In farming, first-class ploughmen get on an average 20s. per week, inferior, 15s. per week, and their keep in each case. At Messrs. Cohoe and Walster's foundry the wages are as follows:—Blacksmiths, from 35s. to 60s. per week; moulders average 1s. per hour, first-class men 1s. 3d. per hour; woodworkers, from 30s. per week to 1s. per hour; labourers, 25s. per week; and boiler-makers (when employed), 11s. per day. Up to 31st March last thirty men were employed, but since then only twenty-two men are employed, this being a slack time until about September, when harvest machinery of every description comes in for repairs, &c., and the full complement of hands will be again required. General blacksmiths average from 30s. to 60s. per week; wheelwrights, 30s. to 60s. per week; painters, about 22s. per week. The rates of wages have averaged about the same during the year. Employers appear to have no difficulty in obtaining men to suit them without applying to this office; and when asked they invariably reply that they would sooner not have men from the Bureau.

I have, &c.,

K. THEO. GARLAND,

Labour Agent.

The Acting Clerk of Petty Sessions to The Superintendent, Government Labour Bureau, Sydney.

Sir, Police Office, Jerilderie, 5 July, 1897.

I have the honor to furnish a report of the work done at the Jerilderie branch of the Government Labour Bureau during the past year. During the period fifty-one persons registered, eighteen railway passes were issued to persons *en route* to the Bogan relief works, nine found employment in the district, and the remainder left the district without aid.

Refunds for railway passes have been received from eight persons, amounting to £16 14s. 8d.

Applications for employment have been in excess of the requirements.

The principal work carried out during the past twelve months has been scrub cutting for starving stock and clearing land for agriculture, for which the current rate of wages was £1 per week and rations.

I have, &c.,

JOHN CURRY,

Acting Clerk of Petty Sessions.

The Labour Agent, Queanbeyan, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Queanbeyan, 2 July, 1897.

In compliance with the request contained in yours of the 19th May last, I have the honor to forward herewith a summary of work transacted at this branch for the year ending 30th June ult.

The state of the labour market has been considerably dull during the past twelve months, as is evinced by the fact that in the case of the whole six persons registered as per above return, railway passes were issued to other districts, and in the case of four persons to private employment, and in the remaining two in search of employment.

The rate of wages prevailing in the district is somewhat about as follows:—From 5s. to 6s. per day and rations.

The

The labour is confined chiefly to road contracts. With the late rains the district may now be said to be on the eve of better times and a good spring is anticipated, and during the ensuing year the demand for labour is likely to be considerably increased.

There have been no refunds to this branch during the year.

I have, &c.,

C. W. THOMAS,  
C.P.S. and Labour Agent.

The Labour Agent, Wagga Wagga, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court House, Wagga Wagga, 1 July, 1897.

With reference to the labour market in this district, I have the honor to inform you that for the past twelve months the supply of labour has been greater than the demand; the principal demand for labourers is that coming from farmers who have been and are paying from 15s. to 20s. per week. At shearing time, which is about August and September in each year, there is a good demand for shearers and rouseabouts, and good men have no difficulty in obtaining employment. The prevailing drought was the principal cause of a slackness in employment.

I have, &c.,

PHILIP E. ELDERSHAU,  
C.P.S., Labour Agent, &c.

The Labour Agent, Young, to The Superintendent, Labour Bureau, Sydney.

Sir,

Labour Agency, Young, 3 July, 1897.

In forwarding my report for the year ending 30th June, I have the honor to inform you that the operations of this branch have been confined principally to the issue of nineteen passes to persons leaving the district for employment elsewhere, as follows:—

1 to Bourke, 1 to Sydney, 7 to Cobar, and 10 to Nyngan.

The conditions of the labour market have fluctuated but little during the past year. As a result of the good prices obtained for wheat after last harvest, a decided upward tendency was experienced, and matters looked most promising. Selectors and others were enabled to meet their engagements, and, in numerous instances, discharged their mortgages, and looked forward to a continuance of good seasons and a larger area under wheat.

But the drought which followed has been so severely felt, and has extended so far into the winter, that a limited area only will be under wheat, owing to the lateness of the season and the difficulty experienced in ploughing. The effect of these circumstances on the labour market are not only felt now, but will also be apparent next harvest. The heavy losses in stock also will seriously limit the number of shearers required this season.

The rates of wages ruling in this district for the past year are the same as quoted in my report of the 7th June last. I am informed that there has been little or no fluctuation in those prices.

I have, &c.,

R. W. COLLINS,  
Labour Agent.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

GOVERNMENT LABOUR BUREAU.  
(PETITION FROM CERTAIN ELECTORS AND CITIZENS OF THE COLONY AGAINST.)

---

*Received by the Legislative Assembly, 17 November, 1897.*

---

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned electors and citizens of the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners are firmly of the opinion that the further maintenance of the Government Labour Bureau is prejudicial to the best interests of the *bonâ fide* workers of the Colony, inasmuch that as an institution it pauperises labour and reduces wages.

That as an institution it has utterly failed to ameliorate the conditions of the workers in whose interests it was ostensibly established.

Your Petitioners, therefore, humbly pray that your Honorable House in its wisdom will see fit to refuse to pass the estimate granting the necessary supply to further maintain the Government Labour Bureau, and saving thereby a large sum of the taxpayers money annually.

And your Petitioners, as in duty bound, will ever pray.

*[Here follow 1,051 signatures.]*

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

THE UNEMPLOYED.

(CORRESPONDENCE RESPECTING A SCHEME FOR THE TEMPORARY EMPLOYMENT OF, BY MR. CHAS. O'NEILL, M.I.C.E., DURING 1894-5.)

Printed under No. 11 Report from Printing Committee, 15 July, 1897.

C. O'Neill, Esq., M.I.C.E., to The Hon. G. H. Reid, M.P., Premier.

Sir,

16, Elizabeth-street, Sydney, 15 November, 1895.

I have the honor to call your attention to a letter, with enclosures, which I sent to you on the 24th November, 1894, referring for work for the unemployed, by making a wide road or promenade from near the Man-o'-war Stairs round by Mrs. Macquarie's Chair to the head of Woolloomooloo Bay, and to respectfully request that you would give the matter your further consideration.

The road might be named "The Reid Promenade," and I humbly think the work would do a large amount of good and be satisfactory to the people generally.

I have, &c.,

CHARLES O'NEILL, M.I.C.E.

Acknowledge. Mr. Ross.—F.K., 20/11/95. Done.—M.R., 21/11/95.

C. O'Neill, Esq., M.I.C.E., to The Hon. G. H. Reid, M.P., Premier.

Sir,

16, Elizabeth-street, Sydney, 24 November, 1894.

I have the honor to send you herewith copy of a letter written by me to the Honorable Sir George Dibbs, late Premier, suggesting what seemed to me a wise means of helping the unemployed, humbly but earnestly hoping that you may view the suggestion in a different light from that expressed in the late Premier's reply, a copy of which is attached hereto.

I may mention that when Mr. F. N. Charrington, the great English philanthropist, was in Sydney in March last, among his impressions of Australia, as reported in the *Daily Telegraph* of March 3rd, were "he admired our beautiful harbour, and thought on the whole that Sydney was the most charmingly-situated town in the world. But what a pity that the early architects of the place had not laid out a public promenade round every bay and creek. What a pity that the Government were not doing more at the present time to preserve the foreshores in their native loveliness."

I also enclose report of the "Surplus Labour Committee" to the Trades and Labour Council of New South Wales, showing various works proposed by me, viz. :—

1. The filling in of Darling Harbour above Pyrmont Bridge.
2. Tunnels for proposed City Railway from Darling Harbour direct to Circular Quay.
3. Tunnels to North Shore.
4. Esplanade and Quay-walk from Pyrmont Bridge by Dawes and Miller's Points to Circular Quay, with Tramways, &c.

I have, &c.,

CHARLES O'NEILL, M.I.C.E.

Acknowledged.—28/11.

C. O'Neill, Esq., M.I.C.E., to The Hon. Sir George Dibbs, M.P., K.C.M.G., Premier.

Sir,

16, Elizabeth-street, Sydney, 22 February, 1894.

I beg respectfully to make a suggestion for the public good by giving useful employment to the starving men now in Sydney. It is as follows:—Order the construction of a road, say, 200 feet wide, with a belt of trees in the centre, and seats, &c., from near the Man-o'-war Stairs (widening only), Mrs. Macquarie's Chair, and along Woolloomooloo Bay to Bourke-street. (The baths would be interfered with, but they could be extended further into the bay.) This would be a truly useful work, and, if authorised, I could place a thousand men on at once, and by changing hands every fortnight the immediate unemployed difficulty would be to a great extent overcome, and a ray of happiness forced into many desolate

desolate homes. This is a terrible time, and the work I have suggested would, I believe, satisfy the people generally, whilst you, as head of the Government, by affording an honorable means for the unemployed men to obtain an independent livelihood, I humbly think should be brave enough to take the responsibility of carrying out a work which would reflect the highest credit on you and the Government. The good you would accomplish would be incalculable, and perhaps one of the most meritorious works a Premier could undertake, and practically begin an era of prosperity in New South Wales.

The road when completed would form a magnificent sea-shore promenade and carriage-drive.

I may give you an example of my own experience when I was Engineer-in-Chief at Auckland, New Zealand. There was a heavy wave of depression came over the Thames Gold-field district, and one day many thousands of men appeared in the streets of Shortland who met me going to my office and demanded some means to prevent starvation. They were very much excited, and I was in the middle of them. I asked a few to come with me. When at the office, and after hearing of the serious state of affairs, I said I would put on a thousand men that afternoon at half the usual wage (five shillings per day) until other work would require their service.

I started the making of a wide road along the sea from Shortland to Tararu, a distance of about 2 miles; then I obtained the approval of the Provincial Government, and in a very short time the depression left the district, prosperity again reigned, and a grand, wide, useful road was completed, called "O'Neill's Esplanade."

I have, &c.,

CHARLES O'NEILL,  
M. Inst. C.E.

---

The Private Secretary to The Premier to C. O'Neill, Esq., M.I.C.E.

Dear Sir,

Chief Secretary's Office, New South Wales, 6 March, 1894.

The Hon. Sir George Dibbs desires me to acknowledge the receipt of your letter of 22nd February, and to inform you that he considers your proposal to construct a road round Farm Cove, as a means of employing 1,000 men who are now out of work, one that is perfectly impracticable and unjustifiable.

Yours faithfully,

H. TENNENT DONALDSON,  
Private Secretary.

1897.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## THE UNEMPLOYED.

(RETURN RESPECTING.)

*Printed under No. 18 Report from Printing Committee, 7 October, 1897.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23rd June, 1897, That there be laid upon the Table of this House a Return showing,—

- “ (1.) The total expenditure for the months of January, February, March, and April this year for the unemployed.  
 “ (2.) The work done by the Unemployed during those months in incurring the expenditure.  
 “ (3.) The expenditure incurred in employing the Unemployed outside of Sydney (if any).  
 “ (4.) The portion of the expenditure which has been given as charity, and that for which work has been executed.”

*(Mr. Affleck.)*

## DEPARTMENT OF LABOUR AND INDUSTRY.

- (1.) £2,474 8s. 4½d., less £878 9s. 7d. refund of railway fares.  
 (2.) Expenditure was incurred in sending men to private employment (including “fossicking”), and to Government works at Shea’s Creek, Botany Sewage Farm, Church and School Lands, Rifle Butts, and Bogan Scrub.  
 (3.) £281 6s. 5½d., being cost of railway passes issued by country branches of the Labour Bureau.  
 (4.) £36 17s. 9½d.

NOTE.—These replies bear only on the cost of railway passes, miners’ rights, and rations granted by this Department, but have nothing to do with the cost of the different works on which the Unemployed have been engaged.

Department of Public Works, Account Branch,  
 15 June, 1897.

STATEMENT showing Amount Expended, under the Public Works Department, on Work done by the Unemployed during January, February, March, and April, 1897.

Locality.	January.	February.	March.	April.	Total.
Church and School Lands	£ s. d. 245 7 7	£ s. d. 153 1 4	£ s. d. 157 2 2	£ s. d. 61 7 9	£ s. d. 616 18 10

1897.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**THE UNEMPLOYED.**

(EMPLOYMENT OF, SINCE 1st MAY, 1897.)

*Printed under No. 8 Report from Printing Committee, 17 June, 1897.*

*[Laid upon the Table of the House in reply to Question by Mr. Whiddon, 15 June, 1897.]*

Question.

MR. WHIDDON asked THE MINISTER OF PUBLIC INSTRUCTION,—

- (1.) Will he be good enough to inform the House how many men from the unemployed have been put on to work since the 1st May?
- (2.) The nature of such work, and the districts to which they have been sent, up to date?

Answer.

SCHEDULE of Particulars.

- (1.) 1,179. In that number are included labourers selected for the Botany Sewage Farm; men put on at Shea's Creek, also old men to clear at the Raudwick Rifle Butts; fossickers recommended by the Mines Department; clearers, by the Department of Mines and Agriculture; and wives, with children, going to join their husbands in the country, who had preceded them, and made homes.
- (2a.) Accountant, brewer, brickmakers, bricklayers, bakers, butchers, blacksmiths, carpenters (house and bridge), cooks (male and female), carters, clerk, concrete-workers, cabinet-makers, drivers (horse), drover, engineer, engine-drivers, engineer's smith, fossickers, farm hands, flour-mill hands, fellmongers, fisherman, generally usefuls, gardeners, grooms, hospital attendant, iron-planer, kitchenmen, labourers, miners (silver, gold, coal, and shale), married couples, milkmen, painters, plumbers, paper-hangers, plasterers, quarrymen, station-hands, shearers, salesman, sleeper-cutters, shoemaker, tutor, timber squarers and cutters, tinsmith, wood-cutters (fire), wheelwrights, wool-scourers, watchman, bushmen
- (2b.)

## FIRE BRIGADES BOARD, SYDNEY.

(REPORT FOR 1896.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

Printed under No. 12 Report from Printing Committee, 22 July, 1897.

The Chairman to The Chief Secretary.

Sir,

Fire Brigades Board, Head-quarters Fire-station, Sydney, 14 April, 1897.

I have the honor, by direction of the Fire Brigades Board for the Metropolitan District, to forward herewith, in compliance with the 7th section of the Fire Brigades Act, 1884, the Board's Report upon its administration during the year 1896.

I have, &amp;c.,

CHARLES BOWN,

Chairman.

## REPORT OF THE FIRE BRIGADES BOARD FOR THE YEAR 1896.

WITH regard to the year 1896, the Fire Brigades Board for the Metropolitan District has the honor to report upon the matters within the scope of its administrative duties under the Fire Brigades Act, 1884, pursuant to the direction of section 7.

The only alterations effected in the personnel of the Board at the biennial election, which took place in March, were the unopposed elections of Messrs. F. J. Jackson, J.P., and T. M. Tinley, J.P., respectively by the Insurance Companies having their headquarters in and outside the Colony, to the seats formerly occupied by Messrs. Walter Church, J.P., and J. St. Vincent Welch, J.P., the other elective members being re-elected. At the first meeting of the newly constituted Board, Alderman J. C. Beare, J.P., was elected Vice-Chairman, in the room of Mr. Church, who had retired from the Board after continuously holding a seat upon it since the passing of the Act in 1884.

To the contributing Insurance Companies, the Lancashire Insurance Company and the London Assurance Corporation were added, while the Mutual Union Insurance Company disappeared from the list. (*Appendix II*). The sum of the risks was £59,720,282, an increase of £380,186 on that of the antecedent year. The contribution levied was equal to 2½d. (2½d.) in every £100 of risk held.

As shown in the balance-sheet (*Appendix IV*) the year closed with an overdraft. For the probable expenditure of this Department during the current twelve months, £20,100 was the estimate adopted. This sum, in view of the claims being urged by various districts for the establishment of fire stations and increased protection, and of varied requirements over an enlarged area, must be very carefully husbanded.

In the last Report a large shrinkage was recorded in the assessed value of ratable property in the Municipalities [*Appendix I*], and for the year under review a further contraction of £269,167 is apparent, despite the addition of two Boroughs, whose assessments amount to £27,682. Of this reduction, no less than £161,589 was in the city. Forty-two Municipalities were on the contributory list, the additional being Penrith and Richmond. These are distant from Sydney about 35 and 39 miles, respectively, but being in the county of Cumberland are in the Metropolitan District under the Fire Brigades' Act. As remarked last year, these are the first instances of the extension of the Act to districts so distant from Sydney, and yet within the Metropolitan area. During the year the provisions of the Act were extended to Liverpool, which consequently became contributory at the beginning of the year current. The contribution levied upon the Municipalities amounted to half-a-crown for every £100 of assessed value of ratable property.

It may be mentioned that although the Fire Brigades' Act, in section 22, authorises a Council to increase its city or municipal rate, notwithstanding any statutory limit of such rate, by sufficient to recoup the amount of the contribution paid in the previous year for the maintenance of the Fire Brigades Department, no Council within the Metropolitan District has yet adopted that course; yet the contribution is drawn for the protection of the lives and property of the ratepayers, who, no doubt, would cheerfully pay the small tax of half-a-crown per £100, rather than be without such a safeguard. Councils, however, have hitherto preferred to pay the contribution levies out of their own funds

At the same time several of the Borough Councils have complained of having to make the payments ; and it is remarkable that frequently those which have protested most strongly have also been those which most strenuously urged the Board to increase the expenditure in their own particular districts. Since the passing of the Act pressure has been continually brought to bear by one or another Council for an increase of the Fire Brigade establishment within the boundaries of its own parish, coupled with the installation of telephone fire alarms, and the erection of costly fire stations ; yet those very Councils complain of an increase of contribution which must be a sequence to compliance with even a portion of their requests. On the other hand, Councils are dissatisfied because the Board has declined to accede to applications for extensions of which the advantage could not be commensurate with the cost.

In the United States of America the whole cost of the Fire Brigades establishments is borne municipally—not merely one-third of it as here ; while in the Melbourne Metropolitan District, where the revenue is drawn from three sources, on lines very similar to ours, the levies upon the municipalities are heavier than in Sydney, being 4s. 1d. for every £100 of ratable property, against 2s. 6d. here.

The sum appropriated for the maintenance of the Fire Department of San Francisco for the twelve months ending 30th June, 1896, is set down in that Department's Report at 718,000 dollars (about £147,500). The appropriation on account of this department for last year was £18,900, of which the municipalities were called upon for £6,300. Yet the population of San Francisco cannot much exceed 300,000 persons, while that of Sydney is estimated at 410,000, which number would be increased to upwards of 440,000, if there were included the population of the whole district of no less than 176,247 square miles, over which the jurisdiction of the Board extended last year. Similarly favourable comparisons may be drawn with regard to the Fire Brigade Departments of Chicago, Kansas City, and other cities.

While emulation of the American scale of expenditure is not advocated, the figures are quoted to show that the Borough Councils here are called upon for only about a twenty-third of the amount contributed by the San Franciscan municipal authorities, and are also much more favourably treated in this respect than the other cities of which we have any information.

Taking the figures given above, the expenditure per head of the population here is 10'3d., while that of San Francisco approximates 9s. 10d., and of Chicago about 3s. 9d., the last-named city having a great population of over 1,700,000 persons.

**Water.** Hurstville, Kogarah, Rockdale, and other districts, are to receive the benefit of a much improved water supply under pressure from the 1,000,000 gallon reservoir which the Department of Water Supply and Sewerage has almost completed at Penshurst. On the north side of the harbour the Hornsby-Chatswood water supply scheme has given the rapidly growing suburbs upon the heights a supply which for fire protection purposes alone must be of yearly increasing value. The Board has pleasure in acknowledging the courtesy with which the Board of Water Supply has continued to respond to requests from this Department, where possible, when any deficiency in the flow or pressure of water for fire purposes has been brought under its notice.

**Fires.** During the year 451 alarms of fire were responded to, of which 91 were false alarms. Of the others, exclusive of 69 chimney fires, 291 turned out to be actual outbreaks of fire. These figures compared with the returns of the previous year represent a decrease of 82 calls, and of 76 fires, other than those in chimneys. The Superintendent reports that the destruction of property by fire has not been extensive, considering the area covered, and that is high testimony to the continued good work which the firemen have performed. Six of the fires were upon vessels lying at wharves in the harbour.

**Port Jackson, Fires on shipping, and necessary Amendment of Fire Brigades Act.** In connection with the oft-urged desirability for special protection being provided for vessels in this port, which is becoming the great commercial *entrepot* of Australasia, attention is again invited to the remarks upon the subject on the second page of the last Report. Among the difficulties there enumerated was the omission of power from the existing Act for the extension of its provisions to Port Jackson. This view has since been entirely supported by counsel's opinion, a copy of which was forwarded to the Principal Under Secretary on 30th September last. Other communications have also passed, setting forth the very invidious position in which this Department is placed with regard to vessels afloat, but so far nothing definite has resulted.

The Fire Brigades Act, 1884, under which the Department is worked, continues in its pristine imperfect state. In some of its provisions it is absolutely unworkable, and fails to carry out its admittedly express intention. With reference to the difficulties which arise in connection with it, communication has been made from time to time, and it is understood that its need for amendment is even more necessary as regards the country outside the Metropolitan District. Under counsel's opinion, before-mentioned, the Board has "neither duties nor powers upon the waters of Port Jackson," and considerable risk is incurred by any attempt to extinguish fire there. The opinion concludes with a recommendation "that the sooner the Board obtains an Act giving them jurisdiction over the Harbour, the better for themselves and the shipping public." In that respect, as in others, the continued appeals for a more satisfactory and workable Act have so far been profitless. In the meantime the Department has not stood by and allowed ships to be destroyed by fire ; but has undertaken the risk, and vessels and cargoes of great value have been preserved. The unreasonable position in which the Department is placed by the imperfection of the Act in that respect requires immediate rectification. There are other serious difficulties affecting the administration of the Act concerning which communication has frequently been made.

With further regard to the question of the amendment of the Act, it may be mentioned that in the sister colony of Victoria the Metropolitan District is under the jurisdiction of one Board and the country under that of another, both of which governing bodies sit in the capital. Under the South Australian Fire Brigades Act, which is of later date than either the Victorian or our own, one Board sitting in Adelaide controls the whole colony, and the system appears to have worked well. Three systems, therefore, are in operation with regard to town and country—in South Australia, Victoria, and this Colony ; and in any alteration of the existing Act it would be well to consider which would be most advantageous for adoption. Recently, as has been said, Penrith and Richmond, situated upon the confines of the county of Cumberland, have been included in our Metropolitan District, a matter with regard to which the Board had no option. To supervise fire-extinguishing organisations at such distances would present little more difficulty than to control them still further away. The question, therefore, arises whether

whether enlarged powers should be given under which the central Board would have jurisdiction over the whole Colony, or whether its operation should be circumscribed to a more purely metropolitan area, on somewhat similar lines to the district of the Metropolitan Fire Brigade of Victoria. As it exists at present, the Metropolitan District here is either too large or too small.

As yet there has been no legislative action to regulate the traffic in explosives and in inflammable liquids, nor to introduce a proper Building Act—subjects upon which the Board has so frequently submitted its views that there can be no necessity for further comment.

On the 1st May, in a commanding position in Darlinghurst, overlooking William-street, a detachment of the Metropolitan Fire Brigade, assisted by auxiliaries, was stationed in premises secured upon lease for twenty-one years. A hose carriage and other suitable equipment were placed there, and telephone fire alarms were run from it as far as Darling Point, and also down Potts' Point, and in other directions. The anticipated establishment of a fire station in Redfern has not yet been accomplished, but it is believed that the Government is favourably disposed towards the desired dedication of the present Court-house and Police-station for that purpose when those premises are vacated for the buildings in course of erection. The position is admirably situated for a permanent fire station from whence to radiate protection throughout the surrounding district. The provision of more suitable fire stations in Paddington and Burwood has not yet been accomplished, but it is hoped that they will not be much longer delayed. It has been decided to build a station in Parramatta upon a site provided by the Government, the premises hitherto in possession of the Parramatta Volunteer Fire Company, No. 1, being required for other purposes. When the building is occupied the necessity for two volunteer fire brigades in that town will have passed away, and the district be better protected by one powerful company with improved equipment. The claims of Manly have not been overlooked, and negotiations, since completed, were entered into for the purchase of a suitable site in Fountain-street, whereon it is proposed to place a station as soon as funds permit, in which to more comfortably house the local volunteer firemen and their appliances. That district, in consequence of its isolated position, must rely entirely upon the services of the local brigade for protection in time of fire. A station, just completed, has been built in Rockdale, and the requirements of Granville and other localities are subjects for future consideration. In Drummoyne the local Volunteer Fire Brigade, assisted by a Government grant, has provided itself with a most creditable station on a good site, which together cost about £500.

The building of stations and properly equipping them constitutes a seriously heavy drain upon our resources, and under present circumstances it would be impossible for every district requiring them to be immediately supplied. Those of most pressing necessity must, therefore, be taken first, and the others dealt with seriatim, as can be afforded. The Superintendent of Fire Brigades has urged with frequent reiteration that the whole matter should be dealt with, without such delay, by the issue of a loan of £25,000 for the purpose. The Fire Brigades Act, however, gives no authority for borrowing, and other considerations make such a course undesirable, even if an enabling clause were added to the Act. In Victoria the Metropolitan Board has borrowed largely, and consequently the contributing bodies have to pay considerably enlarged contributions to provide a sinking fund in addition to the interest. Many Municipal Councils and other elective administrative bodies, here and elsewhere, have borrowed freely in the past, with the result that they are now overweighted with a crushing load of interest. Where there is facility for borrowing, it unfortunately happens that there is grave danger of extravagance; and this is especially the case with organisations whose frequent changes of membership leave the ultimate burden to others. No such corporation can hope to always escape from what in a higher sphere is known as "log-rolling," nor from varied pressure for the expenditure of moneys, when large amounts are in hand, as various influences are brought to bear from time to time. To carry out the desired works, and yet to avoid the evils of which there are so many object lessons in this and other Colonies, the Board suggested that the Government should advance a special annual allowance; but the proposal was not entertained.

The number of telephone fire-alarms has now been increased from 139 to 162, distributed throughout the city and suburbs at the points of greatest vantage. As the system adopted here has proved so eminently satisfactory others will be annually added. These alarms have involved the erection of 135 miles of wire—an addition of 13 miles since our last year's Report—representing an increase of potential protection over a large area, including portions of the city, Balmain, Newtown, North Sydney, and other suburbs.

At the close of the year the Metropolitan Fire Brigade numbered sixty-two of all ranks, the authorised strength being sixty-four—in all, making an increase of four on the previous year's return—and the standard of efficiency is most creditable to officers and men. It appears, however, to be increasingly difficult to obtain recruits of the required physique and other qualifications to fill any vacancies. Three hose waggons have been added to the Brigade's plant during the year, and an order has been forwarded to London for an additional steam fire-engine, capable of delivering 600 gallons a minute at 200 revolutions. The renewals of hose and repair of and additions to other material have been exceptionally heavy.

The authorised strength of the Auxiliary Fire Corps has been raised to twenty, but the number on the roll on the 31st December, 1896, was only fourteen. The difficulty alluded to as being felt with regard to obtaining suitable candidates for the permanent force is accentuated with regard to the Auxiliary Corps, a number of changes taking place in its ranks in consequence of many of its members having from time to time to retire from it, as their work takes them to districts where their services are not readily available at stations to which they are attached. As the applications of members of the corps for service in the Brigade receive preference over those of others, it is necessary that their standard of physique, of attainments, and of character, should be maintained.

Very heavy, but necessary, outlay has been incurred during the year in supplying the Volunteer Fire Companies with hose; and the Superintendent is endeavouring to regulate the branches, nozzles, &c., so that they shall be of uniform pattern. At the close of the year the Standard Brewery Volunteer Fire Brigade retired from service in accordance with the resolution mentioned in last year's Report—to discontinue to maintain Volunteer Fire Brigades within the city. The Company had been in existence some years, and had in its time performed much useful service. The Randwick Volunteer Fire Company having become moribund, the appliances entrusted to its charge have

have been withdrawn. The subsidies, &c., shown on page 10-11, to have been paid to the Volunteer Companies, amounted to £2,567; but that amount does not include the expenditure on their behalf for hose, horses, repairs to stations and plant, and various other items. The renewals of hose, and repair of and additions to other material, have been exceptionally heavy.

In the city the Metropolitan Fire Brigade has superseded the necessity for the Volunteer Fire Brigade stations, to which in past years the city was greatly indebted for the protection afforded, but the suburbs and more distant towns must long look to Volunteer Companies as their first line of defence. The Superintendent of Fire Brigades, in his Report, hereto appended, expresses his gratitude for the services they have rendered, and the Board has pleasure in acknowledging the value of their assistance, which has been the means of saving much valuable property beyond the reach of the permanent force.

The practice of making grants of sums of money from the public revenue to different volunteer fire companies without the cognizance of the Board, and irrespective of whether the companies have been passed by the Superintendent of Fire Brigades as efficient, has been continued, although, as pointed out in the last Report, the system can scarcely tend to the advantage of the Brigades, from a utilitarian point of view.

Correction.

Attention is called to an error which crept into the concluding lines of the last Annual Report,—in the mention of the Mayor of Deniliquin as *ex officio* Chairman of the local Fire Brigade Board. Now, the Mayor of a district, other than the Metropolitan, is *ex officio* a member of the local Fire Brigade Board, but although usually Chairman, is not so by virtue of his office. While making this correction, which in no way affects the conclusion then drawn, it may be added that the Act appears to be as indistinct as to the appointment or election of a Chairman of a country Board, as it most unfortunately is in many other respects, whether with regard to Metropolitan or country districts.

The usual returns, giving details of the departmental work during the twelve months, together with the Report of the Superintendent of Fire Brigades, are added hereto.

CHARLES BOWN,  
Chairman.

Adopted at a meeting of the Metropolitan Fire Brigades Board, at Sydney, on the 14th April, 1897.

Z. COLLIS BARRY, Secretary.

Having examined the books and vouchers of the Fire Brigades' Board for the year ending 31st December, 1896, I certify the above-written Abstract of Receipts and Expenditure to be correct.

1 February, 1897.

JAMES ROBERTSON, F.S.I.A., Auditor.

APPENDIX V.

## APPENDIX V.

## Mr. Superintendent Bear's Report to the Fire Brigades Board.

The Fire Brigades Board, Sydney,—

Gentlemen,—

Headquarters Fire-station, Castlereagh-street, Sydney, 13 February, 1897.

I have the honor to submit my Thirteenth Annual Report on the working and general efficiency of your Brigade and of the several Volunteer Fire Companies, together with the details of fires attended in the city and suburbs, for the year ending 31st December, 1896.

The total number of alarms for fires, or supposed fires, was 395. Of these, 91 were false alarms, 13 proved to be only chimney alarms, and 291 were for actual fires.

Of the fires, 230 were slight or trifling, 27 were serious, and 34 resulted in total destruction.

Of the 291 fires, 164 were insured, 114 not insured, and in 13 instances the insurances on the buildings or contents could not be ascertained.

In addition to the ordinary fires, there have been 56 chimney fires requiring the attendance of firemen with hand-pump only, making an aggregate total of 451 calls for fires, false alarms, and chimney-fires.

The fires of 1896, as compared with those of 1895, show a decrease of 76, the chimney-fires reported as houses on fire a decrease of 5, and those attended by firemen with hand-pump only, a decrease of 8.

In the fires which were slight there has been a decrease of 69; in serious, an increase of 7, and in those which resulted in total destruction, a decrease of 14.

Among the buildings totally destroyed are classed sheds, weatherboard cottages, &c.

The most notable fires of the year are as follows :—

Under the heading of serious—

31st January.—Ship "Thistlebank," at Hoffnung's Wharf.

5th April.—"Quatre Bras" Tannery, Alexandria.

3rd May.—Ship "Ellen A. Read," Double Bay.

17th June.—Warehouse, 226 to 228, Clarence-street, City.

15th August.—Roberts' Hotel, George-street, City.

5th November.—"Quatre Bras" Tannery, Alexandria (second fire).

16th November.—Warehouse, 234, Clarence-street, City.

Under the heading of total—

7th April.—Shops, 103 to 107, King-street, Newtown.

19th May.—Shops, 132, Liverpool-road, Ashfield.

11th September.—Private dwelling, Eve-street, Strathfield.

5th November.—Federal Timber Co., Balmain.

29th December.—Shops, High-street, Penrith.

Out of the 34 fires classed under the heading of total, there were only 4 buildings which were not constructed of weatherboard, wool, &c.

Considering the large area covered by your Board, the destruction of property by fire during the year has not been extensive.

Appended are detailed statements of the fires attended by the Brigade and by the Volunteer Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member has been sent to obtain the necessary particulars.

The summaries appended show the particular dates, time of call, time of outbreak, trades, localities, insurances, hourly, daily, weekly, and monthly. There is also appended a summary of the supposed origin or cause of fires for the year.

Referring to the summary of localities it will be noticed that in the city of Sydney there were 193 calls, 110 of which were for actual fires, 41 were false alarms, 7 were for chimney-fires reported as houses on fire, and 35 were for chimney-fires attended by firemen with hand-pump only.

In the suburbs there were 258 calls, 181 of which were for actual fires, 50 were false alarms, 6 were chimney-fires reported as houses on fire, and 21 were for chimney-fires attended by firemen with hand-pump only.

For full details of fires, and for the particular wards of the city, and the municipalities in which the same have occurred, see appendices attached. A summary of trades is also appended.

Full particulars of the strength of the Brigade (members and plant), together with that of the Volunteer Companies, are also given.

The total amount paid by your Board in subsidies and bonuses to the several Volunteer Fire Companies for the year was £2,567 10s. In addition to this four Companies received £12 each for attendance on the telephone fire-alarms connected with their stations.

During the year I have supplied the whole of the Volunteer Fire Companies, with the exception of Paddington, with your Board's hose, in accordance with my recommendation of the 19th of January, 1896. I have also endeavoured to make all the branches, nozzles, and hose and nozzle spanners, of a uniform pattern throughout the whole of the Volunteer stations within your Board's area, and before the end of the present year I hope to have this accomplished. It is most essential in dealing with large fires to have every article of a uniform pattern. I may state that several of the Companies willingly assisted me in this work by readily handing over their hose and other appliances.

Independently of the money grants to the Volunteer Companies your Board has expended a large amount in supplying them with new hose and appliances, as well as in effecting the alterations just mentioned.

The approximate value of the whole of your Board's plant, including the land and stations held in trust by your Board, I estimate at £91,951. The value of the Volunteer Companies' plant, outside of the plant they hold from your Board, is not included in this sum.

Twenty-four telephone fire-alarms have been erected during the year, and one has been removed owing to its proximity to the new station which has been opened at Darlinghurst, making the number of alarms at present in existence 162. Orders have already been given for the erection of four in the district of Alexandria, and I shall recommend the erection of others later on.

The telephone fire-alarm wires have been extended from 122 to 135 miles, or an increase of 13 miles.

Experience has shown that the system of connecting telephone fire-alarms with Volunteer Fire-stations has not proved to be very satisfactory. The instruments are not regularly tested by the members of the Companies, and owing to this neglect the permanent staff are being constantly called upon at all hours to travel long distances to place the instruments in order. This, of course, means that our men and horses are taken away from the city stations. Another great objection to the system is that in many instances there is no one present at the Volunteer stations during the daytime to receive a call of fire transmitted through the telephones.

I trust your Board will continue to increase the number of the telephone fire-alarms. With their increase, and the extension of the Telephone Exchanges to the suburbs we shall be able to get very prompt and early calls of fire, and no doubt our success in the saving of life and property is due in a great measure to our excellent system of fire-alarms.

A complete list of the alarms erected to date is appended.

During the year telephone communication was established between the Drummoyne and Balmain stations, also between Marrickville station and the Stanmore police-station.

With the exception of the Granville, Kogarah, and Rockdale Volunteer stations, the whole of our fire-stations are in telephonic communication with headquarters, either by direct lines, or indirectly through the Exchange.

Headquarters is connected to the Exchange by two lines, and most of the Volunteer Fire-stations are connected to the local Exchange and local police-stations in their respective districts.

During the year the whole of the telephone fire-alarms and some of the fire-stations had to be renumbered in consequence of the opening of a city station at Darlinghurst. This station was numbered 4, and was opened on the 1st of May. It has thirteen telephone fire-alarms in connection with it, and two main lines to headquarters. The total cost of the alteration of lines, &c., was very little, as in many cases the wires existed previously in connection with headquarters, and they had to be merely cut and the alarms added. The extra main line to headquarters will be kept for further extension hereafter.

The station at Darlinghurst has proved a great acquisition to the city in that direction. It was obtained on a twenty-one year's lease at the very low rental of £3 per week. It is supplied with a one-horse hose-carriage, and all necessary apparatus in proportion. There are four permanent men and three auxiliaries stationed there.

Darlinghurst being now well protected, I must again direct the attention of your Board to the necessity for a fire-station at Surry Hills. I have no doubt that a station could be obtained on similar terms to that at Darlinghurst to save your Board the expense of purchasing land and erecting a building at present.

At any rate it is surprising that after the Act has been in operation for thirteen years, this district belonging to the city proper, is without any protection for the saving of life and property by fire. At present there is no fire-station and no fire-alarms, and the water pressure in some parts is so defective as to require a steam fire-engine for ordinary fires. While this is so, our attention, and a great part of our revenue, is diverted to outer districts where the risks are only trifling as compared with Surry Hills.

The same remarks apply to Paddington and Reifern. These districts should be supplied with suitable stations, and manned with a permanent staff. As I have repeatedly pointed out in my reports to your Board, Volunteer firemen cannot be expected to afford proper protection to these thickly-populated and rapidly-growing districts. It is absolutely necessary that permanent men, who are well disciplined and thoroughly trained to the use of ladders and all modern appliances, be stationed in each of these very important suburbs.

Our plant at the Headquarters and No. 2 stations is too much cramped up, and we could well supply steam fire-engines and plant to two more permanent stations without any additional cost to your Board except for horses.

At the commencement of the year the Drummoyne Volunteer Company purchased a site from a Government grant, and built a very good station thereon, partly from designs of my own. By your Board's instructions our own engineer and men made and fixed the door-opening apparatus for both engine-room and stable doors. This station, and the orderly and clean manner in which it is kept, reflects much credit on the Company. The land cost £90 and the building about £400. At present it is mortgaged to the extent of about £200, and this the Company are paying off as quickly as possible.

Your Board's station at Rockdale will shortly be completed, and I trust the Volunteer Company will be able to afford ample protection to the district, which is a very large and scattered one. I must, however, say that I cannot be very sanguine on this subject, unless more discipline is introduced into the Company.

The station has been supplied with the door opening apparatus similar to the other stations. The expenditure, however, has been very heavy for this municipality, viz., £210 for the land, and about £760 for the building, but if it saves the engines at this side of Cook's River from attending fires there it will be well spent.

At the end of the year the Standard Brewery Volunteer Company were disbanded in accordance with your Board's resolution that no more Volunteer Fire Companies would be subsidized in the city after the end of 1896.

I trust your Board will see your way clear to erect a small station at Burwood during the present year, something similar in strength to the Darlinghurst station, viz., three permanent men, and seven or eight auxiliaries recruited from the presented volunteers. This station is very much needed, so as to enable a fire-alarm system to be established throughout the surrounding districts, which embrace a very large area, and are at present without any protection whatever.

The next important stations requiring the attention of your Board are—Granville, Manly, Parramatta No. 1, and Rookwood. In three of these districts sites have been purchased with Government money, and now await the building of proper stations by your Board.

The Randwick Company have not been registered during the year, nor have they attended any fires. On the 21st of January of this year your Board's plant was removed from the Town Hall, as it was being very much neglected. Eventually a telephone fire-alarm will be erected at the corner of Avoca and Allison Streets, in accordance with your Board's instructions. Although the late Company received a grant of £50 from the Government, I have not been able to ascertain what they have done with the money.

Nothing has been done in reference to the registration of Volunteer Fire Companies at Liverpool, Penrith, or Richmond although these municipalities have been for some time gazetted under the Act.

Owing to a young woman being burned to death at a fire which occurred on the 25th January of this year at Botany-road, Waterloo, very severe strictures were passed on the Alexandria Volunteer Company. At the inquest which followed, the Coroner's jury passed an open verdict, but the whole of the members of the Company resigned on the 29th of the same month, and handed over the station and your Board's plant. The station is held on a lease by your Board from the local Council, and it is now worked by four permanent men and an auxiliary. I may state that I feel very contented since the change was effected as I can place reliance on my own men, while previously I had to depend on a class who very readily donned a gaudy uniform but took no interest in the profession or work of firemen. On a former occasion I had to place permanent men in charge of this station owing to the volunteers quarrelling between themselves.

As already stated, orders have been given for the erection of four telephone fire-alarms in connection with this station.

The Botany-road fire should prove a lesson to the other Volunteer Fire Companies who never run ladders to a first call although some of them carry ladders on their apparatus. Their excuse is that the ladders make their reels too heavy.

I trust your Board may be yet able to carry out the substance of my reports dated the 2nd of January and the 1st of July, 1896, in reference to the raising of a loan as a capital account for the purpose of building proper stations and manning these contiguous to the city with permanent men similar to what has been done in the leading cities of the other colonies.

As I have previously pointed out, the rents received from the men would more than cover the interest on the loan; and, if my recommendations are adopted, your revenue could then be used for the proper working of the Brigade instead of using it as at present for the purchase of plant, land, &c., and the erection of stations and telephone fire-alarms, and thereby having to raise more and more each year, and allowing posterity to reap the benefit of it.

Your Board's area has been increased this year from 176,247 to 196,447 square miles. This gradual increase from year to year in your area will in time to come prove a very serious matter for your Board, as, owing to the extension, the city and adjoining suburbs will each year have to pay an additional contribution without deriving any corresponding advantage for it, while in reality they are getting less as the expenditure is being spread over a much larger area. This policy leads to dissatisfaction among the municipalities and to their requiring to know what return they are getting for their extra money.

I can only repeat what I said in my last Annual Report that a Country Towns Fire Brigades Act is very much needed to get over this difficulty. Provision should be made for such towns as Liverpool, Penrith, Richmond, and other places having their Brigades under their own representatives instead of under your Board as at present.

Every encouragement should be given to the Volunteer Companies in the outer districts as long as they are amenable to discipline. I find, however, that owing to the little interest taken by many members, and the short time that some of them remain in the Companies, there is very much difficulty in keeping them up to a reasonable standard of efficiency. I am well aware of the itinerant disposition of the population, and this no doubt accounts in a great measure for the lack of interest taken in the Companies; but it is a great draw on our strength to be continually sending men to train the volunteers.

As evidence of this I may state that there are only 21 members left in the whole of the Volunteer Companies who were members when I took charge in 1884. Only 10 remain of those who joined in 1885, 9 of those who joined in 1886, 6 for 1887, 8 for 1888, and 9 of those who joined in 1889.

Several of these men are too old for the work of firemen, and many of them seldom turn out to a fire. Their names are, however, returned on the fire reports as if they had been present.

When the Alexandria station was taken over at the end of January of this year authority was given for the strength of the Brigade to be increased by four men. This, with the previously authorised number (64), will bring the strength up to 68, including myself.

Besides this number there are two men not on the working strength of the Brigade, viz., the engineer, who is paid by the day, and F. Brooks, who had been a member of the Brigade, but whose services were dispensed with by your Board owing to ill-health. He is now employed at headquarters as telephone operator from 8 a.m. to 6 p.m., at £2 per week. When we are called to a large fire outside these hours he immediately attends the station and takes charge of the switch-board, and thereby releases another man for duty at the fire. I have found this plan to work very well up to the present.

During the year two hose-carriages of an extra size for two horses were built. One is stationed at headquarters and the other at Alexandria, and both are capable of carrying a large quantity of hose in the event of a large fire. There was also a one-horse hose-carriage built for Darlington. Tenders are now being called for the building of a hose-carriage for the Marrickville station, to take the place of the manual engine which is stationed there. One will also be required for Ashfield to replace the 5-inch manual there, which I require for another district.

A new 600-gallon steam fire-engine has been ordered to take the place of the old "Fire King," which was purchased by the Insurance Companies about twenty-seven years ago.

We had a 65-foot ladder built during the year by our own men for the Circular Quay Station, but I fear we have not gained much by not importing it. If we could depend on the manufacturers to supply us with the exact article we require, owing to their experience and their acquaintance with modern appliances, I consider it would be more advantageous to us in the end to import our ladders than to build them here in the limited space at our disposal. Ladder work is a special feature in our business, especially so the balancing for dipping under electrical and other wires, as well as having the latest improvements for hoisting under every difficulty. The ladder referred to took us over twelve months to build; but of course other work, such as the repairing of plant and urgent work connected with our stations, claimed the attention of the men during that period.

New ladders will have to be supplied to the No. 2 and the No. 5 Stations. Large buildings are rapidly growing up in these districts, and ladders are required for the saving of life and property. Other stations, both permanent and volunteer, will also require to be supplied with light ladders for the saving of life and property.

The officers in charge of the Newtown and Marrickville stations have applied for an additional permanent man for each of their stations, as they are very short-handed during the daytime while the auxiliaries are away at their ordinary work. I will report to your Board on this subject later on, and give you the figures for their attendance at fires.

I have to regret that nothing has been done by the Government towards providing a floating steam fire-engine for the protection of the shipping in our harbour. Although I have repeatedly referred to the necessity for action being taken, the matter is still in abeyance.

During the year, the Board of Water Supply and Sewerage have greatly improved the water pressure in the North Sydney suburbs of Willoughby, Chatswood, and along the line to Hornsby, thereby saving your Board the cost of having to import a small steam fire-engine for the protection of these districts.

The new reservoir at Penshurst, in the Mlawarra district, will shortly be finished, and will be the means of largely increasing the pressure in the surrounding Municipalities.

I am anxiously looking forward to the completion of the Centennial Park reservoir, so that the water pressure will be increased in the warehouse portions of the city. At present the supply varies a good deal, Paddington water being in one street and Crown-street water in another, and this makes a great difference at the commencement of a fire, especially when a warehouse runs right through from one street to another, as in the case of the Eagle Tobacco Company's Factory, in Clarence and Kent Streets.

The permanent staff attend to the work in the following departments:—Blacksmithing, carpentering, engineering, electrical, painting, plumbing, horse-shoeing, and hose-repairing.

Considerable repairs have been effected during the year to stations, engines, and appliances by our men, and a large amount of work has been done in repairing stations and plant for the Volunteer Fire Companies. This work keeps the men constantly employed, and saves your Board a good deal of money annually.

I have to thank the officers and members of the Volunteer Companies for their assistance during the year, and also the officers and members of the police force for their valuable assistance. I have also to return my thanks to the turncocks and to the public generally for their valuable co-operation.

The discipline and general efficiency of the Brigade are in all respects satisfactory, and although the duties at times have been severe, the work has been performed cheerfully and well.

In conclusion, I desire to return my most sincere thanks to your Board for the cordial support you have accorded me.

I have, &c.,

WILLIAM D. BEAR,  
Superintendent of Fire Brigades and Inspector of Kerosene.

1897.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

---

MR. W. L. VERNON, F.R.I.B.A., GOVERNMENT  
ARCHITECT.

(REPORT SUBMITTED BY, IN CONNECTION WITH HIS RECENT VISIT TO THE UNITED KINGDOM  
AND CONTINENT OF EUROPE.)

---

*Printed under No. 22 Report from Printing Committee, 18 November, 1897.*

---

The Government Architect to The Under Secretary for Public Works.

Department of Public Works, Government Architect's Branch,  
Sydney, 12 November, 1897.

MINUTE PAPER.

I HAVE the honor to report that during my recent visit to Europe, and owing to the consideration of the Minister, I was able to devote the months of July and August to inspecting various buildings both in England and on the Continent, and generally to make myself acquainted with the progress in architecture during the last ten years, particularly with reference to technical details and improved methods of building.

Having this object in view, I visited a large number of Gaols, Police Buildings, Hospitals, Asylums for the Insane, Post Offices, Parliament Houses, Exhibition buildings, also the Royal Mint, Law Courts, Electric light Plants, and numerous factories and works in connection with the production of Sanitary appliances.

I have to gratefully acknowledge the cordial assistance rendered me by the Agent-General and his Secretary (Mr. Yardley) in obtaining the best facilities for visiting all these buildings, and, so far as the Continent was concerned, in obtaining the necessary letters of introduction from Lord Salisbury to the several Ambassadors and Ministers.

As regards the Government buildings visited, the general impressions I have gained are that in asylum and post-office work quite the most modern improvements and systems have been adopted, and in that relating to prisons and police stations the work is of a more stereotyped character; but while there are many items of interest in the latter, I am of the opinion that the Government buildings of this Colony do not suffer by comparison.

It is in works of private enterprise that one sees the immense progress in all matters relating to the building art, and in all classes of buildings it is everywhere apparent that in sanitary matters and fittings the arrangements are hardly possible of improvement; while the use of English fittings and appliances appears to be universally adopted on the Continent, both in hotels, steam-boats, railways, and public buildings. Hitherto the best of these fittings have not been used, except to a limited extent, in Australia, possibly owing to their cost, but doubtless suitable opportunities for so doing will arise.

I also visited several of the most important factories for sanitary ware, and Messrs. Bradford's laundry works, and Messrs. Chubbs' safe-works.

One of the most marked improvements in London and the large provincial towns consists in the construction of public underground lavatories, fitted up by the best makers in a most complete manner, and producing in many instances, I understand, a handsome return upon their cost.

On visiting the Royal Mint, I made a close inspection of the whole of the extensive premises. The coinage of silver, just then in full operation, was produced from the same plant as that used for the gold coinage, and I was somewhat surprised to find that in so large an establishment no separate plant exists, while I was informed that nearly the whole of the gold coinage of the British Empire is now produced by the Australian mints. The buildings are old, and consequently not well arranged. Extensive rebuilding of some portions is now proceeding, and the engineer-in-charge informed me that (upon precisely similar grounds as those existing in Sydney) the works were being carried out on the day-work basis as distinct from contract, and by men specially engaged.

As regards theatres and public places of amusement, the regulations laid down for fire-proof construction, and sufficiency of exits, &c., are most rigidly enforced, and in cases of recent buildings of this class, sites bounded by at least two streets, and sometimes three, are invariably secured to the great diminution of danger by fire to adjoining properties. This is in marked contrast to the conditions of the sites of some of the theatres recently erected in Sydney.

I made particular inquiries as to the policy of the Works Committee of the London County Council with reference to open competition amongst contractors, to the introduction of day-work, and to the use of the minimum-wage clause. I could, however, gain very little reliable information upon these points, as they are all passing through an experimental and critical stage, and are the subject of great controversy, due probably to the action of the responsible officers of the Works Committee in so dealing with day-work building accounts, as that factitious total costs have been arrived at, possibly in order to obtain results in accordance with the principles (for or against day-work) in vogue with the majority of the Committee for the time being. The administration was so much under a cloud, and party feeling was so high, that, as before stated, nothing of any value could be obtained.

As regards open competition for contract works, from what I heard, a system of selection has grown up. I have further on reported in connection with Metropolitan police stations, that about thirty contractors are on an approved list, and are invited to tender for works to be put out. In post offices an unrecorded selection at the discretion of the Architect's Branch has become adopted, while in the asylums, which are erected by private architects in private practice under direct commission, those architects take care that none but tried contractors, mostly personally known to themselves, have an opportunity of tendering.

I found in the specifications also no hesitation in mentioning makers' names of special fittings required, to the great advantage of the buildings. This is the universal practice of the profession in England, and has encouraged certain manufacturers to produce special articles of the highest excellence, and of the latest invention, the large amount of business that comes to them through this channel producing the capital necessary for these very extensive undertakings. The absence of this custom in the work here has in some instances placed the Department at a disadvantage, and it has been found impossible to refuse to accept articles and fittings up to a certain standard submitted by the contractors and of unknown make, while those of a special maker would have been preferable.

With regard to the carrying on of works on a day-work basis, my observation went to show that there is a tendency both in London and in the Municipalities to adopt the system in such cases where works are of a highly technical character, and where perfection of execution is of more importance than either time or money. I did not find any decided movement towards the minimum-wage rate, excepting, as I before mentioned, in connection with the London County Council.

Generally speaking, the rule in building matters is to determine by public competition, and in the higher class of work to restrict tendering to approved contractors.

I feel that the advantage of having seen so much modern work will prove to be of great assistance to me in the duties of my office, and I trust of equal value to the Government. I have been able to compare both our classes of buildings and the mode of construction with those adopted in England and on the Continent, and the result has convinced me, after an absence of ten years (that being the period that has elapsed since my last opportunity of seeing modern work), of the great value of a revisit, from a professional point of view.

I was everywhere struck with the importance given to the sites for public buildings. London was, up till recently, an example of the neglect of this important feature, most of the public buildings and the sites being anything but roomy and dignified; of late years, however, the authorities have fully awakened to the importance of this, and enormous sums of money have been spent in redeeming the mistakes of the past—wide, well-formed streets have been cut through the denser portions of the city—the surroundings of public buildings have been enlarged by demolition and otherwise—and the now completed series of public and palatial private buildings overlooking the Thames Embankment present an appearance, owing to the beauty and openness of the sites, unequalled in the world.

In the Continental cities I visited the importance of open sites has always been held in view, the consequence being that, with hardly an exception, the notable buildings are well placed. Unfortunately, this cannot be said of Sydney, except in a few instances; and in the event of the erection of new Parliament Houses and Law Courts, I would urge that the greatest possible attention be given to, and the broadest views taken of this important matter.

The following special reports upon the classes of buildings are necessarily very much condensed, and contain but few details, but it may be understood that a great deal has been impressed upon my mind which it is not possible to state fully. I also have the advantage of having obtained plans and sketches, and promises of more should they be at any time required:—

### Prisons.

The prison I particularly wished to see, and about which the Comptroller-General of Prisons had specially desired me to make inquiries, is that recently established for female prisoners exclusively, at Aylesbury. I accordingly made the necessary arrangements, and paid this institution a visit.

Prisoners under sentences of nine months and upwards are drafted here from all parts of the country, although, at the same time, those on shorter sentences, I understand, under certain circumstances, are also confined. On my visit the total number of inmates was about 230.

The prison is under the charge of a governor, who is also medical superintendent—an arrangement which, I believe, is working well. He has the necessary warders and male attendants for heavy and guard duties, and a matron and female warders for dealing directly with the prisoners.

Having heard a great deal as to this modern institution, I anticipated finding a model structure, embracing all the latest improvements applicable to prison construction and administration; but I regret I was doomed to disappointment. The buildings are really an old county gaol, converted and added to for the purpose of its present use, while the additions have been made in the most economical way possible. The governor, I understand, is much hampered in consequence of the defective planning, and finds it difficult to carry out his duties efficiently.

After a very close investigation, and obtaining all the information that I possibly could upon the special subject of exclusive female prisons, and having the first experiment of Aylesbury fully in view, I formed the opinion that should such an institution be contemplated in this Colony, it would tend more to economy and efficiency to erect a building specially for the purpose, rather than convert existing premises, even if the first cost appeared smaller.

The original wings at Aylesbury are occupied by the prisoners in separate cells, and as these are not of modern construction, they call for no special comment.

The kitchen, bathrooms, storerooms, and offices generally are very inferior, and the cooking is done with a plant that in this Colony would be unhesitatingly condemned.

All prisoners, being lodged in separate cells and confined there, except when in the exercise grounds or in the associated workrooms, have no communication with each other, and they are practically treated on what is known as the "solitary system," the conversation when associated at work, I understand, being extremely limited.

The laundry is used only for the washing in connection with the inmates themselves, and consists of a central room containing a small plant, and that of a simple description, and a series of compartments ranging round the room, about thirty in number, as illustrated in the accompanying sketch. These compartments are entered from the central room and lighted from the outside wall, and are fitted internally with

with the necessary washing-troughs, batten dressers, and water supply. The object of this arrangement is for one prisoner to be located in each compartment, with a fixed amount of work given her when she is locked-in in solitary confinement during the hours of labour. The Governor, however, informed me that this mode of treatment is considered too severe, and his practice was to use the system in special cases only, and generally have all the laundry work done in association.

The endeavour to make this prison an industrial institution may, I understand, be considered as successful. Every able-bodied prisoner is at work. Some are engaged in making and repairing under-clothing for the inmates of prisons generally; others again are engaged in making up the lighter class of mail-bags for the postal authorities, while others are employed in making twine, also for post office use. This latter occupation is done in a long shed in which a rope-walk has been set up, and here the inmates prepare the material, make the twine, and with the aid of simple machinery, wind it into balls of given length, and finally form it into packages. I understand that the demand is so constant that full occupation is found for a considerable number of women in this industry. It is well adapted for female labour, being of a light and healthy character, and its adoption is well worthy of the consideration of the prison authorities of this Colony.

All the prison cleaning, except of the heaviest character, and all the cooking, is done by prison labour.

The open areas within the prison walls lack the careful and, to an extent, attractive garden appearances of some of the best prisons in this Colony, but the ablest-bodied of the inmates are engaged in the cultivation of vegetables for prison use, and I was shown a vegetable garden patch the whole length of one side of the prison premises, about 100 yards by a width of about 20 yards, which was cultivated, and was then bearing heavy good-looking crops, chiefly potatoes, cabbage, onions, carrots, &c.

There is a commodious chapel attached to the prison. Like all English prisons where the prisoners are lodged in their cells, except when specially employed, there is no attempt at relieving the gloomy appearance of the yards generally by cultivating shrubs, flowers, and grass.

Owing to these buildings having been erected at various periods, it was not possible to obtain any idea of the cost, and I could well see that had that information been procurable it would have been of no practical use.

Aylesbury is a country town, situated about 35 miles from London, and the prison is about 1 mile distant from the town boundary.

No provisions are made for executions in this prison.

With regard to prison industries, the only actual and thoroughly industrial prison in England is that at Wakefield, in Yorkshire, and prisoners only are here confined who are able-bodied and are conversant with some operative trade. It is the centre of the commercial dealing with prison products, and every opportunity is taken to produce articles which can be done with a minimum plant, and, at the same time, without injury to outside trades, and that are likely to produce some financial result.

As circumstances so vary in this Colony with those governing the Home prisons, I do not suppose it is possible to institute a similar prison; indeed, the present system seems more preferable, namely, that in which the inmates in every first-class prison in the Colony, so far as is possible, are given occupation.

The two large convict establishments in which hard out-door labour is carried on are those of Dartmoor and Portland, the systems of which are somewhat similar to those at Trial Bay.

With a view of inspecting the miscellaneous industries carried on in a partial manner at other well-known prisons, I visited those at Wormwood Scrubs and Wandsworth.

The former was erected recently, partly to take the place of the old penitentiary at Millbank, which has now been demolished, while the latter was erected to provide for the increase of prisoners, consequent on the increase of the population of London generally.

The general appearance of these prisons during the day-time differs considerably from that of the first-class prisons of this Colony, inasmuch as with the exception of the prisoners visible in the workshops and on the exercise rings none are either seen or heard, although it may be that the accommodation of the prison is fully taxed. The prisoners are lodged in separate cells, and there they remain day and night, except for the purpose of exercise, and in some cases occupation. There is a large number of prisoners, however, whose occupation is carried on in their respective cells in a manner similar to that adopted at Berrima. Amongst other occupations progressing in the cells, I noticed that of weaving a very creditable class of Axminster rug on simple looms fitted into spare cells, in which prisoners do not sleep; also the preparing for and making of every description of fibre mats, and the coarser and heavier work in connection with postal mail-bags, this latter being carried on in a very systematic and regular manner, the demand of the Postal Department being very constant and considerable.

The special labour workshops in both these prisons are constructed in some cases with a view to the isolation of the individual, and in others to the isolation and grouping of trades—the whole being under the direct oversight of the warders. In one case, namely, that of the shoemakers and tailors' shops, each prisoner is confined in a compartment (*see* plan attached), with side partitions shutting off communication from those adjoining, open in the front towards the raised warders' platform, and also opened to a gangway in the rear, backed on to the outside walls, against which stands a range of benches and tool-racks for the larger class of work, and each compartment is furnished with a suitable bench and stool.

This arrangement for separating prisoners, however, I was given to understand, is somewhat objectionable, as the warder, in his frequent beat up and down the whole length of the platform, becomes obscured by the partitions from all but those prisoners immediately to his right and left, and the supervision, therefore, is not perfect. To obviate this, other workshops have been planned, notably those for carpenters, smiths, fitters, painters, &c., with compartments formed by dwarf walls about 4 ft. 6 in. high (*see* also accompanying plan), down the centre of which, also, is constructed the warders' platform. The supervision here is uninterrupted, and in all cases very favourably commented upon by the officials with whom I came in contact.

In no case did I find that the warders' gangway was closed in by wire-netting as a protection against attack, while, on the contrary, the flights of steps leading to the gangways opened into some of the compartments. This latter arrangement appears objectionable, and in the accompanying sketch I have shown them as outside the building, so that no facility should be given to a prisoner to mount the gangway.

For hard-labour and punishment drill, there is a building at Wandsworth (*see* accompanying plan) containing twelve separated cells, six on either side of the usual raised platform, but opened to the platform, and approached from the rear. Through each set of six cells is fitted a crank shaft for pumping purposes, and

and so regulated as to require the united efforts of all six or twelve prisoners, as the case may be, to work the gear. This appliance takes the place of the older treadmill, and I am rather of the opinion will, before long, also follow it into the past.

In neither of these prisons did I see any other than the ordinary industries carried on, excepting those for the post-office authorities beforementioned; and, as is the case in this Colony, the same difficulty presents itself in finding occupation.

I inspected the punishment cells generally, and found that, intentionally, they are not so severe as those in this Colony; in no case, I was informed, throughout the whole country was there such a thing as a "dark cell" in use; and, while the punishment cells were as much as possible isolated, and in some cases, in a separate basement, the punishment consisted more in the severe regimen and incarceration, than in the physical and mental pain of absolute darkness.

Wandsworth Prison contains a very useful set of cells for the first accommodation of incoming prisoners previous to their classification, and also for the final dealing with time-expired prisoners. In large prisons of this character, containing upwards of 1,500 to 2,000 inmates, such arrangements are extremely useful and necessary.

These prisons have special buildings erected as bathrooms, that in Wormwood Scrubs containing fifty-four baths, each in its own partial enclosure, and partly open to the broad gangway patrolled by the warders. This arrangement I consider superior to the arrangements for bathing in the prisons of this Colony, and the plan has been noted for future use.

The kitchen and offices, though on a larger scale than those here, are in no way better fitted up—cooking by steam, as also in this Colony, has been found the best and generally adopted.

Special cell fittings and conveniences, such as doors, locks, provision for inspection, cell windows, &c., are not, as I also noticed to be the case in police buildings in London, nearly so perfect as in this Colony; apparently older types have in a conservative spirit been still adhered to.

There is no electric light in any prison in England, and I understand that the authorities do not expect its introduction. The lighting is chiefly by gas, each cell being lighted, but in many cases, I found, in a manner that we here consider as very undesirable.

Every cell, also, has its bell communication, and many have wood floors and ceilings, with the corresponding difficulty of keeping clear of vermin. They are, however, warmed by hot water in the winter, and appear to be well ventilated.

Each prisoner is provided with a wooden-plank bed and limited bedding, and a small table and stool, besides one or two shelves in which to keep his regulation articles and books, no doubt the long incarceration making it absolutely necessary that some such personal comforts should be allowed.

On inquiry I ascertained that in no cases are night-tubs used in the cells, but the prisons are provided with water-closets and lavatories, a suite of such being generally placed on either side of the wings about half-way in the length of cells, and, of course, on each floor. The closets are fitted with half-doors, and the lavatories are quite open, so that supervision is always possible.

Owing to the cell treatment of prisoners, and to the fact that they are never allowed in the yards excepting when exercising in the rings, which latter are of greater length and more extent than those in vogue in this Colony; there is no need, therefore, for watch-tower and platform provision, and consequently these adjuncts are not to be found. For the same reason, I presume, the yards present a most gloomy and heavy appearance. No trees or shrubs have been planted, and no flowers cultivated, and the whole has a most depressing effect. I am certainly of opinion that the practice in this Colony of employing prisoners on flower and vegetable cultivation is the better of the two.

I was not able to obtain any definite information with regard to penitentiaries for short-sentence prisoners, vagrants, and petty offenders; indeed, the matter is still under consideration, and no establishments have as yet been erected for this object.

The same also applies to establishments for inebriates, and, so far as I could form an opinion, I should say that the authorities in this Colony are quite as well able to initiate this system successfully as those at Home.

I should have liked to have paid a visit to the Broadmoor Criminal Lunatic Establishment, although I was quite certain, from all the information I obtained, that so far as the arrangements of the buildings were concerned, they were not of the latest description, and there would not, consequently, be much fresh light to be gained. I was disappointed, however, by finding that it was neither under the control of the Lunacy Commissioners nor under that of the Comptroller of Prisons, but directly under the Home Office. This being the case, I further found difficulties in the way of obtaining an *entree*, which time alone could have got over, and this I could not afford.

The large class prisons contain a few observation cells for suspected lunatics, but the provision of padded cells is very rare.

### Police Buildings.

For years the construction of metropolitan and country districts police buildings has had the closest attention of the Inspector-General of Police of this Colony and of this branch of the Public Works Department, resulting in the impression that this class of building here, is at least equal in most respects to that erected under the London County Council.

In order to be able to be in a position to form an exact opinion on this point, and also to obtain all information possible, I put myself in communication with the police authorities, and, as a result, had all the information I required placed at my disposal.

I closely examined the whole of the plans of such metropolitan and suburban police stations as had undergone alterations or had been erected during the last few years, or are now being erected. Many of the older buildings, although much improved, are out of date; others have undergone a modern rearrangement and enlargement; while others again have been altogether erected on the most modern of plans, though, in some cases, on very confined sites.

I was informed that should I at any time desire tracings of any of these plans or particulars, and information was so sent through the Agent-General, no difficulty would be placed in the way of their being forwarded to Sydney.

In connection with the erection of new buildings, the designs disclosed the general tendency to give the exterior of the buildings a less forbidding look and cold classical appearance than formerly, and in the case of several of the suburban ones, they presented very similar appearances to many of the more recent ones erected in the country districts of this Colony.

It is gratifying to be able to report that, as a whole, the New South Wales modern police buildings compare most favourably with those in England, and, in some respects, I am of the opinion, are superior.

For the sake of comparison, and for general information, I was advised to inspect buildings of three distinct types, namely, the rearranged existing central police station at Chelsea, a new metropolitan station at King's Cross, and a small suburban one at Willesden.

I found the arrangements of the metropolitan stations, so far as the police themselves are concerned, who do all their parading and mustering on the premises, perhaps more complete and comfortable than those adopted here. Besides containing comfortable messroom and kitchen, each constable has a portion of the general dormitory partitioned off into a cubicle for his own separate use, and this, while containing a sufficiency of cubic air-space, is also fitted up with little conveniences and specially-designed, self-contained furniture. The accommodation for washing is by one general lavatory per floor, with bathrooms, &c., attached. A specially-constructed room for drying both police and prisoners' clothing is provided, generally in the basement, and this convenience is found to be of considerable use.

The quarters also contain well-equipped billiard, reading, and smoking rooms, and a special effort appears to be made to complete these as comfortably and as attractively as possible. The inspectors informed me that it is found a great convenience to attract and retain the single constables within the building when not on duty.

The furniture for these rooms, I understand, is all found by the department, the men having their library and newspaper funds amongst themselves.

Of course, such accommodation as the foregoing is necessarily applicable only to large centres, and it is well worthy of consideration whether as opportunity occurs such provision could not be made in the establishments at the Central Police Station and Belmore Barracks, Sydney, and possibly at Newcastle and Broken Hill.

Making all due allowance for the differences of administration between that of the metropolitan area and of this Colony, the arrangement here for the retention of prisoners compares more than favourably with that in the metropolitan district. I found white glazed lining bricks, from economic motives, too sparingly used, consequently the walls in many cases looked very grimy and lacked a sense of cleanliness inseparable from white glazed bricks. The lighting of the cells in many cases was indifferent, and sufficient care had not been exercised to isolate it from the adjoining properties. The admirable provision in the Sydney lock-ups for the continuous observation of drunken and sick prisoners by means of large grilled openings does not exist, while the distinctiveness of arrangement as between male and female prisoners does not appear to have been considered. I noticed cases in which female prisoners would be confined in cells immediately adjoining those in which male prisoners were confined, and although detention is of a much shorter period than with us, it appeared to me to be objectionable.

Some of the women's cells were lined with a new material called "Opalesque," which answers apparently the same purpose as glazed bricks; but as it is only placed on the walls in very thin layers, and that, I understand, only experimentally at present, I am quite prepared to find that in course of time it will be much damaged and rendered useless.

The lavatory and washing accommodation generally is provided for with better fittings and in a more complete manner than in Sydney; and until a complete system of sewerage is available for all police stations in the metropolitan area it will not be possible to come quite up to the standard of the London ones.

Padded cells are the exception, and very rarely fitted up or required; the only one I saw was inferior in material and construction, for instead of being spring-fitted and faced with hides, it was coarsely stuffed and faced with painted canvas.

The heating of cells had received much attention, as also the ventilation, and, while the former is not required in Sydney, the latter offers several points for careful consideration.

The artificial lighting is, of course, by gas, and in no instance did I find that the electric light had been introduced. The gas fittings in all cases were within the cells.

I generally noticed that the cell-doors, locks, hinges, flaps, &c., are constructed of composite material, wood, and iron, and of a type, I am of the opinion, less efficient and suitable, and not so modern as those adopted in New South Wales.

The inspectors' offices, charge-room, &c., are very similar to those in use here, special provision, of course, being made to meet any special circumstances.

The small suburban station at Willesden, already referred to, contains very moderate quarters for a sergeant, with a couple of cells about which there is nothing specially to remark.

I took advantage of an opportunity also of inspecting a commodious new station just approaching completion under the city police, in a street near the Tower Bridge. It was apparent that a large sum of money had been expended upon this building, which externally presented considerable architectural effect, and internally was designed and fitted in a somewhat elaborate and complete manner; I noticed in the planning and conveniences very much the same characteristics as those under the London County Council, and already referred to. In this case an unlimited and very proper use of glazed white bricks had been adopted.

I also inspected more or less modern country and municipal lockups in Bucks, Monmouthshire, and Sussex. In some of these the type was quite obsolete, and in others no general and strikingly suitable plan seems to have been adopted, owing, no doubt, to the varied authorities under which they have been erected.

An opportunity was also given me of looking over the new and extensive range of buildings erected for metropolitan police purposes, on the Embankment at Whitehall, and called "New Scotland Yard," taking the place of the "Old Scotland Yard," about to be demolished as unsuited for modern purposes, and as necessitated by the recent improvements to the neighbourhood. The new building is a striking one, standing on its own land, with roads and outlooks on all four sides, and very convenient access both to Parliament-street on the one side and the Thames Embankment on the other. It is erected in stone, with striking circular turrets on the four corners, and internally it has an open court-yard. As a result the building is of very simple planning, and every room is well lighted, while access is rendered easy by the various lifts and staircases.

The building contains accommodation for the Chief Commissioners of Police, the Board of Administrative Officers, the Surveyor (Mr. Butler), who attends to all buildings and building properties in connection with the police district, and paymaster's branch. It also contains ample accommodation for the detective branch, with its strong rooms and museum, and is, I am informed, a thoroughly useful building and a success.

It was here that I inspected the large number of plans, and received the assurance as to the intention of giving any further information, already referred to, and received from Mr. Butler and his officers every assistance.

On making inquiries of Mr. Butler as to the practice adopted with regard to tendering for police buildings, he informed me that he was not required to run the risk inseparable from public tendering, but had been able to compile a list of about thirty respectable and experienced contractors, and these only received invitations to tender. His arrangements for clerks of works' supervision is similar to that in this branch, namely, all works of £2,000 and upwards have a clerk of works, if possible, separately appointed for them, whilst smaller undertakings are grouped and inspected from time to time.

### Post Offices.

Owing to the courtesy of the Postmaster-General, I had a good opportunity of viewing the large buildings at St. Martin le Grand associated with the general postal business of the country.

The original building, which stands four-square, and covers a large area, now accommodates only the postal and parcels postal branches, the telegraph business, and the telephone exchange. I understand the constant increase in these, the most important branches, has gradually pushed out the Ministerial and administrative and the financial (including Savings Bank) branches into other quarters.

The Ministerial and Administrative branches are now located in their newly-erected large building adjoining, while some years since, and prior to my last visit to London (ten years ago), the Savings Bank and Postal Order business had also been accommodated in a new building, and connected with the parent one by means of a subway.

A great feature of the building, devoted to postal, telegraph, and telephone business, appears to be the large, uninterrupted, open rooms in which the services were being performed. The postal business has been so often described that it is not necessary for me in this case to enter into technicalities, excepting to say that as little partition work as possible seems to have been adopted, and one subdivision of the service adjoins another without any structural hindrance.

In the telegraph department, particularly in the operators' floors, the whole of the four long wings are altogether open, making a continuous circuit round the central court-yard. On this floor are accommodated many hundreds of telegraph operators, their instruments and fittings being arranged in the most perfect precision. This is one of the sights of London, and the beholder is struck with the sense of order and ease of supervision which this arrangement provides.

The telephone work is not of so extensive a character as I anticipated. It was explained to me that this building contains (and that in a transitional state only) an exchange of exchanges, and not one general exchange for London, the business being still to some extent in the hands of private companies.

It may be thought idle to compare the arrangements for the huge departmental business of London with the more moderate business of Sydney; but on inspecting these premises, my previous convictions that all additions or alterations to the latter buildings should have in view the removal of the financial and Administrative branches, was much strengthened; so much so, that in dealing practically with the question I propose making my recommendations quite in that direction.

I believe, from the experience gained by the London authorities, the truest economy is to face the inevitable increase of postal and all other business in good time, so that all expenditure may be in a right direction and with the least dislocation of the work of the Department.

I made inquiries as to the general policy of the Government with regard to suburban and local post offices in provincial towns. For many years the policy of the British authorities has been to subsidise, as much as possible, tradespeople in small country places having suitable premises and suitable trades to undertake postal business at a comparatively small annual remuneration. This is, to a large extent, still in vogue, and has no doubt saved the Government from a large capital expenditure, but I find that specially-designed post offices are now being erected in greater numbers than formerly in such districts and towns where increase of business warrants this step. As an instance of the large expenditure, I may state that at the present moment the post office in Liverpool is being enlarged at a cost of upwards of £100,000, and a new post office is being erected in the Bloomsbury district of London at a cost of £33,000.

Mr. Tanner, the architect to the Postal authorities, informs me that his present yearly expenditure in the erection and improvement of buildings is about £300,000.

I took advantage of Mr. Tanner's kindness, and examined, at his offices in Whitehall, a large number of plans for suburban and country town post offices, some already erected and others in course of erection, and I obtained from him a number of departmental drawings of the most recent details in fittings for offices, which I have placed in the departmental library.

I also inspected the large building in Bloomsbury before referred to, and I found that the authorities were modernising their post office arrangements, particularly with reference to the open counter accommodation for the public, on precisely similar lines to those which I have recommended and adopted during the last few years in this Colony, both to the advantage of the Department itself and the convenience of the public.

With regard to telephone arrangements in the public streets, I was very much struck with the system adopted in Stockholm, of conveying the innumerable wires to central skeleton tower erections in the immediate neighbourhood of the exchanges. Without going very fully into the principles of the system, it seemed to me that there is a good deal to commend it, as the unsightliness of a great number of wires carried in all directions and at all angles is almost entirely avoided.

### Hospitals for the Insane.

In order to compare the system adopted in the erection of these institutions in New South Wales with the best types in England, I made special and interesting visits to such as I was advised should be seen.

My first visit was to that at Morningside, Edinburgh. This institution, situated a few miles out of Edinburgh, consists of two groups of buildings. One, the earlier and most extensive, is used for pauper inmates of that part of Scotland, and although a fairly modern structure, presents no very special features for observation, except as a means of comparison with those here.

The second portion, called the "New West Branch," on the contrary, consists of a group of buildings recently erected on the grounds of an old mansion, "Craig-house" (much like that at Callan Park), the latter having been made an integral portion of the whole. The buildings have been erected for the accommodation of paying patients, and I was there informed that payments are made in accordance with the accommodation given, at rates varying from £100 to £500 per annum. It is built to accommodate 200 patients, and has cost, without the purchase of the estate, upwards of £170,000, or at the rate of £850 per bed.

Ascertaining these particulars, I was somewhat prepared for the extreme elaboration of the design, both as regards its architectural appearance externally and its arrangement and decoration internally. In every direction expense has been lavishly incurred, the fittings being of the very best class obtainable, and the furnishings on a scale equal to many high-class hotels. I could see at once that nothing of the kind is likely to be required in New South Wales, unless, perhaps, on a most limited scale, at some future day; but this establishment contained many points which were of great interest.

Owing to the nature of the site, and the adoption of the separate pavilion system, the institution has the appearance of an assemblage of fine houses scattered through well-timbered grounds. I found the whole were connected by an extensive series of underground corridors, well lighted and warmed, which also serve as special ways for all pipes, leads, and wires. This system I also found adopted elsewhere where it was necessary, owing to climatic and other reasons, to have such means of communication.

The sanitary arrangements are very complete and elaborate, and include generally the best class of fittings, excepting in the matter of baths, which are inferior to those used in this Colony. I did not find in this or any other institution I visited the adoption of the Gegenstrom, as at Kenmore, although I found that sanitary ware and fittings manufacturers were alive to its advantages.

I was given to understand that no institution in the world approaches the "New West Branch" in completeness, down to the very smallest details, and although the cost appears enormous by comparison with that of some of the large hospitals in London, it is not excessive.

The cost of the new hospital at Kenmore, it is estimated, will not exceed from £150 to £200 per bed.

As the most modern and best of the metropolitan asylums, and more closely in comparison with those of this Colony, I was advised to visit Claybury (Dr. R. Jones, medical superintendent). This collection of buildings stands upon a fine elevated site near Woodford, in Essex, and is one of the five large asylums used for the metropolitan area. To give an idea of its extent I may state the medical superintendent informed me a perambulation of the whole of the buildings and connecting corridors involved a walk of about 10½ miles.

As the building has been recently erected the most careful consideration has been given to the details, and I was glad to make an exhaustive inspection of such parts as could be of interest and value, and, as in all other instances, every facility was given me for so doing. The pavilion system chiefly is adopted, but not being in echelon, as at Kenmore, and the several blocks being connected by intermediate buildings, there appears to me to be a sacrifice of the sunshine in some of the enclosures and court-yards, as well as a want of direct lighting to some of the rooms and wards.

The classification of patients is pretty much the same as that adopted by Dr. Manning in this Colony, though the wards are larger than Dr. Manning considers desirable.

The enclosed exercise yards, for the more refractory patients and those requiring closer supervision, are not so distinctive a feature at Claybury as here, and one misses the highly-cultivated gardening and shrubbing we are accustomed to. The "Ha Ha" fences to these enclosures, so universal and satisfactory in New South Wales, are very little used in English asylums, and at Claybury only a light iron fence, about 4 feet 6 inches high, is erected, and which appeared to me to be both insecure and dangerous to the patients. Several medical officers expressed to me the wish that "Ha Ha's" were more generally adopted.

I noted that all the sanitary arrangements were good, while the lavatories and bathrooms, although in separate cubicles, were grouped into one central set for males and females respectively, instead of being distributed amongst the wards, as in our institutions.

Ample accommodation is given to the public to visit their patient friends, as also the general administrative and executive officers; and the kitchen is probably the most complete ever fitted up, the cooking being done by steam, fire, and gas, on the same principles generally as in vogue in this Colony, with more elaboration of plant, but not necessarily with more efficiency.

The padded cells are lined with vulcanite rubber facings to the cushions, in preference to hides, and I was given to understand that they are more cleanly and equally as indestructable as leather.

The proportion of single rooms to day-rooms and dormitories, regarded in the classification of patients, has apparently been followed very closely on the lines adopted by Dr. Manning.

The chapel is a most beautiful and dignified building of pure ecclesiastical design, and is capable of seating a congregation of about 1,500. A recreation hall is also part of the establishment, with similar accommodation.

The extensive network of corridors, touching almost all portions of the institution, is lighted, warmed, and paved, and apparently of endless lengths, the long winter conditions of England no doubt rendering such adjuncts very necessary.

Included in the institution is a complete building for pathological research, and it contains mortuary, refrigerating chamber, dissecting rooms, laboratories, museum, &c.; the intention being at some future day to enlarge upon the work of investigation now performed there upon the dead from the institution, and to form a school for the study of diseases of the brain. The accommodation and plant provided in the refrigerating room is, I understand, in daily use, every corpse as it is removed from the institution being at once refrigerated before *post-mortem* takes place.

At Claybury, as also at Morningside, and every other institution of modern construction, electric lighting plants of a most extensive character are in use, and the machinery and the necessary buildings have

have been erected on a scale far in advance of anything contemplated or attempted in the Colonies. The guiding principles appear to be ample power, the best of machinery, plenty of space, light, and ventilation. It is needless to say that under such conditions the electricians have brought the lighting, and in some cases the motive power, supplied to these institutions to a state of great efficiency.

In speaking of electric lighting plant generally, I might here remark that wherever I have seen its installation, both in England and on the Continent, I have been struck with the great prominence and importance given to it, and found it contrasts only too favourably with the somewhat makeshift and experimental way in which, perhaps, we have been accustomed to treat it in New South Wales.

Altogether, Claybury impressed me as an excellent model in many respects for future guidance.

I also visited asylums of not so recent a date, including Hanwell and one county asylum, and although recent additions and improvements have been made to these somewhat obsolete buildings, they offered no field for notification that will be of much service.

The Lunacy Commissioners control a very large number of asylums, there being no less than fifty-five in the counties, and fifteen in the boroughs of England and Wales, exclusive of Scotland, while the lunatic hospitals under their control number fourteen; the idiot asylums, five; Naval and Military hospitals, two; and to a limited extent the one criminal lunatic asylum at Broadmoor.

In erecting new buildings spread over so large and densely populated a country, it has been found to be convenient for the several county councils and boroughs to commission architects of repute to erect these buildings, the plans having been first submitted to, and approved of, by the Commissioners. In no case could I find that public competition had of recent times been instituted, no doubt experience of former times having been sufficient in that direction.

During last year the Commissioners examined and approved of the erection of the following new asylums, some of which have already been commenced, namely:—

	Patients.		Acreage.
	Male.	Female.	
Bexley Heath .....	600	1,100	139
Winwick, Lancashire .....	1,000	1,000	206
Cheddleton, Staffordshire.....	400	400	175
West Sussex .....	300	300	246
Borough of Middlesborough .....	125	125	98½

The officials in London have supplied me with lithographic plans of the above-mentioned asylums, and making allowances for the difference in climatic circumstances, a comparison with the institutions of New South Wales is not at all unfavourable to the latter.

### Consumptive Hospitals.

The only consumptive hospital within easy distance of London is at Brompton, and, although there are others scattered along the south coast of England in sheltered situations, these are all of a smaller character, and not so well and favourably known as the former.

I made it my business to obtain *entree* into the consumptive hospital at Brompton, particularly into that of the newer portion, a distinct range of buildings on the opposite side of the Brompton-road, but connected by subway. My inspection was a complete one. The hospital embraces an extensive range of buildings erected some years since, and the second range, already referred to, erected within the last two or three years, in which latter, improvements, gained by experience in the administration of the former, have been adopted.

The newer building at the time of my visit was temporarily vacated for the purpose of painting and cleansing.

I found the wards to be of all sizes, up to and not exceeding accommodation for eight patients. The air-space per bed was large, and great attention was paid to the lighting, warmth, and ventilation.

The corridors adjoining the wards are in each case of ample dimensions, with large deeply-recessed bays, and the whole is comfortably furnished, warmed, and lighted, so that patients can have both exercise in the corridors and the comfort of sitting-rooms in the recesses.

The building is of three floors in height, so far as the patients are concerned, and the wards are classified as much as possible, being based to a great extent upon the several stages of the disease.

Large lifts, constructed to carry couches and bath-chairs, and easy staircases give access to the upper floors.

The difficulty of obtaining anything like a pure atmosphere at Brompton, a circumstance not likely to occur in this country, is met as well as possible by the provision of a large shaft raised above the highest portion of the building, down which the upper stratum of air is drawn into the basement, and then distributed.

This hospital contains, I believe, the only example of an air-chamber specially constructed for treating patients with compressed air. It is circular in form, constructed of iron, with air-tight door and valves, and is capable of seating half a dozen patients. These patients, I understand, use it for from half an hour to two hours per diem, under air at various pressures, and being artificially lighted and warmed, it is made into a comfortable lounge. What the result upon the patients is I am not in a position to say.

After a careful examination of both buildings in every portion, I was forcibly struck with the more advantageous conditions under which a hospital of this character could be conducted in New South Wales than in the murky and surcharged atmosphere of Brompton, although the results that I ascertained on my visit showed me how even under these unfavourable conditions much good can be accomplished.

No very special features are required for hospitals for patients of this character; light, air, and warmth in the corridors and day-rooms, the minimising of numbers in the wards, and well arranged protection for outside exercise, together with good administration, appear to be the main points to be considered.

Infectious

## Infectious and Cancer Hospitals.

Wishing to see the latest type of this class of building, I was recommended to visit that recently erected at Newport, in Monmouthshire, and now in working order. I found it to be built on the isolated pavilion principle, with accommodation for about eighty patients, and extensive and complete administrative buildings. The buildings contain points of interest, which I have carefully noted, but about which it is perhaps hardly necessary to enter into the details of in this report.

## Parliament Houses.

I took the opportunity of visiting the building at Westminster, although I was previously fairly well acquainted with it, in addition to which the office possesses plans of its several floors.

One of the points upon which I was recently examined before the Public Works Committee in reference to the proposed new Parliamentary buildings dealt with the question of the distribution of the *Hansard* and public Press representatives in the two Chambers, and I therefore made particular inquiries as to what the arrangements were. I found that in the Commons neither the *Hansard* nor public Press are accommodated on the floor of the House, but in their own special galleries behind the Speaker's Chair. As regards the Lords, I found that although the same general arrangement exists as in the Commons, yet upon occasions the *Hansard* staff has been accommodated on the floor of the House, owing to the inaudibility of several of the Peers, but I could not ascertain that any of the Press had been granted the same privilege, all my information pointing to the contrary.

The lighting of the Lords is entirely through traceried and stained-glass horizontal windows on either side, and the artificial lighting is by means of pendants, &c. The Commons is lighted in the daytime by similar windows, and at night-time by artificial light behind a glazed ceiling. In all cases the lights are filled with stained glass of rich hues, depicting historical subjects. In neither House is ventilation in any shape or form introduced through the windows; but is all controlled by the plant erected in the clock tower and the connecting shafting. In summer cool and cleansed air is introduced in the basement chambers through coarse canvas soaked with iced water, the effect being to extract the dust and dirt inseparable from London atmosphere, and to reduce it some degrees in temperature. It has, however, been found that the air so dealt with is too highly charged with moisture. In the winter the air is passed through similar screens, only dry, and then warmed before being passed into the Chamber.

At Copenhagen I was disappointed to find that the Legislative Chambers, which formed part of the Royal Palace, had been destroyed by fire, and accommodation of a temporary character was being used, pending dealing with a scheme for the erection of new buildings. In these buildings provision will have to be made for sixty-six Members of the Upper House and 114 of the Lower House.

Again, at Stockholm the two Chambers meet in their old and featureless Government buildings, from which I could gain no suggestions. The Diet consists of two Chambers, the Upper one numbering 150 Members and the Lower one 230.

The Swedish and Norwegian Government, however, has commenced the erection of new Parliamentary buildings in conjunction with the Royal Bank of Sweden, the site being the whole extent of an island lying midway between the Old and the New City, and connected with each by a continuous bridge over one of the numerous waterways of Stockholm. The plans of this building, as about to be erected, have already been placed before the Public Works Committee for their information.

The site is a magnificent one, although it is too curtailed to carry anything more than the present scheme of building, the rapid tide of the river washing the foot of the retaining-walls on all sides. A curious sentimental controversy has arisen between the two Parliamentary parties with regard to this site; one ("Right") objecting to the effect the new pile will have in somewhat obscuring the view of the Royal Palace on the adjoining shore from the main portion of the city, as emblematic of overshadowing Royalty; and the other party ("Left") approving of the site for precisely the same reasons.

At Brussels, the Chambers, which are also founded on a similar plan to those of the Deputies ("Corps Legislatif") in Paris, may be considered as in many respects agreeing in principle with the design for Sydney. Both the Upper and Lower Chambers are similar in all particulars, excepting that the Upper (Senate) provides for sixty-nine Senators and the Lower (Chamber of Representatives) for 138.

The accompanying sketch shows the general disposition in each case. The Chambers are semi-circular in plan, the main walls being carried up solid behind the President and colonnaded round the Members' portion, supporting a frieze, cornice, and ceiling with top lighting. Behind the columns is carried the gallery, the whole circuit of the circular wall, to accommodate the public, one extreme end to the right of the President being partitioned off for Ambassadors and distinguished visitors, and the corresponding one on the left for the Press. These three portions of the gallery all have their separate exits distinct from the precincts of the House proper.

The President is placed on a raised dais similar to the Speaker; the House officials are ranged immediately below him, and in the lowest portion of the floor of the House the official stenographers (*Hansard*) have their accommodation. The Members are provided for on an ascending floor with circular-planned separate tables and benches for each Member; the doors of entrance and exit being on the right and left of the President.

The Chambers are entirely lighted from the top, and the ventilation is conducted towards the same direction. The walls, where not broken by features, are panelled and hung with valuable historic paintings, representing scenes in the Parliamentary history of the country.

I understand that the acoustic principles of the rooms are good, and the Members here speak from their own seats, and not from the "tribune," as in Paris.

I may say here that in all the Continental Chambers of which I have cognisance, the stenographers (*Hansard*) are accommodated on the floor of the House, but not the public Press.

The Chambers in Brussels have the appearance of great dignity, with their quiet architectural treatment. The accommodation for Members is provided to the right and left of the Chambers in a series of well-furnished and commodious salons. I endeavoured to obtain a photograph of the interior of these Chambers, but I regret to say without success.

The site of the buildings faces one of the principal avenues in the park, being *vis-a-vis* with the Royal Palace, while it is recessed in front in a very similar manner as that recommended for Sydney, but on a more dignified scale. The flanks are continuous, Government offices occupying the street on either side. Access is also obtained to the rear of the building, and, in fact, there are two distinct fronts.

In all the Parliamentary buildings that I have visited, both on this occasion as well as previously, I observed the greatest possible stress has been laid upon the necessity of giving large open spaces around the same, and in the majority of cases with great success.

### Picture Galleries.

I lost no opportunity of critically inspecting as many of these as time would permit, and amongst others I visited the Melbourne Gallery, National Gallery, New Portrait Gallery, Tait's Gallery, The New Gallery, Galleries at Earl's Court Exhibition, South Kensington, and also several private ones in London. I visited, as well, the National Gallery in Edinburgh, the newly-elected one at Antwerp, the Exhibition Galleries at Brussels and Stockholm, and also the permanent National Gallery at the latter city.

I took rough sketches of the lighting of those most to be remarked, as well as notes regarding other features.

In respect of planning, I found a great deal worth noting in connection with the New Gallery in Regent-street, London, particularly with reference to the entrance and central courts, they presenting a somewhat new departure, being treated with more architectural detail than usually. The central court contains a handsome fountain, admirably-placed statuary, and narrow galleries for the display of water-colours and miniatures, together with access to the refreshment-room, cloak-rooms, &c.

I was gratified to find that, generally, the sectional dimensions of the new gallery in Sydney were in accordance with the best examples at home; about the details of which I had opportunities of discussion with some of the leading authorities. In no one place was it possible, owing to climatic difference, to compare the system of lighting closely with that adopted in Sydney. In some of the galleries the lighting was by ordinary single skylights, both horizontal and sloping, with all the attendant difficulties of adjustment of light by a system of blinds. In others more elaborate construction was adopted, including the use of horizontal lantern lights, with more or less success; and in only two cases that of the Sydney principle of vertical inner light and horizontal outer lights combined, adopted, although with considerable difference of design and detail.

Though the New Gallery before referred to contains many good features, the lighting I consider not very successful, and here as in many others of the buildings, heavy intersecting ceiling beams prevented the equalisation of light on the exhibited pictures.

As regards the floors of galleries, polished wood, generally in parquet patterns, appears to be universal. It is true I came across exceptions, as in the case of the mosaic floors at South Kensington, and some temporary cemented floors in the Exhibition Galleries of Brussels and Stockholm. The reflection and glow obtained from polished floors as a subsidiary assistance to the lighting up of pictures is considered so valuable as to warrant its adoption.

I noticed all the galleries were furnished with comfortable lounges, an acknowledgment of the fatiguing nature of picture-seeing; and it is well worth the consideration of the Trustees in Sydney the placing of comfortable upholstered lounges or settees, in preference to incurring expense in less comfortable furniture.

Most of the galleries have protecting handrails round the circuit of the courts, generally fixed to standards.

The permanent galleries in Antwerp and Stockholm, in each case in combination with the National Museums, are both buildings of extremely handsome and complete a character, and have been erected evidently at very considerable cost. The lower floors are used as museums, and generally the first floor, with horizontal lights, for prints and etchings, and the noble suites of rooms on the top floor, with ceiling lights, for pictures, in which both buildings, particularly that in Antwerp, are exceedingly rich. The stair-cases have been made notable features, decorated with statues and pictures, and a great display of marble.

The Tait Gallery, just recently erected on the site of the old Millbank Penitentiary in Westminster, and presented by Mr. Tait to the nation, is one of the most modern type in Europe, the architectural detail being very prominent.

The National Gallery in Edinburgh is in some respects the prototype of the design for the completed scheme for Sydney. It stands in an admirable position, overlooking the Princess-street Gardens, having four exposed façades, and is designed in symmetrical proportion in pure classic style, and being entirely lit from the top, there is no fenestration visible.

The National Portrait Gallery, in the rear of the National Gallery in Trafalgar Square, is a very notable building, both on account of the extremely handsome architectural detail, notwithstanding its irregular planning, and of the wealth of its contents, the portraits there hung giving a very vivid and interesting picture of English history. As only the upper floor can necessarily be lighted with a top light, the lower ones have to be content with horizontal ones, and consequently the lighting of these latter is not in all cases good.

### Exhibition Buildings.

During the latter end of 1896 I was instructed by the Minister to submit a scheme for the consideration of the Honorable the Premier for the erection of a series of buildings to be devoted to the use of an Exhibition projected for 1899. I therefore prepared and submitted one applicable to the Outer Domain as a site, and embracing the present Art Gallery, on the extreme east, and the shell of the proposed Parliamentary buildings on the west. Owing, I understand, to representations from Paris, that an Exhibition held in Sydney in 1899 might clash with the great Exhibition to be held in Paris in 1900, the matter was subsequently left in abeyance.

Having thus far been engaged in the initiation of such an undertaking, I took the opportunity of seeing all the Exhibitions within a reasonable distance that I found to be open during July and August, 1897. I therefore visited the following:—

- Victorian Era Exhibition, Earl's Court, London.
- Horticultural and Floricultural Exhibition, Hamburg.
- Great Art and Industrial Exhibition, Stockholm.
- International Exhibitions at Brussels and Tervueren.

The features of these Exhibitions may be classed as follows:—

- 1st. The commercial object, including display of machinery and productions, the result of the industry of the people, and of the natural resources of the countries interested.
- 2nd. Official display in all the branches of the Government.
- 3rd. The exhibition of objects in the Arts and Sciences for the instruction of the people.
- 4th. The amusement and refreshment of the people.

Two of these Exhibitions, namely, Stockholm and Brussels, being under Government control, fully exemplify these objects, while the Exhibition at Hamburg is confined to fewer objects, and is, I understand, under municipal control. The Earl's Court Exhibition to all intents is a private speculation, although managed by a very representative committee, and is confined to an exhibition of objects, both of manufacture and art, showing the general advance during the sixty years' reign of the Queen, with a very large proportionate amount of accommodation for amusement and refreshment.

The Earl's Court Exhibition covers an irregular site in the west end of London, upon which has been held Exhibitions of various characters yearly for some considerable period, and is as much a rendezvous for the people of London for evening entertainments as perhaps for exhibition purposes. Although it has been erected by private enterprise, it has received this particular year a certain amount of official recognition, and is managed by an Honorary Committee of Advice, embracing amongst its members the leaders in all branches of arts and sciences. With the objects as before stated, it may be understood that the Exhibition is a purely British one. The exhibition halls proper are ranged round two very extensive and beautiful courts—one embracing an ornamental sheet of water in the centre, with bridges, fountains, promenades, deep verandahs, and the whole designed in Indian architecture, and brilliantly illuminated at night with many thousands of electric and gas lights, while a band-stand has been erected upon the small island in the centre of the sheet of water. The buildings immediately adjoining this court and overlooking its prospects are devoted to refreshment.

The other court is oval in shape, the centre laid out with rich-coloured flower-beds and gardening, and is skirted all round by attractive stalls.

Between these courts branch off in all directions annexes containing machinery, manufactures, amusements, picture-galleries, and all the exhibits connected with such objects.

The amusement portion of the Exhibition takes up the remaining area of the site, and includes, besides numerous refreshment places surrounded with ornamental gardens, numberless side shows of all sorts, and a huge wheel, 300 feet high, which in its revolutions takes car-loads of passengers to the top-most height. Military band concerts and other entertainments that suggest themselves for amusing the public take place here daily. The Exhibition also includes a very fine reproduction of a small town of the last century, entitled "Picturesque England," and comprises a large number of shops, public buildings, and private houses, all faithfully reproduced in canvas, plaster, and decorations.

The Exhibition generally is notable for the advance made upon those of twenty years ago, and showed most clearly that in Exhibitions of the character not only legitimate Exhibitions, but public amusement must be catered for in every way to make them continually attractive and remunerative.

The Floricultural Exhibition in Hamburg occupies the whole extent of the ornamental gardens of the city, which had been laid out on the banks of a disused canal. The grounds are very extensive and beautiful, being planted out with the utmost taste, and the foliage is such as could not be expected in the uncertain climate of Sydney.

For exhibition purposes a gigantic floral hall has been constructed, probably 1,000 feet by 500 feet, oval in shape, and sunk in the centre, the whole designed with paterres and terraces filled with the choicest flowers and shrubs. A large number of other buildings of every description were also erected in the grounds, both for exhibition and refreshment purposes, the whole being brilliantly illuminated, and made bright and attractive by the presence of five or six military bands.

I understand that from 35,000 to 40,000 people visit the Exhibition nightly.

I was given to understand, also, that so far as matters can be disassociated in Germany from Imperial control, this Exhibition is under the auspices of the Municipality.

In Stockholm the Exhibition is of an unique character, and is generally confined to the products of the three Scandinavian nations—Norway-Sweden, Denmark, and Finland (Russia). No other countries have been allowed to exhibit, the only exception being with regard to a small number of paintings in the art section, to illustrate the progress of this art generally.

The city of Stockholm reminds one very much of Sydney. The physical features are not dissimilar. Each city is intersected by numerous broad and deep waterways, while the houses and shipping cluster in all directions and at unexpected points. The dissimilarity consists mostly in the broad comprehensive style in which the city and its quays have been laid out, and in the palatial buildings erected, facing large open sites, the opposite being the case in Sydney. Stockholm has rather more than half the population of Sydney, but the city gives the impression of being a much larger one.

The site determined upon for the Scandinavian Exhibition is a portion of an island laid out in its entirety as a public park, with one end lying so near one of the principal quays as to be approached therefrom by a bridge. The island being 2 miles in length, is also approached by ferry boats in all directions, reminding one very much of those in Sydney Harbour. The portion of the garden enclosed for exhibition purposes contains about 40 acres, is irregular in contour, and sparsely covered with trees, both these features having been made the most of. The site is also cut into two irregular portions by a public road from the quay before mentioned, so that additional access is gained to the Exhibition by the admirable system of horse-tramways. The Exhibition was first projected in 1894, and since that time the three partners to the enterprise have devoted much energy and attention to produce the present successful results. I ascertained that the mode adopted for erecting the necessary buildings was to employ well-known and private architects of the three nationalities, commissioning them each to erect certain buildings, while the whole was under the control of the Chief Architect residing in Stockholm. As a result, Sweden commissioned eight architects, Norway one, Denmark one, while some of the Finnish buildings were put up by Russian architects. In no cases were competitions held.

The cost of the Exhibition was 4,275,000 kroners, equal to about £213,000 English money.

In conversation with the British Minister of Legation in Stockholm, I ascertained that owing to good management and the popularity of the scheme, the whole of this expense had already been met by the takings (about the middle of August last). Mr. Pakenham told me that at one time, soon after opening,

opening, it was feared there might be a deficit. Thereupon the Government determined to open a "Tombola," or public lottery, but the results on other and more legitimate enterprises have been so assuring that the "Tombola" has fallen almost into disuse, and it is not looked upon as necessary.

It would take too long to describe minutely in this report the general arrangements of this wonderful Exhibition, and it may be sufficient, perhaps, to say that it consists of one large central industrial building devoted to the suitable exhibits of the three nations. It is built as the main architectural effort and the leading feature of the whole Exhibition, being surmounted with a lofty dome and four engaged minarets; it dominates the city, and emphasises the important scheme. Other national buildings, also for the joint exhibits, comprise a large machinery hall, consisting of a wide nave and two aisles, constructed of timber and glass, the main ribs of the roof being carried down to the floor, and supporting in an ingenious manner a series of galleries framed into the spreading timber-work of the principals.

The National Museum contained exhibits of domestic handiwork, a special characteristic of Scandinavian nations, and the results of the education in the sciences and other schools. There are separate buildings also for technical industries, the fishery halls, army and navy exhibits, horticultural exhibits, and a pavilion erected by the city of Stockholm, displaying every variety of sanitary and municipal objects, one annexe containing the entire section of a public street, in which the spectators can see in actual size the arrangements for subways, pipes, drainage, &c.

The official portion of the Exhibition also includes extensive administration buildings, royal pavilion, post, telegraph, and telephone station, press pavilion, and others erected by various small provinces.

The special exhibits include a pavilion of tourists and sportsmen's exhibits, another theatrical and musical exhibits, a further for mining, another for forestry, and also another for the application of electricity.

Throughout the grounds are scattered a large number of strikingly-designed pavilions of all dimensions erected by manufacturing firms for the display of their own production.

Amusement and refreshments are extremely well looked after, and in all directions can be found refreshment pavilions with tariffs of every grade, the whole being very well conducted.

One very striking spectacle is the reproduction of the old town of Stockholm (in a similar way as at Earl's Court); encampments of Laplanders and Finns, who give national entertainments; also zoological exhibits, and a large number of amusements of every description, and facilities for the sale of small articles.

The gardens have been laid out with great taste, and must evidently have been allowed at least two or three years to attain their present maturity.

Altogether the Exhibition is one that offers a most suitable example for guidance should another be undertaken in New South Wales.

I noticed that the authorities advertised the Exhibition in particularly well-executed posters spread over a wide area, and developed a system of private advertising without detriment to the general appearance of the Exhibition that must have added very materially to the returns.

The International Exhibition at Brussels, with its auxiliary at Tervueren, is of a somewhat different description to that at Stockholm, inasmuch as it is open to the exhibits of all nations, and is principally confined under one roof.

The building is of very large dimensions, being in reality an enlargement of the Palais du Cinquante-enaire, and contains courts devoted to Belgium, France, United States, Germany, Italy, Switzerland, Great Britain, Spain, the Ottoman Empire, China, Japan, Russia, Austria, and Hungary. These several nations have classified their exhibits, and in some cases the result is almost complete exhibitions in themselves.

The art section has been very specially provided for in a gallery of large dimensions, containing a number of courts. In these are assembled a collection of pictures of the world, and this alone is a source of very great attraction to the public.

The gardens in front of the building contain a large number of buildings, some of an official character, others of a private, while the restaurants and cafes are so numerous as to form themselves into long streets.

As in Stockholm and London, there is a reproduction on this occasion of old Brussels, providing a large number of amusements, as well as a curious representation of an old town of the middle ages.

The auxiliary Exhibition at Tervueren, a public park about 8 miles distant, and which, I am of the opinion, suffers as an auxiliary in consequence of its isolation, contains a very fine and complete exhibition of the products, manufactures, and inhabitants of the Congo States of West Africa; and this being the only colony possessed by Belgium, the very utmost has been made of it. I did not see much advantage in connecting the Tervueren Exhibition with the International Exhibition in Brussels, as the former appears to be devoted, with the exception of the Colonial Exhibition, to the pleasure of the people of Brussels.

I am not in a position to speak with any degree of authority as to the cost of the Exhibition or of the returns, but I am of opinion that the outlay has been in excess of that of Stockholm, and, to my mind, the result is not so good. The latter contains so much that is fresh, picturesque, and attractive, while that at Brussels is carried on on the more stereotyped lines of exhibitions with which the public have to some extent been surfeited.

The access to the Exhibition at Brussels is easy and convenient; it is on the outskirts of the town, and approached from the principal centres by horse and electric trams, some of the latter having the motive power in accumulators carried in the cars, and others from overhead wires, and third, from underground wires, while I noticed in places that all three travel upon the same metals.

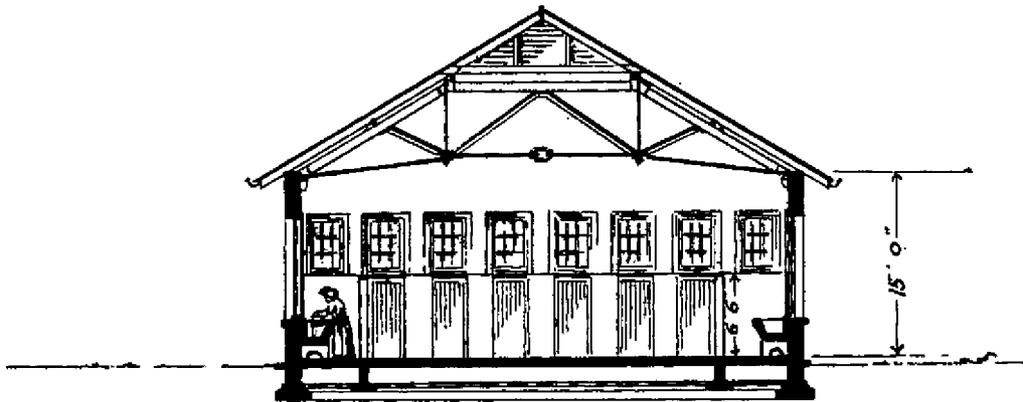

Summing up the impressions I gained from the inspection of these undertakings, I am of opinion that, so far as a Colonial Exhibition in New South Wales is concerned alone, there is a great deal that is suggestive at Earl's Court Exhibition in London, while for an Intercolonial Exhibition, I consider Stockholm the prototype, and in both cases much can be learned from the Horticultural Exhibition at Hamburg

W. L. VERNON.

## NORFOLK ISLAND.

(CORRESPONDENCE RELATING TO THE TRANSFER OF, TO THE GOVERNMENT OF NEW SOUTH WALES.)

*Printed under No. 15 Report from Printing Committee, 12 August, 1897.*

Presented to Parliament by Command of His Excellency the Governor, 11 August, 1897.

## TABLE OF CONTENTS.

Serial No.	From or to whom.	Date.	Subject.	Page.
1	Viscount Hampden ..	1895. Aug. 21	Requests to be furnished with the Secretary of State's views respecting the future administration of Norfolk Island.	
2	To Viscount Hampden	Sept. 18	Requests him, on his arrival in New South Wales, to consider the matter, and report, after consultation with his Ministers, as to the best course to be adopted.	
3	Governor Viscount Hampden.	Dec. 13 (Rec. Dec. 13.) Telegram.	States that his Ministers agree in principle to the transfer of the Island; inquires whether he may proceed with the matter and forward the agreement for approval.	
4	To Governor Viscount Hampden.	Dec. 14 Telegram.	States that there is no objection to course proposed; but if terms proposed affect Her Majesty's Government, requests him to telegraph them.	
5	Governor Viscount Hampden.	1896. Jan 20 (Rec. Feb. 25.)	States that his Ministers have agreed to the suggested transfer, subject to certain conditions, and indicates the measures he proposes to take.	
6	Agent - General for New Zealand.	March 4	Encloses copy of telegraphic correspondence with his Government on the subject of the proposed annexation of Norfolk Island to New South Wales, and expresses a hope that the completion of the proposed arrangement may be deferred pending any further representations which his Government may desire to make.	
7	Governor Viscount Hampden.	March 10 (Rec. March 10.) Telegram.	Considers that the Island should be placed under the administration of New South Wales without incorporation, but Law Officers advise that an Order in Council will subject the Island to all laws of the Colony. Inquires whether he has authority to appoint Resident Magistrate.	
8	Governor the Earl of Glasgow (New Zealand).	(Rec. March 11.) Telegram.	Submits that it would be desirable to consult the Government of New Zealand before cancelling existing arrangements.	
9	To Governor Viscount Hampden.	March 14 Telegram.	States that no steps will be taken in the matter of the transfer of the Island until the arrival of despatches, and that the appointment of a magistrate must stand over, as the New Zealand Government raises objection.	
10	To Governor the Earl of Glasgow (New Zealand).	March 14 Telegram.	States that the Secretary of State will await arrival of despatches before taking any steps.	
11	To the Agent-General for New Zealand.	March 14	States that the Governors of New South Wales and New Zealand have been informed by telegram that no further steps will be taken in the matter of the annexation of the Island pending the receipt of despatches from both Colonies.	
12	Governor Viscount Hampden.	March 3 (Rec. April 13.)	Reports the appointment of a Commission to investigate the matter referred to in No. 5.	
13	Ditto .....	March 5 (Rec. April 13.)	Transmits copy of a letter covering a protest from the House of Representatives of Norfolk Island against the proposed annexation; states that the Law Officers advise that the transfer should be deferred until the form of document effecting it is settled; and requests authority in the meantime to appoint a Resident Magistrate.	
14	Ditto .....	March 19 (Rec. April 27.)	Transmits copy of a letter from the Hon. J. H. Carruthers covering a copy of a report, by himself and Mr. Oliver, on the affairs of the Island; observes that Imperial assistance will be necessary.	

