5150. The men from the whole of the regiment wanted to get into it? Yes; all the Imperial troops wanted to get there.
5151. The New South Wales hospital had rather a high reputation? Yes.
5152. Did some of the Army Medical Corps go through with you on the march from the Modder to Bloemfontein? Yes; we had the mounted bearer section.
5153. Did the ambulance come that way? Sometimes we had the ambulance with us; on other days we had not.
5154. Then you have no complaint to make as to medical attendance, or in regard to hospital arrangements? No.
5155. When you left the hospital at Bloemfontein, where did you go to? To No. 6 general field hospital.
5156. Was that fairly well managed? Yes.
5157. From there did you go to Capetown? No; I got better there, went back to Bloemfontein again to go to the front, but the dysentery returned, and I was sent back to Norval's Pont, and I was sent from there to Wynberg.
5158. What treatment did you get at Wynberg hospital? I was only there three days. I went then to the cavalry camp at Maitland.
5159. How was that fixed up? It was fairly good.
5160. Were you on duty there? They used to put some of the men on duty.
5161. Was the food and that sort of thing fairly good? We had bread and Maconochie's rations and Maconochie's bacon.
5162. How did you like the Maconochie ration? We liked it very well.
5163. There was hardly enough of it, was there? Hardly enough; we could have done with more.
5164. Was not the complaint general in regard to Maconochie's ration, that there was not quite enough meat? The men were always satisfied with Maconochie's ration.
5165. You got tinned bacon? Yes.
5166. Was that good? Yes, it was very fair.
5167. Did you get any money paid you when you were at the Maitland camp? Yes.
5168. Did you get paid up your full 1s. 5d. up to the day you left? No; we did not draw up to the day. I had only £4 10s. all the time I was over there. They gave me 15s. when I came on to the boat.
5169. Did you sign over your pay to any one here before you went away? No.
5170. You did not receive any of your Colonial pay in South Africa? No.
5171. All that you did receive was portion of the Imperial pay? That is all.
5172. You did not receive that right up to date? No.
5173. Were you sometimes short of money over there? Yes, we were always short.
5174. From a financial standpoint, the trip would not be very satisfactory to any of you—you would not make much money out of it? I made nothing out of it.
5175. If you were in employment here you would have been better off? Rather. I myself threw up a billet worth £3 10s. a week.
5176. You would not be able to raise £3 10s. a week over there, anyhow? No, hardly.
5177. *Mr. Chanter.*] Have you recovered your situation? No.
5178. Did you make application for it? I always followed droving and horse-breaking. I was in Queensland, and I came straight down to join the Contingent.
5179. Is your health sufficiently recovered to enable you to resume your previous occupation? No, it has not improved so far. I get pains in the legs sometimes, and feel very squalmish in the stomach, so that I cannot eat anything at times.
5180. I understood you to say, in reply to the Chairman, that sometimes the men were two or three days without food? Yes; on one occasion we were for three days—from the 11th March to the 13th March we had nothing to eat.
5181. Are those dates inclusive? Yes; I myself did manage to get a cob of corn.
5182. Were all the men of your company in the same position? No, just our troop.
5183. Where were you then? It was the day after Abraham's Kraal; it was from the day after Abraham's Kraal up to the day we got into Bloemfontein.
- 5184.

H. P. C.  
Nixon.  
4 Sept., 1900.

5184. How far away were you during that time from your base or the convoy of stores? We were guarding the left flank of the convoy.
5185. And yet you were without food for three days? Yes.
5186. Who was responsible for that? I do not know who was to blame for it.
5187. To whom did the men look for the supply of food? We always looked to Lieutenant Legge for it.
5188. I presume he must have been aware that you were guarding the left flank of the convoy? Yes; he himself was with us.
5189. Was he aware that the men were without food during the whole of that time? I think so.
5190. Did he not make any attempt to supply you with food? On the night of the 13th he sent back a man for food.
5191. That was on the third day? Yes; the man came up about 9 or 10 o'clock with a couple of tins of beef and some biscuits.
5192. During the interval, how close were you to the convoy? We were about three-quarters of a mile off.
5193. And you say that your officer, knowing that the men were without food, made no attempt to get it until the third day? I cannot swear that he knew we were without food during the whole of the time.
5194. Did the men complain to any of the officers? Yes; I myself complained to Lieutenant Legge.
5195. You told him you were without food? Yes; but it appears that at that time the Quartermaster was away somewhere with the transport; something happened to him—he got off the road, or something of that sort.
5196. Was there any other occasion during the time that you were at the front on active service when the men were kept without food? Yes; there was the other instance I mentioned to the Chairman to-day, when we left the Modder River and went to Klip Drift.
5197. *Chairman.*] On that occasion, how far away from the convoy were you? We were ahead of the convoy at that time.
5198. What distance ahead? I could not say.
5199. It is only 21 miles from the Modder River to Klip Drift? Yes.
5200. And the convoy would leave the Modder when you left? Yes.
5201. So that at night-time it would be somewhere between the Modder and Klip Drift? Yes.
5202. If it be a day's march from the Modder to the Drift, the convoy could not have been far off? No. At dinner-time, when we pulled up, we had nothing to eat; the convoy was nowhere in sight. With regard to the other incident, I could not swear that Lieutenant Legge knew all the time that the men were without food. I complained to him myself on the third day.
5203. *Mr. Chanter.*] Not before? No.
5204. Were there any circumstances which led you to believe that Lieutenant Legge was previously acquainted with the fact that the men were without food? No.
5205. *Chairman.*] But if rations were issued to the men, would not Lieutenant Legge know of it? It appears that some thirty-one of our troop got away somewhere, and were supposed to be lost.
5206. But your officer was with you? Yes, nearly all the time.
5207. And he would know if rations were issued, would he not? I suppose he must have known we had none, because he did not see us get any. I suppose he knew that none were issued.
5208. *Mr. Piddington.*] Did he have food himself? Yes.
5209. And you say it is possible that he might not have known that the troop were without food for three days? He might not have known it.
5210. *Chairman.*] What do you mean when you say that some of the troop were supposed to be lost? We were in our right place when we were on the left flank, but they thought we were on the right.
5211. What was the character of the country;—could you see the transport easily? Yes.
5212. So that in the daytime you were not lost, because you were attached to the convoy? Just so, and at night time we came in closer; we were then only about a quarter of a mile from the transport.
5213. *Mr. Piddington.*] And yet you could not get food? No.
5214. Being at night only a quarter of a mile from where the food was stored? That is all.
5215. Did you not, after the first day, complain to Lieutenant Legge? No.
5216. Did not any of the men then complain that they had been without food for a whole day? That was a common occurrence.
5217. And on the second day was no complaint made? I do not know whether there was any complaint on that day, but on the third day I myself complained to Lieutenant Legge.
5218. If the men had nothing to eat for three days, and were within easy distance of the convoy, it seems strange that none of you complained to the Lieutenant, and that he did not send a man to communicate with the convoy in order to get food? Anyhow, he did not.
5219. What other officer was with him? He was the commanding officer. We were riding along with the transport, one behind the other, each man at an interval of from 70 to 90 yards. Thirty-two troopers went on and got right across the road to the right. They either crossed in front of the transport, or found a gap in it; anyhow, they got to the right instead of being on the left, and through that they reckoned that we were lost. On the fourth morning we ran down some sheep, and had some mutton for breakfast.
5220. How long afterwards was it that you were able to get supplies from the convoy? We went into camp on that day. We were in camp for about a fortnight. We did not go straight into Bloemfontein.
5221. *Mr. Chanter.*] Did you get plenty of food in camp? We could have done with more.
5222. *Chairman.*] But you got your full rations then? They started to give us flour there; we got 1 lb. of flour.
5223. *Mr. Chanter.*] With regard to the saddles, you said that the horses in your troop had sore backs? Yes.
5224. Where did the saddles affect their backs? Some were affected on the withers, but the majority across the backbone.
5225. To what do you attribute it,—was it due to the faulty construction of the saddles, or the want of stuffing? The saddles were never stuffed.
5226. After you got to the front? They were not stuffed when we went away from here.
5227. Was there any saddler in your company? Yes; we had a saddler who was left behind at Modder River, and at Bloemfontein I was put on to the saddlery.

H. P. C.  
Nixon.  
4 Sept., 1900.

5228. Did you stuff any of the saddles? No.
5229. No request was made to you to do so? No; I simply mended those that wanted mending.
5230. Did not the officers in charge of your troop take any steps to get the saddles put into better order in order to protect the horses' backs? They did as far as they could. They told the men to roll the blankets in such a way that the saddles would not hurt the horses' backs. They did all that was in their power to stop the saddles from hurting the horses.
5231. You have been used to the bush? Yes, all my life.
5232. Were the saddles supplied to you a fair sample of the saddle which would be used in the bush in Australia? I would not ride on one of them in the bush.
5233. From your bush experience, is not loose padding and that sort of thing very likely to give a horse a sore back? If a horse is cut in the backbone, you can save him by making pads on each side of the sore.
5234. Did you make those pads? Yes.
5235. Did the saddles spread, or split in the trees? Not that I know of. Some of them spread, but I could not say anything about their splitting.
5236. What use did the saddles receive in camp ordinarily; did they receive the use which bush saddles would ordinarily receive? Yes, the saddles were just laid down where we were; there was no particular place in which to put them.
5237. Were they used as seats? I could not say anything about that.
5238. You, yourself, did not see it done? No.
5239. During the time you were at the front, did you yourself, or any of your comrades, receive any of the parcels sent by people in Australia? None were received while I was with them.
5240. Did you, or any of your comrades, expect any parcels from friends or relatives or other donors in the colony? I did not expect any myself.
5241. You did not hear of any other men who did? No.
5242. Did you hear the complaint made by any troopers that they had been advised that certain parcels had been sent to them, and that they had not received them? All the troops were grumbling about not getting their parcels through.
5243. You do not know of any who received their parcels? No; no parcels were received while I was there.
5244. Is there any further statement you would like to make to the committee? No, I think not.
5245. If you were in good health, and your services were again required in South Africa or elsewhere, would you, in the light of your experiences and of your treatment, volunteer to go? I would go under my own officers, but I would not go under the same leader.
5246. Would you go under Lieutenant Legge? Yes.
5247. And chance your being starved for another three days? Yes.
5248. But you would not go under Colonel Knight? No. I do not blame Lieutenant Legge at all. The man I blame for the whole thing is Adjutant McGlynn. He was the principal man to blame. On the "Southern Cross" he was supposed to inspect everything we got, and they used to send us rotten fish, bad tripe, and rotten porridge.
5249. But he would not have anything to do with the supply of food when you were supposed to be lost? Yes, he would.
5250. *Chairman.*] He is the quartermaster, and the duty of the quartermaster is to look after the provisions? Yes.
5251. It is his special duty? Yes, he is supposed to look after the convoy.
5252. Where was he when you were starving during those three days? I do not know, we could not find him.
5253. Was he hiding anywhere do you suppose? I could not say. Anyhow, when we were short of food we could not find him.
5254. *Mr. Piddington.*] Did he turn up after you had been supplied with food? Sometimes he would crawl in about midnight with the waggons, we would not see him all day; he was not suitable for the position. The other regiments seemed to get their food all right.
5255. You think he was incompetent then? Yes.
5256. You referred to the incident of the trooper rescuing you—was that in a general engagement? Yes, we were out on the right flank at Abraham's Kraal; the Imperial troops were fighting to the left of us.
5257. *Chairman.*] There might be many instances of bravery which have not been reported? That is the only one I know of.
5258. *Mr. Piddington.*] Was the act to which you refer witnessed by all the officers? It was seen by the whole regiment.
5259. Yet, as far as you know, no report was made to the Imperial authorities? No.
5260. *Mr. Chanter.*] Did the men make no comment upon it? The men were speaking of it, but the officers did not say anything to Ellis or me, although they saw him gallop back to me.
5261. Where did you have your advances made to you? I had £2 while we were fighting up at Bloemfontein, and down at Maitland I got the other £2 10s.
5262. *Chairman.*] Have you since received all the money due to you? No.
5263. Have you applied for it? No, they could not settle with us, they have not the pay-sheets here, it is Imperial money.
5264. But N.S.W. money? I have received £31 19s. 6d. of that money since I came back.
5265. Does that square you up so far as the Colonial authorities are concerned? No, it does not square me up.
5266. Have you applied to the Government here, or to the Military authorities for your pay in full? No, I have said nothing about it.
5267. You got what you required? Yes.
5268. You had no difficulty in getting it when you applied to the Military authorities? When we landed first they kept us five days without any money. They never asked us if we wanted money or anything else. We went into barracks, I think on Friday night, and some of the men could not go anywhere on the Saturday because they had no money.
5269. Are you aware that the Military authorities had instructions from the responsible Minister to the effect that if you wanted money it was to be supplied to you? I saw it stated in the newspapers that Sir William Lyne had said that it was no fault of his that the men had not been paid.

5270.

5270. I suppose you have had some experience in bullock-driving in Queensland? Yes.
5271. How were you impressed with the driving of the transports in South Africa? The men could drive them right enough, but they were not so good as the drivers out here.
5272. Did you notice the sort of whips they used? Yes; they were altogether different from ours.
5273. More like fishing-rods? Yes.
5274. It took quite a number of men to handle one team, did it not;—how many blackfellows were generally employed in driving a team? Two; one held the reins while the other fellow would walk along and whip up the team. I am speaking of mule-teams. In the case of bullock-teams one man would lead the leaders along while the other would keep the team going.
5275. Do you not think that one Queensland "bullocky" would be better than a couple of blackfellows? He could drive the bullocks on his own quite as well as the two men could drive them.
5276. Did you notice the loads they carried on the transport waggons? Yes; they were good loads for soft country.
5277. Do you know what the regulation load is? No.
5278. You would not be surprised to learn that it is only 4,500 lbs. for a team of sixteen bullocks? I do not know the weight.
5279. Do the bullock-teams in South Africa travel faster than the bullock-teams in Queensland and New South Wales? I do not think so.
5280. *Chairman.*] You did not see them at any time shaking the teams up to a trot? I have seen them trotting along with Scotch carts, but not with team.
5281. On the march from the Modder to Bloemfontein the teams kept up pretty well with you? On some days.
5282. You were marching on the average—how far in a direct line? It would be hard to say. We might be going straight for some distance, and then we would have to gallop away 5 or 6 miles to a kopje.
5283. Did you not average 16 or 17 miles a day? I could not swear to it.
5284. You did not hear what distance the infantry marched?

H. P. C.  
Nixon.  
4 Sept., 1900.

WEDNESDAY, 5 SEPTEMBER, 1900.

Present:—

MR. CHANTER,  
MR. COOK,

MR. HURLEY,  
MR. MEAGHER,

MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Colonel Henry Douglas Mackenzie recalled and further examined:—

5285. *Chairman.*] When you were here before, I think you were examined with reference to the gossamer helmets supplied to some of the Contingents? Yes.
5286. Were you then under the impression that that was the sort of helmet supplied to all the Contingents from the Second Contingent onward? No; I do not think that was my impression.
5287. Your impression was that there was another quality of helmet which had been supplied? That was my impression.
5288. On looking over your evidence, I cannot find that you make any reference to any other class of helmet? I do not think you will find that I did.
5289. Do you not think it would have been a proper thing, if you knew of a different class of helmet being supplied to some of the Contingents, to let the Committee know of it? I am not speaking from certain knowledge now.
5290. The matter does not come within your province? No.
5291. With regard to the officers of the Contingents, did you recommend certain men to the General from the lists which were put before you? If you look at my previous answers to questions on that subject, you will see that I explained it pretty fully.
5292. I admit that you were one of the best witnesses on the subject; but the General says that he took the advice of his officers in the matter? I think you will find that is explained in my answer to some of the questions. I think I said that the General called for all the information we could possibly give him as to the numerous applicants. I will go further, and say that there were cases in which, if I knew a man to be very suitable, I should say, "This man will make a very good officer in such and such a position;" but I did nothing beyond that; my work ceased there.
5293. In connection with the Imperial Bushmen's Contingent, I find that a Mr. C. Hill, 38 years of age, who had had experience in the Kaffir war, Basuto war, and the Moirisi campaign, and who had also served in the Cape Colony Yeomanry, in which he held a commission as lieutenant, and who offered to cable to Mr. Douglas, a member for Port Elizabeth, in the Cape Colony, and who was in command of the company of Yeomanry there, for his credentials was not selected. This man, with all his qualifications, was rejected, while a number of lads, who had no previous military experience at all, were accepted. Can you give us any explanation of that; the man does not seem to be recommended by Colonel Mackay, by the General, or by anyone. Then there is also the case of Lieutenant A. E. Gidley King, who had had no previous military experience. He was accepted. Can you tell us why in these two cases the one man was accepted and the other was rejected? No, I cannot; but there was a letter from Colonel Mackay with reference to some of the recommendations, and that may throw some light upon the subject.
5294. He does not seem to have dealt with it at all; no one seems to know anything about the matter. The General says it is probable that Mr. King and others were selected because they belonged to old families;—did that circumstance influence you at all in making the selection of officers? No, certainly not.
5295. You simply reported upon their qualifications? Yes; I forwarded any information I was in a position to give.
5296. In the case of Mr. King there was no military qualification? Then he would have "None" written against him.
5297. He has "None" written against him; but higher up on the list you will see that Mr. C. Hill, who had quite a long list of military qualifications, was rejected;—can you explain that? I cannot.

H. D.  
Mackenzie.  
5 Sept., 1900.

- H. D. Mackenzie.  
5 Sept., 1900.
5298. Do you think anyone could explain it? I think the only person who could possibly explain it would be Colonel Mackay himself.
5299. Hill is not recommended by either the General or by Colonel Mackay, whereas both Oxley and King are recommended by them. King appears to be down on both of their lists? I think I remember it being said that Oxley had been out at the camp a considerable time and showed great promise. He was considered a very desirable officer; he had special qualifications as a bushman.
5300. Do you know how old he is? I do not, but I suppose he would be about 28 or 30.
5301. How could that be; the General says he objects to giving any one over 26 a commission? He may not have been over 26; but from what I can remember he must have been 28, if not more.
5302. I suppose his age could be obtained;—every private or officer who went away, I presume, was required to give his age? Yes; the age can be obtained.
5303. Do you not think that Hill would also have qualification as a bushman, especially seeing that he had already had service in South Africa? It may be. You can see at once what a man's qualifications are, but you do not know what his disqualifications may have been.
5304. That is just what we want to know? That I cannot tell you.
5305. Can anyone tell us what his disqualifications were? I am not at this moment aware.
5306. There would be no disqualifications, I suppose, if they were not stated? What I meant to say was that a man may have disqualifications in the eyes of his immediate commanding officer which you or I would know nothing about.
5307. He does not seem to have been recommended;—surely the prejudice of the commanding officer would not prevent a man from getting a commission? I think so; where you have a great number to select from.
5308. But you say you do not know whether or not Hill had any disqualifications? No.
5309. As far as you know we cannot get the information from anyone;—there does not seem to be any information at all on the subject? I should like an opportunity to look up the papers in order to see if we could not get some information on the point.
5310. That is only one case. This man was a native of South Africa. He had had a great deal of military experience there, and he offered to cable to South Africa to get his statement authenticated, and he never had a chance, while many men without any qualifications at all were selected. Take Lieutenant Irving for example. He does not appear, according to this list, to have had any previous military qualifications. The next officer upon the list, with no previous military qualifications, is Lieutenant Gidley King? I presume that in both cases the men were bushmen.
5311. But you would not call a lad 22 years of age a bushman? He may have been brought up on a station, and have spent a great part of his life there.
5312. Then we find that Lieutenant S. L. Mackenzie had no previous military qualifications, and also Lieutenant H. C. Michell. Further down on the list you will find the name of Lieutenant Oxley, the name of Second Lieutenant Rainey; also the name of Lieutenant Rudkin, and the names of Lieutenant Ryrie and Lieutenant Lawson. None of these men appear to have had any previous military qualifications. The fact of a man having a previous military qualification seemed almost to debar him for selection. Was any pressure brought to bear upon you in the matter? No.
5313. No influence was used with you? Nothing which you could call unfair influence. Of course persons would ask that, other things being equal, so-and-so might be chosen. I do not think anyone would attempt to bring pressure to bear upon me in a case of that kind.
5314. If the General says that great pressure was brought to bear upon him it did not come through you? No.
5315. You do not know of any pressure being brought to bear in regard to the selection of officers? No.
5316. Will you look up the matter and see whether you can get us information as to the reason for the acceptance of some of these men with no previous military experience? You may find some information in Colonel Mackay's original letter containing the recommendations.
5317. There is nothing in that letter dealing with this matter? I was about to say that a man going in command of a contingent would be allowed a free hand in the selection of his officers.
5318. And very properly so, you think? I do.
5319. If you were going away in command of a regiment, you would think that it was a proper thing to give you a certain amount of power in the selection of officers? Certainly.
5320. There has been an inquiry going on up at the barracks for some time, has there not, with regard to the finances of the Forces? The Treasury Inspector has been there for a considerable time making inquiries.
5321. Do you see by the papers this morning that he has handed in a report? Yes.
5322. Did you give evidence at the inquiry? No.
5323. That matter, again, does not come within your jurisdiction? No.
5324. You will find Colonel Mackay's letter printed in the evidence—it does not appear to bear upon the question of the recommendations at all? It does to a certain extent, because Colonel Mackay says that after the most careful investigation and a personal inspection at drill and in the lines, he had selected the officers named in the accompanying schedule, and recommended them for approval and publication in the *Government Gazette*. In regard to the subalterns, he says:—"As regards the subalterns, I desire to have them under further test till the end of the week, when I will intimate the names of those whom I recommend to be first Lieutenants." The list which follows is, I believe, the list you have handed me. There was a list submitted by the General which differed certainly, in four or five cases, if not more, as regards names. It also differed, as regards seniority, from the list submitted by Colonel Mackay.
5325. In the General's list, which you will find printed on page 60 of the evidence, you will see recommended Captain Copeland, of the Reserve Officers, Lieutenant Conroy, of the Corps of Engineers, Lieutenant Grace, of the 3rd Infantry Regiment. It was also recommended that Captain Luscombe should be Adjutant;—you know, I suppose, that all these men I have named were at the front in South Africa then? I think so. Lieutenant Grace certainly was, because I remember the General saying that he ought to have a commission reserved for him, he having had the pluck to throw up his commission here and go as a private.
5326. You knew that Captain Luscombe was at the front? He was there as a Special Service Officer. Captain Copeland also went as a Special Service Officer.

H. D.  
MacKenzie.  
5 Sept., 1900.

5327. He went about the 17th January? Yes.
5328. Lieutenant Conroy went with the Citizens' Bushmen's Contingent in the Atlantian? He went about the 1st March, I think.
5329. All these men were at the front, so that the General had no authority from them to nominate them for any of these positions? But they would have been pleased if they could have had them.
5330. But would they? Yes; to join a regiment going to the front is better than to be in a position of a Special Service Officer not knowing where you are going or what is to be done with you.
5331. Do you know where these officers were being employed? No.
5332. Then how can you say that they would be better pleased with the General's nomination. Do you know, for example, that Captain Copeland was second in command of the Colonial Pioneer Corps under Colonel Parrott? I heard that later.
5333. Do you think that an Engineer would change his position from second in command of a corps of his own profession to take the captaincy of a company in a Bushmen's Contingent;—if you were a professional man engaged under those circumstances would you care to leave your professional employment? I should not care to leave my profession, but if I had a chance of going to the front I should not cavil as to what regiment I was going in. I should be glad under those circumstances to get into any.
5334. But do you know that Captain Copeland was at that time right at the front? I do not know that.
5335. You have no reason to doubt it? No; I have since heard that he was in the Colonial Pioneer Corps.
5336. The position of second in command of the Colonial Pioneer Corps at the front would be better than a captaincy in a Bushmen's Contingent? I suppose that when the General made these recommendations he had regard to the interests of those who had already gone away.
5337. Do you remember it being stated in the newspapers that Captain Onslow Thompson and Captain Larkin had been appointed to the Second Contingent;—as a matter of fact, their names were gazetted? Yes; but Captain Thompson was withdrawn at his own request, and Captain Larkin also withdrew. I think he said the time was too short to enable him to complete his private arrangements.
5338. Would you be surprised to learn that these gentlemen deny having volunteered at all? No, I should not; they were too such smart young fellows that they were probably offered the positions.
5339. They were recommended to the Minister for Defence for appointment? Yes.
5340. Without their knowledge and consent. Does it not appear to you that this method of recommending people for positions without their consent is not a success? I am not aware that the recommendation was made without their consent.
5341. I think the General admits that in his evidence? I am not aware that that is so.
5342. As a soldier, would you not think it rather trying if you had your name published in the newspapers as having volunteered, and then as having withdrawn? I do not think you should look at it in that way, because men have private business and private affairs which some times necessitate their withdrawing.
5343. But they would be supposed to have made their business arrangements before volunteering;—would not that be the case? It might, nevertheless, be afterwards necessary for them to withdraw. I was wondering for the moment whether there were any other cases of that sort.
5344. Can you give us any information as to the way in which these officers were selected;—have you any papers which would give us any idea as to the system adopted? The system generally adopted was this: A list was submitted to the General. Perhaps ten men might be wanted, and a list of twenty names would be sent in. It would be marked and sent out, and at the end of a week or so a report would be received that So-and-so was "very good," and that So-and-so was "quite unlikely," and so on. That was the system adopted as far as possible.
5345. But in those cases there would be some reason for marking a man as "quite unlikely"? Yes.
5346. You would not mark a man "quite unlikely" on account of the spelling of his name? I do not suppose there was any examination of that sort.
5347. I mean there would surely be some reason for marking a man as "quite unlikely"? Supposing, for example, that he could not write.
5348. That would be a sufficient ground. But take another case. Here is a man who had four years in the Second Life Guards in Egypt; his name is Young. Here is another man named Wootton, who was eight years in the Imperial Army, and four years in the Imperial Reserve. Then there is a man named Webster, who served in the Zulu war and the Boer war. All these men seem to have been carefully put aside. Can you give us any explanation of the reason? I am afraid not. You cannot get behind Colonel Mackay's mind.
5349. But the list submitted by the General and that submitted by Colonel Mackay, with the exception of the men I have named, are practically the same, although arrived at, perhaps, from different standpoints. Surely in the selection of officers there ought to be some method adopted? Take the case of the other Bushmen's Contingent. The money being the citizens' money great consideration was given to Major Carey's recommendations in the selection of officers. I know the General and Major Carey had a list there every morning and went into it by themselves.
5350. In the case of the Imperial Bushmen's Contingent, did every man have to show that he was a bushman before he was selected? Yes; they had all to get a certificate or something of that sort to that effect.
5351. In the case of the Citizens' Bushmen's Contingent was the same rule adopted? I believe so.
5352. Was Lieutenant-Colonel Airey a bushman? He used to be when he lived in Queensland.
5353. That must have been some time ago? Yes.
5354. Was Captain Bennett a bushman? I could not say.
5355. Was he not a school-teacher? He was at one time.
5356. Was it not his profession and did he not get leave of absence to go away? I believe he did.
5357. Would you call Lieutenant Drage a bushman? I do not know whether he was or not.
5358. Was Lieutenant Garvan a bushman? That I do not know.
5359. Was Captain Hilliard a bushman? I should not call him a bushman.
5360. Was Lieutenant-Colonel Knight a bushman? No; certainly not. Was not in any Bush Contingent, and this applies to various others herein mentioned.
5361. Was Captain Lenehan a bushman? I do not know.
5362. Was Lieutenant McGlynn a bushman? That I cannot say.

H. D.  
Mackenzie.  
5 Sept., 1900.

5363. Was Major Murray? He was a good bushman.
5364. He is a barrister;—he was educated at Home, and started his profession since he arrived here? Yes; but he has done a lot of Circuit work.
5365. Then would you call a Judge a bushman? He might be.
5366. Would you call Lieutenant Mackellar a bushman? I do not know.
5367. You know, as a matter of fact, that Lieutenant Mackellar was a young lad not quite away from school? I know that he was a very fine young fellow.
5368. Would you call Major Savage a bushman? Certainly not.
5369. It seems, then, that none of the officers were bushmen? It was difficult to combine officers and bushmen; but they did try to do so; and when they could get a combination of the two qualifications the men were accepted. When they could not get bushmen who were officers to take the places they had to fill them up with officers who were not bushmen.
5370. It does not appear that they could get the combination in this case at all? I do not think they were able to do so in many instances.
5371. Some of the officers do not appear to have had any previous military experience; take Lieutenant Garvan, for example;—what military experience had he had? Very little.
5372. He was not a bushman? I do not think so.
5373. Have you heard any complaints from the men since their return as to their treatment? No; I have received none. I have met every one of the Contingents as they have come back, and have always found Mr. Mitchell, the Secretary to the Patriotic Fund, there also to meet them. The same course was adopted in each case. Only the other day I asked some of the men whether they had had a good breakfast and a good dinner, and so forth, and they said that they had, and they seemed perfectly happy and contented.
5374. It would certainly not be very safe for them to say much more than that? Why not; they would have a perfect right to make a complaint if it were of a legitimate character.
5375. But have not these military people rather strong ideas about insubordination and things of that sort? Not in the case of any legitimate complaints.
5376. For instance, the General says in the course of his evidence that a man was refused a commission because he was insubordinate? If he was insubordinate, that is different from the making of a complaint.
5377. A man writes a letter charging Lieutenant-Colonel Airey, first of all, with using insulting language, and secondly, with assault. In the course of his letter he used these words, "If those are the actions of a soldier, all I can say is that he never was taught the same in the British Army." The General considered those words insubordinate? They are distinctly highly irregular. Fancy sending one officer in command of another having that sort of feeling towards him.
5378. But neither of the men were officers in the regiment at that time? But if they were going to become officers it amounts to the same thing. If a man had taken up that position I would not have recommended him for a commission in that regiment at all—in the interests of the service and of the regiment itself.
5379. Do you think it proper of Lieutenant-Colonel Airey to use insulting language, and to hit one of his officers over the face with a riding-crop? I do not think so.
5380. Do you not think that the man who permitted the assault ought to be punished rather than the man who was assaulted? It is necessary to discover in the first place what the assault consisted of. If I were passing along a barrack verandah, and tapped a man with my pencil and asked him how he was getting on, and whether he had received the clothes he had asked for, I should be surprised if I were told afterwards that I had assaulted him.
5381. But suppose you called him many sanguinary sorts of fool, and made reference to his accent? I myself am not given to using bad language.
5382. But if some one came up and made insulting reference to your accent and then hit you across the face with a riding-crop, would you consider that amusing? Certainly not.
5383. Do you not think an officer, of whatever rank, should take his punishment where punishment is due? If he has committed an offence.
5384. Did you make inquiry into the matter? No.
5385. Then how did you find out the circumstances? This is not the first I have heard of the matter, but I did not hear of it until after the Contingent had left.
5386. Did you not think it proper for an inquiry to be made? If the man had reported the matter at once, there would have been an inquiry.
5387. Suppose that at the time neither man belonged to the regiment? That is of no consequence; they were in camp as officers, although they were not officers of the Contingent. The officer you refer to was an officer in the service of the Colony.
5388. The matter was brought under the notice of the General, and no action was taken. It was brought under the notice of the Minister of Defence, and then no notice was taken? What became of the matter after that?
5389. The General had the letter here the other day;—no action was taken at the time? Of course at that time there was a tremendous rush of correspondence, and unless attention was specially called to the letter it would no doubt slip through.
5390. *Mr. Cook.*] The matter is one which would clearly be within your jurisdiction? Yes; if a proper complaint came forward we ought to be able to trace it.
5391. There has been a good deal said this morning, and at other times, about the selection of the officers;—you said, I think, that no doubt great reliance would be placed upon Colonel Mackay's discretion? Every commanding officer ought to have a good deal of discretion in selecting his officers, especially for active service.
5392. Where there is a difference of opinion the General and you yourself would yield largely to Colonel Mackay? I should not have anything to say.
5393. But, if you had, you would yield largely to the discretion of the Commanding Officer? Yes.
5394. You would do that in the interests of the harmonious working of the regiment? Exactly.
5395. Can you tell us what is the rule in the Imperial service bearing upon the selection of officers;—how are they selected there? An officer there gets his commission, and is sent to a regiment; there is no selection in the matter.
5396. Who asks the officer to go to a particular regiment? He obtains a commission, through examination or otherwise, from the War Office, and he is then appointed to a regiment.
- 5397.

H. D.  
Mackenzie.  
5 Sept., 1900.

5397. But take a case of Volunteers being turned into regulars and sent out, who would officer them? I do not know how they would manage in that case.

5398. There is no rule in the Imperial service bearing upon it? Not for a transfer of that sort. In regimental commands there is no special selection, but when you come up the staff selection does come in. I presume that General Lord Roberts personally selected the whole of his staff.

5399. I am speaking of the officering of regiments. Now take for instance the case of a regiment at Home which is ordered upon foreign service;—there may be officers in the regiment unfit, from a variety of causes, to go abroad? Supposing they were medically unfit, their places would be filled up by others. 5400. Say that, in the case of a particular regiment, a dozen officers were moved out because they were unfit? It is almost impossible to imagine such a case, because the whole of the officers would have to pass a stiff medical examination before going into the regiment.

5401. Supposing there are forty or fifty officers in a regiment, do you think it would be almost impossible that out of that number ten or twelve would be unfit to go on foreign service? I should think it unlikely.

5402. Suppose there were five who were unfit to go, who would have to do with the selecting of five others to take their places in the regiment? We will suppose that the 2nd West Kent Regiment was five officers short; what you want to know is who would fill up their places?

5403. What I want to know is whether it would be done irrespective of the Colonel in Command? Not altogether irrespective of him. If the Colonel were filling up four or five vacancies, he would, probably, write in, recommending the transfer of such and such officers, and, other things being equal, the chances are that that is what would be done. Under those circumstances the War Office would meet the Colonel as far as they could, and they would fill the remainder of the positions with the officers at their disposal. Suppose you had a friend who had a commission in the Imperial service; you would write to the Colonel of, say, the Dragoon Guards, and say that your friend had just got a commission, and you would be glad if you could possibly get him into his regiment. The Colonel would write to the War Office, and say that there was a vacancy in his regiment, and that so-and-so from Australia would like to join, and that he would be glad to give him a chance. The War Office might, under those circumstances, fall in with the view of the Colonel.

5404. Would the War Office endeavour to find out whether any other officer would suffer any injustice in consequence of the proposal of the Colonel? If there were any other applicants, their applications would go through the Colonel of the regiment first of all.

5405. There is no hard-and-fast rule bearing upon the question that you are aware of? No.

5406. *Mr. Meagher.*] The officers to whom you were referring a short while ago were the officers of the Imperial Bushmen's Contingent? Yes; but not all of them.

5407. Can you produce a list of the officers of the Citizens' Bushmen's Contingent? Yes, here is a list. (*Vide Appendix E1.*) That is the list as gazetted.

5408. Have you a list of the applicants? Yes; I do not know whether they are all in the list, but I think so. (*Appendix E2.*)

5409. *Mr. Cook.*] You have, no doubt, heard that there have been many complaints about the provisioning of our men in the field? I do not think I noticed any with regard to the field, but I saw complaints in the newspapers about the provisioning of the men on the transports. The only things I have read of with regard to the field are things which you might expect to happen anywhere under such circumstances; that is to say, men being occasionally short of rations, and having to go on half a biscuit a day and so forth.

5410. I presume the General Commissariat arrangements would apply to the whole force in South Africa? Yes.

5411. What part would our own officers take in connection with the actual getting of food for their own regiments? I do not know what arrangements may have been made in that respect.

5412. So that if there has been any failure in this regard which has not also applied to the Imperial troops, it would be the fault of our own officers, would it not? It might, or it might not be. For instance, the rations might be taken to one part of the field where they could be easily distributed, whereas in another part of the field it might take half a day to get at them.

5413. But that would apply equally to Imperial troops? Not necessarily. One part of the troops might be easily accessible, and another part might be 5 miles distant in a part of the field practically inaccessible.

5414. But the Australian troops would not invariably be selected to go into the most difficult country? It is rather difficult to answer supposititious questions, but, speaking generally, all I can say is that if the food is accessible, the officers are responsible for the men getting it.

5415. *Chairman.*] It is the special duty of the quartermaster? Yes; and the officers.

5416. *Mr. Meagher.*] With regard to the Citizens' Bushmen's Contingent, what steps were taken as to the selection of the officers? I think nearly the whole of the men were chosen between the General and Major Carey representing the citizens. I suppose Lieutenant-Colonel Airey would also have something to say in the matter.

5417. Do you know that men with pretty good qualifications applied for positions in the Contingent and were refused;—for instance, do you know that Captain Le Mesurier applied to go and was refused? Yes.

5418. Do you consider him a sufficiently capable man? He was refused because it was considered that his eyesight was against him.

5419. *Chairman.*] As a matter of fact he failed to pass the doctor? Yes, for eyesight.

5420. *Mr. Meagher.*] Did his eyesight improve when he was sent away with the Imperial Bushmen's Contingent afterwards? I do not think so.

5421. There had been no marvellous cure of his defective eyesight, as far as you know, enabling him to go away with the Imperial Bushmen's Contingent? So far as I am aware, there was no alteration in his eyesight in the interval.

5422. You are quite clear as to his eyesight being the obstacle to his going with the Citizens' Bushmen's Contingent? That was decidedly my impression.

5423. I suppose you will admit that his duties would require the exercise of the same alertness and of the same faculties generally in the case of the Imperial Bushmen's Contingent as in the case of the Citizens' Bushmen's Contingent? Yes.

5424. His responsibilities will be just as great at any rate in the case of the Contingent with which he has gone? Quite.

5425.

H. D.  
Mackenzie.  
5 Sept., 1900.

5425. Do you remember Captain Cheffins, of Bathurst? Yes.

5426. He is a very capable man, is he not? He was in the Naval Artillery at one time; he is a very good organiser.

5427. Do you know what objection there was to his going? No, I do not.

5428. Can you tell me why a man like Captain Cheffins should be refused, and a young man like Lieutenant Westgarth should be recommended by the General Officer Commanding, and should be taken? I take it that, other things being equal, the General would recommend an officer already serving in preference to one who was not.

5429. Still, it is not very long ago since Captain Cheffins was a captain in the 3rd Infantry, or since he was in the Naval Artillery Volunteers? I am not quite sure what was done in his case. I think, from what I can recollect, he went into the Reserve.

5430. Was he not in the 3rd Infantry subsequent to his being in the Naval Artillery Volunteers? I am not sure; it is a long time since I have seen him.

5431. Can you tell me what experience Lieutenant Westgarth had of military service? I should say none, before he joined the Artillery.

5432. How long was he in the Artillery before he was selected? I should say about three months; it might be six.

5433. How old should you say he was? I suppose 23 or 24.

5434. What was his occupation;—was he a bushman? I cannot say.

5435. Can you tell me anything about Lieutenant Allen? I do not know anything about him.

5436. With regard to Mr. Cornwall, he seems to have had no previous military experience, and was recommended by the General Officer Commanding;—what special qualifications had he? I do not know.

5437. Can you tell me anything about Lieutenant Gells; what was his previous military experience;—it was nil, was it not? I remember meeting Lieutenant Gells out at the camp. Whether he was a squatter or not I do not know, but he was a bushman. I know him slightly, but what part of the country he came from I cannot say.

5438. How long have you known him? Off and on for several years.

5439. In your conversations with him did you test his knowledge in any way? No; but I know he is a bushman; it was not my business to subject him to any test.

5440. But there are many men living in the bush whom you would not call bushmen? Quite so.

5441. There are many men connected with station properties whom you would not call bushmen. For instance, Lieutenant Cains, of the Australian Rifles, holds a position as lieutenant; he applied to go, but he was refused. Can you tell me why men like Mr. Cornwall and others, who had no experience, were accepted, while men like Lieutenant Cains, who has had some experience, were refused? I cannot give you any reason for it at this moment.

5442. Can you explain why Lieutenant Cains was afterwards permitted to go with the Imperial Bushmen? No.

5443. Can you tell me why Mr. C. Brown, whose qualifications were three and a half years in the Dragoon Guards and four years in the Scots Guards, but who did not seem to have any influential gentlemen to recommend him, was refused;—I suppose you would hold that three and a half years in the Dragoon Guards and four years in the Scots Guards would give a man a fair idea of cavalry work? It sounds good.

5444. Can you give me any reason why Mr. Brown was not taken? I could not give you a reason why any of the men you have mentioned were not taken; I had nothing to do with the selection. I could not give you any reason why some men were taken and others were left.

5445. But you hold an administrative position in the Military Department. Does it not seem extraordinary to you that a man like Mr. Brown, with so much experience in two such well-known cavalry regiments, should have been refused, while men of no experience were taken? It would seem advisable to have made further inquiries into Brown's case.

5446. I presume that any man in a position to send in qualifications of that character would naturally arrest the attention of anyone whose duty it was to make a selection? I presume the qualifications had that effect.

5447. Have you any reason to doubt the *bona-fides* of the applicant? None.

5448. Then, other things being equal, does it not seem to you extraordinary that such a man should be refused, while men such as I have mentioned, who have had no experience, should have been accepted? That is the question which can be answered only by those who made the selection.

5449. But, on the face of it, it seems extraordinary? On the face of it, I should say that a man with that experience should be selected in preference to other men with no such experience.

5450. Can you tell me why Lieutenant Broinowski, of the Mounted Rifles, was refused? I was under the impression that he went.

5451. He is a pretty capable young man? He seemed to me to be a very capable young fellow; I quite thought that he would have gone with the Contingent.

5452. *Mr. Wilks.*] I understand that in the matter of the selection of officers you were not consulted at all? No, not in regard to that particular Bushmen's Contingent.

5453. But with regard to any Contingent? I do not say I was not consulted at all, but I had nothing to do with the final selection.

5454. Had you anything to do with the recommendations? No, beyond saying, as I said when I was here before, what I knew. If I knew anything in favour of an applicant I brought it forward.

5455. What was the result of any recommendation or suggestion you made? Some of my suggestions were adopted, others were not.

5456. Were they, on the average, adopted? Only with regard to those concerning whom I could speak personally. With regard to nearly all of those who presented themselves for some of the Contingents, I knew no more about them than you yourself would know. In the case of those of whom we could say nothing, reports were obtained from the various camp commandants.

5457. In cases where your recommendations were not accepted, had you any reasons assigned to you? In one or two cases where I thought a man should have gone it may have happened that there was only a junior position open, and the man being of a certain age the General might have an objection to his being put in a junior position when there was a younger fellow able to take it.

5458. Your recommendations were only barred in cases where the applicant was a certain age and where there was a junior position? I could not say from memory. They might have been barred for other reasons.

5459.

H. D.  
Mackenzie.

5 Sept., 1900.

5459. But that was one reason? Yes.

5460. The General, as far as possible, accepted your recommendation? No; what he accepted, as far as he could, were the recommendations of the commanding officer.

5461. But your recommendations always met with a favourable reception from the General? Not always.

5462. One may say, I suppose, that the General had sufficient confidence in you to receive your recommendation favourably? If you call speaking in favour of a man a recommendation, yes.

5463. This is what I want to understand: In the selection of the officers generally for the Contingents, did the Military authorities have a free hand? With the exception of the Citizens Bushmen's Contingent, they did.

5464. The conditions in regard to the selection of officers were similar to those which would obtain in the case of an Imperial force—that is, the authorities had a free hand? Yes. I am afraid I do not quite grasp the meaning of the question. How could the regiments otherwise be officered?

5465. It has been asserted that political influence was brought to bear;—do you know of such influence being brought to bear in the selection of the officers? I do not know that you could call it political influence; there were many Members of Parliament who, if they knew anything about anyone, would write stating what they knew, but you would not call that exercising influence.

5466. It was a matter of recommendation as to character? Something of that sort.

5467. But Members of Parliament had no power in regard to the final selection of the nominees? No.

5468. Then the Military authorities and the Minister for Defence were free from beginning to end in the selection of officers? As far as I know, yes.

5469. Was any influence brought to bear through the Colonial Secretary upon the Military authorities in the selection of officers? In connection with the Imperial Bushmen's Contingent there was to a certain extent.

5470. But in the case of all the Contingents for which this country was answerable and had to pay, there was no such influence brought to bear? I do not remember any.

5471. It was not brought under your notice? I do not remember any particular case.

5472. In the matter of the riding tests;—I suppose you heard of cases where men were objected to on the score of inferior riding, and where it was discovered they were excellent horsemen, and had, in fact, been exhibition riders in country districts? I have heard of such cases.

5473. How do you account for it? I could not account for it. I asked one of the judges how he accounted for it, and he said some of the men could ride beautifully, but if they were given something to carry in the right hand they could not ride at all.

5474. Were any men refused a pass in the riding test because they did not ride in a military style? The military style was never looked for. In fact, it was especially explained to the judges that they must not expect a military seat or anything of that sort.

5475. But they were expected to ride with only one hand free? Yes, because they would have to carry a rifle.

5476. And if a man were an exhibition rider, it would not be of consequence that he should have only one hand free? I should think so.

5477. Then how do you account for cases in which exhibition riders—well-known country horsemen—were rejected at the riding test? I think the Riding Test Committee will have to account for that; I cannot do so.

5478. Did you hear any explanation given in any of the cases you heard of? No names were mentioned so far as I can remember.

5479. Who constituted the Riding Test Committee? There was a different committee at different times. There was Major Carey, Mr. Featherstonhaugh, Mr. T. Watson, and Lieutenant Green—also Colonel Airey.

5480. What do you think of Colonel Airey as a judge of riding? As an ex-master of hounds he ought to be a judge.

5481. Is he noted for eccentricity in that particular line? I do not know that you could say that.

5482. Have you not heard that he is most eccentric as to riding? I have never heard that, but I heard that he was pretty severe.

5483. When men who were exhibition riders were rejected was Colonel Airey the sole judge? It is very difficult to recollect.

5484. Have you heard that Colonel Airey, in the matter of judging the riding, always dominated and exercised full power? No.

5485. Is your knowledge of Colonel Airey such as to lead you to believe that he would exercise full power, irrespective of anyone who might be associated with him? No; I do not think he would. He would have to consider anyone who might be associated with him. I do not think he would override a man like Mr. Featherstonhaugh.

5486. Mr. Featherstonhaugh was not a judge in connection with the Citizens Bushmen's Contingent? No; in that case, I think Lieutenant Green acted with Colonel Airey.

5487. If that were so, is it not reasonable to suppose that Colonel Airey would dominate him on all occasions, Lieutenant Green having been his subordinate officer for so many years? I do not think so. I never formed the opinion of Colonel Airey that he would take advantage of his position in a matter in which everyone was entitled to freedom of action.

5488. It is not your opinion that he would do so? No.

5489. Have you heard of any social influence being brought to bear in the selection of officers? No.

5490. No influence was brought to bear by the club associates of any of the gentlemen who went away as officers, through the Colonial Secretary's Office, for example? Not that I know of.

5491. Are you aware of the General being directly approached by any gentlemen of social standing? I am aware that parents and relatives called upon the General when it was known that those in whom they were interested were applicants.

5492. That would be merely solicitation? Quite so; it is not what you would mean by pressure. You might ask me, for example, to do what I could do for so and so, other things being equal, and I might be ready to do so; I do not call that pressure.

5493. But you can imagine these solicitations might be so persistent as to amount to pressure? Yes.

5494. *Mr. Chanter.*] From your own knowledge, what particular qualifications had Lieutenant Green for judging riding? He had great length of experience. He was in the Royal Horse Artillery, and he was in the mounted portion of the field battery we have here.

5495.

H. D.  
Mackenzie.  
5 Sept., 1900.

5495. Were the riding tests carried out upon any particular formula? There were three or four brush hurdles generally, which the riders rode over.
5496. Was there any authenticated case of a trooper having passed the riding test without going over the jumps? I certainly heard of such cases; but I never heard that they were authenticated.
5497. Did you see statements in the Press to that effect? I certainly saw it stated somewhere.
5498. Was any action taken by the Military authorities to discover whether it was the case? I do not know.
5499. Did you know Lieutenant Legge who went away with the Second Contingent? I know him slightly.
5500. Would your knowledge of him be sufficient to enable you to form a judgment as to his capabilities as a soldier? No; I have not seen sufficient of him.
5501. Evidence was given here yesterday to the effect that he was in charge of a troop acting as guard to a convoy of provisions; the convoy was not more than three-quarters of a mile distant, and it was said that he allowed men to be without food for three days;—do you consider that the act of an officer and a soldier? I should like to know under what orders he was serving. Of course, if he lost an opportunity of getting near the provisions when the men wanted them all that can be said is that it was his business to get the provisions for them.
5502. The evidence yesterday was that a complaint was made to him that the men were without food, and that the convoy of provisions being quite near, he took no steps to obtain food? I should say that such conduct required explanation.
5503. *Chairman.*] If he were the Lieutenant in charge of the troops it would be his business to know if the men had any rations served out to them? Yes; before they marched off.
5504. And on the march? Yes.
5505. It would be his business every day to see that the men were supplied with food? The non-commissioned officer of his section would keep him informed, and if the men did not get their rations he would naturally know.
5506. If the non-commissioned officer did not inform him of the issue of rations, it would be his duty to find out why they had not been issued? Exactly.
5507. If there were a convoy not more than three-quarters of a mile away in the day-time, and not more than a quarter of a mile away at night, and the men were without food for three days, and the officer did not know of it, he could not have been properly attending to that part of his duty? I was wondering where he got his own food.
5508. He used to buy that we are told at farm-houses, and as the officers got the first chance, there was frequently none for the privates when they came along? I think there must be something behind the story that you do not know of.
5509. *Mr. Chanter.*] Evidence of that character has been given here, and has been repeated;—have you received any communication from South Africa in regard to the strictures of General Pole-Carew upon some of the officers? None.
5510. Have you heard anything of that? No.
5511. Have any complaints been received by the Military authorities here that parcels forwarded from here to soldiers serving in South Africa have not been delivered to them? No; I read that statement with great annoyance, because we have taken a great deal of trouble in the sending away of parcels.
5512. *Mr. Meagher.*] Were you yourself out at the riding tests at any time? No; I merely passed through.
5513. You yourself are a bit of a horseman? Yes; but I did not interfere with the riding tests.
5514. You can tell a horse which can jump from a horse which cannot? Yes.
5515. Did you, at any time when you were out there, see horses put to the brush fences that had no idea of jumping, and which had never previously jumped a fence? Yes. I cannot remember now whether I spoke to Lieutenant-Colonel Airey or to Lieutenant Green, but I spoke to one or the other, or to both, and I said it was only fair that they should find out whether the horses could jump before they put the men on them to take them over the fences.
5516. Do you know that a number of men who failed to pass the riding complained that they were asked to ride crocks who had never jumped in their lives? It did not come to me, but I believe that it was rumoured strongly.
5517. Was it in consequence of what you actually saw, and the protest you made, that any change was made in the way of the men being given horses that could jump? I think the change was made after I spoke about the matter.
5518. A change was certainly made? I think so. At any rate, I heard no more complaints.
5519. I suppose that, in a general way, you could pretty well tell a horse that had been worked in the collar;—for instance, if a 'bus horse had been run in Sydney for a few years, you would be a sufficiently practised judge of horseflesh to be able to tell from the appearance of the horse that it had been worked in the collar? As a rule, yes.
5520. It is alleged that many horses picketed in the lines were Sydney 'bus horses;—would you care to deny that? I do not know whether it was the case; I never noticed them myself.
5521. But you would not care to say that the rumour was incorrect? I believe it to be incorrect.
5522. Do you know Mr. McIvor? Slightly. He was disappointed because he was not sent as veterinary surgeon.
5523. He seems a pretty intelligent man, does he not? Yes, I think he is intelligent. I believe the difficulty was that he had not a diploma.
5524. Do you know that Mr. McIvor called attention to the indiscriminate way in which horses which had never been picketed before suffered from greasy heels? I do not know that. I know that he was interesting himself, and was generally making himself very busy, because he was annoyed that he was not taken.
5525. Whatever suggestions Mr. McIvor made were regarded as those of a disappointed man, who apparently was interfering unnecessarily with suggestions that were valueless? That was what our own veterinary surgeon led us to understand.
5526. Who was he? Mr. Gribben.
5527. As a practical man having some experience of mounted corps, do you think it would be likely to be injurious to horses which had never been used to cavalry work, or to being picketed, to picket them in the

H. D.  
Mackenzie.  
5 Sept., 1900.

the ordinary way;—do you think they would be likely to suffer from greasy heels and various complaints of that kind? Not if the heel straps were properly softened. If you do not picket the horses they will commence driving each other. It makes it more difficult when you have suddenly to take in hand a number of new horses. It is not like filling up a few horses here and there in a regiment. In that case the older horses soon quieten the younger ones.

5528. *Chairman.*] As a matter of fact, did you notice that a great many horses did have greasy heels, brought about by the heel straps? They did.

5529. *Mr. Meagher.*] Do you know as a matter of fact that there were hospital lines for horses suffering as the Chairman indicates? Yes.

5530. Do you know that those hospital lines were established upon the recommendation and representations of this very disappointed man, Mr. McIvor? No.

5531. Will you swear that they were not? Of course I will not; I really do not know.

5532. *Chairman.*] You know that the heel straps have to be made of strong leather? Yes.

5533. If they are new and hard they are liable to give the horses greasy heels? Yes.

5534. Do you know if any of the heel straps in this case were treated with oil to soften them before they were used? I forget the receipt at this moment; but I know that Veterinary-Surgeon Gribben ordered a special preparation, but whether they used it or not I do not know. I spoke to Gribben about this stiffness of the leather of which you speak, and he said, "I have a preparation which will soften the leather, and I will tell them how to use it."

5535. Did you look at the straps yourself? No.

5536. You could not say then whether they are soft or hard? No; but I saw the horses in the hospital lines.

5537. *Mr. Meagher.*] Was lucerne hay good nutriment for the horses, considering the hard work to which they were subjected? I should like to see horses doing that hard work upon harder feed. A horse which is not doing hard work will do better upon lucerne hay.

5538. *Chairman.*] With regard to oats, do you know what the regulation feed for the horses was? I could not say, speaking from memory.

5539. Are you aware that they started to give the horses so many pounds of corn and so many pounds of lucerne hay—giving the horses the corn without it being mixed with chaff, bran, or anything of that kind? No.

5540. Would you be surprised to learn that it was so? Yes.

5541. You would not approve of giving horses which had been used to having bran or chaff mixed with oats clean oats unmixed, would you? No.

5542. Do your standing orders provide for bran and chaff being supplied? To a certain extent they do. They give certain proportions.

5543. Are your orders copied from Imperial List? I do not know that they are an exact copy. Of course, the Imperial List would be taken as a guide.

5544. Are you aware that the Imperial List provides only for oats and meadow hay? I believe that is the case. They have no corn at Home.

5545. *Mr. Meagher.*] Are you sufficiently up in veterinary knowledge to contradict Mr. McIvor when he says that lucerne hay may be good for fattening, but not for hard work? Without going into the scientific part of the question, I always understood that you do not give a horse upon hard work lucerne.

5546. Is there any further statement you wish to make to the Committee? I should like to explain one thing. With regard to the appointment of officers, two of the officers in the Contingent are related to me, and I am happy to say that I was not consulted about either of them by anyone. I think that it is only due to those concerned and to myself to let the Committee know that. I admire the delicacy of General French in leaving me out of the matter altogether.

5547. You have a son in South Africa? I have a son there who rode behind Lord Roberts in the procession in London on the occasion of the Jubilee celebrations.

James Studwell Bennett called in, sworn, and examined:—

5548. *Chairman.*] You are a coachbuilder? Yes.

5549. Did you supply any of the carts for the different Contingents going to the Transvaal? Yes; I supplied forty-five carts altogether.

5550. Were you the largest contractor for carts supplied to the Contingents? Yes; I believe I was.

5551. Were the carts you supplied of the best material, workmanship, and design? Yes; as far as we were concerned.

5552. Do you know how many contractors supplied carts? There were four altogether, viz., Holding and Parker, John Wright, Thos. Hoskins, and ourselves.

5553. You do not know the number supplied by each contractor? No. I think we supplied a third of the total number.

5554. Was any favouritism shown to any of the contractors? Yes; I do not think the inspection was as rigid in some cases as in others.

5555. Is it a fact that the naves of some of the wheels were such as to be unfit for hard work? Yes; but those carts were not sent to the Transvaal.

5556. They were retained for use here? Yes.

5557. Were any mistakes made by the contractors in the design? Yes; one contractor fitted the shafts wrongly—they were not interchangeable with the others.

5558. Which would be a serious defect? Yes, it would, if they were in use; if they broke, any of the shafts of the others could not be fitted.

5559. Going away to the front that would be a rather serious matter? Yes.

5560. Did you inspect all the carts sent to the Transvaal? Yes, I inspected all of them.

5561. Were they workable for horses or mules? Some were altered so as to be worked by mules, but I do not think they were workable. The shafts were taken out and poles fitted in; they simply had poles to stay them, so that if the cart was loaded from the tailboard, which was the only place they could load it from, it would tip up.

5562. They were only 2-wheeled carts? Yes; and nothing to stay them.

J. S. Bennett.  
5 Sept., 1900.

5563.

- J. S. Bennett. 5563. Have you seen any carts built on that principle, with two wheels and a pole? Not for horses, but for bullocks; then they have yokes to stay them.
- 5 Sept., 1900. 5564. Did you ever see any carts built with the point of the pole high above the horses' heads, with a cross piece of iron through the pole, fixed on to a catch on the saddle at each side? Yes; that is a very old design.
5565. Is it a fair sort of principle on which to handle those pole carts with only two wheels? No; it is antiquated. In the carts of which I am speaking there was no stay, such as you have just described.
5566. Would you be surprised to learn that nearly the whole of the 2-wheeled carts, in use by the military authorities in South Africa, are built on that principle, with an iron stay? I would not be surprised at all; with an iron stay it would be sensible.
5567. Still you think even with an iron stay it is an antiquated design? Yes, very old.
5568. Do you consider it fairly serviceable? Yes, it would be with an iron stay.
5569. But our own carts had nothing of the sort? No; simply two pole chains fitted on the beast.
5570. Just like an ordinary pole in a 4-wheeled cart? Yes. If you loaded the cart at the back it would tilt up, and if you loaded it in front it would go down.
5571. *Mr. Chanter.*] Then the horses or mules in the cart would have to carry the weight of those two chains? Yes, all the weight would be on their necks.
5572. Who designed that class of cart? I could not say. We had to alter the carts we had already made and substitute the pole. I could not say who designed them.
5573. *Chairman.*] You have had a good deal of experience as a coachbuilder? Yes; my firm is the oldest and largest in the Colony.
5574. So that you are competent to express an opinion on a question of this sort? Yes, beyond doubt.
5575. Were any of the carts altered in height? Yes; after the third lot went away they were all altered in height.
5576. Could you explain what was done, and why it was done? It was done to suit the mules.
5577. What supervision was exercised during the building of the carts? The sergeant came out repeatedly to see that they were being carried out according to specification.
5578. Was the sergeant a coachbuilder? No; he had charge of the Army Service Corps transport matters.
5579. Would a man unacquainted with that particular trade be competent to superintend the construction of the carts? No; he would not be. But Colonel Bartlett came out occasionally; and he certainly is one of the best experts in wood I have met.
5580. But even a good expert in wood would not be an expert in the fitting up of wheels and that sort of thing? No.
5581. You could not expect a military man to be an expert coachbuilder? No.
5582. I suppose in your trade you do not object to close inspection of your work? No; we rather court it.
5583. If you get a fair price, I suppose you are prepared to give a fair article in return? Yes.
5584. So that you would not have objected if the Department had employed an expert? Not at all; I should have been more pleased than otherwise, because it is a little annoying when a person who is not an expert comes out and effects alterations.
5585. Of which he does not know what the result may be? Exactly.
5586. I suppose generally a tradesman prefers a competent man to supervise his work? Yes.
5587. Because if he gave instructions he would understand what the effect of those instructions would be? Certainly.
5588. And he would not be likely to give foolish instructions? No.
5589. But a man who was not an expert might very innocently give ridiculous instructions? Yes; the specifications were repeatedly altered.
5590. So that you were never very sure when you were finished that you had done what was wanted? No; I do not think we finished one job out of the forty-five but what was altered at times.
5591. In a contract for seventy or eighty carts of the same class of work, would you not think that one specification, one design, would have been what was wanted? Yes; I do not know why they were altered.
5592. If your opinion were asked in regard to such a matter, would you suggest that the carts should be all exactly the same? Certainly.
5593. With the poles and shafts interchangeable? Yes, as they ought to have been.
5594. To be useful and give general satisfaction that was really required? Yes.
5595. In your opinion were the carts suitable for the purposes for which they were intended? No; I think they were too heavy to begin with, and, with the poles, certainly unworkable.
5596. Did the authorities consult you at all in regard to the design? Yes; they gave us a cart something like what they wanted, as a sample, and then they gave us a written specification.
5597. Did the cart that they showed you as a sample have the pole fixed on the principle you have described? No; it was not like the carts that were made, except as regards the shape of the body; the shafts were a fixture in that cart.
5598. When they submitted the design with a pole, did they consult you in any way as to how it would work? No; we were never allowed an opinion.
5599. The men who did not know anything about it expressed all the opinions? That I would hardly say, but we were simply told to carry out the instructions.
5600. And you acted according to instructions as you would in any ordinary business matter? Yes.
5601. I suppose if anyone came and asked you to make a cart in the most ridiculous fashion, as long as you got paid for it, you would consider that—the design and the shape—it would be the business of the purchaser of the cart? Yes. But Colonel Taunton stopped me one day and told me that any faulty work or any defects of any kind would be wicked and criminal, because men's lives were at stake.
5602. I mean, as far as the design was concerned, you considered that it was no business of yours? None at all.
5603. You got the order, you supplied the carts, and you put in good workmanship and good material? Yes, that I will guarantee.
5604. Did Colonel Taunton say anything to you about the design? No. General French came over one morning when I was delivering the carts and spoke to me about the rifle-box being in front, and

and asked me if I did not think it was useless there. That was the only comment I had from any of the J. S. Bennett. officials. I just said that was not my business—that I had to carry out instructions. He said the rifle-box was useless there, that on the battle-field the men could not get at it, and it would be full of filth from the horses, and he said he would have the rifle-boxes removed, and after that they were removed. 5 Sept., 1900.

5605. So that, in your opinion, some of the carts sent away with the poles were practically unworkable? Yes, they certainly were unworkable.

5606. Suppose anyone had felt disposed—I do not for a moment insinuate that anyone would do so—do you think they could have palmed off inferior material and workmanship? It is possible.

5607. I suppose those men who were not experts, when a cart was put together and painted over, would not know very much about it? No; it would take a good man to tell then.

5608. It takes a fairly competent man, even if he is looking on, if he does not understand anything about it, to know whether the builder is putting in inferior materials or inferior workmanship? Certainly.

5609. I do not insinuate that that was done, but I just want to know if it is possible to be done;—do you think it is quite possible? Of course it is.

5610. Would it have been possible to carry out the specifications in their entirety, and at the same time build a cart of the required weight? It would have been an impossibility.

5611. You are confident of that? Yes.

5612. So that, as a matter of fact, they supplied you with specifications and conditions which it was impossible to fulfil? Certainly.

5613. Did they want exceptionally heavy carts or light ones? We had the sample, and all the sizes were given; the sizes of the iron and wood.

5614. And you say that adopting those sizes you could not get the weight they wanted? It was not possible.

5615. Did you get a fair price for the work done? Yes; I think we got a fair price.

5616. You had no fault to find in that respect? No; the matter of payment is the only thing I have to find fault with.

5617. Did you not get paid promptly? I have not been paid for some of them yet.

5618. Did they take exception to any of the carts you supplied? No.

5619. Did they give any reason for not paying you? In the case of the last lot of carts I supplied my tender was for eleven carts for the 1st Regiment. After delivery was taken of the carts they were divided up among four regiments, and when I put in a voucher for the eleven carts to the 1st Regiment, they would not pay for them, and I had to make out four separate sets of vouchers.

5620. Does it not seem peculiar that when one regiment orders a number of carts they should be able to split them up afterwards, and that the tradesmen should have to hunt round to find out how he is to be paid? It is not business; and it is not fair.

5621. The fact of a regiment having its own fund from which to pay the account is no business of yours? No. I knew no one in the contract but the 1st Regiment.

5622. You supplied the carts on their order and delivered them to them, and it was none of your business what they did with them afterwards? Not a bit.

5623. I suppose you are aware that as far as the civil authorities are concerned, they are only too anxious that prompt payment should be made in all such matters? That, of course, I could not say.

5624. Did you make any heavy waggons? Not for the Transvaal; I have made heavy waggons for the Military authorities.

5625. Did you make any of the hospital carts for the Army Medical Corps? No.

5626. As a practical man, what do you think of those four-wheeled waggons used here for military purposes? I saw the waggons that went from here to the Transvaal, and I do not think they were suitable for what they were sent for.

5627. You think that in some places they were rather light, and in other places rather heavy? I think they were too clumsy for what they were wanted for.

5628. Something smaller and more compact would have been better? Yes; what we call a buck-waggon would have been suitable.

5629. Occasionally you supply the force here with the carts and waggons they require? Yes.

5630. *Mr. Hurley.*] With regard to the cart tipping up—was there a propstick on these carts? Yes, there was one at the back.

5631. But none at the front? No. After the propstick is removed, and you have the load on, if the load shifts, the pole must go down.

5632. *Chairman.*] I should think that travelling with a cart of that description carrying a load, if the wheels shot into a rut it would be very rough on the horses; in fact, the jolt would be liable to tip the load off? Yes; it would throw it either forward or backward.

5633. Even with a four-wheeled waggon, if you shoot into a rut or creek, it generally shakes things up a bit? Yes.

5634. It would be even more so in the case of a two-wheeled waggon;—whichever way the weight inclined, that would be the way the load would go, and there would not be much time to get out and fix the propstick? The propstick would only be effective while the cart was being loaded.

5635. I suppose you understand that, in transport work, where you have to go right across country, you have some pretty rough places to go through? Yes.

5636. It is not like walking along Pitt-street? I should not think so.

5637. Where you cannot follow a road, but have to make a bee-line across country, it is more dangerous than if you are going along a well-made road? Most decidedly.

5638. Even a shake over a boulder would cause the cart to heave up and down? Yes.

5639. It is fixed, practically, on a swing? Yes; it would be fixed on a swing.

5640. There would be only the one axle to play on? Yes.

5641. *Mr. Chanter.*] What was the military number-mark of the carts? There was no mark until the last order. They were not styled a mark; but we had to make the wheels interchangeable with "Mark 8" waggons.

5642. Are you aware that each class of waggon has a distinctive mark-number? No. We had nothing to do with that. All the carts were supposed to be alike.

5643. The carts supplied to you as a sample had not a mark-number? No. We had a cart sent out—No. 4—as a sample cart. The body had to be made like that; but the shafts were all to be interchangeable. In the sample cart the shafts were fixed.

- J. S. Bennett. 5644. After the alteration from the sample cart as regards the shafts, what other alterations were made?  
 5 Sept., 1900. The rifle-box was taken away from the front; the axle was altered from a nut-axle to a lynch-pin axle; the wheels, instead of being 4 feet 6 inches high, were made 4 feet 9 inches high, with a 2-inch dish, on the English principle; and the tires were altered from 2 inches wide to 2½ inches wide.  
 5645. Were there any other alterations? On some of the carts the shafts were taken right away and poles put in.  
 5646. How were the poles put in—in the same way as in an ordinary bullock-dray? No. Two iron shoulders were made, and the pole was to slip in and out and be fastened with a pin, with a chain on the pin to hold it.  
 5647. No stays to the pole? No.  
 5648. As an expert, do you think that the alteration from a straight wheel to a 2-inch dish wheel was an improvement? No; I think it was otherwise.  
 5649. Would it reduce the strength of the wheel? It would not so much reduce the strength, but it would increase the draught and make the cart run far heavier, and it would be of no service in other respects. I mean it would not make the cart any better.  
 5650. I suppose you do not know what load each cart was to carry? I have no idea what they would put on them; but the carts were made to carry 15 cwt., according to the specification, and they were capable of carrying 30 cwt.  
 5651. Are you aware that under the military regulations carts of all descriptions have to be constructed to carry a certain load per horse—half a ton? No; I was never instructed that way; we simply had the specification given to us, and we were not to deviate from it unless authorised.  
 5652. With reference to payment, you say that the order for the carts was given by one regiment? Yes; the 1st Regiment.  
 5653. And delivery of the carts was made to four regiments? Yes.  
 5654. Did you deliver to the 1st Regiment, or did you deliver part to the 1st Regiment and the balance to the others? I delivered them to the 1st Regiment.  
 5655. And you afterwards sent in vouchers to each of the regiments? Yes.  
 5656. When did you send those vouchers in? Five weeks ago.  
 5657. Did you get any of the payments? Yes; I got two payments—one from the 1st Regiment and one from the 2nd Regiment.  
 5658. Were those payments sent to you or had you to attend at the pay office? They were not sent to me; I had to follow up very closely to get them.  
 5659. Have you been to the pay office for the other two accounts? Yes, repeatedly.  
 5660. What reason do they give for not paying you? They have not given any reason, except that they are not ready.  
 5661. Which are the regiments whose payments you have not received? The 3rd and 4th Regiments. I got paid for five carts. The 1st Regiment had two carts; from the 2nd Regiment three. That leaves six carts to be paid for.  
 5662. Were you at any time requested by the Military authorities to give your opinion as to the suitability of the carts for the work? Not officially; I was repeatedly asked for my opinions when I was up there.  
 5663. Did you express your opinions? Yes.  
 5664. Were any of your suggestions adopted—I mean in your own experience? No.

---

William Lee Walpole called in, sworn, and examined:—

- W. L. Walpole. 5665. *Chairman*] You are a sergeant in A Battery, attached to the Army Medical Corps? Yes.  
 5 Sept., 1900. 5666. You went to South Africa? Yes; with the Army Medical Corps.  
 5667. What vessel did you go in? The "Kent."  
 5668. How was the Army Medical Corps equipped—fairly well? Yes.  
 5669. Everything satisfactory? With the exception of the horses.  
 5670. Did they not turn out well? We got horses from A Battery when we were leaving, and they gave us all the worst horses that were in the Battery.  
 5671. They gave you the worst horses to go away with, and kept the best here? Yes. I belonged to the Battery, and I know all the horses in it, and when Colonel Williams asked that a non-commissioned officer of the Battery should go down he gave me, or I thought he did, a free hand to get these horses for him. Therefore, when I went down I thought I would get a chance to select the horses, but I had to take what were given to me.  
 5672. Who was the officer in charge? Colonel Airey was in command of the Battery, and Colonel Smith was the officer commanding the Artillery forces.  
 5673. Who was it objected to your picking out some of the horses that you thought most suitable? I objected to some of the horses at the time, but I was told I would have to take them. The Veterinary Surgeon, Captain Gribben, was the principal man.  
 5674. You just had to take what were handed over? Yes.  
 5675. In South Africa, how far north did you get? To Bloemfontein.  
 5676. I think the N.S.W. Army Medical Corps got rather a good name for the work they did? Yes; they did very good work out there.  
 5677. What sort of clothing were you supplied with;—was it ordinary khaki stuff? Khaki cord pants and brown tweed jackets; they wore very well.  
 5678. Did you wear the field service hat or the helmet? The field service hat.  
 5679. Were they fairly suitable for that class of work? Yes.  
 5680. Comfortable? Yes.  
 5681. Would you prefer the field service hat to the helmet? Oh, yes.  
 5682. Some of the irregular forces from Home, such as the Yeomanry and the City of London Imperial Volunteers, came out wearing those hats? Yes; they all had felt hats when they came out.  
 5683. They were equipped with them even long after we had adopted the helmets here? Yes; it was some months after when they came out.  
 5684. And the Canadians also wore the soft hat, with the big brim? Yes. 5685.

W. L.  
Walpole.

5 Sept., 1900.

5685. As far as you were able to judge, were men wearing the field-service hat more likely to be shot at by their own friends than if they wore the helmet? I can only speak from what I heard. I heard that men wearing the field-service hats had been fired on by our own troops, and it was put down to that. But then again I heard that men wearing the helmet had been fired on just the same.
5686. So that we could not put it down to the felt hat when we found that men had been fired at who had been wearing the helmet? No; I do not think we could.
5687. Was the saddlery supplied of a pretty fair quality? The harness we took out was all of the Imperial pattern, and we had no trouble with that.
5688. You were invalided from Bloemfontein with fever? Yes.
5689. Fever was pretty bad amongst your people I suppose? Yes; it was very bad there at the time I left.
5690. I suppose that in nursing and attending to the sick in hospital you would be exposed to greater risk of fever than the men outside? Some of our men would; I was not with the field hospital, I was with the bearer companies out in the field.
5691. But while the troops were resting at Bloemfontein you were in the hospital? Yes.
5692. You were at the hospital at the old barracks? Yes.
5693. Fever was pretty bad there? Yes; that is where I got it—while we were resting there.
5694. You remember seeing me there? Yes.
5695. When I was up there there were a great many suffering from fever? Yes.
5696. And your people were attending to them—practically, doing the nursing? We were.
5697. And, of course, you washed the blankets and the bed-clothes in which fever patients had been sleeping? Yes.
5698. And fever germs being about you would have more chance of taking fever than if you were on the march? Yes; staying in Bloemfontein itself a man would have more chance of getting fever than on the march.
5699. The water was bad? Yes.
5700. Still the patients that went to your hospital seemed to be very well satisfied with the treatment? They were very well satisfied indeed; in fact, all the men tried to get into our hospital.
5701. There used to be quite a rush for it? Yes.
5702. Even amongst the Imperial regiments? That is what I mean. It was always understood that we took our own men; they always came to our hospital.
5703. And your hospital had not such a good position as some of the other hospitals? No; with the exception of No. 9, ours was the worst.
5704. The sanitation in the old barracks was not too good? There was no sanitation at all.
5705. And the Free State soldiers who had occupied it had not been inclined to be too cleanly, is that not so? That is a fact; it was crawling when we went into it.
5706. So that you had a pretty hard job to get it into anything like a reasonable condition? Yes.
5707. Everyone seems to think that the medical men with you did good service? Yes; exceptionally good service.
5708. Gave good attention to the patients? Yes.
5709. In fact looked after them just as well as if they had been getting their fees every time? Yes.
5710. How did you reckon you were going to get paid when you left here? I went on the same pay as I received here, and, in addition to that, the Imperial pay. That is how I have been paid.
5711. What is your permanent pay here? £12 10s. a month, including allowances.
5712. That would be about 9s. a day? Yes.
5713. What is the Imperial rate? 2s. 11d.
5714. *Mr. Chanter.*] Did you receive the Imperial allowance? I did up to the time I was ill.
5715. *Chairman.*] Do you know what a sergeant in the volunteer branch of the force received? I think 8s. a day.
5716. You only got the Imperial pay of 2s. 11d. until you were laid up? I daresay I will get the rest.
5717. I suppose if you wanted to purchase anything in South Africa it was very expensive? Yes.
5718. And there were many things which you could not get at all? Yes.
5719. Did you see anything of the New South Wales Red Cross Society over there, in charge of Nurse Martin? Yes.
5720. I suppose they sent some stuff up to your hospital? Yes.
5721. I suppose it was very much appreciated by the men? It was, indeed.
5722. And came in very handy? Yes.
5723. Such as underclothing, socks, and so on? They got most of that stuff up just as I was leaving. It was sent up to Bloemfontein. The men had left there then. It was all stored in Bloemfontein.
5724. When you left Bloemfontein, where did you go to? Weinberg.
5725. Were you in the hospital there? Yes; we went there from Maitland.
5726. What sort of treatment did you get down there? It was good, under the conditions which existed. There was nothing but tents there. The ground was very damp and wet. It was rainy weather at the time. While I was there they ran up some huts, into which we were all shifted, and it was then much better.
5727. A Colonial officer, Captain Bailey, was in charge of you there? Yes.
5728. From what you saw, did you think the Imperial authorities were trying to look after you as well as possible? Yes.
5729. There may have been some leakages, I suppose, among some of the officers through their not properly attending to their duties? I can only speak for my own corps. We never had occasion to find fault.
5730. *Mr. Chanter.*] You said, in answer to the Chairman, that the worst of the horses were sent? Yes.
5731. Who selected the horses? The Veterinary Surgeon; Captain Gribben and Colonel Smith were the two officers who were present at the time the horses were selected.
5732. And you simply had to take the horses handed over to you by them? Yes.
5733. Was there much difference between the horses that went away and the horses that were left behind? A vast difference. Some of the horses were about to be cast. I mean by that that they were to be sent away and sold; but, owing to our going away, that was deferred, and they were sent out with

W. L.  
Walpole.  
5 Sept., 1900.

us—horses that were practically no good at all; horses, 15 years old, worn out; others, jibs, which we found we could not do anything with at all.

5734. Before the horses reached the stage at which they were to be cast, who pronounced judgment upon them—the Veterinary Surgeon? Yes.

5735. And had judgment been pronounced by the Veterinary Surgeon upon some of the horses that were handed over to you? Yes.

5736. Horses that were condemned as unfit for service here were handed over to you for service in the war? Yes.

5737. And the Veterinary Surgeon and Colonel Smith were responsible for that? I could not say whether Colonel Smith or Colonel Airey was responsible, but Colonel Smith was there at the time I objected to the horses.

5738. Would your objection be in the form of a protest against the quality of the horses handed over to you? I went through the proper routine. When I saw the horses being picked out I went to the Sergeant-major, the Senior Non-commissioned Officer of the Battery, and I told him I should like him to speak to the Officer, that I objected to take the horses, and that I was responsible for the transport of the Army Medical Corps. He told me it was no use; he said I would have to take the horses. He spoke to Mr. Gribben and protested, and Mr. Gribben said the horses that were picked out would have to go.

5739. Notwithstanding that he himself had condemned them as unfit for service here? Yes. I know one horse that he had actually cast. It was a horse I had myself. I rode the horse out there. It was a horse that had been condemned—in fact, if he had remained here a couple of days longer he would have been sold.

5740. When you reached South Africa with the horses of what use were they to you? Half a dozen of the worst I left at Capetown; I would not take them with me.

5741. Of the remainder how many were there? When we got into real hard work twenty of them died. The horses were too old. It will take even a young horse all his time to live on the feed they get out there; they get nothing but raw corn—what they call “mealies” out there. The old horses would not eat it at all; they could not eat it, and having nothing to eat they could not stand the work.

5742. Up to the time of your being invalided how many of the horses that you took with you remained on service? About fifteen out of fifty.

5743. After that period I presume you do not know what became of the horses? No.

5744. *Chairman.*] Did you not try some mules? Yes; we got mules at Bloemfontein instead of the horses.

5745. How does the mule service compare with the horse service? For transport the mule is far superior to the horse.

5746. In the light of the experience you have now gained, if it were required in the future that any force should go from here, would you advocate sending horses with them or obtaining mules? I should certainly prefer mules for transport service.

5747. Is there much difference in the value out there? I do not know.

5748. During the time you were on actual service did you hear any comment about any of our troops being fired upon at the time they were wearing the field-service hat? Yes; I heard it out there.

5749. Did you also hear that our troops had been fired upon by their friends when wearing the helmet? Yes.

5750. At what distance with the naked eye would the helmet be distinguishable from the hat? I daresay you could see the difference at 1,500 yards—that is if the day were at all clear.

5751. Do you think there was some laxity on the part of the officers in command in not discovering within that distance that the men were wearing our own helmets, or the hats usually worn by the Boers? I think myself that it did not matter what the headgear was; the men would have been fired upon just the same. At the time it occurred I believe it was just getting dusk. At the time they fired upon the New Zealanders, who were wearing hats, it was just getting dusk, and at the distance they could not tell exactly who they were.

5752. Then you would say there was a reasonable excuse for firing upon them on account of the light? That is what I heard; I was not there. It occurred in a different part of the country.

5753. I presume you had many opportunities of seeing the headgear of the Boers? Yes.

5754. Is there any similarity between the hats they wear and the field-service hats? They wear all kinds of hats.

5755. From belltoppers downwards? Everything you could imagine.

5756. *Mr. Chanter.*] But a good many of them wore hats somewhat similar to the field-service hats? Yes; what you would call a slouch hat.

5757. As far as your corps was concerned I understand that you were not called upon at any time to wear the helmet, and you retained the field-service hat? Yes.

5758. Had you any experience, when acting on service as a bearer, of the Red Cross being fired upon? No.

5759. Did you hear any authenticated statements by others? Yes. I know that one day one of our waggons was fired upon. I was at the place at the time. I was not in charge of the waggon; it was in charge of another non-commissioned officer. It occurred at Paardeberg.

5760. A statement has been made in the Press here on several occasions to the effect that the Red Cross was deliberately fired upon by the Boers;—have you any reason to doubt its correctness? It could happen without being done intentionally. For instance, the bearers often get, as we frequently had to do ourselves, right up in the firing line.

5761. In that case the firing may have been accidental? Yes. But on the occasion I mention, when a waggon was fired upon, that was done intentionally, because there were no other vehicles and no other troops near the waggon at the time it was fired upon.

5762. And they could have known that they were firing upon an Ambulance waggon? Yes.

5763. Was there any experience amongst your corps in regard to the white flag being used? Yes; the whole of the corps I belonged to experienced an abuse of the white flag at Bloemfontein. The Boers hoisted the white flag. In fact all along the trenches, which extended for 2 miles, there were flags about every 50 yards. The Welsh Regiment, I think it was, had been ordered to fix bayonets and charge on the right of the trenches, where the Johannesburg Police were stationed, and immediately the white flag was hoisted.

W. L.  
Walpole.  
5 Sept., 1900.

hoisted. They then unfixed bayonets, and, as soon as they did so, they received a volley from the Boers. The casualties were very heavy that day—about 480—mostly through the white flag.

5764. There was no doubt that that was deliberate? Yes. Lord Roberts saw that himself; he was not far from the wing at the time.

5765. In reference to your pay, you said that you received the Imperial pay up to the time of your being invalided? Yes.

5766. You consider that from that date up to the time of your leaving South Africa the Imperial pay is due to you? Due up to the time of my arriving in Australia.

5767. Have you made any application for it? No.

5768. In regard to your regular pay, which you were drawing when you left here, has that been paid to you satisfactorily? Yes.

5769. *Chairman.*] When you arrived at Capetown where did you proceed to first? We stayed at Green Point for fifteen days; that is about 2 miles out of Capetown. Then we went to Orange River.

5770. And from there did you go on to the Colesberg side? No; from there we were sent to Honningshurst; that was when Lord Roberts marched into the Free State.

5771. And you went through with the advance to the Modder and then to Bloemfontein? Yes.

5772. Did you come in contact with our Mounted Rifles and others? Yes.

5773. Were you attached to the Brigade in which they were? Occasionally we would come across them. They were with General French's column and we were with Lord Roberts' column. The two columns would often be at the same place, and if they remained any length of time we would meet one another.

5774. Were you at any time up at the front with them in an engagement—at Dreifontein, Osfontein, and other places? Yes.

5775. Did you see any of our men in action? Yes.

5776. Have you any idea as to the food supply;—were there plenty of provisions? Our column stayed at Paardeberg ten days; a convoy bringing up provisions was captured, and we were put upon quarter rations.

5777. It was supposed that there were 170 or 180 waggons captured? Yes; we were put on quarter rations for about a week or eight days.

5778. What would quarter rations be—one biscuit? One biscuit.

5779. And 1 lb. of meat amongst four? We had no meat at all.

5780. Then you got less than quarter rations? I mean no meat was issued, but we were sometimes able to get meat.

5781. *Mr. Chanter.*] By commandeering? Yes.

5782. *Chairman.*] That was supposed to be rather a serious offence if you were caught? It was supposed to be; but the Australians did plenty of it.

5783. I think the Field-Marshal issued an order that anyone caught looting would be shot? I know there was a very stringent order about looting.

5784. That would probably refer more to a man robbing a house than a man taking a feed for himself? Yes.

5785. In the case of anyone deliberately robbing a house, although the punishment would be severe, it might not be too severe under the circumstances? No.

5786. The men who were scouting in the advance would, I suppose, be sometimes very badly off for rations? Very likely.

5787. They might be out some days before they would get back to the main body? Yes. On one occasion I was sent to Douglas with the Scots Greys. We started with two days' provisions, and we were away for seven days.

5788. A pretty rough experience? Yes; that is the time when you have to do a bit of commandeering.

5789. But, I suppose, as far as you saw, when food could not be got the men did not growl very much? No; the men knew they had to put up with it.

5790. And they did so in as cheerful a way as they could? Yes. As a rule, the Australians were not the worst off; they could always find something. It was quite different with the Imperial men; they had not a chance to go commandeering, or to pick up a bit, as we would.

5791. I suppose the foot soldiers would have the worst of it? Yes.

5792. They would be kept more in close formation, and would not be engaged in scouting? Yes, and when they bivouacked they would not be allowed to leave the line to go and look for anything.

5793. If you were out scouting, and there was anything to be procured at a farm house, you would have a chance? Yes.

5794. Did you notice how the helmets were lasting? There was one Contingent that came from Australia with helmets which, when I first saw them, were frightful-looking things.

5795. Were they like this (*Second Contingent helmet returned from the front*)? Yes.

5796. Most of them seem to go at the top, like this? I never saw any of them out there much better than this.

5797. Did you see any of them nearly as bad as this one (*the better of the two returned helmets produced by Mr. Sleath*)? Yes, plenty of them.

5798. As a matter of fact, they used to call them concertinas? I know the men used to be a regular laughing-stock when the other troops saw them coming along with the helmets on.

5799. The Imperial troops used to grin? Yes.

5800. You could not call them an elegant head-gear, at any rate? No. When the Second Contingent Army Medical Corps came out they had these helmets, and as soon as Colonel Williams saw them he told them to keep out of his sight while they had that head-gear on. They afterwards got the Imperial pith helmets.

5801. They seem to last fairly well? Yes, they last well.

5802. They take a good deal of knocking about without being hurt? I could not say from experience.

5803. Do you recognise this as one of the pith helmets (*produced*)? Yes.

5804. You see you can knock it about a good deal, and it gets back into shape? Yes.

5805. So that you think that would be a more satisfactory style of helmet? Yes.

5806. Would you think it would be too heavy to wear? It is a bit heavy.

W. L.  
Walpole.  
5 Sept., 1900.

5807. Did you ever hear any of the men complain of the weight of the helmet issued to them by the Imperial Government? I heard the Australians talking about them. The Lancers wore the helmet, and they said they did not like it, that it was too heavy.
5808. It would feel heavy, perhaps, after wearing the hat? Yes.
5809. Under ordinary conditions you got full rations, consisting of four biscuits and 1 lb. of meat;—I suppose you had no difficulty in disposing of that? No; you could always do it quite easily. You could do it in two meals.
5810. Some of those healthy young chaps from the country here, I suppose, could scoff it in one? Yes, quite easily.
5811. As a matter of fact, did some of them eat the whole of their rations in the morning? One man is supposed to have eaten twenty-eight men's rations in one night. Dr. Fiaschi was going to shoot him.
5812. As a matter of fact, to a strong healthy young man the full ration is, after all, a very small quantity? It is indeed. You have never a bad appetite out there.
5813. You have plenty of exercise, as a rule, and the full ration is not a very large supply for a healthy man? No.
5814. *Mr. Hurley.*] In reference to the horses, I think you said you left twenty at the Cape? No, six.
5815. What was the cause;—were they not strong enough to travel? I knew it was no use taking the horses with me if I could leave them at Capetown and get six others in place of them from the Imperial authorities.
5816. Was it owing to sickness on the sea voyage? No; the horses were not fit to take up to the front.
5817. You say that they were cast out as crocks unfit for service? Yes.
5818. Who was responsible for sending those horses? The Veterinary Surgeon, I should say, was the principal man.
5819. The very horses which he himself had condemned, and to which you had objected? Yes.
5820. And experience proved that your objections were justified? Yes.
5821. Did many of that class of horses go out with you? If I had had my own way I would not have taken half the horses we did take, because I did not consider them fit to be taken.
5822. It is just as important to have good horses as it is to have dry powder? Yes.
5823. *Chairman.*] You got some teams of mules at Bloemfontein? Yes.
5824. They seemed to work very satisfactorily? Yes, they did with us; we used to drive them ourselves.
5825. You did not bother about getting niggers to drive them? No.
5826. And you managed to drive them quite as well? Yes.
5827. And found no difficulty in handling them? No, they are very tractable; in fact, I would just as soon have mules to work as horses. If looked after properly, and handled properly, they are just as good.
5828. Was there not some objection on the part of some of your officers to taking mules in the first instance? Colonel Williams always objected to them. I suggested when we arrived at Capetown that we should apply for mules and black boys, but he would not have it.
5829. But after the experience you had with them he came round in his opinion and thought they were not a bad idea? Yes.
5830. In fact, you found them to work very satisfactorily? Yes.
5831. Sometimes in carrying out your duties looking after the wounded I suppose you would get right up in the firing line? I could not say that I have been there many times myself, but plenty of our men have been.
5832. Have you on any occasion ever seen the ambulance waggons mixed in with the main fighting force? Yes; Captain Rothe had two waggons one day riding amongst a section of artillery while they were in action.
5833. So that if those waggons had been hit with bullets or shell it would not have been done on purpose? No.
5834. I suppose even British troops would not cease firing because someone drove an ambulance waggon in among the enemy? Not likely.
5835. They cannot afford to give points away like that? No.
5836. As far as you saw, with the exception of the display of the white flag at Paardeberg to which you referred, did the Boers seem to fight in as civilised a way as anyone else? Yes.
5837. Were you in conversation with any of the prisoners? Yes.
5838. Did they seem much the same as other soldiers? The Free Staters seemed rather sorry they ever took a hand in the war at all, judging from conversations I had with a good many of them.
5839. There was no love lost between the Free Staters and the Transvaalers? No.
5840. Rather the opposite? Yes.
5841. Did you ever hear that they had to separate the Boer prisoners, and send the Free State prisoners to one place and those from the Transvaal to another place? Yes; I heard that while I was out there.
5842. That they were likely to raise a little war between themselves? Yes; they had to send the Free Staters to Green Point and the Transvaalers to Simons Town.
5843. *Mr. Chanter.*] In regard to the order given by the officers that the men were not to loot, what did the men understand by that? What we understood by it was that we were not to go into any house and interfere with anything. We did not take it to mean that if we were short of provisions, and saw a flock of sheep or goats, that we were not to take some.
5844. I suppose the officers would know as a matter of fact that the men were helping themselves? Yes; the officers used to partake of the provisions thus obtained as well as ourselves, and were very glad to get them, too.
5845. Statements have been made here with respect to poisoned bullets; at the time you were with the Army Medical Corps did anything of the kind come within your experience, or did you hear the matter commented upon by any of the medical men? I saw some bullets out there which it was said had been poisoned. It was Captain Green, I think, who got those bullets and examined them, and he said there was no poison on them.
5846. *Chairman.*] Did any case come under your notice of the use of expansive or soft-nosed bullets? Explosive bullets.
5847. Did you see any bullets out there like these soft-nosed bullets (*produced*)? Yes.

5808. *Mr. Chanter.*] What was the comment made by medical men with regard to the wound inflicted by a soft-nosed bullet? The wound made by the soft-nosed or expansive bullet is more jagged and larger than that made by the ordinary Mauser bullet. The explosive bullet would be even worse again.

5809. As far as you know, the statements that the bullets were poisoned were not correct? No; I saw the bullets myself; there was a greeny sort of stuff on them which looked like verdigris.

5810. *Chairman.*] You have seen that the ordinary revolver bullet is greased so as to enable it to slip into the chamber of the revolver easily? Yes.

5811. And if you were to take some of those and expose them, the grease would become green from contact with the brass of the case? Yes; I think that was the case with the bullets I saw.

W. L.  
Walpole.  
5 Sept., 1900.

THURSDAY, 27 SEPTEMBER, 1900.

Present:—

MR. COOK,

MR. HURLEY.

MR. MEAGHER,

RICHARD SLEATH, ESQ., IN THE CHAIR.

Colonel James Edward Doidge Taunton recalled and further examined:—

5812. *Chairman.*] With regard to the helmets, you remember when you were called before there was a gossamer helmet submitted to you? Yes; I was informed that it was one. I do not know myself whether it was gossamer or not.

J. E. D.  
Taunton.

5813. It is submitted by experts, who say that it is so, and we take their word;—you, in your evidence, swore that the helmet—the sealed pattern helmet—was a cork helmet (*handing it to witness*)? I did not swear that this was the pattern.

27 Sept., 1900.

5814. That is your own pattern stamp? It is not the pattern called for in the tender.

5815. Why did you not bring this one with the stamp? The mistake was afterwards found out, and it was sealed.

5816. Why did not you tell the Committee that before? I told you it was a cork helmet.

5817. You said a pattern helmet? You told me to hand down the pattern that was approved.

5818. What we asked for was the pattern helmet, and this is what you brought down? This is the pattern helmet sealed for the forces.

5819. What did the tender call for? The general service pattern. The cork helmet was a higher one.

5820. Did not we ask for the helmet which was the sealed pattern helmet when tenders were called? I did not understand that.

5821. Did not we ask for it? I understood you to ask for the sealed pattern helmet.

5822. I do not want you to mislead the Committee;—I want to get at the facts? I wish to tell the truth. I do not wish to mislead. I have no desire to do that. I have no desire except that everything should be known.

5823. That is our desire? Excuse me, I must object to any motive being imputed to me.

5824. I have not imputed any motive? You suggest that I am going to hide something. I wish to hide nothing.

5825. What is the use of the pattern to us. We asked for the sealed pattern when tenders were called;—why did you not submit it? I did not understand that.

5826. I suppose that when you came before the Committee to give evidence it was your intention to give us all the information that you had;—did you tell us about any other helmet outside this gossamer helmet that was supplied to the forces—the cork helmet;—did you know of any other? Except the helmet supplied to the Bushmen's Contingent, I had nothing to do with the matter. You said we should bring the Second Contingent one; that is what I understood.

5827. You could not understand that. I told you distinctly, absolutely, positively, that we were dealing with the question of the despatch of troops to South Africa? I understood that the helmet brought down was the white helmet, and that we were dealing with the Second Contingent.

5828. What we were dealing with was the despatch of troops to South Africa? Afterwards I mentioned, I think, to someone about the helmet for the Imperial Bushmen, which was rejected for the Field Service hat.

5829. It was said, but not by you? I think so.

5830. I cannot find it in the evidence? I was under the impression that you were dealing with the helmets for the Second Contingent.

5831. I told you as plainly as any man could that we were dealing with the despatch of troops to South Africa, and that we were going to confine ourselves to that before we went into the general question of administration? I have no desire to deceive the Committee in the least. I only wish to bring out everything that would be required.

5832. Let us turn up the evidence. There was some question that Mr. Cook asked. I will read you your own answer. He asked: "Then the pattern did not originate when the men were going away;—it was a pattern already in existence, and according to which the contractor was supplying the Partially-paid Forces? Yes; but this particular pattern helmet was a coloured helmet that the contractor brought up, and said he could supply so many, which we accepted"? Was not that helmet the same helmet, only coloured? I may have said so. I am not accustomed to give evidence before these committees, and it is quite possible for me to make a mistake.

5833. Mr. Cook asked the question positively, "Then the pattern did not originate when the men were going away;—it was a pattern already in existence, and according to which the contractor was supplying the Partially-paid Forces"? and you said "Yes; but this particular pattern of helmet was a coloured helmet"? It was the same helmet only coloured. My answer is correct.

5834. But you say "this particular pattern helmet"? It was the same helmet, only stained.

5835. Why did not you say that;—you say, "This particular pattern helmet"? It is made different by the stain. If you read the reply, you will see that I answer the question.

5876. But this particular one the contractor brought up and said that he could supply so many;—as a matter of fact, they were helmets made for the Partially-paid Forces, and were in hand? I think so. I think it is in part of the evidence.

5837. *Mr. Cook.*] Have you not a copy of the evidence here? I think so.

J. E. D.  
Taunton.  
27 Sept., 1900.

5838. You say in reply to Question 520, "We had certain helmets that they (the Regiments) used to get through the store; the patterns could not be supplied, and they went to the contractor, and the contractor then changed the pattern";—we want to ascertain if the pattern was changed? I want to alter the evidence. I want to, as I made a mistake. I find that at the time I gave the evidence there were circumstances of the case that quite escaped my notice, till I read Mr. Anderson's evidence. What he said is perfectly true.

5839. *Chairman.*] Who gave you a copy of his evidence? It was in the papers. I read it there. Some four or five years ago—it bears out what Anderson says—Captain Legge mentioned to me that he had some difficulty in getting helmets, and that he had arranged with the contractor to supply a lighter class of helmets. He mentioned it to me as Q.M.G. I wish to alter my evidence to that effect.

5840. So that Captain Legge, the Adjutant, informed you that he had altered the material of the helmets? That he had arranged for it.

5841. He had arranged for the alteration of the material? Allow me to put my own words in my mouth.

5842. Here, answer the question; surely you can answer it;—did Captain Legge without your knowledge or authority alter the material and quality of the helmet supplied to the Partially-paid Forces? The Partially-paid?

5843. Answer, "Yes" or "No"? He did not. I really forget.

5844. Did he tell you that he had done it? I forget the circumstances of the case.

5845. It is another matter that you forget? You have no right to make that remark.

5846. You give your evidence in a very bad way; you do not seem to answer the questions;—there are pages of questions here on this evidence to which there are no answers at all? Well, I refuse to be bullied.

5847. Here give your evidence;—I am not bullying you? You are bullying me.

5848. You will oblige me by giving you evidence;—we are not here to listen to long orations from you;—now, you cannot escape answering the question? I do not want to.

5849. You are here to answer questions, and not to talk;—did Captain Legge, or did he not, before he consulted you, alter the material and pattern of the helmet? That I cannot say; but I can say that he had my approval as Q.M.G.

5850. That is a contradiction? I cannot say that he did it first; but he got my approval.

5851. We want to know whether he did it first, and got your approval, or whether he got your approval, and then did it? I cannot say.

5852. You cannot say? That is all.

5853. Do you know the helmet of the pattern "E"? Yes.

5854. Do you know this one—"K"? Yes; I believe so—I cannot positively swear.

5855. And you see the helmet supplied to the Bushmen? Yes.

5856. Was it anything like that (*handing witness a helmet*)? Yes; I believe it to be.

5857. You will not swear whether it was so or not? I believe it to be.

5858. Was a helmet like that supplied to the Bushmen (*showing "C"*)? No; that is the Second Contingent's.

5859. I am not asking what it is;—I ask whether it is the helmet supplied to the Bushmen's Contingent? The flat helmet ("K") was for the Citizen's Bushmen.

5860. Answer my question;—do you know whether it is so or not? I cannot say without seeing the pattern.

5861. Have you the pattern? I think we have.

5862. Did you say anything about that when you were before the Committee before? I do not know that I did. I might have mentioned it.

5863. Will you show me where you mentioned it in the slightest way in the evidence;—can you show me the slightest reference to it, Colonel? I do not know. I cannot say without looking carefully through the evidence. I know that the evidence that I was giving was in reference to the helmets supplied to the Second Contingent.

5864. You knew what the scope of the inquiry by this Committee was? Yes.

5865. Did you hear me say, when you previously gave your evidence, that we were going to deal first with the equipment and despatch of troops to South Africa? Yes.

5866. And then knowing that the helmet had been supplied, do you think it fair or honest not to let the Committee know about this? I do not think that the answer was dishonest.

5867. We do not want it to be dishonest? I thought that the evidence on that particular day had reference only to the Second Contingent. I think you will see that it all had reference to the Second Contingent.

5868. For instance, the carts? I mean, except when you got away to these other matters.

5869. So, as a matter of fact, you did not produce the pattern helmet—that is, the contract helmet—when the contract was first let? Yes; that is so.

5870. Can you give us the reason for not doing it? My reason for not doing it. You asked me for the sealed pattern for the infantry, and I sent it down.

5871. There has been no contract let in connection with this sample, has there? This is only prepared, in view of future events occurring? No, no. Any change in the contract would have to be made by the contractor.

5872. That is not what I am asking; I want an answer, "Yes," or "No";—I want to know whether any contract has been let to supply helmets of this pattern ("D") up to date;—that ought to be easy to answer? No; strictly speaking, not; but the helmet having been changed, the contractor would have to supply in accordance with —

5873. Yes, if he had contracted for it; but up to date, no contract has been let to supply a helmet of this kind to the Forces;—have there been any helmets of this quality and pattern supplied at all, either by the contractor or otherwise—say "Yes" or "No"? Yes; we have always had this helmet, at least for many years.

5874. This helmet "D"? Yes; allow me to explain.

5875. I do not want any explanation at the present time; you told me five minutes ago that this new pattern helmet that had been adopted was the only contract that had been let;—you said that the other cork helmet was much higher? The helmet produced is the same make, but a little higher. When the mistake was found out, we sealed the pattern which was the old pattern in wear by the troops.

5876.

5876. So that when the contract was let it was not the proper pattern helmet at all that was submitted, but it was something else, something that you had got promiscuously, I suppose? It was the old general service-sealed pattern helmet. The original cork helmet was higher than that. In 1890 the pattern was changed to a lower helmet. That is the pattern that the Partially-paid Forces have had from about 1890. J. E. D. Taunton: 27 Sept., 1900.
5877. So that in 1887 the contract was let? In 1898.
5878. In 1898, when the contract was let, the helmet that had been discarded in 1890 got accidentally rung in as the sealed pattern? That is correct.
5879. But if Mr. Anderson swears that there is no pattern at all? He is wrong. The higher pattern helmet instead of that was put out for contract first.
5880. When Anderson tendered there was a cork helmet which was not of the same pattern as this? Undoubtedly!
5881. If that is so, Anderson would tender for the cork helmet? Undoubtedly.
5882. Do you know anything about the prices of helmets? From 5s. to 6s.
5883. Cork helmets from 5s. to 6s.? Without looking it up, I cannot tell you.
5884. If I said that the relative prices were 5s. 6d. for gossamer, and 6s. 3d. for cork, would you say that was correct;—if Anderson and other manufacturers say that those are the relative prices, would it be so? If they say so, I believe it would be so.
5885. Can you say what were the prices for which Anderson tendered? I do not know.
5886. A lot has been said about it? I cannot say, without looking it up.
5887. Anyhow, we will take it this way till we get the actual prices;—suppose that Anderson's tender was 5s. for the pattern helmet;—that in itself would be some indication that he was tendering for a cork helmet? I do not think that it would necessarily be so. I take it that the artillery pattern helmet is better than the infantry helmet. It is bigger.
5888. I am not talking about the price of the artillery helmet? They are of a different size and much better. There is nothing to make me believe the 5s. was for the —
5889. If his tender was for 5s., do you think that the cork helmet could be supplied for 5s.? I do not know.
5890. Do you understand lining? I cannot say that I do.
5891. Do you know that this is a special patent (*showing helmet*)? I have heard it said it said so; but I have heard it said that it is not. It is hardly fair to ask me questions about the qualities of helmets.
5892. I am getting a bit of an authority myself. Now I come to the question of the carts. You said that among the multifarious duties occupying your attention about this time was a matter of twenty-five carts that you had to superintend the making of? There were a great many more than that. It was in reference to the second Contingent.
5893. Do you superintend the manufacture of carts? What do you mean by superintending?
5894. Put it in this way: In answering a question as to your duties, you said that among other things you had to attend to, you had so many carts to make;—I asked you did you make them yourself, and you said, "What nonsense?" I said I was constantly present to look after these things.
5895. Is that a fact;—you were constantly down at the Army Service Corps places inspecting them as they came in? You would not want constantly to look at them as they came in.
5896. How many were there? There were twenty-five in this particular case—100 altogether.
5897. Extending over a period of six months? Till the time the last Contingent left.
5898. But by this Contingent there were only twenty-five? Thirty-five, to be accurate.
5899. Do you know the contractors for these particular carts? There were several contractors. You rather spring this matter upon me. There were 137 carts in all that went.
5900. Were they all made, or were some of them available previously? Seventeen were available. But for the whole of the Contingents there were 137.
5901. In six or eight months? From October to April.
5902. Why did you want to look at them when they came in? To see that they were faithfully built.
5903. You are not a wheelwright, are you? I am not a wheelwright.
5904. Do you know this: that the best wheelwright that ever lived could not judge a cart after it was finished;—you can smother up anything with paint? No doubt you can do a lot with paint. But the wheelwright could not hide the fact whether the carts were properly built or the wheels were properly made. I could judge that. Also if the shafts were fitted with the little pins to fix them in; and other minor details.
5905. I see;—you think it necessary to have this inspection with regard to the carts? Most necessary.
5906. You have had much experience among carts? Only since I have been in this force. The last few years.
5907. Would you be surprised to learn that an expert would never dream of bothering about these things? I should be surprised to learn it.
5908. You would be surprised to learn that an expert would consider that it did not matter if all these little fixings were attached to the shaft if, say, the nave of the wheel gave way? Very likely.
5909. And you would be surprised if the expert gave attention to the proper making of the nave of the wheel? Undoubtedly he would do it if he had time.
5910. You would be surprised to learn that an expert, a man who thoroughly understood the work, would look to this sort of thing? I think he would.
5911. You did not do it? I had not the time.
5912. But you had the time to look at the little staples on the shafts? I could not do everything.
5913. Was there not some one else to do it? Every officer was engaged.
5914. You had no other officer than yourself? Major Miller.
5915. What is he? The officer commanding the Army Service Corps.
5916. Has he had experience as a wheelwright? No. He has had no experience as a wheelwright.
5917. So, in a general way, a military officer reckons that nothing is too much for him;—he can express expert opinions on carts, helmets, and everything else? We have generally had an artificer for these things.
5918. Where was he? He had gone away with "A" Battery.
5919. Do you not keep a wheelwright up there;—who does your repairs? The Artillery have artificers. Most of the carts were inspected by them where possible. But in some cases the carts were delivered and handed over the same day.
- 5920.

J. E. D.  
Taunton.  
27 Sept., 1900.

5920. Olding and Parker, Wright, Hoskins, and Bennett, were the gentleman who supplied these carts;—who drew the designs for the carts—some of the military officers? I think the original design is an old design of some years ago. It was taken from the cart of the country—the two-wheel cart that we use in Sydney.

5921. What sort of two-wheel cart do you use in Sydney—a tip-dray? I do not know the name.

5922. A hansom cab? No, a peculiar shape of cart on two wheels. Something like those of Lassetter's.

5923. Who designed the pattern? Major Miller and myself; and an excellent cart it has proved.

5924. Very good for the streets of Sydney? Very good for South Africa. I have had reports to that effect from some of our men.

5925. What men? Men who came back from South Africa. Our Army Service Corps. There were complimentary references to them also in the military newspapers in England. Perhaps you may consider that a recommendation.

5926. It depends on who wrote the article;—did you ever see a cart like that in the country in Australia;—were you ever in the country? Often.

5927. Did you ever see a cart like that in use in the country anywhere? Yes.

5928. Where? I think so.

5929. Would you swear that you have;—I should like to swear that you have not; whom do you say they were designed by? By Major Miller and myself. General Hutton also approved of them.

5930. There were three of you? Yes. These carts, I may say, have been taken over all sorts of ground. They were much used at the Cape. That was an excellent test, and they have stood it very well. Colonel Williams took some of them to Newcastle once with Major Miller, some years ago.

5931. There is a macadamised road to Newcastle, is there not? No. The carts went over some most awful country.

5932. Climbed over the Canoblas, I suppose? I do not say that. It is no use talking like that. But the country is very bad though.

5933. What did they go to Newcastle for? We want to know about the different roads in the country.

5934. Do you know Mr. Bennett;—do you know that his is absolutely the oldest firm of coach-builders in Sydney? I do not know that.

5935. You never made any inquiries;—you do not know that he is not? No.

5936. You do not know anything about it? No. But his carts were not so well built as the others.

5937. What do you know about carts? In many cases the wood, for example, would open out. The boards were not so well fitted.

5938. You place great reliance on the way the boards in the bottom of the carts are fitted? Yes. If the wood shrinks it is bad.

5939. Shrinks;—it is clothing that shrinks—flannel shrinks? I mean to say seasoned. To see that the wood was properly seasoned.

5940. I knew that you were talking about cloth; is it not your business to see that properly-seasoned wood is put into the carts? If one had time, undoubtedly. It is always done.

5941. Always done? We have a board to inspect the carts before the paint is put on.

5942. You would not be in a position to speak of the carts that went away before the Contingent;—you would not have time to see them before they went away? There are a great many differences in carts. You could see daylight through some of them and not through others. There are a hundred and one differences.

5943. That is a very small matter? It is a good deal.

5944. The fittings at the bottom of the cart is a very small matter; there was not a hole big enough for a case of tinned meat to fall through; who was it who designed the alterations in these carts;—you know that some alterations were made? Certainly. The wheels were made of the general service pattern. That was the most sensible thing to do.

5945. In your opinion? Yes.

5946. Do you speak as an expert? I speak as a military man, and I can give my reasons for my opinion.

5947. I want to know what is your authority;—I want to know whether your reasons are worth having;—does it follow that a military man is an authority on everything, from coach-building downwards? He is an authority on matters that have to do with military work.

5948. Would you be an authority on bullock-driving? No.

5949. That is military work? The wheels were made to one pattern, so that in country where there are no means of obtaining fresh wheels the wheels could be changed from one waggon to another. It allows also spare wheels to be put on a cart. And if there is a break-down you can take the wheels from a broken down cart and use them for another cart.

5950. That is not what I am talking about;—what were the alterations with regard to the wheel? Instead of having a complicated screw axle —

5951. Instead of having a cap? A screw-axle has been referred to.

5952. Instead of having a screw-axle you had a lynch-pin;—instead of having a cap you had a lynch-pin;—what were the other alterations in the wheel? It was a dished wheel. Military experts say it is stronger.

5953. Who are these military experts? It is the way they build them in England in the ordnance factories.

5954. So that a man who may be a military expert imagines that he becomes an expert in wheels also? There are men whose business it is to do these things. They have to make wheels for the whole of the army, for the guns, for the waggons, and so on.

5955. And would you be surprised to learn that you have made a departure here that is not made in the British army? I should.

5956. How much dish have you put in them? I cannot say.

5957. Six inches? I cannot say.

5958. Why did you not have that terrific dish in them before;—why did you not follow the great military experts at home previously? Because they were made by the direction of the General who is an expert in these matters.

5959. These things were done by direction of the General? The changes, and so on, were.

5960. The General did them? The changes in the carts, the lowering of the wheels, and so on, were made by the General, or with his instructions.

5961.

J. E. D.  
Taunton.

27 Sept., 1900.

5961. By whose instructions were the shafts made so that they were not interchangeable? It is quite possible they may have been sent away in a hurry. There was no time properly to inspect them.
5952. Why not;—you said in your first evidence that you devoted nearly the whole of your time to these matters? Not nearly the whole of my time. This was only one thing among thousands.
5963. You told us here to-day that you were continually examining these carts when they were being sent away? I did.
5964. You examined them to see if little staples were on the shafts, and if the boards were fixed in properly, if the sides and bottom of the cart were fixed in properly;—did it not occur to you to look at the shafts? Yes, it did. But I did not see every cart.
5965. Would you know that the shafts were interchangeable or not from looking at them? Certainly, if I took them out. In most cases the wheels and the shafts were tried.
5966. But did you see if any of the shafts would come out or not? Yes.
5967. All? No.
5968. So that some might not come out if they were fastened;—what about that? Some of the carts were handed over to the regiments straight from the contractor. I think one lot—perhaps that is the lot which you are referring to—was given over at the last moment, and went straight to the ship from the contractor. They were made in such a hurry.
5969. So that if this was an inspection it was merely a farce? As far as possible we had everything put right.
5970. Whenever we prove a case you say it was in a hurry, that the things were sent right to the ship? No; I do not. I do not know what particular carts you are referring to.
5971. I am referring to the carts supplied by one of the contractors? You do not say who.
5972. I am not going to tell you that? Some carts came down the day the Contingent went.
5973. Will you swear that that was so in this case? I cannot say in this case.
5974. There is an allegation that you carried out your inspection so carefully that the carts were delivered to you, and were allowed to go away with the shafts not interchangeable? I deny that we were careless. Even with the inspection we could not have time to make a change. Some of the carts were delivered the day they were sent. It was no use rectifying it then.
5975. Did you send some one over to the contractor's yard? In some cases.
5976. In some cases—did you not go out? No.
5977. Will you swear that you did not? Yes.
5978. You never went to Bennett's yard? No.
5979. You never gave any attention to the carts while they were being manufactured? Where it was possible Boards were held. But in many cases there was not time. In some cases so great was the hurry that we had to take them just as they were.
5980. A Board was held after they were painted and finished? No; before they were painted in some cases.
5981. Did you send anyone down to look after the carts at all;—will you swear the Staff-sergeant was not accustomed to visit the different manufacturers? Oh, yes; Sergeant Lyons went out on some occasions.
5982. What for? He is the Staff-sergeant in the Army Service Corps.
5983. Is he a wheelwright? No; he is no wheelwright.
5984. So that he would not know much about them? I think he would.
5985. Because he is a Staff-sergeant? He has had considerable experience. He has been in the Army Service Corps.
5986. So you think he would know all about it? He would know a great deal.
5987. You had another bit of alteration made, I think, did you not—a sort of new departure entirely your own. I mean by "your own," the Military authorities;—did you not put some poles into two-wheel carts? It was not entirely our own idea. It was an order from the General at Cape Town.
5988. Forestier-Walker? Yes.
5989. What was the order? To send just two-wheel carts with poles.
5990. Did you ever see them in use before? No. General Walker knew our carts. He had seen them. He telegraphed to us for them.
5991. That would go to show that Forestier-Walker was a great authority on carts;—did it ever occur to you that if you put a cart on two wheels it would be pretty well balanced, and that if you then put a pole in it, and put some weight on, you would have horses, cart, and pole dangling in the air? The General asked for that particular thing. I think that he made a mistake. I remarked at the time that I thought it a mistake.
5992. Forestier-Walker's mistake? Yes.
5993. It was his mistake;—it was not yours? I told Colonel Mackay when he went away that I thought he would find the carts a failure.
5994. *Mr. Cook.*] What was his idea in sticking the pole in? For mule draught. They have four or six mules for this work. They do not use horses. General Forestier-Walker had seen the carts.
5995. *Chairman.*] Men who do not know anything about it generally rush in where angels fear to tread; apparently, he did not know the difference between a long and a short one? He is well advised. He has experts on his Staff.
5996. Humph! When I was in South Africa they took some levels; they were only about 30 feet out? I do not think you have any right to sneer at a British General.
5997. I only tell you what his experts did? I should like to have it explained.
5998. That is not what this Committee is for;—when you talk about experts I want to show you what experts did? We sent the bar. We did not send harness.
5999. Anyhow, you were not responsible for it; but do you not think it would have been better to call in the services of an expert in dealing with these matters. You had 137 carts to send away;—how much did they cost each? £22, on an average.
6000. A fairly big figure. Do you not think it would have been better to get in the services of an expert wheelwright, a coach-builder, a cart-builder, to advise you in regard to the matter. It would have saved you all the trouble of going round and inspecting them? My own impression is that the carts were good carts. I should like you to call the evidence of experts—Wright, or Olding and Parker. I think that Mr. Wright will tell you that they are splendid carts.
6001. It is alleged that he was somewhat favoured in the contracts? No; I do not think he got anything more than anyone else. Not so much, I think.

- J. E. D. Taunton: 6002. The witnesses here do not say so; it is alleged that he was favoured? It may have been alleged, but it is not true.
- 27 Sept., 1900: 6003. I did not say that it was true? We gave about the same number to each.
6004. You say that the carts are very good? They are. The old carts, before the wheels were cut down, were better. The higher wheels were better than the present ones.
6005. And the large dish? I do not know about the dish.
6006. But you did not use the same dish in your own carts? No.
6007. What is the advantage of the dish? It gives more stability and strength in going over rough ground.
6008. Would not a driver of carts be a better authority than a man sent down from a field battery? No, I do not think so. A man who had had considerable field battery experience would probably know more about it than a carter, because he has to take the carts over much more difficult ground than a carter has.
6009. Do you think the captain of one of the P. and O. boats would be a greater authority on watermen's skiffs than a waterman? No.
6010. It is the same thing? I do not think so.
6011. It seems that there was unnecessary delay in the payment for these carts;—how was that? The carts have been paid for.
6012. All? Yes. There was no unnecessary delay. Mr. Bennett was told that he would have to wait a little time. If you have taken evidence from Mr. Bennett, I should be glad if you would take evidence from Olding and Parker.
6013. We will take it from anyone you like;—you say that you told Colonel Mackay before he went something about these carts? We do not accept the responsibility for those carts. We put the poles in according to order. We do not accept any responsibility. The cable came out asking us to put the poles in the carts, and we did it.
6014. We will call other evidence in regard to the carts if you wish it? Well, you say I am not an expert. Let us have some evidence from experts. Take Wright; take Olding and Parker.
6015. You practically admit what has been said about the carts;—you admit that you do not know whether the shafts were interchangeable or not? In some cases I do not know.
6016. You admit it? I did not see all the carts.
6017. Here is the question of the dish of the wheel—a 2-inch dish;—you think that a glorious idea? You have expert evidence to say that it is faulty.
6018. Not faulty? Dangerous.
6019. But it takes away from the strength and the weight of the draught? You could get expert evidence that it does not.
6020. With regard to the poles, you admit that you had no responsibility about that;—you simply acted according to instructions? Yes.
6021. So you want expert evidence with regard to the dish of the wheels? The dish of the wheels and the substitution of the screw-pin for the axle.
6022. There is no evidence to say whether that is good or bad? I thought you were taking exception to it.
6023. No? Well, I should like to have evidence that they are capable of standing very good wear and tear, and that they will stand very bad country. I have taken them out myself with General Hutton, and they did their work admirably.
6024. It is a wonder that the producers of the country do not take up some of these carts if they are so excellent? They are used in the country, I imagine. I think I can show that they are very largely used.
6025. Perhaps in some up-country towns—may be in Singleton or Newcastle; but not in the country generally? I will take the country proper.
6026. I shall be delighted? It is fair to put the carts to a test—to any practical test you like. You will find them excellent. You will, perhaps, allow the experience of our men is evidence of their value.
6027. They have driven them only in the city or just outside, and know nothing of them;—do you know that this cart is three times too big for the pulling power? Expert evidence will prove that it is not so.
6028. You could put 3 tons in it, as far as I could judge, and you have one horse for it? Two; we always use two.
6029. *Mr. Meagher.*] Whatever be the defects or the advantages of these carts, you say that the fact remains that some of the men who have returned have had practical experience of them in South Africa? Yes.
6030. Would you have any difficulty, if any of the men are in the Permanent Force, in justice to yourself, to give us the name of one or two who might be able to tell us something about them? I cannot say that they have driven the carts. I am not prepared to say that; but they have seen the carts in use. No doubt I could find among the men who have come back someone who has driven the carts. They were used by the New South Wales Army Medical Corps, and no doubt some of the men who have returned have driven them.
6031. If you can ascertain if any man has had practical experience of the carts it will assist the Committee? Certainly. I will endeavour to ascertain it.
6032. What weight were they supposed to carry? They would carry, I should say, about 13 cwt.; but we generally put in 12 cwt. or 10 cwt.
6033. Fifteen hundredweight is the carrying capacity? I think that that is the contract.
6034. Do you think that the dish wheel would add considerably to the stability of the vehicle and the strength of the pulling? I am not sufficiently an authority to tell you. The dish-wheel has only lately been put in. It has been put in following the custom elsewhere. No doubt the General could answer the question.
6035. It was not intended then to put 15 cwt. upon it? No, 10 cwt.
6036. There is a regulation, I think, as to that? Oh! It will carry 15 cwt. But that is an extreme load.
6037. Would you be inclined to think that it would be an absurd statement to say that it would carry almost twice that? It would be a very overdrawn statement.
6038. You would think that if a coachbuilder said that from the specifications it could carry 30 cwt.? I should think that he had mistated it. That would be my opinion. 6039.

J. E. D.  
Taunton.

27 Sept., 1900.

6039. *Chairman.*] If an expert said that would you contradict him? Is he an expert coach-builder, or an expert driver?

6040. *Mr. Meagher.*] But if an expert should say, from his knowledge of the technique of his business, that it was strong enough to carry 30 cwt.? I do not understand it.

6041. From the specifications the cart is so constructed, is of so heavy a draught, and this 2-inch dish-wheel making the cart run heavier, would it be an absurd statement to make that the cart from the specifications is capable of carrying 30 cwt.? The Chairman says, "What can I know about it." What then is the good of asking me? I should think so myself; but the Chairman says that my opinion is not worth having.

6042. *Chairman.*] You say you are an expert? But with regard to the carts, I think I can give evidence as to their usefulness. I have seen them at work under all sorts of conditions. The D.A.A.G. who came from Colombo, where he was in the Army Service Corps, was highly pleased with our carts.

6043. Where is he now? I cannot say. He was passing through the Colony. I forget even his name now. He is D.A.A.G. It is his business to know everything in connection with carts.

6044. They say that every man who is no use they put in the Army Service Corps? The Army Service Corps contains men of the very highest intelligence. It is work that requires the highest intelligence. Think what it requires to feed an army?

6045. But they do not feed them; that is the point? Sir Howard Vincent, who was in South Africa, and who is an expert, says that the arrangements for the feeding and the transport were better in this than they were in any previous war.

6046. Where is he now? He went all through South Africa. I can refer you also to the *United Service Journal*. Sir Howard Vincent thoroughly understands his work.

6047. What is his work? Army administration. He has been at it all his life.

6048. What else? He reads history.

6049. History cannot teach you to drive bullocks? Well, you say that we send a lot of dunderheads to the Army Service Corps. But they have not only to feed the Army, but to provide the transport.

6050. Is it not a fact that out at Rookwood your Army Service Corps was in such an excellent condition that you had the Army out there for two days, and they were all starving? Is it not a fact. It is a distinct untruth.

6051. But one of the Colonels says so? I do not care if fifty colonels say it. If you say who it was I will bring him to book.

6052. He says that he was so very hard pushed that he had to capture a water cart? What Colonel said that?

6053. Colonel Neild? Colonel Neild—but the least said the soonest mended. I do not want to say anything about it.

6054. Captain Price also said that the transport had broken down at Rookwood? Most of these matters will prove to be due to the ignorance of the officers themselves.

6055. There were complaints also of want of food? There was ample food. There were legs of mutton and bread there thrown into the rubbish heap. It would have fed whole families. Most of these matters were due, as I have said, to want of knowledge.

6056. They said that the food was overcooked? No army was ever better fed than were our men at Rookwood.

6057. I saw men in actual fighting, and had an opportunity of knowing what they have to put up with in warfare, and I agree with you. Do you deny the water-cart incident at Rookwood? He had a tap outside his door all the time. What did he want a water-cart for?

6058. *Mr. Meagher.*] Is the shoeing, the farriery and so on, under your control? I have had nothing to do with shoeing horses and farriery except with regard to the Army Service Corps. The Artillery do their own shoeing. I had control of the shoeing for the Army Service Corps.

6059. It was sworn that out at the Camp, at the time this Contingent was going to South Africa, an application was made for anvils, and that certain things were not of proper quality? I suppose that they would be drawn from the Ordnance Department. I had nothing to do with that.

6060. You say that the manufacture of carts was under your control? Yes.

6061. And that the last time they were made you did not know much about any inspection? There were Boards held in some cases.

6062. For instance, there was a question put that men who were not experts gave very ridiculous instructions, and the answer was, "Yes; the specifications were repeatedly altered";—was that so? Repeatedly? Certainly not. No.

6063. Again, in reply to a question that there was "not one job out of 245 but was altered at times? That is not correct.

6064. Were any altered? Not the last time of making them. Bennett had got the contract under old specifications for the partially-paid regiments. They were having carts made for them. In the hurry we had to take the carts from him. It seemed that a lot of those that were made were made under different specifications.

6065. But when you started to make the carts, were they altered while making? Not that I am aware of.

6066. I think that in these carts you have rifle-boxes? That was taken away. Is that what you mean by alterations?

6067. No; this is another question—the rifle-boxes are in front of the carriage? Yes.

6068. And after the carts were finished and delivered, was the rifle-box altered? In the first carts probably it was, because in the first lot that was made the rifle-box was in front. The General afterwards disapproved of that. He said that he did not think it was in the proper place, as the mare's stalings would injure the rifle.

6069. It would be useless in the battlefield, because the men could not get at it;—in fact, it was an old military idea? It is one of the latest ideas. It was thought at first to be a good idea, but the General thought it was not.

6070. I want to just refer just one second to the question of the helmets;—is it a fact that when a change of patterns is made it is published in General Orders;—if you decided to-morrow to alter slightly a pattern of helmet, would it be mentioned in General Orders? Not always.

6071. *Chairman.*] By the way, the boot department is under your supervision? Yes.

6072.

- J. E. D. Taunton.  
27 Sept., 1900.
6072. Did you see this (*handing exhibit*) ;—would you be surprised to learn that that was a piece of a military boot? It looks like a piece of dung.
6073. Is it a piece of a military boot? I am told all round that the boots gave the greatest satisfaction. We inquired of the men who came back, and they spoke very highly of them.
6074. Would you be surprised to learn that this was between the upper and lower soles of a boot? It may be a piece of packing.
6075. Do you think it a proper thing to use as packing? I cannot say. I only know that the boots gave great satisfaction.
6076. And would you be surprised to hear that it is material from between the inner and outer soles? I cannot tell what it is.
6077. I think we shall have to get a Government Analyst to discover what it is? I do not know anything about it.
6078. *Mr. Meagher.*] Who is the contractor? Wright, I think.
6079. The same man who makes the carts? No.
6080. It seems a sort of fibre ;—by the way, you had some doubt when you were here before about men going away from here with only one suit of clothes? I did.
6081. Are you aware that since then we have had several members of the Contingents who had returned before us, and that they have sworn that some of them and that others they knew had gone away with only one suit of clothes and did not get another? I am hardly prepared to answer that question. I believe that Major Boam has explained that.
6082. He has not up to date? Up to the last moment men were being changed. Fresh ones were taken up to the last day.
6083. I gave you before the name of trooper MacMillan ;—have the inquiries been made which you said you would make? I do not know.
6084. Are you aware that he has returned, and that he is now in the Colony? No.
6085. You never took the trouble to make inquiries? I forgot it. It escaped my memory.
6086. You took a note of it at the time. If you have the slightest doubt about it, we can get McMillan here? If it is so, it is so; it cannot be altered now. It is impossible to say if it was the men's fault or the fault of the officers.
6087. How can it be the men's fault ;—what is the good of speaking like that? I judged from what I heard from Major Boam that it was the men's fault.
6088. How? I do not know.
6089. Does he know? I do not know whether he knows or not; he had everything to do with the issue of the clothing.
6090. This is a small matter; but there has been much feeling on the Committee with regard to a soldier's kit ;—can you tell us what these brushes are for (*showing kit containing eight brushes*)? It is the kit provided for in the British Service. It is taken from the Field Service Manual for the infantry at Home. When a British soldier goes into a town he polishes himself up, and makes himself smart. I am told that he does that in South Africa now. I do not know myself whether it is so. There are three blacking brushes, a button brush, a hair brush, and so on.
6091. What is this one for (*showing a scrubbing brush for clothes*)? I do not know.

Major-General George Arthur French, recalled and further examined :—

- G. A. French.  
27 Sept., 1900.
6092. *Chairman.*] You have already been sworn, General? Yes.
6093. In regard to these carts, General, did you have them looked at before they went away? Oh, yes; they were examined. I examined a number of them myself.
6094. Are you aware that a number of them did not have interchangeable shafts? Interchangeable shafts?
6095. Yes ;—those you can change one with the other? I do not remember myself if they did. I do not know whether they would interchange if they were not all made by the one maker.
6096. You could not say? No. Unless they were all made by the one maker I do not suppose they would. I think they were made by different makers.
6097. They were made by four makers? Yes.
6098. *Mr. Meagher.*] But if the specifications were the same in each instance it would not matter who the makers were? No.
6099. *Chairman.*] The specification provided that the shafts should be interchangeable, did it not? That would be for one maker's work only.
6100. But the specifications for the lot were the same? That may be; but it would be a matter of some difficulty in carrying it out, owing to the difference in the work by the different makers.
6101. How is that the case? Why, the different people would have some slight difference in their work, and the different portions would have to be very exact if they were to be interchangeable.
6102. Have you had much experience with carts, General? I have had a good deal with rough carts. I had to take 125 carts out from Red River on the Rocky Mountains. Those were, however, very simple carts.
6103. Not the same pattern as those sent to South Africa? No.
6104. Do you know that nearly every portion of the carts are made, as a rule, interchangeable, especially in military carts? Yes; in military carts and waggons we try to have everything interchangeable.
6105. It is necessary ;—if a wheel of one cart and the shafts of another break down, there would be two carts thrown out of work unless the parts were interchangeable? Yes, that is so. The wheels and axles are nearly always interchangeable.
6106. And the specifications were the same in this case? I could not say; I do not remember.
6107. Do you not think they should have been? Yes; and probably would have been.
6108. But they ought to have been so? Yes.
6109. But you do not know whether the shafts were interchangeable or not? No; I do not know.
6110. The latter carts did not have shafts at all, did they? No; they were fitted with poles.
6111. What do you think of poles for these carts? I do not like them personally; but these were fitted on a distinct order from South Africa.
6112. You were not responsible for that? No.

6113. Still, do you not think the poles would be dangerous if you were crossing over rough ground? G. A. French. Yes, they would be very awkward; although, perhaps, not as much so as we might think, owing to there being a team of eight or ten mules ahead of the carts, so that the strain on the draught-chain would keep the pole somewhere near its proper place. 27 Sept., 1900.
6114. Still, a sudden jerk would be apt to send it up? Yes.
6115. And might probably shift the loading? Very likely, if it had not been particularly well packed and lashed.
6116. Anyhow, you were not responsible for fitting poles to these carts? No.
6117. With regard to the wheels;—you had wheels made with a special dish, did you not? I think there is a slight dish. Nearly all military carts have a slight dish.
6118. Was it not a very special dish, according to the specifications? A slight dish, I think.
6119. Do you know how many inches of a dish it was? I rather fancy it was about 2 inches or  $2\frac{1}{2}$  inches, but I am not sure.
6120. Do you think that a dish in a wheel gives added strength? The Military authorities always hold so. All gun-wheels are made that way. When the weight is thrown on the axle, the dish in the wheel tends to drive the spokes, as it were, against the rim. It tightens up the spokes instead of loosening them. If the spokes were vertical, a sudden strain and thrust might push them right out of the wheel. I have had that happen to me in a buggy.
6121. Yes; but that would be a very light wheel? The dish is supposed to give extra strength when a sudden thrust is put in the wheel.
6122. Do you think it would make the draught heavier? No, nothing to signify.
6123. If experts were to swear positively that it would, would you be prepared to contradict them? No; except to say that in the Military service they always go for the dish in the wheel, and think there is a good reason for it.
6124. In rough country, you say, where the carts are canted up, it does not have the same strain on the spoke if the wheels are dished? No.
6125. And in regard to the additional draught? I should think there would be no practical difference.
6126. Do you know if there was any inspection of these carts during manufacture? Which particular lot do you refer to?
6127. To the 100 odd for these Contingents? I do not know if there was any particular inspection during manufacture.
6128. But they were examined after they were manufactured? Yes.
6129. After a cart is covered with coats of paint and putty, do you think it is possible to judge of the material? They always tried to see them before they were painted. I know there was some objection made to one lot of waggons being painted before inspection.
6130. Do you know if there was any inspection of these carts before they were painted? I could not tell for certain.
6131. You inspected them after painting? Yes.
6132. And you had some alterations made with regard to the rifle boxes? Yes.
6133. On account of its being in an unsuitable position? Yes.
6134. Do you not think, when you had 137 carts to manufacture, that it would have been better to have employed a competent coachbuilder to supervise the work? Certainly, if we had had any such order as that; but we only got the orders in little lots time after time, as different Contingents were organised.
6135. But altogether they totalled 137? Yes; but I think a good many of those were carts we had in stock, and we merely replaced them. There were not 137 new carts made for the Contingents.
6136. Colonel Taunton says that not more than seventeen were taken from stock;—would that be right? I cannot tell the number. He ought to know, as that would come under his Department.
6137. That would give 120 new carts, then? Yes; for all the Contingents, spread over a good deal of time.
6138. Still, the cost of an expert, or competent tradesman, for that time would not have been very heavy? No, I think not.
6139. I do not insinuate that the carts were not of good quality; so far as I am able to judge, they were; but it was practically left to the honor and good faith of the contractors as to material and workmanship, was it not;—that would be so if there were no inspection until after they were painted? Yes, largely, I should say.
6140. Now, in regard to the selection of officers: we have been very anxious, if we possibly could, to find out on what principle these officers were selected; if we take the Imperial Bushmen's Contingent, for instance,—on page 5 of the evidence you will see at the head of the page a name—"C. Hill"? Yes.
6141. He seems to have high qualifications; he is a native of South Africa, 38 years of age, and has had considerable experience in South African wars; he had considerable military experience in South Africa, and he had credentials, which he offered to cable to substantiate, to Mr. Douglas, a member of the Cape Parliament, at Port Elizabeth; he was rejected. Now, I am just taking that as an instance. Then you will see at the bottom on page 4—F. Gregg, a lieutenant; he has no military experience; also on page 5, Irvine, no military experience; King, no military experience; McKenzie, no military experience; H. C. Michael, no military experience; Oxley, no military experience; Raine, no military experience; Rudkin, no military experience; Ryrie, no military experience; and Lawson, no military experience. So you see there are quite a number of names there without military experience, and here is this man Hill, with all this experience, and I have never heard any reason advanced against him at all in any way, rejected. All these men with no military experience, a great many of them without bush experience, and all of them without any experience in South Africa, are taken on, while Mr. Hill, with a long and varied experience in South Africa, is rejected;—can you give us a simple explanation of that? I cannot remember anything at all about Mr. Hill. One of the others mentioned I did not recommend, and perhaps more.
6142. You did not recommend Gregg, I think? No.
6143. There are some of these whom you recommended, I think;—King, for instance, and Irvine? Yes. King went in as junior of the whole lot—a second lieutenant.
6144. He is not marked here as a second lieutenant? I recommended this young Gidley King as a second lieutenant, and at the tail end of them, I think. He is quite a young fellow.
6145. You do not recollect Hill's name coming before you at all? No.

G. A. French. 6146. And Colonel Mackenzie does not recollect it either, still he is here on this list? I cannot recollect it.

27 Sept., 1900. 6147. Is it not strange that a man of that experience, a native of South Africa, with all the military experience, both with the Boers, Kaffirs, and Basutos, and with the experience both of Cape Colony, Port Elizabeth, Capetown, and other parts of the country, should have been passed over, and young men, who might be excellent young fellows in themselves, but who certainly have no military experience and no knowledge of South Africa, selected in his place, or in preference to him? Yes; it does seem strange, if there is nothing on the other side.

6148. Insinuations of that sort are unsatisfactory, and will not do, unless you know something on the other side? No; I do not know anything about it.

6149. Well, we have asked Colonel Mackenzie, and he does not know. This is a matter which at the time caused a good deal of dissatisfaction amongst a lot of people. So much so, that strong representations were made to members of Parliament that favouritism was being shown, and that the thing was not being conducted in a proper way. My reason for asking this question is to try and get that explained away;—can you explain it? What Contingent was this for?

6150. The Imperial Bushmen's Contingent his application is in for;—was he recommended by Colonel Mackay? I do not think so. So far as I know, he was not recommended by anyone.

