who are proprietors of them. Of these I may name Messrs. Harris and Ackman as the principal proprietors of Rosehill, which is a most worthily-conducted and admirably-managed club in every sense; Mr. Peter Moore is the proprietor of Moorefield; Mr. W. L. Davis, and one or two other gentlemen whom I do not know, are the proprietors of Canterbury Park; and Mr. E. E. A. Oatley, is the proprietor of Warwick Farm. I believe these gentlemen are all good, honest, upright citizens. But I fail to see why these men should, by their action in establishing these proprietary clubs, create a class who do nothing else in the world but live by gambling, who never do a day's work in their lives. Of the two methods which might be adopted to improve horse-racing, I have mentioned one, viz., to provide that there shall not be any racing within 50 miles of Sydney, unless that there shall be £500 added money per day, and that there shall be a maximum charge of one sovereign entrance for each race for the privilege of racing for that £500, and that there shall not be more than six races each day. The other possible method is to introduce the totalisator, and, having introduced it, have a Commission who shall say who shall use the totalisator. Racing is not much use without betting. People will not go to a racecourse without gambling. If, as in New Zealand, South Australia, and Queensland, you have the totalisator, and you have a man who says to a proprietary club, "Your race-meeting is not sufficient; you are only giving £150; you shall not have a race-meeting." If you do that you minimise racing, and you create a more healthy interest in the sport. So you get rid of the stigma that attaches to racing. If this question comes before the House of Assembly every representative of a country district is bound to vote for it. Those who lived here in the olden times will remember that Orange, Singleton, West Maitland, Bathurst, and all these large country towns had race-meetings, and good race-meetings. The Hawkesbury Club used to give £500 for its handicap; now it gives £150. The falling off has been caused by the centralisation of racing in Sydney to the benefit of proprietary clubs. Country members should vote for the reform I suggest, because all the racing would be brought then to different centres, and you would have racing again at Bathurst, Orange, Singleton, and all those other country places. With such a changed condition of things horse-racing would again become a sport. I am sorry to say that at present it is solely and wholly a business. As regards the A.J.C., we have a vast organisation in Sydney, which, I may say, has a great deal to do. We are in touch with England, New Zealand, and all the other Australian colonies. A man who does wrong on the turf with us is practically debarred from taking part in any turf pursuits either in the old country or in these colonies. His name is recorded in our register, which goes out every week, and a copy of which is received by every prominent racing club, and the English racing clubs send us their register. If we choose to say—and we have been abused for not doing so—to Warwick Farm, Moorefield, Canterbury Park, and Rosehill, "You shall only hold one race-meeting a week," that would tend to minimise racing in the vicinity of the metropolis. But what would be the consequence? Rosebery Park, Lillie Bridge, and Brighton, who have nothing to say to us, and will not come into our union or league, would take their days themselves, and the evil would be worse than ever.

T. S.  
Clibborn.  
13 Aug., 1896.

T. S.  
Clibborn.  
13 Aug., 1896.

The fixing of £500 a day would immediately shut up all these latter places, and it would not prevent the legitimate clubs, such as Rosehill, Warwick Farm, Hawkesbury, Moorefield, and Canterbury Park from holding race-meetings (say) once a fortnight, and pony-race-meetings once a fortnight. The best clubs would stand the test, and the weakest would go to the wall. Rosehill has, I believe, a capital of £80,000, and Canterbury Park £25,000. I am thoroughly convinced that with the totalisator, and by legislating for the management of racing inside a limit of 50 miles, a most excellent effect would be produced. As far as bookmaking and the bookmakers are concerned, the tax to be collected would be of no account in a vast undertaking like this, whereas the custom of the totalisator is that the club using it deducts 10 per cent. for the cost of management, and pays 2½ per cent. to the Government. The club must also prove, to the satisfaction of the Government auditor, that every shilling of profit derived from the totalisator is added to the stakes advertised and given by the club. The club I have the honor to represent is, strictly speaking, a non-proprietary club. As a matter of fact, it is a trustee for the public, and manages racing for the benefit of the public. All the funds are contributed by the public. Our balance-sheet will be in the Press in a day or two, and you will be able to see for yourselves that, with the exception of my salary and the salaries of the management, all the personal benefit derived by the Committee is the champagne which they drink at the luncheon on race-days. The totalisator, I may say, has proved an undoubted success in South Australia, Queensland, and New Zealand. Mr. Oliffe, no matter what he may think in his inner soul, is naturally bound in honor, from the position he occupies, to express an opinion against the totalisator, because Tattersall's Club have invested an immense sum in a palatial building and in carrying on its great organisation. Together with the Victorian Club, it may be described as a most admirable institution, and the A.J.C. register men who are members of either club, assuming their membership to be a sufficient status. The club takes from each bookmaker £25 a year for the privilege of betting at Randwick on twenty-six days in the year. We do this in order to assure the public that they bet with good men. If one of these men loses his money and does not pay he is immediately sent about his business, and not allowed again to enter the racing world. They walk on strict lines, and know that if they do not pay their bets they are dead to the racing world for ever, not only in this Colony, but also in all the other Colonies and in England. The money thus received from the bookmakers is distributed in stakes. No one connected with the club benefits a shilling by it. I cannot, of course, say anything about the proprietary clubs—as to what they charge. They have had to make a small charge, but it is principally for the same reason as in our case—that the public may be assured that they bet with tried men. For my own part, I do not think the higher class of bookmakers would suffer in the least by the introduction of the totalisator. That, however, is more a racing question. From a revenue point of view, there is no doubt that the totalisator is a source from which you could derive a certain revenue. At the same time you would do a tremendous amount of good for racing. The A.J.C. gave nearly £24,000 in stakes to be raced for last year. Of this we took nothing back—we gave, excepting £915, the balance absolutely. In the case of the Victoria Amateur Racing Club, for instance, a man races at Caulfield for a stake of £100, and he has to pay £3 for the privilege, whereas the A.J.C. gives a prize of £100, and the horse-owner contributes £2 of his own money, which is added to the stake, and the money is all divided amongst those who win it. We advertise exactly what we give. In the other case they advertise a large amount, and they take the fees and things, and put them in the club's coffer.

1217. In order to carry out your idea of limiting the number of race-meetings, and assisting to purify sport, would it be desirable to impose a license fee upon every racecourse to assist towards the old-age pension fund? I think so. I think every racecourse worthy of the name should be in a position to pay a fee. I have prepared a small return which I will be happy to leave with the Committee, and I will explain it as I go on. We register clubs and meetings. We register, as a club, any persons who have a racecourse of their own—racecourses are generally grants from the Crown—and who furnish us regularly with the names of the committee and particulars of the club, and give at least £150 to be raced for at each meeting. We charge them nothing, except £1 1s. when they register their club in the first instance. Their name is then returned and placed in the register of clubs holding race-meetings throughout the Colony. Where a certain number of people in a country town meet with the view of starting a racing meeting, one man will give £5, and perhaps from the storekeeper and others £50 or £60 is raised for a day's racing. The meeting is registered in order that this day's racing may be brought under the jurisdiction of the A.J.C., so that in case of any dispute arising out of the meeting it may be referred to our club for settlement. They make application on a proper form, and, as I say, we charge them £1 1s. for registration. This year we registered 385; in 1895 we registered 398; and the year before 339. In earlier years I think there were nearly 500 of these meetings held throughout the country, but the number is being reduced on account of the centralisation of racing in Sydney. Outside of these again there are numberless race-meetings held of a still more minor character. Such meetings are got up, for instance, for the shearers after the board is finished, and very often they are promoted by publicans. The rule is that as long as these men do not advertise their race-meeting in a newspaper in any way the Jockey Club takes no cognisance of them; but if they put an advertisement in a newspaper to say that races will be held at such-and-such a spot, all the horses running at that meeting are debarred from taking part at any meeting registered under our rules. Then they apply to us to have the disqualification removed. We retain it for twelve months, and then they have to pay a guinea for having it taken off. I produce a list of the clubs that are registered, together with the names and addresses of the secretaries. I may say that in connection with the A.J.C., there is a Jockey's Accident Fund, which this year amounted to £4,745. It is on a liberal basis, and is systematically organised. There are 153 jockeys who pay an annual license fee of £1. In regard to bookmaking, if the gentlemen who are ordered to carry out the law would enforce it as regards the shop-betting in Sydney, the members of Tattersall's Club would very soon be in a position to pay something respectable in the shape of a license fee as suggested. There are, as I have pointed out, 4,000 or 5,000 people belonging to a class which has been created by proprietary racing and pony-racing. At the present time you may say that there are seven days' racing in Sydney in a week, reckoning the night business at Lillie Bridge. Rowe-street is full of shops carried on by this class of people. If they would do as was done in Melbourne, and give one of the principal offenders three months' imprisonment, without the option of a fine, they would stop the evil effectually; but a fine of £10 or £20 has no effect whatever.

1218. *Mr. O'Reilly.*] I think you mentioned that there were eighty-six registered racecourses? Registered clubs.

1219. Does each of those clubs own a racecourse? They generally hold a racecourse as a grant from the Crown for recreation purposes.

T. S.  
Clibborn.  
13 Aug., 1896.

1220. We may say, roughly speaking, that there are eighty-six clubs in the Colony? There are eighty-six clubs who give £150 a year, but if you minimise the racing in Sydney you will have ever so many more clubs in the Colony, because Singleton and all those other places that now hold picnic races will be able to return to their former standing, and hold race-meetings. I have no doubt members of the Committee will recollect when there used to be two-days' race-meetings at Hawkesbury, Bathurst, and Orange. At present racing in Sydney is overdone, and has ceased to be a sport.

1221. But, under existing circumstances, you say there are eighty-six clubs that are financially strong—clubs that you recognise? Yes.

1222. What fee do you think these clubs could contribute to such a fund as is suggested? A very small fee. If you got a couple of guineas a year out of them it would be the utmost they could give. They consider they are doing very well if they have £50 in hand. Hawkesbury, Moorefield, Rosehill, Sydney Turf Club, Tattersall's, Warwick Farm, and Canterbury Park could afford a higher fee.

1223. *Mr. Wilks.*] With regard to the totalisator, could you give the Committee an approximate idea of the amount of money that would pass through the instrument in one year if it were legalised in New South Wales? I could not say. But I know that at Onkaparinga, in South Australia, they put £30,000 through the totalisator during two days' racing. Any South Australian paper will give you the amount invested in the totalisator at each meeting. In 1893 the amount was £13,000; in 1894, £17,000; in 1895, £16,000; in 1896, £18,788. Each of these amounts represents the sum put through the totalisator during one or two days' racing.

1224. How much of the amount thus received would the State get? Two and a half per cent. The odd fractions, which cannot be paid with the dividends, are devoted by the club to charity. Last year, I think, in connection with the South Australian Jockey Club, these fractions amounted to £180. The *Sydney Daily Telegraph* of 11th August, dealing with turf statistics from New Zealand, states that enormous amounts were put through the totalisator during the season, and gives the following figures:—The Auckland Racing Club handled £81,297; the Canterbury Jockey Club, £73,155; the Dunedin Jockey Club, £53,111; the Wellington Racing Club, £37,714; the Hawke's Bay Jockey Club, £33,274; and the Wanganui Jockey Club, £24,375. The total investments amount to £635,421. This represents the amount passed through the totalisator in New Zealand in one year, and of that amount the Government received 2½ per cent. Taxing bookmakers or taxing clubs would be a pettifogging thing for such a fund as you require. The totalisator is the thing which would return a substantial revenue.

1225. Do you think it reasonable to suppose that in New South Wales £1,000,000 would go through the totalisator in a year? Yes; I think you might fairly make that estimate.

1226. At 2½ per cent that would give £20,000 a year? In New Zealand it costs about 1½ per cent. to work the totalisator. It is necessary to employ an army of clerks. I may say that I only speak from hearsay in regard to this matter, and that full information could be obtained from the Secretary of the Jockey Club at Christchurch and the Secretary of the South Australian Jockey Club.

1227. *Chairman.*] You say it costs 1½ per cent. to work the totalisator;—does that come out of the 2½ per cent.? The Government get 2½ per cent. clear. The club takes 7½ per cent., and from this they deduct their working expenses, and they must prove to the satisfaction of the Government auditor that every farthing beyond the working expenses is added to the money given by the club to be raced for.

1228. *Mr. Wilks.*] What do you think of the suggestion with regard to consultation sweeps? I do not think they do a bit of harm, if conducted by men of the same character as George Adams.

1229. I mean, how would it do to license them as a means of revenue? I do not think it would do. You would then legalise consultation sweeps, and the moment you did so you would have any number of applicants for licenses, and I can assure you from my own knowledge that of the numberless sweeps conducted here only three men ever carried them out in a fair and legitimate manner, and those men were Mr. J. J. Miller, Mr. George Adams, and H. Oxenham. I think it is far better that they should be put down altogether. When you come to legalise an operation you must have it under your own thumb. There is no doubt there will be gambling, whether it is on the Stock Exchange or anywhere else. People talk about gambling at the races, but there is just as much gambling on the Stock Exchange. The Stock Exchange is, to a certain extent, legalised, and I do not see why horse-racing should not be legalised. What I should like to see would be that horse-racing should be brought back to what it was twenty years ago—a sport.

1230. *Chairman.*] Do you think the legalising of the totalisator would tend to impair the sport in any way? The bookmakers tell you so, but I do not. Horse-racing was practically dead in South Australia until they legalised the totalisator.

1231. Then, instead of injuring horse-racing there it has proved beneficial? In South Australia they tell you that they cannot live without it, and the same in Christchurch. The bookmakers, of course, live by the game. They make a bet, and if they win all the profit goes into their pockets. With the totalisator the money is distributed among the public. If Jack loses to-day, Tom wins; if Tom loses to-morrow, Jack wins, and a certain percentage still goes to keep the sport at a proper status.

1232. I have a paragraph here from a South Australian paper, which says: "Adelaide charities have benefited to the extent of £2,570 in eight years by the S.A.J.C. totalisator percentages." Do they give 2½ per cent.? Yes; and I think that the 2½ per cent. which the Government in South Australia receives goes to charities. Possibly the sum mentioned in the paragraph represents the fractions, which are not paid by the club, and which, perhaps, go to charities.

1233. *Dr. Graham.*] I suppose the revenue you get from licensing jockeys is a very small thing? £153 a year.

1234. And the trainers? The revenue from this source is £49; but it does not pay us for the printing.

1235. *Mr. O'Reilly.*] Is every racehorse registered? No.

1236. Could you form any idea as to how many racehorses there are in the Colony? In the town and country there are 474 horses in training at different places, but that does not give anything like an adequate idea of the total number, because there are racehorses not in training planted all over the place. There might be, I suppose, about 600.

1237. Surely a man who runs a racehorse ought to be able to pay a fair annual amount to the Government for the privilege? I do not think so. There are wealthy owners who race for sport, but you can count them on your fingers. These men would be able to pay, and the charge that would be made would be to them a mere bagatelle. But it is different with the man who keeps a racehorse for a living. In

New

T. S.  
Clibborn.  
13 Aug., 1896.

New Zealand the law is very strict in debarring the smaller clubs from using the totalisator. There is no doubt there ought to be some restriction in that respect, and a certain limit as to the stake. At Lillie Bridge, for instance, there is a stake of £10, and the race is run under the electric light.

1238. You think that the enforcement of a licensing fee in regard to racecourses would enable the Government to better control race-meetings, and while minimising the evils which have clustered around sport, would also add a little to the support of the aged poor? Yes; it would not, however, be sufficient to impose a licensing fee upon racecourses. No race-meeting should be held within a radius of 50 miles of the General Post Office in Sydney at which there was not at least £500 added money each day, there not being more than six races, with a minimum charge for entrance of £1. A provision of this kind, combined with a license fee, would very much tend to minimise racing.

[To evidence of Sydney Moxed, Esq.]

WEEKLY Dietary—Compiled from Dietary Scale (Weight).

REMARKS—Hospital dietary to be regulated by Medical Officer; and general record to be kept for inspection in the Medical Journal of alterations made each day. Wines, beer, and spirits to be issued only under authority of Medical Officer, except in cases of emergency.

Day.	Breakfast.	Dinner.	Tea.
SUN.	{ 1 pint coffee.* 1 pint porridge, made with 2 oz. maize meal or oatmeal; and 1 oz. treacle or sugar at discretion of Superintendent. 4 oz. bread.	Irish stew, made with 14 oz. mutton (including bone weight), 12 oz. potatoes, and other vegetables, onions, and herbs, 1 oz. flour. 4 oz. bread. Cabbage.	1 pint tea, made with $\frac{1}{2}$ oz. tea, $\frac{3}{4}$ oz. sugar, $\frac{1}{2}$ gill milk. 6 oz. bread. 1 oz. honey.
MON.	{ 1 pint coffee.* 6 oz. bread. 1 oz. jam.	14 oz. beef roasted. 12 oz. potatoes. 2 oz. bread. 6 oz. pudding †	1 pint tea. 6 oz. bread. 1 oz. treacle.
TUES.	{ 1 pint porridge, made as above. 1 pint coffee.* 4 oz. bread.	Haricot, 14 oz. mutton and necessary vegetables. 4 oz. bread. 1 pint soup, made from liquor of beef bones of previous day, with 1 oz. barley, rice, or pease meal, and other vegetables.	1 pint tea. 6 oz. bread. 1 oz. jam.
WED.	{ 1 pint coffee.* 6 oz. bread. 1 oz. treacle.	14 oz. boiled beef, with soup made as at present. 12 oz. potatoes. 4 oz. bread.	1 pint tea. 6 oz. bread. 1 oz. honey.
THUR.	{ 1 pint coffee.* 1 pint porridge, made as above. 4 oz. bread.	Curry, 14 oz. mutton and necessary seasoning. 12 oz. potatoes; rice may be substituted for potatoes. 4 oz. bread.	1 pint tea. 6 oz. bread. 1 oz. treacle.
FRI.	{ 1 pint coffee.* 6 oz. bread. 1 oz. honey.	14 oz. beef (weight includes bone), minced. 12 oz. potatoes. 4 oz. bread. Cabbage.	1 pint tea. 8 oz. currant cake, made with same ingredients as pudding.
SAT.	{ 1 pint coffee.* 1 pint porridge, made as above. 4 oz. bread.	Repeat Tuesday's dinner.	1 pint tea. 6 oz. bread. 1 oz. treacle.

\* 1 pint coffee, made with  $\frac{1}{2}$  oz. coffee,  $\frac{3}{4}$  oz. sugar,  $\frac{1}{2}$  gill milk. Tea can be substituted for coffee at the discretion of the Superintendent.  
 † Bread to be cut up and served out in its proportions for each meal.  
 ‡ Receipt for bread pudding for 250 men, each to receive about 8 oz. —Bread, 50 lb.; flour, 12 $\frac{1}{2}$  lb.; suet, 8 $\frac{1}{2}$  lb. (dripping should be used when practicable); sugar, 8 $\frac{1}{2}$  lb.; currants, 8 $\frac{1}{2}$  lb.; spice, 2 oz. These quantities absorb 3 buckets of water. To be divided for boiling into puddings of required size. Daily record of breakfast, dinner, and tea to be entered in book kept for that purpose.  
 P.S.—The foregoing to form basis of diet, which may be so regulated or altered at discretion of Superintendent as to suit convenient working of establishment, so long as it is not inferior in quality and quantity, and is of the same general character.

Daily Dietary Scale for Unemployed Men.—14 oz. bread, 14 oz. meat, 12 oz. vegetables, 1 $\frac{1}{2}$  oz. sugar, 1 gill milk,  $\frac{1}{2}$  oz. coffee,  $\frac{1}{2}$  oz. tea, 1 oz. jam, treacle, or honey, for tea, and same for breakfast with bread, when no porridge; 1 oz. pepper and 20 oz. salt for every 100 full daily rations. Any inmate requiring more bread at any meal should at once inform the Superintendent, or any person authorised to receive request.

Daily Dietary Scale for Ordinary Working Men.—16 oz. bread, 16 oz. meat; 12 oz. potatoes, 1 $\frac{1}{2}$  oz. sugar,  $\frac{1}{2}$  oz. coffee, 1 gill milk,  $\frac{1}{2}$  oz. tea, 1 oz. jam, treacle, or honey for tea, and also for breakfast with bread, when no porridge.

Men actively employed may be allowed (if the Superintendent considers the nature of their work justifies it) 1 pint coffee and 1 oz. cheese, in addition to authorised scale for ordinary working men. The medical officer may order any extra articles of diet he may deem necessary in particular cases.

\* Returns incomplete.

The benefits promised by Friendly Societies are, in kind, much the same in all societies, and usually comprise medical attendance and medicine for a member and his family, sick pay allowance—generally £1 per week for the first six months, reduced thereafter to 15s. or 10s.—in the event of the death of a member's wife, and funeral money to his wife on the death of a member. The Act limits the amount payable on the death of a member to £200, and no annuity can be granted above £50, but there is no limit to the amount of sick pay, although the rules of some societies limit the total amount receivable weekly to 42s., nor to the number of societies to which one person may belong, and from which he may receive benefits, but the combined benefits must not exceed the abovementioned amounts.

In addition to the Friendly Societies properly so called, some of the registered Trade Unions give benefits analogous to those of the societies mentioned above. The benefits, however, are usually smaller in amount, seldom exceeding 12s. a week for sick pay, and £7 in case of death. A few Trade Unions also make allowance to their members when they are out of employment.

## D.

[Appended by the Committee.]

Sir,

Government Statistician's Office,

Sydney, 6th July, 1896.

I have the honor to inform you that in compliance with your request I interviewed Major Z. C. Rennie, General Manager for Australia of the Mutual Life Insurance Company of New York, in regard to his attending to be examined by your Committee on the subject of Old Age and Invalidity Pensions, and he desired me to say he would be pleased to place before the Committee any knowledge he has acquired on the subject.

I also interviewed Colonel Bell, the United States Consul, for the same purpose. My mission, so far as obtaining his personal attendance was fruitless, as he leaves for America to-day; he, however, desired me to say he would have had much pleasure in acceding to the wishes of the Committee had circumstances permitted. I gleaned the following facts from him:—Pensions were formerly limited to soldiers and sailors physically disabled in action in the service of the United States in all wars since 1812, to widows and children of those slain in action, and widows and children of those who died subsequent to the engagements.

Some six or seven years ago, however, the conditions were modified so as to embrace any application from soldiers or sailors who might become physically or mentally infirm from causes in no way connected with the actions they had been engaged in.

Apparently

Apparently no special provision is made for sustaining the fund from special sources, as all liabilities under this head are made a charge on the revenue as a whole.

According to the "Statistical Abstract" of the United States for 1895 the number of persons in receipt of pensions and the disbursements were as follow:—

Pensioners on roll, 30th June, 1895.		
Invalids .....		751,456
Widows, &c. ....		219,068
Total .....		970,524
Disbursements.		
To 30th June, 1894 .....		\$1,717,275,719
During year ended 30th June, 1895 .....		140,959,361
Total .....		\$1,858,235,080 or £382,352,900

I have, &c.,  
GEO. H. PITT.

E. W. O'Sullivan, Esq., M.L.A.,  
Chairman, Select Committee on "Old-age Pensions."

### E 1.

[Appended by the Committee.]

1894.

NEW ZEALAND.

## OLD-AGE PENSIONS COMMITTEE.

(Report of the, together with Appendix.)

*Brought up 27th September, 1894, and ordered to be printed.*

## ORDER OF REFERENCE.

*Extract from the Journals of the House of Representatives, dated the 26th day of June, 1894.*

*Ordered, "That a Committee, consisting of ten members, be appointed to examine into and report upon the question of making provision for old age, with power to call for persons and papers; three to form a quorum. The Committee to consist of Mr. Bell, Mr. Buddo, Mr. Green, Mr. Hall, Mr. G. Hutchison, Mr. W. Hutchison, Mr. R. McKenzie, Mr. Pirani, Mr. G. W. Russell, and the mover."—[Hon. Mr. CARROLL.]*

## REPORT.

THE Committee have the honor to report that they have had numerous meetings, and have had several specific schemes (copies of which accompany this report) before them for consideration. After mature deliberation they have arrived at the following resolutions:—

- (1.) That a system for the provision of pensions for the old of both sexes should be established by the State if a practicable method for providing the necessary funds can be devised.
- (2.) That, though it would for many reasons be desirable to fix the age for commencement of pensions at sixty years, the Committee are of opinion that it would not be within the scope of practicable finance to fix it below sixty-five.
- (3.) That all applicants for a pension must have resided in the colony for at least twenty years immediately previous to their application.
- (4.) No pension will be granted to any applicant who has been convicted of an indictable offence, unless he or she has received a free pardon from the Governor; or to anyone who has been convicted of drunkenness three times during the last seven years previous to his or her application.
- (5.) That every male and female pensioner should be entitled to a weekly sum of 8s., and in the case of a husband and wife the joint allowance be 15s. per week.

The subject, however, is so large, and has so many ramifications, that, with the limited time at their disposal, your Committee are unable to recommend any particular scheme without further statistics; and they are of opinion that the Government should appoint a Royal Commission during the recess to inquire fully into the question, take evidence as to the numbers and condition of the aged in the colony, the probable annual increase of such numbers, as to the financial methods possible; also that statistics be obtained giving the amount earned in wages by persons receiving less than £300 per annum, and as to the amount which will annually be required for the necessary provision, besides other questions which may be precedent to the determination of any of the various proposals.

The Committee desire to record their thanks to the officers of the Government with whom the Chairman had occasion to communicate for their uniform courtesy and readiness to afford such information as was required, especially to Mr. Richardson, the Commissioner of the Government Insurance Department, for the able and comprehensive *résumé* of schemes for old-age pensions as formulated in various countries of Europe.

Your Committee had also important evidence from Mr. Mark Cohen, of the *Dunedin Evening Star*, giving his view of old-age pensions as bearing upon Friendly Societies. His evidence is not attached because the Committee were unable to go exhaustively into that view of the question.

27th September, 1894.

WILLIAM HUTCHISON,  
Chairman.

## APPENDIX.

*Proposal by the Chairman.*

LOOKING at the precarious nature of the employment of working-men in the colony—one week in work and another out of it—only the smallest number of this class could contribute regularly to the establishment of any pension fund, and where the contribution cannot be general it would be unfair to make it particular. I am therefore of opinion that such a fund should be provided entirely by the State, as a compensation in old age to persons who have given their labour during all the best years of their life, at a very inadequate remuneration, for the public benefit.

Assuming the resolutions agreed to in the report as a basis on which to formulate a scheme of old-age pensions, we have to deal with the following figures, as supplied by the Registrar-General:—

Persons of sixty-five years of age and upwards in the colony number 15,359 (divided into 8,940 males and 6,419 females). These are the latest returns; and dealing with the figures therein more closely, it may be safely reckoned that one-third—it may possibly be more—of the above number (keeping in view the exceptions and limitations already noted) will not apply or be eligible for a pension, a reduction which leaves the result thus:—

Males .....	8,940	
Less one-third .....	2,980	
		5,960
Females .....	6,419	
Less one-third .....	2,139	
		4,280
		10,240
Of these 10,240 it may be reasonable to assume that 3,500 of them are married—husband and wife living together—and pensioned at £30 a year .....		£ 105,000
Males .....	5,960	
Less married men .....	3,500	
		2,460 at £20 16s. a year .....
		51,168
Females .....	4,280	
Less married women .....	3,500	
		780 at £20 16s. a year .....
		16,224
		£172,390
A primage duty of 3 per cent. upon all imports, dutiable and free alike, will produce a revenue of .....		£195,243
Pensions .....		172,392
		£22,851

A PROPOSAL *re* STATE-AIDED INSURANCE OLD-AGE PENSIONS.

By Mr. D. Buddo.

THAT it is advisable that all persons over the age of sixty-five years who have lived in the colony of New Zealand for not less than twenty years, who have not been convicted of a crime for fifteen years, or of drunkenness for five years, and who have not been in receipt of charitable aid, shall be eligible to receive a pension if they have no other means of support. Such pension not to exceed 8s. per week, and be provided for as follows—and I might here print out that it is next to impossible to get statistics for my purpose; but, considering that all incomes of employees who do not contribute to income tax should contribute to the pension fund, I estimate that £12,000,000 is earned by employees earning less than £300 per annum in this colony. This at 1d. in the pound would give £50,000, and this to be collected by the Insurance Department would be a very expensive matter; but it could be easily and cheaply collected by making the employer collect it as receipt stamps on the receipt for wages, every sum given for wages from £1 upwards to bear a penny stamp for every £1 of the amount.

There are nearly 15,000 persons in this colony over the age of sixty-five years, and I estimate that one-quarter of that number, or 3,750, will be in a more or less needy condition and require a pension in their closing years. To provide this number with a weekly pension each of 8s. would require £78,000, and, possibly, liabilities in consequence of increased numbers and expenses might make up altogether £100,000.

I might say here that I believe 3d. should be provided for every £1 earned by employees earning less than £300 per annum, and that the employee should contribute two-fifths and that the State should find the other three-fifths, and that the average of this fund should, if it raises more than is required, be used to assist more, by lowering the age of those who would receive a pension rather than raising the rate of pension.

Further contingencies may occur that might require providing for, such as that the number of persons over sixty-five years of age that are indigent may amount to one-third the total number instead of one-quarter; and also for the next twenty-five years there will be a steadily-increasing number of old people as the colony grows older.

Therefore, I may fairly assume that the amount of 1d. in the pound from the employee and 2d. to be added from the State will eventually just about balance the liability.

In conclusion, I might add that no scheme based upon State-aided insurance lines can be made complete without evidence as to the indigent aged over sixty-five years, and also the amount of wages or salary earned by employees earning less than a specified amount; and I would here recommend that the Old-age Pensions Committee recommend the Government to appoint a Royal Commission to get evidence toward that end.

The Registrar-General to The Chairman, Old-age Pensions Committee.

Registrar-General's Office, Wellington, 9th July, 1894.

Sir,

In compliance with your request of the 5th instant, I enclose a statement of the population over sixty years of age, according to sexes, in groups of age-periods, and the number of deaths at those ages, for 1893.

With a population amounting to 672,265 persons (males 357,635, females 314,630), and the existing proportions at the various age-periods, there would be 28,402 persons (males 17,201, females 11,201) over sixty years of age to be provided for under a scheme of old-age pensions beginning with that year. Judging from the results of past censuses, the proportion to the whole population of persons over sixty years of age will increase by slow degrees, but regularly, for some time. Although there were 1,396 deaths of persons over sixty years of age during the year 1893, the number living and coming forward from the previous ages would be rather more than sufficient to replace these.

I attach another statement, which shows that the death-rate among males over sixty would be about 53.48 per 1,000 and among females 46.15 per 1,000. The rates are also given for groups of quinquennial periods of age between sixty and eighty years, to show the rapid advance in mortality at the higher age-periods. The results are arrived at from the experience of the period 1887-91, because the actual numbers living in March, 1886, and April, 1891, are ascertainable by the censuses of those years.

The question of cost of a scheme of pensions I take to be one for the Actuaries of the Government to work out, and the principle of any scheme would have to be settled before anything could be done.

For a proposal involving State aid and taxation to meet the same, I believe the Registrar and Actuary of Friendly Societies, Mr. E. Mason, has some information to afford. For a scheme of compulsory contributions there must be records of the work done by Mr. Frankland in 1884, before the introduction to Parliament of the Bill for national insurance; and beyond these the Actuaries of the Government Insurance Department no doubt have the very latest information on the subject.

I have, &amp;c.,

E. J. VON DADELSZEN,

Registrar-General.

William Hutchison, Esq., M.H.R.

MEAN POPULATION at each Age-period from Sixty Years upwards for the Five Years 1887-91, with the Yearly Average Number of Deaths registered, and the Death-rate per 1,000 living.

Ages.	Number living.		Deaths.		Rate per 1,000.	
	Males.	Females.	Males.	Females.	Males.	Females.

80 upwards .....	621	500	109	85	175.52	166.99
Total .....	13,500	9,036	722	417	53.48	46.15

Closely connected with the subject of old-age pensions is the question of providing annuities for orphan children left by fathers dying before they have attained the age of sixty-five. This matter is now claiming the attention of actuaries and others in England engaged in the investigation of State insurance schemes, and is a very important feature.

In order to be prepared with data for calculating the values of premiums for such family annuities, particulars as to the number and ages of all children left by married men dying between the ages of twenty and sixty-five have been taken from the death registers. These particulars have been arranged in tabular form and printed in the statistical volume for 1893. The results are shown in two tables (copies attached), one of which deals with the year 1893 only, the other showing the aggregate results of the four years 1890-93.

E. J. VON DADELSZEN.

Registrar-General's Office, 9th July, 1894.

ESTIMATED

ESTIMATED number of persons at each Age-period from Sixty Years upwards living in New Zealand on the 31st December, 1893; also the Number of Deaths registered during 1893.

#### DEATH-RATES of Married Men and Orphanhood of Children.

"THE Registration of Births and Deaths Act Amendment Act, 1882," requires that on the registration of the death of any person the age of each living child of the deceased shall be entered in the register. The particulars so recorded for several years have been tabulated, and the detailed results are shown in the two tables on pages 62 and 63 of the "Statistics of New Zealand, 1893." One of those tables deals with the year 1893 only; the other gives the aggregate results for the four years 1890 to 1893 inclusive. They show the total number of men who died at each year of age from twenty to sixty-five, the number of married men (husbands and widowers) stated in the registers to have died childless, the number who died leaving children living, and the number and ages of the children so left.

From the first table it is found that during 1893 there died 1,610 men between the ages of twenty and sixty-five, of whom 836 were married; 701 married men left children at their deaths; while 135 are stated to have been childless. The proportions of married men and bachelors in every 100 males dying were 51.93 and 48.07 respectively. The proportions at the census of 1891 for the total number living at the above ages were: Married men, 56.81 per cent.; bachelors, 42.92 per cent.; and unspecified, 0.27 per cent. The differences here shown would tend to prove that the death-rate amongst married men at the ages under review is lighter than amongst bachelors; but it must be borne in mind that when registering a death the informant is not always in possession of full particulars as to the conjugal condition of the deceased, and that therefore the number of married men as shown in the tables may be somewhat short of the actual fact.

Assuming the ratio of married men at twenty to sixty-five to the total male population at those ages to be the same in 1893 as obtained at the census of 1891, the death-rate is found to be 8.69 per 1,000 living, whereas the rate for all males at the same age-period was in 1891 9.60 per 1,000.

Ages.	1891.			1893.		
	Total Number of Males living at each Age-period.	Total Number of Male Deaths.	Death-rate per 1,000 living.	Estimated Number of Married Men living.	Number of Deaths of Married Men.	Death-rate per 1,000 living.
20-25 .....	28,337	148	5.22	2,473	5	2.02
25-30 .....	23,704	108	4.56	9,213	45	4.88
30-35 .....	22,021	114	5.18	13,668	45	3.20
35-40 .....	20,513	139	6.78	16,052	80	5.31
40-45 .....	17,755	139	7.83	13,444	87	6.47
45-50 .....	17,028	183	10.75	13,572	108	7.96
50-55 .....	16,770	272	16.22	13,534	143	10.57
55-60 .....	10,945	252	23.02	8,933	139	15.56
60-65 .....	7,685	227	29.54	6,319	134	29.12
	164,758	1,582	9.60	96,208	836	8.69

The total number of children left by the 836 married men who died in 1893 was 3,352. Of these, 1,577 were under fifteen years of age, 673 between fifteen and twenty-one, and 1,031 over twenty-one, leaving 71 in respect of whom no information could be obtained. Thus the average number of children of all ages left by each married man dying between twenty and sixty-five would be 4.01, or 1.89 under fifteen, 0.80 between fifteen and twenty-one, 1.23 over twenty-one years of age, and 0.09 of unspecified age. Discarding the number (135) of fathers said to have died childless, the average number of children left by each of the others would be 4.78 of all ages—2.25 under fifteen, 0.98 between fifteen and twenty-one, 1.47 over twenty-one, and 0.10 of unspecified age. Almost identical results are obtained if the figures for the four years 1890-93 be used instead of those for 1893 only.

Ages.	Estimated Number of Hus- bands and Widowers living in 1893.	Total Number of Male Deaths.	Number of Married Men who died.		Number and Ages of Children left.				
			Childless.	Leaving Children.	Under 15.	15 to 21.	21 and upward.	Unspeci- fied.	Total.
20-25 .....	2,473	154	2	3	3	.....	.....	.....	3
25-30 .....	9,213	161	14	31	61	.....	.....	.....	61
30-35 .....	13,668	167	8	37	103	.....	.....	6	109
35-40 .....	15,052	145	15	65	202	10	.....	11	223
40-45 .....	13,444	131	9	78	308	55	2	.....	365
45-50 .....	13,572	166	9	99	301	114	41	23	479
50-55 .....	13,534	249	22	121	272	177	192	12	653
55-60 .....	8,933	216	19	120	196	164	286	19	665
60-65 .....	6,319	281	37	147	131	153	510	.....	794
	96,208	1,610	135	701	1,577	673	1,031	71	3,352

An important fact brought out by the statistics quoted above is that every year upwards of 1,500 children under fifteen years of age are left fatherless—how many without adequate means of living it is not possible to say.

ORPHANHOOD OF CHILDREN.

The Commissioner, Government Life Insurance Department, to The Chairman, Old-age Pensions Committee.

Government Life Insurance Department, Head Office, Wellington,

30th July, 1894.

Dear Sir,

Adverting to our conversations regarding the various schemes which have been suggested for dealing with the aged poor, I beg to inform you that I have asked the Actuary to prepare a synopsis of the papers in this department which relate to the matter. The synopsis has now been completed, and I hand you herewith twenty copies of it. I am sorry that they are a little blurred, but our machine is working badly. In case, however, they may not be entirely legible, I attach the original synopsis.

W. Hutchison, Esq.,  
Chairman, Old-age Pensions Committee.

And remain, &c.,  
J. H. RICHARDSON, Commissioner.

I.—A BRIEF SUMMARY OF STATE PROVIDENT SCHEMES PROPOSED DURING THE LAST FIFTEEN YEARS, BUT NOT YET ADOPTED.

THESE schemes may be classified in two leading divisions: Division A—those which demand specific contributions, to be applied to create a specific fund; and Division B—those which do not build up such a fund, but provide each year for the benefits out of some form of taxation. Division A may be subdivided into—(1) Compulsory schemes; (2) voluntary schemes. All the schemes will fall into one or other of these categories, as set forth in the following schedule:—

A.—Specific Contributions to create a Specific Fund.

1. The Blackley type, compulsory.
2. The Chamberlain type, voluntary.

B.—Pensions payable to all without Direct Contributions.

The Booth type, indirectly compulsory.

DIVISION A.—1.

1. Canon Blackley's Original Scheme.

Payments.—Every person to pay £10, or thereabouts, between eighteen and twenty-one.

Benefits.—Sick-pay 8s. a week till seventy, and pension 4s. a week after seventy.

This scheme was eventually modified by Canon Blackley, principally through the opposition of the friendly societies, by eliminating the sickness benefit and lowering the pension age to sixty-five.

2. Canon Blackley's Amended Scheme.

Payments.—(a.) £10 in a lump sum from all persons with means, through the tax or rate-collector. (b.) 1s. 3d. a week for three years between eighteen and twenty-one from wage-earners, the State paying half the premium. The fund to be valued yearly, and the payments to be increased if found necessary.

Benefit.—Apparently, 4s. a week pension after age sixty-five.

3. The Late Sir Harry Atkinson's Scheme (a Modification of Blackley's Scheme.)

Payments.—Every person to pay 2s. 3d. a week between sixteen and twenty-three, or 3s. 3d. a week between eighteen and twenty-three, and also 2s. a week between twenty-three and twenty-eight.

Benefits.—Sick-pay till sixty-five: 15s. a week single people, £1 2s. 6d. a week married men, and 7s. 6d. a week married women. Pension: 10s. a week after sixty-five. Widowhood benefit: 15s. to £1 10s. a week, according to size of family, till each child is fifteen. Orphanhood benefits: 10s. a week to each orphan under three, and 6s. a week from three to fifteen.

Every

Every man over twenty-three (excepting those provided for in friendly societies, and possibly excepting men over fifty) to be compelled to provide for 15s. a week sick-pay up to age sixty-five; weekly payments according to age.

It was proposed to maintain all the existing indigent people over sixty-five out of the Consolidated Fund. The above scheme would then provide for all the existing population except orphans and widows. Sir H. A. Atkinson made the following suggestions (not included in the scheme) to provide for existing widows and orphans: (1.) That existing orphans should be allowed to make lower payments between sixteen and twenty-three to become entitled to the benefits. (2.) That rents from Crown lands should be put aside in perpetuity to make a provision for the widows of the present generation till the scheme should be in full operation: estimated to take £30,000 a year.

Sir H. A. Atkinson also proposed to use the remainder of the land-rents to endow each child born with £5 or less, which should be invested till sixteen, and then set off against the payments required. Emigrants under twenty-three would come under the scheme; those over twenty-three would pay for sick benefits only. Immigrants to draw all benefits except sick-pay. No surrender values to be given on leaving the colony.

*Machinery for securing Premiums.*—The colony to be divided into districts, coterminous with local bodies, which would be intrusted with registration. Employers to stop payments from wages and pay into Post-Office Savings-Bank; the payments of well-to-do people to be a debt due to the Crown.

#### 4. Dr. Hunter's Original Scheme, for Scotland only.

The rates were as follows:—

Rate of Weekly Wages.		Weekly Payments till Sixty-five.			Benefits: Weekly Pension.	
		Workmen.	Employer.	State.	After Sixty-five.	Incapacity before Sixty-five.
s. d.	s. d.	d.	d.	d.	s. d.	s. d.
6 0	to 11 11	1	1	4	5 0	?
12 0	to 17 11	2	2	4	7 0	?
18 0	and upwards	4	4	4	10 0	10 0

Dr. Hunter has since merged his scheme with that of Mr. Chamberlain.

#### DIVISION A.—2.

##### 1. M. Constans' Scheme.

This scheme was embodied in a Bill brought forward in the French Chamber in 1891. It is open to all men and women of French nationality who at twenty-five are earning less than £120 a year. Any one can refrain from joining the scheme by objecting before a Magistrate. All who do not so object are assumed to wish to join, and their employers are compelled to deduct from their wages from 5 to 10 centimes a day, and contribute an equal amount. This is to be paid into the State office, and the State will add two-thirds of the combined contributions of masters and men. The pension received in return for this after age fifty-five is either £24 or £12 a year, whereas the contribution of the workman himself would have provided only £7 8s. 4d. or £3 14s. 2d. But if the workman has an income of more than £24 at age fifty-five he loses the State grant entirely. The Bill also provides for the payment of their pensions to contributors who have become permanently incapacitated through sickness, and for the relief of those who may be obliged on account of accident to interrupt their payments into the fund. Every contributor may insure his life under certain conditions, the State also contributing one-third of the premium. There are also provisions relating to those of the present generation over twenty-five.

One of the suggestions for raising the necessary funds was a sliding scale of succession duty, rising from 1 per cent. to as high as 75 per cent.; and M. Constans proposes to raise £1,100,000 per annum for the fund by taxing every foreign workman employed in France 10 centimes a day.

##### 2. Italian Scheme.

This was embodied in a Bill brought before the Chamber in 1892, which provides for a National Pension Institute, to administer funds subscribed by authorised savings-banks and friendly societies, by individuals, and by the State. Every Italian working-man or woman may subscribe to the extent of £20 per annum, and is then entitled at age sixty, and after twenty years' payments, to a pension proportioned to his or her accumulations, but not exceeding £20 per annum, any surplus capital being returned with interest. At death before sixty all contributions, with interest are returned to representatives.

##### 3. Mr. Chamberlain's Original Scheme.

This scheme provided for voluntary contributions towards a pension after sixty-five, based on 2½ per cent. interest, while the State was to guarantee their accumulations at the rate of 5 per cent. It was abandoned for—

##### 4. Mr. Chamberlain's Second Scheme.

Payments to be made to the Post Office or a friendly society.

*Payments.*—Men: For every £5 paid before twenty-five, the State gives £15. From twenty-five to sixty-five, forty annual payments of £1 have to be made.

*Benefits.*—5s. a week pension after sixty-five. At death before sixty-five—(a), 5s. a week for the widow for twenty-six weeks; (b), 2s. a week for each child till twelve years old (but not to exceed 12s. in all for the first twenty-six weeks, and 8s. a week afterwards); (c), if neither widow nor children are left, the original £5 to be returned to the depositor's representatives at his death.

Every man under twenty-five may insure for 5s. a week pension, but not more than 10s. a week.

*Payments.*—Women: For every £1 10s. paid before twenty-five the State gives £8; from twenty-five to sixty-five, forty annual payments of 8s. 8d.

*Benefits.*—3s. a week pension after sixty-five.

##### Alternative Scheme for Men.

*Payments.*—Men: For every £2 10s. paid before twenty-five the State gives £10; from twenty-five to sixty-five, forty annual payments of 10s.

*Benefits.*—5s. a week pension after sixty-five.

For men over twenty-five and under fifty at the time of the commencement of the scheme the annuitant must have secured a pension of 2s. 6d. a week, and pay in from £4 to £10, and the State will double the pension.

##### 5. Mr. James Rankin's Scheme.

It is based on two main principles: (1.) That the contractors for pensions be required to make a contribution from their own resources. (2.) That the contract be only aided by the State if effected through some financially sound organisation—a friendly society or annuity office, a pension trust fund established by Parliament, or the Post Office.

For every annuity of 2s. 6d. after sixty-five provided by the member, the State gives another of the same amount, making the total annuity 5s. a week after sixty-five. At death before sixty-five, nominee to receive a sum not exceeding £5.

Every contributor who has completed payments to receive a certificate which will entitle him or her to any "provident relief which may be necessary during life, in the form of out-door relief, if so desired."

##### 6. Mr. Naylor-Layland's Scheme.

This is a variation of Mr. Chamberlain's. Investments are to be made only in the National Debt. Friendly societies are to be allowed to employ their agents to collect the premiums, in return for which they have the use of the money for an average of six months.

7. *Mr. Vallance's Scheme.*

Voluntary as regards the workmen, but compulsory as regards the employer. This is a proposal to encourage workmen to put by small sums weekly (1d. or 3d. in the pound on their wages), by compelling employers to add a similar sum. The workmen's payments may be withdrawn with interest at any time, but the employers' payments with interest will only be paid at death before sixty-five. After sixty-five the total goes to purchase pensions. This is very similar in principle to the scheme of M. Constans, except that the French scheme is State-aided.

8. *Mr. T. Fatkin's Scheme.*

This scheme points to the investment of savings, under the management of municipal bodies, in local securities yielding a higher rate of interest than that given by the Government, the compound interest on which, at 3 or 3½ per cent., would give greater benefits to the investor.

9. *Sir Robert Stout's Scheme.*

This is an old-age pension scheme pure and simple. The State is to guarantee a rate of interest equal to 5 per cent. on all investments. If this is done, £50 accumulated before age 25 will serve to provide a pension of 17s. 6d. per week after age 60.

## DIVISION B.

1. *Mr. Booth's Scheme.*

This scheme is simplicity itself, except as the means of raising the money. It proposes simply that every person reaching the age of sixty-five should be entitled, without a specific contribution, to a minimum pension of, say, 5s. a week for the rest of his life.

2. *Rev. Moore Ede's Scheme (outlined at the 1892 Session of the British Association).*

This is a combination of Mr. Booth's system of universal pensions with an attempt to endow thrift. It is to be administered by County Councils, and is supposed to encourage thrift and abolish outdoor relief. Inability to claim pension will leave no alternative but the workhouse. It is limited to those with an income under £50. 2s. 6d. per week is to be granted to those incapacitated before age 65, and a pension of 2s. 6d. a week after 65, provided they can so supplement this allowance from any private source as to maintain themselves without any further recourse to State aid.

3. *Mr. Bartley's Scheme (Old-age Provident Pensions Bill).*

Based on the lines of the existing poor-law system. It provides for three classes of pensions (ranging from 3s. 6d. to 7s. per week): (1) To those who have never received any poor relief; (2) to those who have provided partially in some way for their old age, in any manner which they may have preferred; (3) to those whose special misfortunes render them deserving of aid though they have not been able to provide even partially for themselves. It also provides for the imposition of a special rate to be called the pension rate, replacing the poor rate. It is limited to those of sixty-five, who will not be eligible unless they have a clean record, and have been unconvicted of crime for fifteen years, or drunkenness for ten years. The object of the Bill is to help the deserving poor, and leave the undeserving to the poor laws.

4. *Mr. T. W. Fowle's Scheme.*

He advocates the gradual extinction of outdoor relief in not less than twenty-five years, and the allocation to the friendly societies of the sums thus saved (which he estimates at £3,000,000 per annum) on condition that they should guarantee a sufficient maintenance to all their members permanently disabled by sickness or old age.

5. *Rev. J. F. Wilkinson's Scheme.*

District Councils shall be empowered to grant a minimum maintenance endowment of 5s. a week to all aged persons who send in a demand note, except such as are held to have forfeited their pension—these to go to the workhouse. The pension to begin when decay of working-powers becomes manifest. Municipal or village cottages to be purchased or erected by the Councils, and let for a small weekly sum to aged inhabitants. The old-age endowment fund to come from Imperial rather than local taxation.

## II.—A BRIEF SUMMARY OF STATE PROVIDENT SCHEMES NOW BEING ADMINISTERED IN VARIOUS COUNTRIES.

(A—1.) *The German System.*

The complete scheme was brought into operation gradually between 1883 and 1889 by—(1) The Sickness Insurance Law of 1883; (2) the Accident Insurance Laws of 1884 and 1885; (3) the Law of Insurance against Invalidity and Old Age, 1889.

## Payments.

*Sickness.*—1½ to 2 per cent. of earnings: one-third paid by employer, two-thirds by employé.

*Accident.*—2 per cent. of earnings: all paid by employer, nil by employé.

*Old Age, &c.*—1½d. to 3d. per week: half paid by employer, half by employé.

The sickness and accident laws apply to the whole of the wage-earning class, i.e., upwards of twelve millions of workpeople.

The old-age law is compulsory upon all men and women over sixteen in the following three classes: (1.) Persons who are employed as workmen, assistants, apprentices, or servants, and receive for their service a payment or wage. (2.) Persons who are engaged in business as assistants in shops, and apprentices whose yearly earnings do not exceed £100. (3.) Persons employed for payment or wage as members of the crews of German ships.

## Benefits.

*Sickness.*—A minimum of free medical attendance and medicine, and one-half daily wages; or free admission to hospital, with one-half sick-pay for family. Six benefit runs for thirteen weeks only, and member then goes on to the accident fund. Women receive sick-relief for four weeks after confinement. Burial-money is paid equal to twenty times the average daily wages.

*Accident.*—Two-thirds average wages during total, and less during partial, disablement. Burial-money in fatal cases, and allowances to widows, children, and parents.

*Old Age and Invalidity.*—After five years an invalidity allowance, ranging from £5 14s. 8½d. to £7 0s. 3d. per annum, and a pension after seventy, ranging from £5 6s. 5d. to £9 11s. per annum, according to the wages, which are divided into four classes. If death occurs before seventy, one-half of contributions are returned.

(B.) *The Danish System (under the New Law of 1891).*

The leading principle of this law is that after age 60 there shall be two classes of assisted poor—the *deserving* poor, in receipt of pensions; and the *undeserving* poor, in receipt of poor-law relief. It is administered by local authorities, called Communal Councils, who are assisted by the Government to the extent of £111,000 per annum, derived from a tax on lager beer.

All persons over sixty who are unable to maintain themselves, who have been in the country ten years, have never been convicted of crime, and who can prove that they have not received poor-law relief or been convicted of vagrancy or begging for ten years, may claim a pension. The Council then makes inquiries, and if they find that the poverty is not caused by extravagance or evil living, or by transference of property to relations or others, they are bound to allow a pension. If the pensioner should hereafter be guilty of any penal offence, squander his pension, or marry and require a larger measure of support, he is transferred to the poor-law and becomes an ordinary pauper.

Persons now living who are over sixty may receive pensions if their record has been clear between the ages of fifty and sixty.

The pensions are very indefinite, and may be given in money or kind, or by admitting to any institution, provided no workhouse people are inmates, at the discretion of the Communal Council. Very great care is taken to dissociate the old-age relief from the parish relief. Workhouse officials cannot be employed in any way in connection with the old-age relief, and the money is not raised by the poor-rate, but by a special rate levied in each commune. A writer in the *London Globe* says that the law is very popular with all classes of Danes but loafers, whose lot is made harder by it.

(B.)

(B.) *The Austrian System.*

Under the Austrian poor-law it appears that a man can claim a pension. The Emperor Joseph II decided that at sixty a man should have the right to claim from his native town or commune a pension equal to one-third of the average daily wage he had received during his working years. This pension was to be regarded in exactly the same light as a soldier's pension—not as a charity, but as a reward for past services. MORRIS FOX.

The Registrar, Friendly Societies, to the Chairman, Old-age Pensions Committee.

Sir,

Friendly Societies Registry Office, Wellington, 10 July, 1894.

In reply to your inquiry as to the bearing of a scheme for providing old-age pensions of small amounts upon the operations of friendly societies, I have the honor to point out that, unless the principle of the scheme be defined, it would be difficult to say whether the establishment of a pension fund would interfere with the thrift of friendly-society members.

1. Is it proposed that the pension shall be provided out of (a) general taxation, (b) contributions of individuals, (c) partly taxation and partly contribution?

I think that a voluntary-pension scheme may be dismissed from consideration, because the number who would take advantage of an optional insurance benefit, however attractive it might be made, would be few, and, in such case, special legislation would not seem necessary. The possible objection of members of friendly societies to a compulsory-pension scheme is that it might prevent many members from joining who were unable to contribute for both insurances. This view appears to prevail among friendly societies in England. I do not think that this objection would apply so forcibly in New Zealand, at least in respect of workers in constant employment.

2. The first question having been decided, is it proposed to grant the pension to all, or to those only who are in need. The members of friendly societies, and the thrifty classes generally, would probably disapprove of the latter principle. I respectfully suggest that the opinions of leading members of friendly societies be taken, as I do not feel entitled to speak from their point of view.

If the scheme is to be based on the principle of encouragement to thrift, perhaps it might be thought well to grant the pension to members of friendly societies under certain conditions. This proposal is put forward by the Grand Master of the Manchester Unity of Oddfellows in England; but I should add that the majority of the leaders of English friendly societies appear to object to State help in any form.

In order to give you some idea of the cost, I submit the following figures:—At age 60 the present value of £1 a year for life, payable quarterly, calculated on a New Zealand mortality table at 4 per cent. per annum, is £10.33. At that age, therefore, the present value of a life annuity of £26 (10s. a week) is £268. At the census in 1891, the number of persons aged 60 and upwards was 26,374. The present number of such persons may be put at 30,000. In order, therefore, to provide a life annuity of £26 to each person above 60 years of age, immediate additional taxation would be required to the amount of £780,000 per annum. As the percentage of persons above 60 years of age is rapidly increasing, it may be reasonably assumed that, when the population of the colony reaches 1,000,000, more than 8 per cent. will be above that age. On this assumption, the annual charge for pensions would then exceed £2,080,000. Ultimately the ratio of pensioners to the total population will probably rise as high as 15 per cent. Moreover, unless sufficient safeguards are provided, the normal ratio of pensioners to population will be exceeded. Also, should population increase in greater ratio than taxable values, a tax whose amount varies as the population tends to become more and more burdensome.

The above figures do not include cost of management or collection of tax.

I have, &c.,

EDMUND MASON,

Registrar, Friendly Societies.

W. Hutchison, Esq., M.H.R., Chairman, Old-age Pensions Committee.

Title.	A BILL INTITLED AN ACT TO PROVIDE FOR OLD-AGE PENSIONS.
Preamble.	WHEREAS it is equitable that all persons who during the prime of life have helped to bear the public burdens of the colony by the payment of taxes, and to open up its resources by their labour and skill, should in old age be protected by the colony against the risk of want : Be it therefore enacted by the General Assembly of New Zealand in Parliament assembled, and by the authority of the same, as follows :—
Short Title.	1. The Short Title of this Act is "The Old-age Pensions Act, 1896."
Persons entitled to pensions, and amount.	2. (1.) Subject to the provisions of this Act, every person who at any time after the coming into operation of this Act attains the full age of <i>sixty-five</i> years or upwards shall thereafter be entitled to a pension of <i>ten</i> shillings per week for the rest of his life :
Proviso.	Provided— (a.) That he is residing in the colony on the date when he establishes his claim to the pension ; and also (b.) That he has so resided for, in all, not less than <i>twenty</i> years on such date ; and also (c.) That he has so resided continuously for not less than <i>three</i> years immediately preceding such date ; and also (d.) That he has not been absent from the colony for, in all, more than <i>eighteen</i> months during the period of <i>ten</i> years immediately preceding such date ; and also (e.) That his total income from all sources (exclusive of his personal earnings and his pension) does not exceed the rate of <i>fifty</i> pounds per year ; and also (f.) That he is the holder of a pension certificate as hereunder provided. (2.) For the purposes of this section a person whilst in prison shall be deemed to be absent from and not residing in the colony.
Districts.	3. For the purposes of this Act the Governor may from time to time divide the colony into such districts, with such names and boundaries, as he thinks fit.
Alteration of boundaries.	4. If any such district is constituted by reference to the boundaries of any other portion of the colony, as defined by any other Act, then any alteration in such boundaries shall take effect in respect of such district without any further proceedings, unless the Governor otherwise determines.
Registrar and Deputy Registrars.	5. (1.) The Governor may from time to time appoint a Registrar, who, subject to the control of the Colonial Treasurer, shall have the general administration of this Act. (2.) The Governor may also from time to time appoint in and for every such district a Deputy Registrar and such other persons as he deems fit.
Powers and duties of Registrar and Deputy Registrars.	6. Subject to the provisions of this Act the Registrar and every Deputy Registrar and other person appointed as aforesaid shall have such powers and duties as the Governor from time to time determines.
PENSION CLAIMS AND PENSION CERTIFICATES.	
Pension claim.	7. Every person, male or female, claiming to be entitled to a pension under this Act shall deliver his claim (herein after called a "pension claim") to the Deputy Registrar of the district wherein the claimant resides.
Form thereof.	8. The pension claim shall be in the form or to the effect set forth in the <i>First</i> Schedule hereto, with all such modifications as the particular circumstances of the case require.
Register of claims.	9. The Deputy Registrar shall in the prescribed manner file the claim, and record it in a book to be called "The District Old-age Pension-claim Register" ; such register shall be in the prescribed form.
Pension claims to be numbered.	10. All pension claims shall be numbered consecutively in the order in which they are entered in the register, and no two pension claims shall bear the same number in the same register.
Deputy Registrar to investigate.	11. The Deputy Registrar shall fully investigate the pension claim for the purpose of ascertaining whether or not the claimant is entitled to the pension.
May administer oaths.	12. For the purposes of such investigation he may administer an oath, and require evidence to be given on oath.
Evidence to be corroborated.	13. No pension claim shall be admitted unless the evidence of the claimant is corroborated on all material points.
How pension claim to be dealt with.	14. The Deputy Registrar may admit the pension claim, or postpone it for further evidence, or reject it, as he deems equitable ; and his decision shall be notified to the claimant in the prescribed manner.
Issue of pension certificate.	15. If the Deputy Registrar is satisfied that the claimant is entitled to the pension he shall issue to him a pension certificate in the form or to the effect set forth in the <i>Second</i> Schedule hereto.
Particulars to be entered in pension register.	16. The Deputy Registrar shall also enter in a book, to be called "The District Old-age Pension Register," the claimant's full name, occupation, and address, the number of the pension certificate, and the date from which the pension commences, being in every case the first day of the calendar month next after the date on which the pension certificate is issued.
Pension certificates to be numbered.	17. All entries of pension certificates in the Old-age Pension Register shall be numbered consecutively, so that no two entries in the same register shall bear the same number.
Deputy Registrar may postpone claim.	18. If the Deputy Registrar is of opinion that, although the claim is not completely established, further evidence may be adduced in support thereof, or it may be mended by lapse of time, he shall postpone the claim if the claimant so desires, and in such case all matters as to which the Deputy Registrar is satisfied shall be recorded as proved, and it shall be unnecessary to prove them again.
Mode of rejecting claim.	19. If the Deputy Registrar is satisfied that the pension claim is not established, and cannot be mended by postponement for a reasonable time, he shall reject it, and when doing so shall specify in writing all the material points which he finds to be respectively proved, disproved, and not to be proved.
Appeal when claim rejected.	20. At any time within twenty-one days after the rejection of his pension claim the claimant may in the prescribed manner appeal to any Stipendiary Magistrate exercising jurisdiction in the locality.
Points to be deemed proved for appeal.	21. All the material points in support of the pension claim which the Deputy Registrar has found to be proved shall, for the purposes of the appeal, be deemed to be established.
Not to be bound by strict rules of evidence.	22. Neither the Deputy Registrar in investigating any pension claim, nor the Magistrate in hearing any appeal, shall be bound by the strict rules of evidence, but each of them shall investigate and determine the matter by such means and in such manner as in equity and in good conscience he thinks fit.
Points established to be specified when appeal dismissed.	23. If the Magistrate dismisses the appeal, he shall state in writing his reason for so doing, and specify the material points which the claimant has established and those which he has failed to establish to his satisfaction.
Matters to be distinguished.	24. In disposing of material points against the claimant the Deputy Registrar and the Magistrate shall distinguish between what they find to be disproved, and what they find to be simply unproved, or insufficiently proved.
As to matters disproved.	25. In respect of what is found to be disproved the Deputy Registrar's decision, unless successfully appealed against, and the Magistrate's decision when disposing of the appeal, shall be final and conclusive for all purposes.
As to matters unproved.	26. In respect of what is found to be simply unproved or insufficiently proved, the Magistrate's decision shall be final and conclusive so far as concerns the appeal ; but the claimant may at any time thereafter adduce fresh evidence on those points before the Deputy Registrar, and in such case all material points previously found by the Deputy Registrar or the Magistrate to be proved shall be deemed to be established, and the Registrar shall dispose of all other points as in the case of a new pension claim.
Procedure when appeal allowed.	27. If the Magistrate allows the appeal, and declares the pension claim to be proved, the Deputy Registrar shall make the entries and issue the pension certificate in respect thereof accordingly.
Provisional investigation of pension claims.	28. In order to facilitate the adjustment of pension claims, they may be filed and provisionally investigated at any time not exceeding <i>two</i> years before the date on which the claimant alleges that his pension should commence ; but no pension claim shall be finally admitted, nor shall any pension certificate be issued, until all the conditions prescribed in respect thereof by this Act have been fulfilled.
Pension claims may be amended.	29. The pension claim may, in the prescribed manner, be amended from time to time on any point which has not been finally disposed of by the Deputy Registrar or the Magistrate, and the claimant's statutory declaration in the original claim shall be deemed to extend and apply to every such amendment.
Transfer to another district, and duplicate pension certificate.	30. On application in the prescribed form, and subject to prescribed conditions,— (1.) Any pension certificate may be transferred from the register in one district to the register in another. (2.) The Deputy Registrar may issue a duplicate pension certificate in any case where satisfactory proof is given of the loss of the original.

## APPENDIX.

## PAYMENT OF PENSIONS.

31. Every pension shall be payable by weekly instalments at the post-office money-order office named in the pension certificate. When and where pension payable.
32. On application in the prescribed manner the name of such office may be changed from time to time, and every change of office shall be recorded by the Deputy Registrar on the pension certificate. Place of payment may be changed.
33. The instalment for each week shall be payable at any time during the following fourteen days on the personal application of the pensioner and the production of his pension certificate to the Postmaster of the post-office money-order office named therein. To be applied for within fourteen days.
34. In default of strict compliance with all the provisions of the *last-preceding* section hercof, such instalment shall be deemed to be forfeited, unless the forfeiture is waived under the provisions in that behalf hereinafter contained. When instalment forfeited.
35. The Deputy Registrar, by warrant in the prescribed form, may waive any such forfeiture in any case where, after investigation, he is satisfied,— When Deputy Registrar may waive forfeiture.
- (1.) That, if the forfeiture was occasioned by default of personal application for payment, or of application within the prescribed time, such default was due to the pensioner's illness, or temporary absence from the place (but not from the colony), or other sufficient cause; or
- (2.) That, if the forfeiture was occasioned by default in producing the pension certificate, such default was due to its being lost or mislaid :
- Provided—
- (a.) That, except in special cases of the pensioner's serious illness or debility, it shall not be lawful for the Deputy Registrar to issue two such warrants in succession to the same pensioner; and also
- (b.) That in no case shall any such warrant be issued unless it is applied for within fourteen days after the forfeiture occurred.
36. The instalment named in any such warrant shall be payable at any time within fourteen days after the date thereof, on the personal application of the pensioner or other the person named therein, and also the production of the warrant, and (except where the warrant otherwise provides) of the pension certificate, to the Postmaster of the post-office money-order office named in the warrant. Payment under warrant of Deputy Registrar.
37. In default of strict compliance with all the provisions of the *last-preceding* section hercof, the warrant shall be deemed to have lapsed, and the forfeiture of the instalment named therein shall become absolute. When warrant deemed lapsed.
- 38 (1.) No pension shall be payable for any period during which the pensioner is either in prison or out of the colony, or possesses an income (exclusive of his personal earnings and his pension) at the rate of not less than fifty pounds per year, and the instalments for such period shall be deemed to be absolutely forfeited. When pension not payable.
- (2.) The pension for any period during which the pensioner is detained or maintained in any asylum or charitable institution shall be paid to the manager thereof, and applied towards the pensioner's maintenance therein. Payment towards maintenance.
- (3.) If any pensioner by any means obtains or attempts to obtain payment of any instalment of pension for any such period, or for any part thereof, or obtains or attempts to obtain payment of any instalment of pension by personation or any other fraudulent device whatsoever, he is liable to imprisonment for not more than *three* months. Penalty.
39. The pension being for the personal support of the pensioner, it shall (subject to the provisions of the *last-preceding* section hercof) be absolutely inalienable, whether by way of assignment, charge, execution, bankruptcy, or otherwise howsoever. Pensions absolutely inalienable.
40. Every Deputy Registrar shall, in the prescribed manner and at prescribed intervals, prepare and forward to the Registrar a return showing— Returns to be prepared by Deputy Registrars.
- (1.) All pension certificates and warrants issued by him; and
- (2.) Such other particulars as are prescribed.
41. The Registrar shall from the aforesaid returns compile a General-Old-age Pension Register containing a record of all pension certificates for the time being in force, and such other particulars as are prescribed. General register.