## TABLE OF CONTENTS—continued.

Serial No.	From or to whom.	Date.	Subject.	Page.
15	To Governor the Earl of Glasgow (New Zealand).	1896. May 23 Telegram.	Inquires when his despatch respecting the proposed transfer may be expected.	
16	To Governor Viscount Hampden.	May 30	States the arrangements made for providing the salary of a magistrate, and, if necessary, a clerk.	
17	Mr. Byron Adams and other inhabitants of Norfolk Island.	March 27 (Rec. in Colonial Office June 2.)	Memorial to the Queen, setting forth their views as to the position of affairs in the Island, and deprecating any change in the administration.	
18	Governor Viscount Hampden.	June 15 (Rec. June 15.) Telegram.	Considers that the administration of the Island should not be transferred to New Zealand without again referring to his Ministers.	
19	To Governor Viscount Hampden.	June 18 Telegram.	States that Secretary of State is waiting despatch from New Zealand, and before taking action will communicate with him.	
20	Governor the Earl of Glasgow (New Zealand).	May 26 (Rec. July 7.)	States the objections of his Government to the control of the Island by New South Wales, and suggests, on behalf of his Government, that, pending the settlement of the question of laying a new Pacific cable, no change should be made.	
21	To Governor Viscount Hampden.	July 9.	Informing him that a memorial has been received from certain inhabitants of the Island respecting the position of affairs, and deprecating any changes in the administration; and requests him to inform the memorialists that their representations will receive full consideration.	
22	To Governor the Earl of Glasgow (New Zealand).	July 16 Telegram.	Proposes to arrange transfer of the Island to New South Wales without waiting for the settlement of the question of the new Pacific cable, as the matter is urgent, unless reasons for further delay are sent by telegraph.	
23	Governor the Earl of Glasgow (New Zealand).	July 22 (Rec. July 22.) Telegram.	States that Colonial Government have nothing to add to their representations contained in despatch of May 26th, but consider that Norfolk Island shows preference to New Zealand.	
24	To Governor Viscount Hampden.	July 31 Telegram.	States that Her Majesty's Government are willing to attach Norfolk Island to New South Wales if Colonial Government are ready to undertake expenses of future administration.	
25	Governor Viscount Hampden.	June 29 (Rec. Aug. 4.)	Encloses copy of a further Report by the Commissioners appointed to inquire into the affairs of the Island.	
26	Ditto .....	August 5 (Rec. August 5.) Telegram.	States that his Government accepts offer of Norfolk Island, with a grant of, say, £1,000, which is considered equitable, but not an essential condition.	
27	Ditto .....	August 5 (Rec. Sept. 12.)	Encloses Minute from his Ministers accepting the administration of the Island, and suggesting a grant of £1,000 from Imperial funds towards cost of repairing buildings; also sends copy of a letter addressed to Colonel Spalding, C.M.G., who has accepted the appointment of Resident Magistrate.	
28	To Governor Viscount Hampden.	September 25 Telegram.	Proposes to annex the Island to New South Wales by Order in Council, with provisos, and inquires whether proposals meet views of his Ministers.	
29	Governor Viscount Hampden.	October 14 (Rec. Oct. 14.) Telegram.	States that Ministers propose that administration only should be transferred, legislative powers remaining as before, and that complete annexation be deferred; meanwhile New South Wales Government will bear expense of administration.	
30	To Governor Viscount Hampden.	October 23 Telegram.	States that Treasury agrees to grant £1,000, also £100 for Colonel Spalding's passage, and that Order in Council will be sent out as soon as possible vesting the administration in the New South Wales Government.	
31	Ditto .....	October 30	States the financial arrangements made in connection with the transfer; an Order in Council is being drafted providing for the change of administration, and, in the meantime, the existing laws require amendment before Colonel Spalding can act as Magistrate.	
32	Governor Viscount Hampden.	October 9 (Rec. Nov. 18.)	States that a special expenditure of £1,115 10s. will be involved by the transfer, in addition to an annual charge of £100 a year; also that his Ministers are considering the method of transfer, and incline to the opinion that an Imperial Statute will be necessary.	
33	Ditto .....	October 16 (Rec. Nov. 23.)	Transmits copy of memorandum by the Premier, stating that Ministers propose that the Island should not be annexed formally to New South Wales, and that their services should be administrative only, legislation being conducted as formerly, it being understood that the Island is secured to New South Wales, or the future Federal body, when it is found expedient to ask for its annexation.	
34	To Governor Viscount Hampden.	December 28 Telegram.	Proposes to submit Order in Council conferring on Governor of New South Wales powers at present possessed by him as Governor of Norfolk Island.	
35	Governor Viscount Hampden.	1897. November 28, 1896. (Rec. Jan. 4, 1897.)	Reports the steps taken by him on his visit to Norfolk Island to inaugurate the new system of Government.	
36	To Governor Viscount Hampden.	January 14	Approves of his proceedings on the occasion of his visit to the Island, and thanks him for his labour in connection with the introduction of a system of better Government.	
37	Governor Viscount Hampden.	December 16, 1896. (Rec. Jan. 25, 1897.)	Transmits copies of two despatches from the Chief Magistrate, showing that the change in the laws and regulations of the Island had been satisfactorily effected; that the election of the Council of Elders had been efficiently conducted; and that a salutary effect had already been created by the conviction and punishment of offenders.	
38	To Governor Viscount Hampden.	January 27.	Transmits Order in Council providing for the future administration of Norfolk Island.	

## TRANSFER OF NORFOLK ISLAND TO THE GOVERNMENT OF NEW SOUTH WALES.

## No. 1.

Viscount Hampden (Governor Designate of New South Wales) to Colonial Office.

(Received 22 August, 1895. Answered by No. 2.)

Sir,

The Hoo, Welwyn, August 21, 1895.

It will be of great assistance to me if, prior to my departure for New South Wales, I can have the opportunity of obtaining your views respecting the affairs of Norfolk Island.

By Royal Order in Council of the 24th June, 1856, the Governor of Norfolk Island has vested in himself full powers of legislation, subject only to Royal instructions, and as to these he is guided by Royal instructions issued to Sir William Denison in the same year as the Order in Council aforesaid was issued.

Acting upon these instructions, Sir William Denison, and the Governors of Norfolk Island who have succeeded him, appear to have preserved as far as possible the laws and usages by which the inhabitants of Norfolk Island had been accustomed to govern themselves when they inhabited Pitcairn Island.

These laws and usages, which for many years were sufficient for the wants of the small community existing on the Island, have been found of recent years to be quite inapplicable to the times and to the condition of the existing population of some 900 persons.

In the Island there is no court of justice nor prison, no sheriff, nor paid policeman; there are consequently no means for the recovery of debt nor for the punishment of serious crime, and in the event of a direction being issued by the Governor for the trial of a person charged with serious crime, there is in case of conviction no power to transport such a criminal, nor is there any prison in the Island in which a prisoner can be detained.

It appears that Lord Ripon, in a despatch of January 1, 1895,\* acknowledged the receipt of a despatch from Sir Robert Duff of the 15th October, 1894,\* enclosing a report of Commissioners who were appointed to inquire into matters connected with the administration of justice in Norfolk Island.

The recommendations of these Commissioners were generally approved by Lord Ripon, but His Lordship, while admitting that it was out of the question that the revenue of the Island could be made sufficient to meet the cost involved in the appointment of a Resident Magistrate, intimated that a sufficient case had not been made out to justify him in asking the Lords Commissioners of the Treasury to sanction any expenditure from Imperial funds.

Upon the question of sufficiency of revenue, I have reason to believe that, with proper administration, sufficient funds can be obtained to meet the cost of the charges proposed by the Commissioners.

This belief is founded on a report forwarded to me by His Excellency Sir Frederick Darley of a Mr. McFarland, a retired District Court Judge of New South Wales, who has recently visited Norfolk Island, and has always taken a keen interest in its welfare.

Mr. McFarland asserts that of 9,000 acres of land in the Island, nearly every foot is very fertile; that there are now not more than 200 acres under cultivation; that there are still unalienated at least 4,500 acres of rural land, worth at present selling rate £3 an acre, or £13,500; and that, in addition, there are 200 acres or more of a town reserve adjoining Government House well adapted for building.

If these statements are confirmed by competent examination, it would follow that the increased cost of a better administration of justice will be a charge only temporary in its character, and under these circumstances it is a question for consideration whether, pending the sale of these lands, if such a course be sanctioned, the necessary funds may not be obtained by a taxation upon imports.

At the same time, I venture to express an opinion that considerations of convenience, of local interests, of economical administration, and of the treatment of criminals, point to the desirability of persuading the Government of New South Wales to assume the charge of Norfolk Island; and it is upon this point specially that I desire to obtain your opinion before I leave for Sydney.

I have, &amp;c.,

HAMPDEN.

## No. 2.

Colonial Office to Viscount Hampden.

(Answered by No. 5.)

My Lord,

Downing-street, September 18, 1895.

I am directed by Mr. Secretary Chamberlain to acknowledge the receipt of your letter of the 21st ultimo† expressing your desire to be made acquainted with his views respecting the affairs of Norfolk Island.

2. I am to observe, in the first instance, that Her Majesty's Government would regard with much satisfaction the taking over of the administration of Norfolk Island by the Government of New South Wales, and Mr. Chamberlain is glad that this view appears to be shared by yourself.

3. Norfolk Island, as you are doubtless aware, was at one time a part of New South Wales, and was mentioned in the Governor's Commission; but in 1843 it was annexed to Tasmania, or Van Diemen's Land, as it was then called. In 1856, however, it was separated from Tasmania, and created into a separate settlement, doubtless in consequence of the recommendation in Sir W. Denison's despatch of the 27th February, 1856, that the Island should be withdrawn from the jurisdiction of the adjoining Colonies, on grounds which do not seem to hold good at the present day. Moreover, on reference to that despatch it will be seen that Sir W. Denison's original proposal had been that the Island should be re-transferred to New South Wales.

4. Mr. Chamberlain will be glad, therefore, if, on your arrival in New South Wales, you will take the whole matter into your consideration, and will favour him with your opinion, after consultation with your Ministers, as to the best course to be adopted.

5. The correspondence enclosed,\* some part of which has been communicated to you before, is annexed for reference, and I am to request that you will be good enough to return the original despatches before leaving this country.

I am, &amp;c.,

JOHN BRAMSTON.

## No. 3.

Governor Viscount Hampden to Mr. Chamberlain.

(Received December 13, 1895. Telegram. Answered by No. 4.)

MINISTERS agree in principle transfer of Norfolk Island. Can I go on with and forward agreement for your approval?

## No. 4.

Mr. Chamberlain to Governor Viscount Hampden.

(Sent December 14, 1895. Telegram.)

No objection to course proposed. Norfolk Island. If terms proposed affect Her Majesty's Government, you should telegraph them.

## No. 5.

Governor Viscount Hampden to Mr. Chamberlain.

(Received February 25, 1896.)

Sir,

Government House, Sydney, January 20, 1896.

I have the honor to inform you that, acting on the instructions which I received on leaving London, I directed my attention to the affairs of Norfolk Island as soon as I arrived in Sydney.

I have had the advantage of discussing the position and prospects of the Islanders with my predecessor Sir Frederick Darley, and with several gentlemen resident here who, having visited the Island themselves, and being well acquainted with the people, were well qualified to give me valuable advice.

These gentlemen concur generally in their description of the affairs on the Island.

The administration of justice, which is now in the hands of a Magistrate elected by the community, has been partial and unsatisfactory. Crime is rarely punished, and debts are not recoverable.

The public buildings, including the gaol, are in a ruinous condition, and those utilised for a lock-up are unfitted for such use.

The land, which is extremely fertile, is, with the exception of a small area, untilled, the people making no effort to develop the resources of the Island.

This short but significant statement of facts clearly establishes the failure of the experiment made in 1856, when the immigration of other settlers was discouraged, and it was hoped that the Pitcairn Islanders transferred to Norfolk Island, and governing themselves under a simple code of regulations, would develop the resources of its fertile soil, and form a prosperous community.

This being the condition of affairs in the Island, it is evident that immediate steps should be taken to enforce the administration of the law, and to encourage the introduction of fresh settlers.

Acting upon the opinions I expressed to you in my letter of 21st August, 1895† (with which you were pleased to concur), that the reasons against a re-transference of the Island to New South Wales, as stated by Sir William Denison in his despatch of February 27th, 1856, no longer existed, I requested my Ministers to consider a suggestion which I made to them, that Norfolk Island should be transferred to New South Wales.

I am pleased to be able to inform you that my Ministers have agreed to the suggestion made to them, and I have the honor to forward to you their assent to the transfer, subject to the conditions that the rights of existing landowners shall be protected by the deed of transfer, and that the Pitcairn Fund shall be transferred, the proceeds to be applied to meet the expenses of administration of the Island.

It will be necessary to incur some cost in making arrangements preliminary to the transfer, with the view that no questions shall hereafter arise as to rights acquired by grants of land from the Crown, or by transfer otherwise. I am informed that the records of dealings in land have not been accurately kept, there being no reliable register of landowners, and I am consequently of the opinion that a Commission should be appointed to examine such documents as exist, to take evidence, and to prepare a register of all those having legal and equitable rights to the possession of the land.

I desire to confine the inquiry to the examination of rights founded upon grants made by the Crown, as the action taken by Her Majesty's Government in discontinuing the practice of making free grants of land, disposes of the claim that an equitable right to a free grant of land accrues to every person born on the Island.

Pending the transfer to New South Wales, I desire authority to alter the laws and regulations of the Island so as to ensure the administration of justice.

The present Chief Magistrate, Mr. Byron Adams, ignores instructions given him, and he has been quite systematic in the non-performance of his duties.

For instance, my predecessor, Sir Frederick Darley, issued a decree in the spring of 1895 disfranchising all voters who had not paid their medical and school fees, and I am informed, by trustworthy persons who were present in the Island at the time, that the Chief Magistrate on receiving this decree called a meeting, condemned the Governor's action, and caused a roll of the inhabitants to be prepared for electoral purposes inclusive of these disfranchised persons. Upon a poll being held for the election of a Chief Magistrate for the year 1896 these persons voted, and the present Chief Magistrate, Mr. Byron Adams, was re-elected.

I feel assured that Mr. Byron Adams will ignore any instructions that I may send him as he has ignored the instructions of my predecessor, and I am confident that if he is continued in office the laws and regulations of the Island will, in the main, be disregarded. I

\* See Parliamentary Paper of 5th February, 1857. † No. 1.

I propose, therefore, to issue a Proclamation repealing all existing laws and regulations, to apply to the Island the laws of New South Wales, except the land and electoral laws, to supersede Mr. Byron Adams, and to appoint as Chief Magistrate, Mr. Francis Nobbs.

This gentleman is a resident on the Island, and has served as Chief Magistrate. I am in communication with him, and I have every reason to believe that he will accept the nomination at a salary of £100 per annum.

In addition, it will be necessary to provide accommodation for two policemen to be employed, to build a small lock-up, and a store for tobacco or other goods which may have to be placed in bond.

I suggest that authority be given me to expend a sum not exceeding £500 in carrying out the proposals contained in this letter.

As to all these matters, I shall act in consultation with Ministers, and I shall proceed to Norfolk Island as soon as the time has arrived when I can inform the inhabitants of the decision of Her Majesty's Government.

I enclose a form of Proclamation declaratory of the alteration in the laws which I have suggested, and an Order in Council to be issued when arrangements are complete for the transfer of the Island.

I have, &c.,  
HAMPDEN.

[Enclosure 1 in No. 5.]

MINUTE FOR THE HONORABLE THE PREMIER.

December 2, 1895.

I DESIRE to make a proposal to you with reference to Norfolk Island, and I shall be obliged if you will give me the opinion of your Government thereon.

Norfolk Island was at one time part of New South Wales, and was mentioned in the Governor's Commission; but in 1843 it was annexed to Tasmania, or Van Diemen's Land, as it was then called. In 1856, however, it was separated from Tasmania, and created into a separate settlement, doubtless in consequence of the recommendation in Sir W. Denison's despatch of the 27th February, 1856, that the Island should be withdrawn from the jurisdiction of the adjoining colonies, on grounds which do not seem to hold good at the present day.

Moreover, on reference to that despatch, it will be seen that Sir W. Denison's original proposal had been that the Island should be re-transferred to New South Wales.

In 1894 Sir Robert Duff appointed commissioners to inquire into certain matters connected with the administration of justice and the government of Norfolk Island. I enclose their report for your consideration.

I also enclose a report from Mr. McFarland to Sir Frederick Darley, dated May 4th, 1895.

The general purport of these reports is that the Island itself is fertile, but that the population, partly from inherited character and habits, and partly from the absence of any controlling authority, have no desire to cultivate the land and provide the means of defraying the costs of a proper administration of justice. Mr. McFarland, as you will observe in his report, is of the opinion that a sufficient revenue could be found for all necessary purposes.

Assuming that this is the case, I am inclined to the opinion that considerations of convenience, local interests, uniformity of administration and treatment of criminals, point to the desirability of a re-transfer of Norfolk Island to New South Wales.

HAMPDEN,  
Governor.

[Enclosure 2 in No. 5.]

TREASURY MINUTE FOR HIS EXCELLENCY THE GOVERNOR.

Subject.—Norfolk Island.

The Treasury, New South Wales, Sydney, December 31, 1895.

THE Cabinet having considered the Minute of his Excellency the Governor, dated 2nd instant, on the above subject, desires to state that if Her Majesty's Government is of opinion that Norfolk Island should be attached to this Colony, we are quite prepared to administer its affairs.

Of course the transfer would be made so that the Island would become a part of New South Wales, and subject to its laws; all vested interests and all obligations incurred by Her Majesty's Government to be treated justly, and as to the latter, duly honoured in our dealings with the inhabitants.

I understand that there is a fund in connection with the Pitcairn Islanders; this, I presume, would be handed over to us for administration too.

G. H. REID.

[Enclosure 3 in No. 5.]

LAWS AND REGULATIONS FOR NORFOLK ISLAND.

WHEREAS by an Order of the Queen in Council dated the 24th day of June, 1856, the Island called Norfolk Island was declared to be a distinct and separate settlement, and the Governor and Commander-in-Chief for the time being of the Colony of New South Wales was constituted and appointed Governor of the said Island, with power to make laws for the order, peace, and good government of the said Island: And whereas it was further ordered by Her Majesty in Council that, until annulled by competent authority, all laws, ordinances, and regulations, civil and ecclesiastical, which might be in force within the said Island at the time of the proclamation of the said Order in Council, should continue in force, subject only to such changes as should necessarily be consequent on the changes of government.

And whereas on the 14th day of October, 1857, Sir William Thomas Denison, being then Governor of the said Colony of New South Wales, in pursuance of the powers vested in him, did declare and enact that all laws, ordinances, and regulations which were then in force within the Island called Norfolk Island

were

were thereby repealed and annulled, so far the Governor was competent to repeal them. And the said Sir William Thomas Denison, in pursuance of such powers, did thereby make other laws for the order, peace, and good government of the said Island; and the said laws have been since altered and amended by subsequent Governors of the said Colony of New South Wales:

And whereas by the said Order in Council hereinbefore referred to it was ordered and declared that the Governor for the time being of the said Island called Norfolk Island should have full power and authority to constitute and appoint Judges, Justices of the Peace, and other necessary officers and Magistrates in the said Island for the administration of justice:

And whereas Her Majesty did, by Commission, dated the 5th day of July, 1895, duly appoint the Right Honourable Henry Robert Brand Viscount Hampden to be Governor and Commander-in-Chief of the Colony of New South Wales:

And whereas, in the interests of the community inhabiting Norfolk Island, and for the better promoting the advancement and welfare of the said Island and its inhabitants, and the better and more certain administration of justice therein, it has been considered wise and expedient to repeal all existing laws and regulations respecting the said Island and now in force therein, and appoint an officer or officers for the administration of justice therein, and to pass other laws and regulations for the better management of the affairs of the said Island:

Now, therefore, I, Henry Robert Brand Viscount Hampden, the present Governor and Commander-in-Chief of the said Colony of New South Wales and its Dependencies, and Governor of Norfolk Island, do, in pursuance of the power vested in me, declare and enact as follows:—

1. All laws, ordinances, and regulations which have been and are now in force within the Island called Norfolk Island are hereby repealed and annulled.

2. The Executive Government of Norfolk Island, during the absence of the Governor, shall be vested in a Chief Magistrate (who must be a resident in the Island), to be appointed by the Governor of Norfolk Island, and who shall hold office during the pleasure of such Governor.

3. The first duty of the Chief Magistrate shall be the taking of a census of the inhabitants of the Island, in which shall be set forth the age of the inhabitants, the dates and places where born, and the dates of marriage. All males who shall by such census be returned as having attained the age of 25 years, and shall be residents in the Island, shall be termed "Elders," and from this body shall be chosen a jury or juries for the trial of crimes and misdemeanours as hereinafter provided for.

4. The Chief Magistrate shall, with all convenient despatch, compile a registry of all alienated lands in the said Island, showing the names of the original grantees of such lands, and the names of the present holders thereof, and the interests held by them respectively therein, and shall continue such registry for the recording therein all future dealings with such lands and all future alienations of and subsequent dealings with the waste lands of the Island.

5. The Chief Magistrate shall keep a registry of all births, deaths, and marriages that may take place in the Island in the form now in use in the Colony of New South Wales, or as near thereto as circumstances will admit.

6. The Chief Magistrate shall have power to establish a Court of Civil and Criminal Jurisdiction, which court shall be a Court of Record, and shall have the like jurisdiction, and with the like powers of recovering debts and inflicting punishment, as the District Courts, Court of Quarter Sessions, and Courts of Petty Sessions now have in the Colony of New South Wales, so far as they can be applied to the circumstances and requirements of the Island; but the Chief Magistrate shall not have any jurisdiction in the case of capital offences beyond taking evidence as at an information filed in a Police Court in the Colony of New South Wales; and in case of a committal for trial, he shall forthwith report the same (which report shall be accompanied with a copy of the depositions taken) to the Governor of the Island, to abide his decision as to the future action to be taken in connection therewith.

7. For the purpose of carrying out the powers and duties of the said Court, the Chief Magistrate shall have power, and he is hereby authorised, to appoint such bailiffs and other subordinate officers as may appear to him to be necessary.

8. For the preservation of order in the community of the said Island, the said Chief Magistrate shall have the same powers as are now vested in Justices of the Peace for the City of Sydney, in the Colony of New South Wales, so far as the same can be applied to the said Island, and shall have the like power of enforcing any judgment given by him in any case as the said Justices for the City of Sydney now possess.

9. All crimes and misdemeanours not determinable by the Chief Magistrate when sitting as a Court of Petty Sessions shall be triable before the Chief Magistrate presiding as at a Court of Quarter Sessions in New South Wales, and a jury of twelve persons to be chosen as next hereinafter provided for; and all such offences shall be dealt with in accordance with the laws now in force in New South Wales, so far as applicable.

10. Inasmuch as the method of summoning juries in the Colony of New South Wales is inapplicable to the circumstances of the Island, the power of summoning a jury or juries for the trial of any crime or misdemeanour (not punishable summarily by the Chief Magistrate) is hereby vested in the Chief Magistrate, who shall summon such jury or juries in manner following:—

- (a) He shall, by his writ, direct such person as he may appoint for the purpose to summon so many of the Elders as he may think sufficient, to attend at the time and place to be fixed by him for the trial.
- (b) The said Elders shall be chosen by lot, in such manner as the Chief Magistrate may prescribe, from amongst those whose names appear on the census beforementioned, and such other male members of the community as to the knowledge of the Chief Magistrate shall have attained the age of 25 years.
- (c) The persons so named by the Chief Magistrate shall thereupon issue a summons to the Elders in the following form:—

"Mr. A.B. (naming the juror), you are hereby required to appear as a juror at the Court to be holden at \_\_\_\_\_ on the \_\_\_\_\_ day of \_\_\_\_\_ next, and there to attend from day to day until you be discharged by the said Court,"

and shall serve the same by causing it to be left at the usual or last known place of abode of, or served personally on, the said Elders.

known as Norfolk Island shall be transferred to, and shall thereupon become annexed to, the Colony of New South Wales, and the said Island and the land thereof shall be vested in the said Government, and the care, management, government, and control of the inhabitants thereof shall be committed to, and upon such proclamation as aforesaid shall be vested in, the Government of New South Wales.

And we do further order, direct, and empower the said Government of New South Wales to make such laws and regulations for the sale and disposal of the waste lands of the said Island, and to make grants thereof, as such Government may in its wisdom consider desirable, and that such sale and disposal of the said lands shall not be limited to the present inhabitants of the said Island, but in the interests of such inhabitants, and for the promotion of the moral, economic, and commercial interests of such inhabitants, and for the more completely developing the resources of the said Island, the lands thereof may be sold and disposed of to strangers, who shall be British-born subjects, or shall have been naturalised, and who shall be desirous of settling in the said Island.

And we do further order, direct, and empower the said Government of New South Wales to make and promulgate such laws and regulations, and to constitute and appoint such Judges, Justices of the Peace, and other necessary officers and Magistrates as it may consider fit and expedient for the establishment of superior and inferior courts of justice of civil and criminal jurisdiction in the said Island for the due administration of justice therein, and also to make and promulgate such laws and regulations as it may consider desirable to promote the social, commercial, and industrial interests of the inhabitants of the said Island, and from time to time to repeal, alter, and amend all or any of such laws as the said Government may consider necessary for all or any of the purposes aforesaid.

And we do further order, direct, and empower the said Government of New South Wales to raise from time to time from the inhabitants of the said Island, or from any person or persons trading or dealing with them, a revenue for the purposes of the said Island, by such ways and means as the said Government may consider fit and expedient for so promoting the interests of the present and future inhabitants of the said Island.

And we do further order and direct that our Governor of New South Wales shall, immediately upon such proclamation as aforesaid of this our Order, transfer to the Government of New South Wales the fund known as the Pitcairn Island Fund now vested in him or under his control, for the purposes of the income arising therefrom being applied towards the due support of the governing and social institutions that may be introduced into or made applicable to the said Island.

[Enclosure 5 in No. 5.]

MAY IT PLEASE YOUR EXCELLENCY,

Granville, January 1, 1896.

In accordance with my undertaking at our conversation upon Norfolk Island matters, I have consulted with Mr. J. L. Watkins, Parliamentary Draftsman, who was my co-Commissioner to Norfolk Island, and Mr. W. R. Beaver, Clerk of the Peace, who acted as our Secretary.

I informed them that it was not your Excellency's intention to ask the Imperial Government for any subsidy, as it is your view that the residents of the Island should defray all the costs of their Government, including the administration of justice; and that you also propose to discontinue the Chaplain's stipend, and to transfer the duties of his office to the missionaries of the Melanesian Mission resident on the Island.

We agree that it is essential for the due administration of justice that a Resident Magistrate should be appointed, as recommended in our report to the late Governor, and that as the revenue is not, for some time to come, likely to afford the salary for a qualified person from elsewhere, as is desirable, the next best course would be to appoint one of the Islanders as Police Magistrate during pleasure, dissociating the administration of justice entirely from the municipal government of the Island.

We agree to recommend to your Excellency for such appointment Mr. Francis Mason Nobbs, as being the best, and we think the only, person in the community who unites the qualifications of ability, education, experience, and uprightness of character. I found that he had provided himself with some standard law-books, and had made himself fairly acquainted with the principles of law during his administration of the office of Chief Magistrate. We think that if he were invested with the powers of a Police Magistrate, and paid a salary of £100 per annum, some of the disadvantages attendant upon the appointment of an Islander would be minimised. These are set out in a letter subsequently addressed to me by Mr. Watkins, which he permits me to submit to your Excellency.

We also agree that it would be advantageous to transfer the ecclesiastical duties to the Bishop of Melanesia, within whose diocese we believe Norfolk Island now is; but we do not think that the whole of the Chaplain's stipend could be saved thereby, though perhaps one-half might. The clergy of the Melanesian Mission are supported through missionary societies by contributions from the general public for a definite purpose, and it is obvious that they would have no right to devote themselves to other duties without receiving contributions to their support in respect of those duties.

Considering the economic conditions of the community, we think that there would be no possibility of collecting such contributions directly from the individual members, and that a subsidy must come out of the funds within your Excellency's control.

We discussed the question of increasing the revenue by Customs duties, which we think desirable, but we do not possess sufficient technical knowledge of the subject to enable us to make any recommendations with respect to it, and we would venture to suggest that as to this matter an expert, such as the Collector of Customs, should be consulted.

We are of opinion, however, that the imposition of duties will be distasteful to the Islanders generally, and any opportunities of evading them would be eagerly seized. We also feel convinced that the law would receive no support from the present chief authority in the Island.

We do not think it would be incompatible with his judicial duties if the person whom we recommend as Police Magistrate were also appointed local Collector of Customs. In some of our inland towns the duties of Police Magistrate and of receiver of local revenue are combined.

I have just received letters from Norfolk Island, and there are some matters reported by reliable correspondents which it seems to me it is my duty to bring under your Excellency's notice, as indicating the urgent necessity for a change in the constitution and administration of the Island. One

One writes—in November—referring to the enactments of the Lieutenant-Governor, Sir F. Darley, as to public debtors:—"This law, or collection of laws, came on the people like a thunder-clap, and, as you may imagine, caused great consternation; but they are just what was required. . . . At the last public meeting the Chief Magistrate read the new laws, and a footnote after them, in which the Lieutenant-Governor stated he hoped the Chief Magistrate would not have to put them in force, and as soon as read, after some remarks, he passed to other subjects, and, as usual, permitted everyone present to vote, whether a debtor or not, not realising, I suppose, that the new laws came into effect as soon as proclaimed. I quite expect at the next general election for Chief Magistrate there will be a great deal of excitement. . . . To show the peculiarity of legal administration here, I must tell you of a case tried a short time since. One Timothy Christian was convicted by a jury of indecent assault, &c., and fined £4, besides appointed to clear so many yards of the stream running through the township. This work the jury said (as is their custom) was to begin on September 24th next, and the foreman explained that they meant the following Monday; but the accused was told by an outsider that the verdict did not require him to work till September, 1896, and for some time the young man refused to work, and defied the Chief Magistrate. Being present a few days after his conviction at a public dance, to which no one then or there objected, he found plenty of partners. The Chief Magistrate has been much annoyed over this case, but he did ultimately make him do the work. But the fact that he could defy the authorities as he did speaks badly for the Island Constitution."

With regard to this case, I am unable to say—not having the laws of October 14th, 1857, before me—whether it came within the jurisdiction of the local Magistrate's court and jury; but it may be that a miscarriage of justice has taken place. The proclamation of the late Governor of May 20th, 1894, enacts that all crimes not within the jurisdiction of such court shall be dealt with in accordance with the laws at that date in force in New South Wales. By our laws this offence is a misdemeanour (in certain cases a felony), and is not punishable by fine, but by imprisonment.

Another correspondent, writing on 26th December, informing me of the re-election of Byron Adams as Chief Magistrate, says:—"The Magistrate ignores the instructions with reference to a law sent down from the Lieutenant-Governor some three months ago with instructions to the Magistrate to see that the law be strictly carried out. . . . Instead of obeying the commands of the Lieutenant-Governor, he called a public meeting, condemned the Governor's action, appealed to the House, a great many of whom are indebted for fees, and some for fines, who, of course, supported the Magistrate's action, and the law, as I have already stated, was ignored. At the election for the Magistrate and Councillors to-day, the Magistrate certified the electoral roll as correct, though there are a great many defaulters on the list. By so doing he, of course, gave himself a large majority of votes, defeating the other two candidates."

I presume that your Excellency will receive a report from the Returning Officer, and if the facts be as represented to me, I would respectfully express my opinion that you should declare the whole proceedings invalid.

These reports confirm the results of our personal observations, that the person who has been elected as Chief Magistrate is utterly unfit to be your Excellency's representative in the Island.

I would venture, in conclusion, to urge the great importance of a visit to the Island by your Excellency at the earliest opportunity. It would have a strong moral effect upon the people, and you would be able to form from personal observation a better opinion of the condition and wants of that neglected community than from any report, however elaborate.

To His Excellency Viscount Hampden,  
Governor of Norfolk Island, &c., &c.

I have, &c.,  
ERNEST B. DOCKER,  
Judge.

[Enclosure 6 in No. 5.]

My dear Docker, Parliamentary Draftsman's Office, Sydney, December 21, 1895.

On thinking over the proposal to recommend the appointment of Mr. Francis Nobbs as Resident Magistrate at Norfolk Island, the following considerations have occurred to me:—

1. The advantages of a Resident over a Visiting Magistrate appear to me to be the following:—
  - (a) The prompt punishment of offenders and recovery of debts;
  - (b) Continuing supervision over the punishments awarded and the execution of orders; and
  - (c) The presence of a trustworthy man who will inform the Governor as to the state of the Island.
2. The appointment of one of the Islanders to the position will have this good effect, that it will open a career to the more ambitious men, and lead to a higher standard of education and conduct. It would also carry out the previous policy of the British Government—that the Islanders should, so far as possible, manage their own affairs.
3. The disadvantages are:—
  - (a) The numerous family ties which the Magistrate would have on the Island.
  - (b) The absence of that prestige which a Visiting Magistrate would have.

I think these disadvantages would to a certain extent be diminished by the personal probity of Mr. Nobbs, and the influence which the possession of an assured position and an income comparatively large would be likely to have over the minds of the rest of the Islanders.

4. The appointment should only be made after a visit by His Excellency to the Island. It would be desirable to allow some time after the annual election to elapse before the appointment is notified, and the new Magistrate should be inducted by His Excellency or by some person of standing nominated by him for that purpose.

5. An arrangement might be made by which the Melanesian Mission would undertake the chaplaincy of the Island, as soon as His Excellency has satisfied himself that the change would be beneficial. I would strongly recommend that this arrangement be made. It would bring the Islanders under the best kind of outside influence. It might also effect a saving of perhaps £50 a year, and the question might then be considered whether any duties of Customs or other imposts would be necessary to meet the extra charges occasioned by the establishment of a proper civil and criminal jurisdiction within the Island.

6. If the imposition of duties is necessary, then they should be imposed on the induction of the Magistrate. It would not be well to impose them before a sufficient controlling power exists on the Island, and it would be prejudicial to the revenue to postpone the collection of the new duties, as the proposal to impose them must be well known on the Island.

This, which I intended as a letter, has taken the form of a report, and if you think it desirable you may show it to His Excellency.  
 Yours, &c.,  
 Judge Docker. JOHN L. WATKINS.

[Enclosure 7 in No. 5.]

Sir,

January 6, 1896.

I am instructed by His Excellency the Governor to say that he has heard with regret that the law is not administered in Norfolk Island; that few offenders are brought to trial; and that, on conviction being obtained and sentence passed, the penalty is very rarely enforced.

His Excellency has further been informed that you have ignored the decree of his predecessor, Sir Frederick Darley, disfranchising all electors who had not paid their school fees, and that at the last election for Chief Magistrate this disqualification was not enforced.

I have to instruct you to furnish His Excellency by return of mail with full particulars as to this election; and I have further to inform you that if on inquiry His Excellency finds that the facts as reported to him are as stated, he will take immediate steps to put an end to a condition of things which must, if continued, result in great injury to the best interests of the whole population.

It has been reported to His Excellency that Mr. William Adams had in his possession stores belonging to H.M.S. "Orlando," which he sold to Mr. Waterhouse. His Excellency has instructed Mr. Waterhouse to return the balance of these stores remaining in his possession to the first ship of Her Majesty's service calling at Norfolk Island, and his commands are that Mr. William Adams should at once refund to Mr. Waterhouse the value received for these stores.

In reply to your letter of December 17th, I am to inform you that His Excellency will not make any further free grants of land.

I have, &c.,

G. GATHORNE-HARDY,  
 Private Secretary.

The Chief Magistrate, Norfolk Island.

No. 6.

Agent-General for New Zealand to Colonial Office.

(Received March 5, 1896. Answered by No. 11.)

Westminster Chambers, 13, Victoria-street, London, S.W.,

March 4, 1896.

Sir,

Referring to my interview with you of the 2nd instant, on the subject of Norfolk Island and its proposed annexation to the Colony of New South Wales, I beg herewith to transmit copy of the cablegram which I received from my Government, and which I then brought under your notice.

I also enclose copy of the cablegram which I sent in reply, and which communicates to my Government the statements which you were good enough to make to me on the subject.

I beg to express a hope that the Imperial Government may see its way to defer the completion of the proposed arrangement, pending any further representations which my Government may desire to be considered in regard to the matter, as it affects the interests of the Colony of New Zealand.

I have, &c.,

W. B. PERCEVAL

P.S.—Since writing the above I have received a further cablegram from my Government, copy of which I also transmit.

[Enclosure in No. 6.]

Copies of Cablegrams.

NEW ZEALAND GOVERNMENT TO THE AGENT-GENERAL.

March 2, 1896.

RUMOURED here proposed annexation Norfolk Island to New South Wales. Inhabitants protest. The Island is an ecclesiastical province of New Zealand, and the Bishop of Melanesia and all the Bishops here favour New Zealand control, or that Island should not be interfered with. Geographically, Island is nearer New Zealand, and before rumoured change be given effect to, we claim, as matter of courtesy, to be consulted. Inform Colonial Office.

AGENT-GENERAL TO THE NEW ZEALAND GOVERNMENT.

March 2, 1896.

COLONIAL Office states Norfolk Island was part New South Wales until 1843, then annexed Tasmania, and has been under Governor New South Wales since 1856. At request of Colonial Office the Government of New South Wales consents to annex. Matter awaits Order in Council. Colonial Office unaware New Zealand had any desire make any claim in respect thereto.

NEW ZEALAND GOVERNMENT TO THE AGENT-GENERAL.

March 5, 1896.

NORFOLK Island. New Zealand Government did not take exception as matters stood in last. Islanders practically enjoyed self-government, with suzerainty Government of New South Wales. Knowing great interest New Zealand has evinced in respect to Island, consider, as matter of courtesy, should have been consulted.

No. 7.

11.

No. 7.

Governor Viscount Hampden to Mr. Chamberlain.

(Received March 10, 1896. Telegram. Answered by No. 9.)

LAW OFFICERS of the Colony advise that Order in Council will make Norfolk Island subject to all laws of this Colony. Consider it undesirable. Norfolk Island should be placed under administration of the Government without incorporation. Authority of Governor of New South Wales must be established. Have I authority to appoint Resident Magistrate, 20 January? Ministers concur fully.

No. 8.

NEW ZEALAND.

Governor The Earl of Glasgow to Mr. Chamberlain.

(Substance of Telegram received March 11, 1896. Answered by No. 10.)

If rumour correct that New South Wales applies to Imperial Government proposing to annex Norfolk Island, respectfully submit that the Island is an ecclesiastical province of New Zealand, and that it is geographically nearer to New Zealand than to New South Wales. Bishops of province prefer annexation to New Zealand, and before cancelling existing arrangements for government I consider it desirable that you should consult New Zealand Government.

No. 9.

Mr. Chamberlain to Governor Viscount Hampden.

(Sent March 14, 1896. Telegram.)

REFERRING to your telegram of 10th March,\* I shall await arrival of despatches before taking any steps. Question of Magistrate must stand over. New Zealand raises objection.

No. 10.

NEW ZEALAND.

Mr. Chamberlain to Governor The Earl of Glasgow.

(Sent March 14, 1896. Telegram.)

REFERRING to your telegram of March 11,† I shall await arrival of despatches before taking any steps Norfolk Island.

No. 11.

Colonial Office to The Agent-General for New Zealand.

Sir,

Downing-street, March 14, 1896.

I am directed by Mr. Secretary Chamberlain to acknowledge the receipt of Sir W. B. Perceval's letter of the 4th instant,‡ enclosing copies of a telegraphic correspondence with the New Zealand Government on the subject of Norfolk Island.

2. I am to inform you that in suggesting to the Government of New South Wales the annexation of Norfolk Island to that Colony no discourtesy was intended to the Government of New Zealand. It has for many years been recognised that the Colony of New South Wales is primarily interested in the Island, and the Governor of New South Wales has been officially responsible for the administration of its affairs. The telegrams communicated by Sir W. B. Perceval were in fact the first intimation that the New Zealand Government regarded themselves as in any way interested in the matter.

I am to add that Mr. Chamberlain has now informed the Governors of New South Wales and New Zealand by telegraph that he will take no further steps in the matter pending the receipt of despatches from both Colonies.

I am, &amp;c.,

R. H. MEADE.

No. 12.

Governor Viscount Hampden to Mr. Chamberlain.

(Received April 13, 1896.)

Sir,

Government House, Sydney, March 3, 1896.

In continuation of my Norfolk Island despatch of the 20th of January last,§ I have the honor to inform you that I duly appointed a Commission to investigate the matter referred to in my previous despatch, it being my opinion that, having regard to Her Majesty's Government's approval of the proposal to transfer the administration of Norfolk Island to the Government of New South Wales, it was desirable to avoid any delay in giving effect to it.

The Commissioners are the Honorable J. H. Carruthers, Secretary for Lands, and Mr. Charles Oliver, one of the Commissioners for Railways in this Colony. The latter gentleman has visited the Island on several occasions, and is thoroughly acquainted with the Island and its community.

A surveyor of the Lands Department and a private secretary also accompanied the Commission.

In order to facilitate the movements of the Commission, I applied to the Naval Commander-in-Chief for the use of a man-of-war to convey them to and from the Island. Admiral Bridge was pleased to comply with my request, and the vessel is expected to return to Sydney during the next few days.

I trust that my efforts to bring the wish of the Imperial Government to a successful issue will meet with your approval.

I have, &amp;c.,

HAMPDEN.

No. 13.

† No. 8.

‡ No. 6.

§ No. 5.

## No. 13.

## Governor Viscount Hampden to Mr. Chamberlain.

(Received April 13, 1896.)

Sir,

Government House, Sydney, March 5, 1896.

I have the honor to enclose a copy of a letter which I received last week. It is signed by Mr. Byron Adams and by Mr. O. Masey Quintal.

This letter is a summary of another document, copy also enclosed, which purports to be a memorial from the Elders and members of "the House" in Norfolk Island.

I make no comment on these documents, as I shall shortly be in a position to send you a report of a Commission which returned here yesterday from the Island.

This report will deal fully with the condition of affairs on the Island.

My Ministers are advised by their Law Officers that the draft Order in Council for the transfer of the administration of Norfolk Island to New South Wales, transmitted to you under cover of my despatch of the 20th of January last,\* will in its present form subject the Island to all the laws of this Colony; and as they consider that many of the laws of New South Wales are not adapted to the community of Norfolk Island, they are of opinion that proceedings for the transfer should be deferred until further consideration can be given to the form of the document effecting it.

In the meantime it is desirable that I should have authority to supersede the present Chief Magistrate, and appoint a Resident Magistrate who will administer the law.

At the present time there is in Norfolk Island no sufficient protection for person or property, and if matters are allowed to continue in their present condition the consequences will be very serious to that portion of the population which looks to the due administration of the law for protection.

I have, &amp;c.,

HAMPDEN.

[Enclosure 1 in No. 13.]

Your Excellency,

"Alice May," Campbell's Wharf, Sydney, February 24, 1896.

In submitting to you the annexed memorial and protest from the Elders—members of "the House of Representatives"—of Norfolk Island, we respectfully desire to summarise its leading contents by stating that those representatives object to annexation of that Island to New South Wales for governmental purposes because (amongst other reasons) such a measure would:

- 1st. Involve the destruction of the distinctive character and race of the people, as well as of the ancient laws, institutions, and customs of themselves and of their Pitcairn fathers, which were carried with them to Norfolk Island in 1856, and were guaranteed to them by Her Majesty's Order in Council of that year, and which its successive Governors were thereby enjoined to "preserve and maintain."
- 2nd. It would subject the people of Norfolk Island to a code of laws (that of New South Wales) entirely different from their own, and unsuited to their circumstances.
- 3rd. It would inundate the Island with strangers, and expose all its unalienated lands (which are the property of the Islanders by gift) to be appropriated by those strangers within a few days' time, and at a price very insignificant indeed.
- 4th. It would lead to the introduction of large quantities of spirits, the importation of which has hitherto been strictly prohibited under the ancient laws of the Island.
- 5th. It would subject the Island to taxation without, we fear, adequate representation; and deprive the Islanders of the rights of electing their own magistrates, which they have exercised for 100 years past (upon Pitcairn and Norfolk Islands); and
- 6th. In May, 1888, it was resolved by "the House of Representatives" at a meeting presided over by His Excellency Lord Carrington, at Norfolk Island (just as has been now resolved upon), that Norfolk Island should remain a Crown colony, and not be annexed to New South Wales, and nothing has occurred since then which affects that decision.

There are various other reasons which could be readily assigned why the present project should be abandoned, as we sincerely hope it may; but should it be proceeded with, notwithstanding the memorial and protest now submitted to your Excellency, we respectfully request that that paper and this letter be forwarded to the Secretary of State for the Colonies, and that he be asked to submit them to Her Majesty the Queen, who has ever exhibited a like regard for the wishes and happiness of the humblest of her colonies as of the greatest.

We are, &amp;c.,

BYRON ADAMS,

Chief Magistrate, Norfolk Island,

O. MASEY QUINTAL,

Barrister and Solicitor of the Supreme Court of New Zealand, Norfolk Island,

His Excellency Vicount Hampden, Governor of Norfolk Island.

Delegates.

[Enclosure 2 in No. 13.]

## Minutes of a Public Meeting.

Norfolk Island, February 5, 1896.

THE meeting opened in the usual manner with prayer by the Acting Chaplain.

The Chief Magistrate, in his opening speech, informed the House that the reason for his calling the meeting was on account of most important subject—that is, the annexation to New South Wales. That he had read a paragraph in the two leading newspapers of New South Wales to the effect that the Imperial Government

Government had asked the Government of New South Wales to take over the management of Norfolk Island, and that the Ministers are considering the subject. The Chief Magistrate read the paragraph, and said that the question to be considered by the House is, "Is it, or is it not, the desire of the Norfolk Islanders that Norfolk Island should be annexed to New South Wales," also "he wishes to read a few letters from the Governor."

Proposed by Mr. Stephen, seconded by Mr. Johnnie Quintal (senior):—

"That we do not go under the New South Wales Government, but that a civil letter be written to His Excellency stating our reasons."

Mr. Joseph Quintal spoke strongly on the same subject.

Mr. Henry Menges called for the minutes of the meeting at which Lord Carrington presided. Minutes were read; then Mr. John Young spoke plainly on the subject, and also supported the proposition of Mr. Stephen Christian.

Two letters were read from Governor Darley, and one from Gathorne-Hardy, Private Secretary of the present Governor.

Mr. Francis Nobbs spoke on the naval stores in William Adams's possession at this stage.

The Chief Magistrate then challenged the members of the full House to bring anything against him in the administration of the law, as mentioned in His Excellency's letter.

Mr. Macey Quintal also spoke in reference to the naval stores.

Mr. John Young proposed, seconded by Mr. Charles Evans:—

"That two policemen be sent to Mr. R. S. Waterhouse's residence to see that the goods be safely delivered on board the first of Her Majesty's ships to arrive."

Mr. F. M. Nobbs spoke on a letter relating to Mr. David Peacock, which he thinks ought to be read.

Captain Champion then informed the House that the Governor used the word "annexation." This was in answer to Mr. F. M. Nobbs.

It was proposed by Mr. Macey Quintal, seconded by Mr. Joseph Quintal:—

"That we be not annexed to New South Wales."

Carried unanimously.

Mr. Buchanan also spoke on the subject, recommending us strongly not to be annexed to New South Wales, pointing out our disadvantages.

Mr. Waterhouse then informed the House that he did not see the Governor, nor did he inform His Excellency of anything mentioned in the Governor's letter. His interview with His Excellency was after the date of the letter that was read.

Mr. John Young spoke at some length on the doctor's fees in reference to the law by Sir Frederick Darley for debt, and said that he thought it would be as well to let His Excellency know that the doctor is receiving more than what he really agreed for, but that we ourselves gave it gratuitously.

Mr. F. M. Nobbs spoke on the law. He said he thought the Chief Magistrate should have written to His Excellency giving him a full explanation.

Mr. Charles Nobbs spoke on the new law, and also the annexation, and said it is a mere newspaper report, and to take any steps in the matter would be premature.

Proposed by Mr. Gustave Quintal, seconded by Mr. William Adams:—

"That we petition the Imperial Government, enclosing the paragraph in the *Sydney Morning Herald*, of the 17th January last, asking them not to annex us to New South Wales under any circumstances."

Proposed by Mr. William Adams, seconded by Mr. Joseph Quintal:—

"That the Chief Magistrate go to Sydney with Mr. Macey Quintal to interview the Governor on the subject of annexation and other matters."

Carried by a large majority. Fifty-nine in favour and nine against the resolution.

For the next meeting:

Proposed by Mr. Hodson Evans, seconded by Mr. Meade Adams:—

"That no more strangers be admitted as members of this community."

Mr. Phillip McCoy spoke as to the advisability of bringing in a law for "breach of promise," and asked that the matter be referred to the Governor.

The meeting closed by singing the National Anthem.

#### No. 14.

#### Governor Viscount Hampden to Mr. Chamberlain.

(Received April 27, 1896.)

Sir,

Government House, Sydney, March 19, 1896.

I have the honor to enclose a copy of a letter from the Honorable J. H. Carruthers, M.L.A., Minister for Lands, covering a copy of a report drafted by Mr. Carruthers and Mr. Charles J. Oliver, who were appointed by me as Commissioners to make full inquiry into the affairs of Norfolk Island.

2. I would here invite your attention to that portion of the joint report of Messieurs Carruthers and Oliver pointing out that the application of the laws and system of government in force in this Colony would not prove suitable to the Island community, which confirms the opinion already expressed by my Ministers, as intimated to you in the fifth paragraph of my despatch of the 5th inst.\*

3. The letter dated the 9th March was drawn up by Mr. Carruthers after consultation with myself, and the proposals contained therein have my entire approval.

4. You will observe that the superseding of the Chief Magistrate is recommended as necessary, but upon consideration it has been thought desirable to carry out this change as part and parcel of a permanent amendment of the Constitution

5. Accordingly I have notified the inhabitants of Norfolk Island by Proclamation (copy of which is enclosed) that arrangements will be made for the appointment of a Resident Magistrate to administer the law. Pending a final settlement I have decided to leave matters on the Island as they stand at present.

6. I had hoped to make the arrangements for transfer without charge to the Imperial authorities, but I find that the cost of administration will in the first instance be so much heavier than was anticipated that I have been compelled to admit the justice of the contention that Her Majesty's Government should contribute a sum of £3,000 to defray the cost of repairs to buildings, and to meet some portion of the increased cost of administration during the first three or four years following the transfer.

7. I desire to have your authority to request the co-operation of the Admiral in the management of the affairs of Norfolk Island, should I find occasion to do so. I have, &c.,  
HAMPDEN.

[Enclosure 1 in No. 14.]

My dear Lord Hampden, Sydney, March 9, 1896.

I am forwarding to you to-day the joint report of Mr. Oliver and self on Norfolk Island affairs, so far as we at present can report.

As to expenditure, I estimate that £1,000 per annum should be provided, and it should be found as follows:—

	£	s.	d.
From the fund	265	0	0
From the Imperial Government	367	10	0
From the New South Wales Government	367	10	0
	<hr/>		
	£1,000	0	0

I gather, however, from my interviews with your Excellency, that the Imperial authorities are averse to any continued charge towards the local government of the Island; and in view of this fact, and also of the probability that a revenue will be obtainable sooner or later from various local sources, I desire to suggest that the sum of £2,000 cash contribution be paid by the Imperial Government, as its quota towards the expenditure to be incurred in governing the Island through this Colony.

Any additional expense for repair of buildings incidental to the change of Constitution should, I think, be borne by the Imperial Government, in consideration of the fact that this Government will incur, and has incurred, expense in connection with land surveys, titles to land, and other administrative work outside of the Island, without benefiting in any way. The expense to be borne in the repairs, &c., might be limited to, say, £1,000, and it will be moneys well expended to save valuable property from ruin.

In the next place, New South Wales has no naval force, and the affairs of the Island cannot be thoroughly attended to without the assistance of a naval authority. I strongly urge that, as an absolute essential to the success of any change of Constitution, that the Home Government be asked to provide for the co-operation of the Admiral and his fleet in Norfolk Island affairs. Some distinct understanding should be arrived at whereby in times of need and at other occasional periods one of Her Majesty's ships should call at the Island under instructions issued by your Excellency after consultation with the Admiral, so as not to unduly interfere with more important arrangements.

In case of any serious trouble on the Island (and possibly it might occur sooner or later) the people of New South Wales would be far from tolerant to any movement on the part of the New South Wales Government to despatch either military or police to the Island. It would be argued that it was not the business that the taxpayers of New South Wales paid their forces to do, and all eyes would be turned to the fleet at our doors, to whose maintenance we contribute what to us is a large sum, £37,000.

The patrol work of the fleet is already performed in regard to the South Seas, and its extension to Norfolk Island could easily be effected. The value of such extension would be manifest in the support openly guaranteed to the Resident Magistrate and in the oversight so necessary where authority in isolated places is apt to become tyrannical.

I think also that the New South Wales Government should be prepared, on the consummation of federation, to hand over its jurisdiction over Norfolk Island and Lord Howe Island to the Federal Government. A verbal understanding on this point would no doubt be easily attainable.

As to the Constitution of the Island, I would suggest that the Crown Solicitor should receive instructions to frame laws on these lines:—

- (i) To preserve the present code in its workable elements.
- (ii) To provide for a Government Resident, with magisterial powers equal to that of our Stipendiary Magistrates and Chairmen of Quarter Sessions.
- (iii) To establish the authority of the police—to provide for the enforcement of punishment suitable for the Island and its conditions.
- (iv) To provide for land titles and a registry of deeds, wills, births, &c., &c.
- (v) To provide for the jurisdiction of our Supreme Court in more serious offences and the operation of certain of our criminal laws.
- (vi) To establish a simple form of municipal government.
- (vii) To provide for the raising of revenue by certain taxes to be levied and imposed under the authority of the Governor in Council.
- (viii) To regulate the future occupation and alienation of Crown lands on the Island.
- (ix) For the recovery of certain debts.

It will be necessary to have a proper and legal change of administration to bring the Island under the authority of the New South Wales Ministers without making the Island a part of New South Wales. I think that the Law Officers of the Home Government are better qualified to draft the necessary legal documents and to advise on this question than anyone here, and, therefore, it will be wiser to despatch instructions from here to the Home Authorities, and to trust to them giving legal effect to those instructions without any more than a short cable intimating the form and shape of the formal acts to be done there.

I cannot, however, conclude my observations on this question of a new Constitution without proposing an alternative course for your consideration. I am aware that doubts exist as to whether the desired change can be effected by a mere Order in Council or whether an Act of the Imperial Parliament is necessary.

\* \* \* \* \*

If urgency be not thought essential, then perhaps all questions might be set at rest by the passage of an Act to grant a new Constitution to the Island, and to legally empower New South Wales to govern the Island as a Dependency.

The Act should be drawn to empower the New South Wales Legislature at any time, and from time to time, as deemed advisable, to pass a law regulating the future government of the Island, and until such law is passed, to vest the administration and government of the Island in the Governor and Executive Council of New South Wales, with power to promulgate laws and regulations fully and effectually operative. Such an Act would satisfy the people of New South Wales as to their constituted authority and control, exercisable at the discretion of the Legislature, and would strengthen the hands of the New South Wales Executive.

\* \* \* \* \*  
I may add that I think the total expense of the Commission would be covered by £100, but until the surveyor completes his task I cannot definitely fix the amounts.

I have, &c.,  
J. H. CARRUTHERS.

[Enclosure 2 in No. 14.]

To His Excellency the Right Honorable HENRY ROBERT VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, and Governor of Norfolk Island.

MAY IT PLEASE YOUR EXCELLENCY—

As Commissioners appointed by your Excellency on the 4th day of February, 1896, "to make full and complete inquiry, generally, into all and every the state of affairs in and the status and condition of the inhabitants of the said Island, nothing excepted, and more especially into the mode of administration of justice, the enforcement or observance of the laws or of any orders issued or proclamations made by any of my predecessors as Governors of the said Island, and also into the holding titles of the lands in the said Island, and any claims that may be made to the ownership of land therein"—we have now the honour to report on several of the matters referred to, but on others, more particularly those relating to the titles of land, we are as yet, from lack of data (now in course of preparation) unable to lay before your Excellency the result of our inquiries.

Mr. Oliver personally visited the Island during the term of the Commission. A public meeting was held for the purpose of reading the Commission, and announcing the decision of your Excellency with reference to the informal election of Chief Magistrate.

After the disposal of the formal business, some of the Islanders spoke, with an apparent desire to challenge the authority upon which Mr. Oliver was acting. Irritation was displayed, and intemperate language was used; but fortunately this was checked, and the meeting terminated in a most orderly manner.

Subsequently Mr. Oliver procured a considerable amount of information relating to the Island generally, and prior to leaving attended another public meeting, and drew attention to a number of matters demanding the serious consideration of the community, and the laws and regulations in force on the Island were read for general information.

Very little discussion followed, and nothing of importance occurred, beyond a general expression of concurrence in some remarks which were made in support of the wish of the inhabitants that the Island should not be annexed to New South Wales, but in some way remain a Crown Colony.

In addition to the evidence procured on the Island by Mr. Oliver, we have together examined in Sydney the records relating to the affairs of the Island, and we have also received the testimony of several witnesses (amongst others, Mr. Byron Adams, the Chief Magistrate) who have been in Sydney during the term of our Commission.

From our joint and several inquiries, we find that the laws and regulations of the Island are not observed with proper loyalty and respect, either by the people generally or the officials locally administering them. Several instances of maladministration have been brought under our notice, especially in cases of assault upon females.

The chief cause of this state of affairs is the system of elective magistracy. The Community is so small, the individuals are so closely related, and the local-influences are so great, that it is next to impossible to have an election of the man best fitted to really govern the Community locally; and even if such a man were elected he would, for the same reasons as just given, be unable for any length of time to firmly and properly administer justice without incurring the resentment of the majority of the people. There is no opportunity of a proper training of men for the important position of Chief Magistrate, and the local choice is so limited that it is scarcely to be wondered at if men devoid of any proper qualifications are chosen for the post.

Of late, a desire to disregard the authority of the Governor has apparently arisen. Some even go so far as to assert complete ownership of the Island, to the entire exclusion of any but local authority, it being claimed that "the House"—which means majority at a public meeting—should rule. Mr. Oliver, when on the Island, was careful to explain clearly the position of the Community, both as regards the framing and the administration of laws, and also as to the Island not having been, as claimed, ceded to the Islanders.

The moral condition of the Island is not good, but is perhaps not much, if at all, worse than might be expected of any Community similarly isolated, and being, on one side, of Tahitian descent.

The failure of the young men to continuously follow anything like an industrious life tends to the present unsatisfactory moral condition. Although there are many exceptions, the male portion of the Islanders are the reverse of industrious.

The integrity of the greater portion of the community in matters of trade is by no means of a high standard. Indebtedness is far too general, and the non-observance of contracts made in connection with supplies obtained common. This follows the absence of any law compelling the payment of debts, which is a matter requiring attention.

Petty theft is of frequent occurrence, and the malicious injury and destruction of property is said to be resorted to against persons who attempt to take advantage of the laws to endeavour to obtain redress in matters in which they deem themselves aggrieved.

Considerable disunion in religious matters has occurred, attributable in no small degree to the unpopularity of the Chaplain.

Difficulties

Difficulties have arisen in the school, owing mainly, if not wholly, to the impossibility of one of the Community maintaining proper discipline, or teaching up to a moderate standard. Recently a vast improvement has taken place, the Right Reverend Cecil Wilson, Bishop of Melanesia, having, at the request of the people, placed one of his duly qualified teachers in charge. The Bishop has also consented to select a permanent teacher from outside the Community.

There is evidence of the deterioration of the race. The physique of the young people is not equal to that of their parents, and there is a prevalence of disease common to the issue following close inter-marriage. The mental capacity of the children, the direct issue of members of the community, is not equal to that of the offspring of white men who have settled on the Island and married women of the Community.

The buildings which were upon the Island when the Pitcairn Islanders first landed have undergone a great change. Some have been almost altogether demolished—notably the old prison building, for which there was no use—and others of a residential character, at first occupied on sufferance, and that occupation continued, are, with the exception of about four, in a bad state of repair.

The roads are not in good order, little proper maintenance having been done by the Islanders. This is particularly noticeable in wet weather.

The fertility of the Island is probably unsurpassed. Oranges, grapes, passion-fruit, figs, pineapples, and other fruits, grow abundantly. Lemons and guavas are plentiful in most of the gullies. The former is not of a good marketable quality, but the best lemons could be grown. Potatoes, onions, and other vegetables can be largely produced; also maize and arrowroot. Coffee can be cultivated abundantly; indeed the whole Island is capable of being made productive.

The fertile nature of the land has been by no means taken full advantage of, the greater proportion of the areas granted remaining unfenced and uncultivated. A complete list of grants issued, and other information relating thereto, will be found in a separate paper.\*

The recent decision to stop the issue of further grants of land was most wise, but it appears to need some slight reconsideration so far as it affects land already occupied and improved under a system of permissive occupancy locally authorised. These matters will be referred to in a special paper.

Excepting, perhaps, in connection with these permissive occupations, no lands should, in future, be alienated until the affairs of the Island have been placed in a more satisfactory position. There is ample alienated land available for any beneficial occupation and cultivation which is likely to take place in the near future.

The population of the Island is:—

Norfolk Island Community	...	...	...	594
Melanesian Mission...	...	...	...	288
Total	...	...	...	882

The exports from the Island for the year 1895 amounted in value, so far as we have been able to ascertain, to £2,425, the principal items being: whale oil and whalebone, £1,500 (£1,400 and £100 respectively); onions and potatoes, £225; bananas and oranges, £550. To this, treated as an income, may be added on account of expenditure on the Island by the Melanesian Mission of £500, making a total of £2,925.

The imports amounted to £3,207 10s. in value, and included chiefly flour, tea, sugar, drapery, tobacco, and things usually consumed in ordinary life; also a quantity of barbed fencing wire.

As to the future of the Island, we have no hesitation in saying that an immediate change in the system of local administration is absolutely necessary. It may be here stated that the unanimous feeling of the Islanders is that annexation, as they understand it, to the Colony of New South Wales is most undesirable.

To meet the immediate necessities of the case it is, we think, a question for consideration whether the present Chief Magistrate . . . should not at once be superseded and a Chief Magistrate, to be selected from the Community, appointed in his stead, to act only pending the appointment of a Magistrate in the person of someone at the present time in no way identified with the Island. Should supersedure be decided upon, the most eligible person for the temporary position is Mr. F. M. Nobbs. The remuneration at present attached to the office could be paid, it being left to future consideration whether, on the appointment of a permanent Magistrate, Mr. Nobbs should receive any additional sum for his services while temporarily acting. We are not satisfied, however, that it will be wise to make any change at present, if there be any immediate prospect of a change in the constitution of the Island.

If it be deemed undesirable to make any change, pending a final settlement of the future administration of the affairs of the Island, it is suggested that the Chief Magistrate should be formally notified of the disapprobation of his recent action in failing to carry out the laws and regulations, and informed he must act strictly in accordance therewith while he remains in office. It is desirable that this notification should take such a form as to ensure it being made public in the community.

In regard to the contemplated permanent change, we would respectfully point out that the application of the laws and system of government in the colony of New South Wales would not prove suitable to the Island community, and, further, that it is desirable to introduce a form of government which, while being effective, will not be altogether dissimilar to what the people have been accustomed to. This, it is thought, could be done by the Governor continuing his present independent control and authority, under advice from the New South Wales Ministers. The local administration to be entrusted to a Government Resident.

It would be quite useless to attempt to permanently carry on the administration of law in the Island by the appointment of a member of the present Community as Government Resident. Not one of them could command that respect within the Community which is indispensable, their terms of equality of position preventing it. Further, family connexions and local interests are an absolute bar to the satisfactory discharge of the functions by a member of the Community.

The existing laws and regulations could be amended, and extended powers granted to the Government Resident for enforcing punishment, the recovery of fines, and also certain private debts to a limited extent, not, however, in either case, to go further than the sale of personal property, the sale of land being by express words prohibited.

For

For the present system of conducting the business by public meeting, which means an assemblage of the whole adult community, designated by them their "House," we would suggest a local council of twelve, to be elected annually by the male members of the community of the age of 21 years and upwards; the qualification for election being a duly recognised member of the community of the age of not less than 30 years, and, in future, except as regards the offspring of present residents, such membership or permanent residence on the Island to be permitted only by the Governor. This local council to be presided over by a chairman, to be elected by the council, who in his absence shall have power to elect an acting chairman. The executive functions of the local council to be confined to local works, such as the care of the roads, public buildings, &c. They should also have power to frame by-laws for controlling the business entrusted to them, and submit them to the Government Resident, who should forward them, with a report, for confirmation or rejection by the Governor.

The council might be permitted to suggest amendments of, and additions to, the laws and regulations to the Government Resident, who should forward them, with a report, to the Governor in the manner suggested in connection with the proposed by-laws; but no proposed law, regulation, or by-law should be operative until duly notified as approved by the Governor. The present provision for proposed laws and regulations being operative pending confirmation or otherwise is objectionable, and now unnecessary, and has only resulted in laws and regulations being made which have never even been submitted for confirmation.

In connection with the designation "Community," as just previously used, we beg to recommend that it should include male members of the Melanesian Mission (white) of the age of 21 and 30 years as is applicable to the suggestions.

The person to be selected for the position of Government Resident should have no previous connection, in any way, with the Island. He should be married, of undoubted character, capable of administering the laws, and, by example, guiding the people. Practical ability in the cultivation of land is also most desirable; in short, he should be a man, not "of the town," but "of the country," who can readily adapt the modern occupancy of land in advanced countries to the fertile soil now lying idle in the hands of the settlers of the Island and their primitive ways.

He will require a clerk, who should act as Registrar for the Island, and be in charge of postal and other internal Government matters.

Two policemen—married men—are required for police and lock-up duties, and these men should be specially selected from men who know something of the cultivation of land.

The duties of the Government Resident and of the two policemen will be but light, and, as idleness will be dangerous, both as an example and as a corrupting influence in itself, it is necessary that there should be provided some fuller occupation which will be valuable both to the Community and to the Crown, whilst not of such a character as to beget want of respect. We recommend, therefore, that there be established a small State farm, under the active control of the Government Resident, and worked by his officials and by occasional labour, as required. Eventually, this farm will be self-supporting, and, if properly managed, it should tend to revolutionise agriculture on the Island, and lead up to valuable production and increased commerce. It could be used also for the purpose of "task" punishments under the penal code, saving thereby other useless and expensive methods in vogue for inflicting penalties and punishments for minor offences.

It would economise the expense of administering justice, and would utilise valuable labour that could not be better bestowed.

We recommend the following expenditure in relation to the foregoing, viz. :—

Government Resident, £250 per annum with residence provided in the old Government House.  
 Clerk and Registrar, £75 per annum and residence.  
 One policeman, £130 per annum with quarters.  
 One policeman, £100 per annum with quarters.  
 Total, £555 per annum.

Add to this sum the cost at the present rate of payment, for doctor, chaplain, and mail service, viz. :—

	£	s.	d.
Doctor's allowance, including drugs ... ..	155	0	0
Chaplain ... ..	50	0	0
Mail service ... ..	26	16	4
	231	16	4
Maintenance, tools, &c., of farm ... ..	100	0	0
	£331	16	4

making a total expenditure of £886 16s. 4d. per annum.

To meet this expenditure, there is, we understand, available a sum of £265 per annum, drawn from interest on the Norfolk Island Fund.

A small addition to this might be made by the imposition of some slight taxation. It would require to be limited and moderate, as there is but little ready money at present in circulation on the Island. We think a duty on tobacco might be very fairly imposed. A tax on stock depasturing on Crown lands could not be objected to.

A timber license, if imposed under regulations authorising the cutting of timber on Crown lands, and limiting the size and class of timber to be cut, would be beneficial, and produce a small revenue.

A registration fee on dogs is desirable in order to limit their number, dogs at the present time being most destructive among the stock.

A fee for the registration of land transactions and other legal documents, and an Island postage stamp, might also be introduced.

A rental, perhaps only of a nominal character to present occupants, subject to the house being kept in repair, could be very properly charged for the residential buildings now occupied on sufferance, and a small charge be made for stone taken for building or other private purposes from partially demolished old public buildings.

It

It is difficult to estimate the revenue which would be derived from these sources, particularly as we were unable to obtain thoroughly reliable information upon which to base a calculation; but as the principal return would be from tobacco, consumption of which can be approximately estimated, and assuming that a duty of 2s. per lb. is imposed, the receipts under the proposals as a whole may be stated, for the purposes of estimate, at £200 per annum. This would make a total income of £530 per annum, leaving a deficiency on the proposed expenditure of £356 16s. 4d. until such time as the rent or other returns from the Crown lands and other sources of revenue which might be developed, will make the Island self-supporting.

In addition to this annual expenditure, a limited outlay would be necessary in connection with the repairs to building required for police and gaol purposes, quarters for police, and possibly the old Government House; but this would only be a small matter as compared with the suggested annual expenditure.

As regards church and school matters, it would be well if it could be arranged for the Melanesian Mission authorities located on the Island to take over the control. This would probably not result in economy on the present expenditure, but unquestionably it would be the most satisfactory arrangement which could be made.

With reference to the Mission, we deem it only proper to say that their influence on the Island has always been most beneficial, and the personal interest now taken by the Right Reverend Cecil Wilson, Bishop of Melanesia, in all matters affecting the welfare of the community is far reaching.

The possibility of the Island becoming a cable station is worthy of notice. Should this come about, the Island must be brought more in touch with the outer world, which will no doubt be followed by better facilities for trade than at present exist, which is all-important for the advancement of the place.

In conclusion, we venture to express a hope that the representations which have been made in this report will assist in settling the question now pending with regard to Norfolk Island, and the people—with all their faults—have many good qualities, and are capable of great improvement under proper control and influence.

We have, &c.,

J. H. CARRUTHERS.  
CHARLES J. OLIVER.

Sydney, 10th March, 1896.

[Enclosure 3 in No. 14.]

PROCLAMATION.

By His Excellency the Right Honourable HENRY ROBERT, VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, and Governor of Norfolk Island.

WHEREAS from time to time various rules and regulations under the authority of Her Majesty's Orders in Council have been promulgated by the Governor of New South Wales and of Norfolk Island for the better regulation of the affairs of the said Island, and for the due administration of justice therein: And whereas the said rules and regulations have frequently been disregarded by the inhabitants of the said Island, and other rules and regulations have been improperly made by the inhabitants of the said Island, and which have not been submitted to the Governor of the said Island, and the same are therefore void and of no effect: And whereas it is essential that the authority of Her Majesty the Queen shall be respected and upheld by the inhabitants of the said Island: Now, therefore, I, Henry Robert, Viscount Hampden, Governor of the said Island, having made due inquiry into the administration of justice in the said Island, and into the social state and condition of the inhabitants thereof, do hereby notify to the Chief Magistrate and all officials and inhabitants of the said Island that the non-observance of the laws and regulations governing the said Island is inimical to the good order, well-being, and advancement of the community, and that the conduct of all officials and others, who should in duty bound see to the proper observance of the said laws, in failing to see that such laws are properly, faithfully, and strictly observed, is viewed with much disapproval by me as such Governor, and in order to prevent the recurrence of such disregard of the laws and regulations a Government Resident will, at an early date, be appointed by me to supersede the Chief Magistrate, and further that the Constitution of the Island will be by me amended to legally provide for the administration of justice and the local enforcement of the laws being in the hands of such Government Resident, and in the meantime I direct and enjoin that the said laws of the Island be more strictly and faithfully observed. And I further require all the inhabitants of the said Island, as dutiful and faithful subjects of Her Majesty the Queen, by all means in their power, cheerfully and loyally to co-operate in the carrying out of such laws, and otherwise so to conduct themselves as to promote their well-being and advancement. And I further require that this my Proclamation shall be read in open Court at a meeting of the inhabitants to be duly convened for that purpose.

As witness my hand at Government House, Sydney, in the Colony of New South Wales, the sixth day of March, in the fifty-ninth year of the reign of Her Majesty the Queen, and in the year of our Lord 1896.

## No. 16.

## Mr. Chamberlain to Governor Viscount Hampden.

Sir,

Downing street, May 30, 1896.

I have the honor to transmit to you, for your information, copies of a correspondence between this Department and the Treasury,\* from which you will learn that Her Majesty's Government authorise your incurring an expenditure, to be borne by Imperial funds, not exceeding £25 a month, for the ten months commencing on the 1st June, 1896, in providing the salary of a Magistrate, and, if necessary, a clerk, for Norfolk Island, with the view of checking the state of lawlessness now prevailing in the Island.

You will, doubtless, on receipt of my telegram, report to me what steps you take in the matter of such appointments, which, of course, must be of a provisional character, and I will only add here that the receipts of the person or persons so paid should be sent Home to this Department at least every quarter, with a certificate of performance of duty, when repayment can be made by this Department to the Agent-General for New South Wales, as is done in the case of payments for the Norfolk Island mail service.

I have, &amp;c.,

J. CHAMBERLAIN.

## No. 17.

MEMORIAL signed by Mr. Byron Adams and other Inhabitants of Norfolk Island, sent to Her Majesty the Queen, and forwarded to the Colonial Office by Lieut.-Col. Sir Arthur John Bigge (the Queen's Private Secretary), June 2, 1896.

(Answered by No. 21.)

Norfolk Island, March 27, 1896.

To Her Most Gracious Majesty Queen Victoria. May it please your Majesty,—

We, the undersigned, do humbly beg to lay our present condition before your Most Gracious Majesty. We have been informed by His Excellency the Right Honourable Henry Robert, Viscount Hampden, Governor of New South Wales and Norfolk Island, that he intends at an early date to appoint a Government Resident to supersede our Chief Magistrate, and that he also intends to amend our Constitution to suit such a change. He said that such changes are to be made for the better administration of justice in the said Norfolk Island.

He has also stated that the rules and regulations have been frequently disregarded by the inhabitants of the said Island; and other rules and regulations have been improperly made by the said inhabitants of Norfolk Island, and have not been submitted to the Governor of Norfolk Island for his approval. We are not aware that laws have been improperly made by the inhabitants of Norfolk Island, and which have not been submitted to our successive Governors for their approval; as each and all of our ex-magistrates declared publicly, that all rules and regulations made by the inhabitants of Norfolk Island have been forwarded on to the different Governors from time to time for their approval.

We have a system for the administration of justice which may be faulty; but, under the present state of things, we consider that crimes have been properly dealt with according to our laws and usages.

We hope that your Majesty will remember that our Magistrates, in the execution of their duties, in dealing with criminal cases, can only impose a fine of forty shillings. The highest power we have here is vested in a jury of seven Elders, which can only fine to the amount of ten pounds; and neither the Magistrate nor jury has the power to imprison any offender. Under these circumstances it is extremely difficult to punish crimes of grave natures. If our Magistrates be vested with more power, we are sure that we can administer justice legally and impartially in all criminal cases of serious natures.

With regard to the Island being generally in a retrograde position—as represented by the New South Wales Government—we humbly offer a few facts for your Majesty's consideration. When we first landed on the Island, there were only two homesteads on private allotments. Since then nearly eighty had been built by landholders on their allotments; and the majority of these with beautiful orchards of oranges, grapes, figs, guavas, &c., &c., and not one of them is mortgaged in any way; and there are about twenty houses more in the course of erection, waiting for a favourable reply from our Governor to proceed with improvements.

Formerly we were at the mercy of strangers, on whom we depended for our exports and imports; but the community is in much more favourable and comfortable circumstances at present, owing to the fact that we have a vessel of our own, which has lately opened up our trade, and consequently we have established a profitable outlet for our produce; and managed by ourselves.

We have also succeeded in establishing another industry, viz., that of fish-curing, which has proved a great success, and which, we fear, we shall have to ask the Imperial Government to protect for us.

We were informed by Mr. C. Oliver, the late Commissioner appointed by the Governor, that the Imperial Government requested the New South Wales Government to take us over.

We humbly beg your Majesty to consider seriously the changes that are to be made by the Governor; as we think that they will prove detrimental to the welfare of your loyal subjects, the community of Norfolk Island.

1. We have already been informed, on reliable authority, that certain parties in New South Wales are already waiting for the intended changes, to introduce public-houses here—which hitherto have been strictly prohibited on our peaceful little Island—and which, if permitted, will bring all their attendant evils with them. Drunkenness, &c., hitherto have been extremely rare; and what few cases we have seen, have been caused by individuals going on board vessels, and getting liquor on board.

The importation of spirituous liquors on our Island will prove ruinous to our temperance, which is one of the distinctive characteristics of our community.

2. Elective Rights.—Should a resident be appointed, we shall be deprived of our elective rights and privileges, which right every British subject enjoy; and which we have enjoyed for more than 100 years past, and also granted to us by your Majesty in Council. This

This Constitution, which we humbly beg your Majesty to protect, will be greatly injured, if not wholly cancelled, by the change His Excellency is about to make.

After assuring your Majesty that we do administer justice according to our laws and usages, and that we do punish crimes, and that we are progressing commercially, financially, and educationally, we humbly beg that your Majesty will not think us unreasonable in soliciting your assistance to prevent the proposed changes, which will prove disastrous to our nearest and dearest interests both spiritually and temporarily.

Hoping that our petition will be favourably received by your Gracious Majesty, we subscribe ourselves your most loyal and obedient servants,

BYRON ADAMS, Chief Magistrate.  
MARSH ADAMS, Q. Councillor.  
ARTHUR QUINTAL, 80 years.  
THOMAS BUFFETT.

No. 19.

Mr. Chamberlain to Governor Viscount Hampden.

(Sent June 18, 1896. Telegram.)

IN answer to your telegram of June 15\*, as to Norfolk Island, I am waiting despatch from New Zealand, and before taking action I will communicate with you.

---

No. 20.

NEW ZEALAND.

Governor the Earl of Glasgow to Mr. Chamberlain.

(Received July 7, 1896.)

Sir,

Auckland, May 26, 1896.

I yesterday had the honor of receiving your telegram† inquiring when you might expect to hear from me relative to the protest made on the advice of my Government by cable, as to the proposed administration of Norfolk Island by New South Wales.

My Government having delayed to follow up their advice by any further communications, pending developments regarding the proposed new Pacific cable, I telegraphed to inform them of the receipt of your cable message, and I now have the honor to give you the purport of their reply.

In amplification of, and addition to, their previous representations, my Government raise the following objections to the control of Norfolk Island by New South Wales.

In the event of a new Pacific cable being laid on British territory alone, in all probability Norfolk Island would be selected as the station from which a branch cable would be laid to New Zealand.

Under such circumstances, and without desiring in any way to adopt an unfriendly attitude towards a neighbouring colony, with whom New Zealand has always been on the most friendly terms, my Government have the strongest objection to the junction of the New Zealand branch with the main cable being on territory controlled by any other colony, even if that colony be New South Wales.

I am further advised to bring to your notice the agreement which was originally made with the Islanders, that, while their Island was, and would remain, an integral portion of the Empire, they should enjoy local self-government without interference; also that, as far as my advisers have been able to ascertain, there has not been sufficient ground for the contemplated abrogation of the rights and privileges of the Islanders.

Should, however, the Imperial authorities decide that the time has arrived for placing Norfolk Island under more direct control, it is the opinion of my Government that the claims of this Colony to administer Norfolk Island are superior to those of New South Wales. It is true that New South Wales has always exercised a sort of suzerainty or superiority over Norfolk Island, but that arose from the fact that New South Wales was the centre and headquarters of British authority in Australasia in the days when Norfolk Island was first settled, but it does not give that Colony any claim to continue the present shadowy control, nor to convert it into a more effective one, if a better arrangement in the interests of the Island can be effected.

If

## 21

If any change has to be made, it appears to my Government that other circumstances have to be taken into consideration. Norfolk Island is some 300 miles nearer New Zealand than New South Wales; it is a part of the Diocese of Melanesia, which is, ecclesiastically speaking, a part of the province of New Zealand; thus there is a considerable amount of sympathy and community of feeling between Norfolk Island and this Colony, which subscribes liberally to the cost of the Melanesian Mission; and for this and other reasons I am informed that the Bishop of Melanesia, as well as the other Bishops in New Zealand, demur to the Island passing under the government of New South Wales.

Finally, I am advised that, as far as my Ministers can ascertain, if any change is to take place in the government of Norfolk Island, the Islanders, while protesting against any change, would prefer to come under the control of New Zealand rather than that of New South Wales. Should the claim of New Zealand be given effect to, the proper arrangements for the administration of the Island, similar to that in the Cook Islands, would at once be made.

My Government, therefore, begs to suggest that, pending the settlement of the question of laying a new Pacific cable at any rate, no change should be made in respect to the control of Norfolk Island.

I have, &c.,  
GLASGOW.

## No. 21.

## Mr. Chamberlain to Governor Viscount Hampden.

My Lord,

Downing-street, July 9, 1896.

I have the honour to inform you that I have received from Her Majesty the Queen a memorial dated the 27th March,\* and signed by Mr. Byron Adams and other inhabitants of Norfolk Island, setting forth their views as to the position of affairs, and deprecating any changes in the administration.

2. I have to request that you will inform the memorialists that their memorial has been received by Her Majesty, and will also inform them that they may be assured that their representations will receive full consideration at the hands of Her Majesty's Government when tendering any advice to Her Majesty as to the future government of Norfolk Island.

I have, &c.  
J. CHAMBERLAIN.

## No. 22.

NEW ZEALAND.

## Mr. Chamberlain to Governor the Earl of Glasgow.

(Sent July 16, 1896. Telegram. Answered by No. 23.)

REFERRING to your despatch 26th May,† Norfolk Island. Trade and communication are with New South Wales, through whose Governor administration has been conducted. Island is British possession, and requires administration not only Resident, which would be sufficient for Protectorate. Estimated annual expenses of administration, £1,000; present revenue only £265. £2,000 required immediately repairs of buildings. I have no information as to grounds for believing that inhabitants prefer New Zealand, and as definite decision matter of urgency, impossible to await Pacific cable. I propose to arrange with New South Wales unless you send by telegraph strong reasons for further delay.

## Governor the Earl of Glasgow to Mr. Chamberlain.

(Received July 22, 1896. Telegram.)

REFERRING to your telegram of 16th July,‡ Norfolk Island. Government have nothing more since my despatch,† but nevertheless consider that Norfolk Island shows preference to New Zealand.

## No. 24.

## Mr. Chamberlain to Governor Viscount Hampden.

(Sent July 31, 1896. Telegram. Answered by No. 26.)

REFERRING to my telegram of 18 June,§ Her Majesty's Government, after communicating with New Zealand, are willing to attach Norfolk Island to New South Wales if Colonial Government ready to undertake expenses of future administration, in which case application will be made to Treasury for contribution towards cost of repairs of buildings.

## No. 25.

## Governor Viscount Hampden to Mr. Chamberlain.

(Received August 4, 1896.)

Sir,

Government House, Sydney, June 29, 1896.

In reference to my Norfolk Island Despatch of 19th March last,|| I have now the honor to transmit to you the enclosed copy of a further report, with appendices,¶ that I have received from the Commissioners appointed by me to inquire into the affairs of Norfolk Island.

I have, &c.,  
HAMPDEN.

[Enclosure

[Enclosure in No. 25.]

To His Excellency the Right Honorable Henry Robert, Viscount Hampden, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, and Governor of Norfolk Island.

MAY IT PLEASE YOUR EXCELLENCY,—

When reporting, under date the 10th March last, on matters in connection with Norfolk Island, we were unable, from the lack of data, then in course of preparation, to report upon land matters and several other questions mentioned in your instructions.

*Land Matters.*

A list of grants, compiled from the books of the Land Registrar at Norfolk Island, is now enclosed, showing 124 grants have been issued for a total area of 5,303 acres. In only one instance—the grant of 919½ acres to the Melanesian Mission—was the compensation money stated, the amount in that case being £1,330 10s.

*Transfers of Land.*—The information given in the list embraces all the details obtainable from the Island records. It will be seen that a large number of the grants are not now held in the one interest, having been subdivided and either bequeathed or sold to various persons.

*Registration of Land Titles.*—So far as we have been able to ascertain, no record of grants issued, or of subsequent transactions in connection therewith, exists outside of the Island. It would seem very desirable that copies of all documents dealing with land, and especially of deeds of grant, should be retained. Copies of the forms at present in use, with explanatory memoranda, will be found attached.

The descriptions in deeds of grant issued prior to a survey of the Island made in 1887 were based on a survey by the sappers and miners about 1859. These descriptions do not accord with the boundaries determined by the survey of 1887, and it was then found necessary to apportion the areas embraced therein as could be best arranged by the surveyor. This, no doubt, was a desirable course to follow, but it is a matter for regret that no steps were then taken to amend the original grants to accord with the more recent survey. The differences in the areas granted and those available are generally not great, and as regards the cases where the areas available are in excess of those specified in the description, there would be apparently no difficulty in obtaining a surrender of the original grants, and issuing fresh grants; but objection may be taken by the holders of original grants, who would suffer some loss of specified area by correction. However, it is fair to assume that the grants referred to portions of land approximately embraced by the descriptions, and so long as the grantees or their representatives obtain correct grants of these lands they should be quite agreeable to the correction being made. The matter is one which can only be dealt with by a person having local authority for the purpose, and then it will require to be handled with tact.

The question of titles to land under private sales, bequests by will, and what is known as “partition,” will be much more difficult to deal with, owing, in many instances, to the absence of definite information as to the particular portions of land referred to, and in others the want of evidence of the right of persons signing the documents to deal with the land.

It is not easy to suggest a course of action to meet these difficulties beyond pointing out that they can only be met by definite regulations of as simple a character as possible, empowering some authorised person to determine the different interests. The regulations should also provide for the proper record of future land transactions. These matters may perhaps await a final decision as to the proposed alteration in the administration of the affairs of the Island.

*Existing Rights to Grants.*—In our report previously referred to, mention was made to permissive occupations, locally granted, under which, subject to the fulfilment of certain conditions, grants were subsequently issued. Attached is a schedule\* of the applications made for such grants.

Apparently the intention was to enable young people to occupy land whereon they could erect residences, and subsequently obtain a grant of land.

Five of the applicants proved the *bond fides* of their applications—Edgar Nobbs, Henry Quintal, and Edward Laing having erected residences, and are, with their wives, in occupation; and Eustace Christian and Charles M. Evans were erecting residences. In these cases we deem it proper to recommend to your Excellency that the decision to withhold all future grants should be so far reconsidered as to permit of grants being issued. As regards the other applications referred to, the decision should, we submit, be confirmed, and the applicants informed that they will be permitted to either lease or purchase the areas, should they desire to do so, when a decision is arrived at as to how the remaining Crown land in the Island is to be dealt with. In the event of their not purchasing or leasing the land, any improvement which may, when the land is hereafter dealt with, be thereon, should be valued, and the future purchaser or lessee required to pay for the same. We think that if the course suggested meets with approval, the decision should be communicated to each applicant, in order to authoritatively and finally dispose of the applications.

In the matter of Henry Everett: This man has fenced in an area of 6 acres 1 rood 13 perches, it is alleged, under a misapprehension as to the correct boundaries of his property. He has effected considerable improvements upon the 6 acres 1 rood 13 perches, planted some 500 or 600 banana trees, a large patch of sweet potatoes, and a number of grape-vines and fruit-trees thereon, and Mr. Commissioner Oliver, with a view to facilitating a settlement of the case, directed the surveyor to survey the encroachment, which was done. We would recommend that Everett be allowed to purchase the 6 acres 1 rood 16 perches at the rate of £3 per acre.

With respect to the claims put forward by Mr. Dwight Allen, Mr. Bailey, and Mr. Waterhouse, for free grants of land, we submit that it would establish an awkward precedent to admit such claims, and that they be advised that the issue of free grants has ceased, and their applications cannot be complied with; but they will be permitted to purchase or lease land when a decision has been arrived at as to how the remaining Crown land is to be dealt with.

*Disposal of Crown Lands.*—The Island contains 8,528 acres altogether, of which about one-quarter (say 2,000 acres) remains unalienated. This land is generally not so good as that already alienated, being mostly mountainous, but the greater portion of it is fit for cultivation. It

It will be unwise to part with all the Crown land upon the Island, and, in addition to other necessary reserves, there should be reservations for timber. If the residents made fuller use of what land has been alienated, there is an ample area parted with to meet the requirements of the present population (about 600 souls exclusive of the Mission), who have, roughly, 5,000 acres; but there is the natural increase of population to be considered, and closer cultivation should be practised.

About 25 acres is enough for a large family to live upon, whilst half that area should suffice for a man and wife.

If, say, twenty families of really good respectable settlers could be induced to emigrate to Norfolk Island, and each family be leased  $12\frac{1}{2}$  or 25 acres, it would only require the disposal of an additional 250 to 500 acres, and such a course would be of great benefit, for the following reasons:—

1. It would produce revenue.
2. It would ultimately tend to check the present evils of close intermarriage in the community, and if men were well selected as good farmers, they would by example infuse a spirit of industry into the present residents, and educate them in agricultural pursuits.

*Protection of Timber.*—A timber tax has been suggested in our previous report. When the Resident Magistrate is appointed he should inspect and report as to the reservation of any particularly fine patches of timber. In the meantime strict instructions should be issued to check the destruction of the finer timber on the Island.

*Noxious Weeds.*—A considerable portion of the Island is infested with the following noxious weeds: Wild tobacco, poison berry, acacia scrub, red salvia (locally known as mint), and about half a dozen patches of prickly-pear. It is very desirable that some means should be adopted for the eradication of these pests, which, if not checked, will at no distant date overrun the whole Island. A regulation might be made compelling landowners to keep their properties free from such weeds, and providing for fines for failure to do so; or, if punitive measures be not thought advisable, a prize of, say, £5, might be offered annually to the holder of the best-kept farm. In view of the trouble prickly-pear has been in the Hunter River district of this Colony, we would recommend that instructions be issued for the immediate extirpation of the few clumps of prickly-pear on the Island.

#### *Registration of Births, Deaths, and Marriages.*

The Registrar (Mr. Isaac Robinson) was temporarily absent from the Island, Mr. Pearson acting as his *locum tenens*. The books in use were obtained from New South Wales, and similar to those in use in this Colony. The particulars were apparently correctly filled in, but it was ascertained at an interview with Mr. Robinson in Sydney that the registration of births, deaths, and marriages is not compulsory, and he obtains the necessary information from the church register. A regulation seems desirable compelling the attendance of relations at the office of the Registrar, and the registration of births and marriages within a specified period, and the production of a doctor's certificate and registration of death before the interment of the deceased is permitted.

#### *Public Officers.*

The performance of official functions by the magistrates has been dealt with in our previous report.

Dr. Metcalf, the official medical man of the Island, is a capable, conscientious gentleman, held in high esteem by the residents, and performs his duties in an eminently satisfactory manner.

The Chaplain (the Rev. Mr. Thorman) was absent from the Island, but from inquiry made it appeared that he was unpopular with a considerable section of the community, and does not in consequence wield that influence for good which we think he ought to.

The Acting Chaplain (the Rev. Mr. Ivens) is most energetic in all matters coming within his sphere. He takes a great interest in his work, and conscientiously strives to minister to the spiritual and social welfare of the people. Until recently he was deservedly popular with the whole of the inhabitants; but his action in regard to the informal election of Chief Magistrate in December last (action worthy of commendation) has affected his popularity with a section of the community.

The Registrar for Lands (Captain Bates) was also temporarily absent from the Island, recruiting his health in New Zealand. He appears to be a careful official, and conscientious in the performance of his work, but apparently lacks the training necessary to deal with documents relating to land titles.

The Registrar of Births, Deaths, and Marriages (Mr. Isaac Robinson) was absent from the Island, but was seen in Sydney prior to his return. His duties are not arduous, and appear to be performed satisfactorily.

We have, &c.,  
J. H. CARRUTHERS.  
CHARLES OLIVER.

#### No. 26.

Governor Viscount Hampden to Mr. Chamberlain.

(Received August 5, 1896. Telegram. Answered by No. 31.)

REFERRING to your telegram of 31st July,\* New South Wales accepts offer of Norfolk Island, with a grant of, say, £1,000, for repairs of building from Imperial funds. Letter follows to explain that this grant considered equitable, but not stated as an essential condition.

#### No. 27.

Governor Viscount Hampden to Mr. Chamberlain.

(Received September 12, 1896. Answered by No. 31.)

Sir,

Government House, Sydney, August 5, 1896.

I have the honor to acknowledge the receipt of your telegram of the 31st July,\* having reference to the transfer of the administration of Norfolk Island to the Government of New South Wales:

I

I placed the substance of this telegram before the Executive Council at their meeting on Tuesday, August the 4th, and I enclose the result of their decision, embodied in a minute signed by Mr. Reid, the Premier.

I am desired by my Ministers to say that the grant of £1,000 is not stated as a condition of acceptance, but as an expression of their opinion.

They consider that this amount is the lowest that can be named, having regard to what is equitable; but they prefer to make no condition, and to leave the question of a contribution to be settled by Her Majesty's Government in such a manner as they may think to be just and equitable.

I conclude the necessary documents to effect the transfer will be prepared by Her Majesty's Government, and will in due course be forwarded to me with instructions.

With reference to your Despatch of the 30th May last,\* giving me authority to appoint a Resident Magistrate, I am able to say that Colonel W. W. Spalding, C.M.G., late of the Royal Artillery, has accepted the appointment under the conditions and terms stated in the enclosed copy of a letter dated the 4th instant.

It will be necessary to make an allowance of £100 to this officer to enable him to transfer his family, household furniture, &c., to Norfolk Island.

I propose also, with the advice of my Ministers, to give Colonel Spalding authority to employ a policeman at a salary of £100 per annum, with quarters.

I am not able to state the amount of these expenses, which will be chargeable to the Imperial funds, as it is not possible to fix exactly the date when the transfer will be completed. The amount required, however, should not exceed £200, and I request your authority to expend that amount for these purposes.

I request that you will send the reply to this application by wire, as it is my intention to visit Norfolk Island in October for the purpose of giving effect to the alteration in the administration of the Island which has been approved by Her Majesty's Government.

I am, &c.,

HAMPDEN.

[Enclosure 1 in No. 27.]

TRANSFER of Norfolk Island from the Immediate Control of His Excellency the Governor, as representing the Imperial Government, to the Government of New South Wales.

His Excellency the Governor.

August 4, 1896.

The Cabinet accept the offer of Her Majesty's Government to place the government and control of Norfolk Island under New South Wales; it being understood that a sum, say, £1,000, be granted from Imperial funds towards the cost of repairing buildings.

G. H. REID.

[Enclosure 2 in No. 27.]

Sir,

Government House, Sydney, August 4, 1896.

I have the honor to state that his Excellency the Governor has received a despatch from the Secretary of State for the Colonies authorising him to appoint a Resident Magistrate at Norfolk Island, with salary at the rate of £25 per month, for a period of ten months.

His Excellency desires me to inquire whether, in the event of your being appointed to the position, you would be prepared to discharge the various duties for this period at that salary.

I am to add that one of the Government buildings, until recently occupied by the Chaplain, and known as Government House, will be placed at the disposal of the Resident Magistrate for the above-mentioned period.

You will understand that, as Mr. Chamberlain has only authorised the appointment and consequent expenditure as a temporary measure, his Excellency cannot guarantee its continuance for a longer term than ten months; and that there will be no pension attached to the office.

With regard to the cost of passage to the Island, his Excellency will probably make a grant from the Island Fund for the service, but, in the event of your deciding to accept the position, it will be necessary to submit a statement of the amount required for his Excellency's approval before embarkation.

His Excellency is having a Code of Regulations drawn up by the Crown Law Officers, defining the powers of the Resident Magistrate, and should you decide to accept the post, they will be forwarded to you when completed.

I have, &c.,

A. F. H. FERGUSON, Captain,  
Acting Private Secretary.

Colonel W. W. Spalding, C.M.G.

No. 28.

Mr. Chamberlain to Governor Viscount Hampden.

(Sent September 25, 1896. Telegram. Answered by No. 29.)

NORFOLK ISLAND.—Propose to annex to New South Wales by Order in Council, at the same time declaring Norfolk Island to be exempt from laws of New South Wales, and giving to Governor power of legislation until Legislature of New South Wales provides otherwise. Will obtain Law Officers' opinion whether Order in Council fit for the purpose; if not, whether, simultaneously with annexation, Act should be introduced New South Wales. Telegraph whether this meets views of your Ministers.

## No. 29.

## Governor Viscount Hampden to Mr. Chamberlain.

(Received October 14, 1896. Telegram.)

NORFOLK ISLAND.—With reference to your telegram of 25th September,\* Ministers propose that administration only should be transferred, legislative powers remaining as before. Order in Council will probably be sufficient. Complete annexation to New South Wales or future Federal body to be postponed till Colonial Government think it desirable. Meanwhile, Government of New South Wales will bear expense of administration. Despatch follows by mail.

## No. 30.

## Mr. Chamberlain to Governor Viscount Hampden.

(Sent October 23, 1896. Telegram.)

NORFOLK ISLAND.—Treasury agree to £1,000 grant; also £100, Spalding's passage. Order in Council will be sent out as soon as possible by which Government will be administered by Governor, New South Wales, under advice of Executive Council.

## No. 31.

## Mr. Chamberlain to Governor Viscount Hampden.

My Lord,

Downing-street, October 30, 1896.

In my telegram of the 23rd instant† I informed you that the Lords Commissioners of the Treasury had agreed to ask Parliament for a grant of £1,000, being the sum mentioned, both in your telegram and in your despatch of the 5th of August,‡ as the contribution suggested by your Ministers towards the cost of putting the public buildings in Norfolk Island in repair in connection with the transfer of that Island to the administration of New South Wales.

I have now to enclose for your information and guidance copy of the correspondence§ which has passed on the subject.

As provision for this grant is to be made on the Supplementary Estimates for the current year, the money will be available in the early part of next Session, before the 31st of March next, and can be paid over to the Agent-General for New South Wales, unless your Ministers wish other arrangements made.

In regard to the appointment of Colonel Spalding, if, as I gather, he has not yet assumed his duties in Norfolk Island, the provision of £250, which was made for a Magistrate's and his clerk's salary for ten months, on the assumption that such an officer would be appointed about the beginning of June last, will be more than sufficient to provide for his pay for the period between the date of his departure from New South Wales and the 31st of March; and the balance, you will perceive from the correspondence, may be utilised for the payment of a constable for the same period.

As after that date the liability of the Imperial Government for the administration of Norfolk Island and the mail service will cease, it is of importance that, with a view to prevent any available money of this £250 lapsing, these officers and the contractor for the mail service should be settled up with, either by advances from the New South Wales Government or by bills on this Department, before the financial year actually closes, and I request that you will arrange accordingly.

An Order in Council is being drafted, providing for the abolition of the office of Governor of Norfolk Island, and giving the administration of the Island and the power of legislating for it to the Governor of New South Wales, with the advice of his Executive Council.

I hope to submit this Order to Her Majesty in Council at an early date, but in the meantime there is no reason why you should not proceed to Norfolk Island and inform the inhabitants of the changes which have been resolved upon, and instal Colonel Spalding as Magistrate.

Some considerable amendment of the existing laws will be necessary before Colonel Spalding can act, but on this point I have no doubt your Ministers will advise you, and prepare the necessary amending law, which you can pass, as Governor of Norfolk Island, pending the arrival of the Order in Council.

I have, &amp;c.,

J. CHAMBERLAIN..

## No. 32.

## Governor Viscount Hampden to Mr. Chamberlain.

(Received November 18, 1896.)

Sir,

Government House, Sydney, October 9, 1896.

In continuation of my despatch of the 5th of August last,|| I have now the honor to inform you that I have accepted the tender of Messieurs. Hordern Brothers, of this city, to effect certain repairs and alterations to the building known as Government House, Norfolk Island, for the sum of £786.

In this connection I might point out that the Government architect, to whom the matter was referred, expressed the opinion that the tender was a reasonable one.

It has been found necessary to increase the amount to be allowed to Colonel Spalding, for the conveyance of his furniture and household effects to the Island, to £134 10s., this being the lowest rate available for the service.

In

In addition to this sum an expenditure to the extent of about £45 will be necessary to defray the cost of passages to the Island.

I have also authorised Colonel Spalding to purchase furniture for the equipment of certain rooms at Government House, Norfolk Island, to the extent in value of £150, the furniture to remain the property of the Government.

A policeman at a salary of £60 a year and quarters, and a clerk with pay at the rate of £40 per annum, will accompany Colonel Spalding to the Island.

The above will involve a special expenditure of £1,115 10s., and in addition an annual charge of £100 a year for the policeman and clerk.

I have applied to the Colonial Treasurer for an advance to meet these expenses, which, to the extent of £1,000, will be recovered from the proposed grant on the transfer of the administration.

The method of transfer of the administration of Norfolk Island is occupying the attention of my Ministers, who expect to arrive at a decision in the matter in the course of a few days.

They incline to the opinion that it will be necessary to pass an Imperial Statute vesting the administration in the Governor of New South Wales in Council, as the Order in Council annexing the Island to New South Wales will necessarily subject the former to all the laws of this Colony.

I hope to visit the Island early in the month of November, and for this service the Naval Commander-in-Chief on the Station has placed one of the ships under his control at my disposal.

I have, &c.,  
HAMPDEN.

### No. 33.

#### Governor Viscount Hampden to Mr. Chamberlain.

(Received Nov. 23, 1896. Answered by Nos. 34 and 38.)

Sir,

Government House, Sydney, October 16, 1896.

Referring to my telegram of the 14th instant,\* I have the honor to enclose a copy of a memorandum by the Premier, dated the 13th idem, having reference to the proposed transfer of the administration of Norfolk Island.

You will perceive that the Government of New South Wales desire to have the administration placed in the hands of the Governor-in-Council, the expenses to be defrayed out of colonial funds by an annual vote, and they are of opinion that in the order effecting the transfer of administration there should be a recital to the effect that, upon request being made, Her Majesty's Government will be prepared to annex the Island either to New South Wales, or, in the event of federation of the Australian Colonies, to the Australian Federal Government.

My Ministers consider that the transfer of the Norfolk Island Fund, and the contribution by Her Majesty's Government of £1,000 to repairs of buildings, will be consequent upon the completion of the proposed arrangement.

Within a few days I hope to be in a position to forward a draft of the new ordinance and laws and regulations for Norfolk Island.

I have, &c.,  
HAMPDEN.

[Enclosure in No. 33.]

#### MEMORANDUM FOR HIS EXCELLENCY THE GOVERNOR.

MR. REID presents his humble duty to your Excellency, and begs to state, in reply to the Governor's letter of 9th instant, that he is ready to advance £1,000 as therein requested, pending settlement of account on transfer of administration.

The question as to the future government of Norfolk Island has been seriously considered by Ministers, and I beg to acquaint your Excellency with the result of our deliberations.

Whilst ready to assist your Excellency, in fact to be your Excellency's advisers upon all matters of concern respecting the Island, we foresee great difficulties in the way of legislation either by the Governor with our advice or by the Legislature of the Colony.

We propose, therefore, that the Island should not be annexed formally to New South Wales, and that our services should be administrative only, legislation being conducted as formerly, or in such manner as may seem fit to Her Majesty's Government.

It should be understood, however, the Island is, as part of the arrangement, secured to New South Wales, or the future Federal body, when it is found expedient to ask for its annexation.

This will be a tangible basis for an annual vote out of Colonial funds towards the expenses of the Island.

I may repeat that our main object in entering upon this matter at all was to meet the wishes and convenience of the Imperial Government, being fully sensible of the great consideration shown to Colonial requests by the Home Government upon all occasions.

The Treasury, N.S.W., October 13, 1896.

G. H. REID.

### No. 34.

#### Mr. Chamberlain to Governor Viscount Hampden.

(Sent December 28, 1896. Telegram.)

NORFOLK ISLAND.—Law Officers of the Crown advise Order in Council conferring on Governor, New South Wales, powers at present possessed by you in capacity of Governor, Norfolk Island, coming into force when published in the Colony. Proposed to submit at first Council meeting at the beginning of the year.

No. 35

## No. 35.

## Governor Viscount Hampden to Mr. Chamberlain.

(Received January 4, 1897. Answered by No. 36.)

Sir,

Government House, Sydney, November 28, 1896.

I have the honor to inform you that I returned to Sydney on Saturday, the 21st November, from an official visit to Norfolk Island.

Leaving Sydney in H.M.S. "Katoomba" on the 10th November, I arrived off Norfolk Island on the morning of the 14th November, and immediately gave instructions to Mr. Byron Adams, late Chief Magistrate, to call a meeting of all the male inhabitants for 3 o'clock p.m. on that afternoon. At that meeting I proclaimed the New Laws and Regulations for Norfolk Island, copies of which are enclosed for the assent of Her Majesty, if you approve and deem such assent necessary.

I also formally installed Colonel Spalding as Resident Magistrate of the Island.

Colonel Spalding, with my approval, made the following appointments:—

Lieutenant Warner Spalding to be Clerk of the Court, Mr. John Knuckey to be Sergeant of Police, and Mr. F. Nobbs and Captain Bates were confirmed in their offices of Postmaster and Registrar of Lands respectively.

I remained on the Island until the 18th November, and the opportunity was thus afforded me of interviewing many of the leading inhabitants, who assured me that the Resident Magistrate would be loyally supported by the community.

The Island is small in area, but has, in proportion to its size, great capabilities, owing to the fertility of the soil; and I have every reason to believe that the security given to property by recent changes will operate to encourage inhabitants to cultivate the land more systematically than they have in the past.

I have, &amp;c.,

HAMPDEN.

[Enclosure in No. 35.]

PROCLAMATION by His Excellency The Right Honorable Henry Robert Brand, Viscount Hampden, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, and Governor of Norfolk Island.

WHEREAS by an Order of the Queen in Council, dated the 24th day of June, 1856, the Island called Norfolk Island was declared to be a distinct and separate settlement, and the Governor and Commander-in-Chief for the time being of the Colony of New South Wales was constituted and appointed Governor of the said Island, with power to make laws for the order, peace, and good government of the said Island: And it was therein ordered that until annulled by competent authority, all laws, ordinances, and regulations, civil and ecclesiastical, which might be in force within the said Island at the time of the proclamation of the said Order in Council should continue in force subject only to such changes as should necessarily be consequent on the changes of Government: And it was therein further ordered and declared that the Governor for the time being of the said Island called Norfolk Island, should have full power and authority to constitute and appoint judges, justices of the peace, and other necessary officers and magistrates in the said Island for the administration of justice. And whereas, in pursuance of the powers vested in them, the Governors for the time being of Norfolk Island did from time to time declare and enact that certain laws and regulations should be in force within the said Island. And whereas Her Majesty did, by commission dated the 5th day of July, 1895, duly appoint the Right Honorable Henry Robert Brand, Viscount Hampden, to be Governor and Commander-in-Chief of the Colony of New South Wales. And whereas in the interests of the community inhabiting Norfolk Island, and for the better promoting the advancement and welfare of the said Island and its inhabitants, and the better and more certain administration of justice therein, it has been considered wise and expedient to repeal all existing laws and regulations respecting the said Island and now in force therein, and to appoint an officer for the administration of justice therein, and to pass other laws for the better management of the affairs of the said Island: Now, therefore I, Henry Robert Brand, Viscount Hampden, the present Governor and Commander-in-Chief of the said Colony of New South Wales and its Dependencies, and Governor of Norfolk Island, do, in pursuance of the power vested in me, declare and enact as follows:—

*The Chief Magistrate.*

1. The executive government of Norfolk Island shall, during the absence of the Governor, be vested in the Chief Magistrate appointed by the Governor from time to time, who shall hold office during the pleasure of the Governor, and shall reside on the Island. Executive government vested in Chief Magistrate.

The Governor may from time to time appoint some person who shall, if the Chief Magistrate should die or be absent from the Island, or become incapable of acting in his office, have the powers and perform the duties conferred and imposed on the Chief Magistrate until a successor is appointed, or during such absence or incapacity as aforesaid.

2.—(i) The Chief Magistrate shall, in pursuance of the authority hereby vested in him, exercise a general supervision over the affairs of the Island, and shall from time to time and when required by the Governor report to him as to the condition of the Island, and all matters occurring therein, and shall carry out any instructions given him by the Governor. Power and authority of the Chief Magistrate.

Provided that the power of alienating, leasing, or authorising the occupation or use of the waste lands of the Crown shall be exercised by the Governor alone.

(ii) He shall carry out and enforce obedience to these laws, and for that purpose may summon to his assistance any person on the island, who shall forthwith obey the summons under a penalty not exceeding two pounds.

(iii) He shall also preside at the Magistrate's Court and administer justice therein to all persons, without fear or favour, affection, or ill-will, and in the administration of justice or in the conduct of any inquiry authorised by these laws he may administer oaths to jurors, witnesses, and others.

(iv) He may also, with the approval of the Governor, establish gaols, prisons, and houses of correction, and appoint a Registrar and gaolers, constables, bailiffs, and other officers, and remove any officer.

Provided that he may, without obtaining the approval of the Governor, suspend any officer, and appoint another temporarily in his place. The

*The Magistrate's Court and the Grand Jury.*

Jurisdiction of Magistrate's Court.

3.—(1.) There shall be a Court presided over by the Chief Magistrate (herein called the "Magistrate's Court") which shall be a Court of Record, and shall have jurisdiction—

- (a) To punish all crimes and offences (except crimes punishable by death); and the jurisdiction may be exercised summarily or on indictment as hereinafter provided;
- (b) To adjudge on all civil pleas whatsoever, irrespective of the amount claimed or in issue; and
- (c) To grant probates and letters of administration of and orders to collect the estates of persons dying possessed of real or personal property in the Island.

(11.) The jurisdiction of the Magistrate's Court shall extend to crimes and offences committed, and causes of action accrued, before or after the day on which these laws take effect, and to the estates of persons dying after the making of these laws.

Mode of exercising powers of Magistrate's Court.

4.—(1.) Subject to these laws, and so far as applicable, the provisions of the Imperial Acts eleven and twelve Victoria, chapter forty-two, and eleven and twelve Victoria, chapter forty-three, and the Acts of the Parliament of New South Wales, thirty-two Victoria number six, forty-six Victoria number three, forty-six Victoria number seventeen, fifty-two Victoria number six, fifty-five Victoria number five, and fifty-seven Victoria number twenty-three, shall have force and effect within Norfolk Island, and the jurisdiction and powers conferred by the said Acts on Judges and Justices of the Peace shall be exercised by the Chief Magistrate.

Provided that all criminal proceedings before the Chief Magistrate and a jury shall be commenced by a bill of indictment preferred to and found by a Grand Jury, to be constituted as hereinafter provided: Provided also that the jury to try criminal issues shall be a jury of seven Elders:

Provided further that where a bill of indictment charging a capital offence is found by a Grand Jury, the Magistrate may inquire into the same in a summary way, and shall forward the evidence produced before him, with a report thereon, to the Governor, to be dealt with by him as he may think fit.

(11.) In the exercise of civil jurisdiction the provisions of the Acts of the Parliament of New South Wales, ten Victoria number ten, and forty-five Victoria number twenty-seven relating to Courts of Petty Sessions in the Colony of New South Wales, and of such enactments as amend or are in that Colony ancillary to the exercise of the jurisdiction and powers conferred by those Acts shall, subject to these laws and so far as applicable in the circumstances of the Island, and without any limitation as to the amount claimed or in issue, be followed by the Chief Magistrate and apply to the Magistrate's Court.

Provided that the Chief Magistrate shall have no jurisdiction in any case where title of land is in question; but he may in any such case, or on the petition of any person, make inquiry in a summary way into the facts of any disputed title to land, and shall thereupon forward the evidence and his report thereon for the consideration of the Governor, who may adjudicate thereon, and whose orders in the premises shall be enforced by the Chief Magistrate.

(111.) In granting probate and letters of administration and orders to collect the Magistrate shall follow the law and practice of the Supreme Court of New South Wales in its probate jurisdiction so far as they are applicable.

(1v.) The Chief Magistrate shall be sole judge whether any of the enactments abovementioned are applicable in the circumstances of the Island.

The Grand Jury.

5. Upon the application of any person, supported by an affidavit disclosing an indictable offence, it shall be lawful for the Chief Magistrate to order the Registrar to summon a Grand Jury, and the Registrar shall thereupon summon thirteen Elders to be named by the Chief Magistrate to appear at a Court to be holden at a time and place to be mentioned in the summons to inquire, present, do, and execute all things which on the part of the Queen or her successors may then and there be commanded of them, and every finding of a Grand Jury shall be by not less than seven jurors.

Magistrate may make rules of procedure and practice, and fine persons for non-attendance.

6. The Chief Magistrate may, with the approval of the Governor, make, amend, and repeal rules providing for the exemption of certain of the Elders from being liable to serve on juries, for the summoning, impanelling, and swearing of grand and petit juries, for the conduct of trials, the summoning of witnesses, and regulating the practice and procedure of the Magistrate's Court and the Grand Jury, the forms of oaths to be taken by jurors and witnesses, and the forms of all proceedings, the compensation to be allowed to jurors and witnesses, and the costs of the parties, and for applying the Acts incorporated herewith to the circumstances of the Island.

He may also impose a fine not exceeding ten shillings on any person who fails to attend the Magistrate's Court or the Grand Jury in pursuance of a summons, or refuses to serve on a jury.

*Crimes punishable by Death.*

Crimes punishable by death.

7. Crimes punishable by death shall, unless otherwise provided by laws made by the Governor, be dealt with in accordance with the laws now in force in the Colony of New South Wales. The trial of such crimes as aforesaid shall be held in Norfolk Island.

*The Council of Elders.*

Constitution of the Council of Elders.

8. There shall be a council of twelve persons (herein called the "Council of Elders") elected as hereinafter provided. And the Council of Elders may from time to time choose one of their number as President, who shall preside at all meetings for the discharge of administrative duties, and shall have a casting vote only.

Powers of the Council of Elders.

9.—(1.) The Council of Elders shall have the care, construction, and management of the public roads of the Island, and the care and management of all commons and public reserves, and may, subject to the approval of the Chief Magistrate, make, amend, and repeal by-laws for the above purposes, and regulating proceedings at meetings of the council for administrative purposes, and providing for the construction and maintenance of the public roads by the labour of the residents on the Island, or by means of rates to be levied on the said residents; and may in those by-laws impose penalties not exceeding two pounds for any breach of the same.

The Magistrate may approve or disapprove of the making, amending, or repealing of any by-laws, or may reserve the consideration thereof for the Governor. By-laws when approved as aforesaid shall, subject to any laws enacted for the governing of the Island, and subject to any regulations made by the Chief Magistrate, have the force of law.

(11.)

(ii.) The Council of Elders may also, subject to the provision hereinafter mentioned, make suggestions to the Chief Magistrate as to any changes in the laws and regulations of the Island which they may think desirable.

10.—(i.) The first meeting of the Council of Elders for the discharge of their administrative duties shall be held on a day to be appointed by the Chief Magistrate, and meetings may thereafter be held on such days as may be prescribed by the by-laws of the said council, and if no days be so prescribed on any day named by the President. Meetings of Council of Elders.

(ii.) Meetings of the Council of Elders for the consideration of suggested alterations of the laws and regulations of the Island shall be summoned by the Chief Magistrate on the receipt by him of a petition signed by twenty or more of the Elders. The Chief Magistrate shall preside at those meetings.