6151. Then you can recollect nothing about it? No. I cannot recollect anything of it.

6152. Now, in the Citizens' Bushmen's Contingent again we find quite a number here who have no previous military experience. For instance, Kernell, Gell, Moore, and Popley, no military experience. Is there any explanation of that? I suppose they had some bush experience, because, of course, the Bushmen's Committee claimed that men with bush experience should, if possible, be given a chance.

6153. In the Citizens' Bushmen's here, Major Dangar, of the 13th Hussars, was cabled to England for, to take the position of major? Yes; he had military experience.

6154. But had we no one here with military experience to take the position? It was very difficult to get an officer for the position. He was offered the position of major and second in command.

6155. Yes, I know. Apparently that is the position he occupies. But, for instance, would Captain Larkin not have been suited for the position? I should not have thought he would be so well suited as an officer in the Regular Service.

6156. How was that? This other man was many years in the service, and Larkin would not have sufficient experience. Dangar had been eight or ten years in the service.

6157. How long was Larkin in the military forces? I do not know.

6158. Was Major Dangar a bushman? I do not know. I suppose he was. All the Dangar family would have had bush experience.

6159. I suppose probably being connected with the Dangar family, who had contributed considerably to the cost of the Contingent, and one thing or another, might have had a little influence in the matter? Very likely. I should think it would have a great deal with the Bushmen's Committee, and with me, the fact of his being in the Regular Service would have a great deal of weight.

6160. You have rather a high opinion of the officers in the Imperial Forces as compared with the Colonial officers, have you not? The Colonial officers have not had the same experience, of course.

6161. Have you heard at all, General, that some of our officers at the front have been highly complimented by the different Generals? Quite right, too, because we sent plenty of excellent officers, especially with the earlier lots.

6162. And do you know that Captain Larkin is held in very high esteem both by the officers and the men? I hold him in very high esteem myself.

6163. I think at the start Lieut.-Col. Onslow held the position of Major in the Citizens' Bushmen's Contingent? No; I do not think he was actually appointed to the Citizens' Bushmen's Contingent.

6164. Well, he is down here as such on your own paper, page 11? I know we wanted him to go, and I did not think he would go.

6165. Was he not really gazetted and took up his quarters at Kensington? I think he was only assisting at the Camp. I do not think he was gazetted and properly appointed there. Do you mean Onslow Thompson?

6166. No; Lieut.-Col. Onslow commanding the Mounted Rifles? We wanted him to go, and I think it is explained here in the margin—"The G.O.C. recommends." He declined to go, and joined General Tucker's command.

6167. He was gazetted Major? I do not remember his being actually gazetted. He was assisting at the Camp.

6168. I mean after the whole regiment was formed, and they were at Kensington? Just about then he was offered this other appointment, and he chucked up whatever he had at the Camp.

6169. He would have had a fair claim to the position, being the Officer Commanding the Mounted Rifles, would he not? Yes.

6170. He would have had a fair claim to have gone in command of one of the Contingents, would he not? Yes.

6171. If he were capable of commanding the Mounted Rifles here, would he not have been capable of commanding one of the Contingents? Yes, I think so.

6172. Is it not strange, then, that you never gave him the offer then? I am not at all sure that he did not have the offer. I think both Colonel Lassetter and Colonel Onslow had the offer.

6173. Colonel Lassetter is on the retired list, is he not? No; on the reserve list.

6174. And carrying on a large and important business? Yes; but he was willing to go himself.

6175. We can quite understand Colonel Lassetter not going;—it would have been rather difficult for him to go away and leave his business, would it not? Yes.

6176. In the case of Colonel Onslow it was quite different, was it not? Yes; I think there was no difficulty in the way of his going. I tried to dissuade him from taking up this other thing, which was, to my way of thinking, a very minor affair.

6177. You mean the appointment with General Tucker? Yes.

6178. Practically he went as a galloper, did he not? Yes.

6179. Do you think it right for New South Wales officers to volunteer for the Staff of a General when their services are required by their Colony? No; though in both cases it is active service. I did not think

think it right for an officer of his rank taking such a minor appointment when he could have had one of G. A. French. much more importance in our own Forces.

6180. Captain Larkin was selected in the Bushmen's Contingent, the Citizens' Bushmen, was he not? <sup>27 Sept., 1900.</sup>

Yes; he chucked it up on account of his thinking he was not properly dealt with.

6181. And was he properly dealt with? There was a misunderstanding evidently so far as the appointment was concerned. He had been told by somebody who had no business to tell him that he would be made Adjutant.

6182. Did not those who told him have an authority to do so? No, not in the least. That was what caused all the trouble.

6183. And would he not have been as competent for Adjutant as the gentleman who was appointed? I am not so sure; and, in any case, I had arranged for the other officer to be Adjutant, and in the meantime someone who had no business whatever offered it to Captain Larkin.

6184. You are satisfied that Captain Larkin came down here in all good faith believing he would be made Adjutant? Yes; it was not his fault.

6185. Do you not think, then, that he was entitled to the position of Major when it became vacant? No; I do not think so. It was not vacant then.

6186. Onslow was then holding it and he afterwards retired to take up this other billet, was that not the situation? I am not sure about that.

6187. Anyhow, you are confident, I suppose, that Major Dangar had not been communicated with then? I could not say the exact date.

6188. You ought to know that Dangar had not been communicated with then;—you know it was quite at the last? I do not know the exact date.

6189. No; but it was after Larkin arrived at Randwick to take up the duties of Adjutant? I cannot say; but I can look up the point as to the exact date.

6190. Do you not remember seeing certain letters appearing in the papers about the matter? Yes; I think there was a lot of correspondence about it.

6191. I think there were some letters from Mr. Kidd, the Member for Camden, and a letter from Colonel Lassetter, I think, suggested that since he had been so treated it would only be fair to give him the appointment of Major;—do you remember seeing any of those letters? There was some correspondence with reference to the case, but I cannot say whether it was actually suggested that he should be appointed Major.

6192. You quite understand that we are not wishing to criticise any of the officers at all; some stupid people outside do not understand that, but we want to get certain information for the satisfaction of the general public if we can;—now, I think that Lieut. Ryrie was appointed Adjutant? Yes.

6193. He was previously in the Artillery? Yes, and in the Mounted Rifles.

6194. How long was he in the Mounted Rifles? I think about two or three years. He went Home in the Jubilee year, 1897, and shortly afterwards he was appointed to the Artillery.

6195. We will take Lieut. Westgarth, Artillery;—can you tell me how long he had been in the Artillery? I think he only joined about September or October last.

6196. Just about the time that the sending away of these Contingents started? A little before the First Contingent went away, I think.

6197. So that his artillery experience was of a very indifferent character? He did not have any lengthened experience. He was a very smart officer and a good rider, and so on. A very suitable man as a junior officer.

6198. But his experience in the Artillery was very limited? Yes; not much. He has just got a Commission in the Royal Artillery now.

6199. Was he a bushman, do you know? I do not remember whether he had any bush experience.

6200. Would you be surprised to find he was a clerk in his father's office? No; he has passed some time in his father's office.

6201. So that Lieut. Westgarth had neither military nor bush experience? Not much.

6202. You could not say that a few months in the Artillery was military experience in regard to Mounted Rifles? All these appointments to the Bushmen's Contingent were made in connection with the Bushmen's Contingent Committee or their representatives. I do not claim to have had the only say in the matter.

6203. But he is marked on your paper recommended by you? An officer cannot be appointed without my recommendation.

6204. An officer cannot be appointed without your recommendation? No; not legally.

6205. How is that? Because the Regulations lay it down that it must be done in that way.

6206. That you must recommend? Yes.

6207. Now, in the case of Westgarth, or anyone else applying for a commission in the Artillery, what is the course of procedure that is gone through? In the Permanent Artillery?

6208. Yes? A certain number of applications are received, and notice, about three months, is given of an examination. The examination is then held, conducted by the University authorities, and as a result of the examination the first out or second out, according to the number of vacancies, get the positions.

6209. You insist on a University examination? It is conducted by the University authorities; but it is a milder examination than the students at the University go through.

6210. So that in New South Wales a man like Hector Macdonald would have no show of getting a commission? To join as a 2nd Lieut. of the Artillery?

6211. Yes? I do not think he would go for the billet.

6212. He was in the ranks, and I mean, supposing he was a private; he did not have to go through any University examination, though it is admitted that he is one of the smartest officers in the Army? Plenty of good officers rise from the ranks.

6213. But do you give them a show to do so here? Plenty of men rise from the ranks; but Artillery and Engineer officers must have some scientific knowledge, or pass some examination.

6214. Some little time ago, a son of the Premier, and, I am not quite sure, but I think a son of the Colonial Secretary also, became Lieutenants in the Lancers:—did they pass an examination? No; there was no examination for them.

6215. But still they could not become officers without your recommendation? That is so; but would only go on the recommendation of the officer commanding the Regiment. 6216.

- G. A. French. 6216. And the officer commanding the regiment, how would he act? He looks out those who he thinks would make desirable and suitable officers, and then selects their names and sends them on.
- 27 Sept., 1900. 6217. And you allow the officers commanding the regiments to pass over the heads of old and deserving soldiers, and put boys in their places over them? In the Partially-paid and Volunteer Corps the officers commanding invariably select their officers.
6218. If the officer commanding a regiment did not select the proper kind of officers, would it not be your place to step in, and see that the thing was properly handled? The officers are only selected as supernumeraries, or on probation, to begin with.
6219. But the boy who starts as a supernumerary has the advantage over the sergeant who has risen from the ranks;—if a vacancy occurred the supernumerary would get it in preference to the sergeant, although the sergeant might be a more competent man than the Colonel, would he not? Not necessarily, for if the sergeant were fit for the appointment, there is no reason why he should not be recommended for it.
6220. Yes; but is he ever recommended? They are continually recommended.
6221. Take this case of the Lancers;—were not sergeants and other well-qualified men passed over? I cannot say.
6222. Was any pressure brought on you in this matter? No; not the slightest. It is not worth any-one's while to bring pressure. There are plenty of the positions to be got.
6223. It is supposed to be military etiquette or discipline that the officer commanding the regiment should select his own officers? Yes.
6224. And after he selects them, he submits the list to you? Yes.
6225. And after that, you approve of them, unless something special with reference to any of the men is brought under your notice? Yes; I recommend them to the Government.
6226. There has been some mention made of Colonel Mackay, and insinuations have been thrown out that he improperly used his position as a Member of the Cabinet to have officers appointed;—is there anything in that, General? Of course, you have had my evidence already on the whole of that. I recommended certain officers, and he recommended others, and his recommendations were adopted.
6227. And were your recommendations not adopted? I do not say that. Certain of them were not.
6228. Which ones were not adopted? We went into all that before.
6229. Do you mean that those who were already in service in South Africa, and who had not volunteered for these particular positions,—do you mean that these were the ones who were not selected? Some of them.
6230. All of those, were they not? Yes; all of those were rejected.
6231. Was anyone else recommended by you rejected outside those? I think there were one or two others. I think we went into the whole list before.
6232. Yes, we went into it; but we never found any other? Two lists were handed in at the time.
6233. On page 58 and page 59 I think you find them;—on page 58 of the evidence you see a list of the first twenty names? Yes.
6234. Now, are there any of those who did not go? Yes; there is the first one—Captain and Honorary Major Granville John Burnage, 4th Infantry Regiment? He did not go.
6235. Is there anyone else who did not go;—did Fitzwilliam Wentworth go? Yes. If you take the lists on page 60 you will see what a change of seniority has occurred in what was put forward and what was accepted.
6236. Well, are there any of the others who did not go, with the exception of Burnage;—did Mr. Graham Ernest Milne go? Yes; he went; but instead of being in a senior position as captain, he was put in a junior one.
6237. He does not seem to have held a commission before? Yes; he was six or seven years in the Regular Forces.
6238. But as a commissioned officer? Yes.
6239. It says "Mister" here? He had left the Service.
6240. Was he a young man? Only about 30 years of age.
6241. But he had not taken to the military life very much, then, if he held a commission in an Imperial Regiment, and then retired after six or seven years before he was much more than 20? Six or seven years' service would make him six or seven and twenty.
6242. He had not taken much to the military life if he left it at twenty-seven, had he? They very often settle in the colonies and try their hands at something else. He was out in the bush, I believe.
6243. What commission had he held in the Lincolnshire Regiment? Lieutenant, I think.
6244. Had you any proof? That was all right; there was no question about it. He held the commission in the Regular Service.
6245. The Lincolnshire is a foot regiment, is it not? Yes.
6246. So far as Mounted Rifles were concerned, he would not have been experienced? Not as a mounted corps, I suppose.
6247. And he went in a different position? Yes.
6248. Copeland, of course, was at the front holding a very much more important position than this? Yes.
6249. And Soane? He went.
6250. He was in the reserve of officers, was he not? Yes.
6251. Is he an old man? No, I do not think so.
6252. How did he come into the reserve of officers then? They often do that.
6253. When they get tired of the military life? When they get moved away from their regiment, for instance.
6254. Waldron—did he go? Yes.
6255. And Brown? Yes, he went.
6256. What experience had Brown? I think he was in the ranks in the Lancers.
6257. And you jumped him from the ranks to captain? He had plenty of bush experience and was very strongly recommended. Of course, in the Lancers he would have got military experience.
6258. All these, then, with the exception of Burnage and Milne, went in the same positions that you placed them—as captains? Well, of course, Copeland did not go at all.
6259. No, Copeland was there? Yes. The first three on the list did not go as captains.
6260. Copeland was there, that accounts for him; Milne went as a lieutenant, and Burnage did not go at all? Yes.

G. A. French.

27 Sept., 1900.

6261. Major Miller went in his place, did he not? No; he went as Paymaster.
6262. Ryrie was not recommended by you? I do not think he was a candidate at the time.
6263. He was in the 1st Australian Horse;—did you think he would be a competent man? I have reason to believe he was a very good officer. I do not think he was a candidate at the time my list went in.
6264. And O'Brien, of the Mounted Rifles? I did not recommend him as captain.
6265. But he held the rank of Captain in the Mounted Rifles? No, lieutenant.
6266. Well a lieutenant in the Mounted Rifles would be as good as a lieutenant in that foot regiment, would he not? I would not compare a lieutenant, who does about sixteen days drill in the year, with a man who does six or seven years' service, working every day in the year.
6267. Are there any others in the list who did not go, leaving out those already at the front? The officer I recommended as adjutant did not go—Captain Luscombe.
6268. I say, leaving those out who were at the front? The officer who I recommended to go as quartermaster, with the rank of lieutenant, was sent with the rank of captain. I did not recommend that.
6269. Was there anyone else you did not recommend, General? I think that pretty well covers all.
6270. That is, Captain Burnage did not go at all; Milne, instead of captain went as lieutenant; and Holmes, instead of going as lieutenant and adjutant, went as adjutant and captain? As quartermaster.
6271. Yes, as quartermaster; and the officers you recommended, who were already at the front, and who did not volunteer for these positions, were not accepted? No.
6272. That is practically the whole difference? Yes, practically.
6273. And you also admit that Lieutenant Ryrie was not an applicant at the time you formed your list, or you might probably have selected him? Very likely; he was a very good officer.
6274. Do you think those slight alterations—for after all they are not much—too much power for the commandant of the regiment to have exercised? I certainly do, in this case of the Imperial Bushmen. It was an Imperial Force that was being raised, and I was an Imperial officer, and better qualified to represent the Imperial interests in the matter. It is quite distinct, this Imperial corps.
6275. The Imperial authorities did not ask you any more especially than as Commandant of the Forces here, did they? No.
6276. It was not you, but the Government, that was asked to select these men? Exactly; but it was an Imperial Force, and in which the officers should have been picked out simply on their qualifications; and, therefore, I should imagine an officer with forty years' service in Her Majesty's service as well qualified to do that as an officer of two or three years service in the Volunteer Forces here.
6277. What were the qualifications required? To get the best officer for each rank.
6278. But from what standpoint? We wanted military experience and bush experience combined, if possible, especially for the senior positions. You cannot expect very much in the junior ranks, but you certainly want them for the senior.
6279. Do you think Colonel Mackay would be as good a judge of a bushman as you? Yes.
6280. Probably a bit better? Yes.
6281. Seeing that he has been all his life in the bush, and brought up in it? Yes.
6282. You would, perhaps, think that the Imperial authorities would not object to Colonel Mackay having a certain voice in it, especially as he was going to command the regiment? Certainly not.
6283. Did you recommend Colonel Mackay to command? Yes.
6284. Surely, if he was fit to command the regiment, he was entitled to have some little voice in selecting his officers? Quite so. He had a great deal of voice in selecting them.
6285. Do you think it would be wise to send a regiment away from here, or anywhere else, if there were any differences existing between, say, the colonel commanding and some of the officers under him? Not if it could be avoided, certainly not. It is very necessary that the commanding officer and those under him should be working in harmony.
6286. And therefore, if Colonel Mackay felt that he could not work in harmony with some of those men, do you not think he did the very best thing that could have been done in making these slight alterations? I do not know that he had very much chance of judging of these qualifications. He was only about three days in camp when he made these recommendations.
6287. Still, as he had been connected with the Military Forces here for many years—I remember him seventeen years ago connected with some mounted Force—he would have had a chance of knowing some of these men if they had been connected with the Military Forces here for any time? Colonel Mackay has only been connected with the Military Forces here during the past few years.
6288. Oh, no; I remember him sixteen years ago? That was ages ago. He went out of the Service, and came back in 1897.
6289. He held the rank of captain in some mounted regiment sixteen years ago? But he went out of the Service.
6290. He was in the retired list, but that does not seem to be any disqualification, does it? Of course not.
6291. There is an officer in the list here who was out of the Service for a number of years, and you recommended him for captain? A few years, I think.
6292. Do you not think that a colonel commanding a regiment should have some little voice in the selection of his officers? He has nothing whatever to do with the appointment of his officers in the Regular Service.
6293. But in an irregular regiment? Yes; if he had an opportunity of knowing them.
6294. Do you know the principle on which the officers of a corps, such as Brabant's Horse, were selected? No.
6295. Or the Rimington Guides, Montmorency's Scouts, or Bethune's Horse;—would you be surprised to know that the colonels of the regiments—and these were Imperial regiments, paid by the Imperial authorities—had absolute power in the recommendation and selection of their officers? I should think it very likely, if they were in a position to know anything about the officers.
6296. The Colonel raised the regiment, officered it, and then brought it under the control of whatever branch of the Service he was instructed to? Quite so.
6297. Well, Colonel Mackay would stand much in the same position as those men, would he not? He had no chance of knowing the men. He was only in camp a few days. That is why he brought in some of these others—some of the men he knew. Two or three of them belonged to the Australian Horse.

- G. A. French. 6298. You say one of them is a very good man? I think two of them are very good men. I do not think they were applicants when I made out my first list.
- 27 Sept., 1900. 6299. Therefore, if Colonel Mackay, on seeing your list, and feeling that some of those men were not, in his opinion, suitable for the particular positions to which they had been allotted, do you think it was out of place, if he knew of two good men, to ask them to join him? No; I do not think it was at all out of place if he wished to do it.
6300. We will come to this question of pressure, General;—you said something about pressure;—was there any pressure brought upon you, either directly or indirectly, to make any appointments—in any corps? Yes. There is only one case that I know of.
6301. Which case was that? Your own; to have you appointed.
6302. They brought pressure to bear upon you to have me appointed? Yes.
6303. But you did not appoint me? I was quite willing to.
6304. And what sort of pressure was brought upon you, General? I do not know that I am quite at liberty to say.
6305. Did I bring any pressure on you? No.
6306. But there was some pressure brought upon you to have me appointed? Yes.
6307. And you were quite willing to make the appointment? Yes.
6308. But somebody else objected? Yes.
6309. You could tell us who it was objected, I suppose? Yes, in a general way. It was the Bushmen's Contingent Committee who objected.
6310. Did they give any reason for their objection? I do not think they did, very much. They had a good deal to say in the appointment of the Civil Bushmen's Contingent.
6311. *Mr. Meagher.*] Could you say if Major Carey supported you in your desire to have the chairman appointed? No, I cannot say that he did. He was opposed himself to it. He represented the Committee pretty well, to me. I never came in direct contact with other members of the Committee.
6312. He really represented the Committee? Yes; my instructions were to assist him in every way.
6313. *Chairman.*] Was there any pressure brought in any other case outside my own, General? I cannot recollect any other instance.
6314. And the pressure did not seem to pan out much in my case? No; I do not think so.
6315. However, I did not bring any pressure to bear upon you, and did not approach you at all with regard to the matter? Certainly not.
6316. Since you were here last, General, we have had evidence that you specially approved of this helmet—*[Exhibit C handed to witness]*—for the Second Contingent? This particular one?
6317. Generally—that was a sample; they were like that? Yes; one had to take it or leave it. There was not very much choice.
6318. In the case of the Imperial Bushmen's Contingent, did they go away with helmets or with field service hats? I think they had hats, if I recollect aright.
6319. You do not know anything about the helmets being supplied and returned, do you? I cannot remember. Some of the early ones might have been.
6320. Are you sure that the whole of them were not? No; I am not sure.
6321. We have evidence that they were? If you have the evidence, it is probably right. I cannot remember.
6322. Colonel Mackay refused to go away with head-gear of that quality;—he had them returned, and got field service hats? I cannot remember it.
6323. It did not come under your notice? It ought to have done, if it occurred.
6324. But you do not recollect anything about it? No.
6325. By the way, General, just diverting a little, is the Paymaster on duty at the Paddington Barracks just now? The regular Paymaster?
6326. Yes? No; he is on leave.
6327. Has there been an examination into the accounts by a Treasury officer? Yes; there has been an examination going on for some months.
6328. And the result turned out to be satisfactory? No; the Treasury inspector did not send in a very satisfactory report, and action has been taken on it.
6329. Whose business was it to superintend the Paymaster—which particular Department does that come under? He is under the Military Secretary, Colonel Roberts.
6330. By the way, we have been supplied with a number of saddles and that sort of thing, that have been fished out of the harbour;—was that brought under your notice? Yes; there were several saddles.
6331. Have you any idea how they got there? Yes; a pretty good idea how they got there.
6332. Could you give the Committee some idea? Yes; it was at the embarkation of the Second Contingent. The men were taken down the harbour on a steamer when the other Contingent was leaving—the Mounted Rifles I am talking of—and they were brought back alongside the pier at Pyrmont, and had to tranship from one steamer into the other, and get their equipment inboard in the dark. It was then that these saddles got into the water.
6333. It might have been quite accidental then? No doubt it was.
6334. You have no reason to suppose they were wilfully thrown into the water? No.
6335. These saddles would have to be replaced? There was no time to replace them then. This occurred just before the Contingent sailed.
6336. There was one steamer delayed some time I believe? Yes.
6337. Have you noticed any of the evidence given by some of these men who have returned? Yes.
6338. Have you noticed that some of them have sworn positively that they were sent away from here improperly equipped—with only one suit of clothes? I think I noticed that one or two stated to that effect.
6339. We have only had a few herē;—some of the witnesses who came forward swore that they were sent away improperly clothed with only one suit, and others stated that they knew many others of the men who were in a similar plight? I think that would be doubtful.
6340. Whose fault would that be, if it occurred? The commanding officers of the companies should see that every one of their men had two suits.
6341. That comes more within the province of the Quartermaster does it not? Every company commander should see that his men are properly fitted out.
- 6342.

6342. There has been evidence given by one or two others of those who have returned, and they seemed G. A. French. very reliable men so far as one could judge from their appearance, that on the march from the Modder while they were escorting a convoy, on one occasion they went three days without any food, and they were never more than  $\frac{3}{4}$  mile from the convoy? A convoy of provisions? 27 Sept., 1900.

6343. Yes? That seems very odd.

6344. Would that be the fault of the officer in charge of that particular squadron? That the men had no food?

6345. Yes? Largely his fault, I should say, because he could have requisitioned on the convoy for provisions if he wanted them.

6346. Yes; it was a convoy to supply provisions; they closed in at night within  $\frac{1}{4}$  mile of it on some occasions, and they were actually three days without food? Do you think that is an absolutely true statement?

6347. I could not form an opinion; but I should think, from what I saw afterwards, that it was true? Three days without food?

6348. I suppose they would get something—they were served with a ration; but the statement was that they were practically foodless? It would be a very extraordinary thing if it is correct.

6349. Rather a serious thing, would it not? Yes.

6350. That evidence has been given here, and from what I saw myself I have no cause to doubt it, although I know nothing of that particular case? It is a matter that I can tell you nothing at all about.

6351. It would be the fault of the officer if he failed to requisition for provisions? I should think so, if he did not requisition or make representations to whoever was in charge of the convoy.

6352. Now, as a matter of fact, General, I think our last big encampment was at Rookwood? Yes.

6353. Did not your transport break down there? Do you mean to say the carriage of all the things required, and so on?

6354. Yes? Oh! our transport was only a hand to mouth affair then.

6355. It was not altogether satisfactory, was it? There was great pressure, owing to getting all the men into camp together. Everybody was trying to get in at the same time.

6356. In the papers, we had the Colonel of one regiment writing stating that he had had to make an enveloping movement on a water-cart? Yes, and there was a standpipe, tapping the main Sydney water supply within 250 yards of his camp.

6357. On the line from the Nepean River? Yes, the main water supply. It was close to the Potts' Hill Reservoir.

6358. There was no fear of the supply running out? No.

6359. Suppose you were called upon for a special effort in regard to the transport arrangements, what position are you in now? Here?

6360. Yes? Our transport is very limited. Practically our Army Service Corps consists of twelve Permanent men, and we have about as many horses and a few carts and waggons. That is practically what our transport is. We would have to hire everything.

6361. You would not have any difficulty here, would you; because there are any amount of men in the city who understand that sort of thing? There would be no difficulty in hiring transport here. There is a very good style of spring-cart about in plenty, and they would be very useful as long as they kept to the roads.

6362. What do you think of those carts that you use here—those two-wheeled long military carts like delivery vans? They are spring-carts. They are good enough round town; but they would not do across country.

6363. Very serviceable to cart your stuff round Sydney, or where there is a decent road? Yes.

6364. But they would not do any good across country? No; I do not think any spring-cart would be any good across country.

6365. And you would not think of getting this sort of cart for country use? Not where you had to leave the roads.

6366. Very good where you had a macadamised road, or on a tolerable road they would get along, I suppose? Yes.

6367. But certainly not suitable for following up an army when you cannot keep on the roads? They always try to keep the transport on the roads when they can.

6368. If they can with safety? Yes.

6369. Who fixed up the feeding arrangements for the horses at Randwick? It would be under the quartermaster generally—the supply department. The forage would be supplied on the recommendation of the veterinary surgeon, according to what he wanted. At first the horses would get more green food than afterwards.

6370. Are you aware that at the start they got oats, without any chaff or bran? They should have always had chaff or bran if it was only a handful of chaff to make them chew their oats.

6371. And you think it is desirable horses should be fed on the food they were used to in the country? Certainly, especially to begin with. While I am on this subject I may state that I saw the evidence Mr. McIvor gave with reference to the horses. I referred his evidence to the veterinary surgeon, and have their reports here. I should like to hand them in.

6372. *Chairman.*] Certainly.

6373. *Witness.*] It is the report of the veterinary surgeon who was in camp the whole time. There is also a report from Mr. Symons, a veterinary surgeon. The evidence was handed to them for report. I can hand them in.

[*Reports handed in, and marked "F" in Appendix.*]

6374. *Witness.*] The veterinary surgeon says he told Mr. McIvor that he had no business at the camp.

6375. *Chairman.*] With regard to the judges of the riding, who were they? The judges varied from time to time. Colonel Airey and Mr. Featherstonhaugh were the judges at one time.

6376. He only came in with the Bushmen, though? I think before that.

6377. Take the Second Contingent? Colonel Airey was there for one. He was the chief judge, and Mr. Green, an ex-Sergeant-Major of the Artillery, was also a judge.

6378. Do you know that they rejected two of the finest horsemen in Australia, because they could not ride? I have heard some statement of the sort.

6379.

G. A. French. 6379. But this is an absolute fact? Were they not taken on afterwards?

27 Sept., 1900.

6380. One of them was and the other refused to go on under a man who knew so little about horsemanship; he was a man who all over the back country had been riding in show-rings, and had taken numbers of prizes in shows, and was generally considered one of the most daring riders in the back country;—the judges rejected him, because he could not ride? That seems odd.

6381. It seems from that that those who were judging the riding, did not know much about it, does it not? They were supposed to be pretty good riders, and to know a good deal about it.

6382. There is the case of a man called Frank Rudd; I know of that myself;—did you ever hear of that? I do not remember it.

6383. Would you be surprised to know that he is looked upon as the crack rider of the Murrumbidgee? Who rejected him?

6384. Colonel Airey; but I may say when he was informed that he was the crack rider of the Murrumbidgee, he immediately passed him without any further test;—so it would seem from that, that the riding test were conducted in rather a loose fashion, would it not? Yes; if that is all correct.

6385. There is no doubt about the correctness of it;—who set out the riding test? I think it was left to Colonel Airey and those with him. They were not tied in any way, and they were particularly given to understand that the military seat or anything of that sort was not a necessity.

6386. Is that the military seat that Colonel Airey has, General? No; I should not think so, particularly.

6387. Do you know what the test was? I was out there repeatedly, and saw them putting the horses over jumps, and so on. It struck me that a good many men might be put to a great disadvantage, on account of the chance horse they might ride.

6388. Do you think it is a fair thing to put a horse, which might have been taken out of a 'bus or a cart, or from anywhere, a horse getting up in years, that had never been put at a jump in its life before, at these jumps? It was pretty rough on those who had to ride them.

6389. May the result not have been, if they were ridden into some of these stiff jumps, very serious? They were not stiff jumps.

6390. I do not mean as regards the height;—did you know how they were fixed up? They were only about 2 feet high.

6391. I am not talking about the height, but the strength;—did you notice how they were fixed up? I did not see any heavy timber.

6392. Six by four hardwood is very heavy? Was that the top rail?

6393. There was only one rail bolted solidly on to posts;—if the horses rapped that, there was not much chance of it giving? They were very low, were they not?

6394. They were not high, but a horse might stumble over a foot log, with the result that his rider's neck might be broken, might he not? I do not think any serious accidents occurred.

6395. Did you think it was a good test? I do not think the judges could help themselves.

6396. Do you not think a bit of a gallop would have been much more to the point? I think they had that too. I remember being out there, and seeing the men coming back from galloping across country.

6397. Your staff complained very bitterly of the amount of work they have had to do; they have all been complaining of the work they had;—by the way, that reminds me of another question with reference to the horses;—do you know if any of your Staff Officers rung in any of their broken-down horses for sale to the Contingents? I do not think so. One or two of those who were going with the Contingent may have sold their horses.

6398. I think the insinuation is here that some of the officers who were not going with the Contingents, and who had one or two old corks, managed to get them in under somebody else's name, and get them put through that way;—do you know anything about that? I do not know; I do not think that would be true.

6399. You were all very busy on the occasion of getting these Contingents away, were you not? Yes.

6400. Do you remember on one occasion you were measuring the height of some horses on a flat rock at the Randwick Range near the Musketry School? Yes.

6401. Do you remember who there were present besides yourself? No; there were a good many there. We were separating all the horses.

6402. The Veterinary Surgeon was there? Yes.

6403. Do you remember if Colonel Airey was there? No; I could not say. I do not recollect.

6404. Was Captain Lenehan there? He might have been.

6405. Was Captain Pearce present? I am not sure; I do not recollect.

6406. Were Captain Mills and Lieut. Mullens among the number? They might have been there; I could not say for certain. I do not remember who was there.

6407. And Major Knight? Major Knight was probably there. I went through with the Veterinary Surgeon separating the big horses.

6408. Quite so;—do you not think if you were all so desperately busy, that there was hardly any necessity for quite so many officers as all that around the horses? I suppose these were officers in the camp, and they would be off parade, and I suppose they just came along.

6409. We have been told that the helmets could not be examined, and everybody was too busy to do anything;—could not some of these officers have been doing some of the work? There were none of the Staff Officers there, according to the list you read out.

6410. Still you would not stand on ceremony in the matter of having necessary examination conducted into the clothes and other things, would you? Some of these men were surely capable of examining some things, instead of looking on at horse-measuring? I think Major Boam was there examining clothing.

6411. He said he did not examine it? He said it was not his business to do it; he received it, and I suppose examined it in some way before passing it on.

6412. No; we cannot find that it is anybody's business to examine the things according to the rules? They leave it to the Officer Commanding the corps to make objections.

6413. He was with you at the horses, was he not? Yes.

6414. He might have been as well employed in examining the clothing, might he not? Yes; if there was any clothing there to examine.

6415. Or examining saddlery or anything else? I am afraid there was not much saddlery there in those early days of the camp

6416. No; I do not think there was;—did I show you that pith helmet, when you were here before? I G. A. French. think you showed me all of them.
6417. I wanted to get your opinion of this pith helmet (*Exhibit P produced and handed to witness*)? 27 Sept., 1900. This looks like a regular service helmet.
6418. Yes, that is what it is? I have not seen it with this band on before.
6419. There is a khaki cover goes over that? Yes; the band is new to me. They did not have them in India when I was there. How does this behave when it gets saturated?
6420. Very well. That helmet you hold in your hands has done many months' service. It has done twice as much as these of ours that have returned;—do you know anything about the cost of these pith helmets? In India they cost about 2 rupees, about 2s. 6d. at the present price of the rupee.
6421. These helmets ought to be very good to keep out the heat? Yes; that is their main use.
6422. They can be used in the white or with the khaki cover over them? Yes.
6423. What do you think of the field service hat;—do you not think it more suitable for our forces than the helmet? Yes; I like it very much.
6424. How is it we have changed, and our Volunteer regiments have got helmets? We have not changed. They have had both the helmet and the field service hat. The helmet is for full dress.
6425. And they have a cap too? Yes.
6426. So they are well supplied with headgear? Yes.
6427. By-the-way, whose idea was it to get those red tunics and that sort of thing? The full dress of the Infantry?
6428. Yes? That was arranged in accordance with the Commanding Officer's wishes.
6429. Do you not think you should have suppressed it? No; I like one good full dress—the red is not necessarily for service.
6430. Do not you think a smart-cut khaki is as good? No. The trouble is that you cannot get khaki to look smart. There is a certain amount of vanity you must allow for, you know.
6431. You give them the red so that they can mash the girls, and the khaki for fighting? So that they can look smart.
6432. Who developed the idea of giving them something between a shako and an old policeman's hat? You mean the 7th Regiment?
6433. Yes? I do not know. He has a great deal to answer for.
6434. Did you ever see anything like it before? Never; and I do not wish to again.
6435. What would you call them if asked to give them a name? I think a semi-busby.
6436. They are more like one of those old shakos that they used in olden times, are they not? No; a busby is more like that.
6437. It is a busby that the Highland regiments wear, is it not? A bonnet they call that.
6438. Oh, not a bonnet. That is not what I mean. Take the 42nd, the Black Watch, when they have their war paint on? Do not they wear what they call a bonnet?
6439. Yes; the Guards wear a bearskin busby—a most tremendous thing? I do not think I ever came across the 42nd.
6440. You call this that the 7th Regiment wear a sort of broken-down busby, then? Yes.
6441. And you say the Colonel of the Regiment designed that? I suppose so.
6442. Do you not have to approve of all these things? Yes.
6443. And you approved of that? We give a large latitude to officers commanding the Volunteer regiments in regard to their uniform; too much, I am afraid.
6444. I think so when it results in that kind of thing? We endeavoured to stop it, and pointed out that it was quite unsuitable for the hot weather, but they would have their way.
6445. But do you not think it is ludicrous? I do not approve of it, but it is thought to be very fine.
6446. If you had it painted red and blue it might do very well for Fitzgerald's circus;—and so you give the officers a great deal of license? Yes, in the Volunteer regiments, but we do not in the Partially-paid force.
6447. Do you not think, from what you have seen, that the officers of these Volunteer corps should be suppressed somewhat? The officers?
6448. Yes, in their efforts to decorate the men? I do not agree with what they have done in a great many cases, but you do not like to be too particular with men who are giving their services for nothing.
6449. I have been looking over these tenders for forage, and I do not see that there is a great deal of objection to be taken to them? I think, on the whole, we got very good forage. There was one little lot of lucerne which was objected to, and we did not pay for. The forage generally was very good, and was carefully examined by the Board.
6450. Did you not buy some forage in Melbourne for one lot? We did not; but an officer in charge of one lot thought he had run short of forage, and ordered some other at Melbourne or Adelaide.
6451. Do you know who the officer was? I cannot remember. I think it was one of the earlier Contingents.
6452. On the "Moravian," was it not? No, I do not think so, but I cannot remember.
6453. Is there not a sort of idea in military circles that a military officer is necessarily an authority on everything? Well, the same military officer would not be an authority on everything, but you could get different military officers who would be authorities on different points.
6454. Here is an instance that came under my personal knowledge: There was an officer here in the Volunteer or Partially-paid Force; he was a native of London, and came direct from there to Sydney, and never was out of it; of course, he has seen horses round in a cab or a 'bus, yet he went as the officer in charge of the "Moravian" horses, as a sort of officer and vet.? An officer and vet.?
6455. He went in charge of the horses; he started to physic them at once, and nearly killed a lot of them? Who was the officer?
6456. Captain Pearce? He was in a field battery and ought to know something about horses.
6457. He has been some time at school-teaching, and was only out on wet Saturdays in the battery? I did not think he was an authority on horses.
6458. No, but there is an idea among military officers to the effect that being an officer necessarily makes them an authority, is there not? Of horses?
6459. Of anything? I do not quite agree with that.
6460. I do not agree with it myself, but do you not think the idea is prevalent to a certain extent? With some of them I suppose.
- 6461.

- G. A. French. 6461. *Mr. Meagher.*] In your position as General Officer Commanding, do you think the Defence Force of the Colony is on a thoroughly satisfactory basis? Every bit of it—all thoroughly satisfactory?
- 27 Sept., 1900. 6462. Yes? I can scarcely say that?
6463. From your inspection—for no one else is in such a good position as you to give such an opinion—can you say after all your reviews and the information which you naturally seek on account of the heavy responsibility that rests upon your shoulders, that the Defence Force, and especially the Volunteers, is on a satisfactory basis? On a satisfactory basis? Well, I have no particular fault to find with the basis on which the Forces are organised. Of course, there are varying degrees of efficiency in all different forces, and varying degrees of efficiency among the members of the same force, according to the time of serving and individual qualifications.
6464. I do not mean isolated instances;—what I want to know is, is the standard of efficiency of the Volunteer Service up to your expectations, or to what you would like to see it? I think it is quite as satisfactory as any of the other Colonies. Quite as satisfactory as any of them. Of course it is capable of improvement. We are always trying to improve.
6465. You have been for some time making an investigation into one regiment here called the 7th Regiment, have you not? There was a Military Court of Inquiry sitting in connection with the regiment.
6466. Did you preside over it? No.
6467. Did you take any part in it? No.
6468. Did you peruse the result of the Court's deliberations? Yes.
6469. What opinion did you form in regard to the evidence taken, and the state of affairs disclosed by the Court of Inquiry? I agree, generally, with the finding of the Court.
6470. Was the finding of the Court strongly in favour of this particular regiment? No; it pointed out a great many irregularities.
6471. Would you mind stating now, if you can from memory, what were the chief or most important of these irregularities referred to? I should prefer not to, as the matter is not yet decided by the Government.
6472. *Mr. Meagher.*] This is a Select Committee which is entitled to know these things;—it is inquiring specifically into certain things connected with South Africa, and secondly into the condition of the Military Forces, and whether the Government have dealt with this or not, I submit, Mr. Chairman, the question is entirely in order.
6473. *Chairman.*] This Committee has exactly the same powers laid down by Standing Orders as any Supreme Court in the land, and the Chairman is vested with exactly the same powers as a Supreme Court Judge. Any question that a member of the Committee may ask must be answered. It may be a question of taste as to whether the question should be asked, but that has nothing to do with it. The Committee certainly has the power of forcing an answer, or taking the steps that are laid down in the Standing Orders. I, personally, have refrained from going into this matter, because I think it would be better to leave it until we could get this report unearthed.
6474. *Witness.*] I should very much prefer you would. It puts me in the awkward position of stating facts which are confidential, and with which the Government have not yet dealt, although they have had the report a long time now.
6475. *Mr. Meagher.*] This report, in the ordinary course, would have been in the hands of Members of Parliament, on the Table of the House many months ago, but by some utilisation of the forms and formula of Parliament this report has been prevented from coming before the representatives of the people. They have kept it for several months, and I do not feel inclined to be a party to keeping it dark any longer, if this inquiry will give me an opportunity of ascertaining what we are entitled to know.
6476. *Chairman.*] You are entitled to ask the question, and the General is here on oath, and before a Court having the same powers as the Supreme Court of the land. I know it is distasteful for him to deal with a question, that, so far as he is concerned, is confidential. Yet, if Mr. Meagher insists, it will be necessary for him to answer it.
6477. *Mr. Meagher.*] Apart from any qualms of conscience as to answering the question, I would like you to clearly understand that if this were some inquiry in camera, which was not likely to see the light of day, I would not attempt to put you in any false position at all, but I am asking you with reference to a document, the report of the Court of Inquiry on a portion of the Defence Force of the Colony, and which must eventually come before the people by being laid upon the Table of the House. If there had been a reasonable delay I would not dream of asking you, but I think you will admit there has been a most unaccountable delay. I will ask you this question. Did you anticipate, from your experience, that this report would have been laid on the Table of the House many months ago? I do not know anything about laying it on the Table of the House, but I thought it ought to have been dealt with long ago.
6478. You have seen in the paper on many occasions, different members have put questions as to when this report is to come on? Yes.
6479. And the answer always seems to be one of these non-committal unconvincing sorts of answers? Yes; I have repeatedly asked for a decision myself, because I do not like dealing with the regiment without having the affair settled.
6480. If I thought there was any guarantee of that report being dealt with on the Table of this House, I would not press the question.
6481. *Chairman.*] I think you might continue in this way. I am only judging by what I have seen in the papers, but I think the General has sort of whitewashed the regiment since.
6482. *Mr. Meagher.*] I was going to ask him whether he had found many things derogatory to the regiment, and whether he had subsequently not retracted, or at any rate, passed encomiums upon the regiment. Let me ask you this, General;—the result of this Court of Inquiry came before you in the shape of the finding? Yes.
6483. That finding was antagonistic to the regiment? Yes.
6484. Would you mind indicating in what particular way the finding was particular strong against the 7th Regiment? The Court found fault with several of the senior officers of the regiment, and with the staff of the regiment.
6485. Would that include the Commanding Officer? Yes, and the Adjutant and Quartermaster.
6486. Who was the Adjutant? Mr. Holmes.
6487. You would not form your opinion purely on the report, but having perused the evidence, did you agree with what was stated against Captain Holmes? Yes.
- 6488.

G. A. French.

27 Sept., 1900.

6488. The finding was unfavourable to him, of course? Yes.

6489. Did you subsequently, notwithstanding the finding with which you agreed in regard to Adjutant Holmes, recommend him for a position in South Africa? I recommended him for a position as Lieutenant and Quartermaster, but I objected to him being promoted Captain.

6490. You did not consider that any of the evidence that was adduced before the Court of Inquiry was such as to place you in a paradoxical position by recommending him for this position afterwards? No; I do not think so.

6491. There is no inconsistency? No; I do not think the report was sufficiently strong against him to debar his employment in the future. All I had purposed doing was to take him out of the regiment and put him somewhere else.

6492. Do you know since his arrival in South Africa he has rapidly ascended? I do not know much about him since he left here.

6493. *Chairman.*] He is a Major now, is he not?

6494. *Mr. Meagher.*] He is attached to some Imperial staff now. At any rate the promotion is considerable, a higher promotion than Captain, certainly.

6495. *Witness.*] I did not hear of his being promoted. He may have got some appointment.

6496. *Mr. Meagher.*] Do you consider that the evidence disclosed by the inquiry showed that Colonel Neild was not a fit officer to command the 7th Regiment? It showed that there were certain drawbacks to his being in command.

6497. Did the Court of Inquiry consider so? Yes.

6498. And you approved of their finding? Yes.

6499. You did? Yes; in certain respects you know. He is a very energetic active man. I may say what I particularly found fault with was the difficulty of persuading him to attend to points of military discipline.

6500. That is a very important thing, is it not? Yes.

6501. *Chairman.*] He is a great horseman, is he not? I do not know that that is so. You do not expect an infantry officer to be an expert horseman.

6502. *Mr. Meagher.*] That Court of Inquiry found that Colonel Neild should not be in the position of Officer Commanding the Regiment? Yes; that covers it.

6503. Did you agree with that finding? Yes.

6504. Having agreed with that finding, did you subsequently, in public at a parade of this regiment, compliment this particular officer? As regards what?

6505. As regards the efficiency of his regiment and his attendance for the day? On the very great improvement of the numbers.

6506. I am not asking as to the details; I want to know the facts first;—first, did the Court of Inquiry consider that Colonel Neild was not a fit person to be a commanding officer;—have you any doubt that that Court of Inquiry found that Colonel Neild was not the man to be a commanding officer? That was practically what they found.

6507. Have you any doubt that you agreed with them? For certain reasons.

6508. Did you agree with them? Yes.

6509. Did you subsequently in public congratulate that same officer who you considered was not worthy to hold the command of the regiment on the parade of his men and his regiment in his capacity of Officer Commanding? I congratulated him on the great improvement in the numbers. He had worked the numbers up very considerably. I like to give credit where credit is due.

6510. Did you, on the day when you congratulated him, still think that he should not be the Officer Commanding? I had not changed my opinion on that point.

6511. And I may take it that you still think he should not be the Officer Commanding a Regiment? Yes, for certain other reasons, giving every credit to his energy and zeal.

6512. Allowing every credit for his energy and zeal, you still think he should not be the Officer Commanding the 7th Regiment? I have not changed my views from what I put forward originally about it. At the same time, I am willing to give him every credit for the work he has done.

6513. In regard to the Military Forces of the Colony, the Volunteer Branch is under your control, is it not? Yes.

6514. Do you think, numerically, it is very small? No; not in accordance with the basis laid down for us. We work on a certain basis that is laid down for us by the Defence Committee in England, and considering what they lay down, our numbers are fairly in keeping.

6515. How many Volunteers are there? About 8,600.

6516. How many are there in the Naval Brigade and the Naval Artillery Volunteers? I think they run up to about 650.

6517. *Chairman.*] Do they come under your jurisdiction, too? No; unless in active service and employed on shore.

6518. They are really apart from you, then? Yes; except on active service.

6519. In times of peace they are separate? Yes.

6520. *Mr. Meagher.*] But do you not deal with them in your annual report, specifically with the Naval Artillery Volunteers and the Naval Brigade? I have alluded to them because they are supposed to work in with us, and have to man certain guns in our forts.

6521. Did you not make certain recommendations with regard to them? I have pointed out the unsatisfactory state that the Naval Brigade is in. They are not in a position to do anything at sea, and not in a position to do anything on shore either. We have no ship for them, and no modern guns. When I wanted them to join last year in the general manning of the defences round Sydney, they could not turn out for some reason. They cannot go into camp, because they say they have no equipment, so that the position I have never considered very satisfactory for the Government. They are not sailors, and they are not soldiers. It is not the men I am speaking of. They are an excellent lot of men; but they have no equipment.

6522. And do you think that a ship should be provided here for training these men? I have pointed out that one of these ships always lying here might be put in commission, and these men put aboard her, and trained by a staff from the Royal Navy. I think that would be putting them to their proper use, and more satisfactory to them.

- G. A. French. 6523. *Mr. Hurley.*] You have been a very observant man, General;—have you noticed the enthusiasm that was in the people of the Colony here at the time the different Contingents were going away? Yes.  
 27 Sept., 1900. I saw intense enthusiasm.
6524. Since you have had an opportunity of observing the people lately, in the past five or six months, do you think they would be as eager to go as they were when the First Contingent went away, if they were required to go again? I should think so. As a practical proof of it, though I said the Volunteer Force was only about 8,500 men, we have been offered during the past twelve months 14½ new corps, which would probably be about 12,000 men.
6525. You have heard a rumour;—is it true that you cabled to Mr. Chamberlain saying that you could get so many men within a certain time? That is not true.
6526. *Chairman.*] That has been explained before, Mr. Hurley.
6527. *Witness.*] It was my own opinion, expressed to an officer in England, not to Mr. Chamberlain, and referred to the whole of Australia—not to this Colony in particular. At the time, I think, if you will bear in mind the exact state of affairs, you will recollect that we had no white troops near China. We could only send native troops. We are much nearer here, and, in my opinion, a Force could have been raised in Australia.
6528. *Chairman.*] Just one question or two, General;—you made some appointments of officers to the Lancers recently? Quite recently, yes; 200 new Lancers were approved.
6529. You made some appointments of officers? Yes.
6530. Can you explain this to me: that men who had no military experience whatever have been accepted as holding Commissions, while men who have had training in England, and have been through the whole of this South African war, and were recommended by their colonel, were not appointed? Recommended by the colonel of the regiment, Colonel Burns?
6531. Yes, to you; and the appointments not made? I do not think any appointments were made, except on his recommendations.
6532. But how is it that some of the recommendations of men who had gone through the whole of the South African war, and who had had training at Home previously, were not appointed, while boys who had had no previous training were;—can you explain that? Can you give me the names?
6533. Yes; take the case of a young lad named Holborow; he went Home with the Lancers for training; he has been in South Africa as a trooper or sergeant right up to the present time, and been at the front with the Lancers;—he was recommended by his Colonel to you? By Colonel Burns?
6534. Yes; his name was left out, and some boys who have no experience, and were mere lads, were appointed instead? I do not recollect anything about it.
6535. It is a fact, and I want an explanation if you can give me one? I cannot recollect any such recommendation being made to me about Private Holborow.
6536. I find that it is so? If I differed with the Colonel Commanding I should be sure to remember it.
6537. He was recommended first by Major Lee, after the Major had had him at the front for some nine or ten months? And he has come back recently?
6538. He has not come home at all;—he is still at the front? That may have had something to do with it, then.
6539. Do you mean to say that, because a man is at the front, you will not promote him in his regiment;—do you not see that after his active service he goes in as a trooper under these boys? I do not think he could have been recommended to me.
6540. I say he was? There must be some mistake.
6541. *Mr. Meagher.*] Has the General refused any of Colonel Burns' recommendations? I do not think so.
6542. *Chairman.*] You did not appoint as many as Colonel Burns recommended, and you struck out this man's name, and sent on the names of a lot of boys who had no military experience at all? I did not send on any names that Colonel Burns did not recommend.
6543. None that he did not recommend, no; he recommended the lot, and in reducing the list you struck out this man with his qualifications, who is still fighting at the front, and, in preference to him, you recommended for commissions a number of boys who were appointed? Who were these boys, and when was it done?
6544. About six weeks ago? I have no recollection of it.
6545. Have you no recollection of the Minister for Defence forwarding to you some questions I asked in the House concerning the matter; I wish you would give this matter your attention, and have it looked up;—it seems a most outrageous thing? The way you put it, it would be; but I have no recollection of it. It may be that his is held over.
6546. Why would you hold his over and appoint a lot of boys? I think none have been made recently.
6547. Would you mind looking at this exhibit (*a piece of black wadding handed to witness*);—do you know what this is? I have not the slightest idea.
6548. Would you be surprised to learn that it is one of the pieces out of your military boots? Is it?
6549. Yes? I know nothing about it. I have heard it said that our boots were particularly good.

FRIDAY, 28 SEPTEMBER, 1900.

Present:—

MR. CHANTER,  
MR. MEAGHER,

MR. O'CONOR,  
MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

Major Morris Marian Boam recalled and further examined:—

- M. M. Boam. 6550. *Chairman.*] Are you personally conversant with the conditions under which tenders were called for the helmets supplied under the present contract? Yes; I was then Secretary of the Clothing Board.  
 23 Sept., 1900. 6551. Do you remember if this (*Exhibit D*) was the pattern for which tenders were called? With reference to the whole of the sealed patterns exhibited to the tenderers, as Secretary of the Board, I wrote to Colonel Taunton, forwarding him schedules of the articles which would be required for the Service, and asking him to have all sealed patterns ready for inspection. These sealed patterns were got ready in the store,

store, and I sent Mr. Grainger, who was then my clerk as Secretary to the Board, over to the room with the schedules, with instructions to him to minutely inspect each article, and see that it was in accordance with the schedule sent to Colonel Taunton. Mr. Grainger went over there and inspected them. I did not see the sealed patterns myself. I did not go into the store-room to see the patterns, because I sent my clerk over, and he reported to me that all the articles which we had asked for were ready for inspection by the tenderers.

6552. This seems to be a sealed pattern, does it not (*Exhibit* )? There was a sealed pattern helmet.

6553. But whether this is the one or not you do not know? I can tell you that I have seen the sealed pattern since, and this is not the one that was in the store as the sealed pattern for which tenders were called.

6554. Does it not seem strange to you that when we asked the authorities to let us have the sealed pattern, which was the sealed pattern when tenders were called, they should send us something else? We have filled up page after page of evidence on the assumption that that was the sealed pattern because it was sent to us as such. The pattern that was in the store, as far as I can remember, was something after this style (*Exhibit T*). The other (*Exhibit D*) was a helmet that was brought out by Colonel Taunton from Home.

6555. That being so, do you not think it strange that this Committee having asked, in as mild and as courteous a way as we could, for the sealed pattern to be produced, a helmet should be sent to us which was not the sealed pattern at all at the time the tenders were called for? I really cannot understand why the helmet should not have been produced. The one that has been produced is not the helmet that was submitted to the tenderers to contract for. I see there is a date on this pattern helmet (*Exhibit D*). It is 23rd August, 1899, and as the tenders were called in May, 1893, it could not have been the sealed pattern, as regards those tenders.

6556. That was pointed out by Mr. Anderson? There was a sealed pattern undoubtedly.

6557. But why was it not produced when we asked for it? I could not tell you.

6558. Who could tell us; Colonel Taunton could not tell us, Major-General French could not tell us;—is there anybody who could tell us why it was not produced? It is impossible for me to say why it was not produced.

6559. Who would be able to say why it was not produced; we have asked three or four of the principal officers, and nobody knows;—do you not think this is treating the Committee very unfairly? I really cannot understand why there should be any objection to produce the helmet.

6560. Is it not generally admitted that this helmet (*Exhibit C*) is a failure for active service? It is admitted that it has been a failure for active service, but not for ordinary parade purposes. It is good enough for parade work, but it is not good enough for work in the field where a helmet is liable to be knocked about. Where a man parades at the most, say, twenty times a year, and wears his helmet only twenty times a year—comes on parade and goes off parade with it—the helmet is really good enough.

6561. *Mr. Chanter.*] But it is not fit for camping purposes? Certainly not; that is what I said when I came here first—that I would prefer the cork helmet of the two, apart from the question of price. Anderson's contract for the cork helmet is 5s. 9d., and for the gossamer 5s.

6562. *Chairman.*] So that as a matter of fact Mr. Anderson must have contracted for this class of helmet? He contracted for two classes of helmet. He contracted for the gossamer helmet at 5s., and for the Artillery helmet at 5s. 9d., in the same contract, showing that he required 9d. extra where a cork helmet was to be supplied.

6563. Do you not think it would be more profitable, even at a difference of 9d. to get the cork helmet? I do not think helmets would now be worn on active service. I think if men went into active service now they would wear the field service hat, which is found to be the more suitable. Therefore, why pay 9d. extra for a helmet.

6564. Why have a helmet at all? As a matter of fact helmets were done away with some years ago.

6565. Who resuscitated them? I think they were reintroduced when General French came here, when he went back to the old system of a scarlet uniform. Men could not wear a brown field service hat with a scarlet jacket.

6566. Who introduced the scarlet jacket? General French reintroduced it. It was discarded by General Hutton, who decided to have only one class of uniform, and that was to be the field service brown jacket, the full-dress uniform being distinguished by an aiguillette which was easily affixed to the shoulder. When General French came here he thought the men would look smarter in red. In fact, I think, there was a little inclination on the part of the regiments to have red, and he permitted the reintroduction of the red uniform on the representations of the Officers Commanding the Regiments. They could not wear the brown service hat with the red jacket, so they went back to the helmet again. That is how they were reintroduced.

6567. With the brown uniform, if a man were called out on active service on short notice he could use that? Undoubtedly. You would not want the aiguillette. You could take it off, and throw it away, and if it were lost it would not be a very serious matter. Then again, when they had the brown uniform the men had two suits, and since the red has been introduced they have only one suit—that is one of brown and one of red. The consequence is that when you go into service you are obliged to have an extra suit of clothing in store ready for mobilisation.

6568. And, of course, if you start keeping uniforms in store you run a danger of injury to the cloth? No, the clothing would not go to waste in that way. I suppose we have 1,000 suits of clothes in store—what we call mobilisation clothing. The Officers Commanding Regiments utilise this clothing from time to time, and as they utilise it they replace it so that the clothes are always moving, and there is no fear of their being moth eaten.

6569. At any rate if you were called to active service the brown uniform would be there, and would be suitable for active service? Undoubtedly.

6570. The red has been discarded all the world over for active service? Yes.

6571. And the brown or khaki colour has been generally adopted, not only in Great Britain, but all the world over? So I understand.

6572. Even the Japanese are wearing khaki? Yes.

6573. In reference to some of the headgear that has been introduced lately, who is responsible for that? Are you speaking of the purely Volunteer Force?

6574.

M. M. Boam. 6574. I do not know exactly what they are, but I saw some military men striding down the street with a most gorgeous headgear; I do not know, but I suppose they are Volunteers;—I believe the 7th Regiment wear this headgear? They have a sort of a busby.

28 Sept., 1900.

6575. You would not say it was a busby? I would not like to swear it is a busby.

6576. You would not like to swear really what it is? No, I would not like to swear what it is.

6577. Who is responsible for the introduction of these sort of things? I think the officers commanding regiments themselves. Those officers have a pretty free hand with their clothing, unfortunately.

6578. You have told us that Mr. Anderson's contract provides for two classes of helmet? Two prices.

6579. That would mean two classes, would it not? I presume it would.

6580. You would not expect a contractor to put in two different prices for one article? No.

6581. Is it not a fact that the Artillery are still being supplied with cork helmets? I believe they are.

6582. The price of 5s. 9d. would apply to the cork helmet, and the 5s. would apply to the gossamer helmet? Yes.

6583. What do you think of this evidence given by Colonel Taunton?

520. It is not a thing of your own invention or derivation? Certainly not. Our own helmet is a cork helmet. But during the time the regiments made their own contracts—which was before the Clothing Board was appointed—we had certain helmets which they used to get through the store. The patterns could not be supplied, and they went to the contractor, and the contractor then changed the pattern. I did not know it; no report was made of it till afterwards, and the whole thing has only just cropped up now.

I think that is fairly correct.

6584. So that the whole thing in connection with the supply of this helmet has only cropped up within the last few months, and none of the Military authorities knew what helmet was being supplied until lately? It was not known that it was a gossamer helmet. We did not know but what Mr. Anderson was supplying a cork helmet. The matter cropped up through the difference being brought to light by Mr. Duncalfe and Mr. Dunkerley, who showed us the distinction between a cork and a gossamer helmet. As a matter of fact, the Clothing Board was under the impression that the helmets which were being supplied by Mr. Anderson were, as regards material, precisely the same as those which had been supplied hitherto to the forces by the Q.M.G. Some years ago, although the regiments used to make their own contracts for clothing—it was not then under the Board—they did not in the contract include helmets, because these were imported from England by the Q.M.G. by thousands at a time, and sold to the regiments as they required them. Then the time came when they were importing helmets no longer. The sizes began to run short, and the regiments having contracts with Mr. Anderson, went to him and asked him whether he could make a helmet like that—the cork one. Whether he said "Yes" or whether he said, "I could make you a similar helmet," I am not in a position to say. At any rate, he undertook to make a helmet, and the helmets he made were gossamer ones—this kind of helmet. That is how it came about.

6585. *Mr. Meagher.*] Before Mr. Duncalfe and Mr. Dunkerley made this exposure, did the Board think they were receiving a cork helmet? As far as I am concerned I did, and I think, as far as the Q.M.G. was concerned, he did. We thought that the regiments were receiving a helmet similar in every respect to that which was imported from England by the Q.M.G. As a matter of fact, we did not know of any difference—I did not.

6586. Colonel Taunton was asked:

523. Is it not a monstrous state of things, if true, that an army contractor, without knowledge or authority of the Staff, should change the pattern of clothing supplied to an army? I have no knowledge at all of the pattern of the helmet ever having been changed—of the pattern, which was a cork helmet.

Now you tell us it was changed? The pattern was not changed, the material was.

6587. You have already explained that the pattern was changed; that when Colonel Taunton went to England he saw this lower pattern of helmet and brought it out and adopted it, is not that so? So he did.

6588. And so the pattern was changed? The pattern was changed by Colonel Taunton, but unfortunately the pattern that was then in vogue was not placed before the contractor. That small helmet you showed me just now was not the pattern that was placed before the contractor.

6589. But I am saying that the pattern had been changed; in fact, Colonel Taunton swore himself that the pattern had been changed; this was the evidence:

But you said just now that it was changed? Yes, we found out since that it was changed.

As a matter of fact, the Military Authorities themselves changed the pattern from the high cork helmet to this one? Yes.

6590. Colonel Taunton, in his examination, was asked:

Have you taken any steps to deal with a man who plays tricks on you like that? No steps have been taken yet.

If that means anything at all it means that Colonel Taunton admits that the contractor had been playing tricks with the Military Authorities? I hardly think there were any tricks played. I really do not think so. That helmet, exhibited by Colonel Taunton, was placed before the contractor as a sample.

6591. Is that the class of helmet that the Artillery wear now? Yes; something of that kind.

6592. They do not wear the low one? No. That was the helmet, placed upon the table, as the sample for the contractor to tender for. When Mr. Anderson saw that helmet for an infantry helmet he knew that that was not the pattern, although it was there.

6593. Although the Military Authorities supplied it as a pattern? Although the Military Authorities supplied it as a pattern. Mr. Anderson knew that was not the helmet, but he did not take steps to inform anybody that the helmet he had seen was not the helmet; nor did he take steps to ask whether there was not a mistake in submitting this as the pattern helmet. The reason why he knew that this was not the pattern was because he had been making for the regiments helmets of the pattern "D." For two or three years he had been making helmets of that pattern. He knew the other could not be the pattern, and that there must be some mistake; but in his casual way of doing business—he has a casual way of doing business—he never took the pains. The whole thing would have been rectified, if he had written to Colonel Taunton or myself, and said, "There is a helmet on the table, which I am tendering for;—is that really the proper pattern?" That is the way the whole business has come about. Suppose, for example, Mr. Anderson had stuck to the strict letter, and had acted upon this, that his contract had been signed, and that two days afterwards a thousand helmets had been ordered by the regiment. There would

would have been a great hubbub, and we should have been compelled to take them, because they would have been made in accordance with the contract. Nevertheless, Mr. Anderson would have made a helmet that was not in accordance with the pattern helmet. If Mr. Anderson had acted strictly in accordance with his contract, and his contract had been signed, and two days afterwards he had received an order for a thousand helmets, and he had made the thousand helmets in accordance with the pattern, when he had delivered those helmets, it would have been immediately seen that they were not of the correct pattern.

M. M. Boam.  
28 Sept., 1900.

6594. *Mr. O'Connor.*] Do you not think that is a severe censure on your own administration—the fact that a contractor knew that you were putting forward a sample which was not the helmet which was to be worn by your men? I certainly think there was some little blundering in that respect.

6595. You admit that? I admit there was some little blundering there, in placing the helmet before the contractor, which was really not the pattern helmet.

6596. There were other men tendering, I suppose? Yes.

6597. And, naturally, if Mr. Anderson saw that the Military Authorities did not know their own business, it would have been foolish on his part to make the fact known, and thus put the other contractors on the same footing as himself? I do not quite see your meaning.

6598. Take it as an ordinary business deal—Anderson and others are tendering for the supply of helmets to the Military Authorities;—Anderson sees that the Military Authorities do not know what is the proper helmet for their own men? I do not think it can be said they did not know that.

6599. They do not seem to have known it was the proper helmet for their own men; he knew it, but instead of giving the Military Authorities the benefit of his knowledge, and thus giving the other contractors the benefit of his knowledge, he remained quiet and took advantage of his own superior knowledge? He may have done that. It is not likely he would open his mouth to the other contractors.

6600. *Chairman.*] Who would be responsible for submitting the wrong helmet,—Colonel Taunton, or some other officer? The storeman was told to get all these samples ready; and I think to a certain extent he would be responsible for not having the proper pattern.

6601. That brings us to this point: Do you not think it ought to be the duty of some responsible officer to see that these things are prepared and are of the right pattern,—should it not be the duty of some responsible officer to look over them? There is a responsible officer—Mr. Beauman, lieutenant in the Army Service Corps;—he is the responsible officer to see that all the patterns are correct.

6602. When it was found that he had made such a terrific blunder, was he cautioned in any way? I do not know; he is not in my Department.

6603. But he still continues to occupy the same position? Yes.

6604. You are young and a pretty active man;—has it never occurred to you, from a military standpoint, that it would be much better in the interests of the country if there was more direct supervision by officers holding important positions? You refer to the clothing particularly?

6605. As regards clothing and everything? I have always held one view in reference to clothing, and that is, that no matter where the clothing may be going to—up country or anywhere else—it should all filter through one Department, having its headquarters in Sydney.

6606. Delivery should be taken by some responsible officer? Delivery should be taken in Sydney by a responsible officer, and the clothing should be then shipped, or sent wherever required, after it has passed the responsible officer. I have never been in favour of clothing being sent direct from the contractor to companies. When the Clothing Board first started I advocated the system I have just mentioned. From my experience—and I have had a good many years' experience in the matter—I believe that all clothing should come to Sydney. Of course, it would mean a little extra expense, but it is a question whether it would not be money well spent.

6607. By your method, you would be certain of the quality of the clothing that was being delivered? You would be much more certain than under the present system.

6608. And you would be certain of the quantity? That would not matter so much, for the Officer Commanding has to sign for the quantity. We should be certain of the make of the clothes, and it would be better in every respect. The quantities would also be checked. It would be centralising the thing a little; but I think a better result would follow.

6609. Are you aware that, since you were here last, we have had evidence from troopers who have returned from the front to the effect that they themselves, and others whom they knew, left here with one suit of clothes, and received no more? The matter was mentioned when I was last before the Committee, and I explained that the issue of clothing to the men rested with the Commanding Officers and their Quartermasters, and not with us; that we delivered the clothes to the Officers Commanding, and their Quartermasters issued it. I understand that in the case of the Second Contingent, for instance, they took a receipt in their books for every suit of clothing delivered; so that, if there was any doubt in regard to the matter it could not be decided until they came back.

6610. But in certain cases their books show they only delivered one suit;—did you, or any of your staff, take delivery of the clothes for the Second Contingent? The clothing was delivered by the contractor to the regiment.

6611. You gave the order for the number required? I sent the requisition.

6612. Do you know if the regiment had anyone to see whether they got the necessary number of suits delivered to them or not? The Quartermaster was responsible for that, and he ought to have done it, and, of course, in the usual way the Commanding Officer should also have seen that it was done, and inspected the clothing.

6613. In fact, that is the duty of the Commanding Officer, amongst other duties? Undoubtedly so.

6614. The Contingent were supposed to have 10 per cent. in addition to what was required? Yes, 10 per cent. spare was supplied to them.

6615. In that case, even if men went from here with only one suit, the Military Authorities would have been able to supply the other? Certainly.

6616. Would you be surprised to learn that the evidence of some of the returned troopers is to the effect that Colonel Knight is of a most excitable temperament, and accustomed to use very powerful language;—did you ever hear him swearing much in your experience, or was he a man of quiet demeanour who never swore? I did not come in contact with him very much.

6617. *Mr. Wilks.*] You said in your previous evidence that on one occasion you had an altercation with Colonel Knight, and thought it better to leave the tent? That was not in consequence of his using any language.

6618.

M. M. Boam. 6618. You said he was excitable, and lost his head at the Encampment? Yes.

23 Sept., 1900. 6619. *Chairman.*] This is the evidence of one of the returned troopers:—

4317. A rather favourite practice was to call them all “by and large bloody fools?” Yes.

4318. And when he got into a tight corner, instead of giving the order to retire in a proper and dignified way, did he sometimes say, “Retire, you bloody fools, retire!”? Yes; or he would say, “Come back out of that!”

It seems that the troopers have not been impressed with his coolness in action whatever qualities he might have exhibited in the Camp? I said all I could say about Major Knight in my previous evidence.

6620. Did you have anything to do with the supply of boots? Yes.

6621. Would you be surprised to learn that the stuff I now produce is a piece of a military boot? It is hard to say what it is.

6622. Do you know that is the stuff they use for inserting between the outer and inner sole? It might be.

6623. If you went to order a boot would you expect that it would be packed in with stuff like that;—has your attention been drawn to that material having been put in between the soles of the boots? No.

6624. Was Mr. Anderson the bootmaker? No; Wright & Co. were the contractors for the boots. I may say it was not a very expensive boot.

6625. But surely we are not going to supply our soldiers with boots made of material of that sort? I have not heard any complaints about the boots.

6626. In regard to overcoats, the coat produced is a sample of those supplied by the British Government—what do you think of the material? I am not an expert; but as far as I can judge, it looks very good. But they cannot make these coats out in the Colonies. There are all sorts of complaints made if we get these things from Home.

6627. Who makes the complaints? The public.

6628. But you have nothing at all to do with the public;—the Military authorities do not run the policy of the country? I believe we had instructions from the Government that where a thing could be obtained in the Colony of local manufacture it was to be taken.

6629. But you say it cannot be obtained in the Colony? Not this coat.

6630. If it cannot be obtained here, then the question is whether you think it an article that should be supplied;—have the Military authorities any right to consider public opinion;—is not the responsible Minister the man who should gauge public opinion;—do you not think there is rather too much of that among the Military authorities—attempting to place themselves in the position really of a responsible Minister? I do not think so. They act entirely in accordance with instructions received from the responsible Minister.

6631. If they receive instructions, but suppose they act on their own? They do not do anything on their own. They received instructions from the responsible Minister—printed instructions—that where things could be locally manufactured—in fact, it is one of the printed conditions that we place in all the contracts—preference should be given to them.

6632. But you say the overcoat cannot be locally manufactured, that the article that can be made here is very good to carry round in a full-dress parade, just the same as the helmet, but on actual service would be of no use;—do you not think it is the duty of the Military authorities to see that the Forces are so equipped that in an hour those who are enrolled, at any rate, are able to march to the scene of action? I certainly think that should be the aim.

6633. Yet we pay for a helmet, which you admit is of no use for active service, practically the same price as that for which we could get a really good helmet, and that the great coat also is not suitable for active service? I did not say that the great coat is not suitable for active service.

6634. But that has been proved by sworn evidence, because it is not waterproof? It was supposed to be waterproof. The contract was that it should be waterproof, and if that coat were waterproof it would be a good coat.

6635. But you can see that there is no proofing in it? I do not know; I am not an expert.

6636. But it is admitted by the contractor that it is not waterproof—that there is no proofing in it? If it is admitted by the contractor it must be so, for, of course, he knows best. It should be waterproof, however, and if it were waterproof it would be a good coat.

6637. Whose fault is it that it is not waterproof? The fault of those who accepted the clothing as being up to contract.

6638. That would be the different regiments? Yes.

6639. I suppose the captains of the different companies and the colonels of the different regiments would be in a somewhat similar position to yourself—they would not know whether the cloth was waterproof or not until they tried it? They ought to try it.

6640. How could they possibly try it;—for instance, if you take a blanket and put it in a proper angle it will not let any water in? I presume there is a way of testing these coats. I am not disputing the fact that this coat may not be waterproof.

6641. But how can we test it;—is not this another strong argument in favour of having all the clothing received at a central dépôt in Sydney? Certainly; that is what I say.

6642. And examined by an expert? Yes, undoubtedly.

6643. You cannot expect the captain of a company to know whether a particular cloth is waterproof or not? No; you must have some expert to pass the clothing.

6644. In regard to the clothing, what guarantee have you that the quantity was supplied by the contractor? I have the receipts of the different Commanding Officers.

6645. That is not an absolute guarantee that the full quantity of clothing was actually supplied? I was not personally present to see the actual delivery of the clothing, nor, I presume, was the Commanding Officer.

6646. As far as you know of your own knowledge, it was quite possible that the contractor might have delivered 100 suits short;—you do not know? Not personally, as I was not in the store to take over the clothing.

6647. That was done by some officer of the regiment, whose receipt you have? Yes; I did not myself see the suits counted.

6648. The system was this: It was you who gave the order for the clothing; somebody else took delivery of it, and in regard to the payment, you have to accept the acknowledgment that what you ordered was received by somebody else? Exactly so.

6649.

6649. In this case you have the authority of some responsible officer of the regiment;—I suppose it M. M. Boam, would be the quartermaster? The officers requisitioned for the clothing in the usual way.
6650. You have their acknowledgment that it was received as requisitioned for? Yes.
6651. Therefore there can be no excuse from that standpoint, if there was not a sufficient supply? No.
6652. Apparently a number of men were enlisted on board the steamer;—I suppose they would get their uniforms out of the 10 per cent. surplus? Yes; they would have to do so, because we only supplied clothing for the number of men enrolled in Sydney.
6653. In regard to the helmets, have you come to the conclusion that they are unsuitable for active service? Unsuitable for active service, but not unsuitable for ordinary parades.
6654. For that matter a paper helmet would do for ordinary parades? No; because it would be flimsy.
6655. Not if it were stiffened;—a good stiff cardboard, stiffened up properly, would do for ordinary parade purposes if kept dry? Could you keep it dry?
6656. *Mr. Meagher.*] Papier-maché would do? Yes, but it would be more expensive.
6657. *Chairman.*] A decent piece of cardboard, nicely fixed up, would do for an ordinary parade? I say that this helmet is good enough for parades. It stands the water very well. Since I was here last I put one under water for forty-eight hours and split it at the top so that the water could get through, and it stood the test very well.
6658. The difference in price between the gossamer and the cork helmet is only 9d.? According to Mr. Anderson's present contract.
6659. You have seen some of these gossamer helmets after they have done a good bit of wear? Yes.
6660. You have seen that they have got all broken up and twisted out of shape? Yes. As I have said, I do not think it is a suitable helmet for active service.
6661. A cork helmet could never get into such condition under any circumstances? No.
6662. So that the difference in price is not really so great as the difference in quality? No.
6663. A cork helmet would be just as good for parade purposes as a gossamer helmet? Just as good.
6664. And it would be suitable if required for active service? Yes.
6665. Will you look at this Indian pith helmet (*Exhibit P*)? It seems a good serviceable helmet.
6666. The crown would not be liable to fall in? No.
6667. Do you know what the cost of that helmet would be? I have no idea.
6668. The helmet has seen some three or four months wear at the front, and it has undergone three or four weeks twisting about in this Committee and it is not in bad condition yet? It is a very good helmet, no doubt.
6669. Would you be surprised to learn that the cost is about 2s. 6d.? I presume it is made in India.
6670. It ought to afford excellent protection from the sun? It is a good helmet. But the objection I have to a helmet is that a man cannot really fire with a helmet on; he has to put it right back on his head.
6671. But if we are going to have a helmet at all we ought to get the best one we can for our money? I do not think we will ever have a helmet again for field work.
6672. If we are going to use a helmet for field work we ought to use one in time of peace that would be suitable, if necessity arose, for use at the front? I think so. I do not believe a helmet ever will be worn again.
6673. Do you think it ought to have been worn this time? No, I certainly do not.
6674. Are you aware that though we have discarded the field-service hat and adopted the helmet, the Imperial authorities, in sending out the Imperial Yeomanry and the City of London Volunteers, equip them with the soft hat? I know that; I do not favour the helmet at all for field work.
6675. So that the assertion that appeared in the papers that some of our men had been fired upon on account of their wearing the field-service hat seems to have been paid little attention to by the Imperial authorities, seeing that they sent out the Imperial Yeomanry and the City of London Volunteers with soft hats afterwards? I was not consulted in regard to the adoption of the helmet, but if I am asked to express an opinion I certainly say that I do not favour the helmet for service in the field.
6676. How do you think that headgear of the 7th Regiment would do for service in the field;—do you think it suitable? I think it most unsuitable.
6677. *Mr. Wilks.*] In regard to the clothing, do not the Military authorities issue what they call dress regulations? Yes.
6678. The dress regulations would include review order, field service, and undress? Yes.
6679. You spoke about the busbies as being most unsuitable? Yes; I think so.
6680. Not only from a spectacular point of view, but also on climatic grounds? Yes.
6681. Are you aware that on many occasions men of some of the regiments have complained of a sort of incipient sunstroke caused by wearing the busby? I cannot say I have heard any complaints of that kind.
6682. Have you heard of any cases where men have had to drop out of the ranks on parade owing to the excessive heat? No, I have not; but I should not be at all surprised at such a thing resulting from the wearing of that kind of headgear.
6683. It is most unsuitable for this country? Most unsuitable.
6684. But the dress regulations were accepted by the Military authorities—that is, by the General? I believe, as regards the dress regulations of the purely Volunteer Regiments, the General gave way to the officers commanding those regiments.
6685. Did he raise any objection to them in any way? Not that I am aware of. I have nothing at all to do with the dress regulations of the purely Volunteer Regiments.
6686. But was the matter brought under your notice as the Officer Commanding the purely Volunteer Forces? No.
6687. It was prior to your acceptance of the position? I am only Staff Officer; but it was prior to my acceptance of the position of Staff Officer that this head-gear was brought into existence.
6688. Are you aware whether it was recommended because the Westminster Volunteer Rifles wore a similar busby? No; I do not know the circumstances under which it was adopted. It occurred before my time, and I know nothing about it.
6689. This busby, as far as parades are concerned, can only be looked upon as a mere dress affair? A show thing; and even as a show thing, it must be frightfully heavy, and most unsuitable in a climate like this.

- M. M. Boam. 6690. Do you know that it has been generally condemned by the men? No, I do not; but I would not be surprised if that were the case.
- 28 Sept., 1900. 6691. You spoke about the clothing contractor doing work in a casual way—that he had a casual way of doing business? I said, “In his casual way.” I do not think him a thorough business man.
6692. Am I to understand that the authorities also neglected proper inspection in regard to clothing? As far as the sealed patterns are concerned, there was evidently some oversight as regards the helmets.
6693. But the general trend of your evidence is that there had been faulty inspection? No; I did not say there had been faulty inspection. I said that the pattern helmet had evidently been overlooked.
6694. That is, there was carelessness displayed somewhere? There must have been some slight oversight.
6695. We would call it gross carelessness? I call it a slight oversight; I would not go so far as to call it carelessness.
6696. You spoke about a central dépôt for the reception and inspection of clothing? I favour a central dépôt.
6697. Would you favour the establishment of a Government clothing factory? No; I would not.
6698. What is your objection to a Government clothing factory? I think the system of contracting is much cheaper in the long run, with proper supervision.
6699. The British Army have all their supplies in the matter of clothing from a Government establishment? No; they do not. The British Government have no Government factory. The Pimlico dépôt is not a factory; all the clothing is made by contract, and goes into the Pimlico dépôt; it used to be a factory once upon a time.
6700. At Pimlico they adopt the system of inspection that you favour? Exactly.
6701. Does that system you are advocating provide for the clothing being made by contract, and sent to a central dépôt, and also for inspection by experts? Yes, as at Pimlico.
6702. Instead of inspection by Staff officers as is the custom here? Yes. Staff officers cannot be expected to be experts. You cannot make a bootmaker of me to-day, a tailor of me to-morrow, and a Staff officer of me the next day.
6703. Then I am to understand that the office held by Colonel Taunton is a pure sinecure, as he has not the necessary knowledge to enable him to pass the clothing? Colonel Taunton does not perform the duty now; it is done by a central Clothing Board.
6704. But the members of the Clothing Board do not possess the necessary expert knowledge for the performance of these duties? That may be the case as regards the inspection of clothing, but they have other duties. They have the entire control of clothing—the entire control of the issue. They guard the Government purse in that way; they see that there are no over-issues. The Clothing Board keep a separate account of every man in the Partially-paid Forces, and when clothing is issued to him it is entered in the books. If an officer commanding a company should send in a requisition for clothing for a man twice, where he should only send it in once, the Clothing Board is able to prevent a second issue.
6705. But I suppose the most important matter would be the inspection of the clothing? It is a very important matter, but not the most important.
6706. In the case of men going on service it is most important? Undoubtedly so. But I think the all-important feature in connection with the supply of clothing is to see that only the quantity for which each man is entitled is issued. Otherwise, there would be an enormous amount of money spent on clothing.
6707. You said that the Officers Commanding Volunteer Regiments had, unfortunately, too free a hand? I said they had too free a hand as regards clothing.
6708. That has been the case since you have been the Officer Commanding the Volunteer Forces? I am not the Officer Commanding, I am only the Staff Officer? There is a material difference between the Officer Commanding the Unpaid Volunteer Forces and the Staff Officer for the Unpaid Volunteer Forces.
6709. The difference in the position was occasioned by friction between Colonel Bayly, whom you succeeded as Officer Commanding the Volunteer Forces, and the Officers Commanding Regiments? I could not say.
6710. You must have been aware that there was a good deal of friction at the time you were appointed to the position of Staff Officer over the Unpaid Volunteer Forces? All I knew was that I was to vacate my position of D.A.A.G. and take up the position of Staff Officer.
6711. That is all you were officially acquainted with? Yes.
6712. But in the exercise of your new office, you must have learnt that there was considerable friction between the officer whom you superseded and the various Officers Commanding regiments—do you know that officially? I do not.
6713. Things have not been as they ought to have been in regard to Officers Commanding Volunteer Regiments and the responsible Staff Officers, have they? That I could not say; I have no means of knowing.
6714. Since your occupancy of the office, have you had a free exercise of your duties as Staff Officer? Yes, perfectly free.
6715. You have had no cases in which these various officers of regiments have passed over you and gone to the General? They do go to the General now; they do not come to me.
6716. They pass you by? Yes.
6717. Do you not think that is derogatory to your position, and detrimental to the discipline of the regiment? Not at all.
6718. You are satisfied? Quite. I am pleased that they do go to the General direct.
6719. Why are you pleased? It relieves me of a great deal.
6720. That is as far as your personal comfort is concerned? And even in my official position. I should have cause to complain if I were in the same position as Colonel Bayly was as Officer Commanding the Volunteer Forces, but I am not the Officer Commanding the Volunteer Forces. I am only a Staff Officer. That is to say, I am the officer through whom the correspondence filters. It is my place, when correspondence from these Officers of the Regiments comes to me, to put out anything that may be necessary to the A.A.G. before the matter goes to him, in order that he may be conversant with the circumstances. Beyond that, I have nothing else to do, and it is the greatest relief to my mind that these Officers Commanding Regiments go direct to the General instead of coming to me.

6721. It is an admission that the officers of these regiments were so harassing in their behaviour, and M. M. Boam. acted so much against military discipline, that you are glad to escape from the position, and to pass these matters on to the General? I did not know of any of their little doings—whether they were harassing or not. 28 Sept., 1900.

6722. The position originally occupied by Colonel Bayly, as Officer Commanding the Volunteer Forces, is now vacant? Yes.

6723. In the interests of the Volunteer Regiments, and also of the people of the country who have to pay for the maintenance of these regiments, do you consider that the position occupied by Colonel Bayly was a necessary and useful one? Yes; I thought so at the time that the appointment was made.

6724. Have you any reason to believe that it is not necessary at the present time? At the time that the appointment was made the purely Volunteer Force was in its infancy. Now that it has been established for some years the officers are not youngsters, as they were, and they have had time to understand what military discipline is. Therefore, I do not think an Officer Commanding the purely Volunteer Forces is required.

6725. You do not think the position is required at the present time? No, I do not think so. I think the Officers Commanding the purely Volunteer Regiments are just as well able to look after their business now as are the Officers Commanding the Partially-paid Regiments. The latter officers have no officer commanding over them, and, therefore, I do not see that it is necessary to have an officer commanding over the purely Volunteer Force. But I certainly thought it was necessary just at the time of the appointment, because the officers commanding regiments were young, and required some one to guide and handle them.

6726. At the inception of the purely Volunteer Force the appointment was necessary; but now it is not necessary? I do not think so.

6727. Are you aware whether several officers Commanding Volunteer Regiments have used power beyond that conferred upon them as Volunteer officers, and have brought into play political influence—you are not aware of that? No.

6728. Not officially? No, I cannot say I am aware of it at all—not during the time I have been administering as Staff Officer.

6729. Since your appointment as Staff Officer you have had no pressure of a political character brought to bear upon you? None whatever.

6730. In the exercise of your office you have had a free hand? Yes, perfectly free. I have seen nothing of the sort, and have known nothing of the sort since I have been administering as Staff Officer.

6731. And we are to understand that the Volunteer Regiments to-day are on a good footing? Yes, I think they are on a tolerably fair footing.

6732. And they are well administered by the Officers Commanding them? Yes, I should think so.

6733. *Mr. O'Connor.*] Did you have anything to do with the issue of the cartridge-belt to the troops? No, I have nothing at all to do with the equipment.

6734. Have you seen those belts? Yes.

6735. Do you know whether such a cartridge-belt is used by any other military force in the world? That I could not tell you.

6736. You know that there are pouches at the back for holding the cartridges? Yes; I remember them quite well.

6737. Do you know that when a man is fully equipped it is impossible for him to get his hand round to the back to open these pouches and get the cartridges out? I could quite understand that.

6738. And that the only use of the belt is to enable the man to get the cartridges that are in the front? Yes.

6739. And that actually he carries round a lot of cartridges in the pouches at his back which are of no use whatever to him? He could get at them with difficulty.

6740. When fully equipped, with his haversack and everything, he could not actually reach them? They are not easily got at.

6741. But do you not know that he could not get at them at all? No; I never saw that tested.

6742. *Chairman.*] Did you ever see a man with the full gear up? No; but I saw these belts, and I came to the conclusion that a man would have a difficulty in getting his hand to the back.

6743. You would not be surprised to find that he could not get the cartridges out when fully equipped, let him try as much as he liked? No; perhaps I would not be surprised to hear that, if he were fully equipped, considering that I came to the conclusion, on seeing the belts themselves, that a man would have a difficulty to get at them. I came to that conclusion because at that time an American belt was sent to me to test, and I found there was a difficulty in getting the cartridges out from the back. I came to the conclusion that if there was a difficulty in that case there would be still greater difficulty where the cartridges were enclosed in pockets.

6744. *Mr. O'Connor.*] You say that the busbies used by Colonel Neild's Regiment are not suitable? I think them a most unsuitable headgear for a climate like this.

6745. And you think that the sun would affect the heads of the people wearing them? I cannot help thinking they must affect the heads of the men wearing them. They give no protection from the sun, either in the front or the back, and their weight is against them.

6746. *Mr. Meagher.*] In connection with the Volunteer Forces, have there been any cases in which men have been promoted to positions to which they were not entitled by examination? I cannot speak with certainty without reference to my books, but I believe there have been cases of this kind. An officer who has passed his examination as lieutenant may have been promoted as probationary captain; but, though promoted to the position of a probationary captain, he must pass his examination for that rank. The regulations distinctly state that a man, before he is promoted, must pass his examination; but there may have been some reason for giving him his captaincy. It is, however, only given to him on the understanding that he passes his examination.

6747. But does he exercise powers concomitant with those of an officer who has passed the examination? Yes; when once he is promoted to be captain.

6748. There have been cases where men have been practically commanding companies, and where they have not passed the examination? Where they are appointed probationary captains they, of course, have passed an examination—that required for their lieutenantcy. They would not be made probationary captains until they had passed their examination as lieutenant. 6749.

- M. M. Boam.** 6749. *Chairman.*] Does that hold good in all cases—do we not find probationary officers promoted to senior rank, such as that of major or colonel, who have not passed any examination at all? The regulations admit of that. The regulations admit of any officer being appointed direct as a lieutenant, or as captain, or major; but he must, within twelve months of his appointment, pass an examination.
- 28 Sept., 1900. 6750. *Mr. Meagher.*] Pass the examination which would entitle him to the rank he holds? Exactly so. He must within twelve months of his appointment, according to the regulations, pass for the rank he holds, whether it be that of lieutenant, captain, or major. If he fails he has another six months.
6751. *Chairman.*] But if he does not come up? He must come up.
6752. But there are cases where officers have not come up, and they have been there for years;—do you not know of any cases? There are some cases.
6753. *Mr. Meagher.*] That is exactly what we want to arrive at;—are there men in the Volunteer Force who have been appointed to high and responsible positions for which they are not qualified? There are some cases where officers are due for examination and have not come up. They are called upon for examination, and perhaps it is sickness that prevents them, or some other excuse is put forward, which is accepted.
6754. *Chairman.*] Lasting for four or five years? I could not say unless I referred to my books. There may be some, perhaps, extending over four or five years; but when making a statement on oath I should like to be certain, and if the Committee require information of this kind I have only to refer to my books.
6755. *Mr. Meagher.*] There are two examinations, are there not—theoretical and practical;—must they pass both examinations? Yes.
6756. Would you mind supplying the Committee with a list of officers in the Volunteer Force who have not passed the examination? Yes.
6757. Were you a member of the Court of Inquiry that sat on the 7th Regiment? No; but I furnished a report as regards the administration of the regiment.
6758. Did you make an investigation? Yes; I was requested by the Court to make an investigation as to the administration.
6759. Was your report complimentary as to the discipline prevailing? I did not deal with the matter of discipline so much as with the books, and so forth, and the duties of the adjutant and quartermaster.
6760. *Chairman.*] When you came here first to give evidence the helmet question was a new one as far as the Committee were concerned, and you very kindly sent us down the sealed pattern of what is now known as the gossamer helmet;—do you remember my stating that we first intended to deal with the equipment and despatch of troops to South Africa? Yes, I remember your saying that.
6761. You forwarded to the Committee one sealed pattern of the helmet that went to South Africa with the Second Contingent? Yes.
6762. But you did not tell us anything about the patterns of other helmets afterwards adopted and sent away with the troops? I do not think any other troops went with helmets, except the Citizens Bushmen's Contingent, and they chose their own.
6763. Here is another helmet (*Exhibit K*); it was only by pure accident that we discovered that this helmet had gone to South Africa; none of the Military authorities let us know anything at all about it; we are here to make inquiries, and do you think it was fair not to let us know about this other helmet when there was so much noise about helmets? I was under the impression that you had this helmet.
6764. No, we got it from an outsider; an outsider gave us the information, much to our surprise;—it has been an oversight on your part that you did not let us know about this helmet? There was no object in concealing it at all. It must have been an oversight.
6765. We ought to have known about the helmet, seeing that we were making inquiries? It might have been brought forward.
6766. Suppose we had submitted a report under the impression that the Citizens Bushmen's Contingent went away with the gossamer helmet, that would have made us look ridiculous; it would have been said that we inquired as a Select Committee into this matter and failed to elicit information, even as to the kind of helmet worn by one of the Contingents;—it was a mere matter of accident that we discovered that the helmet had been supplied? It would have been just as well to have brought it forward.
6767. Have you made any test of that helmet? No, none whatever.
6768. What do you think of the shape of the helmet for military purposes? It is a very ugly shape, though a useful shape, as it is more suitable for shooting, and it covers the ears well.
6769. But you think the day for helmets has gone past? Yes.

John Mezman Atkinson, sworn and examined:—

- J. M. Atkinson.** 6770. *Chairman.*] You were Secretary of the Citizens' Bushmen's Committee? Honorary Secretary.
- 28 Sept., 1900. 6771. Of whom did the executive of the committee consist? Mr. Carey, Mr. Fairfax, Mr. John See—who was Treasurer, but he never attended—Sir George Dibbs, Mr. J. T. Walker, Mr. William Kilgour, Mr. McNamara, Mr. George Cohen, Sir William Manning, Mr. P. H. Morton, Mr. Kater, Dr. Mackellar, and another gentleman whose name at this moment I do not recollect.
6772. Was the Executive Committee appointed at the first meeting of the General Committee? Yes.
6773. Was the General Committee meeting largely attended? I suppose there must have been fifty or sixty members present.
6774. Afterwards you added pretty largely to the General Committee? Yes; I think there were on the General Committee altogether about 170 names.
6775. Did the General Committee ever hold any meetings after that? No; there was the first meeting and then the final meeting.
6776. During the equipment of the Contingent was any meeting of the General Committee called? No.
6777. The Executive Committee did the whole of the work without consulting the General Committee in any way? Yes.
6778. You laid it down, as a sort of maxim, that no trooper should be enrolled unless he was a bushman—that is, he had to give some guarantee that he was a bushman? That is how we started.
6779. Did you not finish in that way? No.
6780. Could you not get enough bushmen? Yes.
6781. Then how did you come to make the alteration? Pressure was brought to bear. 6782.

NOTE (on revision):—It is omitted in this evidence that I afterwards recollected that the last member of the Committee whom I could not recollect was myself.—J.M.A.

J. M.  
Atkinson.  
28 Sept., 1903.

6782. By whom? By Members of Parliament. Mr. Mackay came to me and told me that Members of Parliament were going to bring pressure to bear, and that a certain section of them waited on Mr. Carey and objected to my examining men with regard to their qualifications as bushmen. He said that all men who had made application, and who had received their passes, must go into camp. I objected very strongly to that course, and I said that it was essentially a Bushmen's Contingent, and that my inquiries were not of a very searching character, as I merely wanted proof that the men were bushmen. My inquiries were made quite independently of class or creed, or anything of that sort.

6783. Could you give us the names of any of the Members of Parliament who waited upon Mr. Carey? No; Mr. Carey could give them to you.

6784. I think I myself interviewed you;—can you say whether I attempted to bring any pressure to bear upon you to accept all hands irrespective of their qualifications? No, certainly not. I should have been very glad if you had been there with me all the time.

6785. I am sorry I had not the time;—you say you were not too particular in your inquiries, and that all that you wanted was some guarantee that the men did come from the bush? Exactly. I wanted a guarantee from some one that they had come from the bush. I was satisfied if they could give me information as to the persons with whom they had worked, in order that their statements could be verified.

6786. In making the selections, you had rather a trying time of it? Yes.

6787. It was not the most pleasant job in the world? No, indeed; it was most unpleasant.

6788. Had you anything to do with the selection of officers? No.

6789. I suppose you were present at the meeting of the committee at which the selection of officers was discussed? I was at every meeting.

6790. Did the General Committee discuss the appointment of officers, or was the matter referred to a sub-committee? No; the matter was dealt with at the meetings of the whole committee.

6791. Have you any documents in your office bearing upon that matter which will show the reasons for the rejection of some men and the acceptance of others? I do not think I have.

6792. Do you know whether any reasons were given for rejection? The names of the applicants were read out to the committee, and if they did not think the men suitable the names were eliminated. There were only a few out of the whole number whose names were eliminated by the committee. The final selection was left entirely to the Military Authorities—that is, as against the fact of interference from the Bushmen's Committee.

6793. Do you remember my name being read out to the committee? I do.

6794. Do you remember what were the objections raised against it? I do.

6795. What were they? The objections in your case were, firstly, that you were a Member of Parliament, and that in going with Colonel Airey, who was subject to the will of Parliament, you would, probably, affect him considerably; and, secondly, that you were recognised as a strong man, and it was thought the chances were that you would very soon be leading more than half of the Contingent yourself. You may laugh, but there is a good deal in what I say. There was nothing said at the meeting which was against you personally; no objection was taken to you in that way. The objection was purely on the grounds I have mentioned.

6796. *Mr. Wilks.*] They were, apparently, afraid of the Chairman's personality? Yes.

6797. *Chairman.*] But I suppose even the Bushmen's Committee had some little idea of what military discipline means;—what was the position for which I applied? I am not aware that you applied for any position. We had nothing to do with the question of position.

6798. So that I was not rejected because it was thought that I was not qualified? The committee did not go into your qualifications. The qualifications for the appointment were left to the Military Authorities entirely.

6799. So the committee were afraid that I might take command instead of Colonel Airey, and, therefore, they fired me out;—is that so? The idea was that your personality would probably assert itself.

6800. Of course, if the Bushmen's Committee had any idea of military discipline they would know that there was not much opportunity for any man to assert his personality? They would have known that there was not much opportunity for the personality of any man being asserted in the Imperial troops; but they did not know what might happen in connection with our Contingent.

6801. There were a great many officers appointed who had had no previous military experience;—is not that so? I could not say.

6802. The Committee did not enter at all into the question of qualifications? No.

6803. They referred that matter on to the Military authorities? Yes.

6804. It was only in cases such as my own, where a committee had, perhaps, some slight prejudice that the applicants were fired out? That was about all, I think.

6805. In regard to equipment, the committee pretty well handled that matter themselves? No; I do not think so.

6806. Who adopted the pattern helmet? We had nothing to do with that.

6807. You left that entirely to the Military authorities? Yes.

6808. You were not responsible for it in any way? No.

6809. Then, in regard to the use of leggings instead of putties, was not that the idea of the committee? We did certainly interfere in that matter; but we objected to the style of legging that was used.

6810. Did the committee advance any reason for that attitude? It seemed to practical men that leggings were more comfortable—that they were more easily put on and taken off in a hurry, and we believed that they would last better.

6811. As a matter of fact, the Bushmen's Committee decided that the Imperial authorities did not quite understand what they were doing when they supplied all their Mounted Infantry with putties? I do not think it can be said that we decided that, because the Imperial authorities supplied a legging called the Baden-Powell legging instead of putties. I believe that legging is now in use by the men in South Africa.

6812. At that time Lieutenant-General Baden-Powell was Lieutenant-Colonel under Colonel Plumer, and commanded half of the Rhodesian Regiment;—do you know how many Lieutenant-Colonels there are in the British Army? I should say there must be some thousands.

6813. You are also aware that Lieutenant-General Baden-Powell's force was an irregular force? Yes.

6814. But someone told you that there was a Baden-Powell legging? That is the name by which the leggings are known. They have been used in Queensland.

6815.

J. M.  
Atkinson.  
28 Sept., 1900.

6815. Was that the legging with which you supplied the bushmen? No; we wanted them supplied with those leggings.
6816. But you supplied them with leggings of a different pattern? They were supplied with leggings of a different pattern; the Military authorities supplied them.
6817. You did not order the leggings yourself;—you only suggested that they should be used? Quite so; we ordered nothing ourselves; it was only a suggestion to the Military authorities. Anything we did was merely in the way of suggesting.
6818. The only thing you did was to eliminate certain names from the list of applicants for commissions—that was the only thing you did definitely? Yes; the list of applicants for commissions was brought before us.
6819. And you did take a definite stand in that matter;—you struck off certain names before you submitted the list to the Military authorities? Yes.
6820. In regard to the quality of the equipment supplied to the bushmen, you do not consider the committee in any way responsible? No.
6821. The order was given by the Military authorities, and therefore the committee could not be held responsible for the quality? Just so.
6822. In regard to some of the luxuries gratuitously supplied by various citizens, they were presumably put on board the boats for the use of the men;—have you heard any complaint from any of the men in regard to the supply of those luxuries? No.
6823. Have you heard anything at all in connection with that matter? I heard that some man had come to my office when I was away with a bit of bread or biscuit, or something of that sort.
6824. Do you know that a certain gentleman in Tasmania presented every man of the Bushmen's contingent with a tin of curry-powder, and that some 500 tins were supplied? I never heard of that.
6825. So that you would not be aware of the fact that the men, after receiving about six tins among them, were told that there was no more for them? No.
6826. And in regard to some hundred cases of apples, also supplied by another Tasmanian gentlemen, you are not aware that they also vanished into thin air, or went somewhere else? No; I have not heard of it.
6827. I might state for your information that I have had communications from these two gentlemen in Tasmania, pointing out that they were only too pleased to make this little contribution to the bushmen, and that it was intended to be made all round to the men; they say that they have been very much surprised to hear from the men that they never received these things? It would take considerably more than 530 tins of curry-powder if each bushman were to receive a tin.
6828. But only one vessel called at Hobart—the "Atlantian"—so that if 500 tins were supplied there would be much more than a tin for each man? That would be so.
6829. But you have no knowledge of the matter? No.
6830. Have you received any reports from any of the bushmen who have returned? No.
6831. As far as the committee were concerned, their duties consisted principally of making certain recommendations to the Military authorities, and leaving them to carry them out, excepting, of course, the action taken by the committee in regard to the list of applicants for commissions? Yes.
6832. Is it not the fact that the Bushmen's Committee insisted upon Major Dangar going as second in command? No; I do not think it is. I think they suggested that he would be a good man for the position.
6833. What knowledge had the committee of Major Dangar's military qualifications? They had the knowledge that he had been in the Imperial Service for a certain number of years.
6834. And that he was still in the Imperial Service? I think he had left the Service.
6835. *Mr. Chanter.*] He was then Captain Dangar? Yes. I believe he left the Imperial Service to go into his father's business in London.
6836. *Chairman.*] All that the committee knew about him was that he had spent some years in the Imperial Service? The committee made a great many inquiries themselves concerning him.
6837. From whom? Each member of the committee made inquiries of his friends.
6838. Would they be likely to know anything about his military qualifications or capacity? They received information about it.
6839. But frequently civilians in such matters give information from what someone else has told them;—the committee had no definite information as to Major Dangar's military capabilities? I think so.
6840. Then from whom did they get it;—did they get it from a military expert who was able to form an opinion? They might have obtained the information from a military man; but not necessarily from a military expert. I am under the impression that they obtained good reliable information about Major Dangar.
6841. But you do not know from whom it was obtained? I am not quite sure. I am not sure whether it was not from Major Thompson, of the Imperial Service, who was out here at the time.
6842. Did the Bushmen's Committee insist upon Lieutenant-Colonel Airey going in command? No, certainly not.
6843. Is it not the fact that the Bushmen's Committee got a cable sent to England, asking that Major Thompson might take command? No.
6844. Do you swear that that is not so? I do, to the best of my belief.
6845. Will you swear that the Bushmen's Contingent did not get a cable sent to England to the Government, asking that Major Thompson might take the position? I believe I am on my oath, and I say that to the best of my belief they did not.
6846. But you do not know? I was at every meeting.
6847. Did the chairman never report that the committee had taken that action? The chairman did say that he was in communication with the Government about it. What I say is, that the committee themselves did not pass any minute to that effect. The committee were looking about for a really suitable man to take the command.
6848. I know of my own personal knowledge that a cable was sent, because I saw it; but you swear that no such cable was sent? No; what I say is that it was not sent by the committee.
6849. Well, was it sent by the chairman of the committee? I say that it was not done by the chairman of the committee to my knowledge. I do not think the chairman did such a thing; if so, he did not report it.

J. M.  
Atkinson.

28 Sept., 1900

6850. You are not aware of any record that such a cable was sent? No.
6851. You are not aware of any report from the chairman, asking that such a cable might be sent? I do not remember it.
6852. With regard to Captain Robertson, did the Bushmen's Committee insist upon his being sent? No, certainly not.
6853. Do you know whether the chairman insisted upon his going? I do not know what the chairman did. What he did in connection with the officers was, I believe, done at the request of Sir William Lyne. That had nothing to do with the Bushmen's Committee.
6854. Did all the applications for commissions come before the committee? I believe they did.
6855. Did you have any application from me in writing? I never saw it.
6856. Then how did the committee come to know that I was an applicant for a commission? The committee themselves never saw any applications from persons for commissions.
6857. To whom did they go? They all went to Mr. Carey.
6858. And he handled them? Yes; he used to read a list of names out to the committee.
6859. Did the committee, when considering these lists of names, think it necessary that the officers, if they had had no military experience, should at least be bushmen? I can only tell you that a minute was passed in, I think, these words: "That, in the opinion of this committee, the men should be officered by military men."
6860. But where military men were not available, was it not considered that they should have some qualifications as bushmen? We had nothing to do with that.
6861. You did not deal with the matter from that standpoint? We certainly considered that the applicants should have been bushmen, but we had nothing to do with the selection of them.
6862. But you had something to do with their rejection? Yes.
6863. Did you not think it proper to reject men who were neither military men nor bushmen? We left it to the Military authorities entirely.
6864. The only thing that seems to have troubled the committee was this: You rejected those whom you considered had some force of character, as you have put it? I really do not think the Bushmen's committee eliminated five names from the whole list, from one end to the other.
6865. So that the committee considered that a man with force of character was debarred, it did not matter what his qualifications might be, while, on the other hand, men who were neither military men nor bushmen were allowed to do so? I do not think I can answer that question in the form in which you put it. I have already told you what course was taken by the committee in the elimination of certain names; only a few were eliminated.
6866. Let me read you some of the names of officers who were selected;—take for example Treatt, Johns, Osborne, and others? Johns was a bushman; he is one of the firm of Johns Brothers, of Wollongough. I might say with regard to applicants for enrolment in the Contingent, that when I refused them as not qualified they endeavoured to get in by a back door. They applied to go as officers, and if they were not accepted as officers they endeavoured to go in the ranks.
6867. Was Westgarth a bushman? No, I do not think so.
6868. You do not know what military experience he had? No.
6869. Do you know that he was only about six weeks in the Royal Artillery, and that he had no bush or military experience. Then there is also W. B. Allen, was he a bushman? I do not know him.
6870. He was not only passed on to the Military authorities, but he was accepted, having had neither bush nor military experience;—do you think the committee were right in that matter? The committee in the case of names of men whom they did not know allowed the Military authorities to exercise their discretion. In the case of men whose names they did not know, a few were, for various reasons, eliminated.
6871. Was Cope a bushman? He was a part owner of a station for a considerable time. He is a solicitor by profession; but he is a fearless and game rider, and straightforward, honorable, man.
6872. But he was not a bushman, yet he was selected;—the committee apparently thought he was a bushman, because he had some financial interest in a station? He was a man who had spent a good deal of time in the bush.
6873. What was he doing there? I cannot say that he ever worked in the bush. I believe that he had also been to the Soudan.
6874. Do you know his age? I have no idea of it.
6875. You did not take into consideration the age of the officers? No.
6876. But you did take age into consideration when the men were concerned? Yes; we had nothing to do with the officers beyond eliminating a few names from the list; with that exception, they were left as I have already explained—entirely to the Military authorities.
6877. You did not leave the matter entirely to the Military authorities—you started eliminating some of the names? We reserved to ourselves the right to have a list read over, and to prevent, if we thought fit, certain names being submitted to the Military authorities; that was all. We did not exercise the right in more than three or four cases.
6878. I happen to have been one of the unfortunate ones? Yes; if you can be called unfortunate.
6879. I suppose that was principally on account of the committee not having any very warm feeling towards me? I have no doubt that they had no warm feelings towards you, from what they had heard of you, but not from what they knew of you.
6880. Of course, from what they had heard of me, and seen of me, they thought it was proper to strike my name out? They did.
6881. Did any members of that committee know me any more than casually—any more than by sight? I do not know whether they did.
6882. But it was some hearsay yarn that induced them to strike my name out? Well, your career is pretty well known.
6883. Surely there is nothing wrong with my career? Not that I know of, except that you are known to be, perhaps, a masterful man in some way, and it was thought improbable that you would submit to the discipline of a junior officer in the Contingent.
6884. A great many of these horses were presented by station-owners at one place and another? Yes.
6885. The rest of the horses were bought? Yes.

J. M.  
Atkinson.  
28 Sept., 1900.

6886. Who did the horse buying? Colonel Airey. Mr. Carey and I bought one small lot. I bought one truck load of ten. Mr. Carey could not go, and he asked me if I would go at the last minute. I objected to it, because I had not bought any, and I did not want to take any responsibility in the matter. 6887. Have you seen Colonel Airey judging horses? Yes.

6888. Do you think he is an excellent judge of horse-flesh? I never knew a man yet who thought another man was a good judge of a horse.

6889. Do you know if Mr. Carey is a good judge of horse-flesh;—has he had a great deal to do with horses, breeding them and handling them continuously for a long time? I could not say.

6890. Do you know if he has? No; I think he was manager of the Omnibus Company for some time.

6891. That is where you would get a good insight into a certain class of horses; but the 'bus horses are not altogether suitable for chargers? I should think not.

6892. Did you have a look at these horses;—did you see any of them that might have been improved upon after they were bought? It is a hard thing to say.

6893. *Mr. Wilks.*] Do I understand that the Bushmen's Committee were anxious to obtain the most suitable man to take command of that regiment? Yes.

6894. More so, I suppose, because the Bushmen's Contingent was a distinctive feature of the campaign? Yes. I might add that our impression at the time was that they would never fight as a body. Our impression was to get thorough bushmen, who would be told off, say, fifty or 100 to a regiment as scouts. Therefore, we were most anxious—and I was aware that the selection of the men was, practically speaking, left to me—to get bushmen. The chairman had told me that wrong motives were attributed to my selection. I explained away the motives. I told the men when they applied to me that it made no difference to me whether they were Jew or Gentile, whether they were honest men or dishonest men, so long as they were bushmen and good fighting men. We did not inquire into the morals or the morality of the men at all.

6895. In regard to the officer—you were most anxious to obtain the most suitable man to take command? Yes.

6896. You hoped this regiment would be a distinctive feature of the campaign? Yes.

6897. Did they approve of the command being given to Colonel Airey;—do you think he was a suitable man to be given command of a regiment;—did his appointment meet with the general approval of the committee? He was the only man that was available.

6898. That is no answer to my question, whether the committee approved of his selection? The committee personally did not express approval or disapproval.

6899. Did Mr. Carey, the chairman, who has a most masterful mind, approve of the selection of Colonel Airey? That I could not say. He did not make his opinion public.

6900. The committee reserved to themselves the elimination of certain names? Yes.

6901. Amongst the names was that of Mr. Sleath, the Chairman of this Committee? Yes.

6902. Who was objected to on the score, first, of his Parliamentary position? Yes, that was the chief thing.

6903. I suppose you are aware that in the Imperial Force there are many Members of the House of Commons and of the House of Lords who occupy subordinate positions? Yes; but the impression with us was that the Military are not so subordinate to Members of Parliament in the Imperial Parliament as they are here. The Imperial Parliament does not interfere in anything like the same way as the Colonial Parliament does with the Military.

6904. That interference could only last while they were in the Colony—it could not last while they were under the Imperial authorities in South Africa? It would last when they came back.

6905. You were afraid that Mr. Sleath would use his Parliamentary power in opposition to the Officer Commanding if any friction had arisen between them during the campaign? We looked upon Mr. Sleath as distinctly mortal; that is all I can say.

6906. You were afraid that Mr. Sleath would usurp the authority of the Officer Commanding;—you said that he might lead half the men? Yes; it was my idea, I suppose.

6907. And the idea of the committee, too, that did express ideas, was that because he had a certain force of character he would usurp the authority of the Officer Commanding? That he would probably interfere with it in some way. I did not say that he would usurp it.

6908. It would be a serious interference if he would lead half the men? I say that a great many of the men might have followed him.

6909. Is not that an admission of weakness on the part of the Officer Commanding that he would allow him to do so? You must judge that for yourself.

6910. If you were dealing with the elimination in that case? I could not answer that question, because it is a matter of opinion, not a matter of fact.

6911. You have already told us in regard to a cable which Mr. Sleath asked you about, that the committee had no official knowledge of it, that the chairman, Mr. Carey, might have done certain things? Yes.

6912. Does not that show that Mr. Carey was the masterful mind in this matter—to put it more plainly, was not the Contingent very well dubbed as Carey's Contingent, instead of the Bushmen's Contingent? I do not think so.

6913. According to your statements, in evidence, he has exercised powers beyond the committee—on his own initiative? No, on the initiative of the Premier.

6914. That is, in communication with Mr. Carey? On the initiative of the Premier he undertook certain work in connection with the Military, not on behalf of the Bushmen's Contingent Committee.

6915. In the interests of the country and the selection of the officers, do you not think it would have been wise to chose all the men with force of character that they could obtain, especially for this regiment being so distinctive in its fighting? The Military endeavoured to select the best men. I knew nothing about what they did, but I presume they did. We had nothing to do with the selection.

6916. You had the position of elimination and reserved the right to finally approve of the selection? Primarily, not finally. We had nothing to do with them after the list was read over. A list of 270 names was handed on to the Military, and we had nothing to do with them after that.

6917. The only power which the committee exercised in regard to the selection of officers was in the primary stage, when certain names were eliminated? That is all.

6918. *Mr. Chanter.*] Statements have been made here, not only by yourself, but by others, that there was a considerable amount of Parliamentary interference? Yes.

6919.

J. M.  
Atkinson.  
28 Sept., 1900.

6919. My name was mentioned jocularly, but it took a rather serious turn afterwards;—do you know whether at any time—from your own knowledge, or from anything you have heard—that I had at any period any communication with your committee in regard to the officers? No, not that I am aware of.
6920. I did see you, personally, on more than one occasion—twice? Yes.
6921. That was in respect to the men as troopers? Yes, as to men.
6922. Did I ask for any concession for those men beyond what others were receiving? Oh, no; I would not have given you a concession if you had. I allowed nothing to influence me when I was considering what was the best to do, so far as I was concerned.
6923. Did I recommend any man to serve as a trooper in that Contingent who did not come up to your own requirements as to a bushman? I do not remember your bringing me more than two, to the best of my knowledge and belief, and I think they both passed. Of course, I had nothing to do with them after I had passed them into camp.
6924. As a matter of fact now, was not the only request I made to you for an order to get them into camp? That was so.
6925. In regard to the officers, the names of these gentlemen were primarily submitted to your committee? Yes.
6926. A certain proportion of them were not approved, and their names were eliminated from the list? Yes; a very small proportion.
6927. That list was then submitted to the committee by resolution or otherwise, and accepted after the excisions had been made? The list of names, after it had been read over to the committee, was passed on to the Military.
6928. Are you aware whether any officers were appointed whose names were not upon the list submitted by the Citizens' Committee? I could not say that, because I really do not remember.
6929. Then, after the list left the Citizens' Committee, that body took no further control in regard to the appointment of officers? No.
6930. Did the committee have any list, or consider any list, of men eligible to be appointed as non-commissioned officers? No.
6931. As regards the presents from the citizens to be forwarded to South Africa, were they forwarded through your committee or through the Military authorities? What we call comforts were sent to my office until they began to load it up, and then we sent them on to the Military. Those which came to my office were sent down by the military carts to the ships before the men left.
6932. Were they handed over by those authorised by you to the Military? Yes.
6933. With instructions to distribute them to the men? Yes.
6934. Has your committee received any communication from South Africa in reference to the officers appointed? We have not received any communication from South Africa at all.
6935. None at all? Not a line since the men left.
6936. *Chairman.*] Not from the Officer Commanding? No; from nobody by the committee.
6937. *Mr. Chanter.*] Was Major Dangar's father a member of the committee? No; his father lives in England.
6938. *Chairman.*] He contributed a large amount of money to the fund? Oh, no; not a very big sum.
6939. Did he give £1,000? No.
6940. *Mr. Wilks.*] £200, I think it was? Yes; I think it was £200; he was only a small contributor. There was never one particle of influence attempted to be used or used in any way by any one of the big contributors of money as regards either men or officers—not a finger's pressure of influence.
6941. *Mr. Chanter.*] Were there any complaints made to the committee that in some cases—I do not know how many—horses donated specially to certain troopers had been taken away from them and used by officers? Certainly not.
6942. Not as to the Citizens' Bushmen's Contingent? No; I did not hear of any. I know we were very particular in that regard. Where any man said, "I give ten horses, with saddles and bridles complete, and I want Jackson to have one of them and Thompson to have another," the two horses were put apart for those two men, and in any way we could do it we carried out their wishes and instructions completely. I never heard any of the men complain; they never made a complaint to me, and I was out there pretty often. Many of them tried to sell their horse and then secure it for the riding afterwards, but having sold their horse they no longer had any right to it, and, of course, it could be given to an officer or anybody.
6943. You have already said that there were no complaints from South Africa, so that there could be none from South Africa to you to that effect? We have not received any.
6944. Have you noticed anything in the press concerning the matter? No; I have not read it.
6945. Who appointed the gentlemen who acted as examiners for the riding test—the committee? Yes.
6946. Did the committee make any particular recommendations to these gentlemen as to what the test should be? I was one of those appointed examiner for the riding test, but I very seldom attended; I was unable to attend, and I asked Mr. Featherstonhaugh to attend in my place.
6947. Is he not a gentleman largely known for his knowledge of horses and everything pertaining to them? I think he is noted as a good fearless rider.
6948. At one time in his life he would ride any horse or ride over anything? I believe so.
6949. It was stated, to the detriment of the committee and those who had to deal with these tests, that there were a certain number of personations? Yes, there were.
6950. Were any personations detected? Yes.
6951. And what action was taken by those in charge? All that was left entirely to me. I used to get word from some of the troopers that certain men had been ridden for or shot for. Then I would go out and request Colonel Airey to call these men up, and we used to put them on the horse again in every case. In one case in particular I recollect that I received information that a man had been shot for, and on my applying to the officer to send him up for another test he bolted from the sergeant who was taking him up to the butts. I told the men publicly at the camp that any intimation they supplied me would be treated as secret, and that nothing harsh would be done without a fair trial. I told them that I considered it was their duty to let me know anything of that kind which had taken place, because not only the lives of themselves, but the lives of their comrades were at stake, and that I would treat everything as confidential, and not let anybody know who told me of the things.
6952. After the whole of these selections had been made, from your personal knowledge and qualifications to judge, do you consider the qualifications for riding had been amply complied with by those selected?

J. M.  
Atkinson.  
28 Sept., 1900.

I think they had. I did not see the latter part of it. To tell the truth, after I was stopped from examining the men's qualifications I felt very much hurt about it. We were so anxious to make it a Bushmen's Contingent that I did not like to see men go in who, I considered, were not bushmen, as many of them did, I consider.

6953. Was Captain Robertson appointed as a member of the Committee to judge in the riding test? No.

6954. Are you aware that he acted on one or two occasions? I am not aware.

6955. And Lieutenant Green? He was nearly always in attendance.

6956. Do you know what his qualifications were to act as a judge in the riding test? No; I do not know who appointed him. He was there on behalf of the Military. He was not appointed as one of the Committee for the Bushmen.

6957. Then there was a divided authority in regard to the riding test? Yes; the Military were represented and the Bushmen were represented at it.

6958. Do I understand that practically when the Bushmen were sent into camp the Citizens' Committee lost control of them? It lost control of them except if any men were there wrongfully. Once they were admitted and passed the test the bushmen had lost entire control of them.

6959. Then it would be possible that Captain Robertson would be appointed by the Military Authorities? It might be possible that he was appointed by the Military.

6960. Personally you do not know anything about his qualifications? No.

6961. Was there any conflict at any time between yourself and those appointed by the Military Authorities in regard to the particular style of riding whether it was to be military style or otherwise? Not to my knowledge.

6962. You are aware that there would be a difference in the carriage—one seat for military purposes and one seat for bush purposes? Yes.

6963. So far as your committee was concerned, they would take the general riding capabilities of the candidates? Yes.

6964. Not the correctness of his military seat? No.

6965. Have your committee made any arrangements to receive any reports from the Military Authorities in South Africa as to the doings of your Contingent? No; we have nothing more to do with them now.

6966. Not at present? No.

6967. Previous to your handing over the control to the Government was there any arrangement made to receive any reports on behalf of the citizens? No; as military men, we understood that they would write to the Military authorities, and make their reports to them, and not to us.

6968. Have the Military authorities communicated with you in any way as to their doings? No.

6969. Then, practically, with the exception of the citizens providing the men and the money for the equipment and carriage, the Military authorities have taken all control? Entirely.

6970. Do you not think that, to a certain extent, that is ignoring the citizens—that you had a right to be communicated with on these matters? I think we have been ignored all through.

6971. Have the committee disbanded now? Yes.

6972. Would it be possible for you to furnish this Committee with the accepted list of officers as it left your committee to be sent on to the Military? No.

6973. No record copy? No.

6974. *Chairman.*] I expect that this would be the list—it has been supplied by the Military authorities? We could get very little information from the Military authorities. It was some considerable time after the Contingent left that we got a list of the men who had gone.

6975. *Mr. Chanter.*] You have already said that they did not take any part in the equipment other than the question of the leggings, but did the committee on their own account make any inspection of the saddlery used by the Bushmen? I think Mr. Carey was attending to that. He undertook that matter. I purchased some saddles with him. He asked me to go up to Brush's, and we bought about thirty saddles there, and they were of a very good class when they were supplied. We saw them at the place.

6976. I suppose the Committee had that confidence in Mr. Carey that they were content to approve of any action that he took—in regard to recommendations? I think all the saddles that Mr. Carey purchased were purchased only in the early part. It was only in the early part that we had anything to do with it, because when the men were in camp there was no saddlery for them. They could neither ride nor learn riding-drill or anything else, and we thought it advisable to go away and buy fifty or sixty saddles. After that the Military did all the supplying; we had nothing to do with it.

6977. As one having a knowledge of what is requisite and necessary for bushmen acting in combination, do you not think the committee itself was a little lax in not pressing for a particular class of legging? They did press. I was instructed particularly to interview Colonel Roberts for this class of legging. I went to the Military, and they said it was too late altogether to get it. Colonel Roberts' reply to me was, "Your chairman approved of this legging, and it is too late to come now about it." I said I did not think it was. However, that was all the answer I got.

6978. You recommended the Baden-Powell legging? Yes.

6979. Are you aware that the Bushmen did go in leggings afterwards? I know that they went in leggings; but not the class of leggings we wanted.

6980. What did the Military authorities advance in favour of the leggings they chose as against the Baden-Powell leggings? My idea was that they had a lot of them in stock, and they used them for a long time.

6981. They wanted to see them out? Yes; and they said did we want to put our experience against theirs. In fact, the suggestion was that we knew nothing about it.

6982. Your experience is only supposed to be sufficient to supply the men and the horses? And the money, I think. In one case with the legging there was a very great objection made to the laces—to the fact that they were one continuous lace or whether they were stitched at every loop. It was the old style of legging, where you keep looping them up one from the other and fastening them on top with a strap. If a continuous lace once broke it would make the fastening of no value. The committee instructed me to go out and see about this. I think Mr. Carey was away. I went out to Colonel Roberts, and asked him a question. He said they were stitched at every loop. That I denied, and I said I had examined a dozen of them. He said to me that must have been the only dozen that were not stitched.

He

J. M.  
Atkinson.  
28 Sept., 1900.

He made his clerk telephone through to Captain somebody, who said through the telephone that he had examined every legging, and that every legging was stitched at every loop. I was so dissatisfied with my reception, and the answers I got, that I came back and sent a note to Colonel Airey, as Honorary Secretary of the Bushmen's Contingent, requesting a report from the saddler's sergeant on four points:—First, the quality of the leggings; secondly, the quality of the laces; thirdly, whether they were stitched at every loop or were one continuous lace; and, fourthly, the quality of the spur straps. The answer came back from the saddler sergeant, endorsed by the camp, that the quality of the leather was good, that the quality of the laces was indifferent or fair, that it was one continuous lace, and that the spur straps were fair or good; but it eventually turned out that there was not one of them sown at every loop. 6983. I saw some, and they did not appear to be sown at all? No; there was not one of them sown. The saddler's sergeant reported that none of them were sown; anyhow, they were one continuous lace.

6984. If the committee is disbanded now, how will the donors to this fund be communicated with as to the result of their contributions to the Citizen's Bushmen's Committee, in which they took so great a pride? Only through the press.

6985. You have nobody in existence now to communicate with the Government? Nobody. The funds we have collected are £300 odd over the requisite amount for the outfit and the pay for six months, and that money we have handed over to the Government. I made my final payment—£14—this very morning, and the accounts are being audited by Mr. Fell, and will be published in a few days, as soon as the audit is completed.

6986. It has been stated here in evidence, and also in the press, that the troopers, who are supposed to receive 4s. 6d. a day, have not received their pay? A very large majority of the troopers have left orders in this Colony for others to receive their pay. The pay they were to get from the Colony was 3s. 4d. a day, and from the Imperial Authorities, 1s. 2d. a day.

6987. 3s. 4d. a day was your liability? 3s. 4d. a day was our liability after the first two months. They sailed on the 28th February. For the first two months we paid them in full, at 4s. 6d. a day, and after that we were paying them, for the other four months, at 3s. 4d. a day, and that has mostly been absorbed with orders given here.

6988. Were these payments made direct by any officer of your committee or by the Military authorities? No; every month the Military sent us in a requisition, and we supplied them; and then, finally, to make this up, we handed over to the Government a cheque for £4,450. Since then we have handed over odd moneys. We have closed our account at the Bank of New South Wales. Since the 24th August I have paid nothing into the bank. I have received £14 1s. 6d., and that money was paid early to-day to Mr. Kirkpatrick, the Under Secretary for Finance and Trade.

6989. A statement was made in Parliament last night that there are certain shortages in the Pay Branch of the Military Department;—was your fund in any way affected by that? I am not aware.

6990. *Chairman.*] You paid into the Treasury, not to the Military authorities? We paid to the Treasury.

6991. *Mr. Chanter.*] When they made a request to you, was it made through the Treasury? The Military authorities used to send down a requisition, "We want so much," and we used to get a cheque drawn out, and Mr. Carey used to pay that into the Treasury.

6992. You would pay in a lump sum on one requisition? Yes; each month. I called attention, two or three times, to the fact that these sums did not agree. We knew the number of men who had left here; we computed their pay up to a penny, and we knew exactly what was intended. Sometimes they wanted £100 more—why, I do not know. The requisition was placed before the committee; the committee said, "Draw a cheque out," and it was drawn out.

6993. What check had your committee on the Military authorities that the distribution of the money you paid into the Treasury was carried out properly? No check at all.

6994. Then, although you had paid the sum of money for the men, if they did not receive the money you would not be aware of the fact except by a direct complaint from a man or from some person on his behalf? No; we would not be aware of it.

6995. So that it is possible that the statements made by the men that they had not received their pay might be correct? That is quite possible, as far as the Military are concerned.

6996. Generally speaking, your committee acted on behalf of the large number of donors before they disbanded;—were they satisfied with the manner in which the men had been handled and dealt with? I think so.

6997. You left the whole of the equipment and everything entirely to the Military authorities to carry out? That was the instruction of the committee.

6998. Do you recollect the trooper named Cook? No.

6999. *Chairman.*] He was enrolled after the men got aboard; he did his riding-test on the ship, and so did a number of others? Personally I have a very strong feeling about the way in which some people were shoved in at the finish. I took twenty-one men down from the camp who were next in order of test to the men who were enrolled, and they were paraded outside at the Circular Quay. I went off in the Government launch to see the "Atlantian" and the other steamer before they left the bay, to find out if there were any deserters. We heard that there were going to be an enormous number of deserters. On the steamer Colonel Airey told me that there was not one deserter, but that there were two men locked up for drunkenness, and another man who had been dismissed. I said, "What do you wish to do—do you want any other men?" He said, "We are to have one." Then there was Captain Baker, who said to me coming off, "those two men who were locked up for drunkenness are no good at all. I wish you would send off three men." So I sent off three men, and those three men were all returned. They did not take any of them.

7000. That being the case you would not send Cook because he got their all right? There were two or three more who got on board the "Atlantian" whom we never sent, and whom we never meant to go.

7001. The name of the man is Alfred Cook, and he is described as a baker? I never heard of him.

7002. *Mr. Chanter.*] You did not have any complaints concerning him or his action on board as a bushman? No; unless he is the man who came to my office with some bread or biscuits.

7003. *Chairman.*] The gentleman who came with the biscuits would be the man? I did not see him, but I told my clerk to tell him if he came again to go downstairs as I did not want to see him.

7004. Was not it a most marvellous thing to enroll men they knew nothing of on board the steamer? I think it was more than marvellous; I think it was a very grossly unfair thing.

7005.

J. M.  
Atkinson.  
28 Sept., 1000.

7035. And the result did not pan out much because they had to send Alfred back from Capetown? I consider it was unfair to the men who were left behind, and I think it was an insult to the Bushmen's Committee to do such a thing.

7006. It was unfair to the men who went? It was grossly unfair. I knew good men I had rejected because they had not come up to the shooting test—excellent men, good bushmen, and everything else. My nephew lost in two points, and he went over on his own and joined the Imperial Yeomanry. Another man, whose name I do not wish to mention, I rejected, and he was taken on board, although my nephew was ahead of him. What I would not do for my nephew was done for this man. I think it was a very grossly unfair thing to do.

7037. *Mr. Chanter.*] You did not hear that Colonel Airey had been deposed on board the "Atlantian"? No.

7008. Or of any threats on the part of those particular bushmen that he had all the intelligence and knowledge, and that if the officers did not behave themselves he would put them overboard? No; I think there were officers on board who would not have stood that from any man.

7009. And this man who was an enrolled bushman—I am glad to say it was not done by authority of the Bushmen's Committee—understood military discipline so well as to get into the guard-room three times on the voyage home? We had many applicants (Generals in disguise) who wished to enroll as troopers, and at the same time to confidentially advise the Colonel as to how things should be done.

7010. What officer would be responsible for accepting a man if he had been declined by your committee—Colonel Airey? No.

7011. Who would be responsible for selecting these men on board at the last moment, in face of the objections of the Citizens' Committee? It would be the Colonial Secretary.

7012. Would it be the captain of the Squadron? I do not think it was any one on board.

7013. *Chairman.*] You do not think it was any one on board? I do not think so.

7014. Cook planted himself away and only came to light when they were going out of the Heads, so that it could not be any one on shore? I could not say.

7015. *Mr. Chanter.*] He was enrolled, according to his own statement, because he was a member of B Squadron?

7016. *Chairman.*] They would have to get a heliograph if they enrolled him from the shore when the vessel was going through the Heads? They might have had instructions before they left.

7017. *Mr. Chanter.*] It has been asserted in evidence, and in the Press, that troopers have not received the gifts which were donated? I can only assert that they were put on board with those I received.

7018. Colonel Roberts, in answer to my question, said that every gift of that description sent to the Barracks was despatched; so that we have evidence that they were despatched from here to South Africa, but not a scrap of evidence that they were received by the men? The men complained that they never received the gifts.

7019. Do you mean to say that they were not given out on board? Not delivered on board. They might have reached South Africa and been chucked away with a lot of other loadings. I believe there were thousands of tons chucked away.

7020. *Chairman.*] Mr. Cook gave this evidence to the Committee:—

2295. Where did you join the Contingent? On board the transport, on the 1st of March.

2296. The day on which the vessel left Sydney? Yes; just as she got outside the Heads.

5297. Who enrolled you? Captain Thomas.

It could not have been any one on shore, could it? I suppose the instruction might have been given to some of the officers to enrol a man if he turned up.

7021. Who enrolled him—Captain Thomas? I know that others who were refused here three times—who were turned out of camp three times—went on board.

7022. *Mr. Chanter.*] How many of the thirteen gentlemen who comprised your Committee had had any military knowledge—Mr. Carey? Sir George Dibbs, you know, had.

7023. Had Mr. Walker had any particular knowledge? Mr. Carey, I believe, has had military experience.

7024. *Chairman.*] He is a major, is he not? I believe so.

7025. Do you know in what regiment he is a major? He is a major in the reserve of officers.

7026. What regiment was he in—in an Imperial regiment of Hussars? No; in New Zealand.

7027. *Mr. Chanter.*] Is McNamara a soldier? Yes.

7028. *Chairman.*] Is Sir William Manning a soldier? I do not think so. They recognised the fact that they were not military men, and consequently they did not interfere in military matters.

7029. *Mr. Chanter.*] How was that committee appointed? They were appointed at the first meeting of citizens. It is nine months and four days that I have been weighted with this thing, and I did not expect it to be nine weeks. I have given up my office and that sort of thing, and taken a lot of trouble. I asked to be relieved of it months ago.

7030. *Chairman.*] Did it never occur to the executive committee that they should hold a meeting of the general body to report to them during all the time this was going on;—you had a meeting of fifty or sixty when the executive committee was appointed? Something like that number.

7031. Then you had a general committee of 170, and it never occurred to the executive committee to call a meeting of the general committee? In a matter of this kind, things were never in such a state that you could have reported anything in particular.

7032. As a matter of fact, now, who of all these members of the executive committee really took any active part in the work;—there were yourself and Mr. Carey and Mr. Kilgour, who else? Well, besides Mr. Carey, the others did not do much work except to attend to meetings.

7033. They did not do that? They did not always do that.

7034. There was always a quorum? No meeting ever lapsed from the want of a quorum.

7035. How many made a quorum—five? Five, I think.

7036. You always had just about the five, I suppose? Yes. Mr. See never attended, and Sir George Dibbs only attended at the start.

7037. Did you hand in the list of troopers you enrolled to the Military authorities? Yes.

7038. Are you aware that at the present time nearly every trooper is wrongly described as regards his name, his initials, and the place he comes from? No.

J. M.  
Atkinson.  
28 Sept., 1900.

7039. Would you be surprised to learn that the other day, when it was stated that a corporal from Wilcannia was missing, I made inquiries and found out that he was not properly described; he was described as H. Allison, from Blackvale, whereas he is T. Allison, from Wilcannia;—do you not think that something is radically wrong when in nearly every case the description is wrong? How do you know, Mr. Sleath, that there is not a T. Allison from Blackvale?

7040. Because only one Allison went, and the number corresponds with T. Allison's? Perhaps he gave his name in as coming from Blackvale on the "Atlantian."

7041. He did not, because I was present and stated his name, and gave him a recommendation? Where was that?

7042. At your office; another one from Wilcannia—J. Wilkinson—is described as F. Wilkinson, from Bendigo? That may be done in the cables in some way.

7043. No; in the printed list which has been supplied to the Treasury by either you or the Military authorities? If it was the list supplied from my office it was what they themselves gave in to us.

7044. I know that in this case it was not so, because I was present when they gave in their names and signed? That did not come from my office, I think.

7045. It must have come from the Military authorities, then? Yes.

7046. Do you not think it is very bad when one is making inquiries regarding any man who is missing or killed, that the authorities here cannot possibly give the proper name of the trooper or the place he comes from;—do you think there has been a great error committed somewhere? I do.

7047. This is rather a serious allegation against Members of Parliament, and I want to know just how they did interfere;—did any of them go to you and interfere? No; I asked them to come up to my office.

7048. Where did you find them? I did not find them at all. Mr. Mackay came to me, and told me that there was great dissatisfaction by some Members of Parliament at the way the men were selected, and I replied to him, "I wish they would come here. They are welcome to sit in my office, and hear the whole thing for themselves." I asked them as a favour to come. I heard no more of them till the meeting, which, I think, took place next day or on that very day. Mr. Carey came in to say that a deputation of Members had waited on him, and they had objected to the men being cross-questioned. That all the men who had been sent a paper to come down—although it was known what class of men we wanted—must be admitted into camp; that I could put any mark on the papers that I liked; but that they must go into camp. I objected to put marks on the papers, and I would not do so. They would not allow me to cross-question them, and find out where they came from, which was all done in a perfectly open way. They said they should go into camp, and let the Military find out.

7049. But it was the members, and not Colonel Mackay, who were interfering? Yes.

7050. And it was Mr. Carey that made the report to the Committee? Yes.

7051. It was on that report that the Committee decided to let them go into camp? Yes.

7052. Is it not a fact that the cause of complaint was that you were alleged to be favouring what were known as non-unionists—that is, men who were opposed to the Shearers' Union, and that any non-unionist, no matter how high his qualifications were, did not have much of a show;—is not that the allegation that was made? That is what you told me.

7053. I admit at once that there is absolutely no truth in it; but that was the allegation made, was it not? That was the allegation.

7054. As a matter of fact now, in a case of that sort you will always find disappointed men ready to say something? Yes.

7055. Even when I was at your office, there was one gentleman—I think you told me it was his third visit—who would insist on being enrolled, and when he was cross-examined for a little bit, he admitted that he had not any bush experience, but had been three years in the Submarine Miners;—that was his bush experience at the time he was cross-examined? I had a lot of worse cases than that.