## MISCELLANEOUS.

42. The instalments of pensions shall be paid at the various post-office money-order offices, pursuant to arrangements to be made between the Colonial Treasurer and the Postmaster-General. Pensions payable at money-order offices.
43. For such purpose the Registrar shall from time to time furnish to the Postmaster-General schedules showing the names of the pensioners, the numbers of their pension certificates, and the dates on which and the post-office money-order offices at which the instalments in respect thereof are payable, and the Postmaster-General shall pay the same accordingly. Particulars to be furnished to Postmaster-General.
44. Every Postmaster at whose office instalments of pensions are payable shall keep a register in the prescribed form, showing particulars of all instalments paid, unpaid, and forfeited, and shall, at the close of each week, forward to the Postmaster-General a true copy of all entries made in such register during the week. Postmasters to keep registers.
45. (1.) The Postmaster-General shall periodically tabulate all such entries, and furnish to the Registrar a copy thereof, together with a statement of the total amount paid in respect of pensions during the period. Payment to Postmaster-General to meet claims.
- (2.) The Registrar, after satisfying himself that such statement is correct, shall certify to the accuracy thereof, and forward it to the Colonial Treasurer; whereupon the Colonial Treasurer, without further appropriation than this Act, shall pay the said amount to the Postmaster-General out of the hereinafter-mentioned Old-age Pension Fund Account.
46. The moneys from time to time required for the payment of pensions shall be raised in such one or more of the following modes as Parliament thinks fit to hereafter determine by enactment, that is to say :— Alternative modes of raising moneys for payment of pensions.
- (1.) A primage duty on imports, not exceeding one per cent. *ad valorem*;
- (2.) An increase of the excise duties;
- (3.) A graduated income-tax;
- (4.) An increase of the graduated land-tax;
- (5.) An increase of the death-duties by graduation;
- (6.) An increase of the stamp duties by graduation or otherwise;
- (7.) A tax on mortgages;
- (8.) A ticket-tax on entertainments;
- (9.) The totalisator-tax;
- (10.) Such other forms of taxation as Parliament thinks fit to impose.
47. All moneys raised as aforesaid shall be paid into the Public Account to the credit of an account called the Old-age Pension Fund Account. Old-age Pension Fund Account.
48. All expenses incurred in administering this Act (other than the payment of pensions) shall be payable out of moneys to be from time to time appropriated by Parliament out of the Old-age Pension Fund Account for that purpose. Expenses of administering Act.
49. If the balance in that account is at any time insufficient to meet the charges thereon the Colonial Treasurer, without further appropriation than this Act, may transfer from the Consolidated Fund and pay into that account whatever moneys may be necessary in order to meet the deficiency. Deficiency payable out Consolidated Fund.
50. The Colonial Treasurer shall, within thirty days after the close of each financial year ending the 31st day of March, prepare and lay before Parliament, if sitting, or, if not sitting, then within fourteen days after the commencement of the next session, a statement showing for such year— Annual statement to be laid before Parliament.
- (1.) The whole receipts and disbursements of the Old-age Pension Fund Account;
- (2.) The total number of pensioners;
- (3.) The total number of absolutely forfeited instalments; and
- (4.) Such other particulars as are prescribed.
51. The Governor may from time to time make such regulations as he thinks necessary for the purpose of giving effect to whatever is expressed in this Act as prescribed, and, generally, of carrying out the intention of this Act. Regulations.

## SCHEDULES.

APPENDIX.

SCHEDULES.

FIRST SCHEDULE.

*Example of Pension-claim.*

1. My full name, occupation, and address are ..... A. B., of Wellington, carpenter.
2. I was born at ..... Bristol, England.
3. On or about ..... The 3rd March, 1830.
4. And first arrived in New Zealand ..... At Dunedin.
5. On or about ..... The 4th January, 1873.
6. By the ..... Sailing-ship "Merope."
7. My age next birthday will be ..... Sixty-nine.
8. Since my first arrival in New Zealand I have been absent therefrom *three* times, and no more, that is to say,—
  - (a.) On or about the 15th September, 1874, I sailed from Dunedin for Sydney by the steamer "Arawatta"; and I returned to Auckland by the steamer "Taranua" on or about the 1st February, 1875, after an absence of four months and a half.
  - (b.) On or about the 1st December, 1880, I sailed from Auckland for Melbourne by the steamer "Albion"; and I returned to Dunedin by the steamer "Rotomahana" on or about the 1st June, 1881, having thus been absent about six months.
  - (c.) On or about the 14th October, 1881, I sailed from Lyttleton for London by the steamer "Ionic"; and I returned to Wellington by the steamer "Doric" on or about the 16th April, 1882, after an absence of about six months.

I, the abovenamed A. B., hereby make claim for a pension under the provisions of "The Old-Age Pensions Act, 1896," and do solemnly and sincerely declare as follows, that is to say:—

1. That, to the best of my knowledge and belief, the foregoing statements are true in every particular.
  2. That I have resided in the Colony of New Zealand, within the meaning of the abovementioned Act, for in all not less than *twenty* years.
  3. That I have so resided continuously for not less than *ten* years immediately preceding the                      day of                      18                      .
  4. That I have not been absent from the said colony within the meaning of the said Act for, in all, more than *eighteen* months during the period of *twenty* years immediately preceding the                      day of                      18                      .
  5. That my present means of support (including my personal earnings) do not exceed the rate of £50 per year.
  6. That I do not hold a pension under the abovementioned Act.
  7. That I have not heretofore made any pension-claim [or, if a pension-claim has previously been made, state in what district, and on what date it was made, and how it was disposed of.]
- And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of "The Justices of the Peace Act, 1882."

Declared at                      , this                      day of                      189                      , by the abovenamed A. B., before me—  
 C.D.,  
 Justice of the Peace [or Solicitor, or as the case may be.]

SECOND SCHEDULE.

PENSION CERTIFICATE.

Old-age Pension District of                      Wellington.                      Under "The Old-age Pensions Act, 1896."                      No.                      .

*Pension Certificate.*

THIS is to certify that, under the provisions of "The Old-age Pensions Act, 1896," A. B., of Wellington, carpenter, is entitled to a pension of 10s. per week, commencing on Monday, the 1st day of February, 18                      .

The pension is payable by weekly instalments; and the instalment for each week is payable at any time during the following fourteen days, on the personal application of the pensioner and the production by him of this certificate at the Post-office Money-order Office at Wellington.

The pension is not payable for any period during which the pensioner is absent from the colony or is in prison.

The pension is subject to the provisions as to forfeiture contained in the abovementioned Act.

Dated at Wellington, this 14th day of January, 18                      .

E. F.,  
 Deputy Registrar for the Old-age Pension District of Wellington.

[Appended by the Committee.]

NEW SOUTH WALES.

No. VI.

AN ACT TO ESTABLISH WORKHOUSES. [ASSENTED TO, 27TH SEPTEMBER, 1866.]

BE it enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—

1. The provisions of this Act shall apply to and in respect of the classes of persons following—

1. Any person who having no lawful means of support or insufficient lawful means of support shall not being thereunto required by any two or more Justices of the Peace before whom he shall be brought or summoned for such purpose in pursuance of the provisions of the Act of Council fifteenth Victoria number four give a good account of his means of support to the satisfaction of such Justices.

2. Any habitual drunkard who having been thrice convicted of drunkenness within the preceding twelve months shall in any street or public place or place of public resort behave in a riotous or indecent manner.

2. The Governor with the advice of the Executive Council may by Proclamation in the *Government Gazette* declare any building or place together with any yards enclosures grounds or lands attached thereto to be a "Workhouse."

3. The Governor with the like advice may appoint a Superintendent and such officers and servants as may be necessary for the management of every such Workhouse.

4. The Governor with the like advice may from time to time as occasion may require make regulations for the conduct management and supervision of every such Workhouse and for the employment correction and restraint of such persons as may in manner hereinafter mentioned be committed thereto and for the conduct of the proceedings of the visitors to be appointed as hereinafter mentioned and such regulations shall immediately after their publication in the *Government Gazette* be in force. Provided that all such regulations shall be laid before Parliament if then sitting within one month after the publication thereof or if Parliament be not then sitting then within one month after the next meeting of Parliament.

5. It shall be lawful for any two or more Justices of the Peace before whom any person charged with being a person within either of the classes hereinbefore mentioned shall be brought summarily to inquire into such charge and adjudicate thereon and in case the Justices shall adjudge such charge to be established it shall be lawful for them if they shall be satisfied that such person is an irreclaimable drunkard or is not likely to seek for and obtain employment or to otherwise obtain or provide any lawful means of support by warrant under their hands and seals in the form or to the effect set forth in the Schedule to this Act annexed marked A to commit such person to the charge or custody of the Superintendent of any such Workhouse as aforesaid. And such person so committed may under the authority of such warrant be detained in any gaol or watch-house until he can be sent to the Workhouse specified therein.

Interpretation Clause.

Workhouses may be established.

Superintendent and officers may be appointed. Regulations to be made.

Justices may commit persons to Workhouse.

6. The Superintendent of any Workhouse to which any person shall be committed as aforesaid shall have the custody and control of such person until he shall be discharged as hereinafter mentioned.
7. If any person so committed to any Workhouse shall before his discharge be absent therefrom without the leave of the Superintendent thereof it shall be lawful for any constable to apprehend such person and convey him back to such Workhouse to be delivered into the custody of such Superintendent.
8. It shall be lawful for any Justice of the Peace on oath made before him that any person committed to any Workhouse has left such Workhouse without the leave of the Superintendent to issue his warrant directing such person to be apprehended and taken back to such Workhouse and delivered into the custody of the Superintendent thereof.
9. It shall be lawful for the Superintendent of any Workhouse to punish any person committed thereto who may leave such Workhouse without permission or disobey any lawful order of such Superintendent or violate or fail to observe any of the regulations of such Workhouse by placing such person in close confinement for any period not exceeding seven days.
10. The Governor with the advice of the Executive Council shall and may appoint some fit and proper persons not less than three nor more than six to be the visitors of each such Workhouse. And some two or more of the respective visitors for each such Workhouse shall visit the Workhouse of which they are visitors at least once in every month and shall inquire into the behaviour condition and circumstances of the persons in such Workhouse in the charge or custody of the Superintendent thereof and shall make such other inquiries respecting such persons as they shall deem requisite for the purpose of ascertaining if it is expedient and proper that any of such persons should be discharged from such Workhouse. And the said Visitors shall report to the Clerk of the Executive Council for the information of the Governor and the said Council the results of all such inquiries.
11. It shall be lawful for the Governor with the advice of the Executive Council to order any person committed to any Workhouse to be discharged therefrom at any time.
12. Every such Workhouse as aforesaid shall be maintained by such funds as may be appropriated by Parliament to such purpose.
13. This Act shall come into operation so soon as the Governor with the advice of the Executive Council shall by proclamation in the *Government Gazette* declared that it shall take effect.
14. This Act may be cited for all purposes as the "Workhouse Act of 1866."

Superintendent of Workhouse to have custody of persons. Constable may apprehend and take back person deserting. Justice may issue warrant to apprehend and take back person deserting. Superintendent may punish person deserting or disobeying. Visitors to be appointed and to report as to expediency of discharging inmates.

Persons may be discharged from Workhouse by Governor and Executive Council. Work-houses maintained by funds provided by Parliament. Commencement of Act. Short title.

SCHEDULE A.

WHEREAS A. B. has been found by us two [or more as the case may be] of Her Majesty's Justices of the Peace to be a person within the meaning of the Workhouse Act of 1866 and we are satisfied that such person is an irreclaimable drunkard or a person not likely to seek for and obtain employment or to otherwise obtain or provide any lawful means of support. Now we the said Justices do hereby commit the said A. B. to the charge and custody of the Superintendent of the Workhouse at [here name the locality of the Workhouse] there to remain until duly discharged therefrom in accordance with the provisions of the said Act.

Given under our hands and seals at this day of \_\_\_\_\_ A.D. \_\_\_\_\_ C.D. J.P. L.S.)  
E.F. J.P. (L.S.)

G 2.

[Appended by the Committee.]

ESTIMATES, by Mr. Alfred Davis, of the amount required to provide a pension for all persons of 60 years and upwards, and 65 years and upwards respectively.

Dear Sir, Registry of Friendly Societies, Sydney, 5th August, 1896.

In accordance with your request, as Chairman of the Select Committee on Old-age Pensions, I have estimated the annual amount which would be required to provide pensions for all persons at and above the age of 60 years and I consider that the approximate amount would be—

For pensions of 10s. per week.	Males.	Females.	Total.
	£860,600	£598,000	£1,468,600
And for pensions of 7s. 6d. per week—	Males.	Females.	Total.
	£645,450	£448,500	£1,093,950
To provide pensions for all persons at and above the age of 65 years the approximate annual sum would be—			
For pensions of 10s. per week :—	Males.	Females.	Total.
	£510,700	£357,100	£867,800
And for pensions of 7s. 6d. per week :—	Males.	Females.	Total.
	£388,000	£267,800	£655,800

I have, &c.,  
ALFRED DAVIS,  
Registrar and Actuary.

E. W. O'Sullivan, Esq., M.L.A.

H 1.

[To evidence of Mr. W. R. Dovey.]

EXTRACT from Mr. J. P. Garvan's speech at the annual meeting of the Citizen's Life Assurance Company (Limited), on 20th February, 1895.

LIFE ASSURANCE AGAINST INVALIDITY AND OLD AGE.

LIFE Assurance is designed as a bulwark to secure the widow and the orphan against poverty. And behind this bulwark of Life Assurance, almost everyone having a wife and family can entrench himself, and though the institution of Life Assurance has made great strides during the present generation, much yet remains to be accomplished by its means in warding off poverty. To provide for the declining years of the poor has been and is now a subject of the deepest interest to the philanthropist and statesman.

At the present time in Germany, there is established a system of Old Age State Insurance, but it will take many years to test its effectiveness. But it is evident that no device can ever remove certain phases of poverty from the world. As long as there is the idleness that will not work, the criminal taint in the blood that shirks the labour that gives the right to eat, so long will there be poverty and acute suffering, not alone amongst those primarily guilty, but amongst all those who by their conditions of life are depending on them for support.

No compulsory assurance will ever be able to extort payment from the criminally idle through a long series of years, so as to warrant paying them a regular annuity on attaining a certain age. And if the annuity be obtainable at an earlier age on the breakdown of health, the State will not have the same protection against fraud that is now possessed by the Friendly Societies.

Into these societies no man is admitted except known to be of good character, and this coupled with the knowledge that members of these societies have of one another, is a great protection against malingering, which nevertheless occasionally takes place.

But

But if the State takes the place of the Friendly Society its design will be on strongly divergent lines, instead of seeking to exclude from the benefits of the State society the improvident and those of doubtful character, the State will compel the inclusion of all those in its insurance scheme.

Malingering will have its widest field for operation and almost certain prizes, but these will be prizes paid to fraud and dishonesty, and the money by which it is paid must be taken from those who strive to give effect to the State design, and will consequently make the benefits the honest obtain from the State assurance more costly than if they banded together, excluding bad and doubtful characters, and giving to their members the full benefits of the payments they had made.

The humanitarian design of a compulsory State assurance or Friendly Society will, in many cases, waste the money of the industrious and the honest in providing bonuses for successful malingering and fraud.

To provide a fund against invalidity and old age, it would be essential to its scientific accuracy and success, that it be made compulsory.

If you have to depend on the option of a large proportion of those in whose special interest the fund is devised, it will prove an absolute failure. The idle, the spendthrift, the dissolute, and the criminal, all will give an undue number to the list of the claimants under an invalidity and old-age assurance law.

But compulsion will only be effected by imposing burthens on the people, and in every country where such a law is imposed it is probable that its burthens will be avoided by the vigorous and the enterprising, who will seek a home where such burthens are not imposed.

The effect of this emigration will be to gradually increase the ratio of the indigent and invalided class, and decrease the ratio of the vigorous workers of a country, and the consequent increased burthens necessary on the proportionately lesser numbers of contributors will eventuate in the direction of undue burthens on the honest workers of a country.

Let me quote the opinion of Mr. T. E. Young, a vice-president of the Institute of Actuaries, in addressing a meeting of the Institute of Actuaries in London in April, 1891, in a paper dealing with the German law of insurance against invalidity and old age. He says :—

"At the risk of being tedious, I would repeat the contention, that the fact of any tyranny and minuteness on Government control dwarfing the individual character, and the freer education of the people by the only sure method of their own toilsome and perplexed experience, marks the fitness, or unfitness, of a scheme for general acceptance.

2. "A Government by such needlessly detailed and elaborate supervision, holding itself implicitly as possessing the sole remedy for all social ills, still more radically tends to demoralise and impede national life by confirming and widening the social habit of applying to the State, at every crisis, real or imagined. External aid is substituted for internal and inspiring effort. To speak in the language of natural history, the homogeneous and gradual evolution of the social organism into higher stages of being, its more intimate adjustment of existence to environment won through painful toil dwindles down into the degradation of parasitism, with atrophy of the activities which triumphantly imply progress, and a concurrent degeneration of the entire national system. For, as in the universal organic system, the decrepitude and paralysis of any section of the corporate body involve progressive decay of the complete fabric of which it constitutes a vital part, especially in respect of the nobler aptitudes. For the parasitic degeneration of the part impoverishes and destroys the vitality of the vigorous sections, until the whole organism wastes away and relinquishes its high functions and destinies in the order of civilisation."

The close supervision almost over every enterprise, and in so many relations of life, which we find in some of the European countries, might enable a Government to provide against many of the defects I have referred to.

Under the conditions of Government in the British Empire, the views I have expressed will closely approximate to the truth.

Let us suppose the consummation of the State design on an improvident and idle person, who has, either by age or malingering, become entitled to the State pension of, say, 10s. per week.

During his earlier years he showed a disinclination to work, but rather a liking for strong drink. Having arrived at 65 years of age, or being invalided at an earlier age, he comes in for his State pension of, say, 10s. per week.

In many cases, as he draws his 10s. per week, he will spend the greater portion in a debauch, and his life, which up to this has been kept somewhat straight by the necessity to work, will, when relieved from the necessity to work, lapse, in many cases, into drinking habits, with its attendant evil examples, and hasten death.

EXTRACT from Mr. J. P. Garvan's Speech at the Annual Meeting of the Citizen's Life Assurance Company (Limited), on 19th February, 1896.

#### OLD-AGE PENSIONS.

The dream of many philanthropic statesmen has been to devise some process of insurance that would save the old and poor from starvation, or the poor-house, in their last declining years. (Hear, hear.)

Germany has sought to carry out such a system, and has had about six years' experience of a compulsory law; and Switzerland, during the past year, legislated in a similar direction, thus showing a strong tendency towards Socialistic legislation in Europe in countries widely differing in their forms of government.

The German law of insurance against old age and invalidity—or as it is commonly known, the compulsory insurance of working-men in Germany—is an attempt on a large scale to solve the most difficult of social economic problems.

Most attempts hitherto have only been temporary and partial expedients that have, as a rule, only given the element of continuity to the difficulties and evils sought to be cured.

One of the greatest difficulties to be coped with is the simulating sickness in order to get sick pay without work, and I will quote you the opinions given by some doctors and others who have been brought intimately in contact with the administration of the new law.

A professor of medicine in the University of Freiburg says :—

"I shall lose all my faith in humanity if I deal much longer with this constant simulation."

The head of the largest of all the local associations in Freiburg writes :—

"We are hopelessly plagued by an amount and variety of feigned weakness and incapacity that I never would have believed possible."

Dr. Bode, of Hermsdorf, near Dresden, writes :—

"In the place where I live the working-men are mostly masons, bricklayers, and the other labourers who work in Dresden while their season lasts, and rest at home in the coldest winter months. Here everybody knows that these good people are strong and healthy as long as they can earn their wages in the town, and that they go to the doctor and complain of pains here and there when they cannot earn more than the sick insurance money will be."

Dr. Thien, Director of the Surgical Institute in Gottbus, says :—

"If the legislators believed they would frighten people from simulation and exaggeration by taking only two-thirds of the previous earnings as a maximum they have deceived themselves."

He adds that, inconceivable as it is, the small amount, coupled with possible idleness, seems to work upon considerable numbers as a sort of evil magic. Upon the general question he says :—

"To a certain extent all the injured tend to exaggeration."

Again,

"Inconceivable as it is, numbers of labourers are blinded by the prospect of lying off, even if they have to live on the smallest pay."

Professor Seeligmüller, who has had an unusually long and wide experience, writes :—

"As most men would like to become rich without trouble, so the injured workman would like to have a life-long pension even when capable of work. He finds that before these laws came into effect the duration of the injuries was distinctly less. He compares his ten years' experience as factory physician with his subsequent experience under the compulsory insurance, and says that the numbers of the incapables steadily increase."

Again,

Again,

"Injuries which before were cured in a few weeks, now often require as many months, (though surgical assistance and appliances are much better, and more quickly applied.)"

"Professor Leichtenstern, of the Citizens' Hospital in Cologne, expresses complete agreement with Seeligmüller. Dr. Vogel, of Eisleben, writes that Professor Seeligmüller has won the thanks of many confreres by speaking out their experience. He thanks him the more, as it requires in the physician some courage. To-day, indeed, that sort of vigorous facing of the question is not at all the fashion."

"In a pamphlet (Leipsic, 1892), upon the accident law by Dr. Ferd. Bohr, leading physician in a medical institute in Carlsruhe, Professor Seeligmüller is opposed upon the question of *traumatische Neurose*, but the author adds, as to the facts of simulation: I will, however, by no means deny the frequency of simulation." He thinks "That the social agitation has done all in its power to embitter the labourer towards this benevolent law." He adds: "It is indeed astounding how a certain class of these people seek to sponge upon the funds under this law."

The sanitary councillor, Dr. Finke, director of a hospital in Halberstadt, writes (1890): "If it goes on in this way with simulation, in twenty years we shall have in the working centres no more able-bodied labourers, but only invalids."

A book just published by Dr. Becker repeats what several physicians have quoted of the malingerer:—

"He sees less than the blind, hears less than the deaf, limps more than the lame."

"A Government official in Berlin who was maintaining that simulation, though a serious fact, could be overcome, was answered by an experienced physician: 'When you succeed at the green table in changing human nature, you will overcome it, but not before.'"

"Dr. Golcbiewski says that simulation has steadily increased: 'The most skilled and schooled of the simulators indeed are found with the trade associations.'"

Dr. Freund, President of the Berlin Working Men's Insurance Association, has obtained some statistics from the poor-house guardians of 110 communities, viz., 44 cities, 49 towns, and 17 villages; and this friendly critic says:—

"As matter of fact, the charity organisations have been much relieved by the Insurance Fund. The labouring classes are, much less than before, forced to turn to the poor-house guardians for assistance. But there is no saving in money. The certainty of being provided for in illness and old age has materially raised the standard of living, and the guardians of the poor are forced to reckon with this. Hence the money saved by the decrease of the assisted poor has to be expended in raising the allowance of those who still depend upon charity, and, in some communities, the expenditure is greater than formerly."

#### SCOPE OF STATE INTERFERENCE.

Whilst I am in strong sympathy with the humanitarian motives that influenced this kind of legislation, yet I am strongly of opinion that unless most carefully guarded and limited to those elements of the population incapable of combining for their own advancement or protection, it will fail in realising the intentions of its advocates; and not alone will it fail, but it will do evil by seeking to foist on the community the responsibility that belongs to individual effort.

If the community takes the responsibility of providing comfortably for the old age of every poor man, then you take away the selfish motive that is the only spur to so much human effort; and in any country where it is generally adopted, it will destroy the great motive power of progress, retard the growth of civilisation, gradually impoverish the nation, and eventually disrupt society. (Hear, hear.)

It uttering these sentiments I must not be taken as condemning any combination of either the whole people, or any section of the people, for mutual help and progressive action. Far from holding such views, I strongly advocate such combinations, but they must stand mainly by their own efforts; the ability to carry out the design of the combination must exist within the combination itself, and its solvency must be guaranteed more by the business capacity and honest administration of its officers, rather than by Government aid. (Hear, hear.)

It may be that the charitable obligation to provide for the decrepit, the sick, or the demented, which partly rests on the shoulders of every man fortunate enough not to be included in that category, and in a concentrated manner is an obligation resting on the whole community in every civilised country—this charitable obligation may, through the forces which statute law can only create, be able to do something more effectual for realising the humanitarian design of relieving the aged poor than has been accomplished yet; and we will watch with intense interest the experimental legislation of Europe in this respect.

## H 2.

[To evidence of Mr. W. R. Dovey.]

ARTICLE FROM *Bankers' Magazine*, SEPTEMBER, 1894.

THE OFFICIAL REPORT ON FRIENDLY SOCIETIES,

*Old-age Pension Schemes.*

THE *Bankers' Magazine*, during the last year or two, has devoted several articles to the subject of the provision for old age—a topic which continues to occupy the attention of the various Friendly Societies, as also the public. Mr. Brabrook, the Chief Registrar of Friendly Societies, recently issued his report for the year 1893, and the document makes, as was to be expected, interesting reading. Several important societies, or "orders" as they are termed, have measures under consideration for converting their existing plans of sick allowance during the whole of life into plans for sick allowance to a limited age, and a pension after that age has been reached. They are, however, he says, confronted, as hitherto, with the difficulty which arises from the great cost of any adequate provision, but that the current of their opinion remains, as far as he can gather, adverse to the acceptance of any form of State aid. The Chief Registrar points out that it is only to a very small extent that the several proposals for assisted pensions which have been publicly made are provisions for the aged poor. The only persons whom they would affect are those to whom the difference between the full premium they would have to pay to the Government or to a Friendly Society for the pension, and the reduced premium which is made up to an equivalent sum by State aid is sufficient to enable or induce them to buy a pension when they would not otherwise do so. Below this level is the great body of those who are too poor to pay even the reduced premium, or too thrifless to feel the reduction an inducement.

Further, he adds, there is "the great body of those who are in a position not to require a deferred annuity, or who do not care to accept State aid towards the purchase of it. Even the comparatively small portion of the community which lies between these two bodies must be still further diminished by deducting those to whom the offer of State aid is not so much an inducement to save as an incentive to withdraw money already saved from an existing investment of some other kind for the purpose of getting a deferred annuity at a low price at the public expense. To these that offer is distinctly demoralising. The offer of State aid cannot reach the very poor if it implies their voluntarily contributing even the reduced premiums. The proposals which were made some time ago for requiring, even from the very poor, the compulsory purchase of a deferred annuity at full premiums are not now seriously pressed. It is clear that compulsion could not succeed without State aid. It seems equally clear that a system of State-aided annuities could not succeed without compulsion. In either case it would assuredly be hopeless to attempt compulsion on the very poor. Would it be any better if the State aid offered were on a sliding scale: 99 per cent. to the very poor, graduating to 1 per cent. upwards? Such an arrangement would be exceedingly difficult in its application, and most burdensome in its cost; it would probably merge into the adoption of a plan of universal free pensions. If it be inferred from these considerations that the number of those who would avail themselves of State aid would be few, and that, therefore, there would be no great harm in starting the plan as an experiment, it must still be borne in mind that, few or many, it is the present generation, and not the next generation, upon whom the burden of making this provision ought to fall. The absolute and necessary condition of the assurance of a deferred annuity is compound interest. The contribution of the purchaser and the rate in aid furnished by the State must be paid to the day, be never allowed to fall into arrear, and be immediately invested; and the interest realised from the investments must be immediately re-invested, otherwise the contract cannot be fulfilled. A loss of £1 by delay in investment or by injudicious investment, incurred now, will become a loss of £7 or £8 by the time the annuity commences. The primary consideration with the State or any other body which enters into contracts for providing deferred annuities must therefore be the safe and automatic investment of the premiums and interest."

## I.

[To Evidence of Hugh McLachlan, Esq., Secretary to the Railway Commissioners.]

## ESTABLISHMENT OF RAILWAY EMPLOYEES' PROVIDENT AND PENSION FUND.

THE Railway Commissioners had early in view the desirability, in the interests of the staff, of establishing a provident and pension fund for the relief and support in sickness, on retirement, and other contingencies, of persons employed, and a Bill was drawn up and submitted to Parliament, with the object of obtaining authority to bring the fund into existence.

The benefits to be given under the fund, and the nature of the same, are set forth in four schedules, the advantages being dominated by the amount of the weekly contributions. The schedules were as under :—

## FIRST SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		Retiring allowance payable on retirement at 65.	Retiring gratuity payable on retirement if contributor is not eligible for a weekly retiring allowance.		
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.		Contributions paid for—		
s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	£	£	£	Per week. s. d.	10 to 15 years.	15 to 20 years.	Over 20 years.
1 0	25 0	18 0	40 0	30 0	300	50	20	*20 0	£ 20	£ 30	£ 50

## SECOND SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		Retiring allowance payable on retirement at 65.	Retiring gratuity payable on retirement if contributor is not eligible for a weekly retiring allowance.		
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.		Contributions paid for—		
s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	£	£ s.	£	Per week. s. d.	10 to 15 years.	15 to 20 years.	Over 20 years.
0 9	18 6	13 6	30 0	22 6	225	37 10	15	*15 0	£ 15 0	£ 22 10	£ 37 10

\* Increased retiring allowance may be obtained in accordance with section 5 of this Act.

## THIRD SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.	
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.
s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	£	£	£
0 9	12 6	10 0	20 0	15 0	200	25	12

## FOURTH SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.	
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.
s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	Per week. s. d.	£	£	£
0 6	25 0	18 0	40 0	30 0	300	50	20

1. The membership to be optional, but any railway employee between the ages of 18 and 45 receiving not less than 25s. per week was eligible to become a contributor of the first or second class.

2. Any employee under 18 or between the ages of 18 or 35, receiving less than 25s. per week, was eligible to become a contributor in the 3rd class.

3. Any employee between the ages of 35 and 45 was eligible to become a contributor of the 3rd or 4th class.

1. A contributor of the first or second class could obtain an increased retiring allowance above the amount shown in the schedule by paying an additional contribution to the fund, i.e., if he were not above 25 years of age he would receive an additional retiring allowance of 5s. 9d. weekly for each additional 1d. per week subscribed.

2. If the contributor were above 25 years of age and not 30, the additional retiring allowance to be 2s. 10d. weekly for each additional 1d. contributed.

3. If the contributor were above 30 years of age and not 45 he was to be allowed such additional retiring allowance allowed as the Actuary to the fund should certify as a proper amount for each additional 1d. contributed.

Only persons employed by the Commissioners were to become contributors to the fund, but temporary employees might, with the permission of the Commissioners, contribute and become during the period of their employment entitled to the casualty and accident allowances, as set forth in the fourth schedule. The contribution payable being 4d. weekly.

The

The Government Railway Act of 1838 provides that any person being permanently employed in the Railway Service after the passing of such Railway Act shall insure his life, but the Provident Fund Bill provides that any person becoming a contributor to that fund shall be deemed to have complied with the provision of the Railway Act as regards life insurance, and no further action need be taken with regard to life insurance.

A contributor was not allowed to join the fund in more than one class, but a contributor might be allowed to transfer from a lower to a higher class of benefits if eligible. The person transferring paying such a sum as the Actuary to the fund should determine to be due to the fund under the circumstances of the transfer.

Any railway employee being a contributor to the Civil Service Superannuation Account might elect to retire from that fund and to join the Railway Employees' Provident and Pension Fund, all privileges due to him on his retirement from the Civil Service Fund being conserved to the date of transfer.

Contributors to the fund ceasing to be in the employ of the Commissioners otherwise than by dismissal, might be allowed to continue to contribute and enjoy the advantages of the fund other than with regard to retiring allowances, the contribution payable for such advantages being fixed by the Actuary of the fund.

1. Any person ceasing to be employed and to contribute to the fund should have claim to the benefits of the fund as might be determined.
2. Any person in receipt of a retiring allowance should be considered to be a contributor so far as the payment of the death allowance in case of his wife's death is concerned.
3. Any person whose services were dispensed with through retrenchment, and had no wish to continue a contributor, might be allowed a sum equal to half the retiring gratuity provided after ten years' contribution; but any contributor dismissed from the service should forfeit all claims to the benefits of the fund.
4. The sickness allowance to be payable for a maximum period of fifty-two weeks, consecutive or otherwise, during any period of eighteen months; but any additional cases of continued sickness where the allowance has been exhausted, the Committee might grant a further sum not exceeding £10.

Any allowance payable under the provisions of the fund will be incapable of being assigned or in any way anticipated. The amount of any contributors' payment to the fund might be deducted by the Commissioners from the employee's wages when due.

The Commissioners shall contribute to the fund an annual sum equal to 75 per cent. of the contributions of the employees, or such less amount as the Actuary shall certify to be sufficient to secure the stability of the fund.

The management of the fund was to be vested in a Committee of not less than nine members, two-thirds to be nominated by the delegates and one-third by the Commissioners.

The delegates to represent the contributors and to be elected from each district according to the locality in which they are for the time being employed, the number of delegates for each district to be subsequently arranged by regulation.

The Chairman of the Committee to be one of the members appointed by the Commissioners.

The Secretary and Actuary to be appointed and paid by the Commissioners.

In case the fund should be deemed by the Committee to be insufficient to meet its liabilities a levy, not to exceed two additional weekly contributions during each period of three months, might be made by the Committee.

## J.

[Appended by the Committee.]

### CHARITABLE INSTITUTIONS OF NEW SOUTH WALES.

Offices of the State Children Relief Board, the Director of Government Asylums, and Children's Protection Act,  
Richmond-terrace, Domain, Sydney, 13 August, 1896.

Sir,

In accordance with your request, I have gone as carefully as possible into the matter of the probable number of deserving poor over 60 years of age in this Colony (outside the Government Asylums) likely to be brought under the operation of a pension policy for that class only. The numbers, of course, cannot be obtained with strict accuracy without waiting a considerable time for special inquiries to be made in every district throughout this Colony, but I believe the figures I now present to you are approximately correct. I do not think they would exceed 1,300. Of course, the number would probably increase in proportion to the increase of the general population, but then the consolidated revenue would be progressive also. If the 10s. a week allowance were adopted, it would at the present time cost £33,800 a year to maintain these 1,300 persons.

Dr. Beattie called upon me to-day, and in the course of conversation gave me an idea of the statistical portion of his evidence before your Committee. He stated that he had fixed the probable number of inmates of the Government Asylums who could be pensioned at about a 10 per cent. proportion to the whole. So far as his institution is concerned, he is probably correct, as he has charge of all the consumptive cases, cancer patients, and indeed a very bad class of hospital patients generally. But he agrees with me that when dealing with the number under control in all the institutions my approximation of 15 per cent. is more likely to be correct. Upon looking at my evidence, I find that I stated there were 3,600 inmates, and that from 500 to 600 might possibly be entrusted with pensions. If the proportion is fixed at 15 per cent., it gives the number who could be pensioned at 540 persons.

There is one other point of importance to which I would ask permission to direct your attention, although I have no doubt it has presented itself to your minds already. In connection with the evidence taken in England upon this important question of old-age pensions, nearly all the objective testimony came from officials directly connected with the management of institutions. I have not had an opportunity of knowing if that has been the case with regard to the evidence given before your Committee, and I do not, of course, imply that such evidence is not perfectly conscientious—indeed, I am sure it is. But may I take the liberty of saying that it is only natural for witnesses of this class, particularly if they are enthusiastic workers, to be unconsciously so much attached to the systems they administer, as to believe honestly that any experiments in other directions must necessarily fail. I know that this was the case in connection with the initiation and working out of the boarding-out system in this Colony.

I have, &c.,

SYDNEY MAXTED,  
Director of Charitable Institutions.

## K I.

[To Evidence of W. F. Schey, Esq., M.P.]

### PENSIONS FOR OLD AGE AND PROVIDENT INSURANCE FOR WORKING MEN.

(By W. A. HUNTER, M.P., House of Commons.)

#### SOCIAL QUESTIONS TO THE FRONT.

WHEN the historian of the future comes to estimate the effect of the two greatest political measures of the second half of the nineteenth century—the enfranchisement of the working man in towns by the Reform Act of 1867, and the subsequent enfranchisement of the agricultural labourer by the Act of 1885—he will probably signalise as their most remarkable consequences a change in the character of the political questions upon which parties are formed.

That change is often expressed as the substitution of social for political questions. The phrase is somewhat inaccurate, but it expresses a substantial truth. From the Revolution of 1688 the conflicts of political parties in this country raged chiefly round the topic of civil and religious liberty, and, after the French Revolution, the struggle of the middle and working classes to obtain a share of political power. Between 1688 and 1832, we were governed by an aristocratic oligarchy. In 1832, the great landlords were obliged to admit the manufacturers and the shopkeepers to a partnership in the Government of the country; and, now since 1867 and 1885, the constitution of the country has become genuinely, although imperfectly, democratic. We have now got government of the people by the people, and if it is not also government for the people, they must blame themselves. They have the power, and if they do not use it or use it unwisely, the fault, as well as the suffering that may follow, will be all their own. The great constitutional struggle which began with the beheading of Charles I, and continued for two centuries and a half—a struggle, the main object of which was to determine who should be masters—has come to an end. The constitutional epoch is closed, civil and religious liberty is practically secured, the democracy is on the throne. A new era has opened.

The shifting of the centre of political gravity from the middle class—which for half a century had the control of the Government—to the working class must necessarily change the whole current of political ideas. Although many of the persons who belong to the middle class live from hand to mouth, and are dependent for their daily bread upon more or less precarious employment, yet the tone and political temper of this class are dominated by the owners of property. In future, although the influence of property will for many a day be enormous, it will be only one factor, and not the greatest, in our social and political evolution. Year by year, as working men come more and more to realise the nature of the weapon that the constitution has placed in their hands, the tone and temper of the political world will be more and more coloured by the views of labour, and less and less by the sentiments generated by the possession of property.

#### EFFECT OF SECURITY UPON OPINION.

The great charm of property is that it ensures for its possessor independence and security. A man who has enough to live upon need not fear the frown of a master, and he can face the casualties of life with a calm mind. Sickness does not deprive him of his means of support; infirmity and old age have no terrors for him; he does not tremble lest the fluctuations of trade should deprive him and his family of food. This sense of security cannot fail to colour his political opinions; he inclines to a cheery or cynical optimism; "everything is for the best in the best of all possible worlds"; he acquiesces readily in the fatalistic doctrine—which, by the way, although it borrows its phraseology from the words, contains nothing of the spirit of Jesus Christ—that the poor shall always be with us. This intellectual temper is strikingly exhibited in Lord Beaconsfield's earlier novels. It has little faith, and if the truth be told, not much desire; it accepts with complacency the lot of the hewers of wood and drawers of water; it meets all suggestions for change with a languid scepticism such as is strikingly shown in the speeches of Mr. A. J. Balfour, or with the brutal cynicisms such as we find among Tories of the baser sort.

#### INSECURITY OF THE WORKMAN.

Political power has passed into the hands of a class whose dominant feeling is insecurity. A workman suffers from uncertainty of employment. He is liable—in some trades peculiarly liable—to sickness and injury; has to look forward to an old age of dependence upon his children, or upon the tender mercies (which are cruel) of the poor law. If he dies in early manhood his last hours are embittered by the thought that he leaves his widow and children totally unprovided with means to face the struggle for existence. He looks upon the cheerful optimism of the rich as a bitter jest indeed. He does not find that everything is for the best in the best of all possible worlds. When his children cry for food, and he has little or none to give them, and when at the same time he sees a small minority indulging in riotous waste, he is very apt to lend a ready ear to any quack who will promise him the millenium. An angry man is seldom a wise one, and although the working man is the first to suffer, and to suffer most severely, from mistaken remedies for social maladies, if his mind is once inflamed with a passionate feeling of social injustice he is capable of grave errors. It is not too much to say that it depends largely upon the extent that we can remove the "insecurity" of the workman's position as to the temper in which we shall approach the solution of the great social problem that lies before us. If means can be devised to give to workmen that happy sense of security which is now the peculiar possession of owners of property, we may confidently expect that the progress of the country will in the future, as in the past, be steady, uniform, practical, and sound; but if nothing is done in this direction, and we come upon times of very bad trade, a very dangerous temper may be developed. The giant Sampson may pull down the edifice, although he buries himself in its ruins.

The amount of public interest that has been excited during the last eighteen months in the question of pensions for workmen in their old age has drawn off attention from the larger topic of provident insurance for the other casualties to which workmen are liable. Old age is only one of the risks to which the working class is exposed, and although it may be found best to begin with that topic, we must never forget that it is only part of a much wider subject. The evils to which workmen are exposed may be summed up in the following points:—

1. Irregularity of employment.
2. Sickness.
3. Disablement, arising from (1) injuries sustained in the course of employment; and (2) other causes.
4. Infirmity, arising from old age.
5. Death, leaving young children unprovided for.

Irregularity of employment is a great evil, but by common consent it is not one which Parliament can directly attack. It may be worthy of consideration whether the State and Municipal authorities who largely employ labour might not do something to mitigate the hardships arising from fluctuations of trade. Why should they not, as a matter of general policy, take up the execution of great public works in times when trade is slack? Would it not be possible, for example, to build ships for the Navy when the ship-building yards are empty? It would not, of course, be possible to avert trade crises, or to give employment to all who from any cause are thrown out of work, but something might be done, and "every little helps."

#### INSURANCE WILL GIVE SECURITY, BUT THE OTHER CAUSES STAND UPON AN ENTIRELY DIFFERENT FOOTING.

There is no impossibility in making State provision against sickness, early death, infirmity, and old age. The question is, how far is it practical or expedient to add to the functions of the State some provision for these casualties of a working man's life. A very slight consideration will show that the protection of the workman cannot be accomplished otherwise than by an application of the principle of insurance. The only alternative to insurance is that each workman should accumulate a fund sufficient to carry him over a period of sickness, sufficient to bring up his family if he dies, sufficient to maintain him for life if he is disabled, or in old age. Even the best-paid workman would find it impossible to collect so much money before his marriage, and as regards the overwhelming majority of workmen, the idea is out of the question. The burden is too great for the individual. But it is a very light burden if distributed over the whole body. Only a few are sick, only a few are maimed or killed, only a minority reach old age. The cost of making provision for these cases is too heavy to be borne by those who have the misfortune to suffer, but it may be met by a small levy on those "who are whole and have no need of a physician." The best trades unions have applied this principle with much advantage to themselves for members temporarily out of employment, and both trades unions and friendly societies have familiarised the working class with the principle of insurance for sickness. Nevertheless, it would be rash to affirm that the nature of insurance is thoroughly understood. Nothing is more common than the objection that if a workman pays into an insurance fund and dies before reaching the pension age he loses his money. It might just as well be said that a man who insures against fire loses his money if his house is not burnt down. Or it might be urged that a healthy man who escapes sickness has done a foolish thing by subscribing to a benefit fund. On the contrary, he gets full value for his money—he obtains security. A man joins a friendly society to protect himself against the risk of illness, and he has more sense than to complain against the enjoyment of robust health.

#### THE "BUSINESS" OF THE STATE.

A word may be said upon an objection not shared by working men, but emanating from some worthy and respectable persons. The State, we are told, has no business to intrude into the domain of insurance. Its proper functions are purely negative; its sole duty is to keep the peace and repress violence. This narrow theory of the functions of the State has so little hold of working men that but for the respect due to many of its advocates one might leave the subject unnoticed. That theory is clearly stated by Bastiat:—"When law and force keep man within the bounds of justice, they impose nothing on him but a mere negation. They only oblige him to abstain from doing harm. They violate neither his personality, his liberty, nor his property. They only guard the personality, the liberty, the property of others."

This passage is a good illustration of the fallacious *a priori* and unhistorical method. If we examine the early stages of human society, we shall find that the roll of the State was even more humble and narrow than Bastiat desires. The earliest human societies were content to protect themselves from external enemies. Their function is still represented in our departments of the Army and Navy. Inside the society there was little that could be called government and nothing that in the proper sense of the term could be described as law. At this stage of human development, Bastiat's theory would have been considered much too broad and advanced. Primitive man, if he had been a speculative philosopher like Bastiat, would have said it was no business of the State to interfere with the domestic affairs of the tribe, it did enough if it prevented its neighbours from eating him. But mankind did not rest in that primitive condition, it moved on.

The second step in social development corresponds with great exactness to Bastiat's theory. To preserve life and limb and property was the first effort of law. The graver injuries to person and property were dealt with by actions at law,

law, but at this stage the law was not so bold as to enforce contracts. That was an interference with the human liberty that the sturdy Bastians of primitive society would have regarded as quite intolerable. Indeed, nothing is more instructive in the history of legal ideas than the timid and gingerly fashion in which law began to take contracts under its jurisdiction. According to the strict letter of Bastiat's doctrine the State ought to confine itself to enforcing negative duties the sphere of positive duty if outside its province. The spirit of Bastiat was strong in the rudest societies. Indeed, to think that law first took a grip of contracts under the impulse of a superstitious religion. At first it interfered only with contracts to which a god was a party, which were made by solemn religious rights, and its object was not to add security to promises but to avert from the community the mischiefs that an offended Deity was believed capable of inflicting.

The negative theory of the functions of the State would either exclude contracts or admit a great deal that the school of Bastiat would keep out. If it is adopted, then we must conclude that the post office and the mint should be left to private firms like W. H. Smith & Co., or Fruhling and Goschen. It is a theory that has no place save in the infancy of human society. That organisation of man that we call the State, although it owed its origin to the necessity of protecting communities from external foes, has never, except at its earlier stages, been confined to pure negation. For what purpose the State may beneficially be employed is a question that can only be determined by experiment and experience, nor is it at all necessary that the functions of the State should in all places, and in all circumstances, be the same. The constitution of the Government, the nature of the work, the nature of the people, these and many other points have to be considered when we have to decide whether, in a particular case, it is expedient or not that the Government should act. In one country a particular act of interference may be wise and beneficial, in another it may be foolish and mistaken. Perhaps there is no political doctrine which among civilised nations would obtain a more general assent than the non-interference of the State with the religious opinions or worship of its people. Three hundred years ago a contrary opinion universally prevailed in the most advanced countries. In this direction, as also in many others, the sphere of the State has contracted, but on the other hand extensions have been made. Our ancestors paid great attention to souls, we look after the drains. What the State may wisely undertake, what it may more wisely let alone, cannot be settled by any hard and fast abstract high *a priori* rule. It can only be approximately determined from time to time, according to circumstances, in the light of reason and experience.

#### OUTLINE OF THE SUBJECT.

In order to give security to the classes that live by labour, it is essential to provide not merely for the case of sickness, but also for infirmity and old age, and for fatherless children. The problem to be solved is whether, and in what ways, our Government here in Great Britain may usefully assist in protecting working men from those casualties that cast so dark a shadow over their lives. I propose in the first instance to examine what has been done in foreign countries to see what guidance may be derived from their experience. I shall then consider various plans for voluntary or compulsory insurance, and finally will call attention to the peculiarly favourable opportunity arising out of financial relations of Scotland to the empire for making a commencement in Scotland of a national scheme of insurance against the ills that flesh is heir to.

\* \* \* \* \*

#### CANON BLACKLEY'S CONDEMNED SCHEME.

In 1885 the House of Commons appointed a Select Committee "to inquire into the best system of National Provident Assurance." The Committee was reappointed in 1886 and 1887, two general elections took place between the first and final reports, and the composition of the Committee was considerably changed. Several schemes were brought under the notice of the Committee, but practically the inquiry resolved itself into an examination of a scheme propounded by the Rev. W. L. Blackley, hon. Canon of Winchester. The final paragraph of the report may be quoted:—

"Your Committee, although unable to recommend the adoption of Canon Blackley's scheme, feel that they cannot conclude their report without recording their sense of the disinterested patience and energy with which he has endeavoured to remove the causes which tend to drive the poor into the workhouse. He has brought to light an immense deal of information on a subject which lies at the root of the happiness and welfare of large masses of the population—information which cannot fail to prove useful in any future legislation which may be undertaken; and his proposals, though in the opinion of your Committee they appear objectionable in some respects and impracticable in others, contain more valuable suggestions, and seem to be based on more extended knowledge, than any of the other schemes which have been brought under their attention."

This well-merited tribute to a clergyman, whose zeal for the poor reflects honor on his profession, very properly accompanies a decision which was adverse to the scheme he then advocated. Canon Blackley's condemned scheme sought to accomplish a very important object. If successful, it would have dried up the fountains of more than one-half of our pauperism, and would have proved an enormous blessing, especially to the poorest class of labourers. It is, therefore, instructive, with a view of future legislation, to ascertain precisely which of his recommendations were condemned as impracticable. Speaking generally, Canon Blackley's scheme was disapproved in respect of those points in which it differed from the German model. The scheme advocated by that reverend gentleman—

#### *Combined Sickness and Old Age Insurance.*

The following were the main points:—

1. It did not apply to those who were over the age of 21 when the system came into operation. All above that age were left to be provided for by existing agencies.
2. It compelled every person, rich or poor, of high or low degree, to pay between the ages of 18 and 21 a sum of £10 into a national sickness and pension fund.
3. In the case of those who, between 18 and 21, were employed for wages, the employer was to be responsible for the collection of the amount, which he was authorised to deduct from the wages.
4. Every person so insured was to be entitled to 8s. a week of sick pay when they suffered "loss of wages through sickness," and a pension of 4s. a week in any case on attaining the age of 70.
5. The sick-pay would continue however long the duration of the illness, and thus, in effect, was a provision for disablement as well as old age.
6. The premiums were to be paid to the post office, and handed over to the elected trustees of the national sickness and pension fund.
7. The sick-pay and pensions were to be paid through the machinery of the post office, under the supervision of local elective committees.
8. This compulsory insurance was to apply to women equally with men.
9. The State was to give no subvention in aid of the fund and no guarantee of its solvency. Its sole duty was to compel persons between the age of 18 and 21 to pay the sum of £10.

In recording the adverse opinion of the Committee as respects the sickness part of the scheme, it is well to note that the Committee expressed a more favourable view of the provision for old age; but they were "disposed to wait for the further development of public opinion before advising the adoption of a general obligatory system of superannuated pay." This reservation ought not to be forgotten.

The leading ideas of Canon Blackley's scheme, in so far as it relates to the case of sickness, are three in number:—(1) The repayment of the premiums, either in one sum or in instalments, before the age of 21; (2) the universality of the obligation imposed alike upon peer and peasant; and (3) the establishment of a single national fund for the United Kingdom, including England, Scotland, and Ireland, through the machinery of the post office. In all those particulars it is the exact opposite of the German system, with which, however, it agrees in requiring no State guarantee or subvention. Oddly enough, the Committee agree with the Canon on the question of prepayment. They observe that in Germany, "Payments to the fund are not made in an initial lump-sum, but by weekly and life-long deductions from wages. In this respect your Committee think that the German system shows an inferiority to Canon Blackley's proposal, inasmuch as prepayment enables a much smaller total payment to suffice as insurance, and once got over, the workman is left free to dispose of his savings in whatever prudent investment he may select." This finding applies with much greater force to the old-age pensions, and is somewhat neutralised by the recognition of the Committee, that the administrative difficulties of collecting the money render the scheme impracticable. It is, of course, most desirable that young people before they marry should lay aside a sum adequate to insure them against sickness, disablement, and old age, but the practical difficulties in the way proved fatal in the judgment of the Committee to the whole scheme.

A more serious question arose as to whether £10 was sufficient. Mr. Sutton, the Government Actuary, expressed an opinion that, assuming 3 per cent. to be the rate of investment, £18 would be nearer the mark. Canon Blackley, with great ability, and upon a wise basis of information, disputed this opinion. The fact is, however, that there do not exist any data upon which an actuary could pronounce a confident opinion, either for or against the figures adopted by Canon Blackley, viz., £10. Sick-pay is an elastic quantity, depending very much on the stringency and closeness of the supervision. The Committee arrived at a clear opinion that, in view of the magnitude of the scheme, they could not accept the initial payment of £10 as a satisfactory basis. They, however, pointed out that "the financial objections to be urged against Canon Blackley's proposal for national insurance do not press with such force against the deferred-annuity part as against the sick-pay part of his scheme."

The German scheme is inferior to Canon Blackley's in theoretical perfection, but it has the great disadvantage of being practical. The German Government does not compel any workman to insure against sickness, if his wages exceed the average by 60 per cent., nor does it attempt compulsion, except for those in permanent employment, and it holds the employer responsible for the payment. Canon Blackley would bring in even the gentry, and the military, as well as casual labourers and loafers; and if it could be done, it would doubtless have strengthened the financial part of his scheme, as no one would give sick-pay unless indigent, or as compensation for loss of wages. Theoretically, it is right to make the obligation universal, and the aid that the rich would thereby give the poor is not more than a fair equivalent for the relief that property would obtain through the diminution of the poor rate. But, with all his ingenuity, Canon Blackley was not able to remove the doubts entertained by the Committee as to the feasibility of this part of his scheme. A plan that secures 13,000,000 of the German people against sickness compares well with our voluntary system, which does not reach more than 3,000,000 or 4,000,000.

But it is upon the actuarial question that the superiority of the German plan is most conspicuous. The German law specifies the minimum help that is to be given to a sick workman; it does not fix the premium, but leaves it to be determined by practical experience in the form of a percentage of the wages earned. A very few years' experience will enable the factory and local clubs in Germany to fix with great accuracy the amount of contributions required. It is true that in the course of his life a German workman will pay a much larger sum, on the average, than he would by the prepayment of a lump sum in early manhood. But the burden is spread over so long a period that it is not felt as a burden at all. He receives a few pence less each week than his full wages, but as he never handles the money he never misses it. The committee of 1837 rightly say "that many of the poorest classes would be unable to provide £10 between the ages of 18 and 21 without great difficulty." There can be no question that a scheme which requires either very heavy contributions or the payment of a lump sum down would be less agreeable to the bulk of the working-men than one which, although it would involve a higher aggregate payment, would be so spread out as to be scarcely felt.

A very important and interesting feature of the German system is that it discards the element of age in fixing the insurance for sickness. No voluntary society could do this. Our Friendly Societies generally refuse to admit members over the age of 45, and they quote much lower rates to those who join at an earlier period of life. In a voluntary system this is right and unavoidable, but it has its disadvantages. The conflict of interest between the young and the old members of a Friendly Society is not an infrequent cause of collapse, and sometimes the older members find themselves left without protection at the very period of life when it is most required. But when insurance is made compulsory, there is no difficulty in averaging the rate of sickness and requiring the same contributions from the young as from the old. If the young pay a little too much, the burden falls upon them when they are strong, and they get the benefit of their sacrifice when they themselves advance in years.

From an actuarial point of view, the German system possesses one distinct advantage. The sick clubs are trade clubs, containing workmen of all ages, from the young beginner of 16 to the old man of 70, who is on the point of taking his pension. Hence, after a few years, they will be able to ascertain with the greatest exactness the cost of sickness, and so be able to adjust their premiums on a basis of perfect safety. But a voluntary Friendly Society which starts with young and vigorous subscribers does not come to feel the real pinch until these members become old and the temptation is almost irresistible to adopt rates of contribution that are insufficient, and ultimately run the society. The affiliated orders have made great and successful efforts to overcome this difficulty, but it is a melancholy and undoubted fact that a very large proportion of the societies to which the working man is compelled to resort are actuarially unsound and therefore unsafe. Canon Blackley may put it too high when he includes five-sixths of the sick societies in this unhappy category: But Sir George Young, who may be regarded as an expert, and who is a strong advocate of the voluntary system, says: "It must be confessed that perhaps the great majority of Friendly Societies are unsound."

From this serious evil the compulsory system in Germany is free, or, at all events, is in a sure way of becoming free. Canon Blackley's scheme establishing, as it would have done, a single National Assurance Society was open to the objection which does not apply to the small and local clubs created under the German insurance law that "there would be great difficulty in preventing malingering." The Committee were of opinion that "this objection seriously affects all the part of the scheme which refers to the payment of benefit in sickness." In spite of what Canon Blackley said that everybody would be interested in the fund, and therefore ready to assist in detecting impostures, it is impossible not to agree with the Committee in their view that this interest is too remote to prove an effective check. The German system, on the other hand by confining the clubs to single factories or to groups of men engaged in the same place in the same trade goes a long way towards securing the advantage of our system of local Friendly Societies, and is wholly free from the objection brought against Canon Blackley's too ambitious proposals.

Considerable opposition to Canon Blackley's scheme was offered on the part of the great affiliated orders of the friendly societies. But the Committee were less impressed by this opposition than by the actuarial and administrative difficulties of the scheme itself. Some of the witnesses seem to think that the people were made for Friendly Societies, not Friendly Societies for the people. Indeed, Mr. Reuben Watson, actuary to the Manchester Unity Oddfellows, did not hesitate to say, in reply to Q. 909 (1855), "If you could devise some scheme which would be for the welfare of all classes of this country but which would be to the detriment of Friendly Societies, you would not object to it on that ground?" A. "Well, I think I should object to it. I think that Friendly Societies have voluntarily done a very great deal of good in this country, and I think they ought not to be interfered with by the establishment of any system which would be injurious to them." This sentiment so naively expressed, "Perish the poor, but save the Friendly Society," did not find much sympathy in the Committee. They reported that, "No conclusive evidence was given to show that the establishment of a compulsory society on a national basis could endanger the funds or affect the soundness of any existing voluntary society conducted on a sound principle." They add that, "It is evident to your Committee, in spite of their acknowledgement of the increasing good work done by well-managed Friendly Societies and of all the recently provided national aids to thrift, that their tendency is, while aiding the thrift of the thrifty, in no way to discourage or put an end to the waste of the improvident." It is worthy of notice that, to a large extent, one of the chief of the incidental advantages of the system of Friendly Societies is secured under the German law. The management of the sick clubs is largely in the hands of the men themselves. In the local clubs one-third only of the Committee consists of representatives of the employers, the remaining two-thirds being delegates of the workmen.

THE topics hitherto discussed—sickness and accident—cover a large portion of the casualties against which workmen are bound to make provision. There remain to be considered death and permanent disablement not arising from injuries received in the course of employment and old age. A full account of what has been done in this country to meet these contingencies would involve much research, and would testify to the seriousness of the efforts of our workmen to "put by something for a rainy day." But it is admitted on all hands that the contingency for which least provision is made is that which in a healthy society may be expected to occur with more and more frequency—the arrival of old age. This is the topic that of all others, and perhaps for that very reason excites the greatest interest in the public mind. Many schemes have been proposed and are being discussed. The subject is full of difficulties, and it would seem desirable to reverse the process which I have hitherto pursued, and, instead of beginning with England, to make a start from the experience of foreign countries. By far and away the most instructive experiment is that to be found in the German Empire. At the present time the French Parliament has a vast scheme of State-aided provision for old age under consideration. Denmark may supply us with some useful hints, and interesting voluntary schemes have been attempted in Italy and Holland. I shall begin, therefore, with a concise statement of the efforts made by our continental neighbours to secure provision for old age.

GERMANY.

In preceding articles I have shown in brief outline the character of the system by which practically every workman in regular employment is insured against sickness and against death or disablement resulting from injuries sustained in the course of his employment. It is believed that 13,000,000 of Germans are thus secured, whereas the number so insured in this country is estimated by the Registrar-General of Friendly Societies to be only between 3,000,000 and 4,000,000. In accomplishing this great work the German Government has not assumed the functions of an insurance society, nor has it granted any subvention to the associations which it has called into existence. It has done the work by imposing a legal obligation on employers, and by assisting in the formation of societies by which the object can be secured. The German Government has not up to this point travelled beyond the limits which are all but universally recognised as the legitimate province of Government. But in dealing with old age it made a new departure. It recognised the necessity of a State subvention, and, as a consequence, a large extension of the area of State intervention in the business of insurance. The law of June 22, 1889, made insurance against disablement and old age compulsory upon the working classes.

It may be convenient, before proceeding to describe the details of this vast and memorable law, to show in a tabular form the nature of the provision made by the German law against the several casualties of life.

I. *Sickness*.—Compulsory insurance in sick benefit societies under local management.

II. *Death*—

- (a) Arising from injuries to workmen. Annuities to widows and orphans under the compulsory Accident Insurance Law.
- (b) Arising otherwise than from injuries in employment.

This case is very partially provided for by the return to the widow and children of a proportion of insurance money paid to the Old-age and Disablement Fund; but may be said practically to be uncovered by the German law.

III.—*Disablement*—

- (a) Arising from injuries in the course of employment. Annuities are provided under the compulsory Accident Insurance Law.
- (b) Arising otherwise. Provided for by the law of June 22, 1889.

IV. Old age also is covered by the same law.

Thus, looking upon German legislation as a whole, it secures practically to the vast majority of the working class no inadequate provision against all the possible contingencies in a workman's life, with the exception, and no unimportant exception, that it does not cover the case of a man dying from ordinary disease and leaving a widow and children.

A word may be said upon this exception—"the missing link" in the German law. It is very difficult to obtain statistics to show the number of children of different ages that are left orphans by the death of the father. I have, however, seen, through the kindness of Mr. King, actuary of the Atlas Insurance Company, a return from the Government of New Zealand for the year 1890, which supplies valuable details. The table covers only a single year, and it is much too narrow a basis upon which to found calculations for a European country; but nevertheless I give the figures for what they are worth. It appears that out of a total of 1,573 males who died in New Zealand in the year 1890, 699 left children, 832 males and 793 females, under the age of 15 years. If we consider 3s. per child per week a reasonable allowance until it attains the age of 15, it would require all the males who died between the ages of 60 and 65 to be insured for a sum of nearly £50 at their death. If only all the married males were insured, it would be necessary on their death that they should be insured for nearly £90, in order to make a provision for all the orphans of 3s. a week until they reached the age of 15. It may be taken that only a very small proportion of the deaths that occur among males between the ages of 20 and 65 are due to accidents in their employments; so that in Germany a large and important field is still unoccupied by insurance provisions.

*Insurance against Disablement.*

Much of the adverse criticism that has been directed against the German scheme of insurance for old age arises from a mistaken notion of the scope of the law. Old age is entirely a secondary and subsidiary object; the chief object of the law is to extend and complete the insurance for sickness. The ordinary Sick Benefit Societies *must* give sick pay for thirteen weeks, and *may* allow sick pay for a year. But at that point the sick allowance must terminate. The workman who from prolonged illness is dropped by the Sick Benefit Societies is taken up by the Disablement and Old-age Fund. This fund is intended to provide an adequate allowance for a disabled workman, but it was never expected to give a sufficient pension for old age. The pension for old age does not begin until the age of 70 years is completed, and it varies in amount according to the scale of contribution, from £5 6s. 5d. (or 2s. 3d. per week) to £9 11s. (or 3s. 8d. per week). These sums, although they are more than one-third of the average wages of the class, were never supposed by themselves to be a sufficient allowance upon which a workman could live; they are meant to be an aid to other resources.

The true relation of old age and disablement in the latest German law may be gathered from the fact that while it is calculated that there will fall on the fund 120,000 disablement pensions in each year, the number of old-age pensions expected to become due in the same period is only 36,000. But not only is the number of disablement pensions more than three times as great, but the allowances for disablement are on a much more liberal scale, and if a man is drawing a disablement pension when he reaches his seventy-first year, he continues to enjoy it, and is not put down to the lower scale of old-age pensions. Thus the old-age pension is payable only in the case of non-disabled men, and is due although the workman is strong enough to do his customary work.

A full right to the disablement pension arises after five years' contribution. The amount varies (1) according to the scale of the workman's contributions, which, again, vary according to his wages, and (2) according to the number of years in which he has contributed. For the purpose of insurance the workmen are divided into four classes:—

- Class I.—Those who earn up to £17 10s. (350 marks) a year.
- Class II.—Those who earn from £17 10s. to £27 10s. (550 marks).
- Class III.—Those who earn from £27 10s. to £42 10s. (850 marks).
- Class IV.—Those who earn above £47 10s. a year.

In calculating the pension for disablement each workman receives 60s. a year from the insurance office, and 50s. a year from the Government, or in all £5 10s. To this is added for every week during which he has been a contributor a sum varying according to his class, as follows:—

Class I.....	¾d. per week (2 pfennigs).
Class II.....	¾d. „ 6 „
Class III.....	1d. „ 9 „
Class IV.....	1¼d. „ 11 „

The contributions of the workman are non-returnable, except as to one-half if he has paid for five years without receiving any allowance, and dies leaving a widow or children under 15 years of age. So if a woman has contributed for five years and dies before receiving an allowance her children under 15 years of age, if they are also fatherless, receive back one-half of her contributions. Suppose we take the case of two workmen, each of whom after ten years' full contributions (470 weeks) becomes disabled, one belonging to Class I, and the other to Class IV, the first will receive an annuity, if permanently and totally disabled, of £5 10s., plus twice 470 pfennigs, or in all £5 19s. 4¾d. The second will receive £5 10s., plus thirteen times 470 pfennigs, or £8 11s. 1¼d.

The following table shows the scale of pensions for total and permanent disablement for the periods of contribution specified, arranged according to classes :—

Number of years' contributions of forty-seven weeks each.	Amount of annual Pension.			
	Class I.	Class II.	Class III.	Class IV.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
5 .....	5 14 8½	6 4 1½	6 11 1¼	7 0 3
10 .....	5 19 4½	6 18 2½	7 12 3½	8 11 1¼
20 .....	6 8 9½	8 6 4¾	9 14 7½	11 12 2½
30 .....	6 18 2½	9 14 7½	11 16 10¾	14 13 3½
40 .....	7 7 7¼	11 2 9½	13 9 2½	17 14 4¾
50 .....	7 17 0	12 11 0	16 1 6	20 15 6
Average earnings of each class .....	15 0 0	25 0 0	36 0 0	48 0 0
Annual contributions for old age and disablement by workmen.	0 3 3½	0 4 8½	0 5 7½	0 7 0¼

The scale of pensions, it will be seen, varies from one-seventh to over a half of the wages earned when in full and continuous employment. On the whole the pensions are small, but so are the contributions, which vary from three farthings to three halfpence per week.

*The amount of Old-age Pensions.*

The pension for old age is calculated in a different fashion. To each pension the State contributes 50s. a year. To this the insurance societies add a sum which varies according to class, and the following table shows how the total pension is made up in each class :—

	Contribution of State.	Contribution of Insurance Society.	Total Yearly Pensions.
	£ s. d.	£ s. d.	£ s. d.
Class I .....	2 10 0	2 16 5	5 6 5
Class II .....	2 10 0	4 4 7	6 14 7
Class III .....	2 10 0	5 12 10	8 2 10
Class IV .....	2 10 0	7 1 0	9 11 0

The amount of the pension does not vary, as the disablement pensions do, according to the number of weeks of contributions paid. But persons under the age of 40 when the law came into force will not be entitled to an old-age pension unless they have contributed for thirty years. Special provisions are made for those who, in consequence of their age, are not able to comply with the terms of the law.

*Is it State Socialism ?*

The pensions that fall due during the first year of the operation of the insurance law, it is calculated, will be paid one-third by the State, one-third by the employer, and one-third by the workman. It is supposed that the average cost of pensions for disablement and old age taken together will be £7 10s. ; but the contribution of the State takes the form of a fixed contribution of £2 10s. to each pension, the effect of which is to give most help to the poorest class, who are in most need of it. The cost to the State in the first year is expected to be £320,000; then it will gradually increase until eighty years hence it will amount to £3,450,000 a year. At that date it is calculated that sufficient capital will have accumulated from the contributions from employers and workmen to provide for pensions that become due, in consequence of which the State subsidy will no longer be required, and will gradually be extinguished. In making this forecast it is assumed that the capital will earn 3½ per cent. The intention is that ultimately the whole cost of the pensions shall be borne by the contributions of the employers and workmen, and the State subsidy is merely a temporary help to enable the existing generation to obtain the benefit of the scheme. If the German scheme had been confined to persons now under the age of 21, no subsidy from the State would have been required or would have been given; for, in that case, the contributions would be equal to the benefits conferred by the scheme. But in the case of persons over that age, and especially of those past 40 years of age, the scale of contributions would be hopelessly insufficient. In effect, therefore, the contribution of the State is temporary, and practically represents the cost of applying the scheme to the existing generation.