11.—(i.) The Council of Elders shall be elected on some day to be named by the Chief Magistrate as soon as convenient after the day on which these laws take effect, and thereafter on the first Tuesday in January in each year; and, on failure to elect any or all of the members of the Council of Elders, the Chief Magistrate may appoint a sufficient number. Election of Council of Elders.

The members of the council shall be Elders of the age of thirty years or upwards; but any person who is in any gaol or house of correction, or has within the previous three months been discharged from some gaol or house of correction to which he has been committed as a punishment for an offence against any laws made by the Governor, shall be disqualified to be elected to or to be a member of the council.

The council shall be elected by the elders in the manner prescribed by regulations made by the Chief Magistrate.

(ii.) Three of the council shall retire on the first Tuesday in January in each year. The order in which the members of the first council shall retire shall be determined by the Chief Magistrate by lot in the manner prescribed by regulations made by him, and when all the members of the first council have retired the members who have been longest in office shall be the first to retire. Retirements and vacancies.

Vacancies from death, absence from the Island, or incapacity, shall be filled by the appointment of the Chief Magistrate, and the persons so appointed shall retire when the persons to whose offices they have been appointed would retire in accordance with these laws.

#### *The Elders.*

12. The Chief Magistrate shall cause to be kept a register of the names of the male natural-born or naturalised subjects of Her Majesty of the age of twenty-five years and upwards who have for the previous six months resided on the Island, and those persons are herein referred to as "the Elders." Who are the Elders.

But no person who is in any gaol or house of correction, or has within the previous three months been discharged from some gaol or house of correction to which he has been committed as a punishment for an offence against any laws made by the Governor, shall be an Elder.

#### *The School.*

13. The father, or in case of his death or absence from the Island, the mother or other person having the custody or care of a child (not being a child under the care of the Melanesian Mission) between the ages of seven and fourteen years, shall pay to the Chief Magistrate, or any person authorised by him in respect of each such child as aforesaid, the sum of threepence weekly for schooling, and shall be responsible for the regular attendance of the child at school, except good cause be shown to the school-master for the absence of the child, and shall be liable to a fine of sixpence for every day that the child is absent from school, unless for good cause. Parents are responsible for attendance of children at school, and shall pay school fees.

#### *Miscellaneous Offences.*

14. No beer, wine, or spirituous liquor shall be landed on any part of the Island, except it be consigned to or to the care of the Chief Magistrate, under a penalty not being less than five shillings nor more than forty shillings. No beer, wine, or spirituous liquor to be imported unless consigned to the Chief Magistrate.

But the Chief Magistrate may, in his discretion, distribute to persons holding the permits hereinafter mentioned so much of the beer, wine, or spirituous liquor consigned to him or to his care as he may think fit.

15. No beer, wine, or spirituous liquor shall be kept in any place on the Island unless under the care and control of the Chief Magistrate, or under and in accordance with a permit issued by him. Seizure of beer, wine, and spirit illegally kept.

The Chief Magistrate, on receiving information on oath that there is reason to suspect that beer, wine, or spirituous liquor is in the possession of any person in contravention of these laws, may issue a warrant authorising search to be made on the premises of the suspected person; and if in pursuance of a search warrant or otherwise any beer, wine, or spirituous liquor is found in the possession of any person as aforesaid, the beer, wine, or spirituous liquor, and the vessels containing the same may be forthwith seized, and the said person shall be liable to a penalty not exceeding twenty shillings, and on conviction the said vessels and their contents shall be forfeited to Her Majesty.

16. Whosoever uses obscene or profane language in a street, highway, or public place shall be liable to a penalty not exceeding forty shillings nor less than five shillings. Penalty for using obscene or profane language.

17. The mother, or, in case of her death, the person having the care and custody of an illegitimate child, shall be entitled to recover in a summary way from the father of the child an allowance of not less than two shillings and sixpence nor more than seven shillings and sixpence a week for the maintenance of the child until it attains the age of fourteen years: Maintenance order for support of illegitimate children.

Provided that no order shall be made under this section on the evidence of the mother alone.

18. The Chief Magistrate may, with the approval of the Governor, make, amend, and repeal regulations— Magistrate may make regulations.

- (a) prescribing the duties of the registrar and of gaolers, constables, bailiffs, and other officers;
- (b) regulating proceedings at meetings of the Council of Elders for the consideration of suggested alterations of the laws and regulations of the Island;
- (c) regulating the election of members of the Council of Elders, and the retirement of the members of the first council;
- (d) prescribing the duties of the school-master, and regulating the management of the school; (e)

- (e) prescribing the conditions under which permits to keep beer, wine, or spirituous liquor may be granted, held, and revoked;
- (f) regulating the cutting of timber on land of the Crown, and prescribing the fees or payments to be made for timber so cut;
- (g) prescribing the measures to be taken for preserving the public health;
- (h) for carrying out these laws and prescribing forms for all matters and proceedings thereunder.

And may, in those regulations, impose any penalty not exceeding ten pounds for any breach of the same, or where the breach is a continuing one not exceeding one pound for every day that the breach continues.

All regulations so made and approved shall, when published in Norfolk Island by exhibiting the same in public at some place near the court-house, have the force of law.

#### *Supplemental and Repeal.*

Recovery of fines and penalties.

19. All fines and penalties imposed by these laws or by any regulations or by-laws made thereunder, may be sued and proceeded for by any person whomsoever and may be recovered in a summary way before the Chief Magistrate, who may, in the order imposing the fine or penalty, direct that in default of payment or satisfaction at the time and in the mode ordered it may be recovered by distress, levy, and sale of the goods and chattels of the defendant, and that in default of sufficient distress the defendant be imprisoned for any term not exceeding three months.

Application of fines and penalties.

20. All fees, fines, and penalties shall be paid to the Chief Magistrate or to any person appointed by him in that behalf, and shall be accounted for by the Magistrate to the Governor.

Powers may be exercised from time to time.

21. Where by these laws, or by any regulations thereunder, power is given to do, perform, or submit to any act, matter, or thing, the power may be exercised from time to time as occasion may require, unless the contrary intention appears.

Repeal.

22. All laws, ordinances, and regulations in force within Norfolk Island when these laws take effect are hereby repealed and annulled, and the offices of Chief Magistrate and assistants or councillors established under those repealed laws, ordinances, and regulations are hereby abolished.

Provided that such repeal shall not—

- (a) affect the previous operation of any law, ordinance, or regulation so repealed, or anything duly done, suffered, or commenced to be done under them; or
- (b) affect any right, privilege, obligation, or liability acquired, accrued, or incurred, under any law, ordinance, or regulation so repealed; or
- (c) affect any penalty, forfeiture, or punishment incurred in respect of any offence committed against any law, ordinance, or regulation so repealed; or
- (d) affect any investigation, legal proceeding, or remedy in respect of any such right, privilege, obligation, liability, penalty, forfeiture, or punishment as aforesaid;

and any such investigation, legal proceeding, or remedy may be instituted, continued, or enforced, and any such penalty, forfeiture, or punishment may be imposed and enforced, as if these laws had not been made.

Commencement of these laws.

23. These laws shall take effect on and after the day of their proclamation in Norfolk Island by the Governor or Chief Magistrate.

In witness whereof, I, as Governor of Norfolk Island, have signed this my Proclamation and have affixed hereto the seal of Norfolk Island, this 14th day of November, in the sixtieth year of the reign of Her Majesty the Queen, and in the year one thousand eight hundred and ninety-six.

HAMPDEN.

His Excellency the Governor of Norfolk Island has been pleased to approve of the following rules and regulations made by the Chief Magistrate under the authority of the laws of Norfolk Island:—

RULES for carrying out the provisions of the Acts of the Parliament of New South Wales 10 Vict. No. 10, and 45 Vict. No. 27, adopted by the laws of Norfolk Island, and for summoning, drawing, and empanelling juries.

#### *Rules to carry out the provisions of 10 Vict. No. 10.*

Sittings of the Court.

1. A Court for hearing and determining all civil pleas shall be held in the Court-house on such days as may be appointed by the Chief Magistrate.

Adjournment of the Court.

2. If the Chief Magistrate is not present at the time appointed for holding the Court, or within half an hour thereafter, the Registrar may adjourn the Court to such time as he may think fit.

Time of filing demands or plaints.—Issue of plaint note.

3. All demands or plaints shall be filed in the Registrar's office six clear days, and all summonses shall be served three clear days, prior to the day appointed for the return of the summonses. A plaint note shall be issued forthwith to the plaintiff on his filing the demand or plaint.

Demand before institution of proceedings.

4. In any action the nature of which admits of a demand being made before the action is brought a demand shall be made before the issue of the summons, otherwise the plaintiff shall not be entitled to recover his costs in the action.

Filing defence and service of notice (13).

5. Where it is intended to defend upon any matters of set-off or excuse, particulars of the same shall be filed in the Registrar's office two clear days prior to the day of hearing, and a copy of the particulars so filed shall, at least one clear day prior to the day of hearing, be served by the defendant on the plaintiff, in the same manner as a summons may be served upon a defendant: Provided that the filing and service of such notices of defence may be dispensed with by consent of the plaintiff or by order of the Court, and under such terms and conditions as the Court may direct.

Service of process by plaintiff or defendant. New trial.

6. In the discretion of the Registrar, a party to an action may receive summons or other process in the action from the Registrar for the purpose of serving the same.

7. When a new trial of a cause has been granted, the Registrar shall give notice in writing to the plaintiff and defendant of the time appointed for such trial; the notice may be given not less than three clear days before the day appointed for the trial.

Affidavit of service.

8. Affidavit of service of any process may be made and endorsed on the proceedings before the hearing.

9. The Court may adjourn the hearing of any matter on such terms as it thinks fit, and may award costs to either party on the adjournment. **Adjournment of hearing.**
10. The Court may at any time during the trial allow any amendment to be made in a summons, plaint, or plea, or other proceeding, either in form or substance, if the party against whom the amendment is sought to be made would not be misled or prejudiced thereby, and upon such terms as to adjournment, payment of costs, or otherwise, as the Court may deem fit. **Amendment of process.**
11. Should the plaintiff succeed in his cause of action the Court may in its discretion allow him reasonable costs for taking out, or service of, Court process. **Costs to plaintiff.**
12. In any action the Court may award expenses to any witness, exclusive of the plaintiff, at a rate not exceeding 6s. a day. **Expenses.**
13. The Registrar shall keep books of account and an execution book, and a record of all transactions before the Court. **Books of account and records.**
- The bailiff also shall keep an execution book, in which he shall enter particulars of all writs delivered to him for execution, the amounts received by him on levies made thereunder, and the return to the writs made by him to the Registrar.
14. The Registrar shall receive all moneys that may be paid into Court before or after the trial, and shall pay the same to the parties entitled thereto, in due course, on demand being made by them or their authorised agents. **Suitors' moneys.**
15. Payment of moneys out of Court may be made on production of the plaint note in the cause; agents to be paid such moneys only on presentation of an order signed by the person entitled to the moneys and witnessed. **Payment of suitors' moneys.**
16. Execution may be issued after the expiration of two clear days from the date of the judgment, on the application in writing of the party in whose favour a verdict has been given, or of his agent: Provided that the agent shall produce an authority for his application, signed by the party on whose behalf he is acting, and witnessed: Provided also that if it be shown on affidavit by a party entitled to take out execution that the judgment of the Court is likely to be defeated by delay, execution may issue at any time after judgment. **Execution.**
17. All sales under process from the Court shall be conducted publicly, and the goods levied on shall be sold by the bailiff or his deputy, at or near the hour of noon, to the highest bidder for ready money, at the place where the levy thereon has been made or as near thereto as circumstances (having regard to the best prices to be obtained) will admit. The bailiff shall, three clear days before sale (which day shall not be earlier than the sixth day from the day of levying upon the goods), affix notice of such intended sale in a conspicuous place at or near the entrance to the premises where the levy has been made, and at the place where such sale is to take place, and on or near the door of the Court-house: Provided that when requested by the owner of the goods levied upon, or when such goods are of a perishable nature, the bailiff shall put the goods up for sale as early as may be, with due regard to the interests of all parties, in which case the notices of intended sale which are prescribed by this rule shall be affixed as early as practicable. **Proceedings in connection with sales under levy.**
18. Where the party alleges that his goods and chattels so levied upon are more than sufficient to satisfy the execution, he may point out to the bailiff which portion of the same he desires to be first sold, and the same shall be sold accordingly; but if such portion be not sufficient to satisfy the execution, then the bailiff shall proceed to sell the whole of the goods and chattels, or such of them as may be sufficient to satisfy the claim, including all costs, and the bailiff shall, in all cases, within three days, pay the surplus (if any) arising from any level to the Registrar, so that he may render the same on demand to the person entitled thereto. **Order in which goods may be sold.**
19. The bailiff shall not be required to act upon any conditional order for suspending the execution of any process, but only upon an absolute order in writing to that effect, which order may at any time be withdrawn by the same party lodging with the bailiff a written instruction to execute the said process. **Suspension of execution of process.**
20. No person shall be employed by the bailiff to assist him in the performance of his duties except with the approval of the Court, and such approval may be withdrawn by the Court at any time if it thinks fit. **Deputy bailiffs.**
21. All suitors or their agents shall be at liberty to inspect the record book of the Court, and all books of the bailiff or his deputy, so far as such suitor may be interested therein, and to take a copy of such parts as relate to the same action, on payment to the Registrar for every such search of the sum of sixpence. **Search of record books.**
22. Bills of sale shall be registered with the Registrar in the manner provided in the Act 10 Victoria No. 10: Provided that no fee shall be charged for such registration. **Registration of bills of sale.**
23. All Court fees shall be paid in advance, and no process shall issue unless the fee for the same has been paid. **Fees to be paid in advance.**

*Rules to carry out Provisions of 45 Vict. No. 27.*

1. Any person in whose favour a judgment has been given under the laws of Norfolk Island may apply to the Chief Magistrate immediately or at any time thereafter during the time such judgment remains unsatisfied, for an order to examine the person against whom such judgment has been obtained; and the Chief Magistrate may thereupon grant such order in writing or otherwise, and proceed to examine such person, or may postpone such examination upon such terms as to costs, and to such time as he thinks proper. **Order to examine judgment debtor.**
2. If the judgment creditor does not apply for such order of examination on the same day judgment was given, but desires to obtain an order on some future date, and before satisfaction of his judgment debt and costs, he shall give a written notice to the Registrar and the other party of his intention to apply to the Chief Magistrate for such order, naming the day on which such application is intended to be made, and such notice shall be served upon the Registrar and other party five days at least before such day of hearing. **Application for order of examination on future date.**
3. The order for judgment provided by section 6 of the Act to be served on the garnishee shall conclude with as full particulars of the claim made against him as would be required if he were being sued by the judgment debtor, and shall set out fully and clearly any questions to be tried for determining his liability. **Order for adjournment.**
4. The mode of service of notice and summonses shall be the same as applies to summonses to appear to plaints. **Mode of service of notices, &c.**
- 5.**

**Fees.** 5. The fees to be taken by the Registrar shall be the same as charged for summonses to appear to plaintiffs, and shall be paid in advance. The bailiff's fees for service of notices and summonses shall be the same as are charged for services of summonses on plaintiffs.

*Rules for Summoning, Drawing, and Empanelling Juries.*

**Precept for jury panel.** 1. The Chief Magistrate may issue a precept directing the Registrar to summon so many jurors as he may think sufficient for the trial of any indictable offence. The number of jurors to be summoned shall in each case be mentioned in the precept.

**Panel to be chosen by lot from Elders.** 2. The Registrar upon receipt of the precept shall, in the presence of the Chief Magistrate, place in a box the name of each Elder written on a separate card or piece of paper, and draw therefrom the names of the jurors to be summoned. Provided that the names of ministers of religion and of officials (including the Chief Magistrate, medical officer in charge, Registrar, constables, bailiffs, and gaolers) shall not be placed in or drawn from the box.

**Summoning of jurors.** 3. Grand or petit jurors shall be summoned by serving on them or leaving at their residences, three days at least before the day fixed for the sitting of the Grand Jury or for the trial, a summons in the form hereto.

**Witnesses before Grand Jury.** 4. It shall be lawful for the foreman of every Grand Jury, and he is hereby authorised and required to administer an oath to all persons who appeared before such Grand Jury to give evidence in support of any bill of indictment; and all persons attending before any Grand Jury to give evidence may be sworn and examined upon oath by such Grand Jury touching the matters in question.

The name of every witness examined or intended to be examined shall be endorsed on the bill of indictment, and the foreman of the Grand Jury shall write his initials against the name of each witness so sworn and examined.

**Drawing the jury in cases for trial.** 5. Upon calling on a case for trial the Registrar shall in open Court place cards containing the names of the jurors who have been summoned into a box provided for the purpose, and shall draw therefrom the cards one after another until seven jurors appear without just cause of challenge, who, being duly sworn, shall be the jury to try the case.

But if a sufficient number of jurors do not attend the number shall be completed by appointment by the Registrar from among such of the bystanders as are Elders and liable to serve on juries.

**Compensation to jurors.** 6. Every juror who attends a Court in pursuance of a summons, and every talesman, shall receive out of the funds in the hands of the Chief Magistrate the sum of two shillings and sixpence for every day of his attendance.

**Form of summons.**

*Form of Summons.*

Mr. A. B. (*naming the juror*).

You are hereby required to appear as a [grand or petit] juror at the Magistrate's Court, to be holden at \_\_\_\_\_ on the \_\_\_\_\_ day of \_\_\_\_\_ next, and there to attend from day to day until you be discharged by the said Court.

(Signed) C. D.,  
Registrar.

REGULATIONS FOR THE ELECTION OF THE COUNCIL OF ELDERS.

**The Returning Officer.** 1. The Chief Magistrate, or some person appointed by him in that behalf, shall be the Returning Officer, and shall preside at all elections of the Council of Elders. Provided that the Chief Magistrate may, in case of the absence, or inability, or refusal of the Returning Officer to act, appoint another Returning Officer in his stead.

**Nomination.** 2. The seventh day before the day affixed by or in accordance with the laws of Norfolk Island for the election of members of the Council of Elders shall be "nomination day," and the nomination of candidates shall be effected by delivering to the Returning Officer at any time before nomination day a paper in the Form A hereto, containing the name in full of the candidate and his residence, and signed by two or more Elders qualified to vote at the election and by the candidate.

**Public declaration of nominations.** 3. The Returning Officer shall, at 12 o'clock noon, on the nomination day read out in public at the court-house the names of the candidates and their nominators, and if there appear to be no greater number of candidates than the number of members of the council to be elected, the Returning Officer shall then and there declare the said candidates to be duly elected; but if a greater number of candidates appear, he shall declare that a poll shall be held on the day fixed as aforesaid for the election, and shall forthwith cause to be exposed and kept exposed until the election, in some conspicuous place at or near to the Court-house, a notice to that effect containing the names of the candidates and their nominators. Provided that no person declared elected shall hold office as member of the Council of Elders until the day fixed for the election.

**Election to be by ballot.** 4. Every election shall be by ballot, and the voting shall commence at 8 o'clock in the forenoon and shall close at 3 o'clock in the afternoon of the same day. The poll shall be held at such place as the Chief Magistrate may appoint, and the Returning Officer shall preside at the poll. The Returning Officer shall have the assistance of the police and of such persons as may be appointed by the Chief Magistrate in that behalf to carry out the details of the polling and to keep order within and at the approaches to the polling-places.

**Compartments for voting.** 5. At the polling-place there shall be a separate compartment or compartments into which none but electors preparing their ballot-papers shall enter during the poll under a penalty not exceeding £1.

**Ballot-papers and ballot-box.** 6. The Returning Officer shall provide himself with a sufficient number of ballot-papers in the Form B hereto, which he shall sign or initial on the back thereof before delivering to an elector. He shall also provide a ballot-box, the front of which shall be of glass, and on the top of which there shall be an opening sufficient to receive a ballot-paper folded. The box shall be locked and the key kept by the Returning Officer.

**Poll-clerk.** 7. The Chief Magistrate may, in his discretion, appoint any person to act as poll-clerk, who shall assist the Returning Officer in the conduct of the ballot.

**Mode of voting.** 8. Every elector qualified to vote at the election shall receive from the Returning Officer at the polling-place a ballot-paper signed or initialled as aforesaid, and may in a compartment aforesaid, without leaving the same, strike through the names on the ballot-paper of those persons for whom he does not intend to vote, and shall then fold up the ballot-paper so as to conceal the interior and disclose only the name or initials of the Returning Officer, and shall openly, in the presence of the Returning Officer, deposit the ballot-paper in the ballot box :  
Provided

I have read with much interest the new laws and regulations, and I trust that they will work satisfactorily.

I approve of the proceedings reported in your despatch, and desire to express to you my thanks for the labour that you have undertaken in connection with the introduction of a system of better government for the Island, which will, I sincerely hope, lead to the general advancement and prosperity of its inhabitants.

I have, &c.,

J. CHAMBERLAIN.

No. 37.

Governor Viscount Hampden to Mr. Chamberlain.

(Received January 25, 1897.)

Sir,

Government House, Sydney, December 16, 1896.

I have the honor to transmit herewith, for your perusal, copies of two despatches that I have received from Colonel Spalding, the recently-appointed Chief Magistrate at Norfolk Island, each bearing date the 28th of November.

The contents of these communications show that the change in the laws and regulations of the Island has been satisfactorily effected, that the election to the Council of Elders has been efficiently conducted, and that a salutary effect has already been created by the conviction and punishment of offenders.

I have, &c.,

HAMPDEN.

[Enclosure 1 in No. 37.]

FROM THE CHIEF MAGISTRATE TO HIS EXCELLENCY THE GOVERNOR.

*Subject* :—Convictions for Larceny.

My Lord,

Norfolk Island, November 28, 1896.

I have the honor to inform your Excellency that there have been two convictions for larceny. In both cases the defendants elected to be summarily dealt with. The first case, *Rossiter v. S. F. Quintal*, stealing oranges from enclosed lands, came on for hearing on the 24th instant. The evidence for the prosecution was conclusive, and the defendant's witnesses only more clearly demonstrated the defendant's guilt.

The accused had been previously convicted of a similar offence in October, 1896, when he received the totally inadequate punishment of a few hours' work in the drains.

The Court sentenced the accused to two months' hard labour on the public roads, &c.

The second case, *Henry Everett v. Shark Quintal*, for stealing a saw from a room occupied by the plaintiff, about July last, was taken on the 25th instant. The evidence established the charge. The defendant declined to go into the witness-box. He had also been previously convicted of breaking and entering. Taking into consideration the defendant's age (under 18 years), the Court sentenced the accused to one month's hard labour on the public roads, &c.

*Small Debts Court.*

Two cases were heard, viz. :—

*Eugene Coutois v. William Adams.*

Do *v. Fish Adams.*

The plaintiff was successful in one case and partially so in the other.

Orders were made for the payments of the amounts determined on, the plaintiff concurring as to terms of payment at the rate of one shilling a week.

The Registrar of the Small Debts Court represents there are several other cases for hearing next week.

I have, &c.,

WARNER SPALDING,

Colonel and Chief Magistrate.

His Excellency the Governor of New South Wales and Norfolk Island, Sydney.

[Enclosure 2 in No. 37.]

FROM THE CHIEF MAGISTRATE TO HIS EXCELLENCY THE GOVERNOR.

*Subject* :—Election of Council of Elders.

My Lord,

Norfolk Island, November 28, 1896.

I have the honor to enclose, for your Excellency's perusal, the capable report of the Returning Officer (Mr. I. Robinson) of the result of the election of the first Council of Elders under the recently proclaimed laws.

The election was carried out in the most orderly manner. The arrangements made by the Returning Officer were good. Great interest was manifested in the results, and a very considerable gathering of Elders were present at the declaration of the poll; after which three hearty cheers were given for Her Majesty, and the meeting dispersed.

I propose to convene the first meeting of the council on the 2nd proximo.

I have, &c.,

WARNER SPALDING,

Colonel and Chief Magistrate.

His Excellency the Governor of New South Wales and Norfolk Island, Sydney.

Sir,

Sir,

Norfolk Island, November 27, 1896.

I have the honor to inform you that, in accordance with your instructions, the election of twelve members to form the first Council of Elders took place on Wednesday, the 25th instant.

There were twenty candidates nominated, the election being held in the Court-house on the day named, the polling-place being open from 8 a.m. to 3 p.m. Two scrutineers from outside were called in, Messrs. Gustav Quintal and Lindsay Buffett, who, in addition to Lieut. Spalding, the poll-clerk, and myself, checked the papers and the counting. With the exception of three informal ones, the papers were correct. At 5 p.m. the result of the voting was declared publicly, and the following gentlemen, named in the order of precedence, were declared duly elected:—

John Buffett, senr.  
Stephen Christian.  
Wm. Henry Arthur Quintal.  
John Forrester Young.  
Cornelius Quintal.  
Geo. Rowland Sinclair Evans.

Oliver Masey Quintal.  
Isaac Godfrey Christian.  
Wm. Roswell Marsh Adams.  
Henry Menges.  
Byron S. M. Adams.  
Stanley Fredk. McCoy.

It may be remarked that the election was a very complete one; with the exception of two, all the Elders on the roll that were able to vote did so, the exceptions being as follows:—Three disqualified through the residence clause (Revs. Robin, Wilson, and Captain Champion); seven sick (four Quintals, Bates, Suell, and Jackson); two absent from the Island (Wilfred Quintal and Rigger Adams); two debarred (Returning Officer and poll-clerk); there are 126 names registered—110 recorded their votes; 14 were debarred as above stated, leaving two who did not vote (H. Everett and A. C. Miller).

I enclose three returns—"A," "B," and "C."

Return "A." Members returned and votes.  
" "B." Candidates and votes.  
" "C." Summary of roll.

Also an electoral roll marked off.

I have, &c.,

ISAAC ROBINSON,  
Returning Officer.

Colonel Spalding, C.M.G., Chief Magistrate.

### No. 38.

Mr. Chamberlain to Governor Viscount Hampden.

My Lord.

Downing-street, January 27, 1897.

I duly received your despatch of the 16th October,\* enclosing a memorandum to the Premier of New South Wales relative to the proposed transfer of the administration of Norfolk Island, and I have now the honour to transmit to you an Order of Her Majesty in Council, dated the 15th instant, which was passed for the purpose at the last meeting of the Council, and which will, I trust, meet the wishes of your Government, and prove sufficient for all present purposes.

2. I had previously consulted the Law Officers of the Crown as to the measures which would be required in order to effect a complete annexation of Norfolk Island to the Colony of New South Wales, and whether this object could be effected by Order in Council under the Act 18 and 19 Victoria, chapter 56. I am advised that, in their opinion, the Island cannot be annexed to the Colony by Order in Council, and that the statute contemplates that Norfolk Island should remain a Crown Colony, governed under the directions of the Queen in Council, not that it should be annexed to another Colony. They thought, further, that the object in view should be effected by Acts of the Imperial Legislature and of the Legislature of New South Wales.

3. As there is no immediate intention of carrying out such annexation, there is no occasion at present to consider the form with such legislation should take; but if your Ministers should wish to make any observations upon the subject, I shall be ready to give them full consideration.

You will observe that the last paragraph of the Order in Council gives you full power to bring it into operation at whatever date may be found most convenient; but I anticipate that you would not interpose much delay before bringing it into effect.

I have, &c.

J. CHAMBERLAIN.

[Enclosure in No. 38.]

At the Court at Osborne House, Isle of Wight, the 15th day of January, 1897.

Present: The Queen's Most Excellent Majesty, Lord President, Lord Arthur Hill, Lord Balfour of Burleigh.

WHEREAS by the Australian Waste Lands Act, 1855 (18 and 19 Viet, cap. 56), it is among other things provided that it shall be lawful for Her Majesty at any time by Order in Council to make such provision for the Government of Norfolk Island as may seem expedient.

And whereas by an Order of Her Majesty in Council dated the 24th of June, 1856, it was amongst other things ordered that Norfolk Island should be a distinct and separate settlement, the affairs of which, until further order is made in that behalf by Her Majesty, should be administered by a Governor to be appointed by Her Majesty with the advice and consent of Her Privy Council. And it was thereby further ordered that the Governor and Commander-in-Chief for the time being in and over the Colony of New South Wales should be, and he was thereby, constituted Governor of Norfolk Island with the powers and authorities in the said Order mentioned.

And

And whereas it is expedient that other provision should be made for the Government of Norfolk Island, and that, in prospect of the future annexation of that Island to the Colony of New South Wales, or to any Federal body of which that Colony may hereafter form part, in the meantime the affairs of the Island should be administered by the Governor of New South Wales as herein provided.

Now, therefore, Her Majesty, by virtue and in exercise of the power in this behalf by the Australian Waste Lands Act, 1855, or otherwise in Her Majesty vested, is pleased, by and with the advice of Her Privy Council, to order, and it is hereby ordered as follows :—

1. The affairs of Norfolk Island shall henceforth, and until further order is made in that behalf by Her Majesty, be administered by the Governor and Commander-in-Chief for the time being of the Colony of New South Wales and its Dependencies. The said Governor and Commander-in-Chief is hereinafter called the Governor, and the title the Governor shall include the Officer for the time being administering the Government of New South Wales.
2. The Governor shall keep and use the public Seal of Norfolk Island for sealing all things that shall pass the said Seal.
3. The Governor may constitute and appoint all necessary Judges, Justices of the Peace, and other public officers for the said Island.
4. The Governor may, by proclamation published in the *New South Wales Government Gazette*, make laws for the peace, order, and good government of Norfolk Island, subject nevertheless to any instructions that may be given to him by Her Majesty under her sign manual and signet, or through one of Her Principal Secretaries of State.
5. The Governor may make grants or other dispositions of any lands within the said Island which may be lawfully granted or disposed of by Her Majesty.
6. All laws, ordinances, and regulations in force in Norfolk Island at the time when this Order takes effect shall continue in force until repealed or altered by competent authority.
7. The said Order of the 24th day of June, 1856, is hereby revoked, but without prejudice to anything lawfully done thereunder.
8. This Order shall be published by the Governor in the *New South Wales Government Gazette* at such time as the Governor may think fit, and shall take effect at the date of such publication, or at such later date as the Governor shall declare by notice in the said *Gazette*.

DISTRIBUTION OF BLANKETS BY THE GOVERNMENT.  
(RETURN RESPECTING.)

*Printed under No. 17 Report from Printing Committee, 26 August, 1897.*

[Laid upon the Table of this House in accordance with promise made in answer to Question No. 12 of 24th August, 1897.]

(12.) Distribution of Blankets by the Government :—Mr. Schey asked the Colonial Secretary,—

- “ (1.) How many pairs of blankets have been distributed by the Government to charitable bodies, missions, Members of Parliament, and otherwise, since 1st January of this year ?  
“ (2.) How many of such blankets were manufactured in New South Wales ?  
“ (3.) How many of such blankets were procured from the firm of McArthur & Co. ?  
“ (4.) What price per pair was paid for those manufactured in New South Wales.  
“ (5.) What price per pair was paid for those procured from Messrs. McArthur & Co. ?”

Mr. Bruncker answered,—I will presently lay upon the Table a return giving the desired information.

Question (1).—Total quantity issued from 1st January, 1897,—10,161 pairs ; distributed as follows :—

Charitable Bodies	...	...	...	...	...	...	...	Pairs.	3,253
Missions	...	...	...	...	...	...	...	60	
Members of Parliament	...	...	...	...	...	...	...	15	
Government Institutions	...	...	...	...	...	...	...	6,833	
Total pairs								10,161	

Question (2).—3,958 pairs.

Question (3).—450 pairs.

Question (4).—(16s. 10d.) Sixteen shillings and tenpence per pair.

Question (5).—(10s.) Ten shillings per pair.

**MOLONG MARBLE.**  
(CORRESPONDENCE RESPECTING.)

*Printed under No. 11 Report from Printing Committee, 15 July, 1897.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 1st July, 1897, That there be laid upon the Table of this House,—

“ All papers, correspondence, and reports made by Mr. Roberts, an Inspector of Public Works, in reference to the quality of the Molong marble in the construction of Public Works undertaken by the Government.”

(*Dr. Ross.*)

SCHEDULE.

NO.		PAGE
1.	Wm. McMullen to the Minister for Public Works. Letter (with enclosure), 25th April, 1897, and minutes thereon	1
2.	W. Roberts, Clerk of Works, to the Government Architect. Report, 13th May, 1897	2
3.	Under-Secretary for Public Works to Wm. McMullen. Letter, 20th May, 1897	2

No. 1.

W. McMullen, Esq., to The Secretary for Public Works.

Hon. Sir,

Molong, 25 April, 1897.

My object for addressing you is this: Learning that it was the intention of the present Government to erect new Parliamentary buildings at a cost of half a million of money, and also that it is your intention that all marble used in the erection of the new buildings must be Colonial marble, I take this opportunity of drawing your attention to the quality and inexhaustible supply that can be obtained in Molong. I visited the metropolis during last week, but was unable to obtain an interview with you in consequence of pressure of business. My object was to interview you personally, and to produce to you samples of the Molong marble for your inspection. I am informed that the Molong marble is equal to the best obtainable in any part of the world, and samples of which, I am informed, can be seen at the Museum at Sydney. Should you, sir, do me the honor of sending an officer to inspect the Molong marble, I will be only too happy to give the gentleman all the information that lies in my power, and also produce to him a block of Molong marble, about 12 cwt., which I have had dressed and polished at my own expense, and I will venture to say that its equal is not to be found in the Colony of imported marble. Trusting, sir, that you will be good enough to grant my request, and send an officer to report on the Molong marble.

I am, &c.,

WILLIAM McMULLEN.

P.S.—I have enclosed a clipping from the local paper for your perusal, sir.—W. McM.

## MOLONG MARBLE.

If sceptical or inquisitive persons are anxious to know what the district of Molong can produce it will do their eyes good to call any day at the residence of Mr. Wm. McMullen, West End, and there they will see a sample or block of splendid marble, about 1 ton in weight, cut, dressed, polished, and beautifully engraved. The stone is to be found in abundance in the very heart of Molong, and can be landed in Sydney polished and lettered about as cheap as freestone gravestones. The stonemason or cutter now at work at West End is an artist of first-class order, and the design (a base stone) is nicely morticed to receive a head stone, and is without doubt a splendid piece of workmanship. He says, and we quite agree with him, that the Molong marble defies comparison in the Colony. Yet here it lies in abundant profusion, only awaiting the advent of capital to prove its worth. A gold reef is as nothing compared to our marble deposits, which it would be almost impossible to work out. A feature of our marble is that it requires no painting, the lettering when cut showing out with striking distinctness on its polished surface. For gravestones it is specially adapted, and in this line it would only require to be known and inspected to become a valuable and future industry of the Colony. The quality and rich high polish of the stone is well worthy of inspection, and we commend it to the notice of the public. We understand that efforts are being made to introduce capital in connection with this industry, and should the gentlemen concerned be successful in attracting the attention of capitalists, well there's a big future ahead for the Molong district. *Nous verrons.*

Mr. Vernon.—Jno. P., for U.S., 27/4/97. Mr. Roberts for report.—L.R., for Gov. Arch, 5/5/97. Report herewith.—Wm. R., 13/5/97. Mr. Robert's submitted. The sample referred to in McMullen's letter is a fine one, and the marble in the district is of good quality, but at present no further supply is necessary.—L.R., P.A.A., 14/5/97. The U.S. Works. In the event of a further supply being required Mr. McMullen's marble appears to be suitable. He might be informed that at present none is required.—J.D., 15/5/97. Under Secretary. Submitted for approval to do so.—R.H., 18/5/97. Under Secretary for Public Works and Commissioner for Roads. Approved.—J.H.Y., 18/5/97. Inform.—18/5/97. Mr. W. McMullen, 20/5/97.

## No. 2.

The Clerk of Works, Bathurst, to The Government Architect.

*Molong Marble.*

Department of Public Works,

Government Architect's Branch, 13 May, 1897.

Sir,

Respecting Mr. McMullen's letter herewith relative to the above marble.

The special piece referred to in his letter I have inspected, and have to inform you that it is a very fine block about 1 ton, sound and neatly prepared and polished.

The marble generally in this district is of excellent grain and figure.

At present I cannot recommend any expenditure, but in the near future something may be done in the matter when the steam marble-plant is set going at the Bathurst Gaol, the steam-engine now only being required.

I have, &c.,

W. ROBERTS,

C. of W.

## No. 3.

The Under Secretary for Public Works to W. McMullen, Esq.

Sir,

Department of Public Works, Sydney, 20 May, 1897.

In reply to your letter of the 25th ultimo in regard to supplying Molong marble for the erection of new public buildings, &c., I have the honor to inform you that this Department does not at present require any marble.

I have, &c.,

R. H. HICKSON,

Under Secretary and Commissioner for Roads,

(per Jno. P.)

OLD-AGE PENSIONS.

(PETITION FROM J. D. LANGLEY, RURAL DEAN, CHAPTER OF WEST SYDNEY, IN FAVOUR OF A BILL,  
THAT, UNDER PROPER SAFEGUARDS, MAY PROVIDE STATE PENSIONS FOR THE AGED.)

---

*Received by the Legislative Assembly, 6 October, 1897.*

---

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New  
South Wales in Parliament assembled.

The humble Petition of the Rural Deconal Chapter of West Sydney,—

SHOWETH:—

That as severe distress and much suffering frequently fall, because of poverty, upon persons who are old, and often through no fault of their own, the Chapter prays for the speedy passing of a law that, under proper safeguards, may provide State pensions for the aged.

And your Petitioner therefore humbly prays that your Honorable House will take the premises into favourable consideration, and grant such relief as may seem best to your Honorable House.

And your Petitioner, as in duty bound, will ever pray.

J. D. LANGLEY,  
Rural Dean.

---

**BIRDS PROTECTION ACT.**

(PETITION FROM LANDOWNERS IN THE TARALGA DISTRICT, PRAYING FOR AN AMENDMENT OF.)

*Received by the Legislative Assembly, 18 November, 1897.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of the undersigned landholders in the Taralga District,—

RESPECTFULLY SHOWETH :—

That the protection of the magpie has been conducive to a serious loss on the part of the agriculturists.

That the said bird is very destructive to the young wheat crops, and should, at an early date, be removed from the list of protected birds.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to amend the Birds Protection Act so that the magpie may not any longer be protected thereunder.

And your Petitioners, in duty bound, will ever pray.

CLAIM OF CAPTAIN ROSSI.

(PETITION FROM CAPTAIN COMTE DE ROSSI PRAYING TO BE HEARD BY COUNSEL AT THE BAR OF THE HOUSE.)

---

*Received by the Legislative Assembly, 23 November, 1897.*

---

To the Honorable the Speaker and to the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Francis Robert Lewis Captain Comte de Rossi, of Rossiville, Goulburn,—

HUMBLY SHOWETH:—

That in July, 1896, a Select Committee of your Honorable House was appointed to report upon your Petitioner's claim against the Government of this Colony.

That Committee sat and fully investigated such claim, finding in favour of your Petitioner, and recommended his case to the favourable consideration of the Government.

That, notwithstanding the most strenuous exertions on the part of your Petitioner to obtain the sanction of your Honorable House to the adoption of such finding, no progress has so far been achieved, the claim thus lying in abeyance.

That your Petitioner humbly prays that your Honorable House, in consideration of the premises, will grant that he may be heard by Counsel at the Bar of your Honorable House in relation to such claim.

And your Petitioner, as in duty bound, will ever pray.

DE ROSSI,  
Captain Comte.

## THE REVEREND JAMES CLARKE.

(PETITION FROM, PRAYING TO BE HEARD AT THE BAR OF THE HOUSE, OR FOR THE APPOINTMENT OF A SELECT COMMITTEE TO INQUIRE INTO CASE.)

*Received by the Legislative Assembly, 24 November, 1897.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of James Clarke, Clerk in Holy Orders, of the parish of Saint George, Kogarah, in the county of Cumberland, in the Colony of New South Wales,—

MOST FAITHFULLY SHOWETH :—

That on Sunday, the 21st of October, 1894, whilst your Petitioner was conducting Divine service, his lawful wife was forcibly abducted from Saint George's Vicarage, Kogarah, the house being broken and entered with the knowledge of the local police, who never interfered. On October the 22nd, the following day, your Petitioner, whilst seeking to recover his lawful wife and establish his legal rights, was violently and unlawfully arrested and detained at the Newtown Police Court, kept all day without food, removed to the Central Court at 4 p.m., and on the hearsay of his mother-in-law, who instituted the before-recited outrage, committed to the Reception House for the Insane, Darlinghurst. Your Petitioner in the Court asked for counsel, but his request was ignored. That the said Newtown police assaulted, overpowered, and searched your Petitioner, appropriated his keys, moneys, and belongings, took and gave possession of Saint George's Vicarage to your Petitioner's wife, who was domiciled therein after her abduction.

On the 23rd October your Petitioner was removed to Callan Park Asylum, and there further imprisoned and detained until, after communicating with and being interviewed by Dr. Manning, he was released on the 10th November, 1894. During your Petitioner's imprisonment nobody was allowed to see him. Reaching home on November 10th, your Petitioner discovered that all the money in his desk had been stolen, and likewise other goods and valuables, and found the house shut up, with nobody in charge.

Your Petitioner, being denied all communication with his lawful wife, shortly after his release endeavoured to regain possession of her as an abducted minor, and applied early in December to the Supreme Court for a writ of *habeas corpus*. A rule *nisi* was made by the Chief Justice, on December 19th, 1894; this rule was discharged by another Judge, December 29th, 1894; an appeal—deferred in hearing—was dismissed with costs against your Petitioner, 12th February, 1895.

Divorce proceedings were instituted against your Petitioner; and on February 20th, 21st, and 22nd, 1895, your Petitioner was assaulted, searched, and imprisoned in the Court three successive days, whereby he suffered in mind and body, was injured in his credit, and greatly prejudiced in the conduct of his case. On the afternoon of February 22nd, 1895, at the conclusion of the divorce suit, your Petitioner was arrested without warrant or charge, in King-street—immediately on leaving the Supreme Court—taken to the Central Police Court, and thence to the Reception House for the Insane, Darlinghurst, and there imprisoned until the 1st day of March, 1895. For these outrages against law and liberty your Petitioner got no redress, being imprisoned for eight days, and being unable to find the names of his assailants in time to take even a tort action for these great wrongs against the free rights and privileges of the subject. Your Petitioner after release sought refuge for a few days at Stanmore, amongst old friends with children, and on Sunday, March 4th, the local police forced an entrance after dark into St. George's Vicarage during his absence.

These various proceedings, having broken up your Petitioner's credit, drove him into insolvency, May 3rd, 1895. On May 27th, 1895, your Petitioner desired the Attorney-General to intervene before the divorce was made absolute, and placed before him grounds on which he might be justified—namely, perjury, uncorroborated testimony, wife a minor with no legal guardian appointed to proceed for the suit. Notwithstanding, the decree was made absolute, 29th May, 1895. Your Petitioner appealed on June 6th, 1895, within the time specified by law. On July 31st, 1895, your Petitioner's appeal was dismissed with costs unheard, because he could not give security for costs through insolvency; and a subsequent Petition for leave to appeal to the Privy Council in *forma pauperis*, August 3rd, 1895, was refused on the same ground,

August 9th, 1895. Consequently your Petitioner was denied that just, wise, and merciful provision of the law which gives every man the right to seek justice though poor. This failure to get the appeal heard moved the Ecclesiastical Authorities against your Petitioner, and on November 15th, 1895, your Petitioner was assaulted, searched, and imprisoned in the Supreme Court while defending himself from the arbitrary withdrawal of his license. For this your Petitioner gave notice of action in December, 1895, and on the 9th day of September, 1896, recovered a verdict for £100. The assault was admitted by payment into Court of 40s. On September 27th, 1896, before judgment was signed, the verdict (not being a debt) was ordered to be sequestrated for the alleged costs of a minor in divorce, who could not legally incur costs.

Your Petitioner complains that a verdict should be sequestrated—a thing unknown to British law—a verdict moreover involving damages granted by a special jury for a personal wrong acknowledged to have been committed by the administrators of law against the right and liberty of the subject.

Judgment was signed on the 23rd October, 1896. Your Petitioner took every right precaution to obtain justice—serving the Crown Solicitor with a notice not to pay, and the sequestrator not to receive—applying to the Bankruptcy Court to secure and protect your Petitioner according to statute law. Your Petitioner complains that this sequestrator's appointment was, and is, contrary to law, whether the Bankruptcy Acts or the Common Law Procedure Act: divorce costs, if owing, are a debt provable in bankruptcy. Those alleged were not so proved, and this sequestrator's appointment was equivalent to making a preferential creditor of one who could have proved in the first assignment, giving him the whole of the assets in the second enforced insolvency to the injury of every other creditor, the first insolvency being still unsatisfied—a state of things never contemplated by the Legislature—creating two Official Assignees at one and the same moment, and declaring that the second shall intercept and take into possession damages for a personal wrong, reserved by statute to the injured man, which the law expressly declares no Official Assignee whatsoever shall have any power over damages which can neither be intercepted before reaching, nor taken away after they have reached the hands of the wronged and suffering. This has been so from time immemorial in English law. Never in the whole course of the administration of justice, either in this or any other part of the British dominions, has an order been made intercepting the damages for a personal wrong done to an uncertificated bankrupt.

The unprecedented legal difficulty of the position was felt on all hands, and the Crown Solicitor having first sought your Petitioner's consent on December 6th, 1896, for paying the moneys into Court (which your Petitioner promptly refused), at length, after nearly half a year's delay, only handed the money to the sequestrator—£98, purporting to be the verdict—on February 25th, 1897, having first received from the said sequestrator a bond of indemnity in the sum of £300. The sequestrator paid the sum of £98 into the Divorce Jurisdiction of the Supreme Court, and after some complicated litigation between Bankruptcy and Divorce, His Honor the Chief Justice in Divorce, on March 23rd, 1897, dismissed the application for having the money paid out of Court for a minor's costs. On May 5th, 1897, the Full Court reversed this decision. Your Petitioner applied, on May 7th, 1897, to the Chamber Judge to appoint some person, other than the Sheriff, to whom a writ of *feri facias* should be directed in order to satisfy your Petitioner's due judgment. Your Petitioner was referred to another Judge, which caused delay. On May 13th, 1897, the sequestrator entered what is known as a satisfaction piece on the Judgment Roll. Your Petitioner, on May 11th, 1897, applied to the Common Law Jurisdiction of the Supreme Court as being an unsatisfied judgment creditor (with a due judgment). Decision was reserved. On May 17th, 1897, His Honor, Mr. G. B. Simpson, nominated and appointed, by order, at your Petitioner's suggestion, the Coroner of the City of Sydney, as the person to whom the writ of *feri facias* for the amount of your Petitioner's due judgment should be directed. On 17th May, 1897, the same day, your Petitioner lodged the writ in the Coroner's hands for execution.

On May 19th, 1897, some messenger attempted to serve your Petitioner with some process in the precincts of the Supreme Court. Your Petitioner both called at the Crown Law Offices, saw personally, and wrote to the Crown Solicitor on the subject.

Your Petitioner found, some time after, that the Crown Solicitor had the writ of *feri facias* set aside on the alleged ground of misdirection, on May 28th, 1897, though the writ was, in fact, addressed to the Sheriff's lawful deputy.

Your Petitioner complains that the law has been broken; that substantial justice has been denied to him, though cruel injuries have been done; and, feeling deeply aggrieved, he seeks redress for his legal rights, which have been invaded; for his privileges as a free-born subject, which have been trampled under foot—contrary to natural justice, contrary to the law of the land, contrary to the right of the subject secured by law, against the verdict of the jury and the plain facts of the case.

And your Petitioner, in this great cause—the cause of law, justice, and personal liberty—earnestly and humbly prays before the Most High God, in whose heart law has her home, and whose throne is the habitation of justice, that this Honorable House will be pleased to take the foregoing premises into full and right consideration, and to grant a fair measure of just relief, either by hearing your Petitioner before the Bar of this Honourable House, or by the appointment of a Select Committee to inquire into the true merits of this Petition, or as this Honorable House shall otherwise deem meet.

And your Petitioner, as in duty bound, will ever pray.

Kogarah, 20th November, 1897.

JAMES CLARKE.

1897.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

WILLIAM MALLET, BOTANY.

(PETITION FROM, PRAYING THE HOUSE TO CANCEL A DEED OF TRANSFER OBTAINED FROM HIM BY FRAUD.)

*Received by the Legislative Assembly, 2 December, 1897.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales assembled.

The Petition of the undersigned, William Mallett, of Botany-road, Botany,—;

HUMBLY SHOWETH:—

That, in the year 1889, I was the holder of the fee-simple of a parcel of land and tenements thereon.

At the time I owed no person any moneys, and no person had any claim against me.

I wrote a will—the form of which I copied from a book,—in which I left my property to one Arthur Orr. I then sent for him, as I wished to tell him how things stood. He came with a man whom I never saw in my life before. They asked me what I wanted; I said to witness, “My will.” The man picked the will up, and said I wanted another witness. I sent my wife for John Bunce. He came, and asked me what I wanted him for. I told him to witness my will. He did so.

Three years afterwards I was offered £1,000 for the property. I decided to accept the offer. I asked Orr for the papers, as he had taken them away. He told me to meet him in Sydney, and he would give them to me. He took me to the office of Thomas K. Leeder, who turned out to be the man he brought to my place to witness the will. When in the office I heard them talking apart from me. I then said, “There is something crooked.” Mr. Leeder then ordered me out of the office. I went home, and told one of my neighbours, a Mr. Salmon, what had happened. He lent me money to pay Mr. Clayton, solicitor, who, upon investigation, found out that a transfer of the property had been effected instead of the will prepared by me.

Owing to the want of means I could not go to law. Eventually I placed the matter in the hands of Mr. R. W. Reid, who took my sworn statement, and J. Bunce's statement that nothing was read in his presence, and that he was asked to witness a will. Mr. Reid placed the matter in the hands of the Honorable the Attorney-General, who caused Detective Hines to investigate the matter. He obtained another sworn statement made by J. Bunce of the same effect as the previous one, thus clearly proving that I intended to will my property, not to transfer it.

The Honorable the Attorney-General having failed to give me any relief in the matter, I was placed in the hands of His Honor Judge Manning, who, on reading J. Bunce's affidavit, assigned me counsel and solicitor to proceed in equity in *pro forma pauperis*.

At the trial J. Bunce gave evidence contrary to the three sworn affidavits. This took my counsel by surprise, and, as at the time we were not prepared to rebut it, His Honor, in the face of the false evidence, gave the verdict against me.

Not having the means to appeal, I have been robbed of my means of subsistence.

I now solemnly declare that T. K. Leeder and A. Orr committed wilful perjury at the said trial.

As these persons have conspired to rob me of my property and stolen the deeds, I humbly pray that your Honorable House will take steps to cancel the deed of transfer which was obtained from me by fraud, otherwise myself and wife, who are now advanced in years, must seek relief in an asylum.

And your Petitioner, as in duty bound, will ever pray.

2nd December, 1897.

WILLIAM MALLET.

# REPORT

OF THE

## PROCEEDINGS OF A CONFERENCE

RESPECTING THE

# RABBIT PEST IN NEW SOUTH WALES,

COMMENCED AT THE CHAMBER OF COMMERCE, SYDNEY,

ON TUESDAY, MARCH 9<sup>TH</sup>, 1897,

In response to invitations issued at the direction of the Hon. J. H. Carruthers,  
Minister for Lands.

---

*Printed under No. 2 Report from Printing Committee, 6 May, 1897.*

---

SYDNEY: WILLIAM APPLIGATE GULLICK, GOVERNMENT PRINTER.

1897.

# THE RABBIT CONFERENCE,

HELD MARCH 9TH, 10TH, 11TH, 12TH, 13TH, 15TH, AND 17TH, 1897.

Report of Proceedings, for presentation to the Honorable J. H. Carruthers,  
Minister for Lands.

THE proceedings were opened by the Minister, who had invited representatives from the different Stock and Pasture Boards, Selectors' Associations, and Farmers' Unions in the country, as well as from the leading Agency Firms of Sydney, to take part in the deliberations for the purpose of discussing the provisions of the Rabbit Destruction Bill, with a view to making fresh recommendations on which to base an amended Bill.

Mr. Allen Lakeman was unanimously elected Chairman of the Conference, in which the following gentlemen took part :—

A. Lakeman, Hay.	A. H. M'Collough, Deniliquin.
Alfred Brown, Narrabri.	E. A. Stinson, Coolamon.
A. Cudmore, Wentworth.	P. R. Brett, Urana.
John Dill, Hay.	J. J. Baylis, Narrandera.
F. W. Bacon, Brewarrina.	C. J. Bolton, Wagga.
Philip Oakden, Cobar.	G. C. Little, Bullock Creek, N.
J. Wilkes, Broken Hill.	T. Brown, M.L.A., Budgerabong.
J. W. Brougham, Mcindie.	T. Looney, Bullock Creek, S.
A. Laurence, Balranald.	R. H. Maund, O'Connell.
T. S. Pearce, Orange.	R. H. Kirkpatrick, Nyngan.
T. C. Worboys, Orange.	John Ward, Nyngan.
R. T. B. Gaden, Dubbo.	G. Davidson, Condobolin.
T. Leslie, Forbes.	E. Locke, Macquarie.
A. Anderson, Corowa.	J. R. Varcoe, Hillston.
W. T. Lawry, at invitation of Minister.	A. Cumming, Hillston.
J. Hayes, M.L.A., Deniliquin.	S. Nixon, Gunbar.
H. C. Taylor, Lands Department.	P. J. Gorman, Berrigan.
W. H. Armstrong, Canonbar.	J. R. Cook, Beringerry.
J. R. Black, Warialda.	W. R. Moore, Goodooga.
C. Fetherstonhaugh, Coonabarabran.	T. H. Hassall, M.L.A., Moree.
J. H. Davies, Gunnedah.	Honorable R. Carington, Jerilderie.
J. M. Atkinson, at invitation of Minister.	A. T. Brooke, Boggabri.
W. Alison, Canonbar.	John M'Aneney, Trundle.
R. Gibson, Hay.	Charles Hebden, Wanaaring.
A. L. P. Cameron, Ivanhoe.	J. Stephenson, at invitation of Minister.
J. Flanagan, Gunbar.	W. Vanston, Goodooga.
F. A. Oatley, at the invitation of Minister.	A. Ross, Hume.
E. Hayes, do.	J. Trefle, Temora.
G. G. Freeman, do.	J. M'Grath, Mossgiel.
— Sides, Hay.	

The Conference proceeded to discuss the subject for which they had assembled.

The result of the deliberations of the Conference was the adoption of the following resolutions :—

Clause 1, as printed, passed.

The

The Preamble and Clause 2 postponed.

Clause 3 was struck out.

#### Clause 4.

That clause 4 up to "Minister," line 19, should stand.

That the following be an addition to subsection (a) :—"That all municipalities, towns, and villages shall be declared separate districts, and shall not be attached to sheep districts, even if adjoining, or within the boundaries of, "Sheep Districts," unless with the consent of the Pastures and Stock Protection Boards."

That the following be added to subsection (b) :—"But no Sheep District shall be amalgamated with any other district, or subdivided, without the consent of a majority of the voters."

In line 13 after "be" the following be inserted "declared rabbit infested."

#### Clause 5.

That clause 5 be struck out, and the following clause inserted in its place :—

"That the Pastures and Stock Protection Boards be the Rabbit Boards for the district—*i.e.*, that the working of the Act be placed in the hands of the Pastures and Stock Protection Boards. That taxation under the Rabbit Act shall not be levied on holders not having a right of representation under the franchise of the Stock and Pastures Protection Acts."

That for the purposes of this Bill the constitution of the Stock and Pasture Boards be altered so as to provide for—(1) The appointment of a member by the Governor; (2) That three members be elected under the Stock and Pastures Protection Act as at present provided, with a minimum voting power of 10 (ten) head of large stock; and (3) That five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 250 head of sheep.

That, where the returns which are sent in are below the minimum, occupiers of cultivated lands shall have the right to vote for the constitution of the Stock and Pasture Boards, such voting power to be proportionate to the number of sheep at which their lands are assessed, the minimum number of sheep qualifying for a vote to be 250.

And that as the Government have the right to nominate a member to the Board, they shall not have any voting power for the other members.

That the franchise for the Pastures and Stock Protection Boards be on the following basis;—

250 to 3,000 sheep	to have	1 vote.
3,000 "	10,000 "	" 2 votes.
10,000 "	20,000 "	" 3 "
20,000 "	30,000 "	" 4 "
30,000 "	40,000 "	" 5 "
40,000 "	50,000 "	" 6 "
50,000 "	60,000 "	" 7 "
60,000 and over	" "	" 8 "

A Rabbit Board shall, within such time as may be prescribed, appoint one of its members to be Chairman thereof, and if such Board shall fail to appoint a Chairman the Governor may appoint one of such members to be the Chairman of such Board; and the Chairman and other members shall be entitled to receive, out of the revenues of the Board, such fees as may be prescribed.

Clauses 6 and 7 were struck out.

#### Clause 8.

That the following words be substituted for the first paragraph:—"The Stock and Pastures Protection Boards shall be constituted corporate bodies and under such style and title shall have perpetual succession and a common seal, and be capable of suing and being sued."

That the word "eight" be substituted for "five," line 21.

That after the word "proclamation," line 24, the following words be inserted, "at the request of the Boards or on the requisition of two-thirds of the voting power."

That after the word "Board," line 28, the following words be inserted, "elected in accordance with the provisions of the Act."

That the words "Pastures and Stock Protection Board" be substituted for the words "Rabbit Board" throughout the Act, wherever consequentially necessary.

#### Clause 9.

That following words be added to subsection (a) :—"All officers appointed to be under the direct control of, and hold office during the pleasure of, the said Boards."

Clauses 10 and 11 were carried.

#### Clause 12.

That the word "stock" be substituted for "private holdings" in line 29.

That in line 32 the words "Stock returns under the Pastures and Stock Protection Act" be substituted for "respective carrying capacity of holdings and to that end."

That all words after "year," line 35, to end of subsection (r), be struck out and the following inserted in their place: "Public lands shall be taxed on the basis of one sheep to ten acres."

That in cultivated lands the taxation shall be on the basis of one sheep to five acres where no returns have been made under the Pastures and Stock Protection Act.

That subsection (11) be struck out.

That after "enclosed," line 50, "or which may in future be enclosed" be inserted.

That

That "(e)" and "(f)" of subsection (iii) and subsections (iv) and (v) be struck out.

That all owners and lessees who may make no returns, or who shall make what, in the opinion of the Boards, are misleading and inadequate returns, may be summoned before the Boards, and the Boards shall have power to rate or increase their returns, at a rate not exceeding one sheep to one acre, with a right of appeal to the Court of Petty Sessions.

Clauses 13, 14, 15, and 16 were carried.

#### Clause 17.

That "Court of Petty Sessions" be substituted for "Local Land Board" in lines 37 and 38. Clause, as amended, carried.

#### Clause 18.

That "a Court of Petty Sessions" be substituted for "two Justices" in line 19. Clause, as amended, carried.

Clause 19 was struck out.

#### Clause 20.

From the beginning of the clause to "mentioned" in line 29 was carried.

That "Pastures and Stock Protection Board" be substituted for "Local Land Board," lines 33 and 34.

That "private" in line 36 be struck out. Clause, as amended, carried.

Clause 21 was carried.

Clause 22 was struck out.

#### Clause 23.

That from "Local," line 2, page 10, to the end of the clause be omitted, and "Court of Petty Sessions" inserted.

Clause, as amended, carried.

#### Clause 24.

That after "shall," line 16, "if the two Rabbit Boards fail to agree" be inserted. Clause 24, as amended, carried.

Clause 25 was struck out.

#### Clause 26.

That the following be a new clause in place of clause 26:—

"That the Minister be empowered to purchase wire-netting and other materials necessary for the construction of rabbit-proof fences; also any machinery, plant, or substance required in the destruction of rabbits; and may contract to sell or let same to Rabbit Boards or private holders upon the following terms:—

- (a) That repayment of principal, together with interest, be on a similar basis as provided for the payment of principal and interest on conditionally purchased lands.
- (b) The value of the netting thus provided be secured to the Minister by a first mortgage on the land so protected.
- (c) The netting to be erected within twelve months after delivery has been taken.
- (d) The Minister to have discretionary powers as to how such advances are to be made.
- (e) The letting of any machinery, &c., to be a matter of agreement between the Minister and parties interested."

Clauses 27 and 28 were carried.

#### Clause 29.

That "two" be inserted before "months" in line 9.

That "private," line 11, be omitted.

That from "but," line 20, to "Gazette," line 22, be omitted.

That "private," line 24, be omitted.

That after "forthwith," in line 25, "use such efforts as may be deemed sufficient by the Board to" be inserted.

That "all," line 25, be omitted.

Clause 29, as amended, carried.

#### Clause 30.

That "or" in line 30 be omitted and "and" inserted.

That subsection (a) be struck out.

Clause 30, as amended, was carried.

Clause

## Clause 31.

That the word "private," in line 3, be struck out.  
That after the word "owner," line 4, the words "or occupier" be inserted.  
Clause 31, as amended, was passed.

## Clause 32.

That the word "all," line 11, be struck out.  
That the last paragraph, comprising all the words from line 20, be struck out.  
That for the purpose of this Act the Minister for Lands for the time being be deemed the owner of all unoccupied Crown Lands.

## Clause 33.

That the words "one and a half inches" in line 33 be struck out and the following inserted, "one and a quarter inches for the lower eighteen inches, and the other two feet should be one and five eighths inches mesh."  
That in line 11, page 14, the words "Court of Petty Sessions" be substituted for "Local Land Board."

## Clause 34.

That after "thereof" in line 21 the following words be inserted, "or where boundaries are inaccessible or unfenceable, as near as possible to the boundaries thereof, having due regard to the natural formation of the country."

Clause 34, as amended, was carried.

Clauses 35, 36, 37, and 38 were carried as printed.

Clauses 39 and 40 as printed were passed.

## Clause 41.

That subsections (a) and (b) be struck out and the following inserted:—

- (a) A private rabbit-proof fence forms a common boundary fence between private and public lands whether erected before or after the passing of this Act, and
- (b) Particulars of the said fence shall be furnished to the Minister.

That the whole of sub-section (c), be struck out.

Clause 41, as amended, was passed.

Clauses 42, 43, and 44, as printed, were carried.

## Clause 45.

That the words "private" and "all" in lines 14 and 15 be struck out.

That after the word "cost" in line 15, the following be added, "and to the satisfaction of the Board."

That after the word "thereof," line 17, the following be added, "if enclosed by the said owner."

That "private" be struck out of line 18.

That "to the best of his means and ability" in line 20 be struck out.

That in lines 21, 22, and 24 the words "less than two nor," "less than five nor," and "less than thirty nor," respectively, be struck out.

That the words "and the existence of rabbits on any private holding or land shall be *prima facie* evidence that the owner or occupier thereof (as the case may be) has failed to fully and continuously perform such duty to the best of his means and ability" be struck out.

Clause 45, as amended, was carried.

## Clause 46.

That in line 45 "less than two nor" be struck out.

That in line 33, before "wounding," and in line 42, before "wounds," the word "wilfully" be inserted.

Clause 46, as amended, was carried.

Clause 47, as printed, was carried.

## Clause 48.

Line 1, that the words "on production of his authority on demand by the owner" be inserted after the word "person."

That the word "private," line 2, be struck out.

Clause 48, as amended, was passed.

Clauses 49, 50, and 51 as printed were passed.

Clause

## Clause 52.

Line 9, that " private " be struck out.

That lines 28 and 29 down to "enacted" be struck out and the following inserted, "All information shall be laid and proceedings at law taken by the Board through its officers."

That " two Justices " in line 17, " Justices " in lines 19, 20, 23, and 33, be struck out and " Court of Petty Sessions " inserted in each instance.

Clause 52, as amended, was passed.

Clauses 53, 54, 55, and 56 as amended were passed.

## Clause 57.

That in line 43, " registered " be inserted before " letter."

Clause 57, as amended, was passed.

Clauses 58 and 59 as printed were passed.

## Clause 60.

That " private " be struck out in line 23.

Clause 60, as amended, was passed.

Clauses 61 and 62 as printed were passed.

---

Mr. A. Lakeman (Chairman), Mr. W. Alison, Mr. T. Brown, M.P., The Honorable Rupert Carington, and Mr. Bacon were appointed a committee to confer with Mr. A. Oliver, and present Draft Bill to the Minister.

Before the conclusion of the sittings, the members desired that the following be urged on the Minister:—" That the Government should continue to offer a substantial reward for a discovery that would tend to entirely destroy the rabbit pest, and ask the Governments of the other colonies to also contribute"; and also " that it is inadvisable that rabbits should be made an article of export."

ALLEN LAKEMAN,  
Chairman.

17 March, 1897.

---

# RABBIT CONFERENCE.

## REPORT OF PROCEEDINGS.

FIRST DAY—9TH MARCH, 1897.

THE Conference met at 10 a.m., and the following gentlemen took part in the deliberations:—

John McAneney, Trundle.	A. L. P. Cameron, Ivanhoe.
A. T. Brooke, Boggabri.	J. Flanagan, Gunbar.
Alfred Brown, Narrabri.	F. A. Oatley, at the invitation of the Minister for Lands.
A. Cudmore, Wentworth.	E. Hayes, at the invitation of the Minister for Lands.
John Dill, Hay.	H. G. Freeman, at the invitation of the Minister for Lands.
F. W. Bacon, Brewarrina.	A. H. M'Collough, Deniliquin.
Philip Oakden, Cobar.	E. A. Stinson, Coolamon.
J. Wilkes, Broken Hill.	P. R. Brett, Urana.
J. W. Brougham, Menindie and Wilcannia.	J. J. Baylis, Narrandera.
A. Laurence, Balranald.	C. F. Bolton, Wagga Wagga.
T. S. Pearse, Orange.	G. C. Little, Bullock Creek North.
T. C. Worboys, Orange.	T. Brown, M.L.A., Budgerabong.
R. T. B. Gaden, Dubbo.	T. Dooney, Bullock Creek South.
T. Leslie, Forbes.	R. H. Maund, O'Connell.
A. Anderson, Corowa.	R. H. Kirkpatrick, Nyngan.
W. F. Lawry, at the invitation of the Minister for Lands.	John Ward, Nyngan.
J. Hayes, M.L.A., Deniliquin.	G. Davidson, Condobolin.
H. C. Taylor, Department of Lands.	E. Locke, Macquarie.
W. H. Armstrong, Canonbar.	J. R. Varcoe, Hillston.
J. R. Black, Warialda.	A. Cumming, Hillston.
C. Fetherstonhaugh, Cononabarabran.	S. Nixon, Gunbar.
J. H. Davies, Gunnedah.	P. J. Gorman, Berrigan.
John M. Atkinson, at the invitation of the Minister for Lands.	J. R. Cook, West Beringerry.
W. Alison, Canonbar.	W. R. Moore, Goodooga.
R. Gibson, Hay.	T. H. Hassall, M.L.A., Moree.
Hon. Rupert Carington, Jerilderie.	

The Honorable J. H. CARRUTHERS, Minister for Lands, in opening the proceedings, said:—

The object he had in calling this Conference together was in order that those who were most interested in rabbits might have some say in the legislation with respect to their destruction. He did not wish to interfere in any way with their deliberations; they could elect their own Chairman and deal with the business before them in the way which best suited themselves; but before leaving them he would like to say a few words with reference to this most important matter.

The Conference which was held in 1895, was representative of the interests of land-owners affected by the rabbit pest, and he had no doubt a great many were here to-day representing practically the same interests as they represented then. The result of the deliberations of that body was that the various recommendations which they had submitted to him were embodied in a Bill, which was introduced into Parliament in August last, and which was now before them. Great diversity of opinion existed among the different Stock and Pasture Boards on the provisions of this Bill. Some agreed with it, some thought it needed considerable amendment, whilst others condemned it altogether. What he complained of was that after having called a number of experts together and obtained their advice, when he put it into cold type many of them turned their backs on their own recommendations. He therefore wished that when the present Conference had made up their minds they would stick to their resolutions and not repudiate them three or four months afterwards. He did not want them to leave their business until they had drafted a Bill, for which purpose he would supply them with a draftsman; and when they had done that, let them submit it to him and he would sit down calmly and criticise it, as they had criticised his Bill. He did not want bald recommendations which would afterwards not be recognised.

The resolutions adopted at the last Conference were:—

“That the Rabbit Act of 1890 be repealed.”

This resolution has been acted upon, and it is proposed in this Bill that the Rabbit Act of 1890 should be repealed.

The next recommendation was “that the matter of dealing with the rabbits should be placed in the hands of the Pastures and Stock Protection Boards until they are superseded by more representative bodies.”

He

He took it that "more representative bodies" meant more representative of the vital interests that were at stake—the interests of the large man, the interests of the small man, the interests of the general taxpayer, and the interests of the people who owned the Crown lands of the Colony. How had that recommendation been carried out? In this Bill it is proposed to place the matter in the hands of more representative bodies, namely, the Rabbit Boards which it is proposed to constitute under section 5 of this Bill. Complaints had been made against having two Government nominees on the Boards; but when it is considered that the State controls over 240,000,000 acres, and will have to provide a large sum for dealing with this pest, he had yet to learn that that great land owner should not have at least a minority representation; and it must be borne in mind that this representation will also be of value in this respect, that where the State is called upon to expend sums of money it will pay more heed to the request, knowing that two of its own nominees are on the Board.

The next resolution was, "That the Stock and Pastures Boards should be empowered to make special levies for the destruction of rabbits and the erection of rabbit-proof barrier fences where necessary."

Clause 12 deals with this recommendation; but there is one little divergence, namely, the provision with respect to half rates being levied on owners of holdings who in the opinion of the Boards are already rabbit-proof fenced. This he was sure would be appreciated. It meant that some consideration was to be shown to the man who had helped himself.

The next was, "That the local controlling authority should have the power to make destruction of rabbits compulsory in their respective districts."

In clause 29 of the Bill it will be seen that this recommendation has been carried out.

The next recommendation was, "That the Crown should take steps to secure the reoccupation of the abandoned areas of the Colony on any terms, provided that the destruction of rabbits was made compulsory."

This is a matter more for administration than for legislation, and it has been the chief aim of the Lands Department to secure this result. Some 164 improvement leases have already been let on this class of country, covering an area of 1,861,828 acres, on all of which the compulsory killing of rabbits is one of the conditions. Then, again, in addition to this, large tracts of country which have been merely breeding grounds for the rabbit have been dealt with on special terms. On the West Bogan one of the conditions is the destruction of rabbits, and the same applies to the Pilliga Scrub, which has been surveyed and thrown open for tender under improvement leases, and is slowly being taken up. So that so far as that recommendation goes it has been carried out. It is hoped that some 3,000,000 acres of these waste lands will be taken up in the next two years, on the whole of which the compulsory killing of rabbits will be a condition.

The next recommendation referred to "the free carriage of rabbits on the railways."

This is also a matter of administration, and the Railway Commissioners have endeavoured to meet exporters to a very large extent, as rabbits are now carried by passenger trains at half parcel rates, and on goods trains they are carried under Table A—the cheapest rates; so that, say, from Narrandera, a distance of 348 miles, a ton of rabbits could be brought to Sydney for £1. 6s. 10d., which was only about one-third of a penny per mile.

The next resolution, namely, "the abolition of the duty on netting," had also been complied with.

The next resolution was, "That netting should be carried free on the railways, where empty sheep or cattle trucks could be used."

Netting is now being carried at sheep and cattle rates, which is as cheap as can be expected from an undertaking conducted on commercial lines.

The next proposal was, "That the State should supply netting to landholders, charging interest at the rate of 4 per centum per annum."

Clause 26 of this Bill was framed to comply with this recommendation. He had gone as far as he could in this respect, but he might be able to go still further, so long as the repayment of advances was provided for. This matter would be in the hands of the local bodies, so that there would be no waste of public funds.

The next recommendation was, "That the compulsory fencing clauses of the Rabbit Act of 1890 should be enforced without inflicting hardship on individual owners."

From a perusal of the Bill, it will be seen that this has been done, provision being made in clause 26 which will obviate the infliction of undue hardship.

The next recommendation is to the effect "That where barrier fences are constituted under the Pastures and Stock Protection Boards, they shall remain the property of those Boards, and provision made to ensure their safety."

Legislation in this direction is proposed in clauses 20 and 22 so as to give effect to this proposal.

Then followed a request "That power should be given to the local authorities to proclaim that certain adjoining holdings should form a group, that such group be fenced, and that the destruction of rabbits be carried on simultaneously within such fence, and to apportion the cost amongst the owners affected."

This is your own proposal, and it is given effect to in clause 43.

The next was, "That the Conference having decided that the question of dealing with the rabbit pest should be placed in the hands of the Stock and Pasture Boards, the Government should contribute towards the destruction of the pest in the proportion to the area of Crown lands in any district. It was decided that the matter should be in the hands of the Pastures and Stock Boards only until superseded by more responsible bodies."

In clause 32 it is set down that the Crown is to contribute towards the destruction of rabbits on public lands in the same ratio to the rabbit rates as the Crown lands bear to the private lands in the district. This provision precludes the possibility of any complaint that the Crown is trying to evade its responsibilities. The Government will have to undertake the work on all the public reserves and waste lands of the Colony which are at present a harbour for the pest.

It would thus be seen that the resolutions of the 1895 Conference had been carried out as far as the proposals of this Bill were concerned; and it seemed rather hard on him that the persons who framed those recommendations should now condemn them. He did not profess to have a very great knowledge of rabbits, but he claimed to be able to put the recommendations which had been placed before him into a Bill.

In conclusion, he would say that their great aim should be to effectively cope with, or exterminate, the rabbit pest, and they could not do that without putting their hands into their pockets. The first thing they had to do was to get money, and money could only be raised by levying rates. There should be local control; each district fencing in its own rabbits, and dealing with the pest within its boundaries. The next question was the constitution of the Boards. He considered that the Pastures and Stock Boards were not thoroughly representative; these Boards did not represent the small man sufficiently.

With regard to the Government representation on the Boards, he would say they must trust the Government. They were not in the habit of appointing inferior men. The Local Land Boards were a good example of this. They tried to get fair and impartial men—men who enjoyed the confidence of the people—to fill these positions. It would never do for the control of the Rabbit Bill to be entirely in the hands of private individuals.

He hoped that the result of their mutual deliberations would be a Bill which would meet with the approval of all classes of the community, and which would be one of public benefit, dealing with this great calamity.

The Conference proceeded to elect a Chairman.

It was proposed by Mr. LESLIE and seconded by Mr. ALFRED BROWN, that Mr. F. W. Bacon be appointed Chairman.

Mr. Allen Lakeman was proposed by Mr. CUMMING and seconded by Mr. FLANAGAN.

On the nominations being put to the vote, Mr. Lakeman was elected by 22 votes to 17.

Mr. ALLEN LAKEMAN then took the chair, and proposed a vote of thanks to the Minister for the manner in which he had endeavoured to cope with the rabbit pest.

This was carried unanimously.

The CHAIRMAN thought that the Bill before them seemed to embody, perhaps with a few amendments, the resolutions drawn up by the last Conference.

Mr. ALISON (Canonbar) said there were a great many present who had not read the Rabbit Bill. He thought they should read the Bill before attempting to discuss it. He, therefore, moved,—“That the meeting be adjourned.”

Mr. LAURENCE (Balrauld) suggested that the delegates representing the different Divisions of the Colony should group themselves together and discuss the Bill.

Mr. GIBSON (Hay) thought that the Bill should be taken clause by clause. They were in a much better position than the previous Conference. They had in the Bill before them a foundation on which they could work. He came from a part of the Central Division whose interests were also those of the Western.

Mr. OAKDEN (Cobar) supported Mr. Alison's motion.

Mr. TAYLOR objected to Mr. Laurence's proposal, and claimed he had the right to discuss the Bill from start to finish.

Mr. T. BROWN, M.L.A. (Budgerabong) proposed,—“That the Bill be read clause by clause, and any clause that could not be agreed upon might be considered afterwards.” There were a good many clauses in this Bill which will require no alteration at all.

Mr. CAMERON (Ivanhoe) supported the motion that the Bill be read through.

Mr. FREEMAN thought the present Rabbit Act should be taken and compared with the Bill now before them.

The CHAIRMAN said he would like to make a suggestion. As this was the first day of the meeting, and many of the delegates had only arrived in town that morning,—how would it do for them to adjourn till to-morrow morning, so that the representatives of the Central and Western Divisions might be able to discuss the matter among themselves?

Mr. CAMERON (Ivanhoe) then moved, and Mr. GIBSON seconded,—“That the meeting be adjourned till 2 o'clock in the afternoon.”

This motion was carried, and the Conference accordingly adjourned.

When the Conference met at 2 o'clock, the CHAIRMAN said he would thank some gentleman to suggest some mode of procedure.

Mr. ALISON (Canonbar) said the representatives of the Central Division had been considering the provisions of the Bill, and as they had not yet finished their deliberations, he would move, “That they adjourn till 10 o'clock to-morrow morning.”

Mr. M'COLLOUGH (Deniliquin) seconded the motion.

Mr. CUMMING (Hillston) moved an amendment, “That they should deal with the Bill clause by clause at once.”

Mr. COOK (West Beringerry) seconded the amendment.

Mr. ALISON (Canonbar) thought it would facilitate matters if the Bill could be gone through privately. He said it would save time if the representatives of the different Divisions could consult together and then submit their conclusions to the Conference. Mr. Taylor could attach himself to any Division he wished.

Mr. M'COLLOUGH agreed with Mr. Alison.

Mr. GORMAN (Berrigan) said: If they went through the Bill amongst themselves they would then come back there and go through the whole matter all over again.

Mr. BOLTON (Wagga Wagga) thought that the idea was that the representatives should meet there in order that they might act in unison.

Mr. OATLEY said he took it from Mr. Alison's proposal that this Bill was to be accepted with variations and amendments; if not, what was the use of forming themselves into different parties to examine the Bill? He thought the best thing to do would be to take this Bill with amendments.

The CHAIRMAN said the motion before him was an amendment on Mr. Alison's motion, to the effect that the business be proceeded with.

The amendment was carried.

Mr. GIBSON (Hay) moved, “That the Bill be now taken clause by clause,” but he would like to know whether any amendments could be moved on matters which were not covered by the Bill.

The CHAIRMAN said any delegate had a right to move any amendment, even on a matter outside the Bill.

Mr. FLANAGAN (Gunbar) seconded the motion.

Mr. OAKDEN (Cobar) thought that before going on with the Bill it would be well to discuss some general principles in connection with the matter.

Mr. LAWRY moved, as an amendment, "That the Bill before the Conference should not be adopted." He said there were many proposals in the Bill which were not generally acceptable—for instance, the taxing of rabbit-proof holdings, even at half rates. He thought that it would be better to take the 1890 Act and incorporate with it such provisions from the present Bill as was thought desirable.

Mr. FREEMAN thought it would be the better plan to take the 1890 Act and formulate amendments so as to bring it up to date.

Mr. ALISON (Canonbar) said that the last Conference started to amend the 1890 Act; but it was finally decided that it should be repealed altogether and a new Act brought in. The experience of that Conference was that the old Act could not be repealed.

Mr. CAMERON (Ivanhoe) could not see the utility of amending the 1890 Act, as only one of its clauses had ever been put into force. He thought they should take the Bill before them clause by clause.

Mr. T. BROWN, M.P. (Narrabri), said that before they started with the Bill he thought it would be better to have some discussion on general principles. As far as he could judge from last year's Conference, the idea was to remove the control of the destruction of rabbits from the Department and place it in the hands of Local Boards. This was the idea submitted to the Minister, and he had carried it out in the present Bill. But there were other interests besides those represented through the Stock Boards. The smaller holders were as deeply affected as the larger holders in the settlement of this question, and they did not look on the question from the same standpoint. The Crown, in respect to the unoccupied land, should be put on the same footing as other holders. He did not think there was anything to be gained by barrier fences; they were not a complete preventative. Small holders felt that they could only effectually deal with the pest by having their individual holdings fenced in. Having secured their holding they would be in a position to deal with the block. They would only have to keep the fence in order and deal with the pest within the enclosure; but they were not in a position to bear the expense of enclosing their holding. Money should be raised, by loan or otherwise, in order that the amount of netting required could be purchased by the Government on liberal terms, provision being made for applicants receiving it on liberal terms. They could then enclose their holding, and make out of the land the money that was required to enclose them in the first instance. The Government could materially assist settlers in this respect. These settlers in the west have not only the rabbit plague to deal with, but also the wallabies; and the same measures would answer in both instances. Small holders should have something to say in legislation. By considering their interests the larger holders would be served also.

Mr. LESLIE (Forbes), said it was he who moved the resolution of the last Conference, "That the Rabbit Act of 1890 be repealed." It was then advanced that there was only one good clause in the old Act. That Bill could not be used as a basis to formulate fresh legislation. Mr. Brown had told them that the interests of the small and large holders were not identical. Their interests were the same whether they held large or small areas. With regard to the Stock Boards not being representative he thought the small holders controlled the voting power if they chose to exercise that power. They could displace the whole of the Board at the annual election. What they wanted was a Bill as free from Government control as possible. He thought that the men who had to pay should have representation. If the Crown was to be the highest contributor it should have the largest amount of representation.

Mr. LAWRY wished to amend his former motion as follows:—"That certain principles in the proposed Bill not being generally acceptable, this meeting should proceed to consider a suggested Bill to lay before the Minister on the lines of amendments in the 1890 Act, adopting any new legislation proposed in the Ministers Bill that may be considered applicable."

Mr. J. HAYES, M.P., said they wanted a Bill to give them control in their own Districts. In the District which he represented the compulsory use of fencing would be all that was required. The fencing conditions in the Murray District had been very successful, and there was no necessity to go in for barrier fences.

Mr. LAURENCE (Balranald) was of opinion that if the present Rabbit Act were amended it would be quite sufficient to cope with the pest.

Mr. BRETT (Urana), said that in his District fences were of no use as they were often covered up by moving sand-hills.

Mr. GIBSON (Hay) considered that everything that had been said could have been dealt with when the Bill was under discussion.

The CHAIRMAN put Mr. Lawry's amendment to the meeting, and declared it lost.

The original motion (Mr. Gibson's) was then put and carried.

Mr. ALISON (Canonbar) moved, "That any amendment should be handed to the Chairman, so that they might be printed and distributed before the discussion on the Bill in the morning."

Mr. M'COLLOUGH (Deniliquin) seconded the motion, which was carried on the voices.

Mr. BROOKE (Boggabri) moved, "That a time limit of ten minutes be allowed to the mover of an amendment, and five minutes for reply."

Mr. BACON (Brewarrina) seconded the motion.

Mr. ATKINSON moved as an amendment, "That fifteen minutes be allowed the mover of a motion, and ten minutes for any one speaking after the mover."

Mr. OATLEY seconded the amendment.

Mr. BROOKE (Boggabri) moved as a further amendment, "That there be no time limit."

Mr. LAURENCE (Balranald) seconded Mr. Brooke's amendment.

This amendment was lost.

Mr. Atkinson's amendment was then put to the meeting and carried.

The Conference then adjourned till 10 a.m. the following day.

## SECOND DAY—10TH MARCH, 1897.

The Conference met at 10 a.m., Mr. Allen Takeman in the chair.

The minutes of the previous meeting were read and confirmed.

Mr. OAKDEN moved. "That the Preamble of the Bill should read as follows:—'A Bill to amend the Pastures and Stock Act; to make better provision for the destruction of rabbits.'"

The CHAIRMAN said that if this motion were carried a new Bill would be required.

Mr. OAKDEN (Cobar) said that the Pastures and Stock Act had done good work in the past, and he thought the destruction of rabbits should be under their supervision.

Mr. WILKES (Broken Hill) seconded Mr. Oakden's motion, and in doing so said: The last Conference was of opinion that the destruction of rabbits should be placed under the supervision of the Pastures and Stock Protection Boards until they were superseded by more responsible bodies. The meaning of that was any Board created under a consolidated Bill. He contended that the Pastures and Stock Protection Boards gave all the machinery that was necessary to deal with the pest; but he considered the matter had not been left in the hands of the Pastures and Stock Boards, but had been dealt with in Sydney. Some of the measures adopted, such as trapping, were ridiculous. He thought that if the Pastures and Stock Boards were given a fair trial we would not need any fresh legislation.

Mr. ALISON (Canonbar) said the work done by the Pastures and Stock Boards had been satisfactory, but there was a practical difficulty in the way of adopting Mr. Oakden's motion. The Pastures and Stock Boards did not deal with fencing. If they could amend the Bill at present before them, they would have the fencing clauses.

Mr. VARCOE (Hillston) was opposed to the principle of placing the destruction of rabbits in the hands of the Pastures and Stock Protection Boards. He said that the small holders had no voice on those Boards.

Mr. OAKDEN (Cobar) said that any owner of a small number of stock had a voice on the Pastures and Stock Protection Boards, and he thought the fencing clauses could be embodied in the Pastures and Stock Act.

Mr. BACON (Brewarrina) said the Minister for Lands had not made the intentions of the Government thoroughly clear with regard to the State paying its share of the cost of destroying rabbits on unoccupied Crown lands. Ministers for Lands in the past had shirked their duties in this respect, and he thought that the Conference should not separate until it had come to a clear understanding in this respect. He also thought that there should be a consolidation of Boards, and a consolidation of machinery, to administer the Pastures and Stock Act, the Diseases in Sheep Act, and the Rabbit Act.

Mr. FLANAGAN (Gunbar) said that although he had been paying taxes for over thirteen years he had never, during all that time, received the slightest benefit from the operations of the Pastures and Stock Board. The great complaint was that whilst the people destroyed the rabbits upon their holdings, and were taxed to do so, the unoccupied Crown lands which adjoined theirs were infested with rabbits, and the Government had never made any attempt to destroy them.

Mr. GIBSON (Hay) thought that it was the duty of the State to purchase wire-netting and to sell it to the landowners on easy terms. He said that this would enable the landholders to wire-net their holdings, and to put their land into profitable occupation at once.

Mr. ALISON (Canonbar) thought that there were very many objectionable provisions contained in the Bill, among them being the mode of assessing the value of the land, which he thought very objectionable indeed. They should adopt the mode provided in the Pastures and Stock Protection Act. He did not consider that it was equitable that the Government should in all cases be represented by two nominees on each Pastures and Stock Protection Board. It was necessary that they should have some guarantee that the Crown would bear its share of the expense of eradicating the pest. If no provisions were made in the Bill, and the Minister asked for a vote to be expended in the destruction of rabbits, it was quite possible that Parliament might refuse to vote the money, although it had previously been promised by the Government. He, too, was also of opinion that the Government should be urged to amalgamate all the Acts as much as possible, in the direction of having one Board appointed to represent the whole of the stockowners.

Mr. WILKES (Broken Hill) said that there was nothing in the Bill to show that the Government would bear a fair share of the expense of destroying rabbits on unoccupied land. He would fearlessly assert that the Crown would never clear the rabbits off the unoccupied Crown lands.

Mr. FETHERSTONHAUGH (Coonabarabran) said that he had read the Bill through, and thought it had its defects. The defects were very manifest, and one of his objects in speaking at this stage was to advise the delegates to provide themselves with a copy of the *Sydney Stock and Station Journal*, which contained the Canonbar circular. He then read from this circular the following extracts:—

It is evident the townspeople in a rabbit district must be the most numerous, and their powers of taxation are such that they can put  $\frac{1}{4}$ d. per head on sheep on all country lands, and the 1000th part of a farthing on the annual value of town lands.

The definition of "owner" is very full, so that anyone who has half or quarter of an acre of land has one vote. An "occupier" is defined as the resident manager. It is evident that the tenant of an allotment of town land may either be constituted the manager of that allotment, or he may be considered the manager without appointment, and therefore entitled to vote.

Where an election is held the townspeople can evidently outvote the country people, both because they are more numerous, and because of the fact that they have no distance to travel to record their vote.

The rabbit district where elective is entitled to three members, which may be townspeople. The remaining members are appointed by the Minister: so that the curious result may occur that out of five members on the Rabbit Board not one may be a stockowner. The duties and powers of a newly constituted Board, on which no stockowner may be a director, are enormous and tyrannical.

According to clause 12, subsection (i) and (ii), they are appointed as a Board to appraise every holding, whether land leased from the Crown in any shape, any freehold land, any cultivated land, which is to be estimated as though laid down in grass. The Rabbit Board is, in fact, another Land Board, and a new department is thus created for valuation purposes. The Board can appoint any person to inspect holdings, who can examine or cross-examine the owner or manager in any manner he may think fit, on his own ground—may apparently choose his own time to put these questions—may ask any question he may think fit, and if the owner refuses to answer any question for any reason he is liable to a penalty not exceeding £10. He can ask what it had cost the owner to manage his run, to shear his sheep, what profit he made on the year's transaction; in fact, his power of asking questions is without limit, and need only be justified by the plea that the inspector considered the questions necessary. There is no doubt whatever that clause 12 creates a department of equal, not

not

not greater, powers to the Land Board. That an office will be kept, the chairman a permanent official, with all appurtenances of inspectors, appraisers, secretary, and others, such as boundary-riders of barrier fence; and the chairman may not be a stockowner—may in fact be a man elected by the majority of the townspeople, or appointed by the Minister or Governor.

The powers of the Board in regard to administration are enormous. It can borrow up to four years' revenue without specifying the purpose for which the money is borrowed. It can erect fences within or without the rabbit district, and compel everyone to pay, no matter how little anyone may be benefited. They can run a fence across any holding, and divide it so that it will divide the owner from his best water. There is in clause 23 an endeavour at fairness, by saying compensation can be paid for severance; but the betterment from the fence is to be taken into consideration in awarding compensation, and in the latter part of the clause the owner is threatened by a proviso, that the Land Board can award costs to or against any party appearing before it irrespective of the verdict. And it must always be borne in mind that the Rabbit Board may be composed of non-stockowners. Clause 29 gives the Board power to peremptorily order any owner to suppress and destroy all rabbits on his holding. This is giving them power to order an impossibility. And in Part III, clause 45, the mere existence of rabbits on a holding is *prima facie* evidence that the owner has failed to perform the duty of destruction, and the Board has then the power to enforce clause 30, Part I, and enter upon the holding and destroy all rabbits, and remain there destroying while one rabbit is to be seen.

The fencing clauses are tremendous in their power. Clause 20 gives the municipality power to fence in the municipal area, and although no person except the townspeople may benefit, yet every person in the rabbit district must contribute his quota. The words are clear—"a barrier fence" is a rabbit proof fence which shall protect any part of the district, whether within or without the district, and the decision of the Land Board that the fence protects any part of the district compels every owner to subscribe his full quota to the cost.

The Board can take possession, without compensation, of any fence now rabbit proof and convert it into a barrier fence, but where a barrier fence is put up the Board can compel the owner on whose boundary it is erected to pay half the cost.

His object was to draw the attention of the Conference to this very valuable circular, and he thought, before they went into this Bill in detail, it would be well worth their while to study the circular fully. He thought he might also mention having been a member of a good many Rabbit Conferences of which, unfortunately, nothing ever came. His experience was that those Conferences had always found that business was much facilitated by the appointment of a sub-committee of perhaps eight or ten to meet and deliberate, and draw up a report for the whole of the Conference to deal with afterwards. He thought it utterly impossible for a large number of men like this Conference to deal with this question properly without appointing a sub-committee, and he would ask them to put their heads together and to appoint a sub-committee, or two sub-committees if they like, who would probably not be above sitting at night to go into this very important matter.

Mr. CUMMING (Hillston) said that there had been a great deal said about the Stock Boards and their utility in the past. They had not been more useful because of the want of a proper constitution. He thought that they could be made very representative bodies, but it would have to be on the land basis. He thought that they must have a Rabbit Bill to protect themselves, and that was the main thing. He, however, was perfectly convinced, from his own experience, that the rabbits could be kept under by the judicious use of poisoning, and if they adopted this method it would very much lessen the use of wire-netting. He knew if everybody did as he did, there would be no rabbits to kill. They should use poison instead of wire-netting which was very expensive; but if they must have wire-netting, they should go on the lines of the Victorian Act, which had been found very beneficial to everybody, because it enabled farmers to get wire-netting from the municipalities on such easy terms that even farmers with small means could protect their property.

Mr. CAMERON (Ivanhoe) said he also would endorse what Mr. Cumming had said about the Stock and Pastures Board, and he could not understand the very strong objection among a great many who were there, with reference to the Stock and Pastures Board. As far as he could see, in most localities the Stock and Pastures Board could be made as representative as it was possible to make any Board, and the reason why the Stock and Pastures Protection Act had not perhaps been so effective was because a great many small holders had not made the slightest use of it. They had not come forward as candidates for election. He thought also, as they had the machinery already in existence in the Sheep and Stock Boards, the administration of the Rabbit Act should, at the beginning, be placed under them, and if at some future time it was seen that these particular Boards did not work particularly well, they could be amended so as to make them acceptable to all the community. The franchise could be reduced from 500 to 200 sheep if it were necessary. He must now refer to a good deal that had been said as to the constitution of the Board, as considered under the Act now before them. Many seemed to think that in districts where the Minister had no land, where all the land was under occupation, and there were no abandoned lands or resumed areas of any kind, that in such cases the Minister should not be entitled to representation. But he thought the Minister was entitled to representation upon those Boards, and that to a very considerable extent, because he was interested in the welfare of the land, as representing the State who owned the land; and he ought to feel a very strong interest in all the Crown lands of the Colony that were held under lease. It was quite as much to the benefit of the State generally that rabbit destruction should be carried on on those lands, and he thought it was only right that the Minister should have representation on the Board, as representing the State. He quite agreed with what Mr. Featherstonhaugh had just said, in that it looked like an impossibility for the Conference to arrive at any decision unless they formed Committees, and took time quietly at night to consider the Bill with its various clauses, and then present a report to the Conference, and he would be strongly in favour of that method being adopted.

The CHAIRMAN said he took it that the second reading and discussion was finished, and they would now go into Committee on the Bill. The first was the Preamble.

Mr. BACON (Brewarrina) asked the Chairman if he would now put the motion standing in his name for the postponement of the Preamble. He did not wish to take up the time of the meeting by replying to what had been said.

Mr. BAYLIS (Narrandera) seconded the motion.

The CHAIRMAN then put the question to the meeting, and it was carried unanimously that the Preamble be postponed.

The CHAIRMAN said the next was clause 1—the Short Title.

Mr. ALISON (Canonbar) said he would suggest that they should deal with Part I of the Bill, postponing the consideration of clauses 1, 2, and 3 until the vital principles of the Bill were laid down.

Mr. GIBSON (Hay) seconded the proposal.

Question put to the meeting, and carried.

The Hon. RUPERT CARINGTON (Jerilderie) said he should like to see clause 4 also postponed until the constitution of the Rabbit Board had been finally settled. It struck him that it was simply putting the cart before the horse to declare what the districts were to be, without declaring how they were to be administered. If this clause were carried, it would simply stultify all the other amendments which might be moved about the constitution of the Board. He would ask this in fair play, so that the amendments which they had got in clause 5 might be considered on their merits and not be hampered, perhaps unintentionally, by this clause having been put first.

Mr. BACON (Brewarrina) seconded the motion.

The Hon. R. Carington's motion was then put to the meeting, and carried unanimously.

Mr. ALISON (Canonbar) then withdrew an amendment standing in his name, on sub-section (b) of clause 4, as under,—

“But no sheep district shall be amalgamated with any other district without the consent of two-thirds of the voters.”

### Clause 5.

#### *Rabbit Boards.*

5. For every Rabbit District there shall be a Rabbit Board, which shall consist of five members, who, subject to the provisions hereinafter contained, shall hold their respective seats for a period of three years from the date of their appointment or election thereto:

Provided always that—

- (a) the Governor may remove any member of the Board who appears to the Governor to have failed to do or be capable of doing his duty;
- (b) The Governor may fill any casual vacancy upon the Board, and may in such case appoint a member for a less period than three years.

A Rabbit Board shall, within such time as may be prescribed, appoint one of its members to be Chairman thereof, and if such Board shall fail to appoint a Chairman, the Governor may appoint one of such members to be the Chairman of such Board; and the Chairman and other members shall be entitled to receive, out of the revenues of the Board, such fees as may be prescribed.

Mr. T. BROWN, M.L.A. (Budgerabong), begged to move that “one year” be substituted in place of “three years” in line 3 of clause 5. He said that a number of these notices of motion stood in his name, but they were proposed by the Condobolin Stock Board, who unfortunately were not yet represented on the Conference; so he had placed them on the business paper for consideration on their behalf. He thought the amendment spoke for itself.

Mr. ALISON (Canonbar) said he would support Mr. Brown's motion. He thought that, as they were making a new departure in having a new Rabbit Board, it would be beneficial to elect them for only one year. It might be a time of excitement when the Board was elected, and there might possibly be men returned whose actions might not be approved of afterwards, and he thought it was rather dangerous, straight off, to give them three years. He thought it was better to keep them under control, as they would get enormous power. They would have the control of nearly a million of money, and under these circumstances they should be kept under control, and one year would be ample.

Mr. WILKES (Broken Hill) supported Mr. Alison for another reason. It would be a very hard matter if the Board that was in this year could go and nullify, as it were, the rights of what would be a future years' Board. The present Stock and Pastures Boards were elected annually, and he thought that they should stick to the principle in the election of the Rabbit Board. He therefore supported the motion.

Mr. GIBSON (Hay) moved as an amendment that “one” of the members appointed by the landowners should retire annually. He did not wish to see men put on the Rabbit Board who would make the Rabbit Act a dead letter. He thought that by one man retiring annually, the Board would get to know the opinion of the public, because on that member putting up for re-election, the landowners would have an opportunity of showing their opinions, and defeating him if they wished. He thought it would be better if a good man could be elected for three years, but that there should be an annual election for one man. He therefore moved that one of the members appointed by the landowners should retire annually.

Mr. OATLEY wished to know, before the motion was put, whether it would not be necessary to take a vote as to who should retire. He thought that the person who obtained the least number of votes at the first election should retire, as otherwise they would provide for three members, but not say which of them should retire.

Mr. ALISON (Canonbar) thought that if one man retired each year, it would still leave a majority retained for two years, and the stockowners would have no means of removing objectionable members from the Board for at least two years.

Mr. Flanagan (Gunbar) thought the farmer had been too apathetic in the past, but that this Board would rouse him up to his duty, and he would know what to do.

The CHAIRMAN then put Mr. Gibson's amendment, that the following be added to clause 5:—“But one of the members appointed by the landowners shall retire annually.”

The amendment was lost.

The original proposition made by Mr. Brown, that “three” be struck out and “one” put in, was put to the meeting and declared carried.

The CHAIRMAN said that the next amendment he had printed was one by the Honorable Rupert Carington, on clause 5, “That the Pastures and Stock Protection Boards be the Rabbit Boards for the district, *i.e.*, that the working of the Act be placed in the hands of the Pastures and Stock Protection Board.” He took it that that would be a substituted clause in place of the whole of clause 5.

The Honorable RUPERT CARINGTON (Jerilderie) said that he ventured to bring this forward for two reasons—firstly, on the grounds that it would save expense; and secondly, on the grounds of increased efficiency. They had in the Pastures and Stock Protection Board the machinery ready to their hand, and therefore, so far as administration, or rather, so far as legislation, if he might use the term, was concerned, it would not cost anything, because the rabbit meeting might be held at exactly the same time as the

Pastures

Pastures and Stock Board meeting for ordinary business, and consequently the Boards would receive one fee. Another thing would be that the Stock Inspector could act as the Rabbit Inspector without any further remuneration. With regard to this Government proposition, that there should be two members put on to this Board by the Crown, he might say, as far as his experience was concerned, that he most strongly objected to it. They were in a peculiar position. These Boards could make them kill the rabbits (under the new Bill), and if they did not, they were liable to be had up before the Magistrate, and in default of distress sent to gaol. There was not a single acre in his district of Jerilderie under control of the Crown. It was all alienated in some form or other—it had all been made into freehold, or had all been let; and therefore he thought it was a great injustice to say that the Minister could come in and appoint two people on a Board which would tax them and which would exercise these powers over them. He thought he could congratulate the Minister upon having given them the most complete example of taxation without representation that he had ever heard of. These gentlemen—who would they be? He was told that one would be the Chairman of the Land Board. Now really, although he was comparatively a new chum in this Colony, it was not to be thought that the Chairman of the Local Land Board could come and attend the Board. No; these Government nominees would be the friends either of a Member of Parliament, or the friends of a defeated candidate. They would come and say, "So and so did me a good turn last time; you put him on the Rabbit Board." They would be either the friends of a Member or else some local busybody, who would probably be very unpalatable to the rest of the Board. Now, apart from this proposition that the Minister should put these two men on, he did not give them any guarantee that he was going to kill the rabbits at all. The Minister proposed to tax them to kill their rabbits, but carefully prevented himself being taxed in any way. He would ask them to refer to one of the last clauses in the Bill, clause 32 reading, "It shall be the duty of the Minister to check, suppress, and destroy all rabbits which may from time to time be in or upon public lands, but such duty shall not commence until a reasonable period after moneys have been made available by Parliament for the purpose, &c., &c." In this Colony now, they were in a very critical state in regard to the finances. It was very important to the Government to have a surplus at the next budget; and could they tell him that the Government would go and put a large sum of money on the estimates, and risk that surplus, in order to kill the rabbits on the Crown lands? Of course he had no right to speak for any other Board than his own, but they thought very strongly indeed upon these two representatives being placed upon the Board. He reiterated that his amendment would be conducive to efficiency and economy in the administration of the Act.

Mr. BAYLIS (Narrandera) seconded the amendment submitted by the Honorable Rupert Carington most strongly. He held that the Pastures and Stock Boards were the proper Boards to deal with the rabbit question. They were elected by the stockowners, the people who were most affected by the rabbit pest. They had heard a lot of talk about the small owners not being properly represented, and the Minister even yesterday had alluded to it, and said that in his opinion the Pastures and Stock Boards were not the proper Boards to deal with this question. He held that in four-fifths of the districts of the Colony the small stock owners, if they only took it into their heads to do so, could actually swamp the Pastures and Stock Boards at the election. He himself was only a small member—he had only 640 acres of land; but he had been elected for the last nine years on the Stock Board. He knew of others who were in the same position, and he would again strongly urge that the Pastures and Stock Boards were the proper bodies to deal with the rabbit pest.

Mr. FLANAGAN (Gunbar), said that was not the question before the Conference; the question was the boundaries of the rabbit district.

The Chairman then explained to Mr. Flanagan the business before the Conference.

Mr. FLANAGAN (Gunbar), said he supported the Honorable Rupert Carington's motion.

Mr. LAURENCE (Balranald) also supported the motion. In his district the Stock Board consisted of four homestead lessees, and anybody was at liberty and welcome to come forward for the position.

Mr. OAKDEN (Cobar) said he had great pleasure in supporting the amendment. It was practically identical with one which he had intended to move. Without going over the arguments that had been already adduced by the previous speakers, he thought they should consider another point which had been referred to, at an earlier portion of the debate, and that was regarding the amalgamation of the Boards. Either the Rabbit Board should absorb the Pastures and Stock Protection Boards and Sheep Boards, or *vice versa*. This all pointed to the necessity that was felt for amalgamation, and it seemed to him that in the interim before the amalgamation of the Pastures and Stock Protection Act and the Rabbit Act, the Pastures and Stock Protection Board was the one which should administer the Rabbit Act temporarily, and he thought that this Conference should unite in asking the Minister that, pending the introduction of a Consolidation Act, which it would urge him to bring forward dealing with the various Acts affecting the stockowners, that the Pastures and Stock Boards should administer until this Consolidated Act was brought in, creating a Board to deal with the whole of the matters affecting stock in the Colony. He thought that if they took up that position, it would at once commend itself to the Minister and to Parliament. He ventured to support the Honorable Rupert Carington, and to bring forward these arguments in his favour outside the arguments already expressed.

Mr. DAVIDSON (Condobolin) mentioned that in his district the Stock Board consisted of one wool scourer and two selectors.

Mr. BRETT (Urana) said that since the Pastures and Stock Act had been in force, it had been carried out without a hitch. With reference to the small owners not being represented on the Board, he said that a small holder had been Chairman of the Board in his district for four years. He thought where the Act had been administered for so long, where they had the whole of the machinery in hand, and where there would be no outlay at all in getting machinery to work the Act, they should certainly place the administration of the Rabbit Act in the hands of the Pastures and Stock Protection Board. He supported the amendment.

Mr. MCCULLOUGH (Deniliquin) said he had been a member of a Board for over seventeen years, and had always got on without the slightest trouble with the sheep-owners. He thought the Stock and Pastures Protection Board deserved the confidence of the Conference.

Mr. LESLIE (Forbes) had very much pleasure in supporting the motion before the Chairman, and said that if anything were wanted to combat the arguments which had been used to the effect that the Stock and Pastures Board were not representative he would like to quote the Pastures and Stock Protection Act. It had been urged in the Conference that the Pastures and Stock Boards were not representative.

representative. Well, if they were not, all he could say was that it was the fault of the small men themselves. It was their own apathy—the apathy of those who had the power in their own hands—and therefore it was their own fault. In clause 3 of the Pastures and Stock Act of 1881, it showed that every small owner, if he took any interest in the election of the Stock Board, had the power in his hands to have a voice in the election of that Board. And he not only had the power of electing, but he also had the power of becoming a member of the Pastures and Stock Board if he were the owner of ten head or more of large stock. He thought that that at once did away with the arguments which had been brought forward that the Stock Boards were not representative. Then, again, it had been said that those Boards had done little or no work. From a return issued from the Stock Department, dated the 18th of August, 1896, he would quote, with the permission of the Chairman, and show what the Board had done. Between the years 1891 and 1895 the Stock and Pastures Protection Board had destroyed 10,046,399 kangaroos, 8,851,369 wallabies, 138,428 native dogs, 4,574,050 hares, and 173,178 wild pigs. The amounts collected during those years amounted to £560,265 6s. 7d., while the amount of the Government subsidy was £162,814 14s. 1d., making a total of £723,080 0s. 8d. He thought those figures spoke volumes in favour of the administration of any Act being placed under the Pastures and Stock Protection Boards. Not only had these Boards done good work, but, as had been pointed out, they had the machinery and could be administered at the minimum of cost. They wanted if possible to relieve themselves of some of the burdens which had been thrust upon them by different Acts of Parliament. He thought that if they could succeed in getting the destruction of rabbits put under the Pastures and Stock Protection Board they would have no reason to complain. If the Act did not work, there was always provision made if a Board did not do its duty that it should be taken over by the district. If people came to the Conference and said that these Boards were not representative, it was simply because they did not know and had not taken enough interest in the matter to find out whether they had got voting power, or what powers were conferred under these Acts. He would advise those gentlemen before they came to the Conference, before they made rash assertions, to go home and read the Pastures and Stock Act carefully.

Mr. BACON (Brewarrina) was in sympathy with the Honorable Rupert Carington's motion, but before making any remarks on it he would like to ask the Chairman what would be the effect of the motion on the Bill if it were carried.

The CHAIRMAN said he had himself been trying to find this out, and the conclusion that he had arrived at was that if the motion were carried, clauses 5, 6, and 7 would be unnecessary. He could say no more, as he had not read further to see what other effect it would have.

A MEMBER: Clause 8 would go out as well.

The CHAIRMAN said he did not think that clause 8 would be done away with. That might be discussed.

Mr. BACON (Brewarrina) wished to endorse the remarks that had fallen from the Honorable Rupert Carington and the other speakers, and he would suggest that the difficulty about the representation of the Government might be met by the appointment by the Minister of six members to act as a central Board with a Minister as Chairman, in the same way as had been done in Queensland. This Board would control the amount of money voted to the Minister by Parliament. This central Board would have a controlling effect over all the Local Boards. He thought this might be introduced as a compromise. If they passed this resolution moved by the Honorable Rupert Carington that the Rabbit Act be controlled by the Pastures and Stock Act, then this central Board under ministerial control might be afterwards adopted as a compromise.

Mr. GADEN (Dubbo) wished to make a few remarks with reference to this bogey-man, the small holder. He could not exactly say that he was a small holder himself, but he had been elected by the small holders ever since the present Act came into operation. That was many years ago, and there had always been an endeavour to get a small man nominated, but they had such confidence in the existing Board, and for those who had offered themselves, that they declined to come forward, and he was quite convinced that if all the small holders were polled to-morrow they would return the same men. There were many reasons why they could not come forward. In many instances they could not devote the time or afford the small expense to attend; but he felt quite convinced that this was merely a bogey, raised not by the small men themselves but by men with some ultimate object in view.

Mr. TAYLOR (Lands Department) wished to say a few words before the clause was put with a view of objecting to it. For his part he strongly objected to the administration of this Act being placed in the hands of the Pastures and Stock Protection Board, simply because, he contended, they were not representative. The Pastures and Stock Board consisted of eight members, five of whom were members of the Sheep Board; and every person who was the owner of 500 or more sheep was entitled to vote for the election of a sheep director, but those who did not own 500 sheep had no vote. In addition to this, he would like to point out that the Pastures and Stock Boards had had the administration of the destruction of rabbits before, and the Act of 1883 was simply to take it out of their power.

Mr. T. BROWN, M.L.A. (Budgerabong), very strongly objected to the motion to place the whole control of this legislation in the hands of the Pastures and Stock Protection Board. As Mr. Taylor had pointed out, the Pastures and Stock Protection Board had had the management of this pest in its initial stages, when, if effective measures had been taken, it might have been kept under control; but they failed to do anything of a substantial character in that direction, and he could not see any hope of anything effective being done in placing this measure solely under the control of the Pastures and Stock Boards. Anybody who knew the working of this Pastures and Stock Protection Board knew that when it came to legislation on the destruction of rabbits it was not a representative body. Possibly the small holders might have certain rights under it, but they had never exercised those rights to any large extent. Then there were Pastures and Stock Boards in the Colony at the present time for which the Government had to nominate the members, because even the large owners did not think it worth their while to exercise their rights. This occurred year after year. Then, again, the boundaries of the Pastures and Stock Board were very extensive; and he contended that if they wished to deal with the rabbit question they would have to get local machinery and confine it within as small an area as possible, and it would be necessary to sub-divide the Pastures and Stock Board Districts into two, and perhaps three, Rabbit Board Districts; and if they carried this amendment it would be impossible to do that. They would make the boundaries of the Pastures and Stock Board the boundaries of the Rabbit Board, and they would make the machinery that had been set up for the Pastures and Stock Boards the administrative machinery for coping

coping with the rabbit pest. He thought the members of the Pastures and Stock Boards present would agree with him that the machinery was not perfect, and that they were looking for legislation to improve that machinery, as their resolutions of last year indicated. He thought it would be to the detriment and not to the interest of rabbit legislation if they went back to the old system that had been discarded, of placing it wholly under the control of the Pastures and Stock Boards. He thought the Minister's proposal was a very reasonable one—that was, that where the Stock Boards dealt with the rabbit pest the working of the Rabbit Act should be placed under those Boards. Then there were municipalities and more settled districts; they should be formed into rabbit districts, irrespective of the Pastures and Stock Protection Boards. And then, again, the Minister proposed that if the machinery of the Pastures and Stock Protection Boards was found inefficient or inapplicable to this piece of legislation, the owners themselves, if they thought fit, could, by petition, have the machinery of election altered and placed on a different basis to suit their requirements. The effort of the Minister all through this Bill had been to make the administration of the Act as suitable to the conditions that it was to operate on as was possible; and this Conference, if they carried this resolution, would limit and place it wholly in the hands of the Pastures and Stock Protection Board, irrespective of the question whether the Stock Boards, on the area of country they have under control, were best suited to deal with it. He thought the Minister's proposal was far and away the best proposal, and he was prepared to support it, and he hoped that the good sense of the Conference would see that it was superior to the amendment. Take Molong Stock Board. Their area extended partly beyond and to the west of the Harvey Ranges. There was nothing in common between the owners on the east and the owners on the west of that Range, and there had been considerable friction between them. The western owners were pestered with wallabies and kangaroos, and the eastern with hares. The sole effort of the Board had been to keep down the hare pest. The Eastern Division controlled completely the moneys of the district, and no money had been available for the putting down of the pest in the west, although that district contributed to the funds. As a consequence, the western district were petitioning to be placed under another Stock Board. How, then, in a big district like this, would it be possible to work the Rabbit Act successfully, when by its very nature it required that the administration should be more local? The same thing applied to Condobolin. There had been friction among the stock-owners on the south side of the river and on the north side. The conditions were different. Those on the north side had a pest of wallaby, and those on the south had nothing. The south controlled the money and they had done little. He thought he was correct in saying that with very few exceptions the small owners took no interest in the constitution of the Board. In Condobolin, when the small owners tried to get representation, they had to travel 80 miles to record their vote. But that was only the initial stage, and he believed that this Rabbit Bill, if the amendment as proposed by the Honorable Rupert Carington was passed, would be practically a dead letter, and outside the Stock Boards it would not meet the views of the great body of land-owners who had to contribute the funds.