7056. But still the complaint amongst Members of Parliament was not that you should accept anyone, but that no favouritism should be shown where everything else was equal? What was reported to the Committee was that these men should not be examined at my office.

7057. Was there any reason given for that? They said that these men had come down from the country, and they must be admitted into camp. I argued very much against it, but they overruled me in numbers, and, of course, I simply bowed to the will of the majority. I am still very opposed to it, and I think it was a very serious matter as regards the qualifications which are required for the Bushmen's Contingent.

7058. I think I can say honestly, on behalf of Members of Parliament, that there was no intention amongst them that that should be so? I was particularly anxious that they should come and interview me on the subject. I send them a message by Mr. Mackay to that effect. I asked them as a favour to come down and see me. I did not know what their ideas were, but that was the idea conveyed to the Committee.

7059. I, as a Member of Parliament, did come down and see you? I know you did, and I was very glad to see you. Mr. Brunner was another Member, who sat in my office for a couple of hours. There were two or three who came down.

7060. I think I explained to you what the general complaint amongst certain Members was; it was a mistaken idea, I admit; but somebody had told them that such and such a thing was the case? Yes.

7061. That you had been or were secretary of the Employers' Union? No; I was Vice-President of the Pastoralists' Union at that time; I am not now.

7062. And they came to the conclusion, wrongly, I admit, that you would not accept anyone unless he was what was known as a pastoralist's man—that is, a non-unionist? A bad-minded man, I suppose, thought I was bad-minded too.

Tom James Hoskins, coachbuilder, sworn and examined:—

7063. *Chairman.*] What occupation do you follow? I am a coachbuilder, carrying on business in T. J. Hoskins. Canterbury-road, Petersham.

7064. Did you supply some carts to the Military for some of the Contingents? The first lot.

7065. Did you supply any afterwards? No.

7066. Was it the Second Contingent or the Bushmen's Contingent? I could not supply the Bushmen's Contingent.

28 Sept., 1900.

- T. J. Hoskins. 7067. It was the Second Contingent, which went away about February? The First and Second, I think; possibly it might have been all for the Second. I only received your notice at 9 o'clock this morning, and what I say now is only stated from memory.  
28 Sept., 1900.
7068. About how many carts did you supply? About six.
7069. Do you know if any favouritism was shown to any of the contractors? I do not think there was much favouritism shown. The only thing is the mystery how some of them got their work passed.
7070. Some seemed to get the work while others did not? I felt quite sure that I could not get my work passed in same condition as some of the work I saw there.
7071. Did you inspect any of the carts, other than your own;—did you have an opportunity of seeing them? I did while I was getting my last voucher through. I saw some of the others which were going away with a pole attached to them. I did not make any with a pole. Mine were all made with interchangeable shafts.
7072. Do you know if any were supplied which were not interchangeable;—you did not notice any? I do not think so. The only ones which would be taken which were not interchangeable would be under Colonel Williams. I did a lot of work under him before the Contingent went away.
7073. I am talking about this Contingent? I do not think there were.
7074. You did not examine them all? No; the only ones I saw, with the exception of my own, were the ones with the pole.
7075. As a practical man, what did you think of that idea? I thought it was a fool of an idea, and I would not think much of any fool that suggested such a thing. I drew the attention of the sergeant to it. I mentioned to him it was 'bus mountings they had on them. I said, "The man who has been making them is evidently a 'bus-builder; he knows nothing about making a cart with a pole." "What do you mean?" he said. "Because," I said, "there is nothing to keep the pole from going up and down; you want a bar put through to attach to your kidney-links." The 'bus-pole is fastened differently. It is a four-wheeled vehicle, so that it remains stationary.
7076. You did not make any with the pole? No.
7077. Did you notice the specifications for the wheels? Yes.
7078. Could you tell us how much of a dish they had? The ones I made were perfectly upright, with about a quarter-inch dish. We never make them otherwise unless instructed.
7079. Some were made with about a 2½ or 3 inch dish? I tendered for them, but was not successful.
7080. What do you think of that idea of having so much dish on the wheel? It is an antiquated idea.
7081. Would it add considerably to the draught? There are a good many different opinions on that. My idea, both here and in the Old Country, is that in making them with a dish like that we can get a shorter axle, so that they will not cover so much ground, but plenty of people run away with the idea that it is meant to strengthen the wheel. It was never meant to strengthen the wheel.
7082. But with a dish like that you get a shorter axle? You get a shorter tread.
7083. Do you think a dish-wheel—that is, with a 2½ or 3 inch dish on it—would make the cart heavier to pull? I do, certainly.
7084. So that you do not see any advantage in this dished wheel? None whatever.
7085. It is an antiquated idea? Yes; just the same as those lynch-pin axles they brought in. It is an old idea, you know.
7086. You see no particular merit in that? No; there is a demerit in it. It is against all reason.
7087. Does it allow more play in the nave? It allows more play, and it is not so easy to keep intact with a lynch-pin like that.
7088. You prefer a cap? A nut.
7089. Sometimes, unless you keep the lynch-pins tight in, they fall out? Certainly.
7090. And it is not very easy to keep them tight in at all times? No; it is not too easy.
7091. One may forget? That is the idea.
7092. But with a nut, of course, you are much safer? Certainly.
7093. And you can keep less play on your wheel too? Yes; you can washer it up and keep less play on it. Then again, one is a right, and the other is a left, and as the wheel revolves, it screws the nut up.
7094. You can never unscrew it while you are going ahead—it is always tightening? Yes.
7095. I suppose you have had a fairly long experience in this trade? Yes; I have been at it ever since I was 14.
7096. Both at Home and in the Colonies? Yes.
7097. And you see no merit whatever in either the lynch-pin or the dished wheel? None whatever.
7098. Those are things that belong to bygone ages? Certainly.
7099. And they are not generally adopted now in the manufacture of carts? No; they would laugh at you if you did that.
7100. Those in the trade really laugh at them? Yes.
7101. I may say that the other expert opinion we have had entirely concurs with your own;—did you take particular notice of the specifications attaching to these later contracts that you did not get? Really I could not say I could, because you would never get two specifications alike. There were always specifying some interchangeable idea that really they never had two carts alike.
7102. A sort of general messing about? Yes; instead of sticking to one proper standard.
7103. Did any one come to your place of business to inspect these few carts while they were in course of construction? Yes.
7104. Do you know who came? I think Mr. Lyons, a staff sergeant, came once.
7105. But, of course, Mr. Lyons is not a wheelwright? No.
7106. It is rather difficult for a man who does not know anything about the trade to pass an opinion? It is impossible.
7107. The chances are that if he did he would be wrong? Yes; in nine cases out of ten.
7108. And if he were right it would be only by accident? It would be by accident.
7109. I suppose after a cart is finished and painted, and, if necessary, puttied over, it would take an expert all his time to know exactly what the workmanship and material were? It would.
7110. So that a man who was not an expert would have a very poor show then? Very poor; in fact, he could not unless he saw the material before it was used.

7111. If he saw nothing but the cart after it was finished, painted, and puttied he could not possibly tell what the workmanship or material was? He could not. It would not take an expert to see flaws in some of them, because in some cases the cracks were not puttied up at all. T. J. Hoskins.  
28 Sept., 1900.
7112. Was that in the case of some of these carts with the pole in them? Yes.
7113. Who was the builder of these carts? I could not say. They were all in a line, and I drew the sergeant's attention to the mountings on the pole.
7114. The mountings, you say, were 'bus mountings? Yes; I do not know if they were altered afterwards.
7115. Not very suitable for that class of cart, you would think? Certainly; the cart would tip up if anything were put on behind. Anybody would know that.
7116. It would appear to be rather a dangerous thing to handle a cart with a pole, especially if it were going over rough country with a heavy load? There is nothing to steady it.
7117. If you bump through a bit of a creek, what is the result? Down comes your horse or your mule.
7118. You made the carts with the shafts;—do you know how long the body of these carts is? I could not say exactly from memory; but I believe it is about 7 ft. by 4 ft. 8 in. I believe they were a little narrower than we usually make them.
7119. Are they fixed on springs? Yes.
7120. A very useful cart, I should think, in the city? They are all right enough in a city.
7121. Or on a fairly decent road? Yes.
7122. But they would hardly be the style of cart you would recommend for cross-country, where there is no track, and you have to go over rough country? I would not advocate springs on rough country like that.
7123. You would want almost railway-truck springs to go over very rough country? I think they would be better without springs at all in a country like that.
7124. A cart of that size would be capable of carrying a very big load on the street here? It would carry 30 cwt.
7125. And if it were built stronger you could pile on it more than that weight in ordinary stuff? Yes.
7126. Do you think it is necessary to have a cart of that size to carry 15 cwt.? It would all depend on what you were going to carry.
7127. I mean for carrying ordinary military material? No; I do not think it would be. I never saw it that size before for carrying military equipment.
7128. Of course, on a good road it does not matter a great deal; but in going across country does the cart seem excessively big for the weight it is supposed to carry—15 cwt.? Certainly.
7129. They say they never load over 10 cwt.; but they are supposed to be able to carry 15 cwt.? That is so. Everything is specified—the size of the axle, the size of the springs, and the size of the timber; and they expect that vehicle to weigh a certain weight; but it is impossible, because you cannot do two things. You must either serve one and offend the other, because the two will not come out right at the end.
7130. That is exactly the evidence we have had—that it would be impossible to carry out their specification and keep to the weight? You could not. There was the instance of the square axle. When I asked the reason for having square axles, I was told it was for lightness. I said, "I think it is really heavier." Of course, we are not supposed to suggest anything; we allow somebody else to do that. I asked them where the lightness came in. They said, "Certainly a square bed was lighter than a round." I said, "I would like you to point it out to me. You must admit that if you are going to get a 2-inch round, you will have the corners off, and consequently it must be lighter," and they wanted to point out, of course, that they could get the round into the square. "Your circle," I said, "would have to be a very large circle to get a 2-inch square in." It was supposed to be lighter; but it was heavier.
7131. How were the poles fixed to the carts? With the ordinary 'bus mountings—with a pole-chain.
7132. *Mr. Chanter.*] Running in a ring? Ring on the end and the loop.
7133. *Chairman.*] They did not have any side-straps or anything on the pole? No; just the bare pole.
7134. *Mr. Chanter.*] There was nothing at all to prevent the pole from going up and down? Nothing at all.
7135. *Mr. Meagher.*] Suppose you had a team of six or eight mules in front, would that steady it? It is impossible to steady it; there was no brake on it to steady it with.
7136. *Chairman.*] You consider that that style of cart with a pole is simply impossible? It is impossible. Even here on our roads it would be no good.
7137. Supposing they were going up a pretty stiff hill with a cart of that size? I know I would not like to be the soldier sitting on behind.
7138. There is likely to be a bit of a break-up? A capsize.
7139. Or if they were going down, practically likewise? Yes, worse, because they have no brake.
7140. And if they happened to bump over a bit of rock or stone there would be a pretty rough shake-up? It would throw the polers down; there is nothing to stop it.
7141. *Mr. Chanter.*] Which do you consider the strongest to carry the greatest load—a straight wheel or a dished wheel of 3 inches? A straight wheel; the dished wheel is an old idea. You never see a man make a dished wheel now.
7142. Had you been left to design a cart combining the qualities of strength and lightness, you would have provided a cart with a straight wheel? Certainly.
7143. *Chairman.*] You consider, as far as your experience goes, it is a sort of different specification or different idea for every fresh tender? Yes. I have had them specify cedar whiffle-trees; but that was before this lot came out. I believe it was for the Medical Staff.
7144. *Mr. O'Connor.*] Did you make them? Certainly not; we put in spotted gum.
7145. *Mr. Chanter.*] What kind of material was used in the carts you made? I think it was blue-gum framework and colonial pine panels, and, of course, the wheel was made of bluegum and ironbark.
7146. Were the naves of blue gum? No, of ironbark or spotted gum. We used blue-gum felloes and ironbark spokes.
7147. Now what class of timber would you recommend yourself to be used for felloes, spokes, and naves? I could not do anything better than that. But I see by the last specifications they are specifying elm naves.
7148. *Mr. O'Connor.*] Where are they going to get them from? America.

T. J. Hoskins. 7149. *Chairman.*] But an ironbark nave is surely good enough for anything? Ironbark is better than elm. They specify an ironbark spoke, which is out of harmony with an elm nave; one is hard and the other is soft, so that it is impossible to make a good job of it. Elm is right enough when it is worked in harmony with hickory, and it is all glued together. Our timber is all hard, and if elm is used it would cut into the naves in no time.

28 Sept., 1900.

7150. *Mr. Chanter.*] What class of timber was used in the shafts? Spotted gum.

7151. Is that as strong as ash? Yes; and I prefer it to ash.

7152. *Chairman.*] It will not have as much spring? Every bit as much spring. It will answer better in our climate; it will not warp—that is, if you get it dry. You do not want to send it away with the leaves on it, like some of them that went away. It is a wonder to me that they got the fever when there was so much eucalyptus in the carts.

7153. *Mr. Chanter.*] What was used in the flooring of the carts? Colonial pine.

7154. Will that be as durable as hardwood? Every bit—it is better and lighter. It is practically a hardwood. I will tell you the reason why I prefer the spotted gum. I believe the timber is always well adapted to the colony where it is grown, and that is why I would argue that our timber is even better for South Africa than the English, or even the American, timber is. Our timber does not take the dry rot like the American timber or the English timber. The English timber is all right in England, but it is no good here. There is no timber in the world which will take dry rot more quickly than ash. I would, by far, prefer spotted gum or blue gum. We have the finest timber here for our class of work that anyone could wish to have. Only for the way in which this business has been bungled up we might have heard a little more about the Imperial waggons. You could not expect them to send for waggons if they had seen the things that were taken over from here.

7155. When your tender was accepted for these carts on certain specifications, was there any interference with or alteration of those specifications afterwards by the authorities? No.

7156. They left you to carry out the work on those specifications? Yes; I took the specifications up and pointed out that there were one or two little things which might be altered. Of course, they told me that it was not my place to suggest; that I was to do the job.

7157. Another witness has stated that the Military authorities altered their specifications? I never had anything to do with that. Both the wheels were cut down, and the price was cut down, and I could not agree with that. I was offered, at the other tenderer's price, to do so many of them; but I could not look at them.

7158. *Mr. O'Connor.*] If you had known that they would have taken wood with the bark on it, you would not have minded? I would not have taken it on; I would rather that somebody else got it. If a man has a stock he values that stock as good as money in the bank, or better, because these other men cannot procure dry stuff, and if we put in dry stuff we must be paid for it.

7159. *Mr. Chanter.*] I presume the specifications provided for the use of seasoned timber? Yes; but who was to know what was used. I am led to believe now that one contractor was getting the axles made. He did not come up to the scratch for the axles. I believe the axles were left on the maker's hands. There was only one man making them here, and there is not the least doubt that he can make a really good colonial article. I prefer them, in a good many instances, to the English make. I believe the contractor simply got a bar of 2-inch square iron, turned it up in the lathe, and put a collar on loose.

7160. And that was passed? There are some of them in Sydney now, I believe. The axle-maker has not got rid of his, and he has not got the money.

7161. *Chairman.*] They just took a 2-inch square bar of iron, turned it off at the ends, and shrunk it, I suppose? Yes; that is what I am given to understand. I have never seen them. Some of these carts are here, and you will be able to see for yourself, whether it is true or not.

7162. Is there any other information which you can give with regard to the carts? I do not think so.

7163. Did the Military authorities ever ask for your opinion;—did they say to you, "These are the specifications, and do you, as a practical man, think they will do"? No; it would be too low and degrading for an officer to do that. I am a coachbuilder.

7164. I suppose your experience of military officers is something like my own—that they consider they are authorities on everything under heaven? That is right. The only man I knew there, who had a general knowledge of everything, was Colonel Williams. He was a good man. If another man took a job under him he would have to do the same as I did. That is quite right. So long as they do that we cannot complain, but we certainly can complain when they are allowed to pass the things which were passed in the condition they were in.

7165. Putting in green timber, &c., and these sort of patent axles of their own is unfair to other contractors who are prepared to supply a proper article if they get a fair price to supply it? Yes.

7166. I suppose you quite understand, so far as the Government of the country are concerned, they are anxious to see that a fair price is given for anything they get? That is quite right.

7167. And that they want the best article they can get? Yes.

7168. So that while the Military authorities may have failed in doing their duty, you understand, I am sure, that no responsibility falls on the Government as a Government? We met, I think, at the Chamber of Manufactures, by invitation, in reference to the waggons for the Imperial Government. We wanted to send as good an article as we possibly could send, because we knew that by doing so it would advance our Colony. Seeing that the men had done the best they could and proved themselves to be good men, we thought it would be cruel for the Military authorities to allow such rubbish to go away against us, because we can turn out as good material as they can in any other Colony, or in England.

7169. You have had an experience which they have not had, perhaps, in England in making a class of wagon or cart for that particular class of work? For any colonial work.

7170. After all, the conditions in South Africa are much the same as the conditions in Australia in regard to the campaign? Yes.

7171. And, having had experience here, you would be more likely to turn out an article which would meet the requirements than if you had remained in England and had never had an opportunity to handle this class of work? Certainly.

7172. And, as you say, the timber here is suited for South Africa, where the climate is much like our own? Yes.

7173. Therefore, you think that the Military authorities, in allowing these carts of rather inferior quality to go away, have practically injured to reputation of your trade with the Imperial authorities? Certainly they have.

7174.

7174. If the Military authorities had sent a first-class article, and attention had been drawn to it there as being a specially suitable article, the chances are that, should another occasion arise, the Imperial authorities would place large orders here? Yes; that is what we were looking at. T. J. Hoskins.  
28 Sept., 1900.

7175. You saw by the Press, no doubt, that at about the commencement of this war the army was very badly hampered for the want of waggons? Yes.

7176. And that a fear was expressed by the Imperial Military authorities that we would not be able to produce in the Colonies the class of waggons required? Yes.

7177. I am sure that if you had seen the waggons which were in use there, you would have come to a very different conclusion from the Imperial authorities? Yes. The absence of Colonel Williams and a good many prominent men did tend to weaken the Board. I really believe there were men on the Board who would not have been considered if Colonel Williams had been on it. If the Colonel had had any trouble with a man in reference to anything like that, I do not think he would take him into consideration.

7178. He would not give the man a chance to have him a second time? No. Three years ago tenders were called for water-carts, and they were specified to be galvanised. The Board passed them. One day, when I was in the Barracks putting some additional tow-boards on some waggons I had supplied to the Medical Staff, they were filling this tank with water, and it capsized as the Colonel was coming down. The underside of the tank had never been painted, let alone galvanised; he drew my attention to it, and I told him there was only one place in Sydney that had a tank large enough to galvanise them in. Of course he was very much annoyed over it. He did, I believe, try to make the contractor do them right; but you could not, because the Board had passed them.

TUESDAY, 2 OCTOBER, 1900.

Present:—

MR. CHANTER,  
MR. GARLAND,

MR. HURLEY,  
MR. MEAGHER,

MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

John Randal Carey, called in, sworn, and examined:—

7179. *Chairman.* You were chairman of the Citizens' Bushmen's Committee? Yes. J. R. Carey.

7180. A meeting of the committee was held, I suppose, at which the executive were appointed? Yes. 2 Oct., 1900.

7181. Do you remember the number present at that meeting? I could not tell you the number; there were a great many.

7182. They appointed an executive? Yes.

7183. Consisting of thirteen? I do not know the exact number; the minutes will tell you.

7184. Afterwards the committee were considerably added to? The general committee was added to from time to time.

7185. Was a meeting of the general committee held afterwards? One.

7186. That was quite recently? Quite recently.

7187. But during the course of the equipment and despatch of the Bushmen's Contingent, you had no meeting of the general committee? No; only meetings of the executive committee.

7188. I understand that the General put the number of the general committee down at about 170 or 180 members? I really could not tell you the number. The minutes would tell you.

7189. You never deemed it advisable to call a meeting of the general committee together? The general committee left the conduct of matters entirely with the executive committee.

7190. The first meeting left matters to the executive committee? Yes.

7191. After the general committee was considerably added to, until it reached 170 or 180 members, it never held a meeting? No. The addition of the names that were put on was more a question of getting funds—to assist us to get funds.

7192. You were quite prepared to do the managing yourselves? Yes.

7193. So that, the fact of a great number being on the committee was purely a nominal matter? To assist in getting funds, as a matter of fact.

7194. I mean, they had no voice whatever in the management;—they took no part? They took no part.

7195. There was no credit or blame attachable to them in any way? There was credit, but not blame, attachable to them.

7196. There may have been credit attachable to them for assisting to get funds, and the general assistance which they gave as far as they could, and, naturally, anyone being on the committee would take a greater interest in the movement on that account? Yes; and they gave advice.

7197. In regard to the equipment, did the executive committee carry that out, and make the purchases? No.

7198. They left it more to the Military authorities? They handed it over to the Government. In fact, everything was handed over to the Government, with the exception of the selection of the men.

7199. And I think they did the purchasing of the horses—those that were not given to you? The Committee did not do anything of that kind. It was all done through the Military Department and by myself.

7200. Were you acting on behalf of the Government, or on behalf of the Committee? I was acting partly on behalf of the Government, as well as being Chairman of the Committee. After they handed it over to the Government, Sir William Lyne and the Minister for Defence requested me to join General French in the matter.

7201. Your Committee gave some recommendations in regard to certain of the clothing and the equipment;—for instance, in the matter of leggings? There were one or two things to which, I think, they rather objected, and they let the Military Department know their objections.

7202. Your Committee, I think, recommended a certain class of leggings, known as the Baden Powell leggings? Yes.

7203. And it was found they could not be got, and the Military authorities supplied another sort? There was a difficulty in obtaining things at the time. We had to decide upon something. There was a legging produced, and it had to be accepted. There was some objection taken afterwards, on account of its not being well stitched.

7204.

J. R. Carey. 7204. Did the whole of the men applying to be enrolled have to give some guarantee that they were bushmen before they could get into camp? Yes; an inquiry was made, in some shape or form, from every man who applied. The original idea was that they should bring a certificate from either the police or the magistrate of the district, or a local Member who knew them to be bushmen. Some of them applied direct, and others applied from the country by letter.

2 Oct., 1900.

7205. Towards the finish did you throw off those restrictions? I had nothing to do with the selection of the men. Mr. Atkinson undertook that—he was a bushman himself. As far as the committee was concerned the restrictions were not thrown off.

7206. Mr. Atkinson, in his evidence on Friday, told us that at a special meeting of the executive you made certain statements as to political pressure being brought to bear upon you, and the committee decided that anyone who applied should go into camp;—is that strictly accurate as far as your memory serves you? No, certainly not. A deputation of Members of Parliament waited upon me, who had some objection to the method in which they heard the men were being selected. I brought that matter before the committee, and then it was decided that whoever came down with the necessary qualifications was to go into camp immediately.

7207. They would be bushmen? Certainly; I do not remember that condition being altered.

7208. Do you remember the deputation waiting upon you? Yes.

7209. Could you give us the sum total of their complaints? Yes; I have among the papers a report of the deputation from notes taken at the time by my own shorthand-writer. It is as follows:—

#### DEPUTATION to Mr. Carey, 19th January, 1900.

The following Members of Parliament were present:—Messrs. Carroll, Byrne, Spence, Hurley, Brown.

Mr. Carroll said there was a great deal of dissatisfaction amongst country Members with the way in which the men were being enrolled for the Bushmen's Contingent. Their principal complaint was that Mr. Atkinson told applicants that if they were provided with testimonials from pastoralists they would stand a better show of being accepted. They did not wish to have any influence in the matter, but the fact of Mr. Atkinson stating that men recommended by pastoralists had a better show was causing a number of Members to get their backs up. When the matter came before Parliament, as it would when the men had to be brought back from the Cape, some Members would give evidence of their dissatisfaction, if the causes were not removed now.

Mr. Byrne produced a letter referring to a case in point, but the reference was only incidental, and did not permit of identification.

Mr. Carey, in reply, said that they would be glad to look into any case, if they would forward particulars. His main object from the first was to prevent applicants from going to Members of Parliament or the Government for testimonials, and at his request the Premier had authorised District Military officers and Inspectors of Police to indorse the application forms for enrolment, thus providing an alternative signature to that of the resident member of the committee or a pastoralist. So far, they had endeavoured to prevent men from coming down to town who were not fit for the position, and their aim was to pick out the best men. He objected to Members of Parliament sending in names that they could not vouch for; and only that day he had refused to accept a man though recommended by Mr. ———, because the latter could not vouch for the applicant being a bushman. He had advised the man to wire to the Inspector of Police for his district to forward a verification of his possessing the necessary qualifications for the Contingent.

Mr. Spence said that their object was to assist in getting the best men for the Contingent; but at present there were some imperfections in the method of enrolling the men.

Mr. Carey detailed the arrangements that had been made for the convenience of men in the country, and pointed out that applicants could get their forms indorsed by Military officers, Inspectors of Police, a pastoralist, or a member of the committee. He must object, however, to Members of Parliament sending in names that they could not vouch for. The committee were taking every step possible to ensure the best men being secured.

On the 20th January I replied to the deputation as follows:—

Messrs. Carroll, Hurley, Spence, Brown, and Byrne, Ms.P., Parliament House,—

Dear Sirs,

I have made inquiries with regard to the questions raised by you as a deputation yesterday, in reference to the method of enrolling members of the Bushmen's Contingent.

Any country volunteer who has filled up the authorised application form, undergone preliminary examination (medical) in his district, and is vouched for by a police officer in charge of a district, a Military officer, member of the committee, or his last employer, will be sent into camp to be finally tested as to his qualifications.

In our enthusiasm, and our desire to get none but genuine bushmen, some applicants, whose appearance or answers to questions have been against them, have not been allowed to go into camp pending verification of their statements; but any who present the authorised form of application, duly filled up, will be sent into camp at once.

7210. Was the tenor of the deputation, as far as you remember, that what they understood by being recommended by a pastoralist was that only certain men would get the recommendation from a pastoralist? That might have been their view, but that was not the intention of the committee at all. It was a question of their last employer.

7211. It was not the intention of the committee; but did you gather from anything that was said at the deputation that the deputation were rather inclined to think that that was what was being done? Yes; I gathered that from them.

7212. So that it was not that the deputation objected to your seeing that the applicants were proper bushmen? No; I do not think so.

7213. But that they felt from certain things that had come to their knowledge that there was a certain amount of favour shown to a certain class of men? They led me to that view. I also inferred from what they said that they were disappointed because Members of Parliament did not have a voice in the selection of the men.

7214. Are you aware that some men came down from the country who had passed the medical examination, and had been put through the shooting and riding tests by the Inspector of Police, and guaranteed by him as bushmen, and before they could go into camp they had to get a recommendation from a Member of Parliament? I am not aware of it. I certainly would not attach any great value to a Member of Parliament's certificate on the subject, inasmuch as I know that Members of Parliament were importuned by their constituents from time to time, and I did not think it was a fair thing to allow them to be put in that position. I felt that it would be far better for Members of Parliament to be freed from any such duty.

7215. You have not a very high opinion of Members of Parliament? I do not say that for a moment. I say I do not consider it fair to Members of Parliament to be allowed to be put in the position of being importuned by their constituents. I know some Members of Parliament sent in the names of a number men, and when they were asked whether they would vouch for them, they said they would not.

7216. Of course, if they did not vouch for them their recommendation was only so much waste paper; someone had to vouch for their being bushmen? They did not say that when they sent in their recommendation.

7217.

7217. The committee would not decide to send any man into camp unless they had some guarantee that he was a bushman? No. J. R. Carey.

7218. I suppose that if a Member of Parliament vouched for a man being a bushman his word would be just as good as that of anyone else? Just as good—if he knew it. There are plenty of Members of Parliament for whose opinion about bushmen I would not give much. A Member of Parliament might be a townsman. But the desire was to relieve Members of Parliament from being importuned by their constituents. If a Member of Parliament stated that he knew a man to be a good bushman, and he was himself a country man capable of judging, I would just as soon take his opinion as that of anyone else. But I think it was an unfair thing for Members of Parliament to be importuned by their constituents. They could not well refuse them, I take it. 2 Oct., 1900.

7219. As a matter of fact, there were quite a number of Members of Parliament on the Committee, were there not? Yes.

7220. So that as committeemen, if not as Members of Parliament, they would have a right to certify whether a man was a bushman or not, if they knew it? Certainly.

7221. You had nothing to do personally with sending men out to the camp? We left that to Mr. Atkinson.

7222. Did you make any provision with regard to the officers, to see whether they were bushmen? The question of the officers was another one altogether. In the first instance the officers had to volunteer. The applications were read out to the committee, and the committee simply said whether they had any objection or not. If they had no objection, then the applications were forwarded on to the General.

7223. In what way did they take the objection? For instance, if a man had neither Military experience nor bush qualifications, did you send his application on to the General? The application was sent on to the General, and the question could be dealt with afterwards. The committee had no objection to the man, that is all.

7224. The committee did not go into the question of qualifications? No.

7225. The committee rejected some, did they not? Yes; they rejected some.

7226. In those cases was it because they had some special objection to the men? That I cannot answer specially. They simply said "No," that is all.

7227. A sort of unanimous "No," without any reason advanced, was that how they handled it? No reasons of any kind were put on the minutes that I remember.

7228. Can you remember whether there were any reasons given;—for instance, suppose twenty men volunteered, would they just strike out, say, two of their names, and let the other eighteen go without giving any reasons? Possibly there may have been some reasons given at the time, but I do not remember; they were not entered on the minutes.

7229. The committee would not do anything like that without a good and solid basis? I do not think they would.

7230. And they would not allow any personal feeling to sway them in the matter? I should not.

7231. As a matter of fact, the committee having that important work would rise above that sort of thing? They did not have anything to do with the appointment of officers, beyond the fact that they simply said, whether they objected to a name or not.

7232. They only sent on to the Military authorities those whom they chose? No; they all went on to the Military authorities.

7233. There were some struck out? No; all the applications went on to the Military authorities.

7234. The secretary swears that some were struck out? There were some names struck out I admit, but still all the applications went on. The Military authorities were made aware of the fact by me that those names were struck out, but all the written applications that came in went to the Military authorities.

7235. You could send on a man's letter, but what was the use of doing that, if you sent something along with it saying, "you must not appoint him"? It went on that they objected to him, that is all.

7236. Quite unexpectedly my name has been brought into question through no desire of mine—Major-General French was the first to bring it out—and I find out that the committee struck my name out? That is so.

7237. What special objection was there to me? I do not know the views of the committee individually.

7238. But surely they gave some reason for doing it? If I myself were asked the reason—although I did not vote on the subject at all, I objected to vote on it myself—my individual reason would be that I think no Member of Parliament ought to take a junior position under an officer who would have to be subservient to him afterwards, inasmuch as he would have to vote his pay, and he would not be a free agent.

7239. How did you know that I was not going to resign my seat as a Member of Parliament? I did not know that. You were a Member of Parliament for the time being.

7240. If I had resigned your objection would not hold good? Not if you had resigned; but you were then a Member of Parliament.

7241. But you did not want me to resign, and then go cap in hand with an application;—you might have thrown me out for some other reason? You are asking my individual opinion, and I am giving it. I do not consider it fair that you or any other Member of Parliament should be put in a junior position.

7242. But Members of Parliament went from the other colonies? That would not alter my view on the subject.

7243. I think some forty or fifty Members of the Imperial Parliament went, a great many of them holding junior positions? Perhaps so.

7244. Surely a Member of the House of Commons is quite as important an individual as a Member of the New South Wales Legislative Assembly; there were also a great many Members of the House of Lords; are you aware that the Duke of Norfolk volunteered as a trooper? I think I have seen that stated in the Press.

7245. If a Minister of the Crown, a man holding the position of the Duke of Norfolk, can volunteer as a trooper, surely there could not be anything against a Member of the New South Wales Assembly volunteering as a subaltern? I have given you my idea that I do not think it is a fair thing for a Member of Parliament to be in that position.

7246. You do not think there was any personal objection? There is nothing in the minutes.

7247. Was it not remarked at that meeting that I had been a very prominent trades-unionist, and was connected with a strike in 1892? I do not think so; I do not remember it. 7248.

- J. R. Carey. 7248. And possibly that had more to do with it than anything else? I do not know; I cannot answer that.
- 2 Oct., 1900. 7249. How many used to attend the meetings of the executive committee, do you remember—about five? More than that, I think.
7250. Five was a quorum;—you would have to have five or more? Five or more, I think. I do not know whether there was any special quorum fixed, but I think we generally said five. We did not work unless there were five present, if I remember rightly.
7251. So that the committee really had nothing at all to do with the selection of officers, with the exception of striking out certain names? Yes.
7252. The others you sent on to the Military authorities? Then General French and myself went through the list.
7253. By-the-way, General French was favourable to my going, was he not? I do not know that he objected.
7254. He swears that he was favourable? Your name did not come before him, if I remember rightly.
7255. He says it did? If I remember rightly, you did not make a written application. I know your name was brought before the committee by me at the request of somebody else.
7256. The committee, as a committee, took no responsibility with regard to the appointment of officers;—you acted individually, along with General French? Yes; all through.
7257. Where it says “Recommended by the General Officer Commanding” the General takes the full responsibility? Yes; eventually the Government takes the responsibility.
7258. After all, if the Government had desired to appoint any one they could have done it in spite of the committee and in spite of the General;—no commission could be issued without the authority of the Minister of Defence? No.
7259. He could issue any commissions he liked? Well, he might; but you see this was a different Contingent from the others. I do not think he would do so.
7260. But he had the power if he had chosen? Yes; it was left in the hands of the Government.
7261. The appointment of officers must be left in the hands of the Government, there is no other power to grant commissions? No.
7262. So that if the Minister for Defence had been determined that anyone should go he could have granted a commission? I do not know what might have occurred under the circumstances.
7263. It might have been bad taste for him to have done it, but he could have done it? Yes; he could have refused a commission to anybody he liked.
7264. And he could have granted a commission to anyone he liked;—he only has the power to grant commissions in this country? That is right.
7265. So that if he had wanted to use any great influence, say with yourself or with General French, and you had refused to listen to him, he could have gone over your heads and granted a commission to whom he chose? Certainly.
7266. Of course he would have had to take the responsibility for it afterwards? Yes.
7267. Did the Government interfere much with you? No, very little.
7268. Did they give you every assistance? Every assistance they could.
7269. They did not put any obstacle in your way at all? No; quite the opposite.
7270. And they did not want to run the show, I suppose? No, quite the opposite.
7271. They did not interfere with you at all, but gave you every assistance? Yes.
7272. Major Dangar, second in command, was in an Imperial regiment I think at one time? Yes; I think the 13th Hussars.
7273. You had to cable to England for him? Yes.
7274. Was that at your instigation? No. Several officers from Home volunteered. He was one, and there was also a Victorian—either a squatter or a squatter’s son—and several others. The offer was brought before the Military authorities and myself, and we went into the matter, and a cable was sent Home to ask what Major Dangar’s qualifications were, with the result that he was highly recommended. I may say there was a desire on the part of the committee that the Contingent should be officered by military men if possible.
7275. Irrespective of whether they were bushmen? That question did not come forward; not at that time.
7276. If you had a regiment of bushmen officered by men who were not bushmen, the men would, of course, have to obey instructions, and the fact of their being bushmen would not be a bit of good if the officers were not bushmen? I do not agree with you there.
7277. They would have to do what they were told? Yes. But the officer would be a man who knew his duty and was well up in his work, and he would be a good horseman. No man was taken as an officer who was not a good horseman. They were all tested, and quite a number of military men who volunteered were thrown out because they could not ride. The intention was that only men should go who were proved to be good bushmen, and it was not desirable that they should be officered by men who were not capable of riding.
7278. You have done a bit of military service yourself, have you not? Yes.
7279. Where was that? In New Zealand.
7280. Did you belong to a mounted or a foot force? Mounted.
7281. You say the committee preferred military men as officers? Yes.
7282. Can you tell me what would be the special duties (say) of a captain of a squadron, from a military standpoint, on active service? He would have entire charge of the squadron; he would have to lead the squadron as a natural consequence.
7283. But to take charge of a squadron, and to lead a squadron—that could be learned in five minutes, could it not? No.
7284. What would be the difficult part to learn? First, he would have to learn what his duties were; and, secondly, he would have to learn what to do with his men.
7285. But if he were going to capture a kopje he would know that he would not have to leave the men behind and charge the hill himself; a man would not require to be a military authority to know that;—as a matter of fact, what book duties attaching to a soldier are there that you could not learn in a week? That would not teach you your work and how to handle your men.
7286. That would not teach you how to put on side and throw out your chest, but it would teach you all the military orders and commands? You would not learn the duties so quickly as that. 7287.

7287. As a matter of fact, what you want in soldiering, as in everything else, is sound common-sense? J. R. Carey.  
To a great extent, no doubt.

7288. *Chairman.*] You are quite satisfied with regard to Major Dangar that it was not family influence which led to his acceptance? Certainly not. 2 Oct., 1900.

7289. He volunteered by cable? Yes; and we cabled home, and received the information that he was looked upon as a first-class man. Beyond that I do not know anything at all about him.

7290. With regard to the adjutant, Lieutenant Ryrie, were you in consultation with the Major-General in regard to his appointment as adjutant? No, I had nothing specially to do with that matter. He was one of the General's old officers, and he knew more about him than I did. Personally, I knew nothing about him.

7291. Then Captain Larkin seems to have come down to Sydney in the full belief that he was to be adjutant? I do not know from whom he obtained that information, although I believe that by some means he did obtain it. He did not obtain it from me or from the General, so far as I am aware. I do not know whether I am right in mentioning this; but I was informed that there was some conversation between him and Colonel Airey in reference to the matter; but Colonel Airey was not himself appointed at that time.

7292. Did you see Captain Larkin when he came to Sydney? No.

7293. So that you do not know anything at all about him? No; except that I know that he was offered a commission.

7294. He was offered a captaincy was he not? Yes, and he declined it.

7295. He declined it, I believe, because he had been brought to Sydney under the belief, on a communication which he had received from Colonel Airey, that he was to be adjutant? I do not know how that would be, or what his belief was. If I recollect the circumstances rightly, I received some communication on the subject through Colonel Airey, in the shape of a telegram or something of that kind; but beyond giving advice, Colonel Airey was not in a position at the time to do anything, he himself not having been appointed.

7296. Was Lieutenant-Colonel Onslow appointed major shortly afterwards? Yes; he was gazetted, I think.

7297. He resigned in order to go as galloper to General Tucker? Yes.

7298. With regard to the two 1st Lieutenants, Westgarth and Allen, do you know whether or not they were bushmen? I do not remember what Allen's qualifications were, but Westgarth had been in the Artillery.

7299. For about six weeks? I could not say how long.

7300. But you would not consider him a bushman? I know that he was a good horseman, and I believe that he had been in the bush; but I could not say definitely.

7301. He had been employed in his father's office in Pitt-street as a solicitor? I cannot say at this moment what his qualifications as a bushmen were.

7302. He had apparently neither military experience nor bush experience? At the time it was a question of picking out the best men from those who offered. Unfortunately many of those men who had had military experience were not able to ride.

7303. Take the case of Staff Sergeant-major Richards of the Mounted Rifles, who undoubtedly must be a first-class drill, because he has to educate both the officers and men? He would not go.

7304. But he did not get the chance, did he? He had the opportunity, but he would not go.

7305. In what position had he the opportunity to go? In the same position as he had held here.

7306. He applied for a commission? Yes. He would not go unless he got a commission.

7307. Would it not have been better to give a man like that, who had qualified by years of experience in the Imperial Army, who was a Staff Sergeant-major in the Mounted Rifles, and who had had a good deal of bush experience, a commission instead of giving one to young Allen or Westgarth, who had neither of them either bush or military experience? All that I know about Staff Sergeant-major Richards is that he did not impress me from what I saw of him, but I cannot tell you very much about the man.

7308. But you see, Mr. Carey, that it was not for the purpose of impressing you that the men were being sent out? Certainly not; but you were asking me my opinion.

7309. I am asking what your reasons were for not giving this man a commission;—how was it that he did not impress you? I cannot give you any reason as to why Richards was not given a commission; but if you ask me my own opinion concerning the man I will give it to you.

7310. You can give no reason why two young men like Westgarth and Allen, who had neither military nor bush experience, should have been given commissions, while Staff Sergeant-major Richards, who had a great deal of military experience, and who undoubtedly was a first-class man—or he could not hold the position he holds—was rejected;—did any of the relatives or friends of Westgarth or Allen interview you? I do not think so specially. I do not know who the relatives or friends of Allen would be; I do not know him at all.

7311. His father used to be a member of Parliament? Yes. I know now to whom you are referring; but I was not aware of that at the time the selection was made.

7312. It seems that we had great difficulty in regard to nearly every Contingent, with the exception of the first, in getting to know why certain things were done. It is possible that both Westgarth and Allen might make very good officers; but what the committee wish to ascertain is why, having neither bush nor military experience, they were chosen in preference to other experienced men? So far as Westgarth is concerned, he has been taken out of the bushmen and transferred to the Royal Artillery.

7313. I have merely mentioned Richards' case because he happens to be at the head of the list; but there may be many other similar cases of men of equal experience being rejected;—why should these boys have been selected while an old experienced soldier like Richards was put aside? If you ask me my opinion of Richards it is that his heart was not in going. What he really wanted to do was to better his position. But for the chance which was offered to him to do that I do not think he would have offered to go. That was not the kind of man we wanted. He himself told me that but for the opportunity to improve his position he would not have volunteered. Our idea was that the men who went should be purely volunteers, having their whole heart and soul in the movement. When it came to the selection of officers to go with the Contingent, the applicants were all gone through by the Major-General and myself and without respect of persons or anything else. If the applicants were what they stated themselves to be they

- J. R. Carey. they were sent into camp, and some were thrown out from being unable to ride. Those with military experience got the first opportunity; and from time to time other men were sent into camp to take the places of those who had failed to pass the riding test. When we could not obtain men who had had any military experience we took the best men from among those who had had bush experience. For example, Mr. Moore—who I see has been recommended for honors—was a station manager for ten or twelve years. He was picked, as being a bushman, when military men were not available. Some of the men put forward very peculiar conditions. One man said he would not go unless he got a command; and another man said he would not go unless he were allowed to drill his troops for three or four months beforehand. All sorts of conditions of that sort were put forward by applicants, and they, of course, became impossible.
- 2 Oct., 1900. 7314. *Mr. Wilks.*] You did not believe in these men who insisted upon certain conditions? No. It seemed to me that what we wanted were pure volunteers, and that the men should go with a good will or not at all. I would rather have a good bushman than a military man who was not going with his heart and soul in the movement.
7315. *Chairman.*] How many names did the committee strike off the list? Not many; I could not give you the exact number; but there were, perhaps, half a dozen.
7316. Do you not think it would have been better to send the whole of the names on with any comment which the committee chose to make upon them? I think that, in every case, the letter in which the application was made was sent on.
7317. But if the committee decided that certain names were to be struck out, it would not be of much use to send on the letter;—would it not have been better for the committee simply to offer their reasons to the Military authorities for thinking that certain men should not go, and then to leave the responsibility with them? The committee could do as they liked, so far as that is concerned; I was only one member of the committee.
7318. Would not the course I suggest have been more satisfactory;—although you say that the Military authorities had the appointment of the officers, the fact remains that the committee did, in certain cases, strike men's names off the list? No doubt they did.
7319. Would it not have been better to leave the responsibility with the Military authorities entirely? The committee went through the list in the first instance, and the selection of those who remained was left to the Military authorities. The Major-General and I went through the names together.
7320. Did you, or the committee, get the Premier to send a cable to the Imperial authorities, asking them whether Major Thompson might take the command? The committee had nothing to do with that.
7321. A cable was sent, I believe? The Minister would have to answer that question.
7322. Did you ask him to send a cable to that effect? No; personally, I did not ask him to do so.
7323. Did any of your committee ask him? Not to my knowledge.
7324. You do not know whether or not such a cable was sent? I believe a cable was sent.
7325. Did the committee insist upon Colonel Airey taking the command? No.
7326. I believe the condition was laid down that no trooper over the age of 40 would be accepted;—is that so? I am not sure, at this moment, whether any age was definitely fixed; but I think it must have been so.
7327. A circular was sent out to the effect which I have named;—would that have been sent out without the authority of the committee? No doubt whatever the circular contained was sent out with their authority.
7328. So that 40 would be the extreme age if the circular stated so? I do not remember the age of 40 being stated.
7329. But if a circular to that effect were sent out, it must have been done with the authority of the committee? I presume so.
7330. Colonel Airey was not under the age of 40? The circular was not sent out with regard to the officers, but as to the troopers.
7331. Then the officers apparently received more consideration than did the troopers? If you call that consideration.
7332. For instance, officers were taken without bush or military experience; but you would not take a trooper unless he had had some bush experience? No, certainly not; that was decided.
7333. Then again, a trooper would not be accepted if he were over 40 years of age, whereas officers were accepted at any age;—was not that somewhat unfair to the troopers? I do not think so, at all.
7334. Had not the troopers the same right to consideration as the officers? It was a question of making up a Contingent of a certain class of men. We decided what the class of men were to be. It was not at all a Government question; it was for the Government afterwards to ask the Imperial authorities to accept the men.
7335. But I am talking just now of the committee;—do you not think the committee were extending to the officers consideration which the troopers did not receive? It was difficult to get officers at all.
7336. But were there not as many as 170 applicants? Yes; and they were a very bad lot at that. A large number who could not ride were thrown out on the very first day, although they were military men.
7337. But you would not expect a "footie" to be able to ride? We did not intend to send men in charge of bushmen who could not ride.
7338. But surely any number of capable, intelligent bushmen could be found? Some of the officers were bushmen.
7339. You say that Mr. Moore had no previous military experience, and that he has, nevertheless, distinguished himself? Yes, and there was also Pockley, who had had no military experience; but who has also distinguished himself.
7340. Was Gell a bushman? Yes.
7341. And Cornwall? I forget. I fancy he was; but the list of applicants is in the hands of the General.
7342. Anyhow Colonel Airey was not a bushman? No.
7343. And he was over 40? I presume so.
7344. But he could ride? Yes.
7345. Who judged the riding? There was a committee appointed to judge the riding in the first instance, and they were added to afterwards. I, myself, was upon the committee, but I had no time to attend to the tests. Colonel Airey was one of the committee, and Mr. Fetherstonhaugh was another.
7346. Was Mr. Fetherstonhaugh upon the riding committee of the Citizens' Bushmen's Contingent? Yes.
7347. You are sure of that? Yes. 7348.

J. R. Carey.  
2 Oct., 1900.

7348. Did he take any active interest in the matter ;—in judging the riding? Yes.
7349. Are you aware that at a great many tests no other member of the committee was present but an old gentleman named Green? I do not believe that to be the case.
7350. But your belief will not alter the fact? If it be a fact. I, myself, do not think such a thing could occur.
7351. There are plenty of witnesses who are prepared to swear to it; I, myself, witnessed it on two or three occasions? Are you referring to the Citizens' Bushmen's Contingent.
7352. Yes; Mr. Chanter was with me on one occasion? Are you sure that Mr. Green was judging at the time?
7353. Yes? Then I should like to know how he became aware of the fact.
7354. A couple of men I knew happened to pass their riding tests while I was there? I never heard of Mr. Green being the sole judge, and I do not think it can have happened.
7355. Who attended to the horse-buying;—was that done by the Military authorities, or by the committee? It was done by the Military authorities and myself, not by the committee. Mr. Atkinson also purchased some of the horses.
7356. I believe he says he bought ten on one occasion. Have you heard of any complaints which have been made in regard to the distribution of the luxuries which were presented to the Contingent by different citizens? I only know of what I saw in the newspapers.
7357. You have received no direct communications upon the subject? None.
7358. Has Colonel Airey reported to your committee from time to time? No; we have had nothing from Colonel Airey.
7359. Do you not think you ought to have had some information from him from time to time? I have had one letter from him, and that is all, I think.
7360. Do you not think it was the duty of Colonel Airey to periodically report to you as chairman of the committee while the committee lasted? I think he might have done so; but, unfortunately, he has not. Whatever he reported would, I presume, come through the General.
7361. You have closed the committee now? So far, yes.
7362. But you have actually closed the committee;—it is disbanded, is it not? I do not know that it is disbanded. We have had a meeting, and handed over the balance of the money to the Government.
7363. And the balance of liabilities? I do not know that there are any liabilities. There is a surplus, so far as I am aware.
7364. For how long were the committee responsible? For six months.
7365. The Government now has to carry the baby? As I say, I do not think there are any liabilities. On the contrary, there was a surplus of about £300. I take it that the Imperial Government will pay the men at the rate at which they are paying the Rhodesian Horse, and that will be quite as much as they would receive under their original pay. While they were in Rhodesia the Imperial Bushmen were getting the pay of the Rhodesian Horse. If the Imperial Government paid our bushmen at the same rate it would mean £15,200 of extra pay. They paid the Imperial Bushmen, while they were out of Cape Colony, 5s. a day instead of 1s. 2d. a day. The Imperial rate would be equal to, say, £3,800 per month, and the difference in the four months of April, May, June, and July would mean a credit of £15,200, either to the Government or some one else. Whether the men would get the pay twice over or not I do not know.
7366. But the Imperial Bushmen were taken over under special conditions? There is no reason, as far I can see, why they should not pay our men the same rate that they are paying other men who are doing the same work.
7367. But did they? I do not know, I should say they would.
7368. Take the men in the Transvaal and the Orange Free State, colonial forces which the Imperial Government has specially got together themselves, they are paying them at rates varying from 7s. to 10s., but they did not pay every man in the Canadian Contingent the same rate; they paid them the same as the Tommies—1s. 2d. per day? I do not know, as a matter of fact, what they are paying, but I do not see why the Imperial authorities should not pay our men the extra rate.
7369. But they have not done so? I do not know that they have not, and I do not know that they will not.
7370. You do not know anything at all about the matter of course; but it is hardly fair to imagine that they will do what you suppose when they have not done so in regard to other forces? It seems reasonable to imagine it, looking at the matter from my point of view.
7371. We have sworn evidence to the contrary? I am not prepared to answer your question beyond saying that from my point of view it is not unreasonable to expect that the Imperial authorities should do what I suggest.
7372. Do you think it would be reasonable for them to do so with some men and not others? Our bushmen were practically in the same position as were the Imperial Bushmen and the Rhodesian Horse.
7373. But the Imperial authorities would not have bothered you at all in the matter if they were going to do what you suggest, they could have obtained the men on their own? They might have done so, of course.
7374. At the present time the Government have to pay the men, your money having run out sometime ago? Our six months is up.
7375. After paying the men for the six months you have £300 left? Yes.
7376. And since the expiration of the six months the Government has had to take over the responsibility? Yes.
7377. The Government also have to take over the responsibility of looking after the wives and families of those who may be killed? After the six months.
7378. But the Government would have had to do that before the expiry of the six months, because you had no money which you could devote to that purpose? We guaranteed the whole matter for six months, and for that period we carried out our undertaking.
7379. But as regards any casualty which occurred before the expiry of the six months, you have not been able to deal with them? They have not come before us yet.
7380. But if they had, you would have been unable to deal with them? We could have done so. If the fund were exhausted, it would be possible I think to raise another fund for that purpose. I do not at all doubt but the public would have come forward to assist us as they have done in the past.

J. R. Carey. 7381. But the fact is that at the present time the Government has to bear the whole cost of the Citizens' Bushmen's Contingent;—it has to take over the whole responsibility? I myself should think that the Imperial Government were doing it.

2 Oct., 1900.

7382. But you have nothing to show that the Imperial Government look at the matter in that way? I have nothing to show that they will not.

7383. But there is a great difference between showing that they will not, and showing that they will; you must be able to show some reasonable evidence of the likelihood of their doing it, and that you seem unable to do; then there are the wounded to be considered;—several members of the Citizens' Bushmen's Contingent have already returned? One or two have returned, I think, who never went beyond Capetown.

7384. I am not speaking of those who did not go beyond Capetown; there are, I think, about a dozen who have returned who went right up to Buluwayo;—are you aware whether the Government are looking after them? I suppose the Government are looking after them.

7385. That would show, would it not, that the Government is really responsible? The Government were prepared to assist us in any shape or form from the very beginning.

7386. We know that some of our citizens contributed very generously, but in all cases where it is necessary to raise a military force the Government must be responsible;—is not that so? They must be responsible, because, in the first place, a force cannot be offered to the Imperial Government except through the local Government.

7387. You could not start to raise and equip a force without the sanction of the Government? No.

7388. If you did so you might possibly be hanged for trying to raise a rebellion? It might be so.

7389. It would depend greatly, of course, upon the circumstances of the country at the time;—I suppose you have no doubt that if you tried to do such a thing in South America they would soon have you strung up? We are not living under a South American Government I am happy to say.

7390. *Mr. Wilks.*] In the composition of what was called the Citizens' Bushmen's Contingent, the object of the committee was to obtain an effective fighting machine for the campaign in South Africa? Yes.

7391. You desired to obtain a body of men who would be useful as scouts and so forth? Yes; that was the idea we had.

7392. Your idea was to raise a body of men who would be self-reliant, who were accustomed to hardships, and freedom from ordinary military restraint;—you wanted to raise a useful but lightly-equipped force? Yes. I should mention that we endeavoured to make the equipment as light as possible. I argued the matter with the General on several occasions from that standpoint,—that is with the object of reducing the weight which the men had to carry.

7393. That was your reason for stipulating that the rank and file must be bushmen? Yes.

7394. Did it not occur to you that the officers should also be bushmen? The officers necessarily had to come from among those who volunteered—from those who sent in applications.

7395. You gave those who had had bush experience the preference? Not in every case. The committee in fact thought that the Contingent should be officered by military men.

7396. And if they had had bush experience in addition to their military qualifications so much the better? Yes; the feeling was that, if possible, men with good bush experience should be picked.

7397. Did I understand you to say that the men who volunteered as officers were, taken as a whole, a very poor lot? Some of them were very poorly qualified. A number of them were disqualified on the first day from being unable to ride.

7398. Had you any further knowledge of those who were rejected? We read very carefully through the applications they sent in, and many of the applicants were personally quite unknown to myself and to other members of the committee. So far as I am concerned, I knew very little of them, except what I could gather from a careful reading of their applications.

7399. The men who volunteered as officers were, as a rule, not up to the standard you expected? The fact was that the best men in Military circles had already left for the front.

7400. The class of men suitable for officers had been depleted, and as there were very few left, you had to make up the number by taking the best you could from a very bad lot? That is about the case. I think as many as sixteen men were on the first day thrown out because they were unable to ride.

7401. I understand you to say that there were only two meetings of the general committee? That is all.

7402. Then all the work of organisation, the selection of officers, and so forth, was left to the executive committee? Yes.

7403. And the executive committee, you say, left the matter to you? The executive committee left the matter to the Government, and the Government asked me to act.

7404. Is it not the fact that you yourself did the major part of the work of the executive before the Government stepped in? I think it was on the 8th January that we handed the matter over to the Government. The resolution of the committee was in these terms: "That the chairman arrange with the Government to take over the details of sending the Bushmen's Contingent to South Africa, the executive committee reserving to itself the right to nominate the men." I gave that resolution to the Premier, and he asked me to see the Major-General, and to go into the matter with him.

7405. You say that the matter was handed over to the Government on the 8th January? Yes.

7406. And after that date the whole of the appointment of officers was with the Military authorities? I was in communication with the General on the subject from the beginning to the end.

7407. I understand that the Military authorities and you yourself acted in conjunction, and that the executive committee vanished, as far as the appointment of officers was concerned? What was done in regard to the appointment of officers was this: a list of all the applicants was read out to the committee, and they objected to anyone to whom they might wish to object.

7408. Before you submitted the list of officers to the Military authorities a certain number—about six, I think—were eliminated by the committee? Yes; I could not give the exact number.

7409. One of the six was the chairman of this committee? Yes.

7410. For what position did he apply? I do not know that he applied for any particular position. If my memory serves me right, Mr. Sleath did not apply either personally or by letter. I certainly do not remember his applying to me.

7411. Then how did his name come before the executive? It came before the executive because it was mentioned to me that Mr. Sleath would like to have a commission. I myself brought the matter before the executive.

7412. I suppose the person who mentioned the matter to you was a reliable authority;—he would not be likely to do so without the permission of Mr. Sleath? Certainly not, I should say. 7413.

J. R. Carey.  
2 Oct., 1900.

7413. Who was the gentleman who mentioned his name to you? The Minister for Defence.
7414. In the ordinary way the applications, I suppose, were sent in to him, and were forwarded to the executive? I do not remember Mr. Sleath's application coming to me.
7415. Do you remember his name being eliminated? Yes. I recollect putting the matter before the committee.
7416. Would you be surprised to know that it was in February that the application came before you? I should not be at all surprised to discover that that was so.
7417. I thought you said you finished your work on the 8th January? The whole of the applications which came in up to the very last were read out to the committee, and they objected to any name to which they wished to object. Their objection was then made known to the Military authorities.
7418. I understood that the whole matter was handed over to the Military authorities on the 8th January? Yes; but all the applications which were made before and after that date came through me.
7419. You dealt with applications upon your own responsibility after the 8th January? I put the whole of the names before the committee.
7420. As late as February? Yes; some of the applications came in, I think, as late as April, and they were all submitted to the executive as they came in from day to day.
7421. Was there any strong reason against Mr. Sleath being enrolled? I do not remember the reason; there is nothing in the minutes stating the reason.
7422. No resolution was carried by the executive assigning any reason why his name should not be forwarded to the Military authorities? No reason was assigned.
7423. But by mutual consent the name was erased? By the decision of the majority.
7424. I suppose Mr. Sleath's name was submitted to the committee without any comment? It was submitted in the list of names.
7425. It was not stated that he applied for any particular position;—he did not ask for the colonelcy, for instance? He did not ask me for anything. I do not remember seeing his application.
7426. Were you advised by the Minister for Defence what position Mr. Sleath would like;—was it pointed out to you that he would like the position of subaltern or colonel, or what was said? I understood that he wished to go as a commissioned officer, that was all.
7427. It may have been as captain or in any other rank, as far as you remember? Yes.
7428. You do not know that he applied for a subaltern's commission? I remember that the word "commission" was used; but I do not think there was any designation of rank.
7429. Then, we are to understand that, with the exception of the first and final meeting of the general committee, it was not considered necessary to call that committee together? It was not thought necessary.
7430. *Mr. Chanter.*] What was the basis upon which you selected troopers for the Contingent;—what were the requisites? They were to be bushmen—good horsemen and good shots.
7431. How did you satisfy yourselves that the men were bushmen? Every attempt was made to find out whether they were or were not, both from the references which they brought with them and from the information which they volunteered. Every man was supposed to get a certificate from the inspector of police in the district, from his last employer, or from someone else, showing that he was a bushman.
7432. As far as you could see, was this condition complied with by the applicants in all cases? I did not go through the whole list myself, but Mr. Atkinson went through it. He himself is a squatter, and ought to know something about the matter. He took the matter upon his own shoulders.
7433. Have you a list of the selected men? No; but the names were all published in the *Gazette*.
7434. *Chairman.*] Do you know that in that list the men are wrongly described in nearly every case? Do you mean in the *Gazette*?
7435. I mean in the list the Government have? I know that my description and that of the Government do not agree in regard to the initials.
7436. It is evident that the Government are wrong, wherever they obtained the information? I do not know where they got the names from. I suppose they were obtained when the men were enrolled.
7437. *Mr. Chanter.*] Did the executive receive any complaint from a trooper named Alfred Cook? I do not remember it.
7438. He says that he was selected at the last moment on board the "Atlantian"? I do not know how the men were selected at the last moment. They ought to have been selected from the next best men; but in the last day or so everything was done in a rush.
7439. *Chairman.*] Cook says he was selected as the vessel was passing through the heads? I suppose they found they were short of a man and they took him.
7440. *Mr. Chanter.*] I should like to know who was responsible for his selection, because, according to his own evidence, he was put in the guard-room three times on the trip over to Capetown? He would be selected by Colonel Airey, I presume.
7441. Who were the committee appointed to make the riding tests? I do not know that I can remember the whole of the names at this moment, but there was first of all myself.
7442. Was Lieutenant Green not appointed? No. I think in the first instance there were Mr. Kilgour, myself, Mr. Atkinson, and Mr. P. H. Morton.
7443. Was not Colonel Airey amongst those appointed? He was appointed afterwards, when it was found that some of the gentlemen appointed could not attend. Mr. Fetherstonhaugh was also appointed afterwards. I do not know that Lieutenant Green was ever on the committee; he was there as one of the Military employees for the time being to assist in the camp.
7444. By whose authority would he act upon the riding committee? I do not know that he had any power to act.
7445. I, myself, saw him acting on several occasions? I know that he was there assisting to bring up the men and form them into line, and that sort of thing, but I do not think his opinion was taken in the matter of riding.
7446. *Chairman.*] Mr. Chanter, and I, and others were out there, and on one occasion Lieutenant Green was the only man acting apparently? I am not aware of it. It is an extraordinary thing if it were the case.
7447. Mr. Chanter saw him acting on more than one occasion alone as a judge of riding;—he was acting on one occasion with an officer now deceased, named Robinson, I think, who was taken from one of the men-of-war? I know nothing of it.

7448.

J. R. Carey. 7448. *Mr. Chanter.*] Were you informed that several troopers had passed the riding test who had never been over the jumps at all? Yes; and they were sent back again and tested.

2 Oct., 1900.

7449. How many were in that position? I do not remember. I remember one man being sent back a second time, because I saw him riding myself, and I said that whoever passed him ought not to have done so, because he was not a capable horseman.

7450. Did you discover who impersonated these men? I do not think it could be found out. I myself tried to make the discovery.

7451. We have had a good deal of evidence as to the appointment of officers;—do you know who was responsible for the appointment of the non-commissioned officers? The non-commissioned officers were to a certain extent recommended by Colonel Airey after he was appointed. They were all sent into camp to be tested—both the applicants and those who were picked out in the first instance, and afterwards the recommendation of the Colonel had a good deal to do with their selection.

7452. What was the test? They were put through drill, I believe, to ascertain what they were capable of doing.

7453. I presume you know that in a great many cases the non-commissioned officers chosen had no previous military experience? The same state of things obtained with regard to the officers. There was no possibility of getting men with military experience.

7454. Was Colonel Airey not acquainted with the fact that among the non-commissioned officers were men who had had only bush experience, and no military experience? When the applications were sent in and tested it was found that some of the men were not smart enough for the positions for which they applied, and it was thought that it would be better in some cases to have a bushman who had had no previous military experience than to have an incapable man who had had previous military experience.

7455. As far as you are aware, did Colonel Airey make any effort to obtain as non-commissioned officers men of first-class bush experience who also had had military experience as against those who had had no military experience? All those who sent in applications had a fair opportunity of showing what they were capable of doing if it was considered worth while to give them the opportunity. In the case of some of the applicants it was not considered worth while to afford them the opportunity; but all who sent in applications who were considered likely men were sent into camp for the express purpose of being tested.

7456. Were only those who made applications considered? Others were recommended by the Colonel because they showed themselves energetic and smart.

7457. Did your committee at any time receive from South Africa any report as to the way in which the Citizens' Bushmen's Contingent and their officers were carrying out their duties? We have received none directly.

7458. Have you received any indirectly? None, except what we saw in the Press.

7459. You are aware that in the Press letters were published from several troopers stating that the officers appointed to command the Bushmen's Contingent were degraded in the presence of the Imperial officers? I saw it stated somewhere, but I am not inclined to believe it. I do not believe the contents of all these letters written by disappointed individuals.

7460. Did you hear, directly or indirectly, any complaints in reference to the distribution of the food supplies? None, except what I saw in the Press.

7461. Are you aware whether the Government have received any report on that matter? I am not aware.

7462. In regard to the free gifts of citizens for the use of the troopers, how were they disposed of? They were sent on board through the Military authorities. The Military authorities received them.

7463. Did your committee receive any intimation at any time as to how they were distributed? We have received no information on that subject, except what we saw in the Press.

7464. The statement has been made on oath that a large consignment of fruit, given for the use of troopers on the "Atlantian," was not distributed among them, but was deliberately thrown overboard;—have you heard that? I think I saw it stated in the Press, but that is not unreasonable. In the first place, you know that fruit is perishable, and if it got into a part of a ship with a lot of horses, what with the contact with ammonia, and the liability of the fruit to damage, you can easily understand that when they got it out for distribution it may have been fit only to throw overboard. I am not stating that it was so, but I do not think the fruit would have been thrown overboard for any other reason than that it was unfit for use. In the case of a large transport, things get stowed away out of sight. You must recollect that the Contingent was got away within a very short space of time, and there were a number of consequent difficulties. Goods such as you mention might be sent on board, and for the time being might be stowed away out of sight. The officers possibly might not have had the time or the opportunity to see that the fruit was put in a place where it could be got at.

7465. *Chairman.*] But 100 cases of apples were put on board at Hobart; they would not be stowed out of sight? I do not think it likely that those cases would be thrown overboard.

7466. Whatever happened, the men did not get them? I cannot account for that.

7467. *Mr. Chanter.*] Then there were non-perishable goods, such as tobacco, which were withheld from the men? I saw through the Press that that had been elicited by your inquiry; beyond that I know nothing of it.

7468. Who would take the responsibility for the distribution of these gifts after they had been received—your executive or the Military authorities? Once the goods were put on board the ship their distribution would be entirely in the hands of the Commanding Officer and his officers.

7469. We have had it stated in evidence by the Military authorities that once they despatched the goods they had nothing more to do with the matter? I presume not; the goods would be on an Imperial ship, and the officer commanding, I should say, would be the responsible man.

7470. If these gifts were not distributed among the men, you think the officer commanding would be responsible? I think so, to some extent—that is, if he got a proper list when he went away. He should have received that from the Military authorities.

7471. In transferring parcels of that kind, would it not be the duty of the Major-General to communicate with the officer in command as to the distribution? I think not; the goods were given as gifts for the men when they left here. The distribution would be entirely in the hands of the officer in command once the goods were put on board the transport. I do not think Major-General French would have anything to do with the goods beyond putting them on board.

7472.

7472. That is the trouble with which the committee are confronted;—no one seems to have had any responsibility in the matter after the goods had been put on board? I think the officer in command would be responsible. J. R. Carey.  
2 Oct., 1900.

7473. I know, as a matter of fact, that gifts of clothing were made to certain troopers, and were despatched from here on February last, and up to the 23rd August they had not been delivered. They were sent to the Military authorities at Capetown? It would be altogether a question of what became of them after they reached Capetown. All that the Military authorities here could do would be to send them on to Capetown. It is very much like letters sent to a member of the Contingent. The question is where the letter will find him after it has reached Capetown.

7474. Would it not be the duty of the officer in command of the regiment or squadron to see that the man get these things? They might never reach him.

7475. Then it is quite useless to send them? There is, of course, a risk of sending things of that kind to an individual. Possibly a number of goods and clothing sent from here for hospital purposes, although intended for our troops, would find its way into other hospitals; still some portion of the troops would benefit.

7476. But the donors might not feel satisfied? They must put up with that sort of thing. It is something like writing a letter to a man at the front; it may never reach him, or it may reach him six months after it has been posted.

7477. This Committee is in possession of evidence showing that a large amount of dissatisfaction in connection with the Bushmen's Contingent in South Africa;—would it be possible for your executive to obtain some report from South Africa with regard to these matters, so that the contributors to the fund may be satisfied? The committee is practically defunct now.

7478. Would it not be possible to call them together for that purpose? Such a report as you mention could be obtained through the Government or the Military authorities from the officer in command. That would be the only way to obtain it.

7479. The Military authorities decline to send for such a report? If there were any serious ground for complaint, I take it that the officer in command would report to the General.

7480. But does it not appear to you that as head of the executive committee in receipt of large contributions from the citizens of New South Wales the public should receive some report as to how the funds has been disposed of? Yes; I have given a report as to how every penny has been disposed of.

7481. But I mean as to the effect of the distribution—how much good or harm, for example, has been done? You mean, I suppose, as to what the men have done. I presume we should have a report as to that by and by in some shape or form. From all accounts they are doing remarkably well, and are proving themselves of great use.

7482. Do you not think that a report from your executive would be more satisfactory than one coming through the Government? The executive have no report, and cannot obtain one except through the Commanding Officer.

7483. Would it not be possible for your executive to so represent the matter to the Government that they would obtain such a report;—if the statements which have been made here, on oath, are not correct it is well that the public should know it? I do not know what the statements made have been, but I have seen several statements in the Press which struck me as being remarkably wild.

7484. For instance the statement has been made here, and it has been corroborated that one of the officers approved by your committee and by the Military authorities, was in charge of a convoy of provisions and allowed his men to remain without food for three days, with the exception of one meal;—that is a serious statement to make? In the first place, I do not think that was said of the Bushmen's Contingent, but if it was, then this is not the place to make any inquiry of that kind. The place is at the front, and the inquiry should be made through Lord Roberts.

7485. What I want you to see is that your committee are the proper persons to ascertain if these complaints are or are not well founded? If these reports were given to me I should not object to sending them on to Colonel Airey, and asking him if there were any truth in them.

7486. Would you undertake to make inquiry of the Military authorities as to the reason why Zeerust was abandoned, and a quarter of a million of pounds worth of stores destroyed when the men wanted to defend the place? That would not be a proper thing at all for our committee to inquire into; that would be a question for Lord Roberts, I should say.

7487. But no one will put the query to Lord Roberts? It would be an absurd thing for me to do so. The Government perhaps might think it wise to make such an inquiry; but it would be absurd for us to make it.

7488. Am I correct in saying that your executive undertook the sole responsibility for the Bushmen's Citizens' Contingent for a term of six months? Yes.

7489. The event to which I refer having occurred during that six months, would not your executive, above all others, have a right to demand an explanation? I do not think so. When we sent the men away we handed them over to the Imperial authorities, and they are acting in South Africa as Imperial troops under Lord Roberts. No doubt there are many cases where men have had to go upon short rations and where it has been impossible to avoid it. Such things are occasionally unavoidable in a campaign of that kind.

7490. We have had strong evidence here as to the men being short of rations? I do not think much of the evidence of individual men who return from a campaign of this kind.

7491. *Chairman*] You would prefer the evidence of some one who has not been there? No; but disappointed individuals come back and make all sorts of wild statements.

7492. Why do you say "disappointed men;" some of the men who have returned have been wounded? That, of course, would be a different matter.

7493. Others have contracted fever and have been sent back? The only members of the Bushmen's Contingent that I am aware of who have come back are men who have never been further than Capetown.

7494. Mr. Cook, for example? One man called at my office, but I do not know his name. I told him that he had only taken the place of a better man, and that it was a pity he went.

7495. I am referring now to the case of the bush baker from Woolloomooloo? The man to whom I am referring came from up-country, because he wanted to be sent back up-country.

7496. *Mr. Chanter.*] We are in this position, as a committee—that if your executive will not make inquiry no other body will do so? Inquiry, I should say, could be made by the Military authorities or by the Government.

7497.

- J. R. Carey. 7497. *Chairman.*] I myself was in South Africa, and saw men going two days without food when they were not fifteen miles from Bloemfontein? Why was that?
- 2 Oct., 1900. 7498. Just because a lot of niggers who were driving the transport did not know anything about it? You might say that that would be the fault of the General Officer in command.
7499. But he was not in command? I mean the officer is in command of the whole.
7500. If you knew more of military matters, you would understand that no one could lay a complaint of a matter of that kind before Lord Roberts;—it would have to be made to the officer in command, and if he were at fault, it is not at all likely that he would report himself? The officer in command must employ juniors to carry out certain details; you see that in every regiment, from the captain down to the corporal. When you are drawing a line as to who the person is of whom you are to make inquiry, I say that the inquiry, if made at all, would have to be made of the General in command.
7501. My own opinion is that we could not make any inquiry from here at all, but that we could make representations to the Military authorities at Home to have an inquiry made, pointing out that sworn evidence made it clear that the men had been needlessly starved? I have never heard that the Bushmen were starved, and I do not know anything about the other men. The Bushmen went, knowing that they would occasionally have to encounter hard times, and they were prepared to see the thing through. The class of men we sent were men who would be prepared to go through any trouble of that kind. I do not think, as a rule, they would be the kind of men to grumble. A few, perhaps, might be inclined to do so, but they are men who had better not have been sent at all.
7502. If the men know that it is impossible to get full rations, they may not grumble, perhaps, at having to take for a short time half rations; but fancy men a quarter of a mile from a convoy of provisions, kept three days without food? Judging from the statements in the newspapers, the Bushmen have not received credit for being without food very long. They are generally credited with having a pair of fowls on each saddle.
7503. But you will see that if each man had a couple of fowls on his saddle, the poultry in South Africa would have to breed pretty quickly to maintain the supply? I do not think the Bushmen are the kind of men to go without tucker, if they could possibly avoid it. Of course, if it were unavoidable, they would have to put up with it like everyone else.
7504. Although food was in sight? That is a question I am not prepared to answer.
7505. Cornelius Danahey, an ex-Member of the Legislative Assembly, was rejected several times;—how was that;—do you know? I know he was rejected; but why, I cannot tell you.
7506. He is a pretty active, smart sort of chap, who can ride pretty well, yet he was several times rejected;—what was the reason? I could not give you the reason.
7507. You are aware that, in defiance of your committee and the Military authorities, he went? I do not know how it was that he was allowed to go, if it be the case that he went.
7508. He certainly went;—I read a most exciting speech which he delivered at Capetown? He would not have gone, any more than would any other man who was rejected, if I had been in command.
7509. How do you account for this bush baker, Alfred Cook, going? I could not say at all.
7510. But some one ought to know about it;—we are being perpetually told that no one knows? He must have represented himself as a bushman, or someone else must have done so.
7511. He tells us that he joined while the transport was going through the Heads? You would have to get information upon that point through the Colonel commanding; I was not at the Heads.
7512. But your committee is responsible; they would have had to pay the man had he remained with the regiment;—did you give the Colonel power to enlist whomsoever he chose? I presume he enlisted a certain number of men at the last moment to fill vacancies.
7513. Did you not have certain rejected men picked out for choice in an emergency? Yes; they were kept in reserve to fill vacancies.
7514. Then, how is it that you gave the Colonel power to enrol this bush baker while there were picked men ready to go? I cannot say how it came to be done. This is the first I have heard of it.
7515. He tells us that Captain Thomas enrolled him when the ship was passing through the Heads;—presumably he did the riding test on deck, jumping over the winch perhaps? Possibly; but you must ask the officer who enrolled him as to that.
7516. Surely you did not give the officers *carte blanche* to enrol whomsoever they chose after they left here? I do not know that anyone was enrolled. I should like to make inquiry into the matter myself and to obtain a little more information about it.
7517. Are you aware that, or have you a report from the Colonel commanding, to the effect that a number of officers did not treat the men with due courtesy;—we are informed by Cook that Sergeant Hurley, Sergeant Myers, Sergeant Airey, and Lieutenant Zouch and one or two others offended in this respect—to put it in the classic language of Cook, he said that he told these men that unless they behaved differently they would find themselves over the ship's side on some dark night;—after being threatened on several occasions in that manner, the officers seem to have behaved with greater courtesy than previously? I should be much inclined to disbelieve it. I know that if a man said such a thing to me he would not have a chance of putting me overboard.
7518. Lieutenant Allen was another officer who, according to Cook, was told that he would have to go overboard unless he mended his ways;—Lieutenant Zouch seems to have apologised to Mr. Cook? I should like to see the evidence to which you refer.
7519. Cook also said, in the course of his evidence, that he was the only straight man on board? I think the whole thing is answered by that one statement—that he was the only straight man out of over 500. I do not think the men you mention are the class of men who would allow themselves to be threatened in the way you describe.
7520. *Mr. Chanter.*] Cook had to be put in the guard-room on three occasions. I suppose there must be, eventually, some report by the officer in command as to why he was put into the guard-room? The Colonel would have some record of the fact, if the man were put into the guard-room on three occasions. It is very clear to me that the man could not have been reliable as a soldier, or in any other capacity.
7521. *Chairman.*] He appears to have been put ashore at Capetown and to have been left there;—do you not think it is injurious to the reputation of the Colony that we should send a man to Capetown and put him ashore there to go begging, and pitching tales about his ill-treatment;—is that not likely to be injurious to the reputation of the Colony? Coping from some men it might be, from other men it would not

not be. I myself should not be inclined to place much confidence in a man who said that he was the only straight man out of 500 men. J. R. Carey.

7522. But you must remember that he had charge of only one ship, the "Atlantian";—if the Military Bushmen's Committee sent the man out to Capetown as a soldier, and it was there found that there was reason to discharge him, would it not be in accordance with all military traditions that he should be sent back again under arrest? The colonel in charge of the regiment would be the man to deal with that matter; I cannot possibly give you his reasons. 2 Oct., 1900.

7523. But could there be any reason for discharging a man on his arrival at Capetown and sending him adrift? There might be sufficient reason for putting him under arrest.

7524. That would be a different thing;—but it seems strange to give a man a free trip to Capetown, and to discharge him there and let him go adrift? He may have asked for his discharge. Besides it is evident that the man must have been a great source of disturbance, and if the troops were going on to Beira at once, the Colonel may have thought it better to give the man his discharge immediately, and so get rid of him.

7525. But they do not do that in the British army or any other army, do they? It might be done under certain circumstances. The Colonel no doubt acted upon his own responsibility. Once he got the man to Capetown he could put him under arrest if he thought proper, but I am only surmising; I cannot say what the Colonel's reasons may have been for acting in the way you describe, if he did so act.

7526. Touching Danahey's case—the committee rejected him, and he appears to have gone into camp, and to have been rejected again? It is possible that he tried to force himself in.

7527. And apparently he succeeded in defiance of your committee and the Military authorities? I do not know how he did it, if that is what you mean. He did not go as a member of the Bushmen's Contingent I take it, and I do not know by what authority he went on board. From all accounts, however, he was on board.

7528. He appears to have arrived in Capetown as a prominent member of the Contingent? I am not aware of that.

7529. I myself happened to read a speech which he made there? I should not feel inclined to take any notice of his speeches.

7530. I am speaking of a speech which he delivered at Capetown? I should take no notice of it. If he forced himself on board ship against instructions, he would be quite capable of making a speech or doing anything else.

7531. He was then enrolled as a member of the Bushmen's Contingent? I am not aware that he was.

7532. But I am assuring you that he was? Are you making that statement of your own knowledge?

7533. Yes? I cannot, of course, contradict you when you say that he was enrolled.

7534. I do not know when he was enrolled, but he arrived at Capetown as a member of the Contingent? He appears to have gone on board, by whose authority I do not know, and he went away with the ship, but not, so far as I am aware, as a member of the Bushmen's Contingent. He appears to have been determined to force himself in.

7535. You see that, notwithstanding all your care and attention, these things occurred;—another man, named Meredith, came back invalided; he also was enrolled on board ship, and I am led to believe that there was a number of others who were enrolled after getting on board? There could not have been many, I think. There may have been a few vacancies at the last moment.

7536. Did you not have a body of thirteen or more men down at the wharf waiting in case there should be vacancies? Yes, and I do not know how it is that they were not taken in preference to others.

7537. Mr. Atkinson swears that he despatched three men to the "Atlantian" while she was lying out in the bay to fill up vacancies, and that they were returned; the statement being that they were not wanted. It appears that, in spite of all your care and attention, a man you rejected not only went to Capetown, but received promotion, landing in Capetown a non-commissioned officer—a corporal? I should like to know how it was done.

7538. So should I, and that is my reason for asking you;—the Military authorities say they do not know, and members of the Bushmen's Committee refer us to the Military authorities? If any officer took a man after he had been rejected by the Bushmen's Committee, I should certainly say he was culpable to some extent.

7539. He was certainly not carrying out the instructions or the intentions of the people who got up the Contingent? No. If such things were done some pressure must have been brought to bear, but I cannot imagine that such things did occur.

7540. We have heard a great deal from time to time about pressure, but we have never been able to locate it? I do not know where the pressure was, but what I say is that I cannot imagine an officer doing such a thing unless pressure were brought to bear. No pressure was brought to bear in regard to the Bushmen's Contingent so far as I am aware.

7541. Some mention of pressure was made by Major-General French, and when it was all boiled down he said that the pressure was in reference to myself;—was any pressure brought to bear upon you in my case? I must confess that no special pressure was brought to bear. I was asked to bring the matter before the committee, and I did so, because I had been asked.

7542. And the committee promptly settled the question? Yes.

7543. When the horses were out at camp, did you take any special note of them? Yes.

7544. Did you notice that many had greasy heels through the heel-straps? Yes.

7545. Did you take measures to prevent it? Yes. Oil was sent out for the special purpose of greasing the straps—that was the only thing that could be done. It is not an unusual thing to occur to young horses, or to horses that are not accustomed to be heel-strapped.

7546. But would the greasy heels be so liable to occur if the straps had been well oiled to start with? The difficulty was that all the saddlery had to be taken as it came in from the factory, just as it was. Sometimes the horses came faster than the means of tying them up.

7547. Did you notice about six weeks ago a statement in the newspapers to the effect that the bushmen had been fully re-equipped—clothing, saddlery, and everything? I do not think I saw that. I saw it stated that the bushmen had been supplied with the military saddles, and that after some two days' marching they had sent back the military saddles and had waited until they had got their own saddles back again.

7548. Where did you see that stated? In the Press.

7549.

J. R. Carey. 7549. Was it stated in a letter from a trooper? I fancy so.

7550. Anything of that nature you all seem to have noticed, but other statements such as I have mentioned to you, you do not seem to have noticed? I think I have noticed nearly everything that has occurred.

7551. But you did not notice the statement to which I now refer—that the New South Wales Bushmen had all been re-equipped? I did not see that statement, nor did I hear of it being made.

7552. You did not see the statement made that their equipment was the worst ever seen in South Africa? No, I saw the opposite.

7553. You and I must read newspapers from different standpoints; as a matter of fact, I produced the statement in the newspaper, and asked the General some questions in reference to it? I never heard of it. The chief things I have noticed have been statements made in the course of this inquiry.

7554. Did you really believe the statement which you saw in the newspapers that the Bushmen had rejected military saddles for the saddles which they took away from here? Yes; and I should not be at all surprised if it turned out to be correct.

7555. Have you had much experience of military saddles? No.

7556. Had you much experience of saddles generally? Yes; I have been riding all my life. I think that in the earlier years of my life, at any rate, I rode more than do most men.

7557. Would you be surprised to learn that all the best experts in Sydney take a different view from yourself with regard to these saddles? I have not expressed any view as to the saddles.

7558. But you say you would not be at all surprised to find that the report that the men preferred their own saddles to the military saddles was true; whereas all the experts we can get in Sydney have expressed the opposite opinion, and have condemned the saddles as being unfit for military purposes? That is a different thing. The question was as to the Bushmen preferring their own saddles to the military saddles they received. The military saddle is certainly the best saddle, but at the same time I am not at all surprised at the Bushmen preferring their own saddles. The great object was to reduce weight. No military saddles were obtainable here at the time, and we had to take the best we could get.

7559. Still you say it is very likely the men would discard the military saddles and take back their own? Yes; because the military saddles supplied to them may have been bad ones. You find contractors cheating the Imperial authorities as well as other authorities.

7560. You are aware that there is only one type of military saddle—the panel saddle? Yes; but saddles of the same type may be good or bad saddles.

7561. But do you know that the Military authorities would probably offer one pattern, and that one contractor would supply the saddles? It would not invariably follow under such circumstances that the whole of the saddles would be good.

7562. But they would have to be all passed, and it would not be likely to happen that some hundreds of saddles supplied to the Bushmen would be all bad, while all other military saddles were good? I am not prepared to answer that question, because I am not acquainted with all the circumstances. Under any contract you may have a supply of good and bad saddles. It is known all the world over that contractors have supplied bad material to the British Army.

7563. Not only to the British Army, but sometimes to the Colonial Army? Yes. In our case it was Hobson's choice; we had to pick up the best we could at the time. I went down with Major-General French, and we bought about twenty-seven saddles in order to test the men at riding. We had to have some saddles ready for this purpose, and we could not get them in any other way; we had to go out and buy them.

7564. While we may admit it was a case of Hobson's choice, your evidence would lead one to believe that even under those conditions, taking what you could, the saddles which you obtained were superior to the British military saddles? I do not think I said that.

7565. Perhaps not in so many words, but that is the inference to be drawn from your statement? I did not mean you to infer anything of the kind. I merely stated what had appeared in the Press—that the men, after two days' marching, sent back the military saddles, and waited for their own saddles.

7566. And you said you were not surprised to hear it? I was not surprised.

7567. The inference being that, if men had to send back for their own saddles, they thought them superior? There must have been some cause for it, of course, but what the cause was I do not know. Therefore I am not prepared to answer your question.

7568. Are you aware that tobacco and other goods contributed by Mrs. Usher and others, for the use of the Contingent, were sold to the men on board? I was not aware of that, and I should be surprised to hear that it was the case.

7569. We are informed, also, that beer and spirits, which were also contributed for the use of the Contingent were sold to the men? It must have been done by the ship, I should imagine, if it were done at all.

7570. We are informed that it was done by the Quartermaster; the intention was, when the goods were contributed, that the men should have them doled out in small quantities when required;—is not that so? The goods were the gift from the people to the whole Contingent. The officers naturally would be responsible for the distribution.

7571. *Mr. Meagher.*] In regard to the qualifications of the Bushmen; particular tests in riding were conducted? Yes.

7572. Various gentlemen officiated as judges? Yes.

7573. Did you yourself officiate on this occasion? I do not think I was ever present; I was one of the committee, but I never took any active part in the tests.

7574. Were you in receipt of complaints from skilled riders as to the method in which the riding tests were conducted? No; I conducted some of the tests in connection with the Imperial Bushmen's Contingent; but not in connection with the Citizens' Bushmen's Contingent.

7575. Did you hear of any complaints as to the class of horses used at the riding tests? I do not think the class of horses used would make much difference.

7576. Was it a fair test to a man to be brought to a hurdle on a horse that had never jumped one? If a horse balked, and the man was able to keep on well, I should probably be inclined to give him a pass more quickly than I would give a pass to a man whose horse skimmed over the hurdle.

7577. The evidence is that some of the horses fell on the men, and that they had never seen a fence before? I do not think that that is the case.

7578. Did you hear it stated? No.

7579.

7579. Do you think it a fair thing to take a horse twelve or fourteen years old, that has never jumped before, and to ask men to take it over a hurdle, and the horse failing to jump, to disqualify the man for being unable to ride? I do not think any men would be disqualified under such circumstances. I myself certainly would not disqualify them, other things being equal. J. R. Carey. 2 Oct., 1900.

7580. Have you heard that any men were disqualified under such circumstances? No.

7581. It has been shown that an expert rider, who has taken prizes at various shows round the country—Frank Rudd—who is recognised throughout the Murrumbidgee as a crack rough rider, was disqualified by Colonel Airey because he could not ride, the horse upon which he was put refusing to take the jump? Do you say it has been sworn on oath that Rudd was disqualified for that reason?

7582. Yes? In the first place, I should like to know how the reason came to be known, because, as a rule, if a man is disqualified no reason is given. I do not think Colonel Airey would be likely to disqualify a man because the horse he was riding could not jump or because it fell.

7583. Do you not think it rather remarkable that a man who is generally recognised as a crack rough-rider, and who was practically bred in the saddle, should be disqualified by Colonel Airey as a man who could not ride? I should think it unfortunate if it were the case.

7584. Is it not peculiar? I do think it peculiar, if it be the case.

7585. Suppose that has been sworn on oath, and the statement has not been contradicted? There may be some other reason for the disqualification; of course, I cannot say what the reason may have been.

7586. Do you not think there must have been something peculiar about the riding tests if a man with such qualifications as Rudd possessed could be disqualified? The man for some reason may have been unlucky. I know that I had already passed men for the Imperial Bushmen's Contingent, and they asked me to give them another trial. I said, "What do you want another trial for when you have passed?" They thought they had not passed because the horse had not jumped; but they had showed that when the horse balked they were able to sit him, and were good riders.

7587. Do you think that if a man were the boldest rider in the world, and he were put on a horse that had never jumped, and the horse failed to jump, it could be said that that man was subjected to a fair test? The failure of the horse to take the jump certainly would not prove whether or not the man could ride.

7588. Do you think it a fair test to ask a man to take a horse over a hurdle, and because the horse fails to take the hurdle to disqualify him? I cannot imagine anyone disqualifying a man for such a reason.

7589. What reason operated in your mind, and in the mind of Colonel Airey, for bringing horses to a jump which had never before jumped? Well, we had to take the horses to test the men as the horses came in.

7590. But could you not test the horses first? You must put men on to them to discover what the horses can do. It is not at all necessary that the men should make the horses jump in order to qualify them as riders.

7591. Why were the hurdles put there then? They were one of the tests. It was not at all necessary that the men should make the horses jump. A man might be in appearance a very slovenly rider, and yet might be a good bush rider. A slovenly rider may have been accidentally disqualified quite irrespective of whether his horse jumped or not.

7592. Rudd says he was disqualified because his horse did not take the hurdle? That may have been Rudd's own reason; a man is disqualified and he naturally assigns a reason himself for his disqualification.

7593. *Chairman.*] When it was explained to Colonel Airey what a bloomer he had made he sent word to Rudd that it was all right, and he then passed him? Of course I cannot answer for what Colonel Airey may have done.

7594. But you were trying to do so? No; I was endeavouring to answer for myself.

7595. *Mr. Meagher.*] Is it not strange that Rudd having been rejected he should have been passed afterwards without a fresh test? I do not know what was done in his case. They generally put down various points for a man's riding, and possibly Rudd may have got a number of points one after the other.

7596. *Chairman.*] That is not answering Mr. Meagher's question. He asks you whether it is not peculiar that a man should be first rejected, and then that he should be afterwards passed without a further test? I certainly think it was peculiar if such a thing were done.

7597. We have it stated in evidence? It may be evidence to this extent—that the man who was rejected was stating his own reason for his rejection.

7598. Not at all? Then I should like to see the evidence. I do not see how it is possible for any man to state the reason for his rejection unless the judges should happen to have told him. Ordinarily the judges would simply tell a man "You are rejected" without assigning any reason. Perhaps you are stating the opinion which the man himself assigned.

7599. That is not the case? Then I should not feel inclined to take any notice of what is said, because it is merely hearsay. Does the man tell you that Colonel Airey rejected him for any special reason. I was present when the man came to Colonel Mackay and told him that he had been rejected because he could not ride. Colonel Mackay said, "Good God! what are they thinking of." Colonel Mackay went to Colonel Airey and told him in my presence who the man was, and Colonel Airey then said, "I suppose I have made a mistake." That explanation, I think, answers the whole matter.

*Mr. Meagher.*] Mr. McIvor gave the following evidence:—

4440. From what you have seen, do you think that Lieutenant-Colonel Airey is really a good judge either of horseflesh or horsemanship? I should be very sorry to judge with him in the show-ring, because we should have very big differences. He never paid sufficient regard to the horse's feet, and one of the most essential things in Africa, and, indeed, anywhere, is to have a sure-footed horse.

4441. You said that he rejected one man for his riding, who had taken prizes in the show-ring? Yes, at the Wagga Show, not once, but repeatedly. I judged him once at Wagga, and he was given the prize as champion horseman, and there were thirty or forty other competitors, all pretty good riders.

4442. Do you remember his name? Yes—poor Andrews, who died at Capetown. He was so cut up about this that he would not go with the mounted rifles. He went over to the Cape, and joined the Australian Horse, and was immediately made a corporal.

4443. Do you know of any others who were rejected, and afterwards shown to be good horsemen? I saw three distinct cases of personation; men who wanted to go, and could not ride, found substitutes to pass the riding test.

4444. Did you know a trooper called Rudd? Yes, very well—Frank Rudd.

4445. Did you ever see him ride? Yes; that is a case that slipped my memory. I think he is about as good a horseman as you could find in Australia—an all-round horseman.

4446. He is considered a crack rough rider? Yes.

4447.

J. R. Carey. 1447. Do you know whether he was rejected? Yes; I know he was, and I made representations to Colonel Airey about him too. It was the most ridiculous thing in the world. I would back him against any man on the ground as an all-round horseman. Probably he was a little rough; but as a horseman he was a really good man.

2 Oct., 1900.

7600. You see that Mr. McIvor, who was on the ground, made representations, not only with regard to Rudd, but also with regard to another man who had taken prizes against thirty competitors;—is it not peculiar that both of these men should have been rejected by Colonel Airey? I think it is.

7601. There would be no difficulty in a man who had been amongst horses a good deal detecting whether a horse had done collar-work? There would not be much difficulty, I think.

7601½. If Mr. McIvor, who was on the ground every day for a considerable time, expresses the opinion that a number of the horses out there were old 'bus horses, would you say that his opinion would be likely to be correct? I do not know that I should value his opinion very much.

7602. Would you say that there were no 'bus horses there? I would not say that there were none if he says that there were a great number.

7603. He says in his evidence: "I may say that there were a great many 'bus horses among the horses of the Citizens' Bushmen's Contingent"? I have no doubt there were some; but if he says there were a great number, I do not agree with him.

7604. Mr. McIvor gave the following evidence:

Did you personally recognise these horses as having served in a 'bus? Yes; you can always tell a horse that has done a lot of collar-work. A trained eye will always distinguish such a horse.

Were any of these 'bus horses among the number of those which passed the inspection of the nine officers whom you mentioned? Yes; scores of them.

Do you think he is correct? I am not prepared to say anything at all about his opinion. I have my own views in regard to it; but it is not necessary, I think, that I should express them.

7605. But suppose he states a certain fact—that scores of 'bus horses were passed? He states that as a fact, but I do not state it as a fact. Mr. McIvor may state it as his opinion, but he cannot state it as a fact.

7606. But he does state it as a fact; can you contradict him;—will you swear that scores of 'bus horses were not passed? I say that it is not a fact.

7607. Will you swear it? Yes. Scores of 'bus horses were not passed by me, at any rate.

7608. How many horses did you pass? I cannot say how many, but I passed a great number. There were over 600 horses; some of them were given to us and some of them were bought.

7609. Did you pass one-half of them? I could not say. They all went more or less through my hands.

7610. *Chairman.*] Then there may have been scores of 'bus horses? Scores would be a large number.

7611. Suppose there were two score? I take it that when a man says scores he means more than that.

7612. *Mr. Chanter.*] What were the points in the riding tests, and how were they distributed? I could not say; I never attended upon the riding committee.

7613. *Chairman.*] It seems impossible to get information in regard to these points; the Military authorities refer us to you, and you refer us to the Military authorities? I do not exactly understand what it is you wish to discover.

7614. We wish to discover generally whether the management of the Military and Civil authorities was what it ought to have been; we think that the Committee has a right to know the facts;—if a man puts himself up as a judge of riding, and rejects two of the best horsemen in Australia, do you not think the public have a right to be made acquainted with that circumstance? I am not prepared to answer your questions upon that point, because I do not know whether the statements upon which the questions are founded are or are not true. If you merely quote the opinion of another man, and ask me to give my opinion of his opinion, then I object to do so.

7615. We have sufficient evidence to show that these statements are true? I have already said that I had nothing to do with the riding committee of the Citizens' Bushmen's Contingent. Therefore, I do not know of my own knowledge what occurred.

7616. It seems unfortunate that no one can give us this information; we want besides, the facts as to the selection of officers;—Major-General French refers us to the Bushmen's Committee, and you referred us to the Military authorities? The officers were chosen by Major-General French and myself under the circumstances which I have already explained to you.

7617. But men of high qualifications were rejected, and we wish to ascertain the reasons for their rejection? I do not myself know of any man of high qualifications who was rejected.

7618. Take the case of Richards? I have already given you all the information I can in regard to him. His heart was really not set upon going. He said, in fact, that he was only going for the express purpose of getting promotion. There is no expression of opinion in connection with that matter—it is a statement of absolute fact. As far as the officers generally are concerned, I have already explained that there was a difficulty in picking any officers at all.

7619. Did it not occur to you or the Military authorities that some of the officers who went with the First Contingent, and who sunk their rank in order to go, might have been obtained? I knew nothing about that; they might not have been obtainable.

7620. If the men had had commissions in the Lancers or in the Mounted Rifles, they would have been through quite as good a test as any to which you subjected the men; after all, the tests to which you subjected them did not pan out very well? I myself think they panned out admirably.

7621. When one of the judges rejected two of the best riders in Australia? There might have been some other reason than that which you mentioned for their rejection.

7622. Do you know of any other reason? I do not.

7623. Then why do you say there may have been other reasons? Because I cannot imagine the men being rejected for the particular reason you mentioned.

7624. But ought not someone be able to tell us what the reasons were? You will have to wait, I think, until Colonel Airey returns in order to obtain the reasons from him.

7625. But Colonel Airey was not conducting the whole of the tests? As I have already myself explained, I myself was not conducting any of them, so that I cannot answer your questions upon that point.

7626. I myself saw Lieutenant Green acting? Do you know of any men who were passed by him?

7627. I know of two brothers, the Stevensons, of Wilcannia; they are two good riders I admit; that was one of the reasons why I was interested; I wanted to see what sort of test was applied, and I took good care to find out who was judging; I was surprised to find out that it was this old man? I do not know how he came to be there unless Colonel Airey appointed him. He was not appointed by the

Bushmen's

Bushmen's Committee. Of course, when he was out there he was in the hands of the Military authorities, in so far as they had charge of the camp. J. R. Carey.

7628. Do you not think it unfortunate that the Military authorities, or anyone else, through laxity, should allow that sort of thing to go on? The men who went may have been excellent men, but there must be a certain amount of dissatisfaction unless things are conducted in a proper and business-like way? I am very much surprised to hear that Lieutenant Green tested any of the men, because, so far as I am aware, he was not appointed for the purpose of doing so. Upon whose authority he acted I cannot say. 2 Oct., 1900.

7629. I might inform you that Major-General French also swears that Lieutenant Green was there judging? He was there I know, but the duty he was asked to discharge was to form the men up. He did that in connection with the Imperial Bushmen's Contingent, when I, myself, was judging, but he did not interfere in the judging. The judges took no notice of what he said in any shape or form. Mr. Watson and I were the judges on that occasion, and Lieutenant Green brought the men up and told them when to go, and so forth.

7630. *Mr. Chanter.*] Are you aware whether the men on that occasion were judged by points or by a consensus of opinion among the judges? By points.

7631. As a practical man, what is your opinion concerning the fitness of a horse for saddle work when he has done a large amount of work in the collar? I myself have a horse which has been accustomed to the collar which I will take over any three-railed fence. It depends greatly upon what work the horse has done. It does not, of course, improve a saddle-horse to put him in harness. In connection with the purchase of horses for the Contingent, I must confess that I myself objected to some of the horses which were bought at the start, and they were not sent. There was a difficulty in getting horses at the time. Everything had to be done in a rush. There was a great difficulty in getting equipment and everything else. In some cases we had horses and we could not get the necessary things to tie them up with. Then there was a difficulty in getting saddles. In order to test the men's riding we had to buy saddles.

7632. Who were the gentlemen appointed to make the purchase of horses? That was entirely in the hands of the Government.

7633. Do you know whom the Government appointed? The Government handed the matter over to the Military authorities and myself. Colonel Airey bought a number of horses to start with, and after that I stepped in and bought a number of horses with him and by myself. Mr. Atkinson also bought some.

7634. The men were enrolled by the Military authorities, not by you? By the Military authorities.

7635. For what term? That I could not tell; I presume the General would have the enrolment paper.

7636. Was the term for twelve months, or to the end of the campaign? That I could not tell you.

7637. I understand, from your evidence, that the Executive of the Bushmen's Contingent have given up all control? Yes; they have handed the matter entirely over to the Government.

7638. Any further requisitions concerning the Contingent will have to be made to the Government and not to your Executive? Yes.

WEDNESDAY, 3 OCTOBER, 1900.

Present:—

MR. CHANTER,

MR. GARLAND,

MR. MEAGHER.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Colonel Charles Fyshe Roberts recalled:—

7639. *Chairman.*] In regard to the saddles of which we were previously speaking, Mr. Anderson was here and gave evidence. He swore positively that the saddles were never returned to him in a complete state, they merely going back, without the girths and stirrup-leathers and irons, for the purpose of having two additional "Ds" put on them, and that he has now got the saddles still waiting for you to take delivery? In reply to that statement of his, I produce the following letter, which I wrote to Mr. Anderson:— C. F. Roberts. 3 Oct., 1900.

Mr. J. Anderson,

Please note that the saddles which were rejected yesterday will not be accepted under any circumstances for this Contingent; and even if they are submitted hereafter for supply they will have to be passed by experts. The statement in the papers that they would be reissued was made without my authority.

Oxford-street, 13 January, 1900.

CHARLES F. ROBERTS, Colonel,  
Military Secretary and Director of Artillery and Stores.

7640. So that Mr. Anderson had this letter sent to him on 13th January? Yes; the day after they were rejected.

7641. If Mr. Anderson swears that he never had anything in writing to that effect, he must have made a mistake? Yes; he has since admitted to me that he got the letter.

7642. He must be rather a rash sort of individual in giving evidence when he states that he never had any such communication? Yes; in effect he said he never had any notice that they were rejected.

7643. And that you only returned a portion of them? He only delivered fifty, and we returned those, and he was told that we would not take even the balance of them.

7644. He says that you returned the saddles that you sent back without any girths, stirrup-leathers, or irons? That was a fact, because the Contingent had got them all mixed up, and had taken away some of the girths, stirrup-irons, leathers, and other fixings. Some of them were afterwards collected, and we told Mr. Anderson we would be ready to pay for all the goods we kept, but the saddles would not be paid for under any consideration. We told him we would pay for what we took, and the letter I wrote him regarding the saddles is the one I have read, and I think it is pretty plain.

7645. In Mr. Anderson's evidence I find the question, "But if you had received a communication from the Military Department, whether from Colonel Roberts or anyone else, condemning the saddles and stating that the department could not accept them, and that they returned them because they were not up to pattern, you would remember if you had received it?" He answered, in reply to that: "If we did receive any communication we did not take it in that way. I do not think, however, that we received any communication at all; I think everything was done through the telephone";—what do you say in regard to the statement? The letter is proof positive. Mr. Anderson actually had the original notice in his pocket when he saw me subsequently about the matter. I said to him, "You must be a great fool if you have given that evidence."

7616.

C. F. Roberts. 7646. Do you wish to hand in a return? Yes; I beg to hand in a return of the cost of the Contingents, so far as we can get it in the Military Secretary's Department. The return was asked for by the late  
 3 Oct., 1900. Mr. Piddington (*vide Appendix "G"*).

7647. The Major-General rather doubted if any request had been sent to England for equipment;—do you know anything about that? I have a letter here dealing with this matter. It shows a request was prepared to be made to the Government by the G.O.C., but it was not sent. The letter is as follows:—

From The Major-General Commanding the Military Forces, New South Wales, to The Principal Under Secretary.

*Subject:—*Indent for Saddlery, Cavalry pattern, complete.

Sir,

Head-quarters Staff Office, Victoria Barracks, Sydney, 18 November, 1900.  
 I have the honor to request the approval of the Hon. the Chief Secretary for an order being sent to England to obtain and send out, with as little delay as possible, sets of saddlery, Cavalry pattern, complete, numnahs and horserugs included. These are required to replace those sent away with the South African Contingent. The cost will be £ , which I beg to submit should be charged against the special Vote for despatch of Contingent.

I have the honor to be,

Sir,

Your obedient servant,

Major-General, Commanding Military Forces, New South Wales.

7648. By the way, Colonel, regarding these numnahs, have you had much experience with them? A fairly good experience,

7649. What do you think of them? Those we sent away with the Contingents were very good.

7650. But do you think they are needed? I think it is almost a necessity.

7651. Would you be surprised to learn that the evidence we have had here from both officers and men who have returned from the front is to the effect that the numnah, with sweat and wet, gets very hard, and it is then very injurious to the horse's back? I think that difficulty can be obviated very easily if men will take the ordinary precautions of just beating the numnah when it is dry. That will knock the hardness out of it.

7652. The men have also given evidence that they find that the blanket folded up answers the same purpose as a numnah, and, in addition, they find it very useful sometimes for either putting over themselves or over their horse at night? That might be so. Many of them had blankets as well. I know it is favoured.

7653. But that would throw the saddle a terrific height, would it not? Not necessarily. The blanket would be very thin. They would not use very good blankets for such a purpose, and they are really meant to cover the horse directly after he is unsaddled. In connection with this matter, there are two men I should like you to call, Sergeant-Major Allen and Quartermaster-Sergeant Dowson. They can give you very clear evidence about how these things were treated, and what use they were.

7654. We have had Captain Hilliard and Major Holmes, and I think we have got all the information in that way that we require;—by the way, Colonel, you remember the new saddlery that you brought here? Yes.

7655. That was not a sample of the stuff that went away? It was a sample from which they were made up.

7656. I think you are mistaken? I got it from the contractor, who said it was a sample of what had been supplied and of the saddles which were sent away.

7657. From Weeks? Yes, I believe so.

7658. Well, Weeks has given evidence here to the contrary; will you look at these saddles, Colonel; I want to show you the difference (*Saddle, Exhibit 4, produced*); that is the saddle you brought in; this (*Exhibit 1, produced*) is the other; now, you see Exhibit 4 has a pigskin seat, while Exhibit 1 has a bag-leather seat? Yes.

7659. Then Exhibit 4 has pigskin knee and thigh pads, while Exhibit 1 has a bag-leather knee and thigh pads;—do you see the difference? I was under the impression that the saddle I brought was of a lighter colour than that one.

7660. No; this is the one; do you see how the seat on Exhibit 4 is set in, and notice the difference between the manner of it and Exhibit 1; the long skirt on Exhibit 4 goes right round, while in Exhibit 1 there is only a half skirt, and it does not go round at all? It looks to me that this is not the same saddle that he showed me to bring in. I think the saddle was lighter in colour than this one.

7661. This is the only new saddle that we have got, Colonel, so it must be the same;—you see the seat of this Exhibit 4 is of pigskin? Yes.

7662. And the flap is imitation pigskin? Yes; it is the one he produced as one taken out of a number that had been set aside from the saddles that had been sent with the Contingents.

7663. But you see it is not the same? Yes.

7664. You see that Exhibit 1 has bag-leather seat and bag-leather knee and thigh pads? Yes; the Exhibit 4 has a much better seat.

7665. Mr. Arnold, one of the best experts in Sydney, describes very fairly the difference between them; he is a manufacturing saddler, carrying on business in Sydney, and I think, from the evidence he gave to the Committee, we are of the opinion that he is an expert. He says the pads in Exhibit 4 are what they call in the trade quilted, and in Exhibit 1 the knee and thigh pads are of bag leather, and not quilted; in Exhibit 1 the pads are solid? I agree with that.

7666. Take Exhibit 1;—do you think it the equal of Exhibit 4? No; not in any way.

7667. I will read you what Mr. Arnold said in his evidence. He was asked: "And you consider that the panel in No. 4 saddle is worth three of the panel in No. 1? Yes.—Looking at No. 4 saddle, you will see that the seat and the knee and thigh pads are made of hogskin? Yes.—And the pads in No. 4 are what you call in the trade quilted? Yes; in No. 1 the knee and the thigh pads are made of hogskin, and the seat are of bag leather, and the knee pads are not quilted.—Taking saddle No. 1 complete, with the panel, do you think it equal in material and make to saddle No. 4? Not in any way.—You consider that it is of much inferior quality right through? Very much inferior, and also the workmanship. In saddle No. 1 the seat is attached to the skirt by machine stitching, which is the cheapest and commonest way of manufacturing saddles.—What class of saddle do you call No. 1—quality 4, quality 3, or quality 2? I would call it the commonest quality, bar the tree, which is good.—Is the only quality of saddle horse than this one, some particular saddle which they send to the Islands? The saddle for the Island trade is about the worst class of saddle that could be manufactured—the cheapest. The Island saddle has

has not a tree in it like this one? The tree in this saddle is all right.—It is about the only portion of the C. F. Roberts. saddle which you can really say is good? Yes.” Now, you see, Colonel, and I think you are convinced yourself that these saddles have little in common between them? They are certainly not the same class 3 Oct., 1900. of saddles.

7668. A great deal of the new stuff you sent down was manufactured at the barracks, was it not? No; at the Ordnance Store.

7669. Well, it was of Military manufacture, was it not? Yes; made under supervision at the Ordnance Store.

7670. It could not have anything much to do with the Contingent, because it was only the old stuff that had got accidentally into the harbour that would be a fair sample of what went away with the Contingents. It was not the stuff sent;—take the rifle bucket, that was not, was it? No; the carbine buckets that were sent were Imperial carbine buckets. They were quite as good as that.

7671. But, anyhow, they were not the same? They were made on the same pattern.

7672. Looking at the carbine bucket, it might be that the ones that were sent away were better; but still the bucket before us was no guide to us to judge of the ones sent, was it? We cleared out everything we had got.

7673. That is so. By the way, who designed the pattern of bandolier the men took? It was partially started by Major-General Hutton, and afterwards improved on. I thought it better to put those braces on, so that the men could carry a great coat, if necessary.

7674. Do you know that it is generally condemned? I know a very similar one has been generally used by the Navy with the cross-belt bandolier.

7675. When? You will see them everywhere. This very man Allan I mention will tell you that whenever the Contingent could get both they took both, so as to have plenty of ammunition.

7676. Did you ever try any of these things on, Colonel? Yes, I have.

7677. And could you manage to get the cartridges out of the back pocket? Oh, yes; easily enough. They can take them out in little packages.

7678. I have tried it;—have you ever tried it with a little swag on your back? No.

7679. I do not mind making a small bet with you that you cannot take one packet out in five minutes;—that is a pretty long time with a fellow blazing at you, is it not? Yes.

7680. Would you be surprised to learn that amongst the men the shoulder bandolier was favoured? I did hear something to that effect afterwards.

7681. And that it is used by all the regular forces in South Africa? I think so.

7682. Are you aware that the men complain that the bandoliers they took from here gives them sore backs on the march? No; I never heard that.

7683. You are aware that the weight of 300 rounds of ammunition would be considerable? Yes.

7684. And that the bulk of the weight is hanging on a belt round the waist, for though the shoulder-straps may keep it from slipping, the bulk of the weight gets on to the small of the back; and, in addition, a great-coat and other things are stuck on top of that;—it would not be surprising, surely then, if it gave a man a sore back? But these bandoliers only had fifty or seventy rounds of ammunition, according to the size of the waist-belt. Some of them were made to carry seventy, and others fifty. If a man had braced them to proper length he never would have felt any trouble at all, as the weight would have been properly distributed.

7685. They have to carry 300 rounds of ammunition somewhere, and if they do not carry it in their pouches they must take it in their swags? Yes; they were supposed to carry some in their pockets, and if they were mounted in their wallets.

7686. We have had a terrible job finding out what all these brushes are for, Colonel;—do you know (*sample kit produced*)? Yes, practically; I know what they are all for.

7687. How many? Seven, I think.

7688. We have been very much concerned about all these brushes, and very anxious to know what they are all for;—will you please tell us? Clothes-brush, blacking-brush, hair-brush, paste-brush, and polishing-brush. These things, are required, as directly the men get into a garrison, like Bloemfontein, they are supposed to clean themselves up at once if they can get hold of their kits.

7689. But did they get their kits? Well, I believe our troops did not get hold of them then; but I am informed the Guards always do.

7690. Well, I saw the Guards, and they seemed to me to be about as dirty as any of the rest of the troops; I could not see any difference; so this is a paste-brush and this a polishing-brush;—what is the paste-brush for? For the clean up.

7691. Would you be surprised to know that no two officers have been able to give the same definition of all these brushes and the uses of them? I cannot help that.

7692. This paste-brush is the one that has puzzled and boxed them all; Colonel Taunton was not sure whether it was a tooth or a boot brush; he eventually gave it up, and Lieutenant Grainger came into the breach, and informed us that it was a clothes-brush to scrub the clothes when they were being washed; some other officer, Major Boam, I think, gave it another use; but I forget what he put it down to; and again we have to admit with pleasure that you have found a new use for it, different to any of the others; no two of the officers have been able to agree about them;—so how could a poor private be expected to know what they were for? They know the uses of them. You would find that the paste-brush would get softer with use than it is now.

7693. Lieutenant Grainger told us that it was the most useful brush in the crowd to polish your pants when you were washing them;—how could this Committee decide what they were for when there is all this difference of opinion amongst the officers? I do not know.

7694. Your particular duties, Colonel, are finance and stores? Yes.

7695. Some inquiry has been going on at the Barracks recently into the finances, has there not? There has been an inquiry into the paymaster's accounts, I believe—in fact, I know there has. An inspector from the Treasury went up and went through the accounts.

7696. Mr. Brodie, was it not? Yes.

7697. He has completed his report, I understand? Yes; I believe so.

7698. Have you heard what the result was? I have not seen the report on the paymaster.

7699. And where is the paymaster now? He is on leave.

7700. On leave? Yes.

7701.

- C. F. Roberts. 7701. Do you know whether there were any steps taken on the report to hold a court-martial? No; that would not come within my jurisdiction; but the paymaster could not be tried by court-martial, as he is not a military officer.
- 3 Oct., 1900. 7702. So you do not know anything about what the report might have been, Colonel? No; not as it affects Solomon.
7703. Did you hear anything at all about it? No.
7704. Did you give evidence? Yes, in reply to questions by the Treasury Inspector.
7705. This did come within your jurisdiction? I was asked one or two questions by Mr. Brodie as to an advance which this man had taken.
7706. Oh, he took an advance, did he? Yes.
7707. He did not bother consulting anyone about taking it? No; he did not consult me, and he told Mr. Brodie that he did. That was the subject of the interview between Mr. Brodie and me. I was asked as to whether I had given him authority to take this advance or not.
7708. That would be like borrowing without the consent of the owner, would it not? Practically the same.
7709. When you get into the Law Courts they call it something else, a harsher name, do they not? Yes; I think they do.
7710. *Chairman.*] How much was the advance? Only £20; still he had no right to take it without authority.
7711. He was getting a good salary, was he not? Yes.
7712. He has had a good deal of leave lately, has he not? I think he has been away since the end of June.
7713. That is about three months? Yes.
7714. Has he been drawing his pay all the time? No; his pay is suspended.
7715. I suppose the paymaster is getting very nearly suspended now too? Substantially he is suspended, only it is not so called. He is getting no pay, at all events.
7716. Do you know if any money has been paid into the pay-branch to make good the overdraft that he took? What he was deficient of—£50 or £60.
7717. Yes? Not that I know of. I do not know if money has been paid in to cover the deficiency.
7718. And if any money had been paid in, you would know? I ought to know. I do not think it has been.
7719. Could it possibly have been paid into the Treasury? I think his deficiency is about £60, and I do not think it has been made good.
7720. You say he is not a military officer? No; he holds no commission; I am certain of that. He cannot be a military officer, unless he has a commission, or a warrant, and he has neither.
7721. He is under the control of the military, is he not? Yes.
7722. So you cannot take any action with regard to him, because he neither holds a commission nor a warrant? No.
7723. Except through the Crown Law Office? Yes; or the head of the Department.
7724. So far as you know, there has been no action taken up to date? I have heard of none. We have been expecting every day to see these papers, but we have not got them. I think I saw in the Press that the papers were still at the office of the Attorney-General.
7725. Of course discipline is not in your particular care at the Barracks or in the Forces? Not now, no.
7726. So that you could not enlighten the Committee in any way in regard to the dispute in the 7th Regiment? No; I know nothing at all about it.
7727. But you have rather an artistic eye for clothing and that kind of thing;—what do you think of the gorgeous uniforms of the 7th? Which part do you mean, the red coat, or the headgear.
7728. Both? The headgear is quite absurd; it will be all very well for a regiment clothed in green or black? It appears there to be practically copied from the 60th Rifles, or the Rifle Brigade.
7729. Do you think it would be a very suitable headgear, even for parade purposes, in a climate like this? Only in the winter.
7730. Does it give any great protection from the sun? I should say none whatever.
7731. And do you think a red uniform with the headgear would be a good thing to go on active service with? No; I think they are most incongruous. They do not go together at all.
7732. What opinion do you hold with regard to this, Colonel;—do you not think that a smart khaki suit with a field service hat looks as well as anything else, especially when you get a body of men moving together? I do; I am very much in favour of the khaki.
7733. Even for Sunday parades? Yes.
7734. And if occasion demanded it, they would be fit to go on active service with? Certainly they would.
7735. And this red tunic and this headgear;—what do you call it? A busby.
7736. They would be unsuitable? Yes.
7737. What sort of a busby do you call that? A rifle busby. All the rifle regiments in England wear busbies somewhat similar to them.
7738. *Mr. Garland.*] But the rifles in India do not wear them, do they? No; they wear helmets. Everywhere out of England now they wear helmets.
7739. *Mr. Chanter.*] Are they like the Hussar's busby? No; the Hussar's busby come on to the nape of the neck. These look to me to be made of black lambskin, but I have not closely examined them.
7740. *Chairman.*] Is it not the old shako? *Harley.*] the shako had a little spout at the back.
7741. And this has not? No.
7742. The native police in Durban wear a hat exactly the same; if the 60th Rifles wear one, so do the native police in Natal; I do not know what they are copied from, but no doubt it is from one or the other;—do you know? I do not think the Durban Native Police ever saw the 7th busby.
7743. *Mr. Garland.*] What is the colour of the busby of the 7th? Black.
7744. Black over scarlet? Yes.
7745. *Chairman.*] It is just like a belltopper, with the rim cut off, is it not? Something of that shape.
7746. *Mr. Chanter.*] Who commands this regiment? Lieut.-Colonel Neild.
7747. *Chairman.*] But in the uniforms of the volunteer regiments, the G.O.C. has to approve of a uniform before it is issued, has he not? Yes; he has to approve of it.
7748. *Mr. Garland.*] Did he design this uniform? No.
7749. I meant did the Commanding Officer of the regiment design it? Yes; I believe that is so.
7750. *Chairman.*] After all, the Major-General Commanding the Forces is really responsible for all these uniforms;—he has got to give his approval, or else they cannot have them? He has to pass the patterns, and then they are sealed up for manufacture.
- 7751.

7751. Have you noticed that among the volunteer regiments some of them have three or four different styles of uniform? No. C. F. Roberts.  
3 Oct., 1900.
7752. Take the Scottish Rifles; you see them resplendent in red and black and white, and their tunics are varied;—did you ever see them? On full-dress parades they wear a kilt and a red jacket.
7753. Have you ever seen them parading—some with red, some with black, and some with white? I have never seen any of them with black.
7754. Have you seen them mixed? I never saw the Scotch Regiment in black; I have seen some of them in brown.
7755. Well, perhaps it was brown and red and white? I suppose the reason some of them would be in brown would be that they had not got the full dress.
7756. And in white? For the same reason; it is a very expensive thing for them to get the full dress.
7757. After the red, what would be the nearest to full dress—brown or white? Brown would be next.
7758. So that the chap in white would be only a starter? Yes; he probably had what they could give him out of the store.
7759. Do you not think a regiment dressed in that fashion has a piebald appearance? It does not look well, I admit that.
7760. The red cloth is expensive, I suppose? No, not so very expensive; the brown would cost about half the other.
7761. You would get a good suit of brown for a couple of guineas, I suppose? More than that, because you have to get the Highland trews.
7762. I am not talking of the Scotchmen; say for any regiment? Yes, then it would be cheaper.
7763. I think the contractor gets 30s.? No, that's for the jacket; there is then something under a guinea for the pants.
7764. Then he is getting a precious lot too much? Khaki cloth and khaki drill are very different things. You can get khaki drill for a guinea.
7765. You can get it for 7s. 6d.; I have seen it at David Jones's for that price; you can get it all over the town; it is calico? That is not drill; it is only calico that is sold at that price.
7766. This [*sample brown jacket produced*] is only a sort of brown serge; the man who charges 30s. for that simple jacket is asking too much, do you not think so? They all vary; I think it costs 30s. I do not think any contractor would make that under 25s. or 30s.
7767. For a tunic? Yes, of that stuff.
7768. A number of uniforms are made of red? Yes.
7769. This is very expensive? Yes; it was done away with seven years ago, I think.
7770. All done away with? Practically.
7771. And they are re-starting it? There was a great push made to have this red again and it was re-introduced, and now I think they are getting tired of it again.
7772. Is not that way of shifting round among the uniforms from red to brown and brown to red rather an expensive luxury? Not so much so as it looks. When a uniform is settled upon it has to wear out, five or six years, as the case may be, and if they want a change then, and the General approves, the change is made. I do not think you will see any more red.
7773. And about the helmet? I think the gossamer helmet is the one used in New South Wales.
7774. Comparing the helmet with the field service hat? I should prefer the field service hat, it being lighter.
7775. Everyone seems to prefer the hat, and yet they are struggling to get them into helmets? No; I do not think so.
7776. You are getting the volunteers into helmets now? They must have helmets to be similar to the others. The mounted troops are all wearing field service hats.
7777. They could not wear a field service hat with the gorgeous red tunic? I do not see why they should not.
7778. It would be something like a man having on a dress coat and vest and a pair of light trousers, would it not? In the very old days they wore a drooping hat and they looked smart enough then.
7779. But did they wear red tunics? No; they wore all sorts of colours.
7780. Could you imagine some of the Hussars with red tunics on parade wearing field service hats. It would be like a man without boots on? Everyone would become accustomed to it in time. I remember the time when helmets were looked upon as the most awful innovation that was ever introduced.
7781. The men and officers, both here and in England, appear to detest them now, do not they? I could not say that.
7782. *Mr. Garland.*] The Germans wear them, do not they? Yes; they all wear them.
7783. *Chairman.*] Some of the old German regiments wore a hat very much like what our 7th wears now, with a peak out in the front and one behind. By the way, this headgear has a number of black ornaments like coffins, has not it? Which.
7784. The 7th? I do not know.
7785. They looked like coffin furniture;—did you ever hear of that? Yes; I have heard of coffin furniture; I thought it was generally silver.
7786. Oh, no! you can get it gold if you like; but there is black also. Now, do you not think the best dress for peace or war would be a brown khaki suit with a field service hat? Undoubtedly.
7787. And that a body of men going through any movement dressed in the same way would look much better than if their uniforms were varied? I quite agree with you; there should be uniformity both in colour and in regiments.
7788. When you were here before, we asked you something about helmets;—do you know that there were several other sorts of helmets they were getting for the Contingents that were not presented to us? The only helmet I know of as being supplied to the Contingents was something like the gossamer, one stained with brown.
7789. Do you know they had a helmet like this (*Exhibit E produced*)? Yes; that is the one I refer to.
7790. That is not gossamer, though. This is gossamer (*Exhibit C produced*). Did they issue this Exhibit E to somebody? So we found out after a great deal of trouble. From private people we discovered that it had been issued to the Citizen's Bushmen.
7791. That was the lot arranged for by private subscription, was it not? Yes, that Contingent; but these helmets were ordered from Mr. Anderson, the Government contractor, by the Military authorities, and paid

C. F. Roberts. paid for by them, although the money may have been repaid from the Citizens' Bushmen's Committee afterwards. The helmets were ordered by the Military authorities from Mr. Anderson, the military contractor, and were paid for at least through the Military authorities, if not by them. We paid nearly all the bills, and they were charged against the Citizens' Bushmen's Fund. We sent on the bills, and they practically gave us the money.

3 Oct., 1900.

7792. Who sent on the requisitions to the Bushmen's Contingent Committee for the money? It was done from my office.

7793. Mr. Atkinson told us that the amounts were very irregular; sometimes you wanted £100 more for the payment of the men and sometimes £100 less, and he never was able to understand how you managed things;—can you explain that? Well, a lot of these men's wives and children had to have money sent them; and if there were thirty-one days in the month, it would naturally make a considerable difference to a short month.

7794. I suppose with 500 odd men it would? I know we send away something like 1,800 cheques to different people in connection with the Contingents now.

7795. Has the Government taken over the whole liability in connection with the Bushmen's Contingent now? Yes; we have instructions to apply to the Treasury for the money.

7796. As a matter of fact, the Citizen Bushmen's Contingent Committee have not got any money, have they? I think it is all expended.

7797. A considerable time ago it was all expended, was it not? They had some £36,000.

7798. *Chairman.*] They guaranteed to equip and pay the Contingent for six months; they did that, and at the expiration of six months they did not bank any more, and the other day they had a final meeting, and presented their balance-sheet, and handed over the balance—that was the balance at the end of six months; but the expiration of the six months occurred a considerable time ago—probably six weeks or two months ago;—is it not so, Colonel? Yes; I think the six months was up in August.

7799. *Mr. Chanter.*] The men were sworn in in January, were they not? They went away in February, I think.

7800. *Chairman.*] They were paying them for some time in camp;—I think it was two months in camp, so they considered they had only four months to run from the time of sailing, did not they? From the time of landing in South Africa, I think it was. They were not in camp quite two months.

7801. Anyhow, the Government has now the whole responsibility of paying the men and looking after the sick and wounded who might return? Yes, everything.

7802. A number have returned already, have they not? A great number of invalids—about 200, I should say.

7803. Not 200 Bushmen, surely, Colonel? No; I meant altogether.

7804. There are about twelve or twenty Bushmen back I think? More than that I should say.

7805. And those who have returned have been looked after by the Government, and the Government has taken over the responsibilities and liabilities of the Bushmen's Contingent Committee? Yes. That is so. Any money expended on the Imperial Bushmen is, of course, recouped by the Imperial Government.

7806. Mr. Carey, in his examination yesterday, seemed to hold a very strong opinion that the Imperial Government would now pay the Citizens' Bushmen; that the Imperial Government would now take them over, in fact;—have you any reason to believe that such a thing would be done? I think the Imperial Government would pay the Imperial rates of pay to the Citizens' Bushmen, but I do not think they will hold themselves responsible for anything further than that.

7807. What do you mean by the Imperial rate? 1s. 4d. or 1s. 5d. a day, I think it is.

7808. Mr. Carey showed a surplus in one of his books of £15,000 odd; it was made up in this way: That if the Imperial Government had paid the Citizens' Bushmen 5s. a day for four months it would have saved the Citizens' Bushmen's Contingent Committee the amount which, on 525 men for four months, would amount to £15,342 9s. 10d.;—what do you say to that? I do not think that he had any ground whatever for holding such an idea.

7809. You never went into such an elaborate calculation as that yourself? No. The Bushmen went away exactly as any other Contingent. They were guaranteed 4s. 6d. a day, less Imperial pay.

7810. Practically, the whole of them were guaranteed by the Government to the Imperial Government, were they not? Yes.

7811. Everything had to be done by our Government, had it not? Yes.

7812. The Imperial Bushmen went away on a very different footing altogether, did they not? Yes. The Imperial Bushmen were asked for by the Imperial Government.

7813. And enrolled as Imperial soldiers? Yes; a different thing altogether.

7814. They were sworn in as Imperial soldiers here? Yes; for twelve months, or until the end of the war.

7815. *Mr. Chanter.*] Was that the same as the Citizens' Bushmen's term of enrolment? No. I think the Citizens' Bushmen were only enrolled for six months.

7816. *Chairman.*] And anything our Government did here in connection with the Imperial Bushmen was only done on behalf of the Imperial Government? Practically, as agents for the Home Government.

7817. With the Citizens' Bushmen and the other Contingents we were, as a matter of fact, making a present to the Imperial Government of the use of these men for the time? Yes; for six months or longer.

7818. *Mr. Chanter.*] I understood, from your evidence before, that you had nothing to do with the equipment, is that so? What part of the equipment? I had something to do with the saddlery, belts, and that kind of thing.

7819. Major Carey, in his evidence, said that he had taken no steps to obtain any report as to the doings of the Bushmen's Contingent in South Africa, nor had they heard any complaints except through the Press; nor did they intend to make any inquiries;—would the Military authorities make any? We have made none so far.

7820. Have you read any statements made by trooper soldiers as to their treatment? Yes, I have read some.

7821. In one case, we have evidence here by a returned trooper in regard to the food supply; he said that Lieutenant Legge was in command of a party escorting a convoy of provisions, and had allowed his men to be without food for three days, with the exception of one meal;—do you not think it devolves upon the Military authorities to make some inquiry into a matter of that kind? If Lieutenant Legge was in charge of a military convoy he could not allow it to be touched.

7822. *Chairman.*] But it was the transport for the march? They were escorting the supplies for the Army on the Modder march.

7823.

7823. *Mr. Chanter.*] They were an escort conveying the provisions; evidence has been given that while the lieutenant himself had plenty of food, though they were never more than a quarter of a mile away from those provisions, the men were kept for three days without food;—would that not seem to demand an inquiry? It certainly would have been advisable to ask the officer in charge of the convoy whether he could not issue rations to the men as they had none. C. F. Roberts.  
3 Oct., 1900.

7824. *Chairman.*] Would it not have been advisable to do more than that;—if you were three days in charge of men, and they had no food, would you not do more than that? I should have made representations to the officer in charge of the convoy to see if I could not get food.

7825. But surely you would have done more than that: would you not have seen that you did get it;—would you not go to the officer in charge of the division, or the brigade, if you could not get food from the officer in charge of the convoy, or would you have allowed your men to starve to death sooner than trouble anybody? I should certainly have troubled somebody.

7826. But if you did not get it when you requisitioned for it, what would you do? I should inquire further.

7827. And if your requisition was taken no notice of, would you not have seen that you did get the food? I should have tried to.

7828. One day is long enough to go without tucker, is it not? Lots of them have been out without food longer than that.

7829. Yes, but that does not justify it, does it? No.

7830. If there were no facilities, one could understand the men being kept without food, but they were actually conveying provisions;—can you not see the difference? Yes; that is why I said I would ask the officer in charge of the convoy if he could not issue rations to the men. There is a lot of routine to be observed in the Army, and it is not so easy to get things as it might look. Probably rations had been issued to the quarter-master for these men, and for some reason or other he had failed to serve them.

7831. Do you think, under the circumstances, it would be subservient to discipline for the men to help themselves, as they say they did? I should think they would not do it; if they did it was an improper proceeding.

7832. But they say they did it? I do not know what sort of men they were.

7833. What would you do if you were starving and saw food within three yards of you;—do you think your dignity would not allow you to touch it, even if no one was looking? I do not know about that.

7834. It would be just as well not to tempt you, I suppose? There would be great temptation, of course.

7835. Is it surprising, if these things are true, the medical comforts were broached in the trucks coming up from Capetown and taken possession of? I have heard that was done.

7836. *Mr. Chanter.*] Do the Military authorities, for the satisfaction of the public of New South Wales, intend to obtain any reports of the campaign? I cannot tell you. We have written to several of the officers, asking them to send us diaries, to let us know what they are doing. We have so far had two from Major Lee and two or three from Colonel Smith.

7837. *Chairman.*] By the way, where is A Battery? I think it is at a place called Uppington, beyond Prieska.

7838. Yes, I know they were sent out there;—they never got back then? They were kept out there to keep down some rebels, I believe.

7839. Yes, I believe they have been doing useful work;—have you heard anything about Colonel Bayly? No; I have seen no letter from him at all.

7840. Have you got no official information about him? No; I have heard that he applied for leave to go to England.

7841. Did you see that he got back to the Cape? Yes; that was after being taken prisoner. Since his release, I believe, he has applied for leave to go to England.

7842. *Mr. Chanter.*] Have you noticed anything in the Press from members of the Citizens' Bushmen's Contingent, stating that there was general dissatisfaction at their being withdrawn and compelled to destroy £200,000 worth of stores? I saw one letter; that was the time that the Citizens' Bushmen went there.

7843. Yes; they were relieved by a force of 3,000 under General Carrington, and though the force was present they were not allowed to make an attack, but ordered to retire and destroy about £200,000 worth of stores and provisions;—would you not think it necessary to make some inquiry into the matter? I do not think so. It was General Carrington's own business. He was the best person to judge whether the stuff should have been destroyed or not.

7844. *Chairman.*] This Committee has great powers, but I think we could hardly tackle the whole Military Department of Great Britain. We should probably not get through with the job.

7845. *Mr. Chanter.*] You would not think an explanation necessary? They might not have had the necessary transport to remove the stores. Zeerust may have been a depôt which could not be longer held, and therefore the stores would be destroyed to prevent them falling into the enemies' hands.

7846. Will there be any general report of the campaign, so that it might be read and understood by the people here? Probably; there will be a general detailed diary of the whole war.

7847. Do you not expect a special despatch or report in regard to the Australian troops? I do not think so. They will say this is only a small body of men, and there is no reason to deal specially with them. They have been merged with the rest of the Army, and split up into small detachments all over the place. What are they amongst so many? They must take the good, and the bad together when they join an army like that.

7848. *Chairman.*] Did you hear that Colonel Airey had been lost with a detachment of eighty men? No; I did not.

Robert James Beauman, lieutenant, called in, sworn, and examined:—

7849. *Chairman.*] You are a lieutenant in the Army Service Corps? Not in the corps but attached to it.  
7850. Do you remember the last contract being called in 1887 or 1888 for helmets? I had nothing to do with it. Tenders for helmets or clothing do not come within my duties.

7851. You were not asked to set out the helmet? No; I had nothing whatever to do with it.

7852. If somebody else, then, comes here and swears that you had, I suppose they are making a mistake? I have had nothing whatever to do with the clothing. There is a Clothing Board for the purpose.

7853. Yes, I know that; do you remember the time the tenders were called for helmets? Yes; I remember the tender being called.  
7854.

R. J.  
Beauman.

3 Oct., 1900.

R. J.  
Beauman.  
3 Oct., 1900.

7854. Were you asked by anyone to set out a pattern helmet? No.
7855. Are you sure you did not put out a pattern helmet? Quite sure that I did not. Instructions were sent to me by the President or Secretary of the Tender Board to have the sealed patterns sent to a certain room in the barracks for the inspection of the tenderers. I gave instructions to the storeman to have the sealed patterns laid out as requested.
7856. Who was the storeman? Broadbent.
7857. And you did not examine the sealed pattern? No; sealed patterns are sealed and in store.
7858. And are you aware that they sealed the wrong helmet? No.
7859. You have not learned that yet? No.
7860. Officers up there are not very communicative with one another, apparently? The sealed pattern is the property of the Quartermaster-General, and is only in my custody for safe keeping. That is all I have to do with it.
7861. Are you aware that the storeman put out the wrong helmet? I could not say.
7862. Is it anybody's business to see this sealed pattern after it is laid out? The Board calls for tenders and gives all information about them.
7863. Would you be surprised to learn that the helmet that was discarded in 1888 was the one which was sealed up instead of the one latterly adopted? No; I am not aware of that.
7864. Is this an infantry helmet (*Exhibit D produced*)? It is the helmet that was sealed.
7865. Have you looked at that ticket on it? No.
7866. If you do, you will find that it was sealed up fourteen months after the tender was let;—do you see that? We have this helmet in stock at the Barracks, and it is the helmet supplied to the forces.
7867. Do not you see by the date of that ticket, and the date of the contract that it has been sealed up fourteen months after the contract was let;—I want to know about the particular letting of this contract, not a history of helmets;—that helmet was sealed up fourteen months after the tender was accepted, so that it could not have been the specimen helmet at the time the tender was let, could it? I cannot bring to memory the exact date.
7868. We have sworn evidence about it; those facts about the dates are right; we have had the actual tender submitted to us; it is not disputed;—are you aware that a helmet of this pattern (*Exhibit T produced*) was submitted as the sealed pattern to the contractors when they came to see the pattern before tendering? No.
7869. If Major Boam and Lieutenant-Colonel Taunton say that it was so, would you contradict them? No, I could not say. I did not see it, so, therefore, cannot know.
7870. As your name was mentioned by one of the officers, we thought we would call you to see if you could throw any light upon it;—unfortunately you cannot, can you? I cannot. If you understand, there is a Board with a President and Secretary to deal with all tenders, and so on, in connection with the Partially-paid Forces.
7871. They call for tenders, do they? Yes.
7872. And, therefore, they ought to have inspected the patterns? Yes, they ought to do so. They call for tenders.
7873. So that you are not prepared to take any responsibility of submitting the wrong helmet? No, I take no responsibility whatever. All I know is that there is a helmet for me to take charge of as a sealed pattern for the Partially-paid Engineers and Infantry.
7874. And that has been handed over by you as soon as tenders were invited? According to the date on it, it has been.
7875. It ought to be somebody's business to see that the helmet that is sealed, and held as a sealed pattern, is really what they want it to be. It ought to be somebody's business, should it not? Yes.
7876. By accident, a bell-topper might be sealed up and no one would know; or, by accident, they might secure one of those busbies of the 7th Regiment and have it sealed up as a helmet, and no one would apparently know anything about it, would they? I could not go so far as to say that.
7877. Well, here is a helmet sealed up, and it is not till fourteen months afterwards that it is discovered that the wrong helmet has been sealed up;—does that not seem very strange? Yes, it does seem so.
7878. Anyhow, you are not prepared to father the mistake? No. I cannot give any further information but that, simply, when the helmet was sealed it was handed over to me for safe custody, and if required at any time I have to produce it. It is the same with all other sealed patterns.
7879. Do not you take delivery of some of these helmets at the barracks? Yes; those imported some years ago.
7880. I mean those manufactured here? I have nothing to do with them, except those I take for my own corps.
7881. What corps? The Army Service Corps.
7882. You would take delivery of some helmets within fourteen months of the letting of the contract, would you not? Yes.
7883. And did you compare them with the sealed pattern, to see if they were up to the sample or not? The helmets supplied to the Army Service Corps were in accordance with the sealed patterns we have in the store.
7884. What sort of a sealed pattern is it then? It is a different make to those; not the same make at all. That is an infantry pattern helmet. Ours is the old helmet, high in the crown.
7885. In the Army Service Corps, then, you have a different pattern altogether? Yes.
7886. So that you have a sealed pattern of your own? It is the sealed pattern for the Permanent Military Forces.
7887. Oh! we have not been able to secure a pattern of that helmet;—the only sealed pattern produced is that one (*Exhibit D*);—what is that? That is the Infantry helmet. In calling for tenders for the other branches patterns would have to be produced. If you were calling for tenders for any Infantry branch this (*Exhibit D*) is the one produced.
7888. That was only adopted recently, was it not? This, to my knowledge, has been here since 1893.
7889. Did not Colonel Taunton bring it from England? No, I do not think so, because I have received from the Ordnance Department some of these helmets.
7890. Major Boam also says that this helmet was brought from England by Colonel Taunton? He may have brought the original.