Both its admirers and its critics have given insufficient attention to this cardinal feature of the German scheme. That scheme is framed on the basis of being self-supporting without State aid; but no such scheme could be worked, except for the very young, unless help were forthcoming. The necessity of such help will appear from a single example. A workman is 67 years of age when the Act comes into force; by the time he reaches the first week of his seventy-first year he has paid in Class I. for 100 weeks, in all, 7s. But nevertheless he will get an old-age pension of £5 8s. 5d. a year for the small sum of 7s. It is obvious that this difference can only be made good by enormously high premiums upon the young of the present generation, or by taxation, and taxation is a fair way of spreading the burden over a century, instead of making it lie with crushing weight upon a single generation. The German scheme is thus not open to the charge of State socialism. As a temporary measure it may be wise or foolish, expedient or inexpedient, but it is much farther off from socialism than free education. We make the whole charge of education a burden upon the taxpayer or ratepayer, and practically endorse the maxim, "To each according to his needs, from each according to his means." But Bismarck's legislation contemplates the payment of the whole cost of pensions by the employees and workmen; the taxpayer will find nothing of the contributions; and only as a temporary makeshift is he called upon to bear any burden whatever. To make the employer pay one half of the premiums of insurance may be objectionable, but it is not socialism. Unless, therefore, we use the term "Socialism" in a loose sense in which all meaning is taken out of it, we cannot with any propriety describe the German system of pensions for disablement and old age as State Socialism; it may be bad or good, but it is in no proper sense of the word socialistic.

*The amount of the Contributions*

is fixed for the first ten years on the following scale :—

	Employers.	Workmen.	Total Yearly Contribution.
	s. d.	s. d.	s. d.
Class I .....	3 3½	3 3½	6 7
Class II .....	4 8½	4 8½	9 4½
Class III .....	5 7½	5 7½	11 3½
Class IV .....	7 0¼	7 0¼	14 1½

At the end of ten years, when the insurance societies have brought the anticipations of the actuaries to the test of experience, these rates will be revised and probably increased. At the end of each five years a fresh revision will take place; and it is reckoned that by the end of eighty years the highest rate of contribution that will be required will not exceed the following :—

	Employers.	Workmen.	Total Annual Contribution.
	s. d.	s. d.	s. d.
Class I .....	4 8½	4 8½	9 4½
Class II .....	8 0	8 0	16 0
Class III .....	11 9	11 3	23 0
Class IV .....	15 6	15 0½	30 6½

If

If the calculations of the German actuaries are realised the extreme rate of contribution to pay both the disablement and old-age pensions would vary from 1½d. to 3¾d. a week as a maximum at the end of eighty years from the time when the Act came into force.

The only State interference that forms a permanent element in German legislation is the imposition of an *obligation to insure*. This is not socialism; it is the enforcement of a duty which every man owes both to his neighbours and to himself. Whether that duty should be left to the care of the individual conscience or be strengthened by the sanction of law is an interesting subject of study; but in any case it is the duty of the individual that is established, not a duty of the State towards the individual. The German system is, in fact, the consummation of individualism, not the thin end of the wedge of socialism. In one case only—the provision for disablement and old age—does the State even contribute to help the individual to perform his duty, but that help is limited in both its character and duration.

A law that simply said to the workman, "Thou shalt insure against sickness, disablement, and old age," even if accompanied by penalties for disobedience, would be barren and unpractical. The cost of enforcing obedience would alone prohibit such a measure. Bismarck accordingly avoided the error of applying compulsion to the workman; he looked to the master. This latter method is as easy and simple as the former is complex and difficult. The principle upon which he proceeded was to compel the employer to insure the workman, and to pay for the insurance, leaving him to deduct from the workman's wages the amount that in the eyes of the Legislature the workman might fairly be called upon to contribute. The employer is bound to pay the whole of the premiums of insurance against accident, and one-third of those for sickness; and to this extent Bismarck's legislation rests upon generally-accepted notions of justice. But the half-share of the premiums for disablement and old age must be defended, if defended at all, not upon any abstract principle of justice, but upon grounds solely of expediency. He was able to satisfy the German Parliament that sufficient ground existed for a charge the equitable nature of which is not self-evident.

The principle of the legislation necessarily defines its limits and scope. Insurance is not made obligatory upon those who have no employers. As the obligation is thrown upon the employer, where there is no employer there is no obligation. Bismarck's legislation is compulsory, but not universal. Except, however, in the case of wives of workmen, this limitation is not serious. The gravest defect of the German law is that no provision is made for a widow who survives her husband, nor, except in the case of accident, for a widow who has young children to bring up. These are grave imperfections. The law is nearly complete for men, but for women it is woefully deficient. Unmarried women who are in employment are insured in the same manner as men, but upon their marriage they are cut off from all provisions, and are allowed merely to withdraw one-half of their own contributions to the disablement and old-age funds, if they have contributed for more than five years.

#### *Who must be Insured for Old Age.*

1. All persons over 16 years of age who work for wages or salary (also if partly payment in kind) as labourers, assistants, apprentices, or servants of all kinds, including copying clerks, messengers, night watchmen, sempstresses, laundresses, &c. (but not tutors, governesses, private secretaries, companions, and the like).
2. Clerks in industrial and other establishments, book-keepers, cashiers, commercial travellers, shopmen, shopgirls, tradesmen's apprentices who do not earn more than £100 a year. Assistants and apprentices in apothecaries' shops are not included.
3. Persons employed for wages or salary in the crews of German sea-going vessels, or on vessels employed in inland navigation.

Workmen who become employers, or otherwise are lifted out of this class, may continue their insurance by paying double the contributions of workmen.

Compulsory insurance does not extend, however, to (1) persons who work for food, clothes, and lodging only, receiving no pay; (2) persons unable to earn more than one-third of the customary daily wage in the place where they reside; (3) persons already in receipt of a pension of not less than £5 14s. 6d. a year.

The following persons may, but are not compelled to, insure:—

1. Small craftsmen, shopkeepers, farmers, porters, guides, and generally all who work on their own account and do not usually employ paid workmen.
2. Persons working in their own dwellings, with or without paid workmen, on account of other industrial firms, even although they supply their own raw materials or work temporarily or occasionally on their own account.

#### *The Insurance Offices.*

The German Empire is a Federal Union bearing a considerable resemblance to the constitution of the United States. Subject to the powers conferred on the central Government, each State in the Union retains its own individuality and autonomy. The Imperial Legislature, like the Congress of the United States, consists of a Senate or Federal Council (Bundesrath), consisting of nominees of the Governments of the several States of which the Empire is composed, and a Chamber of Deputies (Reichstag) elected by universal suffrage. The Empire has, for the purposes of insurance against disablement and old age, been parcelled out into thirty-one districts, in each of which a separate insurance society is formed, which deals with all the persons in its district who are subject to compulsory insurance. In a large State, like Prussia, several of such districts are formed, but in the case of the small States of the Union permission is accorded to form one joint insurance society. The relations of these insurance societies to each other and to the Federal Council are the subject of minute regulations which it were unprofitable here to discuss. It will suffice to describe the constitution of one of these societies, for all are framed on the same lines.

Every insurance institute is managed by a board of directors, but the officials are appointed by the State Governments. The board is composed of State officials, or it may include representatives of the employers and workmen. On the board devolves the control of the executive work of the institute. To each institute is attached a committee of at least ten members, one-half of whom are appointed by the employers and one-half by the workmen. The committee settles the by-laws of the institute, it elects assessors to the arbitration board, examines the yearly budget, and, if no council of supervision is formed, it watches over the conduct of affairs by the directing board. If the board is composed solely of officials, then a council of supervision, consisting in equal numbers of employers and workmen, must be appointed by the committee to watch over the proceedings of the board. The members of the board and committee are regarded as trustees and receive no pay, but workmen are entitled to compensation for loss of wages by attendance to those duties. The appointments are made for a period of five years. All the insurance institutes are subject to the supervision and control of the Imperial Insurance Board at Berlin.

#### *How Disputes are Settled.*

All questions arising in connection with the insurance institutes go in the first instance before courts of arbitration, with a final appeal to the Imperial Insurance Office. At least one arbitration court must be attached to each institute. The board consists of a president and at least four assessors, two elected by the employers and two by the workmen. These elections take place in connection with the sick benefit societies. The costs of arbitration are to be borne by the insurance institute. But the court may compel the parties to pay the charges which are caused by groundless applications.

#### *How Contributions are Collected.*

The contributions are collected from the employer by affixing stamps of the proper value to the workman's receipt card. Each workman must obtain a receipt card, which contains spaces for forty-seven contributory weeks; at the end of each week the employer affixes a stamp of the value corresponding to the wages of the workman; forty-seven weeks are taken to be a complete insurance year, thus leaving five weeks for lack of employment. When a person is prevented by illness from continuing his state of insurance, or is called upon for military or naval service, the period of such illness or service is reckoned as equivalent to payment of weekly contributions.

The *Times* correspondent writing from Berlin on 12th January, 1892, says that the system of workmen's cards is giving rise to much dissatisfaction in Bavaria. At the time the Act was passed fears were expressed that such cards might be marked so as to give information about workmen and prevent them getting employment, and stringent penalties were enacted against any attempt on the part of employers to use them for such a purpose. But it seems that the absence of stamps may tell a tale, and show that a workman has been on strike, or that he has not been in regular work. Again, cards get lost, or the holders fall into arrears, or they change their place of residence, and are put to great trouble in getting their new addresses registered. We do not hear complaints from any quarter except Bavaria; but it is probable that considerable improvement may be effected in the machinery by which the Act is carried out. The agitation in Bavaria is not directed against the principle of the Act, which is recognised as sound.

*How*

*How Pensions are Claimed and Paid.*

The person who lays claim to an allowance for old age or infirmity must give notice to the lower administrative authorities in his place of residence. The authorities report upon it to the last insurance institute into which, according to the receipt card, the claimant paid contributions. If the claim is held valid the rate of allowance is at once fixed, and the board of the institute then draw up a certificate of title which specifies the amount of the annuity, the periods of payment, and the name of the post-office at which the payment is to be made. Usually the annuities are paid monthly in advance. If a person entitled to an allowance moves from one place to another the board of the institute notifies his allowance to the post-office of his new domicile, and that office pays his future instalments.

## DENMARK.

This little country, with a population not much over 2,000,000, presents to our attention some interesting facts in connection with the subject of insurance.

*Insurance of Government Officials.*

The Danish law compels every Government official to insure his life for the benefit of his widow. This rule goes as far back as 1740. At that time the science of insurance was in its infancy, and the Danish Government was obliged to pay for its experience. As an example of the errors which were made, it may be mentioned that, in fixing the amount of the contributions to the fund, no restriction was made as regards the age either of the contributor or his wife. Accordingly, alterations were introduced in 1775, 1788, and 1842. It is unnecessary to enter into detail. Under a law of 1851, provision is made for civil service and military pensions in case of old age and infirmity.

*State Insurance.*

In 1842 the Danish Government established a State Insurance Society, with a State guarantee, called "The Life Annuity and Provident Institution." This was intended for the use of the general public as well as Government officials. In 1871 it was reorganised under the title of "The Life Insurance and Provident Society of 1871," with a revised tariff and special facilities for the poorer classes. This institution has now existed for twenty years, and, although it has been carried on under considerable disadvantages, it has proved a commercial success. It cannot advertise, and it is not allowed to establish agencies in the capital; but, notwithstanding, it holds its own with its numerous competitors, and the Government has every reason to be satisfied with its financial position. "At the last quinquennial valuation, in 1885, it was found that, over and above the capital necessary for the working of the establishment and for the discharge of its liabilities, and after the deduction of an ample reserve fund, and of a considerable sum to meet the falling rate of interest on Government securities, there remained at its disposal the sum of 4,500,000 kroner (about £250,000). This gratifying result was due to the rate of mortality being considerably more in favour of the institution than had been reckoned upon, and more especially to the fact that in making the tariffs the directors had calculated upon receiving an interest of 4 per cent. on their invested capital, whereas they had actually received  $4\frac{1}{2}$  per cent. up to the year 1885." This surplus was distributed by way of bonus among the contributors to the institution.

*State Provision for Old Age.*

An Act came into force in Denmark on 1st July, 1891, which introduced pensions for old age wholly out of taxation, and without any contribution from the workman. In view of recent discussions upon the plan favoured by Mr. Charles Booth in this country, the experiment initiated in Denmark cannot fail to be both interesting and instructive. The money is to be provided, one half by the State, and one-half by the local Poor Law authority. The amount provided by the State is £55,550 up to 1895, and after that date £111,100 a year. For England these sums would represent a State expenditure of three quarters of a million and a million and a half respectively. The principle of the Act is an attempt to discriminate between the deserving and the undeserving aged poor. The funds are administered by the Communal Councils through the ordinary machinery of the Poor Law. A vital feature of the scheme is that those persons who receive relief under its provisions are not subject to the electoral disabilities which in Denmark are attached to ordinary poor relief. It is thus intended to withdraw from the old-age pensions the stigma of pauperism. These pensions are given to those who have completed their sixtieth year, and are without means of providing themselves or their dependents with the necessities of life. The following persons are excluded from the old-age pensions:—

1. Persons who have been in receipt of relief from the Poor Law administration, or have been found guilty of vagrancy and begging during the ten years preceding the date of their application.
2. Those whose poverty has been caused by their own fault, as by a disorderly and extravagant mode of life, or by voluntarily divesting themselves of their property in favour of others.
3. Those who have undergone sentence for any transaction generally accounted dishonourable, and in respect of which they have not received rehabilitation.
4. The pensions are confined to persons who have had a fixed residence in Denmark for ten years preceding the date of their application.

The magistrates in Copenhagen, and outside Copenhagen the Communal Councils, decide as to the nature and amount of relief to be given. No sum is specified, but the relief must be sufficient for the support of the person relieved and of his family, and for their treatment in case of sickness. Should the pensioner be guilty of any action which would exclude from admission to old-age relief, or should he squander what is given to him for his support, the relief ceases.

## HOLLAND.

No system of State insurance for sickness, for accident, or for old age exists in Holland, but a report from our Consul at Amsterdam supplies an account of an interesting voluntary insurance scheme for old-age, established by the Amsterdam Branch of the Employers' Union of the Netherlands.

"Under the auspices of Mr. G. Van Tienhoven, burgomaster of this city, and of a number of the chief employers of labour here, the 'Employers' Union of the Netherlands,' was constituted in the year 1888, chiefly for the purpose of studying the question as to the best manner of improving the lot of working men, and of providing for their support in old-age.

"The leading idea of the promoters of this experiment was that the question was one which could be better dealt with by voluntary co-operation than by the State system of insurance for old-age which is now under discussion in Germany. They considered that the serious obstacles which local circumstances and local needs, in their great variety, place in the way of a universal insurance law, and the difficulty of providing an even moderately sufficient pension for the workmen by means of compulsory insurance, were good reasons for giving the preference to private combination. At the same time it was a principal part of their scheme to secure a State guarantee for the premiums to be paid by employers and workmen jointly.

"The Amsterdam branch of the Employers' Union commenced its operations on the 1st of April, 1889, and includes at present establishments employing about 4,000 workmen in this city.

"The objects of the Employers' Union may be shortly defined as follows:—

- (a) To secure to workmen now in, or in future entering, the service of members a pension of at least 3 fl. (5s.) per week after their sixtieth year, and not payable before their fiftieth year, by the contribution on the part of the employers of at least 15c. (3d.) per man per week, towards the premium necessary to secure such payment, on the condition that the balance of the premium shall be paid by the workman.
- (b) To secure to such youths and apprentices as may have been six months in a member's employment, and who have not yet reached the age of 15 years, a pension on the basis of at least 3 fl. (5s.) per week after their sixtieth year, and not payable before their fiftieth year, by the payment on the part of the employers of the full premium necessary to secure such pension until the persons in question shall have attained their twenty-first year, after which date such employers are only bound to contribute in the portion stated, sub. (a).
- (c) To form a fund for each local branch of the Union, by means of yearly subscriptions and donations from members and well-wishers, and by testamentary gifts, &c.

"The object of the creation of this fund is to ensure, if possible, the payment of premiums on behalf of workmen who might be temporarily incapacitated from continuing their contributions from causes beyond their own control.

"The

Italian workmen or workwomen who are members of a society of mutual aid can alone become subscribers. Each subscriber has a separate account, and he can pay into it as and when he pleases any sum not exceeding £25 a year. He acquires a right to a pension on reaching the age of 60, provided he has been a subscriber for twenty years. He may, however, postpone his pension to a later period in order to increase it. The amount of the pension depends on the subscriptions augmented by the subscriber's share in the money from the central fund. If he dies before the pension age, his subscriptions, with compound interest, are returned to his legatees or successors; but in no case may the pension exceed £25 a year, the object being to confine the benefit of the subsidised central fund to workmen.

In supporting the Bill to set up a National Pension Institute, the Committee of the Chamber of Deputies, while fully appreciating the great work done by friendly societies, "frankly recognises the fact that, in the actual condition of Italian wages, societies of mutual aid are not alone sufficient to provide a competent pension for aged workmen." The proposal has met with large support from working men, and it is expected that at an early date the Pension Institute will be established, and form no unworthy rival to the National Accident Insurance Fund of 1883, to which was awarded the grand diploma of honor—the highest award at the Paris Exhibition.

## FRANCE.

There is now pending before the Chamber of Deputies in France the boldest financial scheme of State-aided pensions for old age that has yet been proposed in Europe. The State paper in which the Government of France recommend the scheme to the French people is so interesting and important that it deserves a full translation. Before, however, placing that document before the readers of the *Dispatch*, some attention may be given to an interesting experiment which has for many years been carried on by the French Government. France, indeed, is the pioneer of State-aided pensions for old age. The experiment to which I refer is one of the numerous projects for the benefit of the poorer workmen which were thrown up by the revolutionary effervescence of 1848. The experiment has, on the whole, proved a failure; and it is precisely in its failure that lies its lesson to us.

*An Experiment in Voluntary Pensions.*

In 1850 an old-age pension fund (*Caisse des Retraites*) was established. It contained the principle of State aid in the form of a guarantee of 5 per cent. compound interest upon the sums paid by the workman towards old-age pensions. The deposit must be in sums of 4s., or multiples of 4s. The depositor must mention the age at which he wished to enjoy his pension; but the age must not be under 50. Each deposit was regarded as a purchase of a pension of proportionate amount at the age stated; there was no obligation to continue payments at stated intervals. Thus, supposing that a payment of 4s. at the age of 20 would purchase a pension of 1s. a year at the age of 50, the workman at once acquired an inalienable right to a pension of that amount at that age. By every successive addition to his contributions he purchased an addition to his pension. There was thus no forfeiture, and no obligation to keep up payments. The workman had the option of making his contributions returnable in case of his death. By three months' notice before the date of the term when the pension became due, the payment might be deferred, with the view of increasing its ultimate amount; but after the age of 65 the pension must be taken. It was also provided that the pensions could not be seized by creditors if they did not amount to more than £14 8s. a year.

What would have happened to this scheme if the men by whom it was originated had controlled its operation must now be a matter of conjecture; but, unhappily for France, between the conception and the realisation of the scheme there was interposed the crime of the 2nd December, 1851. That deplorable event brought into the Government of France a class of men who had other objects to serve than the improvement of the condition of the working classes. No serious attempt was made by Louis Napoleon's Government to bring home to the French workmen the advantages of the scheme. The pension fund was mainly used by Government servants, priests, school-teachers, and small investors who desired good interest for their money. Until May, 1853, there was no limit to the amount which might be deposited.

The most serious defect of the scheme was the obligation of the State to pay interest at the rate of 5 per cent. As the State could not obtain that interest, a loss was occasioned to the Government which threatened to become serious. Accordingly, on 12th June, 1861, the interest was reduced to 4½ per cent. After the German war in 1870, when money became dearer, the National Assembly re-established the 5 per cent. rate. This led naturally to a great increase in the deposits, which rose from £360,000 in 1873 to £2,720,000 in 1881. The result was that by 1882 the fund showed a deficit of £1,680,000. In 1882 the Government found the money to put the funds straight, and reduced the interest again to 4½ per cent. In 1886 another law was passed which limited to £48 the pension to be granted to any one annuitant, and, moreover, made the rate of interest vary according to the rate of Government stock. One effect of the law of 1886 was to take away the motive of the small investor to purchase Government annuities, and the depositors now belong more to the class for whose benefit the pension fund was originally instituted.

The pension fund has evidently failed to provide for the old age of the French workman. Out of 9,600,000 persons in France receiving salaries or wages, there are only 800,000 depositors; and most of the workmen who are insured are interested through the operation of benefit societies or of their employers. The average amount of the pensions is very small, and does not exceed £2 14s. a year.

*A National Workmen's Pension Fund.*

The failure of this experiment, and perhaps the example of Germany, have stimulated the French Government to propose a gigantic scheme of insurance for old age. The new scheme relies for its success upon indirect compulsion. The law imposes upon employers an obligation to pay for the insurance of their workmen; but any workman is entitled to contract himself out of the Act by making a formal declaration to that effect before the mayor of his commune. The premiums are to be paid in the proportion of three-tenths by the employer, three-tenths by the workmen, and four-tenths by the State. With this introduction I now lay before the readers of the *Dispatch* a translation of the State paper in which M. Constans gives the Chamber of Deputies a full statement of the policy of the French Government.

*Statement of Reasons for the Bill by the French Government.*

"The state of opinion, the hopes that are everywhere stirring the labouring classes, the forces that determine the great evolutions of history, render more and more clear and imperious the necessity of effecting social reforms. In France the expectation of such reforms is now uppermost in the mind of the nation. At each of our general elections the country expresses wishes and makes claims that indicate to the public authorities a clearly-defined duty. Our democratic society manifests a growing indifference to the speculations of mere politics; and, on the contrary, drawing away as every day it does more and more from revolutionary Utopias, the more rigorously it holds the Government to the duty of maintaining steadily the public peace and the freedom of labour, the more it shows itself anxious to improve the lot of the working population. Parliament has already, to a very considerable extent, met this want; but many useful questions yet remain to be taken up. Besides, we cannot forget the pledges given to the nation at the elections of 1889. The Bill that we have the honor to lay on the table is intended to ensure the realisation of these promises in reference to a class of interests that the workers regard with the keenest favour.

" I.

"There are no new institutions more ardently desired than those that would guarantee the security of old age. So long as his strength is maintained a man readily resigns himself to the mischances of fate, and finds in his moral and physical vigour elements of resistance that permit him to support the miseries of his condition; but in the state of our civilisation, the spectacle of an old age of weakness and want can no longer be regarded with indifference. Accordingly, there have been established, in recent years, numerous interesting societies based on various forms of mutual association, with the view of providing retiring pensions for their members. This effort, which has been especially supported by the friendly societies, is a strongly-marked indication of an absorbing public interest; but these institutions have as yet had only a limited range.

"One proof of this is the smallness of the allowances that the benefit societies are able to grant. Another proof is the very limited number of members that, without the co-operation of any employer, contribute to the National Pensions Fund. In forty years this fund has registered only 800,000 depositors out of 9,600,000 workmen, representing in France the total number of persons receiving salaries or wages. Further, these 800,000 depositors have been, in large part, brought to the fund by contractors, by industrial companies, or by benefit societies. Hardly any have joined of their own accord.

" This

" This state of matters results partly from the fact that the idea of thrift is not yet sufficiently diffused, but, above all, from the fact that the workers as a whole doubt whether the accumulation of their modest savings can become really productive. Need there be any surprise that the taste for saving has not found the necessary stimulus in the attraction of pensions of the average amount of eight francs a month ?

" It is important, then, to come to the assistance of the workers, not only by stirring up in them solicitude for their future, but by furnishing them with the means of rendering their good intentions effective in fact.

" If the State were to put itself entirely in their place, the object in view would not be attained ; instead of spurring private persons to take the initiative, we should render them still more apathetic ; instead of encouraging the emancipation of the democracy, we should benumb still more the energies of individuals. In order to obtain truly fruitful results in the social point of view, people must be left free to act in providing for their future ; but this freedom must find adequate bases of support. Such bases of support have hitherto been wanting.

" Unquestionably, many employers have for long displayed a zeal that cannot be overpraised. The large manufacturers especially have increased in their establishments the number of organisations for providing pensions, for the maintenance of which they have imposed on themselves very heavy sacrifices. In these circumstances, the employers have been inspired, before all other considerations, with lofty and philanthropic sentiments ; and they have had the satisfaction of seeing that everywhere where their kindly intentions were carried into practice, the peace of society was being strengthened, a lasting agreement was uniting capital and labour ; but the initiative taken in these cases is far from being generally adopted, because of the want of an organisation to facilitate its extension. The question thus arises whether, in order to guarantee to workers rest in old age, it would not be proper to appeal to the employers and to the State for their co-operation, by making them participate, under certain conditions, in the maintenance of institutions that would receive the savings of the workers, in order to invest them and apply them to obtain retiring pensions. The employers have too much interest in securing the peace of the factory or of the workshop not to appreciate the advantages of an organisation that would bind their men more closely to their daily task. The workman will unquestionably display more ardour in his work when he has the certainty of increasing by his assiduity the sums that he and his employer are able to contribute to the Pension Fund. The co-operation of the employers, such as we conceive it, would have to be, moreover, regulated in such wise as not to add too heavily to the general cost of production.

" As to the State subventions, these would in some sort cement the association of workmen and employers. They would undoubtedly involve sacrifices the importance of which may be considerable, and the problem for solution is one that cannot receive too great attention ; but the national labour, the public wealth itself, cannot but reap a large profit from reforms designed to render the future of the workman less uncertain, and Parliament will no doubt be willing to accord satisfaction to wishes that are recognised by every one as legitimate.

## " II.

" To what extent are the workmen and the masters able to contribute to the formation of a pension fund ? An admissible rate of contribution being fixed, what results may be expected ? Such are the first questions for consideration.

" Workmen, it is superfluous to say, can save but little, and their power to save anything is frequently reduced by sickness and by want of work. Deducting from the full year the holidays, the times of probable want of work, and the ascertained average period of illness for a given group of population, it seems difficult to admit that a workman can have the opportunity of saving during more than 290 days a year.

" It is necessary, on the other hand, that the saving in view of superannuation should not require of him a sacrifice which, appearing excessive, runs the risk of repelling him. An ever-increasing number of workers are already taking upon themselves a variety of charges in the societies of which they are members, in order to protect themselves against want of work or sickness, and they will not come to the institution that we are proposing if the effort required of them be out of proportion to their means.

" A contribution of 5 to 10 centimes ( $\frac{1}{2}$ d. to 1d.) a day appears to us a maximum that it is expedient not to exceed.

" To charge the masters with a contribution of equal amount would, we believe, be to ask of industry a sacrifice that it would be willing to make, but that clearly could not be increased without seriously trammelling production.

" A workman, or *petit employé*,\* is scarcely in a position to save before the time when, having overcome the first difficulties of his career and left the army, he enters on the active period of work and begins to make a sufficient income.

" Thus it appears that the time when the workmen could begin to pay into the Pension Fund must be placed towards their twenty-fifth year ; but, in order that they may pay in continuously, it is necessary that their entry on the enjoyment of the pension be not deferred so long as to discourage their good intentions. There certainly would not be many members that would be inclined to go on making payments for more than thirty years. Now, what would a workman or a *petit employé* obtain if he invested, for thirty years, at the rate of 4 per cent., which is at the present time secured by the National Old Age Pension Fund to its depositors—(1) A sum of 5 centimes ( $\frac{1}{2}$ d.) a day ; (2) a sum of 10 centimes (1d.) a day, with an equal contribution by the masters in each case ?

" The result of the first of these two combinations is a pension of 180 francs (£7 4s.).

" The result of the second combination is a pension of 360 francs (£14 8s.).

" These figures, we do not hesitate to say, are insufficient, because the total amount of the pension would be too small to determine the persons interested to a continuous effort. We remarked above that there is displayed in the working population a remarkable eagerness to make provision for the future, but a select portion only do actually make such provision, and, in order to win over the large majority, it is indispensable to make them foresee a really serious amelioration of their lot. On this condition only will it be possible to incite the labouring population to a long and continuous effort, and to cause to reign in France between capital and labour a union that the past has never known.

## " III.

" We have just shown that, on the basis of simultaneous payments of 5 to 10 centimes ( $\frac{1}{2}$ d. to 1d.) a day for the workmen and the employers, during a period of thirty years, there could be assured, according to the actuarial calculations, only pensions of 180 to 360 francs—sums too insignificant to give to the persons interested an adequate security and to encourage them to save.

" We propose to associate the State with these combinations by making it co-operate in the formation of pension funds by a contribution equal to two-thirds of the total contributions asked from the workmen and the masters.

" It is admitted as an axiom in economical science that the intervention of the State is legitimate in all cases where private initiative fails. Now, if ever, is the opportunity for the application of the principle.

" The State intervenes merely to complete what isolated individuals are unable to do. It merely comes to the aid of the thrifty workman who, if left to himself, could not, on his wages alone, make sure of bread for his old age.

" The Bill provides, moreover, for the fixing of a maximum for pensions, which does not exceed the needs of maintenance, because it is only on this basis that the pecuniary encouragement of the State can be for the public good.

" In these conditions, it seems that even the most rigid *laissez faire* theorists cannot dispute that it is legitimate for the State to make a financial contribution. Perhaps socialistic tendencies may be discerned in this reform, but a word—and especially the word 'socialism,' which has been so much abused—cannot be a determining reason for the rejection of a proposal that tends only to strengthen and fertilise individual action.

" The Republic must be based only upon freedom. The opposite system would strike at the notably independent character of the French workman, who would not willingly endure the authoritative tutelage of the State. Accordingly, while the new law assumes that those that can profit by it intend to claim the benefit of it, it would suffice to destroy this presumption if they made a contrary declaration before the Mayor of the commune in which they are employed.

" The contributions which we wish to ask from workmen would therefore be solely voluntary. The pension system would not be at all compulsory. The worker would be the artificer of his own future security. He could, in case of necessity, break off, and afterwards resume, his payments. It is his decision that would, in each case, engage those of the master and the State, while these, on their side, would be liable to contribute to the service of the pensions only if the persons interested themselves contributed to it. So far from constituting an invasion of the freedom of the citizens, and an attack on private enterprise, the scheme relies on the spirit of individual foresight and providence.

" The new burden, moreover, would constitute, in part, only a simple transfer of charges.

" By

\* Under the term *petit employé* would be included the great variety of persons employed in work that is not manual—as postmen, policemen, clerks, messengers, and so forth.

"By securing the old age of the labouring population the cost of public relief would be to a large extent diminished, and by the amount of this diminution the item for pensions in the budget would fail to be reduced.

"If we have no poor tax in France we certainly have a budget for the poor. To transfer a part of the expenses of this budget to an account opened for provision for the future would not be merely to undertake a justifiable financial operation; more than that, it would be to accomplish a high moral reform.

#### "IV.

"We propose to you, accordingly, to create, by the side of the National Pension Fund, a Workmen's Pension Fund for the benefit of workmen, employés, small farmers, and domestic servants of both sexes, being Frenchmen or Frenchwomen, with incomes under 3,000 francs (£120) a year.

"This fund would be supported—

"(1) By the contributions of the depositors, increased by equal amounts from the masters that employ them;

"(2) By contributions from the State.

"Every person hiring out his services would be presumed to wish to take advantage of the benefits of the law, but, at the same time, a declaration to the contrary could be made before the mayor of the locality where the depositor lives. Where this declaration is not presented every master will have to stop from the sums owing to the person whose services he hires a sum of five centimes (½d.) at least, and of ten centimes (1d.) at most, per working day, and he will be liable to contribute to the savings of his employé in an equal sum.

"If the funds thus constituted by the co-operation of the men and the masters had had to be paid compulsorily to the Workmen's Pension Fund, the result would have been, so far as the State is concerned, an accumulation of funds and an increase of charge little in harmony with the liberal character of the law. We should have run the risk, moreover, of putting a drag upon the progress of private enterprise, of discouraging the inspirations of philanthropy, and of limiting the institutions for making provision for the future and for providing mutual assistance, which, on the contrary, it is necessary to stimulate and to expand. There is a great public interest in the development of those institutions in which the democracy is learning the business of government. Everything that can extend their action is calculated to strengthen the public peace.

"We are entitled to expect a great deal in particular from the benefit societies which have already, and with such just title, succeeded in inspiring the worker with so much confidence. In order to induce him to deduct from his modest wages the sums necessary to pay for a pension, there are obstacles to overcome, explanations to give, advantages to lay stress on, which necessitate the assistance of enlightened men living in the very midst of the persons interested. The benefit societies can be, in this point of view, invaluable auxiliaries.

"We have desired, therefore, to join as first collaborators in the undertaking that we are establishing the benefit societies, the pension societies, the trade associations, and, in a more general way, the whole of the provident funds regularly authorised. These societies and funds may, if they wish, bring to the central fund the sums collected by them for the benefit of their members under the conditions of the new law; but, if they prefer, they may keep the administration of them, and provided they observe the general provisions regarding the ordinary investments of benefit societies, they may manage their resources for themselves.

"One recognises all the importance for the full success of the law which would attend such a decentralisation of funds together with such a multiplicity of efforts. Among the difficulties and the objections that we had to consider, there are none more serious than those that arise from the inevitable necessity of collecting and employing considerable funds. The pensions towards which we wish the workers to bend their steps must be formed by means of investments which it would manifestly be desirable to manage apart from the action of the State. If the State were to undertake the whole charge of them, it would be led to acquire such an amount of moneys and properties that its position in finances and estates would not be long in disquieting opinion.

"This accumulation of funds might be avoided, it is true, if the State confined itself, in return for the payments of those that are to be superannuated, to contracting with them an obligation to pay a pension. It is the system that the law of 1853 adopted for the State employés; but it is well known what criticism it provoked. It relieves the present only by throwing upon the future charges that may become very heavy. The reform of the law of 1853 is immediately contemplated, and it is not when this reform is judged indispensable that the State would be able to extend the defective system of the pensions for State employés to a vastly greater number of persons. It is necessary, on the other hand, that the contributions of the workers should not go into the budget, and that they be not, on any account, merged in the mass of taxation. To the separate account-book, delivered to each depositor, there must correspond a certain value, the fruit of saving, and a material proof of the potency of provident foresight.

"To entrust private institutions with the employment of the deposits collected with a view to workmen's pensions is therefore at one stroke to testify to the solicitude of Government for these institutions, to gain for our undertaking customers already enlisted, to rally to our cause excellent converts, and to facilitate by decentralising them the investments which form the keystone of the new law.

"It was necessary, therefore, not only to authorise the co-operation of these institutions, but to solicit it by special attractions. The more active the intervention of the benefit societies, for instance, the better will be the chance of the labouring population, for whom our project is designed, to profit by it. Hence special provisions, whose range will be readily appreciated when we have defined the nature of the right which, in a general way and on principle, would be henceforth secured for all the depositors.

#### "V.

"On every occasion when a payment is made arising, as we have seen, from the combined contributions of the workman and the master, there will be opened a separate account-book, similar to savings bank books. In each account-book the contributions of the depositor will be entered. These contributions will be increased by two-thirds by the State. Here, in general outline, is the project. Let the worker make the desired deposits from the age of 25 to the age of 55, and at 56 he will enter on possession of a pension which he will enjoy to the end of his life.

"Here is a life annuity formed, in reality, on capital spent or sunk. Now, would not the ideal be that the worker should be able to save up, not only for himself, but for his family? Would not a provision for the family of deceased workmen be infinitely desirable? They wish for it—of this there is sure proof: when they have their choice between a life assurance where their premiums are not returnable, and a life assurance where their premiums are returnable, the workers most frequently declare in favour of the latter, in spite of the greater effort which it demands of them or the diminution of the amount assured which it implies. This solicitude for the interests of the family is, it may be said, among the most generous instincts of the French democracy.

"By the savings that he can realise every year during the period of health and strength, with the view of forming for himself a life annuity at the age when he will become unable to work, the workman insures himself only against one of the principal risks to which he is exposed—namely, old age. He does nothing to protect his family against the penury into which his death may plunge them.

"In order to be certain of leaving a provision to one's family at whatever age death may strike him down, the workman must add to the assurance of a life annuity the assurance of a capital sum on death, by means of an annual premium payable up to the age of assumed inability to work.

"Thus, by means of thirty-one payments of 21 francs 75 centimes (say 17s. 6d.) a year, made from twenty-five to fifty-five years of age inclusive, one insures for oneself a life income of 135 fr. (£5 8s.); and, in order to obtain the same annuity, and, in addition, to insure on death, at whatever time it may happen, after two years' assurance, a sum of 652 fr. 50 centimes (£26 2s.), there is needed only a further payment of 11 fr. 98 centimes (say 9s. 7d.) a year, during thirty years at most.

"Our duty was, in these circumstances, clearly marked out. By the terms of the Bill depositors will be able to contract with the Life Assurance Fund, established by the law of July 11, 1868, a life assurance for a sum varying from 500 fr. (£20) to 1,000 fr. (£40), equivalent to the total amount of the sums that they would have to pay individually to the Workmen's Pension Fund. This assurance would be contracted on promise of payment of thirty annual premiums.

"The State will charge itself with the payment of one-third of these premiums. But it will pay one-half of them for those depositors whose contributions have been invested by a mutual benefit society, or any other provident society. The depositors will, therefore, find it to their advantage to avail themselves of the assistance of these institutions; and these institutions, on their side, will have an interest, in order to increase the number of their members, in undertaking themselves the pension business, instead of leaving to the State the exclusive charge of the management of the pension funds.

"To

"To this first inducement we have added another. We had to concern ourselves for the fate of those workmen, injured or disabled, whom accidents in the course of their work render incapable of providing for their needs, and, *a fortiori*, of keeping up the payment of their premiums. Such workmen as would be prevented by infirmity from working will have their pensions paid from the date of their infirmity. The annual sums due from them will be completed—to the extent of one-half in the case of those whose payments have been made to the Workmen's Pension Fund; to the extent of the whole in the case of those whose payments have been invested by a mutual benefit society or a provident society.

"It is thus seen in what a spirit of decentralisation the project has been conceived, and what impetus it is intended to impart to private enterprise quickened by association.

"The State will still have, in any event, capital sums to provide, chiefly to meet its individual contribution to the sacrifices of the workmen and the masters. Its payments must form a special fund; and they must not be used to increase the incomes of the depositors, when their pension, taken in conjunction with their other receipts, would come to exceed 600 francs (£24).

"By annexing the new institution to the National Old Age Pension Fund, we have given, after all, every guarantee for the best employment of the sums that the State will have to invest.

#### " VI.

"It will not have escaped your notice that the benefit of the law is reserved exclusively for French workmen. This being so, there would perhaps be room for fearing that certain masters would give the preference to foreign workmen. To ward off every danger, it is indispensable that foreigners take no advantage from any privilege. The only way to put them on an equal footing is to settle that the masters shall make in respect of each workman of foreign nationality a payment of 10 centimes (1d.) per working day. No one will attribute the character of a tax to the contribution that we propose to ask from masters for their foreign hands. It is neither a poll-tax nor an impost on individuals; it is solely designed to prevent our countrymen from losing the advantages that we mean to assure to them.

"The number of foreigners in respect of whom these payments may be made is reckoned at 1,000,000. At 10 centimes (1d.) a day, this would bring in 100,000 fr. (£4,000). The annual total of this revenue might reach 29,000,000 fr. (£1,160,000.) Let us add that these sums will not be immediately spent; they will be used only as pensions are commenced, and in the meantime they will be invested.

"This will be the first element of a general fund which will be increased by gifts and legacies, which the new institution is authorised to receive.

"This fund will be increased, further—

"(1.) By the sums remaining available from the contribution of the State in consequence of the payment of pension exceeding 600 fr. (£24), or for the benefit of the depositors possessing incomes exceeding 600 fr. (£24).

"(2.) By sums arising from the payments of the State, and withdrawn from the account of the depositors in consequence of interruptions of payments in breach of the conditions laid down by the law.

"(3.) By payments or arrears of annuities unclaimed after a certain time.

"(4.) By interest on the general fund.

"These are the revenues of this general fund which will be used to complete, as has been seen, the annual premiums paid to the Life Assurance Fund, and to pay in advance the pensions of the workmen that shall have been prevented by infirmity from working.

#### " VII.

"What will it cost the State to carry out the undertaking? This is evidently subordinate in importance to the use the workers will make of the instrument which the Government places at their disposal. We must therefore, on this point, confine ourselves to merely approximate calculations.

"On the results of the census of 1886, published by the Minister of Commerce and Industry, the number of workmen is 9,101,469.

"In this total there ought not to be included the foremen (or overseers) and employés making more than 3,000 fr. (£120) a year. These may be reckoned at about 500,000. This deduction brings the number of salaried workers down to 8,601,469.

"But there are to be added such of the agricultural population as are neither owners nor capitalists, nor workmen nor agricultural labourers. These are vine-dressers or small holders, having but a limited stock of implements and their arms as the whole means of existence. They number about 1,000,000; small farmers of comfortable means are not included among them. We should thus reach a total number of 9,601,469. As we have allowed that the payments would extend over a period of thirty years, commencing only at the age of 25, there falls to be deducted from this figure the workers under 25 years of age, say 40 per cent. of the whole, according to the indications furnished by the statistics of the population. The possible number of members would thus be 5,760,000; but, according to probabilities founded on former experience, there is scarcely room to hope for more than 3,000,000 accounts at the end of thirty years, and the charge to the State would be about 100,000,000 fr. (£4,000,000). This charge would appear when the new system is in full working order.

"It has seemed to us legitimate, indeed, to grant the benefits of the system of pensions to the workmen who, having almost reached old age at the time of the promulgation of the law, could not reap the advantages of it. These are principally the persons whose pensions are already paid for, and those that, paying for nearly thirty years into the National Fund, would obtain from that institution only a pension inferior to that which we propose.

"We have been anxious to place before Parliament the outside figures of the cost that may eventually fall upon the State. There will be found in the numerous tables appended to this Memorandum all the elements necessary for estimating the financial effort that must be prepared for. But, however great it may become, it will be observed that at the start it will be inconsiderable; even on the supposition that the success would exceed our expectations, the additional burden on the budget, remaining gradual, could be faced with confidence. The magnitude of the undertaking which we invite Parliament to establish, its beneficent influence on the advance of democracy, would embrace besides all the budget arrangements necessitated by an enterprise of national importance.

The detailed arrangements for carrying out the project will be settled by an Administrative Decree. For example, it will be necessary to make a special effort to remove all those small difficulties which at present give a pretext for indifference even to the best disposed workman. It is indispensable that, without loss of time and without formalities, he shall be able to pay in his contribution, whether every day, or at any time when he is at leisure to do so. We believe that for this purpose there might be turned to account a method already explained, according to which there would be placed on sale at the Treasury, in the town-halls, and at the tobacconists' stamps to the value of 5 or 10 centimes ( $\frac{1}{2}$ d. or 1d.), which the workman and his master would then affix to a special sheet bearing the name of the depositor, and which would be cancelled. Every three months at least the depositor would present these sheets, either at the town-hall of the commune in which he is or at the tax-collectors, and he would be credited on his pension book with the amount of the value of his stamps. Whatever executive arrangements may be made, this principle will always have to be kept in view—namely, that in order to assure the success of a popular system of pensions the means of saving cannot be rendered too accessible to the workmen.

"Let us remark, finally, that, by a special provision of the law, we declare that the retiring pensions shall not be subject to legal seizure. This privilege will render the pensions absolutely secure.

"These few remarks indicate sufficiently the spirit in which the new project has been conceived.

"The Government is far from pretending to offer a perfect solution; but, by developing by means of these important advantages the taste for saving among the working populations, it believes it will effect a considerable advance. It will be happy to have the remarks of the representatives of the country on this subject, and to accept the practical improvements that may result from them. It addresses itself, therefore, with confidence to Parliament, which will be heartily desirous of assuring to the workers the security and dignity of their old age. It appeals to the general goodwill in this work of social provision for the future and social equity."

#### *The Text of the Bill.*

##### Part I.

1. There is established, for the benefit of the workmen, employés, small farmers, or servants of both sexes, being Frenchmen or Frenchwomen, whose annual means are under 3,000 fr. (£120), a Workmen's Pension Fund, which is annexed to the National Old Age Pension Fund, governed by the law of July 20, 1886.

2. This fund is supported by—
- (1) The direct contributions of the depositors, increased by equal sums paid by the masters employing them.
  - (2) The contributions made by the State under the conditions hereinafter stated.
3. He that hires out his services is presumed to wish to avail himself of the advantages of the law, in the absence of a declaration to the contrary before the mayor of the locality where he lives. A receipt of this declaration will be delivered to the declarant.
- In default of the production of this receipt, the master will have to stop from the sums owing to the person whose services he hires a sum of 5 centimes ( $\frac{1}{2}$ d.) at least and of 10 centimes (1d.) at most, per working day, and will be bound to contribute to the savings of his employé in an equal sum.
4. The sums thus made up will be paid at least every three months, either to the Workmen's Pension Fund, or to a mutual benefit society, or to a pension club, or to a trade association, or to a provident fund regularly authorised. They must be credited to a special account.
- The benefit societies, the trade associations, the pension clubs, and other provident societies may either invest the funds thus received under the conditions provided by the law relating to benefit societies, or deposit them with the Workmen's Pension Fund.
5. Societies other than the benefit societies authorised by the State will not be allowed to give their members the benefit of the present law, except by virtue of a decree of the Minister of the Interior [Home Secretary].
6. The payments entered in the account-book of the depositors will receive an addition of two-thirds from the State. The total amount of these sums will be inscribed annually at least in the account-books.
7. In support of the first request for the State increase, the depositor will have to declare, and to have it certified by his master and the mayor of his commune, that his annual means do not reach 3,000 fr. (£120).
- At the time of the payment of his pension, he will have to prove that he does not enjoy an income exceeding 600 fr. (£24).
- Every false declaration will be punished by a penalty of 50 fr. to 500 fr. (£2 to £20), and will entail the cancelling of the State increase.
8. The depositors may contract with the Life Assurance Fund instituted by the law of July 11, 1868, by means of thirty annual premiums, a life assurance for an amount varying from 500 fr. to 1,000 fr. (£25 to £50), equivalent to the total of the sums that they would have to pay individually to the Workmen's Pension Fund.
- The State will charge itself with one-third of these annual premiums.
9. In order that the sums given by way of increase by the State may definitively be secured to the depositor, it will be necessary for him to have paid contributions from the age of 25 up to the age of 55 years.
- Interruptions of contributions, which may not exceed five years in all, are allowed on grounds of inevitable necessity in favour of depositors who shall justify them. The arrears will have to be made up.
10. The life annuities to which the sums entered in the workman's account book will give a right will be inscribed in the ledger of the National Old Age Pensions Fund. The payments arising from the contribution of the State will be applied to form the fund, but so that this pension, together with the depositor's other income, shall not exceed 600 fr. (£24).
11. Every master employing foreign workers of either sex will have to pay 10 centimes (1d.) for each working day of these workers.
12. There will be formed a general fund by means of—
- (1) Gifts and legacies given to the Workmen's Pension Fund ;
  - (2) The contribution paid by the masters employing foreign workmen ;
  - (3) The sums remaining available from the contribution of the State in consequence of the payment of pensions exceeding 600 fr. (£24) or for the benefit of depositors possessing incomes exceeding 600 fr. (£24) ;
  - (4) The sums arising from the contributions of the State and withdrawn from the account of the depositors in consequence of failure to keep up their contributions ;
  - (5) Arrears of annuities not claimed within a certain time ;
  - (6) Interest on the general fund.
13. The proceeds which support annually the general fund will be applied :—
- (1) To complete, to the extent of one-half, the annual premiums paid to the Life Assurance Fund by the depositors whose funds shall have been invested by a mutual benefit society or by any other provident society ;
  - (2) To pay in advance the pensions of the workmen, employees, small farmers, or servants, prevented by infirmity from working, to the extent of the whole of the pension in the case of those whose payments shall have been invested by a mutual benefit society or a provident society, and to the extent of one-half of the pension in the case of those whose funds have been paid to the Workmen's Pension Fund ;
  - (3) To assist, in exceptional cases, those that temporarily fail to keep up their contributions in consequence of accidents ;
  - (4) To the cost of management of the Workmen's Pension Fund.
14. The retiring pensions paid under the present law can be neither alienated nor subjected to legal process.

#### Part II.—Temporary Provisions.

15. The persons mentioned in the first clause, being over 25 years of age and under 40, may take advantage of the provisions of Part I on condition of commencing their contributions in the year following the promulgation of the law.
16. The life annuities already made by the National Pension Fund will receive an addition of two-thirds under the limitations stated in clause 9, provided that they have been produced by at least ten annual contributions.
17. In like manner, the life annuities arising from payments already made by the depositors or to be formed by the benefit societies will receive an addition of two-thirds on their payment, and under the same limitations and conditions.
18. An Administrative Decree will settle the proper arrangements for assuring the carrying out of the present law.

#### Cost of Old-age Pensions.

There is perhaps no subject on which more hazy notions prevail than the cost of old-age pensions. It is not too much to say that three-fourths of the suggestions that are published would not see the light had the authors the remotest idea of the cost of their schemes. Much also of the criticism that is directed against the inadequacy of pension schemes would lose its point if the critics would only look at the question from the financial standpoint. Perhaps the best way of bringing home this point is to take a moderate pension scheme, such as that recently adopted by Parliament for the police, and ask what it costs. The police pensions include officers as well as men, and this circumstance makes the comparison not entirely on all fours with schemes intended to apply solely to workmen ; but the difference is not very great, as, although officers receive larger pensions corresponding with their pay, they are few in number relatively to the whole Force. The Act providing for the pensions of the Scotch police lends itself most conveniently for the purposes of illustration. Under that Act the age at which a man may retire as a matter of right is 55 ; and the average pension is about £1 a week. The Act also authorises gratuities to be paid to those policemen who at an earlier age are compelled to retire in consequence of want of health or strength, and it also provides pensions for those who are injured in the execution of their duty, and for the widows and orphans of those who are killed. But the main expense is the superannuation allowance of, upon an average, £1 a week at the age of 55. To meet this liability a Government grant of £40,000 a year was allocated, to which has to be added a deduction from the wages and salaries and certain other items, which add fully £8,000 a year. The Government actuary assured the Committee which passed the Bill that the provision of £48,000 a year was enough, but not more than enough, to provide for the proposed benefits. No doubt was cast upon this estimate, but nevertheless the Government insisted upon making the ratepayers liable for any deficiency, should the calculations prove erroneous. There are in round figures 4,000 members of the Police Force, so that the premium for insurance against old age and injuries received in the execution of the policeman's duty amounts to no less than £12 per man per annum, or nearly 5s. a week on the average for every member of the Force. If we were to provide for the working men of Scotland superannuation allowances no higher than the amounts deemed reasonable for policemen, the cost would hardly be less than £7,000,000 a year, or twice the total expenditure of all the local authorities in Scotland. A simple fact like this may have more effect in moderating our expectations as to the nature of the old-age paradise that it is possible to secure for the great bulk of the people than many pages of argument.

How

*How to calculate old-age pensions.*

The cost of providing a pension for old age depends upon a variety of circumstances, and it may vary within wide limits. Suppose a man, age 20, wishes to buy at that age by a single payment a pension of £25 a year to begin at 65, the cost may be as low as £10 4s. 8d., or as high as £34 11s. 6d. It all depends upon the conditions. If the money is an absolute payment, not to be returned in any event, and it is invested at 5 per cent. compound interest, the lower sum would suffice; but more than eight times as much is required if interest is reckoned at only 2½ per cent., and the money is returnable on demand. This is an extreme example; and according as the conditions vary, the price may be any sum between. The chief elements that influence the cost of pensions are—(1) the rate of interest on the money invested to produce the pension; (2) the age at which the payments begin, and the number of payments; (3) the age at which the pension becomes payable; and (4) whether the premiums are non-returnable or are returnable, and if so, in what events, and whether with or without interest. Each of these elements may be separately considered and illustrated.

*Effect of rate of interest.*

In order to show the difference in cost of pensions through variations in the rate of interest on the premiums invested, I have prepared the following table, based on the figures supplied by an eminent actuary, Mr. W. Sutton, to the Committee of the House of Commons to which was referred last year the London School Board's Superannuation Bill. Mr. Sutton's tables, it is proper to state, are based on the assumption that during the period of contribution the mortality will follow that of general population as shown in the highest life-table No. 3, and that during the currency of the pensions the mortality will be the same as shown in the Carlisle table. This table shows the cost of a pension subject to the following conditions:—the age of the insurer is 20; he desires a pension of £25 a year at the age of 65; the premiums to be non-returnable. The second column shows the cost of a single payment at the rate of interest shown in the same line; the third column gives the annual premium required, assuming it to be paid yearly from the age of 20 till 65.

Cost of pension of £25 at age of 65. Subscriber is 20 years old, and the premiums are not returnable.

Rate of Interest.	Single Payment.		Annual payment from 20 to 65.	
	£	s. d.	£	s. d.
2½ per cent.	35	16 2	1	11 8
3	27	15 3	1	6 6
3½	21	11 5	1	2 1
4	16	15 10	0	18 5
5	10	4 8	0	12 9

The difference between the cost, whether by a single or by an annual payment, at the rate of 2½ and of 5 per cent., is very striking.

*Age at which premium is paid.*

A still more important factor is the age at which a pension is purchased or the annual payments begin. In youth it is cheap to make provision for old age, but unhappily that is the time when the drawbacks to old age do not haunt the imagination; when old age, with all its grisly terrors, draws near, the cost rises to a point that is almost prohibitive. In order to show the effect of the age of payment, I again have recourse to Mr. Sutton's tables, and assume 3 per cent. is the rate of interest. Suppose a person wishes to obtain a pension of £25 a year at 65 (premiums not returnable), the price will vary according to his age when the payments begin, in the following manner:—

Age when Payment begins.	Single Payment.		Annual Payment from Age named till 65.	
	£	s. d.	£	s. d.
20	27	15 3	1	6 6
25	33	12 2	1	14 0
30	40	17 6	2	4 6
35	49	19 0	2	19 5
40	61	9 9	4	1 10
45	76	8 7	5	17 11
50	96	7 6	9	2 3
55	124	7 7	15	19 0
60	165	13 5	37	11 5

A glance at this table shows how rapidly the cost of providing pensions increases with age, and impresses the necessity of beginning early, if we do not mean to be too late.

*Age at which pension begins.*

It is obvious that the cost of a pension to begin at 50 must be very much higher than if it commenced at 60; in a general way the fact is obvious, but it is desirable to give some precision to our ideas on the subject. For this purpose, I have arranged a table based upon the Post Office scale of annuities. These are calculated on a lower rate of interest, 2½ per cent., the premiums not returnable. Again, I take the case of a man, age 20, who wishes to secure a pension of £25 to commence at the ages under mentioned:—

Age at which Pension begins.	Single Payment.		Annual Payment.		No. of Annual Payments.
	£	s. d.	£	s. d.	
50	122	18 6	6	13 4	30
55	86	17 6	4	7 6	35
60	58	13 0	2	16 3	40
65	36	19 6	1	15 5	45
70	29	18 6	0	18 9	50

Thus a person at the age of 20 buying from the Post Office a pension of £25 a year will have to pay about six times as much if the pension is to begin at 50 as it would cost him if the pension begins only at 70. The cost of the pension at 55 is more than twice the same pension at 65.

*Premiums returnable.*

If the premiums are not returnable, the survivors get the advantage accruing from the predecease of subscribers before the pension age. The cost must obviously be greater if the money is returnable on death before the pension age, or during the lifetime of the subscriber, and it must also vary according as interest is or is not paid on the money returned. For the purpose of illustration, however, it will be sufficient to give one example, and for this purpose, I assume the same conditions as in the preceding table, with this difference only, that the money is returnable during life or at death before the pension age without interest. Again, I follow the Post Office tables.

Cost of a pension of £25 a year payable at under-mentioned ages; payments to be made or begin at twenty; interest 2½ per cent.; money returnable on demand or on death without interest.

Age at which Pension begins.	Single Payment.		Annual Payment.		No. of Annual Payments.
	£	s. d.	£	s. d.	
50	186	19 6	8	15 0	30
55	147	16 0	6	5 0	35
60	113	4 6	4	9 7	40
65	84	11 6	3	2 6	45
70	61	19 6	2	3 9	50

On comparing this with the preceding table it will be observed that the cost of a pension of £25 a year beginning at 70, paid in one sum at 20, is only £20 18s. 6d., if the money is not returnable, but is £61 19s. 6d. if the premiums are returnable. The one is three times as great as the other. If, however, the pension begins at 50 the difference is only £64 (£186 19s. 6d. less £122 18s. 6d.). This result, which at first sight appears startling, is due to the fact that the number who die before the age of 70 is vastly greater than the number who die before 50, and the older the period at which the pension begins the greater the advantage is to the survivors.

PAUPERISM

## PAUPERISM AND OLD AGE.

A return obtained by Mr. Burt gives the exact number of persons over 60 years of age who on 1st August, 1890, received poor relief in England. It does not, however, include lunatics in asylums, licensed houses, and registered hospitals, vagrants, or persons to whose wives and children, but not to themselves, relief was granted:—

Ages.	Indoor paupers.			Outdoor paupers.			Total of paupers.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
60 and under 65.....	8,018	5,354	13,372	5,959	21,849	27,808	13,977	27,203	41,180
65 and under 70.....	9,468	6,339	15,807	10,567	35,866	46,433	20,035	42,205	62,240
70 and under 75.....	9,953	6,856	16,809	17,633	43,266	60,899	27,586	50,122	77,708
75 and under 80.....	7,086	5,298	12,384	16,474	32,021	48,495	23,560	37,139	60,879
80 and over.....	4,949	4,803	9,752	12,456	22,652	35,108	17,405	27,455	44,860
<b>Totals .....</b>	<b>39,474</b>	<b>28,650</b>	<b>68,124</b>	<b>63,089</b>	<b>155,654</b>	<b>218,743</b>	<b>102,563</b>	<b>184,304</b>	<b>286,867</b>

This table gives some instructive information. Notwithstanding that after the age of 60 the population is rapidly thinned by death, we observe that the number of paupers over 80 exceeds the total between the ages of 60 and 65. Among the outdoor paupers the excess in the number of women is noticeable. But the true lesson of these figures only comes out when we compare the number of paupers with the total population of the corresponding ages. The return gives us the number relieved on a particular day; but it does not tell us how many would receive relief in the course of a year. The total can only be estimated. A calculation is to be found in Mr. Charles Booth's paper, read before the Royal Statistical Society in December, 1891.

Table showing proportion of paupers to population of different ages:—

Ages.	Paupers.	Population.	Per cent.
Under 60 .....	1,247,697.....	28,866,294.....	4·6
60 to 65 .....	82,573.....	812,028.....	10·2
Over 65 .....	567,660.....	1,322,696.....	38·4

Mr. Booth arrived at the results in this table by assuming that the numbers in Mr. Burt's return ought to be increased by 60 per cent. for indoor paupers, and 120 per cent. for outdoor paupers. His assumption was justified by the figures of the London parishes, which alone he had at command. Further information has convinced him that his estimate is excessive, and that the true proportion of pauperism over the age of 65 is not 38, but 25 or 26 per cent. But, even with this modification, the figures are startling enough. While only one in twenty of the population under the age of 60 is driven to poor relief, no fewer than five out of twenty above the age of 65 are compelled, in some form or other, to accept the aid of the poor law. Up to the age of 65 the working men gallantly keep up the struggle and keep clear of the relieving officer, but after that age they rapidly succumb. Sixty-five appears to be the turning-point so far as the bulk of the people are affected, but doubtless in some trades of an exceptionally unhealthy or harassing character many men are broken down even before the age of 65.

*Lord Lynton's Return.*

Many persons who in old age are obliged to fall back upon the poor law have endeavoured, by joining friendly societies, to provide for the future, and in consequence some severe reflections have been made upon these societies. The return obtained in 1891 by Lord Lynton is useful as affording an exact measure of the extent, if any, to which the failure of friendly societies may have contributed to pauperism. The total number of indoor paupers in England is about 200,000; but of that number only 14,808 had ever been members of any benefit society. Of this number the great majority, 10,215, had ceased to be members by reason of non-payment of contributions, withdrawal, or dismissal; and in the case of 4,593 the society had broken up. This amounts to little more than one out of fifty of indoor paupers, so that a very small percentage indeed of the indoor pauperism can be ascribed to the collapse of benefit societies. The fact has, however, a certain tragic interest, for it may be in their case that they had done their best to make provision for a rainy day, and, through no fault of their own, the societies failed them in their hour of need. There is a certain grim pathos in the figures which show us for how many years some of these unfortunate people had been subscribing.

Members for less than ten years.....	1,583
„ for ten and less than twenty .....	1,216
„ for twenty and less than thirty.....	955
„ for thirty years and upwards .....	814
„ for period not known .....	25
	<b>4,593</b>

*The chance of Survival.*

One of the most foolish objections to old-age pensions takes the form of an assertion that the working man so rarely lives to the advanced age that it is hardly worth while making any provision for such a contingency. The statistics of old-age pauperism lend little colour to such an assertion. No doubt the rate of mortality may run high in some few industries, and it is not possible to get satisfactory data for each separate trade. Indeed, some authorities are not satisfied with the life tables in use among insurance companies. Mr. Young, in an appendix to Mr. Wilkinson's recently published book on "Pensions and Pauperism," says he shares the opinion of Mr. Sutton, actuary to the Registrar of Friendly Societies, "that no adequate data for the probable expectation of survivance at present exist." This may be true if extreme exactness is required for actuarial calculations; but the life tables in current use may for all practical purposes be relied upon.

According to the new English Life Tables, 1871-1880, of 1,000 males, aged 25, 452 may be expected to attain 65, and of 1,000 females 520 will reach the same age.

The Odd Fellows' and Foresters' tables for working men show a higher longevity than the general population, according to Dr. Ogle's tables. This may be accounted for, partly at least, by the fact that the worst lives are rejected by the friendly societies; but, after making allowance for that circumstance, it is most improbable that the mortality in the working class would substantially exceed that of the general population.

Of 10,000 persons age 21, there will survive—

	Dr. Ogle's Tables.	Odd Fellows' Tables.
At 60 years of age .....	5,401 .....	5,947 .....
At 65 .....	4,300 .....	4,919 .....
At 70 .....	3,280 .....	3,759 .....

*Existing provisions for old age.*

As a general rule, friendly societies do not profess to make provision for old age. A few stop sick pay at 65, and make a superannuation allowance of 4s. or 5s. a week thereafter for life. A few more provide for persons who are both old and disabled. A larger number practically give old-age pensions under the name of sick relief, and thereby imperil their financial soundness, as the contributions are based on the statistics of sickness alone. Quite recently, the Manchester Unity of Odd Fellows has issued a new form of insurance for sickness to end at 65, and of pensions of 5s. a week thereafter. Many of the trades unions also provide superannuation allowances, generally only for those who are disabled after a certain age. But it remains an undoubted fact that all of such provisions extend only to a small minority of the working class, the great bulk of whom, when past work, depend upon their children, and who, if they have no friends or children to support them, go into "the house."

A writer in the *Glasgow Mail* published a series of articles towards the end of last year, giving the results of a minute and laborious inquiry into the extent of the provision made by the working classes in Glasgow against sickness and death. Authentic information of this kind is so scanty that I make no apology to the readers of the *Dispatch* for presenting them with a summary of the results of this inquiry:—

	373,719					

The total population of Glasgow and district exceeds 800,000, and from the above table it appears that there are no fewer than 451,559 wage-earners insured in some society or other. The largeness of this figure indicates that a considerable number are insured in more than one. It will be observed, however, that the great bulk of the insurance is for small sums at death, mostly for burial expenses. This class absorbs 336,819 of the total. Against sickness the insured number 114,490, probably about a third of the working-men. But the total membership of all the societies which make any sort of provision for old age is only 13,059, or about 3 per cent. of the working class. The amount of the superannuation allowance is worthy of notice. The pensions vary from 3s. to 9s. a week, and the premiums from 6d. to 1s. 6d. a week. The Glasgow figures confirm the experience of other places. The great bulk of the working class insure for burial money; less than one-half insure against sickness; and, on the whole, probably fewer than 8 per cent. make any provision against old age.

It would be idle to labour a conclusion the truth of which is a matter of common knowledge. Working-men when disabled by old age are without any independent provision. The number who have secured a pension in old age is infinitesimal. On the other hand, provision for funerals is almost universal, and a number, varying between a third and a half, have secured themselves against loss by sickness. In working-class providence old age is almost a blank. How is this blank to be filled up? This is the practical question. Next week we propose to summarise the various plans that have been proposed to remedy a flagrant and notorious defect in our social life.

EARLY last year a conference was held at the House of Commons between the followers of Canon Blackley and a few members of Parliament, Mr. Chamberlain taking the chair. So much interest was manifested in the making of better provision for the old age of workmen that fresh meetings were held, until at last between eighty and ninety members of Parliament formed themselves into a committee for the discussion of the subject. In the result a general agreement was arrived at on two important points—(1) that, for the present at all events, compulsory insurance against old age was impracticable, but (2) that it was expedient that the State should encourage such provisions by contributing partly to old-age pensions. Schemes carrying out these views were submitted by Mr. Chamberlain, M.P., Mr. Rankin, M.P., Mr. Mallock, M.P., and Mr. John Lloyd, L.C.C., the hon. sec. of Canon Blackley's society. The time at the disposal of members of Parliament did not permit the detailed consideration of those schemes by the general committee, and, moreover, such a discussion would have been fruitless in the absence of skilled actuarial assistance. It was accordingly resolved that the preparation of a scheme, upon the lines laid down by the committee, should be entrusted to a committee consisting of the three gentlemen who had drawn up schemes, together with Mr. Hunter, M.P. It was an instruction to this sub-committee that they should devise a scheme that would not conflict with the work of the friendly societies, and that they should meet leading representatives of these societies in friendly conference. In accordance with this remit, the sub-committee, with actuarial aid, prepared a scheme, which was submitted last Wednesday to leading representatives of the friendly societies. This draft scheme is all but completed, and will forthwith be submitted to the general committee. Until that committee has considered the scheme, its proposals must be regarded as merely provisional.

The draft scheme provides an alternative means of insurance for old age. A person may under the plan provide for old age through the Post Office, or a friendly society, or trades union, or by any other association. If the scheme should be adopted its principal chance of success lies in its being taken up by friendly societies. The provisions under this branch vary according as a person is under or over 25 years of age at the time when the plan comes into operation. Take the case of a person under 25 by way of illustration. If one subscribes either by instalments or in a lump sum £2 10s. in the post office before he has reached 25 years of age, and if he subsequently secures a pension of not less than 2s. 6d. a week at the age of 65, from a friendly society or otherwise, he will then be entitled to an additional benefit of 2s. 6d. a week from the State. The Oddfellows' Society has published a scale of old-age pensions of 5s. a week at 65. Every person who gets such a pension will be entitled to an additional 2s. 6d. a week; and thus a small pension of 5s. a week is converted into the more satisfactory sum of 7s. 6d. a week. These are the figures in the draft scheme, but the essential principle is a moderate addition to the pension obtained through a friendly society, and it is hoped that this additional inducement may assist the friendly societies in winning adherents to these admirable provisions for old age. For those who are over the age of 25 a higher scale of pension is necessary, as fully stated in paragraph 7.