Mr. FREEMAN thought the whole crux of this question was simply that they had got to find the money; and why should they, who were in the midst of it and knew exactly what was going on from day to day, not be the people to spend the money? He certainly thought, therefore, that the administration of this Act should be placed in the hands of the Sheep Boards. If the local body could not successfully administer this Act, how could the Minister administer it from the head office in Sydney?

Mr. T. BROWN, M.L.A., said that if the gentleman would permit him to correct him, he would point out that the difference between Mr. Freeman's wishes and his own was, that he, Mr. Brown, wanted it to be under Local Boards, while Mr. Freeman wanted it to be under Stock Boards. He thought that local Rabbit Boards would deal with it more effectively than the Stock Boards could do.

Mr. FREEMAN read subsection (a) of clause 5: "The Governor may remove any member of a Board who appears to the Governor to have failed to do, or be incapable of doing, his duty." The Governor meant the Minister. Why should the Minister have this power? Why should a Minister remove a Board, perhaps on the recommendation of some quarrelling member of Parliament? Then let them look at subsection (b) again. "The Governor may fill in a casual vacancy upon the Board, and may in such case appoint a Board for a less period than three years." Why should the Minister have such power? Why should the Minister come in? He had the power to nominate two men already as the Bill stood, and why should he come and put a third man and take away the balance of the voting power? What he would draw their attention to was this: that if they were going to place this Bill under the Pastures and Stock Boards, then the Pastures and Stock Boards should administer it, and not the Minister for Lands.

Mr. WILKES (Broken Hill), in supporting this, said that he thought Mr. Brown had been the best arguer in its favour that they could have. Mr. Brown had mentioned the Molong Board, and they were so dissatisfied with this and that, that they would not take the trouble to elect a member. Mr. Brown had also mentioned the Condobolin Board as being dissatisfied; but what had happened in Condobolin? Why, they had carried it their own way, and this showed that the Pastures and Stock Boards were elective Boards and properly representative Boards. There were a number of gentlemen who had come to the Conference with certain ideas about the Pastures and Stock Boards, but they had altered them a lot. What was the use of singing out that they had no power when a man could fling an Act in their faces and say, "There you have all the power you ask for." He thought it was utterly ridiculous for a man to say this when he had an Act of Parliament like that before his eyes. Then he must tackle Mr. Taylor. Mr. Taylor had said that the creation of the Act of 1883 was because of the default of what had been done under the Pastures and Stock Act. It was fourteen years ago since that great error was committed, and now they had a representative body that knew something about rabbits. He would like a few of them to stand up and say what they knew about rabbits fourteen years ago. He would guarantee that they knew very little indeed then with reference to them. There had been a couple of generations since then. Fourteen years ago many men in the room had been in good positions then, but during those fourteen years the rabbits had brought them down a bit. That argument of Mr. Taylor's would not hold water. He would say that although, then, they had not had fourteen years' experience of rabbits, still, if the Act had been administered as it should, and if they had not been bound down to the central office, things would have been different. As it was, the money was thrown away by the Government of those days. He thought it was only right and just to those who had to pay the money that they should have the administration within their hands, and there would be no more representative way of dealing with the whole of the Colony except through the Pastures and Stock Boards.

Mr,

Mr. GORMAN (Berrigan) said there was one phase of the question that had not cropped up yet. Personally, he agreed with the Honorable Rupert Carington, as in his district there was very little Crown land in charge of the Lands Department. It was all alienated; but, as the Minister had pointed out to them yesterday, there were other parts of New South Wales in which he had very large interests, and he thought that if they were to say that the Minister should have no say at all in legislating for rabbits throughout New South Wales, they would do the Conference a lot of harm. They knew Mr. Carruthers carried a great deal of weight, and they would be courting opposition from him straight away. It would be against the interests of the Conference to take away the representation of the Minister.

The Honorable RUPERT CARINGTON (Jerilderie) said he was going to move an amendment to give the Minister representation in another way later on.

Mr. A. BROWN (Narrabri) would like to ask if Mr. T. Brown was there as a representative of the Stock Board, or whether he was there by invitation of the Minister; and the reason he asked was because he appeared to hold a brief for the Minister in regard to payments and patronage; and it appeared to him that Mr. T. Brown wanted to make ministerial patronage so strong, so as to give Members of Parliament, or others who might be interested, the power to get their friends or others appointed to act on the different Boards throughout the country, whether they were agreeable to the stock-owners or not. It seemed to him that his argument was from start to finish against the Stock Boards having anything to say in the expenditure of their own money, and all for ministerial patronage from end to end.

Mr. T. BROWN, M.L.A., for the information of the gentleman who had just sat down, said he was at the Conference on the same footing as that gentleman himself. He had been elected by a body of selectors known as the "Budgerabong Selectors' Association." He did not come there for the Minister, nor did he hold a brief for that gentleman.

Mr. ROSS (Hume) said, if he understood Mr. Brown aright, that gentleman would like to leave the payments in the hands of the Minister. He did not see why they should make a new Rabbit Board right alongside the Pasture Board. He thought the Boards as at present situated were a great success. He thought the Stock Boards of the country were more representative than any other body, and the Rabbit Boards must be elected by someone, and he thought it should be by the people who were to provide the money. That could not be better. In the district which he represented every member of the Board was a small holder; the large holders could not return a man at all. He did not think the large holders had too much power. He thought it was possible that fourteen years ago the owners did not use their power properly, and the events of the past had shown them the danger they were in. He thought it was simply a waste of money to erect any Board alongside the Pastures and Stock Board to control another set of officers with another set of machinery. So long as things were controlled from head-quarters there would be utter failure. Let it be in the hands of the Pastures and Stock Boards until they saw something better.

Mr. NIXON (Gungah) was opposed to this amendment, because there were a number of selectors put on the land under Mr. Carruthers' new Bill who would have no votes.

A MEMBER: Why? It would be on a land basis.

Mr. DILL (Hay) rose as one who had had a good deal to do with the working of Pastures and Stock Boards for sixteen years. He had been Chairman for about five years out of those sixteen years, including the last two years, and he thought the Pastures and Stock Board in Hay, which he represented, had done their duty during that time, and he failed to see any reason why, for the present, the Pastures and Stock Boards might not be trusted with this Bill if passed. With regard to the rabbit question, he thought he had had as much experience in dealing with the rabbits as most men during the past fourteen years, and he thought it was very necessary, indeed, that the administration should be compulsory. He could speak feelingly with regard to that, because he had had neighbours who would not kill, while he was doing his level best to keep the rabbits under, and he certainly would support strongly the placing of this under the Pastures and Stock Boards, for the present, at any rate.

Mr. HAYES said, that if they looked at the Act they would find that the Minister, in the first instance, gave the control, under the Bill, of the Rabbit districts to the Pastures and Stock Boards, and he made this provision wisely, he thought, though if a majority of the land-owners in the district desired to have an election on a land basis, they should do so. This Bill was very elastic, and these provisions were very necessary. Some people said it was far better that the Stock Board alone should regulate it, and others said that as every land-owner has to contribute he should have a voice in the matter. There was a good deal of reason why they should let this clause stand as it was, the Pastures and Stock Boards would have full control over it, and then the people in each district had the right either to remain as they were or to petition to have things altered.

Mr. ROSS (Hume): Why could not one Board do the lot?

Mr. HAYES said if they got a district which was very largely settled by farmers, would not they naturally want to have a voice in the matter themselves? This Act must be broad and liberal. It was wanted to apply to the whole Colony where conditions varied; and therefore, in districts where the owners predominated it would be under the Pastures and Stock Boards, and where the farmers predominated they naturally would want to have a voice.

Mr. CUMMING (Hillston) said that in speaking on this motion he would support the Pastures and Stock Boards, but he would endorse all that Mr. Hayes had said. There was another point: one man might have an equally good run with another, but the man who managed well might have 50,000 sheep, while the man who was careless might only had 20,000 sheep, and he would pay the same, and would do so on the land basis.

Mr. TREELE thought the amendment was rather too sweeping. There was no doubt that what Mr. Hayes had said had a great deal of force in it, and he thought that some of the gentlemen who spoke very strongly in favour of the Pastures and Stock Boards having control under this Bill, had not had much experience where it was all settled by small owners. He had had to put before the Minister a petition from 160 small owners, to have the district brought under the present Rabbit Act. Among these 160 were many men who had only two or three plough-horses—men on blocks whom the rabbits were eating out. They wanted the rabbits checked. If the tax-payers, under the new Rabbit Act, would each have a vote for the Stock Board, then he would be quite willing to support the resolution; but he did not think that, as at present constituted, the franchise of the Stock Board would cover all the men who would have to pay the taxes for the suppression of the rabbits. There was every probability that wherever the

Pastures

Pastures and Stock Boards were seen to be a more practical body than one elected, or appointed, they would be given the administration of the Act, and it was elastic enough to give rules to suit districts such as he had mentioned. No man who had the principle of a Briton in him would say that any man should pay a tax under the Rabbit Act and not have a vote, and certainly under this amendment men would be paying a tax who would not have a vote. Some gentleman had said that the minimum of stock allowed was ten head of large stock before a man could vote. He would point out that in the petition he had referred to there were at least forty or fifty men out of the whole 160 who did not own large stock at all. These men owned land and would come under the operation of the Act. They grew wheat and they simply had sufficient horses to do their ploughing. There were thousands of them, special-area holders. He represented a very large class of people in this country, and he thought that if they carried this resolution there would be men under the Rabbit Act paying taxes who had no vote. This amendment proposed to place in the Stock Boards the power to spend the moneys collected under the Rabbit Act. Any amendment they proposed to the Rabbit Act will not amend the Pastures and Stock Act; and consequently if a man had not a vote under the Pastures and Stock Act, they could not give him one under the Rabbit Act. He took it that they could not amend the Pastures and Stock Act by any proposed Bill dealing with the rabbits; but if it could be made clear to him that all men who would pay a tax under the Rabbit Act would have a vote for the Stock Boards, then he would be quite willing to support the resolution; but otherwise he did not see any reason why they should erect separate Boards if the Stock Boards could do the work.

Mr. ALISON (Canonbar) said this resolution should be carried now, and then they could amend this Act so that every person should have a vote who paid a tax.

The Honorable RUPERT CARINGTON said he hardly thought it necessary for him to make any reply. They had the statement made by his friend the Chief Inspector of Rabbits; but that was fourteen years ago. He would mention that the Queensland Rabbit and Sheep Boards were identical. He had been very much misrepresented in one respect. He had been made to say that the people should be taxed without proper representation. It had been his exact object to prevent that. All his arguments had been directed against the Crown, which was not taxed, appointing two men to the Board. Of course they could amend the Act, and make the representation on a land basis instead of a stock basis; but how any body in a democratic country would agree to the Minister appointing two men, whomsoever he liked, to tax them was what he failed entirely to understand. It was quite absurd and reactionary. With regard to the small men, he might say that he came from a district where there were more small men than in any other district in Australia. There was another gentleman from that district who was also ready to support his resolution. To be told that they would protect the small men by getting two men, outsiders, to tax them was incomprehensible to him.

Mr. FLANAGAN (Gunbar) would like to see a provision made in the amendment that all taxpayers should have a vote.

The CHAIRMAN observed that before putting the question to the Conference he felt it to be his duty to point out, as far as he could from a hasty glance through the Bill, the consequence of carrying the resolution. It had struck him first of all that clauses 5, 6, and 7, would be made utterly useless by the carrying of the resolution proposed by the Hon. Rupert Carington. There was also another matter consequent on the motion being carried, and that was with reference to the Government's proposal to pay a rate on their properties corresponding to the amount of unoccupied land there might be in any rabbit district. He did not know what decision the Conference would arrive at in obviating that difficulty if they intended to take away the representation of the Government on the Boards. Then, with regard to the argument that small men would have no vote, he anticipated that if this motion were carried, and if it were intended to give everyone who had to pay a tax a vote, it would be necessary to amend the Pastures and Stock Act.

The CHAIRMAN then took a vote on the Honorable Rupert Carington's amendment.

The amendment was declared carried.

The CHAIRMAN then adjourned the Conference until 2 o'clock.

On resuming in the afternoon,—

The CHAIRMAN said it would be necessary to discuss clauses 5, 6, and 7, in view of the resolution passed immediately preceding the adjournment.

Mr. T. BROWN, M.P., said he had a motion that he thought would go very well after the amendment which had been carried: "That taxation under the Rabbit Act shall not be levied on holders not having a right of representation under the franchise of the Pastures and Stock Protection Act."

Mr. NIXON seconded the proposition.

Mr. J. M. ATKINSON wanted to know whether that would include the municipalities.

Mr. T. BROWN, M.P., said it simply meant this, that a tax should not be levied on any landholder or any stockholder who was not in possession of the right to vote under the Pastures and Stock Protection Act. Now, the motion that had been passed before the luncheon adjournment placed the whole control of the rabbit question under the Pastures and Stock Protection Board, and this further resolution of his was simply to safeguard the rights of those whom it had been shown had not the right of representation under those heads. Of course, if it were found that there was any body of holders upon whom it would be desirable to levy a tax, then the way to get over that difficulty would be to broaden the franchise of the Pastures and Stock Protection Act so as to include them. His resolution simply safeguarded peoples rights until they were included. It was simply "no taxation without representation."

Mr. ROSS (Hume) said that instead of amending that clause they should simply amend the clause about the person who should have the right to vote. He thought it was very wrong to pass an amendment like that. It would be far better to withhold that and put it this way: "That every man who has to pay taxation shall have a right to vote." If it were left as it was, then very many small holders would escape taxation altogether.

Mr. ALISON (Canonbar) said that as far as he could gather Mr. Brown's proposition was simply "no representation no taxation," and he was perfectly in accord with that.

On the motion being put to the Conference by the Chairman it was carried unanimously.

Mr. GIBSON (Hay) moved that the following also be added: "That the Crown may be represented on the Rabbit Board in proportion to the revenue paid by them, but in no instance to have a majority representation."

The Honorable Rupert CARINGTON (Jerilderie) rose to a point of order. That had already been settled, and the question under discussion now had nothing to do with the constitution of the Rabbit Boards.

The CHAIRMAN suggested that instead of "Rabbit Boards" Mr. Gibson should put in "Pastures and Stock Boards."

Mr. GIBSON (Hay) had no objection. He moved that, with this alteration, the clause be added to clause 5. He took it that unless the Crown would assist the owners—unless they were prepared to accept their responsibility and pay in proportion to their acreage—that they might as well have no Rabbit Bill at all, but simply go back home and let things go as they please. If the Crown were to pay, it was only right that they should be represented. They would not think of leaving out any one section of themselves—they would not think of depriving that section of a vote if they were asked to contribute. In justice, the Crown were entitled to have representation; and, as the Minister had not asked for a majority representation, he thought it would meet the views of everybody to add those words: "the Crown to have no majority representation in any one district although they contribute more than one-half of that district's revenue."

Mr. FLANAGAN (Gunbar) seconded it.

Mr. LESLIE (Forbes) begged to move an amendment to the effect that the Crown should have representation in proportion to the amount of rates paid under the Rabbit Bill. He was quite in accord with a portion of Mr. Gibson's resolution; and he thought, if the Crown became contributors, they had a right to a voice in the expenditure of this money, but if they were the largest contributors to those funds they had the right to the largest representation.

The CHAIRMAN suggested that Mr. Leslie should move to leave out the following words from Mr. Gibson's resolution: "but in no instance to have a majority representation."

Mr. LESLIE (Forbes) agreed, and moved that the words, "but in no instance to have a majority representation," be struck out.

Mr. OAKDEN (Cobar) seconded Mr. Leslie.

Mr. LESLIE's amendment was put to the meeting and carried.

Mr. Gibson's motion as amended now stood: "that the Crown shall be represented on the Pastures and Stock Boards in proportion to the amount paid by them."

Question put and carried.

Mr. ATKINSON asked if the meaning of that would be "on the total amount paid by the Crown" or "on the amount paid by the Crown for rabbit destruction"?

Mr. LESLIE (Forbes) explained that it would apply to the sum they contributed as stock-owners, as it were, but not to amounts voted by Parliament to assist in the destruction of rabbits.

The CHAIRMAN then proposed, with the consent of the meeting, to make it more clear by altering the resolution in this way: "that the Crown may be represented on the Pastures and Stock Protection Boards in proportion to the revenue paid by them as assessments to the Rabbit Destruction Fund."

Passed unanimously.

Mr. FLANAGAN (Gunbar) said it would now be necessary to pass a resolution making the Crown the "occupier" of all unoccupied Crown lands in the Colony.

Mr. ATKINSON asked for an explanation. It had been decided that the Pastures and Stock Boards should have control of the destruction of rabbits; they consisted of eight members. He wanted to know if the Government representation was to be a part of those eight members, or over and above those eight members?

Mr. ALISON (Canonbar) explained that the idea was, that if the Crown paid so much money, it would have so many votes. The Board would still remain the same—the Crown would not appoint a man, but would have the votes increased instead.

## Clauses 6 and 7.

### *Methods of selecting Members.*

6. The members of a Rabbit Board shall be appointed by the Governor:

Provided that—

- (a) where the Rabbit District is identical with a Sheep District, as defined under the Diseases in Sheep Acts, or appears to the Governor to be substantially identical therewith, three members of the Rabbit Board shall be members appointed by the Governor out of candidates to be nominated as prescribed by the Board of Directors holding office under the Pastures and Stock Protection Act in and for such Sheep District; and
- (b) where the Rabbit District is identical with a Borough or Municipal District, or appears to the Governor to be substantially identical therewith, three members of the Rabbit Board shall be members appointed by the Governor out of candidates to be nominated as prescribed by the Municipal Council of the Borough or Municipal District; and
- (c) where an apparent majority of the owners or occupiers of private holdings within the Rabbit District present a petition to the Governor that three members of the Rabbit Board shall be elective members, the Governor may, by proclamation in the *Gazette*, declare that the provisions hereinafter contained as to the election of three members of a Rabbit Board shall apply in respect of the Board of the said District, and the same shall apply accordingly, unless and until the said proclamation is revoked.

But further provided that—

- (d) nothing contained in the foregoing proviso shall apply in respect of two out of five members of the Rabbit Board; and
- (e) the said two members shall be members recommended by the Minister, and appointed by the Governor;
- (f) where no members are nominated, or a sufficient number are not nominated, the Governor may appoint a sufficient number of members to constitute the Board.

*Election of Members.*

7. The election of members of a Rabbit Board shall be in accordance with the following provisions:—

- (a) Whenever an election is necessary, the time and place for holding the same shall be appointed by the Minister by notification in the *Gazette*.
- (b) Occupiers of private holdings within the Rabbit District shall be the persons qualified to vote, and the number of votes allowed to each such occupier shall be determined by the aggregate area of the private holdings within the Rabbit District occupied by him, according to the following scale:—
  - For an aggregate area not exceeding six hundred and forty acres in the Eastern and Central Divisions, or ten thousand two hundred and forty acres in the Western Division, one vote.
  - For an aggregate area exceeding six hundred and forty acres and not exceeding two thousand five hundred and sixty acres in the Eastern and Central Divisions, or exceeding ten thousand two hundred and forty acres and not exceeding twenty thousand four hundred and eighty acres in the Western Division, two votes.
  - For an aggregate area exceeding two thousand five hundred and sixty acres in the Eastern and Central Divisions, or twenty thousand four hundred and eighty acres in the Western Division, three votes.
- (c) When three members of a Rabbit Board have been elected, three members of the Board as previously constituted shall retire;
- (d) Where a member of a Rabbit Board is to be elected, and no valid election takes place, the Governor may appoint a member to fill the vacancy, and such member shall be deemed an elected member;
- (e) The cost of an election shall be paid out of the revenues of the Rabbit Board;
- (f) Subject to the foregoing provisions, all necessary matters in connection with elections shall be prescribed by Regulations to be made in that behalf.

Clauses 6 and 7 struck out.

## Clause 8.

*Incorporation of a Rabbit Board.*

8. The members of a Rabbit Board, as from time to time constituted, shall be a corporate body under the style or title of the "Rabbit Board of \_\_\_\_\_ District," the name of the District being such as the Minister may from time to time assign by notification in the *Gazette*; and under such style or title shall have perpetual succession and a common seal, and be capable in law of suing and being sued.

The validity of any acts of the Rabbit Board shall not be affected by any informality or irregularity in the appointment or election of any member of the Board, or by reason of the fact that there are not five members of the Board; and the fact that all the seats on the Board are vacant shall not of itself operate to dissolve the corporation.

The Governor may, by proclamation, dissolve a Rabbit Board, and the corporation shall thereupon cease to exist, and the then members of the Board shall cease to be members thereof.

When a Rabbit Board is dissolved, the Governor may, at any time thereafter, by proclamation, constitute and appoint another Board, and all the property and all the rights and liabilities of the corporation so dissolved shall vest in the new Board; and if no such Board be constituted and appointed, then in the Crown: Provided that the proclamation constituting and appointing a Rabbit Board in place of a dissolved Board may be subsequent to the proclamation dissolving the same, and the Crown shall thereupon be divested of all the property, rights, and liabilities, or such of them as still subsist, of the dissolved Board, and the same shall vest in the Board constituted and appointed in its place.

Mr. T. BROWN, M.L.A., said that clause 8 should be amended so as to read "that the Pastures and Stock Boards should be constituted corporate bodies." This would be necessary, not only under the Rabbit Bill, but also for matters pertaining to the administration of the Pastures and Stock Protection Act. He begged to move, "That 'Pastures and Stock Protection Boards' be inserted wherever 'Rabbit Board' occurred."

Mr. CUMMING (Hillston) seconded the motion.

Mr. GIBSON (Hay) opposed it. It should remain as it was; because, from what the Conference had passed, the Rabbit Board consisted of the Pastures and Stock Board, together with the nominees of the Government.

MEMBERS: No, no! The Government only have a right to vote, not to appoint nominees.

Mr. T. BROWN, M.L.A., said that, for the purpose of administering the Rabbit Act, he thought it necessary to constitute the Boards corporate bodies, so that their acts could pass on to their successors. As an instance, he mentioned that Mr. Leslie's Board undertook to expend a certain sum of money in constructing a wire-netting to keep the rabbits off their area, and the members of the Board who came afterwards could repudiate the actions taken by this Board if they thought fit, because it was not a corporate body. It was, therefore, in the interests of right administration.

Mr. ALISON (Canonbar) said he would move, "That wherever 'Rabbit Board' occurred in clause 8 the words 'Pastures and Stock Protection Boards' be substituted."

Mr. T. BROWN, M.L.A., consented.

Mr. ROSS (Hume) seconded the proposal.

The Chairman put the question, and it was carried unanimously.

Mr. ALISON (Canonbar) said he wished to move an amendment. In line 21, clause 8, it said five members. He moved, "That the word 'eight' be substituted for 'five'"; because now that they had substituted Pastures and Stock Boards for Rabbit Boards it would be necessary to alter this in this way, because the Pastures and Stock Boards consisted of eight members.

Mr. BAYLIS (Narrandera) seconded the amendment.

On being put, the amendment was carried.

Mr. FREEMAN moved, after the word "proclamation," to insert "at the request of the Board or on the requisition of two-thirds of the voting power." Mr.

Mr. J. M. ATKINSON seconded the motion.

Mr. FREEMAN said that, as the proposer of this amendment, he would like to explain its object. It appeared here "the Governor," which usually meant the "Minister for Lands," might, by proclamation, dissolve the Rabbit Board. It might be a very undesirable thing for the Minister to have this power, and it was so that the Minister for Lands should not have this power to dissolve the Board without a requisition that he moved this amendment. It might be that they might become insolvent, or for other reasons want to dissolve; or again, the Board might be unsatisfactory and the voting power of the district might wish to have them dissolved.

Mr. OAKDEN (Cobar) moved, as an amendment, "That that clause be omitted altogether." Power could not be given to the Minister to do away with the Pastures and Stock Boards, and therefore this was *ultra vires*. It would mean that the Governor might by proclamation dissolve the Pastures and Stock Boards.

Mr. A. BROWN (Narrabri) thought that this difficulty could be got over by amendment, that when the Pastures and Stock Board is sitting as a Rabbit Board they should be a corporate body. There was no doubt that if the Pastures and Stock Board were to administer the Rabbit Act they would administer the Pastures and Stock Act also, but not at the same time; and when there was a meeting of the Pastures and Stock Board called they would deal with stock matters only, and then afterwards sit as a Rabbit Board.

Mr. ALISON (Canonbar) thought Mr. Brown was beside the point. What was before them now was Mr. Freeman's motion. It was a very simple matter and he could see no objection to it. If two-thirds of the voters wanted to have a Board dissolved then they should be dissolved.

Mr. A. BROWN (Narrabri) said that they should not dissolve the Pastures and Stock Board also.

Mr. ALISON (Canonbar) thought that if two-thirds of the voters could be found to wish that the Rabbit Board should be dissolved it would mean that they were all unfit for public offices.

Mr. Freeman's motion was then put to the Conference and declared carried.

Mr. FREEMAN moved that, in line 28, clause 8, after the word "Board," to insert "elected in accordance with the provisions of the Act." His reason for moving this was so that no Board would be reappointed in the place of a dissolved Board, except a Board elected by all the taxpayers.

Mr. FLANAGAN (Gunbar) seconded the motion.

Question put and carried unanimously.

Mr. OAKDEN (Cobar) wished to ask members whether it was wise to allow this clause to stand, wiping out a Board under another Act, which was what naturally followed. Would it not be better to leave that out? It might be establishing all sorts of anomalies.

The CHAIRMAN said that that had been already decided, and there could be no more discussion about it.

Clause 8, as amended, was put to the meeting and carried.

### Clause 9.

#### *Conduct of its business by a Board.*

##### 9. A Rabbit Board—

- (a) may employ a Secretary and such other officers and servants as may be necessary, and pay them out of the revenue of the Board; and
- (b) shall cause proper minute books to be kept of all its proceedings; and
- (c) shall cause true and regular accounts to be kept of all moneys received or paid under the authority of this Act, and shall give the owner or occupier of any private holding within the Rabbit District access thereto at all reasonable hours; and
- (d) shall produce for inspection to any person authorised by the Minister or the Colonial Treasurer for the purposes all its books, accounts, agreements, vouchers, letters, or other documents which may relate to any matter under this Act; and
- (e) shall report to the Minister on any matter or question referred by him for that purpose; and
- (f) shall conform in its conduct of business and its administration of this Act to any Regulations to be made in that behalf.

Mr. OAKDEN (Cobar) moved, "That clause 9 be struck out, and the following clause substituted: That the provisions for the conduct of the business of the Board should accord with or be similar to those of the Pastures and Stock Protection Act."

Mr. BRETT (Urana) seconded the proposal.

Mr. GIBSON (Hay) would like the proposer to explain in what way the procedure under the other Act was different.

Mr. ALISON (Canonbar) pointed out that it would be the same Board under the same Secretary, but that they must needs keep different books. He would wish however to give notice that he would move the recomittal of this clause subsequently, because it might be affected by a later clause.

Mr. OAKDEN (Cobar) withdrew his amendment, and then proposed that "Pastures and Stock Board" be substituted for "Rabbit Board" wherever it was consequentially necessary throughout the Bill.

Mr. BRETT (Urana) seconded the proposal, which was carried unanimously.

The Honorable RUPERT CARINGTON proposed that the words "all officers appointed to be under the direct control of, and hold office during the pleasure of the said Boards" should be put in after subsection (a). As they had to "pay the piper" they might as well have the appointment of the officers.

Mr. GORMAN (Berrigan) pointed out that that was provided for by "the Rabbit Board may employ a Secretary and such other officers, &c."

Mr. TAYLOR wished to take the Chairman's ruling as to whether the adoption of the Honorable Rupert Carington's amendment would not mean a virtual amendment of the Public Service Act.

The CHAIRMAN did not think it would be out of place for the Conference to express an opinion on the matter.

Mr. CUMMING (Hillston) seconded the Honorable Rupert Carington's motion, which was carried unanimously.

Mr. ALISON (Canonbar) gave notice that later on he would move an amendment to the next subsection (e).

Clause

## Clause 10.

*Authentication and service of documents.*

10. Any notice, information, complaint, agreement, or other document, by or from a Rabbit Board, shall be sufficiently authenticated if it is signed by the Chairman of the Board, or, under his direction, by the Secretary of the Board, and authority in the Secretary or Chairman to so sign shall be presumed unless and until the contrary is shown; and it shall not be necessary for the Rabbit Board to affix its common seal to any document not being a deed.

Any notice or other document given to or served upon a Rabbit Board may be given to or served upon the Secretary or Chairman thereof.

Clause 10 was put to the meeting and carried as printed.

## Clause 11.

*Revenues of Board.*

11. All fines, penalties, rates, and other moneys received by a Rabbit Board under or by virtue of this Act shall form part of a fund to be called the Rabbit Fund of the District.

Moneys forming part of the Rabbit Fund of the District may be applied by the Rabbit Board to the payment of any expenses of, or incidental to, the Board's administration of this Act, or of any costs or expenses incurred in accordance with provisions of this Act, and not otherwise.

The Governor may cause the accounts in connection with the Rabbit Fund of the District to be audited, and the expenses of the audit shall, if the Governor so require, be paid out of the Rabbit Fund.

Clause 11 was put to the meeting and carried as printed.

## Clause 12.

*Rabbit Rates.*

12. Every Rabbit Board shall in each year make, or cause to be made, an estimate of the probable sum which will be required (in addition to fines, penalties, and other revenues) to enable it to duly administer this Act throughout the Rabbit District; and the said sum shall be raised by a Rabbit Rate upon private holdings within the district.

The amounts levied under the rate shall be proportionate to the respective carrying capacities of holdings; and to that end—

- (i) the Rabbit Board shall, in the first instance, strike the rate as a rate of so much per sheep, but not so as to exceed one halfpenny per sheep in any one year; and shall forthwith cause notice of the amount of the rate struck to be published in the *Gazette*, and in one or more newspapers circulating in the district;
- (ii) the Rabbit Board shall estimate as exactly as practicable the number of sheep which every holding within the Rabbit District is capable of carrying with good management in an average season; and for the purpose of such estimate—
  - (a) cultivated lands shall be taken to be capable of carrying so many sheep as they would carry if laid down in grass; and
  - (b) lands capable of carrying large stock shall be taken to be capable of carrying seven sheep for every head of large stock:

Provided always that only half rates shall be levied upon any holding enclosed with a fence which in the opinion of the Board is rabbit-proof.

- (iii) the Rabbit Board shall have access as prescribed to—
  - (c) returns of sheep made to Clerks of Petty Sessions and Inspectors of Sheep under the Diseases in Sheep Acts or any other Acts; and
  - (d) returns collected by the police or others for statistical or other purposes; and
  - (e) papers connected with the appraisalment of the rent or license fee of any Crown lands; and
  - (f) any other public documents having relation to the carrying capacity or condition of any such holding;
- (iv) the Rabbit Board may authorise a person to inspect a holding, and he may put to any person in occupation or charge of the holding, or to the owner thereof, questions upon all such matters as shall be necessary for the purpose of ascertaining the carrying capacity thereof, having first informed the person to whom any such question is put of his purpose in putting questions, and of his authority under this Act to put the same; and if any such person in occupation or charge or such owner as aforesaid shall refuse or wilfully omit to answer any such question to the best of his knowledge and belief, or shall wilfully make any false answer or statement in reply to any such question, he shall on conviction forfeit and pay a penalty not exceeding ten pounds.
- (v) the Rabbit Board shall determine the amount payable under any such rate in respect of every private holding within the Rabbit District; and the determination by the Rabbit Board shall, except in case of appeal as hereinafter provided, be final and conclusive: Provided always that no Rabbit Rate shall be payable in respect of any holding estimated to carry less than ten sheep.

Mr. ALTON (Canonbar) said that this was a very important clause. It dealt entirely with the manner of raising revenue for the Pastures and Stock Boards or Rabbit Boards. He disagreed with it entirely. They had now arranged that the Pastures and Stock Boards were to manage the Rabbit Fund, and, therefore, he thought it would be most advisable that they should adopt some system of taxation similar to that in the Pastures and Stock Act, on per head of stock instead of on the land. That was a simple system which did not cause any expense whatever and would be easily understood. If the tax were on the land, it would mean that a considerable army of men would have to go round and value all the rents of the land. Every 40-acre selection in the whole place would have to be valued and estimates put on them. He submitted that it would cause an enormous expense to the district which, he held, would be perfectly unnecessary. Of course it was true that the Crown held considerable areas in various districts,

districts, and they now paid towards the Pastures and Stock Boards. They desired that the Crown should now pay towards the destruction of rabbits also. He thought that they could now bring in a resolution to the effect that any abandoned Crown land should be taxed on the basis of one sheep to 5, 6, or 7 acres—whichever they chose—or it might even be one sheep to 10 acres. This would do away with the necessity of having these Crown lands valued. It would be a rough and ready but a very simple way of assessing the taxation. Many of the gentlemen present had found it difficult to know how farmers and others would be brought in unless their lands were valued. He thought there again they might bring forward a simple way of getting over the difficulty by providing that any cultivated land be on the basis of 1 acre to one sheep. According to the Act, as he read it, any man who had cultivated his land would be required to pay as if he had laid it down in grass. He would like Mr. Taylor to tell them whether it was not the case that it was intended that those words should be “laid down in cultivated grasses.” They could not say laid down in ordinary grasses; that would not be “laid down.” He disagreed with the idea that cultivated lands should be taxed as if laid down in cultivated grasses. They should not be taxed any more than if the land were in its original condition. In order to prevent valuation and its attendant expense, it would be a fair and reasonable thing to say that any cultivated land should be equal to 1 acre to one sheep, or 1 acre to two sheep. He hated the idea of valuation. Men of fads were going round and valuing the land at £1, £2, £3, or £4 per acre. He thought his scheme would meet the views of the people who held cultivated lands, and would be cheaper and less cumbersome to work.

Mr. TAYLOR explained that the intention was that the assessment on cultivated land would be what it would carry if laid down in cultivated grasses.

Mr. ALISON (Canonbar) thought that if it were “laid down” it would mean something that was put there. They should omit this dangerous clause. He might have to pay at the rate of ten, fifteen, or twenty sheep to the acre. It would be better to be sure than to be sorry. He would move, “That in clause 12, line 31, the amounts levied under the rate shall be proportionate to the stock returns; and to that end, the Rabbit Board shall, in the first instance, strike the rate as a rate of so much per sheep, but not so as to exceed one penny per sheep in any one year; that any abandoned Crown lands shall be taxed on the basis of one sheep to 6 acres, and in cultivated land on the basis of 1 acre to one sheep.”

Mr. ATKINSON seconded the resolution.

Mr. ALISON (Canonbar) said that he would cut the resolution in two—First, “That line 32 be struck out with a view to the insertion of the words, ‘the amounts levied under the rate shall be proportionate to the stock returns.’”

Mr. ATKINSON seconded the proposal.

Mr. FLANAGHAN (Gunbar) said that the very best agricultural land in the Hay district was the worst grazing land, and the worst grazing lands were sometimes the best agricultural lands. He said it might cost a man £2 or £3 to the acre to clear land that would not carry a sheep to the acre, and by this he would be taxed for his industry.

Mr. GIBSON (Hay), speaking to the motion, said he would point out that they made their stock returns on the 31st December each year. The number of stock a man returned on the 31st December meant the number that this country could carry. There were some men who made a practice of having no stock on the 31st December. There were other men who carried in a few months—in summer only—all the stock they could carry in the year. That would be the difficulty. He thought, taking everything into consideration, although a person might be appointed who would have to make a sort of assessment, the owners should contribute to this rabbit fund in proportion to the number of stock their land would carry, independently of any returns, because the returns showed neither one thing nor the other. He proposed as an amendment, “That the tax should be based upon the number of sheep or stock the holding was estimated to be able to carry.”

Mr. GORMAN (Berrigan) had much pleasure in seconding Mr. Gibson. He agreed that in many districts many men would have no stock at all, and he had known some of their worst infested areas held by mortgagees, which had nothing but rabbits on them, and he presumed that they would make no returns. This clause as it read here would suit very well. He thought that subsection (r) should stand. If they elected men to the Board they should have confidence in them. These men would know the circumstances of the district.

Mr. OATLEY said he might state one fact here. Speaking from experience, there was some land they had had valued by different people as to the carrying capacity. The average was from 8 acres to a sheep down to 2. If this proposal went forth it would give a great deal of trouble.

Mr. CUMMING (Hillston) rose to support Mr. Gibson's motion. It would be very unfair taking sheep only. In his district there were abandoned runs as well as abandoned Crown lands. There were 66,000 acres in one lot, and they would escape taxation altogether.

Mr. BACON (Brewarrina) thought that the last speaker did not grasp the full extent of Mr. Alison's motion. He wished to provide for some assessment of Crown lands which were unoccupied. He would point out that in the most particular thing—the assessment of rent—the stock returns were the basis by which the Chairmen of the Land Boards were guided. They must know that when rents have to be assessed there is a great deal of trouble between the Crown Assessor and the owners. Were they going to have a Court to assess the carrying capacity of each holding? He thought that the only possible basis that it could be done on was that of the stock returns. They were the only safe guides to go by. It was really not worth while doing it in any other way.

Mr. ATKINSON would suggest that they could arrive at a good understanding on this point without going to the expense of having their land valued. Let the members of the Boards in the different districts assess the carrying capacity. Those men living in the district, would have a very good idea of the carrying capacity of any particular run, and therefore it might safely be left to them, with a right of appeal and the right to bring evidence in support of their appeal.

Mr. ALISON explained that his motion was simply to adopt the process that had been adopted, and was now in force, under the Pastures and Stock Protection Act.

Mr. DILL (Hay) rose to support Mr. Alison's motion, and in doing so would like to see certain words that had been made use of altered. He thought that rather too much was being asked from the Crown. He was thoroughly in accord with Mr. Alison's motion. Only recently he was on a run which had been abandoned. It was thoroughly fenced; there was a comfortable homestead and a woolshed on it, and yet it had been abandoned. He had seen millions of acres which would not carry one sheep to 20 acres.

Mr.

Mr. ATKINSON said that his amendment was that the assessment should be on the carrying capacity, and the carrying capacity be arrived at by the Boards themselves with the right of appeal by the lessee. No valuator should be sent round.

Mr. BROOKE (Boggabri) quite agreed with Mr. Alison in every respect, but did not think they could discuss this amendment without discussing the rest of his proposed amendment. Mr. Flanagan had said that he had land which was utterly useless for sheep, and which cost £3 an acre to clear, and he would be now taxed on what it cost him to clear it; but then he ought to, because he would be proportionately benefited. He would benefit to a greater extent than another man whose land was only worth £1 an acre.

Mr. FREEMAN rose to support Mr. Alison's amendment. He said they all knew that the returns of the stock on the 31st December, in the majority of cases, represented more than the carrying capacity of the country, and though perhaps one man might not have a sufficient number of stock, and might not be right up to the carrying capacity on the 31st December, his neighbour would probably be so much over; and so the thing would cut all round very evenly. Surely they had had quite sufficient for the last fifteen years of people running all over their runs cackling about them. The proper way to take the assessment was on the returns under the sheep Act. One might be a little more one year and another year less, but in a number of years the thing would average itself.

Mr. LAURENCE (Balranald) would support the resolution that the assessment be made on the stock returns. He considered it was the fairest way for the raising of funds. It would be most unfair to put in the hands of a Board a large district to assess. The amounts the Boards would assess at would be found fault with almost everywhere. It should be kept in the Stock Board's hands altogether, and by taking the returns sent in to the Government under the Sheep Act would be the fairest way.

Mr. TREFLE (Temora) rose to support Mr. Gibson. He thought Mr. Gibson's amendment should be carried in its entirety. A short time ago he spoke in the interests of the small men, but now he spoke in the interests of the large men. There was no other course open than to assess the land on the carrying capacity. The other way would be setting a premium on dishonesty. The suggestion by Mr. Atkinson that there should be a power of appeal was a good one. Experienced men who were elected to the Stock Board were not likely to make a mistake. There was no other way which would approach the fairness of this system of taxing by the carrying capacity.

Mr. ROSS (Hume) said he would support Mr. Alison.

Mr. BROOKE (Boggabri) said they had just had one valuation all over the freehold land in the Colony by Inspectors appointed by the Crown, and look at the result. He did not suppose there were two men who were satisfied.

Mr. ALISON was quite astonished to find any difference of opinion in this matter. He only proposed to adopt the mode that had been adopted under the Pastures and Stock Act and was now in force. He was proposing no innovation, no revolution at all. It had been found to work fairly, equitably, and correctly, and he did not see what they could do better than to adopt that principle. But according to the principle which was proposed this Stock Board was to be composed of stockowners, and they were to assess the carrying capacity of the lands in their district—that is to say, that the members of the Stock Protection Board were to be the judges of the value of their own properties. Now, he would say that no body of men were to be trusted with such a responsibility. It would be dangerous. It was most unusual to entrust eight men to value their own properties. When the judgments came out he thought they would see some very curious anomalies. It would be much better for them to say they would adopt the old simple plan under the Pastures and Stock Act, and they should adopt the same mode of taxation. It was simple, easy, and equitable.

Mr. GIBSON (Hay), in reply, pointed out that the right which Mr. Alison would deny to the Rabbit Board was already possessed by the municipal councils. In valuing the property they held a friendly Appeal Court, and in ninety-nine cases out of a hundred this friendly Appeal Court settled the cases, and in the one-hundredth case they went to the Appeal Magistrate. He would like to point out that the returns did not give a true statement of the holding of the run. In his district they had got freehold lands abandoned; they were in the hands of large monetary institutions, and these should pay their share of any rabbit taxation. How were they going to get at the owners of these properties? They would not kill the rabbits, and they would not put stock on them, and Mr. Alison's proposals made no provision to make them pay their share.

Mr. ATKINSON said the valutors who would go out in this case would not be the same class of men as those sent out by the Government to value the lands. These men would be appointed by the Board themselves, the same as the municipal valuer was appointed by his own council. The people would have the right to appeal, and the people would bring forth evidence and say what could be carried. That would be the fairest way of getting at the revenue which should be derived from these lands. Many people carried stock for certain periods of the year only; for instance, many people kept large tracts of country for carrying their stock during the winter season. They wanted to get at the acres which carried rabbits. He thought, therefore, that they should be taxed on the carrying capacity of the whole run. Mr. Alison had said that he could not see how anybody could follow any other course than his; well, he, for his part, could not see how anybody could go for any other course than his own (Mr. Atkinson's).

Mr. Gibson's amendment was put to the meeting, and lost by 28 to 15.

The original proposal by Mr. Alison was put, and carried by 25 to 13.

Mr. ALISON (Canonbar) said the resolution which had been passed necessitated an amendment in line 29 of Clause 12. He would move that the words "private holdings" be struck out and the word "stock" be inserted.

Question put to the meeting and carried.

Mr. ALISON (Canonbar) said in line 35 he would move, and he was not wedded to the figures in any way, that after the word "year" all the words in that subsection be struck out with a view to the insertion of the following, "that unoccupied lands shall be taxed on the basis of one sheep to 6 acres."

Mr. BACON (Brewarrina) seconded the proposal, but would like Mr. Alison to give a definition of what he meant by unoccupied lands.

Mr. ALISON (Canonbar): Lands in the hands of the Crown that were not held under any form of lease or license. He was quite willing to add that. It was advisable for them to deal with the different divisions as they came up; he wanted to deal with the lands in the hands of the Crown which were not under

under any form of private ownership whatever. He would like to deal with that alone just now, and afterwards go on to the cultivated lands, and then go to the unstocked lands. His intention was simply to deal with lands in the hands of the Crown, by which their voting representations would be regulated. This motion, so far as it went, was entirely for land held by the Crown under no form of lease.

Mr. DAVIES (Gunnedah) moved an amendment that it should be 20 acres to the sheep. There were thousands of acres of land that it would be impossible to stock because they were waterless.

Mr. A. BROWN (Narrabri) seconded the amendment.

Mr. CUDMORE (Wentworth) supported Mr. Davies's amendment. There were some public lands that would not carry a sheep to 50 acres. He thought it should be arrived at on the basis of the carrying capacity or sheep returns of the neighbouring lands. They could take the stock returns for each district and calculate the carrying capacity of the unoccupied lands on that basis.

Mr. BROOKE supported Mr. Davies's amendment. There were lots of gentlemen present who were working country which would carry a sheep to 10 acres. It stood to reason that if the adjoining lands were as good it would not be unoccupied.

Mr. WILKES (Broken Hill) would support a sheep to 20 acres.

Mr. BACON (Brewarrina) said if they took on the amendment, 500,000 acres divided by 20 came to 25,000, and 25,000 sheep at  $\frac{1}{2}$ d. per sheep came to about £50—that is to say, the Minister would have to pay over £50 in a big district. He thought, therefore, that a good deal was to be said for not making the amount so big.

Mr. TREFLE (Temora) said that as there was such a wide diversity of opinion, from 6 to 50 acres, it seemed to him it would be better to have the land valued.

Mr. CAMERON (Ivanhoe) supported Mr. Davies's amendment because there was a large amount of land already in occupation by lessees which was valued on a basis of 20 acres to the sheep. Well, the State would say, "We have all the worst land; a great deal that is occupied is carrying a sheep to 20 acres, but this land is of such a nature that it is not worth occupying even if they get it at a rent based upon its carrying capacity at 20 acres to the sheep." He therefore thought that a basis of 6 acres to a sheep would throw out every acre of land that was not already under occupation, and he would most decidedly go even beyond the 20 acres and put it at 30.

Mr. HEBDEN (Wanaaring) proposed an amendment that it be 10 acres to a sheep. All the lands would carry a sheep to 20 acres if it were improved, but people would not improve it.

Mr. FLANAGAN (Gunbar) seconded Mr. Hebden's amendment. He did not mean to insinuate there was plenty of land in the Colony that would carry a sheep to 20 acres. Some men had pulled their coats off and set to work to make the country capable of carrying sheep, and they were to be taxed for having taken their coats off and set to work.

Mr. ALISON (Canonbar) said he was not bound to these figures; and as there was a feeling in favour of a sheep to 20 acres he would be willing to accept Mr. Hebden's amendment, going halfway, and making it a sheep to 10 acres. He was quite pleased to see what a number of advocates the Crown had in the Conference. The proposition was to let the Crown off most easily. He could not conceive that in any district they would have £20 to pay. He really thought a sheep to 10 acres was about the worst that he knew of in the Western Division, and the Crown lands could not be very much worse than that anywhere. There was some good land and some indifferent land, and he thought perhaps it would be better to accept Mr. Hebden's motion for a sheep to 10 acres; and he would amend his motion to that effect, namely, "That public lands shall be taxed on the basis of one sheep to 10 acres."

Mr. CUDMORE (Wentworth) said that Mr. Alison had remarked that there was very little country in the Western Division that had been assessed at 10 acres to the sheep. He begged to differ. There was a great deal that would only carry a sheep to  $12\frac{1}{2}$  or 15 acres.

Mr. Davies's amendment was put to the meeting, and lost by 24 to 13.

Mr. Alison's motion, of one sheep to 10 acres, was put, and carried by 24 to 10.

The Conference adjourned until 10 o'clock the next day.

### THIRD DAY—11TH MARCH, 1897.

The Conference met at 10 a.m.; Mr. Lakeman in the Chair.

The minutes of the previous sitting were read and confirmed.

The Minister for Lands entered amid acclamation, and delivered the following address:—

I think it better, Mr. Chairman, instead of waiting until you have concluded your business, when probably you would submit all your resolutions to me, to occasionally come in and confer with you on the progress that you have made. I think that is the better course to adopt, because you will finish your business at a certain time, and you will all have made your arrangements to go home, and probably there will only be half an hour left to come and talk the matters over with the Minister; and it might be found then that I could not accept your proposals, and then you could not stay back to reconsider them. I thought it better, therefore, to come and have a talk with you. There may be differences of opinion that we can get over by a little mutual consultation; so that I am sure you will not object to my coming here. I will first of all read a telegram which I have received from Mr. Alexander Oliver, of the Land Appeal Court. "Please offer my services to the Rabbit Conference to draft their Amended Rabbit Bill—of course gratuitously. I return to Sydney to-day." We could not have a better draftsman than Mr. Alexander Oliver, and I am sure you will agree with me it is extremely kind of him. You will understand of course that whatever I say to-day I do not want to dictate at all. I simply want to express some views to which you will pay that consideration to which they are entitled; and if you differ from those views, express your opinion upon them, and then we may after all be able to come to some decision which will mean harmony. Now I notice you have passed a resolution placing the administration of the Rabbit Bill in the hands of the Stock and Pastures Protection Board. The difficulty I had in drafting the Rabbit Bill of 1895 was to avoid having cumbersome and expensive machinery. I saw that if we had to put the country to the expense of having a separate Rabbit Board elected that it would perhaps entail expenditure that reasonably

reasonably we should endeavour to avoid. I am quite in sympathy with the views which have been so freely expressed in this country, that to a large extent we are over-governed and that we have too many Boards in existence; and if I can by any means, as the outcome of this Conference, take some existing body and make it do the work that has to be done under this Bill, I should consider it a very great step gained; and, therefore, if it is possible to have a separate Bill making use of existing bodies, I should be one to grasp the situation and make use of those bodies; but if they have defects in their constitutions you are not likely to have those defects overlooked in Parliament. I do not know a Pastures and Stock Board from Adam—I never met a Board, and I know very little of its operations; so that I can have no preconceived opposition to them—none whatever. I believe they are very good Boards, and if they can be made use of, so much the better. But you all want to pass a Rabbit Bill; you do not want to have a Bill drafted which will look very well here but will never get through all the obstacles of Parliament. You want to have that Bill, after it leaves here, drafted into the Statute Book of the Colony. It is only an act of kindness to point out to you objections that Parliament may take and which I cannot overcome. No matter how much I may wish to place the sole control of that measure under the Stock Protection Board, I tell you candidly I do not think I could pass the Bill. It is no use misleading you; it is no use my coming back in twelve months' time to tell you I have failed. The small men in the community have a very large say in the election of representatives to Parliament, and their members count more than the members of the large men at the ballot-box. These small men have representatives in Parliament who will take up the cudgels on their behalf, and you may be sure of very strong opposition in Parliament to handing over the control to the body in which the so-called small men have not adequate representation. The difficulty you have got to overcome is to make the Stock Protection Board of such a character that it will be thoroughly representative of the large and small interests involved; and it means this—that if the present constitution of those Stock Boards does not give adequate representation to the smaller holders in the country, you will have to propose such amendments in the constitution as will give them a fair voice in the election of Stock Protection Board members, and a fair voice in the management of the work. Then, in addition to that, I know there is a proposal to enlarge the franchise. You must go further than merely enlarging the franchise; you must do it on a different basis altogether. There are men who have no stock at all, who are not engaged in stock-raising—perhaps they may have a few draught horses or bullocks for ploughing—men engaged in agriculture, who are injured by the depredations of rabbits, and who necessarily have to make some protection for themselves against the inroads by the rabbits. It seems to me that these men are largely affected by rabbit legislation, and they are entitled—in a measure which will impose taxation upon them—to representation, because I cannot say that a measure will be a good one that allows any class to be taxed without representation. Therefore, if a man who has got 2,000 acres under wheat is taxed, you must be prepared to concede to him some voice in the representation. I do not think there ought to be any difficulty in this matter. I do not see that there should be any difficulty at all, but you ought to be prepared to enlarge the basis of election of the Stock Protection Board so as to take in all those whom you propose to tax and those whom you propose to benefit. Therefore, it seems to me that there ought to be some basis; and if the Conference can arrive at thorough unanimity on this point, you will be doing a distinct public service and you will be justifying your discussion and your deliberations, because we shall have no need then to create a new Board with all the expense of election, but we shall have one Board, already doing good work, made still more useful by enlarging its functions. I hope, therefore, that before you have concluded the consideration of this subject you will have gone into this very difficult question most thoroughly, and that you will have drafted some clauses in this Bill to amend the Stock Protection Board—the Diseases in Sheep Act—so as to enlarge the election, or mode of election, of the Stock Protection Boards. Now, the next point, and I can see that we are not at variance at all, is with regard to the obligation of the Crown to perform its work on the Crown lands. I regret, indeed, to see that some gentleman said yesterday that he could state, almost with authority, that the Government had no intention of dealing with the rabbits on its own land. I presume that my word must be taken for what it is worth. It is not lightly given in these matters. I have never broken a promise which I have made to the people of this country. I state that I am imbued with the knowledge that it is an unfair thing to tax the private holders or occupiers in the community to destroy the pest, and at the same time to allow that pest, without any hindrance at all, to increase and multiply on the Public Estate. Therefore it is incumbent upon the Government to do its fair share of the work, if the work is to be done thoroughly. If the Government is prepared to neglect what it ought to do, it has no right to impose an obligation on private owners to do what the Government will not do. I say we must accept one another's protestations in this matter. You impose an obligation on the Crown, but you cannot vote away a sum of money per annum for the purpose of doing the work; you must leave that to Parliament, which votes supplies year by year, to vote the amount, which will be at the disposal of the Minister for this work. Therefore I have provided that the Minister shall expend some sum of money for this purpose. So long as I am in the Ministry, you can always rely that there will be submitted to Parliament a sum of money to be expended on the Public Estate to destroy rabbits. If Parliament refuses to vote any money we must put up with it; but if the proposal is submitted by those who are in sympathy with you, then I think you will be satisfied with them. In the next place, a hard and fast rule is stated with regard to the rate that ought to be imposed on the Public Estate. I think it is reckoned as carrying a sheep to 10 acres. You must know yourselves that some of the valuable estates which are held by the Crown for commonage, &c., will carry a sheep to an acre, and it will be necessary in these cases for the Crown contribution to be much larger than one sheep to 10 acres, and then there are portions of the country in the far west where it will not carry a sheep to perhaps 40 or 50 acres; so that if you impose upon the Crown the duty of contributing by this hard and fast rule, you make the Government contribute too much in one district and too little in another. Take, for instance, the Pillaga Scrub. That country, I suppose, would carry a very poor percentage of sheep compared with the lands we have in reserve in Riverina; and the simplest way for the Crown to deal with country like that is to fence its own rabbits in, because there is only one holder in the whole of that Pillaga Scrub. I would like to have more. I would like to have twenty, but, unfortunately, we have got very few holders; but there the rating should be very much less than in the richer country. If you go farther west, to Wilcannia and Mount Poole, the rating must be in accordance with the requirements of the country; so that I think it is better not to have a fixed hard-and-fast rule, but to leave it to the various Stock Boards in the various districts. Let local experience decide this. There are only these two points; and I

thought it would be better at once to mention them in order to avoid any misunderstanding, because there is a misunderstanding growing up, and some think that the small man is to be shut out entirely. I think we can bring these divergent views into harmony, and draft something which will satisfy all parties concerned. And on the other point I have mentioned, I think a little reconsideration will show you that it would be, perhaps, better to leave it to the varying requirements of the localities. I have nothing more to say, gentlemen, and I would be very glad to hear, for a few minutes, if there are any other points on which there might be any need for mutual conferences.

The CHAIRMAN read the resolution regarding the basis of representation.

The MINISTER FOR LANDS continuing said: I do not think that resolution is a right one, because the effect of it would be that persons who have not got the franchise under the Stock Protection Board would be exempt from taxation. If you put it the other way round, that there will be representation to all who are taxed, I have no objection to it; but if you are going to exclude people from being taxed, simply because you are going to exclude them from having representation, you are wrong. That reads the wrong way. I say at once that agriculturists who have no franchise under the Stock Protection Act ought not to escape taxation—that they ought to have the franchise, and that they ought as well to have the burden of taxation.

The HONORABLE RUPERT CARINGTON said that he would like to say a few words, as he had been the mover of the resolution which placed the control of the rabbits under the Stock Protection Board. He opposed the proposal in the Bill of the Minister on the ground that we should have no taxation without representation, and he most carefully brought that in, as it was the keynote of his amendment that they should bring in an amendment so as to prevent any taxation without representation. They were dealing with agricultural lands, and how they were to be taxed. He agreed with the Minister that nothing would be worse than that a certain number of people in a district should be taxed and a certain number not taxed. He thought an amendment could be passed that would fairly meet the case. He thanked the Minister for the very conciliatory attitude he had taken, and for the consideration he had shown to the alterations which had been made in the Bill; and he sincerely hoped the Conference would be able to back the Minister up very considerably in his efforts to produce a Bill that would meet the case. There must be mutual concessions on both sides, and he, on his part, would be quite willing to withdraw the resolution about taxation of the Crown. He thoroughly understood the Minister's objection to it, and hoped the Conference would adopt the same attitude to the Minister, and by mutual concession strengthen his hands and enable a Bill to be passed acceptable to him and to ourselves.

Mr. WILKES (Broken Hill) thought the Minister did not clearly grasp his meaning. He stood there as a representative of 11,000,000 acres of land; therefore he felt it his duty to speak. There was a clause in the Act (clause 32) that only allowed a maximum to be laid out by the Minister, and he took it that that maximum sum was equal to the public lands as against the other lands. Take the public lands as 20,000,000 acres against 2,000,000 acres; the Minister can only lay out a maximum of one-tenth of what may be collected. He maintained that about £100,000 might be collected, and therefore the Minister will have to spend £10,000. £10,000 would not suffice. The public lands were the worst infested, and it would take a far larger sum annually than £10,000. The sum which the Government limited themselves to in this Bill would not be sufficient.

The MINISTER FOR LANDS: Do you mean to tell me there are 20,000,000 acres within your district.

Mr. WILKES (Broken Hill) said he estimated that as the amount of public lands in the Colony.

Mr. J. FLANAGAN (Gunbar) drew attention to the fact that the last speaker had yesterday supported a motion that the Minister should be taxed by a sheep to 20 acres.

Mr. WILKES (Broken Hill): No; a sheep to 30 acres.

Mr. FLANAGAN (Gunbar) said he stood there as a representative of the farming class. He had supported Mr. Gibson's motion in the direction that the Minister has now said it should be corrected. The farmers as a rule were apathetic. They did not take part in public meetings, but they would take their part on the voting day, and defeat what was done at the Conference if they did not treat them fairly; and he could assure the Minister he thought there were very few delegates who doubted his sincerity as regarded any proposals he might bring forth with regard to the Rabbit Bill. Here was the point—that they prayed that Parliament would enact a law that would compel land-owners to at once commence to operate against the rabbit pest; but Parliament would not enable the Minister to commence the work. He would be delayed until Parliament granted the money, which might mean a delay of two or three years; therefore, it would be unfair to land owners that they should be compelled to kill rabbits straight away when the Minister would not be enabled to do his share of the work.

Mr. ALISON (Canonbar) said he was very glad that the Minister for Lands had come there to confer with them, and he thought the Minister would find they were very much in accord with him. They were now dealing with the question of the voting and the franchise, and they intended to reduce that franchise to the lowest possible reasonable point. They did not want to bring in a man who has only a pet sheep or a man who has only a spring-cart horse. All land-owners and stock-holders who could reasonably be called land-owners and stock-holders should have a vote. The present law allowed any man who had ten head of large stock or 500 sheep to have a vote. If the small owners considered that 500 sheep was too high a limit, they could reduce that vote. It could hardly be conceived that anyone would want to reduce the number of large stock from ten head.

The MINISTER FOR LANDS: Supposing he had no stock at all, but about 300 acres of wheat land?

Mr. ALISON (Canonbar): They intended to deal with the wheat lands by assessing them on a basis which would allow them a sufficient vote. They did not desire them to pay a very large taxation. As far as possible, men who had cultivated their land should be very lightly dealt with in their contribution to the rabbit fund. They thought that any man who had brought the land up from a sheep to 10 acres to a sheep to 5 acres ought to escape taxation as much as possible, and they intended to make the taxation as light as possible and his representation would be according to his taxation. He was sure the farming members there would be entirely able to say what taxation they proposed to pay. Under this Bill the rate was not to exceed  $\frac{1}{4}$ d. per sheep. In any case the taxation would not be very severe on the owners of cultivated land and they would have full representation in accordance with their taxation. He was the mover of the measure that the meeting passed yesterday in regard to Crown lands, and their idea was that the taxation should not be extreme on the Crown in any way. It was simple, and the Crown would pay just

just the same if every separate piece was valued. The taxation was  $\frac{1}{2}$ d. per sheep and the Crown could estimate at once what the amount of their taxation would be on the number of acres which were public lands at  $\frac{1}{2}$ d. per sheep on every 10 acres of land. The Crown would know how much they had to pay each year. He was firmly of opinion that it was the best proposition for the Crown and for the people.

Mr. BACON (Brewarrina) desired to refer to the second part in which the Minister said some gentlemen expressed a doubt as to his (the Minister's) sincerity in making money available on public lands. He wished to state, in explanation, that in following the Minister's own statement that he was perfectly sincere and would do his best to get the Bill passed in the shape they put it, he was subject to the vote of Parliament. He did not in any way intend to refer to the present Minister, but to the lack of administration on the part of past Ministers, who never put the compulsory clause in operation—in fact, never did anything. He referred to a place where the public lands simply swarmed with rabbits and the private owners could not put them down. The stock routes were infested, and he knew of places where the Minister had never made any payment. He would like to refer to another point where he had been misrepresented. One gentleman stated that in his district there were 500,000 acres of public lands, and when they were discussing the question of assessing these lands at one sheep to 10 or 20 acres, he made a hurried calculation and found that the Minister would contribute £50. Estimating the public land of the Colony at 20,000,000 acres, at  $\frac{1}{2}$ d. per sheep the Minister would pay £2,083 at one sheep to 20 acres. He had stated that the contribution would be very small, and at 10 acres to the sheep on 20,000,000 acres it would be only about £4,000. That did not seem a very large contribution. He only wished to set himself right before the Minister with regard to what he stated about this matter of the money being available.

Mr. T. BROWN, M.L.A. (Budgerabong) said that as he was the author of the clause which the Minister had taken exception to, he would like to make some explanation. He thought it was a perfectly fair and just provision. In the Minister's Bill it was proposed to constitute separate Rabbit Boards, and the franchise was a very wide and liberal one, but the Honorable Rupert Carington brought in a motion which placed the whole control of this Act in the Stock Protection Board under which the maximum members of the Board are elected by sheep-owners with the minimum voting power of 500 head of sheep; and this would mean that a large number of contributors under the proposed legislation would be completely excluded from the administration of the funds they would have to contribute, and in order to safeguard their interests and to carry out the principle that there should be no taxation without representation, for the time being he moved that clause; but to alter that franchise and to enable those men to come under the operation of this Board, does not mean merely an alteration of this Act but an alteration of the Stock Protection Act in that direction. The small owners will very willingly welcome an alteration in that direction. All that they require is to have a voice in expending the money they are to contribute. This resolution was simply to conserve their rights until such time as an alteration was made.

The MINISTER FOR LANDS said that Mr. Bacon had been at some pains to point out that the path pursued by the Crown in the past would give some idea of its possible path in the future, and that the Bill did not propose a sufficient burden on the Crown. He was sure they would pardon him for reminding them that the history of the past twenty years proved that the Government of the Colony had not been behindhand in providing funds for rabbit destruction. In seven years there had been paid from the Consolidated Revenue no less than £503,000 towards rabbit destruction, but altogether £881,457 had been expended in the attempt to exterminate the pest. He thought the statement of those figures would disabuse the minds of anyone as to Parliament not being willing to vote supplies for that purpose; but there grew up a feeling in the minds of the public that money was being spent from the Consolidated Revenue without gaining any commensurate return in rabbit destruction, so that it behoves any Minister at this time to look before he leaps, and not pledge the Parliament of the country to an expenditure which on analysis will not be proved to be fruitful. That is why the Bill must be drawn in this way. Parliament has had such an experience of rabbit destruction that it will trust no Minister with the power to expend moneys until its consent has been obtained. Since that time they had constructed 956 miles of barrier fencing, at a cost of £48,800, and during the last twelve months he had caused 110 miles of fencing to be constructed in order to prevent the wave getting into the northern and western districts. It had been represented to him that the fence from Narrabri to Mungindi was essential for that purpose, and on that ground the State contributed one-half of the cost. These facts show that the Government are not inclined to stand still as long as they can see some return in value for the State expenditure. It may be that clause 32 does not provide anything that is necessary; but this Conference has met here in order to improve the Bill, not to condemn it entirely because some acute man could find a fault here and there. If they went into arithmetic, and the figures did not pan out as they would like, that is no reason why it should be condemned. If they put it at 10 acres to the sheep, they have provided for the Minister to expend £10,000—that is the sum he had put in—and if he had blundered, they also had blundered. First of all, with regard to the municipal districts. Rabbit destruction being under the control of municipal councils, he did not see any necessity for the Stock Protection Boards to intrude themselves into municipal districts. The borough of Broken Hill had at times had a rabbit plague of quite a different character from the plague as they get it. He had had to close the public schools in consequence of the rabbit plague. The plague had very often to be dealt with, having regard to the health of the inhabitants. The rabbits when poisoned came there to die, and it made it insanitary for the school operations to be carried on. There ought to be no interference with the municipal councils administering the Act. He did not think they should oppose the proposal for State representation on those Boards. The more the Government is required to find money, the more the Government will say they must have representation on the Boards. They could not expect the Minister to go and vote like a landowner for the members of the Board. There must be some dignity in the Government. They had had experience of the men the Government had appointed to the different Boards in the country. The Government were likely to insist upon having some representation on these Boards, so that the taxpayers of the community who had provided some portion of the money might be represented. He hoped they would excuse him coming there to-day, as he did not want in any way to interfere with them.

The Minister then withdrew amid acclamation.

The CHAIRMAN thought Mr. Carruthers was very earnest in his intentions to help the Colony to get rid of this rabbit pest. They must take his word for the public expenditure that would be incurred, and he did not think the Minister would be behindhand when the time arrived. He should have liked to see the Minister there after they had discussed the whole of the franchise.

Mr.

Mr. R. GIBSON (Hay) proposed that the matter for discussion should be the constitution of the Stock Protection Board, and on what basis they should be elected.

Mr. ALISON (Canonbar) on a point of order, contended that clause 12 must be finished first.

The CHAIRMAN thought that if they went on with clause 12 they would have to go back over the old ground.

Mr. S. NIXON (Gunbar) seconded the motion.

The question on being put was negatived.

Mr. ALISON (Canonbar) said they had to deal with the cultivated lands. As he pointed out yesterday, in clause 12, subsection (a), it said, "cultivated lands shall be taken to be capable of carrying as many sheep as they would carry if laid down in grass." He disagreed with the proposition in the Bill. He thought that cultivated lands, instead of being taxed as laid down in grass, should be taxed as if in their normal condition. He thought it would be found impossible to state the value of any cultivated land in its original state. They could not judge from the surrounding country. It might not be of the same nature. It would be best for them to arrive at some conclusion as to how many sheep an acre of cultivated land should be assessed at. He would like to see it agreed that all cultivated land should be put on a basis of 1, 2, 3, 4, or 5 sheep. He pointed out to the farmers that if they had an expert going round, the expert would go to the Board and give his opinion, and the farmer would then have to go to the Board and give his opinion, and would have to bring witnesses, and there might be an appeal to another Board, and by this means he would be put to great expense. If they could arrive at a rough and ready way of assessing him it would be much cheaper to the Board, and much cheaper to the farmer, and he would know exactly what he had to pay. The whole of the money would go to the Board without any subtraction for the expense of the expert who would go and value that land. He thought if they had to value the land the expense they would have to go to would be more than the amount contributed. Let it be put at a small lenient rate, so that no farmer should be put upon. He would sooner see a man get off than that he should pay too much. He moved that any cultivated lands should be assessed on the basis of 5 acres to one sheep.

Mr. J. H. VARCOE (Hillston) asked how would his cultivated lands be assessed at a sheep to the acre. He was already assessed at the stock that the land he had cultivated was carrying.

Mr. COOK (Beringerry) moved as an amendment, "That it would be 1 acre to two sheep." He was both a wheat-grower and a sheep-owner, and knew something about the matter. They wanted a reasonable thing, and did not want to get off too easily. A sheep to 2 acres was a fair thing.

Mr. GIBSON (Hay) seconded the amendment *pro forma*, although he was opposed both to the motion and to the amendment. The Minister had pointed out the folly of laying down a hard and fast rule. In his district it took 3 acres of good grazing land to carry a sheep; in the Berrigan district 1 or 2 acres will carry a sheep; in other districts two sheep might be carried to an acre. Why should we lay down a hard-and-fast rule that will give a concession to one class of owners in one district, and will not give a concession to another class of holders in another district. Some gentlemen kept harping on these experts. He did not know what part of the Colony they came from. He came from a part of the country where there were a large number of these experts. He thought it could safely be left to the Board. They were going to elect their own members, and they could safely leave it in their hands and to their practical knowledge, and there should be no necessity to bring men down from any other part of the Colony to give evidence.

Mr. J. R. BRETT (Urana) seconded Mr. Alison's motion.

Mr. FLANAGAN supported the motion. They had passed a clause that Crown lands should be rated at 10 acres to the sheep. He thought Mr. Alison's motion of 5 acres to the sheep would be more in accordance with the motion carried yesterday. Regarding a few words that had dropped from Mr. Cook, who said something to the effect that there were no cultivated lands that would not carry one sheep to 2 acres, he had himself brought into cultivation certain land of which 15 acres would not support one sheep. The Boards would have to raise the rate from  $\frac{1}{2}$ d. to 3d. per sheep to deal with the rabbit pest if it were on that basis. They must all know of scrub lands that would not feed sheep, and that they were the most difficult lands in the Colony to eradicate rabbits from. These rabbits could live where there is timber and scrub that will not feed sheep, and will live there without any water. Rabbits could be eradicated much easier from the rich country than they could from the bad country. The day would come when every man in the community will have a voice in the election of Members of Parliament for their districts, and if they did not adequately take into consideration the interests of the small men all their work would be cast aside by their representatives in Parliament, for there they would not be represented on the basis of the stock they owned.

Mr. NIXON (Gunbar) thought it inexpedient to make any hard-and-fast rule. There were districts that would carry considerably over a sheep to the acre. He thought it should be left entirely to the Boards to decide without any expert evidence. He was quite sure it would give more satisfaction.

Mr. T. BROWN, M.L.A. (Budgerabong), proposed, as a further amendment, "That cultivated land not assessed under a Stock and Pastures Protection Act be assessed by the Board on the basis of the carrying capacity of the adjacent grazing grounds." He believed that the wish of the Conference was to assess on the stock-carrying capacity and not on their cultivation basis, and the best way to arrive at that was to determine it by the adjacent grazing lands, and to leave the assessment in the hands of the Local Stock Board.

Mr. LITTLE (Bullock Creek) seconded the amendment.

Mr. WILKES (Broken Hill) considered that Mr. Gibson and Mr. Brown were only on a bogey. They would allow that a man who had a thousand acres of cultivated land must have ten horses to work it. On Mr. Alison's 5 acres to a sheep, his rate would be 100d.—an assessment of a matter of 8s. 4d.; and would it not be better to do that great wrong rather than bring together this Board, the witnesses, and the Land Agent, on whom they would have to spend a good many eight-and-fourpences. This must be drawn on the lines that Mr. Alison laid down. He did not say, "Stick to 5 or 10 acres," but it must be on those lines.

Mr. A. L. B. CAMERON (Ivanhoe) while looking upon Mr. Alison's proposal as the best and most rough and ready method of dealing with this question, pointed out that it was a clause that was likely to meet with a considerable amount of opposition in Parliament. The Minister had already said that he was opposed to these hard-and-fast rules. He thought it would be best not to pass resolutions which were likely to meet with opposition in Parliament. He thought Mr. Brown's amendment the same as Mr. Gibson's.

Mr.

Mr. BACON (Brewarrina) supported Mr. Alison's resolution, because it was a simple and equitable way of meeting a difficulty. He would point out that in this colony a system of mixed farming did not prevail. Without a man cultivated wheat the land simply lay fallow with the straw lying on it in the summer until it was time to cultivate it again. The method proposed would be the simplest and the fairest and cheapest manner of settling this. On the plea of economy he would advocate Mr. Alison's resolutions.

Mr. TREFLE (Temora) supported Mr. Alison's resolutions. Although he did not agree with the principle on which the land was valued, he thought it was better to tax lightly and use all that money for the destruction of the rabbits than to have a greater tax and a heavy expenditure in getting it. He must admit that valuation would cause a lot of expense. They must not raise a cry throughout the country that the graziers were getting off too lightly. He thought it would be better to allow the farmers who were not stock-owners to be dealt with leniently, so as to avoid any friction which may destroy the Bill. There were farmers with a few stock, a few killing-sheep, a few dairy cows, and a few horses. Their returns under the Stock Protection Act would be very small, and they would get off taxation, but he thought they would have to put up with the difficulty in that instance. Some gentlemen had made remarks about the carrying capacity of the land, and one gentleman had remarked that 2 acres would carry a sheep. In some localities, perhaps, it would, but his experience showed that 2 acres would not carry a sheep. Thousands of acres of the back country land had been brought under cultivation, and he knew of land in many districts that had been brought under cultivation that would not carry a sheep to 2 acres. He thought that if they left the basis at 5 acres to a sheep it would show that they did not want to tax the small men too heavily.

The Honorable RUPERT CARINGTON (Jerilderie) would support Mr. Gibson's amendment. As to expense, there need be no expense whatever. It was never proposed there should be experts called in to value the land; the Stock Boards being experts could value it themselves. Some men would have to pay on their ten head of stock and then on their wheat land as well. They would be taxed twice.

Mr. T. BROWN, M.L.A. (Budgerabong), said that when he drew out the motion of which he gave notice just now he did not know there was anything proposed on the same lines.

The CHAIRMAN said he was just about to rule Mr. Brown's amendment out of order, because Mr. Gibson's proposal and his were the same.

Mr. BROWN (Budgerabong) withdrew his amendment and supported Mr. Gibson's.

Mr. ALISON (Canonbar) said his idea was to allow those who had cultivated land to pay as small a sum as possible to allow them representation. He did not want to see them taxed too heavily, because the men who cultivated land were men worthy of a great deal of consideration, and he thought they would be making the greatest mistake possible if they overtaxed them. He would sooner see them get off lightly than that they should be taxed heavily. His proposition could not possibly injure anybody. His idea was to let them off easier, because they were people who were not interested to the same extent as the pastoralists. They were not affected so much as those who had stock. He was quite willing to have it amended in any way, if he could be shown how it injured any farmer or any owner of cultivated land, but he did not think it would.

The CHAIRMAN here explained to the Conference that the original motion meant that if a man had 5 acres under cultivation he should pay on that at 5 acres to the sheep, and if he had 2,000 acres additional he would pay on that according to the stock returns.

Mr. GIBSON'S (Hay) amendment was put to the meeting and lost by 21 votes to 20.

Mr. COOK'S (Beringerry) amendment was put to the meeting and lost.

The original motion (one sheep to 5 acres) was put and carried by 22 to 17.

Mr. ALISON (Canonbar) begged to move that all the words from the word "the" in line 39 down to the word "stock" in line 48 be eliminated, that is to say the whole of subsection 2.

The CHAIRMAN pointed out that that would follow on the last resolution.

Mr. OATLEY seconded Mr. Alison's proposal, which was carried.

Mr. BACON (Brewarrina) begged to move that no rates be levied on any holding that had been already rabbit proof fenced.

Mr. FLANAGAN (Gunbar) said that that was on the business paper in his name.

Mr. BACON (Brewarrina) withdrew the proposal.

Mr. FLANAGAN (Gunbar) moved "that any owner or occupier of land within a rabbit district shall not be called upon to pay any tax under the Rabbit Act, in respect of any land of his already made rabbit proof, or hereafter to be made rabbit proof at his own expense." He proposed this as an amendment of clause 12.

Mr. WILKES (Broken Hill) rose to a point of order. Mr. Flanagan was going too fast, he had got from clause 13 to clause 22.

The CHAIRMAN ruled that Mr. Flanagan was in order.

Mr. FLANAGAN (Gunbar) said he was a believer in this Act. He was a believer in rabbit fencing in some districts, and a believer in destruction of rabbits in other districts. He came from Gunbar where they had gone into cultivation to a very large extent. They found they could not by any means cultivate their lands without a fence round them. He held land close to Burruga. It was all bush country. It would not be just to compel people in that country to pay for fencing. If the people of that locality sent to the Board to say they did not want compulsory fencing, then they would kill the rabbits. Fencing was a necessity in some cases. Where nine farmers out of ten would vote for fencing then the tenth farmer should be compelled to pay for half that fencing. He thought it would be wise to provide for fencing clauses where the majority of farmers wished to have fences erected, and to compel their neighbours to pay for half the boundary fences. He thought that, although now they might provide in some cases for a boundary fence being placed round the holding, if six or seven farmers who chose to form a group wished to be separated entirely from the jurisdiction of a Stock Board, in respect of that land they should be allowed to do so. These holders should have the power within themselves of rating one-another's land to kill rabbits within the boundary of that "special district," so to speak, and if one man out of the seven did not do his duty in killing the rabbits, the same machinery that applied with the Rabbit Board to compel people under this Act to deal with the rabbits should operate within the holding if the majority of the holders within this "sub-district" wished. The holders within this sub-district should have the power to compel the negligent farmer to do his duty in respect of his lands, and if one of them elected to separate his holding from the other six, then the other six should be compelled

to pay as one man for half of the boundary fence. It would simplify matters very much if groups were allowed to form their holdings into sub-districts. They could have their own little meeting, and each would know what his neighbour was doing, and it would not be necessary to send a Stock Inspector 50 miles to inspect the holdings.

Mr. J. M. ATKINSON said he would second the motion. He asked the Chairman if Mr. Flanagan was right in saying that the Minister had the power to create rabbit districts without reference to the boundaries of the sheep districts.

The CHAIRMAN said that that was not come to yet.

Mr. BACON (Brewarrina) could not agree with the resolution proposed by Mr. Flanagan for this reason, that he proposed that all owners or occupiers who fenced in should be exempted. He would move an amendment that one single owner who fenced in his individual holding should be exempted.

Mr. FLANAGAN (Gunbar) said it was the same thing.

Mr. BACON (Brewarrina) said it was a very different thing. Perhaps Mr. Flanagan would accept this amendment, "Provided also that no rates shall be levied on any holding which in the opinion of the Board is surrounded by a rabbit-proof fence."

Mr. FLANAGAN (Gunbar): Surely that would remain with the Board. They would decide what would be a rabbit-proof fence.

Mr. BACON (Brewarrina) begged to move, "Provided always that no rates shall be levied on any holding enclosed in a fence which in the opinion of the Board is rabbit-proof." That was substantially the same thing as obtained in Queensland. He thought that an owner who fenced in his holding, whether it was 640 acres or 2,560, or 10,000, or 100,000, if he went to the very large expense of putting a fence round and keeping it in order he should not be called upon to go to any further expense in taxation. It should be distinctly understood that he proposed this for individual owners. If it went in groups, these groups would be more or less large, and there would be no taxation at all.

Mr. T. BROWN, M.P. (Budgerabong), said there were some difficulties in the way of Mr. Flanagan's motion. He had contended that, in order to deal effectively with the rabbit pest by means of wire-netting, they must have the holdings of as small an area as possible, and it seemed to him that, unless under this resolution they made the country of a limited area, it would be no effective means of preventing the spread of the pest. In the meanwhile he should move an amendment the following:—"That the word 'quarter' be substituted for 'half,' in line 49, clause 12, of the Bill. He thought the owners who were enclosed would derive a certain amount of benefit from the operations of the Pasture and Stock Boards, and that they should contribute something for the benefit derived, and while he thought the half rates were too high he thought the quarter would be sufficient to cover the benefits received.

Mr. FREEMAN rose to second the resolution which had been proposed by Mr. Bacon, but in doing so followed Mr. Flanagan in all that he said, but he would point out to Mr. Flanagan that where he differed from his resolutions was in the words "rabbit-proof," and he would, like Mr. Bacon, wish to substitute the words "reasonably sufficient." There had been a great deal of conflict of opinion as to what constituted a rabbit-proof fence. It was laid down under certain sections of the Rabbit Act, and it was found to work unjustly against people who had fences which were reasonably sufficient for the exclusion of rabbits. If Mr. Flanagan would add that, probably Mr. Bacon would support him. He would like to show gentlemen, that in many cases there would be no necessity at all to levy any tax, because in some districts they were bounded by wire-netting, and subdivided like a piece of wire-netting itself. There was no necessity that those who had borne the burden of the whole thing for the last fourteen years should come in and pay contributions for the protection of the man outside, who had never paid a penny and never borne any of the expense of this work. They were doing all that, and why should they now be called upon to pay a tax for the protection of their neighbours.

Mr. FLANAGAN (Gunbar) could not do what Mr. Freeman asked. The result would be this—that they would have several Boards giving separate decisions on several rabbit-proof fences. In one district there would be one standard rabbit fence and in another district another standard. He preferred to let Parliament decide what would be a rabbit-proof fence.

Mr. BACON (Brewarrina) withdrew his amendment.

Mr. GORMAN (Berrigan) would oppose Mr. Flanagan's amendment. In the first place, if they carried this resolution, in his opinion there would be very few voters in the Riverina to take part in this Act. Nearly every large property there was netted, and some of them had been netted for two or three years. The fact of having netted the properties did not do away with the rabbit pest. Personally he had fenced in his property with wire-netting, but the difficulty still continued, and if they were not going to have these people brought under the provisions of the Act, they could not compel them to kill the rabbits; and, if the resolution was passed, it would nullify all the work they had done for the past few days.

Mr. LITTLE (Bullock Creek) had much pleasure in seconding Mr. Flanagan's proposal. If a man went to the expense of netting individually it was nothing to the outside owners whether they had rabbits or not. If every owner would wire-net individually, and destruction was made compulsory, the difficulty would be at an end.

Mr. CAMERON (Ivanhoe) was thoroughly opposed to any change being made in the clause as laid down, and the reason he opposed it was that the districts where the rabbits were thickest were the districts where every holding or almost every holding was netted in. In his own part of the district, he might say, every large holding was netted, and the only lessees to fall under taxation would be the homestead lessees, and the small men would bear the whole cost of administering the Act in this district. More than that, he thought that a very great concession was made by the Minister here in order to promote the erection of wire-netting fences, and he thought that if they only paid half rates those who were enclosed were accorded a concession that ought to satisfy any man.

Mr. BROOKE (Boggabri) said that the motion seemed to propose that if a man were fenced in he was not to be compelled to kill his rabbits. Now the intention was to make him kill, and therefore if he fenced in he should not have to pay any taxation.

Mr. ALISON (Canonbar) said that everybody was interested in getting the rabbits down. Whether a man was fenced in or not he would be interested in the barrier fences which were proposed. The Minister said (by the Bill) that he was interested to half the extent of a man who was not fenced in. He defied any man who was entirely fenced in, but had rabbits all round his run, to keep the rabbits out.

Mr.

Mr. ATKINSON said Mr. Alison was more or less right. Any man in his district who was wire-netted in must have the rabbits for his neighbours. But there was all the more reason why a man who had been netted in for some time, and had had to kill, not only his own rabbits but also his neighbours as well, should be let off without any tax, at all events until the other runs were netted in and had gone through the fire.

Mr. WILKES (Broken Hill) thought that Mr. Atkinson had given them one of the best arguments, and he was of that opinion too. Rabbit proof fencing, except in very small, very limited, and well looked after districts, was a farce. There was no such thing as a rabbit proof fence in a big area. They all spoke about small men of 640 acres and so on, but were they thinking about the large holdings? There was no such thing as a run that was rabbit proof. Let them go round the country and look at them. Then, again, they kept harping on the destruction of rabbits. This fund was not for the destruction of rabbits, it was merely for the supervision, and although a run was netted in it would require the same amount of supervision from the Board. This was not for netting, but for supervision of the land. If a man paid this money he was paying to see that the rabbits were killed. It would be a great injury to him if the rabbits outside were not killed, and therefore he should pay for supervision to see that they were killed. Mr. Flanagan's part of the Colony was the most heavily stocked part of the country. They found that although this was a heavily netted country the rabbits were equally bad there. A gentleman next to him had had to turn sheep into his paddocks, because he could not keep them for his horses. It was only a year ago, as Mr. Taylor could tell them, that they had had to spend a lot of money to clear away the sand that had overtopped the fence in one run on the border of South Australia.

Mr. OATLEY said he represented the estate of the late E. Flood. They had a district of about 60 or 70 acres of land enclosed by wire netting, and he might mention to them that this day if they went round they would see that outside the boundaries the grass was pretty well eaten off. On their own run very few rabbits were found; in fact not longer than a fortnight ago some gentlemen had asked his permission to go down and shoot rabbits, and they told him they had the greatest difficulty in finding any of them. Outside there were not one but thousands of them.

Mr. CUMMING (Hillston) said that as they were commencing a new Act altogether let them commence from scratch. If they exempted so many of these people where was the money to come from. He himself was netted, but unfortunately he had a bad class of netting. He thought it would be dangerous to allow the clause to pass. The Boards had no power to see that the fences were in proper repair, and they could not go on the land to kill the rabbits, because they were exempt from taxation.

Mr. HEDDEN (Wanaaring) was opposed to Mr. Flanagan's amendment because he thought everybody should contribute something. He also thought that the clause about a man who was going to fence should not be left in.

Mr. FLANAGAN (Gunbar), in reply said he had already explained that fences were not necessary in many localities. His motion was intended mostly for people who were going largely into cultivation. He had already explained that in localities where the majority of owners were occupiers of land, they should petition the Rabbit Board and the Stock Board to make fencing compulsory, or they could petition to have the rabbits dealt with by compulsory destruction. Therefore a lot of the arguments used in opposition to him were futile. He was a believer to a certain extent in co-operation, but he preferred that where an individual could manage his own affairs it was far better management than they would get in the co-operative style. Of course, if an Inspector noticed that a man who was fenced was neglecting to kill, he could report and have him brought under the operation of the Act.

The CHAIRMAN then put Mr. Flanagan's amendment to the meeting and it was lost by a large majority.

Mr. BROWN'S (Budgerabong) amendment was put to the meeting and lost, 19 voting for the amendment and 22 against.

As there was some doubt regarding the voting it was taken again and declared lost, the voting being 21 for and 23 against.

The CHAIRMAN then adjourned the meeting until 2 o'clock.

On resuming after lunch the Chairman took the Chair at 2 p.m.

Mr. ALISON (Canonbar) moved that after the word "enclose" the words "or which may be in future enclosed" should be inserted in line 50.

Mr. CUMMING (Hillston) seconded Mr. Alison's proposition.

Question put and carried.

Mr. FREEMAN moved, "That subsections D, E, and F, of section 3, clause 12, and the whole of section 4 should be struck out."

Mr. ALISON (Canonbar), said that if Mr. Freeman would omit subsection D from his resolution he would be glad to second it. He thought the Rabbit Board should have access to the returns.

Mr. FREEMAN said he knew at the present moment that the Department of Agriculture and other Departments who had no legal status called for returns from the different sheep owners of the Colony, and numbers of people refused to give these returns, and altogether they were very careless about making the returns anything like correct. These were not reliable, and seeing that they had a safe return on which the tax was to be levied, he thought these subsections should be struck out.

Mr. FREEMAN'S motion lapsed for want of a seconder.

Mr. ALISON (Canonbar) proposed, "That subsections E and F of section 3, and the whole of the sections 4 and 5 be eliminated."

Mr. McCOLLIGHER (Deniliquin) seconded Mr. Alison's proposition.

Mr. FLANAGAN (Gunbar), held that they would be doing wrong if they struck out section 4. He moved as an amendment "That section 4 be retained."

Mr. NIXON (Gunbar) seconded the amendment by Mr. Flanagan.

Mr. BROOKE (Boggabri) thought they were going too far in preventing the Board from inspecting the holdings. There was no reason why a man should not be allowed to inspect them, because they would not know whether a man with an enclosed holding was doing anything at all. They should be simply inspected and a report made to the Board.

Mr. ALISON (Canonbar) said Mr. Brooke could not be aware of the provisions in the Act. Further on the powers of inspection were given. This power to inspect was merely with regard to the appraisal of the holding, and they had struck that out, so that there was no necessity to retain this power of inspection. In clauses 31 and 32 the Board had the fullest powers of inspecting, entering, and ordering the destruction.

Mr.

Mr. T. BROWN (Budgerabong) said it would be wise to let it stand as it was. It was often necessary in order to enable it to be found out whether correct returns had been furnished. If the Board did not think it necessary to use the power they would not call it into requisition. It would be wise to leave it to the Board, and let them exercise the powers when they might and how they might.

The CHAIRMAN explained that section 4 was unnecessary, as the Conference had decided the carrying capacity, and this was only in connection with the ascertaining of the carrying capacity.

Mr. FLANAGAN's amendment was put to the Conference, the voting being—Ayes, 18; Noes, 15.

The vote was taken again, as some of the members said they did not understand the vote they gave. The result was—Ayes, 17; Noes, 18; and Mr. Flanagan's amendment was declared lost.

Mr. ALISON's original proposition was then put and carried by 18 votes to 16.

Mr. ALISON (Canonbar) moved, "All private owners or lessees who may make no returns, or who shall make what in the opinion of the Board are misleading or inadequate returns, may be summoned before the Board, and the Board shall have the power to rate or increase their returns at a rate not exceeding one sheep to three acres." This should be inserted after subsection D of section 3 of clause 12. He said this was designed to prevent extensive defalcations. There were properties on which there were no stock, and none of the land was cultivated. In that case they would have nothing to pay. He proposed that they should have to pay something. He would move that the Boards should have the power to bring the owners of unstocked runs before them and assess them on a fair and reasonable basis.

Mr. FLANAGAN (Gunbar) said he would second Mr. Alison's proposal.

Mr. WILKES (Broken Hill) explained that under the Diseases in Sheep Act power was given for that.

Mr. ATKINSON asked leave to add to the resolution, "that the Board may authorise any person to inspect such holding."

Mr. ALISON (Canonbar) accepted the addition.

Mr. LITTLE (Bullock Creek) said that under this motion any person who was carrying a sheep to the acre could misrepresent the return purposely, and then on coming before the Board would be rated at one sheep to three acres.

Mr. ALISON (Canonbar) pointed out that a man could be punished for that.

Mr. MCCOLLOUGH (Deniliquin) said the Inspector of Stock had the power to inspect the receipts from any run that he thought had furnished false returns.

Mr. LAURENCE (Balranald) asked Mr. Alison to alter his resolution so that the lands would be assessed at the same rate as the adjacent lands.

Mr. T. BROWN, M.P. (Budgerabong), said that Mr. Alison's motion would mean that the Board was constituted a Court with legal jurisdiction. He would not go to that length, for the Court would be constituted the prosecutor and the judge. He thought the best way would be to apply the penalties that obtained under the other Acts to this Rabbit Act, and if it were proposed to make the Stock Board a Court, and put them in the position of being the prosecutors in any legal action taken, and making them the Court to determine the differences between them and the stock owners, he would not support it.

Mr. TREFLE (Temora) agreed with what Mr. Brown had said. He thought Mr. Alison had made a mistake. It was common in all Acts that returns were wanted, and penalties were fixed for false returns. They could not get away from that.

Mr. CAMERON (Ivanhoe) said he would support Mr. Alison, except in defining the powers of the Board in assessing the carrying capacity. He thought the resolution would be better if he left the Board to decide what was really the carrying capacity of the country. With that exception he would then be inclined to support the resolution.

Mr. ATKINSON said he thought that the difficulty that Mr. Brown had suggested might be got over if the Government nominees were the Chairman, and these cases were heard by the Chairman alone.

Mr. BOLTON (Wagga) said with respect to the powers being under the Stock Act, if such a case arose where a wrong return had been made, they had to make an appeal from that and to get a redress from the Police Court.

Mr. FREEMAN suggested that Mr. Alison should alter his motion to read, "Adequate returns shall be put before the Board in a prescribed manner";—then the mode of procedure could be fixed by the regulations.

Mr. OAKDEN (Cobar) was not aware of any case of hardship having arisen under the other Act. It has been in force for many years. In clause 6 in the Act of 1881, a provision regarding the power of the Board for levying assessment said, "On stock runs on each district they shall make assessment not exceeding in the aggregate twice the rents payable to the Crown." He would point out to the Conference what he thought had perhaps escaped their notice. This power had been in the hands of the Pastures and Stock Board for many years. It did not apply to public land, but applied to unstocked countries under lease.

Mr. ALISON (Canonbar) said he would add "with the rights of appeal to the Court of Petty Sessions."

Mr. ATKINSON wished to move that the Board might authorise any person to inspect a holding.

Mr. ALISON (Canonbar) said he would accept that as his motion. He did not wish to have two amendments.

Mr. ROSS (Hume) said he could not see his way clear to support Mr. Alison in the resolution. For instance, a person might give a false return. His property might be able to carry 40,000 sheep, and the return would be for 20,000, and he would be rated at one sheep for three acres in accordance with these resolutions. In his district there was a lot of land that would carry a sheep and a half to an acre. The thing would therefore be absurd.

Mr. ALISON (Canonbar) was quite willing to meet Mr. Ross' views, and to say a sheep to the acre. He wanted to prevent any chance of the Board's being able to act harshly, and that was the reason he had said one sheep to 3 acres. He would sooner see a man get off than allow a Board to act harshly.

Mr. WILKES (Broken Hill) supported Mr. Alison's resolution. He was fully aware that what Mr. Alison had said was correct. It would be a very necessary provision. There had been some objection taken to the Pastures and Stock Boards dealing with appeals. If it were left to the Land Board they might not get a Land Board meeting within twelve months. Many men in his district would have to go 120 miles to get to the Land Board meeting. If they had it at the Petty Sessions this delay would be done away with. Undoubtedly they did want some check. Powers had been given in the Diseases in

Sheep

Sheep Act which had never miscarried. The inspector under that Act could make an estimated return if he considered a run under-estimated, and there could be an appeal to the Sheep Board, but very little of this was done because it was unnecessary. He did not think that they could pass a better resolution on this subject than that proposed by Mr. Alison.

Mr. BACON (Brewarrina) considered that there had been some misapprehension as to the meaning of Mr. Alison's motion. They had decided yesterday how public lands and agricultural lands should be rated. The unstocked lands were the only lands they had not dealt with. There were a number of runs that had been abandoned, because they were overrun with rabbits, and these unstocked lands they wanted to assess. He took it that was the meaning of Mr. Alison's motion, and in making his provision so very elastic, he had shown a desire to meet the wishes of the people.

The CHAIRMAN said that the motion would come after subsection (d), page 7: "That all owners and lessees who may make no returns, or who shall make what in the opinion of the Board are misleading or inadequate returns, may be summoned before the Board, and the Board shall have the power to rate or increase their returns at a rate not exceeding one sheep to 1 acre, with a right of appeal to the Court of Petty Sessions"

Question put and carried.

#### Clause 4.

##### *Rabbit Districts.*

4. For the purposes of this Act, New South Wales shall be divided into Districts, hereinafter referred to as Rabbit Districts.

The Districts into which New South Wales may from time to time be divided for the purposes of the Diseases in Sheep Acts shall be Districts for the purposes of this Act, but the operation of this provision shall be subject always to the powers next hereinafter conferred on the Minister.

The Minister may, by notification in the *Gazette*—

- (a) declare that any Borough or Municipal District shall form a Rabbit District; or
- (b) combine two or more Sheep Districts wholly or in part into one Rabbit District; or
- (c) create Rabbit Districts without reference to the boundaries of any Sheep District; or
- (d) alter or modify the boundaries of any Rabbit District.

Any such notification shall operate and take effect as from the date thereof, but may by notification be corrected, modified, or revoked.

The Hon R. CARINGTON (Jerilderie) said he wished to go back to clause 4, which had been postponed, because it dealt with the defining of the Rabbit District.

Mr. A. BROWN (Narrabri) moved that "all municipalities and towns where infested by rabbits shall be declared separate districts, and shall not be attached to any Sheep Districts, even if adjoining or within the boundaries of Sheep Districts." There were some towns in Rabbit Districts that would almost out-vote the Districts, and not being Municipalities they would not come within the clause which referred to the Municipalities, therefore, he moved the resolution which would include the towns.

Mr. BROOKES (Boggabri) seconded the resolution.

Mr. OAKDEN (Cobar) begged first to move that the clause as far as the word "Minister" should be passed.

Mr. FLANAGAN (Gunbar) seconded the motion, which was passed.

Mr. ALISON (Canonbar) thought Mr. Brown's motion would destroy clause 13. He thought the words should be added at the end of subsection A.

Mr. FLANAGAN (Gunbar) wished to know what Mr. Brown meant by a town.

Mr. BROWN (Narrabri): Where there was a small town where the people paid no rates or very little, he wanted these towns taken out of the district, or otherwise they would outvote the rest of the holders of land in the vicinity in the rabbit district.

Mr. C. BOLTON (Wagga Wagga) wished Mr. Brown to put in the words "town or village."

Mr. BROWN (Narrabri) accepted this, and altered his amendment so as to read, "municipalities, towns, or villages."

Mr. GIBSON (Hay) hoped Mr. Brown would accept a further amendment, and put in at the end the words, "with the consent of the Pastures and Stock Boards." He took it that many landowners adjoining some of these small villages would be content to kill the rabbits within the village reserves if they had the power, because they were a standing menace to the whole district.

Mr. BROWN (Narrabri) agreed to accept Mr. Gibson's amendment.

Mr. TAYLOR (Lands Department) said it seemed to him the discussion was rather superfluous. The clause provided that the Minister might create rabbit districts without reference to the boundaries of any sheep district. Surely they might take that as an argument that the Minister would take care to proclaim districts in the interests of the landowners.

Mr. FREEMAN thought it was far safer to have the whole thing defined. They knew how the word "may" had acted against them in the past in different Acts of Parliament. They wanted the word "shall" put in, so that it shall be fixed without Ministerial power—that all the districts should be proclaimed, and in addition he proposed a further amendment to Mr. Brown's motion, and that was to insert after the word "villages" the words "population areas."

Mr. BROWN (Narrabri) said he would also accept that amendment.

The Honorable RUPERT CARINGTON (Jerilderie) wished to know if they included a town which had no power of rating its inhabitants how were they going to make them destroy the rabbits?

Mr. OAKDEN (Cobar) said it had been proposed that population areas might also be handed over to the Pastures and Stock Boards. Within those areas a great proportion of the people would pay no rates while others would. How were they going to arrive at the voting power which was to give these people representation? This was a very important clause, and should receive a great deal of consideration before they went to a vote.

Mr. TREFFLE (Temora) thought Mr. Brown's proposal, without the last addition to it, suited the Conference splendidly. If they introduced population areas it would lead to enormous mistakes. They should

should stick to the words, "municipalities, towns, and villages." That was intended to define the centres of population practically, and large farms, which were within the population areas, would not be included.

Mr. FREEMAN said he was quite willing to withdraw his suggestion, because he saw that the interpretation clause said that population areas came within the term "public lands."

Mr. ALISON (Canonbar) suggested that the words, "infested by rabbits," should be left out.

Mr. OAKDEN (Cobar) thought the word "included" should be put in, for towns were often within the sheep districts.

Mr. VARCOE (Hillston) said he would like to point out that the Rabbit Act was to be administered by the Stock and Pastures Board. How would the Rabbit Act be administered in the municipalities if there were no Pastures and Stock Boards in those municipalities?

The Honorable RUPERT CARINGTON (Jerilderie) said clause B did not give the power to towns, but it gave power to municipalities and boroughs. It was not proposed to constitute authorities that were not representative, and therefore had no power to tax.

Mr. BROWN (Narrabri) thought that could be provided for when they came to clause 13.

The CHAIRMAN then put the motion, that the following be an addition to subsection "a," "That all municipalities, towns, and villages shall be declared separate districts, and shall not be attached to sheep districts, even if adjoining or within the boundaries of sheep districts, unless with the consent of the Pastures and Stock Protection Boards."

The motion was carried by 31 to 6.

Mr. ATKINSON wished to know whether that included the lands within the control of those towns or villages—the reserves and town commons, &c.

Mr. BROWN (Narrabri) pointed out that the commons were vested in the municipalities.

Mr. ALISON (Canonbar) proposed to add to the end of subsection "b" the words, "that no sheep district shall be amalgamated with any other district or sub-divided without the consent of two-thirds of the voters." He thought some of those present desired that the sheep districts might sub-divide.

Mr. McCOLLOUGH (Deniliquin) supported Mr. Alison.

Mr. FLANAGAN (Gunbar) moved as an amendment, "That there should be no combination of two districts into one district." It would be two unwieldy. He considered one rabbit district sufficiently large as it stood.

Mr. WILKES (Broken Hill) wished to know where the Board would be if they put two districts together. If the sheep districts were altered, they would have to be altered under the Sheep Act. If they put two Sheep Boards to one district, which Pastures and Stock Board was to administer that district?

Mr. BROWN (Narrabri) considered that if two Boards were amalgamated there would only be one Board.

Mr. WILKES (Broken Hill) did not think the Sheep Boards would stand that for one moment. They would be in constant trouble. It was all very well to say the Minister would put two Sheep Boards together under this Act; would he do so under the Sheep Act?

Mr. GIBSON (Hay) said the greater powers they gave the Minister to administer this Rabbit Act the better. If two districts liked to minimise expense under this Act by amalgamation, he did not see why they should not.

Mr. CUMMING (Hillston) wished to move that Stock Boards should have the power, if agreeable, of mutually altering the boundaries. He knew of a case where two stations were too far from one district and had asked to be shifted into another, and everything had worked well since.

Mr. ROSS (Hume) said he would support Mr. Alison. It would be a public benefit if some of these districts were amalgamated. He thought the power should be vested in the Minister.

Mr. LOONEY (Bullock Creek S.) moved that it should be a plain majority and not a two-thirds majority.

Mr. LITTLE (Bullock Creek N.) seconded it.

Mr. OAKDEN (Cobar) said the difficulty seemed to arise as to this clause being left exactly as it stood, because it spoke of the combination of two sheep districts into one rabbit district. He thought their resolutions should harmonise as well as they could with the constitution of the Pastures and Stock Boards. Their decisions, so far, had been that the districts should be identical. They could not have two districts combined as one rabbit district unless these districts were combined under the Sheep Act as one sheep district. He did not think the resolution was clear. They should bear in mind that this Act was drafted, not with the view which the Conference had adopted, that the Pastures and Stock Boards should administer the Act. It was in accordance with this Act that there should be two sheep districts adjoining and separate under the Sheep Act but joined under the Rabbit Act. During their experience they all knew that boundaries had been altered, and no doubt it was advisable it should be done. The resolution should be made clear so that there shall be no doubt about it.

Mr. ALISON (Canonbar) thought Mr. Oakden was under a misapprehension. According to the proposed Bill, the Minister could combine two districts as sheep districts and also as one rabbit district. His proposition was that this should happen only when there was a two-thirds majority of the voters in the district.

Mr. LOONEY's (Bullock Creek S.) amendment, to omit "two-thirds," was put to the meeting, and carried by 21 to 20.

Mr. LESLIE (Forbes) asked for a second count, not that he thought the counting was incorrect, but he understood there were some gentlemen there on sufferance, and he thought they voted on the question.

The question on being put a second time was carried by 22 to 21.

Mr. ALISON's (Canonbar) motion, as amended, was put to the meeting and carried.

Mr. ALISON moved, "That subsection C be omitted." He thought it was placing a very large power in the hands of the Minister without knowing how it was to be used.

Mr. BRETT seconded the motion.

Mr. FLANAGAN (Gunbar) disagreed with Mr. Alison. There might be a rabbit-proof fence running parallel with the boundary of a rabbit district, and if the Minister had not the power to shift the boundary of a rabbit district he would not be able to include this rabbit fence. He thought the subsection should be retained.

The

The CHAIRMAN thought they ought to make the Act as elastic as they possibly could; and he thought the Minister should have the right to alter the boundaries if it was in the interests of everybody. He did not think the Minister would attempt to alter a boundary without the consent of the Stock Protection Board.

The motion on being put was lost.

Mr. ALISON (Canonbar) wished to move that the following words be added to subsection "C"—"On the recommendation of the Stock Protection Board." He did not quite follow what was the power of the Minister in creating rabbit districts without reference to the boundaries of sheep districts.

Mr. A. BROWN seconded the motion.

Mr. LESLIE (Forbes) did not think there was any necessity for that. In every instance the Minister had referred the matter to the Board for advice. He did not think the Minister should be tied down by hard and fast rules.

Mr. GIBSON (Hay) thought the subsection should be left as it stood. It might be advisable to use a rabbit fence as a boundary, and although a certain member might desire it another might not agree, and the Minister could not then alter the boundaries.

Mr. TREFLE (Temora) thought the whole power should be left in the hands of the Minister.

Mr. WILKES (Broken Hill) thought the subsection should be left out; it was giving the Minister for Lands powers that now belonged to his colleague, the Minister for Mines.

The motion on being put was lost.

Subsections "C" and "D" were then passed as printed.

The CHAIRMAN read a telegram from Mr. Alexander Oliver, the President of the Land Court, offering his services as draftsman. He suggested a vote of thanks should be accorded Mr. Oliver, and, if necessary, his services should be made use of.

Mr. A. BROWN (Narrabri) said he had much pleasure in proposing that the thanks of the Conference be conveyed to Mr. Oliver, and that the Conference would gladly avail themselves of his offer if required.

Mr. NIXON seconded the proposal, which was carried unanimously.

Mr. CAMERON (Ivanhoe) proposed that they should continue the sittings up to 5 o'clock.

The CHAIRMAN pointed out that the two gentlemen who were taking notes had very heavy work to do, and he did not think they could possibly get through any more.

The Conference then adjourned until 10 o'clock the following day.

#### FOURTH DAY—12TH MARCH, 1897.

The Conference met at 10 a.m., Mr. A. Lakeman in the Chair.

The minutes of the previous meeting were read and confirmed.

The CHAIRMAN reported that he had sent a letter to the Minister, thanking Mr. A. Oliver through him for his kind offer to draft the Bill for the Conference.

Mr. LITTLE (Bullock Creek) moved that the Conference should sit on until 5 o'clock. He said they seemed to be doing nothing but wasting time. He did this so as to give those who wished to do so a chance of making arrangements to leave town.

Mr. FLANAGAN (Gunbar) seconded.

The CHAIRMAN pointed out that the reason they usually adjourned at 4 o'clock was that certain printing had to be done for the Conference, and the gentleman who was taking the notes had to do his work after they left. He would put the motion without discussion.

Mr. LITTLE's (Bullock Creek) motion was then put and lost by a large majority.

Mr. ALISON (Canonbar) suggested that the next thing they should do was to go on with the question of the voting power.

Mr. WILKES (Broken Hill) thought they must next proceed to amend the Pastures and Stock Act.

The CHAIRMAN said that his view was that they should pass what they considered to be an equitable franchise, and then the proper course, in his opinion, would be to ask Mr. Oliver to draft a clause on the franchise showing how the Pastures and Stock Act could be brought into line in this matter. He thought that before they dealt with anything else they should decide as to what the constitution of the Pastures and Stock Boards should be. It had eight members now, they should decide whether that was sufficient or too many. He would ask some gentleman to make a proposition as to what should be the constitution of the Board.

Mr. ALISON (Canonbar), in order to bring something before the meeting would move that notwithstanding anything in the Stock and Pastures Act to the contrary, the voting power for Directors shall be estimated on the basis of payment equal to 300 sheep.

The Hon. RUPERT CARINGTON (Jerilderie) considered this to be the most important part of their business. They had all of them determined that there should be proper representation of those who were taxed. He proposed, in the motion on the business paper in his name, that two members be added to the present Stock and Pastures Board for the purpose of representing those who were taxed, either in stock or on their lands. He considered that that would fully safeguard the rights of the so-called "smaller men." They would have a vote for the Stock and Pastures Protection Board, and they would have a vote for these two new members that he proposed to add. He also wished to point out that for these two new members the franchise should be practically on the principle of one man one vote, or rather, one tax-payer one vote. He thought it would have advantages, because it would constitute another tribunal to deal with the rabbits. Of course he had carefully put it in his amendment that these two gentlemen should only sit while the Stock and Pastures Protection Board were sitting as the Rabbit Board. They would be elected for the special purpose of guarding those who were taxed. He hoped they would not import any feeling into the matter because it was absolutely necessary, if this Bill were to pass, that this question should be settled practically unanimously. It would strengthen the Minister's position very much, and he thought the proposal was fair to everybody, and would, he supposed, from what the Minister had said yesterday, be accepted by him. Of course with regard to the Government being represented on the Board, that

must

must be settled afterwards, but the regular Board should be constituted in the manner proposed in his amendment. In his opinion that was the fairest and best solution of the difficulty, and he hoped that the Conference would give it fair consideration at all events. He moved, therefore, the following to be an addition to clause 5, as amended, "for the purpose of administering this Act only two members be added to the existing Sheep and Stock and Pastures Boards, such members to be elected by the stock-owners and other persons taxed under this Bill; each stock-owner or taxpayer to have only one vote."

Mr. LITTLE (Bullock Creek) seconded the motion.

Mr. BROOKE (Boggabri) thought that under those circumstances the Board would be too heavy and too expensive, and if they did this they would have to reduce the Pastures and Stock Board.

Mr. CUMMING (Hillston) thought they could get over the difficulty by merging the two Boards into one. It would simplify matters and make things less expensive. The Board would then be more in touch with both classes. He would move an amendment that the voting power be joined and that all vote for the one Board.

Mr. LESLIE (Forbes) would like to ask the mover whether he intended later on to extend the franchise in the direction of making it more liberal than at present it was, under the Pastures and Stock Protection Act.

The Hon. RUPERT CARINGTON (Jerilderie) said they had nothing to do with that. They were considering the Rabbit Act, not the Pastures and Stock Protection Act, or the Diseases in Sheep Act. This was quite another question altogether.

Mr. LESLIE (Forbes) said that they had not up to the present heard of a franchise which would give the taxpayers a vote, the smaller men were not being considered. There was no franchise laid down by which the electors were to return representatives to the present Board. The Hon. Rupert Carington had proposed to increase the number of the Board from eight to ten, and he wanted to know before that went to the vote whether it was proposed to make the franchise very low, or whether it was intended to increase the franchise.

Mr. ALISON (Canonbar) had not heard this before, and must confess that it was a new idea altogether to him to have two extra members on the Board. He could hardly see from the movers explanation how they were going to fix it. He wanted to have it discussed. He was not sure that he did not like the idea, but had not had time to consider it. It was a total innovation altogether. He would like the mover to explain to him first, were the eight old members still to be elected under the Stock and Pastures Protection Act; second, was the franchise under the Stock and Pastures Protection Act still to remain the same; third, were these two new men to be elected under a very much extended franchise; and fourth, who was going to vote for them. There seemed to him to be forty or fifty questions arising out of this proposal. He would like the mover to explain who was going to vote for these two new men.

The Hon. RUPERT CARINGTON (Jerilderie): Everybody.

Mr. ALISON (Canonbar): And who were going to vote for the eight old men?

The Honorable RUPERT CARINGTON (Jerilderie): Everybody.

Mr. OAKDEN (Cobar) wished to know, in view of the resolutions already passed to substitute the Stock and Pastures Boards for the Rabbit Boards, if they were in order in discussing this question.

The CHAIRMAN said he did not see any difficulty in the matter. It had been decided that the Stock and Pastures Boards were to administer this Act under an extended franchise. He now anticipated that the Conference would pass a franchise for the whole of the members of the Pastures and Stock Boards irrespective of what was contained in the Pastures and Stock Protection Act. They need not run their heads against that Act, because if the Minister agreed with them he would make a new franchise and amend the Pastures and Stock Act. There would be no trouble about that if the Conference agreed as to what was to be done. With regard to Mr. Cumming's amendment, that was practically the same as the resolution of the Honorable Rupert Carington, passed the previous day, and was out of order.

Mr. GIBSON (Hay), speaking on behalf of the small owners, of whom he was one, pointed out that the difficulty they were under was this, that they had appointed two different sets of men under different franchises to constitute this Rabbit Board. Five were to be elected under the Diseases in Sheep Act and a stockowner must be possessed of 500 sheep in order to be empowered to vote for one of those five men. Now that matter had been kept quiet, it had not been ventilated. It had been continually pointed out that the small holder if he were of any consequence at all would have ten head of large stock, and would thus have power to vote for the three large stock directors. Under this, however, the small holder would only have voting power for three men out of eight. Now the small men would lay down this principle, that they must be entitled to vote for every member of the Board. Of course they saw the right for the large holders to have extra voting power; they agreed that a man with 20,000 sheep should have greater voting power than a man with 100 sheep. He would propose as an amendment, "That all holders of ten head of large stock, or 100 sheep, or owning a sufficient area of land to carry either, shall be entitled to vote for all the members of the proposed Rabbit Board."