7891. This helmet (*Exhibit D*) was only adopted on the date specified, 23/8/99. That is undoubtedly the date on which it was sealed, because it was signed and dated then? Yes.
7892. And the seal is unbroken? Yes; once they are sealed and signed it is my duty then to be answerable to the Quartermaster-General for their safe custody.
7893. And this helmet was only sealed and signed on 23/8/99. That is only about twelve months ago? Yes; a bit more than twelve months.
7894. And the contract was let considerably over two years ago? Yes.
7895. What use would this helmet be until the contract runs out? You could not let a contract and then alter the pattern of the goods in the middle of it? No; not unless the contractor was willing to substitute the other pattern.
7896. Yes; but he is not. One is made of solid cork and the other (*Exhibit C*) is made of butter-cloth? I think this one (*Exhibit C*) was supplied to the contingents.
7897. Do you know whether this helmet (*Exhibit H*) is supplied to volunteers and partially-paid? I could not say. I have nothing to do with the supply of helmets except to my own corps. As quartermaster of the corps it is my duty to see that the clothing and helmets supplied by the contractors is up to sample quality and quantity.
7898. Is it cork helmets your men are supplied with? I really could not say unless I saw the sample helmet.
7899. *Mr. Garland.*] Do you mean to say you do not know what class of helmet your men wear? I could not say for certain whether it is cork or not until I saw it.
7900. You are not certain whether it is cork or butter-cloth? I could not say until I saw the helmet. When they were delivered we examined them to see they were all right.
7901. If you call tenders for cork helmets, and they send you butter-cloth and you do not know, your examination cannot be worth much, can it;—were any of the helmets butter-cloth? I would not like to swear that some of them were not. I could not say without seeing the helmet, and comparing it with the sample pattern.
7902. Was the sample pattern cork? Yes.
7903. And you are not sure if you got cork or butter-cloth helmets delivered? I could not say from memory.
7904. Do your men not wear helmets every day? No; it is only once or twice in the year that they wear them. It is some time now since I have supplied any helmets to the corps.
7905. *Chairman.*] You say that the sealed pattern for your corps is a cork helmet;—now when you are taking delivery of the helmet, do you mean to tell this Committee that you paid so little attention to them that you really do not know whether they are according to the sealed pattern or not—whether they are made of solid cork or of butter-cloth? In cases when we have any doubt we cut a helmet to see.
7906. *Mr. Garland.*] Do you have to cut them to see? Yes.
7907. *Chairman.*] But you can tell without damaging them much? Yes; but when you come to examine 400 or 500 helmets you cannot go through every one. You take up a sample to see that the shape, weight, and quality are right, and the same as the pattern. If you cut them the men say they are damaged, and object to take them.
7908. You could tell by the feel.
7909. *Mr. Garland.*] At the time of entering into the contract, was there a sealed sample in your custody? Yes.
7910. There was a sealed pattern in your custody? Yes.
7911. Was it this one (*Exhibit D*)? I had that in stock.
7912. At the time this helmet contract was entered into, had you in your custody a sealed pattern helmet for the Infantry and Partially-paid? Yes; I had a sealed pattern, but it was not the same pattern as *Exhibit D*.
7913. When was that sealed;—was it sealed for the purposes of the contract? It was sealed before the date of my taking over the duties. It was in the store at the time I took up the duties.
7914. When was that? In 1893.
7915. From the time that you took over the store until this helmet was sealed and delivered to you in 1899 was this other helmet the only sealed pattern you got from the Infantry and Partially-paid? Yes; that is quite right.
7916. That would be the helmet that was shown to the contractor? Yes.
7917. *Chairman.*] Did the old pattern have any resemblance to that (*Exhibit C*)? No; it was something after the make of the *Exhibit T*.
7918. Did you ever have any sealed pattern like *Exhibit C*? No.
7919. *Mr. Chanter.*] Is it your practice on taking delivery of helmets or clothing of any description to carefully inspect each individual item of the delivery. Suppose you had 500 helmets delivered to you? I do not have such a large quantity. I only deal with my own corps.
7920. What is the number of the corps? One hundred and twenty.
7921. Suppose then that you were giving an order for 120 helmets and they had to be delivered in accordance with a sealed pattern, would you consider it necessary to inspect every one of those? Yes; I should inspect to see that everyone was made correctly and that the workmanship was up to the sample. It would be my duty as quartermaster to do so.
7922. Having superficially inspected them would you choose one out haphazard and cut it to see what its internal construction was? If there was a helmet damaged at all and you would think there was something wrong you would cut the one. Once they are handed over to you you are responsible for them, and if a helmet were damaged you would have to make up the loss. If the damage was done when the helmet was delivered to you you would hand it back to the contractor and would not sign for it.
7923. How would you select the one to cut? I would take it up haphazard.
7924. And if you were satisfied it was right you would pass the lot? Yes.

Lieut.  
R. J. Bauman.  
3 Oct., 1900.

TUESDAY, 9 OCTOBER, 1900.

Present:—

MR. COOK,  
MR. CHANTER,  
MR. HURLEY,MR. MEAGHER,  
MR. QUINN,  
MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

John Cash Neild, M.P., called in, sworn, and examined:—

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

7925. *Chairman.*] You are the Officer Commanding the 7th Regiment? I am member for the electoral district of Paddington in the Legislative Assembly, and also the Lieutenant-Colonel commanding the 7th Volunteer Infantry Regiment.

7926. Could you tell us the date on which that regiment was first formed? Perhaps I had better explain what was done. What is now the 7th Regiment was originally formed as a corps being part of the 5th Union Regiment. The first swearing-in in connection with the old corps was on the 20th June, 1896. The regiment was formed on the 20th June, 1897. The local army date of the origin of the regiment is given as the original date of the first corps, so that according to the records the regiment was really formed on the 20th June, 1896.

7927. You have been the officer in command since the formation of the regiment? I have, except when absent on leave.

7928. Did you pass your examination? I passed my examination for a field officer on the 27th April, 1898. My reason for not passing before was that I was absent in England for nearly twelve months on leave.

7929. You passed the examination for Major? Yes; that is the highest examination which any one passes in this Colony.

7930. When you became a field officer there was no further examination for you to pass? Exactly.

7931. What was the strength of the 7th Regiment about the year 1898? To what part of the year do you refer?

7932. I mean towards the end of 1898? I should have to look up the returns to give you the exact figures, but my impression is that at the time to which you refer the regiment was between 50 and 100 under strength.

7933. The strength of the regiment was then as it is at present? The strength is 634 of all ranks, exclusive of the members of the permanent staff attached to the regiment, and they number five or six.

7934. How did the regiment get on from the date which I have mentioned; did it make up the total strength? It has fluctuated.

7935. About twelve months ago, what was the strength of the regiment? From sixty to eighty under strength.

7936. What is the lowest point the regiment has ever reached, could you say, speaking from memory? To the best of my recollection, it has been as low as 560.

7937. That is not much under strength? No; but I like to see a regiment up to strength.

7938. There was some difference, was there not, among the officers of the regiment? Not that I know of.

7939. Did you not lay a complaint against your Major? If you call that a difference—I had occasion to make a complaint.

7940. Have you got along well with the officers and men? Excellently. It is impossible that we could have done better.

7941. Was the Major the only officer with whom you have occasion to deal? I did not deal with him.

7942. I mean was he the only officer with regard to whom you had to make a complaint? Up to the date when I made a complaint in reference to Major Waine, I think there had been only one little matter with one officer.

7943. Was that officer Captain Wilks? Yes; it was a passing matter.

7944. He was put under arrest, was he not? No.

7945. Anyhow, you are aware that there was an inquiry into a charge—if that be the proper way in which to express it—preferred against the Major? Yes.

7946. You were present at that inquiry? During most of the time.

7947. Have you had an opportunity afforded you of seeing the report of that inquiry? Not as an officer. I may be permitted to say, perhaps, that as the inquiry was conducted openly, in my opinion it would have been advantageous if the decision of the court had been given in an equally open manner. That, however, is only a matter of personal opinion; I do not offer it by way of criticism.

7948. It is alleged that you yourself did something to suppress the report;—is there any truth in that allegation? Certainly not, quite the contrary.

7949. How would you manage to dissociate yourself as Officer Commanding the 7th Regiment from your position as a Member of Parliament;—it is rather a difficult position, is it not? It is, undoubtedly.

7950. You have at times to forget that you are a Member of Parliament, and just remember that you are a soldier, and *vice versa*? Yes; for instance, Mr. Wilks, a member of this Committee, is an officer of the defence force, yet he is sitting in judgment upon the military administration. I suppose he realises the difficulty just as much as I have done.

7951. But he is not active, as it were? He is liable to be called upon to serve at any time.

7952. He could not be called out if he were sick, could he? No.

7953. *Mr. Quinn.*] Could he not evade that position of affairs by resigning? A member of a volunteer regiment can resign by giving fourteen days' notice. I am not sure, at this moment, what the position of an officer would be, but I presume he could resign.

7954. *Chairman.*] The reason I ask you the question is this: I noticed the other day that, in a letter to a newspaper, you commented upon the evidence given by the Major-General Commanding to this Committee;—did you write that letter as an officer of the force, as a Member of Parliament, or as one of the general public? I do not think I mentioned the General's name in any shape or form. I merely made reference to the fact that certain evidence had been given.

7955. That evidence was given by the Major-General; it was reported in the newspapers, and in criticising it you practically gave it a direct denial? I said I think that a mistake had been made.

7956. Did you make that statement as a soldier, as a Member of Parliament, or as one of the general public? I do not think, Mr. Chairman, that that is a question I can answer without notice.

7957.

7957. The reason I ask you the question is this: I wish to know whether you consider that it would be upholding discipline to comment upon evidence given by your superior officer? You yourself stated just now that the position I occupy is a difficult one. I am here to-day to give evidence which I presume will seriously conflict with evidence which has been already given here.

7958. But there is a difference between giving evidence to a duly-constituted body, like this Committee, and press correspondence. Did you consider that you were writing to the press as a Member of Parliament, as one of the general public, or as the Officer Commanding the 7th Regiment? Certainly not as Officer Commanding the 7th Regiment. I did not in my letter refer to myself in any way. My letter referred to the Officer Commanding the 7th Regiment. I did not write in the first person singular.

7959. It is difficult for you to steer through the shoals and quicksands which beset one in your position, and it is difficult, of course, for the general public to clearly grasp the position. Upon another occasion, I believe, you wrote to the press criticising some of the regiments, and, I think, the Rookwood camp, is that not so? I think not.

7960. Did you write a letter in which you stated that the Australian Horse practically resolved themselves into a mounted rabble? No.

7961. Did you not state that they charged a certain position in direct contravention of some well-known rule? I think you are probably referring to my correcting what I may perhaps call some press jocularity.

7962. It was about the time of the Rookwood camp? It was in reference to last year's camp—a camp which was held partly at Rookwood and partly at Paddington. It had reference to alleged events at the sham fight at Canterbury.

7963. Was any exception taken to the letter? Not that I know of.

7964. Did the Officer Commanding the Forces in any way mention the matter to you? I never received the slightest indication on the subject from anyone.

7965. If the Officer Commanding the Forces had considered your conduct insubordinate it would have been his duty to take some action? I cannot say what might have been the General's duty; but no doubt some reference would have been made to the matter had my conduct been deemed improper.

7966. The General would have been the only officer having control over you as the officer commanding your regiment? No; at that time Colonel Bayly was in between.

7967. He commanded the Volunteer Forces;—did Colonel Bayly in any way mention the matter to you? No, I received not the slightest indication from any source that my writing was deemed undesirable.

7968. Had it been deemed insubordinate, it would have been the duty of your superior officer to bring you to task in the matter? I suppose so.

7969. If you considered one of your officers insubordinate, would you not think it your duty to bring him to task for his insubordination? I should ask him what he meant by it, certainly.

7970. If a satisfactory explanation were forthcoming, the matter, I presume, would end; if not, I suppose it would go on to an inquiry? In that case, I should have to present the matter to the General.

7971. And he would decide? Yes. Perhaps it might save time if I were allowed to say that I have never, at any time, or in any way received from superior authority an intimation that I have acted contrary to the Act, the Regulations, the General Orders, or the Queen's Regulations in any matter whatever.

7972. Did you see the recommendations resulting from the inquiry to which I was referring just now? I have become acquainted with them.

7973. Do you know that it was practically recommended that certain officers should be retired? Yes, two officers.

7974. Yourself and the adjutant? Certainly not! Major Waine and the Quartermaster.

7975. The recommendation was that they should be put on the reserve list? Something of that sort.

7976. Was there not some recommendation in regard to yourself? No recommendation was made as to myself. My name was not mentioned.

7977. *Mr. Meagher.*] You have seen the recommendations? I have read every word of them, and very recently. I speak from recent knowledge, and not from my recollection of bygone events.

7978. *Chairman.*] Major-General French gave this evidence:

Do you consider that the evidence disclosed by the inquiry showed that Colonel Neild was not a fit officer to command the 7th Regiment? It showed that there were certain drawbacks to his being in command.

That is the General's evidence. That is not the report. You asked me just now questions as to the report from the inquiry. You are now quoting the General's impressions of the evidence given.

7979. The General's examination continued as follows:

Did the Court of Inquiry consider so? Yes.

And you approved of their finding? Yes.

You did? Yes; in certain respects you know. He is a very energetic active man. I may say what I particularly found fault with was the difficulty of persuading him to attend to points of military discipline.

That is a very important thing, is it not? Yes.

That Court of Inquiry found that Colonel Neild should not be in the position of Officer Commanding the Regiment? Yes; that covers it.

Did you agree with that finding? Yes.

Having agreed with that finding, did you subsequently, in public at a parade of this regiment, compliment this particular officer? As regards what?

As regards the efficiency of his regiment and his attendance for the day? On the very great improvement in the numbers.

Allowing every credit for his energy and zeal, you still think he should not be the Officer Commanding the 7th Regiment? I have not changed my views from what I put forward originally about it. At the same time, I am willing to give him every credit for the work he has done.

7980. From that evidence it would seem that the Major-General is under the impression that the report of the board of inquiry was in favour practically of placing you on the reserve list? I do not know how that may be, but apparently the General has not read the report since it was sent in last January, and has forgotten the details. That is the only way in which I can account for it. Certainly there is no such recommendation in the report.

7981. *Mr. Quinn.*] The report has not been altered in any way, I presume? That I cannot say, but I do not think it possible.

7982. *Chairman.*] They could not alter the report once it had been sent in, could they? I should not think it would be possible.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

J. O. Neild,  
Esq., M.P.

9 Oct., 1900.

7983. That would be "faking" of the worst possible kind; it would be absolutely criminal? I do not think the report has undergone the slightest alteration.

7984. Anyhow, you are perfectly satisfied that the Major-General must have been speaking under a mistaken impression when he gave that evidence? Yes. The report was sent in in January last, and it is quite possible, in the interval which has elapsed, for a misapprehension to have arisen in the General's mind. I myself am speaking from very recent knowledge. I can tell you, if you wish, the only reference made to myself in the report. One reference is made in this way: That the *laches* of the Adjutant were of all the more consequence because the Officer Commanding the Regiment did not possess lengthy experience. The other reference is one following my own evidence before the Court of Inquiry: "That it was desirable to close up. (The Court, unfortunately, used the word "disband," which does not correctly express the reading intended.) They recommended that two of the companies at the Victoria Barracks should be disbanded, and that the Commanding Officer of the regiment should be authorised to establish in their places two suburban companies. That had been accomplished by me, months and months before I knew what was in the report. That is what I had been trying to accomplish for a long time—that the companies at headquarters should be reduced to two. Those are the only references to myself in the report.

7985. Major-General French also gave this evidence:—

And I may take it that you still think he should not be the Officer Commanding a Regiment? Yes, for certain other reasons, giving every credit to his energy and zeal.

That evidence was given on the 22nd September;—is there anything in the report which would bear the construction placed upon it by the answer to that question? Nothing whatever in the report of the Court of Inquiry. You might, perhaps, in quoting the evidence, mention one of the matters also referred to—the increased strength of the regiment.

7986. I find that Major-General French gave this evidence:—

Did you subsequently in public congratulate that same officer who you considered was not worthy to hold the command of the regiment on the parade of his men and his regiment in his capacity of Officer Commanding? I congratulated him on the great improvement in the numbers. He had worked the numbers up very considerably. I like to give credit where credit is due.

—Upon that point, I may say that I have seen the report written by the General upon that inspection. With reference to that report, some questions were answered in the House on the 3rd of this month, and you will find on reference to the answers that it is stated that Lieutenant-Colonel Neild—these are the General's words—"had done very much for the efficiency of the regiment." That is a different matter from numbers; but questions were answered in the House during last week which show that the regiment had a larger attendance at the Easter training this year, and a higher percentage of efficient than had any other regiment in the entire Volunteer Force. Every man in the regiment, with the exception of a couple of officers, was an efficient this year. It will also be seen from the answers given by the Colonial Secretary, on the 3rd October, that, in the report to which I have just referred, General French stated that he noticed a considerable improvement in the drill, although there were a large number of recruits in the ranks. That would be since the regiment had been wholly in my hands—since I have had no major and no adjutant. It goes to show, that since the regiment has been wholly in my hands it has been brought up to over its full strength; that every man in the regiment, with the exception of a couple of officers, has been efficient; and that the attendance at the Easter training was higher than that of any other Volunteer regiment in the Colony, the drill having also improved. The General, in the same report, recommended on account of the improvements effected and the work I had done, an increase of the strength of the regiment by 200 men.

7987. *Mr. Meagher.*] At the public parade referred to, did he congratulate you upon the efficiency of the force? Yes. The exact words I cannot now remember, but the action I had taken in connection with the regiment, he said, had his entire approval, and he congratulated the regiment upon the fact that its officers had been loyal to their Commanding Officer, and he also said that after what he had seen that day he should have great pleasure in recommending an increase of the strength of the regiment. That is the fact, and hundreds must have heard the words used.

7988. *Chairman.*] The Officer Commanding a Volunteer regiment may decide upon the kind of uniform the regiment shall wear, may he not? I should hardly say that.

7989. Do they recommend it? They do; but their recommendations are not always agreed to.

7990. Not necessarily? No. I notice that evidence was given here to the effect, and you, Sir, also made a statement to the same effect, that the uniform of the 7th Regiment had been decided upon by me. I had nothing whatever to do with it.

7991. In the first place, who recommended the red coats? The 300 or 400 persons who signed the application for the enrolment of the corps. I had nothing whatever to do with it.

7992. When men are signing applications for enrolment in a corps, do they specify the kind of clothing they desire to wear? Yes. The corps was started by some gentlemen who have left the Colony now, at a time when I happened to be absent from it. I had nothing to do with it. There were some hundreds of signatures to the paper asking for the enrolment of the corps, and some of the persons interested came to me and asked me to sign a requisition to the Mayor of Sydney to call a public meeting as to the proposed establishment. I signed it, and some persons subsequently called upon me and asked me to speak at the meeting. That I agreed to do. Subsequently a deputation asked me to accept the command, and after some objections on my part, I accepted the position.

7993. Do you say it is customary for men, when forming a corps, to specify the kind of clothing they will wear? Yes.

7994. In regard to the head-gear—the busby—who recommended it? I think you will find that a busby is stated in the application form.

7995. Do you yourself consider that a red coat and a busby constitute a suitable uniform for this climate? For work purposes, certainly not; but, for what is popularly known as swagger, they are all right. We wear brown uniforms when at work.

7996. Would not a busby upon a hot day be a dangerous head-gear for the men to wear? I have worn a busby upon a hot day, and have never found it uncomfortable.

7997. But it affords no protection from the sun at the back of the neck, does it? I have never been badly burnt when wearing a busby, but I have been horribly burnt when wearing a felt hat. It is turned up on one side, and it exposes the left side of the head and temple. I have had the skin taken off my head

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

head when wearing a felt hat. A busby shelters the head more, I think, although it may not shelter the back of the neck so much.

7998. You say that you were never burnt when wearing a busby, but that you were burnt when wearing a field service hat? Yes.

7999. You see the sealed pattern field service hat produced;—if you were wearing a hat of that pattern one half of your head would not be exposed, would it? Not one half of the head, perhaps, but it exposes the whole of the left side of the face. You must remember that the rays of the sun are not perpendicular. 8000. Could you tell us how it is that all the helmets and hats exhibited to the Committee are in such small sizes? I suspect that they have been used as sealed patterns, because they are too small for persons to wear. It is not a question of size; it is a question of style. I have told you how the busbies came to be recommended. The next thing I have any recollection of, in connection with the matter, was reading a General Order fixing the dress. You will find it upon page 95 of the book of the Brigade and General Orders. The number of the General Order is 222, and is dated November 6, 1896. It says: "Busby, light rifle pattern, as worn by the 60th Rifles." That was the instruction issued four years ago next month."

8001. By whom was that issued? By the General. It was issued when I was in England. I read it, as a matter of fact, when I was there.

8002. Were the red tunics included in that General Order? Yes. There is a full description of the tunic in the same Order.

8003. What is your opinion of the best head-gear, having regard to the comfort of the men, usefulness, and suitability to the climate? Unquestionably, for ordinary wear, the felt hat is as good as any you could get. It might be better ventilated, perhaps. I have suggested a plan of ventilation to Mr. Anderson which would be an advantage. It is certainly the best head-gear, and is better than the helmet.

8004. How would the busby and the red tunic answer upon active service? No one would dream of wearing them upon active service.

8005. If an enemy attacked us suddenly, the men would have to wear them or go without head-covering or tunic? Not at all. The dress of the Regiment for work purposes is brown tweed; we never wear anything else when at work.

8006. How many suits of brown have the men got? One apiece.

8007. Then, if they were called out upon active service at a few days' notice, they would only have one suit of clothes? That is so.

8008. If they had two suits of brown, without the red tunic, they would have always two suits ready for equipment? They would be better off for active service undoubtedly.

8009. They would be more fully equipped? Yes; but in this respect there is no difference between the 7th Regiment and the other regiments. They are all in the same position.

8010. I am not singling out the 7th Regiment specially;—I am merely dealing with it because you, as the Officer Commanding, would probably be able to give us more information about it than would anyone else. The Committee intends to call the Officers Commanding the different regiments, and each can then speak for himself;—do you think that the brown uniforms look very well? I think it is the most workmanlike suit. I had occasion to wear the uniform in the old country when I was there—I am referring now to the brown uniform—it met with handsome commendation from no less a person than the Field Marshal Commanding, Lord Wolseley, and other distinguished officers, who praised it very highly as a working suit.

8011. In England, of course, there are old associations connected with the uniforms of different regiments, and that would make it very difficult for the British army to be dressed in one uniform colour? Yes.

8012. With regard to the Highland regiments, for example, you are aware that an effort was made recently, at Capetown, to induce them to discard the kilt, but they would not do so? Yes, I am aware of that.

8013. Here we have no prejudice or sentiment of that kind wedding us to a red or blue suit, as the case may be? None whatever. But I quite agree with Major-General French that on special occasions—and there are about half-a-dozen in the course of the year—it is desirable that there should be some little distinction made between the suits of clothing the men use for drill and in camp and the suits then worn. 8014. Have you noticed the uniform of the Lancer Regiment? That is a parti-coloured uniform—a robin-redbreast pattern, in fact. There is a red breast-piece, I believe.

8015. I have never noticed it upon the men when riding about ordinarily—it struck me as being an ordinary brown uniform? I think you will find that they wear a scarlet breast-piece. There is, perhaps, a difference between the ordinary working suit and the parade suit.

8016. Do you not think it is a mistake to wear scarlet? I do not think I am justified in expressing a wholesale opinion of that kind.

8017. You rather like scarlet and swagger? I do not say that; but I do think it is desirable that there should be a distinction between a working suit, and, if you like to call it so, a holiday suit for special occasions.

8018. Why so? The General gave you his reasons the other day; and I can only say that his views in this respect are similar to mine.

8019. He seemed to think that red looked smarter? There is something in that; but no one would dream of going to fight, or to ordinary drill, in a red suit.

8020. As a matter of fact, is all this soldiering business designed, not with the intention of the men being ready to fight if called upon, but merely with a view to swagger? I have already explained that brown is worn on ordinary drills, and in camp; in fact, on all working occasions. Scarlet is worn only occasionally. The scarlet garment has a longer life, under the Regulations, than have the brown clothes, because it is only worn occasionally—just as you would wear a great-coat occasionally.

8021. How can you compare a great-coat to a scarlet tunic;—a great-coat is a thing of use, whereas, according to your own statement, a scarlet tunic is a thing of ornament? The analogy, perhaps, was not a good one. I have before me the Army List, from which you will see that the King's Royal Rifles is a regiment so large that, apart from the numerous volunteer battalions attached to it, it consists of no less than nine battalions, of 800 men per battalion; they wear the same busby. The 7th Regiment is, therefore, wearing a head-covering which is worn by far and away the largest regiment in the English army—a corps over 7,000 strong.

8022. Do you consider that an article of clothing suitable for the English climate would be suitable for our climate? Certainly not.

8023.

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

8023. That is specially applicable to head-dress? Quite so. Still, persons here wear top-hats and indulge occasionally in other eccentricities of dress of that kind.
8024. But can you make a fair comparison between dress which is held to be suitable for an English regiment and dress which is held to be suitable for an Australian regiment;—it is quite evident, is it not, that clothing suitable for the English climate would not be very suitable for the Australian climate? Certainly; that is so. You would not dream of wearing a silk duster in England on New Year's Day, whereas it is a very common occurrence in Australia; but you might wear a silk duster in England in the middle of summer, just as you would wear one here.
8025. You would not get the same degree of heat in England;—do you know the approximate cost of one of the red tunics, or, say, the whole suit; I mean what you have called the swagger or holiday suit? I think the trousers and tunic, apart from the busby, would cost about the same as the tunic, trousers, and field-service hat; there would not be much difference.
8026. What is the tunic made of? Ordinary red cloth.
8027. Would it not be more expensive than brown tweed? The full-dress would be slightly more expensive than the brown dress, but not very much more so.
8028. Mr. Anderson is the contractor for the clothing, is he not? He has been contracting in the past.
8029. I suppose that, in order to get the exact figures, we should have to go to him? Yes. I think you will find that the cost has varied a little.
8030. Mr. Anderson, I suppose, supplied the clothing at contract prices? Yes.
8031. Do the regiments call for tenders themselves? Yes.
8032. Then your quartermaster ought to have all the information? Yes. If I had known you wished that information from me, I could have obtained it without any difficulty this morning.
8033. Who is your Adjutant? I have had no Adjutant since the latter part of last December. I myself have done the work in conjunction with the Serjeant-major.
8034. We have had great difficulty in finding out, even approximately, the price of anything from the Military authorities? I could give you the price of anything without any trouble, but I have not the particulars by me at this moment.
8035. Do you not think a body of men dressed in clothing of a uniform colour of brown would look better than a body of men in magpie colours; that is to say men in the same regiment being dressed, some in red tunics, some in white jackets, and some in brown jackets? I have never seen that.
8036. Would not one uniform colour of brown look better than a magpie clothing of that description? Undoubtedly. One of the regulations is to the effect that the different units of a regiment are to be dressed similarly.
8037. Did you ever see the Scottish Rifles on full-dress parade? It is quite possible that you might see in any regiment some men in full-dress, and others with only field service uniforms.
8038. White is not a field service uniform, is it? No.
8039. Did you ever see the Scottish Rifles on parade? I have no recollection of seeing any of them in white jackets, although there may be a few recruits not wearing uniforms. I have sometimes in my own regiment men in plain clothes. They may have been passed into the ranks without having their uniforms supplied to them. It may have been the fault of the contractor, or their own fault in not going to get measured.
8040. Did you ever see the undress jacket of the Imperial Highland regiments? Yes.
8041. It is made of white material, is it not? It is what is called a shell-jacket.
8042. That is the jacket I have seen some of the men wearing? There might have been some reason for the men having to wear it.
8043. No doubt there was a good reason for all the men wearing what they had to wear. If the whole of the men were wearing brown uniforms there would not be such a state of things, because if the men got any suit at all it would be the same as the other suits issued. There would appear to be some advantage in a uniform clothing of brown therefore, even from a swagger standpoint? Yes.
8044. When you talk about swagger, I suppose you mean the swagger of a regiment, and not the swagger of an individual mashing girls in King-street? No. The phrase is a very well-known one, and I used it in the sense in which it is generally used.
8045. Applying it to the regiment? Yes. The term swagger is often used to represent not behaviour, but style. I did not use the word as relating to behaviour.
8046. Do you not think the smartness of a regiment, and not the smartness of individual men when they are off duty, is the thing mostly to be aimed at? Absolutely; I quite agree with you.
8047. You are not much impressed with the idea of volunteers in red uniforms patrolling round and mashing girls? They are not supposed to wear uniform, except when on duty.
8048. But a big parade, as you probably know, engenders thirst? Yes; it is thirsty work occasionally.
8049. By-the-way, is there any truth in the statement about your capturing a water-cart out at the Rookwood encampment? That is one of the matters about which I wish to give evidence. I saw from the newspapers that you put questions to witnesses which involved the proposition that I had made a statement as to the capture of a water-cart, and that I made such a statement on the floor of the Assembly. I wish to say emphatically, on oath, that, to the best of my recollection, I have never in the Assembly at any time, or under any circumstances, uttered one word with reference to my being connected with the defence force. I have scrupulously avoided it. The story of the capture of a water-cart was introduced by a *Sunday Times* contributor—possibly a member of the staff. I have also observed that certain witnesses here gave evidence as to the supply, or non-supply, of water at the Rookwood Camp. I wish to state positively, on oath, that there was no standpipe in the Volunteer camp at Rookwood in 1898, or anywhere near the camp; I do not care what evidence may be given to the contrary.
8050. One officer said it was 250 yards from the tents, and another said it was alongside them? I am in a position to give very positive evidence on this point. It is statements of this kind which do harm to a regiment. I say positively, on oath, that there was no standpipe in the Volunteer camp, and what is more, a standpipe was an impossibility, because the camp was situated many feet above the possibility of delivery by means of a standpipe. If there were a standpipe there, why did the Army Service Corps cart the water that we had, when we had any, from a standpipe on the outskirts of the town of Rookwood? When we failed to obtain water, it became necessary for me to hire a cart, and put a ship's tank on the cart, in which to carry water from a standpipe. How was it, if I had the standpipe there, that the Military authorities,

authorities, subsequent to the camp, paid for the hire of the cart. However, I went further in the matter, and I addressed this letter to the President of the Metropolitan Board of Water Supply and Sewerage on the 2nd October:—

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

My dear Mr. Garrard,

Parliament, New South Wales, 2 October, 1900.

Will you do me the kindness to cause me to be informed as soon as possible what standpipe or standpipes were erected or available for use at and during the encampment of the Volunteer Brigade at Milkman's Hill or Mount Pleasant, about equi-distant from Rookwood and Auburn, during Easter, 1898?

I mean the encampment that was bounded on the west by the road running north to Auburn Station.

I may explain that I do not know of there having been any standpipe there, but it has been frequently stated that there was one.

If there was, may I be informed of its position, and distance from the road in question.

Believe me, &c.,

JNO. C. NEILD.

The Honorable Jacob Garrard, President, Metropolitan Board of Water Supply and Sewerage.

I received, in reply to that communication, the following letter:—

No. 1900/8,469-9,416.

Sir,

Metropolitan Board of Water Supply and Sewerage, Sydney, 5 October, 1900.

Referring to your letter of 2nd inst., addressed to the President, requesting information as to the water supply to the encampment of the Volunteer Brigade at Milkman's Hill, near Rookwood, during Easter, 1898, I am directed to inform you that, at the request of the Military Department, the Board carried out an extension of the 4-inch water-main in Graham-street, and erected two standpipes in the position shown on the accompanying tracing. It was originally intended to continue the 4-inch main beyond Mount Auburn Road, but it was found that the pressure would not have been satisfactory.

At the conclusion of the training the standpipes were removed.

I have, &c.,

WILLIAM HOLMES,  
Secretary.

J. C. Neild, Esq., M.P., Legislative Assembly.

I have a tracing here which affords the most emphatic contradiction of the evidence given before this Committee which it is possible to afford. The tracing is drawn to a scale of 50 yards to the inch. The site of the 7th regiment camp was at the extreme western end of the Volunteer encampment. You will notice the position of the water main in Graham-street from which an extension was made, and the position of the two standpipes.

8051. How far would they be from the site of your encampment? The distance which the men would have had to carry buckets of water, or over which we had to cart it, was 600 yards, or about a third of a mile. With reference to the supply of water, the men had to fall in at the Sydney railway station soon after 7 o'clock in the evening. We reached camp after 11 o'clock p.m., and it was mid-day on the next day before, as far as I know, a single drop of water reached the camp from a military source. I obtained from a well, connected with a private house on the other side of Park-road, a few buckets of water to enable the men to have a cup of coffee; otherwise no water was brought into camp until 12 o'clock on the following day. It was under those circumstances that I chartered a cart to cart water from the standpipe on the outskirts of Rookwood.

8052. *Mr. Meagher.*] You did not commandeer the cart? That is a fiction—someone's fun. I believe we had part of a cask of water delivered by the Army Service Corps before I took the action of hiring a cart, but the hiring of the cart was subsequently paid for by the Military authorities.

8053. *Chairman.*] Did the Army Service Corps strike you as being very efficient? They had not enough horses; they had only the artillery horses. At that time they had no horses of their own, and the horses they were using had been worked to death carting the headquarters' fixings up to the camp. The horses were fairly played out.

8054. You say the artillery horses were worked to death carting the headquarters' fixings to the Rookwood camp? I mean the camp where the partially-paid troops were. There were all the tents and the general impedimenta of a camp, stores, and so on. They had all that work to do and they afterwards carted water for us.

8055. How far would it be from here to Rookwood? The carting was only done from the station.

8056. How far would it be from the station to the camp? Each trip would be about a mile each way.

8057. If that work knocked up the horses, how would they get on if they were doing a march from the Modder River to Bloemfontein, and were making about 23 miles a day carrying everything necessary for an army? I am afraid they could not do it.

8058. The Army Service Corps must be in an absolutely useless state if it knocked up through having to cart stores only a mile? Of course, they would take a good many loads during the day.

8059. Of what did the loads consist? Of stores chiefly.

8060. But surely they would not be carting stores all day for a few thousand men. How many men were there in camp? I suppose the total number would be between 5,000 and 6,000.

8061. That would not be the average, would it; there were only 2,000 at the finish? There were seven Infantry regiments, and I suppose they would average about 500 men each.

8062. Would you be surprised to learn that they did not average 350? I should.

8063. What was the greatest strength there? We were a little under 400, and we had the largest attendance in the volunteer section.

8064. Yet you say you think the regiments would average 500 each? Yes. In the partially-paid camp the regiments were up to strength; they were over 600 each; these men received 8s. a day for coming into camp.

8065. Ordinarily the first thing for an Army Service Corps to carry along would be ammunition. There was not much of that to be carried? No.

8066. What they had to carry would be the necessaries for a seven or eight days' encampment? There were four days for the volunteers. But I should explain that the matter is one concerning which I have no technical knowledge whatever. I understand that the facts were these: The Army Service Corps at the time had no horses, and were using the horses attached to the field batteries. I may be wrong, but I believe that that was the case.

8067. But there would be plenty of horses in the artillery—waggon horses, the spare horses, and the battery horses? I have no knowledge of the subject which is of a reliable character.

8068. Does it not strike you as being marvellous that, in carting stores and material for 5,000 or 6,000 men for the distance of a mile only, the transport service should break down? But it generally does break down here somehow or other.

8069. I suppose there was a road leading up to the camp? I do not think there was a road. The approach was over broken ground, but there would be no difficulty in getting over it. 8070.

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

8070. *Mr. Meagher.*] I suppose it would depend upon the way in which the horses were driven and the number of journeys they would have to make? I believe that some of the horses had been employed for days beforehand carting up all the tents, camp tables, and one thing and another.

8071. *Chairman.*] Camp tables did you say? Well, rough boards and furniture of one sort and another.

8072. *Mr. Wilks.*] Is it not a fact that the horses were used to a considerable extent in carting the officers' kits? I heard so, but I do not know whether it is a fact. All the kit I had I carried to the railway station at this end in a cab.

8073. Did you not notice in some of the officers' tents wash-stands, washing-basin, and beds? I saw some little canvas stretchers, which can be folded up and carried over one's arm.

8074. Did you not see some wash-stands? I do not remember seeing any. I myself had a metal basin and a bucket, and I thought them quite good enough.

8075. *Chairman.*] Do you consider that much benefit arises from going into camp under such conditions. Do you know that even the Field-Marshal commanding in South Africa would not dream of carrying a table round with him? Probably not,—he would probably commandeer one.

8076. But there were a number in the camp at Rookwood; also deck chairs and that sort of thing. Did not the officers make themselves pretty comfortable? Is it a fair thing to ask me questions about what I saw when I was a visitor in another camp?

8077. I am speaking of your own camp? We had no luxuries in our camp.

8078. Did it take the carts some time to cart up the medical comforts? I do not know anything about those.

8079. Anyhow, the fact is that the transport service broke down in carting provisions for this small detachment of men a distance of a mile? I do not say that, but it rather gave out on the water question.

8080. And water is a very necessary thing? The most necessary thing of all. It is better to have water than food in an emergency.

8081. How was the food handled at this encampment? There was undoubtedly an entire lack of sensible management in the manipulation of the rations. Men who had never cooked a potato or a steak in their lives had to cook for sixty or 100 men. There ought to be, in my view, out here, as there is in connection with military depôts in England, some school of cookery where men can be taught to cook plain articles of food. When potatoes and meat are served out in a camp, and the men cooking them have no knowledge of cookery, they very likely will not make the best use of the rations they get.

8082. Did you draft off a number of men to do the cooking day about, having no knowledge whatever as to whether or not they were able to cook? An effort is made in such circumstances to ascertain which men have any knowledge of cooking. Some men will say they have, but their knowledge is frequently of the most rudimentary character. They can boil or bake a piece of meat, perhaps, but they have no idea of making soup and eking the stuff out.

8083. *Mr. Quinn.*] But you would not require French cooks in such a camp, would you? No, but you want to make as much as you can out of the not too lavish rations supplied. I myself had to order a couple of carcasses of mutton for two companies, so that they might not have to go to bed absolutely hungry. That meat was subsequently paid for by the Military authorities.

8084. *Mr. Wilks.*] That was done upon my representation, was it not? Yes; you came to me about it.

8085. *Chairman.*] Our army cannot be in a very good state just at present if the men are unable to do the necessary cooking for a few days' camp;—suppose they got away into the back country, they would suffer starvation in a land of plenty? That would depend somewhat upon the contractors.

8086. Does it not show that the method of enrolling too many volunteers from the city, and not enough from the country, where, generally speaking, every man has to do his own cooking at some time of life, is not at all satisfactory? Sometimes a man will say that he can cook when, as a matter of fact, he does not know anything about cooking? He thinks he will like the job of being about the camp in preference to doing hard work.

8087. *Mr. Wilks.*] The men get paid for it too, do they not? Not in Volunteer camps, I think.

8088. You will find they do, I think? I am not aware of it. We have not a force in this Colony which could be put into the field without a lot of preparation.

8089. *Mr. Quinn.*] You mentioned just now the making of soup. Do you think that soup is a thing which a soldier upon active service ought to look for? I do not mean soup in the way in which you would mean it in putting that question, but there are a lot of bones which the men cannot eat, and they can be made with vegetables into a form which will give the men good sustenance. A man with some knowledge of cooking can utilise such material, and can get more out of the rations supplied than can men who have no idea except of boiling or baking a piece of meat. I was not speaking of soup considered as a luxury.

8090. *Chairman.*] Do you not think these camps should, as nearly as possible, resemble in their conditions, the conditions of active service? Yes.

8091. Then do you not think the men should be supplied with rations such as they would receive in South Africa? Apparently, from some of the evidence, they do not get much in the shape of rations there.

8092. Would it not be a useful experience for the men for three, four, or five days to be supplied with a ration in the shape of a small tin of bouilli beef, and three or four "forty-niners." That would be more in accordance with the idea of a campaign? There is a difference between the position of men in our camps, and that of men on active service. Men on active service have been under some regular course of training, either in depôts before they start, or at least on board troopships, and they are in a totally different condition from that of men who are leaving comfortable homes and comfortable meals, and the regular conditions of life. If you put such men suddenly under active service conditions, you would find that they would not be fit to do the amount of drill asked of them; they would break down. That I think is a reasonable view to take.

8093. I suppose the Duke of Norfolk or the Duke of Marlborough would be accustomed to just as comfortable a home as would the men in any of our regiments? A great deal more comfortable, probably.

8094. They seem to have tackled the work without breaking down? I thought the gentlemen you named were magnificently provided with all sorts of things; I read so in the press.

8095. I do not think that is the case? Of course I could not say. It is a hypothetical question.

8096. Suppose an enemy assailed our country to-morrow, you say you could not call our men out for active service until they had gone through a stage of training? I am afraid you misapprehend my meaning.

meaning. If a man has to do anything by all manner of means he will do it; but I do not think there is anything to be gained by making men as miserable as possible under the plea of giving them additional instruction.

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

8097. But how would they be made miserable? It is one of the leading axioms of all our chief Military authorities that the proper feeding and comfort of troops is a necessity if you want to get good work out of them. That is a purely theoretical proposition. I can merely express an opinion; I have not had sufficient experience of camping to render my opinion upon the point valuable.

8098. How was the meat supplied to your regiment when in camp? By contractors.

8099. How much per man? I think  $1\frac{1}{4}$  lbs., including bone.

8100. Was the meat cut up and weighed? Yes; it was weighed off by companies, I think, and it then went over to the companies' cooks.

8101. The whole company's meat was cooked together? Yes.

8102. Did you ever see a large camp in England or Scotland, and take any notice of the way in which they handled rations there? There they have a perfect system.

8103. Are you aware that in such cases the meat is weighed off in companies, and is then weighed off in messes? That would be a more suitable way.

8104. The meat and vegetables are put into a net if they are to be boiled, with the number of the mess, and are cooked in that way? If that were done the rations, of course would go further.

8105. When the cooking orderly goes over to get the rations, the net for his mess is fished out and there is an end of the matter, so far as the distribution is concerned? That is a totally different system. Of course the conditions are entirely different when you are providoring and rationing men day after day, year in and year out.

8106. I am speaking now of Volunteer encampments? I should like to see a similar system adopted here.

8107. Would there be any difficulty in the way of it? There ought to be none.

8108. Each tent would then have their own vegetables, meat and bread? I entirely agree with what you say. There would be a difficulty, however, in carrying out the system under the circumstances of the Rookwood camp where there is only one bucket per tent, which has to be used for tea, coffee, and all purposes, including the washing of the men themselves.

8109. How was the coffee and tea made;—did each tent or company make their own? As far as I can recollect it was done by companies.

8110. Were the companies formed into messes, and did each tent mess by itself? The men messed in their own tents.

8111. So much tea and coffee was allowed for each mess? Yes, with more or less regularity. With only one bucket for 9 or 10 men for all purposes, there was not much possibility of order.

8112. Buckets are not very expensive, are they? No.

8113. If taken proper care of they would last for years? Yes. I am not sure at this moment, but I think that at the last camp we had two buckets allowed to each tent.

8114. Is there any other matter you would like to mention? There is one thing I should like to speak about. There have been statements made in the House—I think by yourself—to the effect that the relations between the General Officer Commanding the forces and myself were of a very unsatisfactory character. I wish to be allowed to say that my relations with the General Officer Commanding have never been more cordial, perhaps not as cordial, than they have been during some few months past, as far as my knowledge goes.

8115. My declaration probably arose from the fact that the Major-General said, in answer to a question by Mr. Meagher, that you were not fit to command a regiment, and that you had written a letter to a newspaper practically stating that he was a perverter of the truth? I did not say that.

8116. Did you not say that the statements he had made were not true? Pardon me, I do not think you ought to put the matter in that way. In the first place, I did not refer to the General at all; I referred to the evidence, and said that it was a mistake. It is quite possible, under such circumstances, for any one to make a mistake. There is one other matter I wish to speak of. A statement was made here by Colonel Taunton as to his being overburdened with correspondence from Volunteer regiments, and he specially named me as being the chief sinner. Upon reading that statement, I directed the serjeant-major, Warrant Officer Shipley, to examine the register of records to ascertain how many communications had been addressed by me to the A.Q.M.G. during the period from the 1st January last up to September. He has supplied me with a list, which I propose to hand in. I find that the total number of communications is eight, and they have reference to such questions as the supply of tram-tickets to instructors. Two out of the eight are upon that subject. One had reference to the loan of flags to decorate the ball-room for our annual ball; another was as to the use of a room for recreation purposes at Victoria Barracks; one was an application for £5 for rations in connection with the Easter training, and so on. I wish to hand in the list, because it appears to me to be another case of extraordinary misapprehension. [*Vide Appendix.*]

8117. Is it the fact that recently, in order to get up the strength of the Regiment, you organised a sort of comic entertainment? I have not done anything of the sort.

8118. Was not the following order issued in connection with an entertainment on the 17th October:—

7th Regt. (St. George's Rifles).

A GRAND CONCERT AND SOCIAL, to welcome home our Invalided Comrades from S. Africa, will be held at the New Masonic Hall, Castlereagh-street, on Wednesday, the 17th October, 1900. Fun to commence at 8 p.m. sharp.

Carriages, wheelbarrow, ambulances, and policemen should be in attendance by 11 p.m., at which time the fun will cease.

Tickets—double, 2s.; single (lady or gent.), 1s.—may be obtained from members of the Committee at the Orderly Room, and at the door on night of Social.

Refreshments will be provided on our usual lavish scale.

Cloak-rooms will be in charge of attendants whose especial care will be to prevent garments left therein from getting on to the backs of people they don't know, which unseemly conduct they are occasionally guilty of, if not strictly supervised.

Dress: Uniform (as best becoming a soldier of the Queen), full-dress or field-service—yer pays yer money and ye takes yer choice—but waistbelts *must* be worn.

No civilians, other than friends of the members of the Regiment, who will be responsible for their good behaviour, will be admitted.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

Members willing to contribute songs, &c., are requested to communicate with the Hon. Sec. without delay, stating name of song, &c., they purpose rendering.  
This Entertainment will be under the distinguished patronage of Lt.-Col. J. C. Neild and officers of the regiment.

GEO. SHIPLEY,  
Hon. Sec.

3/10/00

GOD SAVE THE QUEEN-EMPRESS!

That is not a regimental order; it merely expresses the jocularity of an hon. secretary.

8119. Do you think that is a seemly document to send out in connection with a regiment? No, I think it would have been better not to send it out.

8120. Does it not occur to you that it would have been more appropriate in connection with Fitzgerald's circus than in connection with a Volunteer regiment? It is a bit of fun on the part of some one, I suppose.

8121. But it is sent out from the 7th Regiment, St. George's Rifles, and is signed by the Sergeant-Major. He is the chief permanent officer you have at the present time? Yes.

8122. One has no objection to humour, but do you think your chief permanent officer should send out a document of that character? I think it was a mistake, but at the same time you cannot very well deal with what a secretary may do under such circumstances. Had I been consulted beforehand I certainly should not have approved of the document. But we have our jokes sometimes even in Parliament.

8123. But Members of Parliament are not under the same discipline as are soldiers, you yourself have found that out? I do not think it is a question of discipline.

8124. Do you think that if any Imperial soldier issued anything like that document in connection with his regiment the matter would be allowed to pass unnoticed? I think you can scarcely draw such an analogy. No one contends that a Volunteer regiment shall be conducted on precisely the same lines in every detail as is a professional regiment.

8125. You have an annual ball, have you not? Yes.

8126. If there be any profits from it, where do they go to? I am not aware of the existence of any profits.

8127. But if there were where would they go to? Into the fund we are talking about establishing to be devoted to the purposes of regimental amusement.

8128. If there be any deficiency, who pays it? As a rule I think the officers would make it up.

8129. *Mr. Meagher.*] With regard to the inquiry into the affairs of the 7th Regiment, I believe counsel was employed? I believe so.

8130. On whose behalf was that counsel employed;—was it in your behalf? Certainly not.

8131. Who was the counsel? *Mr. Edmunds.* He was sent to help the members of the Court, I understood.

8132. You were present during the whole of the inquiry? During nearly the whole of it.

8133. Then surely you can tell us what *Mr. Edmunds'* status was? I never quite understood, except that he was there to ask questions for someone who was supposed to be behind the scenes. I never quite understood what his status was.

8134. The public, it would seem, did not quite understand? I applied twice for legal assistance, as I was representing the Regiment, but I only received a reply, which was in the negative, after the inquiry had closed.

8135. Was the inquiry based upon counts made against you, or what was its basis? The basis of the inquiry was certain accusations or complaints I made with reference to Major Waine.

8136. Then you were really the prosecutor? Yes.

8137. Did the counsel appear to be looking after the interests of Major Waine? Perhaps I should explain that the Court originated in my making complaints against Major Waine; and subsequently the Court was asked to inquire also into the attendance of the Regiment on two or three specified occasions. Major Waine had a couple of solicitors representing him during the time his conduct was under investigation; and subsequently when that was finished *Mr. Edmunds* turned up to assist the Court to ascertain why the men did not attend. It never was ascertained why they did not attend, and there is no means of ascertaining it.

8138. As a matter of fact were *Mr. Edmunds'* fees paid by the Crown? I presume so. The Court must, I suppose, have cost a great deal of money. The members of the Court were, I believe, themselves paid; I believe they all receive fees.

8139. Is it an advantageous thing for the tax-payers to be called upon to find counsels' fees in connection with inquiries into every trouble in our Volunteer Forces? That is a question which I presume you put to me as a Member of Parliament, and not as an officer of the military forces.

8140. I put the question to you as a Member of Parliament? As a Member of Parliament I think it is extraordinary.

8141. Do you know what the fees of the learned counsel amounted to? I have not the faintest idea. The members of the Court received, I believe, fees of £1 1s., 18s. 6d., and 15s. per diem each under a regulation that was issued apparently to enable them to be paid.

8142. *Chairman.*] Are you confident that that is so? The order was made by the Minister for Defence for the payment of fees to officers sitting in courts of inquiry. The order was made immediately before the Court assembled.

8143. You are aware that you are making rather a serious statement;—are you prepared to swear that the members received any fees per sitting at all? What I state is this:—That immediately before the Court assembled, an order was issued by *Mr. Reid*, as Minister for Defence—it is printed and everyone can see it; it is a General Order—authorising the payment of £1 1s. a day to a Colonel, 18s. 6d. a day to a Lieutenant-Colonel, and 15s. a day to a Major, and lower fees for the lower grades for sitting in courts of inquiry when the proceedings are of a lengthy character.

8144. Do you know of any officer who sat in this Court receiving fees at all? I do not know absolutely whether they did or not.

8145. You cannot say whether they drew any money; all that you can say is that they were entitled to draw it? Yes.

8146. *Mr. Meagher.*] In just the same way that Members of Parliament are entitled to draw a certain allowance; some members have not drawn it but have allowed it to remain in the Treasury? I do not know absolutely whether in this case the members of the Court drew the fees or not; but I know that the President of the Court frequently encouraged witnesses to attend by telling them they were entitled to fees for attendance, and if the witnesses were paid I presume the members of the Court would be paid. It is only supposition of course.

8147.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

8147. Have you any idea what the whole inquiry cost the country? I have no idea whatever.

8148. Do you know whether any claim for payment was sent in by witnesses? I saw some vouchers lying on the table one day. One witness claimed a couple of guineas for attendance, and I believe one or two officers have sent in vouchers since.

8149. At how many encampments have you been present? At three altogether.

8150. Can you say whether at all these encampments the contractors have given satisfaction in regard to meat and other supplies? I do not recollect hearing any complaints as to quality; but I have heard complaints as to quantity. Whether those complaints were due to the food being served out for a large number instead of for a small number I do not know.

8151. But you heard complaints at Rookwood of the want of food? Undoubtedly.

8152. Colonel Taunton gave this evidence:—

There were complaints also of want of food? There was ample food. There were legs of mutton and bread there thrown into the rubbish heap. It would have fed whole families. Most of these matters were due, as I have said, to want of knowledge.

—Is there any truth in that statement? That may have occurred at the Partially-paid camp, but it did not occur at the Volunteer camp. I do not know whether Colonel Taunton was at the Volunteer camp. I question whether he was.

8153. *Chairman.*] Would it not have been his duty to look round and see that everything was right? Yes; but he probably had quite enough to do without coming round to us.

8154. Who looked after your part of the camp? Our part of the camp looked after itself to some extent. Of course Colonel Taunton may have been there, I cannot say.

8155. *Mr. Meagher.*] Colonel Taunton also said this:—

They said that the food was overcooked? No army was ever better fed than were our men at Rookwood.

—It is notorious, so far as the Volunteer section is concerned, that the food was insufficient. In one of the regiments—not my own—a party of men absolutely walked off and would not come back. They cleared out through the want of food. It is notorious that Mr. Toohey, an officer of the Irish Rifles, bought bread by the half-dozen loaves to feed his men; he was seen carrying bread about under his arm, giving loaves to the men to eat. It is notorious that the men were half starved.

8156. So far as the Irish Rifles are concerned, you say that one of the officers not only had to purchase bread, but carried it round under his arm giving it to his men? Yes, and I am pretty sure it was Mr. Toohey. It is notorious that the men were very angry about the food supply, and the complaint appeared in the press at the time. It is well known that a number of men belonging to one of the regiments left the camp on account of the scanty supply of food.

8157. Can you assign any reason for this shortage in provisions? No; I know nothing more than the explanation tendered by the Military authorities at the time—that the short supply of food was due to poverty of knowledge on the part of those who undertook the cooking. That was the only explanation which was forthcoming. I do not know but that the full supply was given. A possible explanation is that the cooks did not get the full value of the provisions out of the quantity supplied.

8158. And it was not until this morning that you knew that a quantity of meat and bread was thrown on to the rubbish heap? I never heard of it. Of course there was a totally different condition of affairs existing in the two camps. In the Volunteer camp there was not a standpipe for 1,600 men and 400 horses. In the Partially-paid camp, I believe I am correct in saying that every cook's mess had a standpipe. I saw them frequently when riding past.

8159. How far were they apart? My recollection would lead me to think that they were over 100 feet apart.

8160. How far were the two camps apart? From three-quarters of a mile to a mile, the extreme limit would be over a mile. There is, perhaps, this explanation: the volunteers were on a hill, and except by tapping a main in the road shown on the plan, perhaps no water could have been made available. It was understood, however, that in Park Road, running north to the Auburn Railway Station, there was a water main.\* Had that been tapped, there would have been a supply of water to the camp. How it was that down at Graham-street, where the stand pipes were, there was not a sufficient pressure to carry the water any further I do not know. Perhaps an officer of the Metropolitan Board of Water Supply and Sewerage could explain it.

8161. At some manœuvres at Middle Head you were associated with a member of this Committee, Mr. Wilks. Whether from want of strategy, or otherwise —? Pardon me, I think you are now proposing to deal with a matter which is outside the scope of the inquiry by this Committee.

8162. *Chairman.*] It is not for you to judge, Colonel Neild, whether the matter is or is not outside the scope of inquiry by this Committee? But it is for me to judge, sir, what questions I can answer.

8163. *Mr. Meagher.*] I do not wish to be under any misapprehension; but as I understand the matter this Committee was appointed to inquire into the organisation and discipline of the Military forces of this Colony? Into the administration of the Military forces.

8164. I take it that I am now putting you a question as to the administration of the Military forces. You are in command of one of the Volunteer regiments, and that is my reason for putting the question to you. I put the question to you as the Commanding Officer of the Regiment. I wish to know whether at the manœuvres at Middle Head you came into contact with another officer, Mr. Wilks, by whom you were arrested. Did he not place you under arrest? No.

8165. Did you place him under arrest? No. Under the powers given to a commanding officer by law I placed the command of Captain Wilks' company in the hands of the next senior officer for about an hour, perhaps less.

8166. *Mr. Wilks.*] Did you not say, "You must consider yourself under arrest?" I believe I did. But that was a *lapsus lingue*. It was a mistake to have used the term, because none of the conditions attaching to arrest were observed either by Mr. Wilks or by myself.

8167. Whatever the result may have been, or whatever you may have said to Mr. Wilks, do you not know that an inquiry into the circumstances was made by the General Officer Commanding? There was no inquiry.

8168. Was there an investigation of any character? Certain papers were taken away by the General when he went on leave to New Zealand, and while out of the Colony he gave some decision upon the matter.

8169. Did you ever see the decision? It was read to me.

8170.

\* NOTE (on revision):—This is not so. I find Milkman's Hill is too lofty to permit of a water main or other pipe being placed there.—J.C.N.

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

8170. Do you know that the decision exonerated Captain Wilks? It did, I believe.

8171. Do you know that it reprimanded you? It did not go quite so far as that, I think.

8172. What did it do in regard to yourself? I think it expressed sympathy with Captain Wilks.

8173. As a matter of fact, was not the decision divided into three parts;—did not part 1 exonerate Captain Wilks; did not part 2 reprimand Colonel Neild; and did not part 3 express sympathy with Captain Wilks in the treatment to which he was subjected? I could not give definite evidence about the contents of a document I never saw, and which was merely read over to me two years ago. There was certainly nothing in it involving a reprimand to me.

8174. You admit, in effect, that this was not a street-corner episode;—you yourself, holding an important post, took part in a certain set of circumstances, and eventually the General Officer Commanding the forces gave a finding;—were you not anxious to know what the finding was? It was read over to me.

8175. But were you not very much interested in the finding? Yes, of course, I was.

8176. Naturally; and do you think that two years would obliterate from your memory a very important paragraph in the finding? I am sure that the document read to me did not contain anything in the direction of a reprimand.

8177. Are you prepared to swear that the finding did not in one part exonerate Captain Wilks, in a second part reprimand yourself, and in the third part express sympathy with Captain Wilks? There was nothing which you could possibly construe into a reprimand; it depends, of course, upon what meaning you attach to the word reprimand. I think the General disagreed with what I had done. I do not know whether you consider that that would amount to a reprimand.

8178. Do you think that the finding exonerating Captain Wilks, instead of punishing him and expressing sympathy with him, was a compliment to yourself? Not a compliment, decidedly.

8179. Was it not the reverse? That may be. It does not follow that it was a reprimand, although it may have been the reverse of a compliment.

8180. *Mr. Wilks.*] During the evidence this morning you expressed the opinion that your dual capacity as Member of Parliament and a Volunteer officer would occasionally bring you in conflict with the exercise of your duty? No; I hardly put it that way. I said it was difficult to maintain the two positions.

8181. Do you think it would be a wise procedure of this Parliament to pass a self-denying ordinance preventing a Member of Parliament from holding a position as a Military officer? That is a question I have not sufficiently investigated to be able to express an opinion upon that would be worth giving. I should not care to express an opinion upon it; there are so many questions involved. It is not considered undesirable in England by any means.

8182. From your experience you are not prepared to say whether you consider it undesirable here? Not beyond this—that judging by English precedents there is no harm in it.

8183. You said, in answer to the Chairman, that you had passed an examination? Yes.

8184. The ordinary course of examination is in three sections, is it not? Yes.

8185. Drill, regimental duties, and tactics? Yes.

8186. Did you pass in those three? I did.

8187. You passed in drill? Yes.

8188. In the practical school of instruction? I did not go through the school of instruction.

8189. Most of your officers have done so? Yes; I think they have.

8190. From your experience as an officer commanding, would you not think it desirable that you should pass the school of instruction? It all depends. Some men take longer to learn their work than others.

8191. Do you not think the drill would be more essential than the purely theoretical portion? I do not know. I only know that while 50 per cent. of marks will pass an officer in any subject, in drill I was 76.

8192. Did you pass in that examination in drill at the same time that you passed your examination in regimental duties and tactics? I passed all the subjects at the same time—the three sections. If you want to know the particulars, I passed 76 in drill, 81 in regimental duties, and 86 in tactics, being distinguished in two subjects out of the three, and receiving special mention for the whole examination; and the General paid me the compliment of sending me a congratulatory note by an orderly out to my private house, as the pass was considered an unusual one.

8193. You did not avail yourself of the school of instruction? No.

8194. Most of your officers have done so? The school of instruction is not known under the law. The law prescribes a certain course to be pursued, and that course I pursued.

8195. We have evidence here that the Bushmen's Committee, as representing the public, seemed to think that an M.L.A. should not be an officer? I do not know who constitute the Bushmen's Committee. Their views do not trouble me.

8196. The reason they assigned was that a Member of Parliament in this country would at times act at variance with the Military authorities, have you done so yourself? No.

8197. On no occasion have you acted at variance with the Military authorities? Not as a Member of Parliament that I know of. I may have expressed certain facts.

8198. Have you used your powers as a Member of Parliament to act at variance with the Military authorities? That is very hard to say, because when once I did something as a Member of Parliament—I wrote a letter to the Press as a Member of Parliament—it was apparently not deemed that I was writing in that capacity. So that that is a pernicketty proposition that I am not in a position to discuss. I can say that there are literally scores of Naval and Military officers in the British Parliament. The Army, the Navy, the Militia, the Yeomanry, and the Volunteers are all largely represented.

8199. You were gazetted Officer Commanding your regiment in 1896? Yes.

8200. To what office were you gazetted? I was gazetted as Captain Commanding.

8201. It was then a corps? Yes.

8202. Your next step was to the rank of Major? Yes.

8203. How long after was that? I was appointed Major more than a year afterwards—about September, 1897, I should think.

8204. Were you not appointed Major before you left for England? Yes.

8205. That would be considered rather rapid promotion in an ordinary sense? Yes; as rapid as the promotion accorded to an officer occupying an identical position with myself—the late Mr. Garvan—who was not a Member of Parliament at the time. We were made Majors at the same time. There was a Military reason—a necessity for the appointments.

8206.

8206. Prior to your appointment as Captain Commanding, did you go through any recruit drill? Yes.  
 8207. Were you passed in the ranks? Yes.  
 8208. Prior to your visit to England? Yes; I suppose so.  
 8209. You are not certain about that, are you? It is a long time ago. I do not know what report the Adjutant made. I was dismissed from recruit drill, so I suppose I was passed in.  
 8210. I want to get at the question of the discipline at the Head Office? That is a matter I have nothing to do with. That was simply the Adjutant's duty. What happened in the report I cannot say; it is the Adjutant's affair, not mine.  
 8211. What Staff Officer passed you? I suppose, Mr. Tower.  
 8212. He was Adjutant of one of the other regiments? He was Adjutant of the 5th Union Regiment at the time. I think he was called Staff Officer. I do not think he was called Adjutant.  
 8213. You spoke about the high percentage you gained in your pass for regimental duties:—that would mean that you were very conversant with the Volunteer Act and the Queen's Regulations? Not the Queen's Regulations; they hardly apply out here.  
 8214. You are pretty well known as having a good knowledge of the Queen's Regulations? Yes, I hope so.  
 8215. Do you know that portion of the Queen's Regulations that draws attention to the fact that presenting to the press any comment or any knowledge in regard to a report is irregular? No; I do not know the regulations you refer to, because they are continually changing.  
 8216. It is in the Queen's Regulations;—it came out in General Order 85, which draws attention to the Queen's Regulations? The Queen's Regulations do not apply, except in time of war.  
 8217. General Order 85, in precise terms, provides that any inquiry is not to be made public or conveyed to the press? I suppose you mean this—I may say that this is from the Queen's Regulations in 1889, and as they have been altered, I do not know how many times since, I do not know if this regulation is in force now:—

Officers and soldiers are prohibited from publishing and communicating to the press, without special authority, either directly or indirectly, information relative to the numbers, movements, or operations of troops, or details regarding fortifications, or armaments, or experiments made in connection with military matters.

8218. On the 1st of October, in the *Daily Telegraph*, you communicated certain knowledge you possessed about a Court of Inquiry that had been sitting? I answered questions with reference to that this morning.  
 8219. But you did communicate something to the paper on that day? No; I did not communicate anything.  
 8220. Well, a letter over your name appeared in the *Daily Telegraph*? I cannot answer questions of a hypothetical character. My letter is not before the Committee.  
 8221. In consequence of a complaint you urged against Major Waine, the General ordered a Court of Inquiry to investigate certain affairs of the 7th Regiment? Yes.  
 8222. That inquiry was a great expense to the public? I do not know.  
 8223. Have you reason to believe that there would be a large sum of money in costs of counsel employed and fees of court? I suppose it would cost something.  
 8224. Are you of opinion that the public should have had a knowledge of the decision of the Court of Inquiry before this? I said this morning that, speaking as a Member of the Assembly, I thought it would be well—the proceedings of the Court having been public—that the report should also have been public.  
 8225. As a Member of the Assembly did you not lodge an objection, in the objection book of the Assembly, against the production of these papers? I decline to answer a question relative to my action as a Member of the Assembly. This Committee has nothing to do with the actions of Members of the Assembly.  
 8226. You told the Committee this morning that you had a knowledge of the report? Yes, I said I had a knowledge.  
 8227. That is, that there was a report from the Court of Inquiry;—there would be the General's minute on it, and then the Lieutenant-Governor's comments on that? I did not say anything about that.  
 8228. Did you obtain the information concerning the report as an officer commanding the 7th Regiment, or as a Member of Parliament? I did not obtain it as a military officer.  
 8229. You obtained it as a Member of Parliament? I cannot say, exactly, how I obtained it; but I did not obtain it in any shape or form in my military capacity.  
 8230. You said this morning that there was no reference to yourself at all? Not in the report of the Court, beyond what I stated in reference to the Adjutant.  
 8231. You are not prepared to state what the General's recommendation was? I have not been asked any question about that.  
 8232. Are you aware what the General's recommendation on that report was? Yes, I know something about it. I have said nothing about it, and I decline to say anything about it now. It is a private document, I suppose, and I do not think I ought to discuss it in any way.  
 8233. The statement in the *Daily Telegraph*, to which I referred just now, is as follows:—  
 The above report was read over to Colonel Neild, by a representative of the *Daily Telegraph* last evening. In reply to questions, the Colonel said it was substantially correct, and that nothing was omitted; but he declined to discuss it.  
 You say there that nothing was omitted? There is one thing I have thought of since, and that is about some uniforms. There is something in the report about the uniforms that were paid for by the Clothing Board, at the instance of the Adjutant, when I was absent on sick leave and supposed to be dying. I had nothing whatever to do with it; but it has been attempted to be foisted upon me from time to time.  
 8234. Do you remember any reference being made to yourself—about your administrative qualities? Not a word; there was nothing of that sort in it.  
 8235. Do you remember the difficulty you had with the Officer Commanding the Volunteer Forces, Colonel Bayly? Yes.  
 8236. Were you placed under arrest? Yes.  
 8237. An investigation followed? No; there was no investigation.  
 8238. Well, an inquiry took place? Not that I know of; if there was one, I never heard of it. 8239.

J. C. Neild;  
 Esq., M.P.  
 9 Oct., 1900.

J. C. Neild, Esq., M.P. 8239. The General made recommendations with regard to your removal from your position? Possibly.  
 8240. And the Minister for War at that time, Mr. Reid, set his recommendation aside? I do not know what was done.

9 Oct., 1900.

8241. I suppose you are aware that the General made recommendations at the time of a stringent character? I never saw the document; so I cannot say.

8242. Have you any knowledge of the fact that one of the reasons for setting the recommendations aside was that you had been one of the founders of the Regiment? I cannot say; I never saw the paper. The trouble between Colonel Bayly and myself arose purely from his having attacked the Regiment in the newspapers—the *Sydney Morning Herald*—in an interview, and I replied through the same medium. I thought what was sauce for the goose was sauce for the gander; but it did not appear to be so.

8243. We have it in evidence that the recommendations of the General at that time were set aside? It may have been so. I was illegally arrested; there is no doubt about that.

8244. Are you aware of any comment being made to this effect:—That the recommendation was set aside because you were a Member of Parliament? I never heard of such a thing in my life. I do not think it possible such a thing could have happened.

8245. Speaking of your Regiment, you said that the General, on the last occasion, complimented you at the inspection on the efficiency of the men and the strength of the Regiment? He spoke in a manner that gave us all very great pleasure.

8246. The strength of a regiment is of a fluctuating character, is it not? Yes; but the Regiment has never been below strength for nine months. It has been above strength during that period.

8247. Does not the strength of a regiment fluctuate very much according to the enthusiasm over war matters? It might be so, in some cases.

8248. Is there any other reason to which you can ascribe the fact of the Regiment being stronger now than previously? Yes; the harmony which has existed in all its ranks for the last nine months—perfect harmony.

8249. Perfect harmony has existed in all its ranks? Yes.

8250. Did you not find, in your experience as Colonel Commanding that Regiment, that its strength fluctuated, even still more, before the harmony you speak of prevailed? Yes; it did fluctuate; it fluctuated when we had an adjutant.

8251. The 7th Regiment has become notorious, has it not, by reason of its troubles? The troubles that certain persons have tried to heap on it; it had no troubles of its own.

8252. To what do you consider the troubles were mostly traceable? I am sorry to have been driven to the conclusion that the late Adjutant was responsible for the principal portion.

8253. Is it not a fact that the matters that have made this Regiment notorious—I do not mean in a bad sense, but notorious from publicity being given to it—were traceable more to the Adjutant than to the Volunteer officers connected with it? I am afraid that is quite true.

8254. This is not an opinion you have held all along? No; I placed the most complete confidence in the Adjutant until some time back.

8255. You consider that the apparent misunderstanding between yourself and some of your subordinate officers was not presented to you in a proper light? The only case of the kind, that I know of, was that of Major Wayne. I do not know of any other subordinate officers with whom I have had any trouble.

8256. Is he still a Major of the Regiment? I presume so. We have seen nothing of him for eighteen months.

8257. Have you not power to remove him? No; I wish I had.

8258. But on the score of non-attendance to duty, he is inefficient now, is he not? All I can do is to draw attention to the matter under the regulations. The regulations are very plain on the point, and I have drawn attention to the matter. I used to send a notice to headquarters once a quarter, but I have given it up as hopeless. There is a very plain regulation, No. 20, which says:—

Any Officer who fails to pay proper and diligent attention to the duties of his position will not be allowed to retain his commission.

I used to draw attention to his absence from his duty once a quarter, but I have not kept it up with perfect regularity, because it seemed to do no good.

8259. How do you account for that regulation not being acted upon? I do not know; I had a reason given to me; I do not know whether I ought to express it here. If the Committee think I ought, I suppose I must do so. Understanding it to be the wish of the Committee, I will say that the reason given was that the General would take no action pending the action of the Government on the Court of Inquiry matter. That is the reason that has been given to me.

8260. From whom was that reason obtained? I suppose it was signed by the A.A.G., but it communicated the decision of the General. It was communicated either by the A.A.G. or the Acting A.A.G., and I think I heard it more than once. So I discontinued pressing the matter.

8261. Is not that a matter which tends to the bad regulation of the regiment? It has done the regiment harm undoubtedly, for an officer to be in this uncertain position, attending parades in plain clothes, and standing in front of the men in an attitude that could only convey the idea that he was beyond regimental authority.

8262. Did you object to the finding of the Court of Inquiry on the ground that it was not properly constituted? Yes.

8263. As all this merely hinges upon the Court of Inquiry, do you not think it wise for the report to be published and acted upon? With one exception, namely, that the Quartermaster being a very old Volunteer of some forty years' standing, I think he might have been let down a little more lightly. With that exception, I do not see any reason why the report should not be adopted. I have no objection to urge to the adoption of the report.

8264. Then your objection is to the recommendation of the General? Possibly, I have; it does not do to be too precise about a matter of recollection.

8265. Do you remember that the Lieutenant-Governor, Sir Frederick Darley, passed some comment on the matter? Possibly, he did.

8266. You do not remember the nature of it? No.

8267.

8267. If you did you would not care to give it to the Committee, as a Member of Parliament? I only have a recollection of the general terms recommending the adoption of the report. I do not remember more than that.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

8268. You do not remember where the Lieutenant-Governor referred to a previous occasion when Mr. Reid set aside the recommendation of the General in the matter of Colonel Bayly? I have no recollection of seeing anything like that—none whatever. I do not think that was so.

8269. Is your regiment fully officered at the present time? No; I have been trying to get the necessary officers appointed for the last eight or nine months.

8270. What is the cause of the stoppage? The same reason that caused the retention of Major Waine.

8271. Then we are to understand that the report of the Court of Inquiry not having been acted upon, the regiment is now without proper officers? That would appear to be the position; however, there have been several officers appointed lately.

8272. Appointed by the General or appointed by yourself? Appointed by the General. I recommended these appointments as far back as last January. Recently some of them have been sent by the General to the Executive.

8273. Have they been gazetted yet? I think so.

8274. Did you appoint two officers to the Hurstville Company some time back? There is not a Hurstville Company.

8275. Well, in that district—there was some question asked in the House about the matter? I appointed two acting officers.

8276. Are you aware that they appeared on parade in uniform on several occasions before the commissions were granted? Quite likely.

8277. Is not that in opposition to the Military regulations, the G.O.C. not having recommended them? There is nothing in the law, either in this country or the old country, that I have been able to discover, that deals with a matter of that kind. These gentlemen had been passed into the ranks as having done their recruit drill. They were competent, and it was necessary that there should be some officers, as we had not half the number.

8278. Then I am to understand that as Officer Commanding the Regiment you have power to appoint officers without the recommendation of the General? No; these were acting officers. I cannot appoint officers.

8279. You appointed them as acting officers? Certainly.

8280. And they are entitled to appear on parade without any further authority from the Military Authorities? It is entirely a temporary measure pending their appointment. It cannot be otherwise.

8281. The appointment of temporary officers was occasioned through the report of the Court of Inquiry not being dealt with? Apparently, yes.

8282. Then this Court of Inquiry is blocking the discipline of the Military Authorities? Shockingly—I should not say the discipline of the regiment in the sense of order or orderly conduct, but as regards the well-being of the regiment, the effect has been most serious.

8283. Do you consider that this trouble has a serious effect upon every Volunteer regiment? I do not know; it is not impossible. I was asked some questions about the difficulties in connection with my suspension by Colonel Bayly a year and a half ago. I wish to say that I was not the only Volunteer officer put in the same position.

8284. *Chairman.*] Who were the others? Colonel Bayly arrested Colonel Campbell, of the Scottish.

8285. *Mr. Wilks.*] And what was the result in regard to Colonel Campbell? I do not know. I heard a rumour as to how it was settled. I think a little meeting up in the officers' mess settled it all. So I was told; I do not know whether it is true or not.

8286. What was the cause of your trouble and your suspension by Colonel Bayly? I have already said that Colonel Bayly made an attack upon the regiment in an interview with a *Herald* correspondent. I was approached by many of the officers and men, and I was told plainly that if I would not do so they would have to take some action if Colonel Bayly was going to assault the regiment in that manner, and I wrote a letter to the Press from Parliament House stating certain facts. It was, perhaps, very unwise of me to do it. I do not admit to this day that it was any breach of the regulations. I expressed my regret for doing so. It did occur to me afterwards, on having the matter discussed with a person whose opinion I deemed of value, that it was perhaps an undesirable thing, though I took the action in the interests of the regiment, and not in my own. I had no personal grievance.

8287. In this matter of the Court of Inquiry, are you aware of any of the witnesses sending in vouchers for their expenses? I think one officer has done so; only one officer out of the 7th Regiment. How many other officers sent in of course I cannot say.

8288. You have not sent in any account? No, I have not.

8289. You are not aware whether they have been paid or not? I do not know.

8290. Are you aware that they have not been paid? I do not know, because the system of payments that obtains is so uncertain that really I never know what is paid and what is not. I send in the vouchers, and if I do not make some inquiry I never hear anything more about them. Some are paid to the regiment, and in that case I know, but where they are paid direct I get no notification unless I inquire. I do not think it is a good system. It is not a convenient one anyhow for me.

8291. Have you been Officer Commanding the St. George's Rifles since the formation of the regiment? With the exception of when I have been on leave.

8292. You informed the Committee this morning that you attended a public meeting, and spoke at it? I do not know that I said so; but, as a fact, I did.

8293. And afterwards there was a committee meeting attended by some, who were subsequently officers, in regard to dress regulations—the uniform, &c.? No; I think I explained that the arrangements as to costume were laid down in the form of application that 300 or 400 persons signed. I cannot remember whether I read that particular part or not. I suppose I did. I know that the scarlet tunic and the busby were specified in the application.

8294. On your visit to London, did you make inquiries of the military outfitters, Hobson & Co.? I did.

8295. You had a knowledge of the busbies then? Yes.

8296. And you made inquiries? I did.

8297. That was before the regulations were gazetted? That I cannot say; but it is quite possible.

8298. You sent an order to the firm mentioned? I think I sent it in 1893.

8299.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

8299. In the *Daily Telegraph* you said you had nothing to do with the busbies? I do not exactly remember what was in the *Daily Telegraph*. I had nothing to do with the designing of the uniform, certainly. I am not ashamed of the uniform; do not imagine that.

8300. But you made due inquiries with regard to obtaining the busbies—as to the best class of article, and so on? Yes.

8301. And upon your order they were obtained? They were not obtained until a couple of years afterwards.

8302. You now think them a most unsuitable head-gear for this country? No; I do not say that. They are only worn about half a dozen times in the year, and the parades at which we wear them—such as Queen's Birthday parade and the General's inspections—necessarily take place in the winter, and then the busby is a suitable enough head-gear. It is suitable for parade purposes; but not for field operations or fighting purposes, and it was never intended to be so worn.

8303. With your experience, would you now advise that the busby should be cancelled for the future? I do not think I should.

8304. Although it can only be worn about four times a year? It is only required to be worn a few times a year.

8305. You say that it is money well expended, even if the busby is only worn four times a year? I do not say that; but if you are going to have a review order uniform at all, it will be only worn a few times a year by any regiment.

8306. Officers of regiments, besides the field service and review order uniforms, have what they call an undress uniform—that is, the blue uniform? Yes.

8307. How was that paid for? It was paid for by the Military Clothing Board, at the instance of the late adjutant, at a time when Major Waine was in command. I do not know whether he had anything to do with it; I had not. I was on my supposed death-bed at the time.

8308. Have not the Clothing Board asked for payment from the various officers on account of this uniform? The General gave instructions for the amounts to be paid.

8309. Has it been repaid by these officers? In nearly every instance.

8310. There are some instances where they have refused to pay? Where there are amounts due to one or two officers it has been sought to make it a contra account, and the Clothing Board has not approved of that. Contra accounts may be admitted by the Clothing Board against an officer; but not admitted when in favour of the officer. That has been the practice so far.

8311. Then we are to understand that there are several officers who have not complied with the recommendations of the General? Of the officers now attending duty there is not one—they have all paid.

8312. Some of the officers had it deducted from their £10 grant for passing the examination? Yes.

8313. That was done in my case? I believe so.

8314. The Government deducted it from the £10 grant for passing the examination? The Clothing Board did. The Clothing Board recognises a contra account, when it is to the disadvantage of the officer; but apparently they refuse when it is to the advantage of the officer.

8315. Have you had any trouble as officer commanding in regard to the clothing supplied to the regiment by Mr. Anderson;—have the garments been according to sample? I think so. I do not think there have been any complaints. None have come before me.

8316. You have not had any faulty goods delivered to you? None that I can remember. There may have been occasions when the contractor has been very busy supplying other regiments and contingents when there have been delays; but that is inevitable.

8317. What is your opinion regarding the inspection adopted by the Clothing Board—or want of inspection? As far as the Volunteers are concerned—the unpaid Volunteers—I do not think the Clothing Board really take any action at all in regard to clothing.

8318. It rests with the officer commanding, or the captain commanding the company? Yes.

8319. You think that is a suitable system to be allowed to continue? It ought to be. The captains and the commanding officer, in conjunction with the adjutant, ought to be sufficient.

8320. How many of the original officers of your regiment are now on the active list? I could not say without looking at the Army List. There were some who were never sworn in. Poor Mr. Piddington, who died the other day, was gazetted an officer, but never took up his commission.

8321. Who do you consider was actually the founder or inaugurator of the St. George's Rifles? I think, so far as my knowledge goes, it was a sort of joint stock affair between Captain Smith and Mr. Stibbs.

8322. Was he not Captain Stibbs? He held a commission for a week or two.

8323. You had some altercation with the gentleman, did you not? No; I had not. He resigned because he was not gazetted senior captain. At least, that is the only reason I ever heard. Mr. Frank Farnell was gazetted senior captain, and he did not take up his commission.

8324. It is not true that he said that owing to your overbearing conduct he could not remain in the regiment? He never said anything of the kind. He has applied to me for credentials of character and so on, many a time since, and he has been on perfectly friendly terms with me. I never had the slightest altercation with Captain Stibbs.

8325. The only other trouble you ever had with your officers was in the case of Captain Wilks and Major Waine—I will not refer to my own case? Up to the date of the Court of Inquiry; then Mr. Reynolds espoused the cause of Major Waine, and we have seen nothing of him for the last eighteen months.

8326. Are you aware that it has been a very costly affair for Major Waine to defend his action before the Court? I have no idea at all.

8327. Would you be surprised to hear that it cost him something like £200? I would.

8328. Do you not think it fair to Major Waine that he should know the finding of the Court? I do not think I can say anything more than I have already said, namely, as the Court was an open Court I personally regret that the finding was not an open finding.

8329. And both as a Member of Parliament and officer commanding you would do all in your power to assist in its being made an open finding? I should wish the report to be made public.

8330. You would not use any of the powers of the Legislative Assembly to oppose its being dealt with? Certainly not. I think you asked a question about my having, as a Member of the Assembly, taken action which prevented a motion for the production of the papers going as formal. I took that action. 8331.

8331. On the ground that the matter was *sub judice*? Yes; that was the objection. Another reason was this: First of all, I wanted, if possible, that the old Quartermaster, who had been forty years in the Service, should be let down a little more gently. He has been doing good work this year; anyhow, if things were not quite so prompt as they ought to have been previously. I also question whether it was in the power of the Assembly, under the Standing Orders, to ask for the papers. I do not think it is in a case that is *sub judice*. They can only be obtained by address to the Governor; they cannot be obtained legally by a formal motion.

J. C. Neild,  
Esq., M.P.  
9 Oct., 1900.

8332. The Minister, on his own motion, could lay them on the table? I would not say what the Minister could or could not do. There is a Standing Order which says that anything relating to the prerogative of the Crown—and Military Commissions are decidedly a prerogative of the Crown—can only be dealt with by address of His Excellency.

8333. Then, I understand that, both as a Military officer and a Member of Parliament, you think that it is in the interests of the public that the report should be laid upon the table of the House and dealt with? I do not think the House could deal with it.

8334. I suppose you are aware that the suppression of this document is causing disorder that would not otherwise occur? I do not know of any disorder.

8335. That it is occasioning in the public mind a certain misunderstanding? I do not really know what is in the public mind. I cannot answer that question.

8336. Have you not heard, both as a Member of Parliament and as an Officer Commanding a Volunteer regiment, that there is dissatisfaction in regard to the report not being made public? I think the public—to use the well-known phrase—have got full up of the whole affair and do not worry over it. I could not say positively. I have no sources of information of that sort.

8337. From your experience of the Camp, am I to understand that you are of opinion that the Commissariat Department was faulty? I have explained that I am not in a position to question the quantity of the food supply; but I think it probable that a good deal of the deficiency that undoubtedly existed was due to want of proper organisation in what I might call the cooking department.

8338. It was wasted through faulty cooking? I should think it exceedingly likely, and that, in cooking for large masses instead of small ones, the food was not properly distributed; and it is almost certain that there was, at Rookwood, a lack of appliances. We had only one bucket per tent for everything—for the men to wash in and to have their tea and coffee supplied to them.

8339. Is it a fact that the rations allowed on that occasion were less than the Imperial rations? I could not say; I do not remember what the Imperial rations are. At any rate they were less than the rations given to the inmates of some of the English poorhouses.

8340. *Chairman.*] In regard to meat? Taking the rations as a whole. I compared them.

8341. *Mr. Wilks.*] Your experience was to this effect—that the Volunteer regiments were badly provided for as far as the Commissariat was concerned? No; I do not say that. I say that, so far as I know, the stipulated quantities of rations were supplied to the regiments; but I am inclined to think that faults arose in the process of cooking and distribution. I certainly do say that at Rookwood, in 1898, in the Volunteer camp, there was a considerable shortage of food, and it is notorious that a number of men belonging to one regiment practically struck and walked off. It was not the 7th Regiment; none of our men left that I know of.

8342. Do you remember whether it was the Scottish Rifles? Speaking as a matter of impression, I believe that was so, but I may be wrong.

8343. You spoke this morning in regard to the Army Service Corps having broken down? No; I did not say they broke down. I said they were not able to deliver the necessary water through the overworking of the horses, as I understood. One afternoon—Good Friday afternoon—the Infantry portion of the brigade went out for a long march under Colonel Bayly, and we were directed to bring watercarts with us. Well, there was no watercart for my regiment, and we had to go without. Colonel Bayly blew me up about it afterwards, saying that I ought not to have brought the battalion without the watercart. I said, “You asked me if I were ready to move off, and as I was only waiting for the watercart and did not like to cause any delay, we went without water.” We had no watercart anyhow.

8344. Are you aware that the kits of some of the officers were rather excessive at that time? It was not the case in the Volunteer camp, that I am aware of.

8345. Were they almost the same as on active service conditions? I fancy so. We had no luxuries.

8346. The reason assigned by some was that the Army Service Corps was employed to a great extent in the transportation of the officers' kits, is that true? As regards the 7th Regiment, which is the only one of which I can speak, we had very little. I did visit the camp of one of the other regiments, and they certainly had a gorgeous turn-out. Who carted the stuff I do not know.

8347. You have had experience of an Officer Commanding the purely Volunteer Forces in the case of Colonel Bayly—a post that originated a few years back;—do you consider that was a useful appointment? We have before us the fact that after trying the appointment for eighteen months the General recommended its abolition, and wrote to the Press explaining that he had found it necessary to remove Colonel Bayly in the interest of the entire Force. I think those were the words he used. I think you will find that stated in the daily papers of August last year.

8348. That is the Colonel Bayly who is now a Special Service Officer at the front? Somewhere at Cape-town I heard of him last.

8349. Have not several remarks been passed of a complimentary character in regard to his services there? It is quite possible; I have not seen them.

8350. The General recommended the abolition of the position of Officer Commanding the Volunteer Forces? Yes; then we came back under the direct control of the General.

8351. You have been brought into conflict with Colonel Bayly on several occasions? Never.

8352. Did you never have any difference of opinion in regard to the transmitting of correspondence? We had differences on paper, but we never had any personal differences.

8353. Then you prefer to communicate direct with the General, instead of communicating with a Staff Officer Commanding the Volunteer Forces? I do not know whether you are aware that after Colonel Bayly was removed from the position of Officer Commanding the Volunteers, Major Boam was appointed as Staff Officer for the Volunteer Service, a position he still holds, though quite recently his duties have been materially lessened; and now all important communications go direct from the Commanders of regiments to the Chief Staff Officer, which, in my opinion, is the very much better system.

J. C. Neild,  
Esq., M.P.

9 Oct., 1900.

8354. Is there any truth in the statement as to officers connected with regiments, who are also Members of Parliament, bringing pressure to bear on the General on several occasions as against the Officer Commanding the Volunteer Forces? I have not the slightest knowledge of any such thing.

8355. You have no knowledge of the fact that a complaint was lodged by Colonel Bayly that these officers disregarded him, and passed him by, and went direct to the General? No. I think it was I who made the complaint that Colonel Bayly gave audience to my officers behind my back. That was much nearer the mark. I never heard of any complaint of anybody going past Colonel Bayly to the General. Certainly I never did. As long as Colonel Bayly was in that position I do not think I was allowed to see the General.

8356. You say that Colonel Bayly gave an audience to subordinate officers behind your back? Yes.

8357. Did you satisfy yourself of the truth of this statement? I did. I challenged Colonel Bayly with it on paper, and he did not deny it. Everybody in the regiment knew it.

8358. Then you think the Volunteer Service is better served without the Officer Commanding the Volunteer Force than it was with him? For all purposes of administration, I fancy the entire Volunteer Force is much more efficiently administered now direct from the Chief Staff Officer.

8359. As an Officer Commanding a Volunteer regiment, have you any recommendation you would like to make to the Committee as the result of your experience? There are a lot of things that might be done.

8360. I do not mean details? No; leading principles.

8361. To save money and to preserve the efficiency of the Volunteer Force? To begin with, I think that the present Act, which allows a volunteer to clear out on fourteen days' notice, is utterly destructive of a useful force. You take a recruit, you train him, you clothe him, you arm him, and just when he is in a condition to repay the public money that has been expended on him, for some whim, or because he is going to play football instead of volunteering, or for any one of half a dozen other reasons, he sends in his resignation. His clothes are practically wasted, because a new man does not care to wear second-hand clothes, and there is a loss in that respect. There is a great deal of coming and going in the Volunteer regiments that is utterly undesirable in my view. It is destructive of discipline. There is another thing—there is no possible hold upon a man who loses some portion of his equipment. If he loses a few shillings' worth of equipment there is no chance of recovering it. In the Partially-paid Regiments there is always some money retained in hand, and deductions are made for lost articles. There are lots of other things.

8362. What I want to get at is this: From your experience in charge of Volunteer regiments, and your knowledge of the fitness or otherwise of the Staff, I want to know whether it is over-manned or under-manned, or whether the officers are attentive to their duties or otherwise? I should not like to answer a question of that kind.

8363. You would not like to answer it as a matter of delicacy? Partially so. I may be wrong; but in my view, judging from a business experience, there is a duplication of work that might be advantageously dispensed with. For instance, here is a case in point of the duplication of work caused by the appointment of Major Bayly, which has been done away with. In dealing with correspondence, instead of every communication being addressed either to Colonel Bayly in one case or Major Boam in the other, and being minuted by them again on to the superior authority, and the same process with the return documents, the correspondence is dealt with now direct.

8364. Is that not an evidence of faulty administration? I would not say that. It is, apparently, evident that the old method was not found to work as well as the present one.

8365. Would you suggest conscription in preference to volunteering? No; but I think that if a man joins a regiment he ought to join it for some specified term, and be placed under some kind of forfeiture if he leaves it.

8366. If a Bill were brought into the House to amend the Volunteer Act, would you feel the same delicacy in expressing your opinion in regard to the administrative qualities of the Staff? It must be borne in mind that I am connected with only one regiment, and that I am not in a position to form any idea —

8367. I mean only as to your relations with the officers? But there are a dozen regiments. What may be my experience with reference to one may be no guide as to what happens in the case of all the others. Certainly it does seem a little bit amusing for an officer to occupy so many positions that he has to write minutes from himself in one capacity to himself in another, and gravely pass them from one side of the table to the other.

8368. *Mr. Meagher.*] You produce a plan showing the location of the camp at Rookwood? Yes; it is a plan of the Water and Sewerage Board.

8369. Colonel Taunton, in his evidence, said:—

6057. They said that the food was overcooked? No army was ever better fed than were our men at Rookwood.

6058. I saw men in actual fighting, and had an opportunity of knowing what they had to put up with in warfare, and I agree with you;—do you deny the water-cart incident at Rookwood? He had a tap outside his door all the time. What did he want a water-cart for?

That was the evidence given by Colonel Taunton—that you had a tap outside your door all the time, and he did not know what you wanted a cart for;—do you still, in the face of Colonel Taunton's evidence, say there was no water nearer than where you locate it on the plan? Absolutely and positively, except what water might have been in private wells.

8370. There was no tap outside your tent? No; Colonel Taunton is making the most extravagant mistake that it is possible for a gentleman to make. Here is a plan supplied by the Water and Sewerage Board, and it shows that the nearest tap to my tent was 600 yards away. I did not employ the carts to cart water. Colonel Taunton himself is the officer who directs the movements of the Army Service Corps, and the Army Service Corps started carting water for the Volunteer camp; but the distance was so great that they were not able to cope with the work, and it was under those circumstances that I hired a local cart, with a tank on it, to cart water during the four days we were in camp, and subsequently the hire of that cart was paid for either by Colonel Taunton or by the General's instructions, and paid out of the public money, and not out of the capitation money of the regiment.

8371. The hire of the cart which you had to take was, you say, not paid for out of the capitation money of the regiment? To the best of my belief it certainly was not. I have made inquiries, and I cannot ascertain that it was. I believe it was paid, as were also some extra carcasses of mutton. I had to give the men some food on Sunday night, out of general camp expenses—the camp vote—and had nothing to do with regimental money. No greater mistake could possibly have been made, if it is correctly reported.

reported. There could have been no stand-pipe there, for here is the plan. There was one question you asked me this morning, and on which I was pressed very closely, about a matter that arose out of the incident at Middle Head, when I gave the command of "E" Company to a senior subaltern of the company for an hour. I contested the General's decision in a minute which I addressed to Colonel Bayly. I had no opportunity of putting forward my case satisfactorily, and I contested the General's decision in the matter; but Colonel Bayly asked me not to press it, for the simple reason that the General had dealt with the Officers of "E" Company in a sufficiently severe manner; and Colonel Bayly said it would be rather like rubbing it in, if I took any more action in the matter. I have Colonel Bayly's original letter here.

J. G. Neild,  
Esq., M.P.

9 Oct., 1900.

8372. Was not the report of the G.O.C. in favour of Captain Wilks? In that particular case, yes. In this one, that I am speaking of, it was against Captain Wilks.

8373. Was that subsequently? Yes; and that is why I dropped the other matter. There were three officers in "E" Company. One was ordered to clear out at once, and he resigned forthwith.

8374. *Mr. Wilks.*] What officer was that? Second Lieutenant Wood—

- (1.) Second Lieutenant Wood is to be called upon to resign forthwith.
- (2.) With the view of their having a further opportunity of resuscitating the local company, Captain Wilks and Lieutenant Wilkinson are to remain in their present positions until the 30th June next.
- (3.) If the Balmain Company does not by that time attain the required standard of proficiency, some change must then be made in the commissioned ranks.

Captain Wilks and Lieutenant Wilkinson applied for three months' leave of absence, which being granted to them, took them up to the 30th June, and after that, they resigned. It was on account of that letter and that decision that I did not pursue the Middle Head business any further, though, I think, had I done so, I might have brought about a change of view.

8375. You think that if you had pursued the Middle Head business further, in view of what you have stated, it might have been thought that you were vindictive? That is precisely what Colonel Bayly pointed out to me, and that is why I dropped it; and I believe he destroyed my communication, which was a very definite one, with plans showing the whole position of affairs. During the Court of Inquiry the documents could not be found, so I concluded that Colonel Bayly must have destroyed them. They were not returned to me. I have copies, and I have the plan. I went into the matter very elaborately, because I thought that, on a second report, the General would probably take a different view from that which he took in the first instance. As many questions have been asked on the subject, I wish to say that I have never, so far as I can remember, had any difficulty with any member of the Headquarter's Staff, with the unhappy exception of Colonel Bayly. My relations with the Chief Staff Officer have always been of the most amicable character possible for two men to be in, one towards another. The same applied to Major Boam, the Staff Officer of Volunteers. We always got on with the best possible goodwill.

Colonel Charles Fyssh Roberts, C.M.G., recalled and further examined:—

8376. *Chairman.*] In your Department, or sub-department, you take charge of the stores? Stores, C. F. Roberts.  
finance, and pay of troops.

8377. Do you remember being previously examined with regard to the letter written to the paymaster in South Africa with reference to the payment of troops? I do.

9 Oct., 1900.

8378. I think you were then asked if you received a reply from Colonel Seaton Churchill in regard to that letter? Yes.

8379. Did you receive it? I have not received it. I do not know that one has been received.

8380. I think I stated then, that I saw it posted? I understood you to say you saw it.

8381. And that I also saw your communication? Yes.

8382. By whose instructions was that communication sent? By General French's instructions.

8383. Did you make any suggestion to him that it should be sent? No; I did not.

8384. Have you heard anything in regard to the condition of the officers in South Africa? A good deal.

8385. In regard to their wanting pay? Yes.

8386. And being in an absolute state of poverty? Short of funds, anyhow.

8387. Having heard me read a private letter addressed to myself from an officer at Pretoria holding an important position in the New South Wales force, do you not think it is deplorable that such a state of affairs should exist amongst our men as is there depicted? Yes; I certainly do. One cannot understand it, because one hears that these very paymasters—the Imperial paymasters—are willing to give them any amount of money, and let them arrange for it afterwards.

8388. I do not think it is so? Major Bridges, who came back quite lately, told me that.

8389. Major Bridges had very little opportunity of knowing;—Major Bridges, nearly the whole of the time that he was in South Africa, was in the hospital—when he recovered he went down to Capetown and went home;—he could not possibly have had an opportunity of knowing? Well, he told me that they absolutely wished to force money on him, and he would not take it, because he went out under certain regulations, and was drawing his money from here.

8390. He was the officer who gave the evidence before the Commission at Home, that the only thing that bothered him at Bloemfontein was that they insisted on his drinking too much champagne; is not that so? I do not know.

8391. Did you not see that in the papers? I saw some report of that sort.

8392. Did you hear anything from any of the other officers about money being forced on them? No; I do not think I did. But Sergeant-major Dowson who went away, told me that they were offered any quantity of money. He went with the Australian Horse. In fact, when Captain Thompson, who was in command, went and asked for money, and talked about taking £150, they said, "You can take anything you like—£500." And he ought to know, because he had something to do with the payment of the men.

8393. Did he say how much Captain Thompson took? Captain Thompson took £200, I believe.

8394. Did he ever go back to get the balance—£300? I believe not.

8395. When Captain Thompson went to make application for money to the field-paymaster—who, I suppose you understand, is not a sergeant, or someone knocking about the camp—would it be likely that Sergeant Dowson would be there to hear? This was at the Cape, when Captain Thompson saw one of the paymasters.

8396. When he arrived first? Yes.

8397. But that was before the receipt of your communication? I doubt it.

8398.

- C. F. Roberts. 8398. You can doubt that, if you like, but I know it? I forget when our communication went away—I think it was some time in February.
- 9 Oct., 1900. 8399. The Australian Horse left on the 17th February, and the date of your communication to the Head-quarter Office was towards the end of February or the beginning of March? I think it was the 20th February or the 20th January; I cannot remember exactly.
8400. It had not reached there when this Contingent arrived at Capetown:—did this Sergeant Dowson discover any anxiety to part with money after he got further upon? From what I understood him there was no difficulty in getting any money if it were applied for; that is what he gave me to understand.
8401. But the Officer Commanding would have to apply for it? Yes.
8402. In Capetown, Captain Thomson would have to go to the office of the paymaster;—that would be the only place where he could get it? Except from the treasury chest further up, if he wanted more.
8403. Do you think it likely that when he went to interview Colonel Seaton Churchill at Capetown on a question of this sort he would take Sergeant Dowson with him;—do they generally do that? They very often take their pay-sergeant to get the money.
8404. But they generally leave him standing outside? Sometimes. Sometimes they take him in to get the money.
8405. Is it likely that Colonel Churchill would offer Captain Thompson any quantity of money practically, and afterwards, without anything occurring in the meantime, refuse to give him any? I think not, unless he received some instructions—or some intimation, I would not call it instructions.
8406. The inference would be that it was after Captain Thompson got the money that the letter from the Military authorities here arrived at Capetown? Yes.
8407. Have you heard from any other officer, directly or indirectly;—have you heard anything, say, from Colonel Williams? Yes; Colonel Williams has written to me, and informed me that, owing to this letter, he was unable to get pay.
8408. So they had not been rushing him with money? No.
8409. And he is even a bit further up in the stirrups than Sergeant Dowson or Captain Thompson;—is not that so? Yes; but, practically, he would not be the paying officer.
8410. But he gets his money direct? His own individual money, he would.
8411. They have not been rushing him? No; I think not.
8412. And, I suppose, after all, Colonel Williams is not one of those bashful men, that if he wanted money, he would not ask for it if he thought he was entitled to it? I think he would do his best to get it.
8413. Did any of the officers who came back tell you that they had been rushed with money? No.
8414. Would you be surprised to learn that the general complaint, when I was there at the end of April, was that they were practically penniless? No; I should not be surprised; because we have heard of the case of Captain McDonnell—of one of the medical officers, who could not get any money either.
8415. Is he back? No.
8416. Would you not be surprised to learn that if the officers wanted to get some tobacco, or anything, they would have to go round and borrow 6d. or 1s. from three or four before they would get enough to buy a little tobacco? I certainly would be surprised—very much surprised.
8417. It is altogether against military discipline for a superior officer to borrow either from an inferior officer or from a private? Certainly it is.
8418. It lays the superior officer under an obligation to the man he borrows the money from? Undoubtedly.
8419. And yet there has been no field-service pay—that has not even been paid? No; I believe not.
8420. You have not paid it? Not in South Africa.
8421. You have not paid it to the men at the front? No.
8422. And you stopped the Imperial authorities from paying it? Under that letter they were stopped.
8423. So that all the troops could possibly draw—if they got any there, which was left optional—would be what is known as the South African colonial allowance of 1s. 6d. a day? Yes; up to April, when it was made 3s.
8424. When the First Contingent went away, what were the conditions laid down? The conditions, I understood, were that this Government guaranteed, taking the case of a private, 4s. 6d. a day.
8425. That was the estimate on which the Treasurer submitted a motion to the House? I suppose so.
8426. The Military estimates, I suppose, would go through your hands? No; the Contingent estimates are not.
8427. Did not you take part in estimating the cost—had not your office something to do with that? No; we were not called upon to estimate what the cost would be for a long time afterwards.
8428. If the Treasurer submitted to the House a proposal to send 250 men away, and estimated their pay at 4s. 6d. a day for six months, and other expenses, amounting altogether to £30,000, it would appear clear from that, to any ordinary individual, that the Government intended to pay 4s. 6d. per day per man? So I should understand; that they were responsible for it.
8429. As a matter of fact, at that time, was anything known here really as to whether the Imperial authorities would pay our men or not? No, it was not; not until I think a telegram was sent at the end of either December or January.
8430. On the 24th or 27th December? Yes; and Sir Alfred Milner replied that the Imperial Government would pay Imperial rates of pay.
8431. So that the First Contingent, at any rate, went away believing that they were getting their pay here, and it did not matter what they got from anywhere else? Certainly; I was under that impression until that letter was sent.
8432. And from that letter I read, the officers seem to have come to the same conclusion? I think most of the First Contingent did. I think in the case of the second lot—Major Knight's Contingent—it was explained to them, and at that time it was known, at all events, that it was the intention to stop it.
8433. You did not send any paymasters with that force? No.
8434. But in the case of the first lot it was not? No; it was not.
8435. You did not send any paymasters? No paymasters were sent, excepting with Imperial Bushmen.
8436. And, as a matter of fact, the Military authorities here have not transmitted any money to South Africa for the payment of the men there? Except £700 sent to pay the first lot of Lancers from London.
8437. That was only to pay them on their way from England to the Cape? Yes.

8438. It was not to pay for them after they arrived at the Cape? No. Practically, we transmitted no money there. C. F. Roberts.
8439. You transmitted no money to pay the men while on active service in South Africa? That is so. 9 Oct., 1900.
8440. In the financial arrangements, what is the number of your staff? Seven.
8441. Do all payments have to go through your office? Yes.
8442. You have got a Paymaster, have you not? We have a Paymaster.
8443. When the Paymaster is going to pay, what is the system adopted;—does he come and present you a voucher for so much money to pay so many men, or do you give him authority to draw to a certain extent, or how is it done? He presents an estimate of how much money is required for salaries, and how much for contingencies. That is forwarded under cover by the General to the Treasury, asking that the money might be lodged to the credit of the Paymaster.
8444. Is the Paymaster in your office, or has he a separate establishment of his own? He had an office down stairs, but now he is on the same floor.
8445. But he is apart from you? He is not absolutely in my office, but still he is under me.
8446. How long was the late Paymaster, Mr. Solemons, in that position? About eleven years.
8447. Do you know what he was before he came there? I am not certain. I believe he had been in a bank, which was the training that recommended him.
8448. Did you ever hear any reason alleged for his leaving that bank? No valid reason.
8449. You could not say whether one existed or not? That I am unable to say.
8450. Who makes the appointment of Paymaster? I fancy that appointment was made by Major-General Richardson.
8451. It is the General who makes the appointment? I think in that case the General recommended, and the appointment was made by the Government.
8452. Is the Paymaster an officer? He does not hold a commission.
8453. Therefore it is practically outside the power of the Military Authorities to deal with him in any way? They could not deal with him by court-martial.
8454. They could only prosecute him the same as they could any other private citizen? Yes; or recommend his dismissal.
8455. If the facts warranted it, they would enter a prosecution in the ordinary way? They would have to do that, I should say.
8456. Is he sworn in as a soldier, or is he there more as a Treasury official? I do not think he has taken any oath.
8457. He would be there more as a Treasury official? He ought to be.
8458. *Mr. Chanter.*] Does he give any guarantee? Yes; he is under guarantee.
8459. *Mr. Meagher.*] What amount? £1,000, I think.
8460. *Chairman.*] Did you submit any report to the General with reference to this man's action when you found that he was some money short? I only verbally reported it, because it was in the hands of the Treasury inspector at that time.
8461. What was done on that report? He was granted leave of absence.
8462. And he has since been suspended? No; he has practically not returned from leave.
8463. In the case of a prosecution, what office would take initiatory steps? I should fancy the Attorney-General would.
8464. But would not the Military have to lodge an information? They would probably have to prepare a case against him.
8465. But he would have to be brought up first at the lower court before the Attorney-General could step in? I do not know about that. I know the case has been reported by the Treasury inspector, and from the Treasury it has gone to the Attorney-General.
8466. Have the Military Authorities themselves taken any steps? No; we have taken no steps, because it is out of our hands the moment the Treasury inspector steps in.
8467. I suppose you were not anxious to retain the case? It was certainly not a pleasant case to have to go into.
8468. But sometimes some of you soldiers rush into law very suddenly, do you not? I do not know that we do.
8469. Do you not remember a case when an officer commanding the Grand Old Guard sued a sergeant or corporal for not having a uniform returned;—do you remember the case? I do.
8470. And you remember they took it from the Police Court to the District Court, and on to the Supreme Court, and that it was only for want of funds that they did not go to the Privy Council? I do not know about that.
8471. And this was all over 10 bobs worth of a uniform; and they did not stop there, but started afresh, and took it through all the stages again;—do you remember that? Yes; I believe they did. That was the case of Volunteer officers, not officers of the Permanent Force.
8472. At any rate, the Military Authorities reckon that this business is out of their hands now, and under the Attorney-General? At all events, for the present.
8473. Has the deficiency been made good yet? Not to my knowledge.
8474. It may have been paid into the Treasury without your knowledge? It may have been; but I do not think the Treasury would accept it.
8475. They might give way to what is known in this Committee as pressure? I do not think so. They would be putting themselves in a wrong position.
8476. Has not this Paymaster got some influential friends or relatives? He may or may not have. I believe he has one gentleman who is pretty high up.
8477. I think it has been publicly stated in the Assembly that he is a brother-in-law of Sir Joseph Abbott? Yes; I believe it has been so stated.
8478. *Mr. Meagher.*] In regard to the guarantee of £1,000, does that cover the deficiency? The deficiency is about £60 or £70.
8479. You are well protected, then, so far as the guarantee is concerned? It is a Government guarantee. The Government have what is called a Guarantee Fund.
8480. I thought Mr. Chanter asked if there was a private guarantee? No; there is no private guarantee.

- C. F. Roberts. 8481. *Chairman.*] The Government guarantee the honesty of its own servants? Yes; at a certain premium per annum. They charge so much per year.
- 9 Oct., 1900. 8482. So that it would be as well to reduce the salary a little, and have no guarantee;—it is a matter of taste and fancy as to how you name the thing? Some of the officers object very much to pay this guarantee.
8483. *Mr. Chanter.*] What is the percentage? It is only a few shillings per annum. I think in the case in question it is about 30s. per annum. Everybody who has the handling or manipulation of money in any way has to pay a guarantee.
8484. *Chairman.*] Do you not think that in the Paymaster you ought to have a direct Treasury official whose payments should be checked by the Military Authorities? I think it would be an advantage to have a Treasury paymaster; but I do not see how the Military could check his payments. He could only pay what he is asked to pay. It would be like checking your own requirements.
8485. I mean to check and see that he did pay when he was asked to pay, and when he said he had paid? Yes; it would be a double check.
8486. In regard to the estimates submitted from time to time, do you take any hand in the preparing of them? Yes. What is done is this: the officers commanding corps are asked to submit to the Military Authorities what they wish to have—what they think is necessary for their corps. This is then tabulated and made out and submitted to the General. The General passes it, and then the whole amount is prepared in tabulated form, and forwarded by the Military Secretary's Department to the Colonial Secretary, through the General, where it is gone into again, and eventually passes to the Treasury.
8487. When an officer commanding a regiment requisitions for so much money to carry on his regiment for the year, is it customary in your office to strike out items and add others? If the General Officer considers it advisable, it is done.
8488. But does the General Officer deal with it himself, or is there a board? The General deals with it personally. The whole of the estimates are brought up, and he goes through them item by item.
8489. Therefore the expenditure of each regiment is under the direct supervision of the General himself? Practically.
8490. In regard to the ordering of ammunition, stores, &c., who prepares that portion? The Military Secretary's Department prepares indents for them, but it is subject to a conference between the General and the Officer Commanding Artillery, or the General, myself, and the Ordnance Department.
8491. And in regard to new buildings, and alterations of buildings? That is presented by the engineer officer.
8492. Suppose the total Military Vote is £200,000, and Parliament, in its wisdom, decides to strike off £20,000, what happens? As a rule you reduce as many items as you possibly can.
8493. Who has the handling of that? It is left to the General.
8494. It would seem, then, that the General has the full control of the military policy, as well as the command of the Military Forces? Practically.
8495. He is able to strike out an item that the public may be strongly in favour of, and Parliament might be strongly in favour of, but he might not be? He could not well strike it out without Ministerial authority, if it has been approved of.
8496. Without speaking of the last Minister, the present Minister for War is not what you would call an expert soldier? He has not had a military training, if you mean that.
8497. As a matter of fact, the Minister of Defence always accepts the recommendation of the Officer Commanding? Practically.
8498. Do you know any instance where he has refused to do so? I think he refused to do so in General Hutton's case.
8499. But I think the then Treasurer and General Hutton had a few words with one another—or, at least, it was generally reported so? I believe in the early part of General Hutton's time they did not seem to be particular friends.
8500. The then Treasurer is now commanding a regiment of volunteers? Yes; a very fair regiment too.
8501. But in regard to General French, as far as you know, no recommendation of his in regard to expenditure has been refused to be adopted by the Minister for Defence? Well, last year they cut us down £40,000.
8502. But that was the Parliament;—I am speaking of the Minister? Before it got to the Parliament they gave it a very severe pruning.
8503. Do you not think it is very necessary that you should be occasionally knocked down by £40,000? I do not think it does much good.
8504. Probably because the will of Parliament may not be carried out;—do you not think it would have been wise if Parliament had refused to allow the powers that be to introduce this terrific uniform of scarlet, and those busbies of the 7th Regiment? Scarlet for the Partially-paid Forces was introduced sometime ago.
8505. Do you think it would have been wise if Parliament had insisted upon cutting that item out? That would have been seven years ago, and, of course, you can be wise after the event.
8506. But we did not start to use scarlet only seven years ago—I mean the British Army? No; I am speaking of the local force.
8507. The General Commanding surely had some experience in the British Army, and ought to have been an authority as to whether it was advisable to introduce that sort of clothing or not? It was introduced just after General Hutton's time.
8508. Let me put a case like this: Supposing Parliament knocked £20,000 off the Estimates, it would be quite competent for the Officer Commanding to insist upon dressing the partially-paid officers in some gorgeous and ridiculous uniform, and to refuse to order ammunition and guns that were absolutely required;—instead of cutting off the gorgeous uniform he could cut off the supply of ammunition and ordnance? That is possible; but still that gorgeous uniform you refer to is got out of capitation earned by the men's attendance at drill.
8509. But it is all in the Military Vote? Yes.
8510. It does not matter how you spend it;—if you spend it in gaudy uniforms you cannot have it for ammunition and ordnance? You cannot apply capitation money to the purchase of ammunition.
8511. But the capitation is simply a rule laid down as to how you will treat purely Volunteer corps? But you must understand that capitation is a special fund to provide clothing, and it cannot be applied to anything else.

8512. But the Headquarters Staff, with the General Officer Commanding, settle what the capitation C. F. Roberts. grant will be? They recommend it, and it is approved by the executive.
8513. Therefore, if they recommend a capitation grant sufficiently large to get this gorgeous uniform, and that is accepted, they will not have the money left to be able to get ammunition or guns;—they cannot give it and have it both? No; but the capitation out of which this gorgeous uniform has been bought is very low; it is only about £3. It does not matter if it is more than sufficient to supply them with the ordinary brown uniform; they have to spend it somehow in clothing. 9 Oct., 1900.
8514. Do you know what the capitation grant is in Great Britain? 30s.
8515. So that it is exactly double here what it is in Great Britain? Yes.
8516. And do you know that in Great Britain out of the capitation grant they have to pay for all travelling? I know that the capitation grant in England covers everything.
8517. Here the volunteers travel free on the railways, do they not? Yes; when on parade.
8518. When in uniform? No; when on parade. When in uniform they can travel at half rates.
8519. Do you know that in Great Britain the private railway companies charge half rates all the time? I believe so.
8520. So that where a battalion has to muster from, perhaps, ten different centres for battalion drill, the regiment would be rather short of the capitation grant? Most of the men at Home pay the railway fares out of their own pockets. I would not say that is the case when going down for training.
8521. How many battalion drills must they have to make them efficient? Fifteen here to earn their money at full days.
8522. Do you know how many at Home? Some regiments go as high as sixty.
8523. Battalion drills? No; I am talking of general drills. The battalion drills are very rarely at the option of the Officer Commanding.
8524. Is it not necessary that you must put in so many battalion drills here to be efficient? No; it is not laid down that they should be battalion drills. You have to attend here so many day parades or half-day parades as the efficiency for the year may direct.
8525. Then you have departed from the custom adopted in Great Britain? Yes; the present practice has been in vogue for a great many years.
8526. In Great Britain, I think it is required that you must attend four battalion drills, and eight or twelve company drills? It will depend upon the regiment. Some attend as many as sixty drills a year.
8527. But the Imperial Government have laid it down that they must attend those drills before they can draw the capitation allowance? Yes.
8528. There is a certain standard of efficiency which is approved of by the Imperial authorities;—have you got a standard here? The standard is that they have to attend at rate of ten full days, or ten and a half drills.
8529. Could you tell us how you get on with the different bands;—they draw double capitation, I believe? That I cannot tell you; they are only allowed for at so much per head. No bandsmen draw double capitation.
8530. Would you be surprised to learn that I got an answer to a question in the House that such was the case? The bands are included in the number of the regiments; and they get so much per head.
8531. Does not the band get an additional amount? No; they may get a slightly higher rate of pay from the regiment.
8532. But out of the capitation grant? No; they do not earn it. The Officer Commanding the Regiment may spend it on them—that is quite another thing. They spend more on their clothes.
8533. But the Officer of the Regiment draws for them;—say he draws £50, in addition to the capitation grant? That is band allowance. It is, practically, to help to find them in instruments and music.
8534. Do they buy their own instruments? Most of them.
8535. The regimental band? Yes.
8536. Would you be surprised to learn that, in many cases, capitation is claimed where the number of drills have not been put in? They may claim it, but they ought not to get it.
8537. But then you have no check? Yes; the attendances at parade are sent to headquarters and checked.
8538. But the attendances are sent by the Regimental Officer, presumably;—would it be the Adjutant? The Adjutant should send it forward.
8539. The Regimental Adjutant might, by mistake or otherwise, include men as efficient who have not attended drills for years? I do not know how that would be possible, unless it were deliberate.
8540. Who would be able to tell us of the attendance, say, of certain officers and men, and whether capitation had been drawn for them or not? The Headquarters Officer would be able to give you that. Colonel Mackenzie, the Adjutant-General, would be able to get the information. We have to depend on these efficiency returns from the Headquarters' Office not to pay more than they are entitled to. If it is not all earned, the balance goes back to the Government. It is not the same in the case of the Naval Brigade, where they draw their efficiency allowance and use it, whether they are efficient or not.
8541. Do you know anything about this new Permanent Cavalry? A corps has been started.
8542. Who is in command of the Permanent Cavalry? An officer called Tetter.
8543. Was he in the Permanent Force before? He was in one of the Volunteer regiments, I believe; but they do not appear on this year's Estimates.
8544. So it seems to be the intention to disband them? Yes, I presume so.
8545. You think it would not be a bad idea to disband them? Well, I do not think they would be of much use.
8546. The city of Sydney would not be a very good place to recruit cavalry from anyhow, would it? No; I should say not.
8547. In your opinion, does the Volunteer Cavalry, comprising the Lancers, the Australian Horse, and the Mounted Rifles, meet the requirements of a mounted force? I think those three regiments do so, very well.
8548. And the force might be increased or added to, if thought necessary? I think we have got nearly enough.
8549. Still it has been proved in the South African war that mounted men are really of much greater service than foot soldiers? Yes.
8550. They are more mobile? Yes; on a rapid campaign like that of South Africa, certainly.
8551. It is possible for a man to march 25 or 30 miles, and then start fighting? He must be very fit if he does. 8552.

O. F. Roberts. 8552. He would need to be very fit before he started? Yes.

9 Oct., 1900. 8553. The Australian Horse is a purely Volunteer corps, is it not? It now comes on the same footing as the Lancers and the Mounted Rifles.

8554. At whose suggestion has that been done? I think that is the suggestion of Colonel Mackay, and approved by the General.

8555. What is the pay of the Partially-paid men—the Lancers and Australian Horse? I think about £6 a year now. They practically get at the rate of 8s. per day for a certain number of full-day parades.

8556. Are the officers paid also? They are paid in a sort of progressive ratio. I forget what it is in each case.

8557. Are they paid so much for a full-day parade, too? Yes.

8558. I suppose at much the same rate as those in the Permanent Force? No; practically the same as the Partially-paid Infantry. At present, a lieutenant is only earning about £12 10s., a 1st lieutenant is earning £15, a captain £20, a major £25, and a colonel £35.

8559. What is this allowance supposed to be for? It is a sort of remunerative pay.

8560. It is taken as pay? Yes.

8561. So it would be quite a laudable ambition on the part of the whole of these Forces if every man desired to be a colonel? It would be a laudable ambition, but there would be no room for them.

8562. Do all the officers draw this money? I think they all draw their pay. It is drawn for them anyhow.

8563. *Mr. Chanter.*] Who is responsible for the delay in paying the representatives or relatives of the New South Wales Bushmen for the last month? They have been receiving the pay ever since 2nd October.

THURSDAY, 11 OCTOBER, 1900.

Present:—

MR. CHANTER,  
MR. COOK,

MR. MEAGHER,  
MR. QUINN,

MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Colonel Charles Fyshe Roberts, C.M.G., recalled and further examined:—

O. F. Roberts. 8564. *Chairman.*] By the way, Colonel, the staff officers at the Victoria Barracks are allowed certain amounts for servants, are they not;—certain amounts per year? If they do not have servants—yes.

11 Oct., 1900. 8565. That amounts to how much? £27 2s. 6d.

8566. Now, is it not a fact that a number of these officers who are drawing the allowance for two servants have men from the Permanent Artillery as their servants? I do not know that.

8567. Could you swear positively that is not so? I cannot. I do not know that it is so; if it is, it is very improper.

8568. Very improper that it should be so? Yes.

8569. Take the Australian Horse allowance for keeping up the regimental band horses; the amount is £175 a year;—how many horses do they run? It is £100, I think.

8570. £175? What estimates have you?

8571. Those from 1900–1? Oh, I have not those.

8572. There are none in last years? I think you had some.

8573. No? Yes.

8574. Then the Estimates of Expenditure are wrong? They have been transferred from the Volunteer to the Partially-paid. You might possibly find them among the Volunteers.

8575. This is the “Volunteers,” “Permanent and Volunteer Forces”? Partially-paid.

8576. No; the Australian Horse? I think it is under the Partially-paid.

8577. Oh, yes, it is;—how many horses do you keep up for the band? Twenty-five.

8577½. For a band? Yes; twenty-three or twenty-five.

8578. *Mr. Cook.*] That is for a band? Yes; they are mounted.

8579. *Chairman.*] How often would a band come into full working order? Practically, very often—on horseback.

8580. What is the idea of the band;—I see a great amount for band allowance, and allowances for the keeping up of the regimental band horses, &c.; what is the idea of it;—is it not what Colonel Neild would call swagger? It is usual to have a band.

8581. Is it useful? Yes. It is useful to keep the men up to the mark in marching—useful for teaching them to keep time; also for the amusement of the public.

8582. *Mr. Cook.*] It helps the development of the martial spirit? Well, it is an attraction.

8583. *Chairman.*] But in active service they do not manipulate the band, do they? They are generally used as ambulance men.

8584. *Mr. Cook.*] Do not the bands play when the men make the charge? The pipers do, sometimes.

8585. *Chairman.*] They used to do some centuries ago when men were not quite civilised; but now-a-days it is not so? The pipers play sometimes.

8586. As a matter of fact, the pipes are packed away in the transport waggons;—however, there is a £50 allowance for band;—under what heading? Under Australian Horse.

8587. And in addition to the £50, £3 a head capitation for bandmen? As provision for clothing.

8588. Which is clothing? The capitation.

8589. What is the £50 for then? To keep the instruments going, to provide the music, to pay the instructor, and so on.

8590. But do they not compete a good deal at all sorts of gatherings—public gatherings? Occasionally they do.

8591. Out at Randwick, the Cricket Ground, at private houses, and all that sort of thing;—do they not often go to private parties? Occasionally to garden parties, or for charities.

8592. Is Randwick a charity? They do not play there. De Groen's band has been playing there for years. They call De Groen's band a military band; but it is really a civilian band.

8693. They play at the Cricket Ground for cricket matches and bicycle sports, do they not;—do they get paid for it? £10, I think.

8594. Does that go into their own pockets, or to pay an instructor and for instruments to keep them up to their work? Partly for a fund for that and partly for a fund to pay the men. 8595.

8595. *Mr. Cook.*] But do they not undercut other bands, as a matter of fact;—is it not a shockingly low price—twenty-five performers for £10? They do that so that they shall not make too much out of the public. C. F. Roberts.  
11 Oct., 1900.

8596. But does it not enable them to undercut other bands? The only band that plays in public is the Permanent Artillery Band. I do not think that they have more than ten engagements a year. For charities they have to play for nothing. Some years ago they made a very fair thing out of their playing. I will not say a very fair thing; I will say a good thing.

8597. It is a magnificent band; but it ought not to compete unfairly with private bands? I do not know that it does. De Groen's band is doing all the work. I do not think the Permanent Artillery Band has had a paying engagement to any extent for more than three or four years. Nearly all their work has been done for charities. They played at Greenoaks, but that was for a charity. They were paid £5; that was all.

8598. But private bands must rely on engagements from the outside public to pay their way? I do not think that our band—the Permanent Artillery—has played at Randwick or at the Cricket Ground for a very long time. Can I get a copy of the current estimates, Mr. Sleath; what I have are the estimates for 1899–1900?

8599. *Chairman.*] I will send for a copy. Who is the Assistant Commissary-General of Ordnance? Lieut.-Colonel Blanchard.

8600. I see that there is an increase in his "screw" this year? That is on account of very long service; he has had over twenty years' service.

8601. What does he do? He has charge of the whole of the stores there. He is answerable for revenue receipts. He is also responsible for the issue of the ammunition and the keeping of accounts connected with that.

8602. And there is a Receiver and Issuer of Stores? He is a clerk put on to watch the stores going in and out; he is practically a senior clerk.

8603. Then there are four clerks? There is an immense amount of clerical work there.

8604. You also keep a lieutenant and quartermaster (superintending clerk)? In the armoury there are dealings with 25,000 stand of arms.

8605. What sort? Martini-Henry and '303, the new small bore.

8606. And Lee-Enfields? Martini-Enfields, Martini-Henry, and Magazine Lee-Enfields.

8607. What is the proportion of each sort? As far as I can remember, there are about 12,000 Martinis and nearly 8,000 '303's; the other are Henrys and Martini carbines.

8608. But most of these arms, I suppose, have been served out to the forces;—how many have been served out? I suppose about 4,000; nearly 4,000.

8609. Four thousand;—does not every soldier have a rifle? I am not taking the Martinis only.

8610. But the whole lot? I could have brought a return showing exactly; but I should say between 8,000 and 9,000.

8611. And you supply rifle clubs? Yes.

8612. You have 8,000, or 9,000, or 10,000? We are supposed to have 8,000; but I could not state exact number.

8613. Apart from the rifle clubs? Yes.

8614. We have another clerk still;—he gets only £75? Which is that?

8615. He is in the armoury? He is just a junior coming on.

8616. He was not there last year? Then he is a junior.

8617. Then there are a Chief Armourer, an Armourer Staff Sergeant, an Armourer Sergeant, and four labourers;—what is their particular work? Repairing and cleaning arms; they are doing it perpetually as arms are sent in.

8618. And the saddler? He should be rather called a leather-worker. He is the responsible man who examines all the saddles and leather-work that we get by contract, and superintends any that we manufacture.

8619. By-the-way, you have had a good many saddlers employed at the Barracks? Since October we have had a good many. At one time we had as many as thirty at the Ordnance Store.

8620. Who is the saddler who was in charge? Smith.

8621. Is that under your department? This saddler is employed in the ordnance; he is in my department.

8622. Is Smith a saddler? I am not sure that he has not passed part of his time as a saddler.

8623. Is he not a bootmaker? Not that I know of; he has been a great number of years engaged in making our accoutrements.

8624. You do not know whether he is a journeyman saddler or not? He has been with us for twelve or fourteen years.

8625. And gives satisfaction? Very great satisfaction. He is one of the best men we ever had.

8626. Personally, I do not know anything about him; but I am informed that he is a bootmaker? He may have been many years ago. For the last ten or twelve years he had done nothing but leather-work for us.

8627. Do you know that there is invariably great jealousy between the journeyman tradesman and the handy-man? I know that perfectly well.

8628. And that a tradesman considers himself sort of sat upon if someone not a tradesman is put over him to boss him? If they did not like the job they could leave it.

8629. That is perfectly true; but the question is this: Whether in making saddlery it is not necessary that you should have a journeyman saddler? We have not made saddlery. We do not undertake saddlery.

8630. But saddlery-work—leather-work, such as rifle buckets, and so on? Yes. But anyone is at liberty to leave his position if he does not like it.

8631. But that is hardly a fair way to deal with it? They are very keen to get him to keep them on the list.

8632. No doubt; and very properly so, I think;—you have here a Receiver and Issuer of Stores and a Conductor of Stores as well? The Conductor of Stores is a man who works under the Receiver and Issuer of Stores. That is Jackson.

8633. You have eight labourers at £135 a year;—is that not so? Yes.

8634. And one labourer at £155 a year? I think that that is the labourer at the Magazine at Goat Island. He looks after the ammunition, shifting it and issuing it under the assistance of the Warrant Officer and Overseer (Conductor of Stores).

8635.

C.F. Roberts. 8635. Have you a great quantity of stores on Goat Island? Not now so much. But the overseer and labourers have to follow them wherever they go. We have a large quantity of small-arm ammunition which is issued practically every day.

11 Oct., 1900.

8636. But what about this lodging allowance, which seems to have gone up with a sudden bump;—who gets that? The Assistant Commissary-General of Ordnance, the Receiver and Issuer of Stores, the men at Goat Island, and the Warrant Officer and Conductor of Stores.

8637. Have you not on Goat Island, somewhere on Goat Island, a place for them to stop at? We had; but we had to clear out again. The Conductor of Stores had the quarters there previously.

8638. Whom does the place belong to? The Government; but is now required for a reserve for the public.

8639. So that the Government allows lodging allowance to this man to stay on Government property? No; he has to come across to Sydney; there is no room there; the rooms available were occupied by the Mercantile Explosives Establishment.

8640. But he comes across to Sydney? Yes; from Balmain. The labourer and the watchman also come across. They used to live in two tiny little huts.

8641. So far as the Conductor of Stores is concerned, he might be kept across here and then go wherever he was required? He must be there altogether to issue ammunition whenever it is required.

8642. But it would be known at headquarters, and someone would have to get authority for the issue of ammunition? He has also to look after the airing of the magazine, and so on. That is a matter which must be attended to. In fact, he must keep a sharp look-out on the magazine at all times. The labourer and the watchman have to keep a sharp look-out also watching the place at night. There is no guard there as there was in the old days. There used to be the military guard watching all Garden Island. That has been removed many years.

8643. But labourers at £155 a year, with quarters;—that is fairly good pay for a labourer? A man is worthy of his hire.

8644. Quite so;—but it is fairly good pay for labourers? But now he will not have any quarters at all; he will have to find a house elsewhere.

8645. Why? Because they will have to clear out. The place is to be handed over for Balmain recreation purposes, &c.

8646. But is not this amount rather a good salary for a labourer;—do you know what ordinary labourers' wages amount to, even, with the risk of not finding constant employment? The Government labourers' standard is about £128 a year.

8647. How do you make it up; I am not much of a mathematician; 7s. a day is £2 2s. a week;—that is £150 a year, is it not? But there are seven days in the week.

8648. But the ordinary labourer does not get paid for seven days? This man is watching on Sundays as well as other days.

8649. But where there are two to watch, they should not be broken up you would think? They have to take twenty-four hours between them.

8650. But that is only watching? During the working hours, however, they have to work in the magazine, shifting the powder and keeping the place clean.

8651. But instead of having so many men walking round doing nothing, would it not be better to retain a number of soldiers there, and do away with these additional men? That is what we had intended to do.

8652. These men are not sworn in as soldiers? No.

8653. Yet while you have hundreds of soldiers doing nothing, you go outside and employ these men at £155 a year? We have to assist the Mercantile Explosives people in moving and shifting their explosives. They are at work practically every day.

8654. But you have nothing to do with them? We give them a hand when they want it. They do the same in return for us.

8655. But is it not necessary that soldiers should be taught how to handle ammunition? It is practically a merchant's magazine at Goat Island, under Government.

8656. But is it not necessary the soldiers should understand how a magazine ought to be managed? They are taught it.

8657. Is any teaching as good as practical experience? They are given practical experience.

8658. But those men are not soldiers? The soldiers in the force get practical experience at their own magazines.

8659. I am talking of the men, not of the forts;—would it not be an education for artillerymen to know how a magazine should be managed, and the ammunition handled? They are well taught it at the various places, such as Wollongong, Bear Island, the forts in Sydney, and so on.

8660. Yes, but would not this be teaching the men and saving expense at the same time? It might be; but the disposition of the soldiers rests entirely with the General.

8661. Oh, yes, no doubt? As a matter of fact, these labourers have been cut down on several occasions.

8662. Why, the lodging allowance has jumped up from £129 to £200? The Assistant Commissary-General of Ordnance gets a slight increase; the Lieutenant-quartermaster and Issuer of Stores gets a slight increase; the ordnance labourer has to be found a house, too, because there is no place for him on Goat Island.

8663. You give £150 a year to a labourer, and give him a house as well? We are obliged to.

8664. Do you ever think of what the taxpayer has to pay;—on whose recommendation is this done? It has been an understood thing. If we cannot find him a house we must find him a lodging somewhere.

8665. Who fixes the salaries to start with? They have been in that way for a number of years. It has been the custom. I have always considered them fair.

8666. Last year the "overseer (warrant officer and conductor of stores)" received £128, and the labourer received as high as £155? The warrant officer was most unfairly reduced. On representations being made, he was put back to the original rate.

8667. So that the warrant officer and conductor of stores last year received £128, while the labourer and watchman received £155? That was because Jackson, the overseer, was unfairly reduced: I tried to get him back his former amount, and at last it was done.

8668. What is the ration allowance? It is for two officers; I think the Commissary of Ordnance and the receiver of stores. In fact, Commissary of Ordnance only, I find.

8669.