Those who are not members of friendly societies or trades unions providing old-age pensions may insure in the post office. They have a choice of making their premiums returnable or non-returnable. If they select the latter they will earn a pension of 5s. a week practically by a payment of 10s. a year from the age of 20 to 65. But the subscriber has an option—he may so insure that in the event of his death before 65 he will secure a moderate provision for his wife and family. This costs 20s. a year over a period of forty-five years. The benefits to the widow and children are considerable. For the first six months after the subscriber's death his widow will receive 5s. a week, and 2s. per week for each child, but so that the whole shall not exceed 12s. a week. At the end of six months the maximum payable to one family will be 8s. per week, and will continue at the rate of 2s. per week per child until the youngest child shall reach 12 years of age. Such a plan would provide a much-to-be-desired life insurance for the working classes. A workman would have the satisfaction of knowing that if he died in early life his children would be lifted well above the dreary level of pauperism; and, if he lived to bring up his family so that such provision was unnecessary, he would have a provision for his old age.

Such, in bare outline, are the chief features of the draft scheme; for fuller details we refer our readers to the scheme itself. Probably the feeling with which one will rise from a perusal of the scheme is one of disappointment. Is this all, it may be asked, that can be done for old age? The answer to this question is simple. It is all that can be done for the money. If Parliament is prepared for a larger expenditure on old-age pensions than is contemplated by the committee, and if this is responded to by larger contributions from the workmen, undoubtedly larger pensions can be provided. It is all a question of money.

It is probable that the friendly societies may be tempted to compete with the post office in providing temporary annuities for widows and orphan children. If so, they would deserve the same assistance and encouragement that is offered for old-age pensions. At present, however, few societies would be in a position to take advantage of such provisions. The question would doubtless be considered very carefully by any Government before finally settling the provisions of any State-aided scheme of insurance.

On reading the terms of the scheme, our readers will perceive that the State is not brought into any relation with the friendly societies, has no responsibility for them, and no claim to control arising out of the aids to pensions. A man who has made his deposit in a post office, on reaching 65 will simply present his certificate and evidence of having secured a pension elsewhere than in the post office. With the society of which he has been a member the Government will have no concern. It matters not *where* he gets his pension, it is only with the fact that he *has* secured a pension of not less than 2s. 6d. a week that the State has to deal, and the additional State pension becomes due. It would be impossible for human ingenuity to exact from such an arrangement the slightest reason for any further interference with friendly societies. Non-interference with these institutions is the principle of the following.

#### DRAFT SCHEME.

##### I.—Establishment of Fund.

A State Pension Fund to be established, to which Parliament should be asked to make an annual grant, to be supplemented by contributions from local rates.

##### II.—For Males—Money Returnable.

(a) Every male who, for the purchase of a pension under this head, shall pay £5\* to the Post Office Savings Bank before he is 25 years of age shall thereupon be credited with a further sum of £15 from the State Pension Fund; and thereafter for forty years he shall pay £1 per annum to the Post Office Savings Bank. On these forty annual sums being duly paid, and on his reaching 65 years of age, he shall be entitled to a pension of £13 per annum.

(b) If the insured person die before the third annual sum of £1 is due and paid, the sum of £5 which he deposited shall be returned to his widow or other authorised representative.

(c) If the insured person die after the third annual sum of £1 is due and paid, and before reaching 65, leaving a widow and young children, or a widow without children, or children without a widow, the widow (if any) shall receive 5s. per week for twenty-six weeks, and there shall be paid for each child under 12 years of age (if any) 2s. per week until he or she reaches the age of 12 years; but so that the total sum paid to one family shall never exceed 12s. per week during the first twenty-six week, or 8s. per week thereafter.

(d) If the insured person die after the third annual sum of £1 is due and paid, and before he reaches 65, leaving neither widow nor children, there shall be paid to his duly appointed representative the sum of five pounds (£5).

(e) Every male under 25 years of age may insure under this head for a pension larger than £13, but not exceeding £26 per annum. For each £1, over and above £5, deposited before age 25, his pension will be increased by 5s. 4d. per annum; and for each 10s. over and above £1 paid annually, between 25 and 65 years of age, his pension will be increased by £3 6s. 8d. per annum. In the event of his death before age 65, the amount of the additional deposit, or annual sums thus paid, will be returned to his widow, or authorised representative, in addition to the amount to which they would otherwise be entitled.

The returns to be made under b, c, d, and e are subject to V.—Arrears.

##### III.—For Males—Money not Returnable.

(a) Every male who, for the purchase of a pension under this head, shall deposit £2 10s. in the Post Office Savings Bank before he is 25 years of age shall thereupon be credited with a further sum of £10 from the State Pension Fund; and thereafter for forty years he shall pay 10s. per annum to the Post Office Savings Bank. On these forty annual sums being duly paid, and on his reaching 65 years of age, he shall be entitled to a pension of £13 per annum.

(b) Every male under 25 years of age may insure under this head for a pension larger than £13, but not exceeding £26, per annum. For each £1, over and above £2 10s., deposited before age 25, his pension will be increased by 11s. 8d. per annum, and for each 5s., over and above 10s., paid annually, between 25 and 65 years of age, his pension will be increased by £2 16s. 10d. per annum.

##### IV.

\*This sum may be paid in instalments as may suit the convenience of the subscriber.

*IV.—For Females—Money not Returnable.*

(a) Every female who, for the purchase of a pension under this head, shall deposit £1 10s. in the Post Office Savings Bank before she is 25 years of age shall thereupon be credited with a further sum of £8 from the State Pension Fund; and thereafter, for forty years, she shall pay 8s. 8d. per annum to the Post Office Savings Bank. On these forty annual sums being duly paid, and on her reaching 65 years of age, she shall be entitled to a pension of £7 16s. per annum.

(b) Every female under 25 years of age may insure under this head for a pension larger than £7 16s., but not exceeding £26 per annum. For each £1, over and above £1 10s., deposited before age 25, her pension will be increased by 8s. 4d. per annum, and for each 4s. 4d., over and above 8s. 8d., paid annually, between 25 and 65 years of age, her pension will be increased by £1 18s. 3d. per annum.

*V.—Arrears of Contributions.*

If the annual contribution of an insurer is not duly paid, interest at 5 per cent. per annum shall be charged thereon. An insurer may pay up his back contributions, with interest at 5 per cent. per annum, at any time within five years of their falling into arrear. But if the contributions of an insurer are in arrear for five years, he shall forfeit the deposit and contributions previously paid, and shall cease to have any claim upon the fund.

*VI.—Persons insured elsewhere than in the Post Office.*

(a) Every male who, before he is 25 years of age, shall deposit £2 10s. in the Post Office Savings Bank, and shall prove that he is insured elsewhere for a pension of not less than £6 10s., shall, on reaching 65, and on showing that such pension will be paid to him, be entitled to an additional pension of £6 10s. per annum.

(b) Females same as above, but—

	£	s.	d.
Deposit .....	1	10	0
Insured elsewhere .....	3	18	0
Additional pension .....	3	18	0

NOTE.—The credits from the State would be approximately the same as though they had insured entirely with the State Pension Fund on the non-returnable scale.

*VII.—Persons over 25 at passing of the Act.*

(a) Every male who at the passing of the Act is above the age of 25 years, and who within three years of the passing of the Act, being then under 50 years of age, shall deposit in the Post Office Savings Bank:—

£4	if he is under 30 years of age.
£5	do 35 do
£6	do 40 do
£8	do 45 do
£10	do 50 do

and shall prove that he is insured in the Post Office or elsewhere for a pension of not less than £6 10s. per annum, shall, on reaching 65, and on showing that such pension will be paid to him, be entitled to an additional pension of £6 10s. per annum.

(b) Females same as males, but—

£3	if under 30 years of age.
£4	do 35 do
£5	do 40 do
£6	do 45 do
£7 10s.	do 50 do

and

Insured elsewhere .....	£3 18s.
Additional pension .....	£3 18s.

*VIII.—Persons in the employment of the Government.*

All persons in the employment of the Government must open a State Pension Account as a condition of their employment. Where such persons are entitled under existing conditions to superannuation allowance, the Government may pay the subscriptions for their State pension and deduct the amount of the pension from the superannuation allowance to which they would otherwise be entitled.

*IX.—Persons employed by Firms, Individuals, or Institutions.*

All employers of labour—whether firms, individuals, or institutions—may open State Pension Accounts for any of the persons employed by them; and, in the event of any such person leaving their employment before the period at which the pension falls due, may transfer the amount standing to the credit of any such person to any other person in their employment. If the transferee is not of the same age as the original holder of the pension claim, the amount to his credit may be made up to what it would have been if he had been an original subscriber; or he may be held entitled to a pension proportionate to the amount transferred to his credit and having regard to his age at the time of transfer.

*X.—No power of assignment.*

No person shall have power to assign or alienate his pension.

*XI.—Payment by a lump sum.*

Persons desiring to provide for their pensions by payment of a lump sum, in place of an annual contribution, shall be permitted to do so at any age according to a table to be prepared.

**CONCLUSION—COMPULSORY OLD-AGE INSURANCE.**

It is truly said that no voluntary pension scheme will ever secure a provision for all the aged poor; and, indeed, no such plan could be expected to affect more than a minority of the working-class. If we may form an estimate from Mr. Charles Booth's Census of the Poor in London, we may well believe that about 30 per cent. of the population have earnings too small or too precarious to admit of the long-sustained effort that is required to secure even a very moderate old-age pension. About one-fifth of the population are in circumstances so comfortable that a pension scheme, such as that described in last week's *Dispatch*, would have no attractions for them. We may thus at once rule out half the adult population as being unlikely to avail themselves of any insurance for pensions, whether State-aided or not. Still, in the remaining half of the population a vast field is open for enterprise which, up to the present time, is hardly touched by any existing agencies. To what extent, without compulsion, that large class could be induced to make provision for old age is a question that cannot be satisfactorily answered without trial.

Much of the disappointment that is naturally felt in dealing with voluntary schemes of insurance arises from too ambitious desires. No voluntary scheme could be expected to rid us of old-age pauperism, and it must attain a great success before it could make even an appreciable impression on it. The persons who have the foresight and self-denial to provide for the future are least likely, under any circumstances, to come upon the poor-rate, and the class of persons that furnish the bulk of the recruits to the ranks of pauperism are precisely the unthrifty and self-indulgent. To some extent, of course, every old-age pension that is taken up takes away a possible inmate of the workhouse, but no prudent advocate of a voluntary scheme would rest his case upon the hope of abolishing old-age pauperism.

The weak point again of every voluntary scheme lies in the lifelong and continuous effort which it demands of the workman. The choice is between a heavy payment over a short period in early youth, and small instalments covering the whole period from 20 to 65. If the latter course is preferred, a man may secure a pension on the non-returnable scale of 5s. a week at 65 for a weekly payment of 2½d. If he desires also to insure for 2s. a week for each of his children on his death the weekly contribution would be 4½d. It would be idle to say, at all events of the great majority of the working-classes, that they would not pay 2½d. or even 4½d. a week. When fully employed, they could well afford the

the money; but when sickness comes, or loss of employment, they fall into arrears, and if their wages are low, it may require a heroic effort to recover the lost ground. When payments are to be made not weekly but quarterly or half-yearly, the tendency is strong to put off the saving until the day of payment comes near; then occasionally the workman will find himself short of cash, and the opportunity will be lost. Some external pressure would seem to be necessary to keep him up to the mark, and to ensure the due performance of his good intentions.

Such considerations have led many to believe not only that compulsion is necessary if any general provision for old age is to be secured, but that a voluntary scheme is so little likely to succeed as hardly to be worth a trial. It is, however, unnecessary to discuss the desirability of compulsion, as there is a prior question that must be answered. How is compulsion to be carried out? Is it practicable?

*Canon Blackley's Compulsory Scheme.*

The first plan that seems to have occurred to Canon Blackley, who may in England be described as the father of compulsory insurance, was to impose upon everybody, rich and poor, male and female, an obligation to pay a sum of £10 into the Post Office before they reached the age of 21. This scheme did not find favour with the Committee of the House of Commons that sat in 1885-87. How could such an obligation be enforced? Canon Blackley invoked the aid of the employers, who might be made to answer for their workmen. But this plan must be futile unless the employers were to refuse work to those who could not prove that they were insured. Neither employers nor workmen would be grateful to a Government that added this new clause of conflict to all their existing sources of embarrassment. We find it very hard to compel parents to send their children to school; but the inspectors have an easy means of proving the violation of the law when they find the children in the streets and not in the schools. But whether a man has paid his insurance or not is a secret in his own bosom, and could not be extracted from him without the application of inquisitorial methods, to which the British working-man could not easily be subdued. Moreover, the cost of compulsion of the kind that found favour with Canon Blackley would be enormous. The scheme falls between two stools. If such compulsion were not enforced by a very costly process it would be quite ineffective; if it were made effective the cost would render the scheme insolvent.

*The German Form of Compulsion.*

The Germans have adopted a system of compulsion which is relatively both cheap and effective. No obligation is imposed on the workman at all; but his employer is compelled to pay a weekly sum for insurance against old age, and is allowed to deduct half the amount from the wages of the workman. It is possible to get at the employers, although it is not practicable to compel the workmen. But, of course, only those workmen in regular employment can be brought within the operation of the law. The German scheme of compulsion is not universal; it fails to make provision for the most difficult case of all—the casual labourer. It is more comprehensive than a voluntary scheme, but it is not all-embracing.

Recent information from some parts of Germany shows that the machinery of the law is yet far from perfect. The system is cheap and ingenious. Each workman has to take out an insurance card, on which there are forty-seven squares, representing forty-seven weeks in a year. Each week as his wages are paid the employer is bound to put on a stamp of the proper value representing the workman's weekly contribution to the Old-age Pension Fund. But those cards are liable to be lost, and the workman is put to great trouble when he shifts about seeking work. Besides, his employer can tell from the state of a card whether the workman has been regularly employed, and it is complained that workmen who have been out on strike are detected and refused employment. However that may be, it must be admitted that the German system is still on its trial. The experience of the next few years will be decisive one way or the other, and, in the meantime, there would be no chance of inducing the House of Commons to anticipate the result in Germany and start such a system here. If after a full trial the German system is found to work smoothly and satisfactorily, it may find advocates in this country; but, for the present, it may be regarded as outside practical politics.

*Pensions out of the Rates.*

To those who are familiar with the difficulties of providing for old age by means of provident institutions, whether compulsory or voluntary, it is not surprising that a proposal should be made to meet the wants of the workmen, when disabled by age, either by a modification of the poor law or by the bold course of offering a pension of 5s. a week to every man or woman of the age of 65, regardless of their circumstances. The support recently extended to universal pensions for old age by a writer so well informed and so remarkable for the sobriety and moderation of his views as Mr. Charles Booth, must prevent anyone who felt so inclined from dismissing the idea as chimerical and extravagant. The advantages of the scheme lie on the surface. It provides for the poorest class, and it wipes out a big branch of the poor law.

The real difficulty is the cost. A pension scheme on the modest scale of 5s. a week, beginning at sixty-five, would cost twenty-four millions of pounds a year; if the age were reduced to 60, it would cost nearly thirty-six millions a year. Suppose we started with the more limited scheme, could the hard-and-fast line of 65 be maintained? Every relaxation would involve a very large increase of taxation. Is the British taxpayer likely to face the enormous cost which even so moderate a pension as 5s., beginning at so late a period as 65 would necessarily involve? The cheapest way of raising the money, so far as the workman is concerned, would be by a national poor-rate. That would amount to 2s. in the £. What chance is there that the ratepayers, who can with great difficulty be persuaded to pay 1d. in the £ for public libraries, will welcome 2s. in the £ for old-age pensions?

In this matter of rates a broad distinction must be drawn between England and Scotland. In England the occupier pays the whole rate, in Scotland he pays half. In Scotland the working-class would get a very cheap and effective insurance out of the rates. If we suppose that in Scotland a national pension rate were raised to provide—(1) 5s. a week for every man and woman of the age of 65; (2) in case of workman's death, 2s. per week for each of his children up to the age of 12—how much would it cost? The maximum expenditure would be about £3,400,000 a year, which is at present nearly the amount of the whole local taxation of Scotland. But there would be a saving on the poor-rate, amounting perhaps to £400,000 a year, and a considerable number, say 6 or 7 per cent., of the population, would not undergo the troublesome forms necessary to be observed with a universal pension scheme. We may put that conjecturally at £200,000, so that the net and clear addition to existing local taxation would be £2,800,000 a year. This amounts to additional local taxation at the rate of 2s. 4d. in the £.

These figures are, in a sense, appalling, but the curious point, when we look into the matter closely, is that they have no terrors for the working man. The scheme of the House of Commons Committee, which provides 5s. a week in old age and 2s. per child if the workman dies, would cost 20s. a year, even with the help of a contribution from the Government of half a million a year. That sum the workman must pay with undeviating punctuality for forty-five years of his life. But if the same benefits were obtained from the rates the Scotch working-man would pay from 3s. 6d. to 14s. a year, according to his rent; the average would be about 7s. a year, as against 20s. under the voluntary scheme. A workman as occupier would pay 1s. 2d. in the £ if the whole rate were 2s. 4d. in the £. His rent varies from £3 up to £12 a year. The premium he would pay would vary with his rent, as in the following table:—

Annual rent.	Cost out of Rates.	Cost of Voluntary Scheme.
	s. d.	
£3 .....	3 6	20s. for 45 years.
4 .....	4 8	20s. "
5 .....	5 10	20s. "
6 .....	7 0	20s. "
7 .....	8 2	20s. "
8 .....	9 4	20s. "
9 .....	10 6	20s. "
10 .....	11 8	20s. "
11 .....	12 10	20s. "
12 .....	14 9	20s. "

If everybody were to be pensioned out of the rates the workman would get off cheap. Even if he were at the top of the tree, and lived in a £12 house, he would only pay 14s. as against 20s. for the voluntary scheme. He pays according to his means. But the richer ratepayers would suffer. Thus the occupier and owner of a house of £150 rental would pay annually towards the pension fund no less a sum than £17 10s., although he would not be likely to claim a pension in his old

old age. The working class, however, would not on the whole pay more than one-third of the premium required by a State-aided voluntary scheme. No fewer than 73 per cent. of the Scotch people live in houses not exceeding £10; they would supply the bulk of the pensioners, and on the average it would cost them only 6s. 5d. a year.

The financial objection to Mr. Booth's scheme, so far as Scotland is concerned, does not touch the working man; but for that reason it is all the more formidable in the eyes of the well-to-do classes. Only 16 per cent. of the Scotch people can afford to live in houses exceeding £15 rental, and all ratepayers under that figure would gain by charging the pensions on the rates; and it is true, of course, that eighty-four votes outweigh sixteen; but it would be rash to assume that a pension scheme out of the rates is within the domain of practical politics. The 16 per cent. would make the earth tremble with their cries, and most of the people who have everything to gain would probably join in with them. It is almost impossible to get the mass of the population to understand any question that involves finance. Their confidence in the rules of arithmetic would be put to a severe test. Although the workman pays so small a portion of the rates that he would get in benefits about twelve times the value of his subscriptions, yet the repugnance to a rate of 1s. 2d. would probably be fatal to Mr. Booth's scheme. A voluntary scheme is much less efficient and far more expensive to the workman, but, in spite of that, it is more likely to be adopted.

## K 2.

[To evidence of *W. F. Schey, Esq., M.P.*]

### THE OLD-AGE HOMES IN AUSTRIA.

In the Spitalgasse, in Vienna, about a mile perhaps from the Ring, stands a great yellow building. There is no architectural beauty about the place. Artists shake their heads sorrowfully when its name is mentioned. But it has a solid, well-built look, which promises much in the way of comfort for those who live there. It is in the very healthiest part of the city, too, and is a perfect model of cleanliness and order. Its windows are quite dazzling in their brightness, while as for its walls, they are painted and washed more often than those of the Burg. The house is built round a great courtyard, and abuts on the side remote from the street on one of the most beautiful gardens in all Vienna. It is a real old-fashioned garden, with sweet-smelling herbs and shrubs, and great trees that look as if they had been standing there for centuries.

This house is evidently a popular resort. Even in the morning many a visitor makes his way thither, and on fine afternoons the garden is often quite crowded. Young men and women stroll in when their day's work is done, and husbands and wives with their children. Sometimes a bridal party or a christening party may be seen there, in all their finery, just as they have left the church. Sometimes, too, sad little groups in deep mourning. The place is a sort of general rendezvous, in fact, where the old and the young meet together to talk things over. Not that it stands open to all the world—it is only the friends and relatives of those who live there who are admitted. Still, whether or not they ever cross the threshold, the poor of Vienna all look upon this building as their own special property, and take quite a special pride in its well-kept air. The veriest Ishmael among them, even when things are at the worst with him, never thinks of grudging its inmates their comfort. For it is an Old-age Home, one of the six great refuges which Vienna provides for her worn-out workers.

These Old-age Homes are an institution peculiar to Austria, one that dates back to very early days. The first of them, the Langhaus, as it was called, was built in the thirteenth century by the citizens of Vienna. Here old men and women who had no means wherewith to support themselves were lodged and provided with lights and fuel. They were dependent for their food on chance charity, but they do not seem on that account to have fared the worse, for we are told expressly that "every day without exception, they had wine with their dinner and beer in an evening." The Court, when in residence, used to send them dainties of all kinds, and the great nobles would give them a buck, or a few sheep from time to time. It was the custom, too, on high holidays—this is very characteristic of Vienna—for the rich citizens and their wives to pay visits to the poor old folk and make them presents.

The Langhaus was destroyed by the Turks in 1529; but before long another home was built in the St. Marx district, and in this between 500 and 600 old people were not only housed but boarded. During the seventeenth century several institutions of a similar kind were founded.

As times passed, the Old-age Homes lost, unfortunately, much of their distinctive character, and were often used as hospitals, and even as orphan asylums. The Emperor Josef the Second, however, speedily put an end to this state of things, for if there was one work of social reform he had more at heart than another it was that of bettering the condition of the aged poor. He was one of the first formally to enunciate the doctrine that a man who has worked in the days of his strength has the right to be supported by his fellows when old age comes upon him. By the Poor Law which he drew up for his subjects, it is enacted that any person who is destitute may, at the age of 60, claim from his commune either his free board and lodging or a pension equal in amount to one-third of his previous annual average earnings. And this was to be granted to him, not as a favour or as a charity, but as a right. The Vienna Poor Law regulations of to-day, in so far as they relate to the treatment of the aged, are founded on this statute.

All persons who have a right of settlement in Vienna, *i.e.*, about 36 per cent. of the inhabitants, may, on or after their sixtieth birthday, claim either a pension, or admission to an old-age home, always providing they cannot support themselves, and have no relatives who are bound legally to support them. As, however, there is room in these institutions for only some 4,600 persons, and there are usually more than four times that number who wish to live there—the pensions are now miserably small—the Poor-Law authorities are vested with a certain discretionary power in deciding who shall, and who shall not, be admitted. And so far as possible the preference is given to persons of good characters, to those whose destitution is the result of their misfortune, not their heedlessness or extravagance. The great majority of the inmates of these homes, therefore, belong to the respectable poor class. Thus no disgrace is attached to going there—an Austrian would no more think of being ashamed that his father was in an Old-age Home than an Englishman would that his had rooms in Hampton Court. One reason why old people in England dread going to the workhouse is the knowledge that, when they have once crossed its threshold, they will be regarded as pariahs even by their nearest relatives.

Only two of the six Old-age Homes belonging to Vienna are in the city itself; the others are at some little distance away—in the country. One is at Liesing, another at St. Andrä, another again at Ybbs, and the fourth at Mauerbach. They are all in healthy localities, however, and are fine buildings with gardens. The cost of the Home in the Währingerstrasse, which is reserved exclusively for freemen of the city, and their wives and daughters, is defrayed out of the Burgerfond, *i.e.*, the income derived from money and land bequeathed by the charitable as a provision for poor citizens of Vienna. The other homes are supported out of the ordinary poor relief fund, supplemented when necessary by special grants voted by the municipality. The head of the Poor Law Department is responsible for the management of them to Burgomaster, as the representative of the city. Roughly speaking, these institutions are all organised in the same way as the one in the Spitalgasse, although in the Freeman's Home the arrangements are on a somewhat more generous scale.

Each wing of the Spitalgasse Home is divided into number of large, lofty rooms, opening on to a long corridor. There are from ten to twenty beds in a room, and very comfortable beds they are, with plenty of warm coverlets. By each of them is a sort of what-not, with a cupboard on one side for clothes and shelves on the other, and there are chairs and tables standing about. In spite of the long row of beds there is something home-like about the place, owing in some degree at least, to the fact that the old people are allowed to take with them there some few of their own belongings. It may be only a portrait or two, a footstool, or a few books, or even a monstrosity in the form of wax flowers; but almost every inmate has some little treasure or other, which it would have cost him a pang to part with. Then in summer the rooms are gay with flowers—there are plants raised perhaps with infinite pains in some poor attic, and little posies which have evidently been gathered in the Prater. Canaries and thrushes, too, are in some parts of the house, though only there on sufferance. Should their singing be objected to, they must be reduced to silence or banished—for in the Old-age Homes there is an inexorable law in force—no one person or his belongings shall interfere with the comfort of another.

The corridors, which are furnished with comfortable settees, are well warmed in winter and serve as general sitting-rooms. Here, when it is too cold to be out of doors, the old men bring their pipes and the old women their knitting, and there is much talk and cackling and comparing of notes. Politics are warmly discussed sometimes, and Ministers are weighed in the balance and found wanting. All the latest telegrams are read aloud, on the very day they are issued, too, for these Austrian paupers are not dependent on chance passers-by for their journals. They club together—English guardians will be startled to hear of paupers having anything wherewith to club—and subscribe for daily papers, one for each corridor; and these they receive just as regularly and as punctually as if they were archdukes. "It would never do, you see," an old man informed me gravely, in his quaint Wiener dialect, "for us not to keep up with what is going on in the world. These are stirring times." Although

Although the corridors throughout the house are regarded as the common property of the two, all the women—wives as well as widows and spinsters—have their rooms in a wing of the building quite separated from that in which the men have theirs. In view of certain discussions which have been raised in England of late, one of the inmates was asked if he did not think it rather hard that he and his wife should be thus kept apart in their old age. "Kept apart?" he replied, with an odd puzzled look on his wrinkled old face. "We are none kept apart. Why, I see a lot more of the old woman now than I ever did in my life before. She's about here from morning till night, as often as not. *Blauer Himmel!* if that's not enough!"

The commissariat of this Spitalgasse Home is organised on very original lines. The Poor Law Department, instead of providing the inmates with food, allows them to buy it for themselves, and gives to each of them for this purpose 26 kreuzers (about 5d. a day). To secure them from exploitation, an arrangement is in force by which a professional caterer undertakes to keep for their benefit a restaurant in the home itself. This restaurant is under strict surveillance, a committee appointed by the Department deciding what kinds of food are to be provided, and at what price. The old people, however, are under no obligation to go there; they are perfectly free to have their meals elsewhere if they choose, but this they rarely do, except it is as guests, for nowhere else can they obtain such good value for their money. The marvel is, indeed, than any caterer can be found willing to supply good food, and good it certainly is, at the price at which it is sold in the home restaurant. I subjoin the bill of fare for the able-bodied; there is another much more elaborate and varied for the invalids.

And before any of these dishes may be served, the director of the home and one of the doctors must certify that its ingredients are of excellent quality, and that it is well cooked.

There is nothing in the appearance of this pauper restaurant to distinguish it from those which artisans and members of the lower middle class frequent. It is a large comfortable room, furnished with a number of chairs and little round tables, and everything about it is scrupulously clean. Within certain limits, its clients may choose their own hours for their meals, but breakfasts are not served after 9 o'clock, dinners only between 11 and 2, and no one is allowed to linger over his supper later than 8 o'clock in winter, or 9 in summer. They make their way to their dinners in twos and threes, as a rule—a husband and wife, perhaps, and a friend. They choose their table, and then settle themselves down to a careful consideration of the *menu*. The relative merits of soups and puddings are anxiously balanced, and much heart-searching is gone through as to whether a cup of coffee at 3 kreuzers or a glass of wine at 4 is the better worth having. When they have made up their minds on these cognate points, they give their orders, and with quite a lordly air too, as befits persons who have money in hand to pay for what they wish. The choosing and ordering of their own dinners is to most of these old people a source of intense delight; the mere fact of having money to spend gives them a feeling of independence and self-importance which lightens many a burden they have to bear. If the Poor Law Department were to offer them regular board, with three luxurious meals a day, instead of their meagre little 26 kreuzers, the majority of them would certainly reject it with scorn.

These little allowances are valued, too, for another reason: they are a proof of trustworthiness on the part of those who receive them. When a man enters an Old-age Home, his twenty-six kreuzers a day are handed to him as a matter of course. If, however, as sometimes happens, he does not turn them to good account—if, for instance, he spends an undue proportion of them on tobacco, beer, or wine—it is pointed out to him that such conduct cannot be tolerated. Should he not take the hint thus given, he receives an official warning. Then, unless he mend his ways, and that speedily, his kreuzers are stopped, and he is placed on rations. Invalids, too, and the feeble-minded, have no allowances. Their meals are ordered for them by the doctor, and are sent from the restaurant to their own rooms.

Those responsible for the management of the Old-age Homes have decided the clothes question in an eminently common-sense fashion. Such of the old people who have clothes of their own, or have friends willing to provide them with clothes, wear them, while the less fortunate are supplied by the Poor Law Department with what they require. In the latter case, the dress, though as plain as possible, is warm and comfortable, and of the kind worn by the artisan class—of grey or brown homespun, or dark-coloured serge. It is not uniform; indeed, as it is made in the building, it is exceedingly probable that they who wear it—at least, if they be women—have a voice in deciding its *facon*. With the exception of the invalids, all are required to keep their clothes in good repair, and to pay a certain amount of attention to their own personal appearance. These are points which, especially in Vienna, are strongly insisted upon, for the city does not choose to have its old pensioners going about dirty or in rags. The hall-porter has strict orders to allow no one to go out until he has "tidied up," and this regulation is strongly approved of by the majority of the inmates themselves. To an outsider it certainly seems superfluous, for most of the old people are the very picture of neatness. They all appear to have a good supply of clothes. One of the inmates of the Prague Home insisted on showing me his wardrobe. In addition to the rough grey suit he was wearing, he had a pair of dark trousers and waistcoat, a black coat, and a long blue overcoat—all in thoroughly good condition. He had, too, under his care a silk gown, which he displayed with infinite pride. It was his wife's wedding-dress, he told me. His wife, who lives in another wing of the building, had, it seems, handed it over to him for greater safety. "She always wears it, though, of course, when we pay visits," he remarked incidentally. One of the laundry regulations of the homes sounds in English ears as a sorry jest; yet, perhaps, after all, it has its *raison d'être*. The inmates are warned that it is only their bed-linen and clothes that are washed free of charge, not their *putzwäsche*, i.e., lace, frills, and furbelows.

Many of the inmates of these homes supplement their 26 kreuzers a day by earning a little money on their own account, and the Poor Law authorities, far from throwing obstacles in the way of their doing so, give them every encouragement. They even provide work for such of the more worthy among them as have the strength, and the wish to do it; and, what is still more remarkable, they pay them regular wages. It is not much that they give, of course, only some 10 kreuzers for a six hours' day; still, even 10 kreuzers are not to be despised. There is many an old man in our English Unions who would gladly work all day for half that sum if he might but spend it as he chose. The pensioners receive no remuneration for doing the lighter kind of house-work, such as making their own beds, and keeping their rooms clean; this they are required to do, so long at least as they have the necessary strength. But, when there is any carpentering to be done, the carpenters in the home have the option of doing it; and the same arrangement is in force with regard to the dressmaking, tailoring, shoemaking, &c. While all are free to turn their hands to gardening and wood-chopping. And for this work they are paid. Some of the women, too, earn quite a tidy little, some by knitting stockings and vests, and helping to keep the house-linen in repair. Then such of the old people as are specially reliable may become the paid officials of the institution. Attached to each room is a stove-vater, or a stove-mutter, as the case may be, who receives 6 kreuzers a day for keeping order, and seeing that they who live there conduct themselves properly. If any one is ill it is the duty of these officials to fetch what food or medicine he may require, and to look after him generally, and try to make him comfortable. In the room set apart for individuals the stove-vaters or stove-mutters are replaced by nurses. Even they, who, from lack of strength or inclination, do not work, are not, as a rule, entirely dependent for their support on their 26 kreuzers; for whatever presents they receive, whether in money or in kind, are their own private property. And their visitors rarely go empty-handed. The roughest of the rough likes to take his old father at least a bit of tobacco when he drops in to see him, and there is no end of the mysterious-looking packages with which daughters are laden when they arrive. One rule, however, is rigidly enforced, no spirit is allowed to be taken into the homes.

In all these institutions, except the one in Mauerbach, the discipline in force is of the very gentlest character. Practically, the inmates may do just as they like, so long as they conduct themselves in an orderly fashion, and do not quarrel. When once they have made their rooms neat, they may lounge about in the sunshine, or by the stove, the whole day long if they choose. After dinner they may all go to bed for an hour, and this many of them do. In each home there is a chapel where mass is celebrated every day, but the old people are perfectly free to go there or not, just as the fancy takes them. If they care to do so they may leave the home every day at 1 o'clock, and need not return until 8 in the evening. Then they have the right to spend one whole day with their friends every week, and if they wish to spend two the Director rarely or never refuses them the permission. Once a year, too, they may go away for a whole month, providing that they have anywhere to go to. Some of them pay quite a string of visits during the summer, and return to the home all the better and more contented for the change. These privileges, however, are strictly conditional on good behaviour. Should any of the pensioners show a disposition to abuse their liberty, it is at once curtailed. If a man or woman does not return to the home by the appointed time, or if he returns in a disorderly condition, he is not allowed to go out again for some time to come, nor may he undertake any paid work. If he should stir up strife among his fellows, or in any other way interfere with the well-being of those around him, he is subject to imprisonment in a room in the home, though for not more than forty-eight hours. The persistently insubordinate or unruly, however, are not allowed to remain in the ordinary homes, but are sent to Mauerbach, where, though only in one wing of the building, a somewhat sterner régime prevails.

Each Old-age Home is under the management of a resident director, who must render an account of all that passes there to the head of the Poor Law Department. This director, however, is only a constitutional ruler. His authority, though considerable, is strictly limited. Once a month in each home the officials, the clergyman, the doctors, and a representative of the Poor Law Department, sit in a conference, and the inmates are invited to appear before them and make known their wishes and their grievances. A full report of the proceedings upon these occasions must be submitted to the head of the Department. Not very long ago there was an odd little scene in one of the homes. Some dozen old women were interviewing the director for the purpose of inducing him to let them stay where they were, whereas he had received orders to send them to a home further from Vienna. One might have thought from the tone some of them assumed, that he was an unreasonable landlord, and they tenants, whom, in defiance of the law, he was seeking to evict. The director's manner, meanwhile, was deprecativo in the extreme. He spent a good half-hour in soothing the old dames, and striving to convince them, that even down in the country, life might be well worth living. It would be difficult to find a more contented set of old people than those who live in these Austrian homes. There are grumblers among them, of course. One of them complained bitterly to me that, although 26 kreuzers a day might be enough for bare necessities, they left nothing whatever for luxuries. Another—it was in Prague—replied to a chance remark that he seemed fairly comfortable, by a very emphatic shake of the head. He was well cared for, he allowed, and the food was good; but—he gave a significant glance at a little group of old men who were laughing and talking in the corridor, "They are all Czechs, you know," he whispered, in the tone in which a Southern State planter might in other days have spoken of negroes, "and for a German to have Czechs around him is really very trying." These, however, are exceptional cases; the majority of inmates seem to be as happy as they can be whose lives lie behind them, not before. There is not a touch of that dull listlessness about them, of that just-waiting-for-death, which is so marked a characteristic of the old people in our workhouses. On the contrary, they are quite alert, and take a lively interest, not only in what is going on around them, but in things in general. This is especially the case in Prague. An English visitor who chanced to be there a few months ago, was quite overwhelmed with questions as to how affairs are managed in this country. Some of the old folk were very curious to know how the poor were treated here, and they were not a little scandalised when they heard of one of our social arrangements. "To think of sending worn-out workers to live in the same house as rogues and vagabonds!" they exclaimed in evident amazement at such barbarous ways. One old man inquired anxiously how the word "Gladstone" ought to be pronounced.

These Old-age Homes have no claim to rank as an ideal institution—in more than one respect they are open to improvement. For instance, a little more care might, with advantage, be taken in discriminating between the applicants for admission. It would be well if proofs, not only of respectability, but of thrift, were insisted upon from all who find a refuge in the homes. If such of the inmates, too, as are incurably ill were lodged quite apart from the others, in a house of their own, it would add considerably to the general comfort. Then, according to our English notions, the apartments are too large. We should like to see those long dormitories replaced by a series of comfortable little rooms just large enough for two persons to live in. These, however, are mere questions of detail, and as for the main lines on which the homes are organised, they certainly are admirable. The Australian Poor Law authorities recognise the fact, and herein show their wisdom, that as a man is at 60, so he will remain until the end. They, therefore, waste no time on a vain endeavour to induce their proteges in the Old-age Homes to reform their ways; all they try to do is to keep them out of the reach of harm, and make them as happy and comfortable as possible. And in this, as we have seen, they succeed—succeed, too, without any lavish expenditure of money. It is noteworthy that the very arrangements which contribute most to the comfort of these old Austrians involve no outlay whatever. The little dinners over which the inmates of the Old-age Homes linger with such keen enjoyment do not cost more than the mid-day meals supplied in our workhouses. Workmen's ordinary clothes are not one whit more expensive than uniform, nor does the fact of paupers being allowed to see their friends every day entail any sacrifice on ratepayers. In the Vienna Old-age Homes the average cost per head is 57 kreuzers (about 11d.) a day. In the London workhouses it is some 1s. 4½d. Still it is not without reason, it must be admitted, that rigid economists look somewhat askance on these homes; for the respectable poor, when their working days are over, go there gladly. Old men and women have been known to die of slow starvation rather than enter a workhouse.

[To evidence of *W. F. Schey, Esq., M.P.*]

A BILL to stimulate and encourage thrift and self-help with a view of making competent provision for old age and for other purposes connected therewith.

WHEREAS it is considered that it will be of advantage to stimulate and encourage thrift and self-help with the view making competent provision for old age: Be it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same as follows:—

1. This Act may be called and may be cited as "The Old-age Provision Act," and shall come into force on the first day of January, 1897.

2. In the construction of this Act—

"Old Age" shall mean the age of sixty years and upwards; and

"Friendly Society" shall mean any Benefit Society established, or hereafter to be established, in New South Wales in accordance with the law in such case made and provided by the Legislature of this Colony.

3. Every Friendly Society which includes, or shall hereafter include, amongst its benefits an "Old-age provision fund" shall be entitled to all the benefits and advantages conferred by this Act.

4.

4. Every such Friendly Society which has, or shall hereafter establish, amongst its benefits an "Old-age provision fund," shall have full power to regulate the amount of subscription of each member according to age, as well as the times at which such subscriptions shall be paid, which payments shall be continued regularly up to the age of sixty years and no longer, as well as the weekly amount thereafter to be paid out of such "Old-age provision fund" to each and every subscribing member who shall have attained the said age of sixty years. Provided always that such payments shall be made once in every two weeks.

5. Every Friendly Society that has established, or shall hereafter establish, an "Old-age provision fund," shall be entitled to a subsidy of one pound, to be paid out of the Consolidated Revenue of the Colony, for every pound subscribed by the members of such Friendly Society towards such "Old-age provision fund."

6. All subscriptions paid by each and every member of such Friendly Societies into and for the purpose of any such "Old-age provision fund," together with the beforenamed subsidy of pound for pound, to be paid out of the Consolidated Revenue of the Colony, shall be invested in the Savings Bank of New South Wales under the head of "Old-age provision fund" with the name of the particular society attached, and in the names of two officers appointed by the Colonial Treasurer of New South Wales, as well as in the names of any two officers appointed by each such Friendly Society.

7. There shall be an audit by a special officer appointed for such purpose by the Auditor-General of New South Wales once in each and every month of all such funds as are invested in the Savings Bank of New South Wales, in the name and under the head of "Old-age Provision Fund."

8. In case any beneficiary should die before reaching the prescribed age of 60 years all subscriptions paid by him or her into the "Old-age Provision Fund" in connection with a Friendly Society of which he or she was a subscribing member, at the time of his or her death, together with interest for one year on the whole amount subscribed, at the rate of 5 per cent. per annum, shall be paid to his or her next-of-kin, or whomsoever by his or her last will and testament he or she shall appoint.

9. In case of no next-of-kin, or on failure of such appointment, the total amount of subscriptions paid by such member shall be paid into the "Old-age Provision Fund" established by such friendly society of which he or she was a member, for the benefit of the then existing members, and those who may thereafter join the same, collectively.

10. Every subscriber to the "Old-age Provision Fund" which has been established, or may hereafter be established by any friendly society, shall be entitled, on attaining the age of 60 years, to receive the minimum sum of one pound per week for each and every week, so long as such subscribing member shall live.

11. The said subsidy of pound for pound to be paid out of the Consolidated Revenue, shall be paid monthly into the Savings Bank of New South Wales not later than the tenth day from the beginning of each calendar month.

[Appended by the Committee on Old-age Pensions, 8 August, 1896.]

(Evening News, 14th August, 1896.)

Two of the witnesses examined yesterday before the Committee of the Legislative Assembly on Old Age Pensions, were Mr. Oliffe, secretary of Tattersall's Club, and Mr. Clibborn, secretary of the A.J.C. According to our senior morning contemporary, there is an idea abroad that causes of distress should be made to assist in the alleviation of the aged poor, and sport being regarded as one of these causes, the officials referred to were catechised as to whether a revenue could be obtained from sport for the object under inquiry. The idea of making public amusements contribute towards the support of the poor is not original. It is generally known that a formidable percentage is levied on the receipts of Paris theatres for the poor of the French capital, but perhaps not quite so generally known that theatrical managers have a way of returning their receipts at more than they are, and so for advertisement's sake paying a heavier tax. There is a custom, too, generally observed, of the winner of the Grand Prix de Paris, the great race of the year, handing over a portion of the stakes for the poor.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS.

(PETITION FROM THE PARRAMATTA RIVER STEAMERS AND TRAMWAY COMPANY, LIMITED, PRAYING TO BE REPRESENTED BY COUNSEL OR ATTORNEY, OR IN PERSON, BEFORE SELECT COMMITTEE ON.)

*Received by the Legislative Assembly, 27 October, 1896.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of the Parramatta River Steamers and Tramway Company, Limited,—

HUMBLY SHOWETH:—

1. That on the 22nd day of September last past your Honorable House appointed a Select Committee to inquire into and report upon the collision between the "Sol" and the "Alathea" steamers.
2. That your Petitioners are the owners of the steamer "Alathea."
3. That, on the said inquiry, the interests of your Petitioners, of considerable magnitude, are likely to be affected, your Petitioners humbly pray that they may be represented by Counsel or Attorney before the said Select Committee, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may attend to give evidence before the said Committee.
4. And your Petitioners, as in duty bound, will ever pray.

Dated at Sydney this 23rd day of October, 1896.

The common seal of the Parramatta River Steamers and Tramway Company, Limited, was hereunto affixed, by order of the Board of Directors, in the presence of—

WILLIAM LEES, }  
F. A. WRIGHT, } Directors.  
ARTHUR COOPER, Manager.

VOTES NO. 73. TUESDAY, 27 OCTOBER, 1896.

5. COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS :—Mr. A. B. Piddington presented a Petition from the Parramatta River Steamers and Tramway Company (Limited), stating that a Select Committee had been appointed by the House to inquire into and report upon the collision between the "Sol" and "Alathea" steamers; and praying to be represented by counsel or attorney, or in person, before the said Committee, with the right to call witnesses, and to examine and cross-examine all witnesses that may give evidence.
- Petition received.
- Ordered to be referred to the Select Committee.
- 

VOTES NO. 80. WEDNESDAY, 11 NOVEMBER, 1896.

9. COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS :—Mr. W. H. B. Piddington, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and report this subject was referred on 22nd September, 1896; together with Appendix.
- Referred by Sessional Order to the Printing Committee.

COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS.

---

REPORT.

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 22nd September, 1896, "to inquire into and report upon the collision between the 'Sol' and 'Alathea' steamers,"—have agreed to the following Report :—

Your Committee having examined the witnesses named in the list\* (whose evidence will be found appended hereto), are of opinion :—

\* See List,  
page 5.

That the Government are morally, though not legally, responsible to the owners of the "Alathea" for the damages caused by the collision ; and your Committee feel justified in coming to such a conclusion in view of the strong comments of the Chief Justice—the other Judges concurring—on the appeal.

Your Committee consider that the Government should take the whole matter into consideration, with a view to making such restitution as the case deserves.

In view of the evidence given before your Committee, they desire to draw the attention of the Minister to the practice of allowing persons other than Government officials to use the steamers of the Marine Board without special authority.

W. H. B. PIDDINGTON,  
Chairman.

No. 2 Committee Room,  
Legislative Assembly,  
11th November, 1896.

---

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 20 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Ferguson,		Mr. Knox,
Mr. W. H. B. Piddington,		Mr. Watson.

Mr. Piddington called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

[Adjourned till Thursday next, at Two o'clock.]

THURSDAY, 22 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington in the Chair.

Mr. Ferguson,		Mr. Knox,
Mr. Watson,		Mr. Wood.

James William Johnston called in, sworn, and examined.

Witness *handed in* copy of the Judge's notes on the trial of the Parramatta River Steamers and Tramway Company (Limited) v. Hixson, as printed for the purpose of appeal. [Appendix A1.] Copy of the shorthand note of the judgment of the Full Court. [Appendix A2.]

Witness withdrew.

The Chairman *handed in* copy of a letter from the Secretary to the Marine Board to the Under Secretary for Finance and Trade, respecting the Supreme Court action in reference to the collision between the "Sol" and "Alathea" steamers. [Appendix B.]

[Adjourned till Wednesday next, at Two o'clock.]

WEDNESDAY, 28 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington in the Chair.

Mr. Wilks,		Mr. Wood.
------------	--	-----------

Entry from Votes and Proceedings in reference to the Petition of the Parramatta River Steamers and Tramway Company (Limited), praying to be represented by counsel, or attorney, or in person, before the Committee, read by the Clerk.

Present:—J. W. Johnston, Esq. (*Messrs. Johnston, Minter, Simpson, & Company, Solicitors for the Parramatta River Steamers and Tramway Company, Limited*).

Captain Francis Hixson (*President of the Marine Board*) called in, sworn, and examined.

Witness withdrew.

Arthur Stanley Cowper (*Manager of the Parramatta River Steamers and Tramway Company, Limited*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at Three o'clock.]

THURSDAY, 29 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington,		Mr. Waddell.
--------------------------	--	--------------

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 4 NOVEMBER, 1896.

MEMBERS PRESENT:—

Mr. Edden,		Mr. W. H. B. Piddington.
------------	--	--------------------------

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 5 NOVEMBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington in the Chair.

Mr. Davis,		Mr. Watson,
		Mr. Wood.

Present:—J. W. Johnston, Esq. (*Messrs. Johnston, Minter, Simpson, & Company, Solicitors for the Parramatta River Steamers and Tramway Company, Limited*).

John Puckeridge called in, sworn, and examined.

Witness withdrew.

Adjourned till Tuesday next at 12 o'clock noon.

TUESDAY,

TUESDAY, 10 NOVEMBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington in the Chair.  
 Mr. Davis, | Mr. Waddell,  
 |  
 Mr. Wilks.

Present:—J. W. Johnston, Esq. (*Messrs. Johnston, Minter, Simpson, & Company, Solicitors for the Parramatta River Steamers and Tramway Company, Limited*).

Robert George Menzies called in, sworn, and examined.

Witness withdrew.

James William Johnston recalled and further examined.

Witness handed in articles from the *Daily Telegraph* and *Evening News* newspapers, commenting on the decision of the Full Court. [*Appendix C 1 and 2.*] Extract from *Sydney Morning Herald* of 13th September, 1894, giving the summing-up of the Judge on the trial, and the questions he put to the jury, with their answers. [*Appendix C 3.*]

[Adjourned till To-morrow, at half-past Three o'clock.]

WEDNESDAY, 11 NOVEMBER, 1896.

MEMBERS PRESENT:—

Mr. W. H. B. Piddington in the Chair.  
 Mr. Davis, | Mr. Watson,  
 |  
 Mr. Wilks.

Chairman submitted Draft Report.  
 Same read, amended, and agreed to.  
 Chairman to report to the House.

LIST OF WITNESSES.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BY

THE SELECT COMMITTEE

APPOINTED TO INQUIRE INTO THE

COLLISION BETWEEN THE "SOL" AND "ALATHEA"  
STEAMERS.

THURSDAY, 22 OCTOBER, 1896.

Present:—

MR. KNOX,  
MR. FERGUSON,MR. WATSON,  
MR. WOOD.

W. H. B. PIDDINGTON, Esq., IN THE CHAIR.

James William Johnson sworn and examined:—

1. *Chairman.*] Are you senior member of the firm of Johnson, Minter, & Co.? Yes; we acted for the Parramatta Steamship Company in connection with this collision.
2. Will you give us a short *résumé* of the case? I had to do with this case, and our side contended that the "Sol" was wholly to blame for the collision that happened. The consequence of that collision was that the owners of the "Alathea" claimed damages which were put down at about £1,100. They were considerably more than what the jury assessed them at. We then wrote to the Government Department, and we were referred to solicitors on their behalf. They contended that it was the "Alathea" that was to blame, so we took steps to have that question decided by the Court. That was the only question that was before the Court. Evidence at great length was put forward on both sides, and the jury found that the "Sol" was to blame. Incidentally, there arose a question which we were quite unprepared for; that was whether the "Sol," assuming her to be in the wrong, was liable for the damage done, because it was contended by Mr. Bruce Smith that she was not on the business of the Marine Board. In other words, Mr. Bruce Smith's contention was of this kind: that if the owner of a carriage told his servant to go to Dawes' Point by way of George-street, and his servant went down Pitt-street, ran over somebody, and broke somebody's leg, the owner of the carriage would not be liable, because the servant was not following his master's instructions. He was not on his master's business. That is one of those refined technical distinctions in law which, I daresay, the two lawyers I am speaking to will know how difficult it is to gauge. The only question we went to Court to fight was found in our favour, with damages which were assessed at £600, with costs.
3. Will you put in the Judge's notes on the trial? I produce a copy of the Judge's notes as printed for the purpose of appeal. [*Appendix A 1.*]
4. *Mr. Knox.*] Was not the case the subject of an appeal? The other side got a rule *nisi* to upset the verdict on leave reserved, and that rule was made absolute. I produce what appears to me to be a portion of the Judge's notes of the evidence, and I presume that evidence was considered by the Court to be all that affected the question before them.
5. Do you also produce a copy of the shorthand note of the judgment of the Full Court setting the verdict aside? Yes. [*Appendix A 2.*]
6. Did the jury find that the collision was owing to the default of the "Sol"? Certainly.
7. Was the finding of the jury upset on the ground that the Court found that the master of the "Sol" was not on a trip authorised by the Marine Board at the time of the collision? That is so, and it did not affect the question as to who was right or wrong in the collision.

J. W.  
Johnson.  
22 Oct., 1896.

- J. W. Johnson.  
22 Oct., 1896.
8. Can you tell us what the costs came to? The Parramatta Steamship Company have had to pay over £300 for their own costs.
9. Does that include their own costs, or the costs of the other side only? They have not been called upon at present to pay the costs of the other side.
10. *Chairman.*] Do the Government provide for those costs? There have been negotiations of some kind or other. I think there was an intimation that the matter would be allowed to rest, and that we should not be called upon to pay the costs of the other side.
11. *Mr. Watson.*] Were they adjudged liable for the costs of the other side? Yes; the rule was granted with costs.
12. Does that mean the costs of the action and of the appeal? It means that they were ordered to pay the other side's costs, besides their own costs of the trial and all proceedings, which latter came to over £300.
13. *Mr. Knox.*] Do I understand that the Government have practically relinquished their claim to costs against the Company? I can hardly go so far; there is a sort of understanding that if we were to let the matter drop there it would rest.
14. *Mr. Wood.*] Does the sum of £300 include the costs of both sides? No, the Government costs would be extra. Even if we got the verdict of £600—if the Government came forward and said we will give you £600—we should only get £300 to recoup us for what we say amounts to £1,100 damages.
15. *Mr. Knox.*] Was there any appeal on the ground that the verdict was excessive? No, there certainly was not. I would point out that the Judges, who felt themselves constrained to give the Government the benefit of this technical point, went on to suggest that this was a case in which the Government of the day should meet the claim in a liberal spirit. Sir Frederick Darley said: "I must say it is a case of extreme hardship for the plaintiffs, and it is well known that the Marine Board had allowed this steamer to be used for purposes which, strictly speaking, did not fall within the Act of Parliament, and under the circumstances it will be a question for the Government to consider by and by whether the plaintiffs are not entitled to consideration for damages." Sir William Windeyer said: "There is no escape from setting aside the verdict, and I agree with the Chief Justice that it will be a matter for the consideration of the Government whether reparation should be made to the plaintiffs because of the dereliction of the Board in allowing the boat to be used in this way."
16. Up to the present time, as I understand it, the owners of the "Alathea" have not had a shilling of compensation? They are worse off than if they had not gone to trial by the amount of the costs.
17. *Mr. Wood.*] The only reason why the verdict was set aside was because the jury found that the "Sol" was engaged in work other than that of the Marine Board? Yes. It turned out unexpectedly for our side that on the occasion of the collision there were two gentlemen on board the "Sol" who were going to North Shore on some business of their own, and had no business on the steamer. I suppose they persuaded the captain, and he was going to take them over there. I may point out that whether that was true or not, the captain was in charge of the steamer when the collision took place. She was under his guidance, and the jury found that it was owing to his bad judgment or bad seamanship that the collision took place.
18. *Mr. Ferguson.*] Who were the gentlemen on board the "Sol" at the time? I do not remember.
19. Were they Government officers? No.
20. *Chairman.*] Do you know if the Secretary of the Marine Board ever communicated in any way with the Parramatta Steamship Company with regard to settling this matter before the trial? I think I am at liberty to say that Captain Hickson was always prepared to recommend the Government to pay a substantial sum. As far as I know, we have never had any formal offer.
21. *Mr. Watson.*] Do I understand you to say that the solicitor for the Crown, in accepting service from you in connection with this action, contended that the "Alathea" was to blame? Yes; that was the sole contention we went into Court to fight.
22. They did not, then, contend that they were not responsible? Their only contention was that our side was to blame. The other contention was latent; it discovered itself during the development of the evidence at the trial.
23. *Mr. Knox.*] I suppose they pleaded "not guilty"? I think so.
24. Would not that put you to the proof of everything and enable them to set up any defence? Yes.
25. *Mr. Watson.*] Do I understand that the solicitor on the other side contended, in the first instance, that the "Alathea" was responsible? Yes. The contention was that the "Alathea" should have put her helm in the opposite way to what she did. We said that was all nonsense; that the collision was inevitable; that the "Sol" darted out stern first from her hidden retreat. I think I may go so far as to say that the Judge intimated that he concurred in the verdict of the jury.
26. *Mr. Watson.*] I think I understood you to say that if the owners of the "Alathea" got their verdict of £600 it would only mean that they would get £300 towards making good the damage? No; if the verdict had then been upheld we should have been enabled to make the Government pay all our costs, so that we should then have got about £900. What I meant is that if we were to be paid the verdict now, and no costs, it would be as I have described, namely, we should only get £300 to recoup us for £1,100 damages.
27. Then actually at present the company reckon themselves out of pocket about £1,400, even if they do not pay the Government costs; that is, £1,100 damages, and £300 for their own costs? Yes; that is what they are out of pocket at the present moment in round numbers. I knew that was Captain Donald's estimate; he was manager of the company at the time; he consulted me and instructed me all through. He always said that the damages were about that amount. The steamer was sunk.
28. *Mr. Knox.*] I believe one thing that contributed to the collision, as it appears from the evidence, was that the man at the wheel on board the "Sol" had to leave the wheel and go to the engines, although they were backing out? Yes; he left the wheel to go forward to the engines at the critical moment.
29. Although backing out at Circular Quay, they had not a man looking after the engines? Yes; the Court was satisfied with the verdict; they were unwilling to move it, but they felt constrained to do so on this technical objection.
30. *Mr. Wood.*] Was there any contention by the other side that the actual damages sustained were under the amount of the verdict? The other side contended that the damages were considerably under £1,000.

31. Did the other side contend that the damage done was under the amount of damages awarded by the jury? I do not think so. They attempted to cut down damages as much as they could.

32. Was excessive damages made a ground of appeal? No, certainly not.

33. *Mr. Knox.*] Did the other side ever express any contention apart from appealing that £600 was too much? I have not heard of it.

34. I mean since the verdict was given? No. We felt aggrieved that the jury did not give larger damages. It is the duty of counsel for the defendant when there is a claim for damages to cut down the damages as much as possible.

35. At the trial, did they bring forward any evidence to show that the damage sustained was less? They brought forward evidence to show that the damages they were liable for in any case could not be £1,100.

36. They did not contend for any amount? No, only in a general way. They went into minutiae about the damages. We showed that the "Alathea" had, a short time before the collision, been thoroughly done up. They wanted to make out that we could not get those damages, and I think the jury adopted that view to a certain extent. I think I ought to point out this on the question of hardship: that it did not matter a bit whether this steamer was going to put those two gentlemen down at North Shore or at Circular Quay, because the steamer would back out, and when the collision took place she was backing out. It did not matter whether she was going to the North Shore or to the Princes' Stairs. I mention this because it came out in the evidence that the duty of the "Sol" on that day was to go to Princes' Stairs. I say it made no difference whether she was going to North Shore or Princes' Stairs.

37. *Mr. Ferguson.*] The only difference might be as to the time at which she went? They could have easily ascertained whether a steamer was coming along before they started out, by sending a man on to the wharf to look, when he would have seen the "Alathea" coming along the wall towards Princes' Stairs. Instead of that, the captain never got out off his boat; he backed out before looking, and the man left the wheel. If there had been a man at the wheel, and another man at the engines to stop them, the collision would probably never have happened. [*The witness explained this by a rough sketch.*]

J. W.  
Johnson.

22 Oct., 1896.

WEDNESDAY, 28 OCTOBER, 1896.

Present:—

MR. WILKS, | MR. WOOD.

W. H. B. PIDDINGTON, ESQ., IN THE CHAIR.

J. W. Johnson, Esq., of Messrs. Johnson, Minter, Simpson, & Co., solicitors, appeared on behalf of the Parramatta River Steamers and Tramway Company.

Captain Francis Hixson called in, sworn, and examined:—

38. *Chairman.*] Are you President of the Marine Board? Yes.

39. Will you kindly give the Committee a short *résumé* of the case from your point of view? In the first place, the "Alathea" was a Parramatta steamer, bound to a certain place in Sydney Cove from Parramatta. The steamer "Sol" was ordered by the Marine Board Department to go to perform some duty in connection with the Museum. The officer in charge of the "Sol," instead of sending her direct to that place, allowed her to be diverted to take my son and another young man across to North Shore. It was in that diversion from the "Sol's" course that the collision took place. I wanted the matter to be conducted strictly upon the merits of the case as regards the rules and regulations of the harbour for preventing collisions. The Marine Board's counsel did not take my advice in that respect. I did not consider that the "Sol" was to blame, certainly not in the manner in which the Court decided against her, but instead of taking my advice, and having the case fought out in accordance with the rules and regulations, my counsel slurred that part of the question and confined themselves to the law point as to whether the officer on board the "Sol" was justified or not in having diverted the vessel, and whether the Marine Board was liable for any damages that might have been sustained under the circumstances. The verdict of the Court was that the "Sol" was to blame, but at the same time the law point was against the "Alathea"—that the "Sol" had no business to be sent in the way she was when the collision took place.

40. *Mr. Wilks.*] Might not that contention be raised in the case of any collision; for instance, supposing a vessel was bound for Newcastle, and for some reason or other she went across to North Shore? The contention in this case arose more in relation to the Masters and Servants Act. If I have a carriage and tell my coachman to drive to Darlinghurst, and he comes into collision, and does some damage on the road, I am liable; but if he, without my authority, drives down to Darling Point, and gets into collision there, I am relieved from any liability. I should like to say that the verdict was in favour of the "Alathea," so far as the actual merits of the collision were concerned, but it was against her on the law point. After some correspondence the Government paid the law costs of the Marine Board, and we also repaired our boat, which cost about £40. Although we were right in law, we paid our own damages as regards repairs, and we paid our own counsel £318.

41. *Chairman.*] Was the "Sol" on the business of the Marine Board when the collision took place? No; she was diverted in the manner I have described.

42. Was it the practice, and is it the practice now, for the Marine Board's boats to be used by private individuals, and still not be considered to be on the business of the Board? No. I think the point is, the officer at the boatshed had no business to send a steamer away except by the orders of the Marine Board. It is perhaps impossible to have a hard and fast rule, and probably the officer has diverted her from her proper business on some other occasions.

43. Does that practice on the part of the officers still continue? We have never given contrary orders.

44. Do you hold that the "Sol" in this instance was practically upon private business, and not in connection with any work of the Marine Board? Certainly the officer was not justified in diverting the vessel in the way he did. The vessel had dredges and other things on board for the Museum work, but instead of going direct to perform the Museum work, according to orders from the Marine Board, she was turned across the harbour.

45. *Mr. Wilks.*] Am I to understand that under the Masters and Servants Act any responsibility would rest upon the boatswain? Yes, strictly speaking, I suppose.

Capt.  
F. Hixson.

28 Oct., 1896.

Capt.  
F. Hixson.  
28 Oct., 1896.

46. It was outside the service of the Marine Board, and it was upon his own responsibility that he diverted the steamer from her course? Yes; the Marine Board gave orders to do a certain thing, and the officer took it upon himself to divert the steamer.
47. Then the contention is that the responsibility rests on the boatswain? Perhaps so.
48. *Mr. Wood.*] Do you say that the verdict was given in favour of the Marine Board on a law point? Yes.
49. What induced the Marine Board to contest the case;—was it on the ground that they believed that they had the law on their side or the equity; that is, that the “*Alathea*” was to blame according to the regulations? The Marine Board wished to compromise the matter in the first instance. They wished to share the responsibility, and thus minimise the costs.
50. For what reason? For the reason that, as a rule, it is very bad for the Government or the Marine Board to go to law against an individual.
51. It was not because they believed their boat was in fault? Partly so, though I never believed that the “*Alathea*” was faultless. I thought she contributed very largely to the collision.
52. Was any evidence brought by your side, or was there any attempt to bring evidence, to show that the “*Alathea*” was to blame? Yes; there were witnesses brought on our side, but my remark had reference to the way in which our barristers made use of the witnesses.
53. Did they make that one of the points in the contest, that the other boat was really in the wrong? Yes, certainly.
54. In the face of that evidence the jury still brought in a verdict giving damages in favour of the “*Alathea*”? Yes.
55. Although that evidence was thoroughly gone into? No, I say it was not. My counsel, instead of devoting their attention strongly to the actual facts of the collision, paid far more attention to the law point, which they insisted on bringing forward.
56. What regulation would apply to this particular case? I believe the regulation which the “*Alathea*” infringed was that of travelling too fast, and a regulation also says that if a vessel has another on her own starboard side the last-mentioned vessel (that would be the “*Alathea*”) is bound to keep out of the way.
57. In this case it appears that the “*Alathea*” did not? In this case the “*Alathea*” was rounding towards the danger all the time; she was rounding into Sydney Cove. She came round Dawes’ Point, and was rounding all the time towards the “*Sol*.”
58. Clearly showing that she had infringed one of the regulations she should follow? Yes.
59. When you advised the Marine Board to compromise, what did you consider was the amount of damage sustained by the “*Alathea*”? The Marine Board would have been prepared to recommend the Government to pay £700 rather than go into Court. We offered the owners of the “*Alathea*” £700 before the proceedings commenced; that, I consider, was a very ample offer for the damage sustained. It was made through our lawyers.
60. There was no question of costs included in that offer? No; we wanted to compromise from the first, and in the end, rather than go to law, we were ready to offer £700.
61. Then you think that a stronger case might have been made out on your behalf on account of the infringement of the regulations had your counsel given more prominence to that view of the case? I think so.
62. Do you think more evidence could have been brought on that point? Yes; and I am sure false evidence was given with regard to the speed of the “*Alathea*.”
63. Could more evidence have been adduced to show that the “*Alathea*” was in the wrong? I think our counsel might certainly have made more of our case had they paid more attention to what I wanted them to.
64. *Mr. Johnson.*] Were you in Court all the time when the trial of this case took place? Yes; pretty well.
65. Do you not recollect that your side called a number of witnesses? Yes.
66. What about? Different points.
67. Were not all those witnesses called to prove that the “*Sol*” was in the right and that the “*Alathea*” was in the wrong? No.
68. What else were the witnesses called to prove? To show that the “*Sol*” was not engaged on *bonâ fide* business, but was diverted from it by the boatswain.
69. Can you name more than one witness who was called to prove that? Myself, for one; *Mr. Puckeridge*, the boatswain, for another. I admit that my side went into the rule of the road, but they did not pay that attention to it which I wanted.
70. But you will admit that your counsel examined a number of witnesses solely on the question as to who was right or wrong as to the rule of the road? They examined several witnesses on that point.
71. Did they not examine a good many? Well, it is two years ago since the trial.
72. Were there not seven or eight witnesses on that point? I do not think there were so many; we had very few witnesses. There were only two people on the boat beside the crew.
73. The fact of there being two young gentlemen on the boat was not disputed? No.
74. There was no evidence wanted to prove that? No.
75. That was a matter of contention, and not evidence? The fact of their being on board was one thing, but the fact of the boatswain allowing them on board was another thing. There was no dispute about their being on board.
76. Do you not think that there were at least seven or eight witnesses called by your side to prove that the boatswain of the “*Sol*” was in the right, and that the captain of the “*Alathea*” was in the wrong? Certainly not the boatswain; the boatswain was not in the boat.
77. Then do you call him the captain? The coxswain was in charge.
78. Were there not a lot of witnesses called to prove that he could have adopted no other tactics than he did adopt? There were several witnesses called, no doubt, on each side, so far as the rule of the road is concerned.
79. What, then, is your complaint against your counsel? That they did not pay sufficient attention to the speed of the steamer, and to article 18 of the rule of the road, which says that if any vessel has another on her own starboard side the last-named vessel is bound to give way.