The CHAIRMAN explained that they had constituted the Pastures and Stock Protection Board, the Board for the administration of the Rabbit Act, but that an extended franchise was to be given to every rate-payer under the Rabbit Act and Pastures and Stock Act to vote for the whole of those gentleman. Before making any amendment probably it would be better to settle that question as to whether the Pastures and Stock Board was to remain as it was, with eight members, with the right of every taxpayer to vote for the eight.

Mr. NIXON (Gunbar), said he would second Mr. Gibson's motion.

The CHAIRMAN said, that that was not before the meeting.

Mr. OAKDEN (Cobar) said he thought it would meet the case if a franchise under the Diseases in Sheep Act were reduced from 500 to 100 sheep. He said it seemed to be impossible that they should carry out their intentions without amending the Pastures and Stock Act. It would be a simple matter to reduce the minimum from 500 to 100 sheep.

The CHAIRMAN said that he was out of order. The question before the meeting was the amendment by the Honorable R. Carington.

Mr. T. BROWN, M.L.A. (Budgerabong), proposed an amendment, "that for the purposes of this Bill the constitution of the Stock Boards be altered so as to provide for (1) the appointment of a Chairman by the Governor; (2) that one additional member be elected on an equal franchise by all contributors under the Rabbit Act assessments; (3) that three members be elected under the Stock and Pastures Act

as at present provided, with a minimum voting power of five head of large stock; and (4) that five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 100 head of sheep."

Mr. WILKES (Broken Hill) said the Honorable Rupert Carington had given them a nut to crack. He had heard of democrats, but the Honorable Rupert Carington had beaten the democrats. He could not understand the Honorable Rupert Carington's proposal to have one man one vote on this important question. He maintained that the amendment of the Honorable Rupert Carington if passed would necessitate the alteration of the Pastures and Stock Act and the Diseases in Sheep Act. The resolution might be passed, but no Minister of the Crown would dare alter those Acts without consulting the Boards affected; and they would unanimously vote against the alteration. If the Honorable Rupert Carington was going on with this radical proposal of one man one vote, he should not uphold him at all.

The Honorable RUPERT CARINGTON said he would like to reply. He did not intend to try to convince his friend Mr. Wilkes, because he could not. He had tried to explain that he had not stultified himself in the least. He had been perfectly ready that everybody who paid taxes should be represented. He considered that this was a very fair way of settling the question without stultifying themselves in any way at all. There was no chance of the Assembly passing the Bill, in his opinion, in its present form. He thought this was by far the best way of voting. This Board, with the addition of these men, would only sit as the Rabbit Board; they would not sit as a Sheep Board or as a Stock and Pastures Board. He thought his plan gave a fairer representation than any other; and as for it being too extreme he could not say that he agreed with that. It gave a representation of five to the sheep-owners and five to the people who were not sheep-owners. There would be five sheep-owners—three people on the Stock and Pastures Board, and two people on the Rabbit Board.

Mr. ALISON (Canonbar) moved that this amendment be adjourned to give them time to consider it. It was very important, and he could not see its bearings right through. As Mr. Wilkes had pointed out, they had to consider the Stock and Pastures Act as well as the Rabbit Act.

The Honorable RUPERT CARINGTON (Jerilderie) consented to the adjournment until 2 o'clock.

Mr. VANSTON (Goodooga) seconded Mr. Alison's proposal.

The question of the adjournment of the Honorable Rupert Carington's motion until 2 o'clock was put and carried.

### Clause 13.

#### *Rabbit Rates in Municipal Areas.*

13. In any case where a Rabbit District is the same as a Borough or Municipal District, the Governor may direct that the rabbit rate shall be struck on the basis of the annual value of the holdings as shown in the Rate Book of such Borough or Municipal District; and in any such case—

- (a) the Rabbit Board shall, notwithstanding anything hereinbefore contained, strike the rabbit rate, and determine the amount payable in respect of any holding on the basis of such value; and for that purpose shall have access to the aforesaid Rate Book at all reasonable times; and
- (b) the rate shall not in any one year exceed one shilling in the pound on the annual value; and
- (c) there shall be no appeal from the determination by the Rabbit Board of the amount payable in respect of any holding.

Mr. BACON (Brewarrina) moved, and Mr. Gibson seconded, "That clause 13 as printed be adopted." Carried.

### Clause 14.

#### *Notice and payment of Rabbit Rate.*

14. When the amount payable under the rate upon any holding has been determined, notice of such amount shall be given, and the same may be given in accordance with the general provisions as to the giving of notices hereinafter contained.

The amount determined by the Rabbit Board as being the amount payable under the Rabbit Rate shall, except in case of appeal, be paid to such person or bank, and on or before such date as may be respectively specified for the purpose in the aforesaid notice: Provided that the amount may be payable in instalments if the Board so permits.

The person liable to pay the amount shall be the occupier of the holding if the same be occupied, but if not, then the owner thereof; but nothing herein contained shall affect any private arrangement between a landlord and his tenant in respect of the said liability.

Mr. FREEMAN moved that the words after the word "the," starting at "occupier" in line 54 down to the end be omitted, and that the words "the owner of the holding taxed" be inserted. It seemed to him that there was no necessity to make private arrangements. If a man liked to make an arrangement under the common law, that need have nothing to do under the Rabbit Act. It would be simple to allow claims to be made against some person and that person ought to be the owner.

Mr. ALISON (Canonbar) seconded the motion.

Mr. GIBSON (Hay) said he would speak against it. There was one point that struck him, and that was: they had decided that the stock should be rated on the stock returns; and as it was the occupier that made out the returns this resolution if passed would put the owner in a predicament.

Mr. FREEMAN then said he would add the word "occupier."

The Chairman pointed out that that would leave the resolution practically as it was before Mr. Freeman proposed to amend it.

Mr. FREEMAN withdrew his motion.

Mr. FLANAGAN (Gunbar) moved "That the clause as printed be adopted."

Mr. VANSTON (Goodooga) seconded Mr. Flanagan.

The CHAIRMAN then put the question, and it was carried.

## Clause 15.

*Rate Book.*

15. Every rate and every determination of the amount payable upon any holding under such rate shall be entered in a book—to be called the Rabbit Rate Book—which shall be kept in such form and manner as may be prescribed; and all persons shall have access thereto at all reasonable times. The said book shall, on the production thereof, be evidence of the rate and of the amount determined as being payable under such rate upon any holding. The Rabbit Board may from time to time make such amendments and supply such omissions in the entries in such book as may be necessary, and no such amendment or omission shall be held to avoid the rate or any determination of amount: Provided that—

- (a) every person aggrieved or affected by any such alteration shall have the same right of appeal therefrom as he would have had if his name had been originally inserted therein or no such alteration had been made; and
- (b) except in the case of an amendment rendered necessary by the result of an appeal, the determination of the amount payable shall be taken to have been made at the date of the amendment.

Mr. NIXON (Gunbar) proposed and Mr. CUMMING seconded, "That clause 15 as printed be adopted." The CHAIRMAN put the question, and it was carried.

## Clause 16.

*Rate not to be invalidated.*

16. The production of a copy of the *Gazette* containing the hereinbefore required notice of the striking of a rate by the Rabbit Board shall be conclusive evidence that the rate has been duly struck.

No determination of the amount payable in any case shall be held to be invalid by reason of any failure to give notice of such amount in accordance with the provisions hereinbefore contained: Provided always that except in cases of appeal proceedings shall not be taken to recover the amount payable in respect of any holding unless and until due notice thereof has been given.

Mr. CAMERON (Ivanhoe) proposed, and Mr. LESLIE seconded, "That clause 16 be adopted as printed."

The CHAIRMAN put the question, and it was carried.

## Clause 17.

*Appeal against the amount determined by the Rabbit Board.*

17. If any person, liable to pay the rabbit rate on any holding, shall think himself aggrieved by the amount determined by the Rabbit Board as the amount payable under the rate in respect of the holding, he may, unless debarred by the provisions of section thirteen of this Act, within twenty-one days after the aforesaid notice has been given, appeal to the Local Land Board by a notice in the prescribed form, accompanied by the prescribed deposit; and the Local Land Board shall determine the amount payable under the rate, and may order interest to be paid thereon at the rate of five per centum per annum, calculated from the date specified in the notice by the Rabbit Board as the date for payment; and payment of the amount finally determined, with or without interest as the case may be, shall be made to the person or bank specified for the purpose in the aforesaid notice within one month from the date of the final determination thereof.

Mr. BROOKE (Boggabri) proposed that the words "Local Land Board" be omitted and the words "Court of Petty Sessions" be inserted.

Mr. CUMMING (Hillston) seconded Mr. Brooke's proposal.

Mr. FLANAGAN (Gunbar) would oppose this. He held that the Land Boards of the Colony had been constituted for the purpose of saving land-owners from extraordinary and extravagant expenses, and he thought they would act very unwisely if they passed this. There could be no better men—no men better seized with the land laws of the Colony—than the Land Boards. If they took it to the Petty Sessions they would have to fee barristers, and decisions would be given against them on technical points, and they would not get justice.

Mr. SIDES (Hay) quite agreed with Mr. Flanagan. These men knew nothing about the rabbits, and it would not be wise to take it out of the hands of the Land Boards and put it under the Courts of Petty Sessions.

The amendment was put and carried.

## Clause 18.

*Unpaid Rates.*

18. Any amount due as Rabbit rate may be recovered by summary proceedings before two Justices, in accordance with the general provisions hereinafter contained.

Any sums due as rabbit rates in respect of any private holding or lands shall be, and until the payment thereof remain, a charge upon the said holding or lands.

Mr. CUDMORE (Wentworth) proposed that "two Justices" be struck out and "Police Magistrates" put in.

Mr. ATKINSON seconded.

Mr. LAURENCE (Balranald) moved an amendment, "That no person be fined more than once in twelve months."

Mr. STINSON (Coolamon) seconded.

Mr. LAURENCE (Balranald) withdrew his amendment.

The original motion was put and carried.

Mr. WILKES (Broken Hill) said, if he was in order, he would move an amendment, "That any amount due as rabbit rate may be recovered with summary proceedings before a Police Magistrate or two or more Justices of the Peace, in accordance with the general provisions as hereinafter contained."

The

The CHAIRMAN said he could not take that as an amendment. He did not mind taking the vote again as there were places where there were no Police Magistrates.

Mr. ALISON (Canonbar) said the idea was to secure impartiality, and they were rather apt to forget convenience in trying to secure this. In some of the far districts they had not got Police Magistrates. Owners or occupiers or producers might have to travel enormous distances to have a very simple case heard. He would submit that they ought not to put out of the reach of these men the chance of having justice administered close to their homesteads. He would advise Mr. Cudmore to amend his resolution to say, "wherever there is a Police Magistrate it should be heard before him, and where there is no Police Magistrate it be heard before two Justices."

The CHAIRMAN said that would be superfluous, as the Police Magistrate was always there at the Court of Petty Sessions.

Mr. FLANAGAN (Gunbar) said he would support Mr. Alison.

Mr. ALISON (Canonbar) said that sometimes the Police Magistrate could not be there. He might be away in some other part of the district. In such a case I think it should wait until he returned.

Mr. FLANAGAN (Gunbar) thoroughly agreed with Mr. Alison.

Mr. BOLTON (Wagga Wagga) would point out that the Police Magistrate in his town had several other towns to visit, and his absence was so frequent that they had had to form a roster. He was a Justice of the Peace himself. They had the power to take away a man's liberty; surely they could settle these small disputes.

Mr. CUDMORE (Wentworth) said he was willing to accept Mr. Alison's amendment that where a Police Magistrate was not available two Justices should hear the case.

Mr. HEBDEN (Wanaaring) said that was too vague. It was not workable, and in many cases would make it very inconvenient. He would move an amendment that the "two Justices" be struck out and the "Court of Petty Sessions" put in.

Mr. MOORE (Goodooga) seconded Mr. Hebden.

Mr. FREEMAN proposed an amendment, "That any amount due as rabbit rates may be recovered by summary proceeding before a local Police Magistrate, or if there is no Police Magistrate in the district then before two Justices."

Mr. WILKES (Broken Hill) rose to a point of order. He had tried to move this, and had been ruled out of order. He did not believe in his brains being used by others.

The CHAIRMAN said he thought if they adopted Mr. Hebden's amendment "a Court of Petty Sessions" would meet the case. He then put Mr. Hebden's amendment to the meeting, and it was declared carried.

Clause 18, as amended, was put to the meeting and carried.

### Clause 19.

#### *Apportionment of Rates in certain cases.*

19. In any case where—

- (a) any rabbit rates have been paid in respect of any lands held under lease or license from the Crown; and
- (b) such lands or any portion thereof are, during the currency of the year to which such rates relate, withdrawn from the lease or license by becoming the subject of any conditional or other purchase or homestead selection or conditional or other lease;—

the person who has paid the said rates shall be entitled to recover from the incomer so much of the amount paid as may be proportionate to the area withdrawn and the unexpired period of the year.

Mr. ALISON (Canonbar) begged to move that this clause be eliminated. He considered it unnecessary in view of the resolutions passed.

Mr. DAVIES (Gunnedah) seconded the motion.

The CHAIRMAN then put the question, and it was carried.

### Clause 20.

#### *Powers of Rabbit Board as to Barrier Fences.*

20. A Rabbit Board shall have power to—

- (a) erect a barrier fence on any land, whether public or private, within or without the Rabbit District, and repair and maintain the said fence; and
- (b) utilise and convert into a barrier fence any private fence, whether rabbit-proof or not, on any land within or without such district, and repair and maintain the said fence; and
- (c) erect and maintain a barrier fence across any road or travelling stock route, making gates in such fence for the passage of members of the public and their stock; and
- (d) place a rabbit-proof gate in any barrier fence wheresoever the same may be required, and repair and maintain such gate; and
- (e) co-operate with the Rabbit Board of any neighbouring Rabbit District in the construction and maintenance of any such work as hereinbefore mentioned.

A barrier fence may be taken to mean a rabbit-proof fence which protects, or will protect from the incursions of rabbits, the Rabbit District, or any part thereof, whether erected without or within the boundaries of the Rabbit District; and the decision of the Local Land Board that a barrier fence protects, or will so protect, the Rabbit District or any part thereof shall be conclusive of the fact, as against the owner or occupier of any private holding or lands within the Rabbit District.

Mr. WILKES (Broken Hill) proposed that it be taken in detail.

Mr. FLANAGAN (Gunbar) said the clause empowered the Boards to go outside their own districts; therefore he thought it would be improper to pass the clause as it stood, because he held that the power was given to the Board to erect barrier fences around their own boundary and not outside, but  
around

around and within their boundary. He proposed an amendment: "A Rabbit Board shall have power to tax all owners and occupiers of land within their district, for the purposes of erection of rabbit-proof fences around half the boundary of their Rabbit District, the destruction of rabbits within said district, and the proper maintenance of rabbit-proof fences." They should not give them power to go outside, because they would be infringing on the rights of some other Stock Board.

Mr. NIXON (Gunbar) seconded Mr. Flanagan's amendment.

Mr. FLANAGAN (Gunbar) said he wished to substitute the word "around" for the word "without," and then to add his resolution.

Mr. ALISON (Canonbar) wished to know whether Mr. Flanagan meant that no Rabbit Board was to have the power to go outside its own district to contribute to or erect a fence?

Mr. FLANAGAN (Gunbar): No power to go outside its own district.

Mr. ALISON (Canonbar) said that would cause a great deal of trouble if they did not allow them to go outside. There were fences which were now up, and which might be adopted, and he thought it was a most judicious power to leave in the hands of the Board. Why should they be compelled to go to the exact boundary when zigzagging in most extraordinary ways over ranges and across creeks. It would be only reasonable to a Board to go a little outside its own district.

Mr. BOLTON (Wagga Wagga) said, as a surveyor of many years experience, he thought it was very desirable that it should be left to the Boards to adjust boundaries. They knew very well that a lot of their main boundaries were the dividing ranges, and sometimes it would be almost impossible to carry a fence along a dividing range, whereas a little lower down it could be done very well.

Mr. LESLIE (Forbes) suggested that Mr. Flanagan should consent to move that the word "without" be struck out of line 19, and let the rest of his motion stand and be dealt with later on.

Mr. FLANAGAN (Gunbar) said he was quite willing.

Mr. OAKDEN (Cobar) endorsed Mr. Alison's remarks, and was sure that anybody who was acquainted with the western country would know he was right.

Mr. BAYLIS (Narrandera) also endorsed Mr. Alison's remarks.

Mr. CUDMORE supported Mr. Alison. In the western district the boundary crossed high ranges of sand-hills, and if the fences were placed on these sand-hills they would be covered with sand; whereas if the Board were allowed to deviate from the boundary they could be put it in a good position.

Mr. LESLIE (Forbes) said that on the barrier line of fence in which he was interested, it had been very desirable that they should go a long way outside the district, so as to make the fence answer the purposes for which it was erected, and they had done so.

Mr. DILL (Hay) begged to support Mr. Alison, and in doing so he might mention that in November last year they cleared half a mile of sand on his boundary. This year that had all filled up again, so that the rabbits could walk over the fence, and it was his intention to apply to be allowed to shift that fence.

Mr. WILKES (Broken Hill), in support of Mr. Alison, pointed out that the Lands Department could endorse what Mr. Dill had just said, for on the South Australian border a large amount of money had been spent in clearing sand from the boundary fence, whereas if the fence had been deviated a good boundary could have been made.

Mr. FLANAGAN (Gunbar) said the gentleman did not seem to understand him. They had tried yesterday to confine the Rabbit Districts to the present lines, and he fought against that, and they obtained the right for the Minister to modify and remove and shift the Rabbit Districts. The Minister now had the power to shift the fence and shift the boundary of a district; and he still maintained that the rabbit fence should be on the Rabbit District boundary. If there was a rocky place on the boundary, all they would have to do was to tell the Minister and he would shift the boundary.

The CHAIRMAN then put the question of striking out the word "without" from the clause, and it was lost.

Mr. LESLIE (Forbes) begged to move that subsections (a), (b), (c), (d), and (e) be passed as printed.

Mr. GIBSON (Hay) seconded.

Mr. ALISON (Canonbar) opposed the motion.

The CHAIRMAN put the question, and it was carried.

Mr. FREEMAN proposed that the words "decision of the Local Land Board that" in line 34, and the words "a barrier fence" and "or will so protect," in line 35, and "of the fact," in line 36, be struck out, and in substitution of them the following be put in, "the fact that the barrier fence." The clause, as amended, would read,—“A barrier fence shall be taken to mean a rabbit-proof fence which protects, or will protect, from the incursions of rabbits the Rabbit District, or any part thereof, whether erected without or within the boundaries of the Rabbit District; and the fact that the barrier fence protects the Rabbit District, or any part thereof, shall be conclusive as against the owner or occupier of any private holding or lands within the Rabbit District.”

Mr. ALISON (Canonbar) seconded the alteration.

Mr. GIBSON (Hay) said that it would materially help them to come to a decision if there was some procedure by which it would not be necessary to prove that the fence was a barrier fence. They should put in "Pastures and Stock Protection Board" instead of Local Land Board. He would move that as an amendment.

Mr. FREEMAN said he was quite willing to accept that;—it came to the same thing. He therefore withdrew his motion.

The CHAIRMAN put Mr. Gibson's motion, and it was carried.

Mr. ALISON (Canonbar) said that there should be an appeal provided in that clause from the Pastures and Stock Protection Board.

The CHAIRMAN said he thought that could be done by one clause at the end, stating that any decision of the Pastures and Stock Protection Board could be appealed from.

Mr. LESLIE (Forbes) said that he proposed to strike out the word "private" from line 36 of clause 20.

Mr. DILL (Hay) seconded.

The question was put, and carried unanimously.

Clause 20, as amended, was put and carried.

### Clause 21.

21. If any barrier fence shall be erected by any Rabbit Board on the boundary of any Rabbit District, the Board of the adjoining District shall be liable to pay to such Board as aforesaid half the cost of erection and maintenance of such fence, or such fence may be erected and maintained at their joint expense in accordance with such arrangements as they may mutually or jointly agree to.

Mr. LESLIE (Forbes) proposed that clause 21, as printed, be passed.

Mr. STINSON (Coolamon) seconded.

The question was put and carried.

### Clause 22.

22. In respect of any rabbit-proof fence which the Board has erected, or has paid contributions under section forty-two of this Act, the Board may by notice in writing served on him require the owner of any holding along the boundary of which the fence is situated (in addition to any rabbit rates payable by him) to pay, and the said owner shall pay to the Board one-half of the cost of making the fence rabbit-proof.

Mr. LESLIE (Forbes) said he wished to strike out the words "along the" and put in "on the protected side of such" in line 47 of this clause. There was no need to explain the necessity of this.

Mr. BRETT (Urana) seconded.

Mr. ALISON (Canonbar) said he would strike out the whole of the clause. He could not see why a private owner should be called upon to pay anything for a barrier fence. Many owners would sooner that the fence was put further away from them, because the land which was next to the fence was more liable to damage from the rabbits coming over the fence than the land 10 miles away. He did not see how a man alongside the fence got any benefit. He moved that this clause be struck out.

Mr. OAKDEN (Cobar) seconded Mr. Alison's motion.

Mr. LESLIE (Forbes) withdrew his motion.

Mr. FLANAGAN (Gunbar) said he would now move an amendment. There was not a word in this clause about barrier fences, it was all about rabbit fences. He thought the clause should stay as it was. The farmers found it very convenient to shut out the rabbits. Mr. Leslie had been talking about "the protected side." He would like to know what the protected side was. The rabbits were like an invading enemy, they came in from all sides. He held that it would be a great injustice, for the rabbit-proof fences were the most effective means of fighting the plague in many portions of this country. If they eliminated this clause, and one man put up a fence, his neighbour would not be compelled to pay for half of that fence.

Mr. GIBSON (Hay) thought the Conference would make a very great mistake if they struck out the clause. He thought it should be amended. If a barrier fence was erected it was at somebody's expense; he thought the individual holder got an advantage from it over and above its value as a barrier fence. It was a fence along one of his boundaries, and he should pay something for it. He proposed that instead of paying one half of the cost of making a fence rabbit proof, they should make the clause read "and the said owner shall pay to the Board a contribution assessed according to the benefit derived and to be derived from the rabbit-proof fence, which in no case shall be more than the value of half the fence."

Mr. FREEMAN would like to point out to the meeting that those who were assessed in the district had to pay a contribution. If the Board erected a fence they all got a benefit from it, and they were all paying for it by contributing to the fund.

Mr. ALISON's (Canonbar) motion was put and carried by a large majority.

### Clause 23.

#### *Compensation by Rabbit Board.*

23. A Rabbit Board shall not be required to give compensation for anything lawfully done in exercise of the foregoing powers, except where a barrier fence is erected upon any private holding or land so as to cause damage by severance.

The amount of compensation due to any person shall, upon application by him as prescribed, be determined by the Local Land Board; and in fixing such compensation the Local Land Board may take into consideration and set off any betterment accruing to such person's property by the construction of such fence, and shall have power to award costs to or against any party appearing before it.

Mr. LESLIE (Forbes) proposed that the clause as printed be adopted.

Mr. DILL (Hay) seconded it.

Mr. OAKDEN (Cobar) moved an amendment. He wanted "Local Land Board" struck out and "Court of Petty Sessions" put in.

Mr. BAYLIS (Narrandera) seconded.

Mr. ALISON (Canonbar) said he hardly thought the meeting appreciated the importance of this clause. It introduced a new system, which he believed was known as the betterment system. He did not think that, as a rule, land owners or stock owners were in favour of the betterment system. Mr. Oakden proposed to strike out the "Local Land Board," and put in "the Court of Petty Sessions," and in that case the Court of Petty Sessions would be called upon to decide upon the betterment to any holding through which a fence might go. He thought that this was rather a large order for the Court of Petty Sessions to decide what advantage a holder might gain from a barrier fence. He thought it was hardly possible to imagine a case where a fence could be put through a holding, subdividing the holding, so as to be an advantage to the owner. It was a decided disadvantage in nearly every case. It might cut the owner off from water. It might cause him in many ways a great deal of inconvenience. He thought the term betterment was so vague and so difficult to arrive at, that instead of any persons through whose holding a fence was put receiving any benefit or receiving any money for damage, in all probability

he would receive nothing at all, because the betterment would be put against it. It was a principle which he at any rate did not believe in. He did not think the Court of Petty Sessions was competent to assess it.

Mr. OAKDEN (Cobar) withdrew his proposition.

Mr. ALISON (Canongbar) said he would like to see the latter part of the clause struck out altogether.

Mr. OAKDEN (Cobar) said he agreed with Mr. Alison. He proposed that the whole of the words after "Land Board" be struck out, and that the "Court of Petty Sessions" be inserted in place of "Local Land Boards"

Mr. GIBSON (Hay) moved that the whole of the clause be struck out.

Mr. LESLIE (Forbes) withdrew the original motion that the clause be passed as printed, and supported Mr. Oakden.

Mr. FREEMAN seconded Mr. Oakden. He thought it was a very wise provision indeed, although he might have a rabbit-proof fence running right against, or perhaps absolutely on his boundary, it would not be put there by the Board for his convenience, and, although it might be a benefit to some extent, they could be sure that the Board would do its best for the whole district.

Mr. NIXON (Gunbar) seconded Mr. Gibson's motion.

Mr. ALISON (Canongbar) supported Mr. Oakden's amendment.

The question of striking out the clause was put and lost.

The CHAIRMAN then put Mr. Oakden's motion to the meeting, and it was carried.

Clause 23 as amended put to the meeting and carried.

#### Clause 24.

##### *Maintenance of barrier-fences.*

24. It shall be the duty of the Rabbit Board to keep in good repair and efficiently maintain—

- (a) every barrier-fence erected by it and every fence converted by it into a barrier-fence; and
- (b) every barrier-fence erected or to be erected at the expense of the Crown within the boundaries of the Rabbit District:

Provided always that—

- (c) where any such fence as last aforesaid is along the common boundary of two Rabbit Districts the Minister shall determine which of the two Rabbit Boards shall be charged with the aforesaid duty, and the Rabbit Board charged therewith shall be entitled to receive from the other of such Boards half of the annual cost incurred in discharging such duty; and
- (d) the Railway Commissioners shall be charged with the duty of keeping in good repair and efficiently maintaining any barrier-fence erected or to be erected at the expense of the Crown along the boundaries of any lands vested in them, but the costs incurred in the repair and maintenance of such fences shall be a charge upon the Consolidated Revenue Fund.

Mr. BACON (Brewarrina) moved that the clause as printed be adopted.

Mr. HERBEN seconded it.

Mr. ATKINSON proposed that after the word "shall" in line 16 the words "if the two Rabbit Boards fail to agree" should be inserted.

Mr. DAVIES (Gunnedah) seconded it.

Mr. BACON (Brewarrina) accepted the amendment.

The CHAIRMAN thought that it was superfluous. If they agreed they would pay, and if they did not agree they would not pay.

Mr. ATKINSON said there were many cases where the Boards might fail to agree.

Mr. T. BROWN, M.P. (Budgerabong), pointed out that clause 23 determined that point.

Mr. ATKINSON then said that he did not give the Minister the right, it only gave him the power to be arbitrator. He wanted to give the Boards the opportunity of determining on their own account. It said "the Minister shall." He wanted the Boards to do it.

Mr. FLANAGAN (Gunbar) said he would support the motion.

The question was put and carried.

Clause 24 as amended was put and carried.

#### Clause 25.

##### *Power of Boards to borrow money.*

25. (1) Any Rabbit Board may borrow on the security of a mortgage, or otherwise on the credit of any land, personal estate, or annual revenues, actual or prospective, belonging to the Board for carrying out the provisions of this Act in its district any moneys not exceeding in the whole the estimated revenues of the Board for four years:

Provided that no money shall be so borrowed except with the sanction of the Governor in writing under his hand:

Provided further that before any money is so borrowed the Board shall, by advertisement in some newspaper circulating within the rabbit district, give fourteen days' notice of its intention to borrow, and shall at the same time state in such notice the amount of the proposed loan, the rate of interest to be paid in respect thereof, the time, place, and manner of payment of the principal and interest due thereon, and the nature and estimated amount of the proposed security for such loan; and until the said loan is repaid the Board shall levy and collect a rabbit rate of not less than two-thirds of the maximum rate authorised by this Act.

No loan shall be for a longer period than eight years.

The Colonial Treasurer may, on behalf of the Crown, guarantee the repayment within the period for which it was granted, of a loan to a Rabbit Board, and in case of default by the Board in repayment within the period aforesaid, the loan or the unpaid balance thereof may, in the discretion of the Colonial Treasurer, be paid out of the Consolidated Revenue Fund or the General Loan Account, but may be recovered from the Board as hereinafter mentioned, and shall thereupon be returned to the Consolidated Revenue Fund or General Loan Account, as the case may require.

(II) After default for the period of three calendar months made by any Board in the payment of the principal sum and interest secured by any mortgage, deed, or bond made hereunder or purporting to be so made upon the rates and other revenues of the said Board, it shall be lawful for the mortgagee to make application to the Supreme Court that a receiver of the said rates and other revenues of such Board may be appointed. And when appointed under the direction of the said Court such receiver shall pay over to the said mortgagee from and out of the produce of such rates and revenues at such times and in such proportions as may be ordered by such Court the sum which such Court has found to be due to the said mortgagee under the said mortgage deed, and the said receiver shall in all respects have the same powers and be subject to the same obligations and liabilities as a receiver appointed under the equitable jurisdiction of the said Court, and shall continue to receive the rates and other revenues of such Board so mortgaged as aforesaid, and to pay them under such direction until such time as the mortgage debt has been fully paid off.

If under the guarantee hereinbefore provided the said debt, or any part thereof, has been paid out of the Consolidated Revenue Fund or General Loan Account, the Minister shall thereupon have the same rights as are given by this subsection to the mortgagee.

Mr. GIBSON (Hay) proposed that the clause be accepted as printed.

Mr. FREEMAN, looking at the second line, said he could not see what security was to be offered. It seemed to him that the only security they had to offer were the barrier-fences which they might erect and the rates.

Mr. FLANAGAN (Gunbar) would second Mr. Gibson's motion.

Mr. ALISON (Canonbar) said that personally he had hardly expected that they would make the progress they had made that morning, and he had not gone into this clause as closely as he desired, and they should adjourn now to give them time to think over it.

Mr. GIBSON (Hay) had not been certain about coming forward, and then he had moved it *en bloc*. This dealt with perhaps a million of money, and they should consider it carefully.

The CHAIRMAN said he hoped that every delegate to the Conference had carefully considered and read through the Bill before this.

Mr. ALISON (Canonbar) thought they could hardly have worked it out and be ready for it suddenly; as it had come on he thought they ought to adjourn this until 2 o'clock.

Mr. LAURENCE (Balranald) would like to know if the Board would become responsible personally for any money borrowed outside the rates.

The CHAIRMAN said that if they borrowed it legally they would not be responsible, but if they borrowed it illegally they would be responsible.

Mr. OAKDEN said he was against giving the Boards the power to overload them with increased taxation. He moved that the clause be struck out.

Mr. ROSS seconded Mr. Oakden. He thought the Board should not have the power to borrow so much money as four years' revenue. They could see by the experience of other Boards that it was a very dangerous way to get money. The Government should provide it in some other way than this. They should not elect men on this Board with power to anticipate the revenue of four years.

Mr. ALISON (Canonbar) rose to support the view taken by Mr. Ross and Mr. Oakden. He never liked this clause. It allowed a Board, appointed for one year, to mortgage the revenues of a Board for four years. He thought that they should not be allowed to anticipate their revenue for one year. Let them pay as they go; it was a good old system. The clause did not prevent them borrowing for wire-netting. Of course he would not support it if it had that effect. He thought it advisable to have some way of raising money to allow private owners to fence in their holdings, and he did not regard it as possible if this clause was struck out. He thought we should have some clause, and he favoured Mr. Brown's proposition in regard to wire-netting in place of this clause. He thought Mr. Brown's proposition much more likely to meet this case.

Mr. GIBSON (Hay) said that he would point out that all works in their initiatory stage generally involved a considerable amount of expenditure. The power to borrow money was given to Municipal Councils. He thought it was necessary, if they were going to carry out a system of local control, that the body who was appointed should have power to go to this extent of four years. It was not very much, four years' money, and to a large extent it would be for the barrier fences, not for individual holders interests, but for the interests of the people in the whole district.

Mr. ATKINSON said they should take up the position of the Government and spend the money when it was voted.

The CHAIRMAN did not see how the Minister was to advance the money without getting borrowing powers, without any security whatever. He did not see how they were going to ask the Minister to lend them money for wire-netting without security, and the only way they could give security was by giving the Board power to borrow. The difficulty always had been in advancing money for wire-netting. There had been no local body to advance the money, and to look after their interests. He thought they could trust these men, who were administering the Stock and Pastures Act, with the power of borrowing, for carrying on, according to law, the actual administration, and the advancing of money to settlers within their district for wire-netting.

Mr. ALISON (Canonbar) said that if the annually-elected men spent all the four years' revenue at once, the new settlers would have no power to get any money at all.

The CHAIRMAN said he was only putting his own view of the matter. They might have different views. It would be damaging the usefulness of the Pastures and Stock Board if they struck it out.

Mr. OAKDEN'S amendment, "That the clause be struck out," was put to the meeting and lost.

Mr. BACON (Brewarrina) asked if it was competent to move a fresh clause to take its place. It seemed to him that it was too drastic. He thought they had gone ahead too fast.

The Honorable B. CARINGTON (Jerilderie) said they had emasculated the Bill.

Mr. BACON (Brewarrina) said that instead of the Board being able to borrow four years' revenue, they would borrow two years' revenue.

The CHAIRMAN said that he could not take that now. Mr. Bacon must prepare a new clause and propose it later.

Clause

## Clause 26.

*Rabbit Board may supply netting, &c.*

26. The Rabbit Board may purchase wire-netting and other materials required in the construction of a rabbit-proof fence, and also any machinery, plant, or substances for the destruction of rabbits; and may enter into contracts for the sale or letting out thereof to the owner of any private holding or lands for use within the Rabbit District upon such terms as may be agreed upon in writing: Provided that where any sale or loan as aforesaid is made upon terms one-fourth at least of the price shall be paid on delivery of the articles sold or lent, and any money owing to the Board in respect of the sale or loan shall be a charge upon all the lands within the district owned by the person to whom the sale or loan has been made, in priority to any estate, right, title, or interest other than the estate, right, title, and interest of the Crown.

Mr. T. BROWN, M.L.A. (Budgerabong), proposed that clause 26 be struck out, and that in place of it the following clause be inserted,—“That the Minister be empowered to purchase wire-netting and other materials necessary for the construction of rabbit-proof fences; also any machinery, plant, or substance required in the destruction of rabbits; and may contract to sell or let same to Rabbit Boards or private holders upon the following terms:—

- (a) One-tenth of total cost, in the case of a sale, on application, and 5 per cent. on total cost, thereafter to be apportioned as follows:—4 per cent. interest, and remainder to be placed to a sinking fund for the purpose of discharging indebtedness to State by a system of deferred payments.
- (b) The value of the netting thus provided be secured to the Minister by a first mortgage on the land so protected.
- (c) The netting to be erected within twelve months after delivery has been taken.
- (d) The Minister to have discretionary powers as to how such advances are to be made.
- (e) The letting of any machinery, &c., to be a matter of agreement between the Minister and parties interested.”

He thought the Minister should have the power to raise money for letting out wire-netting. He did not hold very strong views on the terms on which it should be let out. He simply desired that those terms should be as liberal as possible, so that those interested might take advantage of it. He was only desirous of having the principle affirmed and was quite prepared to accept an amendment. The stand he took was, that to cope with the rabbit pest, particularly in the more scattered districts, and where the pest was now growing and becoming a menace to the settled districts, wire-netting should be used, and while barrier-fences afforded a certain amount of protection it was by no means sufficient, and the smaller the areas the greater the protection and the nearer they came to getting rid of this plague. In the western part of the Central Division, where the rabbits were the most prevalent at the present time, there were numbers of small holders holding from 10,000 acres to 2,500 acres, and these men were settled down in the midst of vast areas of abandoned Crown lands, and their only hope under any legislation was to fence in their holdings and to kill the rabbits within those holdings. At the present time they were trying to keep the rabbits down by killing, but they were not killing the rabbits that were bred within their own holdings, but the rabbits that came upon their lands from the abandoned areas around. Now, if they could assist those men to fight the rabbits on the small areas, and gradually work on by extending the fences they would gradually get the rabbits under. Some men fence in the holding with netting, and they were in a very different position to those who were not able to do it. There was an instance in the Melrose district. There were a number of 2,560 acre block men in a vast area of abandoned country, some of it practically abandoned to the rabbit and wallaby pest. The men ought to have been enabled to enclose their holdings. There was a selector out there who held second rate land, but, by enclosing, he has been able to carry ninety per cent. of fat sheep to send to market, and the surrounding men on the same area were only able to carry five to seven hundred sheep instead of two thousand, and their holdings were becoming worse and worse, as their feeding grounds were depleted by the millions of rabbits that crowded in from the surrounding lands. These men were not able to get this netting on easy terms, and if they passed this measure they would go a long way towards solving the rabbit problem.

Mr. LITTLE (Bullock Creek, N.) seconded the motion. He would like to point out that they also expected to be able to cope with the wallabies, as their country was infested from the Parkes district, and was completely eaten out by them. From a small portion of 160 acres they had taken over 1,000 wallabies. The whole country was taken possession of, and they had increased in such numbers that it was impossible to get rid of them. Their only hope of contending with them was by getting wire-netting on easy terms from the Government.

Mr. GIBSON (Hay) said that this matter was one he was asked to bring before the conference, if it had not been brought forward by anybody else. There were a large number of men in his district in the neighbourhood of abandoned country, badly infested, and it was all very well for them as a Conference to propose Rabbit Boards, and to propose modes of assessment, but the best thing to do was to try to keep the people on the land. They should assist the people who took up these lands prior to rabbit legislation, who were receiving no benefits from any re-appraisements which were now taking place, in which the devastations caused by the rabbits were a factor, and the men were paying higher rates than the lands were now worth. These men have sunk their all on their property, and they were just struggling on from day to day in the hope of some concession being granted, such as the mover of the resolution had shadowed forth. If they gave these men wire-netting they would ask nothing more. They would be quite satisfied that it should be made a charge on the land, they did not ask for a free gift of the netting. They would be able to pay it back by instalments, and as the Crown was the landlord, he certainly thought it would be an advantage to the Crown that their lands should remain in a good tenants hands. If the men who had sunk all their money on these properties had to go under, who was going to take their place except under very great concessions. The best concession, and he thought the only concession that could be given to a lot of holders, to large as well as small holders, was that the Government should find the netting, and let them have it on easy terms.

Mr.

Mr. ALISON (Canonbar) supported Mr. Brown's proposition. He would knock out that part where it said "payment for interest, &c." He said they were all tenants of the Crown. The general body of the people were as interested as the landlord in keeping this pest down, and he thought the people would voluntarily spend their money in endeavouring to improve the public estate. The State ought to pay its portion and contribute the netting, as long as the borrower paid back the principal. He thought it would be as well to eliminate the interest altogether, for the Crown was interested in preventing the spread of the pest.

Mr. FLANAGAN (Gunbar) supported the motion. Of course they knew circumstances altered cases all over the Colony. Some delegates thought that wire-netting was not requisite. Perhaps not in some parts of the country; but he could say this, that in his locality they commenced to grow wheat a few years ago, and they thought they could do it without wire-netting, but he had seen the rabbits eat as much at night as a reaper and binder took off in a day. They found it impossible to grow wheat without wire-netting. By borrowing money from their bankers some of them succeeded in wire netting 500 acres, and some up to 2,000 acres. There was a delegate there who cultivated 2,000 acres. He was more beneficial to the country than any wool-grower present. Mr. Harpur, of the Railway Department, had told them that 500 acres of wheat were more beneficial to the railways than 5,000 acres of wool. He himself was a wheat and wool grower, and he would say this, that he could produce as much from 500 acres by wheat as from 5,000 acres by wool, and his returns from 500 acres of wheat were more than from 5,000 acres by wool. If the small men had no wire-netting it would simply be a loss of time and money to put them on the soil, for they could not remain there.

Mr. SIDES (Hay) said he knew of an instance where a man had abandoned a run, or, rather, the rabbits had simply put him out of it. It was a property of 12,000 or 15,000 acres, and he was quite within bounds in saying that there were £3,000 spent on improvements on that land. The man had had to leave it. About two months ago that land was offered to him for £1,600, and he would not have it, for the simple reason that to fence it in would be a big expense to him. He had land adjoining it on which he had no stock, because it was overrun with rabbits. There was a necessity for the State to assist the landowners, large and small. There were not many of the large owners in a much better position than many of the small ones. He thought there were very few who would say "no" to the State assistance. They knew very well they had to put their own hands in their pockets and find the wherewithal there when they wanted assistance. That 4 per cent. should be done away with. Let them have actual cost. If the State did not assist, it would simply shut up the means of progress of a coming and a great country. The rabbits had come as a great flood, not as a wave. A  $1\frac{1}{2}$  inch mesh was not a rabbit-proof fence. Rabbits, when they were not fed, got small; they got small themselves when they did not get enough to eat.  $1\frac{1}{2}$  inch was quite small enough. Unless Parliament did something like this they might as well shut up the Parliament House, or not build the new one they were talking about.

Mr. VARCOE (Hillston) had great pleasure in corroborating the remarks of the previous speakers. He considered that this was the most important feature they had come there for—in fact, it was all they wanted. If they could only get this, it would not matter if they had no Rabbit Bill at all. It would not only be the salvation of many who were now struggling under a forlorn hope, but it would also be a stimulus towards encouraging people to settle down on the present abandoned Crown lands, turning them from a wilderness into smiling farms. He supported the motion.

Mr. GORMAN (Berrigan) had much pleasure in supporting Mr. Brown's amendment. He merely differed from him on a point of detail. He certainly did not agree with some of the speakers that the whole of the burden should fall on the State. He understood, from Mr. Alison's remarks, that he would not charge the settler any interest. He considered interest should be borne also. He certainly felt that if the State got rid of the rabbits on their own runs, and assisted the settlers by lending money for netting, and charging a reasonable rate of interest—say, 3 per cent., with a sinking fund of 5 per cent.—that was all they could expect. In Victoria the Shire Councils procured the wire-netting, and the settlers had to pay a higher percentage than that. It had been found to work well there.

Mr. STINSON (Coolamon) said that this was a very important matter. It was a very vital point with the Government. If all the different Boards applied for money it would mean an enormous expenditure. The Minister had told them that he would be only too pleased to come and join them in their deliberations. He thought it would be a very wise thing to avail themselves of that offer, and ask his advice upon this point. He would be able to help them materially. He would be able to offer suggestions to them, which would be of great value. Without his advice, they might pass resolutions which the Government would not accept, interested, as they were, to a great extent.

Mr. DAVIDSON (Condoblin) rose to support Mr. Brown's motion. He represented a district which was badly infested with rabbits and wallabies. On the Crown land adjoining the holdings there was a perfect wilderness of scrub. It would be almost impossible to destroy the rabbits and wallabies on this land, and, unless wire-netting was supplied to the farmers and settlers in that district, they would very soon have to abandon their holdings altogether. Within a radius of 20 miles from their Post Office there were eighty settlers struggling against this terrible pest. They had wallabies by hundreds and thousands. In one day they had burnt 6,000 scalps that had been collected in a very short time. Something must be done, and he was sure, from what the Minister had said, that he was anxious to settle people on the land.

Mr. BACON (Brewarrina) was in thorough accord with Mr. Brown. He thought it would be better to pass the clause, and then leave the matter to the Minister. They might leave the interest open. This was a matter upon which the Minister's views should be taken. He would point out that this resolution affected a lot of waste land in the Eastern Division, which was not generally taken into account, and which was infested with wallabies and native-dogs, and the latter were a very serious pest in some districts. He had great sympathy with the men who had pushed out into the wilderness, and had endeavoured to make two blades of grass grow where there had been but one. He wished them every success, and that they might go on and prosper. They had not only tried to grow two blades of grass, but also wheat, and they deserved success.

Mr. LAURENCE (Balranald) said there was one thing he would like to mention, and that was, from the experience they had had in the past of the Minister buying wire-netting to enable the holdings to be fenced in, they had found that he had paid far more than the private individuals themselves would have paid. They, themselves, knew best where to buy it, and how to get it on to their land. The Minister had bought the netting in Sydney, and in different places, and the enormous cost of carriage was added to the expense

expense of the netting, and the people therefore could not take advantage of this. The people should be allowed to buy netting of the best description as recommended by the Conference, and the Minister should be asked to contribute one half of the cost of erecting the fence.

Mr. NIXON (Gunbar) had much pleasure in supporting the resolution proposed by Mr. Brown. There was no doubt that where the areas were not too large this would be very beneficial.

Mr. BRETT (Urana) wished to know if he was in order in proposing an amendment. He begged to move, "That, as the Minister very kindly offered to assist them, and as this was a very important matter, he should be asked to attend before they decided the matter." The Minister was the largest land-owner amongst them, and it was only fair that he should be present.

Mr. FREEMAN thought the best way out of the difficulty would be to pass the clause as it stood, and then to allow any amendment in the rate of interest to come in afterwards.

Mr. BRETT (Urana) said he did not think it was fair for them to pass an important amendment like that when the principal man who was interested was absent.

Mr. TAYLOR (Lands Department) proposed to put in after the word "Minister" the following, "with the consent of the Stock and Pastures Board."

The question of striking out clause 26 was put to the meeting and carried.

The question of substituting Mr. Brown's amendment as clause 26 was put to the meeting and carried.

When the vote on Mr. Brown's amendment was being taken, Mr. Alison asked the Chairman if he would be in order in submitting an amendment in the afternoon with regard to the interest, and the Chairman replied that he would.

The CHAIRMAN then reported that he would not be able to be present in the afternoon, and would be glad if they would elect some other gentleman to take the chair.

On the motion of Mr. ALISON, Mr. Oakden was elected Chairman unanimously.

The Conference then adjourned until 2 p.m.

On resuming after lunch, Mr. Oakden took the Chair at 2 p.m.

Mr. T. BROWN, M.L.A. (Budgerabong), wished to know whether they had yet determined the amount of the levies under the Rabbit Act, because he thought that was an important matter, to enable them to decide with regard to the constitution of the Board.

The CHAIRMAN pointed out that in the Bill it was provided that the maximum levy was to be  $\frac{3}{4}$ d. per sheep, according to the stock returns. The levy might be less, but it could not be more. The next business before them was the adjourned consideration of the Honorable Rupert Carington's motion.

Mr. LESLIE (Forbes) said he had intended to ask the ruling of the Chair again with reference to whether they should proceed with that resolution, unless the clause which had already been passed, providing for eight members to constitute the Board, was recommitted; but he did not desire to place Mr. Oakden in the invidious position of giving a decision contrary to Mr. Lakeman's ruling. He would therefore move, "That this resolution stand over until Mr. Lakeman's return to the Chair."

The CHAIRMAN said he would ask the Conference not to put him in the position of, perhaps, giving a different ruling to Mr. Lakeman's on this matter. Either the discussion should be adjourned until the return of the Chairman, or he should not be asked to give another ruling.

Mr. WILKES (Broken Hill) moved a further adjournment until the return of the Chairman to the Chair.

Mr. FLANAGAN (Gunbar) seconded it.

The Honorable RUPERT CARINGTON (Jerilderie) begged to move, "That this motion be considered now."

Mr. BROOKE (Boggabri) seconded.

The Honorable Rupert Carington's amendment was put and carried by 20 votes to 14.

The adjourned discussion of the Honorable Rupert Carington's motion, "That the following words be an addition to clause 5, as amended," was then taken: "For the purpose of administering this Act, only two members be added to the existing Sheep and Stock and Pastures Boards, such members to be elected by the stock-owners and other persons taxed under this Bill; each stock-owner or tax-payer to have only one vote."

Mr. ALISON (Canonbar) said he now understood this motion, and he wanted the other members to clearly understand what it implied. The Stock and Pastures Board now consisted of five men elected by the sheep-owners, and three men elected by the large stock-owners. He understood that the Honorable Rupert Carington's proposal was that they should remain as at present, and that there should be two additional men who should only act on the Rabbit Board, and who should be voted for by every person who paid towards the Rabbit Fund, and that each person who voted for the Stock and Pastures Board should have only one vote for these two men. It would save a lot of trouble if this motion were carried. It would leave the Pastures and Stock Act as it was, it would leave the Sheep Diseases Act as it was, and for the purposes of the Rabbit Act, which they were now considering, it would enable them all to act together, with the addition of two men who would be elected by everybody who paid taxes toward the Rabbit Fund. It would not confuse the other Acts in any way. He was inclined to think that on the whole, it would facilitate the working of the Rabbit Act. The only difficulty he saw about it was this: they had a distinct assurance about it yesterday from the Minister that the Crown must not expect to come in as an ordinary ratepayer, but they must have some arbitrary representation on the Board. He could hardly understand how the Crown was to be represented under this motion. If the Crown nominated one or two representatives, the Board would be swelled to eleven or twelve. If the Honorable Rupert Carington could explain some way out of that difficulty, his decision would be much facilitated. If they had two extra members under this motion, and two representing the Minister, it would be twelve. That was a considerable number to pay for. Regarding the franchise, every one who was a taxpayer under this Bill, even if he only paid taxes up to 2s. 6d., would have a vote on those two extra men, and the franchise for the other members would remain as before.

Mr. WILKES (Broken Hill) wished to move an amendment: "That, for the purposes of this Act, the meaning of the Pastures and Stock Boards shall be the Pastures and Stock Board under the Pastures and Stock Act, with the addition of two members appointed under this Act by the Governor-in-Council on the recommendation of the Minister." His reason for moving this was that the Minister must be represented. He was as much for the small owner as any of them; but he could not stand there and see them go by at  
the

the expense of the big owner, who was most interested. He could produce figures to show that the small owners at the present time outvoted the big owners on the Stock and Pastures Board, and the big owners had no say. They had been told by the Minister that the Crown must have representation, and it was only right that he should have representation. He had spoken against the ways and means of carrying out the Act, but he was never against the Minister having representation. The Minister, however, should not be over-represented. The Pastures and Stock Act gave the power to tax unstocked runs, and a run within the meaning of the Sheep Act was 40 acres. They had got the franchise low enough when it was brought down to ten head of large stock, and if the small owners of under 40 acres could not trust the Minister to look after their interests, then they could not get a Bill at all. This amendment of his would make things as plain as could be. It would save trouble, and yet give representation to every class; and if a man had less than ten head of stock in the country he would have very little interest in the rabbit question.

Mr. WILKES' amendment lapsed for the want of a seconder.

Mr. T. BROWN, M.L.A. (Budgerabong), said it had been decided to place the whole of the control of this Bill under the Stock and Pastures Board; and, from a statement which had been made in reply to his question, he understood that this Rabbit Bill gave additional powers of taxation equal to those exercised under the Diseases in Sheep and Pastures and Stock Acts. The powers of taxation under this proposed Bill, by the resolutions of the Conference already carried, were equal to what obtained under those two Acts in their present operation. Now, that would add very considerably to the powers of this Board, and it brought in a large number of other holders, who had not so far been called upon to pay any form of taxation under the existing Acts, because under this Bill they brought in unoccupied lands, and assessed them as carrying so many sheep to the acre; and they also assessed cultivated land, not carrying stock, as carrying so much stock to the acre. And though these lands are not taxed under the Acts which constitute the present Board they will be taxed under this proposed Bill, and it has been generally conceded that in order to give fair representation all round, the basis of the franchise should be enlarged; and what they had to consider now was how to enlarge it. Now, he wished to invite their attention to the franchise as it stood at present. The Stock and Pastures Board consisted of eight members, three of whom were elected by the holders of large stock—horses and cattle—and five elected by the owners of sheep. These members, elected by the holders of different stock, constituted that Board, and had different powers on it, and it was now proposed to add the administration of this Act to those powers. It was now desirable to broaden the franchise so as to bring in others who had not the right to vote under these Acts. Now the Honorable Rupert Carington proposed to add two members to this Board, and so far as those two members were concerned, to have them elected on the one man one vote principle, without any reference to stock. Under the present franchise the holder of 5,000 head of large stock had the right to four votes, and the holder of 30,000 sheep had the right to four votes also, and now under the Honorable Rupert Carington's proposition they would have two further votes. How would the small holders stand? They would have the two votes under the one man one vote principle, and then if they had a less number than 500 sheep or ten head of large stock they would have only one vote. The most that any small holder would have would be four votes, while some of the large holders would have ten. Under the conditions of this Act they should broaden the basis of representation, considering the fact that they would double the amount of taxation. Let them broaden the basis under the Pastures and Stock Act and under the Sheep Act, particularly under the Sheep Act, so as to bring in a large number of taxpayers under this Bill who would be excluded from participating in the franchise if something like this were not done. Then there was the representation, which they must be prepared to give to the Minister on those Boards. They required the Government to come in and bear an important share of the expense which was necessary to bring the rabbit plague under, and to enable the Rabbit Boards to carry on their work effectively. There was not a bit of use in the Boards trying to cope with this question so long as the stock routes, &c., were left as No-man's Land, and the plague allowed to flourish there. They must bring the Department in and make a provision that the Department should bear a fair share of the expense of clearing those lands. The Minister had distinctly told this Conference that certain powers of representation on the Board charged with the administration of the Act must be given to the Department. He could not go to the general taxpayer and ask for a contribution towards funds which would be expended in this way unless he had a voice in that expenditure, and the only way out of the difficulty that he could see was to allow the Minister to nominate the Chairman. They could take it for granted that the Minister would only nominate the best man for the position of Chairman, and he would be of considerable service in helping the other members in dealing with this question. It would maintain the dignity of the Department, and he contended that it would in every way strengthen the position of the Board, and he thought they should make provision in this constitution for the Minister to have the right to nominate the Chairman on those Boards. It need not be elaborated, but there would be extended powers given to those Boards which would necessitate something in the nature of a permanent Chairman, and he thought—judging from the manner in which the Land Board Chairmen had been appointed—they had a guarantee that the Minister, to whom those powers were given, would appoint proper and good men to those positions, and would be in a position to help the Boards to deal with this important question. It might be said that one member of this Board should be elected on the rabbit basis of taxation. He was not particularly strong on that, because he did not want to see the expenses of the Board eaten up by too many representatives, but the notice of motion he gave during the morning would meet the situation as far as it was in his power to solve it. He wished to move, now, "That, for the purposes of this Bill, the constitution of the Stock Boards be altered so as to provide for—(1) The appointment of a Chairman by the Governor; (2) That one additional member be elected on an equal franchise by all contributors under the Rabbit Act assessments; (3) That three members be elected under the Stock and Pastures Act as at present provided, with a minimum voting power of five head of large stock; and (4) That five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 100 head of sheep." This reduced the voting power from 500 sheep to 100 sheep so as to bring in the small men, and it was the best way out of the difficulty.

Mr. ALISON (Canonbar) said that this was an original motion, and he did not think it could be dealt with until the Honorable Rupert Carington's motion had been dealt with. If it came in as an amendment they should have to take it and debate it from beginning to end as an original motion. He thought the best way to arrive at a decision on this matter would be to have all these different propositions printed, when

when they might see what they meant; it was very difficult for them suddenly to gather what they meant. He would like to have it in front of him, so that he could tell what it was. If they accepted it as an amendment, it would be advisable to have both motions printed and put before them in the morning, or else they must discuss the motion from beginning to end.

Mr. T. BROWN, M.L.A. (Budgerabong), submitted that if the Chairman ruled that his motion was an original motion, and not an amendment on the Honorable Rupert Carington's motion, in the event of the Honorable Rupert Carington's motion being carried, it to a certain extent fixed the basis of the constitution of this Stock Board, and so disposed of his amendment as a motion altogether. He, therefore, submitted that it must be taken as an amendment to the Honorable Rupert Carington's motion.

Mr. GIBSON (Hay) seconded Mr. Brown's motion.

Mr. T. BROWN, M.L.A. (Budgerabong), said it was a very important proposition, but it would be better if they could now have these separate motions postponed and printed, and have them to consider in the morning.

The CHAIRMAN said that he did not wish to rule these amendments out, for he did not wish to stifle discussion on such an important matter.

Mr. BROOKE (Boggabri) wished also to move an amendment on this resolution. He quite agreed that it should be postponed until the morning, so that they could have the whole of the day before them. As it was now, Mr. Brown was proposing really to destroy the franchise of the Pastures and Stock Act and the Sheep Diseases Act. He thought the original Bill itself would be better. Under the original Bill they proposed to have three members elected by the Pastures and Stock Board. He proposed now, "That they should have four members selected by the Pastures and Stock Board, and the Minister should elect one, which would make five." This would do away with the enormous expense of having twelve members.

Mr. BACON (Brewarrina) moved that the debate on this matter be adjourned until the next morning.

Mr. FLANAGAN (Gunbar) seconded it.

Mr. BACON (Brewarrina) said that Mr. Brown's amendment raised fresh grounds, and it dealt with matters which were not included in the Honorable Rupert Carington's motion.

Mr. WILKES (Broken Hill) supported the amendment. He claimed to have as much intelligence as a few of them, and his memory could not carry all of it. He would like to see it in black and white.

Mr. GORMAN (Berrigan) did not know whether it was necessary for him to propose an amendment on Mr. Bacon's motion. He thought they should go on with the business. He opposed the amendment. He thought it was a most important question, and, as many of them would probably be leaving on the next evening, and the Conference would probably adjourn at 12 o'clock, they would not be able to give their vote. There was no necessity to arrive at a definite conclusion that evening, but they could go on discussing it, and they might go on the next day and solve it.

Mr. FREEMAN supported Mr. Gorman. He thought it was a most important matter, and although it might not be decided that night, it ought to be discussed freely, and then postponed until the next day for a vote or division.

The Honorable RUPERT CARINGTON (Jerilderie) said he would like to point out that a few minutes ago it had been decided to go on with this motion.

Mr. ROSS (Hume) thought this was a very important question, and he agreed with what Mr. Brown had said, but he had not got a thorough grasp of the question, and it was important that it should be put before the Conference. Half of them did not know exactly what they were doing. It was a question upon which he would like to say something, but he would not be justified in discussing it, unless they had copies of it put before them.

Mr. BROOKE (Boggabri) said, a few minutes ago a motion was put to go on with the business; he voted to go on, but since then half a dozen amendments had been brought forward, and they were in a different position now. That was his reason for moving for the adjournment. He thought it was the same with all of them.

Mr. VANSTON (Goodooga) thought this matter deserved very great consideration, for the small man must not be a football. The small man was a cheap barrier against the rabbits, and he should have the franchise.

Mr. GIBSON (Hay) said he was leaving Sydney that night, and others must also, and he thought that the Conference should meet them, and go on with this discussion.

Mr. ALISON (Canonbar) gave notice that when the discussion came on he wished to make an amendment.

The motion for adjournment of this clause was then put to the Conference by the Chairman, and carried by 23 votes to 14.

Mr. ALISON (Canonbar) gave notice that he would move next day a resolution to this effect,— "That the voting power under this and the Pastures and Stock Protection Act, and the Sheep Act, be on a similar basis, and that the said basis be one vote for every 250 sheep, or ten head of large stock; that the Government nominate one representative, who shall not necessarily be the Chairman."

Mr. BROOKE (Boggabri) gave notice that he would move the next day, "That clause 5 be omitted, with a view to the insertion of clause 6 in its place, with the following amendments: In lines 1, 9, 16, 18, page 4, insert the word 'four' instead of 'three'; lines 24 and 26, page 4, insert 'one' instead of 'two'."

Mr. ALISON (Canonbar) said that in clause 26 (Mr. Brown's clause passed that morning) he would move, "That 'four' be inserted instead of 'three.'"

Mr. BACON (Brewarrina) seconded the motion.

Mr. T. BROWN, M.P. (Budgerabong), said that if the Conference would consent to it, he would like to withdraw clause (A) and substitute an amended clause. He explained that he drew up the resolution very hurriedly on the first day, and his idea was very crudely put.

The CHAIRMAN ruled that this would be out of order unless the clause was recommitted.

Mr. GORMAN (Berrigan) moved, "That clause 26 be recommitted."

Mr. T. BROWN, M.L.A. (Budgerabong), supported Mr. Gorman. He wished to know whether it was right that it should be recommitted now, or at a future time when they were able to go through the Bill again.

Mr.

Mr. HEBDEN (Wanaaring) thought it was understood that when this clause was passed they could go through it piece by piece, and pass it as it stood or alter it.

Mr. ALISON (Canonbar) said that they had accepted the principle with the right to amend it. He proposed that the sense of the meeting be taken as to whether it should be taken as a clause, and that it now be considered seriatim.

Mr. HEBDEN (Wanaaring) seconded it.

The CHAIRMAN said that had the clause been passed without any reservation being allowed by the Chairman, he should certainly rule that they go on with the other business, but on those grounds he thought that it might now be considered.

Mr. T. BROWN (Budgerabong) said that in lieu of subsection A he would submit the following:—  
“That repayment of principal, together with interest, be on a similar basis as that provided for the payment of principal and interest on conditionally-purchased land.” That would enable the Minister to fix the interest and adjust the cost to the Department, and what was over and above that would go to the principal, and the effect would be, as the years went by, that the contribution towards the principal would be a yearly increasing one, and the contribution towards the interest would be a yearly decreasing one. That was what he had in his mind when he first drew up the resolution.

Mr. ALISON (Canonbar) withdrew his motion and seconded Mr. Brown's.

Mr. FLANAGAN (Gunbar) supported it.

Mr. BACON (Brewarrina) also supported it.

The CHAIRMAN then put the question to the Conference, and it was carried.

### Clause 27.

#### *Co-operation between neighbouring Boards.*

27. Where the Rabbit Boards of neighbouring rabbit districts agree to co-operate in the erection of a barrier-fence for the joint protection of the said districts, the Rabbit Board which erects such fence shall be entitled to receive from the other Rabbit Board half the cost of erecting the said fence and half the annual cost of maintaining and repairing the same, unless the agreement shall provide for the payment of some other proportion of such costs; and for the purpose of this section the erecting of a barrier-fence shall include only the expense of rendering rabbit-proof any existing fence on the barrier that may be utilised or converted into a barrier-fence, and of erecting rabbit-proof fences in places on the barrier where such may be necessary: Provided always that any such agreement between Rabbit Boards shall be in writing.

Mr. BACON (Brewarrina) moved, “That clause 27, as printed, be adopted.”

Mr. GORMAN (Berrigan) said the resolution they had just passed was too vague. He thought they should put in 1 per cent. It ought to be fixed.

Mr. BACON (Brewarrina) desired that, as many of the gentlemen were going that night, they should get through as much of the business as possible.

Mr. GIBSON (Hay) seconded Mr. Bacon.

Mr. HEBDEN (Wanaaring) said that clause 25, as a whole, had not been passed yet. He proposed “That clause 26, as amended, be passed.”

Mr. GIBSON (Hay) seconded it.

Clause 26, as amended, was put to the meeting and passed.

Mr. BACON's motion, that clause 27 as printed be passed, was then put to the meeting and carried.

### Clause 28.

#### *Disputes between neighbouring Rabbit Boards.*

28. In the case of any dispute arising between the Rabbit Boards of neighbouring Rabbit Districts as to the payment of any money or the doing of any act required to be paid or done under the provisions of this Act, or as to the carrying out of any agreement between them, the matter of the dispute shall be referred to the Minister, and his award thereon shall be final and conclusive to all intents and purposes: Provided that the Minister before making his award may refer the matter in dispute to any Local Land Board for investigation and report.

Mr. WILKES (Broken Hill) moved that clause 28 be passed as printed.

Mr. FLANAGAN (Gunbar) seconded it.

Mr. FREEMAN proposed that the word “provided” in line 4 down to the end be struck out.

Mr. WILKES (Broken Hill) wanted to know how the Minister was to decide on this; he did not think the Minister had sufficient machinery at his command. The Minister sent for investigation, he did not send for their decision. He must have some machinery for reporting, and he could not expect the Pastures and Stock Board to report to him, for that would be unfair as they would be concerned in the matter. Whom else could it be referred to. He thought it was only right that the Minister should have the right to refer it to some of his own officers, they being better officers than the Local Land Board.

Mr. FREEMAN, in moving the resolution, said he would like to point out that the Minister would have representation on both boards and the matter would be freely discussed, and any disagreement between the two courts could be fairly set out and be referred to the Minister as arbitrator only. If people disagreed and the matter was referred to arbitration, let the arbitrators settle it. Why should we have the delay. This may be an urgent matter and the rabbits might be increasing. They might want to get the wire-netting fences put up, and there might be some little disagreement about it. They might be delayed for six months while the whole matter was referred and discussed by the Local Land Board, and they sent for fences. The whole matter might be delayed for perhaps twelve months before it was settled. The whole matter could be fairly and honestly put before the Minister.

Mr. FREEMAN's amendment lapsed for want of a seconder.

Clause 28, as printed, was put to the meeting and carried.

## Clause 29.

*Rabbit Board may order destruction on private lands.*

29. A Rabbit Board may, by notice in the *Gazette*, specify—
- (a) a date (not being less than \_\_\_\_\_ months from the date of the notice) on or before which the owners and occupiers of all private holdings and lands within the Rabbit District shall respectively commence the work of suppressing and destroying rabbits on all such holdings and lands; and
  - (b) a period during which the said work shall be continued and systematically carried out; and
  - (c) the means (being lawful means and not expressly disapproved of by the Governor) which shall be adopted for the carrying out the said work.

Any such notice, or an abstract thereof, shall also be published in some of the newspapers circulating in the Rabbit District; but any omission to publish the same shall not affect the validity of the notice published in the *Gazette*.

The Rabbit Board may also give to the owner or occupier of any private holding or lands within the Rabbit District a peremptory notice in writing to forthwith suppress and destroy all rabbits on such holding or lands, and to adopt such means for the purpose as may be specified in the notice.

Mr. J. M. ATKINSON said that at line 11 he would move that the word "private" be omitted before "holdings and lands."

Mr. STINSON seconded the motion.

Mr. T. BROWN, M.L.A. (Budgerabong), wished to know if he was to understand that it was the intention of the mover of this amendment that the Board should not have the power to compel the killing of rabbits on lands held privately.

Mr. WILKES (Broken Hill) had an amendment before that. In subsection A the word "months" should be struck out and "fourteen days" be put in.

Mr. WILKES' (Broken Hill) amendment lapsed for want of a seconder.

Mr. WILKES (Broken Hill) altered his motion to "one month."

Mr. BRETT (Urana) seconded it.

Mr. BACON (Brewarrina) thought it should be more than that. He would move that it be "not less than two months." A man might want to get phosphorus and other things, and he would not have time if it were less than two months in many cases.

Mr. J. M. ATKINSON seconded *pro forma*.

Members—Make it three.

Mr. BACON (Brewarrina) said that in deference to some of the members he would make it three months.

The CHAIRMAN then put Mr. Bacon's amendment to the meeting to insert three months, and it was lost by 16 votes to 10.

As the CHAIRMAN was about to put the original motion,

Mr. HEBDEN (Wanaaring) proposed that it be two months, and Mr. Moore seconded it.

The CHAIRMAN then put Mr. Hebden's amendment, and it was carried.

Mr. ATKINSON's amendment, that the word "private" be omitted, was then put and carried by a large majority.

Mr. FLANAGAN (Gunbar) referred to the following words in clause 29: "Any such notice or abstract thereof shall also be published in some of the newspapers circulating in the Rabbit District, but any omission to publish the same shall not affect the validity of the notice." He did not think it should be penal against a man who never saw the *Government Gazette*. He did not object to it appearing in the *Gazette*, but he did not want it to be penal if any landholder did not commence to kill rabbits on any day, unless it was also published in the local paper. He would move that in line 20 the words, "but any omission to publish the same shall not affect the validity of the notice published in the *Gazette*" be omitted.

Mr. VANSTON seconded it.

Mr. LITTLE (Bullock Creek North) thought a personal notice should be served. It would be very much better.

Mr. BACON (Brewarrina) moved that the notice be sent by registered letter. He thought this should be added to the clause; but he would support Mr. Flanagan's motion, and if these words were struck out, he would move that this should be added.

The Honorable RUPERT CARINGTON (Jerilderie) opposed it on the grounds of expense. It would cost 4d. to register a letter and 2d. for the original postage; this would be 6d. on every landowner. Let the proclamation be stuck outside the post office.

Mr. FLANAGAN (Gunbar) accepted Mr. Bacon's addition.

Mr. LESLIE (Forbes) wished to draw their attention to clause 57 in the Act, which made provision for the giving of notice. This, he thought, would cover the whole ground.

The CHAIRMAN thought Mr. Bacon's amendment was not necessary, as clause 57 appeared to cover the whole thing. He would, therefore, put Mr. Flanagan's motion, that these words be omitted, without taking any notice of Mr. Bacon's addition.

The CHAIRMAN then put Mr. Flanagan's amendment, which was carried by 20 votes to 14.

Mr. BACON (Brewarrina) moved that "private" be struck out in line 21, clause 29.

Mr. LESLIE (Forbes) seconded it.

The question was put to the Conference and carried.

Mr. ALISON (Canonbar) moved to insert the following words in line 25, "to destroy to the best of their means and ability" in the place of the word "all" which should be taken out.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out to Mr. Alison that the effect of his amendment would be that the Boards would not be able to carry out this clause. Who could determine "what was his ability" except the man himself, and he might say he had no ability at all. According to the amendment, could the Board step in and carry out the provision? It should be left to the Board to determine whether everything had been carried out properly.

Mr.

Mr. ALISON (Canonbar) did not think that anybody could possibly imagine that they could destroy *all*.

Mr. CUMMING (Hillston) seconded Mr. Alison's amendment.

Mr. GIBSON (Hay) said that if Mr. Alison would simply leave the word "all" out and use the other words it would be better.

Mr. ALISON (Canonbar) moved that the word "all" be struck out.

Mr. CUMMING (Hillston) seconded it.

The CHAIRMAN then said he was very glad they had proposed this. It would be an utter absurdity to say they could destroy "all" rabbits.

The question was then put and carried unanimously.

Mr. ALISON (Canonbar) moved to insert, "use all reasonable effort," for it seemed to him that they must have some limitation. That was all they could ask anybody to do, to use all reasonable effort. They could not compel people to do something which was beyond all reason. He thought there ought to be some safeguard to prevent oppression, and they ought to have some saving clause like this. Did anyone want them to use unreasonable efforts?

Mr. ATKINSON asked Mr. Alison to accept the following alteration "to use such efforts as may be deemed necessary by the Board."

Mr. ALISON (Canonbar) withdrew his amendment.

Mr. ATKINSON moved that the following words "to use such efforts as may be deemed necessary by the Board" should be inserted after the word "forthwith" in line 25, clause 29.

Mr. ALISON (Canonbar) seconded the amendment.

Mr. CUDMORE (Wentworth) moved to omit the word "necessary" from the amendment and to insert the word "sufficient."

Mr. ATKINSON accepted the alteration, and the question was put and carried.

Mr. WILKES (Broken Hill) moved that clause 29 as amended be passed.

Mr. HERBEN (Wanaaring) seconded the motion.

Question put to the Conference and carried.

Mr. ATKINSON moved the adjournment of the Conference until 10 o'clock next morning.

Mr. FREEMAN moved, that as there were only three clauses left they should go as far as part II.

Mr. ATKINSON said he moved the adjournment because clause 30 was so very important that they could not discuss it under two or three hours. They could not do it justice unless they arranged to come back and go on until 8 o'clock.

Mr. CUMMING (Hillston) seconded Mr. Atkinson's motion. He considered that the clause could not be settled under two or three hours.

Mr. BACON (Brewarrina) supported Mr. Freeman.

Mr. T. BROWN (Budgerabong) said they ought now to consider whether they should not devote a little more time to the Bill, considering the amount of work they had to do. They should stay later and sit in the evenings. He thought that if they sat later on that evening they could pretty well finish the Bill.

Mr. DILL (Hay) would support Mr. Brown. He thought they should go on.

Mr. CUMMING (Hillston) said it had been already decided that the Conference should not sit until 5 o'clock. A resolution to that effect, that they should sit till 5 o'clock, had been lost in the morning.

Mr. A. BROWN (Narrabri) said a motion had been carried in the morning that they should adjourn at 4 o'clock. Therefore this motion was quite out of order.

The CHAIRMAN said it had been proposed that they should sit on until 5 o'clock, and it had been negatived.

The CHAIRMAN then put the question for an immediate adjournment. On the vote being taken it was found to be equal, 18 for and 18 against. In view of the decision given in the morning the Chairman gave his casting vote for the adjournment.

The Conference then adjourned until 10 o'clock next morning.

## FIFTH DAY—13TH MARCH, 1897.

Mr. A. LAKEMAN took the Chair at 10.5 a.m.

Notice of motion was given by Mr. Leslie as an amendment on Mr. Brown's amendment, part 2, section 33, that the word "one" be struck out and the words "one and a quarter" be inserted.

The minutes of the previous meeting were read and confirmed.

The CHAIRMAN then said the first business was to decide on the constitution of the Board that would have to administer this Rabbit Act. The first thing the meeting should do was to re-assert who was to administer the Rabbit Act, and how many members there should be. There were a lot of motions on the notice paper, and some members thought it should be one way, but others thought it should be another way.

The Hon. RUPERT CARINGTON (Jerilderie) thought it was most necessary that they should be practically unanimous on this question of the constitution. He was ready to withdraw his amendment if Mr. Brown would alter his amendment in the following way: That for the purposes of this Bill the constitution of the Stock Boards be altered so as to provide for the appointment of a member instead of a Chairman by the Governor, with three members elected under the Stock and Pastures Act as at present provided, with a minimum voting power of five head of stock, together with five members elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 200 head of sheep. If they could agree to that, if they could go to the Minister with an unbroken front, they would strengthen his hands, and Parliament might be induced to carry it through. If Mr. Brown would consent, he would assume it as his own amendment. This was a very important question, and he was very anxious that it should be settled unanimously if it could.

Mr. T. BROWN, M.P. (Budgerabong), said he saw that there was a wide divergence between the views held by different members of the Conference, and he took it that the Conference understood at the outset that they were placing this Bill under the control of the Stock and Pastures Board to administer,

on the understanding that that Board should be reconstructed, as it were, and it had been given to that Conference pretty definitely to understand, that if the Stock and Pastures Board were to have these powers under this Bill, then Ministerial representation of some kind or other must find a place upon that Board. To secure that representation they must reconstruct the Board. It had also been put forward as a necessity to that end, that the franchise of the Stock and Pastures Board should be enlarged, because of the increased taxation powers given under it so as to give the franchise to those who would be called upon to bear this increased taxation. That was the position as he understood it. The Hon. Rupert Carington had endeavoured to go in the direction of meeting that position, but he had not been prepared to go as far as he would like to go. If it would expedite the business of the Conference, and they could agree upon the matter, he would be prepared, if the Hon. Rupert Carington would withdraw his amendment, to withdraw his own, and allow the Hon. Rupert Carington to introduce a motion on the lines that he had suggested, a modification of the two resolutions.

Mr. BROOKE (Boggabri) could not see why they should not go back to the original Bill or modification of the Bill. They had all come to the conclusion that the Pastures and Stock Board should administer the Act. The Bill provided that. In nineteen cases out of twenty no one would ever question the Board; and if they did they would simply apply for an election, and they would have a new Board on new lines. If anybody could show him any reason why they should not utilise the machinery which was offered them in the Act he would withdraw. He thought the wisest thing they could do was to accept the Minister's proposals in the Act.

Mr. CAMERON (Ivanhoe) said that the reason why they should not adopt the lines suggested by the Minister was, that if they did they would have to adopt the franchise which would be objectionable to a very large portion of the Conference.

Mr. BROOKE (Boggabri) said that was only a temporary provision, and if it did not answer satisfactorily they could have an election as provided for in clause 7, and the franchise could be altered in any way the Conference proposed.

Mr. ROSS (Hume) said that when this matter was before the Conference he fully understood that the Stock and Pastures Board were to administer this Act in the same way as they administered the Stock and Pastures Act; but if the Stock and Pastures Board had to run two Acts they might just as well have two Boards. It appeared to be the opinion of the Conference that the franchise of the Stock and Pastures Board should be put lower. He was quite prepared to give every man a vote down to 100 sheep. He would like the Conference to adopt an enlarged vote for the Stock and Pastures Board, and that would enlarge the situation, and the Board could then work the whole thing. He would suggest that the Board was quite large enough with the addition of a Government nominee. He did not see why they ought to have two sorts of members on the Board. Let them look after the rabbits and everything else. He could not support any proposal to put two men on the Board solely to administer the Rabbit Act, because if the Stock and Pastures Board were to work the two Acts independently he would just as soon have two Boards.

Mr. ALISON (Canonbar) said that the position at the present time was that the Honorable Rupert Carington had withdrawn his motion and adopted Mr. Brown's amendment with some alterations. It would then stand something like this, "That for the purposes of this Bill the constitution of the Stock and Pastures Boards be altered so as to provide for (1) the appointment of a member by the Government; (2) that three members be elected under the Pastures and Stock Act as at present provided, with a minimum voting power of five head of large stock; and (3) that five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 200 head of sheep." There was a reduction from ten head of stock to five head. The whole constitution would be simply the present Boards under the Diseases in Sheep Act and the present Boards under the Stock and Pastures Act, and one additional member nominated by the Governor. He would be quite willing to withdraw his amendment, but he thought the reduction to five head of large stock was too low; it would be advisable to retain the ten head. If a man had not ten head of large stock, the probability was that he would be only a carrier, or someone who was not directly interested in land or stockowning. He thought it would be dangerous in the interest of those who were stockholders; and he could not see that there was any difference between the interest of the small and large stockowners. He would be very willing to support the new amendment if that alteration were made. He thought the minimum of 100 head of sheep was too low. The Honorable Rupert Carington had placed it at 200, but he would like to see it put at 250. The maximum taxation of this Act was  $\frac{1}{2}$ d. per sheep, and now a man with 100 sheep would only contribute 4s. 2d. towards the fund. He would sooner let that man off altogether. He should not be taxed at all. It was hardly worth collection. It was not worth bothering a man about, and the lower they reduced the franchise the more danger there would be to stockowners—more danger of bringing in outsiders. A man with 250 head of sheep would contribute 10s. 6d. That was very low indeed, but he supposed it was worth having. If these alterations were made he would withdraw his amendment, and perhaps Mr. Wilkes and Mr. Bacon would see their way to do the same.

Mr. BACON (Browarrina) said he would withdraw his resolution on the notice paper and support Mr. Brown's on the lines advocated by Mr. Alison.

Mr. T. BROWN, M.L.A. (Budgerabong), said that to meet Mr. Alison he was prepared to allow the Honorable Rupert Carington to substitute his motion, and to place the minimum voting power at ten head of stock, and the minimum voting power for sheep to 200, reserving to himself the right to try and reduce it afterwards by amendment.

The Honorable RUPERT CARINGTON (Jerilderie) then moved, "That, for the purposes of this Bill, the constitution of the Stock and Pastures Boards be altered so as to provide for (1) the appointment of a member by the Governor; (2) that three members be elected under the Pastures and Stock Act as at present provided, with a minimum voting power of ten head of large stock; (3) that five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 200 head of sheep."

Mr. VARCOE (Hillston) seconded the motion.

Mr. BACON (Browarrina) thought that the amount had better be fixed at 250 head of sheep.

Mr. ALISON (Canonbar) said that the best means of arriving at this, whether it should be 200 head of sheep, or 100, or 250, was to take a vote at once and settle it.

Mr. BACON (Browarrina) considered that a vote should be taken as to whether 200 or 250 should be put in. This would save discussion.

On

On the question being put, the CHAIRMAN declared it carried that 250 should be inserted in the motion instead of 200. He said that the resolution would then read as under:—"That, for the purposes of this Bill, the constitution of the Stock and Pastures Boards be altered so as to provide for (1) the appointment of a member by the Governor; (2) that three members be elected under the Stock and Pastures Act as at present provided, with a minimum voting power of ten head of large stock; (3) that five members be elected under the Diseases in Sheep Act as at present provided, with a minimum voting power of 250 head of sheep."

Mr. BACON (Brewarrina) said he would also point out the necessity of stating some minimum amount which would be collected on agricultural lands. It might possibly happen that 1,000 acres would be rated at a sheep to 5 acres and the owner would only have to pay on 200 sheep; he would suggest that in no instance should there be a collection on less than 250 sheep.

Mr. ALISON (Canonbar) said that that would be dealt with later on.

Mr. OAKDEN (Cobar) pointed out that they had previously passed a resolution that public lands should be assessed as having a certain carrying capacity, and, under this assessment, the Crown would have the right to vote. He would propose that as under the new clause which was proposed the Government would have the right to nominate a representative, they should have no power to vote for the other members of the Board.

Mr. BROOKE (Boggabri) then asked whether, if this amendment were carried, it would destroy his motion on the notice paper for the recommittal of the clause.

The CHAIRMAN then said that if the Conference carried this amendment, he anticipated that they would vote against Mr. Brooke's motion for recommittal. He would impress upon all the members that the vote he was about to take would really finally settle who was to administer the Rabbit Act. He stated that the Honorable Rupert Carington's amendment was to add the following to clause 5:—

- (1.) The appointment of a member by the Governor.
- (2.) That three members be elected under the Pastures and Stock Act, as at present provided, with a minimum voting power of ten head of large stock.
- (3.) That five members be elected under the Diseases in Sheep Act, as at present provided, with a minimum power of 250 head of sheep.

He then put the question to the Conference whether this addition should be made to the new clause 5, and it was carried by a majority of 28 votes to 5.

The CHAIRMAN then said that the next thing they had before them was the question of assessing the cultivated lands, and their voting power.

Mr. ALISON (Canonbar) said that as he was responsible for the vote that these lands should be estimated on the basis of one sheep to 5 acres, he would say that they should have a vote equal to the number of sheep at which they were rated, with a minimum of 250 sheep.

On the suggestion of the Chairman, Mr. Alison altered his resolution to read, "that where no returns are sent in, occupiers of cultivated land shall have the right to vote for the constitution of the Pastures and Stock Boards, the voting power to be proportionate to the number of sheep at which their lands are assessed, the minimum number of sheep qualifying for a vote to be 250, and that as the Government have the right to nominate a member on the Board, they shall not have any voting power for the other members.

Mr. BACON (Brewarrina) seconded the motion.

Mr. FLANAGAN (Gunbar) said that he would point out that a man with 320 acres would be assessed at 65 sheep, but he must pay at the minimum of 250 sheep.

Mr. LESLIE (Forbes) said he would ask Mr. Alison if he would strike out the word "no." He contended that under the Pastures and Stock Act everyone had to make a return, and, consequently, "no" was misleading.

Mr. BACON (Brewarrina) said that if the previous assessment of a sheep to 5 acres were altered to a sheep to 1 acre it would meet Mr. Flanagan's wants.

Mr. VANSTON (Goodooga) moved that the minimum be reduced from 250 to 100.

Mr. FLANAGAN (Gunbar) said he would second it.

Mr. ALISON (Canonbar) rose to a point of order. A motion had just been passed unanimously or practically unanimously, that the minimum should be 250 sheep. It was purely wasting time to go back again.

Mr. VANSTON (Goodooga) said he understood that Mr. Brown seconded the Honorable Rupert Carington's motion with the right of amendment afterwards.

The Honorable RUPERT CARINGTON (Jerilderie) said that he would move that it be 200 sheep.

Mr. BROWN seconded.

Mr. WILKES (Broken Hill) moved a further amendment that it be one sheep or one head of large stock, and let there be one man one vote.

Mr. WILKES' (Broken Hill) amendment lapsed for the want of a seconder.

Mr. ALISON (Canonbar) said that he did not want to stop discussion, but they had already taken a vote as to the minimum, the decision being for 250.

The CHAIRMAN said that it had been a compromise, and he had allowed Mr. Brown to reserve the right to take a vote afterwards as to the 200 minimum.

Mr. WILKES (Broken Hill) said that he would oppose the resolution reducing the minimum to 200. A man with 2,000 sheep would have four votes. Against what? Every man that owned an acre of land, every man who owned ten head of large stock, no matter whether he was a bullock driver or what he was. They should have some reason in this matter. There had been a lot of clap trap about the big man and the small man. The big man should not be burked. He claimed to be as liberal as any of them, but he thought they were going much too far.

Mr. CUMMING (Hillston) said the whole thing was in a nutshell. They all agreed that there should be a lower franchise. Two hundred and fifty was as near as they could get it, and they must leave it then to Parliament. They could all see from the large numbers in that Conference that they could do very well with a very much smaller number, and there was no need to add to the Boards.

Mr. GORMAN (Berrigan) confessed that he was a little bit mixed as to how they were getting on. He did not hold with Mr. Wilkes that this was a question of small men *versus* big. There were big men in the Conference, and they were able to look after themselves. The small man did not want to outvote the big men at all. If the minimum were fixed to 250, there were a number of small men who would not be

be taxed at all, for without representation there could be no taxation. Some of the worst infested spots in his district belonged to men with only a couple of thousand acres. These men should be taxed. Then there was another point. They had passed a resolution that cultivated land should be taxed at an assessment. Many of the holders had let their lands on the share system, and probably the share men only had a couple of horses and a couple of cows. He presumed that these share men could not be called occupiers.

Mr. ATKINSON said they should be.

Mr. GORMAN (Berrigan) said that he did not think there was anything at all in the argument about the small man outvoting the big. It was simply a question about any man, no matter how small, having a vote.

The CHAIRMAN suggested to Mr. Bacon that he should add some words to his motion, "That every man be taxed up to the minimum."

Mr. BACON (Brewarrina) said that that was what he meant.

Mr. T. BROWN, M.P., said it was thought that 250 sheep should be the minimum voting power. That will mean that a man who returns stock would be taxed at the amount of 250 sheep, and a man who had no stock, but cultivated his land, would return 250 sheep, and would be entitled to the franchise. In order to be entitled to the franchise the holder of cultivated land must have 1,250 acres before he would reach that assessment. He contended that there were holders of less areas than that who would benefit by the Act, and they should be asked to contribute a fair share. In order to bring them in he wished to reduce the voting power, and make 100 the minimum. That would bring in the 640-acre man.

Mr. ALISON (Canonbar) said they would never get finished if they went on in this way. The small men did not escape the operation of the Act. They must destroy their own rabbits, but they would not have to pay any taxes. It simply was not worth while taxing them. There was the same principle of exemption under the land tax and the income tax. The amount to be collected from 100 sheep was not worth while. He did not see why they were so anxious to tax the smaller men, to compel them to pay their 4s. 2d. or 8s. 6d., as the case might be. They had already decided that by a vote, and if he chose to stick to a point of order it could not be raised again except by the consent of the meeting. He had no feeling in the matter. There was no necessity to bring in the men with under 250 sheep, and there was no harm in leaving them out; while, if they were left out, the expense of administration would be very much reduced, because it would cost as much as it was worth to collect the money.

Mr. LESLIE (Forbes) said that the members seemed to think that the Board would have to destroy rabbits. The Board would not. The destruction was to be done by the private owners. The Board would only have to administer the Act. Before the motion was put to the meeting he would like it to be made clear whether it was the intention of the proposer of the motion to increase the maximum voting power. He would be glad to give a man with 100 sheep the power to vote, but the big men should receive a much larger representation in order to compensate them.

The CHAIRMAN then put the question whether the minimum should be 100, 200, or 250 sheep.

The amendment that it be 100 sheep was lost by 23 votes to 11.

The amendment that it be 200 sheep was lost by 22 votes to 13.

The CHAIRMAN then put Mr. Alison's motion, "That where returns are sent in which are below the minimum, occupiers of cultivated lands shall have the right to vote for the constitution of the Stock and Pastures Boards, such voting power to be proportionate to the number of sheep at which their lands are assessed, the minimum number of sheep qualifying for a vote to be 250 sheep; and that as the Government have the right to nominate a member to the Board they shall not have any voting power for the other members."

The motion was carried by 20 votes to 10.

The Honorable RUPERT CARINGTON (Jerilderie) said that in his district they would be taxed twice, as far as he could make out, under this Bill. In his opinion they had made a great mistake in putting it on a stock basis instead of on a land basis.

Mr. ALISON (Canonbar) rose to a point of order. They had settled all that.

The Honorable RUPERT CARINGTON (Jerilderie) said they carried a certain amount of stock and they cultivated a certain amount of land in wheat, but they were able to run a number of sheep in summer on the stubble after the harvest was taken off, and that allowed them to carry a very much greater proportion of sheep than they could otherwise do.

The CHAIRMAN said that could not be gone into without the recomittal of the clause.

Mr. OAKDEN (Cobar) said he thought that they should now extend the franchise in the other way. They should at least give one more vote as the maximum. The limit now in the Diseases in Sheep Act was, for 30,000 sheep, four votes; and he proposed that an additional vote be given—40,000 sheep and over should have five votes.

The Honorable RUPERT CARINGTON (Jerilderie) wished to point out this voting would be partially under the Sheep Act, which provided for that.

Mr. OAKDEN proposed to add to the Schedule of the Diseases in Sheep Act, "40,000 sheep and over, five votes," because they had halved the minimum, and therefore he thought it was only fair to give an extra vote to the people who were the most interested. He supposed that for the hundred votes that had been admitted, they would only get one extra vote under this extra provision.

Mr. LESLIE (Forbes) seconded Mr. Oakden. He thought that the people who paid the largest contributions should have a larger representation than was provided for them. What was proposed was far less than might have been asked for, when they took into consideration the position of the men who held 100,000 sheep, who would return £416 13s. 4d. as against 10s. 6d. each contributed by five men owning 250 sheep, and being entitled to a vote. Mr. Oakden's proposition would place holders of that description in a position to exercise five votes, while the men who paid two guineas as against £416 13s. 4d. would have eight votes. He thought Mr. Oakden had hardly gone far enough in what he was asking for, and he was sure that he was influenced by a desire to conciliate those who did not seem to think the largest taxpayers should have a further voting power. They were all well aware of how it would work, and he thought no reasonable man would object to concede this small increase in the voting power.

Mr. T. BROWN, M.P. (Budgerabong) protested very strongly against this proposal of Mr. Oakden's. He had come there with several others and had agitated for separate Rabbit Boards under a separate constitution, and when they were defeated they were told that it was desirable to place the administration of the Rabbit Act under the Pastures and Stock Board, and for that purpose the franchise of the Pastures and Stock Board would be extended. Now, this would really be a curtailment of the present

present franchise of the Pastures and Stock Board, and would concentrate the voting power in the hands of a few. As far as extending the franchise was concerned, they had only brought it down to the same basis as would accord with the taxes raised. If they passed this resolution, they would place the small holders in a worse position than they were in before.

Mr. FLANAGAN (Gunbar) said he agreed with Mr. Brown.

Mr. T. BROWN, M.P. (Budgerabong) said the members had promised them an extended franchise, and now they wanted to take away all that had been given by increasing the plurality of the vote.

Mr. CUMMING (Hillston) thought that the Act could be left as it was. That would get over all objections. If they lowered it at one end and raised it at the other, their work would be destroyed.

Mr. GORMAN (Berigan) certainly thought that, in a spirit of fair play, if the large holders wanted this increased representation, the meeting should give it unambiguously. In nearly all districts, the small holders were increasing and the large holders decreasing.

Mr. ALISON (Canonbar) said that this could only apply to the very far west, and he thought it would not be of any great importance, even to the large holders, but he did not see that they need object to pass it.

Mr. DILL said, as a matter of fairness, he thought the motion should pass, and those in the meeting who wished to act in a spirit of fairness should vote for it.

Mr. VANSTON (Goodooga) said he thought it was a very large jump from 250 to 40,000 sheep. Out in the west there were many men with something like 1,000 sheep, and these men would only have one vote.

Mr. LAWRENCE (Balranald) supported Mr. Oakden. He thought it only fair that this representation should be conceded.

Mr. OAKDEN (Cobar) pointed out that Mr. Brown was mistaken in thinking that if this were conceded, it would be taking away what had already been given to the small owners. It would only apply in a few districts. It was a very small matter.

The CHAIRMAN then put the question, and it was carried by 22 votes to 12.

Mr. VANSTON (Goodooga) then moved that all holders of over 3,000 sheep should have two votes.

Mr. CAMERON (Ivanhoe) seconded it.

The CHAIRMAN put the question to the Conference, and it was declared carried.

### Clause 30.

30. If any owner or occupier shall neglect or fail to comply with the terms of any notice, whether published in the *Gazette* or given to him in writing as aforesaid, such person may be cited to appear before the Rabbit Board, and unless he satisfactorily explains his neglect or failure, or receives an extension of time to comply with the notice aforesaid, any person authorised by the Rabbit Board may enter upon the holding or land and use all such means and take all such measures and do and perform all and every such acts or things as to him may appear proper or necessary to be done to ensure the destruction of the rabbits upon such holding or land, and shall have free right of ingress, egress, and regress into, over, and across such holding or land for such period as may, in his opinion, be necessary for destroying such rabbits: Provided that—

- (a) entry shall not be made upon any holding or land under the provisions of this section unless and until the Board shall have obtained the consent of the Minister; and
- (b) poison shall not be used without notice being given to the occupier of the holding or land of the intention to use the same; and nothing shall be done in contravention of the Animals Infectious Diseases Act of 1888; and
- (c) the authorised person may at any time withdraw from the holding or land upon payment of the costs, charges, and expenses incurred by him up to the date of such withdrawal; and
- (d) nothing contained in this section shall prejudice any proceedings taken under the provisions hereinafter contained for the recovery of any penalty which may have been incurred by an owner or occupier.

Mr. CUMMING (Hillston) moved, "That clause 30 be passed as printed."

Mr. CAMERON (Ivanhoe) seconded it.

Mr. WILKES (Broken Hill) moved that subsection (a) be omitted.

Mr. FLANAGAN (Gunbar) seconded Mr. Wilkes.

Mr. WILKES (Broken Hill) said that if they had to get the consent of the Minister to go on land, that meant public land, and the Minister would never let them go on to it.

Mr. CUMMING (Hillston) proposed that after the word "*Gazette*" the word "and" be inserted instead of "or" in line 2 of clause 30.

Mr. ALISON (Canonbar) seconded it.

Mr. Cumming's amendment was put to the Conference and carried.

Mr. ALISON (Canonbar) said he must oppose Mr. Wilkes's amendment, but thought that it was decidedly advisable that they should not put all the power in the hands of the Board. He believed in the Boards as a rule, but they should not leave everything to them. He did not believe in the Board going on any holding without having some authority from whom to get permission. The Board could put a man to the expense of £1 per acre, and there should be some reference to the Minister about it. The Minister would want to know what they were going to spend, and so on. It was an enormous power to put into the hands of the Boards.

Mr. LITTLE (Bullock Creek) said he must object to Mr. Alison's opposition, for his experience in dealing with rabbits had been that unless the Boards had full power they could do nothing. They knew the conditions; they saw the rabbits; they knew more about it than the Minister. He should certainly support Mr. Wilkes's proposal. He thought they should give enormous powers to the Boards rather than to the Minister. The Boards were elected upon a free-will franchise. It seemed to him utterly unnecessary to go to the Minister. It might be referred by the Minister to the Land Board before his consent would take effect. They must give the Rabbit Boards full power. The great thing was to take the rabbits in time.

Mr.

Mr. BACON (Brewarrina) said that Mr. Wilkes had taken this up under a misconception. His meaning and intention were very good. He took it that it referred to land that was owned or occupied, and therefore Mr. Wilkes's amendment was unnecessary. It did not refer to public land.

Mr. OAKDEN (Cobar) asked if the Crown was not the owner of the public land.

Mr. WILKES (Broken Hill) said if they curtailed the power and made them go to the Minister, they might as well curtail the Act. The Act was to make destruction compulsory. To get the Minister's consent would take a certain time, and they could not go to the Minister and ask his consent as to whether they were to go on his lands. It would be no use creating a Board unless they had this power.

The CHAIRMAN then put the question to the Conference as to whether these words should be struck out, and it was carried by 20 votes to 8.

Mr. ALISON (Canonbar) said that there was now no power of entry. The whole thing was stultified, and there was no power to get on the land at all.

Clause 30, as amended, was put to the meeting and carried.

### Clause 31.

#### *Board to be repaid expenses.*

31. All costs, charges, and expenses incurred by a Rabbit Board in destroying rabbits upon any private holding or land under the foregoing provisions, shall be repaid by the owner of such holding or land, and until the payment thereof shall be and remain a charge upon such holding or land, and shall take precedence of all mortgages or other charges whatsoever, but shall not take precedence of any debt due to the Crown.

Mr. VANSTON (Goodooga) moved, "That the clause be passed as printed."

Mr. FLANAGAN (Gunbar) seconded.

Mr. BAYLIS (Narrandera) moved "That the word 'private' be struck out of line 2, clause 31."

Mr. STINSON (Coolamon) seconded it.

The CHAIRMAN put the amendment to the meeting and it was carried.

Mr. OAKDEN (Cobar) moved, "That after the word 'owner' in line 3 the words 'or occupier' should be put in."

Mr. CUDMORE (Wentworth) seconded it.

The question was put to the meeting and carried.

Clause 31, as amended, was put to the meeting and carried.

### Clause 32.

#### *Destruction of rabbits on public lands.*

32. It shall be the duty of the Minister to check, suppress, and destroy all rabbits which may from time to time be in or upon public lands, but such duty shall not commence until a reasonable period after moneys have been made available by Parliament for the purpose. The Minister may authorise the Rabbit Board to expend such moneys for the purpose of rabbit destruction on public lands, or may apportion a proportion thereof for expenditure in the erection or repair of barrier-fences, or may make such other arrangements for its expenditure for either or both of such purposes as he may deem necessary or expedient in the public interest.

The maximum sum which the Minister may expend, or of which he may authorise the expenditure, in any Rabbit District for any one year, shall bear the same ratio to the total amount received as Rabbit Rates during that year as the area of public lands in that District bears to the area of private lands therein, and such maximum sum shall be ascertained by multiplying the total amount received as Rabbit Rates by the area of public land and dividing the product by the area of private lands.

Mr. BAYLIS (Narrandera) moved, "That the word 'all' be struck out of line 11."

Mr. OAKDEN (Cobar) seconded it.

The question was put to the Conference and carried.

Mr. WILKES (Broken Hill) proposed, "That all the words from line 20 be struck out." He took this to be a very important part of the Bill. They had made destruction compulsory, and if they left this clause in, it would be like putting a man in the middle of a river and telling him to swim, and then putting 2 tons weight on his feet, so that he could not swim. Where did the Minister come in to destroy rabbits on his land? Of course, he had been tackled by the Minister the other day for saying that he would not destroy; but he maintained that this power would not allow him to destroy. The most he would have would be about £208 on several million acres. Any gentleman who had had any experience in killing rabbits knew that £208 would not deal with a million acres. The Minister's country must be taken to be the worst infested rabbit country. If they tied the Minister down so that he could not pay more than this £208 they would practically see that he would not spend a penny in killing rabbits.

Mr. MORGAN said he presumed that a tax of 1d. per sheep was only for supervision. And he presumed also that the Minister must kill rabbits on his land.

Mr. CUDMORE (Wentworth) said he would support Mr. Wilkes's proposal.

The CHAIRMAN then put the question to the meeting and it was carried.

The Honorable RUPERT CARINGTON (Jerilderie) suggested that a new clause of which he had given notice should be put in here: "That for the purpose of this Act the Minister for Lands for the time being be deemed the owner of all unoccupied Crown lands."

Mr. FLANAGAN (Gunbar) seconded it.

The question of inserting this clause after line 19 of clause 32 was put to the Conference and carried.

Clause 32, as amended, was put to the meeting and carried.

Clause

## Clause 33.

*Private rabbit-proof fences.*

33. For the purposes of this Part, a rabbit-proof fence shall be taken to be—
- (a) a substantial fence which is hung with galvanized wire netting of a maximum mesh of one and a half inch, minimum width of forty-two inches, the wire in the netting being of a minimum gauge of seventeen, and which is furnished with suitable rabbit-proof gates or other appliances at necessary breaks in the continuity of the fence: Provided always that the dimensions of such fence, its height above ground, the depth below ground of the posts thereof and of the wire-netting thereon, and all other details in connection therewith, shall be in accordance with specifications to be published in the *Gazette* by the Rabbit Board; or
  - (b) a fence erected in accordance with the requirements of the Rabbit Act of 1890 whilst such Act was in force; or
  - (c) a fence which is reasonably sufficient for the purpose of excluding rabbits.

And the date when the rabbit-proof fence was erected or the fence was made rabbit-proof shall be immaterial.

The Rabbit Board of the District within which any fence alleged to be rabbit-proof is situated shall, if so required in writing by the owner of the fence, cause the said fence to be inspected; and if the Rabbit Board, after such inspection, is satisfied that the fence alleged to be rabbit-proof is rabbit-proof it shall grant a certificate to that effect; or if not so satisfied shall specify the repairs or modifications which are required to make such fence rabbit-proof; and when such repairs or modifications have been effected the Rabbit Board shall cause the said fence to be again inspected, and if then satisfied that the fence is rabbit-proof, it shall grant a certificate to that effect.

Upon any proceeding before a Local Land Board in respect of a rabbit-proof fence, a certificate by the Rabbit Board that a fence is rabbit-proof shall be *prima facie* evidence of the fact; and evidence in rebuttal shall not be adduced, unless the party intending to adduce such evidence has given to the other party the prescribed notice of his intention to adduce the same.

Mr. LITTLE (Bullock Creek) said, that as Mr. Brown was absent he would move the clause given notice of by Mr. Brown, "That the clause be altered to read that the minimum width be 36 inches instead of 42 inches."

Mr. FLANAGAN (Gunbar) seconded it.

Mr. ALISON (Canonbar) supported it. He said it was no use to put the public to more expense. The question was then put to the meeting, and the amendment was declared lost by fifteen votes to thirteen.

Mr. LAURENCE (Balranald) proposed that the gauge be altered to eighteen; it was much cheaper and quite as effective.

Mr. CUDMORE (Wentworth) seconded the proposal.

Mr. LESLIE (Forbes) said he had given notice of a motion to the effect, that "1½ inch" be struck out and "1¼ inch" be substituted. He thought 1½ inch was no good. If fencing was to be of any effect, they must reduce the size of the mesh; and as the Conference had carried resolutions, asking the Minister to lend the money for the purpose of making fences to make the holdings rabbit-proof, the netting that was supplied must be effective or else the money would be wasted. He thought the Conference should affirm the necessity that that money should be expended in such a way that the netting would be as far as possible a total bar against the rabbits getting through. He might also point out that it would not in any way affect the fences which were already in existence. This new provision would only apply to the fences which would be hereafter erected, because the provisions went on to say "that nothing in this Bill would affect the rates which already existed;" and, therefore, he could not see that there could be any objection to the Conference affirming the desirability of having a 1¼ inch gauge instead of 1½ inch, as suggested in this Bill.

Mr. VARCOE (Hillston) seconded Mr. Leslie's proposal, but he would like the mover to alter it, so that it would read "that the mesh be 1¼ inch for a foot above the ground, and the mesh above that, say 1½ inch to 1¾ inch." The small mesh was only necessary for a foot from the ground.

Mr. CUMMING (Hillston) said that this provision was very necessary. He had seen that class of fence on Mr. Varcoe's holding, and it was one of the best fences he knew of.

Mr. BRETT (Urana) said he would second Mr. Leslie's original proposition without Mr. Varcoe's addition.

Mr. CUMMING (Hillston) said he would second Mr. Varcoe's amendment.

Mr. ALISON (Canonbar) thought they hardly recognised how enormously they proposed to increase the burden of the country if this motion of Mr. Leslie's were carried. They had already passed a motion allowing the Minister to advance money to the holders. He could advance 1½ inch mesh at a much better rate. If they made it 1¼ inch instead of 1½ inch and 42 instead of 36 they would put a great deal on to the cost. He thought 1½ inch was reasonably sufficient. He would ask the meeting to consider seriously before putting everybody in the whole of the Colony to such an enormous expense as this. He would much prefer to support Mr. Varcoe's provision than support Mr. Leslie's—that is to say, let it be 1¼ inch mesh for a foot from the ground. He was quite satisfied that rabbits would not get through 1¼ inch a foot above the ground. He thought that would be a reasonable compromise, which Mr. Leslie might accept; otherwise they would be putting a stop to wire-netting by a great many people all over the Colony.

Mr. LESLIE (Forbes) said he was quite willing to accept the amendment. He wanted a description of fence that would reasonably exclude rabbits.

Mr. CAMERON (Ivanhoe) said he thought that if Mr. Varcoe's proposition were accepted, that it be 1¼ inch a foot above the ground, or even less, so far as his experience went, then from that to the top the mesh need not be less than 2 inches. He was perfectly satisfied that no rabbit attempted to go through a fence except at a height level with its head. He submitted that the combination netting which was being made would be very little, if any, more costly than the 1½ inch. There was, on his boundary, netting of that gauge put up, and rabbits on the other side came through the 1½ inch, and he was not

protected at all, even if  $1\frac{1}{2}$  inch were to be on the other three sides. A great many people were in the same position, and it would be very unfair for those who had to erect fences, if they were subject to rabbits coming in on one of their boundaries.

The CHAIRMAN pointed out if this amendment were carried he thought it would be necessary to do something with the 42 inches again, because it would read  $1\frac{1}{2}$  inch for a foot from the ground, and then Mr. Varcoe said that  $1\frac{3}{4}$  inch was quite sufficient above that.

Mr. LESLIE (Forbes) said that he could not accept  $1\frac{3}{4}$  inch, but would accept  $1\frac{1}{2}$  inch. That would make a good fence, and decrease the cost, but he could not accept  $1\frac{3}{4}$  inch.

Mr. VARCOE (Hillston) said there would be 6 inches in the ground and 1 foot above the ground of  $1\frac{1}{2}$  inch, and above that a larger mesh.

Mr. ATKINSON pointed out that there was an injunction out, that only one firm should make this combination mesh. It would be wrong to pass this resolution in view of that fact.

Mr. DAVIES (Gunnedah) thought that people who had large quantities of fencing already put up should be allowed to run a foot of  $1\frac{1}{2}$  inch mesh along the bottom, instead of putting up a fresh fence.

Mr. NIXON (Gunbar) said it was well-known that many fences were not rabbit-proof, and they should have a fence that would be rabbit-proof, if they were to define anything at all. He had seen the combination mesh, and that could be supplied at the 42 inches for less than the  $1\frac{1}{2}$  inch was supplied at 36 inches.

Mr. CUMMING (Hillston) thought it would be more effective if they left them to choose with the two.

Mr. LESLIE (Forbes) moved that the mesh be  $1\frac{1}{2}$  inch for the whole way. He thought it was going to extremes to make it  $1\frac{1}{2}$  inch the whole way. They might as well put up a galvanized iron fence. One and a half inches was a practical fence.

Mr. ALISON (Canonbar) seconded Mr. Leslie's proposition.

Mr. BRETT (Urana) thought that the lower 18 inches from the ground should be  $1\frac{1}{2}$  inch. He knew very well that  $1\frac{1}{2}$ -inch mesh was simply useless to keep rabbits in. He had seen them go through it in large numbers. He knew a man with  $1\frac{3}{4}$ -inch mesh, who, since putting it up, had had to erect several miles of  $1\frac{1}{2}$ -inch netting to prevent the rabbits getting through.

Mr. ALISON (Canonbar) then suggested that a separate vote be taken for  $1\frac{1}{2}$ -inch mesh for the lower 18 inches of the netting, and then a separate vote about what the mesh for the rest of the width should be.

The CHAIRMAN then put the question as to whether  $1\frac{1}{2}$  inch should be the mesh for the lower 18 inches of the netting, and it was carried.

The question of  $1\frac{1}{2}$  inch for the rest of the width was put and lost.

The question of  $1\frac{1}{2}$  inch for the whole width was put and lost.

Mr. LESLIE (Forbes) then moved, "That the balance of 2 feet above the lower 18 inches should be a maximum mesh of not more than  $1\frac{1}{2}$  inch."

Mr. BRETT (Urana) seconded the motion.

Mr. ALISON (Canonbar) moved as an amendment, "That it be  $1\frac{1}{2}$ -in."

Mr. LAURENCE (Balranald) seconded Mr. Alison's amendment.

The CHAIRMAN then put Mr. Alison's amendment, and it was carried.

The CHAIRMAN then said that he thought it would be better to put these two resolutions in one, and say that the lower 18 inches shall be  $1\frac{1}{2}$ -inch mesh, and the other 2 feet shall be  $1\frac{5}{8}$ -inch mesh.

The question, on being put to the meeting, was carried.

Mr. LAURENCE (Balranald) proposed, "That in line 35 the word 'seventeen' should be changed to 'eighteen.'"

Mr. LITTLE (Bullock Creek) seconded this motion.

Mr. ALISON (Canonbar) said that he had some No. 19 in use, and it had lasted for ten years very well indeed.

Mr. LAURENCE'S (Balranald) motion was then put to the meeting and carried.

Mr. DAVIDSON (Condobolin) then proposed, "That subsection (c) be struck out from this clause."

The amendment lapsed for the want of a seconder.

Mr. WILKES (Broken Hill) moved, "That in line 11 of page 14, clause 33, the words 'Court of Petty Sessions' be inserted instead of 'Local Land Board.'"

Mr. OAKDEN (Cobar) seconded the amendment.

The CHAIRMAN put the question to the Conference, and it was carried.

Clause 33, as amended, was put to the meeting and carried.

#### Clause 34.

*"Boundary" and "adjoining."*

34. For the purposes of this Part—

- (a) a rabbit-proof fence shall be taken to be on the boundary of any holding or land if it follows the line which is the actual, reputed, or accepted boundary thereof, or any line which in the opinion of the Local Land Board is sufficiently approximate to such boundary; and
- (b) the intervention of a road or watercourse (not being a permanent river) shall not prevent holdings or lands being taken to be adjoining.

Mr. WILKES (Broken Hill) proposed, "That in line 22, the words 'Pastures and Stock Board' be inserted instead of 'Local Land Board'."

Mr. OAKDEN (Cobar) seconded the amendment.

Mr. LESLIE (Forbes) said he had an amendment before that. In subsection (a), after the words "boundary thereof" he wished to insert "or, where boundaries are inaccessible or unfenceable, as near as possible to the boundaries thereof, having due regard to the natural formation of the country." He said that if they asked for these powers, the Local Land Board would be the only Board which could determine matters of this sort; and before striking that out they should know whether it would be necessary for this amendment of his to be carried out or not.

Mr.

Mr. DILL (Hay) said it was a very necessary amendment to bring in, and he would second it.

Mr. WILKES (Broken Hill) said, with the consent of his seconder, that as Mr. Leslie's proposition was a very good one, he would withdraw his motion.

Mr. DAVIES (Gunnedah) said, in support of Mr. Leslie, that it was often very difficult to erect rabbit-proof fencing, either in shifting country or in rocky country, on the proper boundaries, and this was a very necessary amendment. It was necessary for all people to get up their fences as quickly as possible, and if they had to wait for the lines to be moved, and the boundaries re-marked, and get the approval of the Survey Department, and all that, they would never get their fencing up.

Mr. Leslie's (Forbes) proposition was then put to the Conference, and carried.

Clause 34, as amended, was put to the meeting and carried.

### Clause 35.

#### *Rabbit-proof fences across roads.*

35. When any lands are intersected, divided, or bounded by a road or travelling stock reserve or route or public lands, the Local Land Board may grant to the owner of such lands permission to carry a rabbit-proof fence across such road, reserve, route, or public lands: Provided always that rabbit-proof gates be erected at places where the fence crosses such road or route, unless the Local Land Board shall in any case dispense for the time being with the erection of the same. Any permission or dispensation granted under this section may be revoked by the Board upon reference by the Minister or application by any person interested.

Mr. CAMERON (Ivanhoe) moved that Clause 35, as printed, be passed.

Mr. MOORE (Goodooga) seconded the motion.

The Honorable RUPERT CARINGTON (Jerilderie) said he presumed that the word "Board" in the last line but one meant "Rabbit Board."

Mr. CUDMORE (Wentworth) proposed that "gates should be registered in the usual way."

Mr. ALISON (Canonbar) then pointed out to Mr. Cudmore that there was a provision in another clause for a fine if a gate were left open, and Mr. Cudmore withdrew his amendment.

The original motion by Mr. Cameron was then put and carried.

### Clause 36.

#### *Rabbit-proof fences a distributed improvement.*

36. When any Crown lands containing a rabbit-proof fence or portion thereof shall become the subject of any purchase or lease from the Crown, payment for such rabbit proof fence or portion thereof shall be made in accordance with the provisions of the Crown Lands Acts; but this enactment shall be subject to the following qualifications:—

- (i) Where any holding or group of holdings has been or shall be made rabbit-proof, the rabbit-proof fence shall be deemed to be an improvement distributed over the whole enclosed area of such holding or group of holdings (exclusive of any roads), so that every portion of such area shall be taken to be proportionately improved thereby.
- (ii) The amount so distributed in respect of the improvement shall, in all cases, be limited to one-half of the value of making the fence rabbit-proof: Provided always that if any portion of such rabbit-proof fence is upon or adjoining any land which becomes the subject of any purchase or lease from the Crown the purchaser or lessee thereof shall also be liable in respect of the fence itself.
- (iii) No portion of the value of any rabbit-proof fence erected as a barrier fence at the public expense shall be deemed to be distributed in accordance with this section.