C. F. Roberts.

11 Oct., 1900.

8669. Then "fuel and light"? That is for the Assistant Commissary of Ordnance.
8670. They seem to require double as much fuel and light this year as last? It is an increased rate for the Assistant Commissary-General of Ordnance.
8671. Increased rate;—an increased rate of pay will get him an increased allowance? Because the rank ought five years ago to have been granted to him, and carries increased allowances.
8672. What is he? Lieutenant-Colonel.
8673. How many lieutenant-colonels have we in this Colony? A good many that do not do the work that Blanchard does.
8674. More than we have of lance-corporals? I think we have more lance-corporals.
8675. Anyhow, with the advance in salary he requires twice the fuel and light that he did last year? As a matter of fact he is entitled to it on account of the promotion; as he gets an increase in rank the position carries with it an increased allowance of fuel and light.
8676. He wants more firewood in fact;—"charge pay,"—what does that mean? An allowance made to the Ordnance Department—a special allowance.
8677. Who gets it? The Commissary-General of Ordnance.
8678. We are getting a lot of information;—here is another item, "uniform allowance"? He was allowed that, too. He and the Lieutenant and Quartermaster got it.
8679. Can you tell us why these things do go upon the list, and if there is no way of avoiding having to pay them;—why is it that they come down here as contingencies? It is contingent on the officer getting promotion.
8680. When he gets it, then it becomes a contingency? It is not regular pay; it was merely to provide the officers with uniform, and is to cover the £5 allowance to some of the staff-sergeants.
8681. But would it not be better, instead of putting down £474 for him, £19 as rations for him, £27 fuel and light for him, £37 charge-pay for him, a portion of £200 lodging allowance for him, a portion of £40, uniform allowance for him—would it not be better, instead of doing all this, to have the whole thing down so that it could be clearly understood? If he got quarters he would lose his lodgings. If the Estimates were prepared in a different way, I admit that it would be very much better. Each year there have been these details; and they are certainly very confusing to some minds.
8682. If a man first gets £700, it should be stated distinctly, without our having to wade through, to closely examine everything to find out each unit;—who is the Inspector of Warlike Stores in England? There are twelve or fourteen of them, I should say. The officers of ordnance do it there. They have departments—one in each department—and we pay our proportion of one.
8683. But do not the Australian Governments combined pay one officer? They all support the cost of one.
8684. £300 is down for an inspector in England;—who is he? The last man I knew was Colonel Baker.
8685. Was not there a man called Colonel Gordon? He had it for a year, in the interval between the appointment of one officer and another.
8686. I could quite understand why he lost the position; but I could not conceive any idea why he got it;—who commands the artillery forces—Colonel Smith? He did while he was here.
8687. Who does the work now? Major Baynes, with a very small increase of pay.
8688. How many majors have you in the artillery? Four.
8689. That is, four in the Permanent Artillery? Yes.
8690. What is the strength of the force? The Permanent Artillery?—about 612 is the strength.
8691. How many batteries are there? Four—three garrison and one field. There is a lieutenant-colonel and four majors. One major is the fire-master and chief instructor.
8692. Who is the chief instructor at the School of Gunnery? Major Bridges. The other majors besides him are Majors Baynes, Murray, and Savage.
8693. Have you not a Major Dangar? No; it is Captain Dangar. There was a Major Dangar; he went out to South Africa from England to one of the Contingents.
8694. I am speaking of the one in the "A" Battery;—did he not get the honorary title? No. Of course, he may have got it out there in South Africa; but we have not heard of it. He is Captain Dangar now, second in command under Colonel Smith.
8695. Did not he have the honorary rank of major? No; it may have been given to him out there. I know nothing about it if it is so; but I do not think it. We have heard nothing of it.
8696. What is this—"Firemaster and Chief Instructor, School of Gunnery, £356"? That is Major Bridges.
8697. Is there any more salary attaching to him anywhere? He gets 2s. 6d. a day allowances for certain duties. It is placed somewhere in the Estimates; it is on page 37—"Acting Fire-master."
8698. The Field Artillery do not seem to possess a major at all? No; they have got Airey, Lieutenant-Colonel Commanding.
8699. But they do not seem to have a major? They have a lieutenant-colonel in place of a major in the Permanent Force.
8700. What does this mean—"Four officers commanding, extra duty pay"? What page is that?
8701. 37? It is command pay for the officers commanding the battery; they get 2s. 6d. a day.
8702. That is £50 each? Yes.
8703. Who is the Staff Officer of Engineers? Major Owen; he is a temporary major. It is Captain Percy Owen.
8704. Does he get any allowances? No.
8705. How is that? There was an agreement under which he was to take the appointment at a fixed salary.
8706. His promotion has been rather rapid, has it not? He joined practically as a captain; he is still a captain.
8707. Is this a captain's pay that he gets? It is rather more.
8708. There is £500 a year here? It is a specialist's pay.
8709. Is he a specialist? He is an engineer. He went to England, and learned submarine mining; he has been through a course.
8710. Been through the course at the expense of this country? Yes.
8711. And you think that he ought to get this pay because the country paid his expenses and his salary while he was in England, and had him educated there? He was a young fellow with very good recommendations when he came here twelve years ago.

8712.

- C. F. Roberts. 8712. No doubt, but twelve years ago he could not be very much of an expert specialist in engineering? He served all his time in Mort's Dock. He was a civil engineer.
- 11 Oct., 1900. 8713. *Mr. Quinn.*] A civil engineer? Yes. He was practically a civil engineer when he came here.
8714. He was in the Survey Office? No; I do not think so.
8715. *Chairman.*] Has he qualified now as an engineer? He is a very good officer for the position that he holds. He can advise on all buildings and check the cost of them, and has been Instructor in Submarine Mining Defence.
8716. Of course, you are not an engineer yourself? No.
8717. You might be something like Colonel Taunton, who knows whether carts are all right when he looks at them after they have been painted and puttied;—it would be rather difficult for a person who is not an engineer to judge of the ability of an engineer, would it not? Yes. Except that you know, practically, a man's work, and he has done his work very well.
8718. Was not Major Owen recommended for the command of the Engineers in succession to Colonel Rowe? I could not exactly say; I do not know every recommendation that is made.
8719. Who had the work of appointing him? The General settles that. There was some rumour about Major Owen.
8720. I do not see here what position Major Lea holds? He is in charge of the Submarine Miners. It is J. L. Lee. You will find it on page 38. Officer Commanding the Engineers, under No. 3 Company.
8721. He gets £384? Yes, a guinea a day.
8722. Considerably over £100 less than is given to Owen? Lee's total approximates £588.
8723. £588? Yes. It is made up as is shown by the schedule published each year to explain the Military Estimates. He gets salary, lodging—or quarters, which is the same thing—forage, stabling, servants, rations, fuel, and light.
8724. Does not Owen get a servant? No; he is not supposed to have one.
8725. Now, as a matter of fact, did he not take both a horse and a servant to South Africa with him? He may have done it. There may have been some grant or concession given to him. We know nothing about it.
8726. Was it not given to him outside the General? Well, he was allowed to take a horse, and probably he was allowed to take someone with it.
8727. Who gets the good conduct pay? The men, according to their service.
8728. What is regimental pay? After a certain time a man is given an increased rate of 2d. a day, or according to his conduct. In fact, it is a reward for good and long service.
8729. The "allowance for uniforms, &c.," seems to have gone up with a bit of a bound;—you will find it on page 39, under the head of contingencies; it has gone up from £200 to £325, or nearly double? That is on account of the increase in the number of men among the Submarine Miners.
8730. And the rations, fuel, and light? That is on account of the same thing.
8731. And the free kits for recruits? When a recruit is first sworn in he must be provided with a free kit. This is the money to supply the kit.
8732. What is the qualification for a sapper;—do you know? There are two sorts of sappers—you mean the Engineers?
8733. It is under Submarine Miners? It is the name—customary of this corps—to give the privates.
8734. But what is the qualification? They must thoroughly understand the junction of mines, the handling of gun-cotton, and such details.
8735. Do you not teach him that after he joins? Yes; but he should have some knowledge of engineering when he joins.
8736. Engineering? What is called mechanical engineering, and such work.
8737. Surely you do not expect to get practical engineers for this amount you have here, do you? But you get the man who has some training. In addition to 4s. a day, he gets rations, fuel, and light, his keep in barracks, his clothes, and medical attendance.
8738. Oh, they do not do too badly; the Officer Commanding the Lancer Regiment is down for £50 a year? But you will notice that it runs to only £35 on account of a reduction.
8739. And a major at £40? I may remark that the amounts formerly allowed in this branch of the Forces went like this:—£50, £40, £32, &c. These have been reduced, year by year, till they have come down to £35 and £30, and so forth.
8740. Who is the major of the Lancers? Major Vernon.
8741. Do you know who is the Officer Commanding the Lancer Regiment? Colonel Burns.
8742. Is he an Imperial soldier? No, he is not.
8743. What length of service has he had? I could not tell you really. He has been in the Lancers about fifteen years. He succeeded Colonel MacDonald, I think.
8744. Was it not Major Walters, who took command after Colonel MacDonald? He used to be in the Lancers.
8745. Major Walters;—he was quite recently in command? No; that was a long time ago.
8746. It was since General French has been here;—he swears so? I do not think so. Colonel Burns was here with General Hutton. He has been in command of the Lancers for nine or ten years.
8747. It is not that length of time since General Hutton was here? Pretty well.
8748. How long is it since he left? Six or seven years ago.
8749. You will have to look up the date, Colonel? He came here in 1893.
8750. Who? Hutton.
8751. But he remained here sometime? He was here three or four years.
8752. Then it would be only about four years ago since he left? I think that he was in command when General Hutton left. I find, on looking up the Army and Navy List, that Burns was the Major Commanding the Lancers in 1897; Walters was put on the reserve list as Major in 1897. That was just the date that Burns took it over; but MacDonald was in command before then.
8753. Oh, no; he had retired long before; but you need not bother about that; the Permanent Army Service Corps—whose department does that come under? That is under the Quartermaster-General. The executive officer is Beauman. He is in direct charge of the men.
8754. He is a sort of staff officer-in-charge? Yes. He is under the Quartermaster-General; but he gets no extra allowance through having charge.
8755. The same conditions apply to the Australian Horse as to the Lancers? Yes. 8756.

8756. And the Partially-paid Submarine Forces—No. 3 Company? Yes; are under Captain Owen as staff officer. C. F. Roberts.

8757. And the electricians? Yes.

8758. They are a Partially-Paid Force? Yes.

8759. Do the Partially-Paid Infantry Regiments, as far as the allowances are concerned, take the same position as the mounted men;—the allowances seem to be pretty well the same? The pay is practically the same. The only alteration is the little extra pay given to the Submarine Miners and the electricians, because they have to do extra work along with their training.

8760. Could you tell me this: I see that you have, on page 47, four regiments mentioned; could you explain why it is that you have an adjutant and paymaster in two, who get 20s. 3d. in allowances, while the other two get 18s. 3d.; take the 1st and 3rd Regiments—they have the rank of major? I think there are captains in two regiments.

8761. How do you mean? I mean that Major Bartlett gets 20s. 3d.

8762. Major Bartlett does;—is he an officer in these Forces? He is Adjutant in the 3rd Regiment. He has the honorary rank of lieutenant-colonel.

8763. Who is command of the 3rd Regiment? Colonel Holborow.

8764. Who had it first? Lieut.-Colonel Oldershaw.

8765. Who previously to Holborow? Colonel Farrell.

8766. Farrell; I have never heard of him? He was there for a very long time. He retired only the other day. Then the other two are captains—Legge and Hillard—in the 2nd and 4th.

8767. These forage allowances; I notice one officer commanding and one major at £17, and one adjutant at £34;—is the adjutant supposed to keep two horses? What page is that?

8768. Forty-eight? The £17 is for a volunteer major, who comes out occasionally with his horse. The adjutant has to keep a horse going all the while.

8769. Then there is stable allowance for one officer commanding, and one major and one adjutant, £42? That is for the colonel, the officer commanding, and the major. The adjutant has also got to keep his horse going. These officers have always to be mounted.

8770. Then the 3rd Regiment—rent, &c., of regimental stores; that seems to be something not in the other regiments' estimates? They have no head-quarters' stores. They have to hire a place.

8771. How is that? They are the Richmond men. The Newcastle men, for example, have Government buildings. In Sydney there are the Victoria Barracks. The Third, who are at Richmond, have no barracks.

8772. What is the idea of having the head-quarters of these infantrymen at Richmond? Because it is more central for the western district.

8773. More central? Well, I do not think so, myself. Originally we had them at Bathurst. Personally, I think they should be either here or in the centre of their district. Newcastle, for instance, is head-quarters of northern district.

8774. That is because it is a centre—one could understand that; but Richmond is no centre? It would be better nearer Bathurst than anywhere else.

8775. Bathurst or Orange, or some of those places? It used to be at Bathurst, but it was altered. I do not know why.

8776. By the way, who runs the Cadet Force here;—do you have anything to do with it? No. A few senior cadets are attached to the forces; but the cadets have dwindled down to three or four companies. There used to be a good many of them. The bulk of them are under the Public Instruction Department—under Colonel Paull.

8777. Is he an old Imperial Army man? No; he is not. He had had a long service previously to getting the position. He was in one of the partially-paid regiments.

8778. What position did he have? Major, as far as I can remember. I think he was in the 3rd Regiment.

8779. Do you not think it better, if they are to have a military training, that they should come under the military forces, with a limit, perhaps? There are a very large number of them. I hardly think it would be worth while to train these little boys very much. The simple movements they can be taught almost by any good instructor.

8780. Could not they be taught almost as they are now;—you would not have to take out all the Staff to put these little kiddies through their manual exercises? There are so many of them. And they are all over the place.

8781. At each school? At probably nearly every school in the Colony.

8782. If you have a capable drill instructor to go round and see the teachers putting them through the manual exercises, and if they were not doing right to show them where they were making a mistake—that is all that would be required; and that only occasionally? Well, I should say so. I should say that that could be done.

8783. Are you in favour of teaching boys of 11 and 12 manual exercises? Of course, you may take them when they are too small; but if you had twenty big boys and twenty small ones, the little fellows could not do themselves much harm to join in. But we have no good rooms to drill them in. Where the use of arms is taught it is pretty severe upon them. All the schools are applying for arms. We can only give them what we have, and they are pretty heavy.

8784. Dummy carbines, are they not? Light Berdon rifles.

8785. *Mr. Meagher.* I have seen the boys when I have been on the trams—they all had dummy carbines? Are you sure—all of them?

8786. Quite? I see.

8787. What is the Army Nursing Staff Reserve that you have here? It was started so as to have nurses for the hospital in case of necessity. That is a retaining fee for twenty-six of them, so that if they want to get a nurse's dress they can do it.

8788. You retain twenty-six nurses? I believe that that is what Colonel Williams wished to have done.

8789. Who has charge of the torpedoes? I think Captain Bosanquet. That is, the Naval Brigade—the Naval Forces.

8790. It would not be a torpedo that set the gun off the other night, would it? I do not know.

8791. Do you know anything about the report of the Board of Inquiry into the affairs of the 7th Regiment? I have not seen it or looked at it. In fact, I know nothing about it. 8792.

- C. F. Roberts. 8792. *Mr. Quinn.*] Do you order the ammunition, Colonel, for the local defences? Yes; it is ordered through the Imperial Government.
- 11 Oct., 1900. 8793. Not through the Agent-General? Yes; through the Agent-General. All our orders go through him to the Imperial Government.
8794. Do you know whether the Imperial Government calls for tenders, or whether it just places out the orders;—does it supply us out of the Imperial Arsenal, or does it send the supply through private firms? If they can afford it they will give us out of their own supplies. But, generally, they put the supplies out to contract.
8795. What firms supply the ammunition? Kynock, generally.
8796. That is the Birmingham firm? We understood that from the report.
8797. You are speaking of the late order? Yes; one of them.
8798. The previous order was in 1898;—it was for 303 ammunition, and was supplied by the same men? The very last order placed in England, the one before that—last year or the beginning of this year—we got from Nobel, through Dalgety's.
8799. What sort of ammunition was it? It was very good indeed.
8800. Rifle ammunition? 303. The test gave very high average.
8801. You got the 3,000,000 cartridges lately? They were from Nobel.
8802. The British Government would put the orders with firms capriciously by contract? By contract. It was noted down on the progress report "placed with Kynock." Kynock is the Government manufacturer. He supplies enormous quantities.
8803. It is alleged that Mr. Chamberlain is in some way connected with Kynock? I do not know anything about that.
8804. The statement has been made in the House of Commons? But that order would not come under Mr. Chamberlain's Department.
8805. But you know well enough that a Minister's influence is not confined always to his own Department. Where the Minister is a strong man like Mr. Chamberlain his influence on other departments would be very great? But all soldiers' requirements, all these matters relating to war and defence go through the War Office.
8806. Through Lord Lansdowne? Yes.
8807. You are satisfied that it is customary for this Colony's orders to be placed out at contract? As far as we know.
8808. How many cartridges have we in stock now? As far as I can remember about 4,250,000.
8809. Including the orders that have been given? When our orders are completed we shall have over 5,000,000.
8810. Are these kept as reserves, or are they issued for practice purposes? The oldest in stock is issued first for practice purposes. We do not keep the oldest. The first received is the first issued. We gradually work off our stocks in that way. The early year's, for example, go first. This year's goes next. And so on.
8811. Have you any ammunition as a stand-by? We keep the standard at present at 5,000,000 cartridges.
8812. What is the lowest that you have had? 2,500,000.
8813. When these orders are fulfilled you will have 5,000,000 cartridges? Over 5,000,000.
8814. Do you think that that is sufficient? Just at present it is. We can get supplies each year to make up for that which we use. So that we shall always have a stock in hand.
8815. But in case of contingency where, for instance, it might be that Great Britain would be involved in war with one or two European powers, and it would, judging by the experience of South Africa, be impossible to expect any reinforcements of ammunition from Great Britain? It would be very unlikely that we should get it, I think. It would depend entirely how they were situated; but if their supplies were not up to requirements it might be awkward for us. Still they might be able to let us have it.
8816. They might;—then we should have to rely solely on the stocks that we had in hand;—how many cartridges do you think that we ought to have in case of emergency? In case of war we ought to have 12,000,000. That is my view.
8817. But as following the commencement of hostilities we might have great difficulty in placing our orders should not we have the amount in stock? Certainly. We should have more than we have now. A great deal more.
8818. *Mr. Cook.*] Why do not you get more? For the very reason that we have not the money to pay for it. We cannot get it. It is a matter for Parliament to provide the means.
8819. *Mr. Quinn.*] It does not matter to us how many officers we have, or what men we have, or what stand of arms we have, if we have not ammunition and so on to supply them with;—suppose we had occasion to place our forces in the field, how long would 5,000,000 cartridges last;—say with 5,000 men in the field? We keep some in hand for reserve, and some for use. We have 500 reserved per man.
8820. That would be 2,500,000 that they would take out—that 5,000 men would take out at the start? They would have the reserve to fall back on.
8821. *Mr. Cook.*] What are the facts as far as they can be ascertained in regard to consumption of ammunition;—how long does this supply last;—about how long? Five hundred rounds is the proper quantity to take on the field, with an extra reserve of 500 more.
8822. How long is that supposed to last? I cannot say upon the fighting.
8823. *Mr. Meagher.*] But since the Franco-Prussian war, and the Russo-Turkish war, taking the amount of lead expended to the number of men killed, has not it generally been held that it takes a man's weight in lead to kill him? It is something like that, I believe, from a statement I once said.
8824. It has never been worked out with the new arms? To a certain extent it has. Authorities agree at present that 500 rounds per man should be in the first reserve to follow him in the field.
8825. *Mr. Cook.*] How long is that supposed to last? It depends on what the man has to do with it.
8826. *Mr. Quinn.*] How many men, if we were attacked by the Russians and French in a vigorous workmanlike way, if we had to repel, in point of fact an invasion of men thrown on our shores, how many men would we put under arms? Including the rifle clubs and reserves, we could put 15,000 or 16,000 men easily.
8827. *Mr. Cook.*] 15,000 men? I mean taking the reserves as at present.
8828. *Mr. Quinn.*] You could put in the field at once from 15,000 to 16,000 men? Yes

8829. *Chairman.*] That is what you would call partially-trained men? Yes; that would be about 7,500,000 rounds, giving them this quota of 500 a man? It would require 7,500,000 as the initial equipment of the forces? No; we ought, in case of war, to have 12,000,000, including extra reserve. 11 Oct., 1900.
8830. But that would not be enough? Very few men, I think you will find, have ever fired 1,000 shots. I think that a man fires only about fifty or twenty. It is not every man who would fire his whole 500 right off the reel. Some would fire twenty; some 100; some more, some less.
8831. Do you mean in a single battle? In a single battle.
8832. Supposing that a man had a campaign of a month? He would not fire the lot in a single day, in all probability.
8833. We might have to repel a determined attack;—assume then that the campaign lasted over a month, and the men had to fire pretty frequently during that time;—do you think, in those circumstances, that even 12,000,000 would be enough? I think it would be a very fair allowance.
8834. Take us as we now stand;—suppose that we ran short, what should we have to do? We could now supply our men with small arms and ammunition.
8835. Do you know how we stand as regards ammunition for the big guns? We are in a very satisfactory position as regards that.
8836. It would be difficult to make the ammunition here, would it? We could make up cartridges, but not shells.
8837. Why? Because we have no engineering establishments suitable for the purpose.
8838. Would you be surprised to learn that they did it in Kimberley? But they may have had better engineering establishments there than we have here.
8839. Why do you say so. They made shot and shell? We could not do that here.
8840. But there is one mining town in New South Wales where they have a far superior plant to what they ever had at Kimberley; I refer to Broken Hill; they have a much better plant there? Do they make their own machinery—the heavy parts?
8841. A great deal of it? If they manufacture their own machinery to any extent, they might be able to do it.
8842. We have Government engineering shops, have we not? Yes.
8843. That is supposed to be the best shop of the sort in the Colony? I do not think that we could make any projectiles here.
8844. And if we cannot, do you not think it is time we had some engineers to superintend the shops? I cannot express any opinion about that.
8845. It seems that there was a shop in Kimberley, where they made a very first-rate gun? Yes.
8846. That is a comparatively small town, with only a very small engineering shop, because a very large one was not required there;—yet you think we could not turn out the same class of work here? I do not think so. I do not know exactly what sort of gun they made at Kimberley.
8847. They say that it was a most excellent one? But it was a very small one, was it not?
8848. A 94-pounder;—they call that a big one, do they not? It is a good size.
8849. It is a good size;—twice the size of the 4·7? Yes, in weight of projectile.
8850. Those large naval guns that were supposed to have saved the British on several occasions—they were 6-inch guns, were they not? Yes; I think so, from reports.
8851. *Mr. Cook.*] You say yourself that we ought to have 5,000,000 rounds in stock, although you admit that that is totally inadequate in time of warfare? I say at least 5,000,000.
8852. How much ammunition do you think that we ought to have for all emergencies, in order to be able to defend ourselves? What it should be were we attacked?
8853. What reserve ought we have to defend ourselves in case of attack? I should say about 12,000,000. We want a two years' supply.
8854. How much per million is that? About £5,500 per million.
8855. We want, then, £60,000 worth of ammunition in stock to make an effective defence—that is, to be ready in case of war.
8856. What is the life of ammunition? From three to five years, as far as we know. We have had but very little experience.
8857. Suppose we average it, and say four years;—that means that you want to expend in small arms and ammunition alone to put ourselves in a fit state of defence, about £15,000 a year? Something like that. Our annual consumption is about £7,000 worth a year. Every day increases it.
8858. What amount is appropriated every year for the purposes? It depends on the Government whether we get £20,000, or £12,000, or £8,000 for warlike stores.
8859. What has been the average cost for the last ten years? £12,000 or £15,000 a year—that is, for everything—blankets, tents, and other stores.
8860. But in cartridges? As much as we can get hold of. There are other things to be thought of besides ammunition, as I have said.
8861. Could you not give us, at a rough guess, the average for the last ten years? I could not; I must look it up and see.
8862. What was it last year? You mean for 1899-1900? We must have bought nearly £25,000 worth; but nearly all that is out of Loan money.
8863. *Mr. Quinn.*] It is all special? Yes.
8864. *Mr. Cook.*] This for last year would be special; what would it be the year before;—what do you say the stock is at the present time? Close on 4,000,000—about 4,250,000.
8865. You say that it had gone down to 2,500,000? I say that it has been.
8866. *Chairman.*] That is on account of sending it away to South Africa? It was not on account of that.
8867. *Mr. Cook.*] Owing to the vote in the House, I understood the Colonel to say? You see, the amount of ammunition is dependent on the vote of the House—that is to say, if there is retrenchment in the Estimates, there is retrenchment on the cartridges. We have an order, say, to reduce the Estimates by £40,000. The retrenchment must affect cartridges *pro rata*.
8868. And if there is a reduction of £40,000 this year, will it mean a proportionate reduction in cartridges? We asked for £20,000 for material—for stores—including the expenditure on ammunition. It has been knocked down to £12,000. It seems that, as we are going to be handed over to the federal people, we are left to get along as best we can.
8869. Here is an item on the Estimates, which are not yet passed; the total figure is £227,000; less an estimated saving of £40,000;—now, have these savings, as stated here, been arranged by the Military Authorities? We shall have to arrange it; we shall have to knock it off. 8870.

- C.F. Roberts. 8370. That will reduce your vote for ammunition? By the same rule, it will be something off the vote for the purposes of ammunition. Parliament passes money for a number of men, and they have certain salaries and emoluments. Those have to be found.
- 11 Oct., 1900. 8871. *Chairman.*] Whatever happens? The salaries had to be reduced 10 per cent. and 20 per cent. some time ago.
8872. The ammunition has had to be reduced, too? It has had to be.
8873. *Mr. Quinn.*] Is it not essential that we should have a small-arms and ammunition factory in this Colony? It is absolutely essential that we should have our own small-arms and ammunition factory; but I do not think that only one colony should undertake it.
8874. When did you place the last order for ammunition in England—for ammunition that has not arrived;—was it not at the end of last year? About August of last year.
8875. And it has not yet arrived? The greater part arrived some time ago.
8876. But the first consignment after the order was placed;—when was that delivered? The first lot was delivered here in about four months.
8877. Then there were some rifles ordered? They were ordered last August.
8878. Have they arrived yet? The orders could not be placed in England on account of the war.
8879. Why? They would interfere with the orders placed by the British Government.
8880. Did it ever occur to the Department that rifles might be placed elsewhere? Our instructions are to keep to the one sort of ammunition.
8881. *Chairman.*] It would never do to have a mixed lot? No. It is considered desirable to have uniformity in arms and ammunition. Take the Lee-Metfords, for instance. Lord Roberts says that Tommy Atkins is quite satisfied with the weapon.
8882. *Mr. Quinn.*] How many Lee-Metfords have we now? 4,000 Lee-Enfields.
8883. And there are 15,000 men? Yes; but we have 3,000 Martini-Enfields and 1,000 carbines.
8884. Small bore? Yes. And 1,000 will be out here in April. We have now something like 12,000 Martini-Henry's. We have 2,500,000 or 3,000,000 cartridges. But if you could let me know what you want I could bring down a return for your information.
8885. That is irrespective of the '303 ammunition? Yes.
8886. Have those cartridges that you mentioned been long in stock? A considerable time. Some of them have been here twelve years.
8887. You would not like to say that it is effective now? No. But a million and three-quarters of the lot we got from the Imperial Government.
8888. In view of what you said as to the necessity of not having mixed arms, do you think it desirable to have these Martini-Henry's? They would be better than nothing. We shall have 12,000 of the small bore.
8889. It seems that it is intended to arm our forces with the Lee-Metford's? As soon as we can obtain the money to pay for the Lee-Enfields.
8890. Of all the rifles that you have, how many have you in the way of effective rifles? Including the Martini-Henry's?
8891. Yes? Over 20,000. Some 21,000 or 22,000, including weapons of all kinds.
8892. And of effective ammunition—I do not mean this twelve years' old ammunition—you have 5,000,000 rounds;—we have 6,000,000 now? I should think close on. The quality of these old cartridges is variable, especially those twelve years old. The cases get damaged by chemical action setting up, unless they are very well made. I do not know exactly how much ammunition has gone out. But I could easily get a return.
8893. Then on the basis of 500 rounds for each man, in order to equip 22,000 rifles with 500 rounds each, you would require 11,000,000 cartridges? Yes, at least.
8894. That is more than twice as many as you have in stock? Yes, about that.
8895. Leaving nothing for reserve? Nothing for reserve. I look upon 200 out of the 500 as the first reserve—300 for immediate expenditure and 200 as the first reserve. Then there ought to be another 500 lying ready. We should have 1,000 rounds a rifle.
8896. 22,000,000 rounds, at that rate? That is using every arm we have.
8897. To equip 22,000 men;—we could equip more than 20,000 men if the country was in danger, and we should be in a state to arm men? I quite agree with you.
8898. *Chairman.*] You say you have a difficulty in getting the money? We had last year an extra amount to help us by Loan vote.
8899. You say that you have over £200,000 on the Estimates now? We had over £200,000 submitted.
8900. There are £200,000 with the Naval and Military Force—£203,000? Something like that.
8901. Do you know the population of this country;—about a million and a third? Somewhere about that. I think that is about it.
8902. Are you aware that it means over 3s. per head for every man, woman, and child in the community to keep up the Defence Force? I suppose it would be about that.
8903. Do you know any other country that pays that? I have not gone into that matter. But I believe that in England it is 16s. or 17s., or even more.
8904. And more than once, in addition to that, you have had some expenditure from loan money? This last year we had.
8905. But for many years? I could not really say. This is the first big vote we have ever had for ammunition and arms.
8906. Were the fortifications paid for out of this—out of loan money? Yes, formerly. That, however, is quite another thing.
8907. There are £7,000,000 or £8,000,000 sunk in fortifications at one place or another? I could not say whether that is correct or not. I could not go into the matter off hand.
8908. Then we had a very large amount of money paid for orders placed for big guns, &c., so that we have had nearly £10,000,000 spent in defence? I should be very much surprised to hear that that was so. I think that it is nearer £3,000,000 or £4,000,000. But I do not know actually what the amount has been.
8909. But if it was only £5,000,000 it would increase the amount per head, would it not; I mean the percentage per head;—can you explain why, when you are so hard up for money, when you ask for all these rises in wages and “screws,” and all that sort of thing, and there is an amount cut off the vote, you take

take it off ammunition, and so on? We have to do the best we can. We could not well knock off any extra thing that we suggested.

8910. But the Staff would never cut themselves down or recommend retrenchment there? The second and third officers were to have an increase; but that is knocked off, I understand. C. F. Roberts.  
11 Oct., 1900.

8911. Why were the increases put there? On account of length of service.

8912. The General Officer Commanding gets £1,250? - Yes.

8913. This £1,250—but I will not go into the matter now, as it is time to adjourn for lunch.

8914. *Mr. Quinn.*] Before we rise, perhaps Colonel Roberts, when he comes later, will bring us a return of the stock of ammunition and small arms? Very well. I will do that later on.

8915. *Chairman.*] We were asking you about the cost per head of the population of the defences here and in England? Yes; I have been working it out. In England, for 1899, the cost per head was £1 3s. The cost in New South Wales, taking the expenditure at £298,650, was 4s. 5d. per head.

8916. But you have not added the interest on borrowed money? No; that is the total expenditure. There is no interest included in the figures I gave you for England. It is merely the expenditure £44,000,000, as against our expenditure of £289,650.

8917. But, in trying to figure out the cost per unit of the population here, it would be necessary to put in the interest on borrowed money that has been expended on fortifications, ordnance, &c., would it not? For the past forty-two years, £5,053,000 has been expended on all defence works, our share of the Navy, Thursday Island, Albany defences, &c.

8918. *Mr. Quinn.*] Over how many years? Forty-two years, and, in addition, loans £1,328,000, making a total of £6,381,731, or practically about £152,000 a year.

8919. *Chairman.*] What is that? The expenditure on all defence and fortifications.

8920. Practically £150,000 a year, you say? £152,000 a year.

8921. Spread over those years you mentioned? Yes.

8922. And we have to pay interest on 6½ millions? Yes; that gradually mounted up; but if you want to make a comparison between here and England, you must take the expenditure in England yearly and our yearly expenditure.

8923. We are not concerned with the expenditure in England, but we are concerned with the expenditure here. The interest has to be paid on 6½ millions, or practically that? Yes; but the comparison is a fair one.

8924. Most of that money would average 5 per cent., would it not? A good part of it, I think; but over a third of a million is for the Navy.

8925. A portion of our defences, though? Yes; but not our own defences; it is the Royal Navy contribution paid by the colony.

8926. But it is provided to us cheaper than we could do it ourselves, is it not? Yes; that is so.

8927. The interest on £6,000,000 would practically be £300,000 a year we are paying, would it not? No; the total amount includes the portion to the revenue that is voted yearly for defence works and salaries. It is not all loan money.

8928. How do you estimate that? I find that in Mr. Coghlan's book, on page 966. It looks to me that it is much cheaper to pay the amount than to have a war indemnity levied on us for double the amount.

8929. Well, Colonel, in spite of the ammunition running to a very low ebb—down almost to breaking strain, if you only have the usual quantity in stock, and admitted that the usual quantity of 5,000,000 rounds would not be sufficient? No; it would not be sufficient.

8930. In case of war? No.

8931. And yet we allowed it to run down to 2,500,000 rounds? Something like that once.

8932. And in face of all that, we find an increase in the expenditure generally amongst the officers' salaries on this year's Estimates? I suppose officers should receive something for their services, and if they held similar positions in England, they would get salaries near the same.

8933. Do you think so? I think so. Most of them have twenty odd years' service.

8934. That might be no reason for an increase of pay? They would get promotion, which would carry increases as a matter of fact.

8935. Not necessarily, would they? You must assume that they would. If they did not deserve promotion, they would get the other thing. They would be shot out.

8936. Promotion goes very rapidly here, does it not? In some instances not very rapidly.

8937. You told us of the case of Captain Owen;—he started as a lad of 20 or 22 years of age, and he started as a captain? He originally came in as a civil engineer, and was afterwards made a captain, and now has honorary rank of major, which brings him in nothing extra.

8938. But he seems to be doing very well with £500 a year;—I should say fairly well? Yes; £500 a year.

8939. Do you know what the officer's pay in England is;—what would a subaltern get? Five shillings and tenpence when he first joined, and 6s. 10d. afterwards.

8940. Is it not 6s. 8d.? I think 6s. 10d.

8941. Do you know what a subaltern gets here? About 12s., all told. He starts with 7s. 10d. pay.

8942. He starts with 7s. 10d.? Yes; and if he gets two qualifications—for school and gunnery—and the armament certificate, then he gets an extra 4s.

8943. How much do you say he gets here, 13s.? Twelve shillings, I think; that is the exact amount, if they get both those certificates; 9s. 10d. if they only get one.

8944. Then it is 13s. as against 6s. 10d.? No; 7s. 10d. as against 6s. 10d.

8945. It is 6s. 10d. as against 13s., is it not? It would be 8s. 10d. against 12s.

8946. Can you find it in the Army List? I think so. Yes, I have it.

8947. Well, it says in this List that a lieutenant, after seven years' service as such, receives 7s. 6d., is that so? Yes; we based our permanent pay on the Permanent Artillery, which is the only permanent force we have practically on Imperial Artillery rates.

8948. A second lieutenant in England gets 5s. 3d., according to this list, does he not? Yes; in the line.

8949. That is, in an infantry of the line or West Indian Regiment? We have no infantry subalterns here.

8950. But that would be the pay? Yes; but the Royal Artillery is the basis on which we pay.

8951. We will take the Royal Engineers; turning to them in this Army List, I find — You will get into the corps pay there and will get mixed up.

8952. What corps pay? There is an extra pay called corps pay, which they get later on.

8953. But the ordinary pay for Engineers is mentioned here? Yes; but there is a subsequent pay, called corps pay, afterwards. The basis of the permanent officer's pay here is worked out on the Artillery

- C. F. Roberts. basis, because they were the first Permanent Force here, and it was done to put everybody on equal terms.
- 11 Oct., 1900. 8954. Yes, but you said you reckoned the pay here would be very much the same as it is in England;—now in the List I find that a lieutenant gets 12s. 6d.? Engineers?
8955. No; the Royal Artillery? No; that cannot be so. The Horse Artillery might be that figure. I know the Royal Artillery gets 7s. 10d.
8956. Royal Artillery and Royal Malta Artillery, it says here? That is the adjutant.
8957. After seven years' service as such, if commissioned from the ranks, a lieutenant gets 7s. 10d., and a second lieutenant 5s. 7d.? Yes.
8958. Here we start with 7s. 10d.? Yes.
8959. And after passing the ordinary school of instruction they get 2s. a day extra? Yes.
8960. And then, after passing for the garrison armament certificate, they get another 2s. a day? Yes.
8961. They first reach to 9s. 10d. and then to 13s.? Gradually, yes. It is 11s. 10d. with those two certificates.
8962. And 7s. 10d. is the amount at Home;—7s. 10d., with armament certificate there, makes 9s. 10d., does it not? 7s. 10d. and 2s., makes 9s. 10d.
8963. Yes; let us take an adjutant; I think some of our adjutants of infantry here get 20s. 3d., is not that so? Yes, something like that. The 1st Regiment gets 20s. 3d. That is a major's pay.
8964. In England it is 13s. 7d., having higher rank by brevet, and 2s. 6d.? You have got to take a major's pay to make the comparison. Is that a major.
8965. No? Well, you must take a major, or you cannot get the comparison.
8966. A major is 16s.? Yes; that is right.
8967. And a lieutenant-colonel gets 18s.? A lieutenant-colonel?
8968. Yes? That is so.
8969. And, when serving with the corps out at Malta, 5s. addition? Yes.
8970. They do not apply to Field Artillery at all, these extras that I have been quoting from the List;—it is armament pay for Garrison Artillery and Malta Artillery when serving at Malta? Yes; that is so.
8971. But I am talking about our Field Artillery? Well, you cannot reduce a man's pay because you move him into the Field Artillery from the Garrison Artillery.
8972. No, but you seem always prepared to increase it if he goes into the Garrison Artillery? Our basis is the Garrison Artillery pay, and as our officers are often shifted from garrison to field, and from field to garrison, we keep them at one rate of pay. It improves their experience.
8973. What does a lieutenant in the Army Service Corps get? The Permanent Army Service Corps?
8974. Yes, the staff officer;—give it to me with allowances? He would get £277 pay, and, with allowances, it would be brought up to £423.
8975. What pay do you think he gets in the Imperial army after seven years' service as such? I really forget what he gets there—12s. or 15s. I think.
8976. Well he gets 6s. 6d., with 3s. 6d. corps pay? That is 10s. a day.
8977. About £182 10s. a year, is it not? Yes.
8978. Well, there seems to be a slight difference between £423 and £182 10s., does there not? £277 is his pay; the other is made up of allowances.
8979. This corps pay is allowance, too, I suppose? No; our man's corps pay would be reckoned in with the pay, £277.
8980. Do you mean to tell me that all officers get this corps pay;—is it not, together with these allowances, an institution worked up to really double the pay, without the public being aware of it? No. I understand that Major-General Hutton went into this matter himself when he was here. A reduction of 20 per cent. was made in the pay, and the whole matter of the allowances was gone into, in order to get the correct basis for the reductions, and have the salaries levelled up.
8981. Is this the principle that the military is worked on here, that a man receives £423 a year, and only appears as receiving £277 as pay? He gets £423 on account of allowances for lodging, forage, stabling, &c. There is a sum of £146 for allowances.
8982. *Mr. Quinn.*] You say the pay was cut down in General Hutton's time? Yes; about 20 per cent.
8983. And that you and the General went into the matter, and scaled these amounts with a view of levelling the pay up with the allowances to what it was originally? No. He made some sort of tabulated statement in which we could account for the reduced rate of pay, so as to pay so much allowance; but not to bring it back to its former amount. Instead of saying a man gets £410, we say his pay is worth so much, and his allowances so much. If his pay did not quite come up to the amount, we saw how much the Imperial pay would be, and gave him that.
8984. Was the effect of that to bring the pay and allowances back to the original sum before it was cut down? No, it was not. For instance, it was a curious thing for a man to go in and get £420 a year, and for the next man holding the position not to get that. The pay was fixed at so much a day, according to the man's rate, and allowances at so much a day, and we did not go back to the old rate, but kept to the reduced rate. For instance, a man might get barrack accommodation, and he loses his quarters' allowance, which was fixed specifically by these regulations. The very man we are talking about, if he went into quarters, would lose £60 in his allowance.
8985. When this new estimate was arranged, how much below the original salaries were the new sums fixed? Taking them all round, 20 per cent.
8986. After you had finished regrading them? Yes; 20 per cent. was taken off, and we then cut our coat according to our cloth.
8987. *Chairman.*] I was asking you, before lunch, about the salary of the General Officer Commanding;—it is £1,250 a year, is it not? Yes.
8988. Can you tell me what his allowances are now? At the present time?
8989. Yes? He receives lodging, including furniture allowance, £262; stable allowance, £27; two servants, valued at £55; light, valued at £32; and £200 table money, I think.
8990. Is the table money a military term, or is it meant in the ordinary sense of the word? It is an allowance that is sometimes given to general officers commanding at big places for entertainment.
8991. Is that all the allowances, then? Yes; I think so.
8992. *Mr. Quinn.*] Nothing for forage? No; he pays for his own forage. He is expected to do that out of £1,250.
8993. £1,250 is it? Yes; he gets £1,250 salary, and finds his own forage and rations.

8994. *Chairman.*] So that, while we practically give him £1,250, and say, you have got to find your own C. F. Roberts. forage and rations, and that sort of thing, we discover that we are paying him £1,826 a year? Yes; that is the present state of things. 11 Oct., 1900.

8995. So that, if some people considering that, think that some of it might go towards the necessary amount of ammunition, I suppose they would be perfectly right in having such an opinion? I suppose they could have an opinion.

8996. By the way, all claims by the Military that are sent in to the Government would go through your Department, would they not? All claims?

8997. Yes? In what matters do you mean?

8998. In all of them;—did you hear, for instance, anything about a claim by the General for some range-finding apparatus, or something? I did hear that there was some such claim, but I do not believe it was ever paid.

8999. Did it go through your office? No.

9000. And was there some claim for some system of coast defence? I believe so. It has not gone through my office.

9001. You do not know anything about it, then? No.

9002. I see in the Army List it says table allowances are granted to certain officers commanding at Home and abroad, the amount to be fixed from time to time by the Secretary of State for War, with the concurrence of the Treasurer;—that is the Imperial regulation, I believe? Yes.

9003. *Mr. Quinn.*] What is the salary of Imperial officers of the same grade as Major-General French?

9004. *Chairman.*] He holds Imperial rank as Colonel, does he not? Yes. That is to say, he came here as a Colonel, but he was made a Major-General a few months ago. On 24th May, I believe.

9005. He was getting the same as Colonel, before he was made Major-General, was he not? No; as Commandant he was drawing this amount. I do not think he had the table allowance at that time.

9006. *Chairman.*] Would the position be equivalent to that of a colonel on the staff? Yes; that is what his equivalent would be in England.

9007. His pay would be £2 a day, would it not? Yes; that is the Imperial figure.

9008. Does that include allowances? No.

9009. A major-general has £1,700 a year, or £3 a day and allowances, has he not? Yes.

9010. That is inclusive of allowances, except field or travelling? Yes.

9011. So that a full-rank Major-General at Home receives £1,700, and General French £1,826? Yes; that is so.

9012. *Mr. Quinn.*] Within the limits of the Colony he was Major-General when he came here, was he not? Yes.

9013. *Mr. Cook.*] Now he is a Major-General everywhere? Yes; since May.

9014. Do you pay seven days a week or six? Seven.

9015. *Chairman.*] Can you get me a list of the whole of the permanent and volunteer and reserve officers in the Colony? They would be in the Army list almost up to date. It would mean a book of that size to made out a list.

9016. To make a list? Yes; it is a tremendous long list.

9017. Is this Army List all officers? Yes; nearly all officers.

9018. Have you got the permanent officers by themselves? Yes; here they are in the list.

9019. Have you any idea how many there are? I have not.

9020. There must be nearly as many officers as men, judging by this list? Not quite as many.

9021. What does these crossed swords mean in the list? They signify that a man has been under fire.

9022. Where was Colonel Taunton upon active service? In the New Zealand war.

9023. He was where? In the New Zealand war.

9024. In New Zealand during the war, you mean? He was in several engagements. He was at the taking of one or two *pahs*, I think. His record will be given in the list at the end of the book. He was in the 50th Regiment then.

9025. And where did Major Boam see his service? At the Soudan Contingent, in 1885.

9026. And do you call that being under fire? They did call it so.

9027. And Captain Kyngdon? The same place; in the Soudan.

9028. They say they got under the waggon instead of under fire? I do not think so.

9029. Reynolds—where was he under fire? I do not know; I do not remember him.

9030. And McIlvride? I do not know.

9031. And Major Bartlett, was he also under fire? He was in the Soudan, in 1885.

9032. By the way, Colonel, who is this Major Airey I see in the list? He was in the Permanent Artillery some years ago. He was retired on account of ill-health.

9033. Was it not on account of something else? I do not think so.

9034. What? No.

9035. Do you positively swear, that you never heard any reason for his retirement other than ill-health? Ill-health, and because he was no longer required, I believe.

9036. Yes, and was there not some special reason why he was no longer required? I do not think so. They considered that he had been long enough in the service. They wanted to make promotion; and he was eligible for retirement.

9037. Do you not remember certain reasons being assigned at the time, and a good deal of noise being made about this matter? Yes, there was a good deal of noise made about him and about Colonel Spalding.

9038. And were there not some pretty strong reasons given in the Press at the time;—did you not see any other reasons than ill-health? It was stated that he was not, practically, efficient enough.

9039. That he really did not know anything about it, was it not? It was after I practically left that side of the Service. I was Military Secretary at the time, and it did not come particularly under my notice.

9040. What particular Department was Colonel Spalding in? He was the Officer Commanding the Artillery.

9041. *Mr. Quinn.*] Do you know anything about the arms and ammunition issued for the capture of the Governors—the Breelong blacks? We gave away thirty Winchester rifles to the police.

9042. And did the rest of the rifles being used come out of the police stock? I suppose so. They came the other day, and wanted us to get them fifty or 100. I told them it was absolutely impossible. They wanted fifty more rifles to be obtained late on a Saturday when the shops were all closed. 9043.

C. F. Roberts. 9043. Winchesters? Yes.

11 Oct., 1900. 9044. Do the police get their own stock of ammunition? Yes.

9045. They import it themselves, then? I believe so. We have given them some of the carbines we had, on account of our changing to the '303 weapons.

9046. *Chairman.*] I see by this list that Percy Owen only became captain on 1st January, 1895;—is that right? Yes; he first of all came in as a civilian, and was then made captain, and afterwards honorary major.

9047. And I see that Major Lee got his commission on 1st January, 1894, as major;—is that so? No; I do not think that is right.

9048. That is the date in the Army List? He was Captain Lee for a long time. He is not major since 1894.

9049. Yes, that is so, according to the List? Well, I suppose it is right, then.

9050. Mr. Parrott was major on 4th September, 1894—nearly eight months afterwards;—as regards seniority, is Lee ahead of Parrott? Not now.

9051. As regards major? Yes.

9052. *Mr. Quinn.*] In length of service? No.

9053. *Chairman.*] I mean as major? Yes; Lee was senior major to him.

9054. There has been some idea of putting this temporary Major Owen ahead of Lee;—is Lee a competent officer at all, do you think? He is very good at the work he is meant for—submarine miners.

9055. That is what he is wanted for, is it not;—you do not want a cavalry officer to run a submarine show? No.

9056. He is not a very pushing sort of a man, is he—I mean Lee;—he does not make a big row, and does not know many Members of Parliament? I could not say.

9057. I never saw the man in my life? You must have seen him somewhere, I think.

9058. It seems, however, that he is getting pretty well left? I do not think he is left. I do not know whether it is going to be done. I did hear some rumour about it.

9059. If Owen gets his commission, in 1895, as a captain, and Lee gets his, in 1894, as a major, it seems rather funny that this other man should step over the man with the length of service and seniority of commission, does it not? That, of course, is a matter I can give you no information about.

9060. I do not want information;—I want to know if there is anything you know peculiar about the circumstances of the case that can explain it? I should think it rather a strange step to take—so sudden a promotion as that.

9061. Could not Captain Owen have done all the work he is doing as captain just as well as temporary major? He is still a captain. His rank as major is merely honorary.

9062. It is only what the colonel of the 7th would call "swagger," I suppose? Practically; he calls himself major; but he gets no pecuniary benefit with it.

9063. Still, he is not doing so badly;—he is getting £500 a year? He was getting that as captain.

9064. If he could flop over the heads of, say, Lee and, perhaps, Parrott and a few others, he would be all right? He might be.

9065. Are you aware that through a weakly constitution he was not able to take any part in the operations in South Africa? I understand that he did a certain amount. He did not go through the whole of it.

9066. The whole of what? The whole of the time he was there in the field. He was ill part of the time.

9067. How long was he there? I do not know; I could not remember. About three months, I think. Something like that.

9068. You think so; but you are not sure? No; I do not know.

9069. It might have been only seven or eight weeks? I think about three months; but I am not sure.

9070. Where was he stationed? On the Modder River, I think; and afterwards, Kimberley.

9071. Would you not be surprised to learn that he went direct to Kimberley, and stopped there? No; I know nothing, for certain, about his movements.

9072. And that he left there and went home? I know he was invalided and went home.

9073. He did not have fever? I think it was fever.

9074. Oh, no? I think so.

9075. I know it was not? Well, the report was that he had had it, and he looks rather like it.

9076. What does he look at the best of times? He used to be rather delicate, and now he is rather fat and heavy.

9077. He has had a trip round the world, from South Australia to America, and back, *via* England, and ought to look very nice, should he not? I cannot say.

9078. In regard to the quantity of ammunition, and to find out the amount of lead, that is of rifle cartridges, that is required to kill a man, do you think it is possible to make such a calculation? Certainly not; you must take it for granted on the statement of the Press, or anybody like that, that so many rounds were fired, and it took so much to kill one man.

9079. These estimates are generally made by men who have not the faintest idea about it, are they not? I would not say that. They could ascertain the number of rounds fired, and the number of men killed, and then it is simply a division sum.

9080. But what about the men killed with pom-poms? We have had no statistics of the sort, since pom-poms were invented.

9081. But how can you get the statistics;—how could you separate the men killed by solid shell? That is a subject I could not deal with.

9082. Then about the men killed by accident;—you might have read in the paper the other day that an amount of ammunition exploded; they tried some powder with a match to see if it was dry, and it was;—then what about the man killed with the lance and sword, and the bayonet? I do not know; I suppose they strike a general average, and that is balanced against the expenditure of ammunition.

9083. Would it be possible to form anything like a correct estimate? I should be very sorry to try, unless you put a man up to experiment with.

Colonel Henry Douglas Mackenzie recalled and further examined:—

9084. *Chairman.*] You have been already sworn, I believe, Colonel? I have.

9085. I think the last time you were here I asked you if you could find out anything about the appointment of these officers to the various Contingents;—did you make any inquiries; and if so, have you discovered anything? I discovered this, that unintentionally I misled the Committee to this extent: I gave them information with regard to men as to whether they were bushmen or not, in the cases of officers who did not belong to the Bushmen's Contingent. I got confused at the end of the inquiry with the Second Contingent and the Bushmen's Contingent, and I answered questions with regard to officers who belonged purely to the Second Contingent, where there was no consideration of bushman qualification at all; but I gave "yes" or "no" as I knew. It was therefore misleading to the Committee, because there was no occasion for those questions to be answered.

9086. I think there was one particular gentleman I fixed upon, and was anxious to find out something about why he was not recommended; a gentleman named Hill, a native of South Africa, who had experience in the Boer and Zulu wars, and had training in Port Elizabeth and Cape Town; he had held the rank of lieutenant, and was comparatively a young man, too; I just singled that one out, as I knew something of the facts of the case. Now, did you find out anything of that case? To tell the candid truth I had forgotten it. The matter was not placed on record, and I have overlooked it. Would you still like the inquiries to be made?

9087. Yes? Then I will make a note of it, and have the inquiries made.

9088. His name is C. Hill, and he applied for a commission in the Imperial Bushmen's Contingent; he is a native of South Africa, 38 years of age; had experience in the Kaffir, Basuto, Boer, Moriso, and other South African campaigns? Would you like me to give you any documentary evidence we have with regard to that application?

9089. Yes; that is the case I wish to know about. Most of these applicants are perfect strangers to me, and I would like an explanation with regard to this case; it might be one that would be acceptable with regard to all other cases for all I know; but I simply take this case because I happen to know some little about it; he had some years service in the Cape Yeomanry, and held a commission as lieutenant there, and also served in Rhodesia under the Chartered Company? May I take it thus: that if I produce any papers we have with regard to this application, or any decision thereon, that that will meet your wishes.

If we can get some reason from them that guided the authorities in not recommending them.

*Mr. Cook:* To show a reason or an absence of reason.

9090. *Chairman.*] Quite so; I single this case because I know some little about it; the others I do not know very much about; there was another case in which I felt an explanation was wanted, and that was our friend, Mr. Gibson; but when I read his statement of claim, I was perfectly satisfied it was a wise decision not to allow him to proceed, because I am afraid he would have captured all the Boer army, and the British army, too, if they had not been careful? Yes.

9091. Now, in regard to the promotion, &c., of officers, do you recommend to the General, or are you asked to report on the cases of promotion of officers? Practically, yes.

9092. There have been some questions asked Colonel Roberts in regard to the Submarine Miners, Engineers' Staff; that would also come under your jurisdiction—in regard to promotion, I mean? Will you allow me to make an explanation?

9093. Certainly? You have got to remember this: the promotions do not go necessarily by seniority in the Service. For instance, if you take the Imperial Service, and take, say, three regiments—the 12th, the 14th, and the 16th. In the 12th there may be an accident; there may be a serious number of casualties, and the juniors will go up very rapidly. The 14th may have no active service, and the promotions will be slow. In the 16th they may be half and half. What I mean to emphasise is this: there is no question of army promotion. It is a question of regimental promotion in these particular branches.

9094. I am talking more particularly about the promotion on a staff where the question of regimental promotion would not come in? I am not so sure about that.

9095. Well, I will take a case in point—the Engineers; I find, from the Army and Navy List, that Major Lee's commission as major dates 1st January, 1894; Captain Owen's commission as captain dates from some time in 1895, and yet we have been led to believe that an attempt has been made to promote him over the head of Major Lee;—what have you to say to that? Well, I am afraid you are putting words in my mouth that I know nothing about.

9096. We have had evidence to substantiate that;—do you know it? No; I do not.

9097. Captain Owen was made a temporary major in August last;—is that not so? I admit this: if you were to ask me to remember the status of every officer in the Service, I absolutely could not do it. Was he not made only a temporary major on active service?

9098. No; a temporary major for all time, apparently;—he still holds it? What are the dates?

9099. Temporary major, 15th August, 1899;—that was many months before he dreamt of going on active service, I presume? I would not say many months; about two or three, perhaps. You are speaking of the engineer—Captain Owen—are you not?

9100. Yes? He was appointed temporary major in 1899; and Major Lee—what date?

9101. On 1st January he was appointed full major, in 1894, previous to Captain Owen holding a commission at all? Even now I do not quite see the point.

9102. I wish to find out whether promotion goes like kissing? No; neither by favour.

I do not know so much about that.

9103. *Mr. Cook.*] What does a man get temporary rank like that for? Probably he is holding an exceptional position, requiring exceptional requirements.

9104. Would he be given temporary additional pay? He may or may not be; and if worthy of the office I think he should be.

9105. *Chairman.*] If holding such a responsible or difficult position, how is it that the forces were able to spare him, and send him away to South Africa, and I believe he has done the round trip, and arrived back again looking well;—if he was such an important officer that he had to hold the rank of temporary major to enable him to carry out his duties, how was it that we could afford to do without him altogether? Simply by the patriotism and loyalty of those who remained behind doing double work without extra pay.

9106. Have they had double work;—then if one man can do double work, it surely would not be so very difficult for two men to carry out the work that one was able to do? There are limits to endurance.

9107.

H. D.  
Mackenzie.  
11 Oct., 1900.

H. D.  
Mackenzie.  
11 Oct., 1900.

9107. I do not think any of the Staff have broken up under the strain, have they? Personally, I did. I had to write to you to be allowed to be excused from attendance at the Committee for a month, for the twelve months' strain had been so great on me that I had to ask for leave.

9108. If that is so, what would happen to us if we were called upon to go on active service,—if an invading force came here? The best answer to that is given by what the Colony has already done.

9109. I am talking about the efficiency of the Military Staff, and will you be good enough to tell us what they have done exceptional? They have done nothing exceptional; but they have done things under exceptional circumstances, and very difficult conditions, and they sent, within six months, a force approximating 3,000 men, and horses to match, away from the Colony, and yet maintained in a state of efficiency a sufficient force to be handy if required.

9110. That is so; they sent away a number of men; but let us see;—they went away at different times, between October and April, did they not? Yes; that is near enough.

9111. Well, the First Contingent went in October, and the last in April? I think so.

9112. That is within a period of six months? Yes.

9113. But a portion of the force did not leave from here—seventy Lancers arrived at the Cape from England? That was only a small portion.

9114. It was 2,700, or 2,000 odd, that left here, was it not? 2,674, I think.

9115. Say, 2,700 in round numbers you dispatched within six months; you had the men available, and did not require to send men away recruiting in the country, holding out any special inducement for them to enrol, did you;—there were plenty of men available? You mean the men were available?

9116. Yes? Quite so.

9117. Plenty of men offering? That is another thing. I say that redounds so splendidly to the credit of the Colony.

9118. I am not concerned with the spirit of the Colony just now in this inquiry? But I am.

9119. There were plenty of men available,—is not that so? Yes.

9120. You did not require to send recruiting sergeants round? To the credit of the Colony, we could have sent twice the number.

9121. Quite so; but you did not send recruiting sergeants round, did you? No.

9122. Well, having the men available, you also had a sufficient amount of money;—I mean the Military authorities;—there was no restriction placed upon you in regard to expenditure in the despatch of the men, was there? I could not say.

9123. I suppose you would not be surprised to learn that both Major-General French and Colonel Roberts have stated so in their evidence? I do not know.

9124. Well, having plenty of men available, and plenty of money, and transport practically arranged for, do you think it was such a great feat to send away 2,700 men within six months? You have eliminated one great element.

9125. What is that? Time.

9126. But you had six months? I am not speaking of that. It is the time between each Contingent I refer to. It was not as though you were told to send away 2,700 men, and were given six months in which to do it. You were told to get them ready from fortnight to fortnight. You were never told how many men were going, but you were told suddenly that certain men were going, and you were told to get them together within a particular time. Time is an element that is to be considered in these matters.

9127. That is so; but take the case of the Second Contingent; some time in December—on 12th December, I think—it was decided to send them away, was it not? You have my return before you on which I had all those things down. I cannot give you the dates from memory.

9128. It is 20th December, and they left on 17th January—that gave you twenty-seven days? Yes.

9129. Was it such a trying matter to get 500 odd men together in that time, then? I am afraid you have never tried it.

9130. I do not know; I think I have even seen a bigger organisation done much quicker than that, Colonel, and with very few men to handle it? Yes; with disciplinary effects combined.

9131. Well, if an invading force were to arrive here quietly some morning, if it takes twenty-seven days to get 500 odd men ready for embarkation, how long would it take us to get 20,000 of a force ready to defend the country? I am not allowed to go into politics. You are presuming that the people would come here without us having any indication.

9132. There is no politics about this; it is purely a question of supposed war? If it is a supposed war, you would hardly expect a serious answer.

9133. You do not suppose, if the actual thing were here, I would be here cross-examining you? If the actual thing were occurring we should have had warning long before you were appointed to the Committee.

9134. Did you read this morning's paper? I must confess that I did not.

9135. Did you read what happened at Fort Denison? Fort Denison does not come under our fortifications.

9136. Neither would an invading force? They might.

9137. I just want to show you what might happen, and you know nothing about it;—have you heard anything about the occurrence? No. May I ask you one question?

9138. Yes? Is it not taking up my time, and the time of the Committee, needlessly? You know very well that Fort Denison has nothing to do with me. Is it any use you taking up my time asking me these questions?

9139. The reason I asked it was on account of your previous answer;—you say no enemy could approach the coast without the Military authorities knowing it? I think you have misrepresented me.

9140. How? You have put it in this way: that I said they could not come without our being aware of it. I said their presence could not be known to you before it was known to us.

9141. That is the reason I asked you that question.

*Mr. Cook:* You are justifying your presumption.

*Chairman:* Quite so. If a gun can go off at Fort Denison at 4 a.m., and nobody can give an explanation of it, and our Military officers do not even know of it, this is on all-fours to your house being burgled while you were asleep.

9142. It might have been a man-of-war pounding away at Government House, might it not? You would not take "might have beens" as certainties, would you?

9143.

9143. But if it had been an enemy, and they landed 20,000 soldiers at Woolloomooloo, how long would it take you to get 20,000 men to meet them? In the first instance, the question is propounded with "ifs." In the next case, it is no use bringing down a greater force than you require to repel those who are attacking you.

H. D.  
Mackenzie.  
11 Oct., 1900.

9144. That is so—it depends how you are armed to some extent;—is that not so? If your force was armed with muzzle-loading guns, and the invading enemy with magazine rifles, you would want to have a few extra to secure a win? In every case of presumption of that sort you would always have to take chances.

9145. I want to know how long it would take;—you say that twenty-seven days was a short time to get 500 men away, how long would it take to get together, say, a force of 20,000 men fully armed and equipped with transport and everything complete to take the field? To enable me to reply, might I ask first, why you apply for 20,000 men when the Imperial authorities have laid down that 10,000 is quite sufficient at the post.

9146. I think we have more than 10,000 in the Colony, have we not? I state it as a fact, that the Imperial Government have stated that 10,000 men are sufficient.

9147. I am just supposing;—I do not say 20,000 is right or wrong;—it might require to be fifty or two? Will you accept 20,000?

9148. Yes; I am taking that as a case in point;—how long would it take? Well, 20,000 men could not be produced. The men could, but there would be no ammunition nor arms for them, because Parliament for many years has starved the forces.

9149. *Mr. Cook.*] Starved the forces? Perfectly correct. I have no hesitation in saying it before any Committee.

9150. *Chairman.*] Do you know the amount of money on the Military Estimates for the year? No.

9151. Do you know how much was voted last year? No.

9152. Would you be surprised to hear that over £300,000 was voted? I would not be surprised until I knew what the items were. I do not know whether it went into the Contingents or not.

9153. No; leaving the Contingents out? You could not expect me to give a reply to that until I saw the figures.

9154. Well, in a country such as this the taxpayers are not prepared to go beyond a fair thing;—have you any idea what the defences are costing every unit in the community—every man, woman, and child? I should say about one-fifth of what it costs in Great Britain, I think.

9155. Do you know the amount per head? About 1s. 9d., I think.

9156. About 3s. 6d. is the figure, and the interest on money expended—over £5,000,000—would bring the amount up to about 10s. per head of the population;—do you know that? I am not up in finance; I expect you are taking loans into consideration, too.

9157. Yes, that is so? That would not be per annum, too.

9158. I am speaking of the interest on loans as well;—it would bring it up to 10s. per head of the population? Yes; which every military man pays for, too.

9159. A man working for £2 2s. a week, and who has just got work, would have to pay it; and if he is the head of a family, his contribution amounts to £4 a year;—that seems a very fair amount, does it not? I suppose he would have to pay more if his Banks were sacked, and burnt, and all that sort of thing.

9160. Why? Well, the Colony would be bankrupt.

9161. But he has nothing in the Bank? Then it is "heads I win, tails you lose" with him. He wins on one side and does not lose on the other.

9162. Yes; he loses both ways. He loses to start with, because the other chap is winning. I see quite a number of increases in salary on the Estimates now;—it does not look as if the vote is being starved, does it? Can you see an increase on my salary?

9163. I have not looked? I should like one. I wish you could see one. I have not seen the Estimates yet, and am asking for information.

9164. Assistant Adjutant-General and Chief Staff Officer;—is that you? Yes.

9165. There is no increase apparently, as far as the salary is concerned? I am very sorry to hear it.

9166. I do not know about these allowances? No; I know there is none there. May I ask a question?

9167. It is not considered the correct thing, but I will allow you to ask one? Do you ask me if others a long way junior to me have got increases?

9168. The number of men has been increasing, and so has the number of officers, until you have a book almost as large as a family bible to hold them? You are taking the proportion of the officers to the men, but you are not taking the responsibility an officer has into consideration.

9169. What particular functions have you as Assistant Adjutant-General;—what is your responsibility? I took the trouble to bring down the General Order giving the different instructions of every branch of the service. If it is any use to you, I could get you a copy printed of the instructions.

9170. We would like it? This shows the duties of the different officers on the Staff right through, and what their special responsibilities are.

9171. Will you give us two or three of the most important? I will give you my own. They include discipline, transfers, and discharges; any courts-martial there may be; exchanges of officers, and promotions of officers; confidential reports of officers, looking after Army List, questions of leave of absence, military prisons, railway orders, orders of admission to defences, the different schools of instruction, and boards of examination, and all that sort of thing. Some of them came under the D.A.A.G.

9172. I just want your own, Colonel? My own would stop on the list produced at military prisons and orders for admission to the defences.

9173. You say confidential reports;—in regard to these confidential reports, would you make them yourself, or would you give instructions to someone else to do it? The question of the confidential reports is this: Say you command a regiment; you have twenty officers under your command; you give a confidential report on each of your officers. They come to me. It is only known to yourself and to myself, and when necessary it is brought before the General.

9174. In regard to carrying out the discipline of troops, transfers, and discharges, and that sort of thing, do you just give an order to some other officer, your junior;—is that how it would be done? Perhaps I might explain.

9175. Yes; you are, we will say, commanding a regiment;—you have a man there whom you want transferred to another regiment; the man who applies is a good man and you have no objection; the officer

H. D.  
Mackenzie.  
11 Oct., 1900.

officer commanding the other regiment has no objection either; but to show there is no collusion it has to go to Head-quarters to be approved, and so that there will be no further charges against either yourself or the other officer.

9176. What I want to know is whether you take the full responsibility, and attend to these matters personally, or take the responsibility for any of your officers under you? Certainly. Directly I approve I take the responsibility on my own shoulders. If I cannot do it the General does.

9177. Suppose you give an order to an officer under you, and that officer failed to carry out the duties in a proper way, would you consider your responsibility ceased when you gave him the order? You are going from one subject to another.

9178. Well, this is the subject I want to be on, and if I left it it was not intentionally;—suppose you gave instructions to an officer under you to carry out certain duties and he did not carry them out, and nobody knew whether he carried them out or not, would you then consider yourself responsible? The officer who gives the original order?

9179. That would be, in your own case, yourself? No; the officer who receives the original order would be responsible for carrying it out.

9180. Then you would have no responsibility? Yes, you have. You cannot divest yourself of responsibility; but the man who got the order is the man who is the primarily responsible officer.

9181. He is responsible to you, and you are responsible to the General,—is that so? Quite so.

9182. And, therefore, you, as head of the Department concerned, must take full responsibility? Quite so.

9183. Even of the actions of an officer, although he fails to obey your order? Well, of course, you are wrong to a certain extent. It would never come to that. If a man failed to carry out an order he is hanged first.

9184. Would you not be responsible to the General? If a man failed to carry out an order, you get somebody else to do it.

9185. But if the time has gone by? We cannot go into supposititious cases?

9186. They are real cases, occurring here? That might be the exception that proves the rule, or some of that sort.

9187. Suppose you had an order from the General, and you handed it on to some major to have carried out; he carried it to the captain, that captain carried it to the lieutenant, and the lieutenant carried it to the sergeant-major; the sergeant-major sent it to the storeman, and he lost it;—who would be responsible then? I cannot go into supposititious cases like that.

9188. It is not a supposititious case; it has occurred here, according to the sworn testimony of the Headquarters Staff, and I ask you who would be responsible in your Department if it happened there? There would be a Court of Inquiry in my Department to inquire into it at once, and find out who was responsible.

9189. There must be some Regulation laid down? There is a Regulation laid down, wherein anything of that sort which is in dispute, a Board of Inquiry shall assemble as soon as possible to locate the offender.

9190. But it is not in dispute? If it is not in dispute there is no finding to be given.

9191. Suppose an order is given, and it is not executed, and nobody knows whether it has been executed or not for over twelve or fourteen months? I do not know what you are referring to.

9192. I do not want to mention the names in reference to it, because I quite understand you would not feel inclined to give any expression of opinion in opposition to any of your fellow Staff Officers; but I am asking you in a general way, if the General gives you an order whose duty is it to see that order is carried out? Mine.

9193. Then you must take the responsibility? Of course I do.

9194. And if an officer fails to carry out your order? He takes the responsibility.

9195. To you? Yes.

9196. But not to the General? I do not say that.

9197. Then you must always have the responsibility, so far as the G.O.C. is concerned? Yes; in my Department.

9198. *Mr. Cook.*] And the blame? Or the praise. *Mr. Cook's* contention is sound.

9199. If I give you an order, and you fail to carry it out, surely I am not to blame if I have conveyed the order properly? No.

9200. *Chairman.*] Then the message-boy would do the work, and you need not have an Assistant Adjutant-General at all; if the Assistant Adjutant-General is only to take an order from one officer to another, and have no responsibility, and to take no credit and have no blame attaching to him, all you want is a message boy;—take Spion Kop: who got the blame for that? If you said, instead of conveying an order, properly conveying an order, you would get the function more correctly. It makes all the difference. There is no question of a message-boy then.

9201. He is supposed to see that the orders are carried out? The General might give you orders to send out two battalions, two divisions, and, perhaps, three brigades. Very well; what can you do but your best? It must be your best, and it must be seen that the orders are given through the best authorities at your disposal. Clerks may record the orders, which, perhaps, may extend over 6 miles, all to be done at 11 o'clock at night. How can you be in these three positions your individual self to see they are carried out?

9202. No? But you will have taken every precaution to see the orders are properly issued.

9203. And the officer you issued the order to has the responsibility to you? Undoubtedly; and if he is a brigadier, he has probably two regiments under him, and two colonels, and they are responsible to him.

9204. Just so? It is a chain of responsibility.

9205. But the responsibility cannot drift out at the end by the bugler-boy, can it? If you are riding in a railway train, the railway porter does not come and take your ticket as long as the inspector is there.

9205½. But in military matters you cannot allow responsibility to drift down; this is a question to which I would really like to get a fair answer, as to, in your opinion, where the responsibility lies;—whether you can pass your responsibility down to the major, then to the captain, then to the lieutenant, then to the sergeant, then to the corporal, to the lance-corporal, then to the private, and so on to the bugler, and when it reaches the bugler, the bugler wonders what has happened; and then it seems to be nobody's business to find out whether the order has been carried out or not;—if responsibility is going to cease when you deliver the order, then, of course, I cannot see how you can have any discipline? I doubt if you

H. D.  
Mackenzie.  
11 Oct., 1900.

you can. I do not mean that in any way as a reflection; what I mean to say is this: It is so hard to explain; but the general idea is this, that the officer who gives the order is supposed to do it in such a way that he is satisfied it will be carried out. Therefore, the primary responsibility is with him; but the succeeding responsibility of each individual to whom it may by force of circumstances attach never leaves them, although it does not relieve him.

9206. Quite so;—that is what I have been really anxious to get all the while;—still, in your particular branch, your taking the responsibility does not in any way relieve any officer under you who may improperly carry out an order you may give him? Suppose you command a regiment, and I tell you to be at such a place at such a time, and you do not, you would be hanged.

9207. Quite so? It would not be necessary for me to see you were there. I would depute somebody to see to it.

9208. If the regiment did not start at the time you ordered it, you would want to know the reason why? Yes.

9209. At once? Yes.

9210. *Mr. Quinn.*] But would the General call on you to know why an order was not carried out? It depends on the Department. Supposing it to have been a question concerning pay, he would call for the Military Secretary.

9211. Supposing it was in your Department? For me. If it is a case of a parade ordered for 10:30 o'clock, which was not formed up till 11:30 o'clock, I want to know who is to blame. In the first place, I am to blame. It is my business to show what orders I gave. If I gave orders for 11:30 o'clock, nobody was to blame but myself; but supposing I gave orders for 10:30 o'clock, and gave everybody time to be there, then the officers under me would be given opportunities of explaining.

9212. *Mr. Cook.*] In other words, the man who actually did it would be to blame? Exactly; you have it in one sentence. The responsibility rests with me until I can explain how it is that the other people who received their orders did not carry them out.

9213. *Chairman.*] Take a case in point. Are you aware that some years ago they called tenders for the helmets for the Infantry, and Artillery, and Partially-paid Forces? I know nothing about tenders.

9214. Would you be surprised to learn that they sealed up the wrong helmet altogether, and did not find it out till fourteen months afterwards? I do not know anything about it.

9215. No, you do not know, but are you surprised to hear it? Like other people, they are not altogether infallible. I suppose they may make a mistake.

9216. Yes; but if an order was given to have a certain class of headgear sealed up as a sealed pattern, and the wrong pattern was sealed, does it not seem marvellous that it took fourteen months to find out the mistake, because there could be no resemblance between the two patterns? I do not suppose the time was of any significance. As a matter of fact, I suppose the matter did not crop up within fourteen months. It might have been a question of two days.

9217. The matter went through Colonel Taunton, Major Beam, Lieutenant Beauman, Sergeant Lyons, and some storekeeper named Broadbent, and not one of those officers will accept any responsibility about calling for tenders for the wrong helmet. That is the reason why we want to know where the responsibility begins and ends. If the Staff Officer is not responsible for his particular department, who is? Well, I suppose you have been on big stations, and you know how it is at shearing-time. The manager goes into the shed, and he holds the leader of the shearers responsible for his men, and in any complaint they come to him, and the same with the wool overseer.

9218. Yes. The officer or board would be the man responsible, and would never attempt to shirk the responsibility? Quite so.

9219. So would the overseer of the station under all circumstances; you can place the responsibility, if anything goes wrong in the pens, or if the sheep are cut rough, you can place the responsibility at once; but in this military system, with your strict discipline, I cannot find out who is responsible;—that is the difficulty? I cannot see where your difficulty comes in, especially after the answer I have given you.

9220. I admit your answer is in accordance with common sense—that the head of the Department must of necessity be responsible for carrying out the orders. If he placed the orders in the hands of an incompetent or improperly-qualified man, and takes no trouble whatever, either by any member of his staff or by himself, to see that the order is carried out, I think he is doubly responsible. I suppose you are aware that in the field, when a General gives an order, he has got a number of staff officers, whose duty it is to report to him from time to time as to the manner of carrying out the instructions issued by the General? That used to be the custom we followed in Egypt, I admit.

9221. *Mr. Quinn.*] You say you have the duty of issuing orders in reference to applications for inspection of our fortifications? Yes.

9222. Do you issue these personally? No.

9223. Who issues them? I do, under the authority of the General. In certain cases the Officer Commanding the Artillery can issue the orders, and the General Officer Commanding can always issue them. The Minister for Defence can in certain cases; also, order that they shall be issued. My signature goes on practically nine-tenths of them.

9224. You exercise a wise discretion in issuing these orders, I suppose;—the regulations are rather rigid, are they not? I exercise a discretion according to regulations.

9225. Are they rather rigid? Yes.

9226. Is it customary to issue orders to officers of Continental armies who come here and request permission to inspect the forces? No; that has not been done. That has been most rigidly guarded against, and I do not know any case in which it has been done, unless there have been special instructions to do it.

9227. By whom? Probably by the Government.

9228. Have you any record of such a case? I do not know of any such case.

9229. But you would have a record showing if it had been done? Yes; there is a record of every one admitted. If you could give me the name of anyone I could look it up. The only one I can remember is a man who had the run of Watson's Bay—Baron Mikloho; but he was only a foreigner—he was not an officer.

9230. *Chairman.*] Was De Wolski a foreign officer? No; he is a Royal Engineer, an officer of the British Army, and though he has a foreign name, is of English parentage.

9231. *Mr. Quinn.*] Will you look and see if there is any officer, either naval or military, of foreign service who has been permitted to look over our forces? Yes; I will look it up. I do not think it is so.

TUESDAY, 23 OCTOBER, 1900.

Present:—

MR. HURLEY, | MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

Colonel Henry Douglas Mackenzie recalled and further examined:—

- H. D. Mackenzie.  
23 Oct., 1900.
9232. *Chairman.* In regard to the Volunteer Forces,—I suppose that all matters of discipline would have to come through you? Eventually.
- 9232½. Suppose there were a complaint against the Commanding Officer of a Volunteer Regiment, would that come finally through you? It would reach me.
9233. To whom would it go in the first instance? That would depend upon the time when the matter occurred. Perhaps you would like me to explain. Suppose the matter took place now, it might come through the Staff Officer for the Volunteer Forces, or it might not. If it took place, we will say, twelve months ago, it would have had to go through the Staff Officer of the Volunteer Forces.
- 9233½. At that time Colonel Bayly held the position? Yes.
9234. Since Major Boam has held the position it has been slightly different from what it was when Colonel Bayly held it? Yes.
- 9234½. Now, a matter of the kind to which I refer might come through the Staff Officer of the Volunteer Forces, or it might not? Quite so.
9235. Do you remember that some time ago there was a dispute between Captain Wilks of the 7th Regiment and the Officer Commanding the Regiment—Lieutenant-Colonel Neild? There was some correspondence.
- 9235½. Could you give us the facts of the case from memory? I could not.
9236. Have you any papers showing what took place? The papers must be on record.
9237. Whose duty would it be to produce the papers if they are procurable? It would be my duty to produce them if they were required.
9238. The Committee require the papers as to the dispute between the Colonel Commanding the 7th Regiment, and Captain Wilks; we require the papers also in another case; you remember, I daresay, an inquiry being held by Colonel Bayly in regard to matters of discipline affecting the Officer Commanding the 7th Regiment; you remember perhaps that the Colonel wrote some letters to the newspapers, criticising in somewhat strong language the action of his superior officers? I remember the fact of letters being sent to the newspapers, but I cannot say, speaking from memory, whether Colonel Bayly held an inquiry.
9239. Do you remember Colonel Bayly putting Lieutenant-Colonel Neild under open arrest? I remember that it was represented that that was done.
9240. Could it have occurred without it having come to your knowledge? I believe the arrest was withdrawn, and was not brought to my knowledge.
9241. Do you not remember that Lieutenant-Colonel Neild threatened the authorities with legal action? I do not.
9242. Are there any papers which would show what actually took place? Probably.
9243. Would they be in your charge? Yes.
9244. Will you kindly produce those papers to the Committee? Yes.
9245. I believe the facts of the case are, that Colonel Bayly put Lieutenant-Colonel Neild under arrest for insubordination, which was said to consist of writing letters to the newspapers, adversely criticising his superior officers? You would be able to obtain the facts from the papers.
9246. In connection with the Volunteer Forces, have you any trouble now in regard to the question of discipline? I know of only one case.
9247. One case or one regiment? One case, and in one regiment.
9248. What regiment is that? The 7th.
9249. Did it concern the commissioned officers, the non-commissioned officers, or the men? There was one single instance.
9250. Did it concern a commissioned officer? Yes; the Colonel Commanding the regiment.
9251. How long ago did it occur? Originally, months ago; latterly, to-day. What I wish to convey was, that there was an interregnum.
9252. To what did the matter refer? To the administration of the regiment.
9253. Was it a case of failure to carry out instructions? I do not think that is the way to put it.
9254. How would you put it? I should be inclined to call it arguing instructions issued by the General.
9255. In Military matters it is a soldier's duty to obey his superior officer without question, is it not? It is his first duty.
9256. If he believes he has been injured, he has his remedy by laying a complaint in a proper manner? The remedy is provided by the Regulations.
9257. But the first duty of a soldier, either a commissioned or non-commissioned officer or a private, is to obey instructions? Yes.
9258. There is a proper method by which a man may obtain redress if he thinks he has been wronged? That is also so.
9259. Are you aware that Lieutenant-Colonel Neild blames the Head-quarters Staff for failure in carrying out their duties? I have no knowledge of it.
9260. Has he, to your own personal knowledge, written time after time complaining of certain things in connection with his regiment not being carried out? The correspondence with the Officer Commanding the 7th Regiment is absolutely too voluminous to recollect.
9261. Has it in all cases dealt with important matters? From the Colonel's point of view, perhaps.
9262. But from your point of view? The matters, perhaps, required attention; but they were not of sufficient importance to stop the work connected with other regiments.
9263. Do you know whether it is the custom to provide officers commanding regiments with a telephone, and to pay for them out of the capitation grant? I do not know.
9264. Under whose Department would that matter come? Under the Engineering Department. 9265.

9265. You have had no trouble in regard to discipline in connection with the other regiments, have you? No trouble whatever.

H. D.  
Mackenzie.

9266. How do you find the strength of the different Volunteer regiments keep up? The strength of the Volunteer regiments is a very variable quantity.

23 Oct., 1900.

9267. Sometimes they keep up to their full strength, at other times they fall off? Yes.

9268. Returns as to efficiency come under your Department, do they not? The returns are furnished to us.

9269. But do you inspect the Volunteer regiments at all? The General does.

9270. I suppose you would generally accompany the General on his regimental inspections? Not necessarily. As a rule, however, he has a Staff Officer with him.

9271. Have you paid much attention to the general efficiency of the different Volunteer regiments—I mean efficiency in drill and so forth? As far as time has permitted, yes.

9272. Have you noticed the shooting and that sort of thing? The regiments being numerous, the work is delegated to a certain extent, and is dealt with by returns which are carefully gone into.

9273. In regard to general efficiency for a period of years, does any one regiment stand out ahead of the others? Occasionally that is so; but that which happens one year is no criterion of what would be likely to happen in the next.

9274. Would not that go to prove that the personnel of the rank and file has been changed? It might be due to many more reasons than that.

9275. But if a man were a good drill to-day he would not be likely to forget it next year? That is not quite the point, I think. What I meant to convey in my answer to your question, as I understood it, was that one regiment might be more popular than another, and that the officer commanding that popular regiment would gain recruits to a greater extent than would an officer commanding a regiment which was considered unpopular.

9276. But my question had reference to the general efficiency and qualifications of a regiment; if the men, generally speaking, were efficient this year, as being good drills, good shots, and capable soldiers generally, they would be likely to be so next year? Quite so; they must comply with the usual Regulations under which men are qualified as efficient.

9277. But to get the bare number of marks necessary to make efficient is not enough; there must be some margin between that and the point beyond to which the men may attain? Exactly; there is some margin between every regiment in every service in the world. Some are better than others.

9278. That is what I am asking you—is there any one of our regiments which stands out as being more efficient than all the others, or are they all much on a par; in the Imperial Service certain regiments have a reputation for being better drills and more efficient generally than other regiments;—is that the case with our local Forces? I am not quite certain that one is in a position to give a direct answer to that question. Unless one had facilities for seeing them together, it would be hard to say. Where the camps are omitted occasionally, it would be difficult to form a judgment. It would be unfair to report on anyone's house, for example, unless one had an opportunity to see it.

9279. But you see the regiments together in field manoeuvres, do you not? The regiments, according to length of experience, are mostly on a level, some, of course, on various points being better than others, which can be proved only by access to the records.

9280. The reports in reference to each regiment are made up and furnished annually? Yes.

9281. They are made up, I presume, from reports of Staff Officers and from the reports of the General himself? All the annual returns are submitted to the General.

9282. The return in each case is compiled by the regimental officer, is it? Yes; each regiment compiles its own returns.

9283. They are forwarded to the General? Yes.

9284. I think you have already expressed an opinion as to the uniform for Volunteer Forces? The only statement, I think, made in regard to the uniform was that all uniform matters came under the Q.M.G.'s Department, and the Committee, I think, expressed their intention of examining him on that point.

9285. As a soldier and Staff Officer, are you in favour of a scarlet tunic? I am in favour of two distinct dresses if the money available will permit of it. I am in favour of a scarlet uniform—not for actual service, but for recruiting purposes.

9286. You think it would be an inducement to recruits to join? I do.

9287. With a scarlet tunic, would it be necessary to wear a helmet? Yes.

9288. You think a scarlet tunic and a field-service hat, would not look well together? You might get over the difficulty to a certain extent by using a scarlet jacket, but I do not think a field-service hat would look well with scarlet.

9289. So that the adoption of a red tunic practically means making a second dress, complete? Yes; for what we call ceremonial purposes.

9290. Have you any idea of the amount of ammunition now available? If I had, I am absolutely not allowed to tell you. I do not say that I have any desire to refuse to answer the question, but it is absolutely forbidden by the Queen's Regulations.

9291. To what Regulation do you refer? I mean the Regulation against giving any information as to material or anything of that sort. The Regulation to which I refer is No. 423 of the Queen's Regulations of 1899.

9292. So that you, in effect, look upon this Committee, appointed by Parliament, as being in the same position as is the man in the street? I do not say that.

9293. I find that Regulation No. 423, says: "Officers and soldiers are forbidden to publish or communicate to the Press any information without special authority, either directly or indirectly; they will be held responsible for all statements contained in communications to friends which may subsequently be published in the Press; they are not to attempt to prejudice questions under investigation by the publication, anonymously or otherwise, of their opinions, and they are not to attempt to raise a discussion in public about orders, Regulations, or instructions issued by their superiors;"—do you hold that this Committee stands in the position of representatives of the Press or your friends? I would point out that, in the presence of this Committee, at this moment, there are two representatives of the Press.

9294. That has nothing whatever to do with you, so far as I can see; you are here before a duly constituted authority, appointed by the highest power in this country, and if you take up the position that the

H. D.  
Mackenzie.  
23 Oct., 1900.

the Queen's Regulations will not permit you to answer any question in connection with Military matters, what is the good of your coming here at all? I beg your pardon; I did not take up that position. I do not say that the Queen's Regulations prevent my answering any question. You must be aware of that, from the answers I have given on three previous occasions when I have been before the Committee. All that I have said is this—that I must, under the Regulations, refuse to give information in regard to details, such as the quantity of ammunition available, and so forth.

9295. That is one of the things which this Committee were specially appointed to inquire into;—you decline to answer questions upon that point? I would put the matter in this way: I will, if you like, ask the approval of the Minister to my answering the question.

9296. Until you are prepared to answer the question, I, personally, do not intend to ask you any more. There has been too much standing on ceremony in connection with this inquiry. For you to consider that the Regulation which you have quoted comes in conflict with questions asked by this Committee is, to my mind, ridiculous? It may seem ridiculous to you, but it would not seem so to me if the Minister were to come down upon me to-morrow for answering the question.

9297. *Mr. Wilks.*] Is it not a fact that the Minister has recently furnished to the public the approximate quantity of ammunition available? If other persons, in furnishing that information, disobey orders, I cannot see that that justifies me in doing so.

9298. *Chairman.*] The Queen's Regulations apply to the Forces here only in cases where the Colonial Military Act and the Colonial Regulations do not apply;—it does not follow that the Queen's Regulations, although they of course apply to Great Britain, must be implicitly followed here. We have Regulations of our own dealing with matters in a different way from that in which they are dealt with by the Queen's Regulations? I may point out that you are in error in making that statement. The Regulations you have been quoting are the Volunteer Regulations.

9299. I am not in error in putting the matter in this way—that you are here entirely under the Colonial Government, and the Colonial Secretary is the civil head responsible to the country for all matters in connection with the Military. The War Office in England have absolutely nothing to do with the matter. We may have accepted, and do accept, the Queen's Regulations; but only to the extent to which they are suited to our circumstances. However, I do not intend to argue the question; if you have a right to refuse to answer one question, you have a right to refuse to answer the whole lot. I do not say that you have definitely refused; but your contention is that you have a right to refuse. If that applies to one question, it, of course, applies to the whole; you cannot differentiate between the questions. You are here to give the Committee information as to military matters. You may be satisfied to answer certain questions; but when we reach an important question to which I have been leading, you may refuse to answer it. All I can say is that if you persisted in your refusal, I could not proceed? I should like to point out that I have not refused to answer a single question, the answer to which might appear before the world; but I have asked to be absolved from answering questions which I am forbidden by the Queen's Regulations to answer. I have not said that I would not obtain a return for the personal information of the Committee themselves, if the Minister would allow me to do so.

9300. *Mr. Wilks.*] Would not the same objection apply to questions as to the efficiency or otherwise of batteries, and the class of guns you have, and so forth? Certainly; but perhaps you would allow me to make a request—it is that an opportunity should be given to me to obtain permission of the Minister for Defence to produce the information you require in open Committee.

9301. *Chairman.*] Your ability in that case to answer any question which might be put to you would depend greatly upon the view the Minister for Defence might take of the matter? I think it is quite fair that I should take up that attitude.

9302. Other officers have come here and have not made this objection; but if you cannot answer this particular question, the Committee, so far as I can see, cannot proceed. Certain statements have been made by the Military authorities in regard to ammunition, and I wish to find out whether or not there is anything substantial in them? Perhaps I might ask you to be so good as to place on record any returns you require, in which case any which I am allowed to submit will be obtained with the least possible delay.

9303. This Committee must be allowed to take evidence in its own way, or we cannot take it at all—that is, so long as I am Chairman? I put the matter in the way I did just now in order to show that I have no personal feeling in the matter at all.

9304. You must see what a howling farce it would be for this Committee to sit here and attempt to take evidence which you say you are not allowed by the Queen's Regulations to give; it would be worse than useless to continue our sittings under those circumstances? I think that the Committee might look at the matter from this point of view—that it may or may not be advisable to make public the whole of the information you obtain.

9305. In this case the public already have certain information, and that is why I asked you the question I did? I must disabuse your mind upon one point. There is nothing to withdraw, except what any enemy of the country might desire to know. I make this statement, not by way of argument, but merely out of respect to your own position.

WEDNESDAY, 24 OCTOBER, 1900.

Present:—

MR. COOK, | MR. MEAGHER,  
MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined:—

G. A. French. 9306. *Chairman.*] I would like you to look at No. 423 of the Queen's Regulations? Yes.  
9307. Do you consider that there is anything in that Regulation that would prevent you answering questions, that may be put to you by this Committee, in regard to the amount of ammunition, armament, &c., at the disposal of the New South Wales forces? If the Press were not present, I should think that clause would not stop me; but there are other clauses which are stronger than that.

9308. *Mr. Cook.*] What are they? The 36th section of the Army Act, which prohibits anything of the sort. Under that officers are liable to be tried by court-martial if they give information on those subjects.

9309.

24 Oct., 1900.

9309. *Chairman.*] Then I take it, that it will be a matter of impossibility for us to receive any information at all in regard to the condition of the stores and arms, &c.? Yes; that would prevent you from getting any information that it would not be to the interest of the State to have made public. G. A. French.  
24 Oct., 1800.

9310. Who is to be the judge as to that—the State or the officer? The officer, I should think; because he is liable to punishment if he does wrong.

9311. So that the officer would be practically a dictator to the public in regard to military matters? I do not think so; we have certain instructions that we shall not divulge information upon certain points, and we have to act upon them.

9312. Do you think that giving evidence before a Committee appointed by the highest power in the land is what would be understood, in ordinary English, as divulging information? I think so, where the Committee overlooks the law of evidence which absolves any official from giving evidence injurious to the State.

9313. Then who is it, the individual or the State that must judge? I do not suppose the State has anything to do with it; but the individual must, seeing that he is held liable to punishment if he gives information contrary to the Regulations.

9314. You suppose the State has nothing at all to do with it? I think not.

9315. Do you think the military forces are above the State? What do you mean by the State?

9316. I mean the public of this country, who provide the funds for military purposes, and in whose services the military officers are;—if the public desire information, is it competent for officers to say that they will not give such information under certain circumstances? Quite so. The Government are the authorities that the public of this country look to for information of this sort. If the Government choose to divulge information that is their look-out, and it is not for the officers to blab out information upon these matters.

9317. Do you consider that giving evidence before a Committee like this is blabbing information? I think so, if this information is given as to the number of rifles and ammunition, and other particulars as to our armament;—I suppose you would like to have plans of all our submarine mines and so on?

9318. You are not here to suppose, but simply to give evidence, like any other witness? I should hold any officer responsible for giving any information about the number of our rifles, the quantity of ammunition, and things of that sort. I have reported one officer already.

9319. *Mr. Cook.*] For giving evidence here? For giving evidence about matters that he should not have given evidence about.

9320. *Mr. Wilks.*] Before this Committee? Yes.

9321. Is there not some other provision relating to giving information about the batteries? Yes; there is a special order about it.

9322. *Chairman.*] I will read to you the 36th section of the Army Act;—I cannot see the slightest inference to be drawn from that with regard to the case before us:—"Every person, subject to military law, who commits the following offences, that is to say, whether serving with any of Her Majesty's forces or not, without due authority, either verbally or in writing, or by signal or otherwise, discloses the numbers and position of any force, or any magazines, or stores thereof, or any preparations for, or orders relating to the operations or movements of any forces at such time and in such manner as in the opinion of the Court to have produced effects injurious to Her Majesty's service, shall, on conviction by court-martial, be liable, if an officer, to be cashiered or to serve such less punishment as is in this Act mentioned; and, if a soldier, to suffer imprisonment or such less punishment as is in this Act mentioned." Then there is a foot note: "The unauthorised communication of intelligence to the enemy is punishable under section 5 (4). The charge under this section must show how and when effects injurious to Her Majesty's service were produced. As to injurious disclosures by private letters, see note to section 5 (4); see also Queen's Regulations, paragraph 423."—So that before any officer could be responsible under the Army Act, it would have to be proved in what way the information was given, even privately. Even if given to the enemy, it would have to be proved in what way the information was injurious to Her Majesty's service? I should think that if the information is published it would be likely to be injurious.

9323. You think that if it is published;—that if the public of this country are made aware of the fact that insufficient ammunition is kept in stock, and insist upon a proper supply in case of emergency, that that would be injurious to Her Majesty's service? I think the people of this country have the Government to look after that for them. It is the head of the State, I presume, who is responsible and not the tail.

9324. What do you call the tail? The opposite end to the head.

9325. But then you see Governments are the creation of the people here? Well, let the people call on this Government to give them the information. The Government can do that if they like, but officers have no right to do it. The Government are kept informed as to everything connected with the defences at all times.

9326. So that in the face of that you would refuse to answer a question, such as I submitted to you in the first place? Yes. There are half a dozen other despatches here on the same case.

9327. Just one minute;—I happen to be Chairman here, and when this Committee wants you to read a despatch, it will give you permission to do so. In the meantime, I am conducting the proceedings, and apart from the Queen's Regulations and the Army Act we have certain statute enactments in this Colony which have some bearing, perhaps, on your position. In the Parliamentary Evidence Act, section 7, it provides a penalty in cases where witnesses refuse to answer questions? I do not think that is quite a correct way of putting it.

9328. Do you mean in connection with the Parliamentary Evidence Act? Yes.

9329. Of course, I am not responsible for what you think? Well, perhaps you would read the section.

9330. The section says that "if any witness so summoned or attending to give evidence shall refuse to answer any lawful questions during his examination, he shall be deemed to be guilty of a contempt of Parliament? Yes; "lawful question"; that is right. I never heard you say anything about "lawful question" in the first place.

9331. Well, I may tell you, that there is not any intention on the part of this Committee to ask you any unlawful question. If you look up the law of evidence, you will find what a lawful question is under this section? I have read it up; I know all about it; and I have taken an opinion on it.

9332. Oh! you have been getting ready for this? Exactly.

9333. And, how is it that it has occurred to you, just at this particular stage, that you must not answer questions of this sort;—has the Army Act been such a dead letter to you all the time? I have not been asked any of these questions, so far as I know.

9334.

G. A. French, 9334. But you have answered questions with regard to confidential reports? Those are on quite a different footing to these questions. I am not going to give any information that may be of serious importance as to the number of our cartridges and rifles, and submarine mines; because it would not be in the interests of the State to divulge such information.

24 Oct., 1900.

9335-6. We have not asked you about submarine mines;—in your opinion it would not be in the interests of the State? No; not in my opinion at present, and I think this opinion would be shared by anyone who understands anything about responsible Government. It is the Government who should give the information. I would not do it as far as I am concerned. In addition to this reference to the Queen's Regulations, I should like to quote an extract from an official despatch from the Home authorities, under which the Commandant has to act. This despatch is in reference to the publication of secret information on matters of defence and armament. The despatch says, "In a letter, a copy of which is enclosed, my attention is drawn to the occasional publication in the Australian Colonies of secret information on matters of defence and armament, and I request that you will acquaint your Government, confidentially, with the fact that this irregularity has been noticed, and that you will impress upon your Ministers the necessity of maintaining absolute secrecy on all questions relating to those details." That had reference to some particulars which were called for in the Legislative Assembly, in Queensland, and which were made public.

9337. What is the date? 1893.

9338. You say that that is in reference to something that took place in Queensland? Yes. The Legislative Assembly called for a return, and were furnished with a lot of information that should have been kept secret.

9339. *Mr. Meagher.*] The object of your refusing to answer these questions is to prevent a disclosure of our position? Certainly. I do not think it would be in the interest of the State that such information should be given.

9340. Have you not already publicly disclosed the fact of our unpreparedness to the world in a report which was published a few days back;—in your report you have a paragraph headed "Warlike stores," and I would like to know what interpretation you put upon these words in that paragraph:—

(19.) The old difficulties as to the supply of warlike stores were accentuated during the past year. A state of war prevailing seemed to be quite sufficient reason for not meeting the requisitions of this and other Australian Governments for such prime necessities of defence as arms and ammunition. The reason was probably more satisfactory to the War Office than to the Governments of these Colonies, who, while constantly having pressed upon them, and rightly so, the necessity for adopting exactly the same pattern arms and ammunition as in use by the Imperial troops, found themselves at a critical period quite unable to obtain them.

(20.) The arms sent to England for conversion, in 1898, have not yet been received back, and a requisition for magazine rifles, sent in 1899, met with the response that in about a year's time their manufacture might be commenced, all of which goes to prove the truth of the statement, in my report of last year, that "there is no central authority responsible for the defence of the extremities of the Empire."

Is not that evidence that the state of war in England has prevented us from obtaining the prime necessities of defence? In certain quantities, of course, it is.

9341. You do not put any qualification here, you come down to the "prime necessities"? I suppose it is perfectly well known that we were to get rifles that we ordered a year ago.

9342. But this mysterious secrecy that you are hedging yourself round with now seems to be extraordinary, when you published all this information in a report some few weeks ago? I considered it my duty to make that report.

9343. Then you bring the Empire into it. You say that New South Wales is not only deficient in supplies, but that, practically, the Empire is in default. You say that the state of war prevailing seems to be quite sufficient reason for not meeting the requisition of this and other Australian Governments for such prime necessities of defence as arms and ammunition. Then you go on to say, "the reason was probably more satisfactory to the War Office than to the Governments of these Colonies, who, while constantly having pressed upon them, and rightly so, the necessity for adopting the same pattern of arms and ammunition as in use by the Imperial troops, find themselves at a critical period quite unable to obtain them." That is very strong is it not? I have been reporting about that for the last fourteen years. The same difficulty cropped up when I was in Queensland.

9344. That may be all right; but what I am trying to impress on you is that we are allowing the agents of the European powers, who may be here, to get this information, without putting them to the necessity of getting documents surreptitiously. Your report shows that, at a critical period, we are unable to get the same pattern arms and ammunition as are in use by the Imperial troops. Do not you think that is a grave disclosure? I think it is very useful information, because it will impress upon the Government the necessity of seeing that much better arrangements are made before the next critical time arrives.

9345. That is the object of this Committee, to see that much better arrangements are made? I made the report for the Government, and if they have chosen to make it public it is their affair.

9346. Well, I do not know whether this is for the Government or not, but I know this much, that I can go to the Government Printing Office, and buy as many copies as I want at 1s. 6d. each? If the Government had not thought fit to publish it they need not have done so.

9347. But there is not much secrecy in the matter, after all. You go into detail when you state that the arms sent to England for conversion, in 1898, have not yet been received back, and so on. That is a nice bit of information, when our men are supposed to have up-to-date rifles supplied to them? We have plenty of rifles.

9348. Well, then, if that is so, there was no occasion to sound this tocsin of alarm. You say that the arms sent to England for conversion have not yet been received back, and that the requisition for magazine rifles, sent in 1899, met with the response that in about a year's time their manufacture might be commenced. Do not you think that, having regard to our isolated position here, that seems very important information, and very private information, to publish in this way. If we have not these magazine rifles, we should, at any rate, bluff the other powers that we have, if we do anything;—do not you think that is a very weak spot to lay bare? If you will look up the records you will find that the Premier has given that information a dozen times over.

9349. I am not talking about the Premier, but I am talking about your opinion. Do not you think that what you have written is a most damnable indictment to send out to the world? No, I do not.

9350. Not that we have sent out for magazine rifles, and will probably not receive them for some years? I do not think we shall have to wait so long as that. I have every reason to believe that we shall have them in a few months.

9351.

9351. I am reading from your report, which says that in about a year's time their manufacture might be commenced—not that they would be sent then? That requisition was sent Home in 1899. G. A. French.  
21 Oct., 1900.
9352. You go on to say that all this goes to prove the truth of the statement in your report of last year, that “there is no central authority responsible for the defence of the extremities of the Empire”;—do not you think that is a most damnable indictment? It is a very straight intimation, and I think it may be of great use to the Colonies when it is considered.
9353. Do you not think that it may be of some use to hostile powers? Not very much; we do not mention any numbers—it is general statement. We have plenty of arms and ammunition, but I am not going to give the exact numbers all the same.
9354. Well, if we are in a position such as you indicate, where is the necessity for these homilies and these attacks upon the authorities who have charge of the defence of the Empire;—if we are only slightly under-armed, there is no necessity for this? I have been doing the same sort of thing for many years past, in the hope of drawing attention to the difficulty of getting these warlike stores.
9355. Can you say whether any ordinary person of mediocre intelligence, reading these statements of yours, would not come to the conclusion that we were in a very backward state in regard to our arms and ammunition? I do not know that they should necessarily. That is not stated that we have no arms, but simply means that we do not get exactly what we want.
9356. But you say that we have not been supplied with the prime necessities;—that is, going down to the basic rock? They had such claims on them that they could not supply us. These Colonies should be well ahead in the matter of arms and ammunition supply, and should not be dependent upon the Old Country in time of war. I have been for forty years in the Service, and can form as good an opinion on this matter as you can.
9357. I would not have the impertinence to set up my opinion against yours in a technical matter of this kind? It seems to me you are only indulging in a legal quibble.
9358. I am not aware of any legal quibble in the matter, but I am putting a simple question to you;—I am asking you whether the paragraph of your report headed “warlike stores,” which says in effect that we cannot manufacture our stores here, that we are isolated in the Southern Ocean, that we have sent to England for the prime necessities in arms and ammunition, and that England is unable to send them to us, does not convey information of a most important character which should not be disclosed to the world? It has been disclosed about a dozen times over in all the Colonies.
9359. It does not matter whether it has been disclosed fifty times over—you are not answering my question;—do not you think that an admission from the Commandant that he is in want of the prime necessities in the way of arms and ammunition is a most serious thing to make public? No; I do not think it is—not in the way I put it. The intention was that the information should be of benefit to this Colony.
9360. Then you say that you do not consider it was of any consequence? No, I do not.
9361. My next question is as to whether you do not consider your disclosure that the up-to-date magazine rifles that we sent for—whatever the quantity is—and which you say the authorities in England were not in a position to commence to manufacture before about a year's time, is a serious matter to make public? The year is nearly up now, as you are aware.
9362. You have emphasised the fact that a manufacture might be commenced in about a year's time, and then you put in a little sarcastic statement of your own;—leaving out that sarcastic addendum, do you not think the communication that we have sent an order Home for magazine rifles which has not been supplied, and is not likely to be supplied for some time, is a serious matter to be made public? If the numbers were given it might be.
9363. I am not talking about numbers;—do not you think that it is a serious matter? The general statement there is not of much consequence.
9364. *Chairman.*] You have told Mr. Meagher that the information has already been given a dozen times by the Premier or by the responsible Minister? Yes; in answer to questions.
9365. Are you also aware that information has already been given with regard to our supplies of ammunition and arms? By me?
9366. By the responsible Minister? I understood some time ago that it was given—some considerable time ago. Fortunately, the numbers have changed in the meantime.
9367. But information has been given within the last six weeks about rifles? By the Minister?
9368. Yes? It was certainly not on my recommendation.
9369. I suppose the Minister does not consult you? He told the House the number and kind of arms that were in stock?
9370. *Mr. Cook.*] Yes; the total number of rifles was given as between 25,000 and 30,000? I have always objected to any information of that kind being made public.
9371. *Chairman.*] But I suppose that the Minister is the head of the military forces here? Yes.
9372. So that I suppose it is for him to judge whether such information shall be made public or not? Yes.
9373. *Mr. Wilks.*] I suppose, as a matter of fact, when it is all over, the intelligence departments of the foreign powers are as well versed as to the quantities of our military stores as you are yourself? That is a question that I could not answer for certain. All foreign powers are continually endeavouring to get information as to the state of defence of every other part of the world, especially those parts in regard to which they may have intentions. No doubt they have a great deal of information, particularly connected with the defence of the English Empire, because we are not sufficiently strict in keeping matters to ourselves.
9374. If they have this information, where is the difficulty or danger of giving information with regard to matters on which you have been questioned? I should very much object to the information being published on the authority of the General Officer Commanding, or of his staff; there would be no doubt about it then, but there may be some doubt about the particulars that other people would give.
9375. *Chairman.*] You are in full accord with the principle that the Military authorities should be absolutely supreme in matters of this sort? What I say is that the Government are the proper persons to look to; if the Government choose to make the information public it is for them to do it, and not for us, who are simply subordinate officials of the Government.
9376. You have said that you do not mind the head of the Government questioning you, but you objected to the tail? I do not think that is what I said. You asked me as to the right of the public to get

G. A. French. get the information, and I said it was for the head of the Government to give the information, and not for the tail. The Government are responsible to the people, and if they choose to give the information it is for them to do it, and not for their officials.

24 Oct., 1900.

9377. I think you spoke of yourselves as a tail? The military officers are not the Government—yes, anybody.

9378. But you did not apply the term “tail” to the people, but to the Government officials;—you mean those in a position subordinate to the head? Yes.

9379. I suppose your statement in reference to the objection to answering questions on a subject I have mentioned applies to all the officers under you? I should think so. Their attention has been drawn to the clause in the Act.

9380. Of course, it would take a pretty strong-minded officer to hold a different view to yours? Any officer can take his own view of the matter. He has the regulations, and he knows his responsibility.

9381. You have already reported one officer because he dared to give information to this Committee? It was because he gave certain figures with regard to cartridges and rifles which should not have been given to the Press.

9382. Do you not think there are a great many things that perhaps want inquiring into? Surely the Government, who have the support of the people, can do that. They are responsible, and with the support of the public they should be the parties to act.

9383. But how about this Committee;—do you think this Committee appointed itself? I believe there were only about a dozen Members in the House when it was appointed.

[The room was cleared and the Committee consulted for some little time.]

General French was again recalled and further examined as follows:—

G. A. French. 9384. *Chairman.*] How many cartridges have we in stock? What sort of cartridges?

9385. Lee Metford, '303, and Martini-Henri? I do not carry that information in my head; besides I would not give it if I did.

24 Oct., 1900.

9386. First of all, you do not know it, and if you did, you would not give it? No.

9387. What is the lowest point to which you have allowed the ammunition to run down? That I could not tell you.

9388. You would be able to get that evidence by to-morrow? I could.

9389. The Committee is desirous to find out the amount of ammunition and the number of rifles available, and in consequence of what has taken place previously, I have to inform you that they have carefully considered the Army Act, 36th section, and the Queen's regulations, paragraph 423, and in their opinion these provisions do not in the slightest degree touch the question that you have been asked. Besides that, the information has already been given—correctly or otherwise. We have further consulted and admitted Parliamentary authority, and we find that in dealing with a question such as this there is no precedent for any witness taking such action as you have taken. It is clearly laid down that Sir Archibald Grant was daily committed to the custody of the Sergeant-of-Arms for refusing to give evidence before a Commission of the House of Commons until he expressed his willingness to do as desired. Section 7 of the Parliamentary Evidence Act states that if any witness summoned to give evidence shall refuse to answer any lawful questions during his examination he shall then be guilty of contempt of Parliament. The only judge of a “lawful” question is this Committee—we are the only persons who can judge. Clause 7 of the Parliamentary Evidence Act further provides that any offending witness may be “committed into the custody of the Usher of the Black Rod or Sergeant-of-Arms, and, if the House so order, to gaol, for any period not exceeding one calendar month, by warrant under the hand of the President or Speaker, as the case may be; such warrant shall be a sufficient authority for all gaolers and other officers to hold the body of the person therein named for the term therein ruled. And no person acting under the authority of this section shall incur any liability, civil or criminal, for such act.” In view of your not having any information available, we shall ask you to attend—you will be notified in the usual official way—at half-past 11 to-morrow morning, when we expect you will be able to supply us with the information we ask for. The Committee want information with regard to the amount of ammunition—small arms ammunition—and the different patterns and numbers of small arms available. We should also like some estimate of the amount of ammunition necessary per stand of arms on what may be termed an active war footing. We are not particular to a few rounds so long as the estimate is fairly accurate? I will take a note of the information you require.

WEDNESDAY, 31 OCTOBER, 1900.

Present:—

MR. COOK,

MR. CHANTER,

MR. J. C. L. FITZPATRICK,

MR. GARLAND.

MR. MEAGHER,

MR. WILKS,

MR. QUINN,

RICHARD SLEATH, ESQ., IN THE CHAIR.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined:—

G. A. French. 9390. *Chairman*] You have been sworn? Yes.

31 Oct., 1900.

9391. I think on the last day you were before this Committee as a witness you were asked if you could obtain certain information, of which you took a note, with regard to the amount of cartridges for small arms, Lee-Metford and Martini-Henri rifles—have you obtained that information? Yes; I have obtained it.

9392. What is the number of cartridges in stock in the Colony? That I decline to state. I have given the information to the Chief Secretary, my superior officer.

9393. You decline to give this Committee the information? Yes.

9394. Have you any reasons for taking that stand? It is not in the interests of the State that such information should be made public. There are distinct orders against it under the Official Secrets Act.

9395.

G. A. French.  
31 Oct., 1900.

9395. You have discovered that Act since you were here before? I have known it for many years.
9396. That was not given as a reason the last time you were before this Committee? I had the Act in my pocket.
9397. I ask is that a reason you gave before for refusing to answer questions? No, it is not; there are other reasons for not giving such information. I am an Imperial officer and am supposed to be guided by military laws and regulations.
9398. By the way, General, do you remember giving an interview to a representative of one of the evening papers, I think it was in November last? I do not.
9399. Do you remember seeing the report of an interview published? I had a good many interviews about that time.
9400. I mean an interview in which you adversely criticised the actions of the British officers in command of the troops in South Africa, where you said they ought not to have gone where they did? I do not recollect anything of the sort. It is not likely I should make such a statement.
9401. By the way, General, you were not altogether pleased with the appointment of this Committee, were you? Not in the least; I think it a highly improper Committee.
9402. You think it so? That is my opinion.
9403. I suppose, as a public servant, you will recognise that it is advisable on matters of policy to keep your opinion to yourself? No; I do not think it is necessary. I am entitled to my opinion as well as other people.
9404. You think you should be general dictator? Not in the least.
9405. Do you remember going to Mr. Reid, the Leader of the Opposition, after the Committee was appointed? Yes.
9406. What object had you in view in going to see the Leader of the Opposition? I did not go to him in any particular capacity.
9407. What capacity? To get information from a legal and Parliamentary point of view.
9408. You made some pretty strong statements to him in regard to the administration of the Military Department? I am not aware that I did.
9409. If Mr. Reid says that you did he would not be telling the truth? I do not think he would say it.
9410. That is not the question;—did you not make some strong statements to him in regard to Military matters? What I said had reference to the appointment of this Committee.
9411. But did you tell Mr. Reid that there were certain things which would be brought out in evidence that would simply damn the present Ministry? I do not believe I said anything of the sort.
9412. And if he says you did, he will not be telling the truth? I should not think so.
9413. Do you know;—is it so or not? I should not imagine that he would say anything of the sort.
9414. I am not asking you what you imagine, I am asking you whether, if the statement was given on oath, it would not be correct? It would not be correct. I protest against an irrelevant matter being brought into this inquiry.
9415. It is not for you to judge what is relevant or irrelevant —
9416. *Mr. Meagher.*] Colonel Roberts has given evidence on this inquiry, General, and you have reported him for doing so;—is that so? I have reported an officer for giving evidence which he should not have given.
9417. Who is that officer? Colonel Roberts.
9418. And you have reported him because you have no doubt in your own mind that he has committed a breach of the Official Secrets Act? He should not have given the information.
9419. But have you any doubt in your own mind that he has committed a breach of the Official Secrets Act? I think so.
9420. You know, General, that under the Official Secrets Act there is no court-martial, but that the procedure is for the Attorney-General to prosecute an offender? I believe that is so.
9421. Have you made any suggestion that the Act should be carried out? Not up to the present.
9422. Do you not think, when a man is guilty of an offence under the Official Secrets Act, that the machinery for prosecuting him should be put in motion? It should be when I have official information on the subject.
9423. But having reported Colonel Roberts for a breach of the Official Secrets Act, do you not think that the machinery should be set in motion for the punishment of the offence? When I have official information on the subject; up to the present I have had nothing but newspaper reports.
9424. What official report do you require? Well, the report of this Committee.
9425. Have you not, as a matter of fact, reported Colonel Roberts? Yes.
9426. On what ground;—on what appeared in the newspapers? Yes; partly.
9427. There was no difficulty in your obtaining a copy of the evidence given before this Committee—the secretary would have been courteous enough to supply you with a copy? I did not know that.
9428. Have you not perused evidence outside your own proof since this Committee began? I have.
9429. You have perused the newspaper report wherein it is stated that Colonel Roberts has disclosed information, and which has incited you to report him for having, in your opinion, been guilty of an offence under the Official Secrets Act; then if the official report, which the Chairman will hand you this afternoon, bears out what the newspaper report has stated;—do you not consider that the machinery for prosecution provided by the Official Secrets Act should be put in motion? I shall report him officially.
9430. But, presuming that the official report bears out exactly what you read in the newspaper, would you not then consider that he should be prosecuted by the Attorney-General? I should leave it to my superiors to do what they thought fit.
9431. But as Commandant of the Forces in this Colony, having reported a man for an offence against the Act, do you not consider that, in the interests of discipline, prosecution for the offence should follow? I should leave that for the Government to decide. If the official report corroborates what I saw in the newspapers, and the concomitant circumstances show that he has been guilty of giving information which he should not have done, I think he should be prosecuted.
9432. You are his immediate superior? Yes, in the military line. It would be necessary to know whether, in giving evidence, he had been subjected to bullying.
9433. From whom could the bullying possibly proceed? It might be from some members of the Committee.

G. A. French. 9434. Would you be surprised to know that, from the moment that Colonel Roberts took the oath, every question put to him was of a most polite character, couched in proper terms, and that neither from first to last did he vacillate or hesitate, or make any complaint as to the way in which the questions were put to him? No.

31 Oct., 1900.

9435. Would you be surprised to know that, without the slightest hesitation, and voluntarily, Colonel Roberts answered every question that was put to him? No; I am not surprised.

9436. Finding that there was nothing offensive in the language, nor any objection on the part of Colonel Roberts, and that he answered the questions with the utmost willingness, would you not think there was an absence of bullying? Yes.

9437. Allowing that to be the case, and finding that Colonel Roberts was not bullied, but voluntarily gave the Committee the information, and you having reported him for a breach of the Official Oaths Act, do you not consider that the machinery of the law should be put in motion to prosecute him? Probably; I think it should.

9438. Colonel Roberts has been under you for some time, has he not? In the military line.

9439. And you have a very kindly feeling for him as an officer? Oh, yes; we get on very well.

9440. Do you think he is a very capable man? In what line?

9441. He is the Military Secretary; I suppose you know the duties pertaining to that office;—do you think he discharges them efficiently? The term “Military Secretary” is a misnomer, and does not apply to his duties.

9442. In your position as Commandant, and being thoroughly familiar with the whole of the routine and technique of the Forces, and especially with the functions to be discharged by Colonel Roberts, do you think he is a capable man? Yes.

9443. Do you think he does his work well? Yes.

9444. Do you remember that in your last annual report, that for 1900, you conclude with these remarks:—“In conclusion, I would wish to place on record my thanks to the Staff of all ranks, and to Officers Commanding Corps and Companies, who, for years past, have done so much to further the efficiency of the Forces, and especially to Colonels Mackenzie, Taunton, Williams, and Smith, Lieut.-Colonel Blanchard, Majors Bridges, Owen, Boam, and Lee, who have each in their respective spheres afforded me most valuable assistance; to Lieutenant-Colonels Burns and Lassetter, by whose exertions the Mounted Forces of the Colony were brought into such prominence in England; to Lieutenant-Colonel Mackay, who raised, *ab initio*, that fine Volunteer Corps, the 1st Australian Horse; and, finally, to those Officers, N.C. Officers, and men, who, by their endurance of hardship, efficiency, and proved valour on many a hard-fought field in South Africa, have brought much credit to themselves, to the Colony to which they belong, and to that great Australia whose Defence Forces lifted on to a higher plane, and under one head and one system, will be still better able to cope with all enemies of the Great Empire of which we are proud to form a part.” Those form practically the whole of your Staff? A good many are juniors.

9445. Do you notice the extraordinary hiatus—the absence of any mention of the officer immediately under you, Colonel Roberts;—do you notice that in this report of yours, apparently the last one you will make, you make special mention of even juniors, but leave out any reference to an officer who, you now say, does his work well? In one respect he is in a position entirely independent of me.

9446. But I suppose he has certain functions to perform, something to do with the efficiency of the Forces? Yes.

9447. *Mr. Quinn.*] Why did you report him if he is independent of you? In one sense he is independent. He takes orders from the Treasury for the payment of money without coming to me.

9448. *Mr. Meagher.*] In the concluding remarks of your report, which I have read, you have mentioned even junior officers, and given them great credit for what they have done to assist you, but you make no mention of a senior officer who has had great responsibilities to discharge, and who is the next man in seniority to yourself? Seniority as Colonel.

9449. But he is higher in status to Lieut.-Colonel Blanchard, Majors Bridges, Owen, Boam, and Lee? Yes.

9450. Then can you tell us why you went out of your way to specifically enumerate officers on the Permanent Staff and omitted Colonel Roberts, who, you tell us, is a very able and efficient man? I think I told you that in one respect he is not under me at all.

9451. Will you make it clear to the Committee in what way he is not under you? He has assisted me in many ways; but not in the same proportion as the others have done.

9452. Do you think he would object to your making remarks of a complimentary character concerning him? I do not know.

9453. Do officers generally feel insulted if they are reported on favourably by their superiors? I do not think so.

9454. This officer, Colonel Roberts, has discharged the functions of his office directly under you, and I wish to know why you have, in your report, located all the other members of your staff, and invidiously omitted to mention Colonel Roberts' name;—is this the reason: that Colonel Roberts is not directly under you? That is one reason; but there are others.

9455. What are the others? I do not think he rendered me as loyal service as the other officers did.

9456. Has the omission of Colonel Roberts' name from your report anything to do with any ill-feeling on your part? I do not think so.

9457. You are on very good terms with him? On very good terms.

9458. *Mr. Cook.*] Have you had any communication from the Chief Secretary relative to the furnishing of information to this Committee? I believe a gentleman arrived just as I entered this room.

9459. You have not heard from him at all? No.

9460. Then the statement by the Chief Secretary, that he had instructed you to furnish certain information to the Committee, is not correct? I have not received any such instruction yet. I noticed the statement in the newspapers; but I have not received any such instruction.

[At this stage of the inquiry a person in the room approached Major-General French, and said:—“Mr. See sent me up to say that you could give all information relating to small arms which the Committee might ask for, but not information relating to forts, torpedoes, and the mounting of guns at the forts.” Major-General French asked if the message was in writing, and was informed by the messenger that it was not. Major-General French remarked that the matter was of so much importance to him that he would require to have the request in writing.] 9461.

9461. *Mr. Cook.*] You regard the Chief Secretary as, in one sense, over you? Yes, certainly; in matters of administration. G. A. French.  
31 Oct., 1900.
9462. Ordinary matters of military administration;—you would make recommendations to him, and would be bound by any statement he made to you? Yes; he would be my official head; but there are certain matters of discipline which would have to come before the Governor, as Commander-in-Chief of the Forces.
9463. What would they be? Matters of discipline connected with the conduct of officers and men of the Forces.
9464. *Mr. Wilks.*] You report a man to Commander-in-Chief of the Forces? Yes.
9465. But suppose the Chief Secretary gave you instructions, independently of discipline, you would obey them? I should.
9466. Would that apply to this furnishing of information for the benefit of the Committee? Furnishing information such as I have hitherto refused to give?
9467. If the Colonial Secretary desires you to give certain information to the Committee? I should have to consider the matter; ordinarily I would.
9468. Why consider it? Because the instructions from the Imperial Government are so stringent in regard to giving information of the kind asked.
9469. Are those instructions conveyed directly to you or to the Chief Secretary? They are contained in the Act and in the Regulations.
9470. What I want to know is this: how far do you consider yourself bound by the instructions of the Chief Secretary? In everything, except in doing something that is illegal. For instance, if I was told to shoot somebody, that would not be a legal instruction ordinarily.
9471. But has not the Minister for Defence the right to ask you for complete information relating to the defences? I should give complete information to him.
9472. But if he said, instead of furnishing it to him you should furnish it to this Committee? I should think, on the legal point, I should be pretty free from responsibility.
9473. Therefore you would not have any objection to furnishing it to the Committee? I should have to consider it. I am an Imperial officer, and have to obey Imperial instructions.
9474. *Mr. Quinn.*] You are also an officer of the Government of New South Wales? Yes.
9475. And are dependent on the Government of New South Wales for your position and salary? Yes.
9476. And if the Government instructs you to do certain things, it is your duty to do them? In 999 cases out of 1,000 it would be correct.
9477. And in all matters? That is a question of such importance that I should not care to answer it without advice.
9478. *Mr. Cook.*] But suppose that all the information the Committee require has already been furnished by the Ministry to Parliament, and has been, indirectly, furnished by the Secretary—Colonel Roberts—and in view of the specific direction of the Minister of the Crown, now, that you should corroborate the evidence which the Committee already have, do you not think that sufficient to relieve you of any further responsibility? I do not think all the information has been furnished.
9479. Information relating to small arms? I do not think all the information has been furnished.
9480. *Mr. Quinn.*] Suppose I asked a question of the Chief Secretary on the floor of the House with reference to these matters, and the Chief Secretary asked you to supply the information for the benefit of Parliament, would you then refuse to give it, on the ground that you were prevented by the Official Secrets Act, or any other Act, or on the ground that as an Imperial officer you were not allowed to give it? I would supply everything to the Chief Secretary.
9481. Why not to the Committee? What I give to the Chief Secretary is, to a certain extent, private. He takes the responsibility of making it public.
9482. But where does your responsibility come in? By giving information here that may be published.
9483. But would not the Official Secrets Act prevent you from giving information to the Chief Secretary? No.
9484. Then, you admit that he is the responsible person? He has the information, and could give it to this Committee in full without putting me into an unpleasant position—that is, if it does not conflict with Imperial interests.
9485. We require the information as a Committee of Parliament? The Chief Secretary can give it; he has got it.
9486. We are not asking the Chief Secretary; we are asking you? All that I can say is that I have given it to my superior officer, and he can give it to you; I refuse.
9487. *Mr. Wilks.*] You regard the information you have given him as confidential? Not exactly as confidential.
9488. *Mr. Cook.*] Have you seen the Chief Secretary at any time since our last meeting? I saw him yesterday evening.
9489. Did you talk over this matter with him? No. I saw him yesterday.
9490. Did you discuss this question? I mentioned to him that there was a section of the Official Secrets Act which debarred anyone from giving such information as is now sought, and that it applies to civilians as well as to military men.
9491. Did he tell you then that he was going to ask you to give the information? No.
9492. Suppose his intention was conveyed to you, would you then refuse to give such information? I have always refused to give such information.
9493. Even if you are requested by the Chief Secretary to give it? I should like to see the request, and see if it is permissive or a direct order.
9494. But if he instructed you to give it, I suppose you would do so? Yes; under ordinary circumstances, I would.

Harold Deering sworn and examined:—

9495. *Chairman.*] You are a clerk in the Colonial Secretary's Department, I believe? Yes. H. Deering.
9496. And you have been sent here with a message to Major-General French? Yes; a message from the Colonial Secretary, Mr. See. 31 Oct., 1900.

- H. Deering. 9497. What is the effect of that message? I was told to see Major-General French, and to tell him that he might give all the information in connection with arms and ammunition which the Committee might ask for, except information as to forts, torpedoes, and the mounting of the guns of the forts.
- 31 Oct., 1900. 9498. And you immediately came here? Yes; the message was urgent, and I came straight away.
9499. You have informed the Major-General to that effect? Yes.
9500. And submitted certain papers to him? Yes, which he has not taken.
9501. *Mr. Willis.*] Prior to his coming into this room? I was just speaking to him when the bell went, and he came in.
9502. *Chairman.*] But you afterwards delivered your message to the Major-General in this room, and submitted certain papers containing information? Yes.
9503. *Mr. Chanter.*] Do those papers contain the information? I have not looked at them.
9504. You do not know their contents? No; I simply had the bald message to instruct the General, and give him these papers.
9505. *Mr. Meagher.*] Do you know Major-General French personally;—have you come in contact with him anywhere before? I think he knows me as an officer of the Chief Secretary's Department.
9506. And he could have no possible doubt as to your being connected with the Chief Secretary's Department? I do not think so. He does not know my name, perhaps.

TUESDAY, 6 NOVEMBER, 1900.

Present:—

MR. CHANTER,  
MR. MEAGHER,  
MR. QUINN,

MR. J. C. L. FITZPATRICK,  
MR. GARLAND,  
MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Major-General George Arthur French, C.M.G., R.A., further examined:—

- G. A. French. 9507. *Chairman.*] Do you remember that you were asked a question the last time you were here which you declined, for certain reasons, to answer? Yes; that is correct.
- 6 Nov., 1900. 9508. Do you still decline to answer that question? No.
9509. Have you received any communication from the Minister for Defence since then? Yes.
9510. Did he give you authority to answer that question? Yes; he has instructed me to do so, and on his responsibility I am prepared to answer the question.
9511. Will you tell the Committee the scope of the instructions you received? That I was to answer the question of the Committee as regards small arms and ammunition, some of the information having been already given.
9512. Anything in regard to field guns—Vickers-Maxims? Do you want information as regards them?
9513. I do not know; I only want to know, before we ask any questions on the subject, whether you would consider yourself at liberty to answer? No; I should not.
9514. *Mr. Quinn.*] That is, without further instructions? Yes.
9515. *Chairman.*] Are you aware that the Vickers-Maxim guns have only been lately in use in the British Army? Yes; it is quite recently.
9516. As a matter of fact, at the commencement of the Transvaal war the British Army was not armed with them? They were not in the service then.
9517. So, that being so, it is not likely, if they were not used in the British Army, that the Forces in New South Wales would be supplied with them? Naturally.
9518. I presume that we take our pattern of arms from the British Army? Yes. We are supposed to adhere as nearly as possible to the weapons used by the British Army.
9519. And any arm that was condemned by the Imperial Authorities would not be likely to be recommended by the General commanding here in New South Wales? No.
9520. So the chances are that New South Wales, some twelve months ago, was not in possession of any Vickers-Maxims? No.
9521. It is known the world over that the Imperial Authorities have not accepted the Vickers-Maxims till quite recently? Not till after the commencement of the Transvaal War.
9522. Could you tell the Committee the number of cartridges—Lee-Metfords and Martini-Henry—that are available? I suppose the '303 is the really important thing. That ammunition fits either rifle or carbine, or a magazine rifle, or the single shooters, commonly called the Martini-Enfields.
9523. The same ammunition fits them all? Yes. We have in store, and with the troops in the Colony, 4,500,000 of cordite ammunition, and to arrive in November and December 395,200 cartridges; ordered, and no advice of shipment, 1,000,000, and due from the Imperial Government furnished to our Contingent, it is possible that they may bring back with them 993,300, making a total, either here or that will probably be here soon, of 6,888,500, an amount which, I believe, is far in excess of that held by all the other Australian Colonies put together.
9524. That is all '303? '303 cordite.
9525. Have you got a quantity of Martini ammunition? Yes. Of the '303 arms, rifles and carbines, we have in the Colony 7,846; converted and awaiting return, 1,541; with Contingent in South Africa, 1,181; under order to December, 1899, and expected to be shipped next month, 4,000. That makes a total of 14,568, either here or likely to be here soon. Of the above, 8,000 would be magazine rifles.
9526. The rest would be Martini-Enfields converted? Yes.
9527. Is it a very serviceable rifle? Yes, an excellent rifle.
9528. For ordinary purposes, practically equal to the magazine rifle? Only single shooters; they have not the magazine attachment.
9529. The conditions of loading are simple? Yes.
9530. And it can be done very rapidly? Yes.
9531. We will now take the Martinis? As regards the Martini ammunition, they were letting that stock run out—both arms and ammunition—because in a few months they would not be wanted. The quantity of Martini ammunition in stock is 2,043,000 rounds; 159,500 we have got in parts, ready to put together, and 275,000 Martini-Henry that can only be used for the carbines. That makes a total of 2,477,500.

9532.

9532. Is that cordite or black powder? All black powder. In addition, there is 476,101 of machine gun ammunition—'45, which could be used in those rifles. That makes a total of 2,953,601. Some of that ammunition naturally is getting very old. Of the Martini-Henry arms we have 11,994 rifles and 1,269 carbines, and of the Henry rifles, which take the same ammunition, 3,771, making a total of 16,034. G. A. French.  
6 Nov., 1900.

9533. The grand total making over 30,000 stand of arms? Yes. Of course, a lot of these have been used ten, twelve, or fifteen years or more.

9534. All of this Martini ammunition could be used for quick-firing Maxims, with the exception of the carbine ammunition? It might, and it might not. A great deal of it is what they call "rolled case," and that is apt to jamb in the machine gun.

9535. The other is supposed to be the best quality, is it not? The solid case is.

9536. Do you know if they have got any new pattern of Maxim to use the Lee-Enfield ammunition? That is the new pattern.

9537. Yes; but you say that the Martini ammunition could be used with the machine guns? Yes; with the '45 machine guns. Of course, the '303 can be used with those machine guns. I may mention that we are getting '45 machine guns converted to '303.

9538. You would not care to say whether we are getting any Vickers-Maxims or not? I do not think I am at liberty to say that. My instructions do not go to that extent.

9539. I think that some time ago you promised to supply the Committee with the list of officers of the Volunteer and Permanent Forces who passed their examinations, and those who had not, and who had been for a period of years holding important positions without passing any examination at all? Did I say I would get a return of that nature?

9540. Yes? If so, it has slipped my memory. I am not prepared with the information now. I think it must have been Major Boam who made the promise, because he spoke to me about something of that sort.

9541. We have tried to get some information in regard to the appointment of officers, and I think that you at least promised that you would have an inquiry made into the matter? In regard to what particular officers?

9542. Some officers who have been lately gazetted for commissions in the Lancers' Regiment; I think I made the statement that some boys had been appointed, whilst old and experienced men had been passed over, though recommended by the colonel commanding? I recollect making some inquiries, and from what I can remember those gentlemen have not been formally recommended. It had only been talked of.

9543. I want to be positive on this, because I have the very best information, and the very strongest reasons for making the statement;—are you positive that one man, whose name I mention, was not recommended? Colonel Holborow's son?

9544. Yes? I do not think that his case came forward officially at all. I have spoken to Colonel Holborow and to Colonel Burns about it, and I do not think there is anything official.

9545. If it went through the proper channel there could be no doubt about it, could there;—I suppose that when the Colonel of the regiment makes those recommendations they would go through the Adjutant? Yes; it would be on record; but I do not think that it got beyond the phase of talking them over.

9546. Are you positive about that? No; I was not prepared for any question on the subject.

9547. My information is so positive that unless you are prepared to positively say that it was not so, I could hardly accept your answer? I am not, at present; the impression on my mind is that the matter has not been officially brought forward.

9548. In granting these commissions, do you not think that the men who have seen service ought to get the preference, everything else being equal? I think they have a very strong claim, and I have declined to make any appointments connected with the more permanent staff until they get a fair show.

9549. I suppose that twelve months' active service right at the front, and moving all the time, would be an invaluable experience? Yes; especially if in any responsible position, either as an officer or a non-commissioned officer.

9550. And even a private, if he were an intelligent man, would gain a great deal of information that he could not get in a sham-fight? Quite so.

9551. After all, you will admit that there is nothing like real warfare for gaining experience? Unquestionably.

9552. That being so, could you give any explanation of the number of official appointments that have been made of commissions having been given since the beginning of the year? In the Volunteer and Partially-paid Forces?

9553. Yes? A certain number of appointments must be made to carry on the work. In the Lancers they have a new corps, and they must have officers to carry on.

9554. Will those officers who have been appointed to the new corps, but have had no military experience, take precedence of men who have had twelve months' active service? It depends upon whether they pass their examinations all right. If they have, and were appointed beforehand, they remain in front of those in that rank. But when the question of promotion comes, the other man's experience may be reasonably considered.

9555. A statement was made by the Premier, when some matter cropped up about his son getting a commission, that it cost £100 to equip him? It seems pretty high, but if he had to buy a horse, appointments, and so on, it might run up to that.

9556. So that would make it practically impossible for an ordinary citizen to become an officer? Yes; if he had not a horse. It is not so much the cost of a horse as the keeping of a horse in town. In the country it costs nothing to keep a horse, but in the town it is a serious expense.

9557. And the uniform costs a good deal? Yes; I am afraid that military tailors all the world over know how to charge for these things. You have to pay through the nose for a military uniform wherever you are.

9558. A good deal is spent on gold braid? They have none.

9559. Have they not for their mess uniform? The Lancers have all silver; but one uniform is as dear as the other.

9560. Do you think the principle is right, if we are to get the best and most capable men as officers, that it should cost £100 to equip them at the start? I think that is a very high estimate. It is not compulsory to get a full dress.

9561. But one would naturally not like to be without it? No; but still it is not compulsory.

9562.

- G. A. French. 9562. But it would be pretty awkward if you were the only one who did not have it? Yes; I quite agree with you there.
- 6 Nov., 1900. 9563. Are you aware that in the British Army it is impossible for a subaltern to live on his pay? Yes; you may safely say it is impossible. He joins as an ensign at 5s. 3d. a day; but he could come here and do labouring work and get 7s.
9564. As a matter of fact, are there not a good deal of practically unnecessary expenses to which these officers are put? Yes; no doubt about it, there is a great deal of heavy expense, especially in connection with the mess and entertainments.
9565. If you are in a cavalry regiment, keeping a couple of polo ponies and other luxuries, it involves expense? Cavalry expenses are very heavy indeed.
9566. Would it be out of the way to say that a cavalry officer, in addition to his pay, would require to have £500 a year? Yes; I think that is what he would require. If he was very careful, perhaps he might get through on £300 a year.
9567. Would it be excessive to say that an officer in a marching regiment would require £100 a year besides his salary? I think that £100 would be a very fair minimum; his pay would not be £100 a year.
9568. So that in that way the poorer classes are debarred from accepting commissions, even if they have the ability and the necessary training? I am afraid that that is one of the direct effects of it.
9569. Of course, one can readily understand that in the Imperial Army there are old traditions that it would be very hard to ever do away with, in regard to mess, and so forth; but do you not think that in a Colony like this, where we have got our traditions practically to make in regard to our army, it would be a wise principle to do away with as much of this expense as we possibly can? I think so.
9570. What is your opinion in regard to what Colonel Neild calls "a swagger uniform";—do you think that it has the beneficial effects that they claim for it? I think a man wants one full dress uniform and a working uniform. In every class of life you find that sort of thing.
9571. The Lancer uniform is rather a quiet uniform, is it not? Yes; it is very nice and simple.
9572. And on a pinch it could be used on active service, could it not? Yes.
9573. It has only red seams? Yes. The officers use a certain quantity of lace.
9574. On a pinch, could not the Lancers uniform be used for active service? I should think so.
9575. It looks as smart as red? They have not got any red.
9576. It looks just as smart as if it was red? I think so.
9577. And it has the additional advantage that on a pinch it could be used for active service? Yes.
9578. I suppose we have learnt something of late years in regard to coloured uniforms? Yes; a great deal, I think.
9579. The brown, or khaki colour, has been adopted the world over? I have heard that the Germans adopted it lately. The troops sent to China wore it.
9580. I hear that the Chinese have adopted it? I am afraid that the Boers have adopted it too. It has been used in India for all branches of the service as a working dress.
9581. Generally speaking, brown or khaki is undoubtedly the most serviceable colour as far as we know up to the present time? Yes; especially in India and South Africa, where there are burnt plains, and the grass is the same colour.
9582. Or in Australia? Yes, inland; but it is wonderful how it shows up along the coast, where there are dark-green bushes.
9583. But where you have dark-green bushes you would generally be under cover? That is only from 3 to 5 feet high, and it would not give much cover, especially where men were moving through it.
9584. *Mr. Quinn.*] A dark-green uniform is worn by the Australian Horse? Yes.
9585. *Chairman.*] The brown uniform is a serviceable sort of uniform, which would not get shabby and wear so quickly as red? No; it does not show the dirt and dust.
9586. Do you think it would be advisable to generally adopt the brown or khaki uniform right through? Yes; I think it is adopted all through. In most of the Colonies they use it.
9587. But we do not use it here? For a working dress we do.
9588. But I am speaking also about full dress? The Commanding Officers shortly after I came here were in favour of a scarlet full dress, and a working dress of brown.
9589. I think one officer stated that personally he would be favourable to the full dress being of brown, with an aiglet or something to distinguish full dress from the working dress? They practically had a dress like that; but they did not seem happy with it.
9590. It is asserted that you are responsible for the use of the red;—is that so? I should not think so, except in combination with the Commanding Officers. I always refer to them.
9591. I think Colonel Neild stated that he was away in England when you changed the dress of his regiment? If I had the dressing of his regiment it would not be dressed in the way in which it is now.
9592. You do have the dressing of the regiment? We allow a great deal of latitude.
9593. You are responsible, are you not? We have eventually to approve of it.
9594. Is the busby worn by the 60th Rifles? They wear something like it; but I could not say whether it is a close copy of it. Of course, this climate is quite against anything of that sort.
9595. Have you noticed that remarkable fixing on the back of it—a rope to tie it on with? A capline it is called.
9596. *Mr. Wilks.*] Some time ago you made a proposal with regard to the establishment of a small arms factory? I made a proposal on the subject to the late Government. I think it was in my report about two years ago.
9597. Was that proposal adopted? I do not think any action was taken on it.
9598. There has been no action taken from that day to this? Sir William Lyne took a great deal of action afterwards.
9599. What action did he take? He made a number of inquiries as to the cost of establishing and putting up the necessary buildings and works.
9600. Your experience would lead you to believe that it is essential to establish a small arms factory? I think it very desirable, and I presume that it will be done under federation.
9601. If federation is accomplished, you think it must be done? Yes; there will be a certain market for their output.
9602. Have you made any recommendation in regard to the establishment of a small arms factory? Not at present.