## INQUIRE INTO THE COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS.

80. That was a matter of contention, not of evidence;—did you not call witnesses to prove that the "Alathea" was going at a greater speed than she ought? Yes.
81. If that were so, your counsel laid the ground for that contention? Yes.
82. Do you blame them for not contending on that point stoutly enough? For not paying sufficient attention to it.
83. But evidence was called upon that point? Certain evidence.
84. You say they contended it to a certain extent, but not strongly enough? Yes.
85. Were not all the facts *pro* and *con* in favour of one ship as against the other made plain as far as they could be elicited? Perhaps so.
86. The rule of the road, as you put it correctly, says that a steamer, when she is in danger of collision, having the other steamer on the starboard hand is bound to get out of the way? Yes.
87. At this critical moment was there not another steamer alongside the "Alathea" which prevented her from doing that? No.
88. Are you sure of that? Yes.
89. Were you there, and did you see the collision? No.
90. Can you say now whether what I have said is not absolutely correct,—that it was proved at the trial that the "Alathea" could not starboard her helm because the "Bunya Bunya" was going along at the same speed, and that if the "Alathea" had altered her course in that direction they would have collided? That was not proved. Evidence was given to that effect, but that is one of the points for which I blame my counsel for not sifting.
91. Did not several witnesses swear to that? The position of the affair was this: My counsel, in place of going in for the actual law of the case, so far as the rule of the road is concerned, slurred that part of it, and went in distinctly for the Masters and Servants Act.
92. Was it not proved by several witnesses that the "Alathea," by reason of the large boat, the "Bunya Bunya," being alongside of her, could not starboard her helm? I do not know that. There were several witnesses on that point. The master of the "Alathea" was the particular man who gave that evidence.
93. Was it not proved that the moment the master of the "Alathea" found he could not starboard his helm, for the reason I have stated, he stopped the engines, and then went full speed astern? It was said that he did so.
94. Was that not sworn? Yes.
95. In applying and construing these rules, is it not laid down that "due regard must be had to all dangers of navigation; due regard must also be had to any special circumstances which may exist in any particular case rendering a departure from the above rules necessary in order to avoid immediate danger"? Yes; that is correct.
96. I take it, that from your point of view, the duty of the captain of the "Alathea" was to starboard his helm? No.
97. Then what do you say he should have done? He came in at enormous speed, when he should have kept out of the way. He was not able to do so in consequence of the great way there was on the vessel.
98. Supposing you had been on board the "Alathea," what would you have done? I would not have gone round the point in the rapid way he did.
99. I mean that when you saw the "Sol" almost coming at you, and you were on board the "Alathea," what would you have done? Probably I would have gone full speed astern.
100. Did not the captain of the "Alathea" go full speed astern? Yes; I believe he did, but I was not there.
101. Was it not sworn by two or three witnesses that he did go full speed astern? Probably it was so.
102. Was there anything else for him to do? When the collision became inevitable, nothing else.
103. Now about the speed the "Alathea" was going;—what speed is she allowed to go at? Six miles an hour inside the cove.
104. Did you not call witnesses to prove that she was going at more than that speed? Yes; one witness, I believe.
105. So you fought that point? We did not call witnesses for any special purpose. We called witnesses on our side, but I cannot positively say what special points they took up. I know witnesses on your side gave false evidence.
106. Were you at the collision? No.
107. Do you not know that the witnesses swore that the "Alathea" was not going more than 6 miles an hour? Yes.
108. Did they not swear that before they rounded Dawes' Point they slowed down? No; they did not. They swore most extraordinary things, which no one believed. They said there was a standing order to their engineers to slacken speed at a certain time, and that the collision occurred after that time.
109. Do you not know that it was sworn at the trial by two or three witnesses on board the "Alathea" that the order had been given to slacken speed? No; you are mistaken.
110. Will you say that that is not so? What was said was that the engineer eased the speed in accordance with the general order on the subject—to do so between Goat Island and Dawes' Point.
111. Do you know that the "Alathea" passed this particular spot where the collision took place every morning at the same moment? I do not know that. I know it was about the time.
112. She is timed to leave a particular spot at an exact time? Yes, I suppose so.
113. Her speed is pretty well known;—do you remember that it was sworn that she arrived at the wharf at Circular Quay almost at the same moment every morning? Yes.
114. Does it not strike you as a most remarkable thing in connection with this collision that your people on board the "Sol," knowing that this steamer passed every morning at a particular time, did not go and look for the steamer before starting out? Yes; I spoke to the coxswain about that subject. His assertion was that first they saw a North Shore steamer coming, and they took precautions to keep out of her way, and then most suddenly and most rapidly came the "Alathea" rushing up and overtaking the North Shore steamer, and she was in the position where the collision occurred so rapidly that they really had not time to get out of her way. They are hidden from a view by the point until they round it. The North Shore steamer was the "Bunya Bunya."
115. Could the coxswain on board the "Sol," when inside the inlet, see the "Alathea" coming round the Wall? No.

Capt.  
F. Hixson.  
28 Oct., 1896.

Capt.  
F. Hixson.  
28 Oct., 1896.

116. If they had got out of the steamer before starting and gone upon the wharf, could they not have seen the "Alathea" coming? Probably they could.
117. Do you not think that the coxswain was bound to expect that the steamer would be there almost at that moment? I believe that is so.
118. Why did he not go and look? The facts of the case show this, that the "Sol" was coming out and they thought everything was right. The engineer unfortunately left his engine thinking everything was right, and he went to attend to his fire. The "Alathea" was then upon her. The "Sol" came out stern first, and had to turn round. The engineer left his starting-bar when he thought everything was clear, and went to attend to the fires. The "Alathea" was on top of her before the man could get back to his engines.
119. See if you cannot admit this: that the fact of its being known that the "Alathea" passed that spot at the same moment every morning settled the case against you? I do not think so. The men in the employ of the Board do not carry watches in their pockets.
120. Did you hear the Judge's summing up? Yes.
121. Did not the Judge tell the jury this: "Gentlemen, it is for you to consider whether those in charge of the 'Sol,' knowing that the 'Alathea' came by this spot at the same moment every morning, had no right to dart out from that inlet before ascertaining whether she was coming or had gone past"? He might have put it somewhat in that way, but that is only the Judge's speech. I say again that these men of mine do not know the time to a minute or ten minutes, nor do any other working men about the wharfs; but I repeat the men came out as they thought carefully. The man left his starting-gear, which he should not have done, and there, to a great extent, we were wrong. He left his starting-bar and went below to attend to the fire, and the "Alathea" was on top of them before they could look round. When the coxswain wanted the steamer stopped he called out, but the engineer was not at the starting-bar.
122. Do you know what was the original claim made by the owners of the "Alathea"? I do not remember; but I may say the claim was most exorbitant, and certain reductions were made in Court at the instance of our counsel.
123. No; those were only attempts at reductions—your counsel could not make reductions? Your side accepted them, and the Judge gave a verdict for £600.
124. Was it not the jury that gave a verdict for £600? Yes.
125. Do you recollect that the original claim was for £1,100, and that a great deal of that was for demurrage? Yes.
126. You would not admit demurrage? No. What we would not admit was this: you charged us demurrage and also the hire of another steamer when we were paying you for demurrage.
127. I admit we could not claim both? That was what you did claim.
128. Did you not also dispute a large sum which was made up for renovating the ship? Yes.
129. Do you know what that came to? I do not know, but it came to this: £1,100 damages were claimed, and the jury, after hearing evidence, gave a verdict for £600.
130. Eventually, you offered £700? No; that was offered previously. When you went to law we did not offer anything.
131. Previous to what? Previous to going to law. Knowing that the thing was very much in the nature of an accident, we suggested that £700 might be offered to you.
132. Then I suppose I may take it that you considered that the "Alathea" had at least suffered damage to that extent? No.
133. But you would not have offered £700 if you thought we had only suffered damage to the amount of £600? We offered £700 on the merits of the case.
134. To whom did you make the offer? We instructed our solicitors, Hamilton and Sly, to make it.
135. You feel quite confident about that? Yes; but I am afraid there was some blunder made between the two solicitors. I am under the impression that instead of offering you £700, the other side said, "You will have to take something less." You wanted £1,000, and we would not give it. We told our solicitors that we would offer you £700, and I am afraid that they did not put it to you in as straightforward a manner as they ought to have done.
136. Is not this what took place: you authorised your solicitors to offer us £700? Yes.
137. Did they not tell you afterwards that they found we wanted £1,000, and that therefore they offered us nothing? I do not remember that. I quite admit I am afraid that the offer did not reach you in the way we intended it should.
138. Have you made any recommendation to the Government since the verdict was given, or have you been consulted about it? I am afraid that is a departmental matter.
139. I do not know. I look upon you as the representative of the Department;—is not that right? Yes.
140. I think it will be very pertinent to the question which is being investigated to know your views? We were all along for compromising. When you forced us to law we had to go.
141. Supposing we never got your offer? I think we can find it stated among the papers that you said you would not take less than £1,000.
142. I think you will find among the papers that we wanted £1,000, but I do not think you will find it among the papers that we ever refused £700? Probably it is so.
143. You have stated that your son and another young gentleman were on board the "Sol"? Yes.
144. What were the coxswain's orders on that morning? I presume that the coxswain had orders to go for Mr. Ramsay of the Museum, but he afterwards got orders from the boatswain to land my son and young Mr. Cape at North Shore before going there.
145. Then he was going b round about way to Princes Stairs? Yes.
146. From your point of view, as a nautical man, might it not be held nautically that, although the coxswain was going to North Shore, he was on his way to Princes Stairs in a round-about way? No; according to the diagram which you have produced he is going away from Princes Stairs. However, it was brought down to this point, that he was to go one way according to Marine Board orders, but he was diverted in another direction by the boatswain.
147. Coming out of the inlet would he not have to come straight out for a bit? Yes.
148. Was the proper officer in charge of the vessel when the collision took place? Yes.
149. Whether those two young gentlemen were there or not it would be the same officer who would be in charge? Yes.

150. Supposing I wanted to be taken across to North Shore, would he take me? I cannot tell you.
151. Supposing anyone went down to him that morning, and said "Boatswain, I want to go to North Shore; will you take me over";—would he do so? I do not think so. Probably because this young man was my son and an officer in the Naval Brigade, that fact would exercise more influence over the boatswain than if he were an ordinary individual.
152. It was not unusual to take your son or his friends? Yes; it was unusual.
153. In whose charge was the movement of the boat on that morning? In charge of the boatswain until the boat was sent away from his shed. After she left the shed the boat would be in charge of the coxswain.
154. In other words the Government had deputed the charge of the boat to the boatswain on that day? That man is in subordinate charge of the establishment. There are several launches there, and this man had charge of them while they were there.
155. Then, on behalf of the Government, he had the control of the movements of those boats on that morning? No; that is not so. He exceeded his authority by acting as he did.
156. Up to the time that the two young gentlemen went there, who had charge of the boat's movements for the Government that morning? The boatswain. After he received orders on the subject from the Marine Board he should not have deviated from them.
157. Then, while having such authority, he took upon himself to direct the coxswain to take those two young gentlemen over to North Shore? Yes.
158. Assuming that the "Sol" was altogether in the wrong in this matter, and that the "Alathea" was right, do you not think it is a hard point for the Government to take, that the Government are free from responsibility, because these two young gentlemen were on board the boat? They did not take the point on the ground that the two young gentlemen were on board. The point they took was the law point, that the boatswain of the establishment, instead of sending the boat in the direction ordered, sent her in another direction.
159. In order to take those two young gentlemen over to North Shore? Yes.
160. Do you not think that is a hard point? Yes; that is hard strict law.
161. Were you not a bit ashamed of it at the time? It is not what I thought. I tell you I was dissatisfied with my counsel in the way they acted. I wanted them to fight out the question on its merits.
162. You wanted it to be decided on its merits, and you did not want that point to be taken? Quite right.
163. Do you not think that if the "Sol" had ported her helm the collision might have been avoided? Yes; also if she had stopped sooner than she did. If the "Sol" had been a larger vessel she would not have hurt the "Alathea" very much, but being a small vessel she struck the "Alathea" low down like a torpedo, as it were.
164. Is it not another rule for navigating the harbour that all steamers must keep as close as possible to that shore which is on their starboard hand? Yes.
165. So that the "Alathea" would not be wrong in keeping as close to this wall as she could? Yes. If she had only gone slower it would have been all right.
166. I cannot see what difference it would make if she was going 7 miles an hour instead of 6 miles? It was more like 11 miles an hour than 6 miles.
167. Did not our side swear that the steamer did not go more than 6 miles an hour, and did not the jury believe our witnesses? The jury gave you a verdict for £600. I do not know what they believed.
168. *Mr. Wilks.*] Assuming that the people on board the "Sol" were aware that the "Alathea" passed the point daily at a certain given time, do you think that the people on board the "Sol" were justified in leaving before the "Alathea" passed? No; I am sure that if the "Sol" people had been aware that the "Alathea" was coming they would not have gone out.
169. If they had an idea that the "Alathea" was coming would they have hauled out? No; I think they would have remained where they were, and would have let the "Alathea" pass.
170. *Mr. Wood.*] With regard to your contention as to the speed of the "Alathea," do you think that evidence could have been produced to show that the "Alathea" was travelling at more than 6 miles an hour? Yes.
171. Did your side bring evidence to show that? Yes.
172. Did your counsel, when your case was going to the jury, give full force to that as one of the principal counts? I do not think they did.
173. In your opinion, when the case went to the jury, that point was not clearly placed before them? I did not think that our counsel paid sufficient attention to that particular point in putting the case before the jury.
174. As a rule, does not the time at which ferry boats are due at the wharves vary, probably, from 2 to 4 minutes? I think so.
175. Where was the "Alathea" coming from? From some point away up on the Parramatta River—I think, Hunter's Hill—and she was going to Circular Quay.
176. From what you know of those ferry-boats coming from such a distance, is it not possible for the time of their arrival to vary 2 or 3 minutes? Yes.
177. Do you say that it was owing to the suddenness and the rapidity with which the "Alathea" rounded this point that the collision occurred? Yes.
178. Had she come slower would your people have had time to get warning that she was approaching? Yes.
179. Do you admit that the fact of your engineer leaving his starting-bar and going to fire the vessel was negligence? Yes.
180. You have said that orders were given to go full speed astern;—had the Engineer been in his place, and if that order had been executed immediately, do you think that the collision would have been avoided? I think it is likely it would have been avoided.
181. With regard to the suggestion that the Marine Board should compromise, do you say that £700 was originally offered? That is what we intended.
182. Was the offer made? Instructions were given by us to our solicitors, but I am afraid that they did not send it to the solicitors for the opposite side in the straightforward way that we wished.
183. As far as you know, instructions were given for a compromise on those grounds? Yes.
184. Was the sum suggested by you intended to cover demurrage as well as damage? Yes; it was intended to cover everything.

Capt.  
F. Hixson.  
28 Oct., 1896.

Capt.  
F. Hixson.  
28 Oct., 1896.

185. Was it intended as full compensation for the damage done and for the time lost? Yes; of course that was the way we viewed it.
186. Is that the usual course for the Marine Board to adopt? As a rule, if the Government contribute to a collision or accident of this sort it is better for them to compromise. Juries are more merciful to private individuals and companies than to the Government.
187. Your contention at that time was that you were to blame, and that the "Alathea" was also to blame? Yes; that there was contributory negligence both sides.
188. And that induced the Board to make an offer? Yes.
189. You have admitted that your boat was in the wrong, as well as the "Alathea," but would you say that, if your case had been fought out on the merits (that is to say, with regard to the rule of the road), you think you could have won your case? I think it is most probable that if we did not win it, it would have been given that both sides were in fault.
190. Do you think you could have clearly shown that the "Alathea" was a contributing party to the accident? Yes.
191. *Mr. Johnstone.*] Did you go into the details of the damages claimed before you authorised the offer of £700? Yes, to a certain extent; but the expenses were all incurred on your side without any reference to us, and then the claim was sent in.
192. Did you think that was what you considered was the maximum claim that ought to be allowed? Yes; we thought that £700 was over and above what you ought to get.
193. Having regard to what you said just now, assuming that the "Alathea" was not going more than 6 miles an hour, and if the "Bunya Bunya" was going in the same direction as the "Alathea," and close to the "Alathea" on the "Alathea's" port side, the only thing the "Alathea" could do was to stop and go astern;—supposing that is what she did, do you think you could ever have succeeded in that case? I do not know exactly what you mean.
194. The harbour rules say that if a steamer is going in a certain direction, and another steamer is coming on her starboard hand, and a collision looks inevitable, then the steamer which is on her starboard hand has to get out of the way;—now, there are only three ways of getting out of the way—going ahead, going astern, or diverting the course? No; there is another course open—that is, not to go so fast originally.
195. I ask you to assume that the "Alathea" was not going more than 6 miles an hour? Then I will answer yes.
196. Then, if that were proved to be the case, you could not have hoped to succeed? But the regulations say that the vessel that has the other on her starboard side has to keep out of her way.
197. You forget the other regulation which specifies a case where that cannot be done? That means dangers to navigation—where there are reefs, currents, and so on. It does not refer to straight navigation, such as that in Sydney cove.
198. Do you not recollect saying that on the facts we have assumed you would have done the very same thing as the captain of the "Alathea" did? Yes; I have said that I would probably have gone full speed astern.
199. *Mr. Wood.*] Have you any reason to suppose that the jury, in bringing in a verdict for £600, were influenced by the fact that they considered it was hard that the "Alathea" people should be beaten on a point of law, inasmuch as the people on board the "Sol" were a contributing party to the accident? I cannot give an opinion on that point.
200. Do you suppose that in assessing the damages they were guided by that consideration? I am rather inclined to think that they went into the actual merits of the case as to the damage done to the vessel. At the same time, I cannot say that that was the case. I think they went very carefully into the merits, and that they said, "Well, if the law is in your favour we will give you £600 as a fair set-off for the damages you have sustained."
201. Do you think that was the jury's estimate of the actual damage done? Yes; and a fair one.
202. How do you reconcile that with the offer which the Marine Board made of £700 which you say was a compromise? The owners of the steamer sent in a very heavy claim for £1,100 or £1,200. Amongst other things they sent in a claim for demurrage and also a claim for the hire of a vessel to do the work of the "Alathea." I thought they were unscrupulous in the claim they sent in, so we offered £700.
203. Do you claim that the amount of £700 which you offered was a compromise? Seeing that the other boat was in the wrong.
204. Therefore I take it you did not regard that as full compensation? Our boat sustained damage also.
205. Did you take that into consideration in making the offer? Yes; we took the whole of the circumstances into consideration.

Arthur Stanley Cowper called in, sworn, and examined:—

- A. S. Cowper.  
28 Oct., 1896.
206. *Chairman.*] Are you manager of the Parramatta Steamship Company? Yes.
207. Do you know anything about the collision which occurred? I have no personal knowledge of it, because it took place before I was manager.
208. Do you know of your own knowledge the amount paid by the company for the injuries caused by the collision? We paid Mort's Dock Company £502, and there were a lot of incidental expenses. I have not made up the total. I suppose that, roughly speaking, we are about £1,000 out, and that does not include the costs.
209. *Mr. Wilks.*] Was that for putting the vessel in full repair? Yes.
210. *Mr. Johnstone.*] Was not your original claim £1,100? I cannot be sure without making up the figures, but it was about £1,000 or £1,100.
211. *Chairman.*] Do you know if any communication was received at any time from the Marine Board to the company offering to compromise? No, I never found anything of that kind.
212. *Mr. Wood.*] Are you quite clear as to the actual damage done to the vessel? Most of the accounts were paid before I went into the office. I settled up with Mort's Dock Company when I paid them £502.
213. Have you reason to suppose that £500 or £600 was spent in repairing the vessel and improving her? Yes; because I believe she was done up shortly before the accident.
214. *Chairman.*] Was it not considered by the company that Captain Donald, the former manager, was rather extravagant? That is merely a matter of hearsay.

215. Was it complained about that he caused too much to be done to the vessel when she was repaired? A. S. Cowper. No; the complaint, so far as I could learn, was with regard to the demurrage. While the boat was laid up, he contended that she would have been earning so much per day, and he charged that amount. I believe the Marine Board objected to that. 28 Oct., 1896.
216. Was that in connection with the claim made against the Marine Board? Yes.
217. *Mr. Johnstone.*] Do you know of any charge being included in the claim for the hire of another steamer to take the place of the "Alathea," while, at the same time, you claimed demurrage? No; I do not think Captain Donald got another boat. There was a small item of £5 5s. for the charter of a little boat called the "Snap Shot," which was used for going backwards and forwards to Mort's Dock.
218. Do you say that you paid Mort's Dock £500? Yes; Mort's Dock Company began to force us, and Mr. Franki was going to charge us interest.
219. In the claim which I hand to you is there any item for hiring a steamer to take the place of the "Alathea"? No.
220. Does this claim, which I hand you, contain all the particulars? Yes; everything that would be necessary to incur in fitting up a boat like the "Alathea." I think the charge for demurrage is quite right. Two holidays are put down in the list at £30 each. I know on some holidays we earn £40 with a boat like the "Alathea."

THURSDAY, 5 NOVEMBER, 1896.

Present:—

Mr. WOOD,

Mr. WATSON,

Mr. DAVIS.

W. H. B. PIDDINGTON, Esq., IN THE CHAIR.

J. W. Johnson, Esq. (of Messrs. Johnson, Minter, Simpson, & Co., solicitors), appeared for the Parramatta River Steamers and Tramway Company (Limited).

John Puckeridge called in, sworn, and examined:—

221. *Chairman.*] Are you in the employ of the Marine Board? I am boatswain in charge of the shed where the Marine Board launches are kept. J. Puckeridge. 5 Nov., 1896.
222. How long have you been in the employ of the Marine Board? About twenty-six years.
223. Do you remember the collision between the "Sol" and "Alathea"? Yes.
224. Were you in charge of the boat on that occasion? No, I had charge of the boatshed.
225. Who takes instructions from you? Any of the boatmen.
226. Do you refer to the captains of the launches? They are called coxswains, but they hold master's certificates for the harbour.
227. On this occasion did you get instructions from the Marine Board that a launch should proceed to Princes Stairs? Yes, for Mr. Ramsay, the Curator of the Museum.
228. Just prior to that boat starting, did young Mr. Hixson and Mr. Cape come down to the shed? Yes.
229. Did they come to you? They came through the boat-shed; they did not come direct to me, they saw me and spoke to me.
230. Did they ask if the boat would take them over to Blue's Point? The boat was in order to go for Mr. Ramsay at a quarter after 9 o'clock. They came there a little after 9 o'clock and told me they were going to North Sydney, and that as the boat was going away would I give them a passage over as they were going to the Hawkesbury with Mr. Thomas Dibbs. The boat started away with them.
231. Did the collision occur shortly afterwards? Yes.
232. Has it been the habit of these gentlemen or of others to take the boat or to ask permission for a boat to be used in that way? No; but it lies in my option to do that if a boat is going to a certain part of the harbour. When the boat has been going in a certain direction people have asked me if they could have a passage.
233. *Mr. Watson.*] Have those been unofficial persons? No; only in cases such as Captain Hixson's son.
234. But these gentlemen were not official persons? No; it is just this way: No doubt I hurried them away. There was very little time; it was 5 or 6 minutes past 9; the launch had to be at Princes Stairs at a quarter past 9, but I knew that Mr. Ramsay would not be there punctually. I knew very well that if I had gone into the little office and rung up Captain Hixson on the telephone he would have consented to my letting the boat go.
235. *Mr. Wood.*] Have you any general instructions to act in that responsible way yourself;—did you do this believing that Captain Hixson would acquiesce in it if you consulted him? Yes; I have not the slightest doubt about that.
236. As a matter of fact, had it been allowed before? They have been on the boat before, but not without the permission of their father.
237. *Mr. Johnson.*] Would you have taken anybody over had they asked you for a passage to North Shore? Decidedly not.
238. Then why did you give orders for these two gentlemen to be taken to North Shore? It is just this way: I look upon Captain Hixson as the Master or Superintendent of the Marine Board. He is President, and this gentleman being his son, and I being very familiar with him (having known him many years I am very familiar with him) granted him the passage.
239. Then you simply gave him a passage because he was Captain Hixson's son? Yes.
240. And also his friend? Yes. I knew that if I communicated with Captain Hixson he would without doubt have consented.
241. *Mr. Watson.*] Were you guided in that opinion by the fact that previously you had the consent of Captain Hixson for such a thing being done? Yes—his son having the launch.
242. In other words, you had given the same permission to his son on previous occasions, and Captain Hixson knew it and had not objected? Yes; Captain Hixson had given permission.
243. Was that the first occasion on which you did it on your own authority? Yes; I believe.
244. *Mr. Johnson.*] I suppose you had given authority on previous occasions? No.
245. Never? I do not believe I ever did.

- J. Puckeridge, Esq.  
5 Nov., 1896.
246. *Chairman.*] As far as you know, since the occurrence of this collision have the Marine Board boats been used for the same purpose as this boat was used on that morning? No; unless they have been used by Captain Hixson.
247. Did you see the collision? No; the boats were out of my view, but I heard the smash.
248. *Mr. Johnson.*] Supposing that some gentleman whom you knew very well had gone there, and you told him you would put him across to North Shore in the launch, would you consider that you had authority to do that? Yes, providing it was not in the hours when the office was open.
249. You would do it if it did not interfere with business? No, if the head office was not open (that is the Marine Board office) I would use my own discretion whether I would do it or not.
250. If you did so, would you consider you had authority to do it? If it was a member of the Government or any official person, but not any private person. If I did so, the responsibility would be entirely mine.
251. What I want to get from you is, in your own belief did you consider you had authority to tell the coxswain that he was to take these gentlemen over to North Shore? That is rather a difficult question to answer.
252. Would you tell the coxswain to do that unless you thought you had authority? No, I would not.
253. *Mr. Watson.*] Were any instructions ever given that you ought to do this, or use your own discretion in matters of that kind? No, on Sundays and holidays, when the office is closed, the boat-shed is entirely under my control, to use my own discretion in carrying out the work.
254. On this occasion the Marine Board office was not closed? It happened on a week-day morning.
255. Since this collision occurred have there been any unofficial persons travelling on the boat? No; not that I am aware of, only people who are connected with the Marine Board Department.

TUESDAY, 10 NOVEMBER, 1896.

Present:—

MR. DAVIS, | MR. WADDELL,  
MR. WILKS.

W. H. B. PIDDINGTON, Esq., IN THE CHAIR.

J. W. Johnson, Esq. (of Messrs. Johnson, Minter, Simpson, & Co., solicitors) appeared for the Parramatta River Steamers and Tramway Company (Limited).

Henry George Menzies sworn and examined:—

- H. G. Menzies.  
10 Nov., 1896.
256. *Chairman.*] Are you captain of the "Alathea"? Yes.
257. Were you captain at the time of the collision between the "Alathea" and the "Sol"? Yes.
258. Have you held that position since? I am not on the "Alathea" at present, but I am still in the employ of the Company.
259. *Mr. Johnson.*] Are you well acquainted with the harbour regulations? Yes.
260. Were you in the habit of passing the spot where the collision took place at the same time every morning? Yes; pretty well, with a minute or two difference.
261. When did you slacken speed? Just when we got to Dawes Point where the red light is.
262. At what pace were you going? At 6 knots an hour after slackening speed. The standing orders are to always slacken speed after passing Dawes' Point, because there is so much traffic that there might be an accident.
263. When you saw that a collision was inevitable, why did you not starboard your helm? The "Bunya Bunya" was just on my port quarter; you could just see daylight between my steamer and her. [*Witness here described on a chart the position of the vessels.*]
264. If you had starboarded your helm, would you have been run into? I was in danger on both sides. As soon as I saw what was going on, I ordered the boat full speed astern, and the order was obeyed immediately. I was a length and a half on the west side of the red buoy marked on the chart, when I saw the "Sol" coming out, and then I rang the order full speed astern, which was obeyed immediately.
265. When the collision took place, was there any way on your steamer? No: she was at a standstill. She was only going slow.
266. If, instead of starboarding her helm, the "Sol" had put her helm to port, would the collision have happened? If the "Sol" had not starboarded, but had kept straight ahead, the collision would not have occurred.
267. Had the "Sol" plenty of time from the moment that you first bore in sight to have stopped her engines and reversed, if the man had been at the starting-bar? Yes; there would have been no collision.
269. *Mr. Davis.*] Had the man who was supposed to be in charge of the "Sol" a hold of the helm? I could not swear whether he had, because there were two men there. There was the Marine Board man on the starboard side, and there was a gentleman on the port side.
270. Who was that gentleman? Captain Hixson's son.
271. Did any evidence come before the Court, showing that Mr. Hixson, and not the man, really had taken the helm in hand? There was something said about that, but it did not come out properly.
271. Was it hushed up? Yes; I have since heard that he was at the helm, and that the driver was down below shaking her up.
272. Was there anybody else on board? That is all I saw. There might have been more, but I did not see them.
273. Was the man in charge of the boat standing close to her helm? There were two close together, and I could not tell who was steering; there was one on each side.

James William Johnson, recalled and further examined:—

274. *Chairman.*] Have you an article that was published in the *Daily Telegraph* which you wish to put in as fair comment? Yes; also an article from the *Evening News*. [*Vide Appendices C 1 and 2.*]

275. *Mr. Davis.*] Do those articles contain some special remarks made by Mr. Justice Windeyer? No; they are comment on the decision of the Full Court, putting the whole case very clearly. I also put in a report which appeared in the *Sydney Morning Herald*, of 13th September, 1894, giving the summing up of the Judge on the trial, and the questions he put to the jury, with their answers. [*Appendix C 3.*] I wish to say this with reference to Captain Hixson's statement as to the conduct of the "Sol's" case by counsel for the Marine Board: I say that counsel went most fully into the facts of the collision from their point of view, and they endeavoured to show that the "Sol" was blameless, and that the "Alathea" was solely to blame, and in my opinion it was only when they broke down in that contention that they resorted to this highly technical point that the "Sol" was not on Government duty. To show how fully they went into that question I hand in the following list of witnesses called by the plaintiffs, and also the list of witnesses called by the defendants:—Witnesses for the plaintiff: Henry Menzies, master of "Alathea"; Frederick Styles, engineer; M. B. Marcey, deck hand; R. M. Pearson, passenger; E. H. Crossman, passenger; T. R. Cooper, passenger; W. S. Dowel, M.P., passenger; A. S. Loveridge, passenger; B. H. Greaves, manager of Parramatta Steamers Company; Charles Cape, passenger on the "Sol"; J. M. Banks, marine surveyor; John Barber, foreman shipwright; John Dick, foreman engineer; A. P. Richards, foreman painter; W. T. Peters, engineer; Joseph Silva, master s.s. "Ivy"; Thomas Donaldson, foreman, Mort's Dock; Captain Hall, marine surveyor; Captain Grainger, marine surveyor. Witnesses for the defendant: Ernest Charles Younger, passenger on "Bunya Bunya"; Joseph Kendall, hand on "Bunya Bunya"; Robert Godbold, hand on "Bunya Bunya"; Charles Cape, passenger on "Sol"; William Henry Keys, Alexander Robertson, William Kendall, John Sherry, John Puckeridge, boatswain on "Sol"; Francis Hixson, Chairman Marine Board; William M'Critchie.

J. W.  
Johnson.  
10 Nov., 1896.

277. *Mr. Davis.*] If the "Sol" had belonged to a private company, or a ferry company, or was privately owned, would the company or owners have been liable for the damage done to the "Alathea," seeing that the jury brought in a verdict of guilty against the "Sol"? Yes, they would have been certainly liable.

277. Would they have been able to shelter themselves under the plea that the vessel was not on duty? No; as a matter of fact the coxswain of the "Sol" is liable to us at present.

278. When a collision occurs at sea, does the injured person sue the master of the ship? No.

279. Is it not generally the owners of the vessel who are sued and who have to pay damages? Yes.

280. *Chairman.*] There are some questions which you wish me to ask you,—was it proved at the trial that the "Alathea" passed the spot where the collision took place almost at the same time every morning? Yes.

281. Was it proved that the "Bunya Bunya" was steaming into the cove close to the "Alathea" on her port side, the "Alathea" being a little ahead of her? Yes.

282. Was evidence on the part of the Marine Board gone into to prove that the "Sol" was in the right, and that the "Alathea" was in the wrong? Yes, most fully.

283. Was £700 ever offered by the Marine Board to the owners of the "Alathea"? No; I was astonished when I heard Captain Hixson say that he had instructed the solicitors for the Marine Board to offer us £700. That was the first I had ever heard of it.

284. Are you quite sure that that offer was never made? I am quite sure it was never made, and I am quite sure that if it had been offered it would have been accepted, rather than have gone into this litigation. I may tell you that we did get a letter from Messrs. Sly and Russell, asking us the lowest sum we would be prepared to accept on behalf of the owners of the "Alathea," and we wrote back saying that we would accept £1,000, but we never said we would not accept £700, and it was never offered to us.

285. Do you not know of any letter ever being written by the Secretary of the Marine Board to the Parramatta River Steamers Company? I am sure it was not. The whole of the correspondence at that time had been relegated to the solicitors.

286. We have in evidence a copy of the letter written by the Secretary of the Marine Board, and addressed to the Under Secretary for Finance and Trade? Perhaps so, but that never reached us. I should like to see it. The memo. I refer to is as follows:—

The Secretary, Marine Board, to the Under Secretary for Finance and Trade.

25 September, 1894.

This case arose from the collision which took place some months ago between the "Sol" and the Parramatta steamer "Alathea." The collision was to a great extent the result of accident, and the Board endeavoured to settle it amicably; but the demands of the "Alathea" party were so outrageous that it was thought better to meet an action in the Supreme Court than to yield to them. The Board did not, however, wish to plead non-liability, and only sanctioned the action of their counsel with a view of protecting the public interest against the excessive demands of their opponents. With the point conceded by the jury of the non-liability of the Board better terms will now be made with the owners of the "Alathea," and something like a fair settlement will be arrived at.

By Order,—

G. S. LINDEMAN.

287. Do you wish to say anything with regard to that? I never saw that, or never heard of it until to-day. That was written after the verdict. I have no doubt that from what Captain Hixson has said that the solicitors for the Marine Board were instructed to offer us £700, but they never did so. He explained himself that he feared they had made some bungle over it. With regard to the fact that Captain Hixson has stated that the Marine Board authorised the sum of £700 to be offered to the owners of the "Alathea," I point out that if the Government now were to see its way to pay us the amount of our verdict, viz., £600, and the amount of the costs that the owners of the "Alathea" were put to, say £300, and taking into consideration that the Government have paid the costs of the solicitors of the Marine Board, amounting to, say, £300, the Government would now only be paying £1,100 altogether, which would only come to £500 more than if they had paid £700 at the time, and no doubt at that time they would have had to pay the Marine Board's solicitors a considerable sum for costs up to that date.

## COLLISION BETWEEN THE "SOL" AND "ALATHEA" STEAMERS.

## APPENDIX.

## A1.

[To evidence of James Wm. Johnston, Esq., 22 October, 1896.]

## JUDGE'S NOTES.

In the Supreme Court of New South Wales.—No. 3 Jury Court. Cor. Windeyer, J.—19th September, 1894.

The Parramatta River Steamers and Tramway Co. (Limited), v. Hixson.

Mr. Want and Dr. Sly, by Messrs. Johnson, Minter, and Simpson, for plaintiffs.

Mr. Bruce Smith and Mr. Raletton, by Messrs. Sly, Hamilton, and Russell, for defendants.

*Captain Francis Hixson*, President of Marine Board and defendant in this action: The "Sol" is under my control and under the control of the Marine Board; the Marine Board employees run her; I knew about her on that day; I did not know of her going to carry my son and Mr. Cape (the solicitor) to Blue's Point; I had not been asked to give authority to take them anywhere; The boat was authorized for the service of Dr. Ramsay, the Curator of the Museum; the boat was ordered for Dr. Ramsay for a certain purpose, and the boatswain in charge of the establishment allowed the two young men to go in her via the service on which she was engaged; she was starting on her expedition to take Dr. Ramsay; Blue's Point would be out of her course on her journey for Dr. Ramsay.

*Cross-examined*: The "Alathea" ought to have kept out of the way. (See the Eighteenth Article.) She could have done so by stopping or starboarding; the "Sol" ought to keep her course; the "Bunya Bunya" should keep out of the way; the Marine Board entrusted the steamer to the boatswain under certain conditions; special orders are given for these duties and others are prepared as matters of routine; the boatswain is the executive officer of the Board; I never took any objection to the boatswain letting the boat be used in this way; it is no part of a boatswain's routine duty to send the boat with private persons across the harbour, but it is often done; I don't split hairs with the man in charge of the boat; I think the man might assume, from his mode of acting before, that he had authority to let the boat be used in this way.

*Robert Godbold*, master of the "Sol": We backed out towards Circular Quay, and came round on a port helm till her head was pointing just outwards of the red buoy, going between 3 and 4 knots; the full speed is between 6 and 7; we were going half-speed when going towards the buoy; I was in uniform standing on starboard side of wheel, I was steering and had charge of the boat; I left the wheel before the collision and pulled a fender off in the port bow, my helm was steady and required holding, I went 13 feet to do it, 26 feet there and back from the wheel; I first saw the "Bunya Bunya's" funnel showing over the wall on the Point, she would be then 120 yards from the buoy; I did not see the "Alathea" then, I kept my course, as I got back to the wheel I saw the "Alathea's" awning over the wall; she was inside the "Bunya Bunya," and the "Bunya Bunya" was half a length astern of her; as the "Alathea" came along, I saw she was altering her course to starboard on her course to the Quay; I gave the order to stop, I turned round and saw the engineer was employed somewhere else, and I ran aft and turned off the steam; my helm was then steady, I went 6 feet to do it, I eased the steam, I did not turn it right off, I turned it one turn, and turned it half-off; we were going 3 knots when I eased her; I lost about five seconds in going to ease her; I think the "Alathea" was going between 8 and 9 at the moment of the collision; the "Alathea" was about half a boat's length to the south of the buoy, her stern would not be clear of the buoy; the buoy was about her midships; way was not off her when I struck her, she was going about 4 when I struck her; the "Bunya Bunya" was on the "Alathea's" port quarter when I struck the "Alathea," and about half a length astern of her, and one and a half outside her; the "Alathea" would have run no risk to herself if she had starboarded and gone to port; having me on her starboard I assumed that she would keep out of the way, and I kept my course; I received orders from the boatswain to take young Mr. Hixson and Mr. Cape across and land them at Blue's Wharf, and go from there to Princes' Stairs to pick up Mr. Ramsay of the Museum, and place myself under his orders, I certainly would not have taken the course I did if I had gone direct to Princes' Stairs, and I should have gone directly in the opposite direction.

I should have cleared the long jetty if I had gone direct to the Princes' Stairs and going not the buoy but nearly parallel to the course of the "Alathea;" the effect of the collision was that the "Alathea" was still going ahead and she dragged us round about till we—

*Cross-examined*: Mr. Puckeridge is the boatswain from whom I take my orders; I altered my helm when she was a quarter length past the buoy; when I saw she was crossing my course, I put my helm hard a starboard; I knew she was coming to the Quay, and I kept my course at right angles to her till I was about twenty yards from her; I knew where the two boats were going when I saw the funnels and awning over the wall; had she kept her course I could not have caught her; the engineer was down firing when I ran aft and no one was in charge of the vessel; I thought there was risk before I jumped aft to turn off the steam; as soon as I saw her bows coming round and altering her course; he was not altering his course in reference to me, but simply coming round the point on a port helm to get to the Quay; I then thought there was risk of collision; that was ten or twelve seconds before I jumped to the throttle valve; she was seventy or eighty yards off when I saw there was risk of collision, and she was just coming in sight round the wall; I kept my course, and shortly after gave the order to stop; I saw there was risk of collision; I kept my course and did not go astern; if going half speed in the "Sol" I would not swear I could stop her in thirty yards; I think I could bring her up to a standstill in forty yards; we might have minimised the crash, but could not have avoided the collision by stopping altogether; in my opinion we would not have avoided the collision if we had stopped when I called out and no one was there.

*John Puckeridge*, boatswain of the Marine Board boats: On day of collision my instructions to the "Sol" were for 9-15 at Princes' Stairs for Dr. Ramsay, of the Museum, to go trawling in the harbour; before that Mr. Hixson and Mr. Cape came and asked me to give them passage to Blue's Point; I had no authority from the Marine Board to take these gentlemen to Blue's Point—I did that on my own authority; going to Blue's Point is not in the journey I was ordered to send the boat—it is entirely in an opposite direction; I had no general or special orders to take these gentlemen; it was a distinct journey to the one I was directed to send the boat on: it was young Hixson; he has been in the boat before; the boat was to finish by picking up Mr. Ramsay; I have often taken young Hixson before with his consent; Hixson has given me orders verbally and in writing for the general managing of the boats; I sent the boat with the gentlemen entirely on my own authority.

*Captain Hixson*: I do not consider it safe for the "Bunya Bunya" and the "Alathea" to come round the Point at nine miles an hour; there is a good deal of traffic running in and out from the wharfs; there is a proclamation prohibiting a speed of over six knots to the hour south of the buoy; if the captain had gone inside the buoy and an accident had occurred, then he would have lost his certificate; the "Sol" did the proper thing in keeping her course seeing these vessels coming as they were; the "Alathea" would not have taken a safe course in continuing as she went; the "Alathea" should have kept out of the way by stopping, or reversing, or starboarding her helm, and so giving the "Sol" room to clear the buoy; if stopping did not give her time to clear she should have starboarded her helm; two blasts on the whistle would have informed the other steamers the steamer was starboarding; putting in new engines of double the power would probably tear the ship to pieces; I do not think it is a proper thing for the engineer to go below just when she was straightening up; I think it is an improper thing to leave the bar unless he sees there is no danger; I do not think it was the duty of the master to go on when being able to stop his vessel in forty yards when the danger was eighty yards off; his duty is to stop under such circumstances if it appears to him the other ship is not going to get out of the way.

## FINDINGS OF JURY.

- A. Was the master of the "Sol" on a trip authorised by the Marine Board at time of collision? No.  
 1. Having regard to the locality and probable contingency of a vessel coming round the point as the "Sol" was going out, was it negligence not keeping a man at the engine to stop her till she was fairly out in the open harbour? Yes.  
 2. Was the collision owing to the "Sol" having no one at the engine when it became necessary to slacken speed, and to her not stopping entirely when the master eased her? Yes.

3. Did the "Sol" infringe regulation 18 as to slackening speed and stopping? Yes. If the "Sol," by infringing regulation 18, could possibly have contributed to the collision, then she is in default, unless she can show that her infringement of the rule could not possibly have done so. The plaintiff, however, is not entitled to recover if the "Alathea," by her own negligence or breach of the regulation as to keeping out of the way, contributed to the collision.

4. Did the "Alathea" do all she could to avoid the collision by keeping out of the way, having regard to her own safety with reference to the proximity of the "Runya Runya"? Yes.  
Verdict for plaintiffs, £600.

A. J. TRAILL,  
Associate.

## A 2.

[To evidence of James Wm. Johnston, Esq., 22 October, 1896.]

### FULL COURT JUDGMENT.

Parramatta River Steamers and Tramway Company (Limited) v. Hixson. New Trial Motion.

HIS HONOR the Chief Justice (Sir Frederick Darley), after setting out the facts of the case, said, "The defence raised by the Marine Board was, that those in charge of the boat, although the servants of the Board, and paid as being servants, were not using the vessel as in the employment of the Board, but for private purposes, that is, for bringing some gentlemen from one side of the harbour to the other, and the jury found that this vessel was not on a trip authorised by the Board at the time of the accident, and it is not possible for the Court to go outside the finding of the jury as to whether the boat was or was not on a trip authorised by the Board, and the law is clear on the subject, that if a servant is not acting, in using a steamer, carriage, or horses, or anything likely to cause mischief or damage, in his master's employment, but is carrying out a scheme or frolic of his own, or of a friend, and an accident occurs through his negligence, the master is not responsible, and it is impossible for the Court to set aside the finding of the jury; and it seems to me that the verdict in the case must be set aside, and, according to an arrangement made, a verdict entered for the defendant, and I must say it is a case of extreme hardship for the plaintiffs; and it is well known that the Marine Board had allowed this steamer to be used for purposes which, strictly speaking, did not fall within the Act of Parliament, and, under these circumstances, it will be a question for the Government to consider by and by, whether the plaintiffs are not entitled to consideration for damages." And

His Honor Sir William Windeyer said, "I entirely agree in thinking that the verdict must be set aside and a verdict entered for the defendant; and I could not help saying that the evidence showed that the plaintiffs were in no wise in the wrong; that they received this injury at the hands of a boat managed by Government officials, sustaining considerable damage; and I thought it better, in the first place, that the whole case should be tried by a jury, to see whether there was any contributory negligence on the part of the plaintiffs which would disentitle them to damages, and if they were proved to be entirely in the right, they might be in a position to make such representations to the Government as they thought fit. And there is no doubt that this boat, at the time of the accident, was not upon the strict business of the Marine Board, and for that reason, the case coming so clearly as it does within the numerous decisions given by the Court on this point, there is no escape from setting aside the verdict; and I agree with the Chief Justice, that it will be a matter for the consideration of the Government whether reparation should be made the plaintiffs because of the dereliction of the Board in allowing the boat to be used in this way." And

His Honor Sir George Innes: "I agree entirely, and I have nothing to add."  
The rule was granted with costs and a verdict entered for the defendant.

## B.

[Appended by the Committee.]

25 September, 1894.

THIS case arose from the collision which took place some months ago between the "Sol" and the Parramatta steamer "Alathea."

The collision was to a great extent the result of accident, and the Board endeavoured to settle it amicably; but the demands of the "Alathea" party were so outrageous that it was thought better to meet an action in the Supreme Court than to yield to them.

The Board did not, however, wish to plead non-liability, and only sanctioned the action of their counsel with the view of protecting the public interest against the excessive demands of their opponents. With the point conceded by the jury of the non-liability of the Board, better terms will now be made with the owners of the "Alathea," and something like a fair settlement will be arrived at.

By order,  
GEO. S. LINDEMAN.

The Under Secretary for Finance and Trade.

## C 1.

[To evidence of J. W. Johnston, Esq., 10 November, 1896.]

[Extract from *The Daily Telegraph*, Thursday, 9 May, 1895.]

### THE SOL-ALATHEA CASE.

THE difficulty of making any general principle of law fit every individual case to which it applies, so as to do equal justice all round, was illustrated in the Supreme Court yesterday, where a decision had to be given which even the Bench acknowledged as unfair to the parties concerned. The case referred to was that of the Parramatta Steamship Company against the Government, in which damages were claimed for loss sustained by a collision between one of their steamers and the Marine Board launch. It was an appeal to the Full Court from a verdict of a jury awarding the plaintiffs £600, and although the equities of the case fully sustained that award, and were not questioned, on a purely technical point the verdict had to be reversed. The Government launch was found to be solely responsible for the collision; there was no contributory negligence on the other side, while, had ordinary care been taken by the Marine Board's servants, the company's steamer would have passed uninjured. A clearer case for damages, therefore, could not be made out, yet, virtually speaking, no damages are legally recoverable. The point was taken that when the collision occurred the launch was not employed upon Government business, and this being sustained by the jury's verdict, the Full Court, on appeal, found itself bound to rule that the action had been brought against the wrong party. Under the circumstances, it seems that technically no one is liable but the man in charge of the launch, and as matters stand, the injured company have no resource but to seek whatever satisfaction they may be able to get out of him.

The law, as laid down yesterday, makes it clear enough that the owner of a steamer or conveyance of any kind is only responsible for damages arising from mismanagement while it is being used under his authority and on his business. If any of his servants take it out for any other purpose, everything is at their own risk. No doubt this principle of law works out equitably in the main, but we have here the proof of how liable it is to be unjustly strained. There is always more or less difficulty in deciding the precise point at which the responsibility of the owner ends and that of the servant begins, and it is from mistakes in doing so that injustice arises. Being a question of fact, its decision rests with the jury. Whether the Bench would have decided as did the jury in this case appears, from the tenor of the Judge's remarks, to be doubtful, but, right or wrong, it bound them all the same. In our opinion it was distinctly wrong, and the Government, which ought not to pettifog itself out of any just obligations, should decline to take advantage of a verdict given upon such grounds.

When the Marine Board launch cut down the Parramatta steamer she was engaged in taking the son of the president and another private gentleman across the harbour. As the Board gave no express authority for her doing so, the jury held that the trip was not being made upon Government business. What is that but hair-splitting? The Government must have given at least tacit authority for the use of the launch, if they did not make a departmental minute to that effect. In the evidence it was admitted that discretion was allowed to the master of the launch in the matter of allowing private persons to use her. Besides, the Government willingly paid the expenses of the trip, from which it is fair to assume that they considered it one coming within the general purposes for which the launch is kept. The launch, it appears, has no special routine of work; she is there to do just what comes in the way. If taking the president's son across the harbour is one

one of the things which should not come in the way, it was somebody's business to see that the launch was not used for that purpose. It was neglect of this duty which caused the launch to be where she was when the collision occurred, and for that neglect the Government must take the moral responsibility. The result of it is a serious loss to private individuals—a loss assessed by a jury at £600. They have, therefore, an undeniable claim for compensation, and although law may be satisfied, justice will not until it is paid.

## C 2.

[To evidence of *J. W. Johnston, Esq.*, 10 November, 1896.]

[Extract from *Evening News*, 9 May.]

THE *Sol-Alathea* affair, decided yesterday, was emphatically one of those hard cases which make bad law. The "*Sol*," the Marine Board launch, some months ago ran down, through the fault of those on board, the "*Alathea*," belonging to the Parramatta Steamer Company, doing damage to the amount of £600. At a first trial it was held that the "*Sol*," being Government property and manned by Government servants, the Government would have to pay this £600. The Government objected to this, and appealed to the Full Court. The Full Court yesterday decided, with regret which was openly expressed (the judges holding that the case was one of great hardship, and that the Government should consider whether it should not make compensation), that the "*Sol*," when on her ramming expedition, was acting in an unofficial capacity.

It appears that the "*Sol*," on the day when she encountered the "*Alathea*," was authorised for the service of Dr. Ramsay, the curator of the Museum; but before taking up Dr. Ramsay, the boatswain in charge allowed Mr. Hixson, son of Captain Hixson, President of the Marine Board, and another gentleman to take passages to Blue's Point. It was during this run that the "*Alathea*" was struck. Blue's Point was out of the course which the "*Alathea*" would have had to follow had she gone to fetch Dr. Ramsay only, and that is where the unofficial element comes in.

But Captain Hixson deposed at the first trial that the boatswain was the executive officer of the Marine Board; that he (Captain Hixson) never took any objection to the boatswain letting the boat be used in the way it was on the day of the collision; and that he (Captain Hixson) thought that the boatswain might assume that there was authority to let the boat be used as it was. This seems to make it plain that in every ordinary and non-hair-splitting sense the boatswain acted under authority and as a Government servant.

The decision to the contrary opens up no end of complications. It would render Government steamers free half their time to do what damage those on board chose; for unless those on board were strictly executing orders no one could get compensation out of the Government for their freaks. The irregular passengers certainly would not be liable; and though the boatswain in charge might be liable, boatswains generally have not any funds. The Government should not take advantage of quibbles.

## C 3.

[To evidence of *J. W. Johnston, Esq.*, 10 November, 1896.]

[Extract from *Sydney Morning Herald*, 13 September, 1894.]

No. 3 Jury Court.—(Before His Honor Mr. Justice WINDEYER and a jury of four.)

PARRAMATTA STEAMER AND TRAMWAY COMPANY v. HIXSON (PART HEARD).

MR. J. H. WANT, Q.C., with Dr. Sly, instructed by Messrs. Johnson, Minter, Simpson, & Co., for the plaintiffs, the Parramatta River Steamers and Tramway Co. (Limited); and Mr. Bruce Smith, with Mr. Ralston, instructed by Messrs. Sly, Hamilton, and Russell, for the defendant, Francis Hixson, the President of the Marine Board of New South Wales. This was a claim for £1,500 damages, for injuries done to the plaintiff's steamer "*Alathea*," through the alleged negligence and unskilful navigation of the defendant's servants, who were in charge of the steam launch "*Sol*." The defence was that the collision was due to negligence on the part of the plaintiff's servants, and that at the time of the accident the "*Sol*" was not being used in the service of the Marine Board, and the master was at the time acting entirely on his own responsibility.

His Honor, in summing up, said the case had occupied some time, but not longer than the merits warranted, inasmuch as it was a case relating to an accident in a portion of the harbour where there was a large amount of traffic. He was bound to say that the evidence was rather more clear in this case than it was generally in cases of marine collision. If the collision was brought about by the default of the defendant Board, and the collision was not contributed to, or, in other words, was not brought about by any negligence on the part of plaintiff's boat, then the defendant was bound to pay such damages as were occasioned to the plaintiff's boat, and those damages were said to be £650. If they came to a conclusion in favour of the defendant, there was an end to the question of damages. Then they came to the question, which of the two vessels was in fault when the collision took place. The duties of the masters of vessels when in danger of collision had been clearly pointed out by the Legislature, and the regulations made under an Act of Parliament, which precisely defined what the duties of masters of vessels were, in order to relieve them of much difficulty in a moment of danger, and in order to relieve tribunals who had to decide cases arising out of collision, as to whether the proper thing had been done by those in command of the different vessels at the time of collision. Before he proceeded to go into the question of the respective duties of the two ships, there was one question he would ask them to consider, in order that the opinion of the Court might be afterwards taken on the matter. The defendant had set up a defence that at the time of the collision the "*Sol*" was not engaged upon any business authorised by the Marine Board. This defence was one founded on the principle that if a servant did injury to another person when engaged about some business not his master's business, the master was in no way responsible. They need not consider whether the application of this principle to the accident was altogether reasonable or in accordance with this principle; all they had to consider was what was the law. It might appear to some that an employer should as much be bound by the wrongful act of the servant whom he trusted with a dangerous machine if he was using it on his master's business or not. The cases on this point varied so much in the circumstances, and such fine distinctions had been drawn in different cases as to when a servant was or was not in the employ of a master, that he thought it desirable to refer this matter to the Supreme Court. If he ruled erroneously on the point, the only result would be that the case would have to be tried over again, and there would be great expense to the parties; and therefore it was thought better to reserve the point of law to the Court on such finding as the jury would give. Even should the Court be of opinion that the Marine Board was not liable under the circumstances of this case, it might be that if the jury should come to the conclusion that there was negligence on the part of the servants of the Marine Board in the management of this steamer, even though the Court held that the plaintiff had no cause of action, the Government might think it right to indemnify the plaintiff for the loss sustained. The first question he would put to the jury was this—was the master of the "*Sol*" on a trip authorised by the Marine Board at the time of the collision? He pronounced no opinion whatever on the question of law, at the request of the parties. The law with reference to the duty of vessels when there was risk of collision was very clear and positive. The law as laid down for a steamship when approaching another ship so as to involve risk of collision was that it should slacken speed, or, if necessary, stop and reverse. The law was that the vessel which disobeyed so cardinal a rule was to be held in fault. The defendant had set up a defence of contributory negligence. The law of contributory negligence was that a person could not recover damages for an accident which had been brought about by his own negligence. His Honor submitted the following questions to the jury:—1. Was the master of the "*Sol*" on a trip authorised by the Marine Board? 2. Having regard to the locality and the probable contingency of the "*Sol*" meeting a vessel coming round the point, was it negligence on the part of those in charge of her not keeping a man at the engine to stop her till she was fairly out in the open harbour? 3. Was the collision owing to the "*Sol*" having no one at the engine when it became necessary to slacken speed, and to her not stopping entirely when her master eased her? 4. Did the "*Sol*" infringe Regulation 18 as to slackening speed and stopping? 5. Did the "*Alathea*" do all she could to avoid the collision, having regard to her own safety? His Honor said that if the "*Sol*," by infringing Regulation 18, could possibly have contributed to the collision, then she was in default unless she could show that her infringement of the rule could not possibly have done so. The plaintiff, however, was not entitled to recover if the "*Alathea*" by her own negligence or breach of the regulation as to keeping out of the way contributed to the collision.

The jury returned a verdict for the plaintiff for £600. They answered the questions as follows:—1. No. 2. Yes. 3. Yes. 4. Yes. 5. Yes.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

CONVENTION BETWEEN GREAT BRITAIN AND JAPAN.  
(DESPATCH RESPECTING.)

*Printed under No. 1 Report from Printing Committee, 21 May, 1896.*

The Treasury, New South Wales,  
12th May, 1896.

HIS Excellency the Governor directs the publication, for general information, of the following copy of a Despatch from The Right Honorable the Secretary of State for the Colonies, enclosing a copy of a Convention between Great Britain and Japan, signed at Tôkiô, 16th July, 1895, supplementary to the Treaty of Commerce and Navigation between the two countries of 16th July, 1894.

G. H. REID.

(Circular.)

Downing-street,  
17th February, 1896.

Sir,

With reference to my predecessor's Circular Despatch of the 31st December, 1894, I have the honour to transmit to you, for publication in the Colony under your Government, a copy of a Convention between Great Britain and Japan, signed at Tôkiô, 16th July, 1895, supplementary to the Treaty of Commerce and Navigation between the two countries of 16th July, 1894.

I have, &c.,

J. CHAMBERLAIN.

The Officer Administering

the Government of New South Wales.

**SUPPLEMENTARY CONVENTION BETWEEN GREAT BRITAIN AND JAPAN RESPECTING THE DUTIES  
TO BE CHARGED ON BRITISH GOODS IMPORTED INTO JAPAN.**

Signed at Tôkiô, 16th July, 1895.

[Ratifications exchanged at Tôkiô, 21st November, 1895.]

WHEREAS, by the Protocol signed at London on the 16th July, 1894, it was agreed between the Government of Her Britannic Majesty and the Government of His Majesty the Emperor of Japan that the *ad valorem* duties of the Tariff annexed to the aforesaid Protocol should, so far as might be deemed practicable, be converted into specific duties by means of a Supplementary Convention, to be concluded between the two Governments within six months from the date of that Protocol; and

Whereas this period was extended by subsequent arrangement:

The High Contracting Parties have appointed as their Plenipotentiaries to conclude a Convention for this purpose, that is to say:

Her Britannic Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, Gerard Augustus Lowther, Her Britannic Majesty's Chargé d'Affaires;

And His Majesty the Emperor of Japan, Marquis Saionji Kimmochi, Junii, first class of the Order of the Sacred Treasure, His Imperial Majesty's Minister of State for Education, and Acting Minister of State for Foreign Affairs;

Who, having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles:—

1. The Tariff annexed to this Convention shall be substituted for the *ad valorem* Tariff annexed to the aforesaid Protocol of the 16th of July, 1894; it shall be subject to all the stipulations contained in Article 1 of that Protocol, in so far as these are applicable, and it shall come into force one month after the exchange of the ratifications of this Convention.

2. The specific duties established by this Convention shall be subject to triennial readjustment. Such readjustment shall be based on the difference between the average of the two quarterly rates of exchange adopted by the Japanese Customs during the six months ending 30th June, 1894, and the average of the rates of exchange adopted by the Japanese Customs for the four quarters preceding that in which each successive period of three years expires.

The Schedule of readjusted duties shall be published by the Japanese Government three months in advance, and shall take effect immediately upon the expiration of the said period.

It is understood between the High Contracting Parties that the operation of this stipulation shall be subject to the acceptance of a similar arrangement by the other Powers with whom Conventional Tariffs are now being negotiated by Japan.

3. The quarterly rates of exchange mentioned in the preceding Article are the rates determining the comparative values, as entered in the quarterly Tables published by the Japanese Department of Finance, of the present Japanese silver yen on the one hand, and of the English pound sterling on the other.

4. The present Convention shall have the same duration as the Treaty and Protocol concluded on the 16th of July, 1894, of which it is a complement.

5. The present Convention shall be ratified, and the ratifications shall be exchanged at Tôkiô as soon as possible, and not later than six months from the present date.

Done at Tôkiô, in duplicate, this 16th day of July, 1895.

(Signed) (L.S.) GERARD AUGUSTUS LOWTHER.  
(L.S.) MARQUIS SAÏONJI.

## WEIGHTS, MEASURES, AND COINS.

The Catty mentioned in this Tariff is the Japanese weight. It is equal to 600 grammes of the metric system of weights, or 1.32277 lb. English avoirdupois weight.

The pound is the English avoirdupois weight.

The square yard and square foot are the English Imperial surface measures.

The yen is the present Japanese silver yen of 900 fineness and 416 grains in weight.

RULE FOR CALCULATING *ad valorem* DUTIES.

Import duties payable *ad valorem* under this Tariff shall be calculated on the actual cost of the articles at the place of purchase, production, or fabrication, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any exists.

## RULE FOR THE MEASUREMENT OF TISSUES.

In determining the dutiable width of any tissue, the Customs shall discard all fractions of an inch not exceeding half-an-inch, and shall count as a full inch all fractions exceeding half-an-inch.

NOTE.—It is understood that selvages shall not be included in the measurement of tissues.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

EXTRADITION OF FUGITIVE OFFENDERS.  
(DESPATCH RESPECTING.)

*Printed under No. 23 Report from Printing Committee, 22 October, 1896.*

Department of Justice,  
Sydney, 13th October, 1896.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated 23rd July, 1896, from the Principal Secretary of State for the Colonies.

ALBERT J. GOULD.

(Circular.)

Sir,  
Downing-street,  
23rd July, 1896.

Cases have recently arisen in which applications for the arrest of fugitive offenders have been made by Colonial Police Officers direct to the Police of Foreign Countries and to Her Majesty's Consuls.

It would appear from these communications that the proper course of procedure to be followed in Extradition cases is not generally known in the Colonies; and I would therefore invite the attention of your Government to the Circular issued by the Director of Criminal Investigations to the Chief Officers of Police of the United Kingdom on 1st January, 1880, which was enclosed in Lord Kimberley's Circular Despatch of the 18th June, 1880, and also to the Home Office Memorandum as to Procedure in Extradition cases, which was transmitted to you in Lord Knutsford's Circular Despatch of the 30th April, 1890. In these papers you will find that it was clearly laid down that the application to a Foreign Country for the arrest of a Fugitive Offender must be made through the Foreign Office and the proper diplomatic channels; and that the limits are defined within which direct communications from Police Officers to Foreign Police Authorities are permissible.

I need scarcely impress upon your Government the necessity for demands for Extradition being sent through the regular channel, and I request that instructions may be given that in future direct communications from Colonial Police Officers to

Foreign Police Authorities, which can generally be made most conveniently through Her Majesty's Diplomatic and Consular Officers, should be confined to such as are of the nature indicated in paragraph 15 of the Police Circular of 1880, and in paragraph 2 of Article III of the Home Office Memorandum above referred to.

These paragraphs are as follows:—

*Police Circular of 1880, paragraph 15.*

"It will be desirable in most cases for the Chief Officer of Police demanding the extradition to despatch a letter or telegram to the competent authority, briefly noting the particulars of the request, and adding that the official demand for extradition is about to be made, and requesting such provisional measures as may be possible or expedient."

*Home Office Memorandum of 1890. Article III, paragraph 2.*

"The Chief Officers of English police forces may communicate direct with the police of foreign countries for the purpose of giving or obtaining information, but under no circumstances should direct application be made to foreign police for the arrest of a fugitive. Serious difficulties have arisen in cases where this direction has been overlooked."

I have, &c.,

J. CHAMBERLAIN.

The Officer Administering the  
Government of New South Wales.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**ORANGES PER S.S. "OPHIR."**

(CORRESPONDENCE FROM THE AGENT-GENERAL RESPECTING SHIPMENT OF.)

*Printed under No. 27 Report from Printing Committee, 13 November, 1896.*

LAI D upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines and Agriculture, copy of correspondence from the Agent-General respecting shipment of oranges per s.s. "Ophir."

The Agent-General for N.S.W. to The Minister for Mines and Agriculture.

Sir,

London, 2 October, 1896.

I have the honor to inform you, in reference to your letter of 17th August last, No. 7, 719A, advising me of the transmission to London, per s.s. "Ophir," of 1,740 cases oranges, that the consignment duly arrived, and the oranges were sold at Monument Yard, London Bridge, on Wednesday last, the 30th ultimo.

I obtained the insertion in newspapers of notices regarding this experimental shipment, which I placed for sale in the hands of Messrs. Keeling and Hunt, leading fruit brokers in London, having previously had a knowledge of these gentlemen, as in 1886 they kindly furnished me with a full report of the orange trade for the information of your Government, and gave me three cases of Valencia oranges to send to the Colony as a guide to the mode of packing the fruit.

The sale was considered a great success, and, as I informed you in my telegram of the 30th ultimo, realised an average price of about 14s. (fourteen shillings) per case.

The fruit arrived in excellent condition, and the No. 1 grade was much approved, and considered equal to any oranges coming to this market. The letter I enclose from Messrs. Keeling and Hunt will give you full particulars as to the condition of the fruit on its arrival, and their opinion with regard to the packing, &c., and I beg to direct your special attention to their practical suggestions in this regard for future guidance.

I am pleased to say that a considerable amount of interest has been evinced in regard to this shipment, arriving, as it did, at a time when the English market is very barely supplied with such fruit from any other country. The sale, on the whole, has been particularly satisfactory.

I have little doubt that a good market can be secured at this period of the year if the fruit offered is of good quality. One fault of this shipment was its unevenness. Care should be taken if possible in large shipments to have the fruit of the very best quality; the mixture of inferior sorts tends to lessen competition and injures the market.

I enclose for your information some of the newspaper comments which have appeared, together with fifty copies of the auction sale, giving the prices realised for each kind of orange. (These have not yet come to hand.—J.S.)

I have just received from Messrs. Keeling and Hunt the account sales, which I enclose herein, showing net proceeds of £1,111 15s. 2d., for which I have their cheque, which I will pay to the credit of the Public Account of the Government at the London and Westminster Bank.

I have, &c.,

SAUL SAMUEL.

Messrs. Keeling and Hunt to The Agent-General, N.S.W.

Dear Sir,

London, 1 October, 1896.

We beg to inform you that we landed the oranges *ex* "Ophir" in very good condition with very few exceptions.

The fruit carried in the refrigerators was fresh and full, some rather cold, with here and there a little waste.

Fifteen boxes were brought over in the hold. The five boxes marked "S. M. Co.'y" were fairly fresh; five marked "Parker" were rather stale, spotted and flabby; and five marked "Pumice" were very stale, flabby, and bad. We condemn this style of packing.

Quality—Good, especially the No. 1, which were excellent. The Nos. 2 and 3 of each mark showed very little difference. The prices realised give the best idea of our buyers' appreciation of the fruit.

Packing—Good generally. We always recommend the use of tissue paper only, avoiding soft shavings, sand, pumice dust, or other packing.

Those that were well and firmly packed in the white paper only, looked very nice when opened—any addition spoils their appearance.

Boxes are very good, allowing a free circulation of air.

Freight is very high, viz., 4s. 1d. per box, as compared with an average of 1s. 3d., sometimes 1s. 6d. per case for Valencia oranges. These latter cases are nearly three times the size of the Australians, and weigh from 1 cwt. 1 qr. to 1 cwt. 2 qr. gross.

The voyage from Valencia occupies from nine to ten days, and the oranges are loaded in ordinary steamers as general cargo.

Time—In our opinion the best time for Australian oranges to come upon this market is from the beginning of August to the middle of October, when supplies from other sources are scarce.

Denia and Valencia oranges form our chief supply, commencing usually end of October, and lasting generally till end of June, sometimes going into July. Last season from this district London received 888,725 cases.