Mr. LESLIE (Forbes) proposed, "That Clause 36 be passed as printed."

Mr. OAKDEN (Cobar) seconded the motion.

The Chairman put the question to the Conference, and it was carried.

### Clause 37.

#### *Rabbit-proof fences on occupation license or annual lease.*

37. Any owner, whose holding consists wholly or in part of Crown lands under occupation license or annual lease, may give notice in the prescribed form to the Chairman of the Local Land Board that he intends to make such holding rabbit-proof; and in any case where notice as aforesaid shall have been given, and such holding shall have been made rabbit-proof in accordance with the terms thereof, such holding shall be deemed to have been made rabbit-proof as from the date of such notice, so far as regards the amount payable for improvements under this Act in connection with any lands which may be withdrawn from the occupation license or annual lease by becoming the subject of any purchase or lease from the Crown after the date of such notice: Provided always that the rabbit-proof fence shall be completed within one year from the date of such notice or within such further time as the Board on application may allow; and that the liability to pay any moneys under this Act in respect of such rabbit-proofing or any portion thereof shall be suspended until such fence shall have been completed.

Mr. LESLIE (Forbes) proposed that the "Local Land Board" should be struck out of lines 11 and 12.

Mr. CUDMORE (Wentworth) moved that the clause be passed as printed.

Mr. LITTLE (Bullock Creek) seconded Mr. Cudmore's proposition.

Mr. OAKDEN (Cobar) proposed that in line 21 the words "one or" should be altered to "two" years. If there was a large expense required, it might be impossible to carry out the work within a year.

Mr. DILL (Hay) seconded Mr. Oakden's proposition.

The CHAIRMAN then put Mr. Oakden's amendment to the meeting, and it was lost.

Mr. Cudmore's (Wentworth) original proposition, that the clause be passed, as printed, was then put to the Conference and carried.

## Clause 38.

*Rabbit-proof fences on lands within a group.*

38. The provisions of the last preceding section shall apply in cases where it is intended to include the lands held under occupation license or annual lease within a group.

Mr. VARCOE (Hillston) proposed, "That this clause be passed as printed."

Mr. CAMERON (Ivanhoe) seconded the proposition.

The CHAIRMAN then put the question, and it was carried.

Mr. WILKES (Broken Hill) then moved the adjournment of the Conference, as the next matter to be dealt with was a very important one. They had only ten minutes left, and they could not discuss this very important clause in that time.

The CHAIRMAN, in adjourning the Conference, said he would like the members to carefully prepare any amendments they might have. They had plenty of time between this and Monday to go through the Bill thoroughly. He had to wait five and ten minutes sometimes before a gentleman would get up and propose an amendment. He hoped that on Monday they would all come prepared to get through the business quickly.

The Conference was then adjourned until 10 a.m. on Monday.

## SIXTH DAY—15th MARCH, 1897.

Mr. Allen Lakeman (Hay) took the Chair at 10 a.m.

The minutes of the previous meeting were read and confirmed.

## Clause 39.

*Contributions towards cost of private rabbit-proof fences.*

39. Where a boundary, or any part thereof, of any holding is fenced with a rabbit-proof fence, or a fence on such boundary, or part thereof, has been made rabbit-proof at the expense of the owner of such holding, a contribution towards the cost of the work shall be payable by the owner of any outside holding or lands adjoining the rabbit-proof fence.

The right to receive such contribution shall vest, and the liability to pay the same shall arise, when the then owner of such first-mentioned holding gives to the then owner of such last-mentioned holding or lands the prescribed notice of demand; and from and after the date when such notice is given, the amount of the contribution, or so much thereof as may for the time being be unpaid, shall, until payment, be and remain a charge upon the holding or lands in respect of which such contribution is payable.

The following provisions as to contributions shall apply:—

- (I) A contribution shall be payable only in respect of so much of the rabbit-proof fence as forms a common boundary fence.
- (II) The amount of the contribution shall in every case be assessed according to the benefit derived, and to be derived, from the rabbit-proof fence, and shall in no case exceed half the value of the rabbit-proof fence, or in the case of a fence which does not belong or wholly belong to the owner who makes the same rabbit-proof, such contribution shall not exceed half the value of the work of making such fence rabbit-proof; and such value shall be the value regarded as at the date when the aforesaid notice of demand is given, and as determined by the Local Land Board.
- (III) A contribution shall not be payable in any case where the Local Land Board is of opinion that the rabbit-proof fence has been erected, or the fence has been made rabbit-proof otherwise than *bonâ fide* for the purpose of excluding or destroying rabbits, or unless and until in the opinion of the Local Land Board the holding or lands from the owner whereof the contribution is demanded derives a benefit therefrom.
- (IV) Nothing in the Crown Lands Acts or in the Act ninth George the Fourth number twelve shall relieve any owner from the liability to pay a contribution under this Act.
- (V) It shall be immaterial whether the rabbit-proof fence was erected or the fence was made rabbit-proof before or after the passing of the Rabbit Act of 1890, or before or after the passing of this Act.

Mr. FREEMAN said, in sub-section (2) it said that "the amount of contribution should in every case be assessed according to the benefit to be derived from the rabbit-proof fence." It seemed to him that it would be a very hard matter to gauge what benefits would be derived from this rabbit-proof fence.

Mr. FLANAGAN (Gunbar) thought this provision dangerous. A fence might have been made rabbit-proof, but might have got into a bad state and so not be rabbit-proof, and as the Bill now stood there would be a danger that people who owned rabbit-proof fences which were not really rabbit-proof would be enabled to receive payment for their fences. Therefore he would wish to insert some words after these lines that would give the power to the Board to say whether they were rabbit-proof or not.

The CHAIRMAN said that to his mind the clause was explicit. They had already defined a rabbit-proof fence, and if it were not up to requirements the contribution could not be enforced.

Mr. FREEMAN moved, "That the whole of line 49 and line 50 down to the word 'shall' should be struck out and the words 'in every case,' in line 48, should also be struck out."

Mr. A. BROWN (Narrabri) seconded the motion.

Mr. ALISON (Canoubar) said he must oppose these words being struck out. He thought they were the most useful words they could have. In very many cases the benefit which was derived from the erection of a rabbit-proof fence was almost nil, and yet the one who derived no benefit from it had to pay.

That

That was to him a very illogical thing to keep in a Bill. It was the one great flaw in the 1889 Act. He had a block of freehold land which joined a block of freehold land belonging to somebody else. The other person had erected a fence but there was a road between the two properties. He happened to be the licensee of the resumed area and he had to pay to his neighbour half the cost of his fence for something that did not do him the fraction of a farthing of benefit. He had to pay something like £20 or £30 a mile for the erection of this fence on his neighbour's property. This would show them at once how enormous the present danger was. If a resumed area were cut up enormously the licensee would be compelled to abandon the resumed area. He thought it was a most useful and just provision and should be left in the Bill.

Mr. WILKES (Broken Hill) said he must also oppose the motion. He was of the same opinion as Mr. ALISON. This was one of the finest clauses that had been embodied in the Bill. In the Western district the greatest objection to the 1890 Bill was this compulsory fencing. Surely, if a fence were put up by an eastern neighbour who had no rabbits, and on the west side of that the country was infested with rabbits, could anyone tell him where any benefit was to be derived by the western men. Most decidedly it would be the very reverse. Then why should the western side have to pay for that fence. In many cases such a fence was a harm to a man. It would have a very bad moral effect if a man had to go and pay for things that were absolutely detrimental to him. Suppose a man took a selection or a homestead lease on a run and the runholder put a fence round two sides of it that joined in a corner; it would not be of the slightest benefit to the homestead lessee, and he would have to pay his share.

Mr. CUMMING (Hillston) must also oppose the proposition. It would be very dangerous to take that clause out of the Bill. Mr. ALISON had put the thing in a nut shell. No man should have to pay unless he made use of the fence.

Mr. CAMERON (Ivanhoe) opposed it strongly. He spoke from experience of having to pay for a fence on one of his boundaries. It acted as a barrier to keep the rabbits in, and he had been very much inclined to make holes in it.

Mr. T. BROWN, M.L.A. (Budgerabong), also thought this was a wise provision. They knew that the rabbits were travelling from the western portion eastward, and the amount of benefit from a rabbit-proof fence depended very much which side of the fence you were on. It would benefit a man on the eastern side but it would be detrimental to a man on the western side.

Mr. FLANAGAN (Gunbar) supported Mr. Freeman's amendment. Some of the gentlemen seemed to think that the rabbits only travelled in one direction, west to east. Now, he held that when a man put up a rabbit-proof fence between himself and the adjoining holder it was the fault of the adjoining holder if he did not get any benefit. He might take it into his head not to erect fences on the other three sides, and if this clause were left in he would be compelled to pay half the cost of one side of his run being made rabbit-proof. He would be protected from one side. It was just the same as an enemy coming into the country. They did not know on what side the rabbits would come in. This compulsion to pay for half the boundary fence was of the greatest benefit in suppressing the rabbit plague.

Mr. VARCOE (Hillston) said he would also support Mr. Freeman's amendment, for although a man might not get much benefit from it, he would be prevented from allowing rabbits to stock his neighbour's run. No man had a right to be a nuisance to his neighbour, and he should therefore be a sharer in the fences between the two.

Mr. ROSS (Hume) hoped that this clause would be struck out. They knew very well it had been the great crux of the last Rabbit Bill. He knew, as a matter of fact, that this fencing clause had been applied with very hard results in the past. Some people had put up fences knowing they were of no benefit at all. Fences had been put up in defiance of people's interests. Fences had been put up on one side of a road, and, as the road was open, the man on the other side had had to fence as well as pay for half the fence erected by his neighbour.

Mr. ALISON (Canonbar) said that Mr. Brown would remember that at the last Conference this clause was put in for the small holders especially.

Mr. FREEMAN said that his resolution was really put forward on behalf of the small men. Big things come out of little matters, and if by the network of these fences the selectors to the east of them benefit by them, surely they must pay. Take Goree, in Mr. Ross' own district, for instance. It was not a rabbit-infested district. It was not within 100 miles of rabbits. He had induced the Goree people to wire-net their holdings, and all those selectors in that district, without any liability at all by Act of Parliament, paid freely, without hesitation, for a share of that fencing.

Mr. FREEMAN's amendment was put to the Conference and lost.

Mr. ALISON (Canonbar) said he would like to have it made clear whether subsection 5 interfered with fences that had been made rabbit-proof before the Act of 1890. Were certain rights under that Act wiped away by this clause? It seemed to him to be dangerous if that were the case. He would like the opinion of the meeting on that point.

Mr. ATKINSON said that in line 37 of clause 40 it stated, "nothing contained in this section shall affect any right to an annual contribution towards the cost of the maintenance and repair of a rabbit-proof fence, accrued under or by virtue of the provisions of the Rabbit Act of 1890, and the Local Land Board shall have power to assess and determine the amount of any such contributions."

The CHAIRMAN said that he thought they might add some such provision as that to clause 39.

Mr. ATKINSON said that subsection B of clause 1 settled the matter.

Mr. ALISON (Canonbar) withdrew his objections.

Mr. LESLIE (Forbes) proposed that clause 39, as printed, be passed.

Mr. DILL (Hay) seconded it.

The question was put to the meeting and carried.

#### Clause 40.

##### *Contributions towards maintenance of private rabbit-proof fences.*

40. In any case where a contribution towards the cost of a rabbit-proof fence is to be paid under the provisions of the last preceding section, an annual contribution towards the expenses incurred in the maintenance and repair of the rabbit-proof fence shall also be paid; and for the purposes of such annual contribution the years shall be taken to run from the date, or recurring date of the notice of demand required by the said section.

The

The right to receive such annual contribution, and a corresponding duty to maintain and repair the rabbit-proof fence, shall run with the holding whereof the owner was entitled to receive payment of the aforesaid contribution towards the cost of the rabbit-proof fence; and the liability to pay such annual contribution shall run with the holding or lands whereof the owner was liable to pay the aforesaid contribution towards the cost of the rabbit-proof fence.

The amount of such annual contribution shall be one-half the expenses of, or incidental to, the maintenance and repair of the rabbit-proof fence as determined by the Local Land Board.

Nothing contained in this section shall affect any right to an annual contribution towards the cost of the maintenance and repair of a rabbit-proof fence accrued under or by virtue of the provisions of the Rabbit Act of 1890, and the Local Land Board shall have power to assess and determine the amount of any such contribution.

Mr. LESLIE (Forbes) proposed that clause 40, as printed, be passed.

Mr. ROSS (Hume) seconded the motion.

The question was put to the meeting and carried.

#### Clause 41.

##### *Contributions from the Crown towards private rabbit-proof fences.*

41. Where—

(a) a private rabbit-proof fence forms a common boundary fence between private and public lands; and

(b) particulars of the said fence have been furnished to the Minister before or after the erection thereof; and

(c) the Minister, after report by the Local Land Board, has approved in writing of the erection of such fence in accordance with such particulars,

the same contributions shall be payable by the Crown in respect of rendering the fence rabbit-proof as would be payable by any private owner, and the amount of such contributions shall be determined by the Local Land Board in the same manner as if the said public lands were private lands.

Mr. ALISON (Canonbar) said that under the last Act the Minister was liable to pay for any fencing erected on Crown lands where he approved of it, and every Minister had exercised this power of approval so much that he had disapproved of every proposal. What was the good of a clause like this if the Minister was going to exercise the power of disapproval every time. He thought they ought to amend this clause so as to make the Minister liable the same as any private person, and yet it seemed as if the Minister should have some power of approval, but he could hardly see a way to get over it.

Mr. FREEMAN proposed an amendment that in line 47 the last word "and" be struck out and the whole of subsection (c) be struck out, and that these words be inserted "provided always that where the Crown pays such contribution they shall have the power of recovery from an incoming tenant, as provided for with regard to the contributions in respect of private rabbit-proof fences."

Mr. FLANAGAN (Gunbar) did not think this amendment was necessary. The public lands were virtually the Minister's lands, and he could make what bargains he chose with an incoming tenant. It was not necessary.

Mr. CAMERON (Ivanhoe) had an amendment on this clause that would meet the difficulty in a very few words. He moved that the words "or after" and the whole of subsection (c) be struck out. This would place the Minister on the same footing as any private holder. He would not say that the State had shirked its duty, but they had never paid for fences put along the public lands, and as the Minister would have some voice in approving in the erection of a rabbit-proof fence, it would be met by having the question submitted to him before the fence was erected. He said they ought to have some definite expression in the Bill as to what would be the Minister's duties with regard to fences that were to be erected between the public lands and the private lands. People had erected fences upon resumed areas, upon the clear assumption to them, that according to the Act the Minister was liable to a contribution of half the cost of erection, and this Conference ought to deal with the Minister's responsibility in so clear a manner that any person reading the Act would be able to understand what responsibility the State took and the responsibility of a private owner.

Mr. CUMMING (Hillston) seconded Mr. Cameron's motion.

Mr. ROSS (Hume) said he did not see why the Minister should not stand in the same position as a private person in this matter. If the Minister had the power to approve of a fence, as in the past, he simply would not approve of it.

Mr. ALISON (Canonbar) said he had found by the last few words "that the amount of the contribution shall be settled by the Local Land Board," the Crown was protected.

Mr. FREEMAN said he was quite willing to accept Mr. Cameron's amendment, and withdrew his own.

Mr. CAMERON's (Ivanhoe) amendment was then put to the meeting and carried.

Mr. OAKDEN (Cobar) proposed that clause 41 as amended be passed.

Mr. T. BROWN, M.L.A. (Budgerabong), seconded the motion.

Mr. J. M. ATKINSON wished to insert the words "fences that have been put up previous to this Act." This was a very important matter. They should make the Crown contribute where these fences adjoined the common boundary. The clause as it stood did not affect the fences that had been put up and were in use, and for which the Crown had declined to contribute. Those people would be placed in a very unfair position. He would move that the words "before or after" be inserted in line 47 after the word furnished.

Mr. CAMERON (Ivanhoe) did not see exactly how this amendment could be put in, because it applied to fences which had been erected in the past. He did not know of any case in which the Minister's consent had been asked before the fence was erected.

Mr. FLANAGAN (Gunbar) also pointed out that there were some lands which had fallen into the hands of the Ministers since 1890. The fences on these might have been between lessee and lessee and now they came into the hands of the Minister for Lands.

The

The CHAIRMAN said he did not think the amendment could be put in as indicated by Mr. Atkinson.

Mr. ATKINSON said he would put it in, in place of the word "and" in line 45. Supposing this Rabbit Bill were brought in, then owners who had erected wire-netting fences adjoining the Crown lands would at once furnish the Minister with the particulars required.

The CHAIRMAN said that he had better move for the recommittal.

Mr. VANSTONE (Goodooga) said he knew of cases where fences had been erected, and the lessee had brought his neighbours before the Land Board, and the fences had been proved to be not rabbit-proof.

Mr. OAKDEN'S (Cobar) motion that the clause be passed as amended was then put to the meeting and carried.

#### Clause 42.

##### *Private barrier-fences.*

42. Where fences within a Rabbit District have, before the commencement of this Act, been rendered rabbit-proof by the expenditure of moneys voluntarily contributed or paid for the purpose by any Stock and Pastures Boards, or by any persons, the Rabbit Board of the District may apply any moneys raised by rabbit rates within the District in repaying to the said Stock and Pastures Boards or persons the moneys so contributed or paid by them as aforesaid, or any part thereof, if in the opinion of the Rabbit Board, the fences are barrier-fences within the meaning of this Act.

Mr. LESLIE (Forbes) proposed that the clause be passed as printed.

Mr. T. BROWN, M.L.A. (Budgerabong), seconded the motion.

The question was put to the meeting and carried.

#### Clause 43.

##### *Grouping of holdings.*

43. When a ring fence enclosing two or more holdings or any portion or portions thereof is a rabbit-proof fence, and the work of making the same rabbit-proof has been done by agreement between the owners of such holdings, the lands so enclosed belonging to such owners shall, with the consent of the Rabbit Board of the District, form a group of holdings within the meaning and for the purposes of this Act.

Any existing fence or portion thereof may be adopted so as to form part of the ring fence of any group, but not without the consent of any owner of such fence or portion thereof whose holding thereby becomes a holding forming part of the group.

The Minister for Lands may agree that any public lands shall be included within a group, and the Crown shall thereupon become liable in the same way as the owner of any holding of private lands within the group.

The Rabbit Board may agree that any rabbit-proof fence utilised or erected by it may be used for the purpose of the grouping of holdings.

Where any holding has been enclosed with a rabbit-proof fence, and any part of the holding afterwards becomes the subject of any homestead selection, purchase, or lease from the Crown, and is thereby withdrawn from the holding so enclosed as aforesaid, the new holding created by such homestead selection, purchase, or lease, and the residue of the original holding shall be deemed to form a group of holdings; and any portion subsequently withdrawn from the residue shall also be a holding within the group.

Any group of holdings constituted under the Rabbit Act of 1890 shall be a group of holdings within the meaning and for the purposes of this Act.

When the external boundaries of any holding or group of holdings have been made rabbit-proof, the owner or owners thereof shall not be liable to contribute towards the cost of erecting or maintaining and repairing a rabbit-proof fence round any holding or land situate within such external boundaries as aforesaid, or towards the cost of making rabbit-proof any existing fence round such holding or land within such external boundaries; and it shall be immaterial whether the said external boundaries have been made rabbit-proof before or after the passing of this Act.

Mr. FLANAGAN (Gunbar) moved that "three or more" be inserted in line 12.

Mr. SIDES seconded the motion.

Mr. LITTLE (Bullock Creek N.) moved that it should be "one."

Mr. BAYLIS (Narrandera) moved that the clause as printed be passed.

Mr. CUDMORE (Wentworth) seconded the motion.

Mr. FLANAGAN'S (Gunbar) amendment was put and lost.

Mr. FREEMAN moved an amendment on subsection 3. It should be that on agreement to make a group of holdings the Minister may come in as a contributor. Supposing a number of holders cared to form a group, and a large portion of that was Crown land, the Minister might relieve himself of liability by not agreeing, and he thought it should be amended so that if an agreement be made to form a group the Minister shall be a contributor.

Mr. A. BROWN (Narrabri) seconded the motion.

The question was put to the meeting and lost.

The clause as printed was put and carried.

## Clause 44.

*Provisions governing groups.*

44. A group of holdings shall be deemed to be a single holding so far as regards any such contribution towards the cost of the erection, maintenance, or repair of rabbit-proof fencing as may be payable by or to the owners of adjoining holdings outside the group. And the following provisions shall apply to the holdings forming part of a group, and to the owners thereof:—

- (i) The liabilities of such owners as between themselves, in respect of sums expended or to be expended for the erection or repair of the ring fence, or of amounts paid or to be paid as contributions towards the cost or maintenance of any portion of such fence, shall be proportionate to the respective areas of the holdings of such owners, and in any case of dispute shall be declared by the Local Land Board; and the amount declared by such Board to be payable by any such owner shall be a charge upon his holding.
- (ii) The majority in number of the owners whose lands may for the time being constitute a group may, from time to time, by an instrument in the prescribed form, appoint any person to be the secretary of the group; and proceedings may be taken by or against the secretary for the time being of a group, as nominal plaintiff or defendant representing all the owners of all grouped lands.
- (iii) In any case where a group of holdings is not known to have a duly appointed secretary or the duly appointed secretary cannot be found, the Rabbit Board of the district in which such group or any portion thereof is situated may designate the owner of any land included within the group to be the nominal defendant representing all the owners of all grouped lands for the purposes of any proceedings proposed to be taken against such group or such owners; and proceedings may thereupon be taken against such owner as nominal defendant in the same way as if he were the duly appointed secretary of the group.
- (iv) In any case where judgment has been recovered against the secretary of a group or other nominal defendant as aforesaid, and has not been satisfied, or where an order for the payment of money has been made against such secretary or other nominal defendant, and has not been complied with, the person entitled under such judgment or order may apply to the Local Land Board to settle the respective amounts to be contributed by the owners of the holdings within the group for satisfaction of such judgment or compliance with such order; and the Local Land Board shall thereupon settle the said respective amounts in proportion to the respective areas of the holdings of such owners; and the person entitled under such judgment or order may take proceedings against each or any of such holders for the amount settled by the Local Land Board.
- (v) If any part of a holding within a group shall be withdrawn from such holding, by reason of its becoming the subject of any homestead selection or purchase or lease from the Crown, or by reason of such holding being subdivided, the new holding created by such homestead selection or purchase, lease, or subdivision shall be a holding within, and forming part of, the group.
- (vi) A holding shall not cease to form part of a group, by reason only of any change of ownership in respect of such holding, or of any other holding within such group; but any owner may, with the permission of the Rabbit Board, and subject to any conditions which it may impose, detach his holding from the group of which it formed part if the boundaries of such holding have been made rabbit-proof.
- (vii) If at any time it be made to appear to the Rabbit Board that a group of holdings is too large to allow the work of destroying rabbits being satisfactorily performed, and that the owners holding not less than one-half of the grouped lands desire that such group of holdings may be subdivided, it shall be lawful for the Board to authorise the subdivision of such group, and to determine the line or lines of subdivision. And the subdivision rabbit-proof fence or fences shall, in all respects, be dealt with as if the same formed part of the ring fence of such group.

Mr. CAMERON (Ivanhoe) proposed that clause 44 as printed be passed.

Mr. VANSTON (Goodooga) seconded it.

The question was put to the meeting and carried.

## Clause 45.

*Destruction by owners and occupiers.*

45. It shall be the duty of every owner and of every occupier of any private holding or lands from time to time to suppress and destroy, by lawful means, and at his own cost, all rabbits which may from time to time be upon such lands, or upon any roads bounding or intersecting the same, or any part thereof.

Any owner, or any occupier, of any private holding or lands who fails to fully and continuously perform such duty as aforesaid to the best of his means and ability shall be liable to a penalty on the first conviction of not less than *two* nor more than *ten* pounds, and on the second conviction of not less than *five* nor more than *twenty-five* pounds, and on the third or any subsequent conviction of not less than *thirty* nor more than *fifty* pounds; and the existence of rabbits on any private holding or lands shall be *prima facie* evidence that the owner or the occupier thereof (as the case may be) has failed to fully and continuously perform such duty to the best of his means and ability.

Mr. CAMERON (Ivanhoe) moved that the word "private," in line 14, and the word "all," in line 15, be struck out, and that the following be inserted after the word "cost," in line 15, "to the best of his ability and to the satisfaction of the Board." The first part of the clause would then read as

as follows:—"It shall be the duty of every owner and of every occupier of any holding or lands from time to time to suppress and destroy, by lawful means, and at his own cost, to the best of his ability and to the satisfaction of the Board, rabbits which may from time to time be upon such lands, or upon any roads bounding or intersecting the same, or any part thereof."

Mr. FLANAGAN (Gunbar) seconded the motion.

Mr. WILKES (Broken Hill) moved an amendment on Mr. Cameron's amendment that the words "to the best of his ability, &c.," be struck out of the amendment. They would entail endless litigation. There was no doubt that every man would come forward and say he had done it to the best of his ability. Destruction would never be compulsory if that were carried. If the Boards were not fit to deal with the question they were not fit to deal with any question. If these words were inserted it would destroy the whole force of the Act.

Mr. HEDDEN (Wanaring) seconded Mr. Wilkes' amendment.

Mr. CUDMORE (Wentworth) supported Mr. Cameron.

The Hon. RUPERT CARINGTON (Jerilderie) thought the House would never agree to pass this motion. They should leave the word "private" in.

Mr. J. M. ATKINSON wished to say a few words in reply to the Hon. Rupert Carington. The Minister had distinctly told them to frame their own Bill and to give it to him. It was no business of theirs what Parliament would pass. If Parliament passed any other Bill, they would be able to say they had not wanted it. They would be able to say, "We never recommended such a proposal; we proposed a certain Bill; we proposed what was right to us." The Hon. Rupert Carington wanted them to propose a bread-and-butter Bill to put before the House for them to swallow.

On Mr. ALISON's (Canonbar) suggestion the Chairman put the different portions of Mr. Cameron's motion separately.

The question of striking out the two words "private" and "all" in lines 14 and 15 was put and carried.

Mr. CAMERON (Ivanhoe) said he was quite willing, in view of Mr. Wilkes' amendment, to strike out the words "to the best of his ability."

The question of adding after the word "cost," in line 15, "and to the satisfaction of the Board the" was then put and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), said that in compliance with the desire of the Condoblin Stock Board, he would move that the following words be struck out, "or upon any roads bounding or intersecting the same or any part thereof," unless the road was under lease or occupation.

Mr. ALISON (Canonbar) seconded the motion. He said the private holder should not have to destroy rabbits on the roads.

Mr. LESLIE (Forbes) moved a further amendment that the word "boundary," in line 16, be struck out. He would like the remainder of the words to be left in. He would point out that roads aggregating very large areas were fenced inside holdings, and therefore those that were inside any property that had been made rabbit-proof would of course be cleared by the owner. The owner should only be made to kill on roads when those roads were inside his run.

Mr. BAYLIS (Narrandera) said the amendment should be altered to read that the owner should kill rabbits "upon any roads enclosed by the said owner, bounding or intersecting the same."

Mr. FREEMAN thought that Mr. Brown's motion should be carried.

Mr. BACON (Brewarrina) said there was a difficulty. In the Western Division there was a reserved road of five or ten chains through the homestead leases. This road had to be paid for as part of the resumed area. Unless it was clearly defined that the holder of the homestead lease had to pay for the destruction of those rabbits it would lead to confusion. As it was now the pastoral tenant had to pay the rent for the road, although the homestead lessee had the use of it. The pastoral tenant should not be also made to pay for the destruction of the rabbits.

Mr. WILKES (Broken Hill) said there was not the slightest doubt that if a road were outside a holding the Crown should pay for the destruction of the rabbits. If the road was not in one lease it must be either in some other lease or else in possession of the Crown. He said that if a road were taken out of a homestead lease it was also taken out of lease and license. As a rule the roads were left in the homestead leases.

Mr. ALISON (Canonbar) said the case was not as Mr. Wilkes stated. He said that when roads were declared between selections, and so on, they were for the use of the public, but were still left in the license. They could easily imagine a resumed area being cut up so that the holder of the area had no use for the road at all. Under this clause he would be obliged to keep the rabbits down whether he had use for the road or not.

Mr. LESLIE (Forbes) said that it was in order to try and protect the lessee who was really paying for these roads, for which he had no use, that he proposed this amendment. Lessees had to pay rent for roads until they were proclaimed, although they were not in their occupation. He wanted to protect the interests of those men, so that they should not be compelled to kill rabbits on roads which were not in their occupation.

Mr. SIDES (Hay) said that the parties on either side of a road should have to pay for killing the rabbits on the road between them. Of course, if a road were within a run they were bound to kill them.

Mr. ROSS (Hume) could not support the clause as it stood. He thought the Rabbit Board should decide who should bear the cost. It would be hard on the Crown if they had to kill the rabbits on all the roads of the Colony, because half the roads were used by the holders of the adjoining lands. It would also be hard on a man on a holding to be compelled to kill rabbits on a road which was perhaps miles away.

Mr. DILL (Hay) said that he had lost nearly the whole of his resumed area. The roads, amounting to 40 or 50 miles, were enclosed by free selectors, and unless he abandoned the balance of the resumed area to the Crown he would be liable for killing the rabbits. If this clause were not carefully amended he and many others would be subject to injustice.

Mr. ATKINSON moved an amendment that the clause remain as printed, with the addition after "thereof" of the following, "if enclosed by the said owner."

Mr. ALISON (Canonbar) said he would accept the amendment.

Mr. ATKINSON said that, of course, would be on land which was enclosed with a rabbit-proof fence.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out to Mr. Alison that this clause was to deal with killing rabbits on holdings, whether they were enclosed by a rabbit-proof fence or not.

Mr. LITTLE (Bullock Creek North) seconded Mr. Atkinson.

Mr. ALISON (Canonbar) pointed out that this amendment would leave the clause exactly as before. There were no instances in the Colony where a resumed area had not been "enclosed," that was to say, enclosed with a wire-fence, but in many instances it was not wire-netting. "Enclosed," under the present Land Act, meant "enclosed by a sufficient fence," it did not mean a rabbit fence. He would like the mover of the amendment to make it read "enclosed with a rabbit fence."

Mr. FLANAGAN (Gunbar) said that the word "owner" should be substituted by the word "user." He knew of cases where there were fences on each side of a road, and the selector on one side had wire-netted. The man who had wire-netted could not use the road. He thought the Board should say who was the user of the road, and that would settle the matter. The man who used the road should destroy the rabbits on it.

Mr. Atkinson's amendment was then put and carried.

Mr. ALISON (Canonbar) moved to add "within a rabbit-proof fence" after the word "enclosed" in the resolution just passed.

Mr. CUMMING (Hillston) seconded Mr. Alison.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out to Mr. Alison that the effect of this resolution would be that there would be no compulsory destruction of rabbits enforced on any land not enclosed by a rabbit-proof fence. The object of this particular clause, on the contrary, was to provide for compulsory destruction of rabbits outside wire-netting enclosures.

Mr. ALISON (Canonbar) acknowledged the truth of Mr. Brown's remarks and withdrew his amendment.

Mr. BROWN (Budgerabong) then moved his amendment—that the following words, "or upon any road bounding or intersecting the same or any part thereof," be struck out.

Mr. ALISON (Canonbar) seconded the motion.

The question was then put and lost.

Mr. LESLIE (Forbes) proposed that the word "private" be struck out of line 18.

Mr. WILKES (Broken Hill) seconded the motion.

The question was put and carried.

Mr. LESLIE (Forbes) moved, that in line 20, after the word "ability," they should insert "and to the satisfaction of the Board."

Mr. T. BROWN, M.L.A. (Budgerabong), thought "to the best of his means and ability" should be struck out.

Mr. LESLIE (Forbes) accepted it.

Mr. WILKES (Broken Hill) seconded it.

Mr. ALISON (Canonbar) pointed out that it was very dangerous to strike out these words. Of course it would have to be to the satisfaction of the Board, because the Board—before it could enter upon any land—must be satisfied that the destruction was not being properly carried on. Individuals must be protected against the arbitrary power of the Board.

Mr. T. BROWN, M.L.A. (Budgerabong), said that Mr. Alison was speaking rather late in the day. He was only proposing to strike this out in conformity with what had been done before. If this were left in, who was to determine that the owner had used his best means and ability?

Mr. ALISON (Canonbar) said a man might be doing his very best to get the rabbits down, and yet the Board might decide that he was not doing his best. The Board should be made to prove its case. There should be a third person an arbitrator. Thousands and thousand of pounds might be thrown on to a man if this were cut out. They did not know whom the Boards would be composed of. If those words were struck out the private owner had no appeal whatever. He had to submit to what a bare majority of the Board might decide. Five men might put some individual, whom they disliked, to an expense of thousands of pounds. It was too much power to give any body of men, that of being judge and executive at the same moment. He hoped they would retain those words.

Mr. LITTLE (Bullock Creek North) pointed out that, unless the Boards had full power, nothing could be done. People would dodge the Boards, and while they had the power of electing the Stock Boards there was not the slightest danger of their being harshly dealt with.

Mr. WILKES (Broken Hill) supported Mr. Brown's amendment. Who was to say what was a man's ability? A man might say that he had done it to the best of his ability, and yet be blind or deaf and have no ability whatever. "Ability" here meant the word "willingness." It was only a quibble.

Mr. LESLIE (Forbes) pointed out that Mr. Alison had said that the owners would have no right to appeal. He would draw Mr. Alison's attention to clause 53 regarding powers of appeal.

The CHAIRMAN said he thought they were wasting time over nothing. The clause, as he read it, provided a penalty for occupiers who did not kill their rabbits. As the Stock and Pastures Board were going to administer the Act they would have to initiate the proceedings before anybody could be prosecuted under this clause. The clause was elastic enough, and yet gave the Pastures and Stock Board sufficient power.

Mr. ATKINSON suggested the further amendment, that the words, "to the best of his means and ability" be struck out, and that the words, "and to the satisfaction of the Board" be not inserted.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out that Mr. Atkinson's amendment was practically his.

Mr. J. M. ATKINSON withdrew his motion.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out that his strong objection to leaving the words in was that they set up another standard of what was sufficient killing, and the owner relying on that could frustrate the efforts of the Board to compel him to kill. A similar provision had to be wiped out of the Victorian Act before the Shire Councils there could enforce the provisions of the Act regarding killing.

Mr. T. BROWN, M.L.A. (Budgerabong), amendment was put and carried.

Mr. FLANAGAN (Gunbar) moved that the word "continuously" should be struck out of line 19. It would be a great hardship if this were left in. There were times when men were taking off their clips, and so on, when they could not busy themselves with killing.

Mr. ROSS (Hume) thought the word should be left in.

Mr. CUMMING (Hillston) seconded Mr. Flanagan. He thought the provision should be a little more elastic. A man might kill with a little arsenic many more than in another way, and after a shower of rain it would be better to wait for a week or two.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the "minimum fines" be struck out and the "maximum fines" retained in clause 45. He thought this matter could be safely left to the Board.

Mr. HEBDEN seconded Mr. Brown's resolution.

The question was put and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the words "and the existence of rabbits on any private holding or land shall be *prima facie* evidence that the owner or occupier thereof (as the case may be) has failed to fully and continuously perform such duty to the best of his means and ability" be struck out.

Mr. FLANAGAN (Gunbar) seconded the motion.

The question was put to the meeting and carried.

Mr. BROWN, M.L.A. (Budgerabong), moved that Clause 45, as amended, be passed.

Mr. HEBDEN seconded the proposal.

The question was put to the meeting and carried.

#### Clause 46.

##### *Natural enemy of rabbits.*

46. The Governor may from time to time, by proclamation in the *Gazette*, declare any animal, bird, or reptile to be a natural enemy of the rabbit, and prohibit within districts (whether Rabbit Districts or not) to be specified in such proclamation the wounding, killing, or capturing, selling or disposing of any such animal, bird, or reptile without a special permit in that behalf, and may from time to time correct, modify, or revoke any such proclamation.

Any proclamation issued under the Rabbit Act of 1890, whereby any animal, bird, or reptile was declared to be a natural enemy of the rabbit, shall continue in force according to the tenor thereof, unless and until revoked under the provisions of this section.

Any person who without lawful authority (the proof of which shall be on the person claiming to have the same) wounds, kills, captures, or sells or disposes of any animal, bird, or reptile declared to be a natural enemy of the rabbit shall be liable to a penalty of not less than *two* nor more than *twenty* pounds.

Mr. DAVIES (Gunnedah) thought the word "capturing" should be left out. He said if they had spring-traps they were more likely to catch the iguana and the snake than the rabbit. He thought they should provide that no trap should be used that was absolutely destructive to life. If they had tip-traps, and the natural enemy of the rabbit got in one, a neighbour who had a down on any man could get him fined. He thought spring-traps should not be used at all, for if the natural enemy of the rabbit got into the teeth of a spring-trap he would be destroyed.

Mr. OAKDEN (Cobar) moved that the word "wilfully" be put in before the word "wounds."

Mr. J. M. ATKINSON pointed out that the word "wilfully" would not do it. If they dug a hole or set a trap they did it "wilfully." It should be "intentionally."

Mr. WILKES (Broken Hill) seconded Mr. Oakden's amendment.

Mr. DAVIES (Gunnedah) moved that the setting of spring-traps, or any trap absolutely destructive to life, be prohibited.

Mr. FREEMAN seconded Mr. Davies' amendment.

Mr. FLANAGAN (Gunbar) opposed that. In his district there was a rabbit factory which had people trapping 10,000 rabbits a day. Would that not be more than the iguanas they would kill? It would be dangerous to hinder traps to be set for rabbits.

Mr. WILKES (Broken Hill) pointed out that Mr. Davies' amendment would not apply in all cases. In his district they must set traps for the native dogs.

Mr. CAMERON (Ivanhoe) pointed out that if this were carried, not only would the owners of land be prevented from using spring-traps, but they would be prevented from using any other method of killing rabbits which would be inimical to the life of the natural enemy. In many districts of the Colony the most efficient manner of destroying rabbits was the use of poisoned water, and yet this was dangerous to the natural enemy.

Mr. A. BROWN (Narrabri) pointed out that native cats came about the houses and destroyed chickens and so on, and in his district nothing would live unless they killed the native cats. He thought an exception should be made with regard to killing "about household premises or yards." When they found native cats or iguanas destroying the poultry about the homesteads they must kill them.

The CHAIRMAN said he thought they would kill them all the same.

A MEMBER: Wire-fence the fowls.

Mr. A. BROWN (Narrabri) moved an amendment "except within 100 yards of a dwelling house."

Mr. LAURENCE (Balranald) said that foxes were the natural enemy of the rabbit, and he wished to know if they were to be allowed to spread all over the country.

Mr. CUDMORE (Wentworth) said that if Mr. Brown had had as much experience with the rabbits as he had had, he would be glad to protect the wild cats, and put the fowls in a glass case.

Mr. OAKDEN (Cobar) seconded Mr. A. Brown's amendment, which was then put to the meeting and lost.

Mr. DAVIES' (Gunnedah) amendment was then put and lost by a large majority.

Mr. OAKDEN (Cobar) moved that the word "wilfully" be put in line 42, and in line 33 before the word "wounding" and the word "wounds."

Mr. WILKES (Broken Hill) seconded the resolution, which was then put and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that in line 45 the minimum fines be struck out.

This was put to the meeting and carried.

Clause 46, as amended, was then put to the meeting and carried.

#### Clause 47.

##### *Burning without notice during winter months.*

47. For the purpose of destroying or suppressing rabbits, any owner or occupier, may, at any time, with the consent of the Rabbit Board first had and obtained, notwithstanding anything in any Act contained, burn or ignite any straw, stubble, grass, herbage, scrub, wood, or other inflammable material on his land subject to conditions to be imposed by the Board.

Clause 47, as printed, was put to the meeting and carried.

Clause

## Clause 48.

*Authorised persons may enter private land.*

48. Any authorised person may from time to time enter upon any private holding or land at any time with or without assistants, dogs, horses, and vehicles in order to search whether any rabbits are on such land, or to erect or repair barrier-fences or gates, or to examine and inspect land, or for any purpose whatsoever under this Act, and may remain thereon so long, and do all such things as may be necessary or reasonable.

Any person who falsely represents himself to be or personates an authorised person under this Act in any manner whatsoever shall be guilty of a misdemeanour, and shall on conviction be liable to be imprisoned with or without hard labour for any period not exceeding *six* months, or to forfeit and pay a penalty of not more than *one hundred* pounds, or both.

Any person who wilfully assaults, obstructs, hinders, or interrupts, or causes to be assaulted, obstructed, hindered, or interrupted, any authorised person in the exercise of any power or authority vested in him by this Act, shall for every such offence if not otherwise specially provided for be liable to a penalty not exceeding *twenty* pounds; and no proceeding for recovery of such penalty nor the payment thereof shall be a bar to any action at law for or in respect of any such assault as aforesaid, but every such action may be commenced and proceeded with as if this Act had not been passed, any law or usage to the contrary notwithstanding.

For the purposes of this section an authorised person means a person having authority from the Minister or from a Rabbit Board, and such authority may be a general authority.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that in line 1 the words "on production of his authority on demand by the owner" be inserted after the word "person."

Mr. BAYLIS (Narrandera) seconded the motion.

The question was put and carried.

Mr. WILKES (Broken Hill) moved that in line 2, section 48, the words "private" and "dogs" be struck out.

Mr. OAKDEN (Cobar) seconded the resolution.

Mr. BRETT (Urana) proposed that the word "dogs" be left in.

On the request of Mr. Flanagan the Chairman put the two words separately.

The question of striking out the word "private" was carried.

The question of striking out the word "dogs" was lost.

The Hon. RUPERT CARINGTON (Jerilderie) moved that "horse" be substituted for "horses."

Mr. SIDES (Hay) seconded the motion.

Mr. BRETT (Urana) said he did not think the work could be done with less than three horses.

Mr. OAKDEN (Cobar) said it was a person who was authorised by the Board who was to use this authority, and he did not think the Board would allow him to do more than he ought.

The question was put and lost by a large majority.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the words "the Minister or from" be struck out of line 26.

Mr. WILKES (Broken Hill) seconded the motion.

Mr. T. BROWN, M.L.A. (Budgerabong), explained that this was merely to leave the power in the hands of the Board.

Mr. ALISON (Canonbar) said that if they struck out those words they did not leave the Minister any power of entry. Surely it was advisable that the Minister should have power of entry. It could do no harm. He did not see what it was put in for. But then he did not see why it should be struck out. The Minister should have power to go in and have a look if he liked.

Mr. FLANAGAN (Gunbar) did not agree with Mr. Alison. He said it would be a very strange proceeding if they wanted to go on a man's land to kill the rabbits if they had to wait for the permission of the Minister.

Mr. BACON (Brewarrina) said it would be an absurd thing to limit the Crown.

The question was put and lost by 18 votes to 17.

Clause 48, as amended, was put to the meeting and carried.

## Clause 49.

*Various offences.*

49. Any person who—

(a) wilfully carries, drives, or passes any live rabbit through, under, or over any rabbit-proof fence or gate; or

(b) wilfully leaves open any gate in a rabbit-proof fence; or

(c) without lawful authority (the proof of which shall be on the person claiming to have the same) wilfully destroys, injures, tears-up, depresses, or removes any portion of a rabbit-proof fence or gate, or excavates under, or in any way tampers with, any portion of such fence or gate, so as thereby to endanger its effectiveness; or

(d) attempts to do any such act as is hereinbefore mentioned, or procures the same to be done

shall be liable to be imprisoned, with or without hard labour, for any term not exceeding *six* months, or to pay a penalty not exceeding *one hundred* pounds, or both.

A rabbit-proof fence or gate, for the purposes of this section, shall mean a fence or gate apparently intended to protect any land from rabbits, and shall include a barrier fence, or gate therein, and it shall be immaterial whether or not such fence or gate is in accordance with the requirements of this Act.

Mr. WILKES (Broken Hill) proposed, "That clause 49 as printed be passed."

Mr. BACON (Brewarrina) seconded the motion.

The question was put to the meeting and carried.

Clause

### Clause 50.

50. Any person who without lawful authority (the proof of which shall be on the person claiming to have the same) wilfully liberates or attempts to liberate, or has in his possession any live rabbit, shall be liable to a penalty not exceeding *one hundred* pounds for every such offence; but nothing herein contained shall be construed to prohibit any person from keeping live rabbits in any safe enclosure with the permission of the Minister first had and obtained.

Mr. FLANAGAN (Gunbar) moved, "That clause 50 be passed as printed."  
The question was put to the meeting and carried.

### Clause 51.

51. Any person who destroys, injures, removes, or interferes with any trap, snare, poison, mator, or thing which is used or required for the purpose, of capturing or destroying rabbits, and which is lawfully placed upon any land for such purpose, shall be liable to a penalty not exceeding *twenty* pounds.

Mr. BROWN (Budgerabong) moved, and Mr. Cumming seconded, "That the clause be passed as printed."  
The question was put to the meeting and carried.

### Clause 52.

#### *Summary proceedings before Justices.*

52. Any proceedings for—

- (a) the recovery of any sum of money, which any private person is under or by virtue of the provisions of this Act required or made liable to pay, whether such sum of money be due in respect of rabbit rates, costs of rabbit destruction, contributions towards rabbit-proof fencing, or otherwise howsoever: or
- (b) the recovery of penalties or punishment of offences under this Act or any Regulation made thereunder

shall be heard and determined in a summary way before two Justices in accordance with the provisions of the Act or Acts in force for the time being regulating summary proceedings before Justices.

Where the Justices, upon such proceedings, adjudge or order any sum of money to be paid and the same is not paid, either immediately after the adjudication or conviction, or within the time then and there allowed by the Justices, payment of the said sum may be enforced by distress and sale of the goods and chattels of the person adjudged or ordered to pay the same in the manner provided by the said Act or Acts: Provided always that nothing herein contained shall affect any other remedy provided in the Crown Lands Acts.

Any person may take proceedings under this Act for the punishment of any offence hereby enacted; but where the land upon which an offence is committed is situate within a Rabbit District any fine or penalty imposed for such offence shall belong and be paid to the Rabbit Board of the District—any law or statute to the contrary notwithstanding—and the Justices imposing such fine or penalty shall order accordingly.

Mr. WILKES (Broken Hill) moved, "That in line 9, subsection (a), the word 'private' be struck out."  
Mr. OAKDEN (Cobar) seconded it, and it was carried.

The Honorable RUPERT CARINGTON moved, "That lines 28 and 29 be struck out of clause 52 down to the word 'enacted', and that the following be inserted, 'all information shall be laid and proceedings at law taken by the Board through its officers.'"

Mr. BRETT (Urana) seconded the Honorable Rupert Carington's motion.

The question was put to the meeting and carried.

Mr. CUDMORE (Wentworth) said he would like to add, "That in section (b) they should insert 'Court of Petty Sessions' instead of 'two Justices' in line 17."

Mr. DILL (Hay) seconded it.

Mr. ALISON (Canonbar) said that it occurred several times, and should be altered in each case.

Mr. OAKDEN (Cobar) seconded Mr. Alison.

Mr. ALISON'S (Canonbar) amendment was put and carried.

Mr. VANSTON moved, "That clause 52, as amended, be passed."

Mr. CAMERON (Ivanhoe) seconded the motion.

The question was put to the meeting and carried.

### Clause 53.

#### *Appeals to General Sessions.*

53. Any person who shall think himself aggrieved by any adjudication, order, fine, penalty, or punishment made or imposed by Justices under this Act, may appeal against the same, and the provisions of the Criminal Law Amendment Act of 1883 in respect of appeals in cases of summary conviction shall extend and apply to every such appeal.

Mr. LESLIE (Forbes) proposed, "That clause 53 be passed as printed."

Mr. CUMMING (Hillston) seconded.

The question was put to the meeting and carried.

### Clause 54.

#### *Orders may be enforced by action.*

54. In any case under this Act where any sum of money is ordered to be paid by Justices or by a Court of General or Quarter Sessions, and the same is not paid within the period named in such order, it shall be lawful for the person entitled to receive payment of such sum to sue upon such order in the District Court or the Supreme Court.

Mr. LESLIE (Forbes) proposed, "That clause 54 be passed, as printed."

Mr. HEDDON (Wanaaring) seconded the motion.

The question was put to the meeting and carried.

Clause

## Clause 55.

*Objections to Jurisdiction.*

55. In any proceedings under this Act, the jurisdiction of the Local Land Board, or Court, or Justices before whom the proceedings are had, shall not be ousted on the ground that the case raises any question of title to land, or that the defendant does not reside within the boundaries of the jurisdiction of the Board or Court or Justices before which or whom the proceedings are had: Provided that the land in respect of which the case arises shall be situated within the boundaries of the jurisdiction of such Board or Court of Justices.

A Rabbit Board shall be taken to be a Local Authority within the meaning and for the purposes of the Justices Enabling Act of 1872.

Mr. BACON (Brewarrina) moved, "That clause 55 be passed as printed."

Mr. J. M. ATKINSON seconded the motion.

The question was put to the meeting and carried.

## Clause 56.

*Proceedings before Local Land Boards.*

56. In any proceedings which under this Act may be had before a Local Land Board for the determination of any contribution, value, or other sum of money (not being an amount payable under any rabbit rate or as compensation by a Rabbit Board), the Local Land Board in determining the sum payable may give time for the payment thereof, and to that end may determine instalments by which the same may be paid, and fix the dates on or before which such instalments shall respectively be paid.

Where any proceedings under this Act are had before a Local Land Board an appeal or reference shall lie to the Land Appeal Court; but if no appeal or reference is made the determination or decision of the Local Land Board shall be final and conclusive.

The provisions of the Crown Lands Acts regulating proceedings before Local Land Boards, and upon appeals and references to the Land Appeal Court under such Acts shall, as far as practicable, be applied to proceedings, appeals, and references under this Act; and for the purposes of proceedings under this Act, the Land Appeal Court and Local Land Boards and the respective members and officers thereof shall have the same authorities and powers as are conferred by the Crown Lands Acts for the purposes of proceedings under the said Acts, and in addition thereto the Land Appeal Court and a Local Land Board shall have power to make such orders as to the costs of any proceedings before the Local Land Board as may appear to be just.

Mr. LESLIE (Forbes) moved, "That clause 56 be passed as printed."

Mr. DAVIES (Gunnedah) seconded the motion.

The question was put to the meeting and carried.

## Clause 57.

*Provision for giving of notices.*

57. Any notice given under or for the purposes of this Act, or any Regulation made thereunder, may be given in any one of the following ways:—

Personally to the person to whom the notice is addressed.

By letter sent through the post and directed to the last known place of abode or of business in New South Wales of the person to whom the notice is addressed.

By advertising the same twice at least in some newspaper circulating in the district in which the lands the subject of such notice are situate, an interval of a week or more being allowed to elapse between such advertisements: Provided that notice shall only be given as last aforesaid when the whereabouts, or the last place of abode or of business in New South Wales, of the person to whom such notice is addressed cannot be discovered by the person issuing such notice.

And any notice required by this Act to be given to the owner or the occupier (as the case may be) of any holding or land, shall in cases where several persons are the owners or the occupiers thereof, be duly given if given to one of such owners or occupiers as the case may be.

Mr. ALISON (Canonbar) moved, "That in line 43 the word 'registered' be inserted before the word 'letter.'

The Honorable RUPERT CARINGTON (Jerilderie) said it would be too expensive.

Mr. FLANAGAN (Gunbar) seconded the resolution, as he thought that this would be the readiest way of proving delivery.

Mr. BACON (Brewarrina) supported it, and said that in a former Act a registered letter was required as proof of the service of the notice.

The amendment was put to the meeting and carried.

Clause 57, as amended, was put to the meeting and carried.

## Clause 58.

58. For the purposes of any proceeding under this Act, the description of any holding or lands need not be a description by metes and bounds, but shall be sufficient if it make such reference to the holding or land either by name, situation, boundaries, or otherwise, as to allow of no reasonable doubt as to what holding or land is referred to.

Mr. BACON (Brewarrina) moved, "That clause 58 be passed as printed."

Mr. ALISON (Canonbar) seconded the motion.

The question was put to the meeting and carried.

Clause

### Clause 59.

59. Where the name of the owner of any holding is unknown to any person giving notice or taking proceedings under this Act, any notice required to be given may be addressed to the owner as such without mentioning his name, and any order or decision may in like manner be made or given against the aforesaid owner as such.

Mr. CAMERON (Fvanhoe) proposed, "That clause 59 be passed as printed."  
Mr. VARCOE (Hillston) seconded the motion.  
The question was put to the meeting and carried.

### Clause 60.

#### *Moneys charged upon holdings.*

60. Whenever by any section of this Act, any sum of money is expressed to be charged upon any private holding or land, any person thereafter becoming the owner of such holding or land shall be affected with notice of such charge, and shall be liable to pay the sum so charged or so much thereof as may for the time being be unpaid as if he were the person originally liable; but nothing herein contained shall operate to determine the liability of any person originally or previously liable.

Whenever any sum of money is charged upon any private holding or land, and any portion of such holding or land is detached from the residue thereof by subdivision, withdrawal, or otherwise howsoever, the portion so detached shall be charged with a ratable part of the aforesaid sum.

Mr. OAKDEN (Cobar) moved, "That in line 16 'private' be struck out, and also in line 23."  
Mr. WILKES (Broken Hill) seconded the motion.  
The question was put to the meeting and carried.  
Mr. LESLIE (Forbes) moved, and Mr. OAKDEN seconded, "That the clause as amended be adopted."  
The question was put to the meeting and carried.

### Clause 61.

#### *Power to raise money by mortgage.*

61. It shall be lawful for any owner of a holding who holds the same as mortgagee to add to the mortgage debt any sums expended by, or recovered from, him for the erection or repair, or as a contribution towards the cost of the erection or repair of any rabbit-proof fence upon, near, or for the benefit of such holding; and it shall be lawful for any trustee of a holding to raise the sums required or recovered for any such purpose by mortgage of such holding, in the same way as if a power to mortgage had been contained in the instrument creating or declaring the trusts thereof.

Mr. ATKINSON moved, "That clause 61 be passed as printed."  
Mr. LESLIE (Forbes) seconded it.  
The question was put to the meeting and carried.

### Clause 62.

#### *Power to make Regulations.*

62. Whenever in any section of this Act the expression "prescribed" is used in connection with any matter, and whenever in any section of this Act "Regulations" are referred to, the Governor may, in every such case, frame regulations for the purpose of giving effect to the provisions of such section. And for the purpose of carrying this Act into full effect generally, the Governor may make Regulations which may provide for the enforcement thereof by penalties not exceeding, in any case, ten pounds, and shall, upon being published in the *Gazette*, be valid in law: Provided that a copy of every such Regulation shall be laid before both Houses of Parliament within fourteen days from the publication thereof, if Parliament be then in Session, or otherwise within fourteen days after the commencement of the next ensuing Session.

Mr. LESLIE (Forbes) moved, and Mr. CAMERON seconded, "That clause 62 be passed as printed."  
The question was put to the meeting and carried.  
The CHAIRMAN then adjourned the Conference until 2 o'clock.

### Clause 5.

The question of recommittal of clause 5 was put and carried.

Mr. ALISON (Canonbar) then moved for Mr. A. Brown the following amendment, "That the franchise for the Pastures and Stock Protection Boards be on the following basis:—

10,000 to 20,000 sheep ...	...	...	...	...	3 votes.
20,000 ,, 30,000 ,, ...	...	...	...	...	4 "
Above 30,000 ,, ...	...	...	...	...	5 "

He said that clause 5, as moved by the Honorable Rupert Carington, provided that the Pastures and Stock Protection Boards should be the Rabbit Board for the district, and that the working of the Rabbit Act be placed in the hands of the Pastures and Stock Board. The next sentence went on to say that the Crown might be represented on those Boards in proportion to the revenue paid by them as assessment to the Rabbit Destruction Fund. Now he understood that later on they had substituted for that the proposition that the Government should nominate one member. As a consequence the following words should be struck out, "the Crown may be represented on the Stock and Pastures Protection Boards in proportion to the revenue paid by them as assessment to the Rabbit Destruction Fund."

The CHAIRMAN then put the question of striking out these words, as it was a necessary consequence of having passed the resolution that the Government should nominate a member, and it was carried.

Mr.

Mr. ALISON (Canonbar) then moved Mr. A. Brown's motion.

The CHAIRMAN said he would like to point out that holders of 40,000 sheep and over were already given five votes under clause 5. He thought it would be better to fix the franchise from the beginning if they were going to alter it at all.

On resuming after lunch Mr. A. Lakeman took the chair at 2:20 p.m.

#### Clause 4.

##### *Rabbit Districts.*

4. For the purposes of this Act, New South Wales shall be divided into Districts, hereinafter referred to as Rabbit Districts.

The Districts into which New South Wales may from time to time be divided for the purposes of the Diseases in Sheep Acts shall be Districts for the purposes of this Act, but the operation of this provision shall be subject always to the powers next hereinafter conferred on the Minister.

The Minister may, by notification in the *Gazette*—

- (a) declare that any Borough or Municipal District shall form a Rabbit District; or
- (b) combine two or more Sheep Districts wholly or in part into one Rabbit District; or
- (c) create Rabbit Districts without reference to the boundaries of any Sheep District; or
- (d) alter or modify the boundaries of any Rabbit District.

Any such notification shall operate and take effect as from the date thereof, but may by notification be corrected, modified, or revoked.

Mr. LESLIE (Forbes) moved the recommittal of clause 4 with a view to insert "declared rabbit infested" in line 13 after the word "be".

The question of recommittal was put and carried.

Mr. LESLIE (Forbes) then moved, "That the words 'declared rabbit infested' be inserted in line 13 after the word 'be'".

Mr. FREEMAN seconded the insertion of those words.

Mr. ATKINSON opposed the motion.

Mr. T. BROWN, M.L.A. (Budgerabong), said he would like to know whether it would be desirable to declare the whole of the Colony to be rabbit infested. There was a large portion of the Colony in which there were no rabbits. Powers should be reserved to declare certain districts infested, but he could not see the force of declaring the whole Colony infested, when only a little more than a half was really infested.

Mr. LESLIE's (Forbes) motion was put and carried.

Clause 4, as amended, was put to the meeting and carried.

#### Clause 5.

Mr. ALISON (Canonbar) on behalf of Mr. A. Brown moved the recommittal of this clause with a view to amend the franchise.

From 5,000 to 20,000 sheep	...	...	...	...	3 votes.
" 20,000 " 40,000 "	"	"	"	"	4 "
Over 40,000 sheep	...	...	...	...	5 "

Mr. BROOKE (Boggabri) said he would second Mr. Alison's amendment.

Mr. SIDES (Hay) seconded Mr. T. Brown's amendment.

Mr. ALISON (Canonbar) said that it had been decided previously that 3,000 sheep should have two votes and Mr. Brown's amendment would alter that. He did not think that that was right, it was out of order.

The CHAIRMAN said that he could not accept Mr. T. Brown's amendment in that form. Strictly speaking, it was out of order.

Mr. T. BROWN, M.L.A. (Budgerabong), then moved, "That the voting be on the following basis:—

250 to 3,000 sheep	...	...	...	...	1 vote.
3,000 " 5,000 "	"	"	"	"	2 votes.
5,000 " 20,000 "	"	"	"	"	3 "
20,000 " 40,000 "	"	"	"	"	4 "
Over 40,000 sheep	...	...	...	...	5 "

Mr. LESLIE (Forbes) moved an amendment, "That the franchise be as follows:—

250 to 3,000 sheep	...	...	...	...	1 vote.
3,000 " 10,000 "	"	"	"	"	2 votes.
10,000 " 20,000 "	"	"	"	"	3 "
20,000 " 30,000 "	"	"	"	"	4 "
30,000 " 40,000 "	"	"	"	"	5 "
40,000 " 50,000 "	"	"	"	"	6 "
50,000 " 60,000 "	"	"	"	"	7 "
60,000 and over...	...	...	...	...	8 "

Mr. CUDMORE (Wentworth) seconded it.

Mr. LESLIE's (Forbes) amendment was put, and the voting was equal, 15 to 15.

The CHAIRMAN then took a second vote which resulted in Mr. Leslie's amendment being carried by 18 votes to 16.

Mr. ALISON (Canonbar) moved, "That lines 42, 43, 44, 45, 46 and 47 of the original Bill reading as under:—'A Rabbit Board shall, within such time as may be prescribed, appoint one of its members to be Chairman thereof, and if such Board shall fail to appoint a Chairman the Governor may appoint one of such members to be the Chairman of such Board; and the Chairman and other members shall be entitled to receive, out of the revenues of the Board, such fees as may be prescribed,'—be reinserted."

Mr. BAYLIS (Narrandera) seconded the motion.

The CHAIRMAN then put the question, and it was carried.

Clause

## Clause 33.

Mr. LITTLE (Bullock Creek North) moved that clause 33 be recommitted with a view to inserting the word "thirty-six" in lieu of "forty-two" in line 34.

The recommittal was carried.

Mr. LITTLE (Bullock Creek North) then moved that "thirty-six" be inserted instead of "forty-two," and said his reason was that since they had fixed the width of the netting they had reduced the size of the mesh and this had made it very expensive. There was no reason why they should put up the extra 6 inches of width when it was only required in certain places such as where there were watercourses and rocky places. In these cases it would take 3 feet of extra width.

Mr. McGRATH (Mossgiel) said that if it were less than 42 inches it would be useless. The rabbits would jump it.

Mr. BAYLIS (Narrandera) said that in the Narrandera district the first that he put up was 36 inches and it had had to be made higher. He himself had seen rabbits jumping up and climbing over the 36-inch netting.

Mr. CUDMORE (Wentworth) said his experience had been the same. Leaves blew up against the fence and sand accumulated, and it was almost useless. If a fence were only 36 inches high it was so low that the rabbits could climb over easily.

Mr. ALISON (Canonbar) supported Mr. Little. In his experience he had never known a rabbit jump over a 36-inch wire netting. He had never heard of it before. They were there to vote a minimum. There was nothing to prevent the people from putting up 5 feet if they liked. They had to make a legal minimum. That was sufficient care of the individual's interest. They should not compel those who were not desirous of having a 42-inch netting to put it up. In many instances there were wires just above the netting which would prevent jumping over. This extra 6 inches would mean enormous expense, and they ought to think seriously before doing it.

Mr. SIDES said he quite agreed with Mr. Alison. He had several miles of 3-foot netting up surrounding crops. It had been up for years, and he had never known a rabbit to go over. While  $\frac{1}{2}$ -inch netting at that height was better than 5 feet of 1 $\frac{1}{2}$ -inch, if 42 inches were made the legal minimum it would be a real hardship to many people.

Mr. DAVIDSON (Condobolin) supported Mr. Little. He thought 36 inches was quite sufficient.

Mr. BRETT (Urana) said that from his experience a 36-inch fence would be simply useless. The rabbits would jump over it in hundreds.

Mr. ROSS (Hume) opposed the motion to introduce 36-inch netting. He had seen them jump over it without touching it at all. He had had experience with both widths, and considered that anything under 42 inches would be perfectly useless.

Mr. BOLTON (Wagga) said they were to propose the most effective way of dealing with the rabbit question, and not to do anything in the way of cheeseparing, and say "possibly" a rabbit would not jump over. They must arrive at something thoroughly effective in every way.

Mr. DILL (Hay) said he could vouch for it that many of the gentlemen present had seen rabbits jumping over 36-inch fences. He had seen them not once, but often.

Mr. ATKINSON said that now that the rabbit stories were badly ousting the snake yarns, he would say that he had had experience with both widths, and his conclusion was that the 36-inch fence was useless. He had taken it down and replaced it with 42-inch, because the rabbits used to go over it.

Mr. LITTLE (Bullock Creek North) said he thought there must be something of the opossum about rabbits that climbed over fences as some gentlemen had said they did.

The CHAIRMAN then put the question of inserting "thirty-six" instead of "forty-two," and the voting was equal, 15 to 15.

On the vote being taken again Mr. Little's amendment was lost by 17 votes to 16.

Mr. ALISON (Canonbar) moved that in line 35 the word "seventeen" be reinserted in place of the word "eighteen," which had been inserted by amendment. He said that over the whole of Victoria and Queensland and New South Wales the gauge was 17, and although he was anxious to make the netting as cheap as possible and the minimum as low as possible, he was inclined to think that they had gone a little too far in deciding for the 18 gauge.

Mr. LESLIE (Forbes) seconded Mr. Alison's motion. He said if 18 gauge were the minimum they would compel a man adjoining to pay for half a fence in which he did not believe, and he thought the man who had to pay had a right to be considered.

The question was put and carried.

## Clause 41.

Mr. ATKINSON moved the recommittal of clause 41, with a view to cut out subsections (a) and (b) with a view to the insertion of a fresh clause. The question of recommittal was put and carried.

Mr. ATKINSON then moved, "That subsections (a) and (b) be struck out, and the following inserted:—(a) A private rabbit-proof fence forms a common boundary fence between private and public lands whether erected before or after the passing of this Act; and (b) Particulars of the said fence shall be furnished to the Minister."

Mr. LITTLE (Bullock Creek North) seconded it.

The question was put to the meeting and carried.

Mr. J. FLANAGAN (Gunbar) moved, "That the following be inserted as a new clause:—'A small group of land owners, say five or more, may form their land into a sub-rabbit district, and have full management and control of same for the purposes of the Rabbit Act.'"

Mr. T. BROWN, M.L.A. (Budgerabong), seconded it.

Mr. ROSS (Hume) thought that was dangerous. He did not see why four or five small holders had the right to a district alone more than one large holder.

Mr. ATKINSON did not think it would be possible to make this provision unless they had their own little Stock and Pastures Board to themselves.

The question was put and lost.

Mr. A. L. P. CAMERON (Ivanhoe) moved, "That a new clause be introduced providing that any Rabbit Board be empowered to borrow moneys for the carrying out of this Act, such moneys not to exceed in the whole the revenue of the Board for three years."

Mr.

Mr. ALISON (Canonbar) rose to a point of order. They had decided the previous day that clause 25 should be struck out, and this really proposed to reinsert it.

Mr. M'GRATH (Mossgiel) seconded the resolution.

The CHAIRMAN then ruled it out of order.

The Hon. R. CARLINGTON (Jerilderie) then moved, "That the member of the Rabbit Board nominated by the Governor shall not be entitled to act as a member of either the Sheep or the Pastures and Stock Board unless he be duly elected by the existing franchise."

Mr. BROOKE (Boggabri) rose to a point of order.

The CHAIRMAN then ruled the Hon. Rupert Carington's motion out of order.

### The Preamble.

A Bill to make better provision for the destruction of rabbits; for the erection and maintenance, and to provide for contributions towards the expense of rabbit-proof fences; to constitute and define the powers and duties of Rabbit Boards; to enable rates to be imposed; to amend the Crown Lands Acts; and for other purposes.

The CHAIRMAN then suggested that the Preamble of the Bill, which had been postponed, should be left to the Draftsmen to deal with.

Mr. ALISON (Canonbar) moved, "That the Preamble be postponed."

Mr. LESLIE (Forbes) seconded the motion, and it was put to the meeting and carried.

### Clause 1.

BE it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the "Rabbit Act of 1896"; and any references in the Animals Infectious Diseases Act of 1888 to the Rabbit Nuisance Act of 1883 shall be read as references to this Act.

The Rabbit Act of 1890, together with all regulations made thereunder, is hereby repealed.

The repeal hereby enacted shall not of itself—

- (i) abate, prejudice, or affect any proceeding now pending in any Court or before any Local Land Board or other authority;
- (ii) prejudice or affect any proceeding, matter, or thing lawfully done or commenced or contracted to be done under the authority of the said Act or any regulation made thereunder;

and provided always that notwithstanding such repeal—

- (a) all offences committed or penalties incurred against or under the said repealed Act, or any regulation made thereunder, may be respectively tried, punished, enforced, and dealt with as if this Act had not been passed; and
- (b) all rights accrued and obligations incurred under or by virtue of the said repealed Act or any regulation made thereunder shall, subject to any express provision of this Act in relation thereto, remain unaffected by such repeal.

Mr. ALISON (Canonbar) moved that Clause 1, as printed, be passed.

Mr. MOORE (Goodooga) seconded it.

The question was put before the meeting, and it was carried.

### Clause 2.

#### *Interpretation of Terms.*

2. In this Act, unless the context otherwise requires:—

"Crown Lands Acts" means the Crown Lands Acts of 1884, 1889, and 1895, together with any Acts passed or to be passed for the amendment of the said Acts or any of them.

"Diseases in Sheep Acts" means the "Diseases in Sheep Act of 1886," together with all Acts passed or to be passed for the amendment thereof.

"Governor" means the Governor, with the advice of the Executive Council.

"Holding" means any land or aggregation of lands constituting one property, whether held under the same title or different titles or under titles of different kinds, together with all proclaimed, reserved, or reputed roads intersecting or bounding the same.

"Local Land Board" means the Local Land Board of the Land District in which the land in question is situate, or any Local Land Board duly appointed to act in place of such Board as aforesaid.

"Minister" means the Secretary for Lands for the time being, or any other Minister from time to time charged with the administration of this Act.

"Occupier" means the owner if he resides on the holding, but if not, his resident manager.

"Owner" means—

- (a) the person registered as the holder of any lease or license, or promise of lease or license from the Crown; or
- (b) The person registered as the holder of any purchase, whether conditional or otherwise, from the Crown; or
- (c) the applicant for a homestead selection whose application has been confirmed; or
- (d) The person entitled at law to an estate of freehold in possession in any land granted by the Crown for private purposes; or
- (e) the person in whom is vested any land taken or appropriated under authority of any statute authorising land to be taken or appropriated for the purpose of any private undertaking.

"Prescribed"

- "Prescribed" means prescribed by this Act or any regulation to be made thereunder.  
 "Private holding" means a holding consisting of lands which are not public lands as hereinafter specified.  
 "Private lands" means lands which are not public lands as hereinafter specified.  
 "Public land" means—

- (a) land vested in the Crown which is not the subject of any lease or license, or promise of, or agreement for, any lease or license under the Crown Lands Acts or under any other Act authorising the occupation or use of land vested in the Crown, and which is not the subject of any contract for the sale thereof; or  
 (b) any land which is the subject of any dedication or permanent reservation for public uses or purposes, not being for a road, whether the said land has been granted for the said uses or purposes or not, and which is not for the time being lawfully held under any lease or license, or promise of, or agreement for, any lease or license.

The CHAIRMAN then suggested that Clause 2 be left to the draftsman to make the interpretations according to the Bill.

Clause 2 was therefore postponed.

### Clause 3.

*Parts of the territory may be exempted from certain provisions.*

3. The Governor may, by proclamation in the *Gazette*, exempt any part or parts of New South Wales to be specified in the proclamation from the operation of the provisions contained in Parts I and II hereof; but any such proclamation may by proclamation be corrected, modified, or revoked.

The CHAIRMAN said they had passed a resolution to the effect that New South Wales should be declared rabbit infested, and this clause 3 gave the Governor power to declare some districts not infested. These two resolutions were therefore conflicting. He thought they ought to cut out clause 3 if the Conference thought that the whole of New South Wales should be under one law without any exemption anywhere.

Mr. ALISON (Canonbar) said it might be desired to declare towns, villages, and boroughs, and so on, to be exempted from the operation of this Act.

The Hon. RUPERT CARINGTON (Jerilderie) thought the clause might read in this way, "the Governor may, by proclamation in the *Gazette*, exempt any part or parts of New South Wales from being declared rabbit infested." He thought it was a most valuable power to give the Governor. It was absurd to declare George-street, Sydney, rabbit infested.

Mr. FREEMAN said he would support Mr. Alison in this matter; it was much better to protect those portions of the Colony that were not at present infested from being open to become infested.

Mr. ALISON (Canonbar) said he wanted to draw the attention of the Conference to the fact that the two clauses were not in consonance. He moved "that the Governor may, by proclamation in the *Gazette*, exempt boroughs, towns, and villages from the operations of the provisions contained in parts 1 and 2 hereof."

Mr. BOLTON (Wagga) thought this Conference should make every feasible suggestion for the suppression of the rabbits. It was just possible that the rabbits might be as thick in a municipality as anywhere else. Mr. Carruthers had said that in Broken Hill they were so thick that the dying rabbits got under the school and it had to be closed. If they removed such a place from the operations of the Act and declared it uninfested they would be declaring an untruth.

Mr. SIDES (Hay) said it would be a mistake to exclude municipalities and towns. He had been in towns very early in the morning, and had seen as many rabbits about the stables as out in the fields.

Mr. HAYES said it was clear that if the Conference had passed a resolution that the whole of New South Wales be declared rabbit infested this clause should be struck out. As far as the municipalities were concerned everyone who knew the country knew that they were just as much infested as anywhere else. The town of Hay had as many rabbits as any other part of that district.

Mr. ALISON (Canonbar) said he had been misunderstood. He only wanted to point out that the two motions were contradictory. He did not mind if it was left one way or the other.

Mr. T. BROWN, M.L.A. (Budgerabong) said it ought to stay as it was. The Minister ought to have power to except certain portions.

Mr. DILL (Hay) proposed that clause 3 be struck out.

Mr. FREEMAN seconded.

The question was put before the meeting, and carried by 25 votes to 8.

### Clause 25.

Mr. CAMERON (Ivanhoe) moved the recommittal of clause 25.

Mr. CUMMING (Hillston) seconded the motion.

The question of recommittal was put and carried.

Mr. CAMERON (Ivanhoe) proposed that clause 25 be struck out, and the following be inserted:—  
 "That any Rabbit Board be empowered to borrow moneys for the carrying out of this Act, such moneys not to exceed in the whole the revenue of the Board for three years." He said that if they eliminated from the powers of the Board the power to borrow money they would thoroughly emasculate the Bill and make it unworkable. The Rabbit Board must be on the same lines as a Municipal Council. Without giving them the power to borrow money they would be practically useless. With regard to the part of the clause naming three years as the limit, he was not particular on that point. They could amend that in anyway they chose. They all knew perfectly well that the initial expenses of a Rabbit Board or any other Board were very much greater than they had any idea of. The Government would have power to buy wire-netting, and to advance it to those who required it under this Bill, but it was possible that that  
 clause

clause would be rejected by Parliament, and they must make provision in that clause in case it was rejected. They should endeavour to make the suggestions which they drew as acceptable to the country and the Minister and themselves as it was possible to make them. If they objected to the power to borrow three years rates, let a vote be taken as to whether it should be three, two, or one. If the Conference rejected this clause he would endeavour to get what he wished put in the Bill in another form, that is, with two years inserted, and if that were rejected, then with one year; and then if that were rejected, and they adhered to the decision that was given a day or two previously, then he would feel that they had in a measure damned the Bill, and, as Mr. Flanagan had said, they might as well go home.

Mr. BOLTON (Wagga) said he quite agreed with the last speaker. He said that if war were declared against anyone else there would be a large sum of money voted for it, and he said that a large sum of money should be voted to wage war against the rabbits. It appeared to him that they must resist the rabbits at any expense, and should put forth every effort by main force to keep them down. He hoped the operations of this Act would be so successfully carried out that they would have no great call or necessity for borrowing later on, but now they required a large sum to take proper measures. He had great pleasure in seconding Mr. Cameron's motion.

Mr. FLANAGAN (Gunbar) said he would support Mr. Cameron's motion. They were giving certain powers to deal with the rabbits, and one of the powers conferred was that of erecting barrier fences. Now they knew very well that they could not erect barrier fences without money, and rates could only be collected once a year, and one year's rates, he was certain, would not erect much barrier fence. Therefore, if they were going to deal with this national nuisance, they would have to confer a power on the Board to borrow money.

Mr. J. HAYES, M.L.A. (Deniliquin), said that this was a matter which he thought absolutely necessary. Many of the Boards would find it necessary to put a ring fence round their district, and this would cost money. The Conference would therefore act wisely in carrying this motion unanimously.

Mr. CUMMING (Hillston) said that he thought that they were overlooking the fact that the initial expense would be the heaviest of all. They must leave something to posterity. It would be quite safe to give the Boards this power.

Mr. ALISON (Canonbar) rose to oppose the motion. He really thought that Mr. Cameron's allusion to the municipalities was a most unfortunate one, because up to the present moment most of the municipalities in this Colony were bankrupt.

A Member: That is their own fault.

Mr. ALISON (Canonbar) said he thought it might be the Rabbit Board's own fault, too. They might borrow four years' revenue, and they might lay such a burden on the Rabbit Boards that they would have nothing to spend on rabbit destruction for a long time. He really thought they would be acting wisely if they refrained from conferring this power of borrowing. They did not know how far it might be extended if they left this part of the clause in as for one, two, or three years. It might be desirable to leave it in for four years. Very few of them would vote for four years. If they passed the clause allowing the Boards to borrow, as sure as fate four years would be inserted when in Parliament. From the experience of the past history of the Colony of bodies being allowed to borrow, he thought if they had not got the experience now that it was exceedingly dangerous they did not profit by their experience.

Mr. WILKES (Broken Hill) said that they had affirmed the principle of the Boards being elected from year to year, and why should they tie down the Boards in this way? This year the Board would borrow, and next year's Board would be tied down hand and foot.

Mr. ROSS (Hume) said he would oppose the reintroduction of this clause. He thought that it was most dangerous. He considered the main object of the Stock Boards under the Rabbit Bill would be to see that private individuals killed the rabbits themselves. He did not want the Stock Boards to kill rabbits. All the Boards were to do was to see that private individuals killed the rabbits themselves. If they gave the Boards power to borrow they would do it in the most extensive way.

Mr. CAMERON (Ivanhoe) said the case had been instanced by Mr. Alison of the difficulty that had arisen with regard to municipalities borrowing money. If the municipalities had already borrowed too much money that was their look-out, and their own fault. And Mr. Alison's argument, as far as he could see, would apply to any Board in any part of the world borrowing money. Any Board in the world might get themselves into difficulties by borrowing too much money. But they did not necessarily get themselves into difficulties, and notwithstanding the difficulties that the municipalities had got themselves into, nobody in that Conference supposed for one moment that corporate bodies should not have the power to borrow money for some time or other. He was not particular whether it was two years or three years, but he did say that unless they had that power it would be impossible to carry on the business of the Rabbit Board. He thought that Mr. Hayes had put it clearly before the Conference that that Board could not carry on without some borrowing powers. If members had not made up their minds which way they would vote, he implored them to vote to give the Boards some borrowing power.

The question was put and lost by 25 votes to 13.

Mr. ALISON (Canonbar) moved that a committee be appointed to confer with Mr. Alexander Oliver, with a view to drafting the proposals of the present Conference so as to bring them into harmony with one another and with other Acts. That the said committee consist of the Chairman, the Honorable Rupert Carington, Mr. J. M. Atkinson, Mr. Bacon, Mr. T. Brown, M.L.A., Mr. Leslie, Mr. Cudmore, Mr. Freeman, Mr. Flanagan, and the mover, two to form a quorum.

Mr. HEBDEN (Wanaaring) proposed that the resolutions passed by the Conference be handed to Mr. Alexander Oliver, and that he be asked to draft a Bill on those resolutions, and that there be no committee.

Mr. WILKES (Broken Hill) supported Mr. Hebdon's motion, and said that if the resolutions were not clear enough to be understood by Mr. Oliver, then it was certain that the committee could not explain them.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), suggested that the Conference should adjourn until Wednesday morning, and that the Chairman should interview Mr. Alexander Oliver, and report to the Conference, on Wednesday morning, how long it would take Mr. Oliver to draft the Bill. They could then come to a decision whether a committee was required or not.

The Chairman then read the following letter from the Secretary of the Board for Exports:—

Department of Mines and Agriculture, Board for Exports, 40, Young-street. Sydney, 15 March, 1897.

Sir,

By direction of the Honorable the Minister for Mines and Agriculture, I have the honor to request the indulgence of your Conference, before closing the session of to-day, in order to lay before the gentlemen present the action being taken by my Board in connection with the export of hares and rabbits.

I shall be in attendance for that purpose.

I have, &c.,

JAS. STEPHENSON,

Secretary.

A. Lakeman, Esq., Chairman, Rabbit Conference.

Mr. T. BROWN, M.L.A. (Budgerabong), said that this was an important matter, and the Secretary of the Board for Exports would be in a position to give them valuable information. He would move that the Conference allow Mr. Stephenson the opportunity of addressing them at the conclusion of the business on Wednesday.

Mr. Brown's motion was carried unanimously.

The Chairman then adjourned the Conference until Wednesday morning at 10 a.m.

### SEVENTH DAY—17TH MARCH, 1897.

Mr. Allen Lakeman took the Chair at 10 a.m.

The minutes of previous meeting were read and confirmed.

The CHAIRMAN then reported that he had seen Mr. Oliver; but he could not have the Bill ready until, at the earliest, the beginning of the following week. It would be a rather difficult matter to draft.

Mr. BAYLIS (Narrandera) said, that as many of the delegates were anxious to get home, and it was no use their remaining for another week, he would propose that a sub-committee be formed of five gentlemen to confer with Mr. Oliver, and receive the Bill from him, and present it to the Minister, and to explain the intentions of the Conference both to Mr. Oliver and to the Minister if necessary. He would nominate the Chairman, Mr. Allen Lakeman, together with Mr. T. Brown, M.L.A., the Honorable Rupert Carington, Mr. Alison, and Mr. Bacon as the sub-committee of five to deal with this matter.

Mr. J. M. ATKINSON seconded Mr. Baylis' motion.

Mr. BAYLIS (Narrandera) said that three should form a quorum.

Mr. J. M. ATKINSON thought that one should form a quorum, as it was only a matter of explaining the intentions of the Conference.

Mr. BAYLIS' (Narrandera) motion was then put, and carried unanimously.

The CHAIRMAN then reported that he had received a note from Mr. Alexander Oliver, from which he would like to read them an extract, and which ran as follows:—"I hardly understand what is the intention of the Conference in regard to the constitution of the 'Rabbit Boards.' Referring to clause 5 on the printed amendments—'That for the purposes of the Bill, &c.,'—does this mean that the constitution of the Pastures and Stock Protection Boards is to be altered only for *Rabbit Administration purposes* or *generally* and for all purposes? If the latter, it will be an amendment of the Stock and Pastures Acts, and not of Mr. Carruthers' Bill only. It will, on the other hand, be rather awkward to have the Boards constituted one way for stock purposes, another for rabbits, especially at meetings when business of both kinds is to be transacted."

Mr. ALISON (Canonbar) said he thought the idea, when the clause dealing with that matter was passed, was this, that the Sheep Diseases Directors met and transacted their business, and then the Stock Board met and transacted their business, and then it was the intention he thought, that the Rabbit Directors would meet and transact their business, but they would sit as separate Boards.

Mr. ATKINSON took it that they had to alter the constitution of the Diseases in Sheep Act, as they put in nine men instead of eight. He thought the Government representative would take the Chair on the Rabbit Board and form the ninth man.

The Hon. RUPERT CARINGTON (Jerilderie) said that sitting as they did together there had never been any friction between the Sheep Directors and the Stock and Pastures Directors. They did the sheep business first and the other afterwards. Why should there not be a third section? He did not see that the Government nominee would have any more right to sit as a Sheep Director than the Stock and Pastures Directors had.

Mr. T. BROWN, M.L.A. (Budgerabong), said that this was quite a revelation to him, and to use a hacknied expression, he did not know where he was on this question. The Minister's Bill provided for a separate Rabbit Board, and it went on to provide that the present Stock and Pastures Board might for the purpose of this Bill be constituted a separate Rabbit Board, that Municipalities might be constituted separate Rabbit Boards according to their areas, and the people affected might come in and require a Rabbit Board to be constituted on an elective basis, independently of the Stock Board or of the Municipalities. These were the provisions of the Minister, and that was the constitution that he was supporting. Now every speech that had been made on the occasion of the passing of that clause was in the direction of giving the Stock and Pastures Board the power to administer this Rabbit Act. It was struck out that the Minister should have no power of constituting, on the wish of the people affected, any other Board but the Pastures and Stock Board to do this work. Now he understood from that position that the wish of this Conference was that the administration of this Act, from the top to the bottom, with the exception of the Municipal Councils, should be part and parcel of the work given to the Stock and Pastures Board, and looking upon it from that standpoint, and knowing the large interests that would be affected by it, and seeing that it was not practically with the province of the Stock and Pastures Board as at present constituted,

constituted, he had set himself the task of liberalising the franchise of the Stock Board not for the purpose of constituting out of the Stock and Pastures Board another Board—the Rabbit Board—but for the general purposes of the Stock and Pastures Act, and that was what he had pointed out to the Conference all along, that to carry out their idea they would have to amend the Pastures and Stock Act and the Diseases in Sheep Act in order to give the rest of the taxpayers a franchise. That would not be necessary if another Board were established to administer this Rabbit Act. Now they had set to work to liberalise the franchise for the Stock and Pastures Board, and they had done so in such a manner, he was inclined to think, that they had liberalised the apex and curtailed the base, and that when it came before Parliament the whole edifice would topple over. They had liberalised the franchise reducing the minimum to 250 sheep, and increasing the voting power from four to eight. Now, if that did not apply to the other functions of this Stock and Pastures Protection Board, in so far as that dealt with Stock and Pastures matters, and Diseases in Sheep matters, then on this basis they were constituting another Board with a different franchise, and it did not follow that the men elected on the one franchise would be the men who would be chosen on the other. What he wanted to know was this: What was the position this Conference intended to take up? The whole thing was fraught with difficulties. The Conference had set out with the idea of placing the whole of the administration of this Bill in the hands of the Stock and Pastures Board, as constituted for Stock and Pastures purposes, but as they had gone on they had lost that idea, and had been working with a view of establishing a separate Board within the Stock and Pastures Board for purposes of administering this Bill. (Members: No, no.) If that was not so, then why was it objected that the Government nominee should not sit upon matters affecting any business but the rabbit business? Would he not be a member of the Stock and Pastures Board? If this combination were not given, his contention was, that they were not placing the administration of this Bill under the Stock and Pastures Board, but they were placing it under a separate Board, with a different function. Now they had got themselves into this very difficult position, and it seemed to him that he was borne out in his contention by Mr. Oliver. Mr. Oliver could not say what was the intention of this Conference. It might be, looking at it from one standpoint, that the Stock and Pastures Board were to administer this Act. But when they came to other provisions in this Bill he could only come to the conclusion that the Stock and Pastures Board as a Stock and Pastures Board, and might not be, was to administer the Act. He thought the Conference should rescind the whole of the resolution, and go back to the Minister's proposal. The Stock Boards would be the administering machinery, and it would only be where the people came and asked for some other form of administration to be set up that it would be set up.

The CHAIRMAN said that he would rule any discussion on the matter out of order. Why he read this letter was to show the difficulties which Mr. Oliver had, and the difficulties that the Committee would have, and he thought it just as well to take the sense of the large body of the Conference, as they were there, as to what really was the meaning of that particular section of the Act which they had passed, whether the Stock Boards were to be constituted as a separate Board, or, as Mr. Brown put it, whether the Rabbit Boards were to be handed over to the Stock Boards, and the Stock Boards were to be constituted with a new franchise.

Mr. ALISON (Canonbar) said that he thought Mr. Brown had altogether mistaken what had been said in the morning. The franchise under the Sheep Diseases Act would be altered. The Constitution of the Stock and Pastures Board would be altered. In accordance with their resolutions those people who were Directors under the Sheep Act and under the Pastures and Stock Act would be the Rabbit Board under this Bill for the purposes of this Bill, and then there would be the Government representative who for the purposes of this Bill, for the purposes of the Rabbit Act, would be called in. The Government did not provide any funds under the Stock and Pastures Act, and therefore they should not have a man representing them on the Pastures and Stock Board. It was their intention that when rabbit business was to be discussed the Government representative should enter the room and discuss it. They had not altered anything or proposed to alter anything except to liberalise the franchise. He did not know that he altogether approved of it himself, but it was done and they could not alter it. They did not propose that there should be a separate election for the Rabbit Board. There would be one election for the Sheep Directors and one election for the Pastures and Stock Board Directors, and the whole of these people formed a Rabbit Board, with the addition of one man for the Rabbit Act, and the Rabbit Act alone, to represent the Government.

The CHAIRMAN then said that he thought this was one of the difficulties that Mr. Oliver would have, and he thought that what Mr. Alison had stated simplified the matter, and it should be put to Mr. Oliver that the Pastures and Stock Board were to be elected on the franchise of the new Rabbit Board, so to say, but that they would conduct their own business as a Stock and Pastures Board for themselves, and the Diseases in Sheep Act Directors would conduct their business, and the Rabbit Board would be conducted by the nine members. If that was what the Conference meant he would be glad to have them vote on the question, and he would convey their decision to Mr. Oliver.

The Chairman then took a vote as to whether this view was the view of the Conference, and it was carried.

Mr. CUMMING (Hillston) moved that the following resolution be pressed upon the consideration of the Minister "That the Government should continue to offer a substantial reward for a discovery that would tend to entirely destroy the rabbit pest, and ask the Governments of other colonies to also contribute." He thought that this matter was worthy of their consideration. Science no doubt would step in one day and solve the problem, as it had done already in Europe with regard to the silk industry, which had been saved by science, and in America the citrus industry had been saved by science also. He thought that if this succeeded it would save all the trouble of this Bill or any other.

Mr. FLANAGAN (Gaubar) seconded it. He thought it would be a very wise thing if the expenses could be curtailed by some new invention. It would be a foolish thing if they did not ask the Government to keep on offering rewards for inventions that would deal more effectively than they could with the rabbits.

The resolution was then put to the Conference and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), then moved, "That Mr. Stevenson, the Secretary of the Board for Exports, be now allowed an opportunity of addressing the Conference."

Mr. ALISON (Canonbar) seconded, and it was carried.

Mr.

Mr. STEVENSON said he had no intention of detaining them very long. He came there merely by direction of the Board for Exports, and with the consent of the Minister for Mines, to explain to them on what lines the Board for Exports intended dealing with the rabbits and hares of the Colony. Although the rabbits were under the Lands Department, the hares were under the Department of Mines. He supposed that if they had arrived at a cross-breed it would have to be administered by a third department. The Board for Exports had made certain arrangements, based to a certain extent on the lines adopted in Victoria. About two years ago, when Victoria first took up the export of hares and rabbits, more particularly the latter, they sent a few hundreds of carcasses just as an experiment. It was with great difficulty that the merchants were got to take it up. Last year they sent 1,318,000 carcasses to London, besides about 60 per cent. more, rejects; altogether more than  $2\frac{1}{2}$  millions of rabbits were destroyed last year under those arrangements. In January this year they sent 183,000 carcasses to London, bringing back a total return of about £7,250. That was instead of having the pest destroyed by letting the carcasses lie on the ground, they were making a commercial article of them. It was proposed to do the same in New South Wales. The Board for Exports had made arrangements for cold storage, and had imported an expert from Victoria to manage the business. The proposal was that the Board for Exports would arrange for refrigerating chambers built in Sydney, that local refrigerating stores should be constructed in the country, and cool trucks provided on the railways. The country produce would be brought to Sydney, stowed in the freezing chamber, and packed and exported by the Board. The Board for Exports would find all cases, and the cost of these would be included in the charges. The conditions were that the rabbits should be trapped or snared, killed, gutted, and bled, and the liver and kidneys must be left in the carcass. Care must be taken to keep the furs clean, and this could be done by hanging them over rails in pairs. Cases with a rail from end to end, and holding from fifteen to twenty pairs, were the best for this purpose. The carcasses, immediately on being killed, were to be forwarded to the Export Depot by a quick train. The Government expert would receive, grade, pack, and brand them, and the charge for handling, freezing, and shipping would be  $1\frac{1}{2}$ d. per pair, cases included. All sweated, damaged, or unsightly carcasses would be rejected, and must be immediately removed by the owner or his agent. The railway rates for hares and rabbits, in not less than 5 cwt. lots, delivered to the Government Export Depot in Darling Harbour, would be:—

			s. d.				s. d.			
Up to 50 miles	...		6	0	per ton.	Up to 200 miles	...	18	8	per ton.
„ 75 „	...		8	6	„	„ 225 „	...	20	0	„
„ 100 „	...		10	10	„	„ 250 „	...	21	5	„
„ 125 „	...		12	11	„	„ 300 „	...	24	2	„
„ 150 „	...		15	0	„	„ 350 „	...	26	11	„
„ 175 „	...		16	10	„	„ 400 „	...	29	6	„

It might be roughly argued that a ton of railway freight would represent about 140 pairs of hares or 340 pairs of rabbits. That was the position up to the present, and the Minister had arranged that he would go with the expert and Mr. Stevenson, and meetings would be held in the country to speak on this question, and to discuss the matter fully there. A meeting would be held in Bathurst on the following Monday, and in other towns at later dates. Information that might be sent to the Board would be received and carefully attended to. They had all preparations made, and they had no doubt that within a few years they would be able to say that scarcely a rabbit could be seen near a railway line where it could be got to the market.

Mr. CAMERON (Ivanhoe) said that he had listened to Mr. Stevenson's remarks with pleasure, but he considered that the rabbits in New South Wales, or in any part of Australia, should not in any way be regarded as a subject for commercial enterprise. To him the rabbit was a scourge that they ought to stamp out by every means that lay in their power. There was no doubt that all those living within the vicinity of railway lines, or even within 20 miles of them, would benefit very much by this, but those portions of the Colony were insignificant in comparison with the large area which was overspread with rabbits, and he did not think that the Conference should recommend anything of that sort. Let them treat the rabbits as their worst enemy, and let them form no portion of any scheme of commercial enterprise in this Colony.

The Honorable RUPERT CARINGTON (Jerilderie) would cordially support the remarks made by Mr. Cameron. He would go even further; he would give any man six months who froze rabbits for export. He would move a resolution, "That it is inadvisable that rabbits should be made an article of export."

Mr. CAMERON (Ivanhoe) seconded the Honorable R. Carington's motion.

Mr. ROSS (Hume) said he felt, like the Honorable Rupert Carington, very strongly on this matter. He thought the Conference last year had passed a similar resolution. The exportation of rabbits was a thing that should not be encouraged. It would be all very well where there were railways and where the rabbits were not too thick, but where the rabbits were numerous they were not fit for export. And if they were to encourage the export of rabbits—to send them home—it would simply be to encourage the breeding of rabbits. Of course, they knew that where those rabbits were caught, and sent home, was where the country was good and the rabbits not so thick. He thought they ought not to encourage this in any shape or form; for wherever a rabbit factory was established, the rabbits would simply increase rapidly. The Government should let the matter alone.

Mr. SIDES (Hay) said he did not think the Conference came here to make rabbits a commercial commodity. They had come here to devise some means to destroy their worst enemy. It was beyond question that they were their enemy, and if rabbits were to be cultivated, they might as well stop breeding sheep; because, if rabbits were exported and put on the market in London, their sheep would come down in value terribly as the meat supply would be so much increased. He thought they should put their faces totally against cultivating rabbits in this way.

Mr. WILKES (Broken Hill) said that the best argument with regard to this was given to the Minister yesterday on the blackberry question. He showed them that there were a number of people who were living, in a manner, on the blackberries. He said they could not help that; the pest must be got rid of. There was one thing Mr. Stevenson had not pointed out. There was only a certain class of rabbits

rabbits that was good for export. In his district there were tinning works, and during the winter months there were no rabbits good for that purpose, because the does were heavy in young and were, therefore, not fit for export. He would most heartily support the Honorable Rupert Carington's motion.

Mr. FLANAGAN (Gunbar) said that the local authorities should see the rabbits were not being kept for commercial purposes in any locality, and when the power was in the hands of any Stock Board it was their duty to see that the rabbits were not kept for commercial purposes, but he thought they were unnecessarily alarmed, and should not prevent a person alongside a railway fetching in an auxiliary to catch rabbits and do the work for him, sending them to Sydney for export and so giving employment to labour. He certainly thought they should not foster the rabbits but the Stock Boards should not interfere with a private individual if he chose to try to make money out of the rabbits he killed.

Mr. T. BROWN, M.L.A. (Budgerabong), said that this was a most extraordinary development. It seemed to him that some of the members had got so completely hypnotised by the idea that the rabbits were to be destroyed by the Rabbit Boards, that they could not conceive of their being destroyed in any other way and turned to some benefit. Now he thought that what Mr. Stevenson had done was simply to show to the Conference how they might in another way destroy the rabbits. He did not propose that the rabbits should be cultivated for export, he proposed to destroy them and convert them into an article for export. One gentleman announced the extraordinary idea that if they put rabbits on the English market the price of sheep would go down. He did not see if they could turn the rabbits into a profitable product for export, why it could not be done as well as sending all the skins as they did now. They skinned the rabbits and exported the skins, so long as it was profitable to do so, and why should they not export the rabbits? If it would interfere with the value of the sheep he would not mind. It would simply be a matter of the survival of the fittest. It seemed to him to be a most extraordinary stand to pass such a resolution as this. He would propose that Mr. Stevenson be thanked for having given them this address, and he would certainly oppose the Honorable Rupert Carington's resolution.

Mr. ALISON (Canonbar) said that without reflecting on Mr. Brown in any way, he thought the picnic the previous day must have affected him. He had been getting hold of the wrong ideas altogether. They were there to consider how to eradicate the rabbit and they only wanted to put their disapproval on anything that would continue the rabbit. If they made rabbits an article of export they might continue for ever, and they were there to destroy them root and branch. They had brought in all sorts of resolutions to make everybody destroy the rabbit, and it would not do for them to say that they had a contract with the Meat Company to supply rabbits for export. He agreed with the Honorable Rupert Carington, and thought that if the factories were put up it would create vested interests. Their situation was different to that in Victoria. In Victoria they were not more than 60 miles from a port and never far from a railway. That made it more profitable. The last resolution passed by the Conference was to the effect that the Government be asked to renew the reward for a means of destruction. It had been stated that the Queensland Government had discovered that they could propagate chicken cholera so effectually as to destroy the rabbits. He supposed that that was the hope of all of them that something of that kind would come about. But seeing the idea was utterly foreign to them he might say that so far as chicken cholera was concerned M. Pasteur found that where he was beaten on that point was purely that the climatic conditions of western New South Wales were fatal to the virus that he was propagating, and that when it had reached a temperature of 110 the virus was destroyed. However, it might be found that a virus could be cultivated that could stand that temperature.

The Hon. RUPERT CARINGTON (Jerilderie) then said that he would like to preface his amendment by moving, "That the thanks of the Conference to Mr. Stevenson be accorded for having so kindly ventilated his views on the subject." His paper was very interesting and they thanked him very kindly for the discussion, although they did not agree with him.

The vote of thanks to Mr. Stevenson was then carried unanimously.

Mr. STEVENSON said that he must have made himself understood very poorly if he did not convey his meaning that they should use all possible means to stamp out the rabbits, and he had suggested this as one of the means adopted with a considerable measure of success in Victoria. Within a few miles of the railway in Victoria they never see a rabbit. However it was no use to attempt to assist men who would not be assisted, and he could only now have the pleasure of conveying the resolution of the Conference to the Minister, and he had no doubt that the Minister would allow the matter to drop into that obscurity which, perhaps, it should never have been brought from.

The Hon. RUPERT CARINGTON'S (Jerilderie) resolution that it was not advisable that rabbits should be made an article of export was then put and carried.

Mr. W. LAWRY moved the following resolutions:—

1. "That if the present Act is efficiently administered, no fresh legislation is either necessary or desirable."
2. "That the only means of effectually dealing with the rabbit pest is to *make it worth while* for those holding lands under various tenures from the Crown to undertake the cost and trouble of destruction."
3. "That this can best be done by granting such extension of their tenancies, or such other concessions as may be considered desirable, as will not only induce them to wire-net their boundaries, but also to subdivide with wire-netting. Freeholders will, in their own interests, take such remedial measures as they consider advisable to protect their property."
4. "That as the whole Colony is admittedly over-run, the whole Colony should be declared infested, and the many salutary provisions of the present Act be thus brought into operation."
5. "That in the administration of the present Act the Government should give facilities, if possible by Regulations thereunder, for neighbouring owners, lessees, or licensees to obtain prompt remedies by legal action against one another for breaches of the Act; and it should be provided that all Crown lands, in order to prevent the law being a dead letter, should be treated in exactly the same way as those held by private owners."
6. "That barrier fences having proved to be only temporary expedients no taxation be imposed on the sheep farmer for their erection or maintenance,"

7. "That with regard to the unoccupied scrub and inferior lands and resumed areas in the hands of the Crown, the Minister should obtain, if necessary, any special powers required to deal with these areas in a broad and statesmanlike manner in the direction of giving long tenure, with a first charge for cost of improvements approved by the Crown, thus bringing the major part of the lands into productive occupation, making them eventually an asset of value, and causing in the meantime the expenditure of large sums in wire-netting and other improvements, and the consequent employment of large numbers of working men."
8. "That such portions of the above-mentioned lands as are too barren to be utilised in any way, and are found to be dangerous as breeding grounds of vermin, should be fenced off with wire-netting when found to be infested."

Mr. T. BROWN, M.L.A. (Budgerabong), asked the Chairman's ruling as to whether Mr. Lawry was in order in bring in these questions now.

The CHAIRMAN then said that Mr. Lawry would not be in order.

Mr. ALISON (Canonbar) moved, "That Mr. Lawry be heard."

Mr. ROSS (Hume) seconded the motion.

The question was then put, and lost by 13 votes to 10.

Mr. ALISON (Canonbar) moved, "That the hearty thanks of the Conference be accorded to Mr. Allen Lakeman for his services as Chairman." They would all agree that Mr. Lakeman by his keen and quick picking out of the situation had expedited their work in the most astonishing fashion, and he was sure that Mr. Lakeman had enabled the gentlemen present to return to their homes probably a week sooner than any other gentleman.

The vote of thanks was carried with acclamation.

The Conference was adjourned *sine die*.

(No. 1.)

*DRAFT of Amended Rabbit Bill embodying the alterations and additions proposed at the Rabbit Conference, together with others consequential thereon, for submission to the Secretary for Lands.*

60<sup>o</sup> VICTORIÆ, 1897.

---

## A BILL

*intituled*

An Act for suppressing or checking the Rabbit Pest by means of Local Administration, and by systematic and effective methods; and to make provision in furtherance of, or in connection with, the said purposes.

---

**B**E it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the "Rabbit Act of 1897."

Short title.

2. The Rabbit Act of 1890, together with all regulations made thereunder, is hereby repealed:

Repeal of Rabbit Act of 1890.

Provided that the repeal hereby enacted shall not of itself—

Proviso.

(I) abate, prejudice, or affect any proceeding now pending in any Court or before any Local Land Board or other authority;

(II) prejudice or affect any proceeding, matter, or thing lawfully done or commenced or contracted to be done under the authority of the said Act or any regulation made thereunder;

and that notwithstanding such repeal—

(a) all offences committed or penalties incurred against or under the said repealed Act, or any regulation made thereunder, may be respectively tried, punished, enforced, and dealt with as if this Act had not been passed; and

(b) all rights accrued and obligations incurred under or by virtue of the said repealed Act or any regulation made thereunder shall, subject to any express provision of this Act in relation thereto, remain unaffected by such repeal.

New South Wales to be deemed rabbit-infested. Proviso.

3. For the purposes of this Act the entire territory of New South Wales shall be deemed to be either actually rabbit-infested or liable to become so: Provided always that the Governor may, by proclamation in the Gazette, from time to time, declare exempt from the provisions of Parts I and II of this Act any part or parts of the Eastern Division of this Colony; and may by like proclamation alter or revoke any such proclamation.

## PART I.

### *Rabbit Districts and Boards—Powers of Boards—Rates, &c.*

Rabbit Districts.

4. The several Districts for the time being constituted Districts for the purposes of the Diseases in Sheep Acts, and hereinafter referred to as Sheep Districts, shall be Districts for the purposes of this Act.

Constitution of Rabbit Boards.

5. For every Rabbit District there shall be a Rabbit Board, which shall consist of nine members, constituted as hereinafter provided, who shall each hold office for one year:

Provided always that if it should appear to the Governor that the member appointed by the Governor as hereinafter provided has failed to do or is incapable of doing his duty, he may remove such member and appoint a person in his place for the unexpired period of office of the member removed.

Every Rabbit Board shall, within the prescribed time, appoint one of its members to be Chairman thereof, and if such Board shall fail to appoint a Chairman the Governor may appoint one of such members to be such Chairman. Every member shall be entitled to receive, out of the revenues of the Board, the prescribed fees.

Constitution of Rabbit Board.

6. The Rabbit Board of a Rabbit District shall be composed as follows:—

Quorum.

*One* member shall be appointed by the Governor.

*Five* members, being those holding office for the time being as Directors of the Sheep District which coincides with such Rabbit District.

*Three* members, being those holding office for the time being as Directors elected under the provisions of the Pastures and Stock Protection Acts.

Such nine persons shall be the Rabbit Board for a Rabbit District, and five of such persons being present at any meeting of such Board shall be a quorum.

Rabbit Board to be a corporate body.

7. The members of a Rabbit Board shall be a corporate body under the style or title of the "Rabbit Board of District," and under such style or title every such Board shall have perpetual succession and a common seal, and be capable in law of suing and being sued.

The validity of any acts of a Rabbit Board shall not be affected by any informality or irregularity in its constitution; and the fact that at any time all the seats on the Board are vacant shall not of itself operate to dissolve the corporation.

Provisions regulating the Board's transaction of business.

8. A Rabbit Board—

(a) may employ a Secretary and such other officers and servants as may be necessary, and pay them out of the revenues of the Board:

Board: Provided that all such officers and servants shall be under the exclusive control, and hold office during the pleasure, of the Board; .

- (b) shall cause proper minute books to be kept of all its proceedings;
- (c) shall cause true and regular accounts to be kept of all moneys received or paid under the authority of this Act, and shall give the owner or occupier of any private holding within the Rabbit District access thereto at all reasonable hours;
- (d) shall produce for inspection to any person duly authorised in writing by the Minister or the Colonial Treasurer all its books, accounts, agreements, vouchers, letters, or other documents which may relate to any matter under this Act;

9. All fines, penalties, rates, and other moneys received by a The Rabbit Fund. Rabbit Board under or by virtue of this Act shall form part of a fund to be called the Rabbit Fund of the District.

Moneys forming part of the Rabbit Fund of the District may be applied by the Rabbit Board to the payment of any expenses of, or incidental to, the administration of this Act by the Board, or of any costs or expenses incurred in accordance with provisions of this Act, and not otherwise.

The Governor may cause the accounts in connection with the Rabbit Fund of the District to be audited, and the expenses of the audit shall, if the Governor so require, be paid out of the Rabbit Fund.

10. Every Rabbit Board shall in each year make or cause to be Rabbit rate. made an estimate of the probable sum which will be required (in addition to fines, penalties, and other revenues) for the effective administration of this Act in the Rabbit District; and the said sum shall be raised by a Rabbit Rate upon stock within the District.

Subject to the provisions hereinafter contained, the amounts levied under the rate shall be proportionate as far as practicable to the stock returns under the Pastures and Stock Protection Acts—

- (I) The Rabbit Board shall, in the first instance, strike the rate upon an assessment of so much per sheep, but not so as to exceed one halfpenny per sheep in any one year.
- (II) Public lands shall be taken to be capable of carrying one sheep to ten acres, and be rated on that basis.
- (III) Cultivated private lands shall be taken to be capable of carrying one sheep to five acres, and be rated on that basis in every case where no returns for such cultivated lands have been made under the Stock and Pastures Protection Acts:

Provided always that only half rates shall be levied upon any holding now or hereafter enclosed by a fence which, in the opinion of the Board, is rabbit-proof.

- (iv) The Rabbit Board shall have access as prescribed to—
  - (a) returns of sheep made to Clerks of Petty Sessions and Inspectors of Sheep under the Diseases in Sheep Acts or any other Acts; and
  - (b) returns collected by the police or other authorised persons for statistical or other purposes.

11. When the amount payable under the rate upon any holding Notice of amount due under rate to be given. has been determined the prescribed notice of such amount shall be given to the person liable to pay the same.

The amount so determined shall, except in case of appeal, be paid to such person or bank, and on or before such date as may be respectively specified for the purpose in such notice: Provided that the amount may be payable in instalments if the Board so directs.

The person liable to pay such amount shall be the occupier of the holding if the same be occupied, but if not, then the owner thereof; but nothing herein contained shall affect any agreement between landlord and tenant in respect of the said liability.

Rate-book to be kept.

12. Every rate and every determination of the amount payable upon any holding under such rate shall be entered in a book—to be called the Rabbit Rate Book—which shall be kept in the prescribed form and manner; and all persons shall have access thereto at all reasonable times. The said book shall, on the production thereof, be *prima facie* evidence of the rate and of the amount determined as being payable under such rate upon any holding. The Rabbit Board may from time to time make such amendments and supply such omissions in the entries in such book as may be necessary, and no such amendment or omission shall be held to invalidate the rate or any determination of amount: Provided that—

- (a) every person aggrieved or affected by any such alteration shall have the same right of appeal therefrom as he would have had if his name had been originally inserted therein or if no such alteration had been made; and
- (b) except in the case of an amendment rendered necessary by the result of an appeal, the determination of the amount payable shall be taken to have been made at the date of the amendment.

Evidence of rate,  
Rate when not  
invalidated.

13. The production of a copy of the Gazette containing the hereinbefore required notice of the striking of a rate by a Rabbit Board shall be conclusive evidence that the rate has been duly struck.

No determination of the amount payable shall in any case be held to be invalid by reason of any failure to give notice of such amount in accordance with the provisions hereinbefore contained: Provided always that, except in cases of appeal, proceedings shall not be taken to recover the amount payable in respect of any holding unless and until due notice thereof has been given.

Appeal from rate  
to Court of Petty  
Sessions.

14. If any person is aggrieved by the amount determined as payable by him under the rate, he may, within twenty-one days after the aforesaid notice has been given, appeal to a Court of Petty Sessions by a notice in the prescribed form, accompanied by the prescribed deposit; and the said Court shall determine the amount payable under the rate, and may order interest to be paid thereon at the rate of five pounds per centum per annum, calculated from the date specified in the notice as the date for payment; and payment of the amount finally determined, with or without interest, as the case may be, shall be made to the person or bank specified in the notice within one month from the date of the final determination thereof.

Recovery of unpaid  
rates, &c.

15. Any amount due as Rabbit Rate may be recovered in a summary way before a Court of Petty Sessions.

Any sum due as a Rabbit Rate in respect of any private holding or land shall be, and until the payment thereof, remain, a charge upon the said holding or land.

Rabbit Board may  
erect and maintain  
barrier fences.

16. A Rabbit Board shall have power to—

- (a) erect a barrier fence on any land, whether public or private, within or without the Rabbit District, and repair and maintain the said fence; and
- (b) utilize and convert into a barrier fence any private fence, whether rabbit-proof or not, on any land within or without such District, and repair and maintain the said fence; and
- (c) erect and maintain a barrier fence across any road or travelling stock route making gates in such fence for the passage of members of the public and their stock; and
- (d) place a rabbit-proof gate in any barrier fence wheresoever the same may be required, and repair and maintain such gate; and
- (e) co-operate with the Rabbit Board of any neighbouring Rabbit District in the construction and maintenance of any such work as is hereinbefore mentioned.

A barrier fence shall be taken to mean a rabbit-proof fence which protects, or will protect from the incursions of rabbits the Rabbit District, or any part thereof, whether erected without or within the boundaries of the Rabbit District; and the decision of the Stock Board that a barrier fence protects, or will so protect, the Rabbit District or any part thereof shall be conclusive of the fact, as against the owner or occupier of any holding or lands within the Rabbit District.

17. If any barrier fence shall be erected by any Rabbit Board on the boundary of any Rabbit District, the Board of the adjoining District shall be liable to pay to such Board as aforesaid half the cost of erection and maintenance of such fence, or such fence may be erected and maintained at their joint expense in accordance with such agreement as they may enter into.

Payment for boundary fence of two districts.

18. A Rabbit Board shall not be liable to pay or make compensation for anything lawfully done in exercise of the foregoing powers except where a barrier fence is erected upon any private holding or land so as to cause damage by severance.

Case where compensation given.

The amount of compensation due to any person shall, upon application by him as prescribed, be determined by a Court of Petty Sessions; and in fixing such compensation the said Court may take into consideration and set off any benefit accruing to such person's property by the construction of such fence, and shall have power to award costs to or against any party appearing before it.

19. It shall be the duty of the Rabbit Board to keep in good repair and efficiently maintain—

Barrier fences to be maintained.