9603. Do you think it is desirable? I think it would be when federation is accomplished, as they would have a certain market.
9604. It is a matter of a market? You would have a wider market with all the Colonies united.
9605. It would be cheaper and more useful for the Australians to have a small arms factory of their own than to keep importing arms from abroad? Yes.
9606. What is your opinion in regard to Colonel Whitney's factory in Victoria? I do not think very much of it. In the matter of small arms and ammunition, I do not think we ought to consider the saving of a few shillings; it is a matter of vital necessity that the Government should supply themselves.
9607. It should be a State factory? Yes.
9608. Is it not a fact that Colonel Whitney's factory is only a fitting factory? Yes, it was some time ago; but they have had some machinery brought out since for manufacturing. I saw from a report that in New Zealand they complain about it.
9609. They complain that it is merely a fitting factory? Yes. It is merely fitting things together; they do not manufacture.
9610. From your experience of the ammunition from that factory, is the material in good order? Yes; we were quite satisfied with the ammunition.
9611. But it is not the style of factory that you would recommend for Australia? No.
9612. You consider that both small arms and ammunition should be supplied from a State factory? Yes; it would be desirable, especially with regard to ammunition.
9613. Do you not think that the same thing would apply as regards the clothing? Yes; I strongly recommend it.
9614. You would recommend that under federation the State clothing factory should be established? Yes. In Queensland we made all our own clothing. We took the Army Clothing Factory price list for wages, multiplied by three, and it seemed to work very well.
9615. Your experience is that, in addition to a small arms and ammunition factory, a clothing factory would be a saving to the State? Yes, I think so. It would be much more satisfactory.
9616. Would you recommend a simpler dress for the various Defence Forces of the country? Yes; a simple working dress; but they want one full dress.
9617. In regard to the Permanent Force, is it your opinion that it is up to the strength that it should be up to? The Permanent Artillery had a fair strength, but they have been reduced on the present Estimates considerably.
9618. With a large seaboard like ours, would you recommend an increase of the Force? Yes; it is desirable. You cannot teach the men their work in a very short time.
9619. In artillery work it takes years of training to make men proficient in the use of the guns? Yes. I also hold that we should have a small nucleus of permanent men of every branch as a "School of Instruction."
9620. You would have as a nucleus for teaching others a permanent body of infantry and a permanent body of cavalry? Yes. It is very desirable that we should have such a nucleus in each large centre of population. We should have these small permanent sections to be used, not alone in training men in their duties, but also in training up instructors. We have to import instructors; but we ought to be able to train our own.
9621. Do you consider that the artillery is second in importance to the naval forces? The navy is the first line of defence. If you take that away the whole question of the defence of this country will at once become a totally different thing. We should have to keep an immense number of men under arms.
9622. Do you not think it would be the interest of the country to increase the Naval Reserve Vote? Yes; if we could train them properly. But our naval men, instead of being trained afloat, are ashore all their time.
9623. The weakness of the system has been that, however willing the men may be, they are only landsmen dressed as sailors? Not exactly; I think that a great many of them are sailors.
9624. But they have no training with up-to-date armaments on a ship? No; and I think their officers have very little naval training.
9625. Whilst the men have had experience in the mercantile marine, the officers have not had even that? Very few.
9626. Is not that a great weakness in what is our most important line of defence? Yes.
9627. Do you think the auxiliary squadron could be used for the training of those men? I proposed in my report that those two spare ships should be used for training the men; that they should be put in commission one at a time.
9628. Was that in your last report? No; I think that must have been three years ago.
9629. You made several recommendations to that effect? Yes.
9630. How was that received? It was referred Home, and the authorities there were to consider it; but I have heard no more about it.
9631. You are of opinion that, not only would it be useful, but that, if such a proposal were carried out, it would be very popular at seaports such as Port Jackson, Wollongong, and so on? Yes; I should think so. They have a naval force in Queensland.
9632. And we have plenty of useful material at our hands in all the ports for volunteering? Yes.
9633. Is it not a fact that, even for purposes of land drill, the Naval Brigade and the Naval Volunteer Artillery are devoid of up-to-date machine guns? They have a lot of obsolete weapons, but I am not well acquainted with the Naval part of the Forces.
9634. They are a well drilled body of men, but they lack proper material to make them efficient? Yes.
9635. *Chairman.*] Is that for want of armament? Yes; they have not got the modern weapons.
9636. Do you not think it is a mistake to show up the weakness of our defences in this way—saying that we have old and obsolete weapons? It had better not be published, then.
9637. *Mr. Wilks.*] Do you regard our system of Partially-paid and purely Volunteer Forces as a good system? I have had a great deal of experience of both, and I think that the two systems will have to go on. It will suit some men to be Volunteers, and to drill occasionally, whom it would not suit to join a Partially-paid Corps, and to have to turn out when they might not think it convenient.
9638. In a purely Volunteer system there is more freedom of action to the men? Yes.
9639. That does not tend to strong discipline? No, of course not.

- G. A. French. 9640. But it is sufficient, you think, for the purposes of a citizen soldiery? Yes; I daresay that a good many of them, when circumstances change, would be quite glad to join the other branch of the Force. I believe in the three divisions that we have in the Service—the regular troops, the Militia, and the Volunteer, backed up by the Rifle Clubs.
9641. That is, by the reservists? They may be reservists or be purely civilian.
9642. They are a useful body of men? That is to be the great training ground in future.
9643. Our best marksmen come from the country? I think so.
9644. In your experience in the matter of administration, which have you found it most difficult to deal with, the Partially-paid or the Volunteer regiments? The Volunteer regiments.
9645. They are the more difficult to administer? Yes.
9646. Does that apply to the officers or the men? To the officers, I must say.
9647. It is not a charge that can be made against all Volunteer regiments? No.
9648. How many regiments could it be confined to? I have had a tremendous correspondence in connection with two Volunteer corps.
9649. *Mr. Quinn.*] Will you state what Volunteer corps they were? I should not like to, as it is rather a reflection on some of the senior officers, or on some of the staff.
9650. If you have no objection to state it, I have no objection to ask the question? From what appeared in the Press, you can have very little doubt as to my opinion as regards one Volunteer regiment.
9651. *Chairman.*] That is the 7th Regiment? Yes.
9652. *Mr. Meagher.*] Which would the other be? I prefer not to answer that. I think the fault was largely due to the Permanent officer connected with it.
9653. You have deemed it advisable to say that there were two; you have located one, and the Committee would like to know which is the other one? The other regiment in connection with which we have a tremendous lot of correspondence is the Australian Horse.
9654. *Chairman.*] Have you any objection to give the name of the officer referred to? I think it is better that I should give it. The one I think was the cause of the correspondence is the Permanent Staff officer, Captain Thompson.
9655. *Mr. Wilks.*] In regard to the matter of commissions, do you favour the advancement of non-commissioned officers to hold commissions? Certainly—where they have the necessary qualifications.
9656. Are you of opinion that that would go a long way to make the Volunteer regiments more useful, if it was done as a general practice? Yes. It is done to a considerable extent. But then the old difficulty comes up: there is a lot of extra expense, and to a man with very little pay it is material.
9657. Do you think that that difficulty should be removed by an alteration in the dress regulations? We have to help them a little. I have got money voted, so that anyone who obtains a commission can get a certain amount of help.
9658. Is it not a fact that the only assistance that the officers in Volunteer regiments get is a sum of £10, which they receive on passing their examinations, and which goes towards the first cost of their dress? Yes.
9659. Have you found any difficulty in getting Volunteer officers to attend their examinations and pass them? There has been some difficulty; but there are not many now who are behind time in passing.
9660. Do you provide a school of instruction to get over that difficulty? Yes.
9661. Have you found that school of instruction useful? Yes; we get a good number of officers to go there annually.
9662. It is generally availed of? It is largely availed of.
9663. Have you found officers from the country coming at their own expense to the city to undergo a fortnights' continuous training? Yes, ten or twelve days' training.
9664. Does not that show the earnestness of the country volunteers to learn their drill? Quite so.
9665. The instruction given at the schools, I suppose, is mainly of a practical character? Yes.
9666. You rely more upon a practical pass than upon a theoretical pass? Yes.
9667. An officer who passed practically, but failed theoretically, would be considered more useful than an officer who passed theoretically, but not practically? Yes; the one who shows practical knowledge will be the most useful in dealing with men, I think.
9668. In your experience, have you found officers commanding regiments who understood battalion drill but did not understand company drill? If they have been a long time from it they may have got out of their company drill.
9669. Is it not a fact that another disadvantage to men holding commissions in Volunteer regiments is their expenses out of pocket? Yes. It is all expense for them, and they get nothing back. The partially-paid men get a little back.
9670. Is it not a fact that company officers, and officers in charge of regiments, are compelled to spend money out of their own pockets for the general advancement of the regiment or of the company? Yes.
9671. And if an officer does not do so he is placed at a disadvantage in comparison with the officers that do? Yes; I am afraid that the poor man is again at a disadvantage.
9672. The entertaining by the officers of a regiment places the poor man at a great disadvantage? There ought not to be much in that line here.
9673. You are aware that some officers spend a considerable amount of money? Yes; that applies to all branches of the service; but it is hard for a volunteer to get any return.
9674. Officers who spend money place those who do not at a disadvantage in the matter of recruits? Probably.
9675. That is, a regiment noted for its entertainments recruits more easily than a regiment that does not? Yes.
9676. And there is no fund provided for the officers of these purely Volunteer regiments? No.
9677. The present school of instruction is in charge of Captain Webb? He has left.
9678. He was a very experienced officer, was he not? Yes; he was an officer who worked his way up from the ranks, in the regular service.
9679. Has he returned to India? Yes.
9680. He was a man who would give a good deal of practical instruction? Yes.
9681. How long was he in charge? Between three and four months.

9682. What was the reason of his appointment, instead of a local officer? We were so shorthanded that we were glad to get hold of an officer to help us in that way. *G. A. French.*
9683. Was it your opinion that you could not find a man on the Staff or amongst the Partially-paid who could take up those duties? It would have put an officer in rather an awkward position to give him a temporary appointment. *6 Nov., 1900.*
9684. It was only a temporary appointment? Yes; we were hoping that our own officers would be coming back.
9685. It is reasonable to suppose that amongst the officers who have rendered good service in the Transvaal you would find one who would be suitable to take charge of the school of instruction? I should think they would have a strong claim. You are talking mainly about the infantry schools. Colonel Bayly, the officer in charge of that, has been away some twelve months.
9686. He was a good officer, smart at drill, and a good disciplinarian? Yes; perhaps a little too much so for some volunteer corps.
9687. His discipline erred on the side of superiority of work;—it was not a personal matter with him? No; I do not suppose it was a personal matter.
9688. You have heard no complaints with regard to Colonel Bayly's discipline from men who were willing to be trained? No.
9689. The only complaints would be from men not willing to be trained? I do not think I ever heard any complaints.
9690. You would consider Colonel Bayly almost an enthusiast as regards his work? He was very good.
9691. Was it not generally thought that he was an exceedingly good drill? I always held that view.
9692. Do you consider he was an officer who was suitable to have charge of the Volunteer Forces of this country? I am afraid he was not so great a success in that position.
9693. Was his lack of success owing to a want of diplomacy? Yes.
9694. That is not a great weakness in a man in charge of a regiment? I think that in dealing with a volunteer corps you want a great deal of tact.
9695. You must humour the officers? You want a great deal of tact in dealing with commanding officers of volunteer corps, who are giving their time for nothing.
9696. The State had a good return in the services of Colonel Bayly, as regards teaching? Yes.
9697. Did you ever consider the utility of establishing a military school or college? In one of my reports I strongly pointed out the necessity of a military college. They have a good one in the United States, and in Canada they have an excellent one.
9698. Would you recommend that we should copy the Canadian institution? Yes. I have already recommended it in one of my reports.
9699. You would consider it especially desirable under federation, that we should have a military college? Yes; I strongly recommend it.
9700. *Chairman.*] You say that Captain Webb was a thoroughly efficient officer? That is my view.
9701. Did you send Home for him? No. He was over here on leave, and I suggested that he should give us a hand.
9702. He apparently was not in South Africa? No; his regiment was in India.
9703. He came to Australia during his leave? Yes.
9704. Has he any relatives here? I think his wife has. I do not know that he has.
9705. Is he the nephew of a prominent man here? I do not think so.
9706. Would you be surprised to learn that he is a nephew of Mr. J. H. Want? I did not understand that he was. I thought that his wife was a sister of Mrs. Want.
9707. You say that he is a very proficient officer? I should think so, very proficient as an infantry officer.
9708. Do you know whether he made any application for the adjutancy of some of our regiments here? I understand that he has done so. I think he would like to come back and be employed here.
9709. Did you have a conversation with the Colonel of one of the regiments in regard to his appointment? He spoke to me about it, and I suggested that he should go and see three Colonels.
9710. Did one Lieut.-Colonel say, that he would not have him under any circumstances, because he was no good? He gave me to understand that he did not think Captain Webb would suit. I do not know what opportunities he had to judge.
9711. You understand that he is likely to come back here? No; I said he would like to come back.
9712. There does not seem to be a great demand on Captain Webb amongst the regiments? I do not know really. In the case you mentioned, the Commanding Officer who said he would not care to have him had a candidate of his own.
9713. I suppose that if any of the officers who have done good work in South Africa are qualified for this position, naturally people would like to see one of them get it? Yes. That is the principle which I have acted upon. I will not fill up vacancies until those officers come back.
9714. So you believe it is necessary that our own officers, who have done good work, should have a show? Yes.
9715. *Mr. Meagher.*] There is every indication that when the Federal Forces are together, a military college must be established on the system of West Point? Yes; and of Canada.
9716. In regard to the ammunition, is that Martini-Henri what is termed mark 4 ammunition? No; the mark 4 that you mean is the Lee-Metford; but that was withdrawn; we have none of it.
9717. Did we not have a large supply of mark 4 ammunition here? No; I have tried to get some for practice, thinking that we should get it cheap; but they would not let us have it.
9718. *Chairman.*] As a matter of fact, mark 4 was not a success on trial? I think not. They stopped the issue of it altogether.
9719. *Mr. Meagher.*] At any rate, we have none of mark 4? No.
9720. With regard to ammunition, would the stock which we have here be of good quality? All that '303 is the very best; and I should think that three-fourths of the Martini-Henri is all right.
9721. In regard to rifle shooting at different times, has there been any complaint by those shooting as to the quality of the ammunition served out? Not in regard to the '303; but some of the Martini-Henri was complained about.
9722. May we take it then that 25 per cent. of the Martini-Henri is not up to the mark? I should think that probably from 20 to 25 per cent. of it is very old, and not suitable for issue.

G. A. French. 9723. As regards the number of men we can put under arms in this Colony, I suppose that, with the rifle clubs and the reserves, we can put at least 15,000 or 16,000 men under arms? We have on the strength about 8,500, and, as a matter of fact, there are 12,000 men offering their services in addition. I am afraid there is not provision made for many of them.

6 Nov., 1900.

9724. Do you think, considering the number of men who can be placed under arms here, and the fact that we are away from our base, so to speak, as far as supplies and ammunition are concerned, being 16,000 miles away from England, that 4,500,000 cartridges is a sufficient quantity for a case of emergency? It is sufficient for the force that we propose to have.

9725. In time of peace it may be all right, but if out of the Chinese embroglio a continental war took place, do you not think that 4,500,000 cartridges is below the quantity that we ought to have? Everything depends on the number of men who are to be put into the field.

9726. You will admit that there is every probability of a rupture taking place;—the Yankees threw the French out of a train the other day in China, and probably the powers will fall out amongst themselves, with our supplies having to be drawn from England, and with about 20,000 men altogether who would be put in the field, that 4,500,000 cartridges is not much below the quantity that we ought to have, is it? You are arguing that point under the idea that we should have to provide for a very large force; but the conditions laid down by the Colonial Defence Committee assume that "Britain rules the waves." Consequently the numbers provided for are smaller than you speak of.

9727. You are not much impressed by the views of the Colonial Defence Committee, are you? They are officers with a great deal of experience, and it is their instructions which we work under.

9728. I think the Colonial Defence Committee have not impressed you very much, because you say there is no central authority responsible for the defence of the extremities of the Empire? Yes.

9729. That is a very serious question to raise? I have been trying to draw attention to that point for thirteen or fourteen years.

9730. Do you not think that it is a most important point? Yes; that is why I try to draw attention to it again.

9731. And although you have been drawing attention to it for thirteen or fourteen years no attempt has been made to solve the problem? No.

9732. You say that there is no central authority responsible for the defence of the empire;—in view of the possible complications that I have referred to, do you not think it would be necessary to have more than 4,500,000 rounds of cartridges? Yes; if we lose command of the sea it will be.

9733. You must admit that the other navies of the world are improving a good deal? Yes; but this is the basis we are told to work on. If we lose command of the sea, the question of the defence of the Colony will be a most serious one. We make our preparations on the basis that we have command of the sea, and that all we need expect is a raiding attack—perhaps by 2,000 or 3,000 men landed from cruisers. If we lose command of the sea, instead of thousands a year we shall have to spend millions.

9734. If an eminent authority has said that, in his opinion, we should never have less than 12,000,000 cartridges in stock to be thoroughly secure and prepared for emergencies, would you agree with that opinion? I think it is a very good thing to have plenty—the more the better.

9735. You think that we should never have less than 12,000,000 cartridges? I do not think we have often had half of that quantity. I believe in having plenty of supplies.

9736. Do you agree that we should never have less than 12,000,000 cartridges? Not on the basis that was given us.

9737. By the Colonial Defence Committee? Yes.

9738. Who constitute the Colonial Defence Committee? Certain selected officers in England. I do not know who are actually on the Committee; they are usually artillery and engineer officers.

9739. How many are on the Colonial Defence Committee? I do not know.

9740. How do you receive your instructions from them? They send them through the Governor. The Secretary of State sends them on.

9741. You have been some years in the Colonies? Yes.

9742. How many visits have the Members of the Colonial Defence Committee made to the Colonies in your time? I should not think that any have in that capacity. Individual members have been out here.

9743. You have been Commandant in Queensland and here;—do you remember an instance of any Member of the Committee, from which you received your instructions, coming here? No.

9744. *Mr. Quinn.* Are they guided by your advice, or do they advise you? They get reports from the Colonies, and they advise on the reports.

9745. *Mr. Meagher.* As Commandant, do you supply reports to the Colonial Defence Committee? Only those annual reports, unless something special turns up.

9746. Have you ever made any recommendation to the Committee? Not direct to the Committee. I put everything in my ordinary report. We occasionally make an inquiry from them when we want information.

9747. I suppose the proper policy is to make your opponent believe you are strong when you are really weak;—do you not think it would be much better, in considering the weakness of the extremities of the Empire, to put the facts in an official communication to the Defence Committee than to publish them to the world? I wanted to draw attention to the fact that there is no system for attending to our wants.

9748. It seems, now, that the defence of this part of the world rests in the hands of the Colonial Defence Committee? It does.

9749. As to the scheme of defence? They lay down a certain basis.

9750. And you are compelled to follow it? Yes.

9751. Do you not consider that if that basis is wrong in any way it may make this portion of the Empire weak? My remark refers to the supply of stores.

9752. The words are: "There is no central authority responsible for the defence of the extremities of the Empire;" would not that take in a good deal? That has reference to the difficulty which we may have in getting stores.

9753. Do you agree with the opinion that we should not have less than 12,000,000 cartridges in stock? With the numbers which I laid down at first, 12,000,000 would be excessive.

9754. You are binding yourself to what the Colonial Defence Committee says;—I ask you to dismiss from your mind that Committee, who have never visited Australia, and to say whether you think that 12,000,000 cartridges

cartridges is not necessary if we are to be in a state of safety? Not according to the numbers which they G. A. French, lay down, and that is on the basis that "Britain rules the waves."

9755. You must not lose sight of the immense strides which the navies of the other great powers have made during the last sixteen years;—do you not consider that we should have not less than 12,000,000 rounds of cartridges in stock? If there is a probability of our losing the command of the sea we should have that quantity of ammunition, and, perhaps, a great deal more. 6 Nov., 1900.

9756. What would be the extra expense of getting 12,000,000 rounds? You may put them down at £5 5s. per 1,000—£5,000 for 1,000,000.

9757. As a matter of fact, 12,000,000 rounds represent an extra £60,000? Yes.

9758. Do you think that a very great expenditure to make on military defence? No. If we had a very heavy stock there would be a certain amount of loss.

9759. There are bands attached to the Volunteer and Partially-paid Forces? Yes.

9760. Are they paid for out of the estimates? There is some assistance given to the bands.

9761. Are not the instruments purchased for the bands? No. They are provided for out of the Band Fund, which the officers subscribe. The officers must subscribe the money, or the men must make money to help the fund.

9762. Does that apply to the Partially-paid Forces? Yes; they get £50 a year for each band.

9763. Do you know whether it is usual, when those bandsmen are in uniform, but engaged on private contracts, to travel on the trams with their Military tickets? I do not know about that; there has been some question asked about it.

9764. Did you make any investigation into that? That would be a matter for the Commanding Officer of the corps concerned.

9765. *Mr. Quinn.*] The last supply of rifles was ordered in December, 1899? Yes.

9766. And they have not arrived yet? No.

9767. What is the cause of that? It was owing to the great pressure during the war. The manufacturers were supplying the Imperial Service as fast as they could.

9768. When do you expect to receive them? They may be shipped next month, and we ought to have them here by February or March.

9769. What about the ammunition? We had to get the bulk of that on contract, not from the Imperial Government. They did the inspection.

9770. From what firm? Nobell & Co.

9771. As a matter of fact, if the strain on Great Britain's resources had not eased off, supposing the war in South Africa were raging now with the same intensity as it did at the time when the order was given, we should not be able to get those rifles for some time? There might have been some greater delay.

9772. And if England were to be involved in a war on the top of this South African war there would be no shadow of possibility of getting any rifles at all? There would be great difficulty, I should think.

9773. Do you think we could rely on getting a single rifle if England were engaged in a struggle with France? That would be a question for the Imperial Government. They would have to consider whether they could not spare us some, especially if there was a likelihood of a serious attempt at invasion here.

9774. I suppose that they had a demand for all that they had in stock, and had to call up the Volunteer ammunition in the first stage of the South African war? There must have been a tremendous run on the stores when they had to put 200,000 men in the field instead of only 30,000 or 40,000, as they at first expected.

9775. Did they make a call on the issue of the Volunteer ammunition? I think they did call in some.

9776. *Chairman.*] Did you get that information from your own personal knowledge? No; I think I have seen it stated. We were asked to send ammunition with our men, and we sent 500 rounds per man.

9777. *Mr. Quinn.*] That, I take it, illustrates the necessity for us to prepare for war in time of peace? Yes.

9778. Not to wait until the Tocsin has sounded before we order our supplies? No.

9779. Of course, the first intimation that we might have of war would be by cable;—would it not be too late then to order rifles and ammunition? We could only cable to the Home Government and ask them to send them.

9780. Would it not be a wiser course for us to have sufficient in stock to enable us to meet any attack? Yes.

9781. Do you think that we have the necessary armaments now? We are a little short of rifles of the best pattern, but I do not think there is any cause for alarm at present.

9782. Do you think that as we are at present we have sufficient rifles and ammunition for any emergency? Yes; for the numbers that are laid down for us. It all comes back to the old question. If you assume that Britain has not command of the seas, the question of the defence of Australia becomes a serious matter.

9783. In New Zealand they have evidently dropped the Colonial Defence Committee;—did you see the report of the proposal made by Mr. Seddon in Parliament? I heard something of it.

9784. They are proposing to order 30,000 stand of arms? That is a large order.

9785. And the requisite ammunition on a war basis; they are also increasing their forces to 18,000 men;—would not that be going beyond the order of things first contemplated by the Colonial Defence Committee? Yes. New Zealand is in rather an exposed position, and has to stand alone. The Australian Colonies can help one another. New Zealand is very open to invasion in every direction, having so many harbours and ports.

9786. She is not open to invasion if the first line of defence on the seaboard be maintained, is she? No.

9787. Then, if the command of the seas were lost, or if the exigencies of Great Britain's position in the other hemisphere in safe-guarding the transport of food across the Atlantic, or holding the Mediterranean, or her requirements in the far East were to necessitate the concentration of her Naval Forces elsewhere, is the condition of things which might result contemplated by the Colonial Defence Committee? I do not think they have touched the naval question. They leave that to the Admiralty. All the recommendations to the Colonies are based on the one principle that England has the command of the sea.

9788. Then, if Great Britain were to lose the command of the sea, we should be comparatively helpless? I would not say helpless, because any large force that comes to invade us would not have an easy job. They cannot bring horses, and they could not bring field artillery in any number.

- G. A. French. 9789. We have plenty of horses here? Yes; if we let them have them. But at first the enemy would be at a very great disadvantage.
- 6 Nov., 1900. 9790. The Colonial Defence Committee does not contemplate their overcoming our first line of defence? No. If you once get beyond that there is no saying what expenses the Colonies would be run into.
9791. It is not a question of the expense; money could not buy what would be necessary at such a time? I mean the preparations beforehand.
9792. I suppose you contemplate the time when the arm of our soldiers will be the magazine rifle? It will be very soon.
9793. Do you think we ought to have as many soldiers as they propose to have in New Zealand—30,000? That would be quite excessive on the basis which we have got.
9794. But if war were declared to-morrow, irrespective of the conclusions of the Colonial Defence Committee, would you not feel much safer if we had equipment for 30,000 men here? Yes; it would give us a great deal of confidence.
9795. And equally so with the requisite amount of ammunition in stock? Yes; it would necessitate about 15,000,000 rounds of ammunition.
9796. And we fire off in practice how much in a year? We get through from 1,000,000 to 1,500,000 rounds.
9797. With 30,000 rifles? For 30,000 we ought to have 15,000,000 rounds of ammunition.
9798. How much would they use in practising? They would run from 150 to 200 rounds per rifle; but surely no one imagines that there would be 30,000 practising in time of peace.
9799. *Mr. Quinn.*] If the first line of defence were to break down even temporarily, we should want 30,000 men, perhaps more? Yes; if that once goes, you can go into any figures.
9800. You mentioned that you would like to see a small nucleus of permanent men of all branches? Yes.
9801. Do you think that those men should be brought here from the Imperial Forces? No; they should be raised locally. It would be an advantage to have a few men from the regular service.
9802. I suppose that those men who have been in South Africa will be regarded as sufficient stiffening now for our own Forces, without the importation of a number of men from the Imperial Forces? Yes; it is only occasionally that we bring a man from the Imperial Forces here to instruct.
9803. Do you anticipate that the warfare through which these Forces of ours have passed will materially enhance their value? It will very much.
9804. Do you consider that they will come back here in all respects on a level with regular British soldiers? They have had an excellent experience.
9805. And what about the officers? The officers learn certain things on service; but there are a good deal more that they would not learn.
9806. *Chairman.*] What they would not learn would be what they would require in time of peace? I do not suppose that any of our men there would necessarily form first-class instructors because they happened to be there. That is a gift peculiar to the individual.
9807. *Mr. Quinn.*] You mean instructors in regard to drill and manœuvres? Yes.
9808. They have had experience in actual field work? Yes, that experience is invaluable.
9809. Do you know whether our officers in South Africa have shown an independence in field-work, and an initiative which has distinguished them from the ordinary run of officers? I have watched things very closely, and, I think, that not only our officers, but also the men have shown great aptitude for acting individually in scouting, and that kind of work. Their experience in the backblocks has been valuable to them. Because they have been accustomed to get about the country without having finger-posts at all the roads.
9810. You spoke about the necessity for long training with regard to artillery work? Yes.
9811. Do you think that is essential? Yes. There is a great deal to learn.
9812. How do you account for the excellent gunnery displayed by the Boers? I think they had well-trained foreign artillerists. They had experienced men from France, Holland, and Germany.
9813. It has been said since that the mercenary element was very small, and that the Boers were excellent gunners? They had a regular permanent corps composed largely of Hollanders.
9814. You do not care to say anything about the big guns? Not except in a general way.
9815. How do you think we stand in regard to that? I think we are very well off here.
9816. In regard to coastal defence guns? Yes.
9817. And in regard to field-guns? We are fairly well off in regard to field-guns. We have more modern guns than any of the other Colonies, and we are getting more.
9818. Do you think that a sufficient amount of money is voted by Parliament for warlike stores, arms, and ammunition? I am afraid not, especially considering the way the vote has been cut down in the last few years.
9819. I suppose you agree that the safety that is gained by concealing weakness is not a very desirable kind of safety? No.
9820. *Mr. J. C. L. Fitzpatrick.*] You said that the experience that our troops had received in South Africa during the last twelve months would be invaluable? Yes.
9821. That being so, do you think it is absolutely essential that these men should return to this Colony? It is in the interests of the Colony; but still I think they would be doing good work for the Empire if they remained in South Africa.
9822. Do you think the authorities would be doing right to offer encouragement for them to remain? Not from the New South Wales point of view; but as we have gone so far as to offer our assistance to the Empire, we ought not to make any unnecessary objection to their staying in South Africa, if they can be of further service to the Empire. It is only a question of a few hundreds.
9823. Do you think any purpose was to be served by sending a Contingent to China? It is a very small Contingent, but it shows the good feeling of the Colony in determining to assist the mother country.
9824. Do you think there could be any doubt about that good feeling after we had sent such a large number of men to South Africa? The men who have gone to China will be acting with a lot of foreign troops, who will know that those men have come from Australia. It will give the foreign powers an idea that there is something bigger than Great Britain in the Empire.
9825. That Contingent is a very small number? Yes; but they represent 4,500,000 of people in the land which they left.

9826. *Chairman.*] In answer to Mr. Quinn, I think you stated that the guns of the Naval Brigade and the Naval Artillery Volunteers were obsolete? I think so, but, of course, on that point I am not the best authority, because those branches of the Forces do not come under me. G. A. French.  
6 Nov., 1900.

9827. Do you not think it a mistake to make public the fact that these guns are obsolete? I am not talking about the guns that are used for defence purposes, but only of the guns that these Forces used to drill with.

9828. But if those are the only guns they possess they would be the only guns they have to fight with? Not at all. If the Naval Forces were not put on board a ship they could man our guns on the defences. I do not admit that that is a proper use for them, but there it is, according to the scheme.

9829. But do you not think it rather a mistake to give evidence with regard to our obsolete weapons, and to refuse it with regard to the latest patterns of weapons that we have? These obsolete weapons are used merely for drill purposes, and they do not affect our defences at all.

9830. But that is not how you put it to Mr. Quinn;—I think you stated that the Naval Brigade and the Naval Artillery were armed with obsolete weapons? No, not armed.

9831. But are not those the only arms they have? No; their small arms may be good enough, but the big guns they drill with are of an old type.

9832. But do you not think it a mistake to give that information while at the same time you refuse to give information with respect to the latest patterns of guns that we have? That is a different thing. One matter refers only to the old guns for drilling purposes—we use a lot of old guns ourselves—but as for the guns mounted on the works that is a different thing.

9833. Do you think that is a good thing to train men to use muzzle loaders whereas in actual warfare they would have to handle quick-firing breech-loaders? No; it would be a very poor preparation.

9834. Now, I again ask the question—As these are the only guns that the Naval Brigade and our Naval Artillery Volunteers are armed with, do you not think it a mistake to give out to the world the impression which would be conveyed to the ordinary mind that our Forces are only armed with obsolete weapons, while you refuse to let the world know that we have got some of the very latest patterns known to the Military Authorities? I think it is a mistake to allude to the guns, or as to what they are armed with, in any way. These Forces are not armed with these guns. It is a mistake to speak of them as being armed with these big guns at all.

9835. I may point out that you gave the information to Mr. Meagher or to Mr. Quinn without being asked to all;—you were not asked about obsolete weapons, and do you not think that it is a mistake for you to have given that evidence before? The obsolete weapons these Forces use to drill with having nothing to do with the defences of the Colony.

9836. But you admit that they are the only ones they have got? Yes; but occasionally they work some of our guns on the defence works.

9837. But the instruction imparted whilst handling these obsolete weapons would not be of much benefit to men called upon to handle the more modern weapon? No; but even with modern weapons the instruction would not be of much service to them as sailors. I maintain that the Naval Brigade and Naval Artillery Volunteers are not properly equipped as seafaring Forces.

9838. Do you think it is to the interests of the country that you should give out the fact that our Forces are not properly equipped? I would very much prefer not to give the information at all.

9839. But you gave the information unsolicited, and that is practically the statement you made? I was answering a number of questions on the subject of the Naval Brigade.

9840. But what I want to impress upon you is that Mr. Meagher did not ask you any questions about the Naval Brigade guns? I do not know why I should have given the information unless it was asked for. These old guns are used by the men for drilling purposes, and some of our men use old guns too for drilling purposes, to a certain extent.

9841. But after all, will it not appear as a statement coming from you practically unsolicited, that these Forces are armed with obsolete weapons? The term “armed” is not properly applied in this case. You do not talk of artillery-men being armed with certain big guns, because they may work any guns with which they may be supplied.

9842. But when you talk of an army being supplied with ordnance and munitions of war, that will take in big guns? It would include field-guns and guns of position, in the case of an army.

9843. And when you speak of the obsolete big guns possessed by the Naval Brigades and Naval Artillery Volunteers, you intend to convey that these are the only guns they have? Those are the only guns they have to drill with in their own place.

9844. If they have no other guns, they would have none to fight with unless they got them from somewhere else? Of course, as a land force, they are supposed to man some of our guns on the works; but my contention is that a Naval Force should be maintained and drilled in that capacity.

9845. And you admit that to drill men and practice them in the use of these guns would be of very little use to them if they were called upon to work more modern quick-firing guns? Yes; on board ship.

9846. Or wherever they have to handle modern weapons? No; it would not be of much use.

9847. I quite agree with you that they ought to have modern weapons; but I am looking to the danger of giving away the position to the enemy? I am glad that you have begun to take that view.

9848. I am sorry that you have not continued to hold it;—you think it is less injurious to the country to give them this information about our obsolete weapons than it would be to inform them that we have guns of the latest pattern? I do not believe in giving any information at all, if it can be avoided.

9849. But you gave the information unsolicited, as Mr. Meagher did not ask you a direct question as to the guns; you will be able to see that when the shorthand report comes out; this Committee never had any intention of asking you about the manning of the big guns or in regard to the general defences of the Colony;—you were informed of that, I think, over a week ago, by myself? The questions which I was asked had reference to the Naval Artillery Volunteers, with which I am very little acquainted, and I gave what information I could.

9850. Would it not have been better to have withheld your information? I do not know.

9851. I do not know either; I do not suppose it is of very great importance; but when you object to let the world know of the new and most modern pattern of guns that we have either got or are on the way to us, do you not think it is equally objectionable to make it appear that we have only got a few obsolete guns? It is only what has appeared in my report, and what has been laid before Parliament a dozen times, namely, that these Naval Forces have not got any proper equipment. 9852.

G. A. French. 9852. Is it not a mistake to point out to the enemy that we have not a proper equipment? It is necessary for those in authority to point out these things at times, in order that defects may be remedied.

6 Nov., 1900.

9853. But does not that equally apply to other matters? Yes; but pointing things out in a general way is very different to giving minute information and details.

9854. But you went into detail in saying that the guns were obsolete? That is only the old things they drill with.

9855. But they have nothing else;—however, I think you stated that if we had 30,000 rifles and, of course, 30,000 men, 15,000,000 rounds of ammunition would be the correct thing to provide to place our supplies on a war footing? Yes.

9856. That is, 500 rounds per rifle? Yes.

9857. And you think that would be sufficient? That is what we are told to have.

9858. Do you know how many rounds per man each private carries when he goes out on active service? They are supposed, with the regimental reserves and others, to have about 500 rounds per man, one way and other.

9859. What amount of ammunition does a man actually carry with him? 150 rounds.

9860. Would you be surprised to hear that they carry 250 and 300 rounds? If they do, that is in excess of what is laid down. On occasions, I suppose they shove anything into their haversacks.

9861. But I suppose that those who have had experience in the latest war would be entitled to speak with authority on the subject? Yes.

9862. And if they have decided that the men should take 250 or 300 rounds each, I suppose you would agree with that? If they have come to any such determination, then I suppose we shall have some definite orders about it soon.

9863. And in the event of its being laid down that the men should carry this amount, would you dispute the authority of those who give the direction? Not in the least.

9864. So that if it has been proved that it is necessary for men to carry 250 or 300 rounds you would fall in with the alteration? Yes. At present we are supposed to have 500 rounds per man in stock.

9865. But in case of war, for even four or five weeks, do you think that would be sufficient? That is what the Colonial Defence Committee laid down.

9866. Leaving the Colonial Defence Committee out of the question, you have had some experience with the modern magazine rifle, and have a good idea of the number of rounds that would be likely to be fired in an engagement under the conditions that prevail in modern warfare;—do you think that, in view of these conditions, that 500 rounds would be sufficient? 500 rounds, plus practice ammunition, would be a very fair stock indeed.

9867. But if it came to an actual case of war, when we could not get any further supplies, would not our stock very soon run out? A stock of 500 rounds per man would represent a good deal of firing. In the case of individual detachments, they might use more than 500 rounds.

9868. They might even use 500 rounds in a day? Yes, perhaps so; but it would be very hot firing.

9869. Does not this all go to show that the best plan would be to have an ammunition factory here? Yes; I am strongly in favour of it.

9870. Would not that obviate the necessity of keeping a large stock, and the risk of the ammunition going bad? Yes.

9871. And, in case of war, the output could be increased as far as possible, so that there would be a continual supply coming in? Yes; that is my contention.

9872. And even if we were isolated we could still have the ammunition factory producing ammunition for our small arms? Yes; provided there was a good large stock of materials kept up.

9873. Yes; but you could keep the necessary materials without any considerable damage? Yes.

9874. What is the life of an ordinary cartridge? It is a very difficult thing to say. Where the powder comes into contact with the metal it very quickly sets up action and deteriorates.

9875. Can you safely rely on the cartridges lasting more than four years? I should think ten or twelve years.

9876. With cordite? I do not know about cordite; we have not had much experience with cordite yet.

9877. Do you know that it is laid down by competent authorities that four or five years is the utmost period that cartridges can be absolutely relied upon? No; I do not. I think we have kept cartridges for twenty years.

9878. Yes; I know they have been kept;—but what I am saying is that they cannot be absolutely relied on for more than five years? It would depend upon the place in which the cartridges were stored and the climate—the extent to which they were affected by hot or damp weather.

9879. But under any circumstance would you prefer old ammunition to new? I would prefer new ammunition.

9880. Everything else being equal, you would naturally find the new ammunition more reliable than the old? Yes.

9881. The advantage of having an ammunition factory would be that you would be able to turn out your ammunition yearly;—your stock would not require to be so large, and therefore you would be able to requisition it at shorter periods? Yes; of course, they always work off the oldest ammunition in stock.

9882. Quite so; but with 15,000,000 of rounds in stock it would take some time to work that lot off? Yes.

9883. And that would be only 500 rounds each for 30,000 men? Yes.

9884. But with an ammunition factory, if we have the material on hand, even if we were isolated we could keep on manufacturing? Yes; that is, if we kept the materials.

9885. There is nothing to prevent the material from being kept in good condition? No; not if it were a Government factory. A contractor would not be able to keep up a very large supply of material, because he would be out of pocket for a very large amount of interest on his outlay.

9886. You are not in favour of this matter being placed in the hands of a contractor? No; not for ammunition.

9887. You think the ammunition factory should be entirely a Government concern? Yes.

9888. Now, in regard to our Volunteer Corps, do you remember an application being made through you, or to you, for a Volunteer Regiment to be formed at Broken Hill; some 500 names were forwarded of persons willing to become volunteers? Lately? 9889.

9889. Well, perhaps twelve, or fifteen months, or it may have been eighteen months ago? I think there G. A. French.  
was an application for the formation of a company or two. I did not think there were so many as 500.

9890. There were between 400 and 500 names sent in? I remember something about it, but I do not 6 Nov., 1900.  
remember the numbers. I recollect that there was an application.

9891. Would you dispute the numbers? Oh, no, not at all; only that usually a greater number sign than are required.

9892. But at a place like Broken Hill, where there are from 10,000 to 12,000 men, it would be nothing remarkable, especially with a great amount of enthusiasm, to find 500 men out of 10,000 willing to Volunteer? Not at all. We found that some of the best Volunteers we had in Queensland were at the mining centres.

9893. Would you be divulging any secret if you told the Committee why you reported absolutely against the application being granted? I do not know; except that it was a question of pounds, shillings, and pence. There were applications received for 12,000 men, and provision was made for only 600.

9894. But Broken Hill is at least the third largest town in New South Wales;—you are aware of that? Yes; and I am quite of opinion that they should have some Volunteers there.

9895. Then why was it that you objected to their having Volunteers there;—you remember that you recommended the enrolment of companies of Volunteers in the city and suburbs, and you rejected this application from this particular country centre? Did I absolutely report against it; I rather think I reported favourably.

9896. Well, I have not made any private inquiry, but I know the refusal was absolute, coming from the Minister for Defence? The difficulty was that so many were offering that they could not all be accepted. 9897. But this is the third largest town in New South Wales, and they have no Volunteer company there at all; they had a meeting and from 400 to 500 men enrolled themselves as willing to form a Volunteer corps, but their application was refused? Well, in a place like that a lot of expense is involved. Even the Rifle Club ammunition has to be sent right round through Adelaide.

9898. But the freight would not amount to much? No; but then you cannot give these men any central training, and there are serious objections to defence corps being formed a long distance away from railway communication.

9899. Have you any idea of the system of military organisation in the Transvaal? Only just what one reads in the papers.

9900. From what you have read, have you come to the conclusion that their organisation there has been fairly effective? I should think so.

9901. Are you aware that in the Transvaal every burgher, no matter in what part of the country he may be situated, has to be possessed of a rifle and a certain amount of ammunition? I believe that is the case.

9902. Yet, here in New South Wales, you think that owing to the situation of Broken Hill somewhere away from the seaboard it would be unwise to have a regiment there? Not at all. I think they are in every way entitled to it, myself.

9903. Supposing that an invasion were made into South Australia, would not the Broken Hill regiment be more readily available than any forces in or about Sydney? Quite so; and I think you will find that under Federation the Broken Hill military affairs will be administered from Adelaide.

9904. And I suppose that it would be just as necessary to protect Adelaide as Sydney? Yes; and I should think there would be a large force there.

9905. And yet, under present conditions, you do not see your way to recommend the formation of a Volunteer corps at Broken Hill? I do not remember what I did in that matter; but I think I was in favour of the formation of the corps, although I know the expense would be very considerable.

9906. You claim to have perfected some scheme of defence? Yes, of coast defence.

9907. I do not know anything about the scheme; but did you perfect that scheme after your arrival here? Oh, no; long beforehand.

9908. And have you made any claim for compensation for it? I submitted the case some years ago when I put the scheme forward, stating that I would leave it wholly to the Government to do what they thought fit in the matter.

9909. Have you made any claim since then? Not directly; but the Queensland Government made me a handsome reward.

9910. Has your scheme been condemned by leading military authorities? No, it has not been condemned; but it has not been adopted in the Imperial Service.

9911. But that says a good deal, does it not? It has never been thoroughly tried, except in the earliest stage in India.

9912. Did you make any claim for the introduction of a range-finder? Here?

9913. Yes? No.

9914. In bringing up the estimates submitted to the Minister for Defence, who recommends the increases of salary? That depends upon what the increases are. They come from the different branches to me, and I, in my turn, recommend on to the Minister.

9915. Who would recommend an addition to your own salary? No one could do that unless it was the Minister, because my salary does not alter. I came out under engagement, and my salary is fixed.

9916. But in regard to allowances? There are certain allowances, which are also included.

9917. Who recommends those to the Minister? I think those are all under regulation. We usually adopt the Imperial Regulations on this point for all officers.

9918. Could you show us any regulation that would provide for the allowance for "table money"? We have got rates fixed for the different parts of the Service, from, I think it is, £100 up to £1,000 a year.

9919. I see by reference to the Regulations that it is provided that table money "may" be allowed; but says nothing about "it shall be;"—could you show us anything definite about that point? I do not think you would find it in those Regulations.

9920. I find something here to the effect that table money may be allowed; the provision is only permissive it is not mandatory? No; it depends upon the command, to a large extent.

9921. Are you aware that Major-General Hutton received none of these allowances? I do not think he did—it would be a trifle to him.

9922. But still it is customary for the General Officer Commanding, in a case such as this, to receive such allowances? Yes, in the Imperial Service, the sums varying from £200 to £1,000 a year.

G. A. French. 9923. I cannot see anything varying the allowance up to that extent? I do not think you will see anything in the Regulations, as the allowances are more fixed by orders from the War Office. You will see that in the Navy an Admiral gets up to £4 10s. a day.

6 Nov., 1900.

9924. Yes; but an Admiral occupies a very high position? A Rear-Admiral occupies the same position as I do as Major-General.

9925. But when you came out here, what was your position? I was in the position of Major-General, because I was given that rank locally—I was only a colonel in the Imperial Service.

9926. You have since been promoted to the rank of Major-General? Yes.

9927. What is the position of captain in the Navy equivalent to in the Army? A Post-Captain, with three years' service in the Navy, would be equivalent in position to a Colonel in the Army.

9928. And how does a Commodore of the fleet rank? With a Brigadier-General.

9929. In regard to that interview that you had with Mr. Reid, I think you said when you were here last that you went to see Mr. Reid, because you could not see the Attorney-General, who was away? He was not in his office, and I could not find him.

9930. Anyhow, you went to see Mr. Reid, but you intended to see the Attorney-General? Yes.

9931. Failing to find the Attorney-General, did you consider the next best man to apply to for advice was the leader of the Opposition? That is not the way I look at it. I wanted advice on a legal and Parliamentary point, and I went to an old friend to get it.

9932. Do you not think that when you wanted legal advice the Crown Law Office was the place to get it? That is quite right, and I went to the Attorney-General.

9933. But in the absence of the Attorney-General, there is the secretary to the Department, who is a barrister of some standing? I merely wanted to ask a few questions, and I did not think it necessary to write officially about them.

9934. But do you not think that, whatever your intention may have been, it looks rather bad to go to the leader of the Opposition in a case where the Government might be affected? Yes; I should think a good deal of mischief might be made out of it.

9935. Without, perhaps, any intention on your part to do anything that was at all questionable? Yes.

9936. Have you read any of the statements made by Mr. Reid in reference to the matter at Ashfield? No.

9937. Are you aware that he has made reference to it? To what?

9938. To the appointment of the Committee, and to the information that he had received, which, he informed me privately, came from you? I did not notice anything of that sort.

9939. Did you not make any reference to the Government in your conversation with him? My conversation related only to this Committee. I think I should tell you the exact point upon which I desired information from him.

9940. We shall be pleased to hear what you have to say upon that? I wanted to know if it was correct according to Parliamentary precedent and practice that a gentleman who was a prosecutor in the case should nominate the jury, and become a jurymen, and practically sit on the bench, and as to whether I could object to it when I was called upon to give evidence. He told me that, according to Parliamentary custom, the Chairman of a Committee was usually the gentleman who nominated the Committee, but that, when he had a case in which he was interested, he had requested someone else to take the chair.

9941. Of course, that was legal and Parliamentary information, and that was what you wanted from Mr. Reid? Yes.

9942. I suppose that you knew that Mr. Reid had somewhat objected to the Committee? I understood that he did not object to the members of the Committee individually, but he thought that the Committee should not be formed at all. I saw that from the report of the proceedings in Parliament.

9943. Could you not have gone to the Prime Minister for information? I spoke to the Colonial Secretary about it.

9944. Could he not give you any information about it? He did not give me any. I think he was very much annoyed at the Committee being appointed, and that he resigned from it at once.

9945. Oh, no? He has never sat upon it.

9946. It is not customary for Ministers to sit on Select Committees? Then why was he put on?

9947. So that he might be represented if he chose;—it is the Parliamentary custom, when a question affects any particular Department, that the Minister for that Department shall, as a matter of courtesy, be appointed to a seat on the Committee, although he rarely, if ever, sits; the Minister for Defence has not resigned from this Committee? I understood that he had resigned—in fact, I think he told me so.

9948. You must have made a mistake, because he did not resign, and he is still a member of the Committee? I understood that he had resigned.

9949. It is better that, when you are giving your evidence, to try to be accurate;—I daresay that you understood what you say, but it appears rather peculiar that you should put the matter in that way, and it would be much better for you, in these matters, that you do not know about, not to answer? When I saw the Colonial Secretary he gave me to understand that he would not have anything to do with the Committee, and I understood that he had resigned.

9950. Well, you are entirely wrong;—is that all that took place between Mr. Reid and yourself—what you have described? That is practically all. This occurred three months ago.

9951. Did you, by any statement or innuendo, lead Mr. Reid to believe that there would be some great exposure? No; I do not think I gave him to understand anything of that sort. I did not apprehend any great exposure.

9952. You did not hint at an exposure of a serious character affecting the Government? No; I do not think I gave him to understand anything of that sort. I did not apprehend anything serious.

9953. But did you say that the Government had unduly interfered with you? No.

9954. Not in regard to the pressure that we heard something about? I do not think the Government put very much pressure upon me—I think my evidence shows that.

9955. Eventually I think you made that clear, but did you lead Mr. Reid to think otherwise? No, I do not think so.

9956. Then if Mr. Reid said there was going to be something of the sort, and expressed a desire to get on this Committee, he must have been drawing on his imagination? I cannot, of course, say what view he may have taken.

9957. You did not intend to convey any impression such as I have described? I had no reason to suppose that anything very serious would come out.

9958.

9958. Anyhow, you did not intend to convey any such impression? No; I do not suppose I did really G. A. French.  
do any such thing.

9959. Do you think that Mr. Reid would deliberately make things up on his own? No; I think Mr. Reid is entitled to as much credence as I am; and I do not like to be called upon for an opinion on a point of that sort. 6 Nov., 1900.

9960. I am not asking for your opinion; but I want you to state that, as far as your recollection goes, if Mr. Reid makes that statement, you did not intend to convey any impression of that sort? I do not recollect his making any such statement. You say you heard it?

9961. Yes; but I am not asking you to endorse the fact that he made the statement, but simply whether, if he made the statement, he must have misunderstood you? I should think so.

9962. Did you say you had been unduly interfered with? No; I have not said I have been very seriously interfered with.

9963. No; I know you have not; but perhaps you told him so;—you did say you had been badly treated, owing to the Governor having been appointed as Chairman of the Imperial Bushmen's Committee? The Governor could not be in any other position once he went on the committee.

9964. You felt rather sore about that, did you not? Not for that particular reason; I felt sore at finding myself superseded after having carried on certain work as President of the committee.

9965. Were you appointed President? I would not say that there was a definite appointment, but as the senior I took that position.

9966. But when the Governor came in, he became your senior? Yes, that may be; but I think it is a very unusual thing to put him on a committee of that sort.

9967. But he has the rank of Commander-in-Chief of the Forces? Yes.

9968. And you felt sore at his practically jumping your position? Yes; but I did not attach any great importance to it.

9969. But you went so far as to write, and practically withdraw from the committee? That was not the particular reason assigned. The reason assigned was that I found the committee was practically about to be put in a position to do the work that I should do with my staff.

9970. But your staff was being pretty badly rushed then? Yes.

9971. And you wanted to rush them further? Well, it is always more satisfactory to do your own work than to have someone doing it for you.

9972. I have no doubt about that; have you taken any action in regard to the evidence given here in regard to the helmets? In what way?

9973. In regard to the officers responsible; are you aware that the evidence discloses this fact: that, when tenders were called—this is admitted by your staff—an obsolete pattern that had been discarded some eleven years ago, was submitted as a pattern for tendering, and that those who were responsible never found it out for fourteen months, when they substituted another pattern;—they never found out what sort of helmet was being supplied for over three years—that is the admission of your staff, given here on oath? Yes.

9974. Have you taken any action? No; except to give directions that proper helmets shall be supplied—cork helmets, for choice.

9975. But do you not consider it neglect of duty on the part of some officer that an obsolete pattern of helmet, discarded eleven years before, should be submitted as a pattern to the contractor, on which his contract should be carried out;—do you consider that no one should be held responsible for this occurring, and for its not having been found out for fourteen months? If the evidence is as you state, of course it is a serious matter.

9976. What I am telling you has been admitted by your own staff, and was given in evidence here? I have not gone thoroughly into that matter since.

9977. Whose business would it be to go into it? Eventually mine.

9978. Do you not think that if the evidence discloses those facts, the matter should be gone into? Yes; but I do not think we have your report yet.

9979. But you have the evidence; and you reported an officer the other day as the result of evidence given before this Committee? Yes; and I am now waiting for some of the evidence upon that very point. I think you said you had given orders that I should get it, but I have not got it yet.

9980. All the evidence you have applied for you have got? I have not got that, although I have made application in an official manner through the Chief Clerk.

9981. Any information you have asked me for has been supplied, but I suppose you know you can get the information without applying to me? I do not know about that. I have applied to the Clerk of Parliaments, and he said that he had received distinct orders from you that he was not to give the evidence.

9982. I do not think that is the exact information;—could you produce the letter? Yes; I could produce the letter.

9983. Are you sure that you have correctly stated the matter to us? Yes; I think so.

9984. You say that he said he had received distinct orders from me that you were not to get the evidence? Yes.

9985. Was the reply not to the effect, that "at the present time" the evidence was declined? The reply said nothing about the "present time."

9986. Or "for the present"? No.

9987. Are you prepared to say that is not what the reply said? I do not think so. I have not got the letter here, but I will produce it. We endeavoured to get what we wanted by applying through the telephone, and then we wrote officially about it.

9988. Are you not endeavouring to convey a false impression? No; the reply, as closely as I can remember it, was that you had given distinct orders that I was not to have the evidence.

9989. It is unfortunate that you have not the letter with you? I can easily get it.

9990. Do you not think it is most remarkable that in a great many of these instances your memory plays you little tricks? I do not think so. What I am speaking of has occurred within the last forty-eight hours, or at any rate within the last three or four days.

9991. Forty-eight hours you say;—would you be very much surprised to find that it is something like a week ago? I think it was after I gave evidence last week, which would be last Thursday. I think it was after that.

9992. Would you be surprised to find that it was almost a week ago, instead of forty-eight hours? I did not think it was so long as that.

9993.

G. A. French. 9993. Would you swear it was not? No.

9994. That was your impression—forty-eight hours? Or a few days.

6 Nov., 1900. 9995. Well, a week is only a few days;—with regard to the other evidence, I think you got that all right? Which evidence do you refer to?

9996. I mean the evidence of Colonel Taunton and Lieutenant Beauman? Yes; I think it is all there.

9997. It has been sent to you;—have you read Lieutenant Beauman's evidence? I think I did, some months ago.

9998. Was there anything peculiar about it? I do not remember. I think there was a certain amount of neglect shown in connection with the work.

9999. Did it not occur to you, when Lieutenant Beauman swore that there was no possibility of telling the difference between a helmet made of buttercloth or cork, that it was rather remarkable? I do not remember anything about it.

10000. Do you mean to say that you are delaying action in this matter until your attention is drawn to it by the report of the Committee? Not necessarily; but until I can give time to it.

10001. Do you think that an officer would be excused for saying that he could not tell a cork helmet from another, even though he saw it and handled it? I think he ought to be able to do it, as the cork generally shows on the inside—although, perhaps, it is sometimes covered up.

10002. But supposing it was covered up could you tell the difference? I would not be certain that everybody or anybody could.

10003. But I am talking about the officer whose duty it was to inspect these helmets;—did you ever try the two together, and compare the cork helmet with the shellaced helmet? Yes; I have looked at them.

10004. Have you handled them? Well, I have never taken them to pieces, or cut them open.

10005. But have you handled them? Yes; I have.

10006. Has it never struck you that the shellaced helmets are as hard as boards, whilst there is a certain amount of flexibility in the cork helmet? I do not know that it has struck me.

[*Exhibits D and H, cork and gossamer helmets respectively, the latter having been supplied to the Second Contingent, were produced and examined.*]

10007. Do you think that it would be a very difficult matter to tell the difference between those two classes of helmets? Not if anyone had had any experience.

10008. You can see the cork on the inside of the cork helmet? Yes.

10009. By making a very small mark you would be able to expose the cork surface sufficiently, without in any way injuring the helmet? Yes.

10010. Do you think an officer who cannot tell the difference between a cork helmet and a gossamer helmet is a proper person to have to inspect these goods? I do not think any of these officers are what you might call experts in these lines.

10011. I am not talking about experts; an expert is a man who would be able to inform us as to how the helmets were manufactured and the material of which they were made;—but do you think it would be a very difficult matter to tell the difference between cork and gossamer? No; not if the officer had received any instruction with regard to it.

10012. Do you think it is wise to have an officer to inspect these goods when he cannot tell the difference between the cork and the gossamer helmets;—what benefit is to be derived from his inspecting them? Not very much, unless he has some information and understands all about it.

10013. If an officer cannot tell the difference between cork and gossamer, his opinion on helmets would not be of much account? No.

10014. I have here the report of the Court of Inquiry held by Colonel Holborow, Lieutenant-Colonel Waddell, and Major Murray into matters connected with the 7th Volunteer Infantry Regiment, and also your recommendation upon the report; in your minute, forwarding the report to the Lieutenant-Governor, you most positively assert that it is more than desirable that the Lieutenant-Colonel Commanding the 7th Regiment should be placed upon the reserved list of officers; in clause 3 of your minute you say: "From my own experience of Lieutenant-Colonel Neild, I am of opinion that discipline is scarcely to be expected from any corps under his command. I agree with the Court as to the blame attributable to the Adjutant, Lieutenant Holmes, with regard to the unsatisfactory manner in which the books were kept, the more so as he is a permanently-employed officer. As stated by the Court, the Quartermaster (2nd Lieutenant Brignell) 'seems never to have made any serious attempt to fulfil any of his duties'; you say that the Quartermaster has made no serious attempt to fulfil his duty;—is that not a very serious statement? Yes.

10015. I suppose you satisfied yourself that it was warranted? Yes; that is the impression I had on reading the evidence.

10016. You go on to say: "(a) Lieutenant-Colonel Neild should, in my opinion, have been removed from the Military Service in connection with the matters dealt with in my report of 25/4/99, addressed to your Excellency; owing, however, to the clemency of the Government, he was allowed to resume duty (*Correspondence attached*)";—do you remember that portion of your report? Yes.

10017. I suppose you have seen all the papers in connection with this case? Yes; probably all that came from my side. There are, of course, other papers.

10018. Have you seen this minute by Sir Frederick Darley, the Lieutenant-Governor: "I commend the General's recommendation and the report to the serious consideration of the Minister. This is not the first time the affairs of this regiment, and Lieutenant-Colonel Neild's connection therewith, have come under my notice. I am satisfied some such change as that suggested by the General is absolutely necessary in the interests of the regiment"? Yes.

10019. It is quite in agreement with your own opinion? Yes. I think that is dated last January or February.

10020. *Chairman.*] Yes, 31st January, 1900; would you just listen to this;—you, of course, saw the report of the Board of Inquiry? Yes.

10021. In section 3 of that report the Court say: "The Court find that the administration of the regiment is weak in the extreme. This appears clearly from Major Boam's report, from the constant feuds and bickerings which have prevailed among the officers, and from the indiscriminate enrolling of recruits, a great proportion of whom leave the regiment before they are dismissed recruit drill. The Court find that this is to a large extent due to the appointment to the responsible position of Officer Commanding of a gentleman of no previous military experience, who has shown that he is himself not amenable to discipline, and who appears

appears to lack the tact and judgment necessary to the efficient command of a regiment. The Court are further of opinion that a successful administration of the Regiment is impossible while the present state of disunion exists among the officers";—do you recollect that? Yes.

G. A. French.  
6 Nov., 1900.

10022. Would you take that to reflect upon the Officer Commanding? I should think that it does; about as much as it could.

10023. If you were in the position of the Officer Commanding, could you possibly persuade yourself that the Court made no reference to you whatever? No; I was astonished to see Lieutenant-Colonel Neild's statement to the contrary.

10024. At Question 7972 Colonel Neild says:—

7972. Did you see the recommendations resulting from the inquiry to which I was referring just now? I have become acquainted with them.

7973. Do you know that it was practically recommended that certain officers should be retired? Yes; two officers.

7974. Yourself and the Adjutant? Certainly not! Major Waine and the Quartermaster.

7975. The recommendation was that they should be put on the reserve list? Something of that sort.

7976. Was there not some recommendation in regard to yourself? No recommendation was made as to myself. My name was not mentioned.

Do you not consider that is a quibble. As a matter of fact, Colonel Neild's name is not mentioned, but the Officer Commanding the 7th Regiment was mentioned;—it would be purely a quibble for the Officer Commanding the regiment to say that his name was not mentioned? I think that it is open to that objection.

10025. He goes on further:

7977. *Mr. Meagher.*] You have seen the recommendations? I have read every word of them, and very recently. I speak from recent knowledge, and not from my recollection of bygone events.

7978. *Chairman.*] Major-General French gave this evidence:—"Do you consider that the evidence disclosed by the inquiry showed that Colonel Neild was not a fit officer to command the 7th Regiment? It showed that there were certain drawbacks to his being in command."

That was rather a mild answer, was it not? Yes.

10026. You were putting it as mildly as you could? Yes.

10027. Colonel Neild continues: "That is the General's evidence. That is not the report. You asked me just now questions as to the report from the inquiry. You are now quoting the General's impressions of the evidence given";—you took rather a mild impression, did you not? Yes; but, of course, 'my opinion is on record.

10028. Yes; but I am taking the report, and you could not say, looking at this report, that it makes no reference to the Officer Commanding the 7th Regiment? No; I could not.

10029. Is that regiment still in a condition described in the report? I think that in many respects it is now in a very much better state.

10030. But I mean in regard to the officers? Several of the officers still remain.

10031. Do you think that it would be well, in the interests of the discipline of that regiment, as well as the discipline of the other regiments, that a settlement should be arrived at as quickly as possible? Quite so. I think it is a very serious blow to the discipline of the corps that it has been allowed to drift on for so long without being settled; but, apparently, looking at the minute of the Lieutenant-Governor, this is not the first time that the Officer Commanding the 7th Regiment has been recommended for removal from the regiment.

10032. Can you give any explanation why, if this Commanding Officer has on two occasions, apparently after due inquiry, been recommended for retirement, such recommendations have not been complied with? I am afraid that the result has to do with his political position; the military recommendations are clear enough.

10033. You think that if he had not been a Member of Parliament he would have been dealt with long ago? That is the impression I had.

10034. I think Mr. Reid was Premier when the first offence occurred? Yes; quite so.

10035. So that this matter is not confined to one Government? No; I do not wish to say anything about any particular Government.

10036. It is not one Government that is affected? No.

10037. I see here quite a number of letters from Lieutenant-Colonel Neild of the 7th Regiment objecting to the decision of the Court, and objecting pretty generally to most things; now I want your opinion on this—or if you can give it as an absolute fact, of course, so much the better,—is it customary when a Board of Inquiry is held on an officer, and that Board arrives at a decision which is endorsed by the Commandant, for the officer whose conduct is in question to start to protest against the Board? No; it would not be in accordance with our notions of military discipline.

10038. Even though he thought he was badly treated, would it not be an act of insubordination for any officer to write to the Civil Head of the Defence Forces, complaining of the action that had been taken? It would be highly improper, according to our views in the regular service; but in the Volunteer Forces, the officers are not always on duty, and are not always subject to discipline. Still, at the same time, it is very injurious to discipline.

10039. Is it not laid down that if you have any objection, what you have to do is to forward it through the Officer Commanding? That is the proper course.

10040. If the Colonel Commanding the 7th or any other regiment had any complaint or grievance, it would be his duty to place it before you? Yes; and if I could not deal with it, I would pass it on to the Minister. No officer has any business to approach the Minister on any military matter.

10041. That is the Regulation, right down to the private in the ranks? Yes.

10042. If a private wanted to lay a complaint, he would have to send it through his captain? Yes.

10043. Even though the complaint were against the captain himself? Yes; unless the captain refused to send it on.

10044. But under ordinary conditions, and unless the captain refused, the privates should send their complaints through him? Yes.

10045. And if a captain had any complaint against the Officer Commanding, he would send it through the Officer Commanding? Yes.

10046. Do you remember anything in connection with Captain Wilkes' case and Colonel Neild? I remember the matter generally. I did not endorse Colonel Neild's action in that matter at all.

10047. Do you remember Colonel Neild holding some of the papers in connection with the case in abeyance for some time? I do not remember.

10048.

- G. A. French. 10048. You are still of the same opinion with regard to the Officer Commanding the 7th Regiment? I am of opinion that there should be a complete change in the officers of the regiment.
- 6 Nov., 1900. 10049. You do not think that we shall ever get proper discipline under the present Officer Commanding? I am afraid not.
10050. Have you noticed any of the letters he has written to the papers lately? I noticed one some weeks ago.
10051. He wrote one, pointing out that you had made a mistake in giving your evidence? He said, I think, that the Court had not found any fault with him.
10052. Is that sort of thing supposed to take place in the Service? No; of course not.
10053. That would really in itself be practically an act of insubordination? Yes.
10054. And the fact that the Officer Commanding could write continually to the papers would naturally lead every other member of the regiment, whether private or officer, to consider that he had the same right? Yes; it is very bad for discipline.
10055. And as a matter of fact, would not every private have the same right as the Officer Commanding has, to criticise his superior officers, or to correct them;—would not the privates have the same right to correct their Lieutenant-Colonel? They might very reasonably imagine so. It is all very injurious to discipline.
10056. Is it not a fact that it is the duty of the officers, especially in regard to discipline, to set a good example to those under him? Quite so.
10057. Mr. Quinn.] You have a paper there in connection with certain instructions from the Colonial Defence Committee? Yes; the paper gives a general idea of the principles on which we should conduct Colonial defence, and it is made clear that the whole of our defence is based upon sea supremacy; if you go beyond that you get into all sorts of difficulty. [*Document put in and marked as Appendix H.*]
10058. Mr. Meagher.] Who constitute that Defence Committee? I do not know; but there is usually an Artillery officer, an Engineer officer, and some others.
10059. With regard to some of the evidence you gave this morning as to the rifles, could you say how many of the rifles you have in the Colony are issued to the Forces? The 303 rifles are nearly all issued to the Forces.
10060. And the Martini-Henry's are in reserve? There are very few indeed of the Martinis out with the troops. I should not think more than 800 or 900. Of course the rifle clubs have some of them.
10061. Could you tell us if the regiment you have been asked about by the Chairman—the 7th Regiment—is armed with the 303 rifle? No; that is just the one that is not.
10062. Is that the only regiment that is not armed with the 303 rifle? I think there are a couple of companies in the 8th Regiment who have not got them.
10063. Is that known as the Irish Regiment? The Irish Regiment have got them; but there are two other companies in the Illawarra District who have not got them.
10064. Do you know that serious complaints have been made against the rifles that the 7th Regiment are armed with? Yes; that was brought before the Court of Inquiry, and they examined the arms, and found no fault with them.
10065. Did you peruse the evidence before that Court of Inquiry? Yes.
10066. Do you know that Adjutant Arthur Holmes gave evidence condemnatory of the condition of these Martini-Henri rifles? Yes; regarding some of them, I think he did. I do not remember the particulars; but I know the Court went and saw the weapons.
10067. Having perused the proceedings before that Court, do you know that Sergeant-Major Norton, now attached to the 3rd Partially-paid Regiment, also gave evidence against those rifles? I do not remember the particulars.
10068. You would not care to swear that he did not? No; it must be ten or twelve months ago since the inquiry was held.
10069. Do you know that Quartermaster-Sergeant Smith gave very condemnatory evidence? I do not remember.
10070. Is Quartermaster-Sergeant Smith a certified armourer? I do not know that he is.
10071. Would you be surprised to know that he is, and that he gave evidence as such? What did he say against the rifles?
10072. That many of them were in an unfit condition to be handled by anyone? Did he mean unclean?
10073. No; he said they were honeycombed? Well, a rifle that is very little used might have that expression used against it, if it were slightly pitted.
10074. But this expression was not used by a civilian, but by an armourer; and if he described a rifle as honeycombed, you would surely regard that as a serious allegation? If the rifle were seriously honeycombed it would be bad; but some people call anything honeycombed when it is a little pitted.
10075. But this was his opinion—that the rifles were not fit for use;—did you read what Quartermaster-Sergeant Smith said? It is very likely I did; but I cannot remember one word of it now.
10076. Do you not remember the positive evidence given on the same subject by Staff Colour-Sergeant Pearce, who is now a sergeant-major with the Imperial Bushmen? I do not remember.
10077. Have you any reason to doubt that Quartermaster-Sergeant Smith was a certified armourer? No.
10078. Do you know him at all? No; I cannot place him.
10079. Do you know that the only evidence in opposition to the testimony I have quoted as to the condition of these rifles was that of Staff Sergeant-Major Clarke? It may be so.
10080. And that the finding of the Court of Inquiry is based on the evidence of Staff-Sergeant Clarke against that of the four men I have referred to, namely, Adjutant Holmes, Sergeant-Major Norton, Quartermaster-Sergeant Smith, and Sergeant Pearce;—with regard to these Martini-Henri rifles, have you ever received any communication from the Ordnance Department in regard to them? In what way?
10081. Have you ever received a statement that showed that 90 per cent. of the Martini-Henri rifles in the country were honeycombed or cut? I do not remember the statement. Of course, a lot of these rifles have been for twelve or fourteen years in use, and no doubt some of them are faulty.
10082. But has not the Ordnance Department communicated with you to the effect that 90 per cent. of the Martini rifles are either honeycombed or cut? I do not recollect anything of the sort.
10083. You would have no difficulty in ascertaining if you had a communication to that effect from the Ordnance Department? No.
10084. I suppose that if a man had held the position of Quartermaster-Sergeant in a Volunteer Corps, you would have no difficulty in ascertaining if he were a certified armourer? No.
- 10085.

10085. Is it usual for men shooting with Martinis, as against '303 rifles, to be allowed a large handicap? *G. A. French.* They give a slight handicap. I think that in seven rounds they get one point at 500 yards.
10086. *Chairman.*] I think that some of the riflemen made the possible score with the Martini-Henry the 6 Nov., 1900. other day.
10087. *Mr. Meagher.*] Then, according to that, the Martini-Henry is just as good as the '303 rifles? I think there is mighty little difference up to 600 yards, but after that distance the new rifle gets the pull.
10088. Do you shoot beyond 600 yards in these tests? Yes; up to 800 or 900 yards in some cases.
10089. May I take it that at 700 and 800 yards there would be a handicap allowed to men using the Martini-Henry rifle? I think they are allowed three points at 800 yards, but these arrangements are made by the Rifle Association, and I am not certain about it.
10090. In your annual report you have one portion dealing with the shooting capacity of the various Regiments? Yes.
10091. In dealing with the proficiency of shooting do you make any allowance in your report for the record made by Volunteer regiments armed with the Martini-Henry rifles as against those armed with the '303? I do not think anything of the sort has been done—the Volunteers have only had the '303 rifle lately.
10092. Are they referred to in your last report? I think the scores of all the regiments are in the report, but Major Boam does that part of the work.
10093. If at 800 yards three points are allowed as a handicap to men using Martinis, do you think it would be fair to take their performances as a criterion without giving them a handicap? Yes; because people who understand anything about the subject know that the men armed with the Martinis are at a disadvantage, and judge accordingly.
10094. You remember that in connection with that Court of Inquiry one of the questions that the Court was asked to investigate was the small number of entries from the 7th Regiment for the Defence Forces Rifle Meeting? Yes.
10095. And that particular regiment was armed with Martini-Henrys? Yes.
10096. Some of which you admit were in a bad condition? I think that all the Volunteer regiments had the Martini rifles then.
10097. But not the Partially-paid? No; they have had the '303 rifle for some time.
10098. This Defence Force meeting was promoted by yourself? It was promoted for shooting on service lines and conditions.
10099. It had nothing to do with the Rifle Association? No.
10100. And that meeting having been promoted by yourself it was your desire to make it as big a success as possible—naturally? Yes.
10101. When the meeting took place, was it merely a private one, or was it recognised by the Government? It was recognised by the Government. They gave a considerable sum towards it.
10102. Is it true that the Government did not recognise it until six weeks after the meeting? In what way.
10103. In the way of an official notification in the *Gazette*;—the meeting was held in the first week in April? We held the meeting immediately after the camp, when the men came from there.
10104. And the official notification of the existence of such an Association did not appear until the end of May? I do not remember the particulars.
10105. Have you any doubt that it was not officially recognised by the Government until nearly two months afterwards? It is quite possible; I do not remember.
10106. Was there any friction about that meeting between the Old Rifle Association and yourself? I do not think there was any in regard to the meeting.
10107. Had you any communication with the Government during the interval which elapsed between the holding of the meeting and the notification regarding the Association in the *Gazette*? I do not remember anything about it.
10108. *Chairman.*] Do you not remember being present with the Colonial Treasurer when a deputation interviewed him representing the National Rifle Association? Yes; was that about that time?
10109. Yes; do you not remember saying some pretty strong things about some of them? Very likely.
10110. Do you not remember calling them pot-hunters? I do not think I did on that occasion.
10111. Oh, yes; did you not say there was a man present in the room who had won £100 in prizes? Yes, I recollect that.
10112. What were the facts in connection with that particular gentleman—had it not taken him sixteen years to win that money? He won the money in one year, as far as I know.
10113. Would you be surprised to learn that it took him sixteen years to win that £100? Perhaps, on the same principle that it takes a doctor to make a guinea.
10114. Would you be surprised to learn that this £100 in prizes extended over sixteen years? I think there must be a mistake, as I do not think I ever knew that statement to be contradicted, and it could have been very easily questioned at the time.
10115. Do you not remember that about ten members of that deputation jumped to their feet to contradict that statement? No.
10116. I have a very vivid recollection of it? It is a very easy matter to find out.
10117. *Mr. Meagher.*] You are not prepared to swear that this association of yours was not officially recognised by the Government six weeks after the Rifle Meeting closed, and that the *Government Gazette* notice appeared at the end of May, whilst the meeting was held at the beginning of April? No.
10118. Was there any obligation on any regiment to attend at any meeting of what was a semi-private association, which was not officially recognised by the Government? There was no legal obligation on any of them.
10119. There is no obligation in the ordinary way upon Volunteer regiments to attend? There is this obligation, that they ought to show an interest in rifle shooting under Service conditions.
10120. But they were showing it by shooting at the meetings of the Rifle Association? But those matches were not shot under Service conditions.
10121. But they were shooting at that meeting? I do not think they shot much at either.
10122. Was there any obligation to compel any Volunteer regiment to attend any such meeting as yours;—supposing that Colonel Roberts, ran one meeting, or Colonel Taunton ran another, was there any obligation upon the Volunteer regiments to take an interest in those matches? No; but they would show very little interest in their work if they did not.
- 10123.

- G. A. French. 10123. At any rate, there was one regiment that did not turn up, and that was the 7th? I think a few of them did.
- 6 Nov., 1900. 10124. There was such a few that you thought it necessary to make it one of the charges against them that they were not showing sufficient interest in your association? My charge was that they did not take an interest in a matter of that sort.
10125. However, this particular Board was asked to inquire why this regiment did not take part in sufficient numbers in a semi-private association meeting? You can scarcely call it a semi-private association.
- I am simply distinguishing it from the National Association, which has been in existence for a number of years as a public association, and has been, apparently, very well administered.
- Chairman.*] It is the second largest association in the Empire.
10126. *Mr. Meagher.*] Do you think that it was a fair thing to ask these men of the 7th Regiment to shoot with honeycombed rifles against men armed with the '303 rifles? There was no reason why they should not; their rifles were as good as other peoples. I do not call this meeting a semi-private meeting at all; it was essentially a military meeting.
10127. Is it held every year? The next year there was no camp, and we were not able to hold a meeting; but it will be held again, and there is money on the Estimates for it.
10128. That was your first meeting and your last until you meet again, and that may be in the dim and distant future? We could not hold a meeting this year because of a great number of the troops being away.
10129. But the old National Rifle Association has gone on swimmingly every year, in spite of the troops being away? Yes; but this association simply exists in order to hold a match immediately after the annual camp, when the men are here.
10130. At your association meeting, held immediately after the camp, were not men in the Partially-paid Forces brought down from the Rookwood camp at 8s. a day and rations to shoot at your meeting? There may have been a few on the last day.
10131. Were not men in the Partially-paid Forces brought down to your semi-private meeting and paid 8s. a day? Some of them came on the last day of this military meeting—I refuse to call it a semi-private meeting.
10132. Will you swear that at your military meeting—as you term it—the men of the Partially-paid Forces were not brought from Rookwood and paid 8s. per day and their rations? I think it is likely that on the last day there might have been a few.
10133. I do not care whether it was the first or last day? It was the breaking-up day.
10134. Were the men brought down and paid 8s. per day to shoot? Some of the men who were in the camp on the last day did come.
10135. Will you swear that the men did not get paid 8s. per day? I would not swear.
10136. In the course of military inquiries, as a rule, you are not often assisted by counsel? No.
10137. I remember being connected with the case of Captain Close, whose conduct was the subject of a military inquiry at the Victoria Barracks? That was before my time.
10138. As a rule, however, you are not represented? No.
10139. What possessed you to employ a barrister at this particular Court of Inquiry into the affairs of the 7th Regiment;—at whose suggestion was it done? I think it was the President of the Court who suggested it.
10140. Had you not Major Savage or someone to represent you;—was there not someone from the Military Forces to represent you? I do not know that the General would wish to be represented at the Court of Inquiry; he would desire to keep away from it.
10141. Do not the proceedings of the Court of Inquiry disclose the fact that one of the charges against the 7th Regiment was that its members did not show up at this rifle meeting of yours? I do not know that it was put in the form of a charge.
10142. Well, one of the allegations against them? It was simply brought forward to show how little interest they took in military matters.
10143. Eventually a barrister was employed to probe that question? I think that barrister was employed to assist either side.
10144. Do you not know that Mr. Edmunds conducted a very long examination on this very issue? He may have.
10145. You say that you did not engage Mr. Edmunds in the first instance? No; I think the first representation as to the desirability of employing a barrister came from the President of the Court.
10146. What fees did Mr. Edmunds receive a day for his services? I do not know.
10147. Do you know how many days he was there? No.
10148. You say you did not employ him? No; of course, any employment such as that must have been directed by the Crown.
10149. Then you have no conception of what Mr. Edmunds' services cost in this inquiry? Not the slightest.
10150. With reference to the rifles in store, is there a proper supply of accoutrements for them? There is a certain amount; but not such as one would like—a great many of them are very old.
10151. Is it not a fact that the new Company of Irish Rifles at Newcastle could not be supplied with accoutrements? Quite likely. Do you mean any accoutrements or the special accoutrements that they want?
10152. I am referring to accoutrements directly connected with the arms, not with the dress? It is quite possible; I know we are very short of them.
10153. Do you think it is a very nice thing to have rifles without accoutrements when men are liable to be called on active service? The rifle and ammunition are the main points; but, of course, we should have accoutrements, too. We cannot, however, have everything with limited means.
10154. Is it not a fact that even now, one of the metropolitan regiments, or part of one, is paraded without bayonets because there are no bolts and bayonet-frogs for their use? It is quite possible.
10155. Do you think that that is an advanced state of things? Of course not.
10156. The bayonet has come in very handy in South Africa? Yes.
10157. Is it not a fact that in some of the Forces here, which you have personally inspected—in one of the regiments—the men carry their cartridges in their pockets because they have no pouches? What sort of cartridges—ball cartridges?

10158. I do not care what sort of cartridges? I do not see why they should have cartridges at an inspection. G. A. French.  
6 Nov., 1900.
10159. Is it not usual to supply pouches? Certainly; if you have them.
10160. When the men have to carry cartridges, and have no pouches, is it not a very improper thing for them to put them in their pockets? Yes; if they want to have cartridges with them.
10161. If they were on active service they would require something besides the gun? Yes.
10162. Do you not think it would be very inconvenient for the men to have to carry their ammunition in their pockets? It is preferable that they should have the fullest equipment.
10163. Has your attention been called to the fact that a regiment paraded with the cartridges in the pockets of the men? No.
10164. Not the 7th Regiment? I do not know of it.
10165. Is the ball cartridge issued to the Volunteer regiments sound? The '303 ammunition is of the very best quality, and, as I told you, about 80 per cent. of the Martini-Henry ammunition is alright.
10166. You have read the report of that Court of Inquiry into the 7th Regiment? Yes.
10167. Do you know that in the course of that inquiry it was disclosed that the Ordnance Department took back 24,000 rounds of ammunition from the 7th Regiment because it was absolutely unfit for use? We withdrew a lot.
10168. Was it not clearly shown that in one regiment alone 24,000 rounds were returned to the Department and classed as unfit for use and dangerous? Quite likely. I do not remember reading of that; but we withdrew a large quantity.
10169. Have any of the Volunteer regiments a medical officer? Some of them have; but, as a rule, the medical officers form a separate staff.
10170. Which Volunteer regiments have medical officers attached to them? The Australian Horse had, and, I think, the 2nd Regiment also.
10171. The biggest Volunteer regiment, comprising nearly 1,000 men—the 7th Regiment—had no medical officer? They have not 1,000 men; only 600.
10172. Were there not over 900 men paraded recently? No; about 500 men paraded out of 630. It so happens that nearly all the regiments comprise 600 men and a band of thirty.
10173. Do you know that neither the Australian Rifles nor the St. George's Rifles have a medical officer? The medical officers should not be with the regiments under the present system.
10174. Do you approve of hundreds of Volunteers going out without the attendance of a medical officer? The medical officers form a separate Staff, and they are attached to any corps, as may be required. The Lancers have a doctor of their own under the old system.
10175. Has it been brought under your notice personally that the whole of the equipment—such as water-bottles, valises, leggings, and mess-tins, and the like—issued to the Australian Rifles and the St. George's Rifles have been in use for the Partially-paid Forces, and have been returned to the store as past use? They may have been in use; but I would not say that they are past use.
10176. Did you not last year order the use of haversacks for the Volunteer regiments to take their kits into camp because their valises were not fit for use? There was no camp last year.
10177. Well, the year before;—did you give an order for the issue of haversacks? I think they should have haversacks, anyhow.
10178. Was it because of the valises being unfit for use? I do not think so.
10179. Has any attempt been made to remedy the faulty equipment of the Volunteer Forces that I have referred to in regard to the want of pouches and bayonets? It is gradually being improved.
10180. Can you say, in regard to the condition of the waterproof sheets, whether those issued to the Forces are useful for the purposes for which they are designed? They were; but I daresay they have been knocked about.
10181. *Chairman.*] You admit that waterproof sheets are necessary? Yes.
10182. On active service as well as in camp? Yes.
10183. *Mr. Meagher.*] Are you aware that some of these waterproof sheets were eleven years in stock before they were issued? I should not think they had been as long as that in stock.
10184. Some of these sheets were issued to the men going away to South Africa? Indeed, I was not aware of that.
10185. You would be quite aware that a sheet that had been kept that number of years in stock would not be in a satisfactory condition—that the rubber would be liable to crack? Yes; in a hot climate, I should think, it would be.
10186. *Chairman.*] There was a case of a man in Newcastle who lost his eye in a sham fight;—I have had a look at the papers in connection with it, and I might ask you some questions about it to-morrow? Yes; I remember the case.
10187. *Mr. Wilks.*] Is the Torpedo Corps under your jurisdiction—I mean the men who man the torpedo boats? No; Captain Hixson has control of them.
10188. *Chairman.*] I see that Colonel Neild states that you had his commission as colonel dated back some considerable time? The Army List will show the exact date.
10189. So that on paper he was a Lieutenant-Colonel much longer than he really was? Of course, that regiment was formed, and there would be a vacancy into which he might be waiting to step.
10190. He was first appointed captain, and then major, and then lieutenant-colonel? Yes.
10191. He says that his commission was dated back to the date of his examination as major? There is no separate examination for a lieutenant-colonel in the Volunteer Forces. He would not be appointed as lieutenant-colonel until he had passed as major.
10192. But you dated his commission as lieutenant-colonel to the date of his passing his examination for major? He was probably holding the position of lieutenant-colonel when he passed as major, owing to the vacancy in the regiment.
10193. Do you not think these sudden and rapid promotions are very objectionable? Yes; of course, we have been rather pressed for officers. When I came here there were not 300 volunteers, and now there are 3,000, and many officers have jumped into their positions.
10194. Has it ever occurred to you that perhaps it might be more satisfactory if an officer, before he got a commission at all, should serve a certain time in the ranks, having the right to rise to the position of Colour-sergeant; and, if he shows special adaptability for the work, right on to the higher grades;—you would be sure of your man? It would be a very good idea; but, of course, one great objection is that there is such great expense involved to the men when they are promoted to be officers.
- 10195.

- G. A. French. 10195. Do you not think that could be remedied? It has my sympathy.  
 6 Nov., 1900. 10196. Do you not know that there are men who have held the positions of captain, and who have had to resign their rank and go back to the position of sergeant? I think such cases are very rare.  
 10197. I know of a couple of cases; I daresay that it does not occur very often, because it is not very often that a ranker—until late years—could get a commission? There is a fair proportion of commissions given to rankers; but I think they are very often declined by men in the ranks, because they could not pay their way. I recollect some years ago a very hard case. A man was given a commission; but could not pay his way, and he was gazetted out of the Forces, whereas if he had remained in the ranks, he would have been entitled to a pension in a year or two.

WEDNESDAY, 7 NOVEMBER, 1900.

Present:—

MR. J. C. L. FITZPATRICK,  
MR. QUINN,

MR. MEAGHER,  
MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined:—

- G. A. French. 10198. *Chairman.*] I think there was some information that you were asked to bring with you this morning? Yes; I was first asked to inquire whether Quartermaster-Sergeant Smith was a certified armorer. I find that he has gone through the armorer's course of instruction. He is not what you would call an armorer-sergeant—a man competent to take a rifle to pieces, and make repairs, and that sort of thing—but he has not had a course of instruction in armory work. The next question was as to whether the Ordnance Department had reported that 90 per cent. of the Martini-Henry rifles were honeycombed or cut. I understand from Colonel Roberts that such a report has been made; but that the arms are serviceable. The term honeycombed is a technical expression. If a rifle is badly honeycombed the barrel would probably have to be replaced; but from that point down to slightly honeycombed it would be of little consequence.  
 7 Nov., 1900. 10199. *Mr. Meagher.*] Where would you draw the line;—what would be the effect of firing from a honeycombed-rifle? It is all a question of degree. If a rifle is badly honeycombed the flight of the bullet might be seriously affected.  
 10200. *Mr. Quinn.*] It would have some effect on the rifling in the barrel, and would cut into the bullets? Yes, to some extent—honeycombing is simply the rust eating into the barrel.  
 10201. That destroys the grooves to a slight extent? Yes. If the honeycombing is bad it will affect the flight of the bullet; but there is bad honeycombing down to slight honeycombing—varying degrees. If a barrel is badly honeycombed it might have to be replaced; but if it were only slightly honeycombed it would not interfere materially with the serviceable character of the weapon. If a strict armorer sees a little speck of rust he might mark a rifle as honeycombed; but that would be only very slightly honeycombed.  
 10202. Is the honeycombing of these rifles that were reported upon by the Ordnance Department of such extent as to effect the efficiency of the weapons? No; they are still serviceable, and they are still fit to issue, although, of course, some of them are very old, having been issued since 1885.  
 10203. *Mr. Meagher.*] Ninety per cent. of these Martini rifles are honeycombed, according to the report of the Ordnance Department? Yes; but they are still serviceable. The next information that I was asked for was to bring a list of officers who have not passed the examination for their ranks. I understood that the Committee asked Major Boam to prepare this list, and he has had it prepared for some time. Of course, there are a considerable number of officers on this list; but the Committee will see that there are good reasons, in nearly all cases, why the examination has not yet been passed.  
 [List handed in and marked *Appendix J.*]  
 10204. *Chairman.*] Has not Major Parrot passed his examination as major? Apparently not. He has been a major for a good while. These engineers are capable men in many cases, and a man may be an excellent engineer without having passed an examination for promotion. He may be very good as a professional man, and he usually gets credit for it.  
 10205. Of course, those men who have commissions, and who have gone to South Africa, have had no chance to be examined and passed? No.  
 10206. I see the name of P. F. Meagher, of the 8th Regiment;—do you know anything about him? I think he is an officer who has been lately appointed.  
 10207. Take the case of Sir George Dibbs, who is mentioned here? Is he mentioned there—I should not think he would be asked to undergo an examination. He has not passed any examination at all, and I do not think we would ask him.  
 10208. One would naturally think not; but, after all, there is a certain course of procedure laid down, and I suppose that even Sir George Dibbs, with all his good qualities, is subject to that course of procedure? I think there is always a little margin left to the Commandant.  
 10209. *Mr. Quinn.*] If there is a margin, I think that is a case in which the discretion ought to be exercised? Yes.  
 10210. *Chairman.*] I should think so too; by the way, in connection with the case that came before the courts—the case of Byrnes *versus* Dibbs—of course, Sir George Dibbs only appeared as Commanding Officer of the Regiment? Yes.  
 10211. Was your attention drawn to that case at all? Yes; but that was a case under the Volunteer Act, for the Commanding Officer to deal with; he has to run the whole thing for himself.  
 10212. Do you not think that that was rather a rough case? I daresay the man had some ground for complaint, but I would not like to go into that point. It was dealt with by the Court.  
 10213. He was upheld by the Court, but on appeal to the Full Court the case was quashed? Have you ever come across Byrnes yourself? I do not know; does he come from Queensland?  
 10214. Yes? Then I do know him.  
 10215. He seems rather an enthusiast in military matters, and I think he has a couple of sons who have gone to South Africa—one in the Army Medical Corps and one in some other corps;—of course, you have nothing at all to do with that case? No; it is purely a case between the man and his own Commanding Officer.  
 10216.

10216. Do you know anything at all about the clothing factory in London in connection with the Military Stores supply? You mean the Army Clothing Factory; I was over it a good many years ago, but I have no recent knowledge of it. G. A. French.  
7 Nov., 1900.

10217. Was that a Government institution? Yes; that is not merely a factory for the manufacture of clothing, with all the latest machinery, but they take things in there from the contractors, and subject them to the very closest examination by experts. You will see them there pulling the soles of boots to pieces, and making the very closest examination by experts, such as there ought to be.

10218. Mr. G. Fleetwood Wilson is the director? Just now; but they generally have an army officer at the head of it.

10219. I think one of your staff rather startled the Committee by assuring them that there was no such place in existence? Indeed, it has been in existence a great many years to my knowledge.

10220. The officer informed the Committee that it was only a place for distributing? It does that as well as manufacture; unless there has been some great change, they manufacture on a very large scale.

10221. I have an article here from Cassell's "Saturday Journal," in 1887, describing this factory as the biggest tailoring dépôt in the world? Yes; they have knives there that cut out fifty pairs of trousers right off, and all the latest machinery for the manufacture of clothing.

10222. I only ask you about this because one of your staff was good enough to inform the Committee that it was entirely a mistake to suppose that it was a factory where they made clothes, and that it was purely a distributing centre. Personally, what do you think with regard to the Government having a factory to make the uniforms themselves? I am quite in favour of it. When I was in Queensland we used to manufacture our own clothing, but that, of course, was on a small scale, and we had to take the pay-sheet of the clothing factory in Pimlico and multiply it by three, in order to make the wages approximate to the prices here. The expense of manufacturing on a small scale is, of course, also relatively much larger than when you are carrying on large operations, but Federated Australia should certainly manufacture its own military clothing.

10223. But, on principle, you entirely favour the idea? Yes; I like the idea of manufacturing and having experts to examine everything very thoroughly. That is where we are so weak—we have no experts.

10224. You are rather in favour of having everything in connection with the army done within itself, where possible? Yes, where possible; but I am particularly strong about the ammunition being made by the Government. There is not much importance attached to it if a man does get at you a bit in regard to clothing, but if a contractor supplies bad ammunition it is a very serious matter. There is always a temptation on the part of the contractor to make more money than he would be entitled to under the legitimate carrying out of his contract.

10225. *Mr. Quinn.*] Should we not also make our big gun ammunition? Yes; a certain amount. You might make the shell cases and so on.

10226. *Chairman.*] That would not be such a very difficult affair? No, very simple; but making guns runs into enormous works.

10227. But they made one at Kimberley? Yes, I know; but I do not know what that gun was capable of doing.

10228. *Mr. Quinn.*] You do not know how many rounds it would stand? No; besides, I did not know how they ever rifled the gun, unless they had a lot of fine plant there.

10229. *Chairman.*] It looks all right? But did you notice whether it was properly rifled.

10230. No, I did not? Well, that is the point. A smooth-bore gun is not at all difficult to make, but a rifled cannon is another matter.

10231. I may say that the Kimberley people wanted to retain the gun, but the Imperial Authorities took it away for use? Yes, I did not know that; they must have had a splendid lot of mechanics at Kimberley. Oh, yes; they have a very fair engineering shop there. The unfortunate man who practically made the gun and all the tools that were necessary was killed.

10232. *Mr. Quinn.*] Has that new field battery that was ordered arrived here yet? Yes.

10233. What type of gun is it? Fifteen-pounders, with a spade attachment to take the recoil.

10234. Are those similar to the "A" Battery guns? Yes; with the addition of that attachment. The spade attachment could be fixed to the guns of "A" Battery.

10235. This is the latest pattern of field-gun? The very latest. Later than anything in South Africa.

10236. Are you satisfied with the work done by "A" Battery in South Africa? Unfortunately they have had nothing to do; they were the best unit sent to South Africa.

10237. *Chairman.*] It was unfortunate that they did not have a better chance, but someone has to do the washing-up.

10238. *Mr. Quinn.*] Have you any idea when "A" Battery will be sent back here? No; as far back as September last, I asked that the "A" Battery should be sent back in time for the Commonwealth celebrations if possible.

10239. You have not heard yet whether your request will be complied with? No.

10240. Is Colonel Smith returning with the Battery? Yes; he will be returning with them.

10241. I notice by a statement in the papers that Sir William Lyne expects 20,000 troops will take part in the Commonwealth celebration proceedings in the Domain;—do you know where they are to come from? I do not know what 20,000 troops would do in the Domain; they could guard the line of route, and that is all there would be for them to do. 12,000 men is my highest estimate of those who are likely to take part in the celebrations. I do not know how many are coming from the other Colonies. We have 8,500 men; there will be 1,000 Imperial troops, and 100 Indian troops, making a total of 9,600, and I do not suppose there will be more than 1,000 or 2,000 from the other Colonies.

10242. *Chairman.*] Some may come from Canada? There may be a few; but my highest estimate is 12,000.

10243. *Mr. Quinn.*] It is proposed to get some from America;—do you think we shall get those too? We shall have to be very quick about it. We might get a few from San Francisco or the Philippines. The vessels that come down from the Philippines for stores might bring a company or two, and I daresay they would not object to the change.

10244. *Chairman.*] With regard to "A" Battery, are you in a position to say how Colonel Smith is looked upon as an artillery officer? Oh, yes; I know all about him. He was my staff officer in India, and he is one of the best artillery officers in the service.

G. A. French. 10245. You would not be surprised to hear that he is looked upon as one of the best artillery officers—among the first few—in the service? No, I would not; I know that he has enjoyed a high reputation for many years.

7 Nov., 1900.

10246. I asked you, because I heard when I was in South Africa, that he was considered one of the three or four first men in the service? Yes; that is why I got him here.

10247. Do you know that he could have had the appointments that afterwards fell to Colonel Long? Yes; Colonel Smith's name was put forward, and it was arranged that he was to have the appointment, but at that time he was only a captain, and they wanted an officer of more seniority, and Colonel Smith was put out of it.

10248. *Mr. Quinn.*] What number of our troops do you expect will be back from South Africa in time for the Commonwealth celebrations? I cannot tell you. We hear that 700 Australians are coming back; but I do not know what proportion of them will be our men; we get very little information from South Africa.

10249. We do not seem to know where Colonel Mackay, with his Bushmen, is now? I have not heard much about them lately, but they have got to the front, and have done some good work all the same.

10250. *Chairman.*] By the way, did you read the report in the papers in regard to Colonel Airey;—are you inclined to credit it? I had the extract cut out, and sent it to South Africa, and asked for further information.

10251. You would not like it to be true? I should not.

10252. Still it has been published in one of the leading London papers? Yes; the *London Times*.

10253. Sometimes they do go wrong, but generally speaking they are fairly correct? Yes.

10254. I think it would be a most deplorable thing if it were true? I hope not.

10255. Did you make any inquiries about that Newcastle man that I spoke of yesterday who lost his eye through an accident? Yes; I know the circumstances of that case, and I recommended that as an act of grace, he might be given a certain amount.

10256. But have you read the report of that inquiry;—it does not put the blame on him? The report of the Court was against the man.

10257. I do not think so? Yes.

10258. Your report is very much against him? My report is based on the other report.

10259. No; I have gone through the report, and the report says that the officer was responsible, because he did not give the word of command—did not give the instruction that he should have given. It does not say that there was any blame attachable to the man, but it rather blames the officer. It is not a matter of very great importance, as regards this inquiry; I admit that at once? As far as I remember the case, from the report of the Court, I had to come to the conclusion that the man was a good deal to blame; but as he had lost the use of an eye, I recommended the Government to give him a small amount of money, and I believe they did.

10260. I would like you to read over that report of the inquiry again, because I think that, somehow, you may come to a different conclusion. I have read over the report, and I cannot see anything in it that would justify your report, although you seem very positive about it? It was all submitted to the Minister, and I think he agreed with me.

THURSDAY, 8 NOVEMBER, 1900.

Present:—

MR. MEAGHER,

MR. WILKS.

MR. QUINN,

RICHARD SLEATH, ESQ., IN THE CHAIR.

Captain Francis Hixson called and examined:—

F. Hixson. 10261. *Chairman.*] You are Captain of the Naval Brigade? I am Captain Commanding the Local Naval Forces.

8 Nov., 1900.

10262. I think the Committee are desirous of getting some information from you with regard to the Naval Forces so that in their report they may be able to refer to that branch of the defences of the Colony. There have been some references already made here to the armament of your Forces;—are you under the Major-General Commanding the Military Forces, or would you kindly explain the position in which you stand? I stand, in reference to the Governor, in precisely the same position as the Major-General. I am independent of him, unless I join him in the field, and then, in accordance with the Naval and Military regulations, I submit to him and obey his orders in every respect.

10263. Is it a fact that you have been somewhat handicapped by the want of a ship for training purposes and the want of more modern ordnance? That is so.

10264. It is a rather serious handicap, I suppose? It is certainly a serious handicap, because my men are mostly, if not all, accustomed to ship work, and therefore the proper place for them to display their energy and knowledge is on board ship.

10265. Training on board ship is practically necessary for the Naval Brigade? Yes. I may mention that a very large proportion of our men join us after leaving the Royal Navy. At the same time they get rusty and want brushing up periodically.

10266. I suppose that in the Navy as in everything else advances are always being made in regard to armament, and that new patterns of guns are always coming into use? Perhaps more so in the Navy than in any other branch of the service.

10267. *Mr. Quinn.*] We had an illustration of that in Ladysmith? Yes, the “handy man” generally comes in.

10268. *Chairman.*] Have you tried to make any arrangement with the Admiral on the Station with regard to supplying a ship for training purposes? I have made personal overtures to different Admirals to see if it were possible to utilise for our purposes the Imperial ships that are laid up here, but I have been met with the statement that these ships are only partially New South Wales ships, that they are Federal ships, and that there would be jealousy on the part of the other colonies if we had the exclusive use of them here in Sydney.

10269. Just so; with regard to the latest pattern of guns, I understand that the Naval Authorities have a number of spare guns here? I believe the Imperial Naval Authorities have.

10270.

10270. Have you approached them to see if you could secure the use of their guns for drill purposes? Those guns are not fit for shore work; they are ship guns. F. Hixson.  
8 Nov., 1900.
10271. Still, they have used the 4·7 Naval guns in field work recently? Yes; they have disarmed the ships and put the guns on shore, and made excellent use of them, but we have no shore mountings for these guns such as they had for the 4·7 guns in South Africa.
10272. But it would not be a difficult matter to arrange for mountings? No; it could be done.
10273. Do you think that it would tend to make your Forces more efficient if you had the use of a ship and some of the newest patterns of gun? Decidedly so.
10274. I suppose that, after all, training with old obsolete guns is not very good for men who may be called upon to handle new and modern weapons? Not very good. Of course training is desirable to discipline the men and keep things together, but it is not fair to put any men against an enemy unless they have the most modern guns that can be procured.
10275. And in order to use such guns effectively they require to be used to them? Yes, to be accustomed to them. I may mention that we get men out of the Navy almost weekly—monthly, at all events. There is a system in the Navy under which the men may, after ten years' service, claim their discharges, and, as a rule, the men do claim that privilege, and come to us when they get ashore here.
10276. Are all your Forces located in Sydney, or have you some at Newcastle? We have a company at Newcastle.
10277. Those are the only two places at which your Force was located? They have lately established a company at Kogarah, but they are not fully organised yet.
10278. But the company still exists at Newcastle? Yes; but at present several of the Newcastle men are in China, and many men from Sydney also.
10279. With regard to the torpedo boats, you have seen it stated that some of the appliances are pretty obsolete? Quite obsolete.
10280. Some of the electric batteries and that sort of thing have been in existence for many years? Yes; they are mostly obsolete. All our weapons, I may say, are obsolete. They practically want replacing with modern appliances. I may mention that there was a meeting of Naval Commandants in Melbourne last year to take up the general question of reorganising the Naval Forces of the Colonies in view of federation.
10281. I desire to ask you a question, and I want you to clearly understand that it is purely on the principle of the thing that I am questioning you: do you think it would be advisable to periodically get a Royal Navy man out here, in a position equivalent to that of an Adjutant of the Military Forces, so that we might give our Forces the benefit of the very latest drill and organisation, and make them acquainted with the most modern armament;—do you think it would be an advisable course to pursue to bring out an officer of that kind from time to time? I think it would be advisable; but I may point out that it would be of no use having the latest type of naval man out here unless we have the latest kind of gun and appliances. If we can drive our own carriage here it is all that is possible for us to do; and it will be almost useless having a man thoroughly acquainted with the latest drill and organisation unless we have the armament and appliances in keeping with the instruction he is able to impart.
10282. There is no doubt about that; but I mean that we should also get the latest armament;—do you think it would be advisable to get a man out from time to time—I do not mean to have the one man continually? I think so. I might hand in the report of the Naval Conference I spoke about, as that embodies my views and that of the Naval Commandants of various Colonies. [*Report handed in and marked Appendix K.*]
10283. If you had the latest type of armament and appliances I suppose your Forces would naturally increase, if it were thought desirable to increase their strength? Yes; and I may point out that the true defence of these Colonies is by means of ship and not by shore armament.
10284. I think that is pretty well admitted—that at least is the first line of defence? Yes; therefore I should advocate our getting the latest thing in ships and ships' appliances, and then we should require the latest men to instruct us.
10285. We have got a rather extensive coast line, if we are going to defend it from the shore? That is so. Some very smart things have been done in history by menacing a certain place like Sydney, and then, after drawing the Defence Forces to the point menaced, taking the ships some 200 miles away, say, and allowing troops to land at a point where the country is clear.
10286. *Mr. Quinn.*] But the ships could not go overland? No; I do not mean that troops will be landed at Bathurst, but I mean at some other point on the coast. The probability is that the chief port would be menaced in the first instance, and that the ships would sail away and land their troops somewhere else.
10287. But the moment we got them off their ships, do you not think we could deal with them? Oh, yes; if they were foolish enough to come ashore. I would like to have a shot at them if they came to my door, and many others would do the same.
10288. *Chairman.*] What is about the strength of your Naval Forces? 573 last year, but on the present Estimates 608.
10289. And your Forces consist of what is known as the Naval Brigade and the Naval Artillery Volunteers? Yes; and a few permanent men in the torpedo branch of the service.
10290. So that your suggestion is that it is highly necessary for the efficiency of the local Naval Forces that we should have the latest thing in ships and armament? Most certainly.
10291. And you think, if you had these, it would be an incentive for more men to join your Naval Forces? We could double the Forces to-morrow, or within the next month, if I were allowed to do so; but it is a matter of money.
10292. But I suppose that it is not very satisfactory to old Navy men to join a force that has not got guns or armament or a ship of modern pattern? No; it would be most unsatisfactory. There is nothing to make men dissatisfied or cause them to grumble more than a thing of that kind.
10293. Especially those men from the Royal Navy, who have had training with more modern weapons? Quite so.
10294. Can you tell us anything about that gun that went off at Pinchgut? No, I cannot. That place was in my jurisdiction, but since I have been superannuated as President of the Marine Board, I have had nothing to do with it. I understand, however, that certain persons landed in the night-time and loaded this gun, and brought a fuse with a slow match, lighted the slow match, and took their departure; then, within a reasonable time after they left, the gun went off.
10295. But did not they hoist the Boer colours? I do not know anything about that. 10296,

- F. Hixson. 10296. *Mr. Quinn.*] Have you any theory as to the identity of the people who were responsible for that? Not the slightest. I met the custodian of the fort, and he told me what I have told you, but he distinctly said he could find no trace whatever of the perpetrators of the act.
- 8 Nov., 1900. 10297. Was there not somebody constantly there? There is only one man who takes charge of the light. This man lights the lantern at sunset, and takes an occasional look at it during the night, but he does not keep on watch during the whole time.
10298. But are there not military men stationed there? No, there is only the one man.
10299. But we have quite a number of men, and we do not know where to put them? But these numbers of men are partially paid only, and their services are not continually available.
10300. But we have 1,000 permanent men? Yes, artillerymen.
10301. Do you not think it would be advisable to station a few of them to protect these guns? I think it would be making much of the affair.
10302. But I mean with regard to the general defences? The old guns at Port Denison are completely obsolete and deserted; they are all round-shot muzzle loaders, and it is less expensive to let them remain there than to shift them about; if you got them ashore you would not know what to do with them.
10303. Would it be possible for a high-spirited party, such as we read of in Captain Marryatt's *Midshipman Easy*, to let off one of our coast defence guns with the same facility? I presume not, there are sentries over all the batteries along the coast. This battery at Fort Denison is quite obsolete, but the guns that would be utilised for service are all properly protected.
10304. *Mr. Meagher.*] I suppose you attach no more importance to that affair of the gun on Fort Denison than you would to the letting off of the gun at Governor Burke's statue in the Domain? Just about the same; if anything I should be more angry if they were to tamper with that Russian gun at Governor Burke's statue than at what happened over at Fort Denison; I was a little angry over that though.
10305. With regard to this conference that you had in Melbourne with the Commandants of the other Colonies, of course you have paid some attention to the position of the Naval Forces in the other Colonies? Yes.
10306. Do you know that in South Australia they are fairly well equipped? Yes; a little more so than any of the other Colonies. Their ship the "Protector" is now in China.
10307. *Chairman.*] She is on her way back? I hope my men will also be on their way back soon. I do not want them to die of dysentery in China.
10308. *Mr. Meagher.*] Have you seen the ship "Protector?" Yes; but only at a distance. I have not seen sufficient of her to pass any opinion; but I know that she is a fairly modern ship, and well armed.
10309. Although the "Protector" may not be useful as a first line of battleship she fulfils her mission admirably in giving training scope to the South Australian Naval Forces? Yes.
10310. If the Government would furnish you with a vessel of the "Protector" type, would that satisfy you? Yes; but I aspire to what is described in the report of the Naval Commandants. I may mention that that report has been sent by the Victorian Government to the authorities at Home, and I have no doubt it will develop.
10311. In Victoria the facilities for Naval training are better than here, for volunteers? Yes.
10312. And they have been so for some years? They have the "Cerberus." The Home Government supplied them with the "Cerberus" many years ago, and she has been there ever since.
10313. A man who was fairly well trained upon the "Cerberus" would have no difficulty in picking up his latitude, so to speak, if he were put on one of the up-to-date ships? No; he would have a fair training; but the "Cerberus" guns are muzzle loading guns, whereas, all modern guns are breech loaders. However, in a few days, a good practical man could easily accustom himself to the modern guns, and the training in the ship would be of great assistance.
10314. The difference would be in the firing and loading; but outside the Naval men who have joined here, supposing some young Australians went in for the Naval Brigade without previous training, would it not be of great service to them to go outside, with an easterly blowing, and get their training even with the old type of guns? Yes. I miss the "Wolverene" very much. It afforded a means of organising and disciplining the men and accustoming them to their proper sphere on board ship.
10315. Practically, you have now to do the same as the Infantry and go into camp at every training period? Yes.
10316. In place of being piped up in the morning, stowing your hammocks away, and going through what you do on board ship? Yes.
10317. Practically yours is a land force now? Yes; since we lost the "Wolverene." The only excuse we have for going afloat now is in connection with our small boats and torpedo boats.
10318. These torpedo-boats are practically barges as far as any utility is concerned? Yes; they are completely obsolete. At the same time they can fire their torpedoes, although their speed and their appliances are obsolete.
10319. They would not be of much utility in these days of submarine boats? I do not believe in submarine boats.
10320. Do you not think some of the trials have been satisfactory;—do you not think the American "Holland" type of boat was satisfactory? When you go below the water you have to deal with eternal fog. When you get below in a submarine boat you cannot see any distance, and do not know where you are, and that is the reason the British Naval Authorities did not take it up. If you are a swimmer, you must know how difficult it is to see any distance when you go below the water to pick up a stone or other conspicuous object.
10321. Yes; but if you locate your object from your conning tower on top, which does not show much to the enemy's ship, once you go below you have a fair idea of the direction in which you are going, and I suppose a strong search light will carry some distance ahead in the water? Very little. I do not altogether ignore the submarine boat, but I am not a great believer in it.
10322. Do you know that the French Naval Authorities have succeeded in travelling from 80 to 120 miles under water in three or four hours in one of their experiments;—they travelled from one port to another? They have the means of travelling with a portion of the boat showing above water, and they can go a long distance that way as compared with the distance they can travel when the vessel is totally submerged. I am surprised to hear that they have travelled under water any such distance as you mention.
10323. The object of these submarine boats is practically for the expulsion of a torpedo against the side of a big ship? Yes.
- 10324.

10324. And there is no doubt that if the torpedo gets there the ship will go down? I would not say that she would go down, but she would be wounded. A modern ship is so honeycombed with water-tight bulk-heads that she would not necessarily sink if she were torpedoed. F. Hixson.  
8 Nov., 1900.

10325. *Mr. Quinn.*] But the "Maine" went down? I am not sure that it has been positively proved yet whether it was an outside or inside explosion that caused the sinking of that vessel, although I know that the Americans say the damage was caused by a torpedo. We have had more than one loss in the British Navy through inside explosions, arising from some dangerous paints that are used for preventing rust and so on. I do not think it is positively established that the "Maine" was destroyed by a torpedo.

10326. *Chairman.*] It is asserted by the Americans that it was a torpedo, and just as positively denied by the other side? Yes.

10327. *Mr. Meagher.*] But proof has been given, as far as human evidence can go, that, whether an explosion occurs from the exterior or interior, the material will be bent in a certain way; and is not the evidence, so far as they have been able to glean on inquiry, after employing expert divers, that the bending of the material showed that the force was exercised from without? Yes, I have seen that, but I never heard of any electric wires or anything of that sort being discovered.

10328. In regard to Queensland, they have some boats for naval training? They have two gun-boats.

10329. Then it amounts to this, that, although New South Wales is the senior colony, she has practically been left behind by the junior colonies in regard to naval training? Yes.

10330. And I suppose that, in case of a European war, in view of the countless vulnerable points of the British Empire, which require that her fleet shall be in every sea—especially if there were a coalition of European Powers against her—it would be almost impossible to concentrate too many ships of the British Navy here? I do not suppose that if a foreign enemy wanted to raid on these shores they would send a fleet intact, they might send separate vessels to rendezvous in a particular locality. I am sure that the power of the British Navy is such that it would prevent a large fleet coming out here intact.

10331. Of course, there are all kinds of things that might upset that theory; for instance, the movements of some of the British squadrons might be hampered by the blowing-up of the Suez Canal, and if the vessels had to come round the Cape it would take a long time, and a big action might be fought here long before they could arrive? Yes.

10332. I suppose the advantage of increasing your forces would be that, instead of having a lot of cavalry and infantry, we should have a larger force available for naval defence? Yes; I am satisfied that the true defence of Australia must rest upon naval strength.

10333. I think so too;—supposing there was an engagement on our shores between Her Majesty's ships and an enemy's fleet, and great damage was done to the fleet, and a great loss of life occurred, it would not be practicable to send home, 16,000 miles away, in order to get fresh men to man the ships, but you would require to take them from Australia? Yes; we certainly ought to have them here.

10334. And the only men available here would be your own corps? Yes.

10335. Practically the history of the world shows that battles have been won on contingencies, and that if you are able to follow up an advantage you can drive your foe to earth frequently before he can reinforce;—but it is clear that you could not look to England for replacing men who might be lost in a naval action here, and that you would have to look to Australia? Yes. It would be discreditable to a nation, such as we are about to be here, not to have dépôts, and make every preparation on the lines you have described.

10336. In regard to coast defence, I suppose it would be almost as necessary to have a corps down in the Illawarra district, at say, Jervis Bay, as at Kogarah, where you are forming a corps now? Yes, certainly.

10337. *Chairman.*] Have you not got some men at Wollongong? There is an artillery force there, and there is a portion of the naval forces told off to leave Sydney and go to Wollongong, if required.

10338. *Mr. Meagher.*] But, after all, you have only 600 men;—you would want more than that if you wanted to work things on a proper basis? Certainly.

10339. In regard to Wollongong, seeing the immense number of men that an enemy's transport would require to land under cover of the guns of a man-o'-war, I suppose Wollongong is not such an important place, because the only method of landing them there would be by means of surf-boats? Oh, no; there is a nice little harbour there.

10340. But it is pretty well protected by naval guns? Yes.

10341. Well, I do not suppose that an enemy would run the blockade of the fort there in order to land troops? They would not do so until they had destroyed the guns. It would be most difficult to land any men on our coast in open water, but there are plenty of little nooks which they could be brought into.

10342. I may take it that Jervis Bay would be more important than the other place? Yes.

10343. With a means of communication by railway not far away? Yes. Jervis Bay is capacious enough to hold all the British fleet—in fact, the fleets of the world.

10344. In regard to small arms, what type of arms are your men supplied with? At present we have only the Martini-Henrys, but we have written for '303 rifles. The men who went away to China were armed with the Lee-Metford '303 rifles, procured from the Royal Navy.

10345. So that practically we had to equip our men by levying on Her Majesty's forces? Yes. The field-guns we took away were good enough in their way, but we exchanged them for better guns in China, which we got from the Imperial people there.

10346. *Mr. Quinn.*] Are you going to bring those better guns back? I hope so.

10347. *Mr. Meagher.*] In regard to China, I suppose that, from a military standpoint, the fact that our troops are quartered in Pekin alongside the cream of the fighting powers of the world, including Russians and Japanese, will be of incalculable advantage to them and to the rest of our forces when they come back? Yes, it will doubtless be of very great advantage to them; although I am proud to say that they have shown themselves to be in no way inferior to the best of the forces there. I am prouder still to say that when our men reached Tientsin, a boat-race was got up, and the champion crew of the fleet was pitted against our men, who beat them easily.

10348. In regard to the Martini-Henry small arms, can you say anything as to the condition of those with which your force is armed; are they in a good state of preservation, or are any of them honeycombed? Our rifles are in a fairly good state of preservation—obsolete, but fairly good.

10349. *Chairman.*] Are those Martinis you are speaking of? Yes.

10350. But after all the Martini is a fairly serviceable weapon yet? It is fairly serviceable, but it is not so good as the magazine rifle. 10351.

- F. Hixson.  
8 Nov., 1900.
10351. But a Martini-Henry bullet would stop a man with more certainty than the other? Oh, yes; I believe the Martini-Henry bullet would stop a man better than the Lee-Metford, if you could fire the Martini as fast as the Lee-Metford, but you cannot.
10352. The Martini has not quite the same range as the Lee-Metford? No.
10353. Still the Martini is a very serviceable weapon? Oh, yes; I do not ignore it by any means.
10354. In handling the Martini-Henry the experience the men gain is much the same as with the Lee-Metford? Yes; and I believe modern weapons are far in advance of the men who use them. The trouble in a battle is to maintain fire discipline, because troops, as a rule, are too prone to throw their fire away, so that the more facilities they have, in one respect, the worse for them.
10355. *Mr. Quinn.*] These torpedo-boats, you say, are absolutely obsolete? Yes.
10356. With regard to torpedoes themselves, have you such a stock as you ought to have for emergencies? We have thirty-nine now.
10357. Are they modern and effective? They are not modern, but they are effective in their way.
10358. But they are not effective in connection with the torpedo vessels to which they are attached? For want of speed, they are not.
10359. You would have to get very close up to your enemy before you could make certain of damaging them? Yes, the arrangements are not so good as with modern torpedoes. These torpedoes are propelled by air which is stored in a chamber, and, after that is exhausted, they are useless.
10360. And they float on top of the water? As a rule, they float on top of the water.
10361. We have no Brennan torpedoes? No.
10362. I suppose the ships of the Royal Navy have? No; the Brennan torpedoes are controlled from the shore, and the Navy have never adopted them.
10363. It is known as the Dirigible torpedo, capable of being directed from the shore? Yes.
10364. Would the use of a torpedo of that kind come under your branch, or under the direction of the submarine miners? The submarine miners.
10365. You say we have no Brennan torpedoes? No.
10366. I believe that the secret of the Brennan torpedo is in the possession of the British Government? It is in the possession of the Horse Guards. Mr. Brennan made no impression on the authorities of the Navy when he was putting his torpedo forward; but he made a good deal of impression with the military authorities, who have adopted it.
10367. It is a military arm;—do you think we ought to have that torpedo here? Well, I think that Sydney is already bristling with the means of opposing an enemy. I think you have enough.
10368. That is very satisfactory. With regard to these torpedo-boats, do not you think, supposing that we proposed to get more effective vessels, that we ought to go in for a vessel of the type of the torpedo-destroyer? Yes.
10369. Would you explain why you prefer those to the ordinary torpedo-boats? Because the torpedo-destroyers are sea-going boats, powerful vessels, and very fast, whilst our boats are scarcely fit to be trusted outside the Heads.
10370. The destroyer also carries quick-firing guns? Yes, quick-firing guns as well; they are really powerful vessels.
10371. Do you look upon the torpedo as a prominent element in the defence of the coast-line? I am rather inclined to think that the torpedo has been overrated, but it is on the principle of the man-trap and spring-guns; a deterrent against an enemy making an attempt.
10372. I gather that you are rather sceptical about the torpedo, judging from your remarks about the "Maine" and the modern warship being honeycombed with water-tight compartments, so that a torpedo might be exploded without incapacitating a warship? Yes, without placing her altogether *hors de combat*.
10373. She would be able still to float and work her guns? Yes.
10374. With regard to a ship for training purposes, you would not necessarily require a modern ship, presuming you had modern guns? I think a second-rate ship would do. Many of the old ships lying useless in the naval ports at Home would be a great acquisition here.
10375. Provided they were armed with the most modern guns? Certainly; but many of these ships that are ignored now by the Imperial authorities, for want of speed and so on, would be of very great assistance here; in fact, I think they would be a great deterrent against an enemy approaching the port.
10376. You say you think that this coast, in time of crisis, would be best defended on the sea? I think so.
10377. Do you think it would be the province of the Federal Government to charge itself with coast defence—naval defence? I think so.
10378. We would then have a class of coast defence battleships? Yes; but it would depend upon the extent to which the country would go in spending money for defence purposes. The advantage of the Federal Government taking the thing up would be that they could concentrate all the ships where they were most wanted.
10379. You think we ought to have some coast defence ships? I think so. I may mention that one great reason we should have them here is that we have coal in our immediate neighbourhood, and coal is now a vital necessity in maintaining sea power.
10380. If we were attacked, do you think a blow would be struck at the capitals, or do you think the object of the enemy would be to effect a landing somewhere down the coast and march on the capital? I do not think they would come to the capital by sea.
10381. Well, supposing they landed—you have stated that the power of the British fleet would be so supreme as to prevent a fleet from being sent here? I fancy so.
10382. Then all we would have to face would be a raid? That is just exactly my view.
10383. Very well; if the men engaged in that raid were to land 100 or 200 miles north or south of Sydney, do not you think it would be absolutely impossible for them to ever reach the capital with our land forces intervening? For the credit of my adopted country, I say positively, yes. We could drive them off as we would drive pigs into the sea.
10384. *Mr. Quinn.*] We would take them prisoners at once? Yes. The great Napoleon never thought of assailing a city with a force numbering less than 10 per cent. of its inhabitants, and as we have nearly 500,000 men in and around Sydney, on that basis 50,000 men would be required for a successful attack upon us. I do not think an enemy would attempt to come here with such a force, but their efforts would be mainly directed towards capturing coal ships, and harassing our commerce, and so on. I do not expect a territorial attack.
- 10385.

E. Hixson.

8 Nov., 1900.

10385. You do not think they would attack the capitals? No; I do not.

10386. All we would have to fear would be attacks upon the coastal towns and commerce? Yes, and particularly upon our coal supplies.

10387. That being so you naturally suggest that what we ought to have is coast defence ships which would enable us to prevent that sort of thing—to go out and meet them? Yes.

10388. Do not you think that the auxiliary squadron belonging to the Royal Navy would be sufficient to repel any raid? I think so, except there were an extraordinary combination of nations against us; but it is always the unexpected that happens, and as I stated just now it would be discreditable to a population of four or five millions not to have any defence against an enemy who might come against them.

10389. You say that, irrespective of what the Royal Navy may be able to do, we ought to be in a position to protect ourselves? Yes; I think the point raised by Mr. Meagher, of having a depôt here, is a most important one. I think we ought to have the means of helping the Old Country if she required it by presenting a formidable defence.

10390. *Mr. Meagher.*] Do you know that a high naval expert, not more than twelve months ago, wrote to the *Morning Post* an article which created a good deal of discussion, in which he referred to the old and obsolete machinery in connection with the auxiliary squadron;—the attack was not satisfactorily answered? I think I remember something about it. It is only within the last five or six years that the British nation has awakened to its actual necessities in the matter of sea power.

10391. *Mr. Quinn.*] That is so, and I think Lord Randolph Churchill started the campaign? Yes, and I think Captain Mahan, the American naval expert, did more than anyone else to wake up the British nation to its naval shortcomings.

10392. And also Lord Charles Beresford? Yes; he did a great deal.

10393. Now, supposing Great Britain, in some great emergency, such as has been forecast by Captain Mahan, were to find that she had to take away a portion of her squadron from here, say up to China—? She did take three ships away the other day.

10394. Yes, and that is some indication of what might happen in a more serious emergency;—a situation might arise in which Great Britain might for the time being have her hands full and might tell us that we would have to safeguard our own coasts? Yes.

10395. In order to do that effectively, it is your opinion that we should provide for a naval defence in the shape of coast defence ships? Most decidedly.

10396. Have you any idea how many would be necessary? I think it would be a matter of money. I could double my forces in a week if the Government would give me the means of so doing, but it is really a matter of money, and as to how much the country will devote to defence purposes.

10397. In regard to these ships? They would be very expensive, and it is the expense that will control the matter very largely. I should say that Sydney ought to have a couple of good efficient cruisers, Melbourne ought to have the same, and Adelaide the same.

10398. That would run the federation into the expenditure of some millions of money? It would not be millions if the Home Government would lend us the ships. If you had to purchase ships you could run into millions very soon, as a first-class liner now-a-days almost runs into a million.

10399. That would be a very serious matter for the federation? Yes.

10400. You contemplate that the British Government would lend us the ships? Yes, I think the British Government would be more inclined to do it than perhaps it would have been some time ago. They recognise the part we have taken in South Africa, and they are also pleased at our having sent the Naval Contingent to China, and I am quite sure that the Home Government would be more inclined to be liberal now than before.

10401. Do you think second-class ships would be sufficient for coast defence purposes? If we could not get first-class ships we might have second-class vessels, but of course first-class ships would be the best.

10402. The ships that an enemy would send here would probably be very swift cruisers? Probably they would; but they would be sure to be short of coal. Coal is now a very vital matter in war, and they would probably hang off Sydney and Newcastle and endeavour to capture our coal ships, and then go into various places of shelter and empty them.

10403. I suppose that your guns that have been pronounced obsolete are actually so? Yes.

10404. And they would have to be renewed? Yes.

10405. And that would be a very expensive item? Yes.

10406. Have you applied for a renewal of your armament? Yes.

10407. And it has not been granted? The Government has promised me, but they have not given me the satisfaction of knowing that they have actually sent for the guns.

10408. Are these men who have joined your force after leaving the British Navy naval reserve men? No.

10409. They would not be liable to be called away? No; they get their discharges absolutely after ten years' service.

10410. *Mr. Wilks.*] Do I understand that you have complained that the annual vote is too small for the Naval Forces? Yes; I think that the naval vote has always been neglected.

10411. I suppose that you have made regular complaints about that? Occasionally.

10412. Are your forces fully officered now? Yes; but a number of my officers are in China.

10413. I mean, as your forces stand now, are they fully officered? No.

10414. But if the Naval Contingent returned from China your forces would be fully officered? Yes.

10415. Is the matter of the appointment of officers under your control? I recommend, and, as a rule—in fact, invariably—the Government accepts my recommendation.

10416. You nominate, and they accept? Yes.

10417. Have you any system of examination for officers after appointment? Yes.

10418. Have the majority of your officers passed the necessary examinations? Yes; all of them.

10419. In regard to the rank-and-file, chief petty officer is the highest rank? Yes.

10420. Has there ever been any occasion on which a chief petty officer has been advanced to the position of a commissioned officer? Yes.

10421. Is there ever much inclination on the part of these men to take commissions? Not often. Lieutenant-Commander Gardiner, who commands at Newcastle now, was in the ranks at one time, and only a few days ago I recommended Instructor Rickwood for a commission.

10422. You favour the advancement of suitable men from the ranks to the position of commissioned officers? Yes; but the men must be exceptionally suitable before I would depart from the ordinary custom.

- F. Hixson. custom. The usual course is for officers to join as cadets, then advance to midshipmen, sub-lieutenants lieutenants, and commanders; and if we take men from the ranks it is somewhat a slur on those men who are mounting the ladder of promotion.
- 8 Nov., 1900. 10423. What is your experience with regard to men who have been advanced from the ranks to commissions? Mr. Gardiner and Mr. Rickwood are excellent men.
10424. It is a practice you would continue? Yes, if I saw a man in the ranks doing exceptionally well and he was otherwise suitable I would be delighted to recommend him for promotion.
10425. Is that generally known amongst the men? I could not say whether it was generally known. If a man becomes an officer there is some little expense and trouble attached to the position. I have never had any complaint whatever on the subject about which you are now questioning me.
10426. Then I am to understand that the cost of the upkeep of an officer in the Naval Forces would be a serious obstacle to many men advancing from the ranks? Yes.
10427. How could that be overcome? I do not know very well how it could be overcome—the same system prevails in the Royal Navy. Occasionally a man reaches the rank of Warrant Officer, and then he is recommended for a commission, but there is some little difficulty in the matter of his equipment, &c., and I presume the same sort of trouble would prevail here.
10428. What is the main element in connection with the expense attached to an officer's position—the purchase of a uniform? Yes.
10429. Do you know of any recommendation that would minimise that? I think that the force is now in a state of transition. The report I have just handed in will, I fancy, be taken up by the Federal Government and approved by the Home Government, and I do not know that I would feel called upon just now to make any recommendation in that matter.
10430. You have already made a recommendation? I have committed my views to paper in that report.
10431. Is it not necessary in the Naval Brigade that the men should have had either naval or mercantile marine experience? Yes.
10432. That does not apply to the officers? No.
10433. Do you not think that is a weakness? It is a weakness; but there is a difficulty in obviating it. The officers come in as cadets, and as they gain experience they go on as midshipmen and sub-lieutenants.
10434. They come under the designation of midshipmen, but they have no possible chance of naval training or marine experience, so that they are dubbed midshipmen, whereas they are probably only in the same position as sub-lieutenants in the Military Forces? Yes; it is a weak point in our system.
10435. Whilst the men have had a positive sea-training, the same advantage does not prevail with the officers? No.
10436. Then it is a weakness in your company that the officers have not the same sea-going qualities that the men possess? Yes.
10437. Is it not your opinion that that difference should be removed? I should be very glad to remove it if I had an opportunity of doing so.
10438. Then the only ready means of doing that would be by the immediate adoption of a training-ship? Yes; I think so.
10439. Was your company in a better state of efficiency when you had the "Wolverene," with all her obsolete armament aboard, than it has been since? Yes, most certainly; the officers did then get a little sea-training.
10440. And you miss that annual training now? Yes.
10441. And you are simply trained as land forces now? Yes; that is all.
10442. While your men are dressed as men-o'-war-men, they do landsmen's work? Yes.
10443. With regard to the Naval Brigade and the N.A.V., do you favour the amalgamation of those forces? Yes; if we have a training-ship, certainly.
10444. If we have a training-ship, you would recommend the amalgamation of those forces? Yes, under Federal regulations.
10445. It would be to the general interest of the community that they should be? Yes; to have one naval force.
10446. With a larger vote you would be able to have naval reserves instead of military reserves? Yes.
10447. With regard to the torpedo section you have excellent instruction? Yes.
10448. From Mr. Rickwood? Yes.
10449. He is looked upon as one of the finest of instructors? Yes; a most excellent man.
10450. And the section of men who drill under him are excellent men? Yes.
10451. But you are weak in your torpedo plant? Yes.
10452. And the only drilling-ground you have is in Rose Bay? Yes.
10453. With faulty and unsatisfactory appliances? Scarcely faulty, but obsolete.
10454. And you also admit that these torpedo-boats are out of date—that even in moderate weather they could not go outside the Heads? Yes.
10455. *Chairman.*] In what relation does Captain Bosanquet stand in regard to the naval forces? He commands the Naval Artillery and also the men in charge of the torpedo plant.

ADMINISTRATION OF THE MILITARY DEPARTMENT.

APPENDIX.

A.

[To Evidence of Colonel H. D. Mackenzie, A.A.G.]

RETURN OF CONTINGENTS TO SOUTH AFRICA.

1st Contingent.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
Lancers .....	38	Captain and Temp. Major Lee, G. L...	Kent .....	30/10/99.
1st Australian Horse .....	34	Lieut. Dowling, W. V.....	Langton Grange .....	13/11/99.
Mounted Rifles.....	99	Captain Antill, J. M. ....	Aberdeen and Langton Grange.....	3/11/99 and 13/11/99.
Infantry.....	125	Captain Legge, J. G. ....	Aberdeen .....	3/11/99.
Army Medical Corps .....	93	Colonel Williams, W. D. C. ....	Kent... ..	30/10/99.
	461			

"A" Battery.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
"A" Battery .....	175	Colonel Smith, S. C. U. ....	Warrigal .....	30/12/99.

Lancer Detachment.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
Lancers .....	41	Captain Nicholson, C. E. ....	Australasian .....	16/2/00.

2nd Contingent.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
Lancers .....	15	.....	Moravian .....	17/1/00.
1st Australian Horse .....	105	Captain Thompson, R. R. ....	Surrey.....	20/1/00.
Mounted Infantry .....	425	Lieut.-Colonel Knight, G. C. ....	Southern Cross.....	21/1/00.
Army Medical Corps .....	117	Major Vandeleur-Kelly, R. ....	Southern Cross and Moravian .....	21/1/00 and 17/1/00.
Nursing Res. Nurses .....	14	Lady Superintendent Gould, E. J.....	Moravian .....	17/1/00.
	676			

Australian Bush Contingent.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
Australian Bush Contingent.	525	Lieut.-Colonel Airey, H. P., D.S.O. ...	Atlantian and Maplemore .....	1/3/00 and 2/3/00.

Imperial Bush Contingent.

Corps.	Strength.	Commanding Officer.	Transport.	Date of Departure.
Imperial Bush Contingent ...	762	Colonel Mackay, J. A. K. ....	Armenian .....	24/4/00.

B 2.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

GENERAL ORDER 4.—PARAGRAPH 1.

Head-quarters, Victoria Barracks, Sydney, 9 January, 1900.

1. For officers proceeding with the Contingent, now being organised, the Government has approved of the following Outfit rules:— allowances.

- (a) Officers requiring to be mounted will be provided with horses at the public expense, an officer providing a suitable horse will be paid a fair price therefor, and may continue to have the use of him. Officers who prefer to retain their horses can do so at their own risk. It should be understood that the Government do not propose to bring back any horses.
- (b) Officers are granted the field allowance of their rank to provide camp equipment (other than tents) and other expenses caused by their having to take the field.
- (c) Officers of the P.P. and Volunteer Forces who have now drawn any allowance for uniform during the past three years, either direct from Government or from Capitation Funds, may draw the following sums towards outfit, viz.: Mounted officers, £25; dismounted officers, £20. Officers who have drawn sums less than these may not draw the difference.
- (d) Officers of the Permanent Forces or Staff will not draw any outfit allowance; mounted officers of the P.P. Forces who have been in receipt of forage allowance will not draw the higher rate shown in (c).

## C 1.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

D.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

MINUTES of a Meeting of the Military Central Clothing Board, held at Head-quarter Staff Office, Victoria Barracks, Sydney, on Wednesday, 20th June, 1900.