The result of the sale of the 1,740 boxes *ex* "Ophir" is generally looked upon as very satisfactory.

We remain, &c.,

KEELING AND HUNT.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

AGE OF CONSENT.

(PETITION FROM CERTAIN RESIDENTS OF DUBBO, IN FAVOUR OF AN AMENDMENT IN THE LAW  
THAT THE "AGE OF CONSENT" IN THIS COLONY MAY BE RAISED TO 18 YEARS.

*Received by the Legislative Assembly, 14 July, 1896.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

**RESPECTFULLY SHOWETH:—**

That, in the opinion of your Petitioners, the law in this Colony for the protection of young girls is totally inadequate for this purpose, and that consequently there is a deplorable amount of defilement of young females.

Your Petitioners believe that the sanction practically given by the law to the seduction of any girl above the age of 14 years is attended with most disastrous social and moral results. No community can truly prosper in which large numbers of its young girls, the wives and mothers of the future, are debauched at the beginning of their lives.

Your Petitioners are convinced that few, if any, girls between the age of 14 and 18 can realise the consequences to themselves of consenting to their own seduction. They are often unaware of the physical results which may ensue, and still less can they estimate the social obloquy and life-long disgrace which will follow the discovery of their fall, nor do they realise that the first downward step leads them almost inevitably to the terrible calling of the prostitute.

Your Petitioners would point out that the age of protection has been raised during 1895 in eight States of the United States of America to 18 years.

Your Petitioners therefore humbly pray that your Honorable House may take into consideration the expediency of so amending the law that the "age of consent" in this Colony may be raised to at least 18 years.

Similar Petitions were received,—

On 16th July, from certain Residents of Dubbo; 66 signatures.

On 16th July, from certain Residents of Tamworth; 75 signatures.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

AGE OF CONSENT.

(PETITION FROM CERTAIN RESIDENTS OF MUDGEE IN FAVOUR OF AN AMENDMENT IN THE LAW THAT THE AGE OF CONSENT IN THIS COLONY MAY BE RAISED TO 18 YEARS.)

---

*Received by the Legislative Assembly, 30 July, 1896.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

That in the opinion of your Petitioners the laws in this Colony for the protection of young girls are totally inadequate for this purpose, and that consequently there is a deplorable amount of defilement of young females. Your Petitioners believe that the sanction practically given by the law to the seduction of any girl above the age of 14 years is attended with most disastrous social and moral results. No community can truly prosper in which large numbers of its young girls, the wives and mothers of the future, are debauched at the beginning of their lives. Your Petitioners are convinced that few, if any, girls between the ages of 14 and 18 can realise the consequences to themselves of consenting to their own seduction. They are often unaware of the physical results which may ensue, and still less can they estimate the social obloquy and lifelong disgrace which will follow the discovery of their fall, nor do they realise that the first downward step leads them almost inevitably to the terrible calling of the prostitute. Your Potitioners would point out that the age of protection has been raised during 1895 in eight States of America to 18 years.

Your Petitioners therefore pray that your Honorable House may take into consideration the expediency of so amending the law that the "age of consent" in this Colony may be raised to at least 18 years.

And your Petitioners will ever pray.

AGE OF CONSENT.

(PETITION FROM CERTAIN RESIDENTS OF BOTANY, IN FAVOUR OF AN AMENDMENT IN THE LAW,  
THAT THE "AGE OF CONSENT" IN THIS COLONY MAY BE RAISED TO 18 YEARS.)

---

*Received by the Legislative Assembly, 13 August, 1896.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

That, in the opinion of your Petitioners, the laws in this Colony for the protection of young girls are totally inadequate for this purpose, and that consequently there is a deplorable amount of defilement of young females. Your Petitioners believe that the sanction practically given by the law to the seduction of any girl above the age of 14 years is attended with most disastrous social and moral results. No community can truly prosper in which large numbers of its young girls, the wives and mothers of the future, are debauched at the beginning of their lives. Your Petitioners are convinced that few, if any, girls between the ages of 14 and 18 can realise the consequences to themselves of consenting to their own seduction. They are often unaware of the physical results which may ensue, and still less can they estimate the social obloquy and lifelong disgrace which will follow the discovery of their fall, nor do they realise that the first downward step leads them almost inevitably to the terrible calling of the prostitute. Your Petitioners would point out that the age of protection has been raised during 1895 in eight States of the United States of America to 18 years.

Your Petitioners, therefore, pray that your Honorable House may take into consideration the expediency of so amending the law that the "age of consent" in this Colony may be raised to at least 18 years.

And your Petitioners, as in duty bound, will ever pray.

## INSTRUCTIONS FOR USE.

1. Clean the type thoroughly before starting to cut the Stencil.
2. Throw the Typewriter Ribbon out of operation, or if the Typewriter is without a Ribbon Switch, remove the Ribbon.
3. Remove the greaseproof paper from between the Stencil and the backing sheet.
4. Insert Carbon Paper between the Stencil and the backing sheet, **TAKING CARE** that the carbon is facing the Stencil. This will ensure perfect visibility while typing.
5. Take the combination of backing sheet and stencil paper and place it in the typewriter. When typing Stencil, use a firm even touch.
6. When turning back the Stencil for insertion or correction, avoid wrinkling by holding the bottom of the Stencil and backing sheet together, pull gently, then turn the platen of the typewriter.
7. To ensure perfect work, the typewriter should be in first-class condition.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

PHARMACY BILL.

(PETITION FROM CERTAIN RESIDENTS OF NEW SOUTH WALES IN FAVOUR OF.)

*Received by the Legislative Assembly, 14 July, 1896.*

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly.

The undersigned Residents of New South Wales beg to submit the following Petition, viz.,—

That you will support the Pharmacy Bill which the Government intend bringing before the Honorable House; the Poisons Act now in force is altogether insufficient and faulty. In all civilized countries it is recognised that a special training is required to allow a person to establish a business as chemist and druggist. This Colony is about the only British Possession which has no Pharmacy Bill, and where, under the present Poisons Act, anyone without the slightest knowledge can carry on a business as chemist and druggist. The frightful consequences of this fact stand glaringly before anyone.

The Pharmacy Bill should exactly state what training and which qualifications are required to allow persons to call themselves chemists, and to act as such, and nobody else should be allowed to do so.

The Board of Pharmacy, elected in the first instance by Government, should have the duty and the power to supervise the education of young pharmacists, to examine them, to inquire into the qualifications of applicants, and to grant or refuse licenses. The present Poisons Act does not allow the Board to register chemists unless they have passed the examinations of this Board, or are pharmaceutical chemists of Great Britain; therefore, fully qualified chemists from other British colonies or other countries are unable to obtain registration here. The proposed Bill should give the Board power to recognise other fully qualified men.

Power should be given to the Board to administer the Pharmacy Bill, and to prosecute offenders, which at present can only be done through the medium of the police.

The Bill should regulate the duties of the Board and their servants. The Board should be authorised to receive certain fees and to use the money for the payment of their servants, &c., who should be appointed by the Board. The Board should have power to make regulations in a certain limited direction, and should also have to make reports to the Colonial Treasurer at certain periods, which reports should be laid before both Houses of Parliament.

The Bill should declare which articles are to be considered poisons within the meaning of the Bill, prescribe the mode of dealing with poison, and the manner in which records of sales of poisons must be kept, and specify the penalties for contravention of the Bill.

And your Petitioners pray your Honorable House to take the premises into favourable consideration and pass a Pharmacy Bill on the lines indicated into law during the present Session.

And your Petitioners, as in duty bound, will ever pray.

[Here follows 3,381 signatures.]

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**ATROCITIES IN ARMENIA.**

(PETITION FROM T. S. FORSAITH, HONORARY SECRETARY OF THE N. S. W. BRANCH OF THE EVANGELICAL ALLIANCE, PRAYING THE HOUSE TO PASS A RESOLUTION RESPECTING.)

*Received by the Legislative Assembly, 29 July, 1896.*

To the Honorable the Speaker and Members of the Legislative Assembly.

The respectful Petition of the President, Vice-Presidents, Members of Council, and Private Members of the New South Wales Branch of the Evangelical Alliance,—

SHOWETH:—

That your Petitioners, in common with the great majority of all classes of the community of this Colony, deeply deplore the inhuman proceedings that for some time past have prevailed in Armenia. Irrespective of all political questions, your Petitioners consider the atrocities inflicted on Christians in Armenia a disgrace to civilisation and an outrage upon the common instincts of humanity. It is not necessary to enter minutely into details, but merely to indicate the sufficiency of the basis on which the feeling of your Petitioners and the bulk of the people of this Colony rests. It may be stated that the Duke of Westminster is in possession of the following facts, obtained from undoubted authority, of outrages perpetrated in the one District of Karpook.

Christians killed by weapons,—29,544.  
 „ burned to death,—1,383.  
 „ died from fear,—793.  
 „ died from hunger, cold, and disease,—5,561.  
 „ wounded,—8,000.  
 „ houses burned,—28,562.  
 „ forcible conversions to Islam,—15,179.  
 Churches, religious houses, and schools destroyed,—227.  
 Destitute persons existing on charity,—92,960.  
 Women forcibly wedded to Turks,—1,532.

Your Petitioners are fully aware that, practically, the Parliament of New South Wales cannot remedy those outrages; but regarding our Parliament as representative of our national sentiments, we do most earnestly and respectfully pray that your Honorable House will follow the patriotic example of the Parliament of the Dominion of Canada, and pass a resolution in such form as your wisdom may suggest expressive of the deep feeling of horror with which the people of New South Wales regard the above-mentioned atrocities, to be forwarded to Her Most Gracious Majesty's Ministers of State, as indicating the strong desire of the people of this Colony that the Imperial Government may take effectual means to put an end to proceedings in Asia Minor that not only shock our human nature but disgrace our national character.

And your Petitioners, as in duty bound, will ever pray.

On behalf and by instruction, representing the Office-bearers and Members of the Evangelical Alliance—the Petitioners.

THOMAS SPENCER FORSAITH,  
Honorary Secretary.

1896.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**MR. LUKE HAYES.**

(PETITION FROM, PRAYING FOR CONSIDERATION OF HIS CASE.)

*Received by the Legislative Assembly, 12 August, 1896.*

To the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of Luke Hayes,—

SHOWETH:—

That on or about the 20th day of June, A.D., 1887, your Petitioner was at that time travelling by rail from Sydney to Peate's Ferry. The train in which he was, met with an accident through the brakes failing, and was wrecked at the foot of the incline going into the Peate's Ferry Station. Your Petitioner was stunned at the time and considerably shaken, but, not thinking that he would feel any bad effects in future years, failed to apply for compensation.

At the time of the accident your Petitioner was employed as Messenger at the Sydney Hospital, in which capacity he served for seventeen years, and left that institution in January, 1891.

For some time previous to that date your Petitioner's left shoulder and side showed symptoms of something being wrong. Your Petitioner then consulted Dr. Rennie, Government Pathologist, who thoroughly examined him, and advised that the muscles of the left shoulder had been moved from their natural position by the shock at the time of the accident. Dr. Rennie prescribed for your Petitioner, at the same time telling him to keep the arm quiet, but without any beneficial result. The arm of your Petitioner has been gradually wasting away, and is now of little use to him.

Your Petitioner, in January, 1896, through John Haynes, Esq., M.P., applied to the Honorable the Premier and Colonial Treasurer for some light employment as a means of livelihood. The application was referred to the Railway Commissioners. A gentleman from the Railway Department called on your Petitioner, and interviewed him. Two days after, your Petitioner received a notification from the Railway Department that they had no work that he could do at his age, 62 years last birthday.

Your Petitioner then petitioned the Railway Commissioners for such compensation as they should deem adequate for his injuries. The Railway Commissioners reply was that the petition could not be entertained.

Your Petitioner now prays your Honorable Assembly to give his case your favourable consideration, as at the present time he is unable to perform any manual labour through the accident he incurred on the date before mentioned, and through no fault of his own.

And your Petitioner will ever humbly pray.

LUKE HAYES.

Dated this 12th day of August, 1896.

1896.

**FACTORIES AND SHOPS BILL.**

PETITION FROM CERTAIN TOBACCONISTS OF NEW SOUTH WALES, PRAYING THE HOUSE TO  
EXEMPT THEM FROM.)

---

*Received by the Legislative Assembly, 18 August, 1896.*

---

WE, the Tobacconists of New South Wales, humbly pray that we be exempt from the Factories and Shops Act now before the Legislative Assembly with regard to early closing, on the grounds that we should be put into unfair competition with hotel-keepers, fruiterers, restaurateurs, &c., the majority of whom now hold tobacco licenses; and seeing that the Act permits them to remain open up to any hour our trade would be diverted into their hands to our detriment, loss, and possible ruin.

GORE AND ARTARMON ESTATES, NORTH SHORE.

(PETITION FROM JOHN HENRY OSCAR FFRENCH, OF GREENWICH, NEAR SYDNEY, PRAYING TO BE REPRESENTED BY COUNSEL, ATTORNEY, OR IN PERSON, BEFORE SELECT COMMITTEE ON.)

*Received by the Legislative Assembly, 25 August, 1896.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Henry Oscar Ffrench, of Greenwich, near Sydney, in the Colony of New South Wales, gentleman,—

HUMBLY SHOWETH:—

1. That on the 10th day of August, in the year of our Lord, 1896, or thereabouts, your Honorable House appointed a Select Committee to inquire into and report upon the Gore and Artarmon Estates.

2. That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire into and report upon the said matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the said Committee.

And your Petitioner, as in duty bound, will ever pray.

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 11th August, 1896,—“to inquire into and report upon the claims and titles to the various grants known as the Gore and Artarmon Estates, North Shore,”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List\* \*See List, p. 7. (whose evidence will be found appended hereto), find:—

1. That the whole question of the title to the lands in dispute dates back to the year 1794, when certain grants were issued to old soldiers, which were afterwards acquired for small considerations by William Gore, Lord Provost and Sheriff of the Colony, in or about the year 1810, and have since been the subject of much litigation, owing to the conflicting claims to the estate set up by various persons.

2. That about the year 1815 Gore mortgaged the land, comprising in all over 1,000 acres, to one D’Arcy Wentworth, who afterwards foreclosed, but, in consideration of a Crown grant of 1,500 acres in the Illawarra District, and at the request of the then Governor of the Colony, handed over his right, title, and interest in the Gore Estate to Ann Gore, the wife of William Gore.

3. That while the evidence is conflicting as to the issue of a consolidated grant to Ann Gore in respect to such estate in 1833, as well as to the existence of such grant, it is evident that the Gore family were the recognised owners of the defined portions of this land by possession, and by the action of Governor Macquarie in regard to D’Arcy Wentworth’s claim to the estate, and that there was an intention to issue such consolidated grant.

4. That the after difficulties in connection with the estate appear to be due to the acts of William Bligh Gore, a son of Ann Gore, who so recklessly mortgaged and bartered the estate without apparent authority or concurrence of the other members of the Gore family as to set up claims by, and on behalf of, R. A. W. Green, Thos. Broughton, John Boyle, and the Crown.

5. That in regard to Green’s claim, which dates as far back as 1842, there was evidently an arrangement between his father and William Bligh Gore by which the estate was divided between them; but in the absence of documentary evidence on the subject, your Committee cannot express an opinion, except that Green has been in possession of the property for many years, and that such well-known persons as the late Crown Solicitor, Mr. John Williams, the late Sir Robert Wisdom, the late Judge Innes, Mr. Acting Justice Rogers, and Mr. Thomas Broughton have purchased some of the land from Green on the title held by him, although Mr. Knapp, a well-known and reliable surveyor, identifies some of this land from a survey made by his father in 1833–6 as Crown lands.

6. That so far as Broughton’s claims are concerned they are very conflicting, for although claiming to own 940 acres of the land by reason of some monetary transactions with one Shuttleworth in 1855, he has as yet only completed his title to about 316 acres of the land, and in doing so has all along recognised some rights of the Gore family, Green, and Boyle, besides maintaining his own rights by force and violence.

7. That the claim of Boyle is in regard to 200 acres, known as Artarmon Grant, 150 acres, and two adjoining farms, and is the result of some negotiations entered into with William Bligh Gore, about 1850, since which time he has been in possession, while in 1853 the late Sir Alfred Stephen decided a question of title in his favour. That he was afterwards persuaded by one Freehill to hand him his title-deeds without any consideration, and Freehill afterwards dealt with the land, which was the source of much litigation between Boyle, Broughton, and others, while any title in regard to the land was also upheld by force and violence on the part of those concerned.

7. That in regard to the title of the Crown to 140 acres of the land, which in 1869 they dedicated by deed to the Willoughby Municipal Council, and which dedication has since been revoked, in opposition to the desire of the said Council, who still hold possession of the deed, the evidence is clear that this land formed portion of the grants (Brumby's, Bruin's, Holdsworth's, and others) included in the Gore Estate, so that if the Crown can successfully assert a right to this land they can equally do so in regard to the remainder of the estate, including the 100 acres mentioned by Mr. Knapp, and now claimed by the descendants of the Gore family, Green, Broughton, Boyle, and others; and although some of the land has been placed under the Real Property Act, the evidence reveals such irregularities in regard to the service of notices required by law by the parties interested as to make it possible for the Crown to dispute the titles issued.

Your Committee are therefore of opinion that as the value of the land involved must exceed a quarter of a million of money sterling, some steps should be taken on behalf of the Crown to assert such rights to the balance of the land as in the case of the 140 acres of land now claimed by them, with due consideration to the rights of claimants.

EDWARD M. CLARK,  
Chairman.

*No. 2 Committee Room,  
Legislative Assembly,  
12th November, 1896.*

---

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 19 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark,		Mr. Howarth,
Mr. Law,		Mr. O'Sullivan.

Mr. Clark called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.

Ordered,—That Mr. John Boyle, Mr. R. A. W. Green, and the Under Secretary for Lands be summoned to give evidence next meeting.

[Adjourned till Tuesday next at 2.15 o'clock.]

TUESDAY, 25 AUGUST, 1896.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the Meeting called for this day lapsed.

THURSDAY, 27 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark,		Mr. Law.
------------------	--	----------

In the absence of a Quorum, the Meeting called for this day lapsed.

WEDNESDAY, 2 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.

Mr. J. C. L. Fitzpatrick,		Mr. Law,
Mr. O'Sullivan,		Mr. Watson.

Entry from Votes and Proceedings in reference to the Petition of J. H. O. Ffrench, praying to be heard by counsel or attorney, or in person, before the Committee, *read* by the Clerk.

Sydney M. Quinlan, Esq. (*Solicitor*), appeared on behalf of Mr. J. H. O. Ffrench.

Richard Augustus Willoughby Green called in, sworn, and examined.

Witness withdrew.

Sydney Michael Quinlan sworn, and examined.

John Henry Oscar Ffrench called in, sworn, and examined.

Witness withdrew.

John Boyle called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next at 11 o'clock.]

TUESDAY, 8 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.

Mr. J. C. L. Fitzpatrick,		Mr. Law.
---------------------------	--	----------

Alfred Parry Long (*Registrar-General*) called in, sworn, and examined.

Witness *handed in* statement of applications respecting the Gore and Artarmon Estates, the portions of same brought under the Real Property Act, the caveats against such applications, and how they were disposed of; the persons to whom the certificates of title were issued, the references to such certificates, and how applications which were not granted were disposed of. [*Appendix A1.*] Plan showing the land forming portions of such estates. [*Appendix A2.*]

Witness withdrew.

Edward Arnold Bronsdon (*Clerk in charge of Alienation Branch, Lands Department*) called in, sworn, and examined.

Witness *handed in* plan showing land claimed by the Crown; the grants claimed by Gore; the area for which certificates of title have been granted, and the areas for which applications for certificates of title have been made but are held in abeyance. [*Appendix B.*]

James Bereyne called in, sworn, and examined.

Witness withdrew.

William

William Reynolds called in, sworn, and examined.  
 Witness withdrew.  
 Frederick Henry Holland called in, sworn, and examined.  
 Witness withdrew.  
 Re-assembling of the Committee to be arranged by the Chairman.  
 [Adjourned.]

---

THURSDAY, 17 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.  
 Mr. Howarth, | Mr. Law,  
 Mr. O'Sullivan.

Sydney M. Quinlan, Esq. (*Solicitor*), appeared on behalf of Mr. J. H. O. French.  
 William Kingston Cook called in, sworn, and examined.  
 Witness withdrew.  
 Frederick George Lewis (*Clerk in the Lands Department*) called in, sworn, and examined.  
 Witness produced plan of a survey of the Gore and Artarmon Estates, made in 1849 by Mr. Edward J. H. Knapp.  
 Copy ordered by the Committee to be appended. [*Appendix C.*]  
 Witness withdrew.  
 Edward James Howes Knapp (*Licensed Surveyor*) called in, sworn, and examined.  
 Witness withdrew.  
 [Adjourned till Wednesday next at *Two o'clock.*]

---

WEDNESDAY, 23 SEPTEMBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.  
 Mr. J. C. L. Fitzpatrick, | Mr. Howarth,  
 Mr. Law.

Thomas Broughton called in, sworn, and examined.  
 Witness withdrew.  
 [Adjourned till Thursday, 1 October next, at *Two o'clock.*]

---

THURSDAY, 1 OCTOBER, 1896.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

---

TUESDAY, 13 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.  
 Mr. Gormly, | Mr. Howarth.

John Horatio Clayton called in, sworn, and examined.  
 Witness withdrew.  
 Henry Wheeler Gillam (*Deputy Registrar-General*) called in, sworn, and examined.  
 Witness withdrew.  
 James Greer called in, sworn, and examined.  
 Witness withdrew.  
 Re-assembling of the Committee to be arranged by the Chairman.  
 [Adjourned.]

---

WEDNESDAY, 21 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.  
 Mr. J. C. L. Fitzpatrick, | Mr. Howarth,  
 Mr. Watson.

Robert Henry Gordon (*Mayor of Willoughby*) called in, sworn, and examined.  
 Witness withdrew.  
 John Doyle called in, sworn, and examined.  
 Witness withdrew.  
 Richard Augustus Willoughby Green recalled and further examined.  
 Witness withdrew.  
 John Boyle recalled and further examined.  
 Witness withdrew.  
 Re-assembling of the Committee to be arranged by the Chairman.  
 [Adjourned.]

---

WEDNESDAY,

WEDNESDAY, 28 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.  
Mr. J. C. L. Fitzpatrick, | Mr. Gormly,  
Mr. O'Sullivan.

Sydney M. Quinlan, Esq. (*Solicitor*), appeared on behalf of Mr. J. H. O. Ffrench.  
Charles Maclay Boyce called in, sworn, and examined.

Witness withdrew.

Mrs. Ellen Wilhelmine Ffrench called in, sworn, and examined.

Witness withdrew.

Richard Augustus Willoughby Green recalled and further examined.

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 12 NOVEMBER, 1896.

MEMBERS PRESENT.—

Mr. E. M. Clark in the Chair.  
Mr. J. C. L. Fitzpatrick, | Mr. Howarth,  
Mr. Law.

The Chairman *handed in* the following, which were ordered to be appended:—Tracing of plan attached to attested copy of deed of partition, Gore and others, 1846. [*Appendix D1.*] Tracing of plan attached to copy of conveyance, George Green to John and William Stewart. [*Appendix D2.*] Copy of a grant to Annie Gore, wife of Wm. Gore. [*Appendix E.*]

Chairman submitted Draft Report.

Same read and *agreed to*.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

GORE AND ARTARMON ESTATES, NORTH SHORE.

WEDNESDAY, 2 SEPTEMBER, 1896.

Present:—

MR. E. M. CLARK,		MR. LAW,
MR. J. C. L. FITZPATRICK,		MR. O'SULLIVAN,
	MR. WATSON.	

E. M. CLARK, Esq., IN THE CHAIR.

S. M. Quinlan, Esq., Solicitor, appeared for Mr. J. H. O. French.

Richard Augustus Willoughby Green called in, sworn, and examined:—

1. *Chairman.*] What are you? A shipwright and boatbuilder.
2. You know that this is an inquiry in connection with certain claims in the Gore and Artarmon Estates? Yes.
3. You are a claimant in respect of that estate? I am.
4. What do you claim? I claim in the estate all outside of Mr. Broughton's claim.
5. What is the area? About 550 acres of the estate.
6. What was the original area of the whole estate? I assisted in the survey in 1815, and I think we measured up about 1,250 acres altogether.
7. Was there a grant to Gore in regard to that estate? The grant specified 1,000 acres.
8. Perhaps you would make a statement as to what you base your claim upon? I claim under the title of the Gore family and George Green, my father.
9. How did he become possessed of it? In the year 1842 he obtained the equity of redemption by mortgage from Wentworth Lawson, executor of Darcy Wentworth, and in the same year the late Mr. Gore became bankrupt, and my father purchased the whole of the assets in his estate. Gore was in possession of it from 1807 to 1810. In 1815 he mortgaged the land to Darcy Wentworth. In 1818 Wentworth foreclosed upon him. Mr. Gore got into some trouble, and there was an arrangement made with the Governor at the time to give Mrs. Gore 1,500 acres of land in the Illawarra district so as to enable her to make an exchange for the Wentworth-Gore Estate. That exchange took place. I think you will find it all in the Registry Office. Of course, we are now looking for the thousand acres in lieu of the fifteen hundred acres in the Illawarra district. It was all arranged that a consolidated grant should be issued to Mrs. Gore. That was in Governor Macquarie's time. It went on many years before a grant was issued. At last it was issued in 1833, I believe in favour of Mrs. Gore and her children. That grant Geo. Green, my father, became possessed of, but unfortunately many years ago it was stolen out of his house amongst a lot of other documents in connection with the Gore Estate and other property, and it has never been seen since.

R. A. W.  
Green.  
2 Sept., 1896.

- R. A. W. Green.  
2 Sept., 1896.
10. That grant was for the thousand acres? Yes. In 1846 the Gore family came to an arrangement with George Green to divide this thousand acres, and there is a deed drawn up to that effect and signed by the family.
11. What was the result of that division;—how much did Geo. Green become possessed of? He was possessed then of 400 or 500 acres. That was all carried out in the same year, 1846. Geo. Green conveyed to his wife his right, title, and interest in the Gore Estate, and I purchased Maria Green's interest in the estate for £6,000.
12. Have you disposed of any of that land? I have disposed of 100 acres of it conditionally to Mr. Rodgers, Sir Robert Wisdom, and Mr. Broughton.
13. And you still claim to be the possessor of the balance? Yes.
14. Between 400 and 500 acres? Yes; I sold another small portion between 5 and 6 acres to Mr. Justice Innes and Sir Robert Wisdom.
15. *Mr. Law.*] Was that 100 acres that you sold amongst the lot? Yes; I hold one-fifth interest still with them in the 100 acres. I claim another portion of the land near St. Leonard's railway station about 140 acres. I am now in litigation with the Crown about that.
16. *Chairman.*] Do the Crown claim that 140 acres? Yes.
17. I suppose that if the Crown can claim 140 acres, they have as much right to claim the thousand acres? I have always said so. I can produce the grant of that land in several blocks.
18. *Mr. Law.*] Is it fenced in? It has been fenced in. At the time when it was portion of Mr. Gore's Estate, it was called Gore's paddock. There is a portion of the fence there still to be seen.
19. It is disputed land not used? No; I used it myself thirty years ago for brick-making.
20. *Chairman.*] As a matter of fact, to your knowledge, all this land has been in litigation for a long time? Yes.
21. And the owners have had to assert their right to it? Yes.
22. To employ fighting men and other people to assert their right? Yes; and longer possession than the actual documents.
23. How did these grants originate? In about 1810 old Mr. Gore purchased these small grants, which were about thirty-five in number.
24. To whom were these grants made? Generally to old soldiers. "Old soldier grants" they call them.
25. What was the purchase money generally? £3 or £4 and a couple of gallons of rum. In going for a consolidated grant all these old grants were handed over to the Crown on the understanding that a consolidated grant would issue to Mrs. Gore and her children.
26. *Mr. Fitzpatrick.*] All these documents were handed over when the grant of title was made? Yes.
27. *Chairman.*] Yet, notwithstanding all that, the Crown now claims 140 acres? Yes; nearly 200 acres altogether they are trying to claim from me.
28. *Mr. Law.*] Is it 200 acres out of the 500 acres that you claim? Yes; thirty-two years ago I made bricks on a portion of the 140 acres, and it always formed a portion of the old Gore Homestead. It was properly fenced in, but the fence was burnt down in 1844.
29. What is the approximate value of this 500 acres of land? It ought to be worth £100,000.
30. *Chairman.*] Then since you bought Maria Green's interest, you have always held it and asserted a right to it? I have been living on the estate now for over fifty years. I was born within a few hundred yards of it.
31. Your estate represented a number of small grants? Yes; there was Bromby, the one near St. Leonard's railway station, Holdsworth's, Bruin's, Wilkinson's, Webber's, Tailor's, Farmer's, Tilley's, Lamb's, Robinson's, Curry's, Chisolm's, William Carr's, James Brown's, Soyer's, Dark's, Whitfield's, George Loder's.

Sydney Michael Quinlan sworn and examined:—

- S.M. Quinlan.  
2 Sept., 1896.
32. *Chairman.*] Will you make a statement with regard to this estate? This is a matter over which Campbell got into gaol for forging a grant. He was tried before the Chief Justice and got ten years. After that they prevented the general public from having access to original grants, so they can only see copies. In 1797 William Gore was Lord Provost and Sheriff of the Colony. Between 1807 and 1814 the owner of these lands bought them from old soldiers for a small consideration,—probably a bottle of rum or a small sum of money. In 1815 he mortgaged them to Darcy Wentworth for £606. In 1818 (24th February), an equity suit was brought by Darcy Wentworth against William Gore for foreclosure, and William Gore was utterly foreclosed of these lands. In 1818 Darcy Wentworth, then owning the land under the foreclosure, conveyed it away to a man named Thomas Sterrop Amos. On the 25th September, 1818, Amos mortgaged the estate back to Darcy Wentworth to secure the repayment of £500. My idea of that is that it was a blind, because Amos bought it from and conveyed it back the same day to Darcy Wentworth. On the 16th August, 1819, the wife of the original William Gore was in distressed circumstances. Her husband was an improvident man and a spendthrift, and she applied to the then Governor Macquarie for a grant of money to get back the land, and that Governor promised to grant her 1,500 acres of land at Illawarra, which she was to exchange for Darcy Wentworth's, and he was to convey back to her this estate. On the 28th August, 1819, in order to effect this arrangement, Mrs. Gore purchased the equity of redemption in the estate of Amos, and on the 3rd September Darcy Wentworth surrendered the deeds to the Governor for the purpose of the issue of the consolidated grant. Wentworth received, on the 9th January, 1821, from the Crown, a grant of 1,500 acres of land at Illawarra in lieu of his interest in this estate at North Sydney. Up to that time everything was plain sailing; but on the 15th January, 1833, a consolidation of these original grants is said to have issued. Mr. R. A. W. Green and others claiming through him allege that there was a consolidated grant issued by the Crown, but if so, this grant was issued unknown to the Gore family. There is no doubt about that. The Gore family, of course, maintain that that grant is a forgery. The Cumberland Register containing these grants, I am informed, was stolen, and this is one of the original grants that was stolen. How the grant could issue without the Gore family knowing it I do not know; but they did not know it, as for years afterwards the representatives of the family importuned

importuned the Government to issue it. On the 17th January, 1833, Ann Gore died intestate and left seven children. That was the woman to whom the grant was to have been issued. In 1836 one of her daughters, Ann Stanhope Gore, died. We need not go through the dates of the deaths of all the other children. One of the children became the wife of Napier George Campbell, General Commanding in India; one went to Ireland and married a man named Ffrench, and then on 30th November, 1842—lending colour to the fact that the consolidated grant had not issued—the executors of Darcy Wentworth conveyed the lands to George Green, father of Mr. R. A. W. Green, as trustee for the children of Ann Gore. This would imply that the legal estate was outstanding in Wentworth at that date. The legal estate then became vested in the father of Mr. R. A. W. Green. It is alleged that in 1846 the Gore children divided the estate into five portions, but considering that they were here, there, and everywhere, it is difficult to see how that could be done. On the 22nd June, 1849, Frances Catherine Gore, one of the children, mortgaged one-fifth, undivided interest, to Ambrose Foss. Foss, in September, 1850, conveyed to Geo. Want; that would be the father, I believe, of the present Attorney-General. One attorney, named Shuttleworth, was struck off the rolls of the Supreme Court, and I do not know what has not happened in connection with this estate. The father of Mr. Ffrench, as I will convince the Committee, is the only person who had any interest in the estate. He, I am informed, committed suicide over it. He was paymaster of the Treasury for many years. In 1852, the Sheriff sold the interests of William Bligh Gore to Geo. Want, the same man who bought the prior interest. Then there is an old surveyor named Boyle, and in 1853, the Chief Justice, Sir Alfred Stephen, made an order placing him in possession on behalf of the members of the Gore family.

33. *Chairman.*] Of the whole of this 1,000 acres? Yes. In 1863, William Bligh Gore died intestate. Then there were only left William and Ann Gore, and Napier George Campbell. In 1875, Frances Catherine Gore died, leaving one child, and William and Ann Gore left two grandsons—Napier George Campbell and John Henry Ogilvy Gore Power Ffrench. Now they are all dead, with the exception of this young fellow for whom I act, John Henry Oscar Ffrench. Going away from that I will show how Mr. Green got a further lien on the estate. There is no doubt that Mr. Ffrench is entitled to the land even assuming that the consolidated grant issued; there was no evidence that it was mortgaged to anybody, and if it were it was only by one man, and that man's name is William Bligh Gore. He got very poor in later times, and he lived with Mr. R. A. W. Green's father. Assuming for a moment that this consolidated grant issued yet all the other estates in the ground outstanding are in young Ffrench. William Bligh Gore got old, and became very hard up, and he went to live with Mr. Green's father, and mortgaged his interest in the land to him, and I cannot find after patient search what consideration there was given to Mr. Green's father, the only consideration that could have been given was board and residence to William Bligh Gore. Mr. Green's father was a boatbuilder, and staying as he did with Mr. Green's father, Gore seems to have given him a mortgage over the estate, and that mortgage could only speak for as much as it was worth. If it was a mortgage it could only be for the portion of the estate that he possessed. Then Mr. Green's father made a settlement, settling that interest on Mr. Green's mother, Maria Green. Mr. Green's claims to be entitled to that by purchase. Since then Mr. Green has been adjudicated bankrupt, so that if any estate was outstanding in Mr. Green, it would have gone. Apart from that, Mr. Green has had for years to contend with the daily onslaught of parties coming and worrying him. The Crown ranger has, he informs me, for the last thirty-two years given him a daily notice to clear. Now the Crown has served him with notice. He dug up clay for some years on the estate to make bricks. It appears that Mr. Carruthers went over there one day, and saw Mr. Green, and spoke to him on the ground. Green, not knowing who Mr. Carruthers was, ordered him off the premises. Mr. Carruthers said, "I will see that you go off this to-morrow." Mr. Carruthers caused him to be served with an information of intrusion in equity.

34. *Mr. Watson.*] Has he been ejected then? Yes.

35. *Chairman.*] If the Crown claim this 140 acres, they have as much right to all the rest? If the Crown tested it in a court of law they could not get it at all. The court has decided that the Crown cannot regrant land unless it comes back to the Crown in some way. In the statement of claim served on Green, they commence by stating that in 1869 or 1870 certain lands were dedicated by the Crown for purposes of public recreation. If it had already been granted away, the Crown had no power in 1869 to dedicate it. You might as well say that they could dedicate George-street in 1895.

36. *Mr. Watson.*] The land having been granted, they could not take it back? No; they would have to proceed at law by *sci. fa.* The court say you may regrant the land, but the owners must surrender up their title, and be paid so much for it, or their grants recalled by *sci. fa.*

37. *Chairman.*] If they claim 140 acres, they have just as much right to the thousand acres? Assuming the land to have been already granted, they have no more right to it than I have. If they had a right they would have disclosed their title. There is an interesting case in the books when the Crown tried to put old Boyle off the land. The Supreme Court decided, following a judgment delivered by Sir James Martin, that they could not do anything of the sort. The Crown must rely on their own title, not on the weakness of the defendant's case.

38. *Mr. O'Sullivan.*] Who holds the land now? The parties are all on it.

39. *Mr. Fitzpatrick.*] How long is it since the Cumberland Register was discovered to be missing? Very many years, I think. I must tell you the way the Broughtons came into it. Thomas Broughton is now 84 years of age. I believe he was in business with one Pendry, a tailor, and William Gore mortgaged the estate to Pendry. Pendry in some way became connected with a man named Shuttleworth, a solicitor, and he sold his interest to Shuttleworth. Shuttleworth, for his dealing in connection with the estate, was struck off the rolls. He was made bankrupt, and Broughton bought the interest of Shuttleworth in the bankrupt estate.

40. *Mr. O'Sullivan.*] Was Gore Island included in the land? I could not tell you. I do not think you can say with certainty what was included. The soldiers' grants were given without any metes and bounds. In these days grants are not made without metes and bounds. They have to get surveyors to allocate those old grants. In 1850 Boyle came on to the estate to allocate these grants. I do not think you can say with certainty how the grants are situated.

## MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

John Henry Oscar Ffrench called in, sworn, and examined:—

- J. H. O. Ffrench.  
2 Sept., 1896.
41. *Chairman.*] Who was your father? John Henry Ogilvie Gore Power Ffrench.  
42. *Mr. Quinlan.*] You claim to be the only heir and direct representative of the original William Gore? Yes. In the Colony.  
43. How many are there out of the Colony? I do not know.  
44. As far as you know they are all dead? Yes.  
45. And you are the son of John Henry Ogilvie Gore Power Ffrench? Yes.  
46. And he was the son of whom? Of Charlotte Sarah Willoe Ffrench.  
47. And she was a daughter of whom? Of William and Ann Gore.  
48. You are also grand nephew of William Bligh Gore who died unmarried? Yes.  
49. And intestate? Yes.  
50. The other children of the original William Gore were Lady Eliza Margoschis Fitzgerald Gore? Yes. The paper annexed contains the names of the other children.  
51. And Ann Stanhope who died young? Yes.  
52. Elizabeth Selina Gore became Mrs. Campbell? Yes.  
53. Francis Catherine Gore and Mrs. Margaret Newcomen Marjoribanks—she became Mrs. Marjoribanks? Yes.  
54. They are all dead? Yes, Mrs. Marjoribanks died without issue.  
55. Do you know how many years your people have been in possession of this land? Sixty years.  
56. Was one of the members of the family buried on the land? Yes. Ann Stanhope Gore was buried on the land and Ann Gore and William Gore.  
57. *Mr. Quinlan.*] Do you know which ground Gore was buried on? He was buried on Whiting's ground.  
58. *Chairman.*] Is Whiting's ground far from the Artarmon Estate? It is part of the Gore Estate.  
59. Is Gore's Hill cemetery part of the Gore Estate? Yes.

John Boyle called in, sworn, and examined:—

- J. Boyle.  
2 Sept., 1896.
60. *Chairman.*] You are a surveyor? Yes.  
61. Do you lay claim to a portion of the Gore and Artarmon Estate? I do.  
62. How did you become possessed of it? Through Mr. Bligh Gore. I became acquainted with him in 1850. He wanted a survey of the estate. The family were very uneasy. There was a claim on the estate through Mr. Pendry. The family did not acknowledge Pendry's mortgage. Old Mr. Gore mortgaged part of the estate to Pendry. I believe this mortgage was a bogus one.  
63. The family repudiated the mortgage? Yes. An effort was made to sue on Pendry's mortgage, and an attorney named Shuttleworth was employed by Mr. Gore. Pendry got round Shuttleworth somehow; they offered to sell the estate to Shuttleworth, and threw us over. They wanted me to make a survey of the whole estate to see how it stood.  
64. Eventually you entered into an arrangement with them? I did.  
65. By which you became possessed of this land? Yes, and whatever I could spare to assist the action I did it.  
66. You have held possession of the land since 1850? Yes.  
67. You have resided on it ever since? Yes, stuck to it.  
68. What estate are you residing on now? On the Artarmon Grant, 150 acres.  
69. That has lately been put under the Real Property Act? Yes.  
70. Were any notices served on you with regard to this? Not officially. Some notices came to bamboozle me. I bought up Shuttleworth's interest.  
71. There have been several efforts made to dispossess you? Yes; they have tried.  
72. Who tried? The Bank of New South Wales tried.  
73. Did Green try? No.  
74. Did Broughton try? No; he would not come against me.  
75. Did Broughton and the Bank of New South Wales try to dispossess you of this land? Yes.  
76. And you still hold possession? I still hold possession.  
77. In 1853 you had a suit in regard to this land, had you not? Yes.  
78. And Sir Alfred Stephen decided in your favour? He did.  
79. Some years ago you entered into an agreement with Messrs. Chappel and Campbell, did you not? I did.  
80. The terms of your arrangement were that you were to sell your interest to them for a certain amount of money? Yes.  
81. How much was the amount? Not to exceed £30,000.  
82. In addition to that you were to receive a weekly payment? Yes; £2 a week until the title was obtained.  
83. Chappel and Campbell made an attempt to obtain a title, and tried to put the property under the Real Property Act? They did.  
84. Whilst they were trying you were satisfied with your bargain? Yes.  
85. Then suddenly they abandoned the old bargain? Yes.  
86. Then Broughton made an effort to put the property under the Real Property Act? Yes.  
87. Whilst you were hovering between Chappel and Campbell, Broughton obtained the title? Yes.

TUESDAY, 8 SEPTEMBER, 1896.

Present:—

MR. LAW, | MR. J. C. L. FITZPATRICK.  
E. M. CLARK, ESQ., IN THE CHAIR.

Alfred Parry Long called in, sworn, and examined:—

- A. P. Long.  
8 Sept., 1896.
88. *Chairman.*] You are the Registrar-General? Yes.  
89. We have called you to produce the certificate of title in connection with the Gore and Artarmon Estate? I hand in a statement showing applications respecting the Gore and Artarmon Estates, and showing the portions of the same brought under the Real Property Act, also showing all the caveats against

against such applications, how they were disposed of, to whom the certificates of title were issued, and the references to such certificates, and how applications which were not passed were disposed of. [Appendix A 1.] I also produce a plan showing in green edging the grounds forming portion of such estate. [Appendix A 2.] These have been compiled and drawn under my personal direction and supervision.

A. P. Long.  
8 Sept., 1896.

90. I suppose you could not tell us anything about the loss of the Cumberland Register? I could not. I might say that that plan does not include some debatable portions of land which form a part of what is now considered a reserve. There are some outlying pieces, about which there is a dispute between Boyle and others and the Crown, as to whether they are Crown lands or not. There is nothing to show that they have ever been granted.

91. There has never been any application in connection with them? I think, however, that one of the applications related to one portion.

92. *Mr. Fitzpatrick.*] In what way was it dealt with? I think it still remains in the office. The objection was taken that the land did not appear to have been granted. It is necessary that the land must have been part of the land in one or more Crown grants, otherwise it is not capable of being brought under the Act.

93. In that case no definite decision has been arrived at? It has remained in abeyance for years. They have not been able to supply information as to what grant it formed part of.

94. *Chairman.*] Is it this 140 acres? I think there are only 30 or 40 acres in the piece to which I refer. The portion marked Reserve G,887, the application before referred to. It was by Chapman and Gallagher, but the objection was taken that the land had not been granted by the Crown, and that application was withdrawn.

95. *Mr. Fitzpatrick.*] You were speaking about the claim of a person named Boyle? Yes; he claimed a certain reserve; there was some dispute between him and the Crown; he was brought up for taking the pogs out, and he took the objection that it was a question of title, and the magistrate declined to deal with the matter.

Edward Arnold Bronsdon called in, sworn, and examined:—

96. *Chairman.*] What are you? I have charge of the Alienation Branch in the Lands Office.

97. The Lands Department lays claim to an area of land about 140 acres in extent; what claim has the Department to that land? The Crown claims the land shown on the lithograph (*handed in*) [Appendix B.] coloured green. The lithograph shows the 140 acres tinted green, and also an area of land indicated by green hatch lines, the latter of which formed the subject of an action in the Supreme Court between the Crown and Boyle. A verdict was given in favour of the Crown, and part of the land has since been sold.

E. A.  
Bronsdon.  
8 Sept., 1896.

98. Why did the Crown claim that land where the green hatch line was? Because the land had never been granted to any one.

99. It did not form a portion of Gore's Estate? It did not form a portion of any grant at all.

100. What is the area indicated by the green hatch line? I should say, approximately, from 40 to 50 acres.

101. I suppose you know the original area of the Gore Estate? The only grants in that locality to Gore himself were the 150 acres, block 349 and a small block of, I think, 10 acres, fronting Gore Cove, portion 185.

102. Then you have no knowledge as to how Gore become possessed of this other land or laid claim to it? It is stated in the correspondence that he acquired the other portions forming part of the estate from the original grantees, it is not shown how he acquired them.

103. Is it within your knowledge that a consolidated grant was issued to Gore for a thousand acres in 1883? We have no record of such a grant, nor is there a record of it in the Registrar-General's office.

104. Then if the Crown lays claim to this 40 acres why not also to those other areas supposed to be included in the Gore grant? Because grants have issued for the other areas of which there are records.

105. For each of those separate areas of land? Yes.

106. What are those red-tinted areas in the lithograph? The red edging shows the grants claimed by Gore in 1818, according to the correspondence in the Lands Department. The red tint shows the area for which certificates of title have been granted, and the red hatch lines show the areas for which applications for certificates of title have been made but are held in abeyance.

107. They are still held in abeyance? They were when a search was made some months ago by a draftsman in the Survey Office.

108. Grants had evidently never been issued of them? Yes, grants have issued.

109. With regard to the reserve, was not that land conveyed by the Department by deed of grant to the Municipal Council of Willoughby? The area was dedicated about 1869, the grant issued subsequently.

110. The title deeds were issued to the Borough Council? Yes; but the land has since been resumed.

111. How is it that these reserves are not shown on maps, such as Mr. Long has put in? The land has been resumed.

112. From those grantees? The dedication has been revoked. I presume that Mr. Long's tracing has been prepared to illustrate a particular thing.

113. The land was resumed, and the resumption money was paid to the persons interested? I do not know that any money has been paid to the council.

114. Perhaps you may tell us something about this Cumberland Register? It was stated, I think, by Mr. Quinlan in his evidence, that the Cumberland Register No. 28, was reported to have been stolen. That is quite a mistake. I produce here the report, dated 1st December, 1893, made by Judge Fitzhardinge, who was appointed a Royal Commission to inquire into certain matters relating to the working of the Deeds and Search Branch in the Registrar-General's Department. The following is an extract from his report:—

The only instance in which it has been stated that a register was mislaid, lost, or could not be found, was during the hearing of a case, *Campbell v. The Anglo Australian Investment Finance and Land Company (Limited)*, tried last September in the Supreme Court, before His Honor the Chief Justice. In that case it was reported that two witnesses had stated that they had, some months before the trial, inspected a register entitled, according to one witness, the "Cumberland Register, No. 28," and, according to the other, the "Cumberland Register," in searching for a copy of a grant said to have been

E. A.  
Bronsdon.  
8 Sept., 1896.

been signed by Sir Richard Bourke, and issued in 1833, for a parcel of land near to Gore Hill, North Shore. When each of those witnesses was in the witness box no register so entitled could be produced, and it was thereupon assumed that such a register was missing from the Registrar-General's Department. There was, in fact, no register missing or lost. The mistake arose through the register having been wrongly described.

Then it goes on to give the explanation of the matter by Mr. Pearson of the Registrar-General's Office:—

Mr. Pearson, one of the witnesses, explained the mistake as follows: In May preceding the trial he, with Mr. George Evans, desired to examine the Register of Grants to search for a copy of a grant alleged to bear date 1833. Register No. 28 was brought to them, and that register was, on examination, at once seen to contain a copy of grants, dated 1835, partly printed and partly written. That register was not further examined. The register was then brought from the search-room entitled "Special Grant Register C." That register contained copies of grants dated from 1833 to 1834, and was in manuscript only; that was carefully examined, but no copy was found of the alleged grant of 1833. That register then so examined was not produced at the Supreme Court at the trial named. The only register produced was Register No. 28, which had not been examined previously as it contained copies of grants for 1835 only. The grant register, which had been examined, was not produced, although it was in its usual position in the search room, and in error it had been called "Cumberland Register, No. 28." Had "Special Grant Register C" been asked for it could at once have been produced. Upon this matter I have examined Mr. George Evans and Mr. Pearson with the registers before them and each has explained the matter fully. Their examination is contained in answers to questions Nos. 3181 to 3219.

I wish also to mention conclusion No. 6 to which Judge Fitzhardinge arrived and which is as follows:—

"No register has at any time been lost or mislaid."

115. *Mr. Fitzpatrick.*] Does this register, which is alleged to have contained reference to a certain grant, actually contain a reference to that grant? No; it is stated by Mr. Pearson that it does not.

116. *Chairman.*] What date was that? 1st December, 1893.

117. Do you produce a letter from William Gore? Yes; it is addressed to the Honorable Alexander Macleay and is dated 12th April, 1835:

I beg leave to call to your recollection that through your interposition I had obtained the sanction of his late Excellency Lieutenant-General Darling for the consolidation of several grants of which this estate is constituted in accordance with the wish and desire of His Excellency Governor Macquarie, and likewise subsequently with the consent and approbation of Sir Thomas Brisbane. The above measure, which would no doubt contribute much to the value and security of this estate, prevent litigation and trouble with the Government, and greatly facilitate the future operations in this district of the Surveyor-General's Department by giving some definite site and boundary line to all my farms has not, I regret to acquaint you, been as yet carried into effect, through the occurrence from time to time of various untoward circumstances over which I had no possible control, having repeatedly made unavailing application for that purpose at the Colonial and Surveyor-General's offices. I have, therefore, now the honor to request that you will do me the favor of submitting this letter and application in behalf of myself and family to His Excellency Major-General Bourke that he will be graciously pleased to order that the consolidation of all the farms which constitute this estate shall be forthwith effected.

I have, &c.,

WILLIAM GORE.

118. That letter will go to show that he claims all those grants? Undoubtedly he claimed them. The correspondence shows that he mortgaged them to Wentworth.

119. And Wentworth disposed of them? An arrangement was made, with the consent of the Governor of the day, that upon Wentworth releasing that mortgage, and conveying the land to Mrs. Gore and her children, that Wentworth should receive a deposit of 1,500 acres of land at Ilawarra, in lieu of an equal area which had been promised to Mrs. Gore in trust for her children. At various times subsequently requests were made by Mr. Gore and his descendants for the issue of a consolidated grant for those farms, and as late as 1873 Messrs. Broughton and French, who claimed to be owners of the Gore Estate, made a similar application for a consolidated grant, but they did not ask for this 140 acres to be included in that grant.

120. Did they include the other 40 acres? No.

121. Gore's application would include that 140 acres and the 40 acres? There is some doubt about that. What he asked for definitely was a consolidated grant embracing all the original grants. Mrs. Gore in one of her letters says that there is certain unoccupied land, and asks for that land to be embraced in the consolidated grant; but the papers show that the Governor of the day ordered a form of application to be sent to Mrs. Gore for her to apply for the ungranted land which she wished to obtain possession of. It appears that Mrs. Gore died about that time, and the application was never made. As far as can be traced no grant was ever issued for that land.

122. I suppose the other claims of the Gore family have been admitted? No, I think not. There were reports made by various officers. I might refer to two, one made by Deputy Surveyor-General Thompson, of the 2nd of April, 1853, of which I can supply you with a copy. This report was adverse to the claim of the Gore family to the ungranted land, upon which the then Governor approved of their being informed, in effect, that their claim could not be entertained, and such letter was sent on the 29th April, 1853. There is also a report, at a later date, by Surveyor-General Maclean, dated 21st March, 1860, a copy of which also I will send to the Committee.

123. That was adverse? Yes; he virtually came to the same conclusion as Deputy Surveyor-General Thompson had come to. He said they had not a vestige of a claim except to the portions which had been granted.

124. I suppose your Department has taken steps to locate this land, and this reserve is the result of it? The location of these grants, the various portions shown on the lithograph, has been admitted by the Crown for many years.

125. You don't claim the reserve as surplus land in connection with the grant—it is the reserve left originally? It is land that was never granted by the Crown.

126. Unalienated Crown Lands? Yes.

127. He lays claim to the land not marked? I cannot say; it is land granted by the Crown.

128. They are not portions of the original Gore estate? The correspondence in the Department does not show that Gore claimed them.

129. *Mr. Fitzpatrick.*] Was there not some system adopted in the old days, when grants of that character were made, of lifting some titles, and is it not possible to discover whether the title to this particular block of land has been lifted by Baker and Taylor? There are records showing that the grants issued in 1794 to Taylor, Lamb, and Baker.

130. *Chairman.*] You have no idea who the present claimants are? No. I believe that Lamb's was one of the grants that were claimed by the Crown to have been cancelled.

131. *Mr. Fitzpatrick.*] The object of my question was to discover whether it might not have reverted to the Crown? Several grants were claimed by the Crown as having been cancelled, and a Supreme Court action took place in connection with portion 296. I think it was; at all events, the Crown was unable to produce any form of surrender, and the Supreme Court would not recognise a mere entry in the Register of the grant having been cancelled. The action went against the Crown. The Crown claimed that the grant had been cancelled, and there is a note in the Register to that effect, but the Court would not recognise that because no formal instrument of surrender could be produced. It is probable that no formal surrender was ever taken.

132. Towards the end of the last century grants were issued in the country, and the Crown has stepped in in a number of cases and taken possession of land that was known to have been granted, and which had passed through a dozen different hands—how was that brought about? I do not know of any case of that description. The Crown has claimed that certain lands had not formed part of any grant, but I never heard of a case in which the Crown stepped in where it was shown that the land had been granted.

133. In the Hawkesbury district it has been alleged that the Crown has taken possession and allowed the person in occupation to purchase, for a nominal amount, without auction sale? Any cases of that description would come through my hands, and I have not known of any such case during the six years that I have had charge of this branch. It may have happened before 1890.

134. *Chairman.*] Is there any other information which you could give the Committee in reference to this matter? I think not; the whole point of the case is, as I have stated, that this land, as far as the evidence of the Lands Department is concerned, has never been granted, except the grant to the Council in pursuance of the dedication of 1869. Various letters have been received during the last fifty years asking for a consolidated grant, but that has never been issued.

135. Then I take it that this supposed grant of 1833 certified hereto by two clerks of the late Mr. Burdett Smith is an invention? I understand that that is the conclusion the Court came to in Campbell's trial. I will send copies of a letter dated 17th October, 1873, from J. H. O. G. P. French, also a letter from Thomas Broughton, dated 13th October, 1873. The outcome of these letters was that it was decided, after a report by the Crown Solicitor, that the request for a consolidated grant could not be entertained, that the proper course for these people was, if they were the owners of the land, to get certificate of title under the Real Property Act.

136. Broughton has since obtained a certificate of title to some of these lands? I believe he has.

#### The Acting Deputy Surveyor-General to the Colonial Secretary.

Caveats of Mr. W. Bligh Gore and Mrs. French.

Sir,

Surveyor-General's Office, Sydney, 2 April, 1853.

1st. Under your blank cover of the 23rd November, 1852, was submitted for the report of the Deputy Surveyor-General a letter from Mr. W. Bligh Gore, dated the 18th November, 1852, laying claim to certain land adjoining the Gore estate, under measurement for sale.

2nd. Under your blank cover of the 18th of December, 1852, was received a letter in reference to the above letter from Mr. James Greer, dated the 24th November, 1852, on behalf of Mr. W. B. Gore, entering a caveat against the sale of the land under measurement, and promising to forward a plan.

3rd. Under your blank cover of the 18th of December, 1852, was received, in reference to former correspondence, a letter from Mr. James Greer on behalf of Mr. Bligh Gore, dated the 13th December, 1852, forwarding the promised plan showing the lands claimed by Mr. W. B. Gore.

4th. Under your blank cover of the 18th of December, 1852, was received a letter from Mrs. French, dated the 2nd December, 1852, stating that she and her sister have claims as well as their brother, Mr. W. B. Gore, and that the claims are founded upon a promise of 700 acres made to her mother, now deceased, by Governor Macquarie.

5th. Under your blank cover of the 8th of January, 1853, was received another letter from Mrs. French entering more fully into the subject, giving a copy of Governor Macquarie's promise, and also enclosing a plan.

6th. As during the multifarious correspondence of the last twenty years upon the subject of Mr. Gore's lands, no claim was sought to be established on the 700 acres promise, nor any claim made to the land said to have been held in pursuance of that promise, and now under measurement for sale, it was considered advisable to look over the old papers, and the Deputy Surveyor-General's letter, No. 53/57, of the 1st February last, was addressed to you accordingly, and by your letter, No. 53/130, of the 7th of the same month the papers were forwarded.

7th. On looking over these papers I find the original promise of Governor Macquarie, dated 16th August, 1819, for the 1,500 acres allowed to the late D'Arcy Wentworth which is stated to be "instead of the 700 acres some time since promised her," meaning Mrs. Gore, and as the promise of the 700 acres is dated the 2nd of January, 1818, the reference of the one to the other is evident.

8th. I find also among the papers, the memorial of Mr. Gore on behalf of his wife and children, dated 4th August, 1819, and replied to by Governor Macquarie, on the 16th as above. In this, allusion is made to the granting in trust of 700 acres to Mrs. Gore and her children and an augmentation of the promised grant solicited in order to enable the family to retain the lands on the North Shore.

9th. So far therefore, as the promise for the 700 acres alluded to by Mrs. French and her brother is concerned, it was evidently included in the 1,500 acres authorised for D'Arcy Wentworth. There is certainly a letter from Mr. McLeay to Mrs. Gore amongst the papers, offering to submit her application for land to the then Governor, but that letter is dated the 15th September, 1826, and did not result in any order.

10th. Under the Report of the Commissioner of Claims on the case No. 917, Mr. Gore was found to be in possession merely of certain land about 120 acres, which it is intended to confirm to him on his surrendering to the Queen four of his detached small grants in lieu thereof, this arrangement has not, however, been perfected, the land is still reserved, but this land forms no part of that which has been measured for sale, and is now claimed by the Gore family in satisfaction of the 700 acres order, nor has the Gore family apparently any claim whatever thereto, and it will therefore be for His Excellency the Governor-General to decide if it may be sold or not.

11th. The several letters and plans transmitted under blank cover are returned herewith, also the papers and deeds sent in your letter No. 53/130 of the (date omitted). I have, &c.,

JOHN THOMPSON.

I conclude the parties interested may be apprised in terms of the 7th or 8th paragraph of this report, and that the claim to the 700 acres of land cannot now be entertained by the Government. The Acting Deputy Surveyor-General to be authorised to have the land referred to in the 10th paragraph brought forward for sale.

M.F., 8th. Approved—C.A.F., 20th.

Mr. French, Mr. Greer, and Deputy Surveyor-General, 29th April, 1853.

Madam,

Colonial Secretary's Office, Sydney, 3 May, 1853.

Referring to my letter to you of the 8th January last on the subject of the claim of the late Mr. Gore's family to 700 acres of land adjoining the Gore Estate at the North Shore, now under measurement for sale, and which you alleged was promised to the late Mrs. Gore by Governor Macquarie, I have the honor, by direction of His Excellency the Governor-General, to inform you that it now appears that the memorial of Mr. Gore, on behalf of his wife and children, dated the 4th April, 1819, was replied to by Governor Macquarie on the 16th of that month. In this, allusion is made to the granting in trust of 700 acres to Mrs. Gore and her children, and to an augmentation of the promised grant solicited in order to enable the family to retain the lands on the North Shore.

E. A. Bronsdon.  
8 Sept., 1896.

2. It further appears that the original promise of Governor Macquarie, dated the 16th August, 1819, for the 1,500 acres authorised for the late Mr. D'Arcy Wentworth, in trust for your family, is stated to be "instead of the 700 acres recently promised to Mrs. Gore," and that as the promise of the 700 acres is dated the 2nd January, 1818, the reference of the one to the other is evident.

3. Under these circumstances (it being apparent that the 700 acres of land alluded to by you is included in the 1,500 acres authorised for the late Mr. D'Arcy Wentworth, in trust) His Excellency regrets that your application cannot now be entertained by the Government, of which the Acting Deputy Surveyor-General has been apprised, and requested to have the land in question measured and brought forward for sale at an early date.

Mrs. Charlotte S. W. Ffrench, Glebe, Sydney.

I have, &c.,  
E. DEAS-THOMSON.

Sir,

Colonial Secretary's Office, Sydney, 29 April [3], 1853.

Referring to my letter of the 18th of December last, on the subject of the claim preferred by you on behalf of Mr. W. B. Gore to certain land adjoining the Gore Estate at the North Shore, alleged to have been promised by Governor Macquarie, I have the honor, by the direction of the Governor-General, to annex for your information an extract from a report from the Acting Deputy Surveyor-General on this subject, and to state (as it is very evident that the whole of the land authorised for the late Mr. Gore's family is comprised in the 1,500 acres authorised for the late Mr. D'Arcy Wentworth in trust) that His Excellency regrets that the claim preferred by you on behalf Mr. Gore cannot now be entertained by the Government.

2. Instructions have accordingly been issued to the Acting Deputy Surveyor-General to proceed with the measurement of the land in question, in order that the same may be brought forward for sale on an early date.

James Greer, Esq. (attorney for Mr. W. B. Gore), 16, Wentworth-place, Sydney.

I have, &c.,  
E. DEAS-THOMSON.

Sir,

Colonial Secretary's Office, Sydney, 29 April [2 May], 1853.

In reference to your report of the 2nd instant, No. 160, on the subject of the claim preferred on behalf of the late Mr. Gore's family, for certain land adjoining the Gore Estate, now under measurement for sale, and which, it is alleged, was promised to the late Mr. Gore by Governor Macquarie, I have the honor to inform you that the Governor-General concurs with you in opinion that the whole of the land authorised for the late Mr. Gore's family is embraced in the 1,500 acres authorised for the late Mr. D'Arcy Wentworth in trust, and that His Excellency has, therefore, been pleased to authorise the land in question being measured and brought forward for sale as early as convenient, of which the parties interested have been apprised.

The Acting Deputy Surveyor-General.

I have, &c.,  
E. DEAS-THOMSON.

The Acting Surveyor-General to The Under Secretary for Lands.

Respecting certain Claims of the Gore Family to Land in the Parish of Willoughby, North Shore.

Sir,

Surveyor-General's Office, Sydney, 21 March, 1860.

The unsettled state of the claims which the representatives of the late Mrs. Gore have from time to time brought under the notice of the Government to certain land in the parish of Willoughby, on the North Shore, having been long known to me, I considered it advisable, as immediately after my taking charge of this department as other more pressing matters would permit, to examine the documents connected with such claims, in order that I might feel myself in a position to submit to the Government for approval such a proposal for the adjustment of the demand as might secure the public rights and yet be just, and even considerate, to the parties interested.

- No. 1.—Surveyor-General's letter, dated 1st February, 1851, No. 31,301.
- No. 2.—Mrs. Gore's letter, dated 22nd February, 1852, No. 32,2308, and *vide* *ibid.*
- No. 3.—Surveyor-General's letter, dated 8th October, 1851, No. 31,339.
- No. 4.—Letters of Mr. Greer, dated 4th November, and 13th December, 1852, and *plun.*
- No. 5.—Letter of Deputy Surveyor-General, dated 2nd April, 1853, No. 53/3009—53/160.
- No. 6.—Memorial of Gore's representatives, No. 54/6748, and *vide* *ibid.*

2. In forwarding the voluminous correspondence which has taken place during a long series of years, I think I may say that I have examined the documents with sufficient care to warrant my calling your attention to those letters only which I have noted in the margin, as exhibiting those features of the case, on which its decision may safely proceed. Any lengthened history, further than what they present, I deem superfluous.

3. Before, however, more particularly stating what is claimed, and what I think may be allowed, I would remark that the delay is mainly attributed to the parties themselves, in their early inattention, from whatever cause; to their indistinct, and confused, if not shifting ground of claims; and to their encumbering what might have been admitted, with what was obviously inadmissible, and that, therefore, it would not be advisable to allow that unauthorised occupation, *ad interim*, as is a reason for now admitting as a fair claim of occupation, what in the earlier period would have been rejected, if fairly set forth.

4. I take the letters and plan of Mr. Solicitor Greer, as defining the claim which his clients ultimately wished to abide by, and while I see no reason to question the alienation by the Crown, and the possible right of property by the Gore family in the lands mentioned in the margin, I beg to say that it exhibits a space of land to which not a vestige of a claim can be supported. The basis of the claim is the mortgage to Mr. Wentworth referred to in the papers to which I have above alluded, and thus does not convey the land within the space marked by the red letters A B C D E and F; it does not convey any of the large tract of land coloured blue on the sketch, nor does it convey the 25 acres of Webber, the 25 acres of Tilley, or the 25 acres of Evans; to all the remainder, the claim of the representatives of Gore may be admitted; and as a matter of grace even to two of the three last mentioned grants, viz., Tilley's and Evans', because, as regards Tilley's, although not granted, it has always appeared as alienated in the maps, and Evans', although the entry of the deed is marked as cancelled, there is a pencil note in the Register, in the handwriting of the late Deputy Surveyor-General, as noted in the margin, and if the land be out of the Crown, it is immaterial to the Government in whose possession it remains.

5. These two grants may therefore perhaps be allowed to remain in their possession. It would be right further to recognise their claim to Williamson's grant of 44 acres, to Asser's grant of 30 acres, and to Jennings' grant of 30 acres, for although the situation of these grants is not shown on the maps, and the Commissioners of the Court of Claims state, in their report on case 917, that they have satisfied themselves of the general position of the two first deeds have issued and the properties are enumerated in the mortgage to Mr. Wentworth. These three portions, amounting to 104 acres, may, therefore, be located to the claimants, in the position attributed by the Commissioners to the two first, and containing the land so long occupied by Gore's family, and indicated on the sketch by the letters A B C D E and F, embracing about 100 acres, and adding thereto to complete the 104 acres, the small triangular portion, marked\*, containing about 4 acres.

6. Beyond this I cannot discover any claim, and by authorising a definite appropriation to this extent, and by leaving the claimants undisturbed in the possession of Tilley's and Evans' grants, the Government gives them, I think, the most ample consideration.

7. I abstain from entering on the preposterous claim, in one place alluded to as Gore's promise to a further 700 acres, on an order to Mr. Gore, because it can be most satisfactorily shown that that order merged in a subsequent order for 1,500 acres grant made to the late D. Wentworth, at Illawarra, on condition of his abandoning his mortgage on the lands of the Gore family at the North Shore.

8. I would, in conclusion, beg earnestly to advise:—1st. That the parties alluded to may be placed in possession of the 104 acres in the situation stated, in lieu of Williamson's, Asser's, and Jennings' grants. 2nd. That they may be allowed to remain undisturbed in occupation of Tilley's and Evans' farms. 3rd. That the residue of the vacant Crown lands in this situation may be subdivided and forthwith sold, to close this long-voxed and unsatisfactory business.

I have, &c.,  
A. G. McLEAN,  
Acting Surveyor-General.

## ON THE GORE AND ARTARMON ESTATES, NORTH SHORE.

The Honorable Minister for Lands,—  
Sir,

Bradley, near Sydney, 13 October, 1873.