- (a) every barrier-fence erected by it and every fence converted by it into a barrier-fence; and
- (b) every barrier-fence erected or to be erected at the expense of the Crown within the boundaries of the Rabbit District:

Provided always that—

- (c) where any such fence as last aforesaid is along the common boundary of two Rabbit Districts the Minister, if the Boards of such Districts fail to agree in regard to the maintenance of such fence, shall determine which of the two Rabbit Boards shall be charged with the aforesaid duty, and the Rabbit Board charged therewith shall be entitled to receive from the other of such Boards half the annual cost incurred in discharging such duty;
- (d) it shall be the duty of the Railway Commissioners to keep in good repair and efficiently maintain any barrier-fence erected or to be erected at the expense of the Crown along the boundaries of any lands vested in them, but the costs incurred in the repair and maintenance of any such fence shall be a charge upon the Consolidated Revenue Fund.

20. It shall be lawful for the Minister, out of any moneys voted for that purpose by Parliament, to purchase and supply to Rabbit Boards, or to owners of private lands, wire-netting and other materials required in the construction of rabbit-proof fences, and also any machinery, plant, or substances for the destruction of rabbits; and may enter into contracts for the sale or letting out thereof to such Boards or owners: Provided that the repayment of principal and interest thereon shall be on a basis similar to that prescribed by law for payment of principal and interest on conditionally-purchased lands—

Supplying netting and materials.

that the security for such repayment be a first mortgage on the holding to be wire-netted or supplied with other appliances for the destruction of rabbits;

that the said netting be erected within twelve months after delivery thereof;

that

that the amounts and times and mode of supplying such wire-netting and other appliances be in the discretion of the Minister;

that the letting of machinery or other appliances for the destruction of rabbits be subject to such terms and conditions as may be agreed upon between the Minister and the Boards or between the Minister and the owners of private lands.

Co-operating Board to contribute toward barrier fence.

21. Where the Rabbit Boards of neighbouring Rabbit Districts agree in the prescribed manner to co-operate in the erection of a barrier fence for the joint protection of the said Districts, the Rabbit Board which erects such fence shall be entitled to receive from the other Rabbit Board half the cost of erecting the said fence and half the annual cost of maintaining and repairing the same, unless the agreement shall provide for the payment of some other proportion of such costs; and for the purpose of this section the erecting of a barrier fence shall include only the expense of making rabbit-proof any existing fence on the barrier that may be converted into or used as a barrier fence, and of erecting rabbit-proof fences in places on the barrier where such may be necessary.

Arbitration in case of disputes between Boards.

22. In the case of any dispute arising between the Rabbit Boards of neighbouring Rabbit Districts as to the payment of any money or the doing of any act required to be paid or done under the provisions of this Act, or as to the carrying out of any agreement between them, the matter of the dispute shall be referred to the Minister: Provided that the Minister before making his award may refer the matter in dispute to any Local Land Board for investigation and report; and may thereupon either make such award himself or refer the whole matter, together with such report (if any), to the Land Appeal Court to make an award. Every such award shall be final and conclusive for all purposes.

Rabbit Board may require rabbits to be destroyed.

23. A Rabbit Board may, by notice in the Gazette, specify—
- (a) a date (not being less than two months from the date of the notice) on or before which the owners and occupiers of all holdings and lands within the Rabbit District shall respectively commence the work of suppressing and destroying rabbits on all such holdings and lands; and
  - (b) a period during which the said work shall be continued and systematically carried out; and
  - (c) the means (being means previously sanctioned by the Minister) which shall be adopted for the carrying out the said work.

Any such notice, or an abstract thereof, shall also be published in some of the newspapers circulating in the Rabbit District.

The Rabbit Board may also give to the owner or occupier of any holding or lands within the Rabbit District a peremptory notice in writing to take all proper steps in order to suppress and destroy rabbits on such holding or lands, and to adopt such means for the purpose as may be specified in the notice. The expression "proper steps" in this section means such steps as may be deemed proper by the Rabbit Board.

Powers of Board if owner or occupier makes default.

24. If any owner or occupier shall neglect or fail to comply with the terms of any notice whether published in the Gazette, or given to him in writing as aforesaid, such person may be summoned to appear before the Rabbit Board, and unless he shall explain his neglect or failure to the satisfaction of the Board, or receives an extension of time to comply with the notice aforesaid, any person authorised by the Rabbit Board may enter upon the holding or land and use all such means and take all such measures and do and perform all and every such acts or things as to him may appear proper or necessary to be done to ensure the destruction of the rabbits upon such

such holding or land, and shall have free right of ingress, egress, and regress into, over, and across such holding or land for such period as may, in his opinion, be necessary for destroying such rabbits: Provided that in any case in which a Municipal Council is such owner or occupier, the Council Clerk shall be the person to be summoned on behalf of such Council, and provided also that—

- (a) poison shall not be used without notice being given to the occupier of the holding or land of the intention to use the same; and nothing shall be done in contravention of the Animals Infections Diseases Act of 1888; and that
- (b) the authorised person may at any time withdraw from the holding or land upon payment of the costs, charges, and expenses incurred by him up to the date of such withdrawal; and that
- (c) nothing contained in this section shall prejudice any proceedings taken under the provisions hereinafter contained for the recovery of any penalty which may have been incurred by an owner or occupier.

25. All costs, charges, and expenses incurred by a Rabbit Board in destroying rabbits upon any holding or land under the foregoing provisions shall be repaid by the owner or occupier of such holding or land, and until the payment thereof shall be and remain a charge upon such holding or land, and shall have priority over all mortgages or other charges whatsoever upon such holding or land, other than debts due to the Crown. In the case of land within a Borough or Municipal District such costs, charges, and expenses shall, until payment, be and remain a charge on the revenues of such Borough or District.

Owner or occupier  
to pay expenses  
incurred by Board.

26. It shall be the duty of the Minister to suppress and destroy all rabbits which may from time to time be in or upon public lands, but in any case where moneys have been made available by Parliament for the purpose of rabbit destruction, such duty shall not be taken to have commenced until after the expiration of months from the day when such moneys so became available. The Minister may authorise the Rabbit Board to expend such moneys or any portion thereof for the purpose of rabbit destruction on public lands, or may apportion a proportion thereof for expenditure in the erection or repair of barrier-fences, or may make such other arrangements for its expenditure for either or both of such purposes as he may deem necessary or expedient in the public interest.

Minister to destroy  
rabbits on public  
lands.

27. The fact that Parliament has not appropriated moneys for the purpose of suppressing or destroying rabbits in any Rabbit District, or that moneys are not available for that purpose, shall not exonerate the Minister from liability under this Act as an owner of public lands in any case in which a private owner would be liable in respect of private land: Provided that any claim for costs, charges, or expenses lawfully incurred by a Rabbit Board in the destruction or suppression of rabbits upon public lands shall be enforceable by such Board against the Minister as nominal defendant pursuant to the provisions of the "Claims against the Colonial Government Act," and any Act amending the same. And a Court of Petty Sessions shall be deemed to be a "competent court" within the meaning of the Act thirty-ninth Victoria number thirty-eight: Provided always that it shall be lawful for the Minister in any case to apply to the Land Appeal Court for an order of such Court staying any proceedings taken against him under this section; and such Court may grant such order if satisfied on the evidence before it that—

Liability of Minister  
under this Act.

- (a) The Minister has taken, or is about to take, immediate steps for the purpose of suppressing or destroying rabbits on the public lands in question.
- (b)

- (b) The degree to which the public lands in question are infested by rabbits is so inconsiderable that no danger of adjoining lands becoming infested thereby will be incurred for a period of months.
- (c) The public lands in question are being so fenced off, or separated by rabbit-proof fencing, from adjoining lands, as to practically preclude or reduce to a minimum the danger of adjoining lands becoming infested by the rabbits on such public lands.

Any such order staying proceedings under this section shall be under the hand of the President of the Land Appeal Court, and shall be obeyed by the Court to which it is directed, but shall in no case continue in force for a longer period than months from the date of such order.

## PART II.

### *Private Rabbit-proof fences—Grouping of Holdings, &c.*

Description of a  
rabbit-proof fence.

28. For the purposes of this Part, a rabbit-proof fence shall be some one of the three kinds of fence herein described—

- (a) a substantial fence at least forty-two inches in width hung with galvanised-wire netting of a maximum mesh of one and a quarter inches for the lower width of eighteen inches, and one inch and five-eighths of an inch for the remaining width, the wire in the netting being of a minimum gauge of seventeen, such fence being furnished with suitable rabbit-proof gates or other appliances at every necessary break in the fence: Provided that all other dimensions of such fence, including the height above ground, the depth below ground of the posts thereof and of the wire netting thereon, and all other details in connection therewith shall be in accordance with specifications to be published in the Gazette by the Rabbit Board; or
- (b) a fence erected in accordance with the requirements of the Rabbit Act of 1890 while such Act was in force; or
- (c) a fence reasonably sufficient in the opinion of the Land Board for the purpose of excluding rabbits.

And the date when the rabbit-proof fence was erected or the fence was made rabbit-proof shall be immaterial.

The Rabbit Board of the District within which any fence alleged to be rabbit-proof is situated shall, if so required in writing by the owner of the fence, cause the said fence to be inspected; and if the Rabbit Board, after such inspection, is satisfied that the fence alleged to be rabbit-proof is rabbit-proof it shall grant a certificate to that effect; or if not so satisfied shall specify the repairs or modifications which are required to make such fence rabbit-proof; and when such repairs or modifications have been effected the Rabbit Board shall cause the said fence to be again inspected, and if then satisfied that the fence is rabbit-proof, it shall grant a certificate to that effect.

Upon any proceeding before a Local Land Board in respect of a rabbit-proof fence a certificate by the Rabbit Board that a fence is rabbit-proof shall be *prima facie* evidence of the fact; and evidence in rebuttal shall not be adduced, unless the party intending to adduce such evidence has given to the other party the prescribed notice of his intention to adduce the same.

29. For the purposes of this Part—

- (a) a rabbit-proof fence shall be taken to be on the boundary of any holding or land if it follows the line which is the actual, reputed, or accepted boundary thereof, or where the boundaries are inaccessible or incapable of being fenced, if such fence follows such boundaries as nearly as possible, having regard to the physical features of the country, or if such fence follows any line which in the opinion of the Local Land Board is sufficiently approximate to such boundary; and
- (b) the intervention of a road or water-course (not being a permanent river) shall not prevent holdings or lands being taken to be adjoining.

Definition of  
"boundary" and  
"adjoining."

30. When any lands are intersected, divided, or bounded by a road or travelling stock reserve or route or public lands, the Local Land Board may grant to the owner of such lands permission to carry a rabbit-proof fence across such road, reserve, route, or public lands: Provided always that rabbit-proof gates be erected at places where the fence crosses such road or route, unless the Local Land Board shall in any case dispense for the time being with the erection of the same. Any permission or dispensation granted under this section may be revoked by the Board upon reference by the Minister or application by any person interested.

Rabbit-proof fence  
may cross road.

31. When any Crown lands containing a rabbit-proof fence or portion thereof shall become the subject of any purchase or lease from the Crown, payment for such rabbit-proof fence or portion thereof shall be made in accordance with the provisions of the Crown Lands Acts; but this enactment shall be subject to the following qualifications:—

Rabbit-proof fence  
to be an improve-  
ment.

- (I) Where any holding or group of holdings has been or shall be made rabbit-proof, the rabbit-proof fence shall be deemed to be an improvement distributed over the whole enclosed area of such holding or group of holdings (exclusive of any roads), so that every portion of such area shall be taken to be proportionately improved thereby.
- (II) The amount so distributed in respect of the improvement shall, in all cases, be limited to one-half of the value of making the fence rabbit-proof: Provided always that if any portion of such rabbit-proof fence is upon or adjoining any land which becomes the subject of any purchase or lease from the Crown the purchaser or lessee thereof shall also be liable in respect of the fence itself.
- (III) No portion of the value of any rabbit-proof fence erected as a barrier fence at the public expense shall be deemed to be distributed in accordance with this section.

32. Any owner, whose holding consists wholly or in part of Crown lands held under occupation license or annual lease, may give notice in the prescribed form to the Chairman of the Local Land Board that he intends to make such holding rabbit-proof; and in any case where notice as aforesaid shall have been given, and such holding shall have been made rabbit-proof in accordance with the terms thereof, such holding shall be deemed to have been made rabbit-proof as from the date of such notice, so far as regards the amount payable for improvements under this Act in connection with any lands which may be withdrawn from occupation license or annual lease by becoming the subject of any purchase or lease from the Crown after the date of such notice: Provided always that the rabbit-proof fence shall be completed within one year from the date of such notice or within such further time as such Board on application may allow; and

Notice of intention  
to fence occupation  
license or annual  
lease, &c.

that the liability to pay any moneys under this Act in respect of such rabbit-proofing or any portion thereof shall be suspended, until such fence shall have been completed.

Notice of intention to bring occupation license or annual lease within a group

Adjoining holdings to contribute half value of rabbit-proof fence.

The provisions of this section shall apply in cases where it is intended to include the lands held under occupation license or annual lease within a group.

33. Where a boundary, or any part thereof, of any holding is fenced with a rabbit-proof fence, or a fence on such boundary, or part thereof, has been made rabbit-proof at the expense of the owner of such holding, a contribution towards the cost of the work shall be payable by the owner of any outside holding or lands adjoining the rabbit-proof fence.

The right to receive such contribution shall vest, and the liability to pay the same shall arise, when the then owner of such first-mentioned holding gives to the then owner of such last-mentioned holding or lands the prescribed notice of demand; and from and after the date when such notice is given, the amount of the contribution, or so much thereof as may for the time being be unpaid, shall, until payment, be and remain a charge upon the holding or lands in respect of which such contribution is payable.

The following provisions as to contributions shall apply:—

- (I) A contribution shall be payable only in respect of so much of the rabbit-proof fence as forms a common boundary fence.
- (II) The amount of the contribution shall in every case be assessed according to the benefit derived, and to be derived, from the rabbit-proof fence, and shall in no case exceed half the value of the rabbit-proof fence, or in the case of a fence which does not belong or wholly belong to the owner who makes the same rabbit-proof, such contribution shall not exceed half the value of the work of making such fence rabbit-proof; and such value shall be the value regarded as at the date when the aforesaid notice of demand is given, and as determined by the Local Land Board.
- (III) A contribution shall not be payable in any case where the Local Land Board is of opinion that the rabbit-proof fence has been erected, or the fence has been made rabbit-proof otherwise than *bonâ fide* for the purpose of excluding or destroying rabbits, or unless and until in the opinion of the Local Land Board the holding or lands from the owner whereof the contribution is demanded derives a benefit therefrom.
- (IV) Nothing in the Crown Lands Acts or in the Act ninth George the Fourth number twelve shall relieve any owner from the liability to pay a contribution under this Act.
- (V) It shall be immaterial whether the rabbit-proof fence was erected or the fence was made rabbit-proof before or after the passing of the Rabbit Act of 1890, or before or after the passing of this Act.

Adjoining holding to contribute half cost of maintenance.

34. In any case where a contribution towards the cost of a rabbit-proof fence is to be paid under the provisions of the last preceding section, an annual contribution towards the expenses incurred in the maintenance and repair of the rabbit-proof fence shall also be paid; and for the purposes of such annual contribution the years shall be taken to run from the date or recurring date of the notice of demand required by the said section.

The right to receive such annual contribution, and a corresponding duty to maintain and repair the rabbit-proof fence, shall run with the holding whereof the owner was entitled to receive payment of the aforesaid contribution towards the cost of the rabbit-proof fence; and the liability to pay such annual contribution shall run with the holding or lands whereof the owner was liable to pay the aforesaid contribution towards the cost of the rabbit-proof fence. The

The amount of such annual contribution shall be one-half the expenses of, or incidental to, the maintenance and repair of the rabbit-proof fence as determined by the Local Land Board.

Nothing contained in this section shall affect any right to an annual contribution towards the cost of the maintenance and repair of a rabbit-proof fence accrued under or by virtue of the provisions of the Rabbit Act of 1890, and the Local Land Board shall have power to assess and determine the amount of any such contribution.

35. Where a private rabbit-proof fence, whether erected before or after the passing of this Act, forms a common boundary fence between private and public lands, and particulars of such fence have been or shall be furnished to the Minister, the same contributions shall be payable by the Crown in respect of rendering the fence rabbit-proof as would be payable by any private owner, and the amount of such contributions shall be determined by the Local Land Board in the same manner as if the said public lands were private lands.

The Crown to contribute in certain cases.

36. Where fences within a Rabbit District have, before the commencement of this Act, been rendered rabbit-proof by the expenditure of moneys voluntarily contributed or paid for the purpose by any Stock Boards, or by any persons, the Rabbit Board of the District may apply any moneys raised by rabbit rates within the District in repaying to the said Stock Boards or persons the moneys so contributed or paid by them as aforesaid, or any part thereof, if, in the opinion of such Board, the fences are barrier-fences within the meaning of this Act.

Barrier fences erected before the passing of this Act may be paid for.

37. When a ring fence enclosing two or more holdings or any portion or portions thereof is a rabbit-proof fence, made rabbit-proof by agreement between the owners of such holdings, the lands so enclosed shall, with the consent of the Rabbit Board of the District, form a group of holdings within the meaning and for the purposes of this Act.

Formation of groups.

Any existing fence or portion thereof may be adopted so as to form part of the ring fence of any group, but not without the consent of any owner of such fence or portion thereof whose holding thereby becomes a holding forming part of the group.

The Minister may agree that any public lands shall be included within a group, and the Crown shall thereupon become liable in the same way as the owner of any holding of private lands within the group.

The Rabbit Board may agree that any rabbit-proof fence used or erected by it may be used for the purpose of the grouping of holdings.

Where any holding has been enclosed with a rabbit-proof fence, and any part of the holding afterwards becomes the subject of any homestead selection, purchase, or lease from the Crown, and is thereby withdrawn from the holding so enclosed as aforesaid, the new holding created by such homestead selection, purchase, or lease, and the residue of the original holding shall be a group of holdings; and any portion subsequently withdrawn from the residue shall also be a holding within the group.

Any group of holdings constituted under the Rabbit Act of 1890 shall be a group of holdings within the meaning and for the purposes of this Act.

When the external boundaries of any holding or group of holdings have been made rabbit-proof, the owner or owners thereof shall not be liable to contribute towards the cost of erecting or maintaining and repairing a rabbit-proof fence around any holding or land situate within such external boundaries as aforesaid, or towards the cost

Person not coming within group not entitled to contribution.

cost

cost of making rabbit-proof any existing fence around such holding or land within such external boundaries; and it shall be immaterial whether the said external boundaries have been made rabbit-proof before or after the passing of this Act.

Grouped holdings.

33. A group of holdings shall be deemed to be a single holding so far as regards any such contribution towards the cost of the erection, maintenance, or repair of rabbit-proof fencing as may be payable by or to the owners of adjoining holdings outside the group. And the following provisions shall apply to the holdings forming part of a group, and to the owners thereof:—

- (I) The liabilities of such owners as between themselves, in respect of sums expended or to be expended for the erection or repair of the ring fence, or of amounts paid or to be paid as contributions towards the cost or maintenance of any portion of such fence, shall be proportionate to the respective areas of the holdings of such owners, and in any case of dispute shall be declared by the Local Land Board; and the amount declared by such Board to be payable by any such owner shall be a charge upon his holding.
- (II) The majority in number of the owners whose lands may for the time being constitute a group may, from time to time, by an instrument in the prescribed form, appoint any person to be the secretary of the group; and proceedings may be taken by or against the secretary for the time being of a group, as nominal plaintiff or defendant representing all the owners of all grouped lands.
- (III) In any case where a group of holdings is not known to have a duly appointed secretary or the duly appointed secretary cannot be found, the Rabbit Board of the District in which such group or any portion thereof is situated may designate the owner of any land included within the group to be the nominal defendant representing all the owners of all grouped lands for the purposes of any proceedings proposed to be taken against such group or such owners; and proceedings may thereupon be taken against such owner as nominal defendant in the same way as if he were the duly appointed secretary of the group.
- (IV) In any case where judgment has been recovered against the secretary of a group or other nominal defendant as aforesaid, and has not been satisfied, or where an order for the payment of money has been made against such secretary or other nominal defendant, and has not been complied with, the person entitled under such judgment or order may apply to the Local Land Board to settle the respective amounts to be contributed by the owners of the holdings within the group for satisfaction of such judgment or compliance with such order; and the Local Land Board shall thereupon settle the said respective amounts in proportion to the respective areas of the holdings of such owners; and the person entitled under such judgment or order may take proceedings against each or any of such holders for the amount settled by the Local Land Board.
- (V) If any part of a holding within a group shall be withdrawn from such holding, by reason of its becoming the subject of any homestead selection or purchase or lease from the Crown, or by reason of such holding being subdivided, the new holding created by such homestead selection or purchase, lease, or subdivision shall be a holding within, and forming part of, the group.

*Rabbit.*

- (vi) A holding shall not cease to form part of a group, by reason only of any change of ownership in respect of such holding, or of any other holding within such group; but any owner may, with the permission of the Rabbit Board, and subject to any conditions which it may impose, detach his holding from the group of which it formed part if the boundaries of such holding have been made rabbit-proof.
- (vii) If at any time it shall appear to the Rabbit Board that a group of holdings is too large for the effective destruction of rabbits, and that the owners holding not less than one-half of the grouped lands desire that such group may be subdivided, it shall be lawful for the Board to authorise the subdivision of such group, and to determine the line or lines of subdivision. And the subdivision rabbit-proof fence or fences shall, in all respects, be dealt with as if the same formed part of the ring fence of such group.

## PART III.

*Destruction of rabbits by owners and occupiers—Offences, &c.*

39. It shall be the duty of every owner and of every occupier of any holding or lands from time to time to suppress and destroy, by all lawful means, at his own cost, and to the satisfaction of the Rabbit Board, rabbits which may from time to time be upon such lands, or upon any roads bounding or intersecting the same, or any part thereof.

Any owner or occupier of any holding or lands who fails to fully and continuously perform such duty as aforesaid shall be liable to a penalty on the first conviction of not more than *ten* pounds, and on the second conviction of not more than *twenty-five* pounds, and on the third or any subsequent conviction of not more than *fifty* pounds.

40. The Governor may from time to time by proclamation in the *Gazette* declare any animal to be a natural enemy of the rabbit, and prohibit within districts (whether Rabbit Districts or not) to be specified in such proclamation the wilful wounding, killing, or capturing, selling, or disposing of any such animal without a special permit in that behalf, and may from time to time correct, modify, or revoke any such proclamation.

Any proclamation issued under the Rabbit Act of 1890 whereby any animal was declared to be a natural enemy of the rabbit, shall continue in force according to the tenor thereof, unless and until revoked under the provisions of this section.

Any person who without lawful authority (the proof of which shall be on such person) wilfully wounds, kills, captures, or sells or disposes of any animal declared to be a natural enemy of the rabbit shall be liable to a penalty of not more than *twenty* pounds.

41. For the purpose of destroying or suppressing rabbits, any owner or occupier, may, at any time, with the consent of the Rabbit Board first obtained, and notwithstanding anything in any Act contained, burn or ignite any straw, stubble, grass, herbage, scrub, wood, or other inflammable material on his land subject to conditions to be imposed by the Board.

Authorised person  
may enter holding.

42. Any authorised person may, on the production of his authority, if demanded by any owner, from time to time enter upon any holding or land with or without assistants, dogs, horses, and vehicles in order to search whether any rabbits are on such land, or to erect or repair barrier-fences or gates, or to examine and inspect land, or for any purpose whatsoever under this Act, and may remain thereon so long, and do all such things as may be necessary or reasonable.

Penalty for person-  
ating or obstructing  
authorised person.

Any person who falsely represents himself to be or personates an authorised person under this Act shall be guilty of a misdemeanour, and shall on conviction be liable to be imprisoned with or without hard labour for any period not exceeding *six* months, or to pay a penalty of not more than *one hundred* pounds.

Any person who wilfully assaults, obstructs, hinders, or interrupts, or causes to be assaulted, obstructed, hindered, or interrupted, any authorised person in the exercise of any power or authority vested in him by this Act, shall for every such offence if not otherwise specially provided for be liable to a penalty not exceeding *twenty* pounds; and no proceeding for recovery of such penalty nor the payment thereof shall be a bar to any action at law for or in respect of any such assault as aforesaid, but every such action may be commenced and proceeded with as if this Act had not been passed, any law or usage to the contrary notwithstanding.

For the purposes of this section an authorised person means a person having authority from the Minister or from a Rabbit Board, and such authority may be a general authority.

Penalty for  
miscellaneous  
offences.

43. Any person who—

- (a) wilfully carries, drives, or passes any live rabbit through, under, or over any rabbit-proof fence or gate; or
- (b) wilfully leaves open any gate in a rabbit-proof fence; or
- (c) without lawful authority (the proof of which shall be on such person) wilfully destroys, injures, tears-up, depresses, or removes any portion of a rabbit-proof fence or gate, or excavates under, or in any way tampers with, any portion of such fence or gate, so as thereby to endanger its effectiveness; or
- (d) attempts to do any such act as is hereinbefore mentioned, or procures the same to be done

shall be liable to be imprisoned, with or without hard labour, for any term not exceeding *six* months, or to pay a penalty not exceeding *one hundred* pounds, or both.

A rabbit-proof fence or gate, for the purposes of this section, shall mean a fence or gate apparently intended to protect any land from rabbits, and shall include a barrier fence, or gate therein, and it shall be immaterial whether or not such fence or gate is in accordance with the requirements of this Act.

Penalty for keeping,  
liberating, &c.,  
rabbits.

44. Any person who without lawful authority (the proof of which shall be on the person claiming to have the same) wilfully liberates or attempts to liberate, or has in his possession any live rabbit, shall be liable to a penalty not exceeding *one hundred* pounds for every such offence; but nothing herein contained shall be construed to prohibit any person from keeping live rabbits in any safe enclosure with the permission of the Minister first had and obtained.

Permission to keep  
rabbits.

Penalty for  
interfering with  
traps, &c.

45. Any person who destroys, injures, removes, or interferes with any trap, snare, poison, matter, or thing which is used or required for the purpose of capturing or destroying rabbits, and which is lawfully placed upon any land for such purpose shall be liable to a penalty not exceeding *twenty* pounds.

## PART IV.

*Procedure—Miscellaneous provisions.*

46. Any proceedings for—

- (a) the recovery of any sum of money, which any person is, pursuant to the provisions of this Act, required or made liable to pay, whether such sum of money be due in respect of rabbit rates, costs of rabbit destruction, contributions towards rabbit-proof fencing, or otherwise howsoever; or
- (b) the recovery of penalties or punishment of offences under this Act or any regulation made thereunder

Petty Sessions to adjudicate summarily on offences and money claims.

shall be heard and determined in a summary way before a Court of Petty Sessions in accordance with the provisions of the Act or Acts in force for the time being regulating summary proceedings before Justices.

Where the Court of Petty Sessions, upon such proceedings, adjudge or order any sum of money to be paid and the same is not paid, either immediately after the adjudication or conviction, or within the time then and there allowed by the said Court, payment of the said sum may be enforced by distress and sale of the goods and chattels of the person adjudged or ordered to pay the same in the manner provided by the said Act or Acts: Provided always that nothing herein contained shall affect any other remedy provided in the Crown Lands Acts.

Any person may take proceedings under this Act for the punishment of any offence hereby enacted; but where the land upon which an offence is committed is situate within a Rabbit District any fine or penalty imposed for such offence shall belong and be paid to the Rabbit Board of the District—any law or statute to the contrary notwithstanding—and the Court imposing such fine or penalty shall order accordingly.

47. Any person aggrieved by any adjudication, order, fine, penalty, or punishment made or imposed by a Court of Petty Sessions under this Act, may appeal against the same, and the provisions of the Criminal Law Amendment Act of 1883 in respect of appeals in cases of summary conviction shall extend and apply to every such appeal.

Power to appeal from Petty Sessions.

48. In any case under this Act where any sum of money is ordered to be paid by a Court of General or Quarter Sessions, and the same is not paid within the period named in such order, it shall be lawful for the person entitled to receive payment of such sum to sue upon such order in the District Court or the Supreme Court.

Action in the Supreme or District Court in certain cases.

49. In any proceedings under this Act, the jurisdiction of the Local Land Board, or Court before whom the proceedings are had, shall not be ousted on the ground that the case raises any question of title to land, or that the defendant does not reside within the boundaries of the jurisdiction of the Board or Court before which the proceedings are had: Provided that in such last-mentioned case the land in respect of which the proceedings are had shall be situated within the boundaries of the jurisdiction of such Board or Court.

Jurisdiction of Court or Justices not to be ousted.

50. In any proceedings before a Local Land Board for the determination of any contribution, value, or other sum of money (not being an amount payable under any Rabbit Rate or as compensation by a Rabbit Board), the Local Land Board in determining the sum payable may allow time for the payment thereof, and may determine the instalments by which the same may be paid, and appoint the dates on or before which such instalments shall respectively be paid.

Proceedings before Local Land Board and on appeal.

Where

Where any proceedings under this Act are had before a Local Land Board an appeal shall lie to the Land Appeal Court; and the Minister or such Board shall have the like powers of reference to such court so far as practicable, as he or it now has under the Crown Lands Acts; but if there be no appeal or reference the determination or decision of the Local Land Board shall be final and conclusive.

The provisions of the Crown Lands Acts as to procedure to apply.

The provisions of the Crown Lands Acts regulating proceedings before Local Land Boards, and upon appeals and references to the Land Appeal Court under such Acts shall, as far as practicable, be applied to proceedings, appeals, and references under this Act; and for the purposes of proceedings under this Act, the Land Appeal Court and Local Land Boards and the respective members and officers thereof shall have the same authorities and powers as are conferred by the Crown Lands Acts for the purposes of proceedings under the said Acts, and in addition thereto the Land Appeal Court (on appeal) and a Local Land Board shall have power to make such orders as to the costs of any proceedings before the Local Land Board as may appear just.

Whenever any question of law shall arise in a case before the Land Appeal Court, such Court shall, if required in writing by any of the parties within the prescribed time and upon the prescribed conditions, or may of its own motion, state and submit a case for decision by the Supreme Court thereon, which decision shall be conclusive. Every such case shall purport to be stated under this section, and shall state the names of the persons who are parties to the appeal, reference, or other proceeding, and shall be transmitted to the Prothonotary of the Supreme Court to be dealt with as to the setting down of the case for argument, and the hearing of the same, and its return with the decision of the Supreme Court thereon, as the Judges or any two of them shall direct. The Supreme Court for the purposes of this section may consist of two Judges only, and shall have power to deal with the costs of, and incidental to, any case stated under this section as it may think fit.

Authentication of documents, &c.

51. Any notice, information, complaint, agreement, or other document, by or from a Rabbit Board, shall be sufficiently authenticated if it is signed by the Chairman of the Board, or under his direction by the Secretary of the Board, and authority in the Chairman or Secretary to so sign shall be presumed unless and until the contrary is shown; and it shall not be necessary for the Rabbit Board to affix its common seal to any document not being a deed.

Any notice or other document given to or served upon a Rabbit Board may be given to or served upon the Secretary or Chairman thereof.

Service of notices.

52. Any notice given under or for the purposes of this Act, or any regulation made thereunder, may be given in any one of the following ways:—

Personally to the person to whom the notice is addressed.

By registered letter sent through the post and directed to the last known place of abode or of business in New South Wales of the person to whom the notice is addressed.

By advertising the same twice at least in some newspaper circulating in the District in which the lands the subject of such notice are situate, an interval of a week or more being allowed to elapse between such advertisements: Provided that notice shall only be given as last aforesaid when the whereabouts, or the last place of abode or of business in New South Wales, of the person to whom such notice is addressed cannot be discovered by the person issuing such notice.

And

And any notice required by this Act to be given to the owner or the occupier (as the case may be) of any holding or land, shall in cases where several persons are the owners or the occupiers thereof, be duly given if given to one of such owners or occupiers as the case may be.

53. For the purposes of any proceeding under this Act the description of any holding or lands need not be a description by metes and bounds, but shall be sufficient if it make such reference to the holding or land either by name, situation, boundaries, or otherwise, as to allow of no reasonable doubt as to what holding or land is referred to. General description of lands sufficient.

54. Where the name of the owner of any holding is unknown to any person giving notice or taking proceedings under this Act, any notice required to be given may be addressed to the owner as such without mentioning his name, and any order or decision may in like manner be made or given against the aforesaid owner as such. Proceedings when owners unknown.

55. Whenever by any section of this Act, any sum of money is expressed to be charged upon any private holding or land, any person thereafter becoming the owner of such holding or land shall be taken to have notice of such charge, and shall be liable to pay the sum so charged or so much thereof as may for the time being be unpaid as if he were the person originally liable; but nothing herein contained shall operate to discharge the liability of any person originally or previously liable. Effect of moneys being charged.

Whenever any sum of money is charged upon any holding or land, and any portion of such holding or land is detached from the residue thereof by subdivision, withdrawal, or otherwise howsoever, the portion so detached shall be charged with a ratable part of the aforesaid sum.

56. It shall be lawful for any person in whom any holding is vested as mortgagee to add to his mortgage debt any sums expended by, or recovered from, him for the erection or repair, or as a contribution towards the cost of the erection or repair of any rabbit-proof fence upon, near, or for the benefit of such holding; and it shall be lawful for any person in whom any holding is vested as a trustee to raise the sums required or recovered for any such purpose by mortgage of such holding, in the same way as if a power to mortgage for any or all of such purposes had been contained in the instrument creating or declaring the trusts thereof. Power to raise money by mortgage.

57. Whenever in any section of this Act the expression "prescribed" is used in connection with any matter, and whenever in any section of this Act "regulations" are referred to, the Governor may, in every such case, frame regulations for the purpose of giving effect to the provisions of such section. And for the purpose of carrying this Act into full effect generally the Governor may make regulations which may provide for the enforcement thereof by penalties not exceeding, in any case, *ten* pounds, and shall, upon being published in the Gazette, be valid in law: Provided that a copy of every such regulation shall be laid before both Houses of Parliament within fourteen days from the publication thereof, if Parliament be then in Session, or otherwise within fourteen days after the commencement of the next ensuing Session. Regulations by the Governor-in-Council.

58. In this Act, unless the context otherwise requires:— Interpretation.

"Crown Lands Acts" means the Crown Lands Acts of 1884, 1889, and 1895, together with any Acts passed or to be passed for the amendment of the said Acts or any of them.

"Diseases in Sheep Acts" means the "Diseases in Sheep Act of 1866," together with all Acts passed or to be passed for the amendment thereof.

"Governor" means the Governor, with the advice of the Executive Council.

- “Holding” means any land or any collection of lands constituting and worked as one property, whether held under the same title or different titles or under titles of different kinds, together with all proclaimed, reserved, or reputed roads intersecting or bounding the same.
- “Local Land Board” means the Local Land Board of the Land District in which the land in question is situate, or any Local Land Board duly appointed to act in place of such first-mentioned Board.
- “Minister” means the Secretary for Lands for the time being, or any other Minister from time to time charged with the administration of this Act.
- “Notification” means notification published in the *Government Gazette*.
- “Occupier” means the owner if he resides on the holding, but if not, his resident manager.
- “Owner” means—
- (a) the person registered as the holder of any lease or license, or promise of lease or license from the Crown; or
  - (b) the person registered as the holder of any purchase, whether conditional or otherwise, from the Crown; or
  - (c) the applicant for a homestead selection whose application has been confirmed; or
  - (d) the person entitled at law to an estate of freehold in possession in any land granted by the Crown for private purposes; or
  - (e) the person in whom is vested any land taken or appropriated under authority of any statute authorising land to be taken or appropriated for the purposes of any private undertaking;
  - (f) in respect to public lands, the Minister;
  - (g) in respect of lands situate within the boundaries of any Borough or Municipal District, the Council of such Borough or District for the time being.
- “Pastures and Stock Protection Acts” means the Act forty-fourth Victoria number eleven, or as amended by the Act forty-fifth Victoria number twenty-three, or any other Act now or hereafter to be passed.
- “Prescribed” means prescribed by this Act or any regulation to be made thereunder.
- “Private holding” means a holding consisting of lands which are not public lands as hereinafter described.
- “Private lands” means lands which are not public lands as hereinafter described.
- “Public Land” means—
- (a) land vested in the Crown which is not the subject of any lease or license, or promise of, or agreement for, any lease or license under the Crown Lands Acts or under any other Act authorising the occupation or use of land vested in the Crown, and which is not the subject of any contract for the sale thereof; or
  - (b) any land which is the subject of any dedication or permanent reservation for public uses or purposes, not being for a road, whether the said land has been granted for the said uses or purposes or not, and which is not for the time being lawfully held under any lease or license, or promise of, or agreement for, any lease or license.
- “Stock Board” means the Board of Directors constituted pursuant to the provisions in force for the time being of the “Pastures and Stock Protection Act” as amended by the Act forty-fifth Victoria number twenty-three, or any other Act.

(No. 2.)

*DRAFT of a Bill amending the " Diseases in Sheep Acts Amendment Act of 1878."*

60° VICTORIÆ, 1897.

**A BILL***intituled*

An Act to amend the " Diseases in Sheep Acts Amendment Act of 1878," in respect of Elections of Sheep Directors thereunder.

**B**E it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows :—

1. For the purposes of the First Election of Directors under the Diseases in Sheep Acts Amendment Act (forty-first Victoria number nineteen) to be holden after the passing of this Act, and for all subsequent Elections of such Directors, instead of the words " five hundred " in section five of that Act, the words " two hundred and fifty " shall be read ; and for the purposes aforesaid instead of the First Schedule to the said Act, there shall be substituted the Schedule following, viz. :—

**FIRST SCHEDULE.**

SCALE of Votes which owners or superintendents of sheep stations shall be entitled to record at Elections of Sheep Directors.

250 and not over 3,000 sheep	...	...	...	1 vote.
Over 3,000 and not over 10,000 sheep	...	...	...	2 votes.
Over 10,000 and not over 20,000 sheep	...	...	...	3 votes.
Over 20,000 and not over 30,000 sheep	...	...	...	4 votes.
Over 30,000 and not over 40,000 sheep	...	...	...	5 votes.
Over 40,000 and not over 50,000 sheep	...	...	...	6 votes.
Over 50,000 and not over 60,000 sheep	...	...	...	7 votes.
Over 60,000	...	...	...	8 votes.

2. In any case in which the returns made under the Diseases in Sheep Act of 1866, or any Act amending that Act, are for a less number of sheep than two hundred and fifty, the owners or occupiers of the land in respect of which such returns have been made, shall, if the same be wholly or mainly cultivated lands, have a right to vote at the Elections of Sheep Directors on a scale proportioned to the carrying capacity of such lands ; provided that the carrying capacity of such lands shall be taken to be                      acres to one sheep.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**RABBIT BILL.**

(PETITION FROM SELECTORS AND LANDHOLDERS RESIDENT IN THE BULLOCK CREEK SOUTH DISTRICT, IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 3rd August, 1897.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned Selectors and Landholders resident in the Bullock Creek South District, and being members of the Bullock Creek South Farmers' Association,—

HUMBLY SHOWETH THAT:—

1. Legislation to deal with the rabbit and other noxious animal pests is urgently required, and that a Bill having this object in view is shortly to be introduced into your Honorable House.

2. Your Petitioners are landholders within the district named, who are seriously affected by the presence of the rabbit and other noxious animal pests, and will therefore be materially advantaged by an effective legislation dealing therewith.

3. Your Petitioners are of opinion that the prevalence of these pests and the futility of all attempts to deal with same, are largely due to the fact that large areas of Crown lands, in the infested districts, are unoccupied, having been abandoned, or are occupied by a very sparse population, altogether insufficient to cope with the pests by known methods; and furthermore, such lands have, within recent years, become overrun with scrub and other noxious growths, forming a harbour for these pests and rendering the problem of their eradication the more difficult of solution. Because of these conditions, the lands of your Petitioners have become very much deteriorated, notwithstanding the continuous efforts and expenditure incurred to protect the same, and under existing conditions the outlook is most unpromising.

4. As the outcome of past experience, your Petitioners are convinced that the most effective means of coping with these pests is by enclosing individual holdings with wire-netting, and thus rendering it possible to keep down the pests within such enclosed holdings, thereby bringing same back to a profitable state of occupancy. On account of the very heavy initial expense necessary to secure this means of protection, your Petitioners have not been able to avail themselves largely of it.

5. Your Petitioners respectfully and earnestly commend to your favourable consideration the proposals contained in the 20th clause of the Rabbit Bill as drafted for your consideration by the late Rabbit Conference. This clause, as will be seen, provides the machinery by which your Honorable House may place at the disposal of the Minister funds with which to purchase wire-netting, and resell same to landholders to enclose their holdings on terms which will enable said landholders to treat with the Minister for its purchase, and will at the same time secure the State against loss.

6. Whilst urging that this clause may be embodied in proposed legislation in its entirety, your Petitioners would suggest that it be made sufficiently elastic as to extend protection against other noxious animals, such as wallabies and hares, which, in some districts, are becoming a menace equal to that of the rabbit pest, so that your Honorable House and the Minister may be enabled to afford assistance to cope with all forms of noxious animals where deemed desirable to do so.

Your Petitioners humbly pray, therefore, that when considering the proposed Rabbit Bill in detail your Honorable House will provide legislation empowering your Honorable House to place such sums of money at the disposal of the Minister as will enable him to purchase wire-netting and resell same to landholders on such terms as will permit them acquiring same, and will at the same time secure the State against losses on such transactions, thereby enabling holders to cope with the rabbit and other noxious pests; and to this end your Petitioners desire to commend to your favourable consideration clause 20 of the Rabbit Conference's Draft Rabbit Bill.

And your Petitioners, as in duty bound, will ever pray.

*[Here follow 33 signatures.]*

A similar Petition was received,—

On 3rd August, 1897, from certain Selectors and Landholders and others resident in the Alectown District.—19 signatures.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**RABBIT BILL.**

(PETITION FROM LANDHOLDERS AND SELECTORS RESIDENT IN PEAK HILL AND DISTRICT,  
IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 19 August, 1897.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in  
Parliament assembled.

The Petition of the undersigned, being landholders and selectors resident in Peak Hill and district,—

HUMBLY SHOWETH:—

That your Petitioners are seriously affected by the depredations of wallabies, rabbits, and other noxious animal pests. The measures taken by the aforesaid landholders for the destruction of the said pests are abortive, owing principally to the large areas of Crown lands in the infested districts which are unoccupied or sparsely populated, and not able to cope with the said pests by any known means. Owing to these conditions the lands are deteriorating in value, and the owners are greatly impoverished through losses of stock and extra expenditure incurred to protect the same, and must ultimately lead to the abandonment of a majority of the holdings. Experience shows that the only means of effectually coping with these pests is by enclosing holdings, or groups of holdings, with wire netting, making it possible to eradicate the pests inside the said holdings.

Your Petitioners respectfully believe that the proposals embodied in the 20th clause of the Rabbit Bill now before you for your consideration will meet the exigencies of the case by providing wire netting on the deferred-payment principle, thereby saving the State and landholders from loss.

The initial expense of procuring wire netting being beyond the means of the majority of your Petitioners, your Petitioners pray, when considering the proposed Rabbit Bill, that you will favourably consider the 20th clause of the Rabbit Conference Draft Rabbit Bill, also making it sufficiently elastic to embrace wallabies and other noxious animals.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 9 signatures.]

---

Similar Petitions were received—

On 19th August, 1897, from certain landholders and selectors, resident in the Peak Hill District;  
17 signatures.

On 19th August, 1897, from certain landholders and selectors, resident in the Peak Hill District;  
10 signatures.

**RABBIT BILL.**

(PETITION FROM CERTAIN LANDHOLDERS IN DUBBO AND SURROUNDING DISTRICTS,  
IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 24 August, 1897.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in  
Parliament assembled.

The Petition of the undersigned landholders,—

RESPECTFULLY SHOWETH:—

That whilst commending to your favourable consideration the proposal contained in the 20th clause of the Rabbit Bill, as drafted for your consideration by the late Rabbit Conference, we desire to pray that said clause be made sufficiently elastic in its provisions so as to provide protection against other noxious animals, such as hares, wallabies, rats, &c., which are a menace in this portion of the Dubbo and surrounding districts.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

RABBIT BILL.

(PETITION FROM FARMERS AND LANDHOLDERS IN THE CONDOBOLIN LAND DISTRICT, IN FAVOUR OF.)

*Received by the Legislative Assembly, 26 August, 1897.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned Selectors and Landholders in the Condobolin Land District, and being members of the Molrose and Walker's Hill and other Farmers' Associations, and others,—

HUMBLY SHOWETH THAT:—

1. Legislation to deal with the rabbit and other noxious animal pests is urgently required, and that a Bill having this object in view is shortly to be introduced into your Honorable House.

2. Your Petitioners are landholders within the district named, who are seriously affected by the presence of the rabbit and other noxious animal pests, and will therefore be materially advantaged by any effective legislation dealing therewith.

3. Your Petitioners are of opinion that the prevalence of these pests and the futility of all attempts to deal with same, are largely due to the fact that large areas of Crown lands, in the infested districts, are unoccupied, having been abandoned, or are occupied by a very sparse population, altogether insufficient to cope with the pests by known methods; and furthermore, such lands have, within recent years, become overrun with scrub and other noxious growths, forming a harbour for these pests and rendering the problem of their eradication the more difficult of solution. Because of these conditions, the lands of your Petitioners have become very much deteriorated, notwithstanding the continuous efforts and expenditure incurred to protect the same, and under existing conditions the outlook is most unpromising.

4. As the outcome of past experience, your Petitioners are convinced that the most effective means of coping with these pests is by enclosing individual holdings with wire-netting, and thus rendering it possible to keep down the pests within such enclosed holdings, thereby bringing same back to a profitable state of occupancy. On account of the very heavy initial expense necessary to secure this means of protection, your Petitioners have not been able to avail themselves largely of it.

5. Your Petitioners respectfully and earnestly commend to your favourable consideration the proposals contained in the 20th clause of the Rabbit Bill as drafted for your consideration by the late Rabbit Conference. This clause, as will be seen, provides the machinery by which your Honorable House may place at the disposal of the Minister funds with which to purchase wire-netting, and resell same to landholders to enclose their holdings on terms which will enable said landholders to treat with the Minister for its purchase, and will at the same time secure the State against loss.

6. Whilst urging that this clause may be embodied in proposed legislation in its entirety, your Petitioners would suggest that it be made sufficiently elastic as to extend protection against other noxious animals, such as wallabies and hares, which, in some districts, are becoming a menace equal to that of the rabbit pest, so that your Honorable House and the Minister may be enabled to afford assistance to cope with all forms of noxious animals where deemed desirable to do so.

Your Petitioners humbly pray, therefore, that when considering the proposed Rabbit Bill in detail your Honorable House will provide legislation empowering your Honorable House to place such sums of money at the disposal of the Minister as will enable him to purchase wire-netting and resell same to landholders on such terms as will permit them acquiring same, and will at the same time secure the State against losses on such transactions, thereby enabling holders to cope with the rabbit and other noxious pests; and to this end your Petitioners desire to commend to your favourable consideration clause 20 of the Rabbit Conference's Draft Rabbit Bill.

And your Petitioners, as in duty bound, will ever pray.

*[Here follow 54 signatures.]*

Similar Petitions were received,—

On 26th August, 1897, from certain Selectors and Landholders and others resident in the Condobolin District, and members of the Mowabla and Kiacatoo Farmers and Selectors' Association.

” ” from Selectors and Landholders resident in the Bulbodney District, and members of the Bulbodney Selectors' Association.

NEW SOUTH WALES.

**RABBIT BILL.**

(PETITION FROM LANDHOLDERS AND SELECTORS RESIDENT IN THE BULBODNEY DISTRICT, IN  
FAVOUR OF THE 20TH CLAUSE OF THE RABBIT CONFERENCE DRAFT BILL.)

*Received by the Legislative Assembly, 20th October, 1897.*

The Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of the undersigned Selectors and Landholders resident in the Bulbodney District, and  
being members of the Bulbodney Selectors' Association,—

HUMBLY SHOWETH THAT:—

1. Legislation to deal with the rabbit and other noxious animal pests is urgently required, and that a Bill having this object in view is shortly to be introduced into your Honorable House.

2. Your Petitioners are landholders within the district named, who are seriously affected by the presence of the rabbit and other noxious animal pests, and will therefore be materially advantaged by any effective legislation dealing therewith.

3. Your Petitioners are of opinion that the prevalence of these pests, and the futility of all attempts to deal with same, are largely due to the fact that large areas of Crown lands, in the infested districts, are unoccupied, having been abandoned, or are occupied by a very sparse population, altogether insufficient to cope with the pests by known methods; and furthermore, such lands have, within recent years, become overrun with scrub and other noxious growths, forming a harbour for these pests and rendering the problem of their eradication the more difficult of solution. Because of these conditions, the lands of your Petitioners have become very much deteriorated, notwithstanding the continuous efforts and expenditure incurred to protect the same, and under existing conditions the outlook is most unpromising.

4. As the outcome of past experience, your Petitioners are convinced that the most effective means of coping with these pests is by enclosing individual holdings with wire-netting, and thus rendering it possible to keep down the pests within such enclosed holdings, thereby bringing same back to a profitable state of occupancy. On account of the very heavy initial expense necessary to secure this means of protection, your Petitioners have not been able to avail themselves largely of it.

5. Your Petitioners respectfully and earnestly commend to your favourable consideration the proposals contained in the 20th clause of the Rabbit Bill as drafted for your consideration by the late Rabbit Conference. This clause, as will be seen, provides the machinery by which your Honorable House may place at the disposal of the Minister funds with which to purchase wire-netting, and resell same to landholders to enclose their holdings on terms which will enable said landholders to treat with the Minister for its purchase, and will at the same time secure the State against loss.

6. # REPORT

OF THE

## PROCEEDINGS OF A CONFERENCE

RESPECTING THE

# NOXIOUS WEEDS PEST

IN

## NEW SOUTH WALES,

COMMENCED AT THE CHAMBER OF COMMERCE, SYDNEY,

ON TUESDAY, MARCH 16<sup>TH</sup>, 1897,

In response to invitations issued at the direction of the Hon. J. H. Carruthers,  
Minister for Lands.

---

*Printed under No. 2 Report from Printing Committee, 6 May, 1897.*

---

SYDNEY: WILLIAM APPLGATE GULLICK, GOVERNMENT PRINTER.

1897.

# NOXIOUS WEEDS CONFERENCE,

HELD 16TH, 17TH, 18TH, AND 19TH, MARCH, 1897.

Report of Proceedings, for presentation to the Honorable J. H. Carruthers,  
Minister for Lands.

THE proceedings were opened by the Minister, who had invited representatives from the different Pasture and Stock Boards, Selectors' Associations, and Farmers' Unions in the country, as well as from the leading Agency Firms of Sydney, to take part in the deliberations for the purpose of discussing the provisions of the Noxious Weeds Bill, with a view to making fresh recommendations on which to base an amended Bill.

The Honorable Rupert Carington was unanimously elected Chairman of the Conference, in which the following gentlemen took part:—

Alfred Brown, Narrabri.	E. Hayes, at invitation of Minister.
John Dill, Hay.	H. G. Freeman, do.
F. W. Bacon, Brewarrina.	A. H. M'Collough, Deniliquin.
Philip Oakden, Cobar.	E. A. Stinson, Coolamon.
J. Wilkes, Broken Hill.	P. R. Brett, Urana.
J. W. Brougham, Menindie.	J. J. Baylis, Narrandera.
A. Laurence, Balranald.	C. F. Bolton, Wagga Wagga.
T. S. Pearse, Orange.	G. C. Little, Bullock Creek, N.
T. C. Worboys, Orange.	T. Brown, M.L.A., Budgerabong.
R. T. B. Gaden, Dubbo.	T. Looney, Bullock Creek, S.
Thomas Leslie, Forbes.	R. H. Maund, O'Connell.
A. Anderson, Corowa.	R. H. Kirkpatrick, Nyngan.
W. F. Lawry, invitation of Minister.	John Ward, Nyngan.
W. H. Armstrong, Canonbar.	G. Davidson, Condobolin.
J. H. Davies, Gunnedah.	J. R. Varcoc, Hillston.
J. M. Atkinson, invitation of Minister.	A. Cumming, Hillston.
W. Alison, Canonbar.	P. J. Gorman, Berrigan.
R. Gibson, Hay.	J. R. Cooke, Berrigerry.
The Honorable Rupert Carington, Jerilderie.	A. T. Brooke, Boggabri.
A. L. B. Cameron, Ivanhoe.	John M'Aneney, Trundle.
J. Flanagan, Gunbar.	— Wilson,
F. A. Oatley, at invitation of Minister.	A. Ross, Hume.
J. Perry, M.L.A.	— Sides, Hay.
	T. Waddell, M.L.A.

The Conference proceeded to discuss the subject for which they had assembled.

The result of the deliberations of the Conference was the adoption of the following resolutions :—

That the Preamble be passed as printed.

A BILL to provide for the eradication and destruction and for preventing the growth of Noxious Weeds, and to prohibit and regulate the importation of Noxious Weeds, and of articles which might spread their growth.

Be it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows :—

That Clause 1. be amended as under :—

Except as provided in clause 8, noxious weeds shall mean Bathurst burr and such weeds as shall be declared noxious by the Governor by proclamation in the *Gazette* and local newspapers, on the recommendation of the local authorities; and such proclamation shall apply only to such districts or parts thereof named therein. The Governor may also by general election or special proclamation in the *Gazette* declare any plant to be a noxious weed within the meaning of this Act, and such plant shall be deemed to be a noxious weed throughout the Colony or such parts of it as named in the proclamation. The Governor may from time to time vary or revoke such general proclamation, providing that such general proclamation, shall not have the force of law until it has been laid before both Houses of Parliament for one month. And the Minister shall thereafter furnish the local authorities affected with a copy of every such general or special proclamation.

That Clause 2 be amended as under :—

*Local authorities.*

2. Subject to the provisions hereinafter contained the provisions of this Act dealing with the eradication and destruction of noxious weeds shall be administered by the following local authorities—

- (a) within the boundaries of any municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed, now or hereafter to be constituted the council of that municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed;
- (b) within the boundaries of any sheep district proclaimed under the Diseases in Sheep Act of 1866 or any Act amending the same, exclusive of land within the boundaries of any municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed the board of directors under the Stock and Pastures Act, with one Government representative for the purposes of this Act,

and in each case the area within which a municipal council, board of directors, aforesaid, or lands held in trust for public purposes, shall constitute a district for the purposes of this Act.

That Clause 3 be amended as under :—

*Eradication and destruction of noxious weeds.*

3. The local authority shall, within their district, have power to eradicate and destroy all noxious weeds growing on vacant Crown lands, roads, and public reserves not under lease or license.

Where the local authority are a municipal council or trustees of land set apart for public purposes, they shall eradicate and destroy all noxious weeds growing on all roads, including main roads, within the municipality, or lands set apart for public purposes.

That Clause 4 be amended as under :—

4. (i) On receipt of any information respecting the existence of noxious weeds on land within their district, the local authority shall, if satisfied of the existence of the noxious weeds, serve a notice on the occupier of the land, requiring him to eradicate and destroy, to the satisfaction of the Board, the noxious weeds within the time specified in the notice, and to execute such works and do such things as may be necessary for that purpose, and if the local authority think it desirable (but not otherwise) specifying any works to be executed.

(ii) Provided that where the occupier cannot be found, the local authority may themselves eradicate and destroy the noxious weeds.

(iii) If the occupier of land shall be unknown or absent from the Colony, and the expense incurred hereunder in clearing such land of noxious weeds cannot be recovered from him, and remain unpaid for more than months after the same shall have become due, the local authority may let such land for any period not exceeding five years, upon terms and conditions to be prescribed, and shall receive the rents and profits thereof, and shall apply the same in payment of such expenses with interest thereon at the rate of 10 per centum per annum, so long as the same shall be unpaid: And such authority shall hold the surplus (if any) upon trust for the person entitled to such surplus."

That Clause 5 be amended as under :—

5. (i) If the person on whom a notice to eradicate and destroy noxious weeds has been served as aforesaid makes default in complying with any of the requisitions thereof within the time specified, the local authority may by any person authorised by them in that behalf make a complaint to a justice, and such justice shall thereupon issue a summons requiring the person on whom the notice was served to appear before a police or stipendiary magistrate or any two justices in petty sessions.

(ii) The said magistrate or justices may, if satisfied that noxious weeds exist as alleged, by order require the said person to comply with all or any of the requisitions of the notice, or otherwise to eradicate and destroy the noxious weeds within a time specified in the order, and may, if thought desirable, specify the works to be executed by the said person for that purpose.

(iii) If a person fails to comply with an order of a magistrate or justices made as aforesaid, with respect to the eradication and destruction of the noxious weeds, he shall, unless he satisfies the Court that he has used all due diligence to carry out such order, be liable to a penalty not exceeding *twenty* shillings a day during his default. Moreover, the local authority may enter the land to which any order under this Act relates, and eradicate and destroy the noxious weeds, and do whatever may be necessary in execution of such order.

(iv) All costs, charges, and expenses incurred by a Local Authority, or any person authorised by a Local Authority, in clearing any private land of noxious plants under the provisions of this Act, shall be a first charge upon such land, and shall take precedence of all mortgages or other charges whatsoever upon such land: Provided always that a certificate under the hand of such Local Authority shall be a full discharge of all such costs, charges, and expenses up to the date of such certificate.

That Clause 6 be passed as printed.

6. The local authority may, for the purpose of carrying out the provisions of this Act, enter or authorise any person by writing properly authenticated by the said authority to enter, at any time, with men, vehicles, horses, and bullocks, and necessary appliances, into and upon any land within their district.

That Clause 7 be amended as under.

7. If it appears to the Minister that the local authority have neglected to exercise any powers conferred or duties imposed on them by this Act, the Minister may give notice in writing requiring the local authority to exercise the powers and perform the duties aforesaid within a period to be named in the notice.

If the said requirement is disobeyed, or is not complied with, it shall be lawful for the Minister to exercise the powers or perform the duties of such local authorities and recover the expense thereby incurred from such local authorities in the case of municipal councils or lands held in public trust and from the owner or holders of such other lands so occupied.

That Clause 8 be passed as printed.

*Restriction of importation of noxious weeds.*

8. The Governor may make regulations—

- (a) prohibiting the importation into New South Wales of any noxious weeds or of the seed of any noxious weeds, and providing for the destruction of the same if imported contrary to the said regulations;
- (b) regulating the importation into New South Wales of articles, the importation or use of which would, in the opinion of the Governor, tend to spread the growth of noxious weeds;

And the Governor may in those regulations impose any penalty not exceeding *twenty* pounds for any breach thereof.

All regulations made as aforesaid shall when published in the *Gazette* have the force of law, and shall be laid before both Houses of Parliament within fourteen days if Parliament be then sitting, but if not then within fourteen days after the commencement of the next following Session of Parliament.

That Clause 9 be passed as printed.

9. Whosoever hinders or obstructs any person in the exercise of a power conferred or duty imposed on him, by or under authority conferred by this Act, or by any regulations made thereunder, shall be liable to a penalty not exceeding *twenty* pounds.

That Clause 10 be amended to read as under:—

10. All sums of money expended by the local authority, under the authority of or in pursuance of the provisions of this Act, shall be paid as follows:—

- (a) Where the council of any municipality or trustee of any land set apart for public purposes is the local authority, payment shall be made out of the funds of the municipality or trustee of any land set apart for public purposes.
- (b) Where the board of directors aforesaid of a sheep district, is the local authority, payment shall be made out of the Consolidated Revenue Fund, or from such other source as provided for such purposes under this Act.
- (c) Where the Board of a district is the local authority, a charge shall be levied on all travelling stock, for the purpose of destroying noxious weeds on travelling stock routes or reserves.
- (d) Provided that no such payments shall be made under subsections (a) and (b) where land belongs to private owners, but shall be recoverable from such owner, on an order made by a Police or Stipendiary Magistrate or any two Justices in Petty Sessions.

That Clause 11 be passed as printed:—

11. Penalties imposed by this Act or by any regulations made thereunder may be recovered before, and offences against this Act may be heard and determined by, a Police or Stipendiary Magistrate, or any two Justices of the Peace in Petty Sessions.

That

That Clause 12 be passed as printed :—

12. In this Act, unless the context otherwise requires :—

“ Governor ” means the Governor with the advice of the Executive Council.

“ Justice ” means Justice of the Peace.

“ Minister ” means Secretary for Lands, and includes any Minister of the Crown having the administration of this Act.

“ Occupier ” includes the person having the charge, management, or control of the land referred to.

That Clause 13 be amended as under :—

13. This Act shall take effect on and after the \_\_\_\_\_ day of \_\_\_\_\_ one thousand eight hundred and ninety-seven, and may be cited as the “ Noxious Weeds Act, 1897.”

That the following be inserted as a new Clause :—

#### Clause 14.

“ That in every district or part thereof in which prickly-pear shall have been declared a noxious weed by proclamation under this Act, the Minister may vest the local authority, charged with the administration of the Prickly Pear Act of 1886, subject to the control of the Minister, to carry out and enforce the provisions thereof and the regulations issued thereunder.”

Before the conclusion of the sittings the Members desired that the following be urged on the Minister :—“ That, in view of the rapid increase of the sweetbriar, prickly-pear, and tobacco-plant, and other noxious weeds, and the necessity for a cheap and efficient means of dealing with same, this Conference urges the Government to offer a reward for the discovery of a cheap and efficient means of eradicating noxious growths.”

The Chairman (the Honorable Rupert Carington), together with Mr. J. M. Atkinson, Mr. Wilson, Mr. Davies, and Mr. Brown, M.P., were appointed a Committee to present the resolutions of the Conference to the Minister, and, if desired, to confer with him upon it.

RUPERT CARINGTON,  
Chairman.

19th March, 1897.

# NOXIOUS WEEDS CONFERENCE.

## REPORT OF PROCEEDINGS.

FIRST DAY—16TH MARCH, 1897.

THE Conference met at 10 a.m., and the following gentlemen took part in the deliberations:—

Alfred Brown, Narrabri.	H. G. Freeman, at invitation of Minister.
John Dill, Hay.	A. H. M'Collough, Deniliquin.
F. W. Bacon, Brewarrina.	E. A. Stinson, Coolamon.
Philip Oakden, Cobar.	P. R. Brett, Urana.
J. Wilkes, Broken Hill.	J. J. Baylis, Narrandera.
J. W. Brougham, Menindie.	C. F. Bolton, Wagga Wagga.
A. Laurence, Balranald.	G. C. Little, Bullock Creek, N.
T. S. Pearse, Orange.	T. Brown, M.L.A., Budgerabong.
T. C. Worboys, Orange.	T. Looney, Bullock Creek, S.
R. T. B. Gaden, Dubbo.	R. H. Maund, O'Connell.
Thomas Leslie, Forbes.	R. H. Kirkpatrick, Nyngan.
A. Anderson, Corowa.	John Ward, Nyngan.
W. F. Lawry, at invitation of Minister.	G. Davidson, Condobolin.
W. H. Armstrong, Canonbar.	J. R. Varcoe, Hillston.
J. H. Davies, Gunnedah.	A. Cumming, Hillston.
J. M. Atkinson, at invitation of Minister.	P. J. Gorman, Berrigan.
W. Alison, Canonbar.	J. R. Cooke, Berrigerry.
R. Gibson, Hay.	A. T. Brooke, Boggabri.
The Honorable Rupert Carington, Jerilderie.	John M'Aneney, Trundle.
A. L. B. Cameron, Ivanhoe.	— Wilson,
J. Flanagan, Gunbar.	A. Ross, Hume.
F. A. Oatley, at invitation of Minister.	— Sides, Hay.
E. Hayes, do.	

The Honorable RUPERT CARINGTON was unanimously elected Chairman.

Mr. PHILIP OAKDEN (Cobar) proposed, "That the proposer of a motion be allowed ten minutes, and any seconder five minutes."

Carried unanimously.

Mr. ALISON (Canonbar) pointed out that the Bill proposed to lay very heavy and arduous responsibility on landowners. In many parts of the Colony the prickly-pear, which might be fairly described as a noxious weed, so heavily infested freehold land that to thoroughly destroy it by any private owner practically meant his ruin, or even if the Government had to destroy it it would almost swallow up the whole of the revenue of the Colony. If the Government were obliged, as he did not see they were obliged, in this Act to destroy all prickly-pear on all Crown lands, the expense would be something enormous. It would have been well, before this Bill had been brought before us, to have had some estimate made of what the cost would have been to private owners to begin with, and secondly to the Government. It would have assisted the Conference materially to have arrived at a conclusion with regard to the provisions of the Bill. He would like to see some provision in the Bill that private owners could not be ruined by any arbitrary action of the Boards under whose control this Act was placed, and it would be well to provide against the rights of individuals being seriously jeopardised. They would quite understand that if there was an arbitrary Board elected, they could ruin a man by compelling him to take action to destroy the weeds on his property. He thought it would be better to have progressive eradication of it, and great care would have to be taken by this Conference to see that no harsh or arbitrary action was taken. Take, for instance, the briar. There were parts of the country where, to provide for its total destruction, would simply mean ruination to the owner. They should see that all reasonable efforts should be made, but that an appeal should always be allowed in the matter. He drew attention to the principle they had adopted in the Rabbit Act, and he thought they had made a very great mistake in allowing arbitrary power to the Boards to say that the rabbits "shall" be destroyed. There was no appeal, and there was the mistake. They should not allow any tyrannical action to be taken by any Boards. They should simply see that all reasonable efforts were made; otherwise private interest might be seriously injured.

Mr. LAURENCE (Balranald) pointed out that the whole of the Western Division, from Balranald to the South Australian border, was infested with a plant known as the tobacco-tree, and he could state that as much as 30s. per acre had been paid on some of the runs adjacent to Balranald to eradicate this plant. The leasehold areas were greatly infested, and because lessees only have a tenure of twelve months they have not spent the same amount of money as they should have done. He held letters from several gentlemen

gentlemen in the Balranald district which he would read for the information of the Conference. Some of the letters told him that if the lessees were told to clear their holdings without being subsidised by the Government they would have to abandon their holdings. He held that the eradication of this plant would be a benefit to the whole Colony. He thought, therefore, the Boards ought to have power to let by contract the eradication of this plant, both on the leasehold and resumed areas, and he considered it only fair that the Minister should pay on the leasehold area at the rate of, at least, 75 per cent. of the cost.

Mr. WILKES (Broken Hill) held with most of the remarks of the previous speaker. He thought they would help to embody in this Bill something that they threw out in the Rabbit Bill, and that was they could not declare the whole of the Colony infested. It would have to be divided in some manner into districts, and the majority of those interested, or the Minister, would have to declare certain weeds to be noxious weeds within that district. Previous speakers had referred to the arbitrary manner in which they had given power to the Board in killing rabbits. It was required in that Bill.

The Minister for Lands entered amid acclamation.

The Honorable J. H. CARRUTHERS said: Mr. Chairman and Gentlemen,—I convened this meeting to deal with the question of noxious weeds, in order that you might assist in the Bill which I propose to introduce in the ensuing session of Parliament. I submit the draft Bill, copies of which you have in your possession. You must understand that that draft Bill is just a rough draft. It has not been finally revised, so you may find some defects in the draftsmanship of it; but it will be a good basis to go upon. The principle of the Bill, practically, is to make it a legal obligation on landowners to destroy the noxious weeds on their own property, and to make it an offence if the noxious weeds are not destroyed, stating certain local authorities who will have the oversight and the administration of the Bill—municipalities and the Board of Directors of a Sheep District, and, in other portions of the Colony where there is no Board of Directors to look after the work, such persons as the Government may appoint—and there is also a restriction on the importation of noxious weeds. I believe most of the noxious weeds have been imported here, and that, therefore, the experience of the past shows us we ought to be very careful in the future to restrict the importation of noxious weeds, which at the moment may not seem to be dangerous, but which, perhaps, may bring about as big a danger as the Bathurst burr and the sweetbriar. In my travels I have been wonderfully struck with the change which has come over the vegetation which has been imported into the various districts. Everybody is thoroughly acquainted with the injury that has been done by the sweetbriar, and the large amount of money they have had to spend for the attempted eradication of it. There is not a pastoralist who is not acquainted with the injury which the Bathurst burr does for New South Wales. I have recently noticed a serious injury that is accruing in the colder climates of the Colony by the spread of the English blackberry, and I think we have in that a very great danger; but when I spoke to people in various parts of the Colony on the probability of the blackberry being declared a noxious weed, the protest was at once raised that it was an article of commerce. But I saw enough in the New England district to convince me the blackberry would be one of the greatest evils in these districts that has ever been introduced into this Colony. I have seen Crown reserves which were set apart for the purpose of travelling stock absolutely overrun. It would cost hundreds of pounds to rescue them. The whole of the surrounding country is being gradually sown broadcast with this, to my mind, very serious evil. In the neighbourhood of Sydney, in the National Park, which has been reserved for the benefit of the people of Sydney, a great deal of the country is being overrun by this mere weed, and it seems to me that we must put aside the little benefit that is gained by a few people picking blackberries. Now the Bill proposes that there shall be a Schedule to declare what shall be noxious weeds. The matter is one of great simplicity. The only question in the administration of whatever law is passed is, that if you make it an obligation on a landowner, you must put it in the power of small men to cope with the pest. And, therefore, if we say it is necessary to cause such steps to be taken by a small property owner to get rid of the pest on his property, you must consider what, first of all, is the object of so doing. The object is not so much to clear that man's land as to move a menace from surrounding property; and, therefore, having regard to that, the question comes in how far people who are indirectly benefited will have to do the work themselves. I have no doubt there will be considerable strength in the argument that the Crown ought to undertake its work of clearing all the Crown lands; but you must be well acquainted with the fact that the prickly-pear has now gained possession of tracts of Crown lands we cannot give away. I have plenty of lands that anyone can have on a ninety-nine years lease, for no rent, if they will clear them of the prickly-pear. We will have to approach the question of clearing Crown lands in the same way as we approach the clearing of lands for the poor man. We will have to be very careful in dealing with this matter. Legislation must be based on this fact, that the benefit of dealing with the pest is not a benefit wholly and solely to the individual whose property is affected, and whose property is cleared, but a benefit to the surrounding holders as well. You will find that the Bill provides that there may be an administration of the law with regard to any owner who proves that he is unable to deal with the pest within a given period—that is to say, that the local authorities may extend the time during which a person may deal with the pest on his own lands. Since this Bill was drafted it has impressed itself on my mind that it would be necessary to have some assistance given by a general local tax, of a very light character, so as to allow those who have small holdings heavily encumbered with the pest to have some assistance in the work of clearing their property. I do not think we need take very much time over this Bill. If you will submit your recommendation, I will have a Bill drafted on these recommendations, and send it on to a committee of gentlemen you may nominate to receive such a Bill.

Mr. WILKES (Broken Hill) (continuing) thought they had got a matter to deal with that would require great consideration, and he was of opinion that each representative there should take the Bill back, and call meetings within their own districts, and get the opinion of the district. The Minister pointed out one weed—prickly-pear; to attempt to eradicate that would mean ruination to scores. He would like them to say whether the matter could not be referred to the various districts of the Colony.

Mr. WILSON said he was glad of the opportunity of saying a few words while the Minister was present. He would point out that it was the travelling stock routes and reserves that were the most infested parts of the whole Colony. He thought the Bill should be placed in the hands of the Pastures and Stock Boards. He considered the Bill did not deal properly with the Central and Western Divisions. It would be a distinct gain to every stockholder, and everybody else, if the stock routes and reserves were kept in good order; but at the present time they were not. The State having provided public watering-places should have a certainty of a more or less regular income; but in good

seasons

seasons drovers, instead of using these public watering-places and reserves, and paying for the use of them, went on to other men's land, and eat up all the grass, and drank their water. It might be a very neighbourly way of doing things, and he liked to be as neighbourly as he could, but it did not pay, and they must look at the thing from a business point of view. He considered that about 8,000,000 sheep and 1,000,000 cattle travelled on the roads every year, and on an average they travelled 50 miles. If they charged 1d. per head for 50 miles, that would produce an income of £37,500, which would go a long way towards paying for the expense of looking after the public watering-places and reserves, and keeping the roads clear from burrs. Another question he would like to touch on was whether travelling stock routes should be withdrawn from lease or not. There were many places where the lessee would be agreeable to lease, and other places where the lessee would not be agreeable to lease. It seemed to him that the Pastures and Stock Boards, living in the district, should be the body to give a decision on that point. The Department of Lands was not a qualified authority. He begged to move that the following new clauses be inserted in the Bill:—

- "1. That in the opinion of this Conference the whole of the travelling stock routes and camping reserves in the Central and Western Divisions should be under the control of the Pastures and Stock Boards.
- "2. That all public watering places should be under similar control.
- "3. That the Pastures and Stock Boards be charged with the duty of keeping all travelling stock routes and reserves free from Bathurst burr and other noxious weeds.
- "4. That all travelling stock should pay a fee according to the distance travelled, such fee to entitle them to water at all public watering places without further charge."

He proposed that this Bill should be made to apply only to the Central and Western Divisions.

The CHAIRMAN pointed out that that was a matter which should be dealt with on the second reading of the Bill.

Mr. ALISON (Canonbar) drew the attention of the Conference to the fact that there was already a Prickly-pear Act in existence, and if it had been carried out properly the prickly-pear would have been eradicated long ago. The Government lands were so covered with these weeds that it would cost enormous sums of money to clear them. With regard to the noxious weeds to be put in the Schedule, he did not think it would do to have a hard-and-fast rule all over the Colony. It might be advisable to have certain weeds proclaimed noxious all over the Colony—such, for instance, as the Bathurst burr; but in other cases it should be left to the Boards to decide what should be noxious weeds in their particular districts.

Mr. PEARSE (Orange) said, with regard to dealing with these pests, he had been very glad to hear the remarks that had fallen from the Minister with regard to sweetbriar. Unless very stringent action was taken with regard to it, it would eventually cost them an enormous sum of money to eradicate it from the land. He had received a number of letters from gentlemen in his district with regard to the subject of noxious weeds, and they all thought that something should be done, and done at once, in regard to this matter. The longer it was allowed to go on the worse it would become, as the seed was scattered over the land. He was sure that if prompt action was taken the weeds could be quickly eradicated.

Mr. ATKINSON said the pest was felt very much more in the Eastern Division than in the less populated parts. He was a great believer in the eradication of these noxious weeds. One thing he would point out was, that although one person might do his best to eradicate the weeds, the person owning the adjoining property made no attempt. He himself had for several years done his best to get them under; but his neighbours seemed not only not to eradicate them, but to cultivate them; in fact, one man had told him it added considerably to the weight of his wool, and he could assure them as a positive fact that that man cultivated them.

Mr. DILL (Hay) said that it had cost him something like £4,500 to get the burrs under. There were burrs on every stock route and reserve in the country, and they were let grow without any hindrance. Up the Murrumbidgee way they were all over the country. He had travelled over most of the Colony, and therefore spoke as a man with some experience.

Mr. ROSS (Hume) said that every travelling stock route was covered from side to side, but if some proper means were taken they could easily be kept down and thoroughly eradicated. He agreed with Mr. Alison that something ought to be done to protect travelling stock. As far as Bathurst burr was concerned, he thought it was very easily destroyed. In the Western District the blackberry was a great pest, and there were some parts where no stock could be carried on account of it. He did not think they wanted any Government assistance at all if some compulsory instructions were issued making every man kill the weeds on his land. At the same time he did not think it was fair that they should be called upon to eradicate the weeds upon travelling stock reserves. He thought the Government should clear them, because if they were kept clear it would be an easy matter to keep the other lands clear.

Mr. T. BROWN, M.L.A. (Budgerabong), said that they must recognise the principle that different districts have different peculiarities; and the law that might be applicable to one district would not be so to another. They would have to keep that in view, and the Schedule would have to be sufficiently elastic. There were such weeds as were generally prevalent—such as the Bathurst burr—that would be required to be declared noxious weeds over the whole of the Colony, and the sweetbriar, in the agricultural districts immediately between Sydney and the Central district, and also the prickly-pear. They recognised that all these noxious weeds were importations; and the Bill provided that the Minister could step in and prevent importations of seed that were likely to become a danger to the vegetable growth of the country. That was a piece of legislation that should have been in operation years ago; and he was quite sure, if it had been, it would have prevented the loss of untold sums of money to the producers in this country; and he did not think they could go far wrong in placing stringent power in the hands of the Minister in this direction. In dealing with the eradication of these weeds they must remember that there were vast areas of country that it would be impossible to eradicate. Under the present system the man who was spending his money in eradicating some of the noxious weeds was completely at the mercy of his neighbour; and some Crown lands were equally bad in the vicinity of his holding. They should endeavour to enforce a reasonable amount of compulsion in the direction of compelling owners to do something towards the destruction of the weeds on their holding, and also clear the routes.

Mr. PEARSE (Orange) said that in the Bill it was provided that municipalities should be called upon to destroy the weeds within their areas; but it appeared to him that if enforced stringently that would practically make a number of these municipalities bankrupt. Municipalities in the past had been doing something in this direction, but they had to go to the Government for a special grant. One great mistake they always made was that they never thought of dealing with this noxious vegetation—such as

Bathurst

Bathurst burr—until the damage was done; they only cut them down after they had seeded. It should be within the powers of some Board to enforce the killing at a particular time; it made all the difference when these weeds were killed, especially the Bathurst burr. If they left it a week or two after they had seeded, it was of no effect. With respect to outside holdings, it was proposed that Stock Boards should have the control of the destruction of these weeds, but he was inclined to think the Land Boards could better deal with Crown lands, because in dealing with these matters they had mostly to deal with Crown lands, which were a strong factor in spreading the vegetable growth around. In dealing with them in this way, the Bill provided that a private owner might receive notice to destroy noxious weeds, and if he did not do so, it was competent for the Authority to send in persons to do it, and he was liable to a fine of 20s. a day. There was no provision made as to how the Authorities were to recover the expenses they were put to from the holder; therefore it paid him to incur a fine of 20s. a day. With regard to what Mr. Wilson had said about stock routes and the providing of water, he was quite in accord with him; and he thought anybody who had anything to do with travelling stock would agree with him that some reasonable charge should be made, and the proceeds should be used to keep these reserves clear, and great benefit would then occur to those immediately concerned. At the present time stock routes were completely over-run, and they were practically useless to travelling stock. With regard to Mr. Wilson's proposal with respect to watering places, he did not see how he was going to apply it.

The CHAIRMAN pointed out that the resolutions were not under discussion.

Mr. WADDELL, M.L.A., agreed with Mr. Wilson in some of his remarks. Last session he introduced a Bill after considerable thought, dealing with this particular pest. It appeared to him then that the wisest course was to give each landholder who cleared his land of the sweetbriar the right to compel his adjoining neighbour to clear his, and at the same time, that his adjoining neighbour should be protected from any harsh provision that might be inserted in the law, that he should be given a reasonable time to clear his land. For instance, one provision was that a man who cleared his land of sweetbriar should have the right to give his neighbour notice that he would have to clear a piece of his land 1 chain wide along his boundary fence, and then clear the rest within three years. He thought there should be one part dealing with the Eastern Districts and another with the Central and Western.

Mr. BOLTON (Wagga Wagga) said that sweetbriar was the worst weed about Wellington and he thought that required special legislation.

Mr. A. BROWN (Narrabri) pointed out that while the travelling stock routes were infested the travelling stock would carry the burr from one part of the country to the other. He considered that as private holders had to get rid of the burr on their own holdings, the Government should keep the stock routes clear. If the Government put the stock routes in the hands of the Pastures and Stock Boards, then an Inspector would have to see that they were kept clear. It was no use partly cutting them down; they must be cut from fence to fence.

Mr. BROOKE (Boggabri) said that the Minister had pointed out that the probabilities would be that they should have a new tax on the people whose lands were already taxed. He could not see why a man should be taxed after he had cleared his land in order to help the man who had done nothing. As to putting it in the hands of the Land Boards he thought the Pastures and Stock Boards knew more about it than the Land Boards.

Mr. PERRY M.L.A., said he had come to the conclusion that by the time this Bill passed the Conference there would be very little for Parliament to do. He hoped the matter would receive fair consideration and not that consideration of one part of the Colony as against another. He considered that the noxious weeds in the Eastern Division were a greater curse than they were in the Western Division. He was speaking from the Eastern Division standpoint. In the North Coast Districts, for instance, they had got weeds that were considered garden plants, which in other parts would be considered noxious weeds; therefore it would be necessary in discussing the Schedule to be very careful as to what weeds they declared noxious weeds all over the Colony, but they should give power to the different districts to proclaim or define in those districts what were noxious weeds. They would have to carefully consider this matter, because it would be almost as much as a man's land was worth if you asked him to clear some weeds out. He had been along the coast a good deal and he had come to the conclusion that the people themselves were not so much to blame for the trouble as the Government. The people had asked time after time for legislation in this matter. The Government had been the worst offenders of the lot. He thought the Government should take the matter in hand and spend money in clearing these stock routes of the country. It would be better than sand-shifting.

Mr. DAVIES (Gunnedah) considered the Government had been the worst offenders. He supported Mr. Waddell's suggestions.

The CHAIRMAN said that he had before him certain resolutions by Mr. Wilson, which he had carefully considered; but he did not wish to take the extreme course of declaring them out of order, but still he would like to point out that if these resolutions were carried it would be no use going on with the Bill. He would ask the Conference whether they thought it wise, that, under the cover of these resolutions which had been suddenly sprung upon them, certain districts should be put under enormous expense, and others be left out. He appealed to Mr. Wilson to withdraw questions Nos. 1, 2, and especially No. 4, because putting a tax on travelling stock had really very little to do with noxious weeds. He would ask Mr. Wilson to accept a compromise in this matter, and that was, that he should move as an amendment, "That the Pastures and Stock Boards be charged with the duties of keeping travelling stock routes free from burrs."

Mr. WILSON thought that some of his proposals would easily come under the clauses of the Bill—that was, to put everything under the control of the Pastures and Stock Boards. He thought the main suggestions of his resolutions could be discussed, and amendments made in them. He thought he said enough before to show that one question hinged on the other. He was, however, quite willing to leave it to the meeting.

Mr. ALISON (Canonbar) moved, "That they proceed with the Bill."

Mr. ATKINSON seconded the motion, and it was carried.

Mr. ATKINSON proposed, "That the Preamble be postponed."

Mr. ALISON (Canonbar) seconded the motion.

The question was put before the meeting and carried.

Mr. ALISON (Canonbar) moved, "That clause 1 be postponed."

Mr. LESLIE (Forbes) seconded the motion.

The question was put to the meeting and carried.

Clause

## Clause 2.

*Local Authorities.*

2. Subject to the provisions hereinafter contained the provisions of this Act dealing with the eradication, destruction, and prevention of the growth of noxious weeds shall be administered by the following local authorities—

- (a) within the boundaries of any municipality now or hereafter to be constituted, the council of that municipality;
- (b) within the boundaries of any sheep district proclaimed under the Diseases in Sheep Act of 1866 or any Act amending the same, exclusive of land within the boundaries of any municipality, the board of directors of the sheep district;
- (c) within any portion of the Colony proclaimed by the Governor, and not within the boundaries of the areas mentioned in subsections (a) and (b) of this section, any person appointed by the Governor in that behalf: Provided that the Governor may revoke or alter any proclamation made as aforesaid;

and in each case the area within which a municipal council, board of directors of a sheep district, or person appointed by the Governor has authority as aforesaid shall constitute a district for the purposes of this Act.

Mr. ATKINSON moved, "That on page 1, subsection (a), clause 2, should read 'within the boundaries of any municipality or township now or hereafter to be constituted, the council or trustee of that municipality or township.'" He said his object in moving this amendment was that they should of necessity include the township and the trustees of the townships in the Act of destruction of these noxious weeds. He thought they had all noticed that the reserves in the smaller townships were covered with noxious weeds, and therefore his object was to bring the townships which were in municipal areas and the trustees of that township within the meaning of this Act, that was as regards the compulsory destruction of these burrs.

Mr. BACON (Brewarrina) seconded Mr. Atkinson's amendment. He would point out that as regards trustees of country commons, that their jurisdiction did not extend to land within the township, and he would ask Mr. Atkinson to explain how he would meet that difficulty.

Mr. WILSON pointed out that as regards township reserves nobody but the Crown was responsible.

Mr. ALISON (Canonbar) moved as an amendment, to insert the following words as an addition to Mr. Atkinson's motion, "All trustees of commons, parks, recreation grounds, or racecourses, shall be held, and deemed for the purposes of this Act, to be the occupiers of the lands contained in such commons, parks, recreation grounds, and racecourses."

Mr. ATKINSON accepted Mr. Alison's suggestions to add those words to his motion.

Mr. T. BROWN, M.L.A. (Budgerabong), said he would like to say a few words before it went to a vote. It seemed to him to be pretty well identical with what was proposed in the Bill. Suppose they included, as was proposed, the trustees of commons, parks, racecourses, and so forth, where were they to get their revenues from. He did not see how that was provided for, and then again there were large areas of land held by the Railway Commissioners. Who was going to compel them to clear their land?

Mr. ATKINSON pointed out that he only wished that the townships and reserves adjoining such townships should participate in the trouble and expense of eradicating these burrs. They were all agreed that they not only did not destroy them but they propagated them. He certainly thought that the people who used these lands should come under the provisions of the Bill. They should be compelled not only to destroy but to keep them under.

Mr. T. BROWN, M.L.A. (Budgerabong), said that it appeared to him that the object of this amendment was to charge certain local bodies with the destruction of noxious weeds, &c. They would have to go farther and give these bodies powers they did not at present possess. As Mr. Alison pointed out, the Bill provided for this. The Bill took the municipality which had the power to raise revenue and charged that body with the destruction of noxious weeds within the area that it could raise revenue for that purpose, but the other lands that Mr. Alison proposed to include such as commons and racecourses were dealt with as Crown lands and charged to the Crown. He moved, "That the subsection be passed as printed."

Mr. ATKINSON's amendment, with the addition of the words suggested by Mr. Alison, was put to the meeting and lost.

Mr. T. BROWN's, M.L.A. (Budgerabong), motion that the subsection be passed as printed was carried.

Mr. ALISON (Canonbar) moved, "That in line 4, subsection (b), after the word 'of,' the words 'Stock and Pastures' should be inserted, and that the word 'sheep' should be eliminated, and the words 'Stock and Pastures' substituted."

Mr. BACON (Brewarrina) seconded the motion.

The question was put to the meeting and carried.

Mr. ALISON (Canonbar) moved, "That subsection (c) be postponed."

Mr. WILKES (Broken Hill) moved, "That the Conference adjourn until after the conclusion of the Rabbit Conference."

Mr. ATKINSON seconded the motion.

The question was put to the meeting and carried.

The CHAIRMAN then adjourned the Conference until the conclusion of the Rabbit Conference the next day.

## SECOND DAY—17TH MARCH, 1897.

The Hon. RUFERT CARINGTON (Jerilderie) took the Chair at 10 a.m.

The minutes of the previous meeting were read and confirmed.

Mr. ATKINSON said that as many gentlemen who were present the previous day did not appear to understand the purpose of his amendments, he would ask that they start from clause 2 *de novo*—that was to say, to practically recommit the Bill.

Mr. ROSS (Hume) seconded the motion.

The question on being put to the meeting was carried.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), proposed, "That after the word 'municipality' in the first line of subsection (a) and in the second line of subsection (a) the following words be added, 'or lands set apart for public purposes, and for which trustees are or may be hereafter appointed.'" His idea was to have municipalities proclaimed noxious districts, Stock Protection Boards as provided for, areas as provided for in subsection (c), and he also wanted public lands set apart for public purposes, and the trustees of those lands to be separate districts. He said his proposal, if carried, would mean that all those lands that were set apart for public purposes would be districts in themselves for the destruction of these weeds, and the trustees themselves would be charged with the destruction of the noxious weeds in those areas. He understood they were within the Pastures and Stock Boards' areas.

Mr. ATKINSON said that that was substantially what he was proposing. He thought it was a most important thing that the townships or village reserves should be included. They should be specified and set out in the Bill, and not left to the Minister to approve or disapprove of making them into separate districts. It should be settled in the Bill that the Minister shall make these separate districts, and therefore he wished to introduce the words, "townships or recreation reserves or race-courses."

Mr. WILSON said he did not know whether the proposer and seconder of this motion clearly saw its effect. This motion decided that the council of any municipality was to be the local authority to deal with these matters. He would suggest that they should pass the clause as it was. If they wished to deal with the commons, &c., that should be a separate subsection. The two things should not be mixed. He said they could not put it in there; they must first indicate how they were to get the money to spend. Of course, they all agreed that the municipalities should be left as that clause set up. If parks and other grounds with trustees were to be made local authorities, well and good; he was quite willing that should be done. He thought it was best, however, to do that separately, and not mix the things up.

Mr. T. BROWN, M.L.A. (Budgerabong), thought that either they misunderstood Mr. Wilson or Mr. Wilson misunderstood them. They proposed to let municipalities deal with the lands under their control; then they found that there were other lands in towns that were not under control of municipalities, and this amendment proposed to constitute the trustees of these lands authorities for the purposes of this Act. They did not intend to bring these bodies under the control of the municipalities, but the present Act did not provide that these bodies should have any existence at all for the purpose of this Noxious Weeds Act, and what was proposed to be done was to give them existence under this Act.

The CHAIRMAN then put the question to the meeting, and it was declared carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved, "to insert the following words in subsection (b) after the word municipality 'or lands set apart for public purposes and for which trustees are or may hereafter be appointed.'"

Mr. ATKINSON seconded the motion.

Mr. WILSON differed from the view taken by Mr. Brown. The amendment was careful to exempt these lands from the operation of the Pastures and Stock Board. He was quite sure no provision would be put in the Bill that would sufficiently nail them down and make them responsible, and there was no provision to give them any funds. They should be left under the Pastures and Stock Boards. This was a most dangerous amendment.

Mr. LESLIE (Forbes) thought with Mr. Wilson that they ought to be very careful before they added the words proposed by Mr. Brown. It might be there would be no power by which these lands would be kept cleared of noxious weeds, but by leaving the provision as it was in the Bill he thought they would come under either the municipalities or under the jurisdiction of the Pastures and Stock Boards.

Mr. FERRY, M.L.A., would like to point out that they were not dealing now with a matter that affected only the sheep-owners. They were dealing with a matter that affected the agriculturist as well. It was to widen the franchise in that respect. Because they elected the Sheep Directors from men subject to taxation under that particular Act, there was no doubt there would be some taxation under that Act to carry it out, and they would require to give the farmers a voice.

The CHAIRMAN pointed out that this was not the place to discuss the franchise.

Mr. T. BROWN, M.L.A. (Budgerabong), said if the Chairman would permit him to explain the position it might get over the difficulty. In subsection (a) they had decided that certain bodies should be constituted authorities. These bodies were the municipalities and lands or areas set apart under trust. The Council was to be an authority under this Act for the municipal areas and the Trustees were to be the authorities for those other lands set apart for public purposes. They had already carried an amendment to that effect giving these Trustees that power and this provision was to exempt them from operations of the municipal councils.

Mr. T. BROWN's (Budgerabong) amendment was then put to the meeting and carried.

Mr. ALISON (Canonbar) said that Mr. Bruce, the Chief Inspector of Stock, had kindly come down to assist them in amending this Act. Mr. Bruce had placed in front of him a number of amendments which he thought would facilitate the working of the Act. They would therefore understand that he simply moved these amendments for the Conference to consider. He would first move, "That after Mr. Brown's amendment the following words be added 'or vacant Crown lands in such district.'"

Mr. BRUCE (Chief Inspector of Stock) seconded the motion.

Mr. T. BROWN, M.L.A., (Budgerabong), said that before the motion was put he wished to point out that in subsection (c) the kind of land which was now proposed to be dealt with had been already dealt with. At least that was what he understood. He moved that subsection (b) be left as it was, and that subsection (c) read as follows:—"Within any portion of the Colony proclaimed by the Governor to be a noxious weed area or district, and not within the boundaries of the areas mentioned in subsections (a) and (b) of this section, the Governor may appoint any person or persons to be a local authority for the said area or district provided that the Governor may revoke or alter any proclamation made, &c." He did not see how Mr. Bruce's amendment could be put in. By this amendment he proposed to make it clear that it was intended to apply the provisions of this Act to those areas, and to allow the Minister to control these bodies.

Mr. BRUCE (Chief Inspector of Stock) thought that there were three sets of local authorities, the Municipalities, the Pastures and Stock Board, and the Government. He said that unless his amendment was put in in subsection (b) there was nothing at all to be done under subsection (c)—that was plain enough—because it exempted the areas contained in the sheep districts of the Colony.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), said that Mr. Bruce's opposition was a perfectly fair and legitimate one. Subsection (b) gave the power of the local authorities to Stock Boards and exempted other bodies that were constituted from the operations of the Stock Boards. They had already exempted municipalities, and they exempted lands held for public purposes, because they had constituted the trustees a separate authority. He therefore saw the force of Mr. Bruce's contention. They must exempt also those other public lands, unoccupied lands or reserves, so called, in order to make subsection (c) read properly. He would therefore support Mr. Bruce.

Mr. ALISON (Canonbar) said that he had moved this as a matter of form. He regretted, with much deference to Mr. Bruce, that he could not find his way to support it, although he had moved it. He did not propose to exempt any lands from the Sheep Boards—this third authority was not necessary. They did not want any lands exempted at all except municipalities.

Mr. BRUCE (Chief Inspector of Stock) wished to know who was to make the municipalities do the work.

Mr. ALISON (Canonbar) said the Minister would make the municipalities do the work; they were supposing in that instance that the Sheep Boards and the municipalities would do their duty, as there was a clause later on in the Bill which would give the Minister power to enter and make them do their duty. It seemed to him that if they exempted Crown lands, they were exempting from the operations of the Sheep Boards and municipalities something like twenty million acres in the Colony.

Mr. ROSS (Hume) did not think a third authority should be brought in at all. His idea was that the municipalities should be the authority for everything within their boundaries, and outside the municipalities the Sheep Boards should do everything. Wherever the Government had to do anything they did it at as much cost as anybody else. He thought all lands should be under the Sheep Boards if outside the municipalities. If the Government were to come in and pick out little pieces it would emasculate the whole thing.

Mr. WILSON said that if those amendments were carried it would be throwing the Crown lands out into a sort of no man's land.

Mr. ALISON's (Canonbar) motion was then put to the meeting and lost.

Mr. ALISON (Canonbar) moved that the words, "of the sheep district" be cut out, and "the Board of Directors under the Stock and Pastures Protection Act" be put in.

Mr. BACON (Brewarrina) seconded the motion.

The question was then put to the meeting and carried.

Mr. ALISON (Canonbar) moved, "That after the word 'Act,' which was now at the end of that section, the following words be inserted, 'with one Government representative for the purposes of this Act.'" They had included Crown lands, and he thought it was only right to add a Government representative, in accordance with Mr. Carruthers' desire, in the same way as they had done under the Rabbit Act.

Mr. BAYLIS (Narrandera) seconded the motion.

The question was put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved, "That after the words 'in each case,' the following words be inserted, 'or lands held in trust for public purposes.'"

Mr. ROSS (Hume) seconded the motion.

Mr. PERRY, M.L.A. (Budgerabong), would like to ask the gentleman who moved the motion, whether this alteration would not virtually take from under the municipality such a thing as a cemetery which might be outside the municipality. They would have two controlling authorities inside a certain area, and it would lead to no end of trouble.

The question was put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), said if Mr. Alison would permit him, he would move, "That the word 'aforesaid' be inserted instead of 'Sheep District.'"

Mr. ALISON (Canonbar) seconded the motion.

The question was put to the meeting and carried.

Mr. BROWN, M.L.A. (Budgerabong), said it would be necessary to strike out the words "or persons appointed by the Government as authority as aforesaid." It was consequential on the previous resolution.

Mr. BAYLIS (Narrandera) seconded the motion.

The question was put to the meeting and carried.

Clause 2, amended as under, was put to the meeting and carried:—

*Local authorities.*

2. Subject to the provisions hereinafter contained the provisions of this Act dealing with the eradication and destruction of noxious weeds shall be administered by the following local authorities—

- (a) within the boundaries of any municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed, now or hereafter to be constituted the council of that municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed;
- (b) within the boundaries of any sheep district proclaimed under the Diseases in Sheep Act of 1866 or any Act amending the same, exclusive of land within the boundaries of any municipality or land set apart for public purposes, and for which trustees are or may hereafter be appointed, the board of directors under the Stock and Pastures Act, with one Government representative for the purposes of this Act;

and in each case the area within which a municipal council, board of directors, aforesaid, or lands held in trust for public purposes, shall constitute a district for the purposes of this Act.

## Clause 3.

*Eradication and destruction of noxious weeds*

3. The local authority shall, within their district, have power to eradicate and destroy and prevent the growth of all noxious weeds growing on vacant Crown lands, roads, and public reserves not under lease or license, and to prevent a recurrence of the growth of noxious weeds eradicated and destroyed.

Where the local authority are a municipal council they shall eradicate and destroy all noxious weeds growing on all roads, including main roads, within the municipality.

Mr. ATKINSON said this was a clause for the eradication and destruction of noxious weeds, and it empowered not only the destruction but the prevention of a recurrence of the growth of noxious weeds eradicated and destroyed. That seemed to him to be very far reaching and he proposed, "That the words from 'and' down to the word 'destroy,' inclusive, be omitted."

Mr. WILSON seconded the motion.

Mr. ATKINSON wished to know how they could prevent the Bathurst burr growing again. They could not guarantee that they could prevent these noxious weeds growing, and he thought these words should be struck out. The Board might order them to do a lot of things, and he did not see how they could give that power to anybody. It seemed to him to be absurd that there should be any doubt on that question.

Mr. ALISON (Canonbar) supported Mr. Atkinson, and pointed out that he should also strike out the words "and prevent the growth of."

Mr. ATKINSON accepted the suggestion.

The question was put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved a consequential amendment in line 6 of clause 3, "To insert after the word 'council' or 'trustees of land set apart for public purposes' and also after the word 'Municipality' in line 9."

The question was put to the meeting and carried.

Clause 3 amended as under was put to the meeting and carried.

*Eradication and destruction of noxious weeds.*

The local authority shall, within their district, have power to eradicate and destroy all noxious weeds growing on vacant Crown lands, roads, and public reserves not under lease or license.

Where the local authority are a municipal council or trustees of land set apart for public purposes, they shall eradicate and destroy all noxious weeds growing on all roads, including main roads, within the municipality, or lands set apart for public purposes.

## Clause 4.

4. (i) On receipt of any information respecting the existence of noxious weeds on land within their district, the local authority shall, if satisfied of the existence of the noxious weeds, serve a notice on the occupier of the land, requiring him to eradicate and destroy or prevent the growth of the noxious weeds within the time specified in the notice, and to execute such works and do such things as may be necessary for that purpose, and if the local authority think it desirable (but not otherwise) specifying any works to be executed.

(ii) The local authority may also by the same or another notice served on the occupier require him to do what is necessary to prevent the recurrence of the growth of the noxious weeds, and if they think it desirable specify any works to be executed for that purpose, and may serve that notice notwithstanding that the growth of the noxious weeds may have been abated if the local authority consider that it is likely to recur on the same land.

(iii) Provided that where the occupier cannot be found the local authority may themselves eradicate and destroy the noxious weeds, and do what is necessary to prevent the growth of a recurrence of the growth thereof.

Mr. ALISON (Canonbar) moved, "That the word 'any' be left out."

Mr. ATKINSON opposed that very strongly, because this clause would give any individual the power of inflicting or levying black-mail. He simply had to lay the information before the Board, and if he did not do that, how was it possible for them to know where the Bathurst burr was.

Mr. ALISON (Canonbar) said the authorised officers would report.

Mr. ATKINSON said that their authorised officer could not get about everywhere. In this case there was no chance for a man to levy black-mail, and he must certainly protest against Mr. Alison's motion. If these noxious weeds were to be eradicated each one of them must be to a certain extent a detective on his neighbours. He would say that the Board should act on receipt of information no matter where it came from.

Mr. BACON (Brewarrina) supported Mr. Atkinson

Mr. BAYLIS (Narrandera) seconded Mr. Alison. But thought the word "any" was superfluous.

Mr. WILSON said he was pleased to find himself able to support Mr. Atkinson on such an occasion. He thought that if this word were not retained the principle of this Act would be lost. The giving of information to the Board that Bathurst burrs were growing on any land was surely not an unneighbourly offence. It was the assistance and the active concurrence of everybody interested, that would bring about the purposes of that Bill.

Mr. ROSS (Hume) thought they ought to leave the clause as it stood in the Bill. He did not think it was a very criminal matter if he saw a patch of Bathurst burr growing on his neighbour's land to inform the Board. He thought the best thing that they could do was to let the clause stand as it was.

Mr. T. BROWN, M.L.A. (Budgerabong), pointed out to Mr. Alison that this clause did not provide that any person laying information was to take proceedings. The local authorities had to serve a notice and take such action as they thought necessary. He thought the words should stand as they were, because they would be a great assistance to the local authorities.

Mr.

Mr. ALISON (Canonbar) thought he had been misunderstood in this matter. He did not desire to prevent anybody who had an interest in the matter giving information, but he desired to prevent frivolous complaints which would move the Board. It was quite possible that if these words were retained, any Tom, Jack, or Harry coming along could say he saw so and so. He could write a letter to the Board, and they must take action. The Bill provided that they must. He was quite willing to meet them by altering it to read "on receipt of information through their authorised officer or any landowner interested."

Mr. ATKINSON said that that was his contention and intention.

The CHAIRMAN then put Mr. Alison's amendment to the meeting, and it was lost.

Mr. ALISON (Canonbar) said he would try to get in his ideas if he could. He moved that after the word information that the following words be inserted: "through their authorised officer or any landowner interested."

The CHAIRMAN said he did not think that was in order. They had just settled that any information would do; therefore he ruled Mr. Alison out of order.

Mr. ALISON (Canonbar) said he would like if possible to take the opinion of the meeting, so as to have some little restriction placed on it.

The CHAIRMAN asked if Mr. Alison wished to dissent from his ruling.

Mr. ROSS (Hume) said he did not wish in any way to disagree from the Chairman's ruling, but he would like to support Mr. Alison.

Mr. ATKINSON said it appeared to him that what Mr. Alison feared was that every traveller—any Jack, Tom, Bill, or Harry, coming along the road—could give information. He did not think those tramps would take the trouble.

The CHAIRMAN ruled that no further discussion could be allowed on the matter. They had settled the question two minutes ago that anybody could give information; therefore he ruled, as he was bound to do, that any further amendment to negative what they had just done was out of order. If they wished now to go back on what they had done, he would not take it as any disrespect to himself; but the proper method to adopt, if they so wished it, was to dissent from his ruling.

The Conference then adjourned until 2 p.m.

The CHAIRMAN took the Chair at 2.10 p.m.

Mr. ATKINSON moved, "That the words 'or prevent the growth of' be omitted."

Mr. T. BROWN, M.L.A. (Budgerabong), seconded the motion.

Mr. ALISON (Canonbar) said it seemed somewhat of a repetition of what they had already done. No harm could accrue from leaving those words in. In his mind the difficulty was at what stage the local authority could step in and order destruction. It was necessary to kill the weeds at an early stage, and this would prevent the growth of them. These words were put in to try and prevent any loop-hole in this way. To "prevent the growth of" was really the proper term to apply in this Noxious Weeds Bill. He suggested that these words be left in.

Mr. ATKINSON said that Mr. Alison's contention seemed to have no bearing on the case, because they were already required "to eradicate and destroy."

The question was put to the meeting and carried.

Mr. ALISON (Canonbar) moved, "That in clause 4, line 5, after the word 'him' the following words be inserted: 'to use all reasonable efforts.'"

Mr. BRETT (Urana) seconded the motion.

Mr. T. BROWN, M.L.A. (Budgerabong), said he opposed this proposal of Mr. Alison's, because it was setting up a standard of which the owner was largely the judge, and by which the objects of this Bill could be defeated, and had been defeated in other colonies in the same way. They had knocked out this standard on Mr. Alison's proposal in the Rabbit Bill, and had substituted something else; and he did not see why they could not carry the same principle into the Noxious Weeds Bill that they had put in the Rabbit Bill. He would, therefore, propose an amendment, and move that instead of these words the following be added after the word destroy: "to the satisfaction of the Local Authorities."

Mr. ATKINSON seconded the motion.

Mr. ALISON (Canonbar) said that all through this Bill he had felt the necessity of guarding the interests of the individual, and he was very much afraid that harsh measures might be taken, which would jeopardise the interest of the individual, and cause him to be put to ruinous expense. Now, he did not believe in putting such a tyrannical power in the hands of any body of men without a power to appeal. Mr. Brown's amendment simply meant this, that the men should appeal to the same body who would order them to do the work. He wanted a man to have an appeal to someone else, and the person he wanted him to appeal to was the Minister. He could conceive such a position that there might be a most tyrannical Board, who were possibly little interested themselves, and they might go, as the Minister had pointed out to them, and ruin the individual. Take a property which was very much covered with prickly-pear. Supposing the Board ordered a man to destroy the prickly-pear in three months or less—they might order him to do it within six days. They could conceive of them doing all sorts of unreasonable things. There ought to be an appeal, and his amendment was that a man might have an appeal—that he may not be absolutely ordered to do anything. What more did they want men to do than to use reasonable effort? If a man could show he had used reasonable effort, and was continuing to do so, what more could they ask of him?

Mr. ATKINSON, in supporting Mr. Brown's amendment, said that Mr. Alison's remarks showed him the desirability that legislation should be separate for the Western Division of the Colony, and for the Eastern. Mr. Alison's experience only went for the western part of the Central Division, and he had not had any experience of the more populated parts of the Eastern Division. He believed that the Prickly-pear Act was inoperative. He contended that the prickly-pear should not be included in the weeds for destruction under this Noxious Weeds Bill. That, of course, would come in in the Schedule, and when the Schedule was made out would be the time to move that the prickly-pear should be excluded. What was wanted more particularly in this matter was the destruction of the Bathurst burr. He would say this, that if the words were left—"all reasonable efforts"—the whole of the Bill would be inoperative. They would never get the Bathurst burr destroyed. It was important that there should be no loop-hole by which the owners of country which produced these Bathurst burrs could get out of it; and he was quite satisfied that if they introduced these words they would be taken advantage of by large growers of Bathurst burrs to evade the Act.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), wished to know who was going to decide what was "reasonable effort." That kind of legislation had obtained in Victoria some time ago, and there was a continual struggle between the owners and the Boards charged with the powers of destroying rabbits, particularly as to what were reasonable efforts, and the Legislature had to be called in to clear the matter up by saying, "to the satisfaction of those Boards"; and he now proposed to add the same words—"to the satisfaction of the Boards." They could not enforce it if it were left "all reasonable efforts." They had got to go to the Courts of law to enforce it, and if the Courts were satisfied that the matter was being pushed on as vigorously as could be, they were the authority to deal with it. Mr. Alison wanted to set up the owner of the land as the man to interpret what was reasonable effort.

Mr. ALISON (Canonbar) said that Mr. Brown had just pointed out that there was an authority to go to to define what was reasonable effort. It would give a man the power to go to the Courts, and show he had used reasonable efforts.

Mr. ATKINSON believed he could do that any way. The question of reasonable effort was very much an individual idea.

Mr. ALISON (Canonbar) said they were going to set up eight men to be the judges of what was reasonable effort. A bare quorum might do it. Three men were left to decide what was reasonable effort. He thought it was a matter that should be left for adjudication. He would not like the Board to have the power in its hands, nor would he like to leave it in the hands of individuals, but he would put it in the hands of an impartial body.

Mr. ATKINSON said the Bathurst burr must be destroyed at a certain time. A man might contend that by putting on three men he was using reasonable effort. Very often it would require fifty men to cut them down before they seeded. If they did not cut them before they seeded they were not using reasonable effort. That was why he objected to the individuals deciding what was reasonable effort.

Mr. ALISON (Canonbar) said that Mr. Atkinson had remarked that they must sometimes put on fifty men. The Board could order a small man to put on fifty men or 100 men. A man might have a property of 100,000 acres, and the Board had to decide whether he was to put on fifty, 500, or 1,000 men. A man could be ruined in a week. It was very autocratic. The interest of the individual might be swamped altogether by some arbitrary decision of three men on the Stock Board. Three men were a quorum, and thus three men might put a fourth man to untold expense to put down prickly-pear, the Bathurst burr, or any other noxious weeds.

Mr. BRETT (Urana) asked the Chairman to give his ruling as to whether they were dealing with the Bathurst burr alone or with the prickly-pear, or with any other noxious weeds.

Mr. ATKINSON said that it had been said at the beginning of the Conference that the Bathurst burr was the common enemy all over the Colony, and that we were to deal with that only.

Mr. ALISON (Canonbar) said that this Bill had to go before the Parliament of New South Wales, and he thought there was enough common sense in Parliament to see that no law, so far as their prevision could prevent it, would allow anybody to be crushed. As to the judge of reasonable effort, they had a committee of nine or ten to decide that, and they were not deciding on their own affair. Now, surely a committee of nine men, probably in the same case in general, but not in this particular instance, knowing that a decision given against men to-day might apply to themselves to-morrow, would give a reasonable decision. Then again, they must remember that if a law were made unreasonable it inevitably fell to the ground. Common sense declared that the law in Victoria to put down the Scotch thistle was foolish and it failed. He would like to say that most of these conferences, every now and then, had a tendency to rush to the Minister. What a destruction it would be of the power of the Board if the tax-payers' influence with the Minister were allowed to decide these things.

Mr. DILL (Hay) said that for two seasons the expenses on his run for cutting down noxious weeds were equal to the expense of a second shearing, and within four years they had spent £2,500 in the eradication of the burrs. But the heaviest expense had been for burrs, and he had had on two occasions as many as sixty men cutting the Bathurst burrs—two overseers and sixty men—from six weeks to two months, and he thought most of the gentlemen present would admit that was equal to a second shearing. In dealing with this question he would not like to see individual owners pressed too hard, but at the same he recognised it was imperative they should use caution in dealing with this very important question.

Mr. T. BROWN's (Budgerabong) amendment was put to the meeting and carried by 15 to 5.

Mr. ATKINSON moved, "That subsection (II) be struck out." He said it was consequent on the other amendment which he had proposed. He would not take up the time of the Conference in expatiating upon it.

Mr. T. BROWN, M.L.A. (Budgerabong), seconded the motion.

The question was put to the meeting and carried.

Mr. ALISON (Canonbar) moved, "That after the word 'executed' in subsection (I) the following words be inserted:—'and may subsidise the said occupier to the extent of not exceeding £2 for each and every £1 expended by the said occupier.'"

Mr. T. BROWN, M.L.A. (Budgerabong), asked that the motion be left over until the question of taxation was decided.

Mr. ALISON (Canonbar) consented.

Mr. T. BROWN, M.L.A. (Budgerabong), moved, "That in subsection (III), after the word 'thereof,' the following words be inserted:—'Provided that notice of such intention to proceed shall be published in some local paper at least one month before such action is taken.'" This was so as to make provision to give the owners sufficient notice of the action which was contemplated.

Mr. DILL (Hay) seconded the motion.

Mr. ATKINSON opposed the motion. Supposing there was no owner to be found when the burrs were at their worst, the burrs might seed before the owners were found. If they had to take a month's notice in the local paper, the effect would be that the Act would be made of no avail. Municipalities cut these burrs themselves, and they would hold that as a legal charge on the land. He therefore failed to see why this amendment should be passed. He presumed it applied to municipalities and towns. It would be a very great mistake to allow a month to pass. Notice could be stuck up at the post office. Time would slip by and the plants would seed.

Mr.

Mr. WILSON said that this was another of those dangerous protections to the individual which would destroy the value and the whole intention of the Bill. It was these same absent, non-extensive owners, so to speak, who were the cause of a lot of these legal Bills. The land tax would bring some of these matters to a head. These lands were almost worse than vacant Crown lands, and more difficult to get at. Mr. Brown's proposal would render nugatory the efforts of the whole Act to destroy noxious weeds. Those people who were not to be found on the ground would certainly not see the local paper, no matter how attractive it might be. He appealed to Mr. Brown to withdraw his amendment.

Mr. T. BROWN, M.L.A. (Budgerabong), failed to see that any harm could be done, and that the powers of the Boards and Authorities would be limited. Some reasonable notice should be provided for the owner. It would be well known in the municipalities what lands had been infested and were likely to be a danger; and if they were not able to find an owner, and intended to take action, they could take action beforehand, and issue this notice in plenty of time to enable effective action to be taken at the right moment. It was not intended to hinder the Board in any way—only to safeguard the owners.