Present —

President—Colonel C. F. Roberts, C.M.G., A.D.C., Military Secretary.  
Members—Lt.-Col. and Bt.-Col. J. E. D. Taunton, Assistant Quartermaster-General: Captain J. H. R. King,  
Acting Staff Officer for Engineer Services.  
Secretary—Major M. M. Boam, D.A.A.G., and S.O. for U.V.F.

1. Minutes of previous meeting were read and confirmed.

Helmets.

2. Messrs. Anderson, Duncalfe, and Dunkerley attended the meeting, the two latter at the invitation of the Hon. the Chief Secretary. (*Vide* correspondence No. , C.R. .)

The President stated that the Board had received a letter of instructions to inquire into the matter of helmets issued to the Contingents sent to South Africa, and those supplied to the N.S.W. Military Forces.

Mr. Duncalfe, in reply to the President's query as to what they were present for, stated that they (Mr. Dunkerley and himself) had received a letter from the Principal Under Secretary asking them to come and examine some helmets that were supplied to the N.S.W. Contingent.

The President pointed out that the Board had no samples before them of helmets that had been brought back from Africa.

Mr. Duncalfe said they wanted to examine returned samples, or the same class of goods as sent out.

The Board, in the absence of any samples from South Africa, produced a specimen helmet of the class supplied to the Imperial Bushmen's Contingent.

The specimen was handed to Mr. Duncalfe for examination. (*Viz.*, the sealed pattern.)

Mr. Duncalfe asked if the helmets were supposed to be made of a certain class of goods.

The President replied that there was no specification furnished in connection with the same, as time would not permit.

The President asked Mr. Duncalfe to state his objection to the helmet, who said, in reply, that the objection was that it had a felt body. It was like a pulp—like a piece of wool—and soon as ever the slightest amount of water got into it, it was absorbed and became soft, there was nothing in it to hold it back. These sort of helmets were not good for wear.

Mr,

Mr. Dunkerley, on being asked to express his objection, said he endorsed every remark that had been made by Mr. Duncalfe, adding, that before the helmets went out he objected to them. The helmet was no good whatever for wear.

The President asked Mr. Anderson if he had anything to say about the helmet, and why it was submitted.

Mr. Anderson replied that to his judgment the felt would be better than gossamer, which was his reason for submitting it. It (the body) was made up of felt prepared in the same way as gossamer, and covered in the same way. The helmet had been knocked about. He did not think the sample in his hand was ever intended to be sealed when he brought it up. As to the felt not wearing as well as gossamer, of course, he had to leave that to their judgment. The felt was made of wool, felted together with a great deal of trouble, and made very strong, was then prepared with certain solutions to prevent the water getting into it, just as it would prevent into calico. He could not see any objection. The helmet was made of exactly the same material as that hat (*referring to a hat lying on the table*). As far as he could judge, it required considerable experience and experiments to find out which was the best, but would say decidedly that the sample was the best. So far as wear was concerned, you could not break it. His only objection to the helmet was that it was a little bit too heavy.

Mr. Duncalfe said that it seemed to him that, so far as he had seen the helmets, it had been a series of experiments. They who had manufactured these helmets had not really understood what they were doing. To bear out his statement he would simply appeal to the wear of the helmets that had been sent to South Africa. The President would remember him coming up and objecting to them going away.

The President pointed out that it was then too late. It was no use objecting a day or two before.

Mr. Duncalfe replied that there was plenty of time.

The President replied that, when Mr. Duncalfe was asked how many he could make in the stipulated time, he said he could not do it.

Mr. Duncalfe said he was not asked. If Mr. Anderson had not had the blocks for this particular shape, he would not have taken the contract for 250 helmets. He said he would buy blocks that would be of use to him, *i.e.*, of a regulation pattern. He asked Major Boam, when out at Randwick, what use these peculiar shaped blocks would be if he got them. If they would use any more of that shape, and Major Boam replied, "No, the military authorities would not have it."

Major Boam said that he remembered showing Mr. Duncalfe the helmets, and saying that was the pattern decided upon, and asking if he could undertake to make them. In reply to that, he (Mr. Duncalfe) said it would necessitate him getting special blocks, and obtaining these meant a very large outlay, therefore, he would not undertake it. Mr. Duncalfe made reference to Mr. Anderson having these special blocks on hand, therefore he was in a position to undertake the contract. He (Major Boam) would inform the Board that he did not know whether Mr. Anderson had the special blocks on hand or not, but he had to make the helmets to a pattern given him. If he had the blocks on hand he was very fortunate, but it seemed a strange thing that he should have had.

Mr. Duncalfe stated that he did not know whether Mr. Anderson had the blocks, but it was evident that he made the pattern from this block. Mr. Anderson knew whether he had the blocks. He was satisfied that he (Mr. Anderson) would not go and get the blocks, turn out 250 helmets, and get sufficient blocks to turn them out in three weeks.

Mr. Dunkerley pointed out that the discussion seemed to be converging between certain manufacturers. He was representing a body of men. He had been to see the President, together with another man. They simply required public competition for military work; that was their complaint at the time, besides complaining with regards to the hats sent away. The helmet sent would never serve.

The President asked Mr. Dunkerley if, practically, his complaint was that public tenders were not called.

Mr. Dunkerley replied in the affirmative, adding that when public tenders were called they would be able to produce hats that would be a credit to the Colony. The helmets sent were simply a disgrace.

Mr. Duncalfe stated that Mr. Anderson said that he had got, in his opinion, a helmet that would wear. He wished to show that Mr. Anderson did not know what he was talking about.

The President said that was a matter of opinion, and requested Mr. Duncalfe to state his objection to the helmet.

Mr. Duncalfe replied that his objection to the helmet was that it was made of an article that was of no earthly use. It was a helmet made to look at, not wear.

The President remarked that Mr. Dunkerley had complained that public tenders had not been called for, and asked if he concurred in this complaint.

Mr. Duncalfe stated he wished to complain of the class of goods, and also about public tenders not being called for.

Major Boam pointed out that tenders had been called for for helmets before the Contingent came into question.

Mr. Duncalfe said they had not been persistently called for. They were called for by tenders, but not for that line (helmets) alone.

Major Boam replied that they were, and Mr. Duncalfe said that he begged to differ.

On a reference to papers relating to the contracts, Major Boam's statement was found to be correct.

Mr. Dunkerley remarked that they would like to have the sections divided, and advertisements inserted for "Helmets" only.

The President replied that when Mr. Dunkerley came to see him, he pointed out that the contracts were let in sections, and said that there would be no objection to his contracting for hats or helmets; that he could take the contract for any particular section, and he would be held responsible for its due fulfilment. He could get them where he liked. What Mr. Dunkerley required, he understood, was the protection of the trade by dividing the contract for hats and helmets.

Mr. Dunkerley replied that that was correct, the President had grasped his meaning entirely.

Mr. Dunkerley pointed out that when certain trades are divided a better article is obtainable.

The President said they were not allowed much time to arrange for the helmets, &c., and was sure that Mr. Duncalfe told him he could not take the contract at the time.

Mr. Duncalfe replied that he contracted for 250 in three weeks, and 500 in five weeks. He had to get blocks made for them.

The President said Mr. Duncalfe was informed that five weeks could not be given him.

Mr. Duncalfe assented to this remark, and added that when he went to see Major Boam at Randwick was the time when he said he could do the 250 in five weeks; it was said they would have to be delivered in three weeks, but they were not delivered in anything like that time.

The President asked if it was worth their while going on with the matter. There was no complaint against the New South Wales Bushmen or the Imperial Bushmen's helmets?

Mr. Duncalfe replied that the letter he had received from the Secretary read "sent out to the Contingents." He condemned the helmet submitted as useless. He would guarantee that if Mr. Anderson made that class of helmet and took it to any firm, he could not sell it. Mr. Anderson was trying to tell the Board that the felt was as good as gossamer. He considered that it was much covered up.

The President pointed out that the Board had no specimen before it of helmets issued to other contingents, which had been complained of.

Mr. Duncalfe asked if there had been any other helmets issued lately that the Board had anything to do with? The same class of helmet had been issued to the Irish Rifles.

Colonel Taunton stated that on the account appearing in the press of the headgear of our men being like the Boers, he was instructed to endeavour to obtain 500 or 600 helmets. He asked Mr. Anderson and Hordern's if they could supply brown helmets, and they replied no. He did not know of Mr. Duncalfe's firm at that time. Mr. Anderson came up to the General, and said that he had got so many white helmets that he was going to supply to the 2nd Regiment, and he could stain them. To this the General agreed.

Mr. Dunkerley remarked that the helmets that were stained turned out to be no good; they were gossamer helmets.

The President asked what proof he had that the helmets were no good.

Mr. Duncalfe said he presumed there would be samples there. The President handed to Mr. Dunkerley a sealed pattern helmet for the Irish Rifles.

Mr. Dunkerley said that the sample had a felt body, the only difference was that it had calico on it. A gossamer would wear a of that sort out.

Mr. Duncalfe said that he had not seen any of the helmets brought back from the Cape; he had merely seen the account in the Press that Mr. Sleath had brought back samples of certain articles. He had seen a helmet as worn by one of

of the camp. He could not supply cork helmets in six weeks' time, but could supply a gossamer helmet. The gossamer will not stand at the side of a cork helmet. It would be impossible to get cork helmets within six weeks' time.

Mr. Anderson, in reply to Colonel Taunton, said that he believed that the helmet he supplied to the Artillery was the same as the cork pattern.

The President remarked to Mr. Anderson that he ought to know, and asked if the Artillery were getting cork helmets or not.

Mr. Anderson replied that he believed so, but did not know for certain.

Mr. Duncalfe stated that his contention was that they were all supposed to be cork helmets, but they had not been supplied cork.

Mr. Anderson, in reply to the President, said that he imported them.

Mr. Anderson, in reply to Mr. Duncalfe's query, whether he or his men could make a solid cork helmet, stated they were not in a position to do it at the present time.

The President asked Mr. Anderson if he imported the helmet submitted (this was afterwards shown to be one of the imported helmets), who replied that they did not make them here, they imported them; he did not think anyone in Sydney made them. If the sample was a cork helmet, it was an imported one.

Mr. Dunkerley said that they wanted those things made here as soon as they possibly could. It would give a fair opening, and be an inducement for competition in one line.

Colonel Taunton pointed out that tenders had been called for for helmets for the Irish Rifles, amongst other things, and Mr. Dunkerley said they wanted the sections to be divided.

Major Boam asked what if it were insisted that the helmets should be made with the patent stops.

Mr. Duncalfe said that they could not be obtained without the royalty was paid. When he gave a price for that helmet, he had to take into consideration everything connected with it, because, if he were going to execute the order, he would expect it to be the same quality.

The sealed pattern of cork helmet for the Partially Paid troops was submitted.

Mr. Duncalfe stated it was a substitute, if it was meant for cork.

Major Boam drew attention to the fact that the Irish Rifles did not specify that the helmet should be cork.

Colonel Taunton pointed out that the Board did not make the contracts for the Volunteers. They made their own, and therefore could specify what they liked.

Mr. Duncalfe said that Mr. Anderson was making the helmets for the R.A.A., and they were supposed to be cork. Permission was granted him to ask Mr. Anderson whether all the helmets that he had turned out for the R.A.A. had been solid cork.

Mr. Anderson replied that if they had been made in Sydney, they were not solid cork. He had imported a great many. He could not make them, he had not got the material. He was now importing material.

The President asked if he would admit that possibly he had supplied some helmets that were not cork?

Mr. Anderson replied "quite true."

The President then asked when that was likely to have occurred?

Mr. Anderson replied that he could not tell. "It would only be in a case where they were wanted in a very great hurry."

Mr. Duncalfe asked if every helmet that had come to the barracks and delivered as a new solid cork helmet had always been a "new cork helmet?"

Mr. Anderson replied "with the exception of the body."

Mr. Duncalfe pointed out that Mr. Anderson had admitted that he got the old helmets. They strip the old cover off. He then asked if it was not a fact that, when stripping off the cover, they could help pulling off the cork?

Mr. Anderson replied no.

Mr. Duncalfe asked if Mr. Anderson could take all the cover off without taking some of the cork off too?

Mr. Anderson replied that they never used them if it did.

The President here interrupted the questioning, and asked Mr. Duncalfe if his contention was that Mr. Anderson was not supplying cork helmets where he ought to do so.

Mr. Duncalfe remarked "And second-hand at that."

Mr. Anderson said he had not done that by way of deception. He had made no secret of it.

Mr. Duncalfe pointed out that it was not according to contract.

The President asked Mr. Duncalfe if he was not running away with some question brought forward by one of the Ministers. The Board had assembled to hear complaints made against helmets supplied. Mr. Duncalfe's contention was that Mr. Anderson did not supply to the Permanent Artillery cork helmets; further, that he (Mr. Duncalfe) contended that the helmet now being supplied to the Irish Rifles was not a cork one. This was the fault of the Corps, because they had chosen the helmet themselves.

Mr. Duncalfe remarked that they would not have chosen it had they known that it was only to last as long as those supplied to the Bushmen.

The President said that they had nothing to do with the case, as they could have gone to Mr. Duncalfe if they had wanted advice.

The helmet submitted to Mr. Duncalfe was placed before the Board and identified.

Storeman Broadbent was called, and stated that he had placed the helmet under a shower bath, with the water turned slightly on. It had not been there for more than an hour when the water went right through it and lodged under the bands; it was quite soft. The Irish Rifles helmet had not been under the water twenty-four hours.

On Mr. Duncalfe remarking that the Irish Rifles' helmet had not been under water, the President asked him if he would not admit that the man ought to know what he did. Mr. Duncalfe replied "Yes."

Mr. Duncalfe, in reply to the President's query if he had not admitted that his helmet would go under water, said "Yes," and that he brought it to be tested.

Storeman Broadbent withdrew.

The President to Mr. Dunkerley, stated that the Board practically were in accord with his contention in regard to splitting up the contracts into sections.

Mr. Dunkerley would not admit that they could get cork helmets in six weeks. If they had been in the habit of manufacturing them in Sydney it might be done; but this never having been done, they would have to send home for the cork. No guarantee was required that they should receive the contract, so long as it was competition. Pointed out that the helmet furniture should be supplied by the military authorities. The getting of the cork was a mere nothing, so long as it was known that advertisements were placed in the papers to allow of competition. The number worth tendering for would be from 500 to 700; about 500 for a start.

Mr. Duncalfe pointed out the necessity for ordering a considerable number of sets of cork at a time, as a few hundred sets counts for nothing with the manufacturers.

Colonel Taunton pointed out that there was nothing to prevent them sending in their tenders direct to volunteer regiments.

Mr. Duncalfe said they had got no possible means of ascertaining where those people were to be found when there was nothing given out. He did not know when the Irish Rifles' helmets were given out; had he known he would have tendered.

Colonel Taunton pointed out that he could have put himself in communication with the regimental officers. As regards the Partially Paid, the Board arranged their contracts.

The President submitted one of the R.A.A. helmets.

Mr. Duncalfe pointed out that it was not one of Anderson's make, and that if you sent down to Anderson's for 500, and he had not that quantity of cork, he would make the number up with others.

Q.M.S. Hartnett was called, and directed to produce samples of artillery helmets.

Q.M.S. Hartnett stated, in reply to the President, that he had no knowledge of having received from Mr. Anderson helmets that were not cork, or made-up cork.

Mr. Duncalfe pointed out that Mr. Anderson had stated that, if he happened to run short of the cork helmets, he substituted others.

Mr. Anderson, in reply to the President, said he could not remember how long ago it was since he had substituted others for cork, but it had only been done if they were in a very great hurry,

Q.M.S.

Q.M.S. Hartnett, in reply to the President, said he had never noticed any helmets come in that were not correct. They did not always have Mr. Anderson's stamp on ; sometimes they were perfectly plain—no leather on.

In reply to Mr. Duncalfe, he said he had not got any without a velvet binding, and these (referring to sample) particular studs.

Mr. Duncalfe, referring to two N.S.W. Artillery helmets before the Board, pointed out the difference in the leather bands inside, which meant a difference of 3d. in the cost.

Q.M.S. Hartnett, in reply to the President, said that the helmets for the R.A.A. were imported, but that those for the P.P. Artillery were obtained from Mr. Anderson through the Clothing Board.

Colonel Taunton, in reply to Mr. Duncalfe, said he could not remember the price of the helmets.

Q.M.S. Hartnett withdrew.

W. O. Lyons, A.S.C., was called in, and stated he gave the helmet submitted by Mr. Duncalfe a test with the edge of a sword, by striking it on the top and on the side. It bore the side test, but it broke at the back of the neck. There was no hard substance in the helmet to cut against.

Mr. Duncalfe said he thought there was an improvement, and that the helmet had, in his opinion, stood the sword test.

W. O. Lyons withdrew.

The President pointed out that there had been no complaint about the Imperial Bushmen's helmet.

Mr. Duncalfe said that only one party could be named (Mr. Sleath) who had brought back any articles that were unfit to go. There had been any amount of correspondence about the Bushmen's helmet—he had got a book full of it. In reply to Colonel Taunton, he could make a helmet other than cork to stand the usage of a campaign. The stained helmet that went away with the 1st Contingent was a better one than this (*referring to a helmet on the table*).

Colonel Roberts stated that could be the only one complained of.

Mr. Duncalfe replied no ; it was a gossamer helmet, but he did not know whether it was supposed to be a cork one.

The President again pointed out that the only possible complaint that Mr. Sleath could have brought back was with regard to the stained helmets.

Mr. Duncalfe replied that he did not know.

The President asked Mr. Duncalfe if he candidly believed if the gossamer helmet (the stained helmet) was as good as could be got at the time, excepting cork ?

Mr. Duncalfe replied yes, barring the covers. If he had had the contract, it would have been a gossamer helmet, and he would have stated that he could not make a cork one in the time. He admitted, in reply to the President, that it was the best article that could be got at the time.

The President stated that the difficulty was to find out when Mr. Anderson supplied other helmets in lieu of cork.

Mr. Duncalfe said it was three years ago to his knowledge.

The President pointed out that there had been a sort of inquiry, and that it had nothing to do with this matter.

Mr. Duncalfe said that it was a very strange thing if he was turning out the very same thing now, and the President replied that it did not affect Mr. Anderson as they were sitting now.

Mr. Duncalfe assented, and said that Mr. Anderson was the contractor for the R.A.A., and if he were asked to supply 300 cork helmets in six weeks' time he could not do it ; he would have to substitute others.

The President reminded Mr. Duncalfe that that was no business of theirs.

The President asked Mr. Duncalfe if he admitted that cork helmets could not be made in Sydney, if an order was given at the present time, under four or five months, who replied "No" ; he had ordered cork last week, and it could not be made within four or five months. He was prepared to tender for cork helmets, if in sufficient numbers. He was perfectly willing to make helmets, but would like the military to supply the furniture, as there was great difficulty in getting the ornaments here.

The President asked if their contention as helmet-makers was that if they got a fair demand, and the ornaments were supplied, they would be ready to make them, to which Mr. Duncalfe replied in the affirmative.

Mr. Duncalfe, referring to his sample helmet, said he would try to get the wire of a stronger quality.

Messrs. Anderson, Duncalfe, and Dunkerley withdrew.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

Minute Paper.

Head-quarters Staff Office, Sydney, 7 September, 1900.

THE G.O.C. would like any remarks you wish to offer with regard to Mr. McIvor and the evidence (as per attached) given by him before the Select Parliamentary Committee on 30th ultimo.

To. Vet. Surgeon Bowker, care of Police, Police Station, Lismore.

H. D. MACKENZIE, Col., A.A.G.

Minute Paper.

Subject :—Evidence given by Mr. C. McIvor before the Parliamentary Select Committee.

Head-quarters Staff Office, Sydney, 7 September, 1900.

WITH reference to the evidence given by Mr. C. McIvor before the Parliamentary Select Committee, on the 30th ultimo, I have the honor to request that the following remarks relative thereto may be brought to the notice of the G.O.C. :—

Witness, Mr. C. McIvor, was never officially connected with the despatch of any mounted Contingent. He was an applicant to go as a veterinary officer, but not being able to produce any qualification whatever, his application could not be entertained. He used to hang around the camps all day long, and, from Captain Le Mesurier and other officers listening to his stories, he no doubt presumed that he had some connection with the Contingent. His main evidence refers to Lieutenant-Colonel Knight's Contingent, of which I know little, as Veterinary Lieutenant Bowker was Camp Officer, and Captain Gribben, Principal Veterinary Surgeon, supervised. The greasy heels alluded to were not at all caused by the picketing-straps, but by horses getting their hind legs over the halter-ropes. This could not be avoided, as from the number of fresh horses coming in daily, there was no time to properly train them. Giving lucerne hay at first was not at all injudicious. As the horses got more work, the lucerne hay was cut down and oaten hay in increased quantities substituted, as the records of the Supply Officer show. The horses stood their work well, and all shipments were very favourably reported upon by the Imperial Veterinary Officers at Capetown and Beira. In the particular case referred to there was some delay in supplying the shoeing requisites, as the forge had to be brought from South Head. To state that it took four trips to get a forge is decidedly untrue.

As to the forage supplied on board ship, everything was of good quality, and the lucerne hay was not supplied by contract, but was the best that could be purchased in the open market.

A few horses that had done harness work were purchased, but in some cases these were for pack-horses ; others were quite young horses that were only half broken to harness, and were not in any way screwed or unsound.

SYDNEY T. D. SYMONS, Lieut.,  
Acting Principal Veterinary Surgeon.

To the Assistant Adjutant-General.

Murwillumbah, Tweed River, 17 September, 1900.

Sir, With reference to the attached papers, I have the honor to submit the following remarks upon Mr. McIvor's evidence, viz. :—

In answer to Question No. 4425, I have no idea of Mr. McIvor's capabilities as a stock expert, and in fact do not quite understand what he means by the term. I was informed by Captain Gribben that his services as a veterinary officer were refused upon the grounds that he possessed no qualifications which would entitle him to the position.

4426-4427. Since Mr. McIvor's services were refused by the Veterinary Department, and also by the other branches of the Military Department, I should like to know upon whose authority he was allowed to interfere with the organization of the Second Contingent. Shoeing-smith Gribben, whom I placed in charge of the horses upon the sick-lines, complained to me about Mr. McIvor's interference with his work, and upon this complaint I interviewed Mr. McIvor and warned him against visiting the sick-lines, telling him that the horses in those lines were under my supervision, and [that I did not require his suggestions or interference in any way. With regard to the heel-ropes, I am of the opinion that, provided the horses are properly picketed and looked after, there is little chance of them doing themselves much injury. The worst case of cracked heels which I had to deal with was a horse called "The Joker," which belonged to one of the staff officers, This horse had been frequently picketed at the encampments, I believe.

Most of the injuries which occurred upon the lines were due to carelessness upon the part of the men. This, in reality, was no fault upon the part of the officers, for I frequently heard the officers warning the men about their carelessness. I frequently walked down the lines, and noticed horses with their head-ropes loose (undone), and were simply tied up by the hind legs ; in fact, a chestnut police horse dislocated his hip by this means.

Leading a horse about with the heel-ropes on is a dangerous practice. A trooper in the Australian Horse lines, I believe, adopted this plan ; the horse broke away from him, bolted round the grounds, fell, and dislocated his shoulder. Then, placing a horse upon the lines with loose heel-ropes on is a dangerous practice, for he is likely to kick the adjoining horse.

A great source of danger was allowing the public to promenade through the lines, thereby unnecessarily disturbing the horses.

With regard to the hospital lines, I thought it advisable to alter the position of these lines, and I had hospital lines put as far away from the general traffic as possible, and had men detailed to look after these lines.

I only remember four horses that were injured at the jumps, and strange to say these horses were reputed to be good jumpers. As far as the selection of horses for the jumping tests was concerned, I am of opinion that the officers used all the discretion in their power to select fit and proper horses for such purposes.

With regard to the forage, this was selected by Captain Gribben, and upon the whole was of very good quality. With regard to the lucerne hay, I am of the opinion that a little lucerne is good in preparing horses for a long sea trip ; if Mr. McIvor remembers correctly, the horses of the Second Contingent were also fed upon oaten hay, which was of very good quality.

The horses upon board ship were fed upon chaff, bran, oats, oaten hay with lucerne hay, and boiled linseed, occasionally. The best samples of English hay contain a great percentage of red-clover, which is also a highly leguminous plant, and is just as likely to give rise to diuresis as lucerne hay. Although

Although the Imperial transports were like palaces in comparison with ours, their losses amongst the horses were enormous in comparison with ours.

The Imperial transport officers were surprised at the condition in which our horses arrived in Capetown.

The horses which I had charge of upon the s.s. "Surrey" were disembarked upon the Saturday and went off to the front upon the Tuesday following, which, in itself, speaks well for the management of our horses.

With regard to the forges and fittings, they arrived at camp as soon as I was ready to receive them, for in the first place I had to select men capable of using these tools, and then had to supervise the shoeing.

4429. Some of the saddles and girths were certainly a poor lot.

4430. With regard to the fittings under the saddles, such as the namma, which was there to keep the blanket free from sweat and dry, and the oilskin sheeting, these articles are indispensable, and surely Mr. McIvor must admit that placing them under the saddle is the best means of carrying these articles.

With regard to the selection of the horses, I do not remember having passed a single 'bus-horse, and I am sure I could detect one if saw one. All horses which Colonel Airey purchased in my presence were carefully examined by me for age and general soundness, and if I detected the slightest signs of unsoundness the horse would be rejected.

To use Mr. McIvor's own terms, the only so-called officers' crocks which I remember having passed, and which were purchased, was a beautiful bay mare sold to Lieutenant Holborow by Captain Onslow Thompson, and eight or nine good serviceable young horses brought from the South Coast by Major Weston.

A great many of the horses purchased were brought to the camp by the Volunteers themselves to be used as their own mounts.

4439. In my opinion the horses selected for the Second Contingent, as far as time and supplies of horses would permit, upon the whole, were a serviceable lot.

4460. I have my doubts about this statement.

4461. The orders which were sent out to Camp were instructions from the Imperial authorities saying not to accept horses over 15'3 for cavalry purposes, and over 15'2 for mounted infantry purposes. The statement that more attention was paid to the height of the horses than general soundness is positively untrue.

4464. Few horses were in reality injured at the jumps.

4468-9-70. I believe this statement to be untrue.

4476-77. None of these horses were purchased in my presence, as far as I can remember.

4491. Mr. McIvor had nothing to do with the selection of Captain Le Messurier's horse. The Captain's own horse was a good serviceable horse, but was too high for the Captain, so he asked me to select him a more suitable horse, and I advised him to buy one that Mr. Phillips from Potts' Point brought in for sale, aged 6 years, 15 hands high, and sound. The Captain tried this horse, liked him, and purchased him. I do not know whether Colonel Airey purchased the Captain's horse or not.

4494. Colonel Airey informed each private, as his horse was purchased, to take him to the lines, look after him, and keep him for his own mount.

4497. I do not believe this statement. Major Lenehan had his own horse "Satan" at Camp, but the Major did not think that his horse would be quite up to his weight, so asked me to select two horses for him. The first I selected was the police mare "Truthful," from Maitland, which the Major liked and kept; the second horse was a brown gelding from the Grafton police (viz., Constable Laidman's mount). I knew this horse as soon as I saw him in Camp, and the Major liked him very much.

Re the so-called commandeering of privates' horses, I might state that some confusion took place when the General and Captain Gribben examined the horses for height. Some of the horses in the Australian Horse lines were too high, according to the Imperial standard; these, of course, had to be discarded and substituted by others from the mounted infantry lines, which were thought to be too high for mounted infantry purposes and more suited to cavalry.

I have, &c.,

H. BOWKER, M.R.C.V.S.,  
Vety. Surg. Lieut.

The A.A.G., Victoria Barracks.

## I.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

Published in *Government Gazette*, No. 842, of 26th October, 1897.

Chief Secretary's Office, Sydney, 22 October, 1897.

HIS Excellency the Governor directs the publication of the following Circular Despatch from the Secretary of State for the Colonies, enclosing a copy of a memorandum of the Colonial Defence Committee regarding Colonial Defence.

JAMES N. BRUNKER.

[Circular.]

Sir,

Downing-street, 7 August, 1897.

I have the honor, with the concurrence of the Secretary of State for War and the Lords Commissioners of the Admiralty, to transmit to you copies of a Memorandum of the Colonial Defence Committee [90 M. 31 Dec., '96] showing the principles which, so far as they apply to the special local conditions of your Government, it is desirable should be followed in dealing with questions affecting Colonial Defence.

This Memorandum substantially reproduces the information contained in the Confidential Memorandum transmitted to you in my secret despatch of 6th July, 1896, with the omission of certain confidential matter. It has been prepared with a view to a more general diffusion of a knowledge of the principles enunciated therein; and your Government will be at liberty to give such publicity to it as they may consider desirable.

I have to add that, in expressing concurrence in the Memorandum, the Lords Commissioners of the Admiralty have pointed out that the sentence in paragraph 2, beginning with the words "To fulfil this great charge they claim the absolute power, &c.," does not apply to cases where distinct agreements exist between Her Majesty's Government and the Colonies in respect of particular ships.

I have, &c.,

J. CHAMBERLAIN.

The Officer Administering the Government of New South Wales.

[No. 90 M.]

COLONIAL DEFENCE.

*Memorandum by the Colonial Defence Committee.*

About six years ago the Colonial Defence Committee drew up a memorandum laying down certain general principles which they considered should be kept in view by the various responsible Governments of Australasia in dealing with questions affecting defence.

These principles have been generally accepted and acted upon in the Australian Colonies, though at times action is still taken there not entirely in accordance with them, while from other parts of the British Empire proposals are still received based on erroneous conceptions of the true policy of a great State having vast interests to defend in all quarters of the habitable world.

The Colonial Defence Committee, therefore, consider that the time has come when advantage will be derived from a further enunciation of the principles which have guided and still guide them in making recommendations to the various Departments of State with regard to the defence of the colonies.

2. The maintenance of sea supremacy has been assumed as the basis of the system of Imperial defence against attack from over the sea. This is the determining factor in shaping the whole defensive policy of the Empire, and is fully recognised by the Admiralty, who have accepted the responsibility of protecting all British territory abroad against organised invasion from the sea. To fulfil this great charge, they claim the absolute power of disposing of their forces in the manner they consider most certain to secure success, and object to limit the action of any part of them to the immediate neighbourhood of places which they consider may be more effectively protected by operations at a distance.

It is recognised, however, that Her Majesty's ships, engaged in hunting out and destroying the squadrons of an enemy, may not be in a position to prevent the predatory raids of hostile cruisers on British ports. The strength of such an attack will vary in the different parts of the world, according to the strengths of possible hostile navies, the proximity of their bases, and the troops that are or could easily be brought there in anticipation of war. It also varies from time to time with changing political combinations. But it is improbable that a raiding attack would be made by more than a few ships, nor could it be of any permanent effect unless troops could be landed. In no case could a greater force than a few thousand men be collected and conveyed without such arrangements and preparation as would bring the operations under the category of those dealt with by the navy. Against a raid of the nature indicated it has been considered necessary to make secure those places which are essential to the navy for coaling, refitting, and repairing. Ports for this purpose have been selected by the Admiralty, and Imperial resources in men and money available for use abroad have been concentrated on their defence. Many of the colonies have contributed largely to their own military protection. In Australian waters defence for naval purposes has been provided by the Colony of New South Wales in the protection that has been given to the port of Sydney, while the defence of certain mercantile strategic positions has been undertaken mainly by the Australian Colonies whose commerce they will protect.

3. Apart from the harbours fortified for the navy, there are other ports which, though they do not enter into what may be called the general strategic scheme, are also liable from their commercial importance to predatory raids, and which require measures of defence for the protection of the special interests involved. The resources of places which, in the opinion of an enemy would justify the considerable risks which a raid on them would involve, are generally sufficient to admit of the provision of local defence by local means, and where the liability to attack and the resources to resist attack co-exist, it has been held to be the duty of the Colony to make provision for adequate defence.

In dealing with places of this nature the Committee have advocated the creation of sufficient fixed defences to resist occupation by hostile cruisers, but more especially the provision of troops sufficient to deal effectually with such forces as an enemy must put on shore to enable him to secure any permanent advantage from his attack. Troops without works may defeat an enemy and frustrate his object. Works without troops are useless and delusive. Is it necessary to lay stress on this fact, as fortifications give an appearance and feeling of security which is not justified unless they are fully garrisoned by well-trained men and supported by mobile forces, and because expenditure on defences involving a heavy outlay at one time and little at another can be more easily fitted into the exigencies of fluctuating budgets than expenditure on troops, which must be constant to be effective. When money is made available in time of anticipated war, there is a tendency to spend it in increasing fortifications and armaments, sometimes already on an unnecessary elaborate and extensive scale, while in time of external quiet and internal financial depression there is a tendency to reduce to a dangerous extent the military forces, which can only be of value if constantly kept up to a state of efficiency in numbers and training.

4. It is scarcely necessary to point out that the system of defence for the whole Colonial Empire must take fully into consideration the special conditions of the various colonies. The organisation of forces in a vast continent like Australia must differ from that of the small body of men whose duty will be to protect the single port of a West Indian island. The colonies of Australia should be in the position to afford each other mutual support by combined offensive or defensive action. An armed police force, prepared to resist the few troops that might be landed from a single cruiser, may suffice to guard the smaller interests of a West Indian town. Again, the defence of Canada, with its long land frontier, obviously requires to be treated on a different basis from that of the small island of St. Helena.

To enable them to deal with these varying conditions on the basis of the general scheme for the defence of the whole Empire, the Colonial Defence Committee have recommended that a scheme, drawn up on certain indicated lines to show the probable strength and nature of attack on each Colony, and how its existing resources could be utilised to the best advantage for defence, should be submitted annually for their consideration and remarks. Such schemes are now regularly received from all the Crown Colonies, and from most of those that are self-governing. The clearer perception of the strategic conditions of each place is shown in the later schemes, and the increase in their definiteness and practicability as they are revised year by year, lead the Committee to attribute the greatest importance to them, and strongly to urge those Colonies which have not already done so to at once take this step towards informing themselves as to what would be their weak points in war, and what means they have for remedying them. Defence schemes are not of mere academic interest. If war with a great power were to break out to-morrow there would be no new data available on which to draw up such schemes if they did not already exist. They would have to be hastily compiled, considered, and adopted, and would probably be considerably above or below the requirements of the case, unnecessarily dislocating the civil progress of the country in the former case, and dangerously risking its safety in the latter.

5. In addition to the schemes which deal, as above stated, with the organisation of existing resources for purposes of defence, various Annual Reports of the Commandants of the military and naval forces of the self-governing Colonies have

have been referred to the Committee, as well as proposals which have been received from time to time by the Colonial Office from the Colonies with reference to alterations in their personnel and matériel. This has enabled the Committee to advise on the organisation, conditions of service, training and equipment of colonial military and naval forces, and on the fortifications and armament of the many defended places abroad. The Committee can, of course, only advise, and, for reasons of local policy or expediency, or for other causes, it has not always been possible for the Colonial Governments to accept the advice that has been given. The failure to do so has sometimes involved them in expenditure which to the Committee has just appeared essential, while sometimes they have effected economies which to the Committee have not appeared wise, and thus have in part marred the completeness of the general scheme of national defence to which so much importance is attributed.

It will be convenient to repeat here the principles which are now guiding the Committee in advising on the more important details with regard to the above subjects.

6. The military forces of each Colony, when more than a detachment of volunteers or armed police, should be under a carefully selected officer, who should be appointed for a definite number of years, and who should be directly responsible to the Defence Minister in self-governing, and to the Governor in Crown Colonies for the administration and for the maintenance of the efficiency of the military forces in time of peace, and, except when Colonial forces are co-operating with Imperial forces under a Senior Officer, for the conduct of all military operations in time of war. The Committee attribute great importance to the duties and responsibilities of the Military Commandant being clearly defined, and to his powers, especially in war, being large. Until such time as the training of officers of local forces shall have been carried to a standard that will make it possible to select from among them officers equal to the very responsible duties involved in the command of all the troops of a Colony, it will be necessary, in the interests of the Colonies, to give these commands to Imperial officers.

Where the troops of adjacent Colonies are likely to co-operate, a Council of Defence of those Colonies should appoint a General Officer with Staff for the inspection of the troops in peace and for the conduct of joint operations in war.

Where a Colony is divided for purposes of defence into several districts each district should be under an officer appointed to its command, who should be responsible for the defence organisation of that district to the Military Commandant of the Colony.

In Colonies where there are extensive artillery defences and a considerable artillery force, a specially selected officer should be appointed from the Royal Artillery for a definite number of years to command the artillery of the Colony in peace, and to serve as Artillery Staff Officer to the Military Commandant in peace and war. Such an appointment would only be necessary in the self-governing Colonies until local officers become available who are well acquainted, both theoretically and practically, with modern artillery matériel, and with the latest approved methods of utilising it, and the artillery personnel, to the best advantage.

The corresponding appointment under similar conditions of an officer from the Royal Engineers is advisable where there are extensive submarine mining defences, or where large military works are in contemplation or in progress.

7. The selection, appointment, and conditions of service of the officers in the various branches of the colonial forces are not altogether satisfactory, and require to be assimilated in the various parts of the Empire, and especially in adjacent colonies.

Each Colony should have a reserve of qualified officers, who should be available, under definite arrangements, to make up the full number required for the forces on war footing with a small additional number to replace casualties. Canada possesses excellent material for such a reserve in the graduates of the Kingston Military College, and the matter has also been kept in view in some of the Australasian Colonies.

As many colonial officers as possible should be passed through military schools in the first instance, and should occasionally attend classes of instruction afterwards. The concentration of the military education of officers in Australia at one centre would tend to economy and efficiency. It was recommended by a Royal Commission as long ago as 1882, and would probably follow on confederation, as in the case of Canada.

The higher instruction of officers has been assisted in some of the Australian Colonies and Canada by sending selected officers to courses in England and India. The results are reported to have been very satisfactory, and the system is considered a good one.

The United Service Institutions of New South Wales, Victoria, and Queensland have been established to contribute by lectures and discussions on military and naval matters towards raising the standard of technical knowledge of the officers of the military and naval forces of those Colonies, and the military institutes of Toronto and Quebec to serve a similar purpose in Canada. The Colonial Defence Committee look on these institutions as most useful, and hope to see similar institutions established in other Colonies.

8. The colonial military forces consist of regular or permanent troops, militia, either partially paid or unpaid, volunteers, and armed police. The Colonial Defence Committee attach the greatest importance to the assimilation of the troops in adjacent Colonies, and they consider that, as far as the local circumstances permit, the conditions of service should also be similar to those in the corresponding forces in the Imperial Army.

In self-governing Colonies there should be, as there mostly already is, a small body of regular or permanent troops to look after armaments, defence works, and stores, and to assist in the training of the militia and volunteer forces in peace. They would form a strong nucleus for the more technical corps in war, and should include, until they attain a standard of recognised efficiency, a certain number of warrant officers or N.C.O. instructors from the Imperial Service.

The Committee consider that a better general result has been, and is likely to be, given where the bulk of the colonial forces are partially paid than where the entirely voluntary system is adopted. The latter is fairly applicable in towns and well-populated districts, where it is possible frequently to get men together for parades without seriously interfering with their ordinary avocations; in rural districts the men cannot, as a rule, be assembled with sufficient frequency without pecuniary loss, and payment should be made to them.

In those Colonies where armed police are maintained, they should be liable to serve against foreign aggression as well as for the maintenance of internal order, and arrangements should be made to replace them in the latter duty at time of anticipated attack by special or rural constables as far as this can be done consistently with safety.

Militia, volunteers, and armed police should be separately organised, but arrangements should be made for their working together at peace manœuvres, or in war operations, and also for their working with Imperial forces if called upon to do so.

Colonial troops should, as a rule, be organised in battalions of infantry, squadrons or regiments of mounted troops, batteries or companies of artillery, companies of engineers, and companies of armed police; but they should be told off to the higher units of a field force in Colonies where field operations are anticipated, and to definite duties in the combined action required for the defence of coast or land positions.

The Colonial Defence Committee attribute the greatest importance to the organisation of the departmental services, without which the smallest operation in war becomes impossible. Definite arrangements for supply, transport, and medical services should be made beforehand for every defended port and every contemplated field operation. Much can be done in this direction without expenditure by mere registration of doctors and nurses, and of sources of supply, horses, vehicles, labour, and superintendence, and more, by the small payment of retaining fees to secure services which might otherwise not be available in the hour of need. The departmental services, to be completely satisfactory, should, however, be thoroughly organised in time of peace.

9. With regard to the conditions of service in colonial regular and militia forces, it will suffice here to state that the Committee consider a short period—say three years—with thorough training to be more advantageous than the same training spread over a longer period. Re-enlistment and re-enrolment should be possible for further yearly periods, and retirement from active service should be followed by a period in the reserve dealt with below.

Permanent troops should always, and partially-paid troops should, when called out for training or in anticipation of war, pass under the Army Act of 1881 for discipline, and volunteers and armed police should also come under it when acting with regular troops, or in operations against an enemy.

The Colonial Defence Committee consider that the conditions of service for (1) regular forces, (2) militia, (3) volunteers, and (4) armed police in all parts of the Empire should be as uniform as the varying circumstances of the different Colonies will allow, and that this principle should govern local Legislatures in framing their Military Acts.

Such Acts, besides dealing with enlistment or enrolment, length of active and reserve service, application of Imperial Army Act and Army Regulations, &c., should also lay down definite regulations for training. These at present vary greatly in different Colonies, and while, taking into consideration the high intellectual and moral standard of the material generally available for the forces in the self-governing Colonies, the training at present given in some of them may be considered sufficient, in others this is not the case.

The

The Committee attach the greatest importance to combined training in camps of exercise and in rehearsal of the approved schemes of defence, but they would point out that unless the soldier has previously received sufficient recruit's instruction and company training, he will not be in a position to derive full advantage from larger operations. Thorough training in small units is the first step towards making a soldier efficient.

10. The Colonial Defence Committee have always strongly advocated the formation of reserves for all colonial forces. They consider that a proper reserve system will enable the peace establishments to be kept low, and insure their being brought up to war strength with trained men. They attach great weight to the first of these considerations, as they recognise that it would seriously militate against the civil interests of the Colonies to keep a large force permanently with the colours or liable to be constantly taken away from their ordinary avocations for the frequent training necessary to make a short service militia efficient. They also deprecate any system which, in time of emergency, floods the ranks of the permanent or partially-paid troops with a number of untrained or slightly trained recruits.

They therefore recommend that all men that have passed through the ranks of the permanent or partially-paid forces should be registered for a definite period as reservists, liable to be called out in the event of national emergency, and their addresses and changes of address should be recorded, and that they should receive an annual retaining fee carrying with it the obligation of attending certain drills. The number of men so registered should be sufficient to bring the peace up to the war establishment, and to provide a small additional number to replace casualties, and the period of service in the reserve should be about twice as long as that in the active forces, reduced, however, when the strength of the reserve allows of this being done without falling below the total laid down as necessary.

11. Passing to the question of equipment, the most important item is the small-arm, and concerning this the Committee are guided in their recommendations by the following principles:—

- (1.) All troops in a Colony to have small-arms of the same calibre.
- (2.) Troops in Colonies which may have to act together to have small-arms of the same calibre.
- (3.) Troops in Colonies where they may have to act with Imperial forces to have small-arms which will take the service "303" ammunition.
- (4.) Cavalry and artillery to be armed with carbines, and, as a rule, other troops, with rifles.
- (5.) Machine-guns to take the cartridges of the small-arms used in the same Colony.
- (6.) Small-arms to be provided for 50 per cent. over establishment and reserves of men.

12. Field artillery in connection with colonial defence is required either for operations with a field army, or in connection with the land defence, and the defence against landing parties of a coast fortress or coaling station. In the former case it is essential that the batteries should be able to move rapidly, and over long distances, complete, with ammunition columns. In the latter case rapid movement is equally essential, but only over short distances, and prolonged action will not be called for; a single battery will probably suffice in places only liable to a raiding attack. All guns in a Colony should take the same ammunition, and it will be best to adopt, as far as possible, a field-gun used in the Imperial Service.

13. It is scarcely necessary to point out that in all Colonies a sufficient reserve of uniform, equipment, harness, saddlery, and stores for at least the full strength of the war establishment of all arms of the colonial force should either be kept in store, or there should be means provided for its rapid supply by local manufacture. The Committee have seen with satisfaction that much has been done in some Colonies towards supply from local sources, and they recommend that this object should constantly be kept in view. It is advisable that clothing and equipment should, as far as is consistent with local conditions, be of similar patterns for the different branches of the Service in the different Colonies. Uniform should be plain, serviceable, and cheap. Khaki has been found in India to be the most suitable colour. There should be a uniform system in all Colonies for distinguishing the different services, arms, and grades, and the system should be similar to that adopted in the Imperial Service.

14. The Colonial Defence Committee have frequently dealt with the question of guns for the defended ports of the Empire, and have pointed out that a medium B.L. and lighter Q.F. armament is, in most cases, sufficient for coast defences. The reasons that have led to this opinion are the great advantage that shore guns have over those on ships, and that unarmoured or lightly armoured vessels are especially at a disadvantage in fighting shore batteries mounting even light artillery. Against cruisers a medium gun will amply suffice, and by its greater handiness and speed of fire will prove more effective than the heavier natures. The cost of armaments and emplacements rapidly rises as calibres increase, and by restricting the size of their guns in the future the Colonies will secure economy, efficiency, and simplicity at the same time.

The substitution of more modern guns for armaments now mounted will, of course, become desirable from time to time, especially when such guns can be worked by a smaller number of men; such substitution when it is undertaken should be considered for the whole armament of a port. Otherwise, there results a multiplication of calibres and patterns, which add greatly to the difficulties of training the gunners and working the guns. It is scarcely necessary to add that every gun mounted should be maintained thoroughly efficient with a full supply of all the ammunition and necessary stores for working it.

15. With regard to coast works, it is unnecessary to say more here than that, where their position renders them liable to boat attack, they should always be protected from a sudden rush by an unclimbable fence or ditch.

Land works are sometimes necessary to protect a port from hostile parties landed out of range of the coast batteries and attacking from the flanks or rear. They will usually consist of field defences; clearing of foreground and occasionally demolitions will also be necessary. All details concerning them should be carefully worked out beforehand.

More extended works will, of course, be necessary in the case of attack from a land frontier, and will require more complete study and preparation.

16. Certain Colonies have provided themselves with local floating defences to supplement the fixed defences of their ports. Since the completion of the latter, the Colonial Defence Committee have attributed less importance than formerly to the small colonial navies, considering that it is generally difficult to obtain from floating harbour defences an effect commensurate with the outlay entailed by them. Where, however, there is a sufficiently spacious area of navigable water apart from the fortifications to permit local defence ships to manoeuvre, this objection does not apply. Colonial warships, where maintained, should be kept in a thoroughly efficient condition, both with regard to personnel and matériel.

17. There are many points in addition to those touched on above concerning which the Colonial Defence Committee have offered advice to the Colonies in the past are prepared to do so in the future, but which it is obviously inadvisable to deal with in a memorandum for general information. In this connection they would repeat a paragraph from a former report. "The necessity for preserving secrecy in regard to the position of guns and details of defence was brought before the Colonial Conference in 1887, and has at various times been impressed upon the Colonial Governments. It is earnestly hoped that these warnings will in future be acted upon."

18. The Committee would also take this opportunity of pointing out that they can more satisfactorily assist the Colonial Governments in dealing with questions of defence if all general reports and important proposals of their military advisers are referred to the Committee through the Colonial Office as soon as possible after being considered by the Governments. The Committee completely recognise that, for financial and other reasons, possibly of a confidential nature, and a political rather than of a military character, it may often not be practicable to give effect to the recommendations that are made. They think, however, that they would be in a better position to follow and advise upon the general military policy of the Colonies, if the recommendations were always communicated to them, accompanied, if necessary, by the confidential opinions of the Governments and Governors thereon.

19. In conclusion, the Committee are led to refer, by the prominence which has of late been given to the question of Federal defence, to the mutual co-operation of the Colonies for this purpose in time of war. It will be obvious that at present such co-operation must be mainly confined to adjacent Colonies, such as those of Australia, and in a smaller degree those of South Africa. In Australia this subject has been considered with happy results by the Federal Military Conferences of 1894 and 1896, and more recently at a meeting of Premiers at Sydney.

Doubtless a time will come when the increasing strength and resources of the self-governing Colonies will enable them to materially assist the mother country, by placing at her disposal for operations in any quarter of the globe bodies of troops formed from the excellent material of strong self-reliant colonists, but at present the development of their own vast territories in time of peace, and the effective protection of them in time of war, is undoubtedly the best contribution the Colonies can offer to Imperial defence. To this, however, there is an important exception. England may be engaged in the future, as she has frequently been in the past, in a war which carries with it no danger of attack on the Colonies. In such a case the offer of assistance from them would be prized, as it has been on more than one occasion, not only for its real value, but also as evidence of that solidarity on which the greatness of the British Empire must ultimately rest.

(Signed) M. NATHAN, Secretary,  
Colonial Defence Committee.

31st December, 1896.

APPENDIX J.

J.

[To Evidence of Major-General G. A. French, C.M.G., R.A.]

OFFICERS not qualified by examination for present rank.

Rank.	Names.	Regiment or Corps	Date of Appointment.	
Major and Brevet Lieut.-Colonel.	Parrot, T. S. ....	Engineers ..	4 Sept., 1894	In South Africa.
Major .....	Passmore, H. ....	6th Regt. .	27 April, 1898 .

[To Evidence of Captain Francis Hixson, R.N.]

REPORT of the Conference of Naval Officers assembled at Melbourne, Victoria, to consider the question of Naval Defence for Australia.

President : Captain Francis Hixson (late R.N.), Commanding New South Wales Naval Forces.  
Members : Captain William Rooke Creswell, C.M.G. (retired Lieutenant, R.N.), Naval Commandant, South Australia ; Captain Robert Muirhead Collins (retired Lieutenant, R.N., Retired List, Victorian Naval Forces), Secretary for Defence, Victoria ; Commander Walton Drake (retired Lieutenant, R.N.), Acting Naval Commandant, Queensland ; Commander Frederick Tickell, V.N., Commanding Victorian Naval Forces.  
Secretary : Mr. F. Savage.

CONFERENCE OF NAVAL OFFICERS.

From Captain Francis Hixson (late R.N.), Commanding the local Naval Forces of New South Wales, President of the Conference of Naval Officers, to the Honorable the Minister of Defence, Victoria.  
Defence Department, Melbourne, 5 August, 1899.

Sir,  
In accordance with the suggestion of the Honorable the Premier of Queensland, which was concurred in by the Governments of New South Wales, Victoria, and Queensland, viz., that a meeting of Naval Officers representing the Colonies should be held with a view to discussing the question of Naval Defence for Australia, so that some concerted scheme might be adopted whereby the colonies might be able to fall into line in giving effect to the suggestion to establish a branch of the Royal Naval Reserve or to provide some alternative scheme, I have the honor to report that the following officers assembled at the Defence Office, Treasury Buildings, on the 31st July :—  
Captain Francis Hixson (Commanding New South Wales Naval Forces).  
Captain Robert Muirhead Collins (Secretary for Defence, Victoria).  
Commander Walton Drake (Commanding Queensland Naval Forces).  
Commander Frederick Tickell (Commanding Victorian Naval Forces).  
Captain W. R. Creswell, Naval Commandant of South Australia, joined us on Wednesday, the 2nd instant.  
On the motion of Captain Collins I was elected President of the Conference.  
The Conference further appointed the Chief Clerk of the Defence Department, Mr. F. Savage, as Secretary.  
The Conference very carefully considered the question remitted to them, and their report is forwarded herewith.  
I have much pleasure in expressing the appreciation by the Conference of the services rendered by Mr. Savage.  
I have, &c.,  
FRANCIS HIXSON, Captain,  
President.

The Conference have the honor to report as follows :—  
As it is improbable that either the Admiralty proposals for raising a naval reserve in Australia or that any alternative scheme proposed by the Conference for increasing the naval defence of Australia can take effect before federation, we base our recommendations on the assumption that such should be carried out by a Federal Government.  
The Conference agreed to the following resolutions to be submitted to their respective Ministers of Defence :—  
Moved by Captain Collins—  
(1.) That whilst a Royal Naval Reserve cannot, in our opinion, be raised in Australia on conditions required by the Admiralty, yet we consider that a naval force that would be efficient and available for service in vessels of war can be raised on rates of pay and conditions of service suitable to the colonies.  
(2.) That such force should be formed by the amalgamation of the existing Naval Permanent Establishments, who would be the instructional staff and required nucleus for maintenance of the vessels in reserve, the complement of the vessels being made up by the officers and men not permanently employed but maintained in efficiency by courses of annual training. This force would be maintained and controlled by the Federal Government, and would be governed by a Federal Discipline Act and regulations which would provide for their employment in general naval service.  
(3.) The Admiralty to provide ships of a type effective for service in time of war, which, in peace-time, would be stationed at the principal ports for the drilling and training of the local Naval Force—these ships to be maintained by the Federal Government, and be subject to periodical inspection by the Naval Commander-in-Chief.  
OBSERVATIONS

## OBSERVATIONS ON THE RESOLUTIONS.

## Resolution 1—

That whilst a Royal Naval Reserve cannot, in our opinion, be raised in Australia on conditions required by the Admiralty, yet we consider that a naval force that would be efficient and available for service in vessels of war can be raised on rates of pay and conditions of service suitable to the colonies.

We are of opinion that, although a Royal Naval Reserve cannot be raised under Admiralty conditions, a naval force of proved efficiency can be organised and trained under the systems long in force in the Australian Colonies.

There is at present a naval force of 1,545 men in existence in Australia, distributed as follows :—

New South Wales.....	573
Victoria .....	300
Queensland.....	512
South Australia.....	160

Of these, over 1,000 can be considered *bonâ fide* seamen, and the remainder consist of boatmen, yachtsmen, &c.

Thus there exists already a valuable nucleus of trained men, and from an examination of the returns of the sea-going and fishing population, the Conference consider that, under effective organisation, a reserve force of 3,000 seamen could be raised in time of need; whilst with regard to men who could not be classed as seamen, "there is reason to believe," as Lord Brassey has stated, "that the blue-jackets form an excessive proportion of the complement of mastless ships of war, and that the number of the seaman class required has been calculated under the influence of traditions coming down from sailing ships of former days"; and, therefore, if necessary, a considerable proportion of the Colonial Naval Reserve might be raised in accordance with such changed conditions as where efficiency in naval gun drill and the use of small arms and ability to pull an oar might be considered sufficient qualifications.

The duties of a reserve or supplementary force are either—

- (1.) To make up for waste after engagement, &c.
- (2.) To raise the skeleton crews of vessels to war strength, and thus at once increase the number of available ships.

Such a force as could be raised in Australia would largely exceed any possible requirements of the vessels on this station, and there are no vessels available to absorb the remainder.

The Conference note that, under the present establishment of Imperial fleet strength in these waters in war time, when obsolete vessels, surveyors, &c., would be withdrawn, there would be a surplus of seamen over those required to man the effective ships on the station, leaving no place to be filled by a Reserve on the present establishments.

Therefore, without the addition of reserve ships, the full value of such an important force would not be developed, but would be wastefully idle in time of national emergency.

The Conference are of opinion that an increase of the naval strength on the outbreak of war would be an immediate necessity for the protection of the floating commerce of Australia, in which the mother country is largely interested; and that the additional strength of the Naval Defence in war time could be adequately provided, as recommended in Resolution 3.

## Resolution 2—

That such force should be formed by the amalgamation of the existing Naval Permanent Establishments, who would be the instructional staff and required nucleus for maintenance of the vessels in reserve. The complement of the vessels being made up by the officers and men not permanently employed, but maintained in efficiency by courses of annual training. This force would be maintained and controlled by the Federal Government, and would be governed by a Federal Discipline Act and Regulations, which would provide for their employment in general naval service.

The ability of the Naval Establishments in the Australian Colonies to raise and train Naval Forces has long been proved, as shown by the reports of the Admirals Commanders-in-Chief on the station.

Further, we have had the honour to receive a letter from His Excellency Lord Brassey (see *Appendix*), whose experienced judgment in such matters is so well known, in which he gives it as his opinion that the training of seamen in the colonial ships of war "Cerberus," "Protector," and "Gayundah," might be considered an equivalent to six months' continuous training in an Imperial ship of war.

The Conference recommend that the conditions of service for a Federal Naval Force should be as follows :—On first enrolment, the seamen to be drafted to the—

First Division—For a period of five years, during which he would be liable, if required, for service in the fleet abroad—then drafted to

Second Division—For a period of five years, for harbour service.

Third Division—To reinforce Second Division.

## Resolution 3—

The Admiralty to provide ships of a type effective for service in time of war, which, in peace time, would be stationed at the principal ports for the drilling and training of the local Naval Force. These ships to be maintained by the Federal Government, and be subject to periodical inspection by the Naval Commander-in-Chief.

These vessels would furnish the increased naval strength required in war time, and be a substantial addition to the fleet of the Empire.

The stationing of ships in reserve at our ports, while they would be of service in training crews that would be required to man them in war time, would cause no additional cost to the British taxpayer.

The Naval Force detailed to man, or partly man, these ships should be raised by expanding the present local Naval Forces, as proposed in resolution 2.

At the Premiers' Conference in London, in 1897, presided over by the Secretary of State, the Right Honorable Joseph Chamberlain, it was proposed by the Right Honorable C. C. Kingston, the Premier of South Australia, to substitute a force of trained men for the payment in money now made for the maintenance of the Auxiliary Squadron.

In the letter previously referred to as having been received by the Conference from Lord Brassey the principle received some support.

The cost of the maintenance of the local Naval Forces in Australia is at present about £65,000 per annum, which, together with the £126,000 contributed each year towards the cost of the Australian Squadron, makes a total annual expenditure on Australian Naval Defence of £191,000.

The Conference are of opinion that this expenditure, controlled by the Federal Government, would be sufficient to provide for the maintenance of five 2nd class cruisers stationed in peace time, as proposed, in the principal ports and exercised from them, and for the raising and maintenance of a Reserve of sufficient strength to provide not only for the manning of these vessels in time of war, but also to furnish a source from which men would be available to meet Imperial naval requirements, and to make up waste.

## GENERAL.

It has been the design of the Conference to outline a scheme whereby the available Naval Defence in Australia shall advance *pari passu* with the growth and development of the Australian Commonwealth, and become less, year by year, a charge on the Imperial forces and exchequer. To develop our resources, and the training of our seamen, so that instead of remaining a source of weakness and anxiety to the mother country—an exposed flank—we may gradually become a strong outpost.

To accomplish this, it is necessary to have special regard to the nature of the defence requisite for an island continent.

It was with the object of developing Australian Naval efficiency that the late Admiral Tryon suggested the formation of the Auxiliary Squadron.

The progressive policy which it is certain that he intended to carry out with this end in view, has not advanced from the initial stage at which Sir George Tryon left it.

When the Auxiliary Squadron was first established by agreement between the colonies and the Admiralty, it was generally understood, in Australia at any rate, that the ships would form a means of drilling and training Australian seamen.

This expectation has never been realised, the vessels in reserve having always been laid up in Sydney, and no attempt has been made to utilise them for the benefit of the local Naval Force.

There has, consequently, been no advance in Australia's ability to undertake any honourable share in her sea defence.

The

The present policy, viz., that of the payment in specie in return for Naval Defence furnished *in toto* by the mother country, makes no advance whatever.

Twenty or fifty years' hence, Australia's ability for sea defence—self-defence—will be as to-day, and as it was ten years ago.

A continuance of the present policy involves either the periodical increase of the amount paid to the Imperial Government for Naval Defence, that the growing trade and interests of the Federation may be adequately protected, or, if that amount be not increased, we must expect a justifiable complaint from the British taxpayer. In this connexion, it is well to remember the high point already reached by the Imperial Naval Estimates.

In the event of a European combination of such strength as to occupy the attention of the British fleets, the continuance of a policy which in no way advances Australian ability for sea defence might have disastrous consequences.

It has been the invariable policy of the motherland to encourage all her colonies and dependencies in self-defence, i.e., to encourage the organising of forces suited to meet and to resist the particular danger to which they are exposed. The Cape, Canada, and India are all cases in point—all have land frontiers requiring military defence.

Australia having no military frontier requires for her defence a sea or naval force.

As a recent modern example of the respective merits as a defence of a powerful army or navy for an island defence, the case of Cuba in the recent American war is conclusive. Cuba had a standing army of from 150,000 to 200,000 men and an inefficient navy. The United States, a standing army of from 25,000 to 30,000 and an efficient navy. The efficient navy of the United States destroyed the Spanish navy.

The small army of 25,000 men embarked, and choosing their point of attack, captured Santiago. The large army, with Cuba closely blockaded, became merely an additional burden as ration eaters, and hastened the fall of the Spanish side.

It is necessary here to draw attention to the salient conditions which will govern Australian defence and determine its character.

Within the last half-dozen years the keen attention of the political world has been concentrated on the Pacific.

There is every indication that it will play the part of the Mediterranean in the past century as the arena of national contending forces.

France, Russia, Japan have established naval bases and possess powerful fleets in the north of the Pacific. Nearly every other European power has effected a lodgment in the seas to our north.

Every consideration both of defence and our position of influence, which will be that of the "New Power in the Pacific," demands from those responsible for the organisation of Federal defence the recognition of the primary importance of naval defence for Australia.

FRANCIS HIXSON, Captain, Commanding New South Wales Naval Forces, President.

ROBERT COLLINS, Captain, Secretary for Defence, Victoria,	
WALTON DRAKE, Commander, Acting Naval Commandant, Queensland,	
F. TICKELL, Commander Victorian Naval Forces,	

## APPENDIX.

Dear Captain Hixson,

Government House, 2 August, 1899.

As an old Admiralty official who has been endeavouring for a quarter of a century, at least, to secure the sanction of the Admiralty to the enrolment of a Colonial Naval Reserve, I desire to be helpful to the conference over which you are presiding. It will probably be convenient that suggestions should take the form of a letter to the chairman.

And, first, I take the opportunity of expressing the assurance that the Admiralty will be glad to know that the Governments of New South Wales, Victoria, and Queensland have decided to give further examination to the proposals forwarded for their consideration through Admiral Pearson.

In Victoria the inquiry conducted by Captain Tickell has shown that the sea-faring people are not disposed to enter the reserve under the conditions which obtain at home. We have, therefore, to consider how far modifications can be proposed without loss of efficiency in essentials. It was hardly to be expected that the regulations as to drills, service afloat, and rates of pay, which have been found to work well in the United Kingdom, should be equally adapted to the conditions with which we have to deal in Australia. It does not follow that the endeavour to raise a force of reservists for the manning of the squadron in Australian waters should be abandoned. Under peace conditions men can easily be spared from the crowded barracks and receiving ships in the home ports. In war heavy losses must certainly be suffered, even by the victor, in naval actions with the forces of a first-rate maritime power; and men for a hasty mobilization on the Australian station might not always be available. Having these obvious considerations in our view, it seems fitting that alternative proposals should be brought forward from the colonial side.

Dealing first with the class of men to be enrolled, I would submit that it is not necessary that the entire force of the Colonial Naval Reserve should be seamen. Landsmen and aquatics, well instructed in naval gunnery, in other words, a reserve of marines or marine artillery, would be able to render valuable service. In the case of a reserve of marines, conditions as to service in a man-of-war may be relaxed, and thus one of the main difficulties with which we have to deal will disappear.

In support of the suggestion that a part of the Naval Reserve of the colonies should consist of marines, reference may appropriately be made to the recent experiences of the Spanish-American war. The largest steamers in the mercantile marine of the United States were taken up as cruisers. They were navigated by their own crews, who readily agreed to serve until the close of the war. The guns were manned by marines who were embarked under the command of captains of the United States navy. It was a return to the conditions which obtained in the fleets of the elder day which met and vanquished the Spanish Armada. Everything worked most satisfactory. In nautical phrase the ships were "happy ships."

2. Having dealt with the class of men to be enrolled, I turn to the training of the Colonial Naval Reserve. In the Imperial force six months' service has, under recent regulations, been insisted upon. It would certainly be desirable that the Colonial Naval Reserve should be similarly trained, but the difficulties under colonial conditions are almost insuperable. The pay in the Imperial navy is far below the scale of remuneration which sea-faring men command in Australian waters.

In lieu of service in the fleet it might be considered sufficient to put in drills afloat in colonial-armed vessels, such as the "Cerberus" and "Protector," or on board one of the ships not in commission in the Sydney Harbour.

In this connection it may be urged that if service in the Colonial Naval Reserve is made attractive we should be able to raise men from a comparatively educated class. The steamers in the coasting trade of Australia are manned by crews of exceptional qualifications. The colonial naval reservists should be men of the same type as those recently raised for temporary service in the United States navy. The main deficiency—trained reserves—was in part neutralised by the great adaptability and high general standard of intelligence of the extemporised crews. These late experiences of naval warfare seem to have a direct bearing on the question before your committee. Our Colonial Naval Reserve should be drawn from the same class which gave to the navy of the United States in a few weeks 12,000 men, who, although without previous service in warships, were found efficient for their duties.

3. I need not deal at length with the question of pay. For the first time the Imperial Government has offered retainers of substantial amount to colonial seamen. It may probably be necessary to supplement the capitation grant from the Admiralty by a small payment from local resources. The charge would be inconsiderable in amount, and might perhaps be deducted from the contribution now paid to the cost of maintenance of the Australian squadron.

In conclusion, the suggestions I venture to offer are the following:—

1. The Colonial Naval Reserve should consist in some proportion of marines.
2. Drills and exercise afloat in colonial-armed vessels may be substituted for the six months service in a vessel of war as required for the Naval Reserve of the United Kingdom.
3. The retainer offered by the Admiralty to be supplemented, as far as may be necessary, by a contribution from colonial funds.

I have, &c.,  
(Signed) BRASSEY.

L.

[Appended by the Committee.]

New South Wales Military Forces,  
Head Quarters, Sydney, 10 January, 1900.  
From Major-General G. A. French, C.M.G., R.A., Commanding N.S. Wales Military Forces, to The Principal Under Secretary.

Subject :—Forage Supply for horses of 2nd Contingent. Forwarding tenders.

Sir,  
I have the honor to forward herewith tenders received for the supply of forage required for the horses leaving by the ss. "Southern Cross," "Surrey," and "Moravian," which have been called for in accordance with the instructions contained in your letter of the 8th instant.  
The tenders, together with the necessary samples of forage, have been duly submitted to a Board of Officers for examination and report, and the same recommend that the tender of Messrs. Hall & Co. be accepted (excepting lucerne hay).  
I shall therefore be glad to receive the necessary covering authority in this matter as early as possible, in order that a contract may be immediately entered into with Messrs. Hall & Co.

I have, &c.,  
G. A. FRENCH, Major-General,  
Commanding N.S. Wales Military Forces.

Submitted for appl.—C.W., 10/1/00. Approved.—J.S., 10/1/1900. The Major-Genl.—B.C., 10/1/00. C.W. Supply Officer, for action.—J. E. D. TAUNTON, B.L.-Col., A.Q.M.G., 11/1/1900. To be returned. A.Q.M.G. Action taken; papers herewith.—R. J. BEAUMAN, Lt., Supply Offi., 13/3/1900.

Sir,  
I am directed by the Chief Secretary to request that you will be good enough to call for tenders for the supply of forage for horses leaving by the ss. "Southern Cross," "Surrey," and "Moravian." The tenders to be obtained from the firms who submitted tenders in the case of the ss. "Kent."

I have, &c.,  
CRITCHETT WALKER,  
Principal Under Secretary.

The Major-General Commanding the Military Forces.

Supply Officer, for action, in accordance with above.—J. E. D. TAUNTON, B.L.-Col., A.Q.M.G., 9/1/1900.

Regent-street, Paddington, 10 January, 1900.  
CORN, three (3) shillings; oats, two (2) and eight (8); bran, eight (8) pence farthing; chaff, wheaten or oaten, as available, three (3) and ten (10) pence. Samples and particulars later.  
The Supply Officer, Army Service Corps, Victoria Barracks. TAYLOR BROS.

Recd., 0.25 p.m.—D.M., Major, 10/1/1900.

Sir,  
We enclose you herewith our tender for forage for the contingent proceeding to South Africa, which, we presume, will be required to be delivered to the wharf at which the vessels are leaving, and have made our prices to include the cartage. We would respectfully point out that in each line, we have quoted only the best possible quality, and the samples which accompany the tender are taken from the bulk of what is available for your supply.  
The maize is New Zealand choice grain, perfectly free from weevil, and specially suited for crushing.  
The oats are what are known as New Zealand "B" grade, their very best feed quality.  
The bran is prime coarse quality, and specially suited for horse feed, a large proportion of what the mills turn out now being much finer and more adapted for cow feed.  
Lucerne hay.—This will be prime Hunter River old quality, and while we are unable to send you a sample, it not yet being on the spot, we are prepared to offer any guarantee you may desire. In regard to oaten hay, although we have made every possible effort to obtain our western quality by wiring to the various centres, we find it is impossible to secure any in the time at our disposal; we are, therefore, unable to tender for more than 25 tons, and this will be prime Ballarat—hay which should be equally suitable.  
Oaten chaff.—The market is absolutely bare of this line, and 60 tons is the most we could deliver by the 16th instant; this we are prepared to dump, if required, provided you give us one extra day's notice before delivery to put it through the dumping press. We would mention that a great saving of space will be obtained by having it pressed, and the cost only represents 10s. per ton more.  
The straw is the finest Tasmanian wheaten quality, but oaten can be had if preferred; we have large quantities of both available.  
We have, &c.,  
JNO. BRIDGE & CO.

To the Supply Officer, Victoria Barracks.

Tender for Forage.

H.Q. Staff Office, Sydney, 9 January, 1900.

TENDERS are invited, until noon of the 10th instant, for the supply of forage for contingent proceeding to South Africa.

It must be distinctly understood that the lowest tender will not necessarily be accepted.

Samples of forage to be supplied must accompany every tender.

Every tender must, as a guarantee of good faith, be accompanied by a deposit of £25, which will be forfeited in the event of the tenderer withdrawing, or failing to complete the necessary contract documents, whether such tender be accepted or not.

The successful tenderer will be required to enter into a bond in the sum of two hundred and fifty pounds sterling (£250), for the due performance of the contract.

Tenders to be addressed "Supply Officer, Victoria Barracks," and endorsed "Tender for forage."

Stamp duty to be paid by contractor.

NEW SOUTH WALES MILITARY FORCES.

PROCEEDINGS of a Board of Officers assembled at Victoria Barracks, on the 10th January, 1900, by order of the A.Q.M.-General, bearing date 10th January, 1900, to open tenders for forage for the use of horses of the Second South African Contingent.

President—Major D. Miller.  
Members—Lieut. R. J. Beauman.  
Vety.-Lieut. S. T. D. Symons.

The Board having assembled, pursuant to the above order, proceed to open tenders and inspect samples, and report as follows:—

- (1.) The only two samples of lucerne hay submitted, being too new and of poor quality, are not recommended.
- (2.) The maize should be crushed, being better digested and assimilated, and less likely to cause bowel complications.
- (3.) The chaff should be dumped, as thereby less space is required; it is more easily handled and cleaner.
- (4.) The best samples submitted are as follows, viz:—

Maize ..	Bridge (1)	Hall (2)	Prescott (3)
Oats .....	Bridge (1)	Hall (2)	Prescott (3)
Bran .....	Hall (1)	Bridge (2)	Prescott (3)
Oaten hay .....	Hall (1)	Prescott (2)	
Oaten chaff .....	Hall (1)	Prescott (2)	Bridge (3)

- (5.) It will be seen that Messrs. R. Hall & Son are first in three lines and second in the remaining two lines, and in view of the prices quoted by them the Board recommend the acceptance of their tender.

Signed at Victoria Barracks, this 10th day of January, 1900,—  
DAVID MILLER, Major, President.  
R. J. BEAUMAN, Lieut.,  
S. T. D. SYMONS, Vety.-Lieut., } Members.

NEW SOUTH WALES MILITARY FORCES.

PROCEEDINGS of a Board of Officers assembled at Victoria Barracks, on the 19th January, 1900, by order of G.O. 5, bearing date 10th January, 1900, to open tenders and pass all forage for the various sea transports for the Second Contingent about to proceed to South Africa.

President—Major Miller.  
Members—Captain Gribben.  
Lieut. Beauman.

The Board having assembled, pursuant to the above order, proceed to report that the whole of the forage supplied for shipment per transports "Southern Cross," "Moravian," and "Surrey" was duly inspected and passed.

- (2.) That considerable delay occurred in the delivery of the chaff and hay, owing to the failure of Messrs. Hall & Co. to carry out their contract in the specified time.
- (3.) That the forage as a whole was sound, sweet, good feed, but in some instances was not of the first quality.
- (4.) The lucerne hay was obtained by purchase, and although older hay would have been preferable, that bought was of the best procurable description.
- (5.) The Board strongly recommend, in the event of any further forage being required for a similar purpose, that it be bought in the open market, and stored pending shipment—or should it be decided to continue to purchase by tender, that the right be reserved to accept the whole or any line as desired.

Signed at Victoria Barracks, Sydney, this 19th day of January, 1900,—  
DAVID MILLER, Major, President.  
R. J. BEAUMAN, Lieut.,  
S. T. D. SYMONS, Vety.-Lieut., Acting P.V.S., } Members.

The Board desire to add that in regard to the oaten hay as delivered for the "Southern Cross" and "Surrey" and the bran for the same ships, they exercised the power of rejection—the forage being not in accordance with the sample.

Letters to P.U.S. as to recommendation of Board (5).—G.A.F., 20/1. Appd.—G.A.F., 20/1. Letter sent, 22/1/00.  
B. 00-206.

A.Q.M.-G. to Major Miller, President, Board on Forage.

Sydney, 11 January, 1900.

With reference to para. 1, G.O. 5 of yesterday's date, the Board will have the forage weighed, compared with weigh-bills, and see that the same is in accordance with samples and of best quality.

By Order,  
J. E. D. TAUNTON,  
Lt.-Col. and Brvt.-Col., A.Q.M.-General.

1900.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

CAPTAIN BARRETT, AUSTRALIAN RIFLES, GOULBURN.  
(CORRESPONDENCE RESPECTING DISMISSAL OF.)*Printed under No. 2 Report from Printing Committee, 28 June, 1900.*Memorandum from The Assistant Adjutant-General to The Officer Commanding  
6th Infantry Regiment.

Sydney, 16 December, 1897.

THE G.O.C. directs that Captain Barrett be suspended from all military duty until further orders, pending application being made to His Excellency the Governor and Commander-in-Chief for approval to convene a Court of Inquiry under para. 95 of the Volunteer Regulations, in consequence of complaints made concerning his conduct on parade on 4th instant.

The Major-General Commanding the Military Forces to His Excellency the  
Lieutenant-Governor and Commander-in-Chief.*Re Court of Inquiry on certain Officers.*

New South Wales Military Forces, Head-quarters,

Your Excellency,

Sydney, 17 December, 1897.

I have the honour to forward herewith certain correspondence bearing upon complaints made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, against each other in connection with their actions on a parade at Goulburn on the 4th instant, and to request that, as the explanations of both do not admit of my arriving at a decision on the matter, that your Excellency will be pleased to authorise me to convene a Court of Inquiry, in accordance with para. 95 of the Volunteer Regulations, copy of which, with para. marked, is forwarded herewith for your Excellency's perusal.

I have, &c.,  
G. A. FRENCH, Major-General,  
Commanding N. S. Wales Military Forces.

The Hon. the Chief Secretary.—FREDK. M. DARLEY, Lieut.-Governor, 26/12/97. A minute may be prepared recommending that a Court of Inquiry be convened in accordance with the request herein made.—C.W., 30/12/97. Approved.—J.N.B., 5/1/98. Minute herewith, 11/1/98.

The Major-General Commanding the Military Forces to His Excellency the  
Lieutenant-Governor and Commander-in-Chief.

*Re* Court of Inquiry on certain Officers.

New South Wales Military Forces, Head-quarters,

Your Excellency,

Sydney, 28 December, 1897.

Referring to my letter of the 17th instant, regarding the convening of a Court of Inquiry to hear the complaints of Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, in connection with the parade at Goulburn on 4th December, 1897, I have the honour to request that your Excellency may be pleased to grant me the authority asked for therein as early as possible, in order that a decision may be arrived at in the matter.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding N. S. Wales Military Forces.

The Hon. the Chief Secretary.—FREDK. M. DARLEY, Lieut.-Governor, 30/12/97.

Minute Paper for the Executive Council.

Court of Inquiry to be convened in connection with conduct of certain Volunteer Officers.

Chief Secretary's Office, Sydney, 6 January, 1898.

I RECOMMEND that, in accordance with the provisions of para. 95 of the Volunteer Regulations, Major-General G. A. French, C.M.G., R.A., Commanding the Military Forces, be authorised to convene a Court of Inquiry to hear the complaints made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, against each other in connection with their actions on a parade at Goulburn on the 4th ultimo.

JAMES N. BRUNKER.

I have no power to authorise the Major-General to convene a Court of Inquiry. This must be done by me, as Governor, with the advice, &c. I have also to appoint the officers who are to hold this Court. (See latter part of section 24, 31 Vic. No. 5.)—FREDK. M. DARLEY, Lieut.-Governor, 7/1/98.

Memorandum by The Major-General Commanding the Military Forces.

11 January, 1898.

COLONEL William Hillier Holborow, C.M.G., Commanding 3rd Infantry Regiment; Lieutenant-Colonel Montagu William Bayly, Commanding purely Volunteer Corps; Lieut.-Colonel Gerald Ross Campbell, Commanding 5th (Union Volunteer) Infantry Regiment; or, Captain and Brevet Major Morris Marian Boam, Deputy Assistant Adjutant-General.

P.U.S.—Above names submitted as suitable officers for Court of Inquiry at Goulburn.

G. A. FRENCH,  
Major-General.

Minute Paper for the Executive Council.

Court of Inquiry to be convened in connection with conduct of certain Volunteer Officers.

Chief Secretary's Office, Sydney, 11 January, 1898.

I RECOMMEND that the authority of the Lieutenant-Governor-in-Council may be obtained, directing that a Court of Inquiry be convened to hear the complaints made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, against each other, in connection with their actions on a parade at Goulburn on the 4th ultimo; and that the undermentioned officers shall compose such Court of Inquiry:—

Colonel Holborow, C.M.G., Lieutenant-Colonel Bayly, Lieutenant-Colonel Campbell, and Major Boam (if necessary).

JAMES N. BRUNKER.

Minute of the Executive Council:—The Executive Council approved the appointment of the Board of Inquiry referred to.—ALEX. C. BUDGE, Clerk of the Council. Min. 78-S, 11/1/98. Approved.—FREDK. M. DARLEY, Lieut.-Governor, 11/1/98. Confirmed, 18/1/98.

The Principal Under Secretary to The Major-General Commanding the  
Military Forces.

Sir,

Chief Secretary's Office, Sydney, 11 January, 1898.

In reply to your letters of the 17th and 28th ultimo, I am directed by the Chief Secretary to inform you that His Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased to direct that a Court of Inquiry be convened to hear the complaints made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, against each other in connection with their actions on a parade at Goulburn on the 4th *idem*; and to appoint the undermentioned officers to compose such Court of Inquiry:—

Colonel William Hillier Holborow, C.M.G., Commanding 3rd Infantry Regiment; Lieutenant-Colonel Montagu William Bayly, Commanding purely Volunteer Corps; Lieutenant-Colonel Gerald Ross Campbell, Commanding 5th (Union Volunteer) Infantry Regiment; or Captain and Brevet-Major Morris Marian Boam, Deputy Assistant Adjutant-General.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

Papers returned herewith.

PROCEEDINGS

PROCEEDINGS of a Court of Inquiry, assembled at Orderly Room of "G" Company, 2nd Infantry Regiment, in Market-street, Goulburn, on the 28th day of January, 1898, by order of His Excellency the Lieutenant-Governor, bearing date 14th of January, 1898, and 19th January, 1898, to investigate certain matters to be brought before it.

PRESIDENT :—Colonel W. H. Holborow, C.M.G., Commanding 3rd Infantry Regiment.

MEMBERS :—Lieutenant-Colonel M. Bayly, Commanding purely Volunteer Corps; Lieutenant-Colonel G. R. Campbell, Commanding 5th (Union) Volunteer Infantry Regiment.

The Board having assembled, pursuant to the above order, proceed to make the declaration required by Reg. No. 99 of the Regulations made under the Volunteer Force Regulation Act. This declaration was duly made by—

Colonel Holborow, President.

Lieutenant-Colonel M. Bayly, and

Lieutenant-Colonel G. R. Campbell, } Members of Court.

The President invites the attendance of Lieutenant Newman, 2nd Regiment, and Captain Barrett, 6th Volunteer Regiment, who enter the Court.

The President intimates that as Lieutenant Newman made the charge against Captain Barrett in the first instance, Lieutenant Newman will be entitled to call his witnesses first, and then Captain Barrett his witnesses. The President also explains that he proposes to take statements of Lieutenant Newman and Captain Barrett in the first place before any other evidence is called, and then each party's witnesses will be called—Lieutenant Newman's first, and then Captain Barrett's—and that each party will have the right to examine his own witness and cross-examine the other party's.

The President intimates the reason for holding the inquiry at this time—4 p.m., 28th January, 1898—to allow of examination of a witness who is leaving the Colony.

The President reads complaint of Lieutenant-Newman, dated 6th December 1897, to Officer Commanding 2nd Regiment. Letter of 7th December, 1897, from Adjutant of 2nd Regiment on behalf of Officer Commanding 2nd Regiment, and endorsements thereon; also Captain Barrett's explanation, dated 10th December, 1897, to Officer Commanding 6th Volunteer Regiment, and letter of Officer Commanding 6th Volunteer Regiment, dated 9th December, 1897, to A.A.G. as Chief Staff Officer, with endorsements; and explanation of Lieutenant Newman, dated 14th December, 1897, in response to letter of Officer Commanding 6th Volunteer Regiment, of 9th December, 1897; and letter, dated 8th December, 1897, from Captain Barrett to Officer Commanding 6th Volunteer Regiment.

These documents are marked A(1), A(2), B, C, D, E, F, G, respectively, signed by the President, and attached to the proceedings.

First witness—*Lieut. Andrew William Newman*, 2nd Infantry Regiment, being duly sworn, states :—

On the night of the 4th December, 1897, about 7:30 p.m., both Companies ("E" Company of Australian Rifles, and "G" Company 2nd Regiment), were formed up in Market-street, Goulburn, in front of the Orderly Room, to attend the Hospital Demonstration; while I was talking to "G" Company, Lieut. Wall, 2nd Regiment, came round to me to ask me which was the best way to get up to the Fire Brigade Station, where the procession was to start from; after telling him what way I thought would be the best, he went back to "E" Company, Australian Rifles, and moved the Company off; "G" Company not being numbered off, I ran round to Mr. Wall and asked him why he was moving the Company off in such a hurry, saying it would be as well for both Companies to go up together, instead of "E" Company, Australian Rifles, being up there a quarter of an hour before we got there; during this conversation with Lieut. Wall, Captain Barrett walked up to us both, demanding from me what I was doing; I at once told Captain Barrett that I was not addressing him, but was addressing Lieut. Wall; Captain Barrett then went on talking, and saying that he thought I was taking a great deal upon myself; I then said to Captain Barrett I was looking after my own Company, but, perhaps, he would like charge of the parade, whereupon Captain Barrett told me "to go to hell"; I then said that I should report him, and his reply was "that I could report, and do as I damned well liked"; after the parade was dismissed, there was a meeting of the Goulburn Band in this Orderly Room, as Lieut. Thompson (Adjutant, Australian Horse) wished to enlist the band for the First Australian Horse; there were also present in the room Mr. R. E. Zouch, Lieut. and Adjutant Thompson, Mr. R. Finlay, and Mr. Baxter, commercial traveller; and after the band had left the room, Mr. Zouch asked me what was the matter with me, as I looked put out about something, and my reply to him was, "So would you look put out if a man in uniform had told you to go to hell without any provocation"; the door between office and Orderly Room opened about that moment, and Lieut. Holdorf, of 2nd Regiment, walked into the Orderly Room, Captain Barrett and Lieut. Wall standing in the doorway; I then said to Mr. Zouch, "It is a thing that I will allow no man to say to me on parade without reporting"; whereupon Captain Barrett remarked that there was no occasion to mention anything about that here; I then told Captain Barrett that names had not been mentioned, but that I had never so far forgotten myself as to say a man in uniform instead of an officer, and that if he would insist upon trying to create another row, I pointed towards the door, and told him that that was the way out; Captain Barrett then remarked, "Oh, if I am ordered out, I shall go out"; I then said, "Very good; I order you out of the room"; Captain Barrett then stepped from the doorway into the office; going towards the door which led out of the office into the passage; I walked after Captain Barrett, with the sole intention of closing the door, and when in the office, just before Captain Barrett got to the door, he said, "Don't you give me any impudence," drawing his hand back, and striking me on the cheek, and knocking my helmet off, to which Lieut. Wall was a witness.

The President asks Captain Barrett whether he wishes to ask Lieut. Newman any questions, and he says, "No."

Q. 1. *Lieut. Newman (to the President)*: Who was in charge of your Company? A. I was.

Q. 2. If you were in charge of Company, why did you ask Lieut. Wall anything;—was he in uniform? A. He was in uniform. He came down to see if he could be of any assistance, so far as I know. He was with Captain Barrett's Company.

Q. 3. Captain Barrett is in charge of "E" Company? A. Yes.

Q. 4. Why did you address Lieut. Wall instead of Captain Barrett, who commanded "E" Company? A. My sole object for speaking to Lieut. Wall instead of Captain Barrett was that, so far as I could see, Lieut. Wall was in charge of the Company, as he had formed the Company up, and numbered them off, and done everything else, and moved the Company off also.

Q. 5.

Q. 5. What do you mean by forming the Company up? A. Falling the men in, and numbering them off, and then forming fours, turning to a flank, and moving them off.

Q. 6. Were you on friendly terms with Captain Barrett up to that time? A. As far as I know, there was no enmity of any kind between us up to that time.

Q. 7. Was there any understanding as to who should move off first? A. No. The two Companies, were formed up in column in Market-street, my Company in front, and Lieut. Wall called his "E" Company to attention, formed fours, turned the Company to a flank, and moved off; and then I ran round to Lieut. Wall, and asked him why he was in such a hurry—if he could not wait and let us both go together, instead of straggling up.

Q. 8. Did "E" Company go off by itself? A. No. While I was speaking to Lieut. Wall, the Company ("E" Company) was halted by Lieut. Wall, and that time was the time when Captain Barrett made use of the exclamation, "Go to hell."

Q. 9. You say Captain Barrett was talking a good deal;—to whom was he talking? A. He was talking to me; that was before he used the expression.

Q. 10. Do you recollect what he said? A. He said he thought I was taking a good deal upon myself.

Q. 11. When he used the expression "Go to hell," did he do so in a loud tone, so that the men could hear it? A. I think it was made in a loud enough tone to be heard by a few of the men in my "G" Company on the left flank, and a few men on right flank of "E" Company. [Witness explains the positions of the two Companies at the time.]

Q. 12. What time did the procession take place, and when was the paradedism issued? A. The parade was dismissed at Orderly Room at 9 p.m.

Q. 13. When Captain Barrett struck at you, was his hand closed, and did he hit fiercely at you? A. Yes.

Q. 14. Was this the first parade the two Companies had together? A. Yes.

Q. 15. Did you report your Company ready to march off to Captain Barrett? A. No.

Q. 16. Did Captain Barrett give any commands? A. Not that I heard.

Q. 17. Do you think he gave any? A. I do not think so.

Q. 18. What reason had you for supposing that Captain Barrett was not in command of his Company? A. Because I never heard him give any commands; apparently all commands were given by Lieut. Wall.

Q. 19. Whereabouts was Captain Barrett standing whilst the Companies were being formed up? A. As near as I could say, up near the right flank of his Company.

Q. 20. Did you take command of the parade? A. No; I didn't interfere with "E" Company in any way.

Q. 21. Did you ask permission to march "G" Company off? A. No.

Q. 22. Whose authority was given to hold the parade? A. I received authority from Colonel of my Regiment.

Q. 23. Were you ready to march "G" Company off before "E" Company, Australian Rifles, marched off? A. No; I was not ready.

Q. 24. To what Company did the office in which the assault took place belong? A. To "G" Company, 2nd Regiment.

Q. 25. Has "E" Company an Orderly Room and office independent of "G" Company's rooms? A. Yes.

Q. 26. Virtually, Captain Barrett had no right in office of "G" Company unless invited? A. No.

Q. 27. Do the men and officers of the two Companies "E" and "G" frequent each other's rooms? A. Not the men or N.-C. officers, but officers (Captain Barrett and myself) do.

Q. 28. To whom does this room in which the Court is now being held belong? A. To "G" Company, 2nd Regiment—Orderly Room.

Q. 29. Does First Australian Horse Band practise here? A. No, not now; on night of assault it was used for purposes of recruiting for First Australian Horse, by my permission.

Q. 30. Did you order Captain Barrett out of office? A. Yes, I did, as I have already said.

Q. 31. Who were the witnesses to the assault? A. Only Lieut. Wall.

Q. 32. What made you think that Captain Barrett wished to create another disturbance? A. From the excited way in which he was talking.

Q. 33. Can you state the gist of what Captain Barrett said, and your replies whilst Captain Barrett was in the doorway and before you ordered him out? A. On hearing my remark—i.e., "that I will allow no man to say to me on parade," &c. (as in previous portion of my evidence)—Captain Barrett then said that there was no occasion to mention that here, as he thought it was quite out of place. That is all I can state of the conversation that took place.

Q. 34. After this remark, did you and Captain Barrett have any conversation? A. No; Captain Barrett kept on talking, but I cannot say what he said. I said I did not want to have any conversation or any more row, and that if Captain Barrett insisted on trying to cause another row—I pointed towards the door, and said that that was the way out. Captain Barrett stepped back from the door into the office, and he turned and drew back his hand, and then said, "Don't you give me any impudence."

Q. 35. Cross-examined by Captain Barrett: Which hand did I use in striking you, Lieut. Newman? A. The right hand.

To President: The Goulburn band mentioned was purely a civilian band, and was here to meet Lieut. and Adj. Thompson in connection with his proposal that they should join Australian Horse.

A. W. NEWMAN,  
2nd Infantry Regiment.

Adjournment.—The Court adjourned at 6:30 p.m.

Reassembly.—And reassembled at 8 p.m., the same members being present as before.

Second Witness—Captain Arthur Connor Barrett, 6th Regiment Volunteer Infantry, being duly sworn, states:—

I am the Captain Commanding "E" Company, 6th Volunteer Regiment Australian Rifles; I know the nature of this inquiry; pursuant to leave from O.C. my regiment (Colonel Wright), a parade of "E" Company was held in Market-street, Goulburn, at 7:30 p.m. on 4th day of December, 1897; I attended at

at "E" Company's Orderly Room at 7.15 p.m., and whilst addressing N.-C. officers, Lieut. Wall, of 2nd Regiment, presented himself to me, and wished to know if he could be of any assistance to me in connection with the parade, and seeing that I had no subalterns, I thanked him for his offer and accepted it, fully expecting a full parade; Mr. Wall asked me if he would fall the Company in; I assented, and he proceeded to do so; finding that he was forming up the ranks before inspecting the N.-C. officers, I drew his attention to what I considered a slight omission, and asked him to remedy it; he did so; I then ordered the Company to fall in in usual manner on section commanders. (N.B.—This was in street opposite Orderly Room, where Court is sitting.) I then proceeded to number the Company, and having done so, proceeded, in company with Lieut. Wall, to inspect their accoutrements; having done so, Lieut. Wall suggested that, as Mr. Newman had formed his Company across the street, we should do the same; this was done, though I remarked to Mr. Wall that it appeared a cumbrous manner of handling a company; Mr. Wall remarked that it would be as well, for appearance sake, to have both Companies drawn up in the same manner; having arranged the Companies in this manner (across the street) Mr. Wall reported himself and suggested that he should ask Mr. Newman, whose Company was to lead on the march, which way he intended to move "G" Company off; I assented, and Mr. Wall went in search of Mr. Newman, and after an absence of a few minutes returned, stating that Mr. Newman wished to move off by fours from the left; he then said, "Shall I move also"; I said "Yes, you may give the order also, as it is time we were on the move"; "E" Company had just moved off, and "G" Company appeared to be following, when Mr. Newman rushed up to me, in an apparently excited manner, and demanded who was in charge of that Company; I remarked, "I am"; he then said, "Do you recognise me as senior officer?" I said, "Certainly not"; he then repeated, "Am I not senior officer?" I remarked, "No; you had better look after your own Company, Newman, and I will look after mine"; he then asked again a third time, "Am I not senior officer?" I gave the same answer, "No"; he next said, "Are you senior officer?" I told him then that I would look after my Company, and he was to look after his; he then said, in an excited manner, "I will report you"; I said, "You may please yourself what you do"; I then marched my Company off, and proceeded to the Fire Station; marching past the Fire Station, in Montagu-street, next parallel street to Market-street, Mr. Newman's Company following, I marched past the station for the purpose of allowing Mr. Newman's Company to take its proper station in the procession, being the Company entitled to lead; in that order the Companies marched; during the march Mr. Wall wished to know whether he was to conform to movements of "G" Company; I replied, "No"; on the completion of the parade, whilst addressing my Company, thanking them for their attendance, the City Band struck up the National Anthem, drowning my remarks; after dismissing the Company, here in front of Orderly Room, I waited for some little time in the street for the purpose of demanding an explanation from Mr. Newman in regard to his conduct during the evening; it refers to that portion of the evidence I have already given in respect of conversation which took place between us, as I have already detailed, before we marched off; finding that Mr. Newman was not coming out from his Orderly Room, I determined on seeing him inside, and as I considered that I had been somewhat hasty in my remarks to him, I had decided to apologise, at the same time requesting him to explain his conduct; on reaching the office of the 2nd Regiment, I found Lieutenants Holdorf and Wall sitting in the office chatting; the occurrences of the evening were discussed, and I stated my intention to those officers, *i.e.*, to apologise for my remark, and to demand an explanation from Mr. Newman; after waiting for some time the two officers named walked to the door of the Orderly Room, 2nd Regiment, and I followed; Mr. Newman was then standing in the doorway, discussing the question of the band being turned over from his Company to the Australian Horse; we stood in the doorway together for some few minutes; during that time Mr. Newman was accorded a vote of thanks for his kindness in lending the room and handing the band over; whilst this was going on, Lieutenants Wall, Holdorf, and myself again retired to the office, Mr. Newman passing in and out two or three times, and seeing that he appeared busy, I refrained from addressing him; some little time afterwards we heard the band retire, and some excited talk going on in the Orderly Room; for some time we took no notice; Mr. Wall and Mr. Holdorf then walked to door of Orderly Room, and I followed; as soon as I reached the door, I heard Mr. Newman say something that led me to believe he was discussing what had taken place between us, and not wishing the matter to be made public, I walked in to him and requested him not to make a public babble of a matter like that; he immediately turned on me, and raising both hands before him, said he did not wish to have anything more to say to me; I requested him not to get excited; he then showed me the door, and I turned to the door, saying that as I was ordered out I would go, remarking that I was very sorry to meet with conduct like that from him; he followed me to the door, and almost putting his face up to mine, dared me to meet him in private clothing; as he pressed so close to me, I put out my left hand to push him away, and in shaking his head at me the edge of his helmet came on to the tips of my fingers, and the helmet spun off; he immediately returned to the Orderly Room, after picking up his helmet.

The President invites Lieut. Newman to ask this witness any questions he may desire; but Lieut. Newman states that he has no questions to ask.

Q. 36. *To the President:* Had you any instructions as to "G" Company, 2nd Infantry Regiment, parading on 4th December, 1897? A. I was aware of the parade, but had no official instructions. It was at my request that the Hospital Committee had invited "G" Company.

Q. 37. Did Lieut. Newman inform you that his company would parade that evening? A. No.

Q. 38. Had you authority to allow Lieut. Wall to fall in and assist you? A. No.

Q. 39. What uniform did Lieut. Wall wear? A. Undress, with sword.

Q. 40. What was uniform of Company? A. Full dress.

Q. 41. Was any previous arrangement made as to which Company should lead? A. No; I understood that "G" Company, as the older Company, had the right.

Q. 42. When you told "E" Company to march off, what information had you that "G" Company (2nd Regiment) was ready? A. The fact that Mr. Wall had returned from Mr. Newman, having ascertained the way in which Mr. Newman wished to move off.

Q. 43. Did you consider yourself as senior officer on parade? A. No; from inexperience I did not know my position.

Q. 44. Since you took command of "E" Company, has Lieut. Newman's manner been deferential or otherwise? A. Up to this time we had been always good friends. His conduct had certainly been deferential, and nothing objectionable in his manner.

Q. 45.

Q. 45. Did you know that you were senior officer to Lieut. Newman, and did he treat you, prior to 4th December, 1897, with the respect due to you as senior officer? A. I understood that Captain ranked above Lieutenant, but there seemed to be some difference of opinion between me and Mr. Wall as to which of the two, I or Mr. Newman, was senior, owing to my being a purely volunteer officer, and Mr. Newman an officer of the Partially-paid Force. Mr. Wall insisted that Mr. Newman was senior. As to second part of question, it is somewhat difficult to answer, as we never met in uniform.

Q. 46. Did you consider that Lieut. Newman had authority to order you out of his office? I understood that he had such authority.

Q. 47. Was your hand closed or open when it came in contact with Lieut. Newman's helmet? A. It was open; the left hand, and the thumb of my right hand was stuck in my sword-belt.

Q. 48. Before writing letter of 10th December, 1897, to O.C. 6th Regiment, had you seen complaint of Lieut. Newman? I had seen Lieut. Newman's complaint.

Q. 49. Before writing your memo. of complaint of 8th December to your O.C. Regiment, had you seen or heard of Lieut. Newman's complaint *re* you? A. I had not; I had not seen Lieut. Newman's complaint, or heard from any officers in Sydney or elsewhere. I admit that I used the expression, "Go to hell," but did not think it necessary to state it in my evidence this evening, as I had already practically admitted it in my letter of the 10th December to O.C. Australian Rifles (6th Volunteer Regiment).

Q. 50. At what period did you use this expression, and where were you then standing? A. Mr. Newman had just started to walk to his Company from alongside of mine, saying, "I'll report you." I then made use of the expression complained of.

A. W. BARRETT, Captain,  
Commanding "E" Company, 6th Regt., Australian Rifles.

The President states that Lieut. Wall desires to be called now. Captain Barrett states that he is his witness. Both Captain Barrett and Lieut. Newman consent to his being called now.

Third witness—*Lieut. George Wall*, 2nd Infantry Regiment, being duly sworn, states:—

I am a Lieutenant in 2nd Regiment of Infantry; I was present at parade in Goulburn on evening of 4th December; during the afternoon I made inquiries from Captain Barrett if he would allow me to be attached to his Company during evening; he consented; at the appointed time (7.15) of parade, I reported myself, and asked him if I could assist him; he said, "Yes"; I then asked him would I form up his Company; he said, "Yes," and I did so, and I reported everything as correct to him; I next inquired from Mr. Newman where the Fire Brigade Station was, so that I might march off the Company, "E" Company, Australian Rifles; after some little delay, I called Company to attention, formed Fours left, Left wheel, Quick march; as the Company was moving off, Mr. Newman came to me, and asked me what I was doing; I told him what I had done, and asked him what I would do when I got to Fire Brigade Station; at that moment Captain Barrett came and asked Mr. Newman what he wanted; Mr. Newman said he was merely inquiring what I was doing; he said he was addressing me; then Captain Barrett used insulting language to Mr. Newman, telling him "to go to hell," and to mind his own business—that he (Captain Barrett) knew what he was doing—loud enough for members of both "G" and "E" Companies and bystanders to hear; Mr. Newman went back to his Company, and I immediately asked Captain Barrett would I proceed, and he said, "Yes"; nothing of any importance occurred until the Company was dismissed by me, with Captain Barrett's authority; I had virtually command during the evening; after the men were dismissed, I came to Orderly Room of "G" Company with the other officers of "G" Company, and Captain Barrett came in afterwards: I met Captain Barrett in the office, and we sat on table for some time talking about who would be senior on parade; after some little time we came into the Orderly Room, Captain Barrett leading; I heard Mr. Newman asking Lieut. Thompson, Adjutant, Australian Horse, some questions as to who would be senior; no names were mentioned; he was quoting a case; Captain Barrett said that there was no need to discuss that question here; Mr. Newman said if Captain Barrett had come to make a disturbance, he had better leave, as he (Newman) did not wish to enter into any discussion, for he had already told him on parade that he intended to report what Captain Barrett had said to him; Captain Barrett turned to leave the room, Mr. Newman following, and I immediately after; when Mr. Newman got to door leading to office from Orderly Room, Captain Barrett struck Mr. Newman in the face, knocking his helmet off.

Q. 51. To Captain Barrett: At the parade, immediately after companies were drawn up, do you say that Mr. Newman came and spoke to you and not to me? A. Mr. Newman did not speak to me until after I had moved off "E" Company, which I then immediately halted.

Q. 52. Do you remember telling me that you would inquire of Mr. Newman how he intended to move off? A. Yes; after the expression had been used by you.

Q. 53. Do you remember coming back, and stating that Lieut. Newman wished to move off by fours left? A. I do not remember.

Q. 54. Do you say that you had virtual command of the Company;—do you infer that you displaced me? A. Yes, as to the first question; No, as to the latter. I gave all orders from falling-in the Company to dismissing it.

Q. 55. Do you remember asking me if I intended to conform to movements of "G" Company? A. I do not remember.

Q. 56. Do you not remember me saying that I shall not conform to orders of "G" Company, but will give my own commands as to movements? A. No.

Q. 57. Do you not remember running up to me from the rear and telling me that "G" Company had changed arms, and whether I should do the same? A. Yes; which you immediately did. I could not say now who gave the order.

Q. 58. Do you not remember me flatly refusing to follow movements of "G" Company? A. No.

Q. 59. Who gave the order to change arms? A. I did so nearly every time. I was sometimes alongside "G" Company, and then I cannot say what orders were given them.

Q. 60. Did you hear me at any time give order to change arms? A. No; not once during the whole evening.

Q. 61. Do you remember me giving orders repeatedly for Company to mark time, owing to my Company crowding on "G" Company? A. No.

Q. 62.

Q. 62. Do you remember me drawing the attention of the Mayor to the fact that the Fire Brigade was spoiling the march by moving too slowly? A. Yes.

Q. 63. Do you remember admitting, in "G" Company's office, that you were the cause of all the trouble, through misinterpreting Mr. Newman's instruction to you about moving off? A. No.

Q. 64. *To Lieut. Newman*: Did Captain Barrett, in "G" Company's office, strike me with his open hand or clenched fist? A. Clenched fist.

Q. 65. With which hand did Captain Barrett strike me? A. With his right hand, because he struck him on the side nearest me, and he was carrying his sword in his left hand.

Q. 66. Did I push my face up into Captain Barrett's face during his exit from Orderly Room door to outer door of office? A. No, you did not.

Q. 67. And is it not a fact that if I had not stepped back I should have received a nasty blow from Captain Barrett. A. I believe so.

Q. 68. Did you hear me saying anything like what is stated in Captain Barrett's report as to what he asserts to have happened when I ordered him out of the Orderly Room [*the actual words of Report are read by President to witness*]? A. I did not hear anything like that. The words I heard used were, "I shall certainly report you, Captain Barrett."

Q. 69. Was this expression used in the Orderly Room and office, or on parade? A. To the best of my knowledge, in both places.

Q. 70. *To Captain Barrett*: Did you see me strike Mr. Newman with the clenched fist of my right hand? A. Yes, I did.

Q. 71. When the last words were spoken between Mr. Newman and myself in the office, were you not in the Orderly Room? A. No. I had hold of Mr. Newman's arm, and we both came into the Orderly Room together.

Q. 72. *To the President*: Have you to-day talked about this case to either Captain Barrett or Mr. Newman? A. Yes; to Mr. Newman. All I said was, "It is a most unfortunate affair that I should be taken from Sydney to-day, when I was leaving for London to-morrow."

Q. 73. When did this take place? A. About 5.7 o'clock.

Q. 74. Was anything further bearing upon the case said? A. No, nothing further.

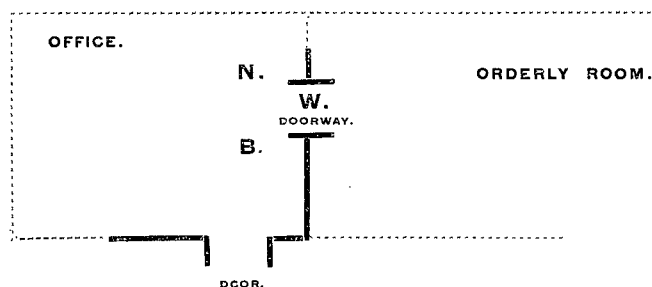

Q. 75. Have you heard anything in connection with the case from anyone since this case began this afternoon? A. I overheard, by accident, a conversation that a lot of N.-C. officers of Australian Rifles were being called.

Q. 76. Did you understand from Captain Barrett that you were placed by him in command of "E" Company, or only to assist? A. In command.

Q. 77. What was said by Mr. Newman and Captain Barrett immediately before Captain Barrett made use of strong language? A. I do not recollect.

Q. 78. When did Mr. Newman threaten to report Captain Barrett? A. It was after the strong expression was used.

*To the President*: [*Lieut. Wall shows position in office of Captain Barrett, Lieut. Newman, and himself, thus—*

*at time when Captain Barrett struck Lieut. Newman.*]

Q. 79. Did you see Lieut. Newman put out his two hands to Captain Barrett before he was struck? A. No.

Q. 80. Who numbered off "E" Company when they first fell in? A. I did.

Q. 81. Did anyone else number the Company? A. No one else; only numbered off on one occasion.

Q. 82. Could any commands have been given in your absence? A. Yes.

Q. 83. You say that you gave all commands to "E" Company from the time they fell in till they were dismissed;—how do you reconcile this with your statement that you left "E" Company several times and went to "G" Company while marching, and did not know what commands were given them? A. I did not hear any other commands given than what I gave myself.

Q. 84. Was Lieut. Newman's manner towards Captain Barrett subordinate and deferential when on parade, as from an inferior to a superior officer? A. I should say, yes.

Q. 85. *To Captain Barrett*: Have you stayed with Mr. Newman on two occasions at his house in Goulburn during the 4th December and since? A. I was staying with him on or about the 4th December, but not since.

Q. 86. *To the President*: Did you ask Captain Barrett, "Would you fall Company in?" A. Yes.

Q. 87. Did Captain Barrett see that you were forming up Company without inspecting N.-C. officers, and did he call your attention to that, and ask you to remedy it? A. No; that is not the case. To the best of my knowledge and belief, that is not the case.

Q. 88. Who inspected the clothing and accoutrements of Company? A. Captain Barrett, myself, and N.-C. officers.

Q. 89. Who was then in command during this inspection? A. I understood that I was—that is, virtually. I did not mean that I displaced Captain Barrett.

Q. 90. After "E" Company was formed across street, did you ask Captain Barrett as to which Company was to lead on the march? A. Yes.

Q. 91. Did you ask Captain Barrett whether you should ascertain from Mr. Newman what was to be done in this matter? A. Yes.

Q. 92.

Q. 92. Did you seek Captain Barrett's immediate permission before moving off from parade ground?

A. No.

Q. 93. Who gave the order to move? A. I did.

Q. 94. When "E" Company moved off, did you see Mr. Newman run up to Captain Barrett and say, "Who is in command of 'E' Company?" A. No. Quite possible this might have occurred without my seeing it.

Q. 95. Do you say that Captain Barrett did not dismiss the Company? A. He did not dismiss the Company.

GEORGE WALL, 1st Lieut.,  
2nd Infantry Regiment.

[The witness withdraws.]

Lieut. Wall, with the consent of Lieut. Newman and Captain Barrett, is allowed to leave altogether.

Lieut. Newman and Captain Barrett both agree to continue inquiry at this hour—12:10 a.m., 29th January.

Fourth Witness—*Captain Legge*, Adjt., 2nd Infantry Regt., having been called, and nature of his evidence having been stated, it was agreed by both parties to dispense with his evidence, both parties admitting that Captain Barrett applied for a commission in 2nd Regiment some months ago, and that Lieut. Newman forwarded it and recommended that it be granted.

[The witness withdraws.]

Fifth witness—*Lieut. Robert Roland Thompson*, 1st Australian Horse, being duly sworn, states:—

I am Adjt. and Lieut. of 1st Australian Horse; I was in the "G" Company Orderly Room at Goulburn on evening of 4th December, after meeting of band; after the meeting Lieut. Newman asked me what I thought of an officer who had told him "to go to hell"; a few moments after, I think, Captain Barrett came to door between office and Orderly Room, and said something like this: "That will do, Newman"; Newman said, "I mention no names; I do not wish the matter brought up here"; Mr. Newman then went into the office; came back shortly afterwards looking very excited, accompanied by Mr. Wall.

Q. 96. To Lieut. Newman: Did you notice any threatening language used by me to Captain Barrett, or did you notice me place myself in any threatening attitude in front of Captain Barrett? A. No.

Q. 97. To Captain Barrett: Did you remain in Orderly Room all the time of disagreement between Mr. Newman and myself? A. Yes.

Q. 98. Did you observe that Mr. Newman got very excited when I entered the Orderly Room? A. No, not very excited—no, not excited. He spoke sharply to you when you said, "That will do, Newman."

Q. 99. Did you hear anything of the nature of the sound of a blow? A. No; I did not. I heard something like a scuffle, but I did not take any notice of it—something like several men trying to get out of a room together.

Q. 100. To the President: Did you hear Mr. Zouch ask Mr. Newman what was the matter with him, as he looked put-about? A. I did.

Q. 101. Did you hear the reply? I cannot remember.

Q. 102. Did you hear Mr. Newman reply, "So would you look put out if a man in uniform had told you to go to hell, without any provocation"—or words to that effect? A. I cannot remember.

Q. 103. Were you standing near Mr. Zouch and Mr. Newman at the time when Mr. Zouch asked the question "What are you put out at?" A. Yes; with others.

*Adjournment.*—The Court adjourns at 12:38 a.m., 29th January, 1898, until 11 a.m., this day.

The Court reassembles at 11 a.m., 29th January, 1898, at the same place as before, the same members of the Court being present.

Captain Barrett and Lieut. Newman are also present.

Fifth witness—*Lieutenant and Adjutant Thompson*, 1st. Australian Horse:—

Q. 104. Would you judge by conversation that occurred at the time that Captain Barrett's manner was aggressive, and that he was trying to create a disturbance? A. The only time I saw Captain Barrett was for a few moments at the doorway leading in to the office, and then his manner was not aggressive.

Q. 105. Did you hear Mr. Newman say to Captain Barrett that if he insisted upon trying to create another row (pointing towards the door), that that was the way out? A. I did not hear that.

Q. 106. By which door did you leave Orderly Room, and when? A. By door leading into the street, I think, accompanied by Mr. Zouch, Mr. Finlay, Mr. Wall, and, I think, Mr. Newman, and one or two others.

Q. 107. Was that after Captain Barrett had left? A. Yes.

Q. 108. Would you say, from Captain Barrett's or Mr. Newman's manner or language about the time when you saw Captain Barrett and Mr. Newman together, that either could be considered to be provoking a disturbance? A. No.

[Witness then explains that Mr. Newman came into the Orderly Room just after the scuffling witness stated that he heard, accompanied by Mr. Wall, with his helmet in his hand, and said, "I have ordered Captain Barrett out, and he struck me; I am not going to stand that from any man," or words to that effect.]

Q. 109. Where were you when you heard the scuffling? A. In Orderly Room—(shows position).

Q. 110. Did you at any time see Mr. Newman raise his hands, either in a deprecating or aggressive manner, to Captain Barrett? A. No, sir. [Captain Barrett does not object to this evidence.]

Q. 111. To Captain Barrett: You saw me at the door? A. Yes.

Q. 112. In what manner of voice did I speak? A. In an ordinary tone of voice.

Q. 113.

Q. 113. Did you not hear Mr. Newman order me out of the room—he standing in Orderly Room?  
A. No.

Q. 114. Did you see Mr. Wall holding Mr. Newman back by the arm? A. No.

Q. 115. Did you see Mr. Wall follow Mr. Newman out of the Orderly Room when Mr. Newman followed me? A. No.

Q. 116. *To the President*: Was Mr. Newman's manner and attitude towards Captain Barrett, when you saw them together, what you, from your experience as a soldier, would consider correct from a junior to a superior officer? A. No. His manner seemed to be excited, and he seemed to be labouring under a grievance, and I do not think that his bearing was what I should expect to be observed by a subordinate to a superior officer. After the scuffling, and after Mr. Barrett had left, I had a conversation with Mr. Newman, in which he stated that he had served for many years, and that he considered he was senior to Captain Barrett, as Captain Barrett had just come into the service. Then I said that that was not so—that his longer service had nothing to do with it, and that Captain Barrett's rank entitled him to be his superior officer.

Q. 117. *To Captain Barrett*: Do you remember Lieut. Holdorf leaving the "Royal Hotel" afterwards, where he was in company with you, for the purpose of arranging a reconciliation between me and Mr. Newman? I do.

Q. 118. *To Lieut. Newman*: Did you see parade that night? A. Yes.

Q. 119. Could you say what kind of sword-belt Captain Barrett wore that night? A. I cannot remember. He wore a white cross-belt. I did not notice sword-belt.

*To President*: Lieut. Holdorf came back to hotel, and then stated that he could not effect a reconciliation, as Captain Barrett would not come up that evening. Mr. Newman waited at hotel until Lieut. Holdorf returned. (*This statement was in connection with Captain Barrett's question to Lieut. Thompson.*)

R. R. THOMPSON, Lieut. and Adjt.,  
1st Australian Horse.

[The witness withdraws.]

Sixth Witness—2nd Lieut. Charles John Holdorf, being duly sworn, states:—

I am 2nd Lieut. of "G" Company, 2nd Infantry Regiment; I was present at parade on December 4th last, and also in Orderly Room afterwards; I fell "G" Company in, with the understanding that Mr. Newman had charge of the parade of both Companies, "G" and "E" 6th Regiment; this I understood from Mr. Newman; I proved Company, and gave the order to stand at ease; I remember no more until I saw "E" Company, 6th Regiment, moving off by the command of Mr. Wall; I then saw Mr. Newman come over to "E" Company, and he then came back, and he made use of the expression, "Captain Barrett, I'll report you"; just before that I heard some conversation over near "E" Company, but I cannot say what it was; Captain Barrett replied, "You can do what you damned well like; I'll report myself"; nothing else that I noticed material took place after that until we met in Orderly Room.

Q. 120. *To the President*: Who was in command of "E" Company, as far as you could say? A. Sometimes I heard Captain Barrett give command, and at times Lieut. Wall; the Companies worked independently, and dismissed independently; after the altercations I heard, I heard nothing of any conversation between Captain Barrett and Lieut. Newman as regards seniority on the parade; before altercation, Lieut. Newman had taken no part in the parade, as far as I could see; at Orderly Room ("G" Company's) after parade there was a meeting of the City Band with the Adjutant of Australian Horse; I attended that meeting, and I saw there Captain Barrett and Lieut. Newman; before the meeting finished I retired, and went into "G" Company's office; I met Lieut. Wall there, and had a conversation; Captain Barrett joined us; part of the conversation referred to difference between Captain Barrett and Mr. Newman; I said I was sorry it happened; Captain Barrett also said he was sorry too, and that he bore no ill-will to Mr. Newman, for if he had, he would not have attended there that evening; this idea for attending was to apologise for remarks he had used to Lieut. Newman; we then came into Orderly Room; in the meantime the band meeting had dispersed; I came in first, and saw Mr. Newman speaking to several gentleman, and as I came in I heard him say "that some man on parade had told him to go to hell"; Captain Barrett, who was following me, said to Mr. Newman, "Well, there is no need for you to bring that up here"; Mr. Newman replied, "I do not want to have anything more to do with you," and said, pointing to the door, "There is the door"; Captain Barrett replied, "I do not think it is fair to be ordered out"; Lieut. Newman then made a forward movement, and Captain Barrett retired, and they both went into office; I heard words in office between them, but cannot say what they were; afterwards Lieut. Newman came into Orderly Room with his helmet in his hand remarking that Captain Barrett had struck him; Lieut. Wall went into office with Mr. Newman.

Q. 121. *To Lieut. Newman*: Did you notice what sort of sword-belt Captain Barrett wore that night on parade? A. I cannot say.

Q. 122. Was it a white or tan-brown belt? A. I cannot say.

Q. 123. *To Captain Barrett*: Can you say if Mr. Wall followed Mr. Newman immediately on his leaving the Orderly Room to go into office after me? A. Yes.

Q. 124. Did you notice whether Lieut. Wall had hold of Mr. Newman's arm? A. I cannot say.

Q. 125. Did you hear anything like the sound of a blow? A. No.

Q. 126. Had Mr. Newman the appearance of having been struck a violent blow? A. No.

Q. 127. Do you remember coming to me at my house at about 10.30 that evening for the purpose of endeavouring to effect a reconciliation? A. Yes.

Q. 128. Do you remember expressing surprise that Mr. Newman had stated that I had struck him? [*Mr. Newman does not object.*] A. I cannot remember that. I might have said I would be surprised if Captain Barrett had struck Lieut. Newman—one officer striking another.

Q. 129. Do you remember whilst at my house that I stated I could not meet Mr. Newman that evening, owing to the ungentlemanly conduct or treatment I had received at his hands? A. You said to me that your reason for not coming that night was you would sooner have the meeting the next day, as you thought you were too excited that evening.

Q. 130. Do you remember telling Mr. Wall in the office of "G" Company that he was the cause of all the trouble? A. I told Lieut. Wall that the mistake he made in ordering "E" Company to move off its ground after the inspection was the cause of the trouble.

Q. 131.

Q. 131. *To the President*: Would you say, from Captain Barrett's manner when you and he came into Orderly Room, that he was trying to create a row? A. His manner would not warrant that; he had already said that he had come to apologise.

Q. 132. Did you hear Lieut. Newman say to Captain Barrett that if he would insist upon trying to create another row (pointing towards the door), that that was the way out? A. I have already stated that this in effect took place.

Q. 133. What was Mr. Newman's manner at that time to Captain Barrett? A. Slightly excited.

Q. 134. Was it aggressive? A. No.

Q. 135. Did you see Mr. Newman at any time hold up his hand in a deprecating or threatening manner to Captain Barrett? A. No; all I saw was his pointing to the door.

Q. 136. Did you hear Captain Barrett request Mr. Newman not to get excited? A. Not to my recollection.

Q. 137. Do you consider that Lieut. Newman's manner to Captain Barrett was calculated to provoke him in the Orderly Room? A. No.

C. J. HOLDORF, Lieut.,  
"G" Company, 2nd Infantry Regiment.

[The witness withdraws.]

Seventh witness—*Richard Essington Zouch*, being duly sworn, states:—

Resident of Goulburn, and recommended for a commission in Goulburn Squadron of Australian Horse; I was in Orderly Room on evening of 4th December when City Band was present; I simply noticed a controversy between Captain Barrett and Mr. Newman; I think Mr. Newman asked for an apology; I cannot remember Captain Barrett saying anything; from the conversation of Captain Barrett and Mr. Newman, I was led to believe that Lieut. Newman wanted an explanation of some sort; I did not know what.

Q. 138. *To Lieut. Newman*: After bandsmen had left room, did you ask me anything? A. Yes; I asked what all this bother was about, and I think I added, "It is a pity to see two men squabbling in this way."

Q. 139. Do you remember my reply? A. I think it was to the effect that you had been grossly insulted.

Q. 140. During the time you were in Orderly Room, did you see me raise my hand with the intention of striking Captain Barrett, or place myself in a threatening attitude to him in any way? A. No.

Q. 141. After Captain Barrett had retired into office, whom did you notice following? A. I did not notice anyone.

Q. 142. Did I follow? A. I cannot say.

Q. 143. After Captain Barrett had retired, did you notice me coming from office into Orderly Room? A. Yes; I saw you return into Orderly Room, but do not know when you went into the office.

Q. 144. *To Captain Barrett*: Do you remember me appearing at office door? A. Yes; at some time or other.

Q. 145. Did you see me standing alongside Mr. Newman in doorway before band retired? A. I do not remember that. I remember seeing you only at time of controversy mentioned.

Q. 146. Do you remember a vote of thanks being passed to Mr. Newman for his services that evening? A. Yes.

Q. 147. Do you remember Mr. Newman making a long speech in reply? A. I remember him speaking, but I cannot say he was long.

Q. 148. Do you remember that there was a good deal of talking? A. I do not remember that.

Q. 149. Did you hear a blow struck in office? A. No.

Q. 150. Had Mr. Newman the appearance of having been struck a heavy blow? A. No.

Q. 151. Did Mr. Newman tell you that he had been struck? A. No; not at that time.

Q. 152. *To the President*: Are you prepared to say that Lieut. Newman did not raise his hands in any way to Captain Barrett? A. I should certainly say not threateningly. I never saw it; not in any threatening way. I simply saw him making a motion with his hand to the door—pointing the way.

Q. 153. Was Mr. Newman excited? A. Oh, yes.

Q. 154. Would you say that Lieut. Newman's manner to Captain Barrett was provoking? A. I should say not; that it was more as if Lieut. Newman was demanding concessions from Captain Barrett which he would not grant.

Q. 155. Would it be correct to say that Captain Barrett was trying to create a row? A. No.

Q. 156. Did you hear Lieut. Newman say to Captain Barrett, "If you will insist upon trying to create another row, then (pointing towards the door) that is the way out"? A. I believe something was said to that effect.

Q. 157. Was Captain Barrett excited? A. Yes; he seemed to be angry.

Q. 158. Did Captain Barrett endeavour to get into conversation with Mr. Newman, and did he refuse to converse with him? A. Yes; just immediately before Captain Barrett was ordered out; but I do not know what happened in the first part of the conversation. Towards the last I heard Lieut. Newman say to Captain Barrett, "I do not want to have anything more to say to you; there is the door."

Q. 159. At that time, was Captain Barrett's manner conciliatory or aggressive? A. I could not say it was conciliatory, or that it was aggressive. I consider from what he said, namely—"But you order me out; very well, I will go,"—that he was calm then.

R. E. ZOUCHE.

[The witness withdraws.]

Eighth Witness—*2nd Lieut. Michael Fitzgerald*, 2nd Infantry Regiment, duly sworn, states:—

I am a 2nd Lieut. in "G" Company, 2nd Infantry Regiment; remember 4th December last; I was on parade with "G" Company, in charge of left half Company; Company was facing Orderly Room, and a short distance off "E" Company was formed up at right-angles to us—about 7 yards off; I saw Lieut. Wall moving off "E" Company, and as the Company was being moved off Lieut. Newman went up to Mr. Wall and said something which I did not hear; about this time Captain Barrett came up to

to where Lieut. Wall and Newman were standing; some conversation (I did not hear what) took place between the three officers; then Lieut. Newman went back to the front of his own Company "G," and in doing so he called out to Captain Barrett, "I shall most certainly report you, Captain Barrett"; Captain Barrett replied, "That he could report, or do what he damned well liked"; "E" Company immediately moved off, and "G" Company followed; I know nothing more of what happened afterwards.

Q. 160. *To the President:* Was Lieut. Newman with his "G" Company before going up to Lieut. Wall? A. Yes, certainly, on the footpath; he had given some commands before going to Mr. Wall and Captain Barrett.

Q. 161. What commands did he give? A. I certainly heard him call Company to attention, and just then "E" Company was moving off, and apparently not as Mr. Newman had expected.

Q. 162. *To Lieut. Newman:* What sort of a sword-belt did Captain Barrett wear that night? A. I do not remember a sword-belt, but I remember a cross-shoulder-belt—white.

Q. 163. Do you think you would have seen sword-belt on Captain Barrett, if he had worn it outside his tunic. A. I am quite certain I would, as I was speaking to Captain Barrett on two occasions during the parade.

Q. 164. *To Captain Barrett:* Will you swear positively that I had not my sword-belt on that evening outside my tunic. A. I cannot say positively. I can only say positively as what I have said as to the cross-belt, but I think I would have seen the sword-belt if it had been outside.

Q. 165. You were aware that I was in full dress? A. Yes, I think so.

Q. 166. You are lodging with Mr. Newman and have been so for some time? A. Yes.

Q. 167. So you have discussed this matter at table? A. As a matter of fact, I do not sit at same table with Lieut. Newman, so I have not discussed the matter with him except on the night of 4th December, at my lodgings.

Q. 168. Do you remember Mr. Wall leaving my Company and go to Mr. Newman to speak to him? A. No; I think I would have seen if this had taken place.

Q. 169. Did you hear me give any orders during the parade? A. Yes; in Sloane-street, "Change arms." I do not remember any other. I was a considerable distance away from "E" Company during March.

Q. 170. After dispute, did you observe which officer gave commands for "E" Company to move? A. I cannot say who did after dispute; but before dispute, I distinctly remember that commands were given by Lieut. Wall.

Q. 171. Did you observe Mr. Newman at any time salute me? A. No.

Q. 172. *To the President:* Could men of either or both Companies hear expressions, I shall most certainly report you, Captain Barrett"? A. Certainly; both Companies.

Q. 173. Could both Companies hear, "Well do it if you like, and be damned," as Captain Barrett said? A. Yes.

Q. 174. Could men in either of the Companies have heard conversation between Lieut. Wall, Newman, and Captain Barrett? A. I could not hear it; but men on extreme left of "G" Company, and a portion of "E" Company may have heard it.

Conversation took place at X — rather nearer E than G.— E. Co. had moved round into position of dotted line.

M. FITZGERALD, Lieut.,  
"G" Company.

[The witness withdraws.]

Mr. R. Finley and Mr. Baxter, witnesses for Lieut. Newman, were called, but did not answer. May be called later, if desired.

This concluded evidence adduced by Lieut. Newman.

Ninth witness—Sergeant Phillip Kennedy Clark, 6th Regiment, Australian Rifles, being duly sworn, states:—

I am a sergeant in "E" Company, 6th Volunteer Regiment, Australian Rifles; have six months service in this corps, and no previous service; remember parade on 4th December last; company was formed up in front of Orderly Room about 7:30; I only saw Lieut. Newman walk round in a hasty sort of way to Captain Barrett, but heard nothing of any sort, and know nothing more about the matter.

Q. 175. *To Captain Barrett:* Can you say who gave the order for "E" Company to move off after Mr. Newman had spoken to me? A. Yes, you did.

Q. 176. Did you hear any orders given during evening? A. I only heard orders given by you.

Q. 177. Do you remember Company being inspected? A. Yes; by you—accompanied by Lieut. Wall.

Q. 178. *To Lieut. Newman:* When I went to "E" Company, did I go directly to Captain Barrett, or did I address Lieut. Wall? A. I only saw you addressing Captain Barrett.

Q. 179. Was I then in company with Lieut. Wall? A. I cannot say. I do not remember noticing him.

Q. 180.

Q. 180. *To the President*: Who gave the command for "E" Company to fall in? A. I will not say positively, but I am almost certain it was Captain Barrett.

Q. 181. Who numbered the Company off? A. Captain Barrett. I heard no commands except those given by Captain Barrett.

Q. 182. Did Lieut. Wall form the Company up? A. No, I think not. I would not swear positively whether it was Captain Barrett or Colour-Sergeant Roberts.

Q. 183. Who dismissed the Company? A. Captain Barrett.

Q. 184. Do you remember, during inspection of Company, whether Captain Barrett preceded Lieut. Wall, or *vice versa*? A. I do not remember Lieut. Wall taking any active part in the parade whatever.

Q. 185. Did you hear remark by Mr. Newman, "I will report you"? A. No.

Q. 186. Did you hear a remark by Captain Barrett to Mr. Newman, "Go to hell"? A. No. I heard Captain Barrett say, "There is too much of this sort of damned thing"—that was to himself, or rather Lieut. Newman was not there—after I saw meeting of Captain Barrett and Mr. Newman.

Q. 187. Did you not hear Lieut. Wall give any commands that evening? A. No; Captain Barrett or Colour-Sergeant Roberts gave all the commands.

Q. 188. How did Company move off? A. To the left, in file, and Captain Barrett gave the order.

Q. 189. Were you accustomed to hearing Captain Barrett's words of command? A. Yes, on two previous occasions.

P. K. CLARK, Sergeant,  
"E" Company, 6th Volunteer Regiment.

[The witness withdraws.]

Tenth witness—*Private William James Rogers*, "E" Company, 6th Regiment Volunteer Infantry, being duly sworn, states:—

I am a private in "E" Company, 6th Volunteer Regiment, and was on parade on 4th December last—No. 1 section parade, about 7:30; I am almost sure it was Captain Barrett who had ordered Company to fall in; first I heard of any disturbance was when Lieut. Newman came up to Captain Barrett and asked him who had charge of Company; I did not hear the reply; Lieut. Newman then said, "Do you recognise me as your superior officer?" or words to that effect; I cannot say the reply to that either; the next I heard was Lieut. Newman saying, "I will report you, Captain Barrett"; then Captain Barrett says, "You can go to hell and report"; that is all I remember.

*Captain Barrett*: I do not wish to ask any questions.

Q. 190. *To Lieut. Newman*: Were you in front or rear rank of No. 1 section? A. In rear rank—No. 4.

Q. 191. Was this conversation before or after "E" Company moved off? A. I cannot say; but I know Company was facing Orderly Room, and Lieut. Newman and Captain Barrett were behind me then.

Q. 192. During this conversation, was anyone else present? A. One other officer.

Q. 193. Do you know who he was? A. Yes; I believe Lieut. Wall; I am not sure of it.

Q. 194. Can you explain how you heard everything that I said, and only one sentence that Captain Barrett said? I think you were rather excited, and that you did not know what you were saying.

Q. 195. *To the President*: Who fell "E" Company in? A. Captain Barrett.

Q. 196. Who inspected it? A. Captain Barrett and either Lieut. Wall or Colour-Sergeant Roberts.

Q. 197. Who numbered the Company off? A. I think Lieut. Wall took the instructions from Captain Barrett. I forget who did tell us to number.

Q. 198. Who gave commands to Company to march off? A. I cannot say; but I know Captain Barrett gave all the commands along the street.

Q. 199. Who dismissed the Company? A. Captain Barrett.

Q. 200. What commands did you hear Lieut. Wall give during the evening? A. I forget what they were; but I did hear him giving commands. There were a good many of them.

Q. 201. When and where did conversation take place? A. It took place after "E" Company, which originally faced railway, formed fours left, wheeled to the left, and halted in fours opposite Orderly Room, and facing up street. It was then that conversation took place.

Q. 202. Where was "G" Company then? A. "G" Company was originally in front of us, facing railway, about 10 yards off, and was there after we moved into position as above.

Q. 203. Where were Captain Barrett, Lieut. Newman, and Mr. Wall, then? A. On right-hand of flank of "E" Company, between "E" and "G" Companies, but quite close to "E" Company.

Q. 204. Are you sure Company moved off in fours? A. Yes.

Q. 205. Who gave orders? A. I cannot say.

Q. 206. You knew you were to give evidence to-day? A. Yes—when I got subpoenas, last week and this week.

Q. 207. Has any one spoken to you about the case? A. No.

Q. 208. Was expression used, "Go to hell," before or after Lieut. Newman said he would report Captain Barrett? A. After.

Q. 209. Do you remember Captain Barrett saying something like, "You can do as you damned well like"? A. No. I did not hear anything such thing.

W. J. ROGERS, Private,  
"E" Company, 6th Volunteer Regiment.

[The witness withdraws.]

Eleventh witness—*Sergeant Walter McLaren*, 6th Regiment, Volunteer Infantry, being duly sworn, states:—

I am a sergeant of No. 1 section, "E" Company, Australian Rifles—6th Regiment—and was on parade on 4th December last; my first experience of military service is in Australian Rifles; I did not hear much of what passed that evening; I heard Lieutenant Newman ask Captain Barrett whether he recognised him as senior officer, just before moving off to join procession; "E" Company had then formed fours, wheeled to the left, and halted in fours, I think; I did not hear Captain Barrett reply, and I heard nothing else of what is alleged to have taken place.

Captain

Captain Barrett asks no question.

Q. 210. *To Lieut. Newman*: Where were you standing at this time? A. On right-hand of my section, between the two ranks.

Q. 211. Where were I and Captain Barrett standing? A. About 5 yards to my left.

Q. 212. Was any other officer present? A. I do not think there was any other. I did not notice Lieut. Wall.

Q. 213. After this remark, what did Captain Barrett do? A. I cannot say.

Q. 214. *To the President*: Who fell the Company in? A. Captain Barrett.

Q. 215. Are you certain? A. I would not swear, but I am almost certain it was. Yes; it was Captain Barrett.

Q. 216. Who inspected the Company? A. Lieut. Wall and Captain Barrett.

Q. 217. During inspection, which officer preceded the other? A. Captain Barrett.

Q. 218. During inspection, did Lieut. Wall take an active part? A. No; he merely followed Captain Barrett.

Q. 219. Who numbered Company off? A. I could not say for certain.

Q. 220. Who marched it off? A. I could not say for certain; but to the best of my knowledge it was Captain Barrett.

Q. 221. Who halted the Company after it wheeled to left? A. I could not say.

Q. 222. Who dismissed it? A. Captain Barrett.

Q. 223. Did Lieut. Wall give any words of command during parade? A. Yes, he did.

Q. 224. What were they? A. He gave command to form fours shortly after Company had fallen in. This was my first experience on parade except recruit drill. This is the only time I heard Lieut. Wall give any command.

Q. 225. How often did you see Mr. Newman approach Captain Barrett? A. Only once.

Q. 226. Could you from your position state whether Lieut. Newman did or did not approach Captain Barrett more than once? A. I could not from my position say whether he did or not.

Q. 227. You were subpoenaed to attend? A. Yes, twice.

Q. 228. Has any one spoken to you or advised you as to the evidence you were to give? A. No.

Q. 229. If Lieut. Newman had gone over to Captain Barrett more than once, would not you have noticed him? A. No; it is possible for Lieut. Newman to have gone over more than once without my seeing him.

Q. 230. *To Lieut. Newman*: When you heard remark, was I standing still, or what was I doing? A. You were walking up to Captain Barrett.

WALTER McLAREN, Sergeant,  
No. 1 Section, "E" Company, 6th Regiment.

[The witness withdraws.]

Twelfth witness—*Lieutenant and Adjutant Gideon James Grieve*, Volunteer Permanent Staff, being duly sworn, states:—

I am Adjutant of 6th Volunteer Regiment, and also at present of 5th Volunteer Regiment; Lieut. Newman did on one occasion—my first visit to Goulburn, in the beginning of November—mention to me that he considered it very rough on him that Captain Barrett should have been appointed to a captaincy whilst he, after serving some years, was only a lieutenant; I explained to Mr. Newman then, that on his promotion to captaincy in 2nd Regiment he would become senior to Captain Barrett, and Mr. Newman seemed perfectly satisfied with that; as far as I could see, through visiting Goulburn, the utmost good feeling prevailed between Mr. Newman and Captain Barrett.

Q. 230½. *To the President*: Did you know if any communication was made to Captain Barrett from Sydney, acquainting him with the fact that Lieut. Newman had made a complaint, before the 8th December? A. No information was sent from Sydney.

G. J. GRIEVE, Lieutenant and Adjutant,  
6th Volunteer Infantry Regiment.

[The witness withdraws.]

Captain Barrett states that these are all the witnesses he wishes to call. Two more were summoned—Privates Ball and Horton—but Captain Barrett did not wish to call them.