E. A.  
Bronsdon.

Referring to the voluminous correspondence of the late William Gore, Esq., and members of his family, on their claims to certain lands at North Willoughby, and also to the title deeds which W. Gore surrendered to the Colonial Secretary for the purpose of getting a consolidated grant defining the boundaries, in lieu of several undefined small grants of land, etc., etc.

8 Sept., 1896

Also the reports of the late Acting Surveyor-General, H. McLean, Esq., and Commissioners of Titles, with evidence of E. J. H. Knapp and Mr. William Henry, taken before said (as per margin) Commissioners. 41,10243.

I beg respectfully to state, that with a sincere desire to an amicable settlement, and to avoid litigation in this matter, I, as mortgagee in the Gore Estate, and John Henry O. G. P. Ffrench, heir at law of the late William Gore, having submitted our respective claims for equitable adjustment to our respective attorneys, I beg herewith to submit a deed of conveyance, duly executed, of the lands in question, which the Gore family have had in their possession for upwards of 60 (sixty) years. And I beg to submit the remaining original old grants which are undefined, and also a schedule of deeds and documents connected with the Gore Estate, etc., etc.

I have the honor to request that one consolidated deed of grant may be issued to the said John Henry O. G. P. Ffrench, Esq., of the land comprised within the lines coloured blue on the plan endorsed on the deed of conveyance, duly executed by Mr. Ffrench, Miss Gore, and myself, being in all 100a. 2r. 19p., viz., 56a. 2r. 19p. of 104 acres allocated by the Government in lieu of Asser's, Jennings', and Williamson's grants, and also the whole of Curry's and Robinson's grants of 25 acres each.

I have the honor respectfully to request that properly-defined deeds of grants may also be issued to me of the residue of the said Gore Estate, situate at North Willoughby, as allocated by the Government, and comprising undefined old grants as set forth on the other side. I believe Gore's 150-acre and 10-acre grants to be sufficiently defined, but I fancy it will be necessary to point out on the land how the Government allocate the different farms. I beg to add, that an application of like nature will be received from Mr. Ffrench.

I have, &c.,  
THOS. BROUGHTON.

SCHEDULE of undefined grants, William Gore's Estate, Thomas Broughton's Portion.

William Packer's 25 acres; Williamson's and Jennings' (?) 43a. 1r. 25p.; Asser's 4a. 2r.; C. Loder's 25 acres; J. Sawyer's 25 acres; G. Tilley's 25 acres; J. Roberts' 25 acres; G. Whitfield, 25 acres; J. Dark's 25 acres; D. Carr's 25 acres; Ben. Johns' 25 acres; Thos. Baker's 25 acres; H. Evans' 25 acres; Hy. Lamb's 25 acres; Peter Dargan's 25 acres; R. Turner's 25 acres; Wright's 30 acres.

N.B.—I should like to have returned to me, when this case is disposed of, the deeds of conveyance from Mr. Ffrench and Miss Gore and the deed from C. H. Nichols, with the schedule of deeds and documents of titles to the Gore Estate at North Willoughby.

THOMAS BROUGHTON.

The Honorable the Minister for Lands,—  
Sir,

Carlotta, Gore Hill, North Shore, 17 October, 1873, By St. Leonards.

Referring to the correspondence of the late Mr. William Gore and members of his family upon the subject of their claims to certain lands in the parish of Willoughby, on the North Shore, known as the Artarmon Estate, and also to the title deeds which Mr. Gore surrendered many years ago to the then Colonial Secretary for the purpose of obtaining a consolidated grant of the same defining the boundaries which were not defined in the original grants. I have the honor to respectfully inform you that with a desire to avoid any further litigation in this matter, and to conserve the recommendation contained in a report to the Government by the late Mr. Acting Surveyor-General McLean, Mr. Thomas Broughton, mortgagee of the estate in question, and myself, heir at law of the late Mr. W. Gore, have joined in the execution of a deed of conveyance of the before-mentioned estate by which the lands enumerated in No. 1 hereto have been conveyed to myself, and the lands enumerated in No. 1 hereto have been conveyed to myself, and the lands enumerated in Schedule No. 2 have been conveyed to Mr. Broughton. In view of the final settlement of this matter as above, I have now the honor to request that in lieu of the original deeds of grant of the estate, fresh deeds of grant may be issued as follows, viz.:

1. To myself a consolidated grant of 106 acres 2 roods 19 perches being the land specified in Schedule No. 1 hereto, which land is in my sole possession and has been in the Gore family for upwards of sixty years.
2. To Mr. Thos. Broughton fresh grant or grants of the portions of the estate specified in Schedule 2. I have to state that Mr. Broughton will also address you upon the subject of this letter, and that in furtherance of our respective applications, he will submit the original grants of W. Gore's 150 acres, Roberts' 25 acres, Asser's 30 acres, and Packer's 25 acres, which with Robinson's grant, in my own possession constitute the deeds of grant of the Artarmon Estate. Under the foregoing circumstances, I venture to hope that the respective applications of Mr. Broughton and myself, under the deed of conveyance before mentioned, may receive favourable consideration at the hands of the Government. I beg to add, however, that pending the carrying into effect of the proposed arrangement by the Government, the caveat lodged by me against the issue to any person of the title deeds deposited with the Government by the late Mr. Wm. Gore is not in any way to be prejudiced or affected by this application, but will, when necessary, form the subject of a future communication from me and also probably from Mr. Broughton.

I have, &c.,  
J. H. O. G. P. FFRENCH.

SCHEDULE No. 1, MR. FFRENCH'S PORTION.

Twenty-five acres, D. Curry's grant; 25 acres, C. Robinson's grant; 56 acres 2 roods 19 perches. The eastern-most portion of 104 acres allocated by the Government for Williamson's, Asser's, and Jennings' grants. The above land is comprised within lines coloured blue upon the plan endorsed on the conveyance before referred to. It contains the site of the late Mr. Gore's residence, and has a frontage to the Lane Cove Road.

SCHEDULE No. 2, MR. BROUGHTON'S PORTION.

One hundred and fifty acres, W. Gore's grant; 25 acres, J. Roberts' grant; 25 acres, G. Whitfield's grant; 25 acres, J. Dark's grant; 25 acres, D. Carr's grant; 25 acres, Chas. Loder's grant; 25 acres, J. Sawyer's grant; 25 acres, G. Tilley's grant; 25 acres, W. Packer's grant; 25 acres, P. Dargan's grant; 25 acres, H. Evan's grant; 25 acres, Ben. John's grant; 25 acres, Thos. Baker's grant; 25 acres, H. Lamb's grant; 25 acres, R. Turner's grant; 47 acres 3 roods 9 perches being the western-most portion of the 104 acres allocated as above mentioned for Williamson's, Asser's, and Jennings' grants.

James Bereyne called in, sworn, and examined:—

137. *Chairman.*] What are you? A labourer.
138. You claim to own an acre of land in the Gore Estate? Yes.
139. How did you acquire it? I bought it from Mr. Boyle.
140. What farm does it form a part of? Dargan's 25 acres.
141. But they have built a public school on that land, have they not? Yes; the Government resumed my acre and the one adjoining.
142. Did they pay you for your acre? The Government told me they were going to resume it, that I was to value it, and that they would give me more for it than I would get at public auction. I valued it the next day at £4 a foot.
143. But they paid the money to Broughton, did they not? Yes, owing to some rambling story he told them.
144. Did Broughton claim Dargan's farm? Yes; when I put mine under Torrens' title they asked me if anybody claimed it, and I said yes, Broughton.
145. You used to act as agent for Broughton, did you not? I acted as Broughton's agent about twelve years ago.

J. Bereyne.  
8 Sept., 1896.

- J. Bereyne. 146. Do you know what farms he claims there? He claims Dargon's, Evans's, Lamb's, Baker's, Artarmon's, Carr's, Loder's, Sawyer's, Tilley's, Roberts's, Whitfield's, Dark's, and Johns's.  
 8 Sept., 1896. 147. You know all these estates? Yes, every one.  
 148. And do you know that Gore alway's laid claim to them? William Bligh Gore was the real owner, and Boyle and Gore were partners.  
 149. You paid Boyle for this acre of land? I did.  
 150. How much? £5. Forty years ago he offered me 6 acres as a gift. I had a billet then under the Government at Circular Quay and I was not so much in need of it, but when I began to get worse off I touched up his memory about it, and at last I bought an acre for £5.  
 151. Did you get the deeds? Yes.  
 152. Did you know Mr. Ffrench? Yes; I was at his funeral. He told me before he died that he would shoot Mr. Broughton before Mr. Broughton should humbug him. I believe that that was the cause of his death. He told me three days before he shot himself on Gore's Hill that if I would go with him to the station he would shoot Broughton and drive another bullet through himself. I said, "Don't do that"; I said, "Don't spill blood." Ffrench said he was of gentle descent, and he would not be humbugged by Broughton.  
 153. The general report was that he shot himself through Broughton? He shot himself.

William Reynolds called in, sworn, and examined:—

- W. Reynolds. 154. *Chairman.*] You know all about this Gore Estate? I think I do.  
 8 Sept., 1896. 155. How long have you known it? About sixty-two years. It always went by the name of the Gore Estate. I used to get timber off it.  
 156. And you used to pay the money to Gore? Yes.  
 157. He laid claim to it? Yes.  
 158. Who else laid claim to it? Sometimes one member of the family, sometimes another.  
 159. Did Green ever lay claim to it? No.  
 160. Did Broughton? No.  
 161. You have no idea of the area of the land? No. My 40 acres adjoined the 150 acres.  
 162. Did you have 40 acres? Yes; alongside the Artarmon Estate, Brown's ground.  
 163. Did you have that 40 acres? Yes, I had it thirty-three years.  
 164. Do you know anything in regard to some land that the Government are claiming—a reserve near the railway station? Yes, there are more than 50 acres, I think.  
 165. Part of that adjoins the Artarmon Estate; then it comes along by the railway? Yes; about 50 acres are Wells's. I went near it nearly 50 years ago to survey that estate. I was going to buy it. Wells said it was not occupied.  
 166. You always paid your rent to Gore? Yes.  
 167. And Gore was always the admitted owner of the property? Yes, till the old gentlemen died; then young Willie Gore came in.

Frederick Henry Holland called in, sworn, and examined:—

- F. H. Holland. 168. *Chairman.*] You were caretaker in connection with this Gore Estate for Sir Alexander Stuart?  
 8 Sept., 1896. Yes.  
 169. He represented the Bank of New South Wales, did he not? Yes.  
 170. What area of land did you take care of? I suppose about 300 acres.  
 171. What did it comprise? There would hardly be 300 acres. Boyle was outside the far side fence; he had about 12 acres. There was the Spiros taken out of it. It comprised about 300 acres altogether.  
 172. Is the land still held by the Bank of New South Wales? I do not know who owns it now.  
 173. Did Broughton lay any claim to it? No.  
 174. You do not know what farms it comprises? No; I know it was fenced in, and it was taken out of my hands and put into the hands of a man named M'Kenzie.  
 175. Is it still fenced? No; after it was taken out of my hands I was one day going down to the Shore, when I met Bereyne near England's Hotel. He said, "Is it true that they have taken the Artarmon Estate out of your hands?" I said, "Yes." And he said, "Then I will slaughter that fence." Then he went with his men and cut down the fence, and they commenced to cut down the timber. It was beautiful timber.  
 176. How long ago was that? Twelve or thirteen years.  
 177. In whose interests was Bereyne acting? I cannot say. They cut down all the wood, made posts, posts and rails, and ships' tunnels and logs of it, and carted it away. Nobody stopped them.  
 178. *Mr. Fitzpatrick.*] Who were the claimants at that time? Sir Alexander Stuart. We never heard of Broughton then. It is only lately that Broughton has made any claim at all.  
 179. *Chairman.*] How long is it since Broughton first came into it? I do not know exactly. Before it was fenced a wooden house was put up. I carted it from Wilson's place, near the Spit. Mr. Wilson was nephew of Sir Alexander Stuart. A man named Bennett had charge of the house. Bereyne and some other man upset the house with props. They got Bennett outside. He lay down on the ground, and they carried him out on to the road.  
 180. *Mr. Law.*] Do you remember what year Sir A. Stuart and the Bank had an interest in it? It is twelve or thirteen years ago.  
 181. How many years had you charge of it? Only a few months.  
 182. *Chairman.*] At that time possession seemed to be held by fighting? Yes.

ON THE GORE AND ARTAMON ESTATES, NORTH SHORE.

THURSDAY, 17 SEPTEMBER, 1896.

Present:—

MR. O'SULLIVAN, | MR. HOWARTH,  
MR. LAW.

E. M. CLARK, Esq., IN THE CHAIR.

S. M. Quinlan, Esq., solicitor, appeared on behalf of Mr. J. H. O. Ffrench.

William Kingston Cook sworn and examined:—

183. *Chairman.*] What are you? A builder and contractor.

184. I understand that you purchased a portion of the Gore and Artamon Estate at one time? I did a long time ago. I became acquainted with Mr. Ffrench who afterwards became a partner with Mr. Broughton. I also became acquainted with Mr. Richard Harnett, and wishing to have a farm and orchard I agreed to take Gore House from him. Whilst there I was visited by Mr. Ffrench who lived on the adjoining hill. He was then married to a Miss Sollings, and had two little children—girl and boy. He, recognising me, visited my house. The daughter of a man named James Brain was servant at Mr. Ffrench's at this time. I remember that on one occasion when visiting Ffrench she brought me some iced water-melon. I understood from Mr. Ffrench that he had courted Harnett's daughter, and at one time he, Ffrench, had foolishly given him possession of Gore House. Mr. Ffrench said that Mr. Harnett had no power to underlet, and that if I would give up possession he would give me a piece of land on the 25 acres of ground just beyond the Nichol's Estate on the Lane Cove Road, but I was not to tell Mr. Broughton. Mr. Ffrench and I visited each other several times. Mr. Ffrench confided to me the fact that he had been a poor boy at the Turon diggings. At the time I referred to he was second pay-clerk in the Treasury, having £600 a year; Mr. Coonan was the head clerk. I visited Mr. Ffrench at the Treasury several times to talk matters over. Mr. Ffrench informed me in conversation that these grants were 25-acre grants to old veterans, but some of the veterans had died, drank themselves to death in Sydney, and the remainder had been collected by the British Government and shipped home again. I understood from Mr. Ffrench that his grandfather, Mr. Gore, had been concerned in some rebellion in Ireland and deported here—his grandfather became Sheriff for a time of Sydney, and became possessed of those grounds. There were no deeds. He said that his grandfather told him that he had had the deeds of some of the property, and they had been sent into the Treasury, but the Treasury officials had lost them. He had had a most voluminous correspondence with the Government, but they refused to recognise his claim. He also said that his family to create a title to the land had exchanged with a member of the Wentworth family. I fancy it was D'Arcy Wentworth, for 1,500 acres of land somewhere in the Illawarra district. Then to make the thing more secure they had re-exchanged, taken their old land back again, and given Wentworth his 1,500 acres back. He also told me that his grandfather and grandmother were buried on the land a few feet from the Lane Cove Road to secure the title. He also said that he understood that his grandfather had shot a soldier for cutting grass on the land. That the old man had been tried for it, and been found guilty, and before the Judge could pass sentence he cut his throat in the Court. He was then taken away to a hospital. Time passed, and the sentence was never carried out. The regiment to which the soldier belonged went home to England, and his grandfather was then exiled to North Shore and told never to come into Sydney again. Then the old man commenced rearing poultry. After this Mr. Ffrench told me his wife was an ambitious woman, and she desired to found a family there, and she did not like him taking me in against Mr. Broughton. She thought he had better stick to Mr. Broughton and see the matter out. Then Mr. Ffrench said he would send a man to me who had some papers connected with Dargan's farm—a man named Jenkins. I produce an abstract made at the time of the title which this man had:—

Twenty-five acres of land at North Willoughby; granted to Peter Dargan, 13th December, 1794.—Gt. 334, R.E.G. No. 1, folio No. 139.—Peter Dargan, jr., labourer, of Sydney, heir and only child of Peter Dargan, sr., sold the above 25-acre grant to one William Palmer Moffatt, surveyor, of Sydney, for the sum of £250 sterling, in September, 1854. Witness—William Beddin and John Valentine Wareham, law stationer. (Book 33, September, 1854; date of deed 1st August, 1854; received in office, 11th August, 1854; Book 34.) Ending 27th July, 1863.—Book 83, Moffatt W. P., Thomas H. Sindon, 742, deposit deed 25 acres, St. Leonards, North Shore, also policy of insurance (abbreviated copy); T. H. Sindon, Esq., of Mudgee, has this day drawn a six-months' bill in my favour for £250. I place in his hands as coll. security a deed of 25 acres of land situated at North Willoughby, &c., &c.; also a policy of insurance for £500 on my own life, dated 28th May, 1857, originally issued by the Professional Life Assurance Society, incorporated with the European Assurance Society, 27th April, 1864; policy paid to 28th May, 1864 (European Life Assurance Company ceased paying premiums in 1871; when it wound up, no claim was made for a creditor's dividend by W.P.M. If he died before that the policy was paid; if not, the policy is now waste-paper; in 29th June, 1874, books sent to England.)

Both these instruments to be retained by T. H. Sindon as security by way of equitable mortgage until he be repaid the amount he has to pay upon the said promissory note for £250, if any, to sell or dispose of by public or private sale, and to seal and deliver to the said purchaser as good and full a title as if I were present and ratifying the same in person; and I hereby appoint him my true and lawful attorney, and he may sell by public or private sale for any sum over £250, but not under £250, and if I repay him the £250, supposing he has had to pay that amount on the bill drawn, he is to redeliver to me or my written order my deeds of land and life policy. William Palmer Moffatt, Witness.—Edward Clarke, attorney's clerk, Mudgee. Before George Warburton, Commissioner for Affidavits. Registered by Charles Hallett, of Sydney, 27th June, 1865.

That was given to me as the man's title. Mr. Ffrench sent him to me. I had paid a deposit on the grant—Dargan's farm. I then put some building material on the ground for the purpose of erecting a house, and a man named James Brain, who afterwards said he acted to the order of Mr. Broughton, came and stole the stuff from the ground; I caught him on the ground with his dray; he had got some timber belonging to me. I went to the Water Police Court, and took out a summons against him for stealing my building material, and I subpoenaed Ffrench to give evidence. I went to the Treasury, and we had a row. The head clerk said I cannot allow this in here, you two gentlemen must go outside and settle your business. Ffrench said he would not come forward. I said he had acted as a traitor to let me into this matter. It was cowardly. He was a nice man, a ladylike man, one of those gentle simple kind of creatures. A peculiar circumstance occurred. Mr. Broughton was on the Bench, showing an unregistered document to the J's.P. There were a number of magistrates there. One of the lawyers said, "you can object to Mr. Broughton sitting in that case; he is claiming the property." I told Mr. Broughton that  
he

W. K. Cook.

17 Sept., 1896.

W. K. Cook, he had no right on the Bench. He said that he was a J.P., but I said that he had no right to act in a case in which he claimed to have an interest. Mr. Broughton had to leave the Bench. The case came on, and it was treated as a disputed title case, and it had to go to the Supreme Court. Mr. M'Carthy, of Robertson, Fisher, and M'Carty (Mr. Broughton's solicitors), appeared for James Brain. Mr. Broughton produced what they called a particularly clean unregistered document to prove his title to the land, and Mr. Stephen said, "Gentlemen, I do not tell you that Mr. Broughton has not lent £14,000, but I ask you, as business men, if you would lend £14,000 on a piece of paper like that, without going into the bush to see who was living on the land." Previous to this I had offered to buy Gore House, and 25 acres of land round it, from Mr. Ffrench, and Mr. Ffrench and Mr. Broughton met me one evening at Gore House, and asked what I would give. After some conversation, I said £250. Time was given me to consider this. I received an intimation that a Mr. George Wickham, afterwards Coroner of Parramatta, had bought a title to the Artarmon Estate for £1 10s. at a sheriff's sale; also that some man—Jackson I think was his name—with teams, had given £16 for the Artarmon Estate, had cut several hundred tons of wood off the estate, and then gone away and left it. I had nothing more to do with it. I afterwards gave information to Mr. Harnett through Mr. Felmingham, chemist of King-street, his son-in-law. I gave them notice that there was a title in existence. He afterwards bought the title, and they were to give me something for my information, and Felmingham afterwards asked me to call at the office. I found afterwards that they had got the title. I went to Alexander Stuart about it. I was to have had £200 when they obtained the title, and 10 per cent. on the sum the land sold for. I calculated about £2,000. I produce Sir A. Stuart's letter, *re* same (£2,000, and so much down as soon as they got the title). I have a letter from Alexander Stuart, telling me that I slept on my rights, and that I had better see Felmingham's executor.

Mr. Wm. Kingston Cook, 24 University-terrace, Yurong-street,—  
Dear Sir,

Sydney, 31 December, 1885.

In reply to yours of 23rd instant, I must disclaim all connection with any arrangements made between you and Mr. Felmingham, acting on behalf of myself and Mr. Harnett, as you say. I had no knowledge of any transaction between you and Mr. Felmingham, nor had I ever any interest in Gore Hill. I am aware that Mr. Harnett once occupied Gore Hill, and he may have had some interest in obtaining the Sheriff's title you write about, but it could be of no use to me, as the property I was interested in, Artarmon Estate, was quite separate from Gore Hill property.

It is a pity that you did not see about the matter sooner, while Mr. Felmingham was alive, or while his affairs were being administered by Mr. Harnett.

Yours, &c.,

ALEX. STUART.

But he had no money, and I never bothered further about it. Before this, I bought from John Boyle, Tylor's farm for £250. Ellis and Makinson drew the deeds or agreement which Mr. Boyle was to pay for, but he never did. Boyle introduced me to them as acting for him. I lived at this farm some time. There was a man named Ben Smith, a runaway American sailor. He was a man who used to drink about the bush. I had a valuable cow shot through the neck, the legs of another broken. I sold one to a butcher for £5 2s. 6d., the other for 6s. to Hammond, of Lano Cove. I had my horses killed; a horse named Porter I had killed, another named Captain; another named Bess was injured in the back. A horse named Jack was put in a waterhole, and beaten to death. I prosecuted the man Ben Smith, and he was committed for trial. Mr. Broughton's lawyer appeared to defend him, but there was a difference of ten minutes about the time. I could not tell the time by the clock, and the moon was brought into the question. I could not swear exactly, but Ben Smith was seen on the Lano Cove Road by some night-men. I had a mob of prize calves killed, all except two, that I sold to Mr. Ffrench. These two, Maggie Brain, Ffrench's servant, daughter of James Brain, reared with a bottle. I had over 600 head of poultry poisoned. I took the insides of several down to the Government Analyst. The Government Analyst consulted with his colleagues, and they decided that poisoning was not cruelty. I received an intimation that the bush was to be set on fire. I was told by an old bush woman named Betty, over 80 years of age, for whom I built a little hut for her to live in. She went over to Ben Smith's, and brought back the news that the bush was to be set on fire. I got all the grass burnt off round my place, and the bush was set on fire, and every time the fire went out, it was lighted up again.

185. Who do you think did it? Ben Smith used to go over to Ffrench's place, and they were the people who used to annoy me. Ffrench was dead at this time, but his wife lived near my place. Mrs. Ffrench about this time was negotiating the sale of Gore House to a Mr. Richard Sheldon for a rental and £1,000, providing she could give him a title within fourteen years; and Sheldon soon after entered into possession of Gore House. Then the Bank of New South Wales brought an action of ejectment against me. I produce the writ:—

In the Supreme Court of New South Wales, }  
Cumberland, to wit. }

On the 2nd day of November, in the year of our Lord 1875.

On the day and year above written a writ of our Lady the Queen issued forth of this Court in these words, that is to say:—Victoria, by the grace of God of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, &c., &c. To John Boyle, Owen Boyle, Speidro Ann Lenthall, Edmund Henry Lenthall, and Kingston Cooke, and all persons entitled to defend the possession of all that piece or parcel of land (save and excepting 12 acres thereof, already reserved by John Boyle) containing by admeasurement 150 acres more or less, known as the Artarmon Grant to William Gore, Esq., by Governor Macquarie, lying and situate in the county of Cumberland, parish of Willoughby, and district of Hunter's Hill. Bounded on the south side by an east line of 36 chains, commencing at Roberts' east corner; on the east by a north line of 36 chains; on the north by a west line of 52 chains to the line marked for Nicholls' and Roberts' farms, by a road 1 chain wide, reserved on the west side. Also, all that piece or parcel of land called Webber's, lying and situate in the county of Cumberland, parish of Willoughby, and district of Hunter's Hill, containing by admeasurement 25 acres more or less, commencing at the north corner of that portion called Roberts' 25 acres, with the Artarmon west line; bounded on the north-east by a line north 39 degrees west 16 chains; on the north-west by a line south 51 degrees west 16 chains; on the south-west by Reddishe's 25-acres portion, separated by a line bearing south 39 degrees east 16 chains to Roberts' south-east corner; and on the south-east by that farm to the commencing point. Also, all that piece or parcel of land (saving and excepting the 5 acres thereof already conveyed to the separate use of Mrs. Ann Lenthall, and also saving and excepting the 1/2 acre and 12 perches thereof already conveyed to Mr. Edmund Henry Lenthall, by indenture, dated the 15th day of November, 1860), situate in the county of Cumberland, parish of Willoughby, and district of Hunter's Hill, containing 25 perches (more or less), called Tilley's farm; bounded on the north-west by a portion of land marked "Whitfield," commencing at the south corner of Roberts' 25 acres; and separated on the north-west from Whitfield's by a line south 51 degrees west 16 chains; on the south-west by Sawyer's 25 acres, separated by a line south 39 degrees east 16 chains; on the south-west by that portion called Anne's Farm, being a line north 51 degrees east 16 chains; and on the north-east by other part of the estate; and separated from it by a line north 39 degrees west 16 chains to the commencing point. And also all that piece or parcel of land called "Tylor's" Farm, lying and situate as above mentioned, containing by admeasurement 25 acres (more or less) commencing at the east corner of Currie's 25 acres; bounded on the south-west by Robinson's 25 acres; separated from

from it by a line south 39 degrees east 16 chains : on the north-east by Lamb's 25 acres and other part of the estate ; and separated from it by a line north 39 degrees west 16 chains ; and bounded on the north-west side by other part of the estate, and a line bearing north 51 degrees west 16 chains to the commencing point,—to the possession whereof the Bank of New South Wales claim to have been on and since the 1st day of November, in the year of Our Lord 1875, entitled, and to eject all other persons therefrom. These are to command you or such of you as deny the alleged title within eight days after the service hereof, to appear in person or by attorney in our Supreme Court, at Sydney, to defend the said property or such part thereof as you may be advised in default whereof judgment may be signed, and you turned out of possession.

Witness,—The Honorable Sir James Martin, Knight, the Chief Justice of our said Court at Sydney, the 2nd day of November, in the 39th year of Our Reign, A.D. 1875.

For the Prothonotary,—

J. A. READ,

2nd Clerk of the Supreme Court.

And John Boyle has, on the \_\_\_\_\_ day of \_\_\_\_\_ 1875, appeared by William Maguire, his attorney to the said writ, and defended for the whole of the land therein mentioned. And Kingston Cooke has also on the \_\_\_\_\_ day of \_\_\_\_\_ 1875, appeared in person to the said writ, and has defended for a part of the land in the said writ mentioned, that is to say, "All that piece or parcel of land called 'Tylor's Farm, lying and situate as above mentioned, containing by admeasurement 25 acres more or less. Commencing at the east corner of Currie's 25 acres ; bounded on the south-west by Robinson's 25 acres, separated from it by a line south 39 degrees east 16 chains ; on the north-east by Lamb's 25 acres and other part of the estate, and separated from it by a line north 39 degrees west 16 chains ; and bounded on the north-west side by other part of the estate, and a line bearing south 51 degrees west 16 chains to the commencing point.

Therefore, let a jury come, &c.

Deputy-Sheriff Allpress came up with several men and two constables, but I sent down to Sydney a man on a fast horse, and the Sheriff sent word : "For God's sake do not interfere with Kingston Cook." They had found that the farm land occupied had been put under Torrens' Act by a man named Stewart, living at Enmore. Consequently, their action against me was null and void. I have been subjected to great persecution by those people, and I have lost £1,100 over it.

186. Has Broughton made application to put this grant under the Real Property Act? Yes ; and I have had to oppose him.

187. Has he succeeded? I do not know.

188. He made application? Yes ; and I put a caveat in against his application.

189. When was that? I think that that would be about 1888.

190. Did you meet with any opposition in the Lands Titles Office with regard to it? I did, and a person I believed to Mr. Ward, the then Registrar-General, called me outside and said : "I dare you to put a caveat in." He put his fists near my face and said : "I will keep the Lands Titles Office one hour later, and I dare you to put a caveat in, or you will be sold up." I then determined to let the matter drop. As a matter of fact the office was kept open long after the closing time, the person alluded to staying with me on the front steps.

191. Has anyone been in with Mr. Broughton on the matter? Yes ; I paid £18 to a man named Thos. Freehill, known as "Paddy" Freehill.

192. What are the names of the others who were in with Broughton? Mr. Broughton stopped me in the street and said : "I am very sorry for you ; you have lost a great deal of money over this matter." I said : "If you are sorry, show it by giving me a piece of this land," and he said there are twenty-two people in with him. I asked who they were, and he said : "I mean twenty-two grandchildren." They say that Judge Rogers is in it. I never had any more to do with Broughton. They offered to pay my passage if I would go to San Francisco. Mr. Broughton said in Court, when the case was going on, "I will drive you out of the country as I did William Palmer Moffatt and Thos. Henry Sindon." I said, "You cannot ; I am too respectable a man." He said : "Moffatt was driven out of here and lynched in America."

193. *Mr. Howarth.*] You say that you bought from John Boyle, Tylor's farm for £250? Yes.

194. When was that? I think about 1874.

195. Did you receive a title? No ; the deed or agreement was drawn by Ellis and Makinson, and I gave bills afterwards to Mr. Boyle for the amount. The bills were turned over to another person, and I afterwards had to give £100 to get them back again and to prevent myself from being sued.

196. Did you ultimately receive a title to that land? No ; they found another man named Stewart had got it under the Torrens' Act.

197. As a matter of fact you never did possess a title to Tylor's grant? No ; I took Mr. Boyle's title.

198. So you really never had a claim? Yes ; I lived on it and paid Mr. Boyle a small sum every month as a rent until the bills were paid. I gave bills for £250.

199. You never completed the transaction? No.

200. Do you know in what year Stewart obtained the Torrens' title? No.

201. Harnett promised to give you possession of Carr's grant? I never knew Harnett had any connection with Carr's grant. Harnett gave me possession of Gore's house on the hill. I lived there and paid rent, but when he found that Mr. French had visited me, and said he (Harnett) had no power to underlet. He said, "Harnett, give me back your lease, and I will make you a weekly tenant," and that was done. French said : "If you give me possession of Gore's house I will give you another piece of land a quarter or half an acre." I said to Harnett, "Where is your title?" and he said, "French was courting my daughter, and he stole the deeds out of my desk." I wish to add that I arrived in New South Wales at the end of 1871 "with capital." I commenced business by taking a contract from Mr. Moriarty, of the Harbours and Rivers Department. I was introduced to him by Mr. John Musson, the well-known hydraulic engineer. The contract occupied me until I became acquainted with these land dealers.

Frederick George Lewis called in, sworn, and examined :—

202. *Chairman.*] You are a clerk in the Lands Office? Yes.

203. Do you produce a map? Yes ; I produce a map marked "C. 582-690," showing the Gore and Artarmon estates. It is a survey made by Mr. Edward J. H. Knapp in 1849. [*Copy appended.—See* 17 Sept., 1896.

*Appendix C.*]

204. Does it show the position of the several grants of land in the parish of Willoughby, in the county of Cumberland? Yes.

Edward

Edward James Howes Knapp called in, sworn, and examined :—

E. J. H.  
Knapp.  
17 Sept., 1896.

205. *Chairman.*] What are you? Licensed surveyor under the Real Property Act.
206. You see the map produced here? Yes, it is a map which was made by my father.
207. Your father located certain grants there? Yes; he was told off by the Department to allocate all these grants in the parish of Hunter's Hill. He had been making a survey for the grant of Mrs. J. D. Nicholls, and the Surveyor-General deputed him to allocate these grants. He had been making surveys there in 1833 and in 1836 for the Gore family, and it was in consequence of his local knowledge that he was chosen for this particular work. After allocating all these grants he found there about 100 acres of Crown land which are tinted yellow on the map.
208. Do you know who is in possession of those lands now? I cannot say now. Some years ago an attempt was being made to jump the Crown lands marked on the map 275, and tinted yellow, and I told R. M. Pearson, the Chief Draftsman of the Lands Titles Office about it, and something was then done by him to block the issue of the certificates of title. A letter was received from the Lands Department, and Mr. Pearson wrote on the plan of the parish of Willoughby in the Lands Titles Office this note, "No application under the Real Property Act can be entertained for any portion of the following grants, viz., H. Evans, 25 acres; W. Wright, 25 acres; G. Tilley, 25 acres; and H. Lamb, 25 acres." This was the land they were trying to get through the Real Property Office. Mr. Pearson also wrote: "Vide letter from Minister for Lands, 5th May, 1885." Under that he has written the following memo.: "Another letter has been received from the Secretary for Lands, desiring that the terms of the letter from his Department, dated 5th May, 1885, to be adhered to. R. M. Pearson, 23/6/87." That was in reference to these grants, which I have just mentioned. Mr. Pearson told me when I returned from the country that a further attempt had been made to get a further certificate of title for some of this land, and that it had succeeded, and he mentioned the names of those who were interested.
209. Who were they? The late Sir Robert Wisdom, Sir George Long Innes, John Williams, Francis Edward Rogers, and Thomas Broughton.
210. *Mr. O'Sullivan.*] What was Broughton at that time? For many years he has been nothing but a land speculator. He was originally in business as a tailor in Sydney.
211. *Chairman.*] Who was John Williams? He was Crown Solicitor. On the 15th August, 1887, I addressed a letter to the late Sir Henry Parkes calling his attention to the fact that there was Crown land in his electorate, and suggesting that as they were spending so much money in purchasing parks they might take possession of that land, and they would have one of the finest spots on the harbour. I saw him on the subject, and he said if you will give me the particulars I will very likely do something in the matter. On the 28th November of the same year I wrote him a letter referring to my last. In this letter I said, "I have your note of the 6th September, with Mr. Garrett's memo. of the 5th of same month, in which he says, 'We are doing all that can be done to prevent these lands from being improperly alienated.'" I furnished Sir Henry Parkes with full particulars of the various grants, "William Wright's grant, 30 acres, dated 3rd September, 1794, laying (sic) and situate in Lane Cove, in the district of Hunter's Hill." Then on the Register of Grants, in the Surveyor-General's Office, under the head of remarks, "Exchanged by William Wright with Obadiah Ikin for William Baker's farm. Then sold on the 3rd August, 1797, to John Holdsworth for £3." "H. Lamb's grant, 25 acres, dated 19th November, 1794, laying and situate in Lane Cove, in the district of Hunter's Hill, cancelled." "Grant given on the Hawkesbury, Mr. William Moore, proprietor, 14th May, 1822.—Cumberland Register, No. 1, folio 37." "H. Lamb's grant, 25 acres, dated 19th November, 1794, laying and situate in Lane Cove, in the district of Hunter's Hill, cancelled." Cumberland Register No. 1, folio 38. "Robert King's grant, 30 acres, dated 3rd December, 1794, laying and situate in Lane Cove, district of Hunter's Hill, cancelled."—Cumberland Register, No. 1, folio 41. "Humphery J. Evans' grant, 25 acres, dated 3rd December, 1794, laying and situate in Lane Cove, in the district of Hunter's Hill, cancelled." This grant being found in the Secretary's office, with a note thereon, demised to the Crown, 15th August, 1804. (Signed) D. D. Mann, Clerk."—Cumberland Register, No. 1, folio 41. The above accompanied my letter to Sir Henry Parkes of the 28th November, 1887, but he never took any action in the matter. That is all the information that I can give.
212. Do these grants represent the land shown on the plan tinted yellow? No. In addition to that tinted yellow they represent Crown grants which were cancelled.
213. *Mr. O'Sullivan.*] You mentioned the name of Tilley—is it Tilloy or Tylor? In some places they have got it Tylor. I think it is one and the same grant. Tilley is the proper name.\*
214. You have no doubt whatever about the grants you have referred to being cancelled? None, whatever; I have given you the records.
215. Then if these are what they got under the Torrens' Act they have no substantial basis for the title? No; in regard to land tinted yellow.
216. Would a possessory title of twenty years give them the right to apply for a Torrens' title? Not against the Crown. It must be sixty unbroken years under the *Nullum Tempus* Act, twenty years against private individuals in the Colony, forty years if they are resident outside the Colony. You might get some data from the Lands Titles Office, and see exactly who has been applying for these lands under plans numbered 4,489 and 5,141, and deposit plans 1,206 and 1,658, also applications Nos. 7,019, 7,460, 7,469, and 7,470.
217. Is there anything further? The first transaction which my father had with the land, on account of William Gore, was in 1833. He made a survey for William Gore of the Artamon Estate. What became of the fair copy I do not know, but I have here the rough office copy showing the survey. In 1836 he made another survey.
218. *Chairman.*] What do you think are the rights of the Crown in regard to the land? My opinion is, that the whole of that 100 acres tinted yellow belongs to the Crown.

219.

NOTE (on revision):—This is a verbal slip. Tilley's grant is quite distinct. Taylor, or Tylor's, is a separate grant south-east of Tilley's.

219. That is the cancelled grants? No; that tinted yellow—that never was granted. It is the land marked on the plan referred to.

220. Do you know that the Crown claims a reserve of 140 acres near the railway station? I did not know that, unless it is that tinted green on plan.

221. *Mr. O'Sullivan.*] How much land, in your opinion, belongs to the Crown in that vicinity? About 100 acres, which has never been alienated by the Crown; where Mr. Whiting lives is part of it. The brick-works behind Whiting's place, and that claimed by Sir George Innes.

222. *Chairman.*] Then this cancelled grant of Tilley's you consider to be Crown land? Yes.

223. What would you consider to be Gore's title in regard to that land? My father was employed by Gore to do his private work. If that had been Gore's land he would have reported it to the Surveyor-General, but he did not; he said it was Crown land.

224. What do you consider to be Gore's title to the adjoining lands—we are told that there was a consolidated grant? That came before my father's survey of 15th October, 1833. It was in 1833. I have a description of the consolidated grant at the office.

225. What was the area? 1,000 acres. It was granted to Ann Gore and the children.

226. Does that grant contain the Artarmon Estate? Yes.

227. Do you know anything about the Cumberland Register which contained all the particulars in regard to this grant being stolen? There is a mistake about that. It is not the Cumberland Register at the Lands, but the book at the Real Property Office. It was mislaid, not stolen. It was the Cumberland Register from which I took the extracts of the Surveyor-General's Department.

228. Any extracts that could be taken from that book would be correct? We call it the surveyors' bible.

E. J. H.  
Knapp.  
17 Sept., 1896.

WEDNESDAY, 23 SEPTEMBER, 1896.

Present:—

MR. LAW, | MR. J. C. L. FITZPATRICK,  
MR. HOWARTH.

E. M. CLARK, ESQ., IN THE CHAIR.

S. M. Quinlan, Esq., solicitor, appeared for Mr. J. H. O. Ffrench.

Thomas Broughton called in, sworn, and examined:—

229. *Chairman.*] You have some interest in connection with this Gore and Artarmon Estate? On the 15th June, 1855, I lent James Nainby Shuttleworth £2,000 by way of mortgage. The mortgage deed will describe the land on which I lent the money. Shortly after I lent the money, J. N. Shuttleworth became insolvent. Mr. Morris was appointed his official assignee. Mr. Morris transferred to me all his right, title, and interest in the land mortgaged to me by Shuttleworth.

T. Broughton.  
23 Sept., 1896.

230. How did Shuttleworth become possessed of this property? William Gore mortgaged his property on the 20th August, 1840, to William Pendry. There was a second mortgage on the 21st August, 1840. There were further charges on the 6th October, 1840. There was a third mortgage on the 31st December, 1840. There was a fourth mortgage on the 20th October, 1840. Then there were further charges on the 21st October, 1841. William Gore became insolvent in 1843, and he died in 1845. Pendry also became insolvent. On the 15th June, 1848, Clark Irving being the official assignee of William Pendry's estate, transferred to Rudolph John Want all Pendry's right, title, and interest under the mortgages. Rudolph John Want sold to James Nainby Shuttleworth. Then as I have previously stated, Shuttleworth first of all mortgaged to me; then he became insolvent, and his official assignee, John Morris, transferred to me the equity of redemption of James Nainby Shuttleworth. Of 940 acres known as the Artarmon Estate, I got 316 acres passed under the Real Property Act. I found that there were numerous claimants for portions of the land. I found that Mrs. Ffrench claimed a portion. I promised her that I would convey to her son what she claimed. I did convey to her son William Power Gore Ffrench 109 acres of land. That was more than she claimed, but her sister Francis Catherine Gore claimed Packer's grant, and I conveyed to Ffrench, I think, Robinson's grant, in lieu of Packer's, and part of Williamson's and Asser's, in consequence of the alteration of the Lane Cove Road.

231. This 316 acres was really all that you got out of the 940 acres? That is all that I got. I did assist Mr. Whiting to perfect his title to that 109 acres that I just spoke about, which I conveyed to Mrs. Ffrench's son.

232. Did you ever make application to the Department of Lands to issue a consolidated grant in regard to that land? Not exactly a consolidated grant, but I did apply to the department to grant to Mr. Ffrench certain land, and to grant the balance to me. Whilst upon that subject, allow me to state that in the Lands Department there is a very voluminous correspondence between the Gore family and the then Colonial Secretary.

233. Did you ever purchase any land at all from Green on this estate? I did not. But Sir Robert Wisdom purchased from Green 100 acres of land. Sir Robert found that he could not perfect the title, and he drew me into the purchase with him so as to complete his title. I did not see it at the time, but learnt that afterwards. That 100 acres Green could not convey. He had only half of Whitfield's farm. I allowed him 12½ acres to complete his 100 acres.

234. Do you know what farms that 100 acres represented? Yes. J. Berk's, C. Whitfield's, J. Sawyer's, and C. Tilly's; these are the four portions that Sir Robert Wisdom bought from Greene.

235. *Mr. Law.*] These were four portions of 25 acres each? Yes. Lenthal claimed 5 acres, and disputed the title to that 5 acres and succeeded.

236. *Chairman.*] Has he still got possession of that land? I believe some mortgage company have possession of it.

237. Does that land you speak of include Whiting's land? No.

238. What farms did Whiting's land represent? The farms that Whiting claims and occupies are the farms which I conveyed to John Ogilvie Power Ffrench.

239. What are the names of those? Gore's, Robinson's 25-acres, Perry's 25-acres, then there is a piece No. 275, that comprises the land which Mr. Whiting bought.

- T. Broughton. 240. You say that you conveyed the land to Mr. Ffrench;—I suppose there was a consideration for it? Not to me; I merely made a promise to his mother that if it lay in my power at any time to convey the land to her, I would do so. I had known the Gore family for a number of years.
- 23 Sept., 1896. 241. Then, your claim in connection with this land was clearly by reason of the purchase from Shuttleworth, not by reason of any arrangement with the Gore family at all? Certainly not by any arrangement with the Gore family, but in virtue of my purchase, and to avoid law expenses.
242. What farms did this 316 acres represent? First, Gore's grant of 150 acres—that was the Artarmon Estate. I was involved in a lawsuit with Sir Alexander Stuart. He commenced to fence, and my tenant, James Berayene, pulled down his fence as fast as he put it up. Sir Alexander commenced an action against Berayene. He lost that action, and then appealed to the Privy Council. The Privy Council thought that the case required more inquiry, and referred it back for further inquiry. My counsel at that time, Frederick Darley, advised me that it would cost more in law than the land was worth, and advised me to compromise with Sir Alexander Stuart and Mr. Shepherd Smith. I did compromise with them. I was to take one-half of Artarmon and one-half of Cann's 25 acres, and they were to take the other half, in equal shares of one-fourth.
243. That was out of the Artarmon Estate? That was the 150 acres and 25 acres which we called at that time Webber's grant, but now called Cann's.
244. Then you became possessed of one-half? I became possessed of one-half of the Artarmon Estate and half of Webber's, now called Cann's.
245. Have they done anything with it? No.
246. What have you done with your half? I have it still.
247. Did you do anything to perfect the title? Yes; I perfected the title to 316 acres, and the proving of that title cost me £12,000 in law.
248. You say you perfected the title to 316 acres;—I suppose that is land outside this farm altogether? No; it includes my half-share of Artarmon.
249. Then you perfected your title to the whole of 202 acres of the Artarmon Estate, and the other farm and the other title remains in dispute to the present time? Yes. I say that I have got a perfect title to 316 acres in all out of 940 acres. Sir A. Stuart and Smith got 106½ acres; Green sold 95 acres; Ffrench obtained 109 acres; Lenthall, 5 acres.
250. What title have you to the 150 acres in the Artarmon Estate? A grant. 150 acres was the original grant, but when they came to take the metes and bounds of that 150 acres it comprised 202 acres.
251. But if there was a consolidated grant of the whole estate that land would have been included in the consolidated grant? Certainly.
252. And it would not have mattered whether it was 150 or 200 acres? I might tell you what I know about this consolidated grant. I do not think that the papers which are in the Colonial Secretary's Office disclose that any grant was ever issued. In the year 1818, D'Arcy Wentworth held a mortgage over William Gore's property at the Lane Cove. D'Arcy Wentworth foreclosed and sold the property to a person by the name of Amos. William Gore obtained an order from Earl Bathurst, in Downing-street, London, to Governor Macquarie, to grant to William Gore a section of land. William Gore proposed to Wentworth to hand to him that grant in consideration of his cancelling the mortgage on the Artarmon property. Mr. Gore was in England upon the trial of Governor Bligh. This is what Mr. Gore told me himself. Gore proposed to D'Arcy Wentworth to hand to him that order for a section of land in satisfaction of his mortgage. Wentworth said that that section of land was not equivalent for the money which he had lent Gore, but he said, "If Governor Macquarie will grant me 1,500 acres of land I will hand over your property to you. I will take that in satisfaction of my mortgage." Governor Macquarie sanctioned the grant of 1,500 acres of land to D'Arcy Wentworth, in consideration of his relinquishing the mortgage upon Gore's property. In the year 1821, D'Arcy Wentworth was entitled to 500 acres on his own account, and a grant for 2,000 acres was issued to Wentworth, that including the 1,500 acres. Wentworth handed the deeds of that land to Captain Piper and to Mr. Garland, who was then Provost, Marshal. Mrs. Gore, in 1826, applied for a grant in her own right. A form was sent to her to fill up for that grant. I have seen that form myself among the papers in the Lands Department. It never was filled up, and no grant was ever issued, as far as I could ascertain, in favour of Mrs. Gore.
253. *Mr. Quinlan.*] You say that the grant of the 15th January, 1833, was a forgery then? I do not know anything about it.
254. But you say that no grant issued? I said that Mrs. Gore applied for a grant of land in her own favour, and I say that no grant was issued to Mrs. Gore upon that application.
255. Then what do you say of the grant of the 15th January, 1833? When I have finished giving evidence you will have an opportunity to ask questions, but you have no right to interrupt me. I refer the Chairman to the correspondence in the Lands Department for the statement I am making.
256. *Chairman.*] What date would that be? 1826. Mr. Gore, about the year 1826, was willing that this property should be made over to his wife and children.
257. That is the land comprised in the 940 acres? Yes. I always understood from old Mr. Gore and his family that they were entitled to 1,000 acres of land. Of that 1,000 acres of land the conveyance from Shuttleworth to me comprised 940 acres. Mr. Gore was willing, and made an application out for this land to be transferred to his wife and children, but no transfer, as far as I am aware, ever took place. I remember that Sir Thomas Mitchell objected to make any transfer unless he had written instructions from the Governor to do it, and up to that time he never had any such instructions. Whenever Mr. Gore got into debt he would then state the property was his wife and children's. When he wanted to borrow money it was his own property, and not the wife and children's. I knew the old man. He was a hot-headed Irish gentleman. An application was made, as I have already stated, in 1826, when Gore was quite willing, to avoid paying his debts, to have this transferred to his wife and children, but subsequently he left Gore Hill and went to live in Pitt-street. He was anxious to get money, and to get his daughters settled, and from time to time, I know of my own knowledge, that he obtained large sums of money from old Mr. Pendry and his son—in fact, he obtained so much that he brought Pendry into the Insolvency Court. I have heard of such a thing as a consolidated grant to the Gore family of 1,000 acres of land. The late Mr. R. B. Smith asked if I would come and see that consolidated grant, but I never did see it. When he asked me if I would look at it, I said, "No; I do not want to be mixed up in this thing." There is one thing that the Committee ought to know, and that is that in the early days of New South Wales there was

was no such thing as a Registrar-General's Office. There was no registration of deeds beyond the Cumberland Register of Grants. When D'Arcy Wentworth obtained Gore's 1,500 acres of land he did not go through the form of reconveying to Gore the land that was mortgaged to him, but merely returned to Gore the deeds that had been mortgaged, so that really in law and in equity the equity of redemption remained in Wentworth. Then, about 1842, George Greene obtained, or rather Parry Long obtained for George Greene, a reconveyance from William Lawson and William Charles Wentworth of the land which Gore had mortgaged to D'Arcy Wentworth. That was about the year 1842. In consequence of their obtaining that, George Greene, Mrs. French, Miss Gore, and William Bligh Gore, made a distribution amongst themselves of Gore's property. The plan of that distribution was given in evidence in the case of Stuart and Smith against Baraycne. If the Committee desire it I have no doubt they can get all the information on that subject from Mr. H. R. Way, my attorney. I believe that Mr. Clayton has the original documents of the agreement entered into by Mrs. French, her sister, Miss Frances C. Gore, William Bligh Gore, and George Greene, and the name of Lady Fitzgerald, one of the daughters of Gore, was also mentioned, but she did not sign that agreement. Her name was mentioned, and I think Mr. G. R. Whiting, with the view of perfecting his title, administered to the estate of both Mrs. Fitzgerald, Campbell, and Chapel with the view of perfecting their title, as they supposed, to the Artarmon Estate, paid Mr. Campbell, son of General Campbell, in England, £1,000 for any right, title, or interest which he might have in his mother's estate of Artarmon. In the appeal case we took the evidence of Campbell in England as to any right or title that he had to the land, and he declared that he had never been in New South Wales, and that he had no claim or title, as far as he knew, to any land in New South Wales; but some people residing in New South Wales had offered him £1,000 for any right that he might have. He conveyed that right to Campbell and Chapel in consideration of the £1,000. Amongst the land which I considered that Shuttleworth conveyed too was a farm called Bromby's Farm of 25 acres; another farm called Bruin's Farm of 25 acres, and another farm stipulated as Holdsworth's. I think I ought to tell you that in 1832 Mr. Gore collected together all the deeds that he possessed with regard to the Artarmon Estate. I heard Mr. Thomas Lane in the case that was tried in the Supreme Court swear that he packed up the whole of Gore's deeds in the year 1832; that he accompanied Mr. Gore to the Colonial Secretary's office and saw Gore hand over those deeds to the Colonial Secretary for the purpose of getting a consolidated grant of all. Mr. Lane was the confidential servant of Mr. Gore for over ten years. He lived with Mr. Gore up to 1842. Mr. Gore became insolvent in 1843, and he died in 1845. Then there was a scramble for his property. In the year 1843 Mr. Gore appeared before me at the Police Court in my magisterial capacity, complaining of George Greene having made a forcible entry into his house and barring the doors against him. I, with Mr. Chas. Windeyer, committed Greene to take his trial for forcible entry on to Gore's premises. He was tried and he was fined £25. Greene and Gore's eldest daughter, Mrs. French, were constantly wrangling as to who should get possession of the old man's property, and at last they forced him out of his house, and he went to live in a little cottage on the top of the hill, which has since been called Greene's. I have not said anything to you respecting John Boyle. In 1856 William Bligh Gore desired to see me at Lamb's farm, where he was then living. He proposed to sell me all his right, title, and interest in the Gore Estate for £100. I mentioned to him that old Boyle made a claim on the Artarmon estate, he said Boyle never gave him a shilling in his life, but he conveyed the Artarmon estate to John Boyle to prevent Want from selling it over his head. Want had a judgment against him, and he was afraid that Want would take the property, so he conveyed it to Boyle with the understanding, that if they got the property, he should have one-half and Boyle should have the other. I spoke to Boyle on the subject subsequently. I told him what W. G. Gore had said to me, and Boyle said, "well he did owe me something, I surveyed the land for him, and he promised me that I should have half." I swore that in the Supreme Court in the presence of John Boyle, and neither John Boyle nor his counsel contradicted it or questioned me upon the subject.

258. Did you ever have any dealings with Mr. Freehill in connection with his estate? Yes; I remember the whole of that matter. Mr. Freehill was living in Lower George-street, and was a baker. I heard that he had taken a conveyance from John Boyle for 120 or 130 acres of the Artarmon estate. I took the grant of the 150 acres down to Freehill, and showed it to him, and endeavoured to satisfy him that it was my property, and that if he was going to pay any money for it he would be throwing his money away. I was about to commence an action against Freehill, but his friends came and begged of me not to commence any proceedings against him, because he was in difficulties, and if I commenced any proceedings it would be the means of driving him through the Insolvency Court. I did not take any proceedings against Mr. Freehill, and the next I heard of it was that he had mortgaged the property to the Bank of New South Wales. Subsequently I heard that Mr. Shepherd Smith, or the Directors of the Bank of New South Wales, sold to their codirector, Sir Alexander Stuart, Mr. Freehill's interest in the Artarmon estate. I also heard that Sir Alexander Stuart had sold one-half to Mr. Shepherd Smith, then they commenced proceedings against my tenant Baraycne, and that was the cause of my compromising with them.

259. You say that Gore conveyed some land to Boyle;—what land was that? As far as I know, William Bligh Gore conveyed to John Boyle, without consideration, his interest in the 150 acres of land; and I may state that at the time of that conveyance he had mortgaged to George Green. George Green's mortgage is dated 9th March, 1846. I think, speaking from memory, that William Bligh Gore's conveyance to Boyle was in 1851; but in 1851 he had nothing to convey. I look upon it from first to last that old Mr. Boyle is a myth in the interests of the Gore estate altogether.

260. But has he not been in possession for many years? Although I hold the certificate of title, the man is too old for me to throw him out into the streets. I would not take any steps to dispossess him, but I may tell you that Sir Alexander Stuart did take steps against him. He unroofed the house that Boyle is living in, but I never would do that.

261. I suppose the man claims some right by reason of that conveyance from Gore? He has no more right than you have.

262. Then Green has no right? I will tell you how Green may claim some right. In 1843, when Gore became insolvent, George Green bought the assets in Gore's estate, and I have always thought that that gave Green some right to the property, which was not mortgaged to Pendry.

263. If Green said he had a right to 500 acres that would not be a fact? I did make good Green's title to 100 acres. I paid him £2,600, besides a deposit of £500 as my third share of that property, and he sold

T. Broughton. sold pretty well all that I had bought in Shuttleworth's Estate, and afterwards involved me in a lawsuit with a syndicate, which cost me thousands of pounds. He sold to Ferguson and Broad and a syndicate almost the whole of the land that was conveyed to me or mortgaged to me by Shuttleworth and the Official Assignee. Green has always claimed the land adjoining the cemetery near the railway—what is called Bromby's grant. Now, with regard to Bromby's grant, before I had anything to do with the Gore Estate at all, about the year 1842, Mrs. Ffrench claimed the cemetery and the land adjoining there. I have seen the correspondence between Mrs. Ffrench and the then Colonial Secretary on the subject of that land. The Government surveyed that land for the purpose of having it sold by auction. Mrs. Ffrench protested against the sale of the land, claiming it as part of her father's estate. I remember she stated that her father had held possession of that land, and at the time when she was writing a man named Michael M'Gowan was in possession of the land. I have no doubt that young Ffrench can produce some of the correspondence on that subject. I had two letters myself, and I handed those two letters to the late Mr. R. B. Smith. In consequence of Mrs. Ffrench's representations to the Government, they withheld the sale of that land. Green has always claimed that land. For the last twenty-five years he has had brick-works upon it, and he has been selling the clay. He has always claimed that land in opposition to me. I have never interfered with him. I thought that his father, having bought the assets in Gore's insolvent estate, that gave him some right to the land. In the deed of partition that I referred to, it shows that that portion was allotted to George Green. It was at one time fenced in, and I believe that some of the posts are still standing.

264. The original 1,000 acres was not fenced in, was it? I cannot swear that. I was too young at the time, and I cannot say that I ever went round the boundaries, but just on that spot it was fenced in, because in the year 1821 old Gore shot a soldier for going into his garden and cutting grass. He was tried, and sentenced to death for that, but he cut his throat in Court, and was carried out. He was sent to gaol, and afterwards made Sheriff.

265. In regard to this claim of Green's to his reserve near the railway-station, what right do you think he would have to that? The only right that I think he could have would be through his father buying the assets in old Gore's Estate in 1843, but how Green first came to have possession of that land, as I tell you, was his getting a conveyance of the equity of redemption from William Charles Wentworth and William Lawson of the mortgage of Gore to Darcy Wentworth, although when he handed to Gore his deeds, he did not reconvey the property, and the equity of redemption remained in Wentworth. I say still that there is part of the Gore Estate that the Crown have granted; the only difficulty is that in those grants they describe nothing. Those grants have never been dealt with yet, but they may be found in the Cumberland Register.

266. Somebody said that the Cumberland Register was stolen? I have seen the Cumberland Register over and over again. There are two copies—one in the Colonial Secretary's Office, and another in the Registrar-General's Office. I may tell you also that the Government filed caveats against me, and I had to prove my title as against the Government to several of those blocks of land.

267. *Mr. Law.*] You said that you had promised Mrs. Ffrench that you would give her son all the land that she claimed? I gave him all the land that she claimed, and all that her sister, Catherine Gore, claimed. I conveyed that to young Ffrench, and he conveyed whatever interest he had to me.

268. You said you gave more land than she claimed? I gave her son more than she claimed, because I gave him Robinson's grant, that she did not claim; and I gave him part of Williamson and Assor's grants, where the alteration of the Lane Cove Road was altered.

269. You gave her 169 acres? Yes; I gave her son.

270. You said that you made Green a present of 12½ acres to enable him to complete a sale? Yes; Green had a conveyance from Want, and his conveyance covered those three farms that I have mentioned, less 12½ acres of Whitfield's, and in order to enable Green to complete his contract with Sir Robert Wisdom I gave 12½ acres of land, and in return he conveyed most of my property to Ferguson and Broad.

271. You say that Green has been making bricks there for twenty-five years? I saw the brick kilns there as far back as 1873.

272. He had them there for twenty-five years? Yes; I have seen him working there. He has always claimed that land; and although it was conveyed to me, I thought that perhaps he had a better title than I had.

273. Has he been on that land for twenty-five years? I have not interfered with him at any time.

274. He has had undisputed possession for twenty-five years? Yes; his father must have claimed that land as far back as 1846. Mr. Clayton has what they call the partition deed, and that will show what Green claimed at that time.

275. About how many acres do you claim altogether? When you ask me how much I claim, I say that I have three portions of 25 acres each in that area; but I have not the deeds to show, and it cost me so much money that I am afraid that if the Government go against me it will cost me more than the land is worth. I have been to an expense of over £12,000, and I have had enough of it.

276. *Mr. Howarth.*] Did I understand you to say that William Bligh Gore became insolvent in 1846? No; William Gore, senior, was insolvent in 1843, and he died in 1843. My contention would be this, that when old Mr. Gore became insolvent, away went his interest; there could be no interest, in any heir-at-law, after that.

277. And the conveyance from William Bligh Gore to John Boyle is supposed to have taken place in 1851? Yes.

278. Do you remember the year of transference from John Boyle to Freehill? Yes, I think it was 1860. John Boyle's contention always has been that he got no consideration from Freehill. Freehill produced in the Supreme Court a cheque which he gave to Boyle for £500, but I do not believe that Boyle ever had £500 at any period of his life. W. B. Gore mortgaged to George Green on March 9th, 1846.

279. *Chairman.*] The whole of that estate? No, this 150 acres.

280. *Mr. Howarth.*] Then he is supposed to have conveyed to Boyle in 1851? Yes.

281. And Boyle is supposed to have conveyed to Freehill in 1860? Yes.

282. Did Freehill convey to Spiro Stampogen? No. Although it was mine I would not disturb Boyle. Spiro has a house on the land, I do not know that he has any title to it. When I applied under the Real Property Act I left that 5 acres out.

283. Then there were 2 acres some odd perches on the other side of the Mowbray Road? Yes.  
 284. Was it portion of the original Artarmon Estate? Yes.  
 285. That was supposed to be 150 acres more or less? Yes.  
 286. The 5 acres in the possession of Spiro Stampogen is not included in the certificate of title? No.  
 287. I believe it was conveyed by John Boyle to Spiro Stampogen? John Boyle has conveyed all his right, title, and interest to three or four different people.  
 288. You mentioned that Darcy Wentworth sold, or arranged to sell, the Gore Estate mortgaged to him to a man named Amos, did he sell to Amos? Legally the mortgagee cannot buy a property mortgaged to himself. He must get a third party to buy. I do not believe it was a *bona fide* sale.

T. Broughton.

23 Sept., 1896.

TUESDAY, 13 OCTOBER, 1896.

Present:—

MR. GORMLY, | MR. HOWARTH.  
 E. M. CLARK, Esq., IN THE CHAIR.

John Horatio Clayton, solicitor, called in, sworn and examined:—

289. *Chairman.*] Do you produce some papers in connection with the Gore and Artarmon Estates? I do. J. H. Clayton.  
 290. In connection with Mr. Green's claim? Yes. I do not hold these documents for Green. I hold them for Rogers and Broughton, in connection with the land which forms part of Green's land. 13 Oct., 1896.  
 291. Land that Rogers and Broughton purchased from Green? Yes.  
 292. Perhaps you would describe these documents? The first deed was a copy of a grant to James Brumby. That is a grant which purports to grant to James Brumby 25 acres of land, to be known as Brumby's farm, situated at Lane Cove, in the district of Hunter's Hill. I call attention to this, that across the documents is written the words "to be cancelled," but the words "to be" have been struck out, and the word "cancelled" left.  
 293. What is the date of that? The date of that grant is the 3rd December, 1794. I may mention that such a cancellation as that has been held by the Supreme Court in a similar case that I fought, known as Tilly's grant, has been held to go for nothing. The mere writing across a grant the word "cancelled" goes for nothing, because anyone might write that. It was held that the fee must be got in from the grantee—that the fee having once left the Crown, it must be got back in a proper legal way, not by writing across the grant the word "cancelled." The decision of the Full Court in regard to Tilly's grant shows that. We have got a Torrens title to-day for Tilly's grant. The next deed which I produce is an attested copy of a deed of partition. The date is blank, except that the year 1846 is given. That deed was made between William Bligh Gore or Artarmon and Charlotte Sarah Willoe French, Frances Catherine Gore, Elizabeth Margaret Fitzgerald, and George Green. That is the deed of partition which is supposed to divide certain lands which were part of the Gore Estate, at any rate, if not the whole, among Gore's children who are named there and George Green. The George Green mentioned is the father of Richard Green. There were four children of Gore's and this George Green who divided this land, Green taking under that deed the whole of the land coloured green upon the plan\* annexed to the deed.  
 294. Do you know what grants these represent? No; because in those days it appears that all the land in that locality was taken up by what were known as soldiers "chits" or permits, which enabled soldiers to take up areas of 25 acres generally; it did not say where. These areas were marked off in squares of 25 acres, the Crown being uncertain where any particular grantee had selected—until informed by him. A man was supposed to come back and say where he had taken up his 25 acres. Take Brumby's land. No surveyor could fix that, but it is there all the same. In this particular case it says that the land and hereditaments described in the plan or chart hereunto annexed marked with the letter "A" should become and belong to so-and-so. This refers to the partition deed.  
 295. Do you know the area of that land? No. I could not tell by the area. Any surveyor having that plan before him could go and mark it out from the natural features. The next document is a copy of a deed—George Green to John and William Stewart—that is a conveyance or deed of settlement. A deed of settlement from George Green to John William Stewart, dated 26th September, 1846, the same year as the deed of partition. By that deed George Green settled on these trustees—the two Stewarts—the very lands which are shown on the plan\* annexed to the same deed. He settled them upon certain trusts from his wife, giving her power of sale. Well, in that deed, to show the uncertainty of these lands, it describes the following pieces of land, viz., Artarmon, Polmont's, Asser's, Dick's, Loader's, Whitfield's, Roberts', Sawyer's, Robinson's, Packer's, Dargan's, Jennings', and Turner's Farm. Then it goes on to state, "or by whatsoever name or names the said land and hereditaments have been and now and are usually called, known, or distinguished," so that the names were uncertain at that time. But it says that one-sixth part is now in the actual possession of the late George Green, and is more particularly distinguished on the plan in the margin to these presents. That was in 1846. The great thing is to fix the land, the name being very uncertain at that time. There is one deed, dated the 6th October, 1876—Mariah Green and John Stewart appoint Richard Augustus Willoughby Green and Isaac Howard as trustees, in place of the two Stewarts. Then there is another deed, dated the 1st August, 1879, in which Mariah Green, Howard, and Richard Green appoint in place of Green and Howard, G. B. Robins and Thomas Cromack, new trustees in place of Howard and Green. Robins and Cromack, by deed dated 8th September, 1879, as trustees of Mrs. Green, sell to A. W. Green all the land comprised in that settlement of 1846. On the 9th September, 1878, Green executed a mortgage to his mother, and since that has sold some land comprised in this deed, and in those other deeds from which the purchasers from him obtained the Torrens' title. Rogers and Broughton have obtained the Torrens' title. Part of the land of course remains unsold, and the title is in Green to-day.

\* Tracings appended by the Committee. See Appendix D 1 and 2.

Henry

Henry Wheeler Gillam called in, sworn and examined :—

- H.W. Gillam. 296. *Chairman.*] You are in the Registrar-General's Department? Yes; I am Deputy Registrar-General.  
 13 Oct., 1896. 297. You have been summoned to produce a copy of the Cumberland Register? Yes; for 1833.  
 298. We asked you for particulars of a 1,000 acres of land granted by Governor Bourke, in terms of a promise made by Governor Macquarie, to Ann Gore, wife of William Gore, for the use of her children, in consideration of his surrender of numerous grants? No such grant was ever issued, as far as our records show. We have never had such a grant in our office.  
 299. I will read a declaration which has been made on that subject:—

We, the undersigned clerks to Robert Burdett Smith, of No. 169, King-street, Sydney, solicitor, do hereby certify that we have examined what purports to be a certified copy of the original grant under the hand of Sir Richard Bourke, Governor of the territory of New South Wales, and certified as being a true copy of the original grant by Alexander Macleay, Colonial Secretary, and that the writing on this and the preceding sheet of brief paper is a true and accurate transcription thereof.