Mr. ATKINSON said this would affect the municipalities, and the municipalities were empowered to destroy the burrs in the town. They did so now and merely sent in a Bill after it was done. He had never been notified yet to destroy burrs within the municipality, but he had invariably received a Bill for the destruction of the same after it had been done. They would see that Mr. T. Brown's amendment might affect the Municipalities Act. The main object was to destroy those burrs, and Mr. T. Brown was trying to find a loophole so that it might not be done. Mr. Brown had not been dealing practically with these things, so that he did not have the knowledge which would enable him to deal with this Bill.

Mr. T. Brown's, M.L.A. (Budgerabong) amendment was put to the meeting and lost.

Mr. ALISON (Canonbar), moved the consequential amendment, "That in subsection (II) of clause 4, all the words after the word 'weeds' be omitted."

Mr. ATKINSON seconded the motion.

The question was put to the meeting and carried.

Clause 4, amended as under, was put to the meeting and carried,—

4. (I) On receipt of any information respecting the existence of noxious weeds on land within their district, the local authority shall, if satisfied of the existence of the noxious weeds, serve a notice on the occupier of the land, requiring him to eradicate and destroy, to the satisfaction of the Board, the noxious weeds within the time specified in the notice, and to execute such works and do such things as may be necessary for that purpose, and if the local authority think it desirable (but not otherwise) specifying any works to be executed.

(II) Provided that where the occupier cannot be found, the local authority may themselves eradicate and destroy the noxious weeds.

(III) If the occupier of land shall be unknown or absent from the Colony, and the expense incurred hereunder in clearing such land of noxious weeds cannot be recovered from him, and remain unpaid for more than \_\_\_\_\_ months after the same shall have become due, the local authority may let such land for any period not exceeding five years, upon terms and conditions to be prescribed, and shall receive the rents and profits thereof, and shall apply the same in payment of such expenses with interest thereon at the rate of ten per centum per annum, so long as the same shall be unpaid: And such authority shall hold the surplus (if any) upon trust for the person entitled to such surplus."

Mr. BRUCE (Chief Inspector of Stock), moved that the following be an additional subsection: "If the occupier of land shall be unknown or absent from the Colony, and the expense incurred hereunder in clearing such land of noxious weeds cannot be recovered from him, and remain unpaid for more than \_\_\_\_\_ months after the same shall have become due, the local authority shall let such land for any period not exceeding five years, upon terms and conditions to be prescribed, and shall receive the rents and profits thereof, and shall apply the same in payment of such expenses with interest thereon at the rate of ten per centum per annum, so long as the same shall be unpaid: And such authority shall hold the surplus (if any) upon trust for the person entitled to such surplus."

Mr. ALISON (Canonbar), said that Mr. Bruce should put this fresh subsection on the notice paper for the next day, moving the recommittal of clause 4 to insert it. It would then be printed and all the members would be able to understand in what way it would affect the Bill.

Mr. BRUCE (Chief Inspector of Stock) consented.

#### Clause 5.

5. (i) If either—

(a) the person on whom a notice to eradicate and destroy or prevent the growth of noxious weeds has been served as aforesaid makes default in complying with any of the requisitions thereof within the time specified; or

(b) the growth of the noxious weeds though abated since the service of the notice, is, in the opinion of the local authority, likely to recur on the same land,

the local authority may by any person authorised by them in that behalf make a complaint to a justice, and such justice shall thereupon issue a summons requiring the person on whom the notice was served to appear before a Police or Stipendiary Magistrate or any two justices in petty sessions.

(II) The said magistrate or justices may, if satisfied that noxious weeds exist as alleged, or that although the growth is abated, it is likely to recur on the same land, by order require the said person to comply with all or any of the requisitions of the notice, or otherwise to eradicate and destroy or prevent the growth of the noxious weeds within a time specified in the order, and may, if thought desirable, specify the works to be executed by the said person for that purpose.

(III).

(iii) If a person fails to comply with an order of a magistrate or justices made as aforesaid, with respect to the eradication and destruction of, or prevention of the growth or a recurrence of the growth of the noxious weeds, he shall, unless he satisfies the Court that he has used all due diligence to carry out such order, be liable to a penalty not exceeding *twenty* shillings a day during his default. Moreover, the local authority may enter the land to which any order under this Act relates, and eradicate and destroy and prevent the growth of the noxious weeds, and do whatever may be necessary in execution of such order.

Mr. ATKINSON moved, "That in subsection (a) the words 'or prevent' be omitted, and also the whole of subsection (b)."

Mr. DILL (Hay) seconded the motion.

Mr. ALISON (Canonbar) asked Mr. Atkinson to move these two amendments separately.

Mr. ATKINSON withdrew his amendment and then moved, "That in subsection (a) the words 'or prevent' be omitted."

Mr. DILL (Hay) seconded the motion.

The question on being put to the meeting was carried.

Mr. ATKINSON moved, "That the word 'or' in subsection (a) be omitted, also the whole of subsection (b) and the word 'either' at the beginning of the clause."

Mr. T. BROWN, M.L.A. (Budgerabong), seconded the motion.

The question was put to the meeting and carried.

Mr. ATKINSON moved, "That the following words in subsection (ii) be omitted 'or prevent the growth of.'"

The question was put to the meeting and carried.

Mr. BAYLIS (Narrandera) moved, "That the following words be omitted: 'or that although the growth is abated it is likely to recur on the same land.'"

Mr. T. BROWN, M.L.A. (Budgerabong), said that was consequential on the previous amendment. He seconded the motion.

Mr. ATKINSON moved, "That in subsection (iii) the words from 'or' down to 'growth' in lines 3 and 4 be omitted."

Mr. BAYLIS (Narrandera) seconded the motion.

The question was put to the meeting and carried.

Mr. BAYLIS (Narrandera) moved, "That in line 8 the words 'or prevent the growth of' be omitted."

Mr. ATKINSON seconded the motion.

The question was put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved, "That the following words be added to clause 5 subsection (iii) after the word 'order' in line 10, 'and recover all reasonable cost of the said eradication or destruction of noxious weeds from the owner or holder of such land as hereinafter provided for.' He said that the Bill provided that the local authority should come in and destroy; and should cause the owner of the land to be fined for not carrying out the instructions of the Act. It did not provide that the local authority should recover the cost of that destruction; and his proposal was to enable them to recover the cost of destruction.

Mr. LESLIE (Forbes) said he had an amendment in clause 6 on the same thing, and he thought Mr. Brown should put that in after his amendment.

Mr. T. BROWN, M.L.A. (Budgerabong), thought Mr. Leslie's amendment should come in after his. He would withdraw his amendment and allow Mr. Leslie's to come in in clause 5 instead of clause 6.

Mr. LESLIE (Forbes) moved, "That the following be added to clause 5, 'and the persons owning or occupying the land where such entry has been made shall be liable for the amount expended in the eradication and destruction of noxious weeds.'"

Mr. ATKINSON moved, as a further amendment, to add the following words "such costs to be a first charge on the land."

Mr. T. BROWN, M.L.A. (Budgerabong), did not think that was right. The local authority would have to proceed to the bench of magistrates, and they would make an order and then carry out what Mr. Atkinson wanted.

Mr. ATKINSON said the question was whether they would be able to proceed in that way. They might not be able to make it a first charge on the land. He wished it to be provided in the Bill that it might be a first charge on the land.

Mr. DILL (Hay) seconded Mr. Leslie's motion.

Mr. WILSON seconded the amendment.

Mr. ATKINSON said it had just been pointed out to him that the charge might be worth more than the land itself.

Mr. BRUCE moved, "That the following words be inserted: 'All costs, charges, and expenses incurred by a local authority, or any person authorised by a local authority, in clearing any private land of noxious plants under the provisions of this Act, shall be a first charge upon such land, and shall take precedence of all mortgages or other charges whatsoever upon such land: Provided always that a certificate under the hand of such local authority shall be a full discharge of all such costs, charges, and expenses up to the date of such certificate.'"

Mr. ATKINSON said he would withdraw in favour of Mr. Bruce.

Mr. ALISON (Canonbar) said it seemed to him that they were proposing to put a frightful load on the lands of the Colony. There were first charges under the Rabbit Act and first charges under the Noxious Weeds Act;—where was the mortgagee to come in? He wished to warn the gentlemen present that they were going rather fast. They were informed by the Minister that some lands were terribly infested with burr, briars, and prickly-pear. They had included the Crown, and made them liable to the local authority. The local authority could enter on the Crown lands and destroy noxious weeds; consequently the Crown was equally liable with any individual towards any expense which was gone to by the local authority. He could not conceive of any Parliament endorsing Mr. Brown's idea. They had got acres upon acres which they would give ninety-nine years' lease of for nothing, if people would only clear the noxious weeds off. If the Crown did not eradicate, the local authority would enter, and it would be a first charge on the Crown land. He protested this would add too much to the burdens of the country.

The

The CHAIRMAN thought this was a very important amendment, and it should be postponed until next day. It would be on the notice-paper, and they should consider it carefully.

Mr. T. BROWN, M.L.A. (Budgerabong), said that Mr. Bruce's amendment and Mr. Leslie's seemed to him to be on the same lines. They should both be printed and be on the notice-paper for next day.

The question of postponement was put to the meeting and carried.

#### Clause 6.

6. The local authority may, for the purpose of carrying out the provisions of this Act, enter, or authorise any person by writing properly authenticated by the said authority to enter, at any time, with men, vehicles, horses, and bullocks, and necessary appliances, into and upon any land within their district.

Clause 6, as printed, was put to the meeting and carried.

#### Clause 7.

7. If it appears to the Minister that the local authority have neglected to exercise, or to make reasonable efforts to exercise, any powers conferred or duties imposed on them by this Act, the Minister may give notice in writing requiring the local authority to exercise the powers and perform the duties aforesaid within a period to be named in the notice.

If the said requirement is disobeyed, or is not complied with, it shall be lawful for the Minister to exercise the powers or perform the duties, and where a municipal council is the local authority, to recover on behalf of Her Majesty from the council the expenses thereby incurred.

Mr. ALISON (Canonbar) moved that in line 2 the following words be struck out: "or to make reasonable efforts to exercise." He did not see why the Board should have the exclusive right to reasonable efforts when they would not give it to individuals.

Mr. T. BROWN, M.L.A. (Budgerabong), seconded Mr. Alison's motion.

Mr. ATKINSON wished the Conference to define that the only weeds they were now considering were the Bathurst burrs.

Mr. ALISON's (Canonbar) motion was put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the following be added to the first paragraph of clause 7: "Such notice shall not be for a less period than one month."

Mr. ALISON (Canonbar) said he would oppose that. They had not allowed individuals a moment's notice, and why should the Board have a moment's notice. If they were not going to give the individual time, they should not give the Boards time.

Mr. ALISON (Canonbar) thought Mr. T. Brown was making a mistake in this. It was certain a considerable delay would occur before the Minister could be moved to give notice. Moreover, the Minister had to say what period. He thought the Boards were not a bit too decided, but he thought a month would be too much; it would be a pity to fix too short a date.

Mr. ATKINSON seconded Mr. Brown's motion.

The question, on being put to the meeting, was lost.

Mr. T. BROWN, M.L.A. (Budgerabong), said that clause 7 provided that the Minister could recover from a municipal council, but it did not provide that he could recover from private persons. He proposed to strike out all the words after the word "debt" in line 3, last paragraph of clause 7, and to insert the following: "Of such local authorities, and recover the expense thereby incurred from such local authorities in the case of municipal councils or lands held in public trust, and from the owner or holders of other lands so occupied."

The whole clause was then postponed in order that the amendment might be printed.

#### Clause 8.

##### *Restriction of importation of noxious weeds.*

8. The Governor may make regulations—

- (a) prohibiting the importation into New South Wales of any noxious weeds or of the seed of any noxious weeds, and providing for the destruction of the same if imported contrary to the said regulations;
- (b) regulating the importation into New South Wales of articles, the importation or use of which would in the opinion of the Governor tend to spread the growth of noxious weeds;

And the Governor may in those regulations impose any penalty not exceeding *twenty* pounds for any breach thereof.

All regulations made as aforesaid shall when published in the *Gazette* have the force of law, and shall be laid before both Houses of Parliament within fourteen days if Parliament be then sitting, but if not then within fourteen days after the commencement of the next following Session of Parliament.

Mr. ALISON (Canonbar) moved that clause 8 be passed as printed.

Mr. BAYLIS (Narrandera) seconded the motion.

The question was put to the meeting and carried.

#### Clause 9.

##### *Supplemental.*

9. Whosoever hinders or obstructs any person in the exercise of a power conferred or duty imposed on him by or under any authority conferred by this Act, or by any regulations made thereunder, shall be liable to a penalty not exceeding *twenty* pounds.

Mr. ALISON (Canonbar) proposed that clause 9 be passed as printed.

Mr. BAYLIS (Narrandera) seconded the proposal.

Mr. T. BROWN, M.L.A. (Budgerabong), would like to see this clause made clear. The Bill said the penalty should not exceed £20; he would like to add, to make it clear, "for every such offence."

Mr. T. Brown's (Budgerabong) amendment lapsed for want of a seconder.

The clause was put to the meeting and passed as printed.

Clause

## Clause 10.

10. All sums of money expended by the local authority, under the authority of or in pursuance of the provisions of this Act, shall be paid as follows:—

- (a) Where the council of any municipality is the local authority, payment shall be made out of the funds of the municipality.
- (b) Where the board of directors of a sheep district, or a person appointed by the Governor is the local authority, payment shall be made out of the Consolidated Revenue Fund.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the following words be inserted in lines 1 and 2 of subsection (a), after the word municipality: "or trustee of any land set apart for public purposes."

Mr. ATKINSON seconded the motion.

The question was then put to the meeting and carried.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the following words be added to subsection (a):—

Providing it should be competent for such Municipality or Trust to make special provision for the purpose of this Act by levying a special rate, tax, or charge, as may be determined upon providing further that such special rate, tax, or charge shall be submitted to the Governor for his approval, and by him published in the *Gazette*, and laid before both Houses of Parliament within fourteen days if sitting, but if not sitting, then within fourteen days after the commencement of the next Session, and such notification shall thereafter have the force of law.

He wished to provide that these bodies should be able to make provision in whichever way they deemed fit, and as a safeguard it would be laid on the Table of the House.

Mr. ATKINSON seconded the motion.

Mr. T. BROWN, M.L.A. (Budgerabong), said that if the municipalities wished to raise funds specially for the destruction of noxious weeds that would give them power to levy a special rate, and the people concerned might object if they thought fit. As this was an important matter he would not object to let this part of the clause stand over in order to have it printed, and dealt with to-morrow.

The Chairman then adjourned the Conference until the next day.

---

THIRD DAY—18TH MARCH, 1897.

The Honorable RUPERT CARINGTON (Jerilderie) took the Chair at 10 a.m.

The minutes of the previous meeting were read and confirmed.

Mr. T. BROWN, M.L.A. (Budgerabong), moved that the following clause be added to subsection A, clause 10: "Providing it should be competent for such municipality or trust to make special provision for the purpose of this Act by levying a special rate, tax, or charge, as may be determined upon, providing further that such special rate, tax, or charge shall be submitted to the Governor for his approval, and by him published in the *Gazette*, and laid before both Houses of Parliament within fourteen days, if sitting, but if not sitting, then within fourteen days after the commencement of the next session, and such notification shall thereafter have the force of law." He said this was a simple provision to enable municipalities and trustees of land held for public purposes to provide revenue for themselves, and they might do so by agreeing upon a levying rate, or imposing a tax or a charge, as they thought best, to meet their case, and he had provided that it should receive the approval of the Governor, and should be laid before Parliament before it could become law, so that anyone wishing to object might be heard. He thought it was very necessary to empower these parties to raise the means of coping with the pest under this Bill in some such way as this.

Mr. J. M. ATKINSON seconded the motion.

Mr. A. ROSS (Hume) said that the clause read best as it was, he did not see that they wanted any extra tax at all. If they wanted more power, it would simply be too much of a burden upon the people. He did not see why it should go before the Governor and all that sort of thing. In any municipality the same men who were doing the roads would cut the burrs, and he did not see any reason at all for Mr. Brown's amendment. He did not think that this amendment should be passed in preference to the clause as it stood in the Bill.

Mr. J. M. ATKINSON said he had seconded this *pro forma*, because he thought it was being introduced for the purpose of raising revenue for each district for the eradication of these noxious weeds, and he did not think that that was generally understood. As far as it went at present the money had to be paid out of the Consolidated Revenue Fund.

The CHAIRMAN said that the money would only be paid out of the Consolidated Revenue Fund with regard to Sheep Boards.

Mr. J. M. ATKINSON said that they were taking all reserves, and Mr. Brown had introduced the word "Trustees," and that, he concluded, meant the trustees of Town Commons. They were all sufficiently taxed already; but Mr. Brown's motion was not for an extra tax, it was simply that these Boards should be made self-supporting. In other words, it was a small Local Government Bill. What he wanted to impress upon them was this, that the trust would empower the charging of so much for camping sheep on a reserve. That would be consolidated revenue to all intents and purposes, and it would be revenue for those Boards to eradicate the burrs and the noxious weeds on those reserves. In the same way, the trust in a township would be able to charge a certain amount to the residents of that township, and that money would go towards eradicating the burrs. Therefore, this provision would be favoured by those who did not want a tax. Now he wanted them to distinctly understand this—from what he understood from the Minister—the clean lands of the Colony were to be taxed in order to pay the £2 subsidy for every £1 spent in eradicating the pest. Now they did not want that. He contended that

that if the Crown would only destroy the burrs on their small areas of ground, and allow the trust to destroy—and compel them to destroy—they would have no more trouble with the Bathurst burr, the briar, the blackberry, or anything else. The Bathurst burr was the main thing; the others were easy to get rid of. He therefore contended that the motion submitted by Mr. Brown was the best motion they could pass, because it was doing away with the individual and wholesale taxation which was proposed.

Mr. T. BROWN, M.L.A. (Budgerabong), said that the subsection read as follows: "Where the council of any municipality is the local authority, &c." that had been amended to read as follows: "Where the council of any municipality or the trustees of any lands set apart for public purposes, &c., &c.," so now they had to go on and introduce some means for the trustees to raise funds. Now he proposed to enable them to fix upon that source of revenue which they considered necessary for their requirements, and it was necessary to give them the power to levy a tax, but he had given the right to appeal to Parliament. What he proposed had nothing at all to do with the Stock Boards, it simply dealt with lands in municipalities, or lands held by public trusts. If the municipalities had money, as had been stated, for this purpose, then they need not raise any more money, but if they wanted it he did not see that they should be denied the right.

The question of adding these words to subsection (a) was put, and lost by 13 votes to 9.

Mr. T. BROWN, M.L.A. (Budgerabong), said that before they went further he would like to point out that as far as he knew the municipalities might raise funds and have revenues at their disposal. He did not know that that would apply to trustees of public lands, and he would like to know if it were not desirable to make some provision here to enable them to carry out the obligations imposed on them by this Bill. While he knew that municipalities had sources of revenue, and the means of levying taxes, and could meet their obligations under this Bill by that machinery, he did know that the trustees of temporary commons, or of other public lands such as racecourses, had any machinery by which they could raise the money necessary to keep down the noxious weeds. What he wanted was to raise this point now and ask the Conference whether they were prepared to give these people some means of raising the necessary funds to carry out the Act. He begged to move as a further amendment to subsection 4, the clause that had already been moved, but omitting all reference to municipalities.

Mr. ALISON (Canonbar) seconded the motion.

Mr. WILSON said that Mr. Brown had asked for enlightenment on one point. All his trouble was about the funds the trustees would have to raise. Would the trustees not have rates to carry them on? Were not the trustees of all such lands the owners? Ifad they not income from these lands as racecourses or as grazing farms? Very often the racecourse was the most profitable grazing paddock in the vicinity of a township. Surely if they got a source of income from the land they were called upon to exercise their duties as proprietors and occupiers. There was no sort of public body to raise rates from. It seemed to him that it would be providing a lot of unnecessary whirligig machinery to do something that was entirely in the hands of the trustees as owners. As regarded municipalities they had machinery to get at the private owners. The owners might be a little hard to get at, and there might be a little loss out of the rates, but the municipalities did not need further funds.

Mr. FLANAGAN (Gunbar) supported Mr. Brown's motion, and said that Mr. Wilson had quoted an isolated case with regard to racecourses. Let them take burying grounds for instance. What interest had the Trustees of the ground in that ground? They were only working for the public. Mr. Brown's motion would enable the public to raise a tax on all persons concerned in the burying ground, and if Mr. Brown's motion were lost it would have the effect of compelling them to destroy everything out of their own pockets.

Mr. ALISON (Canonbar) said that Mr. Wilson was wrong in opposing this. It was provided that municipalities should provide the money out of their funds, and others should get it from the consolidated revenue, but where could the trustees get the money from? They had only money for specific purposes so far, and unless the Conference defined in this Bill where they were to get the money, they might be in a position to say, "Where are we to get the money?" when they were told to eradicate the weeds.

Mr. A. ROSS (Hume) said he must oppose Mr. Brown's amendment again. As a matter of fact if this Act were passed to-morrow, and if there were burrs on their land they would simply get notice and have to destroy the weeds as private owners.

Mr. BRETT (Urana) said he would oppose Mr. Brown's amendment. As far as commons, racecourses, and recreation reserves were concerned, they let their racecourses for certain purposes, and they could get sufficient rents to destroy all the noxious weeds they were likely to get on them.

Mr. PEARSE (Orange) rose to support Mr. Brown's amendment.

Mr. WILSON said that the only reason he would vote against this was that he did not like to put something absurd on record. What he wanted to know was—what was Mr. Brown proposing that these people should levy on? Mr. Brett had told them that these places had sources of revenue, and they had all to exercise reasonable care to look after the property under their control.

Mr. Brown's amendment was put to the vote, and lost by 14 votes to 13.

Mr. LESLIE (Forbes) moved that in the place of the words "Sheep District" the words "Pastures and Stock Board" be put in.

Mr. ALISON (Canonbar) said that the word "aforesaid" would do instead of the word "Directors."

Mr. LESLIE (Forbes) accept Mr. Alison's amendment.

The question was put and carried.

Mr. WILSON proposed to insert after the word "district" the following: "Funds shall be provided by levying a charge on all travelling stock."

Mr. ALISON (Canonbar) rose to a point of order. He said that Mr. Wilson had set it down on the Notice-paper as a new clause. He submitted that it was exactly similar to Mr. Wilson's now clause.

Mr. WILSON said that he considered it would come in there more conveniently.

The CHAIRMAN said that it would confuse matters very much if Mr. Wilson brought this in as an amendment—it should be brought in as a new clause.

Mr. WILSON said that the original object had been to lay down a general principle. The opportunity now occurred in him to bring that to a head in a concrete, definite form by a power given in the Bill. It seemed to him that that was a proper place to bring it in.

The CHAIRMAN pointed out that what Mr. Wilson called a mere principle would entail an Act of Parliament to tax the travelling stock.

Mr.

Mr. BROWN, M.L.A. (Budgerabong), thought it was necessary to put an amendment in here, but he did not agree with Mr. Wilson, because he hardly saw how his proposal would be worked. He would move that at the end of subsection (b) after the word "fund" the following words should be inserted: "or from such other source as provided by the Minister for such purpose." He said that Mr. Wilson might bring his amendment at the end of that as indicating one of the sources from which the revenue would be derived.

Mr. WILSON said that he would be willing to let the resolution stand, on the understanding that after Mr. Brown's amendment was dealt with, his clause would be taken afterwards as a subsection.

The CHAIRMAN said that that was correct, but it could not be taken until all the other proposals on the business-paper before Mr. Wilson's new clause had been dealt with.

Mr. LOONEY (Bullock Island South) said he would second Mr. Brown's motion.

Mr. ALISON (Canonbar) said that they had arrived at a very important clause indeed. In the clause which they had before them they found that payment had to be made in some mysterious manner out of the Consolidated Revenue. Of course, it was apparent that there was some error there. He felt satisfied that stock-owners would be called upon to pay these funds themselves. They may be prepared to have some fund or another, which the stock-owners would subscribe to, for the purpose of paying the expenses of this Act: The only thing that the Crown could be called upon to do was to destroy the noxious weeds on their own land. Now the other day it had been decided to take the discretionary power out of the Pastures and Stock Boards in this matter of the destruction of these weeds. He felt sure that unless there were some exceedingly elastic provision provided for funds that they would get themselves into a difficulty. They had already provided that on any information—not that the Board may start to destroy, but they shall destroy the weeds. That had been decided. The discretionary power had been taken out of the hands of the Board.

Mr. J. M. ATKINSON said he did not agree with that.

Mr. ALISON (Canonbar) said it was so. He would be glad to be put right if he was wrong. Now, he had the very strongest objection in a Bill like this to putting such enormous power in the hands of the Board. Before this Board could enter on the lands of private people to destroy the weeds, they must have the means of raising revenue. He did not know how the authors of this Bill were going to provide a revenue. Perhaps Mr. Brown and Mr. Atkinson would enlighten him. They had the power to call upon the owner to destroy the weeds, and to sue him afterwards for the money, but really they must have some fund to deal with. Now how were they going to provide that fund? Mr. Brown had said that the Minister was going to provide it out of the Consolidated Revenue, or from a fund which was to be got from somewhere else, but where was the Minister to get the money from?

Mr. J. M. ATKINSON said the Minister would tax them.

Mr. ALISON (Canonbar) said of course the Minister would tax them, but he was not quite sure how they were to be taxed, and he was not quite sure if Mr. Brown's amendment were brought in, how the money would be got. If they did not provide any machinery for getting the money, how was it to be got? It was proposed that a tax should be made upon travelling stock. Well, now, was that to be a consolidated charge, or was it to be divided *pro rata* among the different Boards of the Colony, or should the different districts which had the stock passing through get all the money?

Mr. WILSON rose to a point of order.

Mr. ALISON (Canonbar) said he need not bother as he would not discuss that any further. He would point out that if they did not take great care they would stultify themselves enormously over this business. They would compel the Boards to go on with the eradication of weeds. If they did not find some very elastic means by which they could collect revenue, the whole Act would be a farce. He would distinctly object to the extremely wide powers that were given to the Boards. From what Mr. Atkinson had said he supposed that the clean places should not assist the places which were affected. He would point out that in their last Bill they did not recognise that principle at all. They had recognised that if a man's land were out of the sphere, as it were, of the rabbits, he had still to pay half rates. Surely those runs which were free of weeds, and so on, were interested in keeping the weeds clear.

Mr. J. M. ATKINSON said that he hoped Mr. Wilson would exonerate him from encroaching on, or sucking his brains in any way. He would say that when he seconded Mr. Brown's amendment that trustees should have the power of raising money, he did it fully and solely with the object that the sheep districts should have the power to put a certain small sum on their reserves for the use of cattle—for travelling stock. This travelling stock would willingly pay that small sum, and that would be sufficient to eradicate the burrs. His intention had also been that the owners of racecourses should have the power of charging horses for exercising there, and that they might have various other means, which, without raising any tax, would be quite sufficient to keep the burrs in check. In many racecourses he noticed that they had been kept in check, and that remarkably well, but what they had to legislate for was the "dirty managers." He would like them all to remember that many people had been eradicating these noxious weeds for years, and kept their runs clear, and the dirty managers had year after year seeded their runs. He did not know whether he was in order at this stage in diverting to what the Minister had said about the briar and the blackberry. He was perfectly satisfied that the briar and the blackberry would be very easily eradicated. He was not a sporting man, and had not found any very great difficulties from either the briar or the blackberry, so far as he knew. A friend of his had bought an estate upon which the briars had been kept protected for many years, because the previous owner's sheep had been kept alive by them one year in a drought. In four years his friend had eradicated the briars. It was in the Goulburn district where briars were very bad. As for the blackberry, it was a revelation to him that the Minister called it a noxious weed. It could be very easily kept down. He felt sure that if revenue were raised in those districts where these weeds were, it would be very easily done without raising a tax over the whole Colony.

Mr. WILSON said that it was evident that this amendment of Mr. Brown's could not be discussed to any satisfaction without dealing with his motion. They should let the whole thing be discussed, and let his amendment and Mr. Brown's be separated afterwards.

Mr. FLANAGAN (Gunbar) thought they ought not to lose sight of either. He certainly agreed to raising a tax on travelling stock if the grass were preserved for travelling stock. For instance, the travelling stock rates embraced very nearly the whole of the land of the Colony that had to be dealt with in this Noxious Weeds Bill, and if they raised a tax on travelling stock, there ought to be some provision that

that the grass would be preserved for travelling stock. They knew that lessees of runs all over the Colony pastured their sheep on these roads. He would suggest that, in raising a tax for this purpose, the lessees of runs whose sheep fed over these stock roads should pay half, and the travelling stock owner should pay the other half.

Mr. A. ROSS (Hume) said he must oppose Mr. Brown's motion. He would not say that this was not a proper proposal, but it should not be done through the Minister. He understood that this Noxious Weeds Bill did not provide that any Board should do the work themselves. It simply provided to make the owners, whoever they might be, eradicate the weeds. He did not think any funds were required. Referring to the stock reserves, he did not see why the owners of land alongside the reserves should be taxed when they dare not put stock on these roads because of the burrs.

Mr. Wilson then said that Mr. Ross was discussing his motion by subterfuge.

Mr. ALISON (Canonbar) then moved that the Conference should have a general discussion on the financial clause. He moved that subsection (b) of clause 10 be struck out with the view of the insertion of a proper financial clause.

Mr. FLANAGAN (Gunbar) seconded the motion.

Mr. ATKINSON proposed to postpone clause 9.

Mr. LESLIE (Forbes) seconded the motion.

The question of the postponement of clause 9 was put and carried by seventeen votes to four.

The question of postponing clause 10 was put and carried.

Clauses 11, 12, and 13 were also postponed to allow of the discussion of Mr. Wilson's new clause.

Mr. WILSON then said he proposed to go straight at what he believed to be the key of this Bill. He was not going to talk for the edification of the meeting. He wanted to get some result, and he ought to be allowed to indicate that he was leading up to a resolution. In order to discuss this matter fully, the proper place was under subsection (b) of clause 10, and that discussion could have overlapped and been intermixed with the discussion on Mr. Brown's amendment on the same subsection. Now clause 10 was taken away, and he could only say that what he wanted to do was this, to indicate what he would do when clause 10 was brought back for discussion.

The CHAIRMAN then said that Mr. Alison's idea in moving the postponement of the clause was that Mr. Wilson might go on with the resolutions which he had on the business-paper. Mr. Wilson must confine himself to them, and not to the discussion of clause 10, which had been postponed.

Mr. ALISON (Canonbar) then moved that as Mr. Wilson had nothing to bring before them, they should go on with the clause which had previously been postponed.

Mr. J. M. ATKINSON said that he had moved the postponement of the other clause under the impression that it would facilitate and help Mr. Wilson in what he wished to put before them, and in what he also concurred in, and therefore he did it in a most friendly spirit. He could say nothing else. He wished to know whether it would now be in their province to go back to clause 10, subsection (b), and move it again. If they found they had made a mistake, surely it was not too late to rectify it.

Mr. ALISON (Canonbar) said that they had gone wrong altogether by departing from the ordinary course of business. Let them start afresh now, and let them get on with business. There was nothing before the Chair. He would propose the following motion, "That they go on and proceed with clause 1."

The CHAIRMAN said that now that they had got something before the Chair they would get some business done.

Mr. ROSS (Hume) seconded Mr. Alison's motion. He was very much surprised at Mr. Wilson's action in this matter, because he had supported the amendments to postpone these clauses with the intention of letting Mr. Wilson go on, and now Mr. Wilson would not go on with it. He considered that the best way they could do was for somebody else to move the clauses instead of Mr. Wilson. He considered it very childish to sit down in that way.

Mr. WILSON, in personal explanation, said it was not a very proper thing to call another member childish. He rose to discuss his motion, but the Chairman asked him what he was moving, and then said, "Where will that come in?" He was perfectly prepared to go on and discuss it. There was nothing childish about him.

The CHAIRMAN thought the business should be left in his hands to conduct it in the best way he could. There was an amendment by Mr. Alison to go on with clause 1, and he wanted to know if there was any amendment on that.

Mr. BROOKE (Boggabri) said he thought there was a misunderstanding when they moved that Mr. Wilson be heard. They did not intend any disrespect to the Chair, nor did they intend to take the business out of the Chairman's hands.

The CHAIRMAN said he was sure that no disrespect had been intended to the Chair, but he merely wanted to get the meeting into order.

Mr. J. M. ATKINSON moved, That they now discuss clause 10.

Mr. T. BROWN, M.L.A. (Budgerabong) seconded the motion.

The question was put and carried.

The CHAIRMAN then said that Mr. Brown's amendment should be discussed.

Mr. A. ROSS (Hume) said he was discussing this question before, but was not allowed to talk about Mr. Wilson's amendment. If he got up again he wished to know if he might discuss that now.

Mr. WILSON then said that he thought Mr. Brown's amendment and his would now run concurrently.

The CHAIRMAN said that he had ruled that the question before the Chair was Mr. Brown's amendment.

Mr. T. BROWN, M.L.A. (Budgerabong), said, with the sanction of the Conference, he would like to withdraw from his amendment the words "by the Minister," and then it would be as follows: "or from such other sources provided for such purposes by this Act," and then it would become a preliminary to Mr. Wilson's amendment.

Mr. WILSON then said he would propose to adopt his amendment that was now before the Conference.

Mr. T. BROWN, M.L.A. (Budgerabong) said that his amendment should be dealt with first. The business should be conducted in a business-like way.

Mr.

Mr. WILSON said that after the word "from" in Mr. Brown's amendment he wished to put in "a charge to be fixed on all travelling stock." It would then read "or from a charge to be fixed on all travelling stock, or from such other sources as provided for such purposes by this Act." His views were drawn from the western part of the Colony, and were not applicable to the eastern. The main source of supply and continuation of noxious weeds was the travelling stock reserves. When they proceeded to eradicate a disease they endeavoured to discover the source of it and to cut it off at the fountain-head. That was what he proposed to advocate in this matter. Now he thought that some of the representatives of the Conference did not see the force of what they had already decided as to dealing with this great source of supply. They had carefully laid it down that the whole of the travelling stock reserves under lease should be charged to the present lessee, and he should be liable to all the pains and penalties for dealing with those lands. Now, while he had in the main advocated a strict responsibility being put on the individual, he did not want to put an unfair responsibility on the individual, and he thought that this would do it. In many cases it was not the duty of the individual to keep the travelling-stock reserves clear, and it was not a fair charge to put upon him. It was well known that many of the Crown stock routes had been subject to a lease practically, and had been nothing but a curse for six months in the year when the burrs had been growing. From Narrabri to Moree was the most important stock route in the Colony. Some seven or eight years ago he got every lessee to agree to withdraw from that and fence it off, and the Minister for Lands absolutely refused. Now, he maintained it would be grossly unfair to make the care of that one road a charge on the adjoining owner; and some of the runs there were concerned in the care of three or four of those roads leading into such a station as Narrabri. He thought it was unfair to make those men pay for land which they never used, and which they never grazed upon. He thought his resolution would deal with the whole of the hitherto impossible difficulty of dealing with the stock reserves. There were some that should be withdrawn from lease, and some that should not. How could an equitable arrangement be made in respect of noxious weeds on those reserves. He had indicated the best way to arrive at that. Suppose one of them was very difficult to keep clear, but was the road to a water supply. It would be grossly unfair to make the adjoining lessee eradicate those weeds. The local Board, however, could say, "You must cut the burrs," and he would write back and say, "These burrs were brought here by travelling sheep"—that was a matter for equitable arrangement—"we have got a fund, and your share of eradicating these weeds would ordinarily be about 1s. 3d., and we would eradicate those weeds and charge you 1s. 3d." It would be to the interest of the lessee not to fight against his road being withdrawn from lease, but rather to fall in with it. He had indicated what he considered the nearest possible approach to a business-like arrangement, and where a division ought to be. It would, practically, be a bargain between neighbours as to who was responsible, and the Board, as they were not putting their hands into their own pockets, would be liberal to the unfortunate individuals who had infested stock routes through their leases. In the western division the stock routes were included in the leases, and without an Act of Parliament that would not be got rid of, and with his provision that would not be necessary. Things would remain as they were, and probably the lessee would be quite content to look after himself if he saw that everybody else was similarly dealt with. That was practically the whole object of his motion. As to a tax, well nothing could be done without money, and in this case he carefully kept away from the system of taxing the adjoining landowners in any way, but they certainly ought to tax the people who used their roads and water absolutely without return of any kind. If he had a place on a railway line and had to pay his interest and so on, why should he have to contribute towards a fund to eradicate the land of some small man adjoining him? People should pay for what they got. The people whose sheep ate the grass and drank the water would have to pay the tax. Of course it was very difficult to get at. He suggested that probably the average number of travelling stock in New South Wales was 8,000,000, and 1,000,000 thrown in for cattle. Now, he considered 1d. a head a fair charge. The distance travelled would be very difficult to get at, but an average of 50 miles would not be very far out. Of course some travelled 500 miles, but the immense numbers of stock travelled an average distance of about 50 miles. He found that there were practically thirty sheep districts in the territory he had in his mind's eye. Now he put it to them—they had some idea how far money would go in each direction—how far would £500 go in the direction of eradicating these weeds for each Stock Board. In some districts £500 would be twice over enough to do it; in other districts it would not. After the first year the cost would be reduced to one-third or one-half. He just wanted to bring it to the point of what taxation the owners would be liable to, and a good bit less than a ½d. per head for each journey would provide all the necessary funds. He thought he had kept himself as closely to the point as the meeting could wish, and he had not touched on one or two other matters that were down on the paper, but at the same time if the Conference liked he would be prepared to draft a whole Bill for them.

The Chairman then said that Mr. Wilson had exceeded the time limit of ten minutes.

The Conference decided that Mr. Wilson be further heard.

Mr. WILSON said the machinery could be dealt with afterwards. The detail would be this—that a man applying for a permit to travel his stock must also tender the agreed-upon rate, which would be an acquittance to the drover for the road he would travel on. That would have to be collected in a general way, in the same way as the sheep fund. But it would have to be ear-marked and kept for a specific purpose. That must go into the general fund, and then be re-distributed according to the necessities, not according to the acreage or mileage, because the subject was a general one. These districts outside the main trucking stations were the ones that wanted help; and it was just as much to the interest of the man 100 miles away to know that there was a clear road for him to travel his stock as to the interest of the man on the spot. He did not want them to go to the Government cap in hand. If they did that it would sooner or later mean an additional all-round tax. Of course he supposed he would be entirely out of order in saying anything about taking in the watering-places.

The Chairman then said it was clearly out of order.

Mr. T. BROWN, M.L.A. (Budgerabong), said if Mr. Wilson would permit him he would like to strongly urge him to withdraw this amendment of his, and have it dealt with free from difficulty. They were legislating for the whole of the Colony, where those proposals did not apply so strongly as they did in some particular districts of the Colony which had been referred to. He said that his resolution left it open for other sources beside that particular one which Mr. Wilson proposed. Mr. Wilson wished to make provision for certain divisions in the country. If Mr. Wilson carried that he would entirely destroy his amendment.

Mr.

Mr. WILSON said he did not take any word out of Mr. Brown's amendment.

Mr. BROWN (Budgerabong) then said that if Mr. Wilson would add "under this Act" he would withdraw.

Mr. WILSON thought he had made it clear that he did not interfere with Mr. Brown's amendment in any way.

Mr. FLANAGAN (Gunbar) said he would prefer Mr. Wilson's amendment to Mr. Brown's, because it was more definite. If Mr. Wilson would accept this amendment, "and the owners of other stock depasture on travelling-stock routes," he would be glad. There were further classes of stock routes in the Colony. There were stock routes that were cut off by fencing, but not excised from the run. There were other stock routes fenced off, and these stock routes were not excised from the run, but the keeper of the run did not use the grass, but rented the right to somebody else to put the sheep on. He thought his amendment would cover that. Supposing he was the owner of the whole of a run, and he had a stock route on the run, and he let the grass on that route to some selector, it would be very unjust to charge him, the holder, and to let that selector, who used the grass, go free. There were other routes where the lessee had the route fenced off, and yet he put his sheep on and had it eaten as bare as the floor, while he preserved the other parts of his run. It would be very unjust that he should pay half rates when he was taking all the benefit from that route. He thought Mr. Wilson should amend his motion in that direction, and he would then support him strongly. He would second it *pro forma*, but did not know whether he would vote for it if it were not amended.

Mr. FREEMAN supported Mr. Wilson in this matter. He considered that this travelling-stock reserve question was the one question that had been neglected. They had areas of country in the far west where sheep were depastured. He knew reserves which were supposed to be in the interests of the travelling public, which had been alienated, and they also found that people who held those reserves, depastured more on them to the acre than the country would possibly carry, and when people arrived with stock to travel, they found there was nothing for the stock to eat. In Deniliquin there was £40,000 being spent on the freezing works. All the selectors and run-holders round there were precluded from sending their stock, because the stock routes were not available to the public. The reserves had been fenced out. Stock were depastured on them, and they were absolutely eaten out. Now it might be said that where a travelling-stock reserve was in a paddock of another description, that sheep fed no more over that reserve than they did over the rest of the run, because the traffic frightened the sheep away. Then again, they might clear the route inside their fence of noxious weeds, but on their boundary their neighbours fenced it out, and it was practically no man's land, and became thoroughly infested with these noxious weeds. He did not think there was anything to say further. It had been proved on these re-appraisements before the Land Court that these people in the far west should have every consideration in the reduction of their rents, for the simple reason that they had no travelling-stock reserves to carry their sheep to market when they had got them.

Mr. LAURENCE (Balranald) supported Mr. Wilson's proposition. He thought, so far as the land was concerned, the district which the travelling stock went through should be able to hold the rent and pay the Minister the rent, and the money should be kept for the purpose of eradicating the noxious weeds. The stock routes were the worst infested part of the runs. It was simply impossible to get sheep from Kerang, because of this burr. They were made perfectly black with it.

Mr. DILL (Hay) was prepared to give a certain amount of support to Mr. Wilson's motion, but he would like to point out a matter that had escaped him. That was that the east had not been taken sufficiently into account.

Mr. WILSON said he did not exclude the east, but only specially referred to the west.

Mr. DILL (Hay) said the east should be considered. There were hundreds of thousands of acres in the east that were used in the summer months, and this area was very beneficial to the sheep in the Riverina and other parts on the border of Queensland. Those sheep would otherwise die. He had used that country himself for many years. If they put on such a tax as would make it too heavy for those who travelled their sheep 500 miles, then they would not only injure those people, but they would injure the people who held the country in the east. A great many of the burrs that came down the Murrumbidgee came from about Gundagai and right along the stock routes.

Mr. J. M. ATKINSON wished to move, as a further amendment, "That Mr. Wilson be requested to withdraw his amendment with a view to its being introduced as a subsection of clause 10, and that Mr. Brown's amendment be dealt with on its merits."

The CHAIRMAN said Mr. Wilson's proposition was not an amendment. If he were asked to put it as a subsection he would do it. That would be the simplest way.

Mr. WILSON then said he would accept that.

Mr. T. BROWN, M.L.A. (Budgerabong), then moved his amendment. He said that he had moved an amendment which would embrace the whole of the Colony, and Mr. Wilson had brought in a clause referring to only one part of the Colony. Mr. Wilson should withdraw, and then his amendment should come in as a subsection and be dealt with separately.

Mr. WILSON then moved, "That this be an additional subsection (c) to clause 10: 'Where the Board of the district is the local authority, a charge shall be levied on all travelling stock for the purpose of destroying noxious weeds on travelling-stock routes and reserves.'" He said that Mr. Flanagan had wanted him to alter that to deal with questions where stock routes were used by people who had no right to use them at all. Well, those people should be sued for trespass.

Mr. FLANAGAN (Gunbar) said he did not agree with that. He wanted Mr. Wilson to accept the following addition: "and the owners of other stock that depasture on stock routes." That was so that the tax would not be taken of people who did not use the stock routes.

Mr. WILSON proposed that that should be dealt with in detail when carrying out the proposal. If a pastoral lessee sublet the stock route to an adjoining landowner who scoured the country, that was exactly a case where the stock route should be taken out of the lease. They were there to educate the Minister to do it. Such cases would be amply dealt with, and in those cases the whole thing was under the local authority. He remembered one point raised by Mr. Laurence, and that was that the district should collect the money. Suppose a mob of sheep came in on the Queensland border and went to Moama district, the Moama district would collect the money. That was not right. It should be collected and distributed. He had anticipated all that. There would be heaps of difficulties come out in detail.

As

As to Mr. Dill's case, he thought he was getting very nearly in the same boat with Mr. Flanagan. If this were carried out, the stock routes—which should be public property—would be made of the highest service to those who had to use them.

Mr. J. M. ATKINSON seconded Mr. Wilson's motion.

Mr. DILL (Hume) said he would like an explanation from Mr. Wilson as to whether the charge made with regard to a tax made on stock should be a first charge. Did he propose to make the tax on the travelling stock for every 50 miles?

Mr. WILSON said it should be for every 50 miles or every 10 miles—that was a matter of arrangement.

Mr. ALISON (Canonbar) said he should like to have seen Mr. Wilson bring forward a complete set of consecutive proposals. The only figures they had before them were 8,000,000 travelling stock. He had proposed that they should be charged so much for every 50 miles they travelled. He thought it was indicated in a very vague manner. Details should be furnished to them before they dealt with it at all. Were they going to commit themselves to a scheme of which they had no details? It was extraordinary. He had never heard of such a thing before. He would ask anybody reading that resolution to say who was to make the charge, how it was to be made, and what was to be done. The resolution said, "Where the Board of a district is the local authority, a charge shall be levied." He supposed that meant that the Local Board should levy the charge.

Mr. WILSON said it would mean that; and it should be paid into a general fund.

Mr. ALISON (Canonbar) asked if the Board would collect for the whole distance the stock might travel?

Mr. WILSON said they (the Board) would.

Mr. ALISON (Canonbar) then said it would be most advisable that they should have a full and comprehensive scheme drawn up by Mr. Wilson. Take the Queensland stock: he supposed that if they travelled across New South Wales it would probably be 1,000 miles. How were they going to share the charge among all the Boards through whose districts they would travel? It would be a terribly heavy charge.

Mr. WILSON said that was their look-out.

Mr. ALISON (Canonbar) said that they did not want to put a heavy tax on Queensland. They were all interested in the other colonies. Mr. Wilson did not point out how this tax was to be obtained, or how it was to be levied, or whether it was to be done by the Minister, or who was to do it; nor did he give them in any way clearly the duties of those Stock Boards; and he had cut out the Eastern Division—or wanted to cut out the Eastern Division.

Mr. J. M. ATKINSON said he seconded Mr. Wilson's motion; but he did so understanding it in this way: Mr. Alison did not understand how the tax was to be collected. It was a very simple thing. When a man applied for a permit he would have to state where he was going to, the distance he was travelling, and everything else, and the tax should be collected then. It was not necessary that a hard-and-fast rule should be laid down about  $\frac{1}{2}$ d. or a 1d. or 2d. or a  $\frac{1}{4}$ d. or anything else; it was according to the amount of weeds on the reserve. If after the first year it took so much less to clear them, the tax on the travelling stock should be so much less.

Mr. ALISON (Canonbar) said that Mr. Atkinson was dealing with it now as though the money was to be spent in the particular district in which it was collected.

Mr. ATKINSON said he was coming to that. This money would be paid into, and form part of, the Consolidated Revenue Fund, and would be ear-marked for this special purpose. It could be given out to the various districts according to their requirements, and subdivided into these districts. The Narrabri district might take £1,000 in one year, and another district to the east would only take £100. That would divide up the whole of this tax, which would really form part of the Consolidated Revenue Funds. Regarding Mr. Flanagan's objections that selectors who had rented the reserves would not be taxed, the best way to overcome this would be to put in "occupier." The occupier would be liable for those burrs. If ground were rented or occupied by a private individual, that private individual was liable for the eradication of those burrs. For instance, the travelling stock reserve that went through a man's run would have to be kept clear by that man; there was no question about that. It would be absurd to think that a man was going to be so very short-sighted in his policy that he would cut the burrs up to the edge of the stock reserve and allow his sheep to feed over them. What benefit would that be to him. The allotment of the money would be done from the Consolidated Revenue Fund. The different Boards would send in their requirements for the whole year, and if there was not enough money they must do with so much less. It would be allotted from the Consolidated Revenue Fund by the Minister; but that amount of money was ear-marked, and if he chose to add to it he might do so, but he could not take from it for any other purpose.

Mr. ALISON (Canonbar) moved "That before deciding on this motion of Mr. Wilson's, they should have a comprehensive scheme placed in front of them."

Mr. WILSON said he would make a suggestion. If the Conference would pass that resolution of his he would ask them to adjourn for a fortnight, and he would bring them back a Bill which he would ask Mr. Alexander Oliver to draft.

Mr. LESLIE (Forbes) said he agreed with the principles laid down by Mr. Wilson. He thought they were trying to do the right thing at the wrong time. It seemed to him that if they adopted the resolution now moved by Mr. Wilson, that that would amount to an alteration in the Land Act. They were practically dealing with taking lands out of leases and handing them over to the Pastures and Stock Boards, and he thought that was out of order. He did not know whether that Conference viewed this matter from the same standpoint. If they adopted this it would mean that the Land Act would be amended so as to withdraw some lands from stock reserves and hand them over to another body altogether.

Mr. BROOKE (Boggabri) thought they were now getting into the details before they had enunciated the general principles.

Mr. ROSS (Hume) thought Mr. Alison was right. With reference to what Mr. Leslie said about altering the Land Act, there was nothing whatever in the Land Act to stop the Minister from stopping the leasing of reserves. The Minister had the power to cancel the reserves, and do what he liked with them. At the same time he would support this motion of Mr. Wilson's, because it was to be followed with something else. However, he hoped he would do it in less than a fortnight. He did not think that Queensland stock should go through free, even if they did not want to destroy the burr. Mr.

Mr. WILSON said he would just like to say a word about Mr. Leslie's contention regarding withdrawing lands from lease. He was rather surprised that Mr. Leslie should raise such a question. They knew the Minister had power to withdraw any land from lease, and the exercise or non-exercise of that was one of the burning questions regarding those same stock rates. He had indicated what he considered an elastic provision that where the stock rate was absolutely agreed upon by the Minister and the local body, and where the local body and the owner decided in the public interest the lease must be withdrawn, it should be done. If public opinion and the Stock Boards took that view the Minister would not be able to stand against them. Besides, a great deal of the Minister's objection to this was that he lost rent, and had more claims coming on him to spend money in different ways. Now, with regard to Mr. Alison always cropping up about details. What was the use of his providing about ten or a dozen minor details, when the principle was not laid down in the first instance. If they gave him that support which he had asked for he would guarantee to bring them in as good a Bill as this or any other Bill would be. He did not think it necessary to burden this discussion with the distribution of the money. Every man in charge of a station had got to make an estimate of expenditure for three or six months ahead. Mr. Reid had got to do that, and he had got to put on new taxes, not knowing what they would bring in. Every Board would once a year send in an estimate to the Minister of what it would cost them. They would say, "There are 50 miles of road that is very bad, and then there are 50 miles where the people on this side are very careful, and they will not be very bad—they will not want much." The only thing the Board will have to do would be to say, "There are 5,000 acres which will take 2s. an acre to clear, and there are, say, 20,000 acres which will take 6d. an acre to clear, and then they will lump them together. That is the estimate. And then the Minister may say, "These estimates seem to me to exceed the fund, and therefore you must do with less." If they wanted to know more details he would say that he would ask the Minister to take a vote in Parliament, or he thought that the Minister himself would not be disinclined to assist the Boards if the Boards were found doing good work under this Bill. Under the original Pastures and Stock Act, the Board, if they ran out of funds, might go to the Minister and get advances, and these advances are afterwards repaid, because the pest is destroyed, and the funds afterwards come in and accumulate, and they pay off the advances. If the first year was heavy the Treasury would have to make an advance of a few thousands, and the fund would make it up later on.

Mr. Alison's (Canonbar) amendment was then put and carried.

The Conference then adjourned till 2 o'clock.

On resuming after lunch, the Chairman said that he proposed to go on with the Bill as it stood, following on from clause 10, going through clauses 11, 12, and 13, and then take any recommittals.

Mr. LESLIE (Forbes) then moved, "That the following be added as subsection (d) of clause 10:—

"Provided that no such payments shall be made under subsections (a) and (b) where land belongs to private owners, but shall be recoverable from such owner, on an order made by a Police or Stipendiary Magistrate or any two Justices in Petty Sessions."

He supposed they had followed the Bill sufficiently closely to see that no provision had been made for this, and he therefore proposed this clause to rectify the omission. He did not want the Consolidated Revenue or the municipal councils to be compelled to pay for the destruction of noxious weeds for private owners. No provision was made to compel private owners to pay for the destruction of weeds on their holdings.

Mr. DILL (Hay) seconded the motion.

The question was put and carried.

Clause 10, as amended, with subsections added as under, was put to the meeting and carried:—

10. All sums of money expended by the local authority, under the authority of or in pursuance of the provisions of this Act, shall be paid as follows:—

- (a) Where the council of any municipality or trustee of any land set apart for public purposes is the local authority, payment shall be made out of the funds of the municipality or trustee of any land set apart for public purposes.
- (b) Where the Board of Directors aforesaid of a sheep district is the local authority, payment shall be made out of the Consolidated Revenue Fund, or from such other source as provided for such purposes under this Act.
- (c) Where the Board of a district is the local authority, a charge shall be levied on all travelling stock, for the purpose of destroying noxious weeds on travelling stock routes or reserves.
- (d) Provided that no such payments shall be made under subsections (a) and (b) where land belongs to private owners, but shall be recoverable from such owner, on an order made by a Police or Stipendiary Magistrate or any two Justices in Petty Sessions.

#### Clause 11.

11. Penalties imposed by this Act or by any Regulations made thereunder may be recovered before, and offences against this Act may be heard and determined by, a Police or Stipendiary Magistrate, or any two Justices of the Peace in Petty Sessions.

Clause 11 was put to the meeting and passed as printed.

#### Clause 12.

12. In this Act, unless the context otherwise requires—

"Governor" means the Governor with the advice of the Executive Council.

"Justice" means justice of the peace.

"Minister" means Secretary for Lands, and includes any Minister of the Crown having the administration of this Act.

"Occupier" includes the person having the charge, management, or control of the land referred to.

Mr. BRUCE (Chief Inspector of Stock) moved to add to the definition of occupier the following—“and any owner or proprietor jointly or in severalty of land.” He said that they all knew that the owner of land, as well as the tenant, ought to be made liable. In many cases a man might be put in as a tenant, and then there would be no means of getting at the actual owner, nor providing for the destruction of the weeds.

Mr. WILSON asked that the following words be added, “or any sub-lessee.”

Mr. BRUCE (Chief Inspector of Stock) accepted it.

Mr. WILSON then seconded Mr. Bruce's amendment.

Mr. J. M. ATKINSON said that there was a question that he would like to ask, and that was, whether Mr. Bruce wished to include with occupied the word “owner,” and then “jointly and in severalty”; and, if so, were they not enlarging the liability of the Government to a very large extent in connection with the leased land in the Colony. If they put in these words, “jointly and in severalty,” it would couple in the Government—that was to say, the Government must do it themselves. He failed to see any other way out of it. How were they going to overcome that? He maintained that it would be better to define those things separately altogether. He could not see how it was possible to put the two together. They must either make the owner liable or the occupier liable. He moved an amendment, “That the words ‘jointly and in severalty’ be left out.”

Mr. BRUCE (Chief Inspector of Stock) said that the Government was taken care of by definition of private land, and also by the definition of vacant land, which the Government had to pay for. He wished to make every individual in the partnership liable. His resolution was intended to provide for public companies.

Mr. ROSS (Hume) said that if the Government were to be made liable it was a very large thing. Any taxes on the land ought to be a first charge on the land, and it should be put plainly.

Mr. WILSON seconded the amendment by Mr. Atkinson. He would suggest that the proposer of the original amendment should leave that matter to the Minister when he brought the Bill in, and for the Parliamentary Draftsman.

The CHAIRMAN then pointed out to Mr. Wilson that he had seconded the original motion.

Mr. Atkinson's amendment was put first and lost.

Mr. Bruce's original amendment was then put and lost.

Mr. BRUCE (Chief Inspector of Stock) then moved the following additions to clause 12:—

Private land shall be deemed to be—

- (a) Any land alienated from the Crown in fee-simple, or any less estate or interest, whether by Crown grant, lease, promise of lease, or otherwise.
- (b) Any land of which any person shall be in the actual occupation, or in receipt of rent, profit, or interest therefrom.
- (c) Any land vested in a municipal council, including the roads and streets in municipalities.
- (d) Any land vested in trustees.
- (e) Any land not included in the term unoccupied Crown lands, as hereinbefore defined.

(ii) All roads not exceeding 3 chains in width, which shall be held to be the property of the adjoining occupiers.

He thought it would be best to put in a plain definition of what was meant by private land.

The CHAIRMAN then ruled that these subsections should be dealt with separately.

Mr. A. ROSS (Hume) then seconded subsection (a).

Mr. WILSON wished to know why they should define the term private land when there was no recommendation in the Bill for dealing with private land. They had not applied any principle to private land anywhere in the Bill.

The question was then put and lost.

Mr. BRUCE (Chief Inspector of Stock) then withdrew all the remaining resolutions on the notice paper in his name.

Clause 12, as printed, was put to the meeting and passed.

### Clause 13.

13. This Act shall take effect on and after the \_\_\_\_\_ day of \_\_\_\_\_ one thousand eight hundred and ninety-six, and may be cited as the “Noxious Weeds Act, 1896.”

Mr. BRUCE (Chief Inspector of Stock) pointed out that the words “ninety-six” in this clause ought to be “ninety-seven.”

The question of amending “ninety-six” to “ninety-seven” was carried.

Clause 13, amended, to read as under, was passed:—

13. This Act shall take effect on and after the \_\_\_\_\_ day of \_\_\_\_\_ one thousand eight hundred and ninety-seven, and may be cited as the “Noxious Weeds Act, 1897.”

### Clause 1.

#### *Noxious Weeds.*

1. The plants named in the Schedule hereto shall be deemed to be noxious weeds within the meaning of this Act, and the Governor may, by proclamation in the *Gazette*, declare that any plant is a noxious plant within the meaning of this Act, and revoke or vary any declaration made under this section. And the Minister shall forthwith furnish to the local authorities hereinafter mentioned a copy of every declaration made as aforesaid.

Mr. T. LESLIE (Forbes) moved, “That the following words be inserted in place of clause 1: ‘Noxious weeds shall mean such weeds as shall be declared noxious by the Governor by proclamation in the *Gazette* and local newspapers on the recommendation of the local authorities.’”

Mr.

Mr. ALISON (Canonbar) said he would second the motion, but would like Mr. Leslie to add at the beginning, "except as provided in clause 8."

Mr. LESLIE (Forbes) accepted this alteration.

Mr. J. M. ATKINSON said it would hardly be right to pass the motion as Mr. Leslie had put it, with the addition, because it was only to be done on the recommendation of the local authority. That was to say that the local authorities where they were very much beset by the Bathurst burr might not declare that a noxious weed if it was going to affect their pockets considerably, and if such were the case it would not be eradicated if they did not recommend it. Therefore he thought this would require a little more thought before they eliminated that provision as Mr. Leslie proposed. He would ask the gentlemen to consider well before they voted on this matter how they should allow such powers to be given to trusts, because this was not alone a matter for the Sheep Boards to deal with; they were dealing with the various trusts, so that if they chose to declare anything a noxious weed there was no power in the Bill which would declare them noxious weeds, and it seemed to him to be a very ill-advised resolution. The Bathurst burr was such a serious noxious weed to the whole Colony, and should be, without exception, declared a noxious weed throughout the whole of the Colony, and therefore he would move, as an amendment to Mr. Leslie's motion, "That on line 3, of section 1, the Government may —"

The CHAIRMAN said he could not accept the amendment, because the question was that this clause be struck out, and he could not move an amendment on a clause which was to be struck out.

Mr. ROSS (Hume) said he really did not see any very great objection to Mr. Leslie's motion, and he did not think that the reasons advanced by Mr. Atkinson were very sound, because if there were good men on the Boards they would declare the weeds noxious which they found detrimental to their interests. It was a lot of trouble to get the Government to do it, and he thought the Pastures and Stock Boards should do it.

Mr. BACON (Brewarrina) said he would support Mr. Leslie's clause with the last amendment. Surely to goodness if they elected a Board they had sufficient confidence in their integrity that they would not, for their own reasons, declare certain weeds not to be noxious.

Mr. J. M. ATKINSON said that the gentlemen present could not get away from the fact of Pastures and Stock Boards. Now, he wished them to consider the trusts. He had said that the trusts, the reserves in townships, &c., if they did not wish to tax themselves would not declare the Bathurst burr a noxious weed. Municipalities would not declare Bathurst burrs noxious weeds because they did not care, they were away outside the sheep district. He wanted to bring it to a vote, and to show those people where it pinched them. The municipalities would not declare Bathurst burrs noxious weeds, and the routes would be of no use to travelling stock.

Mr. BRUCE (Chief Inspector of Stock) said he was with Mr. Atkinson. There was a large amount of coast country where the people did not care a bit about the Bathurst burr. They had cattle, and it did not affect them. They were all agreed that the Bathurst burr was noxious, then why not put it in so many words?

Mr. ALISON (Canonbar) said that Mr. Atkinson apparently could not get away from Bathurst burrs. He seemed to think that there was no other weed in the Colony but the Bathurst burr. He thought there was a good many others, and they were there to deal with noxious weeds. He thought Mr. Leslie's amendment put the matter in a nutshell. He wanted to reserve the power to the local Pastures and Stock Boards. They did not want the power taken out of their hands. They wished them to have the power to declare what was a noxious weed in their district. Were they going to declare that there were no other noxious weeds but Bathurst burrs in the Colony? That was Mr. Atkinson's idea, and they ought to take a broader view than that. It would be absurd to declare some weeds noxious all over the Colony. What better could they do than to leave it to the Boards that were interested to declare what weeds were noxious in their districts? They gave the Boards full power; they did not command them to do anything. There was clause 7 that provided if they did not do their duty, the Minister might; if they did not exercise their duty, he could come in and compel them to do it. He thought it would be entering upon a very dangerous thing making this Act mandatory in so many respects, and not making it permissive to the Boards. They should leave it to the Boards in this matter.

Mr. WILSON said he thought Mr. Alison had failed to grasp the point that while the Pastures and Stock Board would say, "We want the Bathurst burr destroyed," the municipality might say, "We do not want the Bathurst burr declared a noxious weed," and there they would have a key-stone for the dissemination of the Bathurst burr all round a wide territory. That was what Mr. Atkinson was driving at, and he thought he had taken up a very strong position indeed. Clause 7 said, "if it appears to the Minister that the local authority have neglected to exercise their powers," they had carefully abstained from clothing themselves with powers and taking on a duty, and may be, one small municipality would be the curse of 100 miles of country. Now he would be surprised if Mr. Leslie did not see the great gap in his proposal. He would suggest that they should first declare that the Bathurst burr was a noxious weed everywhere and deal with the rest afterwards.

Mr. BACON (Brewarrina) said there were very few towns in this Colony that were not surrounded by a sheep district, and they might be very well sure that the Minister would see that there was something like uniformity of action all over the Colony. The Minister would see that the municipalities carried out the Act on the same lines as the Pastures and Stock Boards. The Boards would very soon inform the Minister that any municipality was not doing its duty, and the Minister had the power to see that the legislation was on uniform lines.

Mr. FLANAGAN (Gunbar) said he thought it was requisite to give the power to the Minister to say what were noxious weeds, and then clause 7 would simplify everything.

Mr. J. M. ATKINSON said that Mr. Bacon had said that the Pastures and Stock Boards would see to its being done. They had arranged that the Pastures and Stock Boards should have no control over the townships, and the Boards could not make them cut those weeds, as they had no power to do it, and the local authorities might not care to declare them noxious weeds, and they would remain uncut, and the sheep would have to go through them.

Mr. LESLIE (Forbes) said, in replying to the arguments used against the resolution, he presumed that no gentleman there was in favour of allowing the Bathurst burr to grow in any part of the lands of New South Wales. He thought they all considered it their enemy, and were all prepared to exterminate it. He thought that the first principle that needed to be established was that laid down in his resolution.

He wanted the Boards to declare what were noxious weeds within their particular districts, as what would apply to one district of the Colony would not apply to the whole. The conditions were different, and therefore what would flourish in one district would not in some other district of the Colony. And if the Conference would affirm this resolution he was quite prepared to go with them in any resolution which they might move afterwards to declare the Bathurst burr a noxious weed throughout the whole of New South Wales.

The CHAIRMAN then said it was rather doubtful after that amendment was passed whether that could be done. It said, "The Governor, with the advice of the municipality, should declare certain weeds, noxious." He did not think they could go and put in the Bill that Bathurst burrs should be noxious because they would be simply contradicting that clause.

Mr. T. BROWN, M.L.A. (Budgerabong), said he had given notice of an amendment on that clause, and asked if it would be competent to move that as an amendment to Mr. Leslie's. He had proposed to substitute for clause 1 his notice of motion.

The CHAIRMAN said that if Mr. Leslie's amendment was carried he would rule that Mr. Brown's amendment and the other standing in Mr. Alison's name were out of order.

Mr. T. BROWN, M.L.A. (Budgerabong), said that what he proposed in his amendment was to allow the authorities to form their own schedule of what were noxious weeds. He would move as an amendment on Mr. Leslie's motion that all of his own amendment from the word "Governor" be added to Mr. Leslie's amendment so as to get rid of the opposition which had been offered. He thought it would meet the opinions of everybody if the words Bathurst burr were inserted after the words "shall mean" in Mr. Leslie's motion, so that the clause would declare the Bathurst burr to be a noxious weed and such other weeds as should be declared noxious by the Governor.

Mr. WILSON suggested that Bathurst burr be left out and when they dealt with the schedule it could be put in.

The CHAIRMAN then said that if they put it in the schedule they contradicted the clause. He had ruled that already, and he must insist on his ruling.

Mr. FLANAGAN (Gunbar) did not see that Mr. Leslie had altered the position one iota, as it was still left to the recommendation of the local authorities.

Mr. ROSS (Huine) said he understood that Mr. Atkinson's view was met in this way, that the Bathurst burr was put in as noxious all over the Colony, and the other plants wherever the Governor might declare on the recommendation of the local Boards.

Mr. LESLIE'S (Forbes) new clause without Mr. T. Brown's addition as under "Except as provided in clause 8 noxious weeds shall mean Bathurst burrs and such weeds as shall be declared noxious by the Governor, by proclamation in the *Gazette* and local newspapers, on the recommendation of the local authorities, and such proclamation shall apply only to such districts or parts thereof named therein," was then put and carried.

Mr. WILSON said he wished to move an amendment that "Bathurst burrs" be omitted from the resolution. He proposed to omit it there for the purpose of putting it in, in what he considered to be, its proper place.

The CHAIRMAN said he would not accept the amendment if he meant to put it in elsewhere.

Mr. WILSON said he would ask the meeting to dissent from the Chairman's ruling that he was not entitled to move the omission of the words "Bathurst burr" from the amendment.

The CHAIRMAN said that he had already told him that he was entitled to move the omission of the words "Bathurst burr" but he was not entitled to put them in the schedule because it would be contradictory of the clause.

Mr. WILSON said that he would still move that the Chairman's ruling be dissented from.

Mr. ALISON (Canonbar) rose to a point of order. Undoubtedly Mr. Wilson was out of order. They had put "Bathurst burr" in the clause and they had passed the clause.

Mr. WILSON's motion failed for want of a seconder.

Mr. T. BROWN, M.L.A. (Budgerabong), said he would move the addition of the following, "The Governor may also by general or special proclamation in the *Gazette* declare any plant to be a noxious weed within the meaning of this Act, and such plant shall be deemed to be a noxious weed throughout the Colony or such parts of it as named in the proclamation. The Governor may from time to time vary or revoke such general proclamation, providing that such general proclamation shall not have the force of law until it has been laid before both Houses of Parliament for one month. And the Minister shall thereafter furnish the local authorities affected with a copy of every such general or special proclamation." He said that the different authorities under this Act were given the power to declare that weeds were noxious in their districts. So far as the larger authorities under this Act were concerned, that would be sufficient to meet all cases; but they had also constituted some smaller local authorities, such as Municipal Councils and Trustees of Public Lands, who might not wish to declare some weed which was hurtful to be noxious, and, in the interests of the districts, the Governor should step in, at the instance of the local Pastures and Stock Boards, and declare such weeds noxious. And he provided in his amendment that that should not be arbitrary, but that notifications should be laid on the Table of the Houses, so that there might be time for protest.

Mr. FLANAGAN (Gunbar) seconded the motion.

Mr. WILSON asked Mr. Brown if he contemplated that it was possible that under this addition the municipality being a local authority could apply for a revocation of the general declaration that Bathurst burr was a noxious weed. That was just as dangerous a principle as they had been discussing some little time ago. They had put in Mr. Leslie's clause that the Bathurst burr was a noxious weed, but now they were giving the Governor power to revoke that.

Mr. T. BROWN, M.L.A. (Budgerabong), said that was not so.

Mr. WILSON said that was the way he read it. As far as he could judge, it seemed to him to be quite open to any municipality to apply to the Governor to absolve their district from cutting burrs, because they were not interested in sheep in that district. He would, therefore, oppose the amendment. He wanted "Bathurst burr" to stay in, in spite of the Governor and the Executive Council. Municipalities would apply to have the general proclamation that Bathurst burr was a noxious weed in every part of the Colony revoked so far as their particular municipality was concerned. And that was where the whole mischief would be done over again.

Mr.

Mr. T. BROWN, M.L.A. (Budgerabong), said that nothing of that kind had been provided for in the Act. The only Proclamation that the Governor could vary or change was the proclamation that he would make in pursuance of that section.

Mr. ALISON (Cannonbar) thought Mr. Brown's amendment out of order, because the power of the Governor to declare a weed noxious had been eliminated. Mr. Brown's amendment would practically restore clause 1, which had been cut out. If they inserted that they took it out of the hands of the local Boards, and they put it in the hands of the Governor to proclaim what was a noxious weed all over the Colony. The governor should have the power to prevent the importation of noxious weeds.

Mr. BRUCE, Chief Inspector of Stock, would point out that clause 7 as it stood already provided for what Mr. Brown was aiming at; and Mr. Brown's motion, as it were, repealed or cancelled the motion that had just been passed at Mr. Leslie's instance. Everything that was needed was provided for in the Bill.

Mr. LESLIE (Forbes) said he was inclined to support Mr. Brown's amendment, as Mr. Brown was afraid that municipalities and other smaller trusts would let the burrs grow, and might not consider it to their interest to destroy it; but on reading clause 7 he found that the difficulty that Mr. Brown sought to overcome was fully covered by that clause, because if Bathurst burr were declared a noxious weed in any particular district and the municipality failed to carry out the destruction of such weed, then the Minister under clause 7 had the power to come in and take it out of the hands of the local authority if it were not doing its duty. Therefore he thought Mr. Brown's amendment was quite unnecessary.

Mr. T. BROWN, M.L.A. (Budgerabong), said that clause 7 applied to noxious weeds that had been proclaimed noxious weeds. Now this addition was about proclaiming noxious weeds. So far as Live Stock Boards were concerned he saw no difficulty, and these Boards might name their own schedule, but to give them that right they must also give the smaller authorities—the trustees and so on—the same right. Now it came in this way that small bodies for the purpose of saving expense might decline to declare some weeds noxious weeds under the Act, and what he was aiming at was to give the Minister power, in the interest of the large stockowners or not, to proclaim a certain plant when the local authority refused to put the Act into operation with respect to it. That was all he was aiming at, and he thought he had safeguarded the interests of those smaller communities by saying that while the Minister might exercise this power it would be laid before Parliament for so long in order to protect those smaller interests when they wanted to protest.

The question of adding Mr. T. Brown's amendment to clause 1 was put and carried by a majority of one.

Mr. J. M. ATKINSON moved the following amendment on clause 1:—"That the prickly pear be not a noxious weed within the meaning of this Act." He thought that the fear the prickly pear would be included as a noxious weed under this Act had affected the vote of several gentlemen present. He thought that it should be under another Act altogether, and that it would be impossible to classify it with the other noxious weeds under this Bill. He thought it was important there should be another Act for it, and therefore he moved that the prickly pear be not a noxious weed within the meaning of this Act. He was informed on reliable authority that the Prickly Pear Act of 1883 was still in operation. He would therefore withdraw his amendment.

Clause 1, as amended, was put to the meeting and carried:—

Except as provided in clause 8, noxious weeds shall mean Bathurst burr and such weeds as shall be declared noxious by the Governor by proclamation in the *Gazette* and local newspapers, on the recommendation of the local authorities; and such proclamation shall apply only to such districts or parts thereof named therein. The Governor may also by general election or special proclamation in the *Gazette* declare any plant to be a noxious weed within the meaning of this Act, and such plant shall be deemed to be a noxious weed throughout the Colony or such parts of it as named in the proclamation. The Governor may from time to time vary or revoke such general proclamation, providing that such general proclamation shall not have the force of law until it has been laid before both Houses of Parliament for one month. And the Minister shall thereafter furnish the local authorities affected with a copy of every such general or special proclamation."

Clause 4, as amended:—

4. (1) On receipt of any information respecting the existence of noxious weeds on land within their district, the local authority shall, if satisfied of the existence of the noxious weeds, serve a notice on the occupier of the land, requiring him to eradicate and destroy, to the satisfaction of the Board, the noxious weeds within the time specified in the notice, and to execute such works and do such things as may be necessary for that purpose, and if the local authority think it desirable (but not otherwise) specifying any works to be executed.

(II) Provided that where the occupier cannot be found, the local authority may themselves eradicate and destroy the noxious weeds.

(III) If the occupier of land shall be unknown or absent from the Colony, and the expense incurred hereunder in clearing such land of noxious weeds cannot be recovered from him, and remain unpaid for more than months after the same shall have become due, the local authority may let such land for any period not exceeding five years, upon terms and conditions to be prescribed, and shall receive the rents and profits thereof, and shall apply the same in payment of such expenses with interest thereon at the rate of 10 per centum per annum, so long as the same shall be unpaid: And such authority shall hold the surplus (if any) upon trust for the person entitled to such surplus.

Mr. ALISON (Cannonbar) moved (for Mr. Bacon) the notice which stood in that gentleman's name on the notice paper, to re-commit clause 4 with a view to insert after the word "information" the words "through the local authorities or any landowners interested."

Mr. FLANAGAN (Gunbar) seconded the motion.

The question of re-committal was put to the meeting and carried.

Mr. ALISON (Cannonbar) thought it could be altered to read, instead of "local authorities," "the authorised officer."

Mr.

Mr. ATKINSON rose to a point of order. It had already been decided.

Mr. WILSON thought it was a pity that they should have to go over the same ground. He would put those words in, but for all practical purposes they meant the same thing. "Authorised officers" were simply a nullity. At the present time the places which were supposed to be supervised by the authorised officers were left alone, because the authorised officers had too much to do. Then again, who were the "owners interested?" There were no taxpayers under this Bill, and the "landowners" interested were a doubtful quantity. It seemed to him that this was a matter of such wide application that if the Boards received an anonymous letter, or if a swagsman strolling by thought that he might get a job from the local authorities, and so laid a complaint, he thought the local authorities should be pretty well able to judge of the merits of that complaint. He might be a landowner on the down stream side of a district. He would be very much interested, but if there was any contention in the proposed amendment he would be nobody, he would be an unknown quantity.

Mr. ALISON (Canonbar) said he would be interested.

Mr. WILSON said he wanted it to have a general application. If the representations were from a fishy source the Boards would know whether to make any movement. If he had sheep travelling, it was just as much to his interest to have the burrs cut for the last 10 miles, even though he came from Queensland, as it was to the interest of a man in the district. If he wrote to the Board the Board might say "Who the deuce is that man? He is from Queensland, he is not a taxpayer." He thought the meeting should let it stay as it was, and let the local authorities winnow the wheat from the chaff, and say who was making a reasonable complaint.

Mr. ATKINSON opposed this very strenuously before, and he thought if they wished to pass a Bill for the eradication of noxious weeds, it was imperative that they should not narrow down their limits for knowing where the noxious weeds were. If they had a local Board elected as Mr. Alison had so often said, they must leave something to the sense of that Board. If he was going to be elected by the whole of the people in that electorate surely they would elect good men to the Board, and he did not hesitate to say that those men had not in the past passed any foolish things, or anything that would require such immense care as Mr. Alison proposed.

Mr. FREEMAN said he supported Mr. Alison in regard to this. Let them take a drover entering Goodooga, when he got to Deniliquin he could complain of every run he came through, and he could have an authorised officer sent out to inspect the runs. They must carefully guard themselves from too many Government officers. They were always being inspected.

The MINISTER FOR LANDS then entered the chamber amid acclamation. He said:—I do not want to be accused of leaving you in an unceremonious fashion. You have been kind enough to come here at considerable inconvenience I am sure to yourselves, to assist the State in solving some very difficult problems, and I only regret that business of perhaps national importance necessitates that I should leave the Colony before you have completed your deliberations, and this prevents me from having that consultation which I am sure would have been productive of valuable results, at the conclusion of your labours. I hope you will not take offence at my departure from the Colony before you complete your deliberations. You understand the circumstances, and I am sure, therefore, you will excuse my absence. I cannot let the opportunity pass without coming here to thank you for the serious consideration you have given to these matters; and, although I cannot agree with all your proposals, I daresay you cannot agree yourselves, and I am sure that you yourselves, from the results of your deliberations, must appreciate my position, and therefore you will be less liable to be censorious of my actions, and I can only hope you will judge me leniently. I shall accept your advice whenever it is possible to do so. If I refuse to accept your advice you will give me at least the credit of placing my refusal on the large public interests which are at stake. I cannot sacrifice the great interests of the body of this country, who constitute the taxpayers, when I think they come into conflict with the interests, perhaps, of a section of the community. But I hope we shall not have differences of that character; that we shall be able, reasonable men as you are on the one side, myself as administrator on the other side—to harmonise our respective views, and by compromise make legislation which shall be acceptable to all parties. I do not propose to criticise your proposals. At a later stage I shall be glad to meet the committee you have appointed, and then to discuss any great matters of difference that may arise; and I believe that the result of all our efforts will be the introduction of a Bill which will be satisfactory, not only to yourselves but to the people of the country. You are engaged now in considering a measure with regard to noxious weeds. Your deliberations have not reached that stage when I can express any opinion whatever. You are breaking virgin soil, and therefore it is not likely the first attempt will be productive of unanimity of opinion. Therefore we must not be prepared at the first to strive to make such a comprehensive Bill as will last for all time, when perhaps experience will teach us more wisdom than we possess at the present moment. I have to thank your chairmen for the very great kindness which has been tendered to me by their presiding over your deliberations, and I can extend to you my thanks on behalf of the people of this country for your loyal and voluntary assistance; and I can only hope that the results will be as satisfactory to yourselves as our meeting has been to one another.

Mr. ALISON (Canonbar) said that they must heartily thank the Minister, Mr. Carruthers, for attending there now and again and for inviting them to come. They must now congratulate him exceedingly on the position he held in the Convention that was shortly to be held, and they wished him, he was sure, a pleasant voyage there, and a happy result to his efforts. He was sure that they would congratulate him and themselves and the country generally on having such an able representative to visit Adelaide. They had done and were doing their best to bring forward, to pass a Bill, which would be acceptable to him. They quite understood that it was impossible that he would be able to agree with everything. There were differences of opinion even among themselves on a few points, but he was quite satisfied in this, that they would all agree that whatever the Minister did bring in it would be brought in with the very best intentions, and he now proposed that they most enthusiastically thank the Minister for his kindness to them all.

The Minister for Lands then left the Conference amid acclamation.

Mr. FREEMAN (continuing), said he took it that the intention of the motion was simply this, so that there should not be a lot of frivolous complaints by anyone who chose to subject the lessees to expense. Part of the words of the motion were "landowners interested." He took it that people who had got sheep in this Colony were all interested landowners, and therefore they were the proper persons to make complaints, and he thought Mr. Alison's motion should be carried.

Mr.

Mr. ROSS (Hume) said he opposed this motion. They had had a great deal of discussion on this before. It was one of the hardest points in the whole Bill. He did not see why information should not be laid by anybody. The information was only conveyed to the Board. He did not see that there would be any harm when it was conveyed by any person, no matter who. He did not suppose a swagsman would bother his head about it, and even if he did, as they all knew very well, the Board would take it for what it was worth.

Mr. ATKINSON said that they did not seem to grasp that a notice had to be served on the occupier of the land by the Board. There was no expense, they only served the notice if they thought such information as was given them was correct. He did not see why any objection should be made to that.

Mr. ALISON (Canonbar) said that if the Board got a letter it was provided that the local authority "shall" that was the only thing, if the word was "may" it would be all right. If they would alter that, he would withdraw his amendment in order to cut out the word "shall," and insert the word "may."

Mr. WILSON said he objected to have "shall serve a notice if satisfied." The Board must be satisfied. They were not a collection of fools, they were sensible men. The Board were business men, met there for business purposes, and they would say, "This is some man's nest, who is this man?" If he were a public man he would be there to be held to obloquy if he were wrong. There was no compulsion that they should serve a notice until they were satisfied as to the existence of the noxious weeds. It was only the merest beginning of the proceedings altogether.

Mr. ALISON (Canonbar) said he would stick to his previous amendment.

Mr. WILSON's amendment was then put to the meeting and lost.

The Conference then adjourned until 10 o'clock the next day.

#### FOURTH DAY—19TH MARCH, 1897.

The Chairman, the Honorable Rupert Carington, took the Chair at 10 a.m.

The minutes of previous meeting were read and confirmed.

Mr. BRUCE proposed that clause 4 be recommitted, with a view to the addition of which he had given notice.

Mr. PEARSE (Orange) seconded the proposal.

The question was put to the meeting and carried.

Mr. BRUCE (Chief Inspector of Stock) moved that the following be added:—

If the occupier of land shall be unknown or absent from the Colony, and the expense incurred hereunder in clearing such land of noxious weeds cannot be recovered from him, and remain unpaid for more than months after the same shall have become due, the local authority may let such land for any period not exceeding five years, upon terms and conditions to be prescribed, and shall receive the rents and profits thereof, and shall apply the same in payment of such expenses with interest thereon at the rate of 10 per centum per annum, so long as the same shall remain unpaid: And such authority shall hold the surplus (if any) upon trust for the person entitled to such surplus.

Mr. FLANAGAN (Gunbar) seconded the amendment.

Mr. WILSON said he saw no objection to this clause, but he doubted the wisdom of allowing such a long term as five years. It might be a heavy punishment to a man to tie his land up for five years. He supported this clause with a view to opposing Mr. Bruce's next clause. He thought, however, five years was rather too long, and three years would be sufficient.

Mr. ATKINSON pointed out that the words were "not exceeding" five years. He would endorse Mr. Bruce's proposal for this reason, that some portions of this land might be so bad that they might have to let it for five years to get a tenant to clear it. Therefore, he thought they might leave the term of five years to the discretion of the people who had to let it.

Mr. FLANAGAN (Gunbar) said five years might not be sufficient. He thought the Board should have power to take possession of the land until such time as the owner appeared. He would move to omit the five years altogether, and state in the clause that the Board should have power to put the occupant on the land until such time as the owner turned up, and engaged to perform the duties devolving upon him.

Mr. ROSS (Hume) said he thought there was a good deal in Mr. Flanagan's contention on that matter. He thought a man might be away, and if his land were let for five years in the sixth year the land being idle might become foul again.

Mr. FLANAGAN's (Gunbar) amendment to leave out the words "five years" was put to the meeting and carried.

Mr. WILSON said that sometimes the unknown man came back again and yet they were giving Boards the power to lease the land in perpetuity. He thought that they should provide that if the owner came back and wanted to pay up he might turn the tenant out.

Mr. ROSS (Hume) said that they must either give the Boards power to let the land or else power to sell, he thought that this was the best way out of it. If a man came back when his land had been cleared it was more than probable that the tenant would not care to give up the lease.

Mr. ATKINSON asked if it would not be better to make this a first cost on the land. If those words were inserted it would obviate the necessity of Mr. Bruce leaving out those words, and it would have a definite period.

Mr. FLANAGAN (Gunbar) moved that the following words: "give the power to the Board to deal with the land until such time as the owner turns up" should be inserted instead of the words which were cut out. That they should leave out from the word "may" to the word "years" and put in "The local authority shall have the power to deal with the land until such time as the owner turns up, and will undertake to deal with the lands according to his responsibility under this Act."

Mr.

Mr. CUMMING (Hillston) seconded the motion.

Mr. ATKINSON said he must oppose the insertion of those words. They were now dealing with the small lands. There was no doubt about it, because on the larger areas of land they would never fail to find the owner, and, therefore, it would be a very outrageous thing to let any portions of those lands subject to a twenty-four hours' notice of ejection. They would get nobody to take those lands. Nobody would spend a farthing on them to eradicate the burrs. It was absurd for Mr. Flanagan to wish to introduce such a thing, what they wanted was to keep the burrs eradicated. It was absurd to expect that anybody would take land subject to twelve hours' notice of ejection. The facts of the matter briefly were these: if a man did not come and claim his land or say he was the owner of that land during the process of this Act, and did not come and say "This is my land, I am the owner," then the local authorities were justified in letting that land to a tenant for a period not exceeding five years. When the owner turned up, if he did turn up afterwards, and said he objected to this, they would say "Very well; you own the land, if the tenant likes to leave it now, very well; take it and eradicate the weeds; but if the man will not go out you must put up with the penalties you have incurred." The same thing was done in other directions with the lands of the Colony. If they wanted to keep the land clear they must give facilities to people to come and eradicate the weeds. A man might spend some money on the land and perhaps erect a small house, and then the owner might come along and say "Clear out of my land, I want it to-morrow."

Mr. BRUCE (Chief Inspector of Stock) said he was altogether of Mr. Atkinson's opinion that he had explained it properly, and he thought it would practically render the Act inoperative.

Mr. WILSON said he would like to point out that this would only apply to limited areas, and he questioned very much whether it would not be better for the Board to be without the power, for he thought it would lead to litigation, where the costs would be more than the amount to be recovered. He thought the term should be five years. There were many things they must submit to without putting the law in motion.

Mr. FLANAGAN (Gunbar) said Mr. Atkinson had told them that no man would take this land. A man might go and build a house on it. What for?

Mr. ATKINSON: To live in.

Mr. FLANAGAN (Gunbar) said he thought a man would be an idiot to build a house on that land on such a tenure as the Board would give him. Suppose he had an allotment in a town, and suppose he was destroying the weeds under the Act, and there was an allotment alongside of his and no one knew the owner. The Board would simply have the power to deal with that until such time as the owner turned up and the Board might make a bargain with him. He might run his fowls or his cows on that land, and would eradicate the weeds. He would not be such a fool as to build a house on it. The Board would let him know what he might expect, what his tenure would be, and he might have to give it up any day. It was absurd talking of building a house on such a tenure.

Mr. Flanagan's (Gunbar) motion was then put to the meeting and lost.

Mr. Bruce's (Chief Inspector of Stock) amendment, "That five years should be reinserted in his previous amendment," was put and carried.

Mr. Bruce's (Chief Inspector of Stock) original amendment without any further amendment was put to the meeting and carried.

Mr. ALISON (Canonbar) said he would like to move the recommittal of this clause with a view to alter the word "shall" into "may." He now moved that the following words be inserted after the word "purpose" in subsection 2, clause 4: "and may subsidise the said occupier to the extent not exceeding £2 for each and every £1 expended by the said occupier." He moved this with a view of allowing the Boards to assist in such cases as they might see that the insistence upon the absolute letter of the law would ruin the occupier, and as he was sure they had no desire that such a thing should be enforced on any person, he wished to give them the power to assist any person whom they might deem it desirable to assist in this way. He did not propose it as a mandatory clause; they might or might not advance it if they chose. It was quite feasible as it stood, as the Act stood, that a weak financial man might very easily be ruined by the stringent operation of this Act. He entirely disagreed with the principle upon which this Act had been carried out in the Conference. It had been carried out simply from the point of view of the people who had got rid of the weeds themselves, and they did not regard the different circumstances that might occur in the different parts of the Colony. Now they were going to make a mandatory law, and the result must be very serious injury to a great many people all over the Colony. Now, the mode of thought which had actuated the Conference in regard to this Noxious Weeds Bill was that they had only to pass a law compelling everybody to destroy their weeds, and the thing was done. Why not bring in a law in that case compelling everybody to destroy wallabies, rabbits, and kangaroos, and give them no assistance, and the thing would be done. That was a very crude idea of legislation which they had embodied in this form. If they were to have legislation foisted on this Colony it would result in a reaction such as would sweep away all their efforts. They must not make things mandatory, but must make them permissive, and allow Boards to assist individuals who would otherwise be ruined. One could contemplate the invasion of the weed suddenly into some district which would make most serious injury. It was most advisable that the Boards should have the power to assist the individual, and of working to some extent on the co-operative principle. They were all praising the Stock and Pastures Protection Act, and that was the principle on which that Act worked. Why not adopt the principle of that Act, and make it permissible that the Boards should have power to assist different people in the destruction of noxious animals or noxious weeds. He submitted that this resolution of his would not be a mandatory one, but it would give the Boards the power to deal with the weeds, so as to assist the weaker men in the district.

Mr. FLANAGAN (Gunbar) seconded Mr. Alison's motion. He was in no way jealous because Mr. Alison had taken up his motion, he would strongly assist him. His motion on the paper read as follows: "provided that where it comes under the knowledge of the authorities administering this Act, that the eradication of noxious weeds from any one holding would be ruinous to the owner or occupier of such holding, the law should provide to distribute the cost of eradication over all the lands of the district which may not be affected, but are in danger of becoming so."

Mr. ALISON (Canonbar) said he would withdraw his motion in favour of Mr. Flanagan.

Mr. WILSON pointed out that Mr. Alison's proposition was definite and reduced it to a point, whereas Mr. Flanagan's was indefinite.

Mr.

Mr. ALISON (Canonbar) rose to a point of order. The clause had not been recommitted. He would now move that the clause be recommitted, for the purposes of this amendment.

Mr. MOORE (Goodooga) seconded the recommittal.

The question was put to the meeting and lost.

Clause 4, as amended, was put to the meeting and carried.

### Clause 5.

5. (1) If either—

(a) the person on whom a notice to eradicate and destroy or prevent the growth of noxious weeds has been served as aforesaid makes default in complying with any of the requisitions thereof within the time specified; or

(b) the growth of the noxious weeds though abated since the service of the notice, is, in the opinion of the local authority, likely to recur on the same land,

the local authority may by any person authorised by them in that behalf make a complaint to a justice, and such justice shall thereupon issue a summons requiring the person on whom the notice was served to appear before a police or stipendiary magistrate or any two justices in petty sessions.

(ii) The said magistrate or justices may, if satisfied that noxious weeds exist as alleged, or that although the growth is abated, it is likely to recur on the same land, by order require the said person to comply with all or any of the requisitions of the notice, or otherwise to eradicate and destroy or prevent the growth of the noxious weeds within a time specified in the order, and may, if thought desirable, specify the works to be executed by the said person for that purpose.

(iii) If a person fails to comply with an order of a magistrate or justices made as aforesaid, with respect to the eradication and destruction of, or prevention of the growth or a recurrence of the growth of the noxious weeds, he shall, unless he satisfies the Court that he has used all due diligence to carry out such order, be liable to a penalty not exceeding *twenty* shillings a day during his default. Moreover, the local authority may enter the land to which any order under this Act relates, and eradicate and destroy and prevent the growth of the noxious weeds, and do whatever may be necessary in execution of such order.

Mr. LESLIE (Forbes) withdrew the notice of motion standing in his name, which read as follows: "And the persons owning or occupying the land where such entry has been made shall be liable for the amount expended in the eradication and destruction of the noxious weeds," in order to adopt that standing in the name of Mr. Bruce.

Mr. BRUCE proposed that the following be added as subsection 4, of clause 5:—"All costs, charges, and expenses incurred by a local authority, or any person authorised by a local authority, in clearing any private land of noxious plants under the provisions of this Act, shall be a first charge upon such land, and shall take precedence of all mortgages or other charges whatsoever upon such land: Provided always that a certificate under the hand of such local authority shall be a full discharge of all such costs, charges, and expenses, up to the date of such certificate."

Mr. LESLIE (Forbes) seconded the proposition.

Mr. WILSON thought they had done enough in hampering the people's land in what they had passed a little while ago. He objected to their being any temptation to pile up charges which would in many cases total perhaps more than the cost of the land.

Mr. FLANAGAN (Gunbar) said if a man did his duty there would be no charges, and it was absurd for them to come there to make a law and not make a penalty for the criminal and idle men in the districts.

Mr. ATKINSON said he must endorse Mr. Bruce's amendment also. He could not agree with Mr. Wilson. There were many of the medium sized holders that he knew of who would be their chief enemies. It was not the small holder or the big holder, but the medium sized holder who was their chief enemy.

Mr. ALISON (Canonbar) said he thought that was following in the steps of very bad legislation that had gone before. It seemed to him that everything was going to be a first charge on the land. He would suggest they should pass clauses saying how properties which would fall into the hands of the Noxious Weeds Boards should be put up for sale.

Mr. Bruce's motion was put to the meeting and carried.

Mr. FLANAGAN (Gunbar) moved the following addition to clause 5,—

Provided that where it comes under the knowledge of the authorities administering this Act, that the eradication of noxious weeds from any one holding would be ruinous to the owner or occupier of such holding, the law should provide to distribute the cost of eradication over all the lands of the district which may not be affected but are in danger of becoming so.

He might say that this question or the subject contained in the motion did not affect either his district or himself personally. He was informed by some gentlemen that this Conference thought there were many individuals in different localities all over this Colony to whom it would be ruinous if they were compelled individually to clear their holdings, and therefore it appeared to him a wise thing to introduce these words. They could fence out the emu, the kangaroo, and the rabbit, but they could not fence out the weeds. Floods rose and carried the weeds on to a man's land just like an enemy. Suppose an enemy landed tomorrow in Adelaide then it would not be right to leave the people of South Australia to fight that enemy, every man in Australia should put his hand in his pocket to help them to fight that enemy. There people of the district where these noxious weeds grew were in danger of having their lands overrun by the weeds. Of course if it were a rich man who neglected his duty he would not propose for one moment to assist that negligent rich man. If it were a banker who took these lands over the Board would certainly never compel the residents of the district to subscribe to help that banker to clear the weeds off that land. All he wanted was to enable the Board, where they saw a case of hardship in eradicating the weeds, to distribute the cost all over the district. He thought it only wise and just that this new principle should be introduced.

Mr. ALISON (Canonbar) seconded the motion.

Mr. ATKINSON said he need hardly say he was going to oppose this tooth and nail. They would all see, in fact it seemed to him they had seen already, that this was giving an incentive to a man who did not clear his land, in so far as it was an inducement to a man who had an accumulation of filth on his land that he should go and get £2 for every £1 that he spent in clearing the land. Mr. Flanagan had said that floods would carry the weeds down, but the floods must carry the weeds from somewhere, and that somewhere must be cleared of these weeds. If those lands were cleared the flood could not carry noxious weeds down. If this proposition was carried it would be an inducement to a man to get a subsidy for every £1 he spent.

The question was put before the meeting and lost.

Clause 5, as amended, was put to the meeting and lost.

#### Clause 6.

6. The local authority may, for the purpose of carrying out the provisions of this Act, enter, or authorise any person by writing properly authenticated by the said authority to enter, at any time, with men, vehicles, horses, and bullocks, and necessary appliances, into and upon any land within their district.

Clause 6, as printed, was put to the meeting and carried.

#### Clause 7.

7. If it appears to the Minister that the local authority have neglected to exercise, or to make reasonable efforts to exercise, any powers conferred or duties imposed on them by this Act, the Minister may give notice in writing requiring the local authority to exercise the powers and perform the duties aforesaid within a period to be named in the notice.

If the said requirement is disobeyed, or is not complied with, it shall be lawful for the Minister to exercise the powers or perform the duties, and where a municipal council is the local authority, to recover on behalf of Her Majesty from the council the expenses thereby incurred.

Mr. T. BROWN, M.L.A. (Budgerabong) moved the addition of the following words "of such local authorities and recover the expense thereby incurred from such local authorities in the case of municipal councils or lands held in public trust or from the owner or holders of such other lands so occupied." He said that this clause as originally drafted in the Bill provided that the Minister should exercise certain powers under the Bill to eradicate noxious weeds in certain cases where local authorities failed to do so. The clause went on to say that "if the said requirement was disobeyed, or was not complied with, it should be lawful for the Minister to exercise the powers, or perform the duties, and, where the municipal council is the local authority, to recover on behalf of Her Majesty from the council the expenses thereby incurred." That clause made provision for the Minister to enter into areas held under other authorities than that of municipal councils, but it made no provision to enable the Minister to recover from those other bodies, and his proposal was to widen that clause so as to enable the Minister to recover from those other local authorities the expenses incurred in destroying the weeds that they had neglected to destroy. He proposed to strike out all the words after the word "duties."

Mr. ATKINSON seconded the proposal.

The question was put to the meeting and carried.

Mr. BRUCE (Chief Inspector of Stock) moved the addition of the following, clause 7,—

"Before taking proceedings against an occupier who is not entitled to the actual occupation of any land infested with noxious weeds, the local authority shall serve such occupier with a notice in the prescribed form: and if the person who is entitled to the actual occupation of such land shall not, within fourteen days from the service of such notice, arrange with such occupier for the eradication of the noxious weeds on such land, such occupier shall be deemed, as regards such land, to have all the powers of an Inspector or local authority under this Act."

Mr. DAVIES (Gunnedah) seconded the motion *pro forma*.

Mr. WILSON said that the following words did not appear to him to convey any concrete idea: "before taking proceedings against an occupier who was not entitled to the occupation of any land." He confessed he did not understand them.

Mr. BRUCE said that occupier included owner.

Mr. ALISON (Canonbar) said that he would point out that the following words were unnecessary: "such occupier shall be deemed as regards such land to have all the powers of an Inspector," because everybody under that Act was an Inspector.

The question was put to the meeting and lost.

Mr. BRUCE proposed the following as an addition to clause 7,—

Whenever there are more occupiers than one of any infested private land, and one of such occupiers is, under this Act, in any way compelled to pay the whole or more than his fair share of the cost of eradicating the noxious weeds on such land, he may, in any Court of competent jurisdiction, recover from the other occupiers of such land such proportion of the cost, charges, and expenses incurred by him in or about such eradication, as is, in the opinion of the Court, fairly proportionate to the respective interests of the occupiers in such land.

He said that wherever there were more occupiers than one, and one paid more than his fair share the others should be liable to pay a fair proportion.

Mr. FLANAGAN (Gunbar) seconded the motion.

Mr. BACON (Brewarrina) did not see any necessity for the additional clause. He did not understand how one owner could be compelled to destroy weeds if another were not compelled to do so. Supposing three people owned a piece of land, how could one of them be supposed to destroy noxious weeds and not another?

Mr.

Mr. WILSON suggested to Mr. Bruce that, not only this amendment but the other which was on the business paper, was really a matter for legal minds to discuss. These were legal provisions, and he did not think they were competent to deal with them. He would like to have as little to do as possible with this part of the Bill. The draftsmen could do everything much better than they could.

Mr. BRUCE said he would adopt that suggestion. This clause had been adopted from the Prickly Pear Bill. He would withdraw the amendment. He moved that the following addition be made to clause 7:—

“The expense incurred in eradicating any noxious weed other than prickly pear, on land not being land held under lease from the Crown, shall as between landlord and tenant, in the absence of any special agreement, be borne in the following proportions respectively, namely:—

- (a) Where the interest of the tenant at the time when such expense was incurred is for a shorter period than three years, the whole of such expense shall be borne by the landlord.
  - (b) Where the interest of the tenant is for a longer period than three years and shorter than five years, two-thirds of the expense shall be borne by the landlord and one-third by the tenant.
  - (c) Where the interest of the tenant is for a longer period than five years and shorter than eight years, the whole of the expense shall be borne by the landlord and tenant equally.
  - (d) Where the interest of the tenant is for a longer period than eight years and shorter than twelve, two-thirds of the expense shall be borne by the tenant and one-third by the landlord.
  - (e) Where the tenant's interest is for a longer period than twelve years, the whole of the expense shall be borne by him.
- (ii) In the case of leased land infested with prickly pear (the same not being land held under lease from the Crown), and with respect to the apportionment of the expense of the eradication thereof on such land there is no special agreement between the landlord and tenant, it shall be for the Board, on the application of either the landlord or tenant, to make such appointment, which shall be final and binding on all parties concerned.”

He said he would like a discussion upon this matter with respect to the interest of landlord and tenant. If this Bill were passed there would be many tenants who would have noxious weeds upon their land, and he thought it was only right this Conference should express the opinion as to how far the tenant and landlord were liable. When the Act came into force there would be some tenants every one, two, three, or perhaps ten years, and the question was whether the landlord or the tenant should be at the cost of eradicating noxious weeds from the land. He had brought this forward simply with a view to discussion.

The motion lapsed for the want of a seconder.

Clause 7, amended as under, was put to the meeting and carried.

7. If it appears to the Minister that the local authority have neglected to exercise any powers conferred or duties imposed on them by this Act, the Minister may give notice in writing requiring the local authority to exercise the powers and perform the duties aforesaid within a period to be named in the notice.

If the said requirement is disobeyed, or is not complied with, it shall be lawful for the Minister to exercise the powers or perform the duties of such local authorities and recover the expense thereby incurred from such local authorities in the case of municipal councils or lands held in public trust and from the owner or holders of such other lands so occupied.

### Clause 8.

#### *Restriction of importation of noxious weeds.*

8. The Governor may make regulations—
- (a) prohibiting the importation into New South Wales of any noxious weeds or of the seed of any noxious weeds, and providing for the destruction of the same if imported contrary to the said regulations;
  - (b) regulating the importation into New South Wales of articles, the importation or use of which would in the opinion of the Governor tend to spread the growth of noxious weeds;

and the Governor may in those regulations impose any penalty not exceeding *twenty* pounds for any breach thereof.

All regulations made as aforesaid shall when published in the *Gazette* have the force of law, and shall be laid before both Houses of Parliament within fourteen days if Parliament be then sitting, but if not then within fourteen days after the commencement of the next following Session of Parliament.

Mr. BRUCE moved the recommittal of this clause with a view to certain amendments.

The recommittal was put to the meeting and lost.

Mr. BRUCE then withdrew his amendment and all other amendments on the business paper standing in his name.

Mr. ALISON (Canonbar) moved that the following be inserted as a new clause:—

“That the provisions of this Bill shall not apply to lessees or licensees or tenants of less than five years' tenure. Where the interest of the tenant or licensee at the time when such expense is to be incurred is for a shorter period than five years the whole of the expense shall be on landlord.”

He said it was too unjust and too absurd to ask these people to destroy the whole of the weeds on their holdings. He considered it was altogether too inequitable.

Mr. BACON (Brewarrina) seconded Mr. Alison's motion.

Mr. ATKINSON said he would like first of all to ask Mr. Alison how he proposed to reconcile this new clause with what had already been passed, that was that the municipalities should have the right to rent the ground for a period not exceeding five years if they could not find the owner. He considered they were now going back and putting it on the owner again, so that they might rent it, and still not be liable

liable to keep down the noxious weeds. The majority of them would put a special clause in the lease, and that was that all noxious weeds should be eradicated, so that the passing of this clause, if it were passed, would simply negative all these leases that had been made. Any private lease that had been made would be negated by a clause like this. If Mr. Alison would insert the words, "Crown licensees or Crown tenants," he would not object to it so much.

Mr. ALISON (Canonbar) said he was quite willing to insert those words.

Mr. ATKINSON said he supported the motion.

Mr. ALISON (Canonbar) said this motion would now read, "that the provisions of this Bill shall not apply to Crown lessees, &c."

Mr. ATKINSON said they wanted to get something that was fair and equitable to all; and he would say that after considering this proposal he hardly saw how they could carry it, even with the addition that had been proposed. He thought they should leave it now, and let that sort of detail regulate itself. He would ask Mr. Alison to withdraw the motion. It would possibly be against the interest of any landholder in the Colony. This, of course, would either introduce one of two things; it would either introduce longer leases from the Crown, or the Crown would have to pay. Now, he need hardly say the Bill would never pass Parliament, where the Crown would render itself liable for that, therefore it would compel them to give longer leases.

Mr. T. BROWN, M.L.A. (Budgerabong), said, if he understood the reading of this clause aright, it was on all-fours with clause 7, that was proposed by Mr. Bruce and had been defeated a little while before, distributing the cost of the destruction of the noxious weeds between the tenant and the owner. He understood Mr. Alison wanted to eliminate the tenant phrase altogether. As the motion was on all-fours with Mr. Bruce's previous amendment, he considered it out of order.

Mr. FLANAGAN (Gunbar) said he was sorry to disagree with Mr. Alison; but this was a most dangerous proposition that they should throw millions of acres of land from under the operation of that Act which they were trying to get put into force. A selector might have a piece of country and the Crown lessee might have a piece of country under the occupation of the Act, and he could continue to hold that land for four years, and let noxious weeds grow all over it. Why should any lands be excluded from the operation of the Act? If they wanted to eradicate noxious weeds, and if occupiers of land did not like to incur the responsibility under this Act, then by all means let them throw up the land, and then the Crown would incur the responsibility, or the selector who held the adjoining land would be glad to take the land into his own holding.

Mr. BACON (Brewarrina) opposed Mr. Alison's proposal. If it referred to private owners it would interfere with any leases now existing, and in other leases that might hereafter be made. The parties to these leases would make them in conformity with the Act, and they were simply legislating as between private persons. With regard to the addition of the Crown lessees and licensees that Mr. Atkinson proposed should be inserted, he opposed that, for he considered it would be an absurdity. It would take out two-thirds of the land in the Colony from the operation of the Act. The Bill would be thrown in the waste-paper basket, and their time would be wasted.

Mr. WILSON said he endorsed Mr. Flanagan's very decided opinion that this would practically destroy the whole work they had done. It did not matter whether the land was public or private, and he would point out that it seemed to him that so far as this Act could apply it applied to a plant that could almost be got under and exterminated inside of one or two years—certainly inside five years—that was if the opportunities of the reseeded of the plant were reduced to a minimum. It was held also that a great deal of the land that was now held under five years' lease was to be under conditions that the tenant had to be responsible for the prevention of any noxious growth. He thought the present Land Act gave them a very good cue as to how they could proceed. It was not to be expected that this Bill should deal with prickly-pear, and blackberry, and so on. That required a great deal of expert calculation, and he did not think they would ever arrive at any definite sensible result on such points, but with regard to the more or less annual weeds which cost less for the time being, and which the succeeding owner or tenant may or may not require to deal with for a time. In the following years the landlord was probably in a worse position than before. It was the tenant who would nearly always get the benefit of dealing with noxious weeds under this Bill.

Mr. ALISON (Canonbar) said he was astounded that there was so much opposition shown in this matter. It seemed to him so extraordinary to think that where the tenant had a lease for a year with no provision with regard to the destruction of weeds that they should propose to throw on him a burden which might be altogether beyond his strength. He had got a yearly lease under certain conditions, and they were proposing to throw on him the onerous responsibility which he never contemplated having to be upon him at the time he took up his lease. They were near the end of the Bill now, and he did not know whether Mr. Wilson intended to bring forward his resolution to complete the scheme of taxation. It seemed to him that they were passing the Bill without any scheme of taxation which would allow the Boards to have any funds to carry out the provisions of the Bill. He could not understand how they had got into such a muddle over this Bill. They had provided no means for collecting money, but had simply passed odd resolutions here and there.

The CHAIRMAN did not think Mr. Alison was in order.

Mr. ALISON (Canonbar) said the Chairman was perfectly right, and all he could say was that he could see his motion would not be carried. At the same time he was convinced that this Bill was too inequitable to receive the approval of the country. All leases could have enormous burdens thrown upon them to exactly the same extent as freehold land or land held under ninety-nine years' tenure. He entered a strong protest against them stultifying themselves so much by rejecting the amendment.

The question was put to the meeting and lost.

Mr. DAVIES (Gunnedah) moved the following as a new clause, "That in every district or part thereof in which prickly pear shall have been declared a noxious weed by proclamation under this Act, the Minister may vest the local authority charged with the administration of this Act with the administration of the Prickly Pear Act of 1886, subject to the control of the Minister, to carry out and enforce the provisions thereof and the regulations issued thereunder."

Mr. ATKINSON seconded the motion.

The question was put to the meeting and carried.

Mr. BACON moved "The recomittal of clause 10 with a view to the omission of subsection C."

The motion lapsed for want of a seconder.

## The Preamble.

A BILL to provide for the eradication and destruction and for preventing the growth of Noxious Weeds, and to prohibit and regulate the importation of Noxious Weeds and of articles which might spread their growth.

The preamble was put to the meeting and carried as printed.

Mr. PEARCE (Orange) moved, "That in view of the rapid increase of the sweet briar, prickly-pear, and tobacco-plant, and other noxious weeds, and the necessity for a cheap and efficient means of dealing with the same, this Conference urges the Government to offer a reward for the discovery of a cheap and efficient means of eradicating noxious growths."

Mr. LAURENCE (Balranald) seconded the motion.

The question was put to the meeting and carried.

Mr. ALISON (Canonbar) pointed out there were no financial clauses in the Bill.

The CHAIRMAN pointed out that a minority report could be written putting their views on paper with regard to that.

Mr. BACON (Brewarrina) said he would support Mr. Alison. The only clause in the Bill that proposed any funds was Mr. Alison's proposal which he desired to get expunged, because it was throwing on travelling stock the whole onus of providing funds for cutting noxious weeds in the district.

Mr. LESLIE (Forbes) proposed, "That a sub-committee be appointed to present the resolutions to the Minister and confer with him upon it; such sub-committee to consist of the Honorable Rupert Carington, Mr. J. M. Atkinson, Mr. Wilson, Mr. Davies, and Mr. T. Brown, M.L.A."

The question was put to the meeting and carried.

Mr. ATKINSON, amid acclamation, moved a vote of thanks to the Chairman for the very able manner in which he had presided over the business of the Conference.

The Honorable RUPERT CARINGTON (Jerilderie) said that there was one thing they must not forget, and that was the able assistance rendered to them by the secretary and shorthand writer, who was reporting the proceedings, on behalf of the Metropolitan School of Shorthand, for the Minister.

Mr. ALISON (Canonbar) moved, "That a record be made in the Minute-book of the valuable service rendered to the Conference by the secretary and shorthand writer."

Mr. PEARSE (Orange) seconded the motion which was carried.

The Conference then adjourned.

**TRUCK BILL.**

(PETITION FROM CERTAIN RESIDENTS AT KENDALL, CAMDEN HAVEN, IN FAVOUR OF

—  
*Received by the Legislative Assembly, 14 October, 1897.*  
 —

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South  
 Wales in Parliament assembled.

THE Petition of the undersigned respectfully prays that the Truck Bill, which has been introduced and passed its first reading, may be amended so as to bring the timber-getters under the protection of the proposed law, and that the measure be placed on the Statute Book with the least possible delay.

And your Petitioners, as in duty bound, will ever pray.

TRUCK BILL.

(PETITION FROM CERTAIN RESIDENTS OF THE HASTINGS RIVER DISTRICT IN FAVOUR OF.)

*Received by the Legislative Assembly, 6 July, 1897.*

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The undersigned to this Petition are of opinion that all industries here suffer through the injurious practice of mill-owners paying their labourers, viz., mill-hands, timber-getters, and teamsters, in goods for their labour instead of money. And seeing that a Truck Bill is to be introduced by the Honorable Mr. Garrard, with the view of bettering the condition of the working class, we, your Petitioners, pray that the said Bill be so amended as to bring the timber-getters and teamsters under the protection of the proposed law.

We also pray that the Truck Bill be dealt with at the earliest possible moment.

And your Petitioners, as in duty bound, will ever pray.

**TRUCK BILL.**

(PETITION FROM CERTAIN WOMEN RESIDENT OF CAMDEN HAVEN IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 29 July, 1897.*

---

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Women of Camden Haven respectfully sheweth,—

That the present system of saw-mill owners having stores is impoverishing the community, and is reducing our families to a condition very much akin to slavery.

We are deprived of the freedom of action by being compelled to buy out of their stores.

And seeing the Government have put down the truck system in Government contracts, we ask that your Honorable House will amend the Truck Bill introduced by the Honorable Mr. Garrard, so that it shall not be lawful for them to keep or share in stores; for we are of opinion that anything less than that would fail to do any good. We also pray that the Truck Bill be dealt with at the earliest possible moment.

And your Petitioners, as in duty bound, will ever pray.