18th April, 1894.

HENRY A. BOYD.  
 JOHN RIORDAN.

Have you any such grant in your office? No such grant exists there.

300. *Mr. Gormly.*] You have sufficient information to be able to say that there is no such grant? I have even better evidence than my own in the Judge's report on the Royal Commission appointed to inquire into the working of the Deeds and Search Branch of the Registrar-General's Department in 1894.  
 301. There is no record of this document in the Registrar-General's Office? No; if such a document really existed a certified copy was procurable from the office.  
 302. *Chairman.*] Then, in regard to the Cumberland Register, was it ever lost? No; in the early days, up to 1810, grants were made in the county of Cumberland alone. There were no grants outside the county, and they were all recorded in what was called the Cumberland Register. In the Lands Office, however, they had what were called Cumberland Registers, embracing the counties of Cumberland, Camden, Northumberland, Cook, and so on, and containing grants from 1832 to 1836, but there was no grant amongst them in connection with the Artarmon and Gore Estates, and no register whatever called No. 28. When the trials were on in connection with the alleged grant we had a most urgent scrutiny through all our documents to see if there could be such a grant, and we found it was impossible.  
 303. You say that no portion of the Cumberland Register has ever been lost? No.  
 304. Your whole register is complete? Yes; in every respect. The Judge says, in his report, "From the evidence of persons well qualified to speak on the matter, it appears that no such register as Cumberland Register No. 28 has ever been in the Registrar-General's Office." That is the statement of Judge Fitzhardinge, in his report, after rigid inquiry.

James Greer called in sworn and examined :—

- J. Greer. 305. *Chairman.*] What are you? A solicitor.  
 13 Oct., 1896. 306. We have called you here to give evidence in connection with the Gore and Artarmon Estates. We think you had better give it in your own way, as you have been connected with the estate? Yes; I have been connected with the estate for many years, commencing in 1852. I was acting at the beginning for William Hugh Gore, as solicitor, in some matters when I lived in Wentworth Court. At that time he wanted some money. I advanced £100 to him, for which I got a deed of conveyance of Turner's 25 acres, and 10 acres at Greenwich Point. It was conveyed to me by deed, and registered in the same year. It was all bush land at the time, and soon after I got the deed I went home with the great Devine case on appeal. That was about the year 1855. After that I returned to the Colony, and I did not bother about this ground at the time, as I looked upon it as bush land, until I heard that the Cooks were occupying it. I then brought an action of ejectment against them. They claimed by occupation. The matter was decided, however, upon a technical point without the merits of the case being gone into. I went into the matter very fully, and I got the late Mr. Brownrigg, one of the oldest surveyors here, to go into the matter. He made a search in the Colonial Secretary's office, and this is what he wrote:—

My Dear Sir.

Wentworth Court, 13 October, 1888.

I have looked up the matter of Gore's 10 acres and Turner's 25 acres, parish of Willoughby. I find recorded Book N, folio 777, under date 20th September, 1838, a mortgage of equity of redemption William Gore to Pendray of the following parcels, parish of Willoughby, viz:—

25 acres, known as Robinson's grant.	30 acres, known as Jennings grant.
25 " " Sawyer's "	25 " " Turner's "
25 " " Loder's "	25 " " Dargan's "
25 " " Curry's "	30 " " Asser's "
25 " " Deik's "	44 " " Polmott's or Williamson.
25 " " Whitfield's "	150 " described as Gore's Artarmon Estate.
25 " " Robert's "	10 " described as Gore's 10 acres, Gore's Bay.

In book P, folio 361, dated 27th April, 1839, I find a mortgage to Pendray of all the above parcels.

In book I, folio 174, I find the following record, bearing date 13th May, 1862:—William Bligh Gore to George Green, conveyance of an equitable right on equal half part of one-fifth of the Artarmon Estate; also Polmott's, Asser's, Derk's, Loder's, Whitfield's, Roberts, Sawyer's, Robinson's, Packer's, Curry's, Dargan's, Jennings', and Turner's grants.

You will observe that Gore had dealings with all these grants as far back as 1838. Many of the said grants being dated as far back as the year 1794. I did not search to ascertain when and how Gore came to be so possessed of them, but it is quite certain from the document I gave you that in 1862 his right to such grant was then under the consideration of the Government. I have not yet made search as to Pendray's dealings with Gore's conveyances.

As regards Gore's 10 acres, I made search in the records of the Surveyor-General's office, and find that the Crown grant bears date 29th September, 1833, and yet you will observe that under date the 30th September, 1838, he is disposing of it to Pendray.

You will also see how Pendray's 25 acres have been disposed of prior to your conveyance in 1863.

You cannot fail to see the difficulties surrounding this case or the trouble I have had in regard to it. Let me know your further wishes.

James Greer, Esq.

Yours truly,

MEADOWS BROWNRIGG.

307. *Mr. Gormly.*] Was Mr. Brownrigg a Government surveyor or a licensed surveyor? A licensed surveyor.

308. That document relates to what he knew personally? He made this search to help me in the case against

against the Cooks. I have here certified copies of all the transactions which took place between Morris, the official assignee, and Broughton, between Shuttleworth and Broughton, and Gore and Pendray, Irving, the assignee to Pendray, to R. J. Want; William Gore in 1841 to Pendray; Gore to George Green in 1846; Green to R. J. Want in 1851; William Gore to Pendray in 1841; William Gore to Pendray in 1840; George Armitage to Fairbairn in 1880; Power of attorney. I have here a copy of Turner's grant, dated 1794.

J. Greer.  
13 Oct., 1896

309. *Chairman.*] That is the land you have purchased? Yes. I purchased it right out for £100 with 10 acres at Greenwich Point. This is the history of the whole of the transactions. Full copies of all the deeds registered; I will lend them to you.

310. What became of this 25 acres of land—did you dispose of it? No; I never disposed of it. Broughton took proceedings about it. He said he had a prior claim by occupation, and I did not fight it a second time. The complication came in the matter when Shuttleworth appeared on the scene. I knew Shuttleworth; he was an erratic sort of fellow. He was in difficulties, and I think he went through the insolvency court. He was mixed up with Broughton and John Hoskings in some monetary matters. I find in some very old papers I have here an appeal which was given on the subject by the late Mr. Wise. The case was stated on which that gentleman's opinion was asked; it was as follows:—

*Ex parte* the Official Assignee of the estate of J. N. Shuttleworth.

A MEETING of the creditors in Shuttleworth's estate is to be held at the office of the Official Assignee to-morrow, Wednesday, 9th June, for the purpose of laying before them the result of the examination of Messrs. Broughton and Hoskings, relative to the mortgage of the Artarmon Estate, &c., and that the Official Assignee may obtain their directions as to the course he is to pursue to test the validity of the various deeds connected with the sale of Mr. Shuttleworth's knowledge in the flaw in S. Terry's will.

The evidence of Hoskings and Broughton, and previous opinions, are enclosed.

Will counsel advise as plainly as possible for the purpose of reading to the meeting what course the creditors by the Assignee should adopt to test the validity of the various deeds, and to place themselves in the best position, in order to obtain the dividend from the estate.

#### COUNSEL'S OPINION.

THE object of the examination of Hoskings and Broughton was to discover how far the mortgage could be proved to have been a carrying out of the illegal agreement, in other words, whether it was tainted with the illegality, and therefore void. A careful consideration of the evidence as given, coupled with the recollection of the mode in which the parties gave their evidence, brings me to the conclusion that there is not sufficient evidence to establish that the actual consideration of the mortgage was an advance on the part of Broughton for carrying out the illegal agreement, and that, therefore, Broughton cannot be fixed with conscious participation in the illegal transaction at the time of the mortgage. The examination was *in vacuo*, and Broughton's manner was certainly favourable to his version, namely that it was an advance to meet Shuttleworth's general wants, and it is not to be forgotten that both the Court and the jury would lean rather towards supporting than invalidating the transaction. These observations apply to the original mortgage, but if the Assignees are prepared to redeem, I think that they would not be bound to pay any part of that sum subsequently advanced for carrying on the suit, after the knowledge of, and, therefore, in connection with the illegal agreement, i.e., there could be no second charge for that purpose.

9th June, 1858.

EDWARD WISE.

311. What do you consider Broughton's claim to the land? He alleged that he had persons in occupation as far back as 1830. He alleged that he had a possessory title. Then there was some transactions between him and Pendray, Shuttleworth, and Hoskings.

312. He purchased Pendray's or Shuttleworth's right, title, and interests in the estate? Yes.

313. Shuttleworth held a mortgage over it from Gore? Yes; and then Want bought the assets of Gore; then Shuttleworth bought them from Want. He made some arrangement with Want that Boyle and Gore, who were on the land, had to be ejected, and an action had to be brought to eject them. Shuttleworth was acting for Gore, and, of course, it was necessary for him as solicitor to intimate to his client that there was an action to eject him and Boyle. He alleged that there was never any notice given, and he allowed Want to go on with the case and eject them although he had sold. He was acting as purchaser and solicitor, being the purchaser himself and solicitor for Gore. It came before the late Chief Justice Stephen, and just after the sheriff's officer had been sent over to take possession; it was only then that Gore got the first information of the proceedings, and he went and had an interview with the Judge, and Shuttleworth was called upon to show why these proceedings had been carried on without his client's knowledge. The Sheriff was ordered out of possession, and Shuttleworth was going to be struck off the roll of attorneys.

314. *Mr. Howarth.*] Are you positive that Want purchased the asset from William Gore? Yes. I have a deed here, Want to Shuttleworth, dated 1852. He must have purchased to be able to sell to Shuttleworth.

315. If it is stated that Green purchased the assets of William Gore, that, in your opinion, is untrue? Not Gore; Pendray went insolvent. The consideration for that, he said, was a £1,000, but, in my opinion, Shuttleworth had not £1,000; he was hard up. I knew him well. I have a document here entitled Irving and Pendray to Want.

316. Do you not know anything of the Cumberland register? No.

317. Do you know of any transaction between Bligh, Gore, and Boyle? Yes. I recollect their being in my office very often. I recollect them consulting with me about matters. I know that Boyle was living on the Artarmon estate. I saw him there.

318. *Chairman.*] The 25 acres of Turner's grant and the 10 acres at Greenwich Point are in possession of Broughton? Yes.

WEDNESDAY, 21 OCTOBER, 1896.

Present:—

MR. HOWARTH, | MR. WATSON,  
MR. J. C. L. FITZPATRICK.

E. M. CLARK, ESQ., IN THE CHAIR.

Robert Henry Gordon called in, sworn, and examined:—

319. *Chairman.*] You are Mayor of the borough of Willoughby? I am.

320. Are you acquainted with the reserve in the neighbourhood of the St. Leonards' railway station which forms part of the Gore and Artarmon Estate? I know a reserve of 140 acres which, I believe, formed part of that estate.

R. H. Gordon.  
21 Oct. 1896.

321. That reserve was dedicated, I think, by grant to the borough of Willoughby? Yes.

322.¶

- R. H. Gordon. 322. What was the date of the grant? I have the grant here, the date is the 10th January, 1888.
- 21 Oct., 1896. 323. That was a grant of this particular area from the Crown? It is a land grant from the Crown of that particular area of land, 140 acres.
324. Does that grant show any particular original grants to individuals, or is the land described as Crown lands? It is Crown land.
325. They do not mention any particular grants to individuals? No.
326. Your Council still consider that that land is vested in the Council? We do. We consider that it is our reserve. The Government have taken action to resume it and cut it up for sale. But the Council still maintain that the reserve belongs to the people of Willoughby for recreation purposes.
327. Some steps have been taken by the Government lately in regard to it? We are in treaty with the Minister for Lands to try and arrive at a settlement. The Minister has taken action against a man named Green for removing soil from the reserve.
328. Land was vested by grant in your Council? Yes; and the Government have asked us to return the grant, so that it may be cancelled, and the Council have declined to do so.
329. You have no objection to leave that document, have you? I must refuse to leave it, but I will send you a copy of it.
330. *Mr. Fitzpatrick.*] You said there were some steps taken against a man named Green for trespassing or removing soil? Yes.
331. What was the result? A perpetual injunction was granted against him for trespass.
332. Was the question of title raised by him or by any one on his behalf? I do not think he defended it at all. It was reported in the *Sydney Morning Herald* that he did not appear. I was present when the Minister with a party drove on to the ground, while Green was in a hole throwing out clay, and a man with a dray was there to take it away. The Minister warned him of the risk that he was running, and told him that he would have to take action to stop it, the result being this perpetual injunction against his interfering with the land.
333. Has the Council ever taken steps to prove their right as against the Government? Not against the Government. All that the Government has ever done has been done against the strongest protests from the Council, but we are not in a position to fight the Government. We have no money to throw away on that.
334. *Chairman.*] Your Council rely upon the deed of grant? Yes; and we maintain that we have fulfilled our trust in so far as we were able.
335. *Mr. Fitzpatrick.*] Assuming that the Government took possession, and cut up the land to sell it, what course does the Council propose to adopt then? We have made certain proposals to the Government. We want them to give us reserves in other parts of the borough in return for this area, and if that is acceded to, it is possible that the Council will not interfere in the matter. In the event of the Minister for Lands failing to do that, we would fight it out if we have any grounds to go on.
336. *Chairman.*] This reserve is within your municipality? Yes.
337. And the area is 140 acres? Yes; and it is a very valuable site.
338. *Mr. Howarth.*] Do you know whether the reserve referred to was ever a portion of the Gore and Artarmon Estate? No; as a matter of fact, I do not.
339. You do not know the metes and bounds of the Gore and Artarmon Estate? No; I do not.
340. Do you believe that the reserve referred to can really form a portion of the Gore and Artarmon Estate? I do not know.
341. Even assuming that it may have been a part of the Gore and Artarmon Estate originally do you hold the opinion that it is still a portion of the estate? It cannot be a portion of the Gore and Artarmon Estate—it is reserved for the borough of Willoughby. Mr. Pigott, solicitor for the Council, has defended our title in the Supreme Court, as against Campbell and Nicholls in the Supreme Court action, and he could give all particulars.
342. That was in regard to the 140 acres? Yes.
343. You have had to fight for the title to this land? We have had to fight for it, and it went so far as to go to a trial. Then when the trial came on for hearing, it went by default—the parties did not appear.
344. You defended your title on that deed? Yes.
345. You maintained that your Council is entitled to the control of that 140 acres described in that deed? Yes.
346. *Mr. Fitzpatrick.*] Is there anything in the deed to show that the 140 acres ever formed part of the estate named? No.
347. *Mr. Howarth.*] Do you know that Green has been served with notice to hand over possession to one of the Crown Law officers of a portion of that reserve which he claims to have a title to? I have heard a rumour to that effect, but I do not know whether it is a fact.
348. *Chairman.*] Your Council having that deed in their possession, objects to any interference with their rights as trustees of that particular reserve? Most decidedly.
349. Unless they give you an equivalent? Yes. We shall probably ask them to let us have the whole of this land—this 140 acres? They claim to have cancelled the deed which I have exhibited here.
350. Have you any idea how they cancelled it? They say that we have neglected our trust inasmuch as we did not improve the land, and they have revoked the dedication by *Gazette* notice.
351. *Chairman.*] Did they allow you anything for the improvement of the land? Not a shilling.
352. *Mr. Fitzpatrick.*] That opens up the question whether the grant did contain a clause imposing certain conditions, the fulfilment of which is necessary before you can continue to hold the land;—is there such a clause in the grant? No; the only clause is one which says that the land shall be devoted for the purposes of a recreation reserve of the people of Willoughby, and for no other purpose. The argument of the Crown is that we have not improved, cleared, fenced, and stumped, the land, and made it fit for a recreation reserve. We have done this as far as possible. We have stumped, cleared, and fenced about 34 acres of it, and we had one portion of it laid out as a cricket ground. That was as far as our means would allow us to go.
353. Has the municipality any power to spend money for the improvement of reserves of this kind? It is very questionable. Legally speaking, I do not think we have authority to spend money on reserves.
354. You really rely upon assistance from the Government for that purpose? We do. All the money we have received from the Crown has been spent on those reserves. We have also spent £400 of the rate-payers' money in defending our title to the land.

355. You, therefore, still consider that under all the circumstances, in the interests of the ratepayers of Willoughby, you are entitled to claim this 140 acres? We do.
356. And you have objected, so far, to any interference from the Government? All along we have objected. We have parleyed with them, and we have submitted certain proposals which, if accepted, will, I think, settle the matter.
357. Has your municipality taken steps to prevent people with tents from occupying the land? They have all been removed, and several have been fined.
358. You have asserted the rights of the public to the reserve? We were doing so until the Government disputed our title. At the present time there is a serious menace to health around St. Leonards, owing to these humpies which have been put up on the land. There is no provision of sanitary conveniences whatever, and we cannot act now, as the Government say we have no power. If we went into court I suppose we would be defeated on that ground.
359. And you depend on the deed? We depend altogether on the deed of grant.
360. *Mr. Howarth.*] Does the deed contain the words, "and for no other purposes"? The grant from the Crown says, "We are desirous of granting the said land unto the borough of North Willoughby to be held and used as a place for public recreation, for the said inhabitants, and for no other use or purpose whatsoever."
361. Do you think that the Crown revoked the dedication because of the settlement on that land of certain persons on that land in humpies, tents, and so on? I cannot say exactly that may be part of it. They give a number of other reasons. They say that we neglected our trust in that respect.
362. Is this grant the original title that the borough held for that reserve? No.
363. The other title was valid, was it not? It was given on a wrong form.
364. Did you have to defend the other title, and to pay for the cost of the defence out of the rates of the borough? We did.
365. To what amount? About £400.
366. *Chairman.*] What title was that? This is not the first title. The first grant that we got was put on a wrong form, through an error in the Lands Department, and we were advised by our solicitor that we could not succeed in maintaining our rights on that form, and we were put to a lot of expense over it. When the Crown gave us this title they said, there is a title which nobody can touch.
367. *Mr. Howarth.*] Before obtaining the present title, did you ever have a case in court against any of those who had settled on the land a case, that went against the Council as to the validity of the title? It may have been so; I cannot tell exactly.
368. Since you have held this grant the Council has done its utmost to keep the land for recreation purposes? Yes.
369. You have sued people who have settled upon it;—you have obtained injunctions against certain people, and you have served notices? We have got convictions in the court, and had them fined. We fenced the ground on two occasions, but the fences have been cut down and taken away.
370. *Chairman.*] You consider this 140 acres of land to be a valuable asset of your Council? Certainly, 17 acres of it is worth £500 an acre.
371. You have done all that as trustees you could do in regard to the matter? We have done all that we could do. We have not much money at our disposal.
372. And this reserve has really been looked upon as a sort of wilderness, population having only latterly settled in its vicinity? Since the railway came.
373. The value of the reserve is only now being recognised? I understand that when it was dedicated to the Council in the first instance the value of the land was only £2 an acre. At present its value is about £200 an acre.
374. *Mr. Howarth.*] Did the Council at any time make application to the Crown to refund to them the cost of the litigation to which they had been put to to prove their title? Application was made both by deputation to Sir Henry Parkes and Mr. Carruthers, and they asked us to furnish details, and promised to look into the matter.
375. Did Sir Henry Parkes at any time promise to refund to the Council the amount of their costs? I have been told that he did.
376. You consider that as you were defending a valid title, issued by the Crown, the Crown should have paid the legal expenses incurred? We most decidedly look to them for that money—it is close on £400. They have not paid anything towards it.

John Doyle called in, sworn, and examined:—

377. *Chairman.*] You are an old resident of the district of Willoughby? I am.
378. How long have you been there? Going on for sixty-six years. I was born in Sydney. Left Sydney when I was 6 months old, and I have been there ever since.
379. You know this Gore and Artarmon Estate? I do. I was reared on that estate, and my sisters and brothers were born there.
380. Of course you knew Mr. Gore? Yes; I knew old Mr. Gore and his son.
381. Mr. Gore always asserted his rights to a certain area of land there? Yes; about 1,000 acres.
382. And that included the Artarmon Estate? Yes.
383. Have you any idea why he asserted that right;—did he claim that he got it by grant or how? They were grants to his family from the Government, I believe.
384. Do you know anything about the very old grants? Mr. Gore claimed all of them. They were McCanns', Roberts', P. Dargan's, Webbers', Humphries', Dan Carr's, Sawyer's, Kelly's, Packer's, Baker's, Lamb's, Brumby's, and others.
385. To whom was the Artarmon Estate granted? That was a grant to Gore.
386. You have lived on that estate? Yes; I lived near where Spiro, the foreigner, lives.
387. What was Mr. Gore? He was sheriff here at one time.
388. He shot a man, didn't he? He shot a soldier for cutting grass on his land—that 10 acres at Greenwich.
389. Down at Greenwich Point? Yes.
390. Where do you live now? I live on Berry's Estate, about a chain from the boundary of Gore's Estate.
391. Did you ever have any transactions with anybody connected with this estate? Yes. I paid William Bligh

J. Doyle  
21 Oct., 1896

- J. Doyle.  
21 Oct., 1896.
- Bligh Gore for the right to cut wood on it, and when he died his nephew, John Ffrench, the man who shot himself, received the money. He said he was Broughton's agent.
392. You did not know Ffrench in connection with this except as Broughton's agent? No.
393. You knew that he was in some way related to Gore? Yes.
394. Ffrench being a relative of Gore he had some right in connection with the estate? Well, his mother had the estate.
395. Who was his mother? Old Mrs. Gore's daughter who married Captain Lamb.
396. Who asserted the prior right to this estate? Gore always did. I never saw anyone molested on the land at the time when Gore had it.
397. Mr. Gore was always recognised by everybody as the man who had the greatest right to the property.
398. Did you ever understand that Gore had purchased the right to this land from old soldiers who had obtained grants? Yes; he got it from old soldiers. A man named Lane gave evidence in the Supreme Court to the effect that he saw old Mr. Gore give £5 for Dan Carr's grant.
399. Have you any idea of the relationship between Broughton and Ffrench in regard to this estate? I had dealings with Ffrench. I rented four or five farms from him, and he was always very anxious for his money. One time I said, "Can you not give me a little more time," and he said "I cannot. The man to whom I have to give the money is very eager for it." He said it was Mr. Broughton the squatter. I borrowed money from Mr. Whitton, the late Engineer-in-Chief for Railways, to pay him.
400. You have never had any dealings with Broughton at all?—
401. You have heard of Ffrench shooting himself? Yes; I know all about it.
402. You never heard that Ffrench's trouble was in any way due to Broughton? No.
403. You never had any transaction with Broughton in regard to this land? No.
404. How long is it since Broughton first asserted a right to this land from your knowledge? Thirty or thirty-five years.
405. You never knew upon what grounds he asserted that right? No.
406. The people for thirty or thirty-five years have recognised that he has some right? Yes; but I do not know why.
407. Do you know anything about Green's claim? Yes; Green's claim is Brumby's farm, 25 acres.
408. Why does he claim that? He used to have sawyers working on it, and was making bricks there.
409. Do you know anything about land surrounding St. Leonards railway station? An area there was given to the Council. They fenced it in, and Green cut the fence down and took it away.
410. Green asserted his right? Yes; he took the fence away two or three times.
411. You knew that land many years ago? Yes.
412. You do not know who fenced it in? I do not. The fence was burnt down at the time of the great fire in 1844 or 1845. Adjoining Berry's land some of the old posts are still in the ground.
413. The general impression was that Gore fenced in to assert his right to the land? Yes.
414. And that included the land where St. Leonards station is now and the 140 acres which the Crown claim? Yes; that was a portion of it.
415. *Mr. Howarth.*] At the time when you recognised Broughton through Ffrench as having some connection with the land, was Spiro settled on it? I have never rented land from Broughton. I rented it from Ffrench, who said he was agent for Broughton.
416. At the time you were paying rent to Ffrench for Broughton, was Spiro settled on the Artarmon Estate? He had 4 or 5 acres.
417. Was Spiro on the estate before you paid any rent to Ffrench? I paid rent to William Bligh Gore years before, and afterwards to Ffrench.
418. Did you ever lease any land from Broughton? No.
419. Were you ever ranger for Broughton? No.
420. You never acted as his agent? No; he told me once to look after his land.
421. Do you know when Spiro settled on that land? I do; I think it was Freehill who put him there.
422. Did Freehill put him in possession? He bought from Freehill.
423. Do you know how Freehill became possessed of that land? No.
424. Do you know whether Boyle sold to Freehill? There have been some transactions between him and Boyle.
425. Do you know whether W. B. Gore sold to Boyle? I know that Gore would be capable of doing a good many things.
426. *Chairman.*] Gore was not a man of immense wealth? No.
427. He always wanted money? Yes; and he would do anything to get it.
428. *Mr. Howarth.*] Has Spiro been there thirty years? Nearly, but not quite thirty years.
429. Did you pay rent to Ffrench for Broughton before Spiro came? I did subsequently to Spiro's settling upon the land.
430. *Chairman.*] What was your general impression with regard to Boyle's claim to the estate? He was always with the Gores—they lived together.
431. Did you ever hear that Boyle had some interest in it through the Gores? I cannot say.
432. How long have you known Boyle? About forty years; he was a surveyor, and surveyed all round the country for William Charles Wentworth.
433. And you never knew much about his connection with the Gores? No; he was very thick with the Gores.
434. Do you know anything about Gore living with Green? Yes; he lived with Green when Green lived down at Greenwich. There was a private school there, and I went to that school. It was kept by a barrister named Savage. Mr. Gore used to live there, and he kept a racehorse.
435. As far as Gore and Boyle are concerned, you do not know their relationship? Old Boyle had a sheep station. He once had seventy sheep, but they died.
436. *Mr. Howarth.*] Do you know whether Spiro has any title to that land? Spiro went to Mr. G. P. Slade, the solicitor, to sell his grant out. Slade looked at the deed, and said it was not worth the paper it was written on.
437. Spiro has been in possession of the Artarmon Estate for thirty years? He has been living on his own place.
438. How long has Boyle been on the estate? About forty years.

Richard Augustus Willoughby Green recalled, and further examined:—

439. *Chairman.*] I understand that you desire to make a statement in regard to the evidence that has been given? Mr. Quinlan stated that William Bligh Gore was a lodger of my father's many years ago, and he put it that Gore ran up a long bill, and he says that there was no mortgage executed by William Bligh Gore to George Green in 1846. I wish to contradict that. I never left my father's place until I was 22 years of age, and I know that Gore never boarded there. There was a mortgage, dated 9th March, 1846, and George Green foreclosed in 1848. Then I believe R. J. Want purchased the equity of redemption from George Green. It went from Want to Shuttleworth, and from Shuttleworth to Broughton in 1855. Then Shuttleworth conveyed to Broughton some 940 acres, but that was behind the back of a deed of partition signed by Gore. A deed, dated 1846, by the Gore family to George Greene.
440. Shuttleworth, then, is supposed to have conveyed to Broughton the whole of the land comprised in the Gore and Artarmon Estates? Yes; Greene's portion as well as the others.
441. But Broughton has since paid you certain sums in regard to a certain portion of that land? Yes; because I produced this deed, which rather astonished him, and he gave way.
442. In what way did he defeat you? He defeated me in one action, for one grant—Baker's Grant, 25 acres.
443. Then he has always been a cause of litigation in regard to this estate? There has always been some trouble about it.
444. When Broughton found himself beaten, he compromised with you in regard to a certain farm? Yes.
445. He has paid you money in regard to some land? Yes. He paid his share; there were four of them in it—Broughton, Wisdom, Rogers, Q.C., and the late John Williams, Crown Solicitor. They gave me £8,000.
446. Did they pay you that money? Unfortunately, I never saw a shilling of it. I was robbed of it.
447. You say that Broughton and others paid you £8,000? Yes; to my solicitor, and I never saw a shilling of the money.
448. Your solicitor was Ferguson, of Ferguson and Broad? Yes.
449. The parties fought you till they found they could fight you no longer, then submitted and paid you the money? Yes; they did.
450. Did you mention the name of Judge Innes? I sold 6 acres of land to Judge Innes and Sir Robert Wisdom—they gave me £800 for it.
451. Then this matter is really mixed up with two Judges at present sitting on the Bench—Sir George Innes and Mr. Rodgers? Yes.
452. You are sure that that money was paid over to Ferguson and Broad? Yes; I saw the butts of the cheques in the Supreme Court, and they could hardly credit the statement that I had never received the money.
453. These people acknowledge your right to the land? Yes.
454. What area did your father's mortgage comprise? It was the equity of redemption from D'Arcy Wentworth.
455. Your father purchased D'Arcy Wentworth's equity of redemption; what was the area of the land? 1,000 acres.
456. You have always asserted your claim to that area, including the Artarmon Estate? Yes; my father asserted his right in 1845. He surveyed the whole estate when I was a boy, and I have lived on the estate for fifty-two years.
457. And you still live on a portion of it? I still live on Dura's grant—a portion of the 100 acres sold to Wisdom & Co. That has to be sold by public auction, and we divide the proceeds.
458. What is the area? 100 acres—four farms. Deik's, Whitfield's, Sawyer's and Tilly's. When we were obtaining a certificate of title the Government opposed me.
459. You are waiting for a certificate of title to these four farms? No; that was issued six or eight years ago.
460. You still have a fifth interest in the 100 acres? Yes.
461. Have you taken any steps to sell? No; I cannot move; I am in the Bankruptcy Court; I cannot get a release. The land has come down to such a low value, so that they let it lie.
462. Broughton, Rogers, and Innes have always recognised your claim? Yes.
463. And always considered your claim sufficient to pay you a fair return for your land? Yes.
464. Is there anything else you would care to say? One or two little matters. Mr. Harnett claims a portion of Nicholl's land. I fought Mr. Harnett in the Supreme Court and beat him twice, but since I have got into the Bankruptcy Court he has gone and got a certificate of title.
465. Did he serve you with the necessary notice of his intention to apply? No. I have told him since about it. He is now cutting up the land to sell it. I have told him I shall call upon him to surrender his title.
466. Under the Real Property Act, he ought to have served you with a notice? Of course.
467. You were taken by surprise;—you found that he had got a title without your being informed of the fact? Yes.
468. *Mr. Howarth.*] That land that Harnett obtained a Torrens title for;—is it included in your asset? Yes. I think I showed some £50,000.
469. Did the Official Assignee offer to sell you a right, title and interest in the 100 acres some years ago? Yes.
470. Was it sold? It was not; but Mr. Rogers made an offer for it.
471. *Chairman.*] Mr. Rogers made an offer at auction for your right, title, and interest? Yes.
472. Where? In Hunter-street.
473. And there was no offer for it? Mr. Rogers offered £250.
474. Did they not accept it? No. They would accept nothing less than would release my estate.
475. What amount was necessary for that? £1,500.
476. Judge Rogers attended the sale and made an offer? Yes.
477. You were present? Yes.
478. You heard him make an offer of £250? Yes.

R. A. W.  
Green.  
21 Oct., 1896.

John Boyle recalled, and further examined:—

J. Boyle.  
21 Oct., 1896.

479. *Chairman.*] Did you transfer your right, title, and interest in the Gore and Artarmon Estates to Freehill? It was merely a friendly affair. There was an action pending for a small farm of 25 acres—Cann's farm. The Government said that that was vacant land that never had been alienated. It was conveyed by Mr. William Bligh Gore to me in the same deed as the Artarmon Estate.
480. It was a farm separate from the Artarmon Estate? Yes; I asked Freehill to be trustee for me in this action by the Crown.
481. The Crown took action against you? Yes.
482. When was that? I think it was about twenty-five years ago.
483. That was when you came into contact with Freehill? Yes. James Hart was the attorney whom I employed. Freehill had a son article to Hart; I thought it would be handy for me to enter Freehill's name with mine in the defence. I went to Freehill and he said he would not defend it—that he would not spend a pound on it. I told Hart, and Hart said he must defend it, there is plenty of security in hand for payment. Freehill did not defend, and judgment in default was signed against him on 18th May, 1871. I defended case, and when the case came on Freehill entered the court and said "Take my name off that list; I have no part in it." Mr. Butler said "Mr. Boyle, will you go on with the action?" and I said "Yes." Judge Fawcett said "If Freehill had any interest it falls to the ground now." I went on with the action and won it against the Crown. The date of the judgment was 13th February, 1872. The clerks in the Survey office were spiteful, and tried to get a new trial. They applied to Judge Hargreaves, and also to Judge Fawcett, and moved the Full Court. The Chief Justice, Sir Alfred Stephen said to Mr. Williams, the Crown Solicitor, "This is three times that you have come before the court for a new trial;—it looks like a persecution. He said "Show me your strongest point." Mr. Williams showed him, and the Chief Justice slapped the papers down, and said there was an erasure on the document—the Cumberland Register.
484. How long have you had possession of the Artarmon Estate? I should think, forty-five years.
485. When did you come into possession;—did you not first meet Gore in connection with the Artarmon Estate about 1849? Yes.
486. And you made a survey of this estate? Yes.
487. W. B. Gore made a certain proposal to you? Yes.
488. That you should protect the interest of himself and family, and he gave you an interest in the estate? Yes.
489. And you have lived on the estate ever since then? Yes.
490. You have occupied the Artarmon Estate? Yes.
491. Do you know anything about old Greene's claim? I do, and I do not.
492. Was not W. B. Gore staying with Greene at one time? Not in my time.
493. When does Greene's claim commence? He was made a sort of a trustee. The papers were in the Colonial Secretary's office. Old Gore was not pleased with his family. The deed that Governor Bourke made was to be confirmed for the wife and children.
494. Was it ever confirmed? It was.
495. Did you ever have any connection with Shuttleworth? No.
496. What title had Shuttleworth? None at all.
497. What was he? He was Gore's Attorney.
498. Did Broughton become possessed of this land through Shuttleworth? I cannot say.
499. Did Shuttleworth ever have any interest in it? None whatever.
500. You entered into some arrangement with Freehill in regard to this land? I gave him orders to make a deed of trust, and he made it out to himself.
501. What was the consideration? There was nothing at all.
502. You employed Freehill, who was a solicitor, to help you in regard to your claim on the land? Yes.
503. You gave him authority to make a deed of trust? Yes; and he virtually made a deed of gift to himself.
504. And did you sign that? I signed it, having great confidence in him.
505. What did he do in regard to that deed? He left it in the Bank.
506. Did he ever sell his right, title, and interest in it? He became insolvent.
507. What did he do with regard to your deed? He lodged it in the Bank of New South Wales.
508. Was it as security for an overdraft? He wanted an overdraft, but they would not give it to him for a while. When he became insolvent I went to Mr. Shepherd Smith, and he said the Bank must keep itself clear.
509. You have always asserted your right to the estate? Yes.
510. Notwithstanding any document you may have given to Freehill, you have asserted your right to the land by possession? Yes.
511. And you came into possession through W. B. Gore? Yes.
512. He asked you, in the interests of his family, to stand by him and protect this land? Yes.
513. You were then a surveyor, and surveyed the whole estate? Yes.
514. What area is there? 940 acres I made of it.
515. You fought this matter in the Supreme Court several times? I did. Sir Alfred Stephen decided in my favour first, in 1851.
516. You have won at times, and lost at times? Sometimes I was sold.
517. You claim that the solicitors did not understand you, and at times threw you over? Yes.
518. Freehill had no right to barter away this title of yours? No.
519. Did he sell to Broughton? No.
520. To whom did he sell? The Bank who held the deed as security sold to Harnett and Stuart.
521. Is it not a fact that the Artarmon Estate has lately been put under the Real Property Act? Yes.
522. Who put it under that Act? Broughton.
523. Then you presume they sold to Broughton? No; they were all mixed up together in it.
524. Has Broughton served you with any notice that he intended to put the property under the Real Property Act? No.
525. He ought to have done so? Yes.
526. You are still in possession? Yes. Shepherd Smith came out to my place. My place was burnt down

down by certain parties, and I had built it up again. Mr. Shepherd Smith asked me to call and see him. I went to see him, and he said that Froehill had a house in George-street, and he told me to go and fetch two honest men, but not to bring a lawyer. After this the Bank sold to Harnett and Stuart. J. Boyle. 21 Oct., 1896.

WEDNESDAY, 28 OCTOBER, 1896.

Present:—

MR. J. C. L. FITZPATRICK, | MR. GORMLY,  
MR. O'SULLIVAN.

E. M. CLARK, Esq., IN THE CHAIR.

Sydney M. Quinlan, Esq., Solicitor, appeared on behalf of Mr. J. H. O. Ffrench.

Chas. Macleay Boyce called in, sworn, and examined:—

- 527. *Chairman.*] You are a solicitor? Yes.
- 528. You have some paper in connection with the papers of the late R. B. Smith, an attested copy of the C. M. Boyce grant to the Gore family? I have what purports to be a copy of a grant. It is supposed to be a copy of a grant to Annie Gore. It purports to be a certified copy of the original. It simply speaks for itself. That is all I know about it. 28 Oct., 1896.
- 529. Is it taken from the Cumberland Register? It is marked on the margin as being entered on the records, No. 28, page 53a. The date is 15th January, 1833.
- 530. That is the date of the grant? Yes.
- 531. Are the names of any of the smaller grants mentioned? I think so, in the boundaries.
- 532. *Mr. Gormly.*] Is that a deed or grant from the Crown? It purports to be a copy.
- 533. *Chairman.*] It is supposed to be entered on the Cumberland Register? Yes.
- 534. Have you a copy of Holdsworth's Grant? I have a copy signed by the Deputy Registrar.
- 535. Was it cancelled? It was intended to be, but there has been a decision at law to the effect that the mere striking through of the grant does not re-vest the land in the Crown.
- 536. Do you know that Holdsworth's Grant formed a portion of that reserve of 140 acres near the St. Leonard's station? I do not know anything about it. At the foot of the copy it says "cancelled," it also says "demised to the Crown."
- 537. Have you any other paper in connection with the estate? Yes; I have a memorial here taken from a bunch of memorials which belongs, I believe, to the Court of Claims. They were found in an office previously occupied by Mr. Pennington. The memorial is dated 5th May, 1834. The date seems to have been written subsequently to the body of the document. If the 5th of May, 1834 is the correct date, then, as the memorial leads up to the grant of 1833, it places the affair in a rather curious position. Memorials were always made before the grant issued.
- 538. What does that memorial set forth? It is supposed to lead up to the grant. 1826 is the date which appears faintly on the paper; it is afterwards written as 1834.
- 539. Then the supposition will be that the actual date would be 1826? Yes; from the front page you would gather that. On the inside, however, there is the same writing as in the body, and it says dated 28th April, 1834. The water-mark of what purports to be the copy grant is 1833. This copy is supposed to be signed by Alexander Macleay.

Ellen Wilhelmine Ffrench called in, sworn, and examined:—

- 540. *Mr. Quinlan.*] You are the widow of J. H. O. G. P. Ffrench? Yes.
- 541. You were Miss Solling? Yes.
- 542. I have here a copy of Governor Macquarie's answer to Mrs. Gore, in which he said he would grant 1,500 acres of land? Yes, that is correct. It is as follows:—

E. W. Ffrench. 28 Oct., 1896.

THE GOVERNOR'S ANSWER TO MR. GORE'S MEMORIAL.

Sydney, 16 August, 1819.

In consideration of the reduced state of Mr. Gore's circumstances and of the consequent distress, his family now labour under, the Governor will give a grant of 1,500 acres of land to Mrs. Gore and her children in trust instead of the 700 acres some time since promised her, in order to enable Mr. Gore to carry into effect his proposed arrangement. The Governor will also direct Mr. Gore, himself, his wife, and children, and also four Government men (which will be assigned to him) to be victualled from the King's Stores for the space of eighteen months from the period of his going to reside on his farm.

LACHLAN MACQUARIE.

- 543. Is there not a letter written in 1832 requesting that the grant should be issued? Yes, that letter is as follows:—

Sir,

Artarmon House, North Shore, 25 January, 1832.

I have the honor to request you to submit to his Excellency the Governor an application in behalf of Mrs. Gore and my children, that the various farms which constitute this estate and have been purchased by me many years ago, shall be consolidated in one grant, as in their present dispersed and separated state they are the source of equal and continued vexations, contentions, and trouble, to myself and the Government Surveyors, who have at this moment run a line for the purpose of locating them to another individual within 40 rods of my hall door through two of my most valuable and oldest grants in the Colony, on the supposition that they were unlocated lands, although they had been located to their respective grantees by Governors Grose and Hunter in the years 1794 and 1796, and had been cleared, resided on, and partially cultivated the grantees, the intermediate purchasers and myself during the long terms of thirty-five or thirty-six years.

I beg leave to state in this place that I am now induced to renew this application for the purpose of preventing an unintentional alienation of any portion or part of the property of my family, by giving a definite defined boundary to it, which may at the same time facilitate such arrangements as Government may hereafter feel disposed to make respecting the sale or otherwise of the adjoining unlocated land.

An authenticated return or list of the several grants above alluded to, taken from the registry of the Supreme Court, is at present in the office of the Colonial Secretary.

I beg sir to call your recollection, that General Darling had conceded his sanction for the consolidation of the above property, including 150 acres (one hundred and fifty acres) grant to me by Governor Macquarie, whose letter if called for I shall produce requiring me to get the various grants consolidated into one grant for the benefit of my wife and children is now in my possession.

I take the liberty of stating to you that the old grants have no boundaries by chain or compass attached to them, which of course make it more difficult to ascertain their limits and locality, their identity having hitherto been found only by the spot the grantees cleared and erected their dwelling on.

I have, &c.,  
WM. GORE.  
The

E. W.  
French.

The following is a minute from the Governor for a victualling order:—

28 Oct., 1896.

Monday (Noon), Sydney, 17 January, 1820.  
The Governor has received Mr. Gore's letter of date, 14th instant, and in compliance with the request therein contained now sends him a victualling order for himself for eighteen months, and a separate order for the four Government men promised him, who are also to be victualled for eighteen months from the date of their being assigned to him. But the Governor hopes and expects Mr. Gore will, as soon as possible, fulfil his promise, in getting the necessary deeds legally perfected, in conveying (in Trust), the grant of land last given by the Governor, for that especial purpose, to his wife and children; so as to prevent their being deprived thereof by Mr. Gore's creditors.

There is also a letter from the Deputy Surveyor-General, which is as follows:—

No. 32/97.

Sir,

Surveyor-General's Office, 15 February, 1832.

In returning to you the accompanying letter from Mr. William Gore transmitted to me by yours of the 4th instant, No. 32/119, I have the honor to observe (my report not being called for), that the farms to which Mr. Gore alludes as having no boundaries by chain or compass attached to them have been many years since measured and charted on all the maps in this office, and that is only the land lying between the road in front of his residence and these farms so charted which has, as he states, been located to another individual; and indeed had the case been otherwise it would be extremely difficult (after the removal by Mr. Gore of the surveyor's marks) to show that any land had been measured in the situation he describes.

With regard to the request for a deed of consolidation it appears to me very desirable that such an arrangement should take place, at the same time I would submit that the situation of the purchased farms should not be materially altered from that in which they have been so long charted and recognised, because the circumstance of their so being placed on the maps has prevented other individuals from selecting there, and because the alteration of their position would give Mr. Gore a much greater command of road frontage than he can possibly be entitled to, and would afford him the means of closing the access to farms belonging to other settlers.

If, however, Mr. Gore desires any change of these purchased farms I see no great objection to Loder's being placed on the north-east side of road so as to adjoin those which it was proposed he should receive instead of Asser's, Polmont's, and Jennings.

I have, &c.,

T. A. TERRY,  
Deputy S.-General.

544. Your husband claimed the whole of this land, the Gore and Artamon estates? Yes. He claimed an interest in those estates personally. He claimed the lot, as belonging to his family.
545. How much was there supposed to be? A thousand acres.
546. You know where Mr. Whiting lives? Yes, I do.
547. You lived there yourself? I lived there with my husband for seven years. That would be twenty years ago.
548. You know where the burial ground is at North Sydney? Yes.
549. Did that form part of the estate? It did.
550. Have you gone over that burial ground? Yes; we had a path through it, and I went over it daily.
551. Do you know how many years your husband was in possession of it? The family had possession of it, and never lived anywhere else. They always had possession of it, in fact they have not lost possession yet.
552. You have heard it stated that Mr. Broughton said that your husband was his agent;—was that true? It was not true. Mr. Broughton swore that my husband was his agent, which was not true.
553. Mr. Broughton also swore that he was on familiar terms with the Gore family—was that true? That was not true.
554. I believe that his position, socially speaking, was very different from that of the Gores? Yes; he must have been a boy in old Mr. Gore's time; they could not possibly have been friends.
555. Do you know the position of these farms? I have seen them on the map.
556. Do you know the place where Green took clay from? I do.
557. Do you know that the Crown have prevented him from taking any more? I have heard so.
558. Is that part of the Gore estate? It is.
559. Do you know whether H. Lamb's 25 acres was part of the estate? It is.
560. And T. Baker's? Yes.
561. Was the land near St. Leonards Railway Station part of the estate? It was where Green took the clay.
562. Do you say that the whole of that land was part of the estate? Yes, the whole of it.
563. *Chairman.*] Was it at one time fenced? When I was married, in 1869, it was all open; there was only a road. All the improvements have been made since my husband's death.
564. *Mr. Quinlan.*] Your husband has been dead 21 years? Yes.
565. Do you know how Broughton claimed the land? Through a mortgage.
566. Whose mortgage? Want and Shuttleworth, and some deed of Mr. William Gore's, I believe.
567. What dealings did your husband have with Mr. Broughton? He had no dealings with him. Mr. Broughton was always annoying and worrying him to have some settlement or he would involve him in a law suit if he did not do as he told him. At last he got from him some paper giving up a portion of the Gore estate. He claimed some right through transactions with old Mr. Gore, but my husband did not recognise Mr. Broughton's claim.
568. *Chairman.*] Do you know anything of Boyle's claim to the Artamon [estate? His claim was never recognised.
569. But he has been in possession for a long time? That 150 acres belonged to Mr. William Gore, son of old Mr. Gore.
570. Of course that 150 acres is in addition to the 1,000 acres mentioned in the consolidated grant? So it ought to have been included.
571. Somebody appears to have given Boyle a deed? I do not know.
572. Do you know how the Green's come into it? They were looked upon as intruders always. Mr. Green never interfered with the land in Mr. French's time.
573. You do not know really much about the Green's? No. Only they were looked upon as intruders.
574. Have you heard that Green's father had a mortgage on the property? He said that he was a trustee.
575. *Mr. Quinlan.*] Do you know whether the late Mr. French claimed to be heir-at-law? He did not.

## ON THE GORE AND ARTARMON ESTATES, NORTH SYDNEY.

Richard Augustus Willoughby Green recalled and further examined:—

576. *Chairman.*] What was the total area of land claimed by you? 550 acres.
577. And you have sold some of that? Yes; I have sold 100 acres conditionally to Messrs. Rodgers, Broughton, Wisdom, and John Williams, late Crown Solicitor.
578. Then you still claim that you hold over 400 acres there? Yes.
579. Were you paid for that 100 acres? The money was paid to my solicitors, but I never saw a shilling of it. The amount was £8,000.
580. They afterwards got the property under the Real Property Act? Yes.
581. You know Holdsworth's ground? Yes.
582. Is that included in this 140 acres claimed by the Government? No. We have always called it the 50 acres farm; but there are two grants in it—Holdsworth's and Bruin's. That is the piece that the Crown has been cutting up and selling. I went and stopped the sale.
583. And you will go and stop the next sale? I shall. I think they are selling it privately.
584. *Mr. O'Sullivan.*] You say that £8,000 was paid to your solicitors? Yes, to Ferguson and Broad. Broad is now in gaol for manipulating the money of clients.
585. Did they get that money, and pay you nothing out of it? They drew it, and I never saw the money.
586. *Chairman.*] Are you sure that they got it? I saw the butts of the checks. It all came out in the bankruptcy examination.
587. Whose cheques? Broughton's, Rodger's, and Wisdom's. I never saw them until they were produced in the Bankruptcy Court, four months after the money was paid. Ferguson never stopped to hear the judgment of the Court, but ran away; and he has never come back.
588. You claim 550 acres of the balance of that area of 1,200 acres? Mr. Broughton set up a claim to 940 acres under a deed which he holds; but I had a deed ten years older than his.
589. He admitted then that you were the owner? Yes; he admitted that by purchasing from me.
590. *Mr. O'Sullivan.*] How did the land pass into your family from the Gore's? By my father purchasing Gore's insolvent estate, and equity of redemption from William Wentworth, and Lawson from Darcy Wentworth's executor.

R. A. W.  
Green.

28 Oct., 1896.

## E.

[Appended by the Committee.]

Acres, 1,000.

By His Excellency Major-General Sir Richard Bourke, Knight Commander of the Most Honorable Military Order of the Bath, Captain-General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c., &c.

BE it known unto all men by these presents that whereas by a promise made by Governor Macquarie to Annie Gore, wife of William Gore, of a grant of land for the use of the said Annie Gore and her children, and in consideration of the surrender of numerous grants, comprising the Artarman Estate, Lane Cove, in the district of Hunter's Hill, to the Crown. I, the said Major-General Sir Richard Bourke, in pursuance of the powers by His Majesty the King vested in me as Governor of the said Territory and its Dependencies, for and in consideration of the said surrender by William Gore, the husband of the said Annie Gore, of the said grants of the Artarman Estate to the Crown, do hereby grant unto the said Annie Gore, and the children of the said Annie Gore and William Gore, their heirs and assigns, subject to the reservations and conditions hereinafter mentioned, all that parcel of land containing by admeasurement 1,000 acres of land, situate in the district of Hunter's Hill, county of Cumberland: Commencing at the south-west corner of Peter Dargon's grant of 25 acres; bounded on the south boundary of that grant east 10 degrees north 16 chains; thence by the east boundary of that grant and the east boundary of Humphery Evans's grant of 25 acres north 10 degrees west 32 chains; thence by the north boundary of that grant west 10 degrees south 16 chains; thence by a line bearing north 10 degrees west 41 chains; thence by a line bearing west 12 chains 50 links to the east boundary of William Gore's 150-acre grant; thence by the east boundary of that grant north 29 chains to its north-east corner; thence by its north boundary west 59 chains; thence by its west boundary south 8 chains 50 links; thence on the north-west by a line bearing west 40 degrees south 48 chains 54 links to the north-west corner of Gilbert Goodlett's 25-acre grant; thence by a line bearing south 40 degrees east 16 chains to the south corner of that grant; thence by the north-west boundary of David Carr's grant of 25 acres west 40 degrees south 16 chains; thence by a line bearing south 40 degrees east 92 chains to Gore's Creek; thence by a line bearing east 42 chains to the western boundary of Edward Woolstencroft's grant of 524 acres; thence on the east by a line bearing north, being the western boundary of Woolstencroft's grant, to the point of commencement,—with all the appurtenances whatsoever, reserving as hereafter reserved, to be held unto the said Annie Gore and the children of the said Annie Gore and William Gore, their heirs and assigns, for ever, on condition of paying therefor yearly to His Majesty, His heirs and successors, the quit-rent of one peppercorn if demanded, reserving to the Government the right to a public road through the same, and also reserving for the use of the Crown such timber as may be deemed fit for naval purposes.

Given under my hand and the seal of the Territory, at Sydney, in New South Wales, this 15th day of January, in the year of our Lord 1833.

(L. S.) RICHARD BOURKE.

Signed and sealed in the presence of—

GEO. KENYON HOLDEN.

This is a true copy of the original.—ALEX. McLEAY.

WE, the undersigned clerks to Robert Burdett Smith, of No. 169, King-street, Sydney, solicitor, do hereby certify that we have examined what purports to be a certified copy of the original grant under the hand of Sir Richard Bourke, Governor of the Territory of New South Wales, and certified as being a true copy of the original grant by Alex. McLeay, Colonial Secretary, and that the writing on this and the preceding sheet of brief-paper is a true and accurate transcription thereof.

HENRY A. BOYD.  
JOHN RIORDAN.

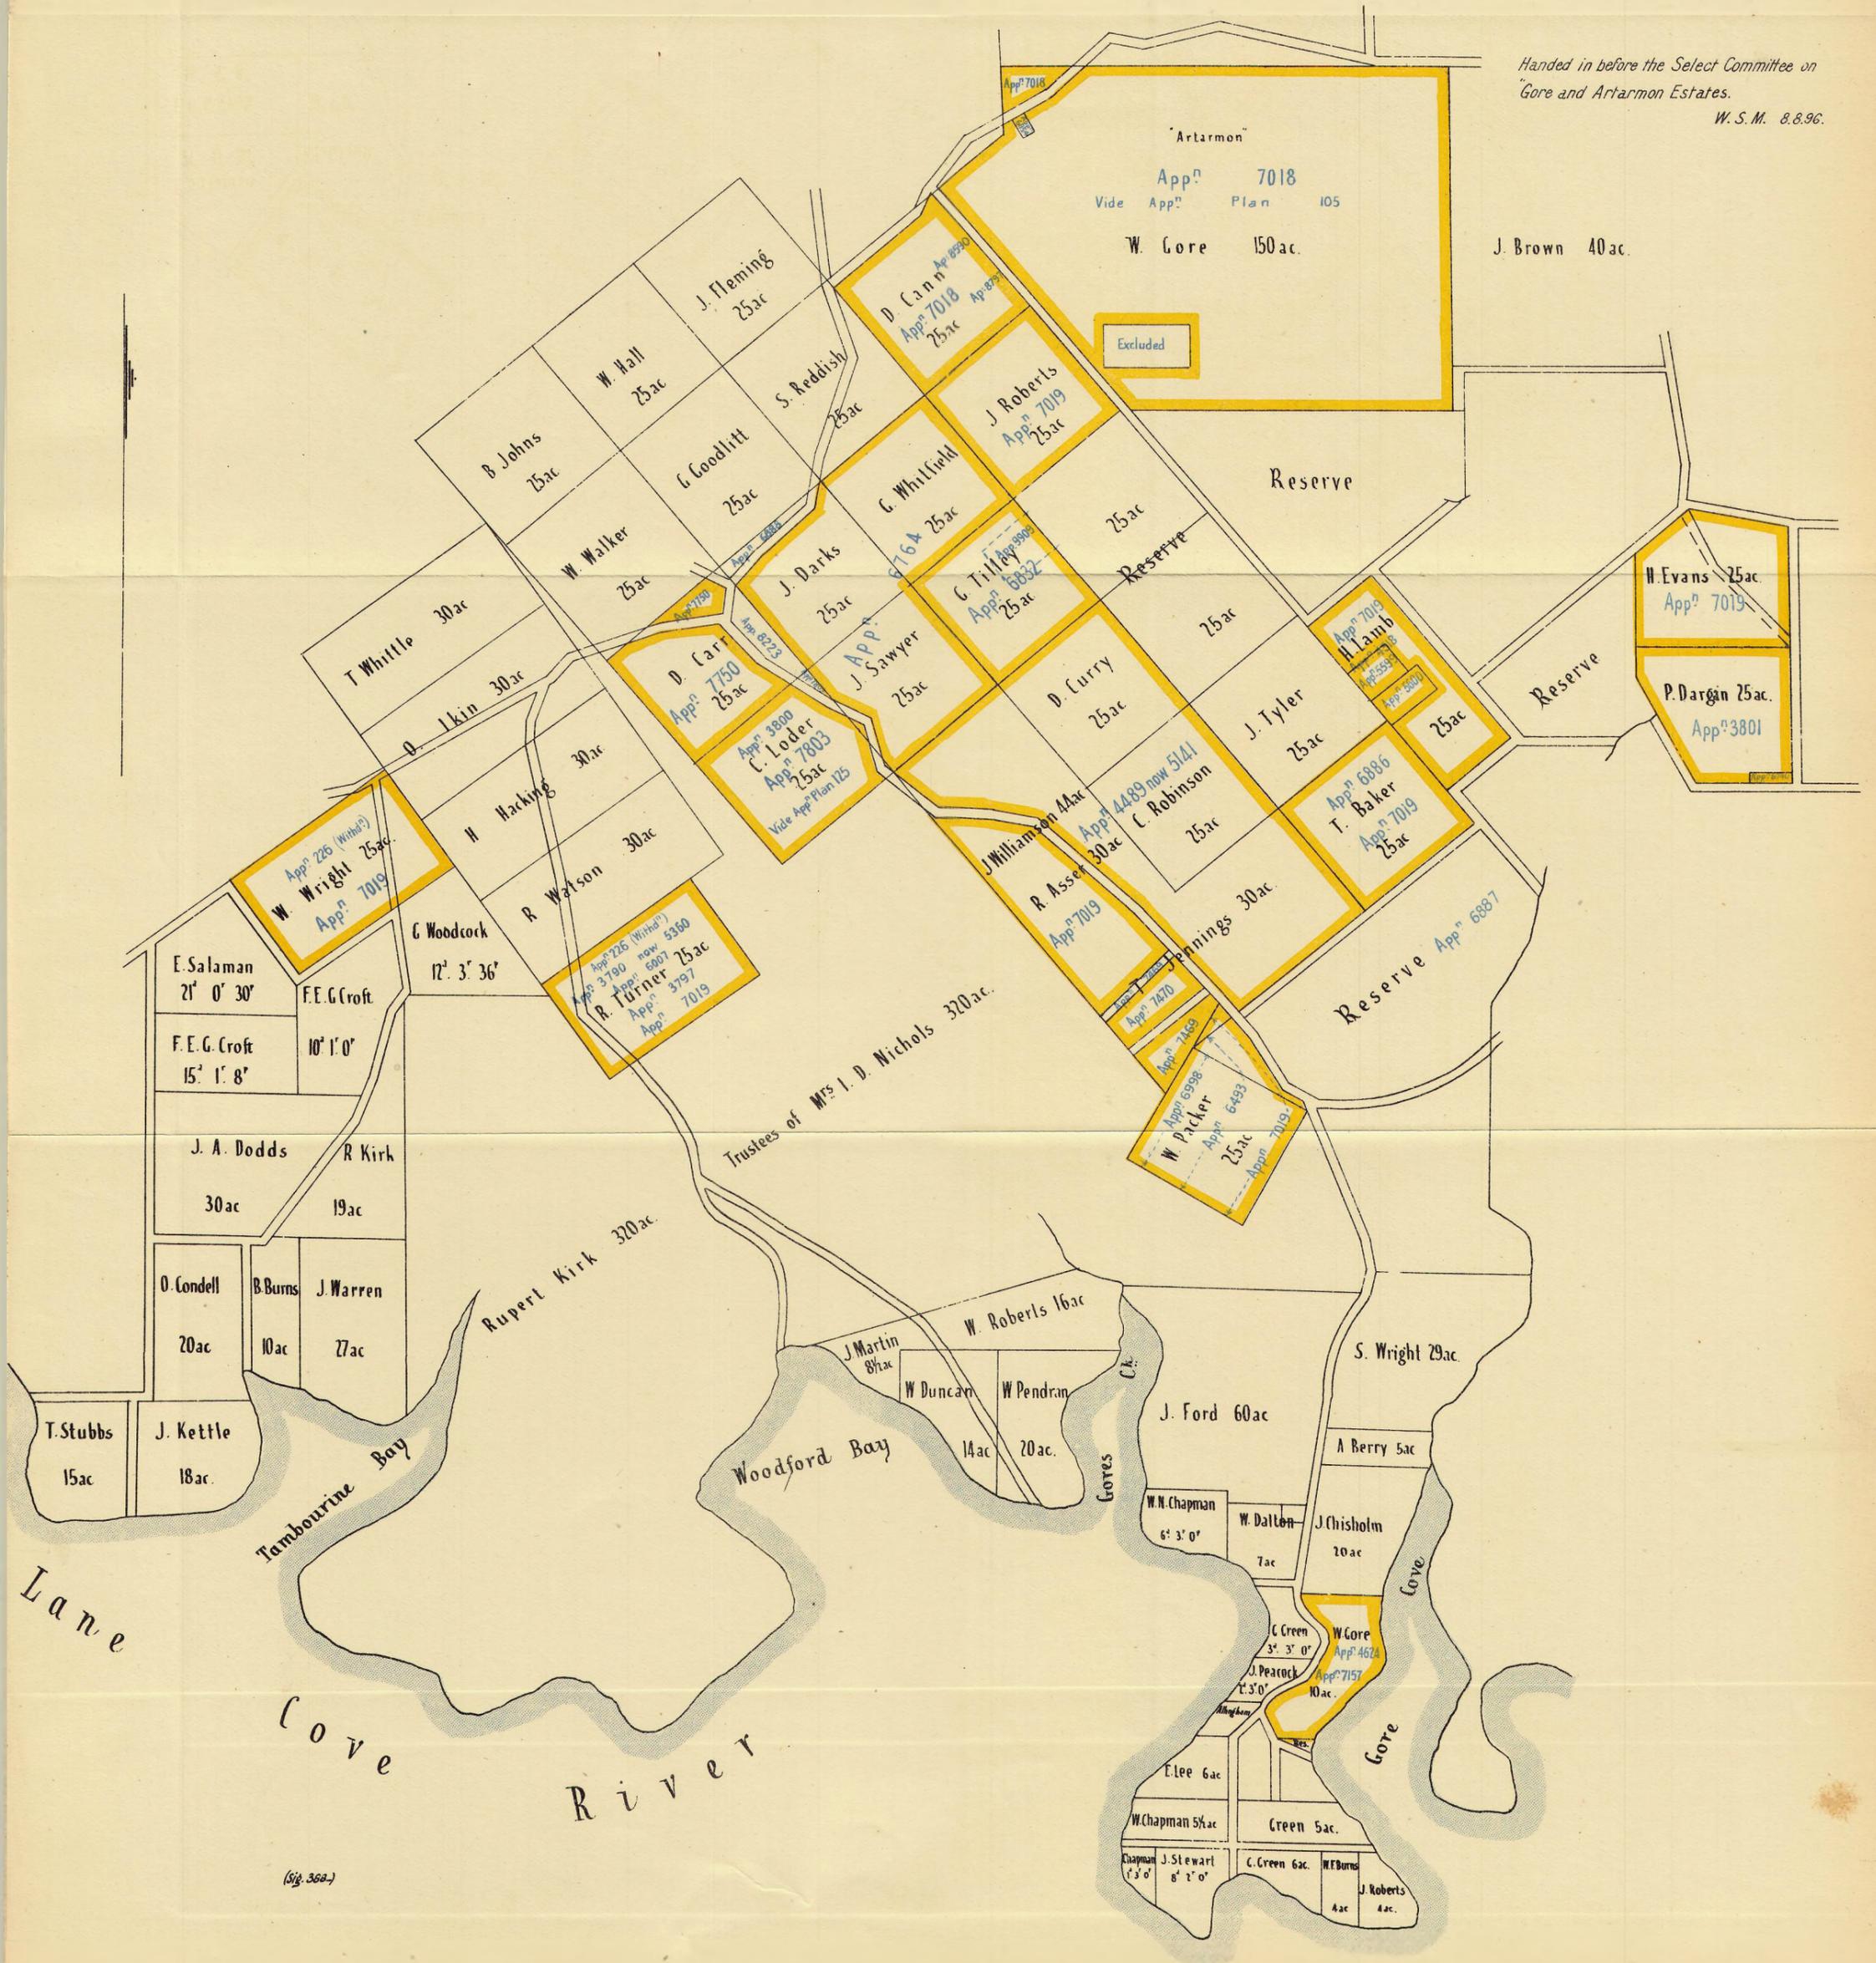

18 April, 1894.

Entered on record by me in Register of Cumberland Purchases, No. 28, page 53A, this 4th day of February, 1833.  
ALEX. McLEAY,  
Colonial Secretary and Registrar.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

---

**PATENTS LAW AMENDMENT BILL.**

(PETITION FROM ANDREW ARMSTRONG, OF No. 5, SPRING-STREET, SYDNEY, AGAINST.)

---

*Received by the Legislative Assembly, 6 October, 1896.*

---

To the Honorable the Speaker and Members of the Legislative Assembly in Parliament assembled.

The humble Petition of Andrew Armstrong, of No. 5, Spring-street, Sydney,—

SHOWETH:—

That a Bill, intituled the "Patent Laws Amendment Bill," is now under the consideration of your Honorable House.

That your Petitioner views with alarm the effect of the passage of such Bill into law, inasmuch as the interests of mining development under systems of treatment now being used with advantage, will, by the passage of such Bill, be placed under charges which will prove severely detrimental to a large number of individuals and also injurious to the general interests of the whole community.

Your Petitioner therefore humbly prays that the passage of such Bill will be carefully considered, and action taken thereon which will be, in the opinion of your Honorable House, of most advantage to the people of New South Wales.

And your Petitioner, as in duty bound, will ever pray.

ANDREW ARMSTRONG.

---

 Similar Petitions were received—

On 6th October, 1896, from John Howell, Managing Director of the Smelting Company of Australia (Limited), of 56, Margaret-street, Sydney.

" " from Stephen Henderson, representing the Camden Syndicate, of London.

" " from Henry Hudson, representing the Clyde Smelting Works.

" " from Frank Jarvis, Secretary to the Illawarra Harbour and Land Corporation (Limited).

" " from Leonard Dodds, Pitt-street, Sydney.

" " from F. F. Marks, Attorney for the Anglo-Australian Exploration (Limited).

On 7th October, 1896, from William Springthorpe Dowcl, of Vickery's Chambers, Sydney.

NEW SOUTH WALES.

---

COLOURED RACES.

(PETITION FROM CERTAIN RESIDENTS OF THE NORTH COAST FOR THE RESTRICTION OF THE INFLUX OF.)

---

*Received by the Legislative Assembly, 3 November, 1896.*

---

To the Honorable the Speaker and Members, Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the North Coast, and others, interested in the well-being of the Colony,—

RESPECTFULLY SHOWETH:—

That a grave danger is threatening the well-being and prosperity of New South Wales by the steadily increasing influx of various coloured foreigners into this Colony.

That within the last two or three years a number of coloured aliens, chiefly Hindoos, have found their way into these districts, as shown by recent departmental returns.

That there are within easy distance of our shores hundreds of millions of coloured people existing under conditions so greatly inferior to our own as to constitute a menace to the moral, social, and political well-being of the community.

Your Petitioners, therefore, pray that in your wisdom you will devise and enact such means as will stop or restrict the further influx of coloured persons of all races into this Colony.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 176 signatures.]

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**BETTING AND GAMBLING SUPPRESSION.**

(PETITION FROM W. WOOLS RUTLEDGE, SUPERINTENDENT, CENTRAL METHODIST MISSION, IN FAVOUR OF.)

*Received by the Legislative Assembly, 12 November, 1896.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Congregation of the Citizens of Sydney, worshipping at the Centenary Hall, York-street, Sydney, and numbering upwards of fifteen hundred persons,—

HUMBLY SHOWETH:—

That, in the opinion of this congregation, the alarming increase of the practice of gambling, especially amongst the younger portion of the community, by means of "consultations" and the facilities offered by the publication in the daily press of the state of the betting market, and the encouragement otherwise given to the vice of gambling, calls for some urgent measures for its suppression.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to pass into law some measure which will prevent the spread of this evil, which is sapping the foundations of society, and destroying that principle of honest industry which is one of the fundamentals of a nation's stability.

And your Petitioners, as in duty bound, will ever pray.

Signed on behalf and at the request of the Petitioners,—

W. WOOLS RUTLEDGE,  
Superintendent, Central Methodist Mission.