Thirteenth witness—*Sergeant John William Wright*, 6th Regiment, Volunteer Infantry, being duly sworn, states:—

I am a sergeant in Australian Rifles, 6th Volunteer Regiment; ten years ago I was in Partially-paid Force for five years; present at parade on 4th December; saw corps formed up; I heard nothing of any disturbance on that evening; I was at extreme right of Company, and I believe affair was on left; I was in charge of No. 2 section.

Q. 231. *To the President*: Who fell the Company in? A. I think Staff-Sergeant Naghten; but I am not certain. I now remember it was Lieut. Wall, a gentleman from Sydney. It was he who inspected the Company.

Q. 232. Did Captain Barrett precede Lieut. Wall in inspection of Company, or the reverse? A. I cannot say; I thought Lieut. Wall inspected Company.

Q. 233. Were the rifles inspected? A. No.

Q. 234. Who numbered Company off? A. I believe it was same gentleman—Mr. Wall.

Q. 235. Who gave command to Company to form fours left, and wheel to the left, when the Company first moved off parade-ground? A. I cannot say for certain.

Q. 236. Who dismissed Company? A. I do not remember.

Q. 237.

Q. 237. Do you remember who was in command of Company? A. I did not know who was commanding the Company throughout the evening.

Q. 238. Did you hear Captain Barrett give any words of command that evening? A. Oh, yes; I heard his voice several times.

Q. 239. Could you say what those commands were? A. I think "Change arms," and so forth, as we went through the streets.

Q. 240. Did you hear Captain Barrett say to Lieut. Newman, "Go to hell"? A. No.

Q. 241. Did you notice Captain Barrett give any words of command when Company first moved off? A. I rather think it was Captain Barrett who did so; but I am not certain of this.

J. W. WRIGHT, Sergeant,  
"E" Company, No. 2 Section, 6th Volunteer Regiment.  
[The Witness withdraws.]

*Adjournment.*—Court adjourned at 6:45 till 8 o'clock. With consent of Captain Barrett and Lieut. Newman, the Court will sit then till 9 o'clock.

*Reassembly.*—At 8 p.m. the Court reassembles, the same members being present as before. Captain Barrett and Lieut. Newman are also present.

Sixth witness—*Lieutenant Holdorf*, recalled:—

Q. 242. *President*: When Captain Barrett met you in Orderly-room, on evening of 4th December, you stated that he said to you that he had come with the intention of apologising to Mr. Newman;—did he go further, and say that he also intended to ask Lieut. Newman for an explanation as to his conduct? A. No—to the best of my knowledge and belief. This occurred so long ago that I may have forgotten some details as to what happened.

C. J. HOLDORF, Lieut.,  
"G" Company, 2nd Infantry Regiment.  
[The witness withdraws.]

Fourteenth witness—*Colour-Sergeant Edward Josiah Roberts*, 6th Regiment, Volunteer Infantry, being duly sworn, states:—

Colour-Sergeant of "E" Company, Australian Rifles; up to joining "E" Company have had no military experience; remember parade of 4th December; I was in command of left section that evening; as far as I remember, we formed up parade facing Orderly Room; I think Lieut. Wall formed up Company; the Company was inspected by Lieut. Wall, Captain Barrett, and myself; it was one of our first parades, and we went to see whether belts, &c., were right—not the rifles; there were several imperfections.

Q. 243. Who numbered off Company? A. I do not recollect it being numbered.

Q. 244. Who proved Company? A. Lieut. Wall, to the best of my belief.

Q. 245. When you were ready to move off, who gave orders—"Form fours, left," &c.? A. I am not sure who gave orders.

Q. 246. Who halted Company next? A. I do not know.

Q. 247. Who gave orders for Company bugler to sound "fall in"? A. I think Lieut. Wall did; but I did not take any particular notice of what happened that evening.

Q. 248. When Company was inspected by Lieut. Wall, Captain Barrett, and yourself, in what order did you go? A. Captain Barrett first, I last.

Q. 249. Who dismissed Company? A. Captain Barrett.

Q. 250. As Senior N.-C. Officer, whom did you consider was in command of the Company during the parade? A. Captain Barrett.

Q. 251. Did he, generally, that evening take active command? A. Yes; I think he did. Lieut. Wall assisted him in falling-in, and during the evening.

EDWD. J. ROBERTS, Colour-Sergeant,  
"E" Company, 6th Infantry Regiment.  
[The witness withdraws.]

The President reads a letter from Lieut. Grieve to him *re* further evidence to be offered by him. [Letter marked "H," and attached hereto.]

Both Lieut. Newman and Captain Barrett agreed that evidence should be taken.

Twelfth witness (recalled)—*Lieutenant G. J. Grieve*, Adjutant, Volunteer Permanent Staff, recalled by President:—

When Mr. Wall had finished giving his evidence before the Court last night he came into the office; I thought he looked worried, and I said, "Are you tired?"; he said, "No, I am not tired; I am worried, because I have contradicted myself several times under cross-examination, I think, by Colonel Bayly. Of course, I was in a difficulty, because I was pulling his—Captain Barrett's—leg all the time. I am jolly sorry it ever happened; but it all originated in a silly bet." I said then to him, "What was the bet? Was it that you should induce Captain Barrett to give you the command of his Company?" He did not reply. He then left to catch the train.

G. J. GRIEVE, Lieut. and Adjutant,  
6th Volunteer Infantry Regiment.  
[The witness withdraws.]

*Adjournment.*—Court adjourns at 9 p.m. until 8:30 a.m. on Monday, 31st inst.—G.R.C.

*Re-assembly.*—

*Re-assembly*—The Court re-assembles at 9:15 a.m., 31st January, 1898, the same members being present as before. Lieut. Newman and Captain Barrett being also present.

Fifteenth witness—*Sergeant William Stewart*, 6th Regiment, Volunteer Infantry, being duly sworn, states :—

I am a sergeant in command of No. 4 Section, "E" Company, Australian Rifles; recollect parade of 4th December; fell in about 7:30; recollect Company falling in; faced Orderly Room; not quite sure who ordered it to fall in; Captain Barrett numbered it off; I am not sure who proved it, but to the best of my belief it was Captain Barrett, and as far as I know, Captain Barrett inspected it; there was so much delay that I really forgot what took place; about twelve years ago I was in 1st Regiment in Goulburn for about two years, and since then I have had no experience until I joined Australian Rifles.

Q. 252. *To President*: Can you tell Court who gave command to "E" Company that night to move off? A. Captain Barrett.

Q. 253. Company was halted a short distance, after it first moved off, opposite Orderly Room? A. Yes.

Q. 254. Whom by? A. I cannot say who halted Company.

Q. 255. Who moved Company off after? A. According to the voice, it was Captain Barrett.

Q. 256. Did Captain Barrett actively command the Company that night? A. Yes; I am sure of that, as Captain Barrett was frequently marching alongside of me, when he gave several orders. One in particular, I remember, "Change arms," several seconds after the order to "G" Company to "Change arms" had been given.

Q. 257. Who dismissed the Company? Captain Barrett.

Q. 258. What did he say? A. I cannot remember.

Q. 259. What is the command for dismissing a Company? A. "Shoulder arms, Right turn, Dismiss."

Q. 260. Did you hear him say words like those? A. Something similar.

Q. 261. Did you see Captain Barrett and Mr. Newman together on parade that evening? A. I did not.

Q. 262. Did Mr. Wall assist Captain Barrett on parade? A. I heard Mr. Wall give command, "Left, right" now and again; that is the only assistance I noticed.

Q. 263. Did you notice Mr. Wall assist Captain Barrett in forming up? A. I did not notice him give any assistance with the Company whatever.

Q. 264. Were you on parade when Company fell in? A. Yes.

Q. 265. *To Captain Barrett*: After Company reached Orderly Room, and was fronted before dismissal, do you remember anything that occurred just prior to dismissal? A. I do not remember anything.

Q. 266. Do you remember whether anyone thanked Company and congratulated Company on turn out? A. I cannot remember.

Q. 267. Do you remember Company being ordered to mark time? A. Yes.

Q. 268. Frequently? A. Yes.

Q. 269. Who gave order? A. You did.

Q. 270. *To Lieut. Newman*: Did Company fall in facing Orderly Room, or was it N.-C. officers? A. I mean the Company.

Q. 271. Can you say what the first command to move off was? A. No.

Q. 272. Was it anything like "Attention, Form fours left, Left wheel, By the right—Quick march"? A. I could not answer that question clearly, as it was so long ago.

Q. 273. Is it the general effect of your evidence that you do not remember clearly what took place that evening, as it was so long ago? [*Captain Barrett objects to question.*] A. No; except as to certain items above, where I have qualified my answers by stating I did not recollect clearly.

W. STEWART, Sergeant,  
No. 6, "E" Company, Australian Rifles.

[The witness withdraws.]

Sixteenth witness (witness called by Captain Barrett)—*Private John Horton*, 6th Regiment, Volunteer Infantry, being duly sworn, states :—

Private in Australian Rifles; previously in military service under Captain Rossi, &c., up to 1875; as a private in old Goulburn Company; remember parade of 4th December; held about 7:30; parade formed up facing Orderly Room; Captain Barrett told Company to fall in; he inspected it; he numbered off and proved it; I am right-hand man of No. 1 Section; I heard Captain Barrett, Mr. Newman, Lieut. Holdorf, and Lieut. Wall talking together, about 6 yards away; I cannot say I heard anything; I paid no particular attention; I thought some argument was going on, but I cannot recollect a single word, as I was listening to the band; Lieut. Wall put us through some company drill previous to this; after that we moved up to Fire Brigade office; Captain Barrett appeared to be in command then—marched us off.

Q. 274. *To Captain Barrett*: Do you remember Mr. Newman walking up to me during the evening? A. Yes; after we got "Form fours, left," &c., when we first moved off; we marched then about 40 yards, and were then halted.

Q. 275. *To President*: Were you not halted before you (being in last section) completed the wheel? A. No; it was about 40 yards up the street from where we wheeled before we were halted.

Q. 276. If a dozen previous witnesses had stated that Company was halted before wheel was completed, their statement was incorrect? A. I should say so, to the best of my belief.

Q. 278. Where was "G" Company then? A. They had followed, and were about 8 or 10 paces away from me.

Q. 279. *To Captain Barrett*: Do you remember Mr. Newman speaking to me that evening—after we had halted as above? A. Yes.

Q. 280. Do you remember Company being dismissed? A. Yes.

Q. 281. Do you remember anything occurring previous to dismissal? A. I do not.

Q. 282. Did any officer address Company? A. Only yourself; but I never heard any complimentary remarks.

Q. 283.

Q. 283. Do you remember inspection of Company? A. Yes.

Q. 284. Who inspected Company? A. You. I recollect, because Captain Barrett made a mistake in the command. He gave some command when we were "standing at ease," before calling us to attention, and Lieut. Wall pointed this out to him, and then Lieut. Wall took us in hand and gave us "Form fours—right, left, and about." This was really after the inspection.

Q. 285. *To Lieut. Newman*: When I walked up to Captain Barrett to address him, as you say, was that before or after "G" Company moved off? A. I could not be certain on that point.

Q. 286. *To the President*: Are you sure that Lieut. Holdorf was talking with Captain Barrett and Lieut. Newman? A. No; I could not say. I did not hear him talk; he was in company with them.

Q. 287. What was the Company drill that Lieut. Wall put you through? A. Fours, right, left, and about, and then fours right, and then marched Company across street facing railway, and fronted and halted it.

Q. 288. Was that all he did? A. Yes, to my recollection. He marched with Company up street.

Q. 289. Who gave order after that to move off? A. Captain Barrett, to the best of my belief; but I am not certain.

Q. 290. What were the commands? A. Fours left, Left wheel, Quick march.

Q. 291. Did you hear Captain Barrett make use of any bad language when in conversation with Lieut. Newman and others? A. No; but if I had chosen to pay attention I could have heard what the conversation was.

Q. 292. What was Lieut. Newman's manner to Captain Barrett when in conversation with him and others? A. I could not say.

Q. 293. Did you hear the word "senior" spoken? A. No.

JOHN HORTON, Private,

"E" Company, 6th Volunteer Regiment.

[The witness withdraws.]

Seventeenth witness—*Robert Edward Leslie Finlay*, being duly sworn, states:—

Recollect being present in Orderly Room on evening of 4th December, when City Band was present; Mr. Zouch and others were also present, and Lieut. Newman; I was sitting in corner of room, over near office door, and Lieut. Newman remarked to Adjutant Thompson, as far as I remember, "How would you like to be told to go to hell?" then I saw Captain Barrett standing in office doorway; I did not catch distinctly what he said, but I think it was to the effect "that it was no place for explaining the disturbance"; Lieut. Newman ordered him out of the room; he said, "You can go out; you have nothing to do with things here—no right in here" (Orderly Room); Captain Barrett did not move much—stood much where he was—and Lieut. Newman walked towards him; I then walked towards middle of Orderly Room; I did not see Captain Barrett hit at Lieut. Newman, but the next thing I saw was Lieut. Newman's helmet fall off on to the ground; there was a sort of a scuffle, but I did not see it properly as I was not in a good position; I heard no other conversation between Lieut. Newman and Captain Barrett, as I did not want to be mixed up in the matter.

Q. 294. *To Captain Barrett*: You saw Mr. Newman advance towards me after ordering me out? A. Yes.

Q. 295. Did you see me leave the room on being ordered? A. No; I did not, as Lieut. Newman was between us.

Q. 296. In fact, Mr. Newman not only ordered me out, but followed me out? A. I saw Mr. Newman advance as far as the doorway.

Q. 297. Did you see Mr. Wall follow Mr. Newman? A. I saw an officer in uniform, but I do not know what he did.

Q. 298. Did you see anyone catch hold of Mr. Newman's arm? A. No; I do not remember.

Q. 299. *To Mr. Newman*: After you saw helmet off, who came back into room? A. I could not say.

Q. 300. Did you see me come back? A. I saw you in the Orderly Room after I saw the helmet on the ground.

Q. 301. *To Captain Barrett*: Did you see anyone come into room with Mr. Newman after helmet episode? A. I think the officer mentioned was with him.

Q. 302. You cannot state that this officer walked back into room with Mr. Newman? A. No; I cannot.

Q. 303. *To the President*: Was Lieut. Newman's manner towards Captain Barrett respectful? A. It was rather abrupt, and it led me to believe that Lieut. Newman considered that Captain Barrett had no right in the room.

Q. 304. Did Lieut. Newman follow Captain Barrett quickly or closely after he ordered him to leave the room? A. I should say quickly; but they were not close to one another when in the Orderly Room.

Q. 305. Did Captain Barrett appear to be inciting a row? A. No; what I would think was that Captain Barrett appeared to be annoyed at Lieut. Newman telling Lieut. Thompson about the affair—what happened on parade.

Q. 306. Did Lieut. Newman appear to provoke Captain Barrett? A. Only by ordering him out.

Q. 307. Was Lieut. Newman's remark to Lieut. Thompson said loud enough to reach the next room (office)? A. It was addressed to Lieut. Thompson, Zouch, and myself, so that we could hear, but not intentionally loud enough for any person in office to hear; but if anyone was sitting in office close to door he could have heard it, I think.

M. S. FINLAY.

[The witness withdraws.]

Eighteenth witness—*Corporal James Nesbitt*, 6th Regiment, Volunteer Infantry (called by Captain Barrett), being duly sworn, states:—

Corporal in "E" Company, Australian Rifles; previous service in Goulburn Company of 3rd Regiment twenty years ago; in two camps at Paddington twenty years ago, and since then no service till joining Australian Rifles.

Q. 308.

- Q. 308. *To Captain Barrett*: Who was in command of "E" Company on night of 4th December last? A. You.
- Q. 309. Did you see Company inspected? A. Yes; by you and Lieut. Wall.
- Q. 310. Can you tell which went in front? A. You.
- Q. 311. Anyone else there with us? A. No; I did not see anyone else.
- Q. 312. Did you hear any words of command given during evening? A. Yes; by you.
- Q. 313. Did you hear any other officer giving commands? A. No other officer, to my knowledge.
- Q. 314. Did you hear "Change arms," "Mark time," "Step short," given during march? A. Yes, by you.
- Q. 315. Who dismissed Company? You.
- Q. 316. Prior to dismissal, were any remarks made by any officer—congratulatory remarks, &c.? A. Yes; Captain Barrett spoke, but I could not hear words, as band struck up.
- Q. 317. *To Lieut. Newman*: Did band play again another time, after band had finished playing troops to Orderly Room, and they had halted? A. I could not say. I afterwards asked what Captain Barrett had said, as I could not hear because of the band.
- Q. 318. Have you had any conversation with anybody as to the evidence you should give here to-day? A. No.
- Q. 319. *To the President*: What section do you belong to? A. No. 1.
- Q. 320. Who proved the Company before it was marched off? A. I cannot say.
- Q. 321. Do you know whether it was proved? A. It was. I know there was some mistake in the first words of command.
- Q. 322. By whom was it proved? A. Captain Barrett, to the best of my knowledge. I would not be positive.
- Q. 323. Did you hear Captain Barrett make use of any bad language? A. No; I did not hear any conversation.
- Q. 324. Did you notice Captain Barrett and Lieut. Newman in conversation just after Company was first moved off and halted? A. Yes; but I did not hear what was said.
- Q. 325. Did you notice the manner of Lieut. Newman? A. I saw something was amiss, but I did not see anything unusual—speaking in an undertone. They appeared to be talking quietly in an undertone.
- Q. 326. *To Captain Barrett*: Did you observe Mr. Newman walk up briskly to me? A. No; nothing out of the ordinary.
- Q. 327. During conversation, how was Lieut. Newman standing in relation to you? A. Right side towards me, facing Captain Barrett, and Lieut. Wall had his back to me. I wish to add, National Anthem was played at the last—at time of dismissal.

JAMES NESBITT, Corporal,  
"E" Company, 6th Regiment, Australian Rifles.  
[The witness withdraws.]

Nineteenth witness—*Private Alfred William Ball*, 6th Regiment, Volunteer Infantry, being duly sworn, states:—

Private "E" Company, Australian Rifles; remember parade on 4th December last; no previous military service; in No. 1 Section that evening.

- Q. 328. *To Captain Barrett*: Who was in command of Company? A. You.
- Q. 329. Do you remember Company moving off at the outset and halting? A. Yes; the Company moved a few yards.
- Q. 330. You remember the Company moving off again after this? A. Yes.
- Q. 331. Who gave the order? A. You.
- Q. 332. Do you remember any orders being given during the march? A. Yes. We were halted in Sloane-street. We then got the order to "Fix bayonets," given by you.
- Q. 333. Do you remember also, "Change arms," "Step short," &c.? A. Yes; given by several—by you, by Lieut. Wall, and the sergeants.
- Q. 334. Whom did you understand to be in command of Company? A. You, Captain Barrett.
- Q. 335. *To Lieut. Newman*: When Company was formed up across street facing railway, and order was given "Form fours left," &c.;—who gave same? A. To the best of my belief, Captain Barrett; but I am not too certain about it; I would not positively swear it was Captain Barrett.
- Q. 336. Who gave the command to Company to halt after it had moved a few yards? A. Captain Barrett. I am quite certain about that. I can call to mind how it came about. Lieut. Wall doubled up to Captain Barrett, and said something to him, and then Captain Barrett halted Company, and then they both turned and came back to Lieut. Newman.
- Q. 337. *To the President*: Who fell Company in? A. Captain Barrett.
- Q. 338. Who numbered and proved Company? A. Captain Barrett.
- Q. 339. Who inspected Company? A. Captain Barrett; because he spoke about the arms.
- Q. 340. Was anyone with him? A. Lieut. Wall.
- Q. 341. When Company was first halted, did you notice Lieut. Newman in conversation with Captain Barrett? A. Yes. I heard Lieut. Newman say, "Do you recognise me as senior officer?"
- Q. 342. What was the answer? A. I cannot say.
- Q. 343. Did you hear anything else? A. I heard nothing more until Captain Barrett turned round and walked back, and he made a remark that there is too much of this school-boy business, or words to that effect.
- Q. 344. Did you notice Lieut. Newman's manner to Captain Barrett when in conversation with him? A. Yes. It was a sort of domineering manner—very abrupt.
- Q. 345. Did you hear Lieut. Wall give any orders? A. Yes. He gave us some drill—"Form fours—Right and left and about"; that was after Captain Barrett had given order to fall in.
- Q. 346. *To Lieut. Newman*: You say you heard me say, "Do you recognise me as superior officer?"—will you not swear that what I said was, "Perhaps, as superior, you would like charge of the parade?" A. Certainly not.

ALFRED WILLIAM BALL, Private,  
"E" Company, Volunteer Regiment.  
[The witness withdraws.]

Captain

Captain Barrett says he has no other witnesses to call. Lieut. Wall does not desire to call any further evidence. Court asks them this.

*Lieutenant Newman recalled :—*

Q. 347. *To the President*: Did you say anything with regard to "daring Captain Barrett to meet you in private clothing" when in office with him as he details? A. No; I did not say it like that at all. What I said was, "Had you been in private clothes, Captain Barrett, you would not have said such a thing to me as you did to-night."

Q. 348. Was that before he hit you? A. Yes.

Q. 349. In reference to conversation stated to have taken place between Lieut. Wall and Lieut. Grieve, after Lieut. Wall had given his evidence on 28th January;—will you tell the Court whether you had any bet of any kind with Lieut. Wall in connection with this matter? A. Certainly not; I knew nothing whatever about such a thing.

Q. 350. Did you make use of expression, "Do you recognise me as senior officer?" or words to that effect, to Captain Barrett, as he states; and, if so, how often? A. I never made use of that expression at all. What I did say was this, "Perhaps, as senior officer, you would like charge of the parade?" In the first instance, I spoke to Lieut. Wall, as he had moved the Company off, and then Captain Barrett came down, and said, "What is the matter with you now?" and I said, "Captain Barrett, I was not addressing you, but Lieut. Wall." It was at this time that I made use of expression, "Perhaps, as senior officer, you would like charge?" and it was at this juncture that he turned round and told me to go to hell; and it was after this that I said, "Captain Barrett, I shall certainly report you." I have no doubt whatever about that; and, as soon as I said it, I turned round to walk to my Company, and then Captain Barrett said, "You can report, and do as you damned well like."

Q. 351. Did you run up to "E" Company, and ask who was in command of this Company, and words to that effect—i.e., when Company moved off first? A. I have no knowledge of having done so. I did not ask who was in command. I ran up to Lieut. Wall when I found Company was moving off, as I thought he had moved Company off unknown to Captain Barrett, and I said, "George, what the mischief are you in such a hurry. Can't you wait until I am ready, and let both Companies go up together?"

Q. 352. Knowing Captain Barrett was in command of "E" Company, why did you not approach him on a matter connected with his command? A. Because Lieut. Wall had moved Company off; Captain Barrett was further away on right flank of his Company.

Q. 353. Did you consider that evening that you were in command of whole parade? A. Certainly not.

Q. 354. Why did you ask Captain Barrett whether he would like to take command of parade? A. When Captain Barrett came down to me and demanded in manner he did, "What is the matter with you now?" I quite understood from his manner that he was slighting me, and I made use of the expression then to him.

Q. 355. Lieut. Holdorf has said, "Mr. Newman had charge of parade of both Companies ("G" and "E")—this I understood from Mr. Newman";—can you account for this statement by Lieut. Holdorf? A. No; I do not think I had mentioned anything of the kind as to having charge of the parade. I knew I had charge of my own Company.

Q. 356. Lieut. Thompson said that you stated that you considered you were senior to Captain Barrett, having served for many years, as Captain Barrett had just come into the service—this was after parade;—do you recollect saying words to that effect? A. Yes; and my reason was to get Lieut. Thompson's opinion, the same as I had got Lieut. Grieve's some time previous to 4th December.

Q. 357. Had you sought Lieut. Wall's opinion? A. No.

Q. 358. Have you had any conversation with Lieut. Wall since the case began? A. No; I have never seen Lieut. Wall since the night of 4th December.

Q. 359. Did you salute Captain Barrett on parade? A. No; I do not think I did. The first time I remember to have been anywhere near Captain Barrett was when the altercation took place.

Q. 360. Did you ask Captain Barrett more than once, "Perhaps you would like command of the parade," &c.? A. It was only once.

Q. 361. Did you hear Captain Barrett give any words of command? A. Yes. I think on one or two occasions I did, but after the altercation. I did not hear any words of command given before this by Captain Barrett. I took no notice of "E" Company after altercation.

Q. 362. What do you mean by this latter part? A. I simply attended to my own Company.

Q. 363. Who formed up and told off "G" Company? A. Lieut. Holdorf.

Q. 264. Where were you then? A. I was in office; when I came out the Company was standing at ease, facing railway.

Q. 365. Where did you stand? A. I stood on left flank of "G" Company, down on the footpath.

A. W. NEWMAN, Lieut.,  
2nd Infantry Regiment.

[Witness withdraws.]

*Adjournment.*—Court adjourns at 1:20 p.m., until 2:30 p.m. same day.

*Reassembly.*—Court reassembles at 2:30 p.m., 31st January, 1898, the same members being present as before, also Captain Barrett and Lieut. Newman.

Captain Barrett does not wish to ask Lieut. Newman any questions. Evidence then read over to Lieut. Newman, when he signed same as correct on foot of previous page.—G.J.G.

*Captain Barrett recalled :—*

Q. 366. *To the President*: You say that you raised your left hand to push him away, in your evidence;—do you mean to push his face away from yours or to push him bodily from you? A. To push his face away.

Q. 367. Did you know that, as senior officer on parade, you were in command of "G" Company as well as your own? A. No; Mr. Wall told me during day that I was junior to Lieut. Newman.

Q. 368. Did Lieut. Newman ask you if you would like command of the parade? A. No; decidedly not.

Q. 369.

Q. 369. Did you consider, on 4th December, that, having accepted Lieut. Wall's assistance, that officer unduly interfered in your command; and, if so, in what ways? A. Yes (in answer to first part), inasmuch as he attempted to persuade me to make movements of my Company conform to those of "G" Company; not in any other way. Mr. Wall moved Company off first by my permission, after asking me for leave to do so—i.e., at the time when the order was given "Form fours left, Left wheel, Quick march." After that, thinking that I had been unfairly dealt with by Mr. Newman and Mr. Wall at the altercation, I refused to allow Mr. Wall any further control in the Company.

Q. 370. Did you call Lieut. Wall as a witness? A. We both subpoenaed him. I called Mr. Wall as he was an officer and a gentleman, and presumed nothing but the truth from him.

Q. 371. You say that Mr. Newman said, "I'll report you" before expression "Go to hell" was used by you;—is that so? A. Yes, decidedly so.

Q. 372. As to "report be damned";—did you use that expression, and when? A. I cannot recollect having used that expression. I can only attribute Mr. Newman's threat to report me to the fact that I curtly told him I refused to recognise him as senior officer.

Q. 373. Whom did you consider as senior officer? A. I considered that I was senior to Lieut. Newman as being a captain and he a lieutenant; but I did not know that that gave me the right to take charge of the parade of both Companies.

Q. 374. To Mr. Newman: Did you not know previous to the parade that you were my superior officer, from a communication received from Lieut. Grieve? A. No; I received no such communication.

A. C. BARRETT, Capt.

Commanding "E" Co. 6th Vol. In. Regt., Australian Rifles.

[Evidence closed.]

*Lieut. Newman* then addresses the Court.

*Captain Barrett* addresses Court.

They both then leave the Court—3.30 p.m.

# REPORT.

HAVING carefully considered the evidence brought before it, the Court is of opinion:—

- (1.) That Captain Barrett, "E" Company, 6th Volunteer Infantry Regiment, did make use of unseemly language to Lieut. Newman, 2nd Infantry Regiment, on parade on 4th December, 1897, at Goulburn, to wit, "Go to hell," in the hearing of Lieut. Wall, 2nd Infantry Regiment, and possibly others.
- (2.) That Captain Barrett did wilfully push or strike Lieut. Newman on the evening of the 4th of December, 1897, in the office of the 2nd Infantry Regiment at Goulburn, knocking his helmet off.
- (3.) That Captain Barrett did not receive sufficient provocation from Lieut. Newman before he made use of the bad language referred to in No. 1, but that provocation occurred.
- (4.) That Captain Barrett did not receive any intentional provocation from Lieut. Newman before he assaulted him, as in No. 2; but that, possibly, Captain Barrett may have misunderstood Lieut. Newman's conduct, and so been provoked. [N.B.—One member of the Court is satisfied that Captain Barrett regarded Lieut. Newman's conduct as aggressive.]
- (5.) That Lieut. Newman ordered Captain Barrett out of his (2nd Regiment's) Orderly Room on the evening of 4th December, 1897, the former not wishing to have any conversation with Captain Barrett after the occurrences on parade on the same date. [N.B.—One member of the Court considers that in this act Lieut. Newman showed disrespect to his superior officer.]
- (6.) That Lieut. Newman's language and manner to Captain Barrett on parade, on 4th December, 1897 (see No. 1), was disrespectful to a slight extent, and was probably due to a misapprehension as to his and Captain Barrett's relative positions. [N.B.—One member of the Court disagrees to the inclusion of the words "to a slight extent."]

Signed at the Orderly Room, "G" Company, 2nd Infantry Regiment, Goulburn, New South Wales, this 31st day of January, 1898.

WM. H. HOLBOROW, President,

Colonel, Commanding 3rd Infantry Regiment.

MONTAGU W. BAYLY,

Lieut.-Colonel, Commanding purely Volunteer Regts. and Corps.

GERALD R. CAMPBELL,

Lieut.-Colonel, Commanding 5th (Union) Volunteer Regt.

Members of  
Court of Inquiry.

## A.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

From the Chief Staff Officer to Colonel Holborow, C.M.G., President, Court of Inquiry.

NEW SOUTH WALES MILITARY FORCES.

Instructions for the Court of Inquiry ordered to be assembled by direction of His Excellency the Lieutenant-Governor, dated 11th January, 1898.

Head-quarters, Sydney, 18 January, 1898.

THE Court of Inquiry, of which you are President, detailed in letter from Chief Secretary's Office of 11th January, 1898, will assemble at Goulburn at such date and time as you may appoint, to inquire and report upon complaints mutually made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, as set forth in their letters dated respectively 8/12/97 and 6/12/97, forwarded herewith.

The Court will be "close."

H. D. MACKENZIE, Colonel,  
Chief Staff Officer.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

Memorandum from the Officer Commanding "G" Company to The Officer Commanding 2nd Infantry Regiment.

SECOND INFANTRY REGIMENT.

Sir,

6 December, 1897.

I desire to report to you the gross misconduct of Captain Barrett, the officer commanding the local corps of Australian Rifles, who, on Saturday evening, while on parade, told me to go to hell, in the presence of other officers who were on parade in uniform, and also before both Companies—"E" Company of Australian Rifles, and "G" Company of 2nd Infantry Regiment.

I have, &amp;c.,

A. W. NEWMAN,

Lieutenant.

## C.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

From the Officer Commanding to The A.A. General.

SECOND INFANTRY REGIMENT.

Subject:—Discipline.

Head-quarters, Sydney, 7 December, 1897.

I AM directed (by telephone) by the Officer Commanding 2nd Infantry Regiment, not being able to be present himself to-day at the Regimental Office, to forward attached report from Lieut. Newman, at present commanding "G" (Goulburn) Company of this Regiment.

The parade referred to by him was a hospital parade authorised by the Officer Commanding 2nd Infantry Regiment.

It is requested that the matter may be inquired into as early as possible, as the interests of the two Companies concerned must be very adversely affected by the occurrence.

J. G. LEGGE, Capt. and Adjt.

(Pro O.C. 2nd Inty. Regt.).

Urgent. O.C., 6th Regiment.—To call upon Captain Barrett for explanation. By order,—H. D. MACKENZIE, Col., A. Adj., 7/12/97. Urgent. Captain Barrett, "E" Company, for explanation.—F. A. WRIGHT, Major, Commanding 6th V.I. Regt. Australian Rifles. A.A.-G.—Captain Barrett's explanation attached.—G. J. GRIEVE, Lieut. and Adjt. (pro O.C. 6th V.I. Regt.), 13/12/97.

## D.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

MEMORANDUM.

From Officer Commanding "E" Company, Goulburn, to The Officer Commanding 6th Volunteer Infantry Regiment, Australian Rifles.

Sir,

10 December, 1897.

I have the honor to acknowledge receipt of memorandum, dated 8th December, covering memos. from the A.A.G. and O.C. 2nd Regiment, also complaint from Lieut. Newman, O.C. "G" Company, 2nd Infantry Regiment.

With reference to the complaint of Mr. Newman, I have the honor to refer you to my complaint of the 8th instant, concerning the conduct of that officer.

I admit, with regret, that I used a strong expression under the provocation of most insulting language from a junior officer of another regiment before the men of my own Company on parade. I do not think, however, that I spoke in a tone loud enough to be heard by the men of either Company.

I have, &amp;c.,

A. C. BARRETT,

Captain.

## E.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

From Officer Commanding 6th Volunteer Infantry Regiment, Australian Rifles, to The Chief Staff Officer, Victoria Barracks.

Subject:—Discipline.

Sir,

Head-quarters, Queen's Square, 9 December, 1897.

I have the honor to forward attached report from Captain A. C. Barrett, commanding "E" (Goulburn) Company of this regiment.

As Lieut. Newman has also forwarded a report to his O.C., complaining of language used to him by Captain Barrett (which report was sent on from this office to Captain Barrett for his explanation yesterday), I have the honor to suggest that Lieut. Newman should be called on for an explanation of the charge contained in the report of Captain Barrett.

I have, &amp;c.,

F. A. WRIGHT, Major,

Commanding 6th Volunteer Infantry Regiment, Australian Rifles.

O.C. 2nd Regiment. For Lieut. Newman's explanation.—H. D. MACKENZIE, Col., A.A.G., 11/12/97. O.C. "G" Company. Please obtain and attach explanation by Lieut. Newman. By order.—J. G. LEGGE, Capt., Adj. 2nd Infantry Regiment, 13/12/97.

O.C. 2nd Infantry Regiment. Sir,—I have the honor to forward herewith a detailed explanation of the occurrence of Saturday evening, 4th December, on which night I had occasion to report the O.C. "E" (Goulburn) Company, Australian Rifles.—I have, &c., A. W. NEWMAN, Lieut., commanding "G" Company, 14/12/97.

A.A.G. Forwarded.—Lieut. Newman's explanation attached.—J. G. LEGGE, Capt. and Adjt. (pro. O.C. 2nd Infantry Regiment), 15/12/97.

## F.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

Explanation of Lieutenant Newman.

Subject:—Discipline.

LIEUTENANT G. Wall, who was in Goulburn at the time in question, and also on parade after the Companies "G" and "E" were formed up, came to me to ask how the Companies were going to move off. After I explained the way I thought would be best, went back to "E" Company, called it to attention, and began to move off. I at once went round to Mr. Wall to ask him what he was doing, when Captain Barrett demanded in a very domineering manner, "What is the matter with you now?" I immediately said, "Captain Barrett, I was not addressing you, but was speaking to Lieut. Wall" (who, apparently, had charge of "E" Company). Captain Barrett, who was then about six or eight paces from me, turned deliberately round and told me to "Go to hell," in the presence of Lieut. Wall, and also a number of men of both Companies. I then said to Captain Barrett, "I shall certainly report you," whereupon he replied, "You can report, and do what you d—d well like."

After

After the parade was dismissed there was a meeting of the band in the Orderly Room. Officers from Sydney, in mufti, who, with several other gentlemen and myself, were present, Captain Barrett, Lieutenants Wall and Holdorf being in the office adjoining. After the members of the band had gone, one of the gentlemen said to me, "You look put out about something," and my reply was, "So would you if a man in uniform on parade had told you to go to hell, without any provocation."

Captain Barrett just at this juncture walked from the office into the Orderly Room, and heard the remark that had been passed, although names of anyone was not mentioned. I had even so far forgotten myself as to say a man in uniform instead of an officer. I told Captain Barrett I did not want any more talk about it, and that if he would persist in trying to cause another row (pointing toward the door), I told him that was the way out. During his exit he struck at me, striking me on the cheek slightly, and knocking my helmet off my head, to which Lieut. Wall was a witness.

Captain Barrett says, in one part of his report, "I lost patience," and again, "After parade I went into the 2nd Regiment Orderly Room to see Mr. Newman." He does not say what the remark was he made use of when he lost patience, neither does he say why he came into the Orderly Room—for the express purpose of apologising for the insulting remark he had made use of to me earlier in the evening, as he told Lieutenants Holdorf and Wall he intended doing. I trust, sir, that a searching investigation may be held to decide the truthfulness of these charges.

A. W. NEWMAN, Lieut.,  
"G" Company, 2nd Infantry Regiment.

#### G.

[Wm. H. Holborow, Colonel, President, Court of Inquiry, 28/1/98.]

Memorandum from the Officer Commanding "E" Company, Goulburn, to The Officer Commanding 6th Volunteer Regiment, Australian Rifles.

Sir,

8 December, 1897.

I have the honor to complain of most insulting language used to me on parade on Saturday evening last, 4th December, by Lieut. A. W. Newman, of "G" Company, 2nd Infantry Regiment.

While moving my Company off to form up in the Hospital Saturday procession, Mr. Newman came up, and in a blustering, excited tone, demanded, "Who is in command of that Company?" I told him I was. He then said he was "senior officer on parade." I requested him to keep quiet and not get excited, and told him, "I will look after my Company, you look after yours."

He repeated several times in a loud and insulting manner, "Am I not senior officer?" and added, "Are you senior officer," in a sneering manner, and finally stated in a voice loud enough to be heard by both Companies and bystanders, "I'll report you." I lost patience and moved my Company off.

After parade I went into the 2nd Regiment Orderly Room to see Mr. Newman, who peremptorily ordered me out, and dared me to meet him in private clothes, and as I walked out he followed, threatening me.

I have, &c.,  
A. C. BARRETT,  
Captain.

#### H.

From Lieutenant Grieve, Adjutant, 6th (Volunteer) Infantry Regiment, to The President, Court of Inquiry.

Subject:—Evidence to be given in connection with a statement made by a witness in the case.

Sir,

Orderly Room, Goulburn, 28 January, 1898.

I have the honor to state that I desire to tender as evidence in the case now before the Court a statement made to me by Lieut. Wall, 2nd Regiment.

This request I make after consultation with Lieut.-Colonel Bayly, Commanding Purely Volunteer Force.

I beg to state that I would have made this statement earlier in the day but that I failed to secure an interview with Lieut.-Colonel Bayly, in whose hands I desired to place myself.

I have, &c.,  
G. J. GRIEVE, Lieut. and Adjutant,  
5th and 6th Volunteer Infantry Regiments.

#### Minute by The Major-General Commanding the Military Forces.

Your Excellency,

Sydney, 1 February, 1898.

(1.) The enclosed proceedings were forwarded to me by the President, though, from the manner in which the Court was convened by His Excellency the Lieutenant-Governor, it would appear that "the Governor" is the convening officer.

(2.) I would respectfully draw your Excellency's attention to the great loss of time involved before this Court assembled, which, to my mind, was not conducive to the discipline of the Force.

(3.) I concur in the opinion of the Court as below:—

(1.) I concur.

(2.) I concur.

(3.) I concur.

(4.) I concur with the majority, but think it possible that Captain Barrett did think Lieut. Newman's conduct aggressive.

(5.) I concur.

(6.) I concur with the dissentient member of the Court.

G. A. FRENCH,  
Major-General.

#### Minute by His Excellency the Governor and Commander-in-Chief.

2 February, 1899.

THE delay incidental to the method of procedure in convening Courts of Inquiry which has taken place in this case cannot but have had a prejudicial effect on the discipline of the Volunteer Force.

You will observe that the Commandant concurs with the findings of the Court of Inquiry; but he does not consider that, under the Volunteer Acts, he is justified in making any recommendation. The Governor-in-Council appears to be the authority under those Acts who should decide upon the course to be pursued on the finding of the Court of Inquiry. Perhaps it will be your wish to ask the Commandant to offer his opinion.

HAMPDEN.

The Chief Secretary. Submitted.—C.W., 2/2/98.

#### Minute by The Principal Under Secretary.

Military Court of Inquiry in connection with complaints made by Captain Barrett, 6th Infantry Regiment, and Lieutenant Newman, 2nd Infantry Regiment, against each other, in connection with their actions on a parade at Goulburn, on 4th December.

WITH reference to the minute, dated 1st instant, addressed by the Major-General to His Excellency the Governor, drawing His Excellency's attention to the "great loss of time involved before this Court assembled,

assembled," which he states was not to his mind "conducive to the discipline of the Forces,"—I beg to say that the Major-General's request to His Excellency the Lieutenant-Governor for authority to convene a Court of Inquiry—

Was dated ... .. 17th December, 1897.  
 Was minuted on to the Chief Secretary by his Excellency on... 21st December, 1897.  
 And reached this office on... .. 24th December, 1897.

The Christmas and New Year's holidays having intervened, the usual form of Executive minute was prepared on 6th January, and laid before the Council on 7th idem, but did not pass, having been minuted by His Excellency the Lieutenant-Governor in the following terms, viz. :—

"I have no power to authorise the Major-General to convene a Court of Inquiry. This must be done by me as Governor with the advice, &c. I have also to appoint the officers who are to hold Court. (See latter part of section 24, 31 Vic. No. 5.)"

On 10th January a further minute was drafted for His Excellency's consideration, and, having been amended by him, was finally placed before the Executive Council and approved on the 11th idem, such approval being notified to the Major-General, with papers, on the same day.

A copy of this minute has this day been forwarded to His Excellency the Governor.

C.W., 3/2/98.

For the Major-General Commanding.—J.N.B., B.C., 4/2/98. C.W., 4/2/98. To be returned for Executive action.

### The Major-General Commanding the Military Forces to The Principal Under Secretary.

[Confidential.]

Head-quarter Staff Office, Sydney, 11 February, 1898.

I ASSUME that it is the wish of the Chief Secretary that I should give my opinion with regard to the matters dealt with by the Court of Inquiry of which Col. Holborow was President.

I am of opinion that it has been clearly shown that Captain Barrett used highly improper language on parade to Lieut. Newman, and that he wilfully pushed Lieut. Newman in the office of the 2nd Infantry Regiment, at Goulburn, on the 4th December, 1898.

Had Captain Barrett been an officer of any reasonable length of service I should have felt it my duty to recommend his dismissal from the Force; but, in view of the fact that he was only appointed to a commission in October last, I think it will be sufficient for the interests of military discipline if his appointment be cancelled.

Lieut. Newman seems to have needlessly interfered with a Company of the Volunteer Force, on the supposition that he had a right to do so; for this, I think, a reprimand will be sufficient punishment.

G. A. FRENCH, Major-General,  
 Commanding New South Wales Forces.

This should be referred for His Excellency's perusal. The necessary Executive authority may then be obtained for confirmation. Submitted.—C.W., 11/2/98. His Excellency.—J.N.B., 11/2/98. Approved.—HAMPDEN, 12/2/98.

### Minute Paper for the Executive Council.

Re Court of Inquiry held in connection with conduct of certain Volunteer Officers.

Chief Secretary's Office, Sydney, 15 February, 1898.

WITH reference to the proceedings of the Executive Council on the 11th ultimo, directing that a Court of Inquiry be convened to hear the complaints made by Captain Barrett, 6th Infantry Regiment, and Lieut. Newman, 2nd Infantry Regiment, against each other, in connection with their actions on a parade at Goulburn, on the 4th December last, and appointing the officers to compose such Court of Inquiry,—I now advise, in view of the proceedings of such body, and in accordance with the recommendations of Major-General French, C.M.G., R.A., Commanding the New South Wales Military Forces, (1) that the commission issued to Captain Barrett be cancelled; and (2) that Lieut. Newman be reprimanded.

JAMES N. BRUNKER.

The Executive Council advises that the recommendations herein set forth be approved.—A. C. BUDGE, Clerk of the Council. Approved.—HAMPDEN, 15/2/98. Memo.—98-8, 15/2/98. Confirmed, 22/2/98. Returned.—C.S.O., 22nd Feb., 1898.

### The Principal Under Secretary to The Major-General Commanding the Military Forces.

Sir,

Chief Secretary's Office, Sydney, 16 February, 1898.

With reference to my letter of the 11th ultimo, directing that a Court of Inquiry be convened to hear the complaints made by Captain Barrett, 6th Infantry Regiment, and Lieut. Newman, 2nd Infantry Regiment, against each other, in connection with their actions on a parade at Goulburn, on the 4th December last, and advising you of the appointment of the officers to compose such Court of Inquiry, I am now directed by the Chief Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased, in view of the proceedings of such body, and in accordance with your recommendations, to approve (1) of the commission issued to Captain Barrett being cancelled, and (2) of Lieut. Newman being reprimanded.

I have, &c.,  
 CRITCHETT WALKER,  
 Principal Under Secretary.

Memorandum

**Memorandum from The Assistant Adjutant-General to The Officer Commanding  
2nd Infantry Regiment.**

[Confidential]

Sydney, 17 February, 1898.

I AM directed by the Major-General Commanding to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased, upon the proceedings of the Court of Inquiry at Goulburn, to direct that Lieut. A. W. Newman, having needlessly interfered with a Company of the Volunteer Force, on the supposition that he had a right to do so, be reprimanded.

The suspension of Lieut. Newman will, therefore, cease to operate from this date.

H. D. MACKENZIE, Colonel,  
A.A.-General.

O.C. "G" Company.—For. Lieut. Newman to note and return.—J. G. LEGGE, Capt. and Adj. (pro O.C. 2nd Infy. Regt.), 18/2/98. O.C. 2nd Infy. Regt.—Noted. I also desire to express regret for anything I may have done prejudicial to discipline; but that I erred through error and not intention.—A. W. NEWMAN, Lieut., 21/2/98. A.A.-G.—Memorandum complied with. Lieut. Newman expresses regret.—GEO. W. W. WADDELL, Lieut.-Colonel, Comdg. 2nd Infy. Regt., 23/2/98. Noted.—G.A.F., 26/2/98.

**Memorandum from The Assistant Adjutant-General to The Officer Commanding  
6th Infantry Regiment.**

Sydney, 17 February, 1898.

I AM directed by the G.O.C. to inform you that, as a result of the Court of Inquiry at Goulburn, His Excellency the Governor, with the advice of the Executive Council, has directed that the Commission, dated 1st October, 1897, issued to Captain Barrett, 6th (Volunteer) Infantry Regiment, be cancelled, and steps will accordingly be taken to carry out this decision.

H. D. MACKENZIE, Colonel,  
A.A.-General.

A.A.-G.—Noted. Captain Barrett notified.—G. J. GRIEVE, Lieut. and Adj. (pro O.C. 6th V.I. Regt.), 17/2/98.

**The Major-General Commanding the Military Forces to The Principal Under  
Secretary.**

*Subject* :—Court of Inquiry at Goulburn, re cancelling of Captain Barrett's Commission.

New South Wales Military Forces, Head-quarters,

Sir,

Sydney, 17 February, 1898.

In accordance with my minute of 11th instant on papers C.S.O. 98-2,136, and the approval of His Excellency the Governor, with the advice of the Executive Council, on the proceedings of a Court of Inquiry at Goulburn, I have the honor to forward herewith the draft of a *Gazette* notice cancelling the Commission issued to Arthur Connor Barrett as Captain in the 6th (Volunteer) Infantry Regiment (Australian Rifles).

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

Submitted for approval.—C.W., 18/2/98. Approved.—J.N.B., 18/2/98.

[Enclosure.]

Draft for *New South Wales Defence Force Gazette*.

[Confidential.]

Head-quarters, Sydney, 17 February, 1898.

Sixth (Volunteer) Infantry Regiment (Australian Rifles).

THE Commission issued to Arthur Connor Barrett, dated 1st October, 1897, as Captain, is cancelled.

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

**The Principal Under Secretary to The Major-General Commanding the Military  
Forces.**

Sir,

Chief Secretary's Office, Sydney, 22 February, 1898.

In reply to your letter of the 17th instant, I am directed by the Chief Secretary to inform you that the following notification has been published in the *Government Gazette* of the present date, viz. :—

SIXTH (VOLUNTEER) INFANTRY REGIMENT (AUSTRALIAN RIFLES).

THE Commission issued to Arthur Connor Barrett, dated 1st October, 1897, as Captain, is cancelled.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

Seen by G.O.C.—H.D.M., 23/2/98.

**Petition.**

To Major-General French, C.M.G., R.A., Commanding the New South Wales Military Forces.

The Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

1. That at a Military Court of Inquiry, held at Goulburn on 29th January, 1898, certain charges were made against the petitioner by Lieut. Newman, of "G" Company, 2nd Infantry Regiment.

2. That as a result of the said inquiry the Commission held by petitioner was cancelled.

3. Your petitioner now solemnly asserts that a grave miscarriage of justice has occurred in connection with the before-mentioned inquiry, inasmuch as the verdict was against the weight of evidence.

4. That the evidence showed most clearly that on two occasions on the evening of 4th December, 1897, Mr. Newman violently insulted the petitioner, first by a demand that petitioner recognise him (Mr. Newman) as petitioner's superior officer; and secondly, by excitedly ordering petitioner to leave the Orderly Room, and rushing after petitioner when doing so, and threatening to strike him, petitioner at the same time giving no cause whatever for such treatment.

5. That petitioner is now possessed of fresh evidence from responsible persons to absolutely contradict the statements made by Mr. Newman at the inquiry.

6. That petitioner attaches hereto a sworn statement as to the main points submitted at the inquiry.

Your petitioner, therefore, prays that you will, in the interests of justice, and for the honor of the service, allow the inquiry to be reopened.

I have, &c.,  
ARTHUR CONNOR BARRETT,  
Petitioner.

I, ARTHUR CONNOR BARRETT, late Captain "E" Company, Goulburn, 6th Volunteer Infantry Regiment, make the following statement on oath, in respect to certain charges preferred against me by Lieut. A. W. Newman, 2nd Infantry Regiment, in connection with a parade held on 4th December, 1897, the said charges being afterwards inquired into by a Board appointed by the Military authorities in January last:—

1. I desire to state, without any reservation or equivocation whatsoever, that the evidence of Lieut. Newman, to the effect that I struck him on the evening of 4th December, 1897, is a wilful and malicious falsehood.

2. The statement of Lieut. Newman, in his evidence before the Court of Inquiry, that he did not address me on parade in an insulting manner, demanding that I should recognise him as my superior officer, is absolutely false.

Taken and signed at Goulburn; }  
this 30th of June, 1898. }

ARTHUR CONNOR BARRETT.

Witness—

T. H. FITZGERALD, J.P.

A.A.G.—Inform applicant that ample opportunity was afforded for producing witnesses at Court of Inquiry. That at present I can see no reasonable cause for asking the Governor to reopen the Inquiry.—G.A.F., 4/7/98.

The Chief Staff Officer to A. C. Barrett, Esq., Goulburn.

Re Court of Inquiry.

Sir,

Head-quarters, Sydney, 6 July, 1898.

I am desired by the General Officer Commanding to acknowledge the receipt of your letter of the 30th ultimo, requesting that the late Court of Inquiry into certain charges made against you by Lieutenant Newman, 2nd Infantry Regiment, may be reopened on account of your having procured fresh evidence, and in reply to inform you that the Major-General is of opinion that ample opportunity was afforded you for producing witnesses at the Court of Inquiry, and that at present he can see no reasonable cause for asking His Excellency the Governor to reopen the inquiry.

I have, &c.,  
H.D.M., Colonel,  
Chief Staff Officer.

The Mayor of Goulburn to The Chief Secretary.

Sir,

Goulburn, 8 July, 1898.

I have the honor to transmit to you, under separate cover, petition signed by the citizens of Goulburn relative to the Military Inquiry on the conduct of A. C. Barrett, formerly Captain, "E" Company, 6th Volunteer Infantry Regiment.

Trusting you will give same your favourable consideration,

I have, &c.,  
PATRICK SHAW,  
Mayor.

May be referred to the Major-General.—C.W., 12/7/98. Approved.—J.N.B., 12/7/98. The Major-General Commanding the Military Forces.—C.W., P.U.S., B.C., 13 July, 1898.

[Enclosure.]

To The Honourable James N. Brunker, Chief Secretary of New South Wales.

The humble petition of the undersigned citizens of Goulburn,—

RESPECTFULLY SHOWETH:—

1. That Arthur Connor Barrett, of Goulburn, was the holder of a commission as Captain of "E" Company, 6th Volunteer Infantry Regiment, on the 4th day of December, 1897, and on this date a disagreement took place between him and Lieut. Newman, of "G" Company, 2nd Infantry Regiment, as to right of superiority, when Captain Barrett refused to recognise Lieut. Newman as his superior officer.

2. That owing to the said disagreement a Court of Inquiry was held at Goulburn on the 29th January, 1898, and the finding of the said Court was "That the commission issued to Arthur Connor Barrett as Captain of the said Regiment on the 1st October, 1897, be cancelled."

3. That in consequence of the cancellation of the said commission issued to Captain Barrett he is now precluded from entering any of the forces of New South Wales, except as a private.

4. That your petitioners are of opinion that Arthur Connor Barrett has been harshly dealt with, and instead of his commission being cancelled, he should have had the offer to resign, so that he might enter some other Regiment as an officer.

5. That the said Arthur Connor Barrett was instrumental in organising the said "E" Company, 6th Volunteer Infantry Regiment, and worked assiduously for twelve months in procuring its formation; and further, that he has served as a Volunteer in the Forces of New South Wales for a period of six years, and was one of the New South Wales Soudan Contingent in 1885.

6. At a public meeting of the citizens of Goulburn, held in the Town Hall, Goulburn, on the 5th April instant, and presided over by the Mayor of that city, the following resolutions were unanimously carried :—

1. "That this public meeting desires to express its sympathy with ex-Captain Barrett and its regret at the action of the Military Authorities in connection with the recent Court of Inquiry."
2. "That this meeting form itself into committee and draw up a petition for purpose of signature by the citizens of Goulburn whose sympathies are with ex-Captain Barrett, and present it to the Chief Secretary for reconsideration of ex-Captain Barrett's dismissal."

Your petitioners therefore humbly pray—

1. That you will graciously reconsider the dismissal of ex-Captain Barrett from "E" Company, 6th Volunteer Infantry Regiment, and in place of dismissing him, as aforesaid, he be allowed to resign.

Dated this            day of            1898.

And your petitioners, as in duty bound, will ever pray.

Name and Address.

### Minute Paper to The Principal Under Secretary.

*Subject* :—Petition relative to Military Inquiry on conduct of Mr. A. C. Barrett, formerly Captain, "E" Company, 6th Volunteer Infantry Regiment.

Head-quarter Staff Office, Sydney, 15 July, 1898.

With reference to the prayer of the petitioners (C.S.O., 98-12,072, returned herewith), the cancellation of Mr. Barrett's commission places him (as far as future military employment is concerned) practically in the same position as if he had been called on to resign.

2. The Court of Inquiry reported on the evidence brought before it; it was not within the power of the Court to direct that the Commission should be cancelled.

3. This is not correct. There is no legal reason why Mr. Barrett should not again obtain a Commission, if recommended therefor, and application refused.

4. The harshness is a matter of opinion, and those responsible for the discipline of the Force may be excused for holding a different view to those not so responsible. Remainder answered in 3.

G. A. FRENCH,

Major-General Commanding.

The Mayor of Goulburn may be informed in terms of the Major-General's minute.—C.W., 19/7/28. Approved.—J.N.B., 19/7/98.

### The Principal Under Secretary to The Mayor of Goulburn.

Sir,

Chief Secretary's Office, Sydney, 20 July, 1898.

In continuation of my letter of the 13th instant, on the subject of the Military Inquiry regarding the conduct of Mr. A. C. Barrett, formerly Captain, "E" Company, 6th Infantry Regiment, I am now directed by the Chief Secretary to transmit herewith copy of report that has been obtained from the Major-General Commanding the Military Forces in the matter.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

### Petition to Major-General French, C.M.G., R.A., Commanding N.S.W. Military Forces.

The Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

1. That petitioner was the holder of a commission as Captain of "E" Company, 6th Volunteer Infantry Regiment, on the 4th day of December, 1897; and on this date Lieut. (now Captain) Newman, of "G" Company, 2nd Infantry Regiment, demanded that petitioner recognise him on parade as his (petitioner's) superior officer. This petitioner refused to do, at first courteously, and finally with warmth, owing to Mr. Newman's reiterated demands.

2. That Mr. Newman, later in the evening of 4th December, 1897, in the presence of several officers of New South Wales Military Forces, peremptorily ordered petitioner out of the room ("G" Company's Orderly Room), petitioner having entered the room for the purpose of asking for an explanation from Mr. Newman as to his conduct earlier in the evening while on parade.

3. That in consequence of reports sent in by Mr. Newman and petitioner, a Court of Inquiry was held in Goulburn on 29th January, 1898, and, as a result of the evidence adduced thereat, petitioner's commission was ordered to be cancelled.

4. That the charge laid against petitioner by Mr. Newman in his report was "gross misconduct as an officer, in using the expression, go to hell." Petitioner admitted with regret using the expression "under the provocation of extremely insulting language and conduct from a junior officer of another regiment."

5. That at the Court of Inquiry Mr. Newman was allowed to introduce another charge against petitioner, namely, that petitioner had struck him. This charge petitioner most solemnly denies, and is prepared to refute it by the evidence of reputable citizens.

6. That on the evening of 4th December, 1897, as petitioner was leaving the Orderly Room, on being ordered out by Mr. Newman, he was followed to the hall door by Mr. Newman, who, in a most insulting manner, said, "you are not bloody well game to meet me in private clothes."

7. That in consequence of the action of the Military Authorities in cancelling petitioner's commission, a public meeting of the citizens of Goulburn was held in the Town Hall, Goulburn, on the 5th April, 1898, and presided over by the Mayor of that city, when the following resolutions were unanimously carried:—

"1. That this public meeting desires to express its sympathy with ex-Captain Barrett, and its regret at the action of the Military Authorities in connection with the recent Court of Inquiry."

"2. That this meeting form itself into committee and draw up a petition for purpose of signature by the citizens of Goulburn, whose sympathies are with ex-Captain Barrett, and present it to the Chief Secretary for reconsideration of ex-Captain Barrett's dismissal."

8. That a petition, signed by some hundreds of citizens, including many magistrates and leading townsmen, was presented to the Hon. the Colonial Secretary, who thereupon obtained a report from the Major-General Commanding.

9. That the Major-General, in reporting upon the petition, stated, *inter alia*, that there was no legal bar to ex-Captain Barrett obtaining another commission if approved.

10. That in view of the Major-General's report, petitioner made application for the position of Captain of "E" Company. This application was refused on the ground that "petitioner's previous commission having been cancelled, he could not obtain another."

11. That petitioner made a further application, giving the gist of the Major-General's report, and the application was again refused, on the ground that there was no vacancy.

Your petitioner, therefore, respectfully asks:—

1. That having been cruelly punished on an accusation which petitioner can prove to be false, he be restored to the rank of Captain in the New South Wales Military Forces, and, in consideration of local circumstances, he be placed upon the reserve list of officers; or,—

2. That a fresh inquiry be ordered to enable petitioner to produce the evidence of reputable citizens in denial of the charge of striking Mr. Newman, and such other matters as it may be deemed necessary to inquire into for the honour of the Service, and in the interests of justice.

And your petitioner, as in duty bound, will ever pray.

ARTHUR CONNOR BARRETT.

Goulburn, 9th December, 1898.

(1.) Inform Mr. Barrett, with reference to requests 1 and 2 of his petition, dated 9/12/98, that it is not within the power of the G.O.C. to grant the requests; but that if Mr. Barrett can submit any fresh evidence, showing that the accusation referred to was false, he will be happy to forward it for the consideration of His Excellency the Commander-in-Chief

(2.) The ordering of a fresh inquiry would necessarily be a matter for His Excellency to deal with.—G.A.F.

### Memorandum from The Assistant Adjutant-General to Mr. A. C. Barrett.

12 December, 1898.

WITH reference to requests 1 and 2 of your petition, dated 9th December, 1898, I am directed by the G.O.C. to inform you that it is not within his power to grant the requests; but that if you can submit any fresh evidence showing that the accusation referred to was false, he will be happy to forward it for the consideration of His Excellency the Commander-in-Chief.

(2.) The ordering of a fresh inquiry would necessarily be a matter for His Excellency to deal with.

H. D. MACKENZIE, Col.,  
A.A.-G.

### Mr. A. C. Barrett to The Assistant Adjutant-General.

Goulburn, 15 December, 1898.

Re Petition to Major-General Commanding from A. C. Barrett, ex-Captain, 6th (Volunteer) Infantry Regiment.

Sir,

203, Auburn-street.

I have the honor to acknowledge receipt of your communication 97-2,256, dated 12th December.

I beg to state that I am in a position to submit fresh evidence of an important nature, and it was owing to the discovery of this evidence that I some time ago submitted a request to the Major-General Commanding for a rehearing of the case.

I have, &c.,  
A. C. BARRETT.

### The Assistant Adjutant-General to Mr. A. C. Barrett.

Head-quarters, Sydney, 19 December, 1898.

THE G.O.C. desires me to point out that you have apparently misread memo. of 12th instant, which indicated that fresh evidence (or the nature thereof) should itself be forwarded for the consideration of His Excellency the Commander-in-Chief.

Copy of memo. referred to herewith; please note portion underlined.

H. D. MACKENZIE, Colonel,  
A.A.G.

### Mr. A. C. Barrett to The Assistant Adjutant-General.

Re Petition to Major-General Commanding from A. C. Barrett.

Sir,

Goulburn, 29 December, 1898.

I have the honor to acknowledge receipt of Memo. 97-2,256, of 19th inst., and I beg to tender you my thanks for the explanation *re* matter of evidence to be submitted.

The evidence I desire to submit, should His Excellency the Commander-in-Chief allow the matter to be reopened, will be as follows:—

A.—Witnesses will corroborate my statements on oath,—

- (1.) That I did not strike Mr. Newman.
- (2.) That Mr. Newman rushed at me in a grossly insulting manner, and demanded that I recognise him as my superior officer, before both Companies of Infantry ("G" and "E" Companies).
- (3.) That Mr. Newman rushed at me in an excited and threatening manner as I was leaving the Orderly Room, and stated in a loud voice that I was "not bloody well game to meet him in private clothes."
- (4.) That Mr. Newman frequently alluded to me in a disparaging manner before other officers, members of the 1st Australian Horse, and civilians, on the night of 4th December, 1897.
- (5.) That Mr. Newman frequently insisted on the evening of 4th December, 1897, that he was my superior in military status, and that he would "bloody well show me" that such was the case.

B.—Witnesses will show that after Mr. Newman's attack on me on parade,—

- (1.) Mr. Wall frequently expressed his disapproval of Mr. Newman's actions in the presence of other officers.
- (2.) That I inspected the Company, marched it off, commanded it *en route*, and finally dismissed it.
- (3.) That Mr. Newman, regardless of military etiquette, dismissed his Company, and gave the signal to the band to play the National Anthem before "E" Company, which came second, had been properly formed for dismissal.

C.—Witnesses will refute Mr. Wall's statement,—

- (1.) That he was virtually in command of my ("E") Company from assembly to dismissal.
- (2.) Will refute Mr. Wall's statement that he gave all orders to "E" Company.
- (3.) Will show that I was waited on by an officer on the night of 4th December, 1897, and asked not to press my report against Mr. Newman as he (Newman) would be deprived of his commission if I did so.
- (4.) Evidence will be given proving that Mr. Newman held a long conversation with Mr. Wall during the course of the inquiry, and afterwards denied on oath that he had done so.

(5.)

- (5.) Evidence will show that Mr. Newman acted in a manner unbecoming an officer and gentleman, in that he reported me to head-quarters after a brother officer had obtained a promise from me (and subsequently from Newman) that no reports should be sent in for the space of a week, the officer alluded to promising to use his best endeavours to induce Mr. Newman to apologise to me for his unwarrantable conduct.

I have, &c.,

A. C. BARRETT.

The President of the Court,—G.O.C. wishes you to state if you can see any new matter herein—letter dated 29/12/98—for which ample opportunity was not afforded the present claimant to produce. Previous papers herewith.—H. D. MACKENZIE, Colonel, A.A.G., 31/12/98.

The A.A.G.,—I can see nothing new in the letter dated 29/12/98 referred to. Every opportunity was given to ex-Captain Barrett to produce his witnesses, and before the Court was closed he was asked by me if he had any more evidence to produce, and his reply was that he had not.—WM. H. HOLBOROW, Colonel, Commanding 3rd Infantry Regiment, President of the Court of Inquiry, G.O. "6," 14/1/98, Richmond, 3/1/99.

A.A.G.—Notify Mr. Barrett accordingly.—G.A.F., 13/2/99.

### The Assistant Adjutant-General to Mr. A. C. Barrett, Goulburn.

*Re further inquiry.*

Sir,

Head-quarters, Sydney, 13 February, 1899.

I have the honor to inform you that your letter of the 29th December last was referred by the General Officer Commanding to Colonel Holborow, C.M.G., the President of the Court of Inquiry held at Goulburn on the 28th January, 1898, and a copy of his reply is forwarded herewith for your information:—

"I can see nothing new in the letter dated 29/12/98 referred to. Every opportunity was given to ex-Captain Barrett to produce his witnesses, and before the Court was closed he was asked by me if he had any more evidence to produce, and his reply was that he had not."

I have, &c.,

H. D. MACKENZIE, Colonel,  
Chief Staff Officer.

### Mr. A. C. Barrett to The Assistant Adjutant-General.

Sir,

Goulburn, 20 March, 1899.

I have the honor to acknowledge receipt of memorandum 97-2,256, of 13th February.

I regret to find that my case has not been referred to His Excellency the Commander-in-Chief, as I was led to hope—from the tenor of the memorandums, dated 12th and 19th December, 1898—would be done.

Again, I respectfully ask that the Major-General Commanding will reconsider my petition.

I have, &c.,

A. C. BARRETT.

A.A.G.—In view of the minute of the President of the Court of Inquiry, I cannot take any further action in this matter.—G.A.F., 23/3/99. Inform.

### The Assistant Adjutant-General to Mr. A. C. Barrett, Goulburn.

Sir,

Head-quarters, Sydney, 24 March, 1899.

I have the honor to acknowledge the receipt of your letter of the 20th instant, requesting reconsideration of your petition, and in reply, am desired by the General Officer Commanding to inform you that, in view of the minute of the President of the Court of Inquiry, he cannot take any further action in the matter.

I have, &c.,

H.D.M., Colonel,  
Chief Staff Officer.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

# CASE OF A. C. BARRETT, LATE CAPTAIN OF "E" COMPANY, 6TH VOLUNTEER INFANTRY REGIMENT.

(PETITION FROM ARTHUR CONNOR BARRETT, PRAYING THAT A SELECT COMMITTEE BE APPOINTED TO INQUIRE INTO AND REPORT UPON THE FACTS IN CONNECTION WITH THE CANCELLATION OF HIS COMMISSION.)

*Received by the Legislative Assembly, 3 December, 1900.*

To the Honorable the Speaker and Members of the Legislative Assembly.

The Petition of the undersigned,—

RESPECTFULLY SHOWETH :—

That Petitioner was the holder of a commission as captain of "E" Company, 6th Volunteer Infantry Regiment on the 4th day of December, 1897, and on that date Lieutenant A. W. Newman, commanding "G" Company, 2nd Infantry Regiment, at a joint parade of the two above-named companies, made a demand that Petitioner should recognise him as Petitioner's superior officer, and later on the same date, Lieutenant Newman, without cause or provocation, ordered Petitioner out of an Orderly Room, in the presence of a number of officers and civilians.

The matter was reported to the respective Regimental Commanding Officers, and a Military Court was opened at Goulburn on 28th January, 1898, to inquire into and report on the respective complaints.

2. That although Lieutenant Newman in his report had complained only of "gross misconduct" in the usage of a certain expression by the Petitioner, he was allowed at the inquiry to introduce a second charge, to wit, that Petitioner had on the evening of 4th December struck him.

3. That Petitioner stated on oath that he did not strike or attempt to strike Lieutenant Newman on that date.

4. That Lieutenant Newman and Petitioner were made respectively plaintiff and defendant at the inquiry, although each had reported the other.

5. That the inquiry was held with closed doors. Petitioner respectfully submits that many witnesses were thus prevented from offering evidence, as the nature and scope of the inquiry was not known.

6. That Petitioner was unaware that until some time after the inquiry commenced that he was to be charged with striking Lieutenant Newman.

7. That on 4th December, 1897 (prior to the parade), Lieutenant George Wall, a friend of Lieutenant Newman's, strongly urged upon Petitioner the right of Lieutenant Newman to command of the parade as Petitioner's superior in rank.

8. That on the evening of 4th December, 1897, Lieutenant George Wall offered his services to Petitioner in connection with the parade.

9. That during the march of the two companies, Lieutenant Wall asked if he (Petitioner) would conform to the orders given by Lieutenant Newman.

10. That Lieutenant Wall stated on oath at the inquiry that he was virtually in command of Petitioner's ("E") Company, and dismissed it on 4th December, 1897.

11. That Lieutenant Newman on oath stated at the inquiry that he had not claimed superiority of command over Petitioner, nor did he address Petitioner on 4th December, 1897.

12. That Lieutenants R. R. Thompson and C. J. Haldorf both stated on oath that Lieutenant Newman had claimed superiority of rank over Petitioner in connection with the parade on 4th December.

13. That the late Lieutenant G. J. Greive, Adjutant 6th Regiment, stated on oath at the inquiry that Lieutenant Newman had complained to him of the appointment of Petitioner to the rank of captain while he, Newman, was still a lieutenant.

14. That Lieutenant Greive made the following statement on oath at the inquiry :—"When Mr. Wall had finished giving his evidence before the Court last night, he came into the office. I thought he looked worried, and I said, 'Are you tired?' He said, 'No, I am not tired; I am worried because I have contradicted myself several times under cross-examination, I think by Colonel Bayly. Of course, I was in a difficulty, because I was pulling his—Captain Barrett's—leg all the time. I am jolly sorry it ever happened, but it all originated in a silly bet.' I said then to him, 'What was the bet?' Was it that you should induce Captain Barrett to give you the command of his company?' He did not reply. He then left to catch the train."

15. That as a result of the inquiry, Petitioner's commission was cancelled, and Lieutenant Newman was reprimanded for having needlessly interfered with a company of the Volunteer Force on the supposition that he had a right to do so.

16. That Lieutenant Newman on oath stated at the inquiry that he did not address Petitioner on parade on the evening of 4th December, 1897, as Petitioner stated.

17. That the following non-commissioned officers and men of "E" Company stated on oath at the inquiry that they saw Lieutenant Newman address Petitioner, namely,—Sergeant P. K. Clark, Sergeant W. McLaren, Corporal Nesbitt, and Privates W. J. Rodgers, J. Horton, and A. W. Ball. Horton and Ball further deposed that they heard Lieutenant Newman say to Petitioner, "Do you recognise me as your superior officer?"

18. That Petitioner has since been waited on by a number of respectable persons willing to give evidence, they believing that a grave miscarriage of justice has resulted in connection with the matter.

19. That at a public meeting of the citizens of Goulburn held at the Town Hall, 5th April, 1898, resolutions were passed expressing sympathy with Petitioner and regret at the action of the military authorities. A petition signed by 132 (one hundred and thirty-two) persons was presented to the Chief Secretary, praying that Petitioner be allowed to resign instead of having his commission cancelled.

20. That Petitioner has twice asked the General Officer Commanding to allow the case to be reopened, in petitions dated 30th June and 9th December, 1898.

21. That Petitioner, on 29th December, 1898, submitted to the General Officer Commanding a statement of important fresh evidence which he had to offer. This was in reply to a promise from the General Officer Commanding that he would submit a statement of any fresh evidence to His Excellency the Commander-in-Chief, with the view of having the case reopened. Petitioner was afterwards informed that the communication had been referred to Colonel Holborow, President of the Court of Inquiry, who expressed himself unable to see anything new in the way of evidence.

22. That Petitioner again, on 20th March, 1899, respectfully requested that the matter be referred to His Excellency the Commander-in-Chief.

23. That the General Officer Commanding, in a report to the Principal Under Secretary on the petition of Goulburn citizens, stated, *re* cancellation of Petitioner's commission,—“There is no legal reason why Mr. Barrett should not obtain a commission if recommended therefor and application approved.”

24. That Petitioner thereupon applied for reappointment as Captain of "E" Company, and was informed that having had his previous commission cancelled he could not obtain another.

Your Petitioner therefore humbly prays,—

That having been degraded on accusations which he most solemnly affirms were false, and having since exhausted every honorable means within his power to get the inquiry reopened, a Select Committee be appointed to inquire into the facts in connection with the cancellation of his commission of captain of "E" Company, 6th Regiment.

And your Petitioner, as in duty bound, will ever pray.

Goulburn, 29th November, 1900.

ARTHUR CONNOR BARRETT.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EASTER ENCAMPMENTS, 1899 AND 1900.

(RETURN SHOWING ATTENDANCES OF VARIOUS VOLUNTEER REGIMENTS.)

Printed under No. 11 Report from Printing Committee, 11 September, 1900.

(2.) Easter Encampment, 1899-1900 :—Mr. Ashton asked the Colonial Secretary,—What was the attendance at the Easter Training in 1899 and 1900 respectively of the following Volunteer Regiments, viz.:—(1) The 5th Regiment, Scottish Rifles; (2) the 6th Regiment, Australian Rifles; (3) the 7th Regiment, St. George's Rifles; (4) the 8th Regiment, Irish Rifles? Mr. See answered,—The following information has been furnished by the Major-General Commanding the Military Forces :—

RETURN showing the attendance at the Easter Training in 1899 and 1900 of the following :—

Regiments.			Days.	1899.	Days.	1900.
5th Infantry Regiment	...	...	4	212	4	327
6th do	...	...	4	456	4	399
7th do	...	...	4	262	3	404
8th do	...	...	4	176	—	Nil.

No provision was made on the Estimates for Easter Training for any of the unpaid Volunteer Regiments. However, the 5th Infantry Regiment was arranged by private subscription; the 6th Infantry Regiment got a special grant from the Government; the 7th Infantry Regiment was allowed a small sum out of the Capitation Fund towards rations, but this Regiment was not under canvas, the men returning to their homes daily. The 8th did not hold a camp.

## SOUTH AFRICAN CONTINGENTS.

(REPORT OF MILITARY AUTHORITIES REGARDING EQUIPMENT OF.)

*Printed under No. 7 Report from Printing Committee, 2 August, 1900.*

From Major-General G. A. French, C.M.G., R.A., Commanding New South Wales  
Military Forces, to The Principal Under Secretary.

*Subject:—South African Contingents.—Remarks with regard to Equipment.*

New South Wales Military Forces,  
Head-quarters, Sydney, 9 July, 1900.

Sir,

I had intended dealing with the matters mentioned below in my Annual Report; but as that could not be furnished for some time, I have the honor to submit the following for the early consideration of the Honorable the Chief Secretary.

(1.) The system introduced during the past five years of deducting large sums from the Military Estimates seems to me to be primarily responsible for any failures in the supply of suitable equipment to the troops sent to South Africa.

Thus, for 1896-97	...	...	...	...	£20,000 was deducted.
1897-98	...	...	...	...	20,000 "
1898-99	...	...	...	...	37,703 "
1899-1900	...	...	...	...	40,000 "

(2.) It should be understood that only small savings could accrue from—

- (a) Failure on the part of members of the Force to put in the full time for which pay was voted.
- (b) From failure of Volunteers to become efficient.
- (c) That actual savings having been made in the first of the above years, they could not be repeated in succeeding years, or, to speak more plainly, an appointment having been abolished for the sake of economy in 1896, could not again show a saving by its abolition in 1897.

(3.) It was not competent for the Military Authorities to reduce the pay or allowances voted by Parliament for the members of the Forces, and, consequently, savings had to be made from the Vote for "General Stores and Contingencies."

(4.) The evils mentioned in (3) were further intensified, owing to a new system, brought into force by the Treasury, by which all sums unexpended on 30th June lapsed; thus, as the Military Department could take no action for the purchase of stores till Estimates were passed (about December), and as delays frequently occurred in the supply of stores—especially warlike stores from England—considerable sums lapsed, and the accounts had to be paid from the succeeding year's Vote. The accumulations due to the above causes put us in the position on 1st July, 1899, of having some £16,000 carried over to that financial year, and the Estimates further provided that £40,000 was to be saved; so that we started, as it were, with a deficit of some £56,000 (quite apart from other reductions of £10,240 made before submission to Parliament), or about 30 per cent. of the whole Military Vote.

While the above sweeping reductions were being made, the Forces were increasing in a greater proportion. Major-General Hutton, when Commandant, put the minimum expenditure at £200,000 per annum. When he left the Colony the Forces consisted of—

Permanent officers and men	...	...	...	...	538
Partially-paid officers and men	...	...	...	...	4,341
Volunteers	do	...	...	...	198
Total	...	...	...	...	5,077

On 30th June, 1900, there were—

Permanent officers and men	...	...	...	...	829
Partially-paid do	...	...	...	...	4,244
Volunteers do	...	...	...	...	3,434
Total	...	...	...	...	8,507

showing an increase of 60 per cent. in numbers for an increase of 6 per cent. on the Annual Estimates.

(6.) A reference to my letter of 30th August, 1899, will show that I plainly pointed out the very serious disadvantage to the Military Service in practically having to start the year with a deficit of some £56,000; but apparently no action was taken, and consequently it can be readily seen that when, in October, the Military Department was called upon to prepare a Force for service abroad, the military stores and equipment available could not be much—the Forces, in fact, having been living from hand-to-mouth for many years past.

(7.) As a matter of fact, the First Contingent, and others sent to South Africa up to end of December, 1899, were well equipped, nearly all the mounted men having the Imperial pattern military saddlery; after that date we had to be content with what could be obtained at short notice.

On 21st December I submitted to the Government a proposal for the Second Contingent. On 30th December "A" Battery left by the s.s. "Warrigal," fully-equipped with a good outfit in every respect. On 17th January 702 officers, non-commissioned officers, and men embarked on the steamships "Surrey," "Moravian," and "Southern Cross."

(8.) *Helmets.*—Owing to information being cabled on 1st January that our first Contingents were liable to be mistaken for the enemy through wearing hats, it was ordered, on 4th January, that khaki helmets should be supplied. There were none in store, or obtainable in the Colony; so that thirteen days only were available to provide helmets for some 702 officers and men. Even afterwards, when the Citizens' Bushmen Corps was formed, an attempt to get these of proper shape and material from manufacturers resulted in one offer of 250 in twenty-one days, and this offer was withdrawn a few days after.

In these circumstances, the question resolved itself into obtaining, not what you wanted, but what you could get; and it is not surprising if helmets obtained in such circumstances could not stand the rough service of campaigning in wet weather. As a matter of fact, when an interested expert (who offered to supply 250 helmets, but could not do so) was questioned by the Clothing Board, he admitted that "it was the best article that could be got at the time."

(9.) *Uniform.*—The system under which uniform has been supplied to our Forces was plainly dealt with in my Report for 1897. Subsequently, the Right Honorable the Premier took steps towards the formation of a clothing factory; but I regret to say the idea was not carried out. Practically we are still in the hands of one contractor; and as he is not bound to keep up any stock of garments, or even of material to make them, it can readily be understood what a rush there was when some 700 men had to be measured and fitted out with two suits of uniform in two or three weeks. In the matter of great coats and riding trousers we actually had to wait till the cloth was manufactured at the mills, and then wait for it to be made up.

The fact that our men were provided with cloth instead of cotton khaki was a decided advantage, especially when cold weather was coming on, though in response to an application as to further supplies of clothing being forwarded, we received an answer that the Imperial authorities in South Africa would attend to that; as a matter of fact, I believe they also replaced some of the helmets.

(10.) *Saddlery.*—One of my early acts after arrival in this Colony was to order 200 sets of military saddlery and 1,000 numnahs. These came in well for the Mounted Rifles and Lancers of the First Contingent, but afterwards only "bush" saddles were obtainable. The bush saddle may be all very well in the bush for a 10-stone man in his shirt sleeves, but is not the saddle for the "Light" Dragoon, who, with his arms, ammunition, and gear for man and horse rides, 18 stone. Even with the best of saddles the half-starved, overweighted horses on active service suffer from galls and sore backs; it is therefore not to be wondered at if some of ours suffered similarly. To obtain sufficient saddles in the short period available was one of our greatest difficulties; they had to be obtained where possible. Those supplied by regular saddlers were generally satisfactory of their kind. In one instance, a speculative tailor apparently bought up some job lots of inferior saddles, the D's fastened with such bad leather that it could be torn across by hand. On this being reported, they were promptly condemned by a Board, and the whole consignment thrown back on his hands.

An extension of three days' time in the departure of the transports, which I asked for, was not approved; and to illustrate the pressure at this period (January), I may mention that my first mounted parade for inspection of the Mounted Infantry had to be made on the Sunday before their departure, and even then I had to take them one Company at a time, and wait till the next Company changed the one lot of saddles on to their horses; in fact saddles and bridles were being delivered up to the hour of embarking. This left little margin for inspection.

(11.) I append hereto:—

(a) Copy of my letter of 12/1/00, referring to saddlery.

(b) Report of Major Boam, D.A.A.G., the officer appointed to attend to the issue of clothing of Contingents.

(c) Report of Clothing Board as to helmets supplied.

In conclusion, I would like to remind the Hon. the Chief Secretary that the number of men and horses sent to South Africa from New South Wales was greater than from any other two Australian Colonies combined; that all Contingents were embarked up to time, and without any hitch in arrangements; that the Staff, in addition to their own work, had to purchase 2,500 horses and equipment, engage and fit out 2,784 officers and men, carry on the duties relating to transports, horse fittings, forage and food supplies, &c., as well as perform the duties of absent members of the Staff, so far without any recognition whatever.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

From Major-General G. A. French, C.M.G., R.A., Commanding New South Wales Military Forces, to  
The Principal Under Secretary.

*Subject:—*Departure of Troops being deferred till 20th.

[Urgent.]  
Sir,

New South Wales Military Forces,

Head-quarters, Sydney, 12 January, 1900.

I have the honor to submit, for the consideration of the Minister, the desirability of deferring the departure of the troops till Saturday, the 20th.

In submitting this suggestion, I do so mainly in consequence of the delays with regard to the supply of harness and saddlery, and the inferiority of workmanship. These have been of such a nature  
that

that the Mounted Infantry have not yet been able to have a mounted drill, and the Australian Horse have had to condemn a large portion of their supplies of saddlery. The time thus gained will be of great value in giving extra training to these hastily-raised Forces.

I have, &c.,  
G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

REPORT BY THE D.A.A.G. UPON CLOTHING SUPPLIED TO THE SECOND, CITIZENS' BUSHMEN'S, AND IMPERIAL BUSHMEN'S CONTINGENT.

(1.) Paragraph 1 of G.O. 142, of 21/12/99, notified that all applications with reference to the issue of clothing for the Mounted Infantry, and Army Medical Corps, Second Contingent, were to be made to me at the School of Musketry, Randwick Rifle Range, and that clothing obtained through any other source would not be recognised.

The scale of clothing for the above Contingents was laid down in paragraph 4 of G.O. 146, of 27/12/99.

(2.) On 22/1/00, the A.Q.M.G. instructed me to arrange supply of uniform to the Bushmen's Contingent (Citizens') on the same scale as that issued to the Second Contingent—pointing out, however, that the G.O.C. considered the colour of the khaki was rather dark, and would prefer material of a lighter shade, if possible.

(3.) On 20/3/00, the A.Q.M.G. directed me, by memo. of that date, to issue clothing to the Imperial Bushmen's Contingent as soon as possible, on the same scale as for previous Bushmen's Contingent. I therefore controlled the issue of the clothing to all Contingents, with the exception of the First (Infantry unit). Although I cannot speak as an expert, my many years of experience in having to deal with the clothing of Regiments, and, more particularly so, since I have been Secretary to the Military Central Clothing Board, will, I venture to think, enable me to offer an opinion as to the clothing which has been supplied to the Contingents.

Second Contingent's jackets were of precisely the same material as supplied to the Partially-paid Regiments, and were quite up to sample in every respect, both as regards texture, colour, and make.

*Pantaloon.*—In this respect a very serious difficulty occurred, as no cotton Bedford cord was obtainable in the Colony, the stock having been used up in fitting out the Mounted Rifles.

Messrs. Vickers, of Marrickville, undertook to manufacture a material in substitution of Bedford cord, the first of the kind ever manufactured in the Colony. When a sample pair were made up, I obtained the opinion of Mr. Murray, the Managing Director of the Parramatta Woollen Mills, as to quality of the cloth, and he informed me that it appeared to be excellent material, and would, he thought, wear well. It was, however, subsequently discovered that the cloth was too fine in texture for rough wear; but this was not found out until the same material was issued to the Citizens' Bushmen's Contingent, and therefore after the departure of the Second Contingent.

*Helmets.*—These were supplied in accordance with sealed pattern supplied by the A.Q.M.G. As the quality of these helmets forms the subject of separate inquiry by the M.C.C. Board, I will make no remarks regarding the same.

*Citizen's Bushmen's Contingent.*

*Jackets.*—In every way up to the sample supplied, partly by Mr. C. Anderson and partly by Parramatta Woollen Mills.

*Pantaloon.*—Every endeavour was made to induce other manufacturers of cloth and others to undertake the supply of a Bedford cord, but without avail.

The Parramatta Woollen Mills, Messrs. Hadfield Bros., Messrs. Hordern & Co., Pitt-street, Mr. R. C. Hagon, all stated that they could not supply the article; therefore there was no alternative but to accept the cloth as manufactured by Messrs. Vickers & Co., which, although too fine in texture, was nevertheless an excellent material.

*Helmets.*—Supplied by Mr. C. Anderson, as per sealed pattern of A.Q.M.G. Although I do not wish to offer any remarks as to the quality, as this forms the subject of a separate inquiry, I desire to call attention to my reply to the A.Q.M.G.'s memo. of 27/3/00, asking for a report as to the helmets issued to the Third Contingent (which were similar in every respect to those issued to the Imperial Bushmen's Contingent), as follows:—

“Helmets wear very well, especially taking into consideration that they are subject to very rough usage, consequent upon camp life.”

*Imperial Bushmen's Contingent.*

Clothing supplied by Mr. C. Anderson and Parramatta Woollen Mills.

*Jackets.*—Having heard that some complaints had been made with reference to a portion of the material supplied to the Citizens' Bushmen's Contingent, although I had no doubt as to its quality, I was particularly careful as regards the material for the Imperial Bushmen's Contingent; and both Mr. Anderson and the Parramatta Woollen Mills supplied articles of the very best quality.

In the first delivery of pantaloons by Mr. Anderson, the material was the same as supplied to previous Contingents, and upon his being informed that they were not wearing well, he undertook to replace sixty pairs. Messrs. Vicars then manufactured a heavier cloth, in accordance with a sample submitted to them by order of the G.O.C., and supplied by the Parramatta Woollen Mills, and no further complaints were received. Both the jackets and pantaloons were subjected to severe tests as to shrinkage. They were kept in water for several hours, then allowed to dry, and then hung out in the sun, and at night time. This process was repeated several times, and the articles withstood the test well. This was reported to the A.Q.M.G. at the time.

*Field Service Hats,* supplied by Messrs. A. Hordern and Sons, were of very excellent quality.

General

*General Remarks.*

The first requisition forwarded to Contractor (Mr. Anderson) for the Second Contingent was on 21/12/99, and the departure took place on 17/1/00, giving him twenty working days to complete the supply, consisting of—

1,230 jackets.  
1,230 pantaloons.  
1,430 puttees.  
905 F.S. hats.  
905 F.S. caps.  
700 helmets.

The requisitions for clothing of Citizens' Bushmen's Contingent were forwarded to Contractors at 10 p.m. on 23/1/00, and the departure took place on 28/2/00; therefore the Contractors had twenty-six working days to supply the following clothing:—

950 F.S. jackets.  
950 pairs cord pants.  
475 F.S. caps.  
475 great coats.  
475 helmets.

The cloth for the cord pants had to be specially manufactured during the above period.

The first requisitions for clothing of Imperial Bushmen's Contingent were forwarded to Contractors on 23/3/00, and the departure took place on 23/4/00; therefore giving the Contractors twenty-five working days to complete—

1,256 F.S. jackets.  
1,361 cord pants.  
1,117 puttees.  
967 F.S. caps.  
734 great coats.

During the above period the whole of the cloth required for these articles had to be manufactured. Local manufacturers were not prepared to meet the unforeseen demands, and were working night and day, and put aside their ordinary business orders to make up the cloth required to complete the Military contracts; and the Contractors were so pushed that in some instances it was not possible for them to deliver the clothing until the day of the departure of the troops.

M. BOAM, Major,  
D.A.A.G., S.O., for U.V.F.

6/7/00.

#### REPORT OF M.C.C. BOARD WITH REFERENCE TO HELMETS ISSUED TO CONTINGENTS.

7 July, 1900.

THE M.C.C. Board beg to submit for information of the G.O.C. that, after hearing the statements of Messrs. Dunkerley, Duncalfe, and Anderson, they are of opinion that the helmets supplied to the Contingents sent to South Africa, and to the N.S.W. Military Forces, were the best procurable, considering the short time available to the despatch of the troops.

With regard to future supplies to the N.S.W. Military Forces, the Board recommend that tenders should be called for supply of a cork helmet of a pattern which had been obtained from England.

CHAS. F. ROBERTS, Colonel,

NEW SOUTH WALES.

# HORSES FOR ARMY REMOUNTS.

(PARTICULARS RESPECTING.)

*Printed under No. 10 Report from Printing Committee, 30 August, 1900.*

*[Laid upon the Table of this House in answer to Question No. 1 of Tuesday, 21 August, 1900.]*

## Questions.

(1.) **Horses for Army Remounts** :—Mr. Price asked the Colonial Secretary,—

(1.) Has the Government any means of showing what effect the complications in South Africa have had upon the New South Wales export trade in horses for Army remounts; has it been beneficial so far as trade and values are concerned; if so, what is the approximate increase in the value of the horses in this Colony?

(2.) How many horses have been sent from New South Wales for Army remount purposes during 1898, 1899, and 1900, to India, Africa, or other places, and the average prices paid for same?

(3.) What are the prospects for an increased trade in Army remounts with Great Britain, Germany, and other Powers; and how can the trade be stimulated?

(4.) Has any comparative estimate been formed of the suitability of Australian, British, and American horses for Army purposes; if so, is such comparison favourable to New South Wales in regard to the questions of cost, suitability of horses, and facilities for transit to India, Africa, and the East?

(5.) Have any reports been prepared showing,—(a) The most desirable stamp of horses to breed for Army purposes; (b) the weak features in the class of horses offered; (c) the ages, colours, and heights most desired; (d) the minimum and maximum prices which the right class of horses would bring; (e) the conditions under which animals would be inspected, and the places for inspection; if not, will he be good enough to urge the Military authorities to prepare such a report?

(6.) In view of the possibilities of the development of the trade, will he take steps to issue a pamphlet for distribution containing the following information, viz.:—(a) Particulars of the stamp of horses required, age, colour, height, and approximate value; (b) suggestions as to the strains most valuable in breeding the class of horses required for the various arms of the military service; also illustrations showing the classes of horses desired, together with such other information as may be deemed necessary to encourage the breeding of suitable horses and the development of the trade in horses for remounts?

(7.) Will he arrange for an Honorary Board of Advice, consisting of horse-breeders and military experts, to inquire into the value and possibilities of the horse-trade for Army purposes?

(8.) Is he aware that in the Maitland, Scone, Singleton, Durham, Gloucester, and Muswellbrook Districts a large number of suitable horses for military purposes are bred; will he take steps to have inquiries instituted at the places named, with a view to the establishment of periodical military horse fairs to stimulate the remount trade between this Colony and the British, African, Indian, and Eastern markets, thus enabling horse-breeders in the surrounding districts to submit their horses upon a fixed date?

## Answers.

- (1.) Effect has been beneficial. Increased value, 30 per cent.  
 (2.) New South Wales sent 2,560 horses. The Imperial Remount Committee purchased a total number of 6,734 horses, made up as under:—

Cavalry ... ..	3,104
Mounted Infantry Cobs ... ..	1,876
Draught ... ..	1,754
<b>Total ... ..</b>	<b>6,734</b>

Of this total of 6,734 horses, they were purchased as under:—

Queensland ... ..	1,530
Victoria ... ..	68
New South Wales ... ..	5,136
<b>Total ... ..</b>	<b>6,734</b>

As regards price, no exact information is procurable now; but, including all incidental expenses up to time of shipping, the cost per head as under is fairly accurate:—

	£	s.	d.
Draught horses ... ..	20	0	0
Cavalry horses ... ..	15	0	0
Mounted Infantry Cobs... ..	10	10	0

- (3.) Present demand largely depends on war requirements. Trade to Great Britain direct is possible—would depend on a superior class of horses being sent.  
 For many years Canada has exported horses to England—voyage averaging ten to twelve days. Freight on large shipments from New South Wales would possibly average £10 per head to India. If insured, premiums would be about 8 per cent. on amount of policy.
- (4.) In India, horses from New South Wales thrive better than horses from any other country.  
 In Africa, horses from New South Wales do very well. In certain districts disease is responsible for heavy mortality, no matter where horses have been bred.  
 In the East, Australia practically controls the horse-market during times of peace; demand in China is mainly for light hacks and polo ponies.  
 Batavia and the Malay Peninsula require good hacks, carriage pairs, and thoroughbred horses of the highest class for racing purposes.  
 Facilities for transit are sufficient for requirements—several lines of steamers.
- (5.) *a.* Weight-carrying hackneys; active light draughts.  
*b.* Bred from weedy mares; in many cases stallions are unfit for stud purposes; produce consequently full of faults. The German system obviates these errors.  
*c.* Age, 4 to 6 years—bays and browns—from 15-2 to 16 hands.  
*d.* Prices given by Indian Government and number of horses required published in *Government Gazette* annually. Usual price, £45 in India.  
 For private buyers, high-class racehorses command good prices; polo ponies, carriage horses, and good jumpers sell readily at good prices.  
*e.* Horses are landed, and, if intended for remount purposes, are detained for twenty-one days in the Government Compound, then inspected by the Remount Officer and Government Veterinary Surgeon.
- (6.) Stallions: Suffolk Punch or active draught mares; thoroughbred—or *vice versa*.  
 (7.) The matter will receive attention.  
 (8.) Districts named, and other districts of New South Wales, breed numbers of horses which would be suitable.

G. A. FRENCH, Major-General,  
 Commanding N.S. Wales Military Forces.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## COLONIAL TROOPS AND ENGLISH YEOMANRY.

(OFFER OF FARMS TO, BY GOVERNMENT OF RHODESIA.)

*Printed under No. 14 Report from Printing Committee, 11 October, 1900.*

THE following Government Notice is published for the information of all concerned :—

## GOVERNMENT NOTICE.

No. 147 of 1900.

Chief Secretary's Office, Salisbury, 16 August, 1900.

Farms for Australian, New Zealand, and Canadian Volunteers, and English Yeomanry who have volunteered for the defence of Rhodesia.

It is hereby notified that the Government have decided to offer farms to a limited number of settlers to be selected from the different Contingents under the conditions specified below.

Applications should be addressed to the Chief Secretary, Salisbury, or to the Secretary, Bulawayo, and should in every case be accompanied by a recommendation from the Commanding Officer of the Detachment to which the applicant belongs.

One hundred farms will be granted on the following terms, viz. :—

Farms of 1,500 morgen or thereabouts (say 3,000 acres) will be granted to *bona-fide* settlers who will personally occupy and farm with stock and agriculture.

1. For five years, subject to a quit rent of 10s. per annum.
2. After five years' occupation as above, settlers have the following options :—
  - (a) Of purchase at 1s. 6d. per morgen, in addition to cost of survey.
  - (b) Of leasing the land for five or seven years at a rental of £5 per annum.

The quit rent in both cases to continue at 10s. per annum.

3. The British South Africa Company will obtain and distribute breeding cattle up to fifty to each settler, who shall have the option of—(a) purchasing outright at cost price, or, if it is preferred, in four annual instalments, with interest at 5 per cent per annum, on the unpaid instalments; (b) of farming with the said cattle on halves with the British South Africa Company, who retain the ownership of the cattle.
4. The British South Africa Company will pay each settler £25 per annum for at least five years, in return for which the latter will agree to be liable to be called out for military services if required, and to attend for training and drill as ordered by proper authority. During such period of training an allowance will be paid at the rate of 5s. per diem.
5. Where it is considered desirable, land on Gold Belt will be granted or leased under special conditions to be fixed by the British South Africa Company.

By Command of His Honor the Administrator,

H. H. CASTENS,

Chief Secretary.

With reference to the above public notice, Lt.-Col. R. Grey, O.O. 2nd Brigade, will be glad to give any information he can, or make any further inquiries which may be desired. He will also be glad to give any assistance he can to intending settlers in furtherance of their applications.

**CASE OF QUARTERMASTER-SERGEANT TROY.**

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 6th September, 1900, "*to inquire into and report upon the case of Quartermaster-sergeant Troy,*" and to whom was granted on 1st November, 1900, "*leave to sit during the sittings of the House,*"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List\* \* See List, page 5.  
(whose evidence will be found appended hereto), find as follows—

1. Your Committee are of opinion that Troy's hasty resignation was the outcome of an impression on his part that he had been harshly treated when disgraced some time previously.
2. Your Committee are of opinion that, as disclosed by the evidence, Quartermaster-Sergeant Troy was a zealous and efficient member of the Permanent Staff.
3. Your Committee suggest, therefore, that Troy might with advantage be reinstated in the position to which he was reduced prior to his resignation, and recommend his case to the favourable consideration of the Government, with a view to their giving effect to the suggestion of your Committee.

J. C. L. FITZPATRICK,  
Chairman.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

APPOINTED TO INQUIRE INTO THE

CASE OF QUARTERMASTER-SERGEANT TROY.

TUESDAY, 23 OCTOBER, 1900.

Present:—

MR. E. M. CLARK,	MR. DACEY,
MR. NEILD,	MR. NOBBS.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Thomas Troy called in, sworn, and examined:—

1. *Chairman.*] What are you? At the present time I am doing nothing.
2. You were connected with the Military Service? Yes. I held the position of Staff colour-sergeant when I resigned from the force. The last corps I was attached to was the Irish Rifles.
3. How long is it since you resigned? About two years.
4. Under what circumstances did you leave? I held the rank of quartermaster-sergeant, and I had some trouble with Colonel Bayly. There was a Court of Inquiry, and I was reduced to the rank of colour-sergeant. I had committed no crime, in my estimation; in fact, the papers, I think, if you get them, will prove that. I claimed before this to see the General, to make known my complaints against Colonel Bayly. He was following me up for about four or five years. The first time he commenced was in 1895.
5. *Mr. Neild.*] Colonel Bayly is not the officer commanding the Irish Rifles? No; he was not even the officer commanding the regiment.
6. He was the officer commanding the unpaid Volunteers at the time this inquiry was held? He was.
7. What position did he hold on the inquiry? He prosecuted.
8. Whom did the Court consist of? Major Knight, Captain Legge, and Captain Kyngdon.
9. And Colonel Bayly was the prosecutor? Yes.
10. *Chairman.*] What was the allegation made against you? If you wish, I will give you the whole history of the case.
11. The Committee will be glad if you will make a statement? I was in Tamworth about the end of December, 1894. In my turn of seniority on the Staff I was appointed as sergeant-major of the 1st Infantry Regiment on probation for six months; that was from the 1st January till the 30th June, 1895. I never had a complaint against me all the time I was sergeant-major of the regiment. One evening—I think it was on the 30th June—one of my own Staff sergeants brought me in a general order, and showed me my name in it as being removed from my position, although up to this time I had got no intimation in the world that I was to be removed. Colonel Farrell was colonel of the 1st Infantry Regiment then, and Major Bayly was adjutant of the same regiment. When I got this general order in my hand I took it to the office of Colonel Farrell, and Major Bayly was there at the time. I called Colonel Farrell's attention to my being in orders, and getting no intimation whatever beforehand about being removed. I asked him if he knew anything about it. He said, "Yes." "Well," I said, "I would like to see the General about this matter." General Hutton was here at this time. Colonel Farrell did not want me to see the General first. I left the office, and Major Bayly then called me out of the room on to the Square in Victoria Barracks. "What do you want to see the General for," he said to me; "do you want to question the General's right to remove you from the position of sergeant-major?" I said, "I do not wish to do anything of the kind; the General can appoint whom he likes sergeant-major of the regiment; all I want to know is the reason why I am removed from the position, and the reason that

T. Troy.  
23 Oct., 1900.

- T. Troy. 23 Oct., 1900. that I went out of that office," meaning the regimental office. "All right" he said, "attend to the office in the morning"—that was for me to be at the Staff office. We went before General Hutton. Colonel Mackenzie, Colonel Farrell, Major Bayly, and General Hutton were all present. General Hutton said to me, "Troy, you want to speak to me." I said, "Yes, sir," and he said, "What is it?" I told him about my name being put in orders, and being removed from the position of sergeant-major, and getting no reason whatever for it. I knew that that was contrary to the regulations, that I should have got an intimation about it, and a reason for being removed too. So the General said, "Troy, I do not think they need give you any reason." "Well," I said, "the regulations provide for it, sir." First and foremost when I told him about it he said, "What! removed from the position of sergeant-major?" And he turned round to Colonel Mackenzie, and asked, "Where is the correspondence in this case?" The Colonel said, "There is no correspondence." "What!" said the General, "no correspondence; why is there no correspondence?" Colonel Mackenzie told the General that Colonel Farrell a day or two before that came to him and told him—whatever he told him he did not explain there and then—what he said. It was then that the General said to me that he thought they need not give a reason for removing me. Of course, I did not want to argue it then with the General. "All right, sir," I said, and I accepted my position and walked out of the office. I was quartermaster-sergeant at the time I was appointed sergeant-major. Then I was transferred to the 2nd Regiment, and was sent on to Milton to take up the duties there of a Staff colour-sergeant, although holding the higher rank of quartermaster-sergeant. When they were forming the Volunteer Corps—the 6th Regiment and the 7th Regiment, and the 8th Regiment—I was brought down from Milton to form the Irish Rifles, which at that time were to be raised to 200; and while I was there Colonel Bayly brought me to two infantry schools of instruction in about three months. At that time I had a tremendous lot of work to do with the Irish Rifles, where everyone, you may say, from the commanding officer down was a recruit. I had the whole of the work to do myself, as well as to keep a register. At that time there was a Union Battalion of the St. George's Rifles, the Irish Rifles, and the Scotch Rifles. They formed one battalion when they were first formed, and I had to keep the register for the whole of these for about six months, until they were separated, and made the 6th, 7th, and 8th Regiments. Colonel Bayly took me to these schools, and left nobody to do my work while I was away. The schools would last twelve or fourteen days, and, of course, the work accumulated; it was left for me to do. It will give you an idea of the work I had to do. The Irish Rifles were 300 strong; they were increased 100 while I was there. Since I left they got four men to do the work I was doing. There were actually four Staff sergeants doing the work I was doing, and, in the face of that, Colonel Bayly made me attend these schools. At that time I was instructing the officers of the Irish Rifles, and at one of the schools he took me to was my own commanding officer, Major Murray, and two other officers of the Irish Rifles. I was the only Staff sergeant there. Previous to going to this school, Mr. Tower, the adjutant, came to me and warned me for this school. He said, "You will be instructor at it." I said, "It does not matter, Mr. Tower, whether I am an instructor or not; you know very well the work which is here, and I would sooner not go; I do not want to go as instructor to the school." The next day he came back again and told me that I would have to go to the school, in place of being instructor. When I went to the school I was simply put in the ranks at one end of the rope with a private soldier of the Permanent Artillery, in plain clothes—a recruit—at the other end, and no other Staff sergeant there. It was apparently done for the purpose of holding me up to ridicule. I could see no other reason for doing it. I objected to this, and I told Major Murray.
12. *Mr. Neild.*] Have you attended many schools? About four, I think.
13. Did you ever see a Staff colour-sergeant or quartermaster-sergeant required to take the end of a drill-rope? Never. Not only that, but I was there by myself. What made it more glaring was that my own commanding officer, and others I was drilling, were there. Apparently it was all done to hold me up to ridicule.
14. Who was the commandant of the school you speak of? Major Bayly.
15. Was it by his instructions you were put in this ignominious position of carrying the end of the drill-rope? It was. When I saw this was done to me, I reported it to Major Murray on the Square, after one of the schools had dismissed one day, and I told him I wanted to see the General—that was General French. He said, "What steps am I to take?" I said, "It is usual to report first to Colonel Mackenzie." He said, "All right." After the luncheon-hour Major Murray called me on the Square, and said, "I saw Colonel Mackenzie, and he told me that if you made that complaint in the presence of Mr. Tower to me you could see him." Major Murray then called Mr. Tower, the adjutant of the Irish Rifles. I made the complaint, and Mr. Tower said, "I cannot let you see the General, Troy." "I beg your pardon, Mr. Tower," I said, "I have a perfect right to see the General; he is my Commanding Officer." He said, "You cannot see him." So I did not see him. I did not know what to do with myself. I knew this thing was going on for three or four years. I could not turn; I could do nothing at all. No matter what I did I could not please. What I believe was a conspiracy was formed by Major Bayly—
16. *Chairman.*] What happened? I told him it was a conspiracy.
17. What happened? Some time after this school business—this would be about the middle of 1898—Major Murray came to me one morning. "Troy," said he, "you are accused of using bad language on parade—on the fitting of clothing with the recruits." I said, "Yes." He said, "Yes; you are accused of using bad language." I said, "I never used bad language." "You are also accused," he said, "of not falling in recruits at the proper time"—that is, 8 o'clock at night. I said, "The recruits were fell in, sir." The next morning Major Bayly came down to the office, and I was brought in before him for using this bad language.
18. *Mr. Neild.*] Was Major Murray present? Yes; Major Murray, Captain Mullins, and Mr. Tower were there. This was going on for three or four days, and they could get no one to prove it. They called a recruit in, and he said that I called him a damned fool. In three nights afterwards Major Murray turned this young fellow downstairs—dismissed him from the corps. That was all the evidence which was given there. But Colonel Bayly kept coming down to the office—four or five times altogether—making inquiries, and all this sort of thing. In the end I said what I did to Colonel Bayly, and that is what the Court of Inquiry was over, and that is what I was reduced for.
19. Do you state that Colonel Bayly, who was practically the Brigadier of the Volunteer Forces, came to the regimental office making inquiry as to regimental matters? Yes, and without referring to the commanding

- commanding officer, who was Colonel Campbell, because we were linked with the Scottish Rifles at the time. It was never referred to Colonel Campbell at all. This is the crime I was supposed to have committed. Mr. Tower came to me this day, and he said, "Colonel Bayly is coming down to-morrow." "Well, now, Mr. Tower," I said, "I am about mad with the treatment I have received at Colonel Bayly's hands, and it will have to end to-morrow; I will have no more of it." Colonel Bayly came down the next day; Major Murray, Captain Mullins, and Mr. Tower were in the office, and he commenced again. "Now, Colonel Bayly," I said, "this is only a conspiracy, and it was you that kept it up. You have followed me now for the last four or five years, and you have persecuted my life out. When I wanted to see the General you stopped me; you gave me no chance of explaining myself or redeeming myself; so it will have to stop. I will see what Parliament will do in my case." For using these words Colonel Bayly then made a prisoner of me, and he "crimed" me for insubordination.
20. Was there any entry made in the Crime Book? Oh, yes; there was a crime made out.
21. Who signed it? I really could not tell; I never saw the crime.
22. Was it read to you? It was read out in the presence of the General. We went before the General the next day, and I was charged with this insubordination in front of the General. I laid the whole of my case before the General. "Now, General French," I said, "Colonel Bayly has followed me for the last four or five years; he has persecuted me; he has got me removed from the position of sergeant-major of the 1st Regiment; and he is not satisfied now, for he is writing behind my back to you. He says I am an inferior instructor, or an indifferent instructor. If I were an indifferent instructor, or a bad one, why was I brought down from Milton to form the Irish Rifles—200 strong—where every man, from the commanding officer to the bugler, was a recruit? Why was I selected to do that if I was a bad instructor? Would you not think that one would want to be a very good instructor to do it?" I told the General, also, about him blocking me from seeing him, and General French said, "I am your commanding officer, and you had a perfect right to see me. I will have an inquiry into this case." In the usual way, I would have been punished if they had considered there was any insubordination. The General formed a Court of Inquiry.
23. When was this? It was about June, 1898, when the General said he would have an inquiry. The Board was constituted with two captains and a local major, who was simply a captain.
24. Who were they? Captain Legge, Captain Kyngdon, and Major Knight, who was President. If I had thought that I had committed any crime, I would have objected to the constitution of the Board, because it would not be fair under the circumstances, as the prosecutor was a colonel. I knew they were all of them Major Bayly's immediate friends, and I need not have allowed myself to be inquired into by that Board. I knew that I had committed no crime. The words I used to Colonel Bayly were used in the nature of a complaint. I had no intention to be insolent or insubordinate. I had been close on forty years in the Service, and while I was on the Staff in New South Wales, close on fourteen years, I had never had a scratch of the pen against me nor a complaint one way or another. I never had any bother with any man until this man commenced at me.
25. *Chairman.*] What was the result of the inquiry? I never heard what was the result, only that I got a couple of lines in a memorandum from Mr. Tower a few days afterwards saying that I was reduced to the rank of 3rd-class colour-sergeant, owing to my former good character. That was all I heard about it. The General never sent for me as is usual. A man is usually told off in front of his Commanding Officer, and in this case the General was my commanding officer.
26. *Mr. Neild.*] You being a member of the General Staff? Yes. As soon as I got this memo. I took it home and I consulted with my wife about it, and I said, "There is no use for me to remain on the Staff."
27. *Chairman.*] What did you do then? I resigned.
28. That is your cause of complaint? Yes. My complaint is that I could not soldier with Colonel Bayly. Of course, I had no chance then. I was punished without having committed any crime at all. I committed no crime. The words I said to Colonel Bayly were, "It is a conspiracy," and I pointed out to him how he followed me for four or five years.
29. *Mr. Neild.*] Do you not think it was an insubordinate thing to make an accusation of conspiracy in that way? I did not use the words in that sense. I had no intention of using them in that sense. You see, Sir, I tried every method before I did anything. That is, I applied to see the General through my own commanding officer. I applied in every shape, and I could not see him, and this man kept on writing behind my back.
30. But you have not given us any evidence of that? You will find it in the papers in the Court of Inquiry. As far as I understand the finding of the Court of Inquiry, although I never got a copy of the finding—or anything of that sort—was that beyond the words being used there was no insubordination.
31. Perhaps you can tell us what was the length of time between the incidents at the school of instruction and the making of this charge against you? It was immediately after.
32. At this school of instruction, did you continue to carry one end of the drill-rope all through? All through the school.
33. Who was at the other end of the rope? A man of the Permanent Artillery.
34. A private? A recruit.
35. Was there any other member of the Permanent Staff or General Staff occupied as you were? No; there were none of them at the school at all.
36. Were you the one solitary non-commissioned officer of the Permanent Staff at that school? Yes; the only one. A couple of months before that happened I was at a big school of the whole of the Staff. These schools, I believe, should be two years apart for the Staff, and this was only a couple of months apart.
37. The object of having the non-commissioned officers at the school is usually to discharge some duties as assistant instructors, is it not? That is right.
38. But instead of being employed as an assistant instructor, you were employed as a rope-carrier? Yes, although it was represented to me by the adjutant beforehand that I was to go as an instructor, and to be paid for it.
39. Were you paid? Not at all. Apparently the whole thing was done to annoy me.
40. *Mr. Nobbs.*] Did you make complaints about carrying this rope to the senior officer? I did to my major.

T. Troy.  
23 Oct., 1900.

41. In writing? No; only in casual conversation. If a man has a report to make, he makes it verbally to the captain of his company, and if the captain of the company cannot settle his report, it goes on to his commanding officer. I made that report.
42. You said something about several letters being written behind your back, and charges being made behind your back;—how do you know that? A report of everybody that attends the school goes to the General Officer Commanding. It is supposed to be private. Whether there is an officer of the school or a non-commissioned officer of the school, there is a report that goes to the General. In my case every report that went in was adverse to me.
43. *Mr. Neild.*] How do you know? Major Murray showed me the very last one himself. He was the person who called my attention to it. "Troy," he said, "I do not agree with this report at all, and I will write to the General to have you examined." He wrote in, and never got an answer about it.
44. *Mr. Dacey.*] You wish the Committee to understand that Colonel Bayly did not consider you were able to hold a rope in the proper manner? Oh, no.
45. How came the report to be adverse to you, when this was the duty you were discharging? It was in the previous schools. I was at four schools altogether, and every time a bad report went in against me of being an inferior drill-instructor. I told the General when I was before him, "I'll prove to you, in your presence, that for a squad, a company, a battalion—or, for the matter of that, a brigade—I am second to nobody in these Colonies, and I never have been as an instructor." Everyone knows that there is nobody in the Colonies who is a better instructor than I am. "I am willing to be inspected," I told the General, "by anybody they wish to appoint."
46. *Mr. Nobbs.*] You say that at every school you had adverse reports sent in against you;—were there different officers at each school? Colonel Bayly was always the commandant.
47. On every occasion on which you had adverse reports sent in against you? Yes.
48. Would he be the man who would make these reports? Yes; at the inquiry, the president had my school report in his hand, and he said to him, "What sort of an instructor was Quartermaster-sergeant Troy?" Colonel Bayly said, "In my opinion, he is an excellent one."
49. *Mr. Neild.*] Is that Major Knight you are referring to as the president? Yes.
50. He was subsequently acting-commandant of the school of instruction, was he not? I believe so; I had left then. So he was writing behind my back one thing, and was swearing in the front of my face another thing. In front of my face he swore I was an excellent instructor, and behind my back he was reporting the other way.
51. *Mr. Nobbs.*] How did he explain himself;—did you call his attention to this? No; because, unfortunately, I was represented at that inquiry by Mr. Nathan, a solicitor; and from what I was told afterwards, they got at him up at the Barracks.
52. *Mr. Neild.*] Is not Mr. Nathan a bosom friend of Colonel Bayly? I do not know anything about it. Anyway, they "fixed" him up there.

WEDNESDAY, 7 NOVEMBER, 1900.

Present:—

MR. HAYNES,

MR. NOBBS.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Henry Douglas Mackenzie sworn and examined:—

H. D.  
Mackenzie.  
7 Nov., 1900.

53. *Chairman.*] What office in the Military Forces do you hold? I am a colonel connected with the Military Forces, and Assistant Adjutant-General of those Forces.
54. You understand that this inquiry has reference to the removal of Quartermaster-sergeant Troy;—do you know him; did you know him when he was connected with the Military Force? Yes; I knew him, especially when he was connected with the Torpedo Force.
55. Do you remember the circumstances under which he was removed from his position as sergeant-major of the 1st Infantry Regiment? I do not.
56. You received instructions to produce certain papers? Yes; I have brought all the papers that I could find.
57. Do they deal in any way with Mr. Troy's removal from his position? I do not think they do. I see some evidence given before the Court of Inquiry—I think it must have been Quartermaster Troy's own evidence. It reads, "On the occasion when I appeared before General Hutton on the subject of my removal from the 1st Infantry Regiment, General Hutton did not know anything about it, and turned to Colonel Mackenzie, and asked him where the correspondence was, and he replied that there was none."
58. What course is generally pursued in reference to the removal of an officer from his position? If the commanding officer of a regiment reports that any particular non-commissioned officer is not suitable for the position he is filling, then we try to find a more suitable position for him.
59. Would not correspondence ensue in the case of the removal of an officer? I should think it would. I was looking for such correspondence in this case, but cannot find any.
60. Have you any personal knowledge of the capacity of Sergeant-major Troy? Since he left the old Torpedo Corps I have not. During the time I knew him in connection with that corps he was a very valuable man, and I was very sorry when he left that corps.
61. Had you any knowledge of his ability as an instructor? I cannot say that I had. He always brought on the recruits to the Torpedo Corps very well, as a result of his practical instruction.
62. Was any inquiry made of you by the General as to why there was no correspondence in this case? I do not remember the circumstance—in fact, I did not remember until I looked through the papers to-day that Sergeant-major Troy ever went to the 1st Regiment.
63. You cannot say why there is no correspondence? No.
64. Will you have inquiry made as to whether there is any correspondence? I will.
65. *Mr. Haynes.*] So far as you are aware, Quartermaster-sergeant Troy never rendered himself incapable of duty; he was always well-conducted and steady? So far as I knew, he was always steady and well-conducted.
66. In connection with the Torpedo Force? Yes; both the late Colonel Cracknell and the late Colonel P. B. Walker had a very high opinion of him—in fact, so far as I recollect, he only left the Torpedo Corps because of its reorganisation; it was split up into various sections.

## CASE OF QUARTERMASTER-SERGEANT TROY.

67. *Chairman.*] Apparently, there was an application made for the production of papers in the case, on a motion in the Legislative Assembly that the papers be laid on the Table of the House? There was a request from the Colonial Secretary's Office for papers that were to be laid before the House. The correspondence was sent forward with a covering letter, which I find here, and which reads as follows:—

H. D. Mackenzie.  
7 Nov., 1900.

[Copy.]

5th October, 1898. Court of Inquiry forwarding copy of proceedings.  
Major-General G. A. French, C.M.G., R.A., Commanding New South Wales Military Forces. The Principal Under Secretary.

Sir,

In forwarding copies of the proceedings of the Court of Inquiry in ex-Sergeant Troy's case, I have the honor to specially draw the attention of the Minister to the enclosed extracts from "Clode's Military Forces of the Crown," which clearly indicate in the interests of discipline the objections to such matters being dealt with by a House of Parliament. I would, therefore, strongly urge the advisability of opposing any further action in this case, and that in future motions of a similar nature be resisted, unless there is reason to suppose that "some gross violation of the law" has taken place.

I have, &c.,

G. A. FRENCH,

Major-General, Commanding New South Wales Military Forces.

On this I see Mr. Brunker, who was Colonial Secretary at the time, wrote this minute:—

Under an order of Parliament the papers in this case must necessarily be laid on the Table of the House. The action suggested in the last paragraph of the General's letter will be carefully regarded.—J.N.B., 7/10/98.

Colonel William Thomas Farrell sworn and examined:—

68. *Chairman.*] I believe you have retired on your rank as colonel? Yes.

69. You were at one time the officer commanding the 1st Infantry Regiment? Yes.

70. Whilst in that position were you brought into contact with Quartermaster-sergeant Troy? Yes; he was acting for the time as sergeant-major.

Colonel W. T. Farrell.  
7 Nov., 1900.

71. Whilst acting in that capacity, you had an opportunity of discovering his worth and ability as an instructor? Yes; I had a very good knowledge of him, although he was not a very long time with me.

72. What opinion did you form as to his capacity? I think he was a very good instructor, a very good man, taking him all round.

73. Do you know the circumstances under which Troy was removed from the position he then held in connection with the 1st Regiment? I do not think I recollect, it is so long ago.

74. You know that he was removed? I am not sure whether he was removed or whether he removed himself; he did not get the position of sergeant-major of the regiment; whether he was sent to another regiment, or went to another regiment, I cannot say; I had very little to do with that.

75. Did you take any part in recommending his removal? No; I had nothing whatever to do with his removal. My confidential reports to the Major-General Commanding will give all particulars, because they were written at a time when the matter was fresh in my mind. But I am certain I had nothing to do with his removal.

76. Do you recollect whether any correspondence passed in connection with his case? I have not the slightest recollection; but I rather think not, if it was a regimental matter.

77. Would it not be the usual course, in a case of the kind, to have correspondence? If he was attached to the regiment at the time it would be usual.

78. Do you personally know whether there was any difference between Sergeant-major Troy and Major Bayly? I do not know that there was any personal difference between them. I do not think Major Bayly held the very highest opinion of him.

79. Major Bayly was adjutant of the regiment at that time? Yes.

80. You cannot call to mind the circumstances connected with Troy's removal at all? I really cannot just at this moment.

81. Have you any papers, or can you secure access to any, which would help to refresh your memory on the point? The only papers would be the confidential reports. The original reports were sent on to the Major-General; but copies are in the office.

82. Are you able to say that it was not on your recommendation that Sergeant-major Troy was removed? I do not think so; I have no recollection of it whatever.

83. Personally you are on very good terms with him? Yes; and with all the sergeants, as far as that goes. There is no doubt he had a reasonable show to be made sergeant-major.

84. And, so far as you are concerned, you would not have placed any impediment in the way of his attaining to that position? That would depend on whether there were better men to take the position. I should feel that I was in duty bound to get the best man.

85. Do you recollect who was appointed? I do.

86. Who was it? Sergeant-major Conway; he is now sergeant-major of the regiment.

87. Are you sure on that point? I do not think anyone else was appointed.

88. Was not an officer named Chidgey appointed? I did not know that he was appointed sergeant-major; he was appointed once, I think, and had to give it up, because there was too much to do. I am not sure he was appointed; he might have been on probation.

89. During the period that Quartermaster-sergeant Troy was on probation, did he discharge all the duties associated with that office? I saw nothing amiss with him, so far as my knowledge went. I had not so good an opportunity as some other members of the Staff had of seeing his qualifications, particularly at the schools of instruction.

90. Had you as good an opportunity as Major Bayly had? No; because I had nothing to do with the schools of instruction.

91. During the time that Troy was on probation, was he at any school of instruction? So far as I can recollect, I think he was at more than one.

92. Is it usual for an officer to be removed without correspondence taking place between him and his superior officer? No; unless the removal is by way of promotion. There is very seldom much correspondence when a non-commissioned officer is promoted. There would not be any occasion for it.

93. *Mr. Haynes.*] If Quartermaster-sergeant Troy was competent, and had been doing his duty well, and was then removed, would there not be some record in the office indicating why he was removed—whether he was dispensed with as a superfluous officer, or because of his incompetency? Oh, yes; we give notice of removal of an officer. As I mentioned before, sometimes they are removed by way of promotion to another regiment; but there is very little said about it.

94.

- Colonel W. T. Farrell. 94. But say that this was not a transference from any particular regiment to another, but an actual removal from the service—ought there not to be some record of the transaction? Ob, yes; but I really cannot recollect it.
- 7 Nov., 1900. 95. But you recollect that when you were his superior officer, Quartermaster-sergeant Troy gave you satisfaction? Oh, yes; I saw nothing amiss with him. Of course there is a great difference in men. A sergeant-major requires to be a very smart man. I would like you to get, if you can, copies of the confidential reports. I gave those reports, and, as far as I could, gave conscientious reports.
96. *Chairman.*] Was any complaint made to you by Troy with reference to what he alleged to be unfair treatment on the part of Colonel Bayly? I think Quartermaster-sergeant Troy has mentioned it; but I did not take very much notice of it. It is not for me to say if there was anything like favouritism or not.
97. When a complaint is made against a subordinate officer, or a charge laid against him, is it usual for him to be allowed to see the General? I think he is generally brought before the General by the commanding officer of the regiment.
98. There are certain officers who are entitled to go direct to the General, are there not? Officers can go direct to the General; officers who used to be under my command very rarely went to the General without coming through me.
99. *Mr. Nobbs.*] Officers commanding regiments; they could? Yes.
100. But all subordinate officers would have to go through officers commanding the regiment? That is the proper course.
101. Did Adjutant Bayly ever complain to you about the incapacity of Quartermaster-sergeant Troy? I cannot answer such a question as that. My confidential report is a very strong document. There is a great deal of confidence between an adjutant and a commanding officer.
102. But, supposing a charge of incapacity was made by Bayly against Troy, would that be in writing, or be merely verbal? A charge is a very different thing to a conversation.
103. If it was a conversation, you would not recognise it;—you would not take any notice of it? Certainly not.
104. Supposing that Troy was removed, and there was no charge against him, would you regard it as a purely regimental matter—that is, whilst he was acting as sergeant-major? He was acting on probation; he was never appointed.
105. But you call him quartermaster-sergeant? I do; because you stated in the paper you sent me that he was a quartermaster-sergeant. He was never quartermaster-sergeant to my knowledge.
106. So that your regiment was without a permanently-appointed sergeant-major for some time? Yes; for a considerable time.
107. And during the interregnum, Troy was acting sergeant-major? By virtue of his seniority.
108. It was during that time, and whilst you had charge of the regiment, that he was removed? I cannot recollect.
109. At all events there ought to have been some correspondence connected with the matter? Yes; but I do not think it was in my report.
110. Would that correspondence be in the regimental brigade office, or where? It had nothing to do with me, and I do not think it was in my report.
111. So that whatever correspondence there may be in regard to this case, will be in the head-quarters brigade office? Yes.
112. Any action that was taken, was taken upon the confidential report made by the General Officer Commanding? Not about his removal, I think.
113. On what evidence was Troy removed? I have not the slightest idea that he was removed. I know there were changes made, but I cannot at this time recollect.
114. Perhaps this might assist you;—I notice in the papers that a question was asked of Major Bayly, at an inquiry that was held, whether he was not responsible for Quartermaster-sergeant Troy having been reverted from acting as sergeant-major of the 1st Infantry Regiment, and he replied that he was not, that it was a matter entirely between the officer and the commanding officer and the Major-General? I have not the slightest recollection of it.
115. I suppose you considered you had good reasons for not recommending him for permanent appointment? Well, I thought the other man was better.
116. *Mr. Haynes.*] What other man? Sergeant Conway.
117. Who took Troy's place? It has been said that Chidgey took it; but I do not recollect whether he ever got the position. I think he was on probation for the position. If he got it he certainly did not keep it. I think he had to go "Home" about some money that he was to get. That was what was reported.
118. *Chairman.*] In connection with the removal of an officer, do you not think there should be some correspondence in the interests of all concerned? Yes.
119. So that, if trouble arises at any future time, it could be turned up? An ordinary regimental officer would have nothing to do with that, unless he did something whilst serving in the regiment. Then the difficulty in my position would be that I should have to be chairman of the court of inquiry, and would have to report.
120. In connection with the removal of an officer to an improved position, that would be on the recommendation of the officer commanding the regiment? Yes; the officer commanding the regiment would have to report favourably or otherwise—that is, if they did not take what was stated in the confidential reports as sufficient. Confidential reports are confidential reports, and no one else can see them. They contain a good deal of information useful to the commanding officer, and upon that he acts.
121. *Mr. Haynes.*] You say that in your confidential reports you indicated your preference for Conway over Troy? I did not say preference, I said I thought him more suitable.
122. Was he a more competent soldier? I thought so—that, taken together with the advice of those well able to judge.
123. Had you any communication from Colonel Bayly with reference to Conway, saying that he was a protégé of his? I do not remember.
124. Whatever your opinion might have been with respect to Sergeant Troy's fitness for the position of Sergeant-major, you did not hold the opinion that he should be removed from the Force? I never held any such opinion. He did his work, as far as I could see, as well as most of them. He was always willing

willing, and I had nothing whatever against him, certainly nothing to cause me to recommend his removal from the regiment. Colonel W. T. Farrell.

125. *Chairman.*] Quartermaster-sergeant Troy eventually resigned from the service? I have not the slightest knowledge of his having done so. After I left the Force I did not take quite so much interest in it as I did before. I thought he was still in the Force. 7 Nov., 1900.

126. *Mr. Haynes.*] That is since he was acting as sergeant-major for you? I am inclined to think it must be; I cannot say for certain.

THURSDAY, 8 NOVEMBER, 1900.

Present:—

MR. DACEY, | MR. NOBBS,  
MR. NEILD.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Lieutenant Arthur Tower sworn and examined:—

127. *Chairman.*] What is your position in connection with the Military Forces of New South Wales? That of adjutant on the General Staff. A. Tower.

128. Do you know Mr. Troy, who was at one time quartermaster-sergeant? Yes; he was connected with the 5th Union Regiment. 8 Nov., 1900.

129. And you were adjutant of the regiment? Of the 5th Regiment.

130. Do you recollect Quartermaster-sergeant Troy coming into collision at any time with Major Bayly, the result being an inquiry? Yes.

131. In connection with that matter, or any other matter of a similar nature, did Troy appeal to you for permission to see, or for the privilege of seeing, the Major-General at any time? No; I do not remember him asking me to see the General. If he had asked to see him he could have done so, by the request going through the usual course.

132. Did he complain to you at any time with reference to him being compelled to attend a course of instruction, a school of instruction, while he had, as he said, a considerable amount of office work in arrear? Yes; the Staff often complained of having to attend schools of instruction; it takes them away from their work. We were particularly busy at that time, and were working the regiment shorthanded.

133. If he were taken away from his office for the purpose of attending the school of instruction, would anyone be left in his place to transact his official duties? Oh, yes; we had to carry on the best way we could.

134. You do not recollect him making a personal application to you for permission to see the Major-General? I do not remember. He may have said to me that he would like to see the General; but I do not think, speaking from memory, that he made an official request to see him.

135. Then you placed no impediment in his way to prevent him seeing the General? Absolutely none.

136. You say that someone was appointed, at the time he was sent to the school of instruction, to do his office work? The regiment was constituted in this way: The Irish Rifles were formed and attached to the 5th Regiment. Of course, the 5th Regiment had a sergeant-major. We had to work on the Scottish in order to get the work done, I myself having to do some of the work, as we always have to do if any of the Staff are taken away for the schools.

137. In what capacity would Troy go to that school? It would all depend upon what school it was. If it were an officers' school, he would go as an instructor; if it was a Staff school, the whole of the Staff go there to go through their drill under the instruction of another portion of the Staff.

138. Do you know whether Troy made any complaint, when that school had been completed, as to his treatment in connection with it—that he was compelled to take one end of the drill-rope? I remember him saying to me that it seemed rather a hard matter, having to go through standing at ease by numbers; but that was not made as an official complaint.

139. Assuming that you were sent to a school in the same capacity that Troy went in, and you were put into the same position, would you realise it as being somewhat of an indignity? No; I have had to do it myself.

140. Would you conceive that it would form the basis of a complaint on your part? Well, if I was kept at it from the commencement of the school to the finish of the school, at that one particular thing, I should think the higher authorities would be regarding me as lamentably ignorant.

141. If you were not allowed to give instruction at all in the course of that school? That would be a question for the commandant of the school; the commandant of a school is king, as it were, and a king can do no wrong.

142. But does it not strike you as being rather a peculiar position to put an instructor in? I really cannot say; the commandant of the school does what he thinks fit.

143. Who would be the commandant of the school we are referring to? Either Major or Colonel Bayly.

144. Do you know that there had been previously, and existed at that particular time, a considerable amount of friction between Colonel Bayly and Quartermaster-sergeant Troy? No; I do not know that there was any friction between them. Of course there was an inquiry, not a legally-constituted Court of Inquiry, but an inquiry over which Colonel Bayly presided. Friction arose then. But previously at the schools I am not aware that there was any friction between them. There was not to my knowledge.

145. You are aware that Troy was removed, or reduced as far as rank is concerned? Yes.

146. In the case of the reduction of an officer, is it not usual for some correspondence to pass—some record to be kept? That is not for me to say; it is a matter for the Head-quarters Staff. So far as I remember the regulations, I think the officer commanding a Volunteer Force is empowered to disrate or to appoint to a higher grade.

147. Do you not think, as a matter of fairness, in the event of a man taking exception to the reduction to which he had been subjected, that there should be some correspondence, so that he could discover from the papers the reason which actuated his superior officer in taking such a course? That is a question, of course, of discipline, or rather, of administration, which devolves upon the Head-quarters Staff.

A. Tower.  
8 Nov., 1900.

148. Do you recollect a particular application being made to you by Troy, after the school had been completed—after the course of instruction in connection with that school had been completed—that he should be permitted to see the General? I cannot recollect now. It is a long time ago.
149. In presence of Major Murray? I really cannot recall the circumstance now. He may have made an application.
150. *Mr. Nobbs.*] You will not swear that he did not? No; I cannot swear one way or the other.
151. *Chairman.*] Would you say definitely that you did not refuse his application? Certainly; if such a request was made to me I can safely swear that I did not refuse it.
152. *Mr. Nobbs.*] With respect to these indignities which Troy was supposed to have suffered in connection with the schools, do you remember any conversation taking place in connection with his having to hold a drill-rope, and do other things? I think I have stated that I remembered on one occasion, when Troy came back from the school, he stated that he had been kept on the “stand at ease” by numbers, and holding on to the end of a rope.
153. You did not take that as an official complaint? Oh, no.
154. In the case of official complaints, are they made in writing? They should be in writing, that they may be sent on to a higher authority.
155. You would not take any notice of a complaint unless made in writing? Oh, yes. If a Staff sergeant came to me, and said, “I have to complain about such-and-such,” or, “I wish to complain officially about this,” I would take down the complaint, and would then write a letter to my commanding officer, stating that so-and-so felt aggrieved, and the nature of the complaint.
156. But you would have to be told that it was an official complaint before you would take it down? Oh, yes.
157. When being examined the other day, Quartermaster-sergeant Troy, in the course of one of his answers, said, “After the luncheon-hour Major Murray called me on the Square, and said, ‘I saw Colonel Mackenzie, and he told me that if you made that complaint in the presence of Mr. Tower to me, you could see him.’ Major Murray then called Mr. Tower, the adjutant of the Irish Rifles. I made the complaint, and Mr. Tower said, ‘I cannot let you see the General, Troy.’ ‘I beg your pardon, Mr. Tower,’ I said, ‘I have a perfect right to see the General; he is my commanding officer.’ He said, ‘You cannot see him.’ So I did not see him.” Do you recollect that? I cannot recall it to memory.
158. Did you feel that you had any reason for refusing? I would have no reason, because I am only too glad to uphold the Staff in any way.
159. *Mr. Neild.*] I think a question has been asked with reference to an application by Quartermaster-sergeant Troy to, I think, Major Bayly, for permission to see the General;—do you know anything of that? I cannot remember.
160. Suppose that Quartermaster-sergeant Troy wished to interview the General, he would first of all apply to you, as adjutant? Yes.
161. Would it be competent for you to refuse him, supposing you wished to do so? No; I should refer the matter to the A.A.G.
162. But would there not be an interim application to Colonel Bayly, as officer commanding the senior regiment? Was he then officer commanding?
163. You told the Committee that an application from Quartermaster-sergeant Troy for permission to see the General would be entitled to be passed on for the General’s instructions? Decidedly.
164. But are you not aware that Colonel Bayly, when occupying the position of Officer Commanding the Volunteer Regiments and Corps, refused commanding officers interviews with the General? I know nothing at all about it.
165. Are you aware that he did, on more than one occasion, refuse to allow the officer commanding the 7th Regiment an interview with the General? I do not know it.
166. The object in asking the question is this: If Colonel Bayly went so far as to refuse regimental commanders interviews with the General, it is quite possible that Quartermaster-sergeant Troy’s application never reached the General? I see what you mean.
167. And that is, as I understand, Quartermaster-sergeant Troy’s grievance—that he was denied an interview with his superior authority which he sought? I see.
168. From what you said just now with regard to the school of instruction, I understand that it would not be usual for a non-commissioned officer of Quartermaster-sergeant Troy’s rank to be employed through the school in holding the end of a drill-rope? Not all through the school; but they might be short-handed for a day.
169. But it would not be the case all through the school? That would not be usual, from what I have seen of the schools.
170. And if it has been given in evidence that the other end of the drill-rope was carried by an artillery recruit, would not that be calculated rather to degrade a non-commissioned officer? As I said before, it is impossible for me to express an opinion, because there is the commandant of the school—he does whatever he thinks is right; and he might have some object for the good of the whole.
171. Still you think it unusual? I have never seen that done at the school myself.
172. You are assistant instructor at the school? I am.
173. I think you said just now that you were not aware of any chronic state of friction between Colonel Bayly and Quartermaster-sergeant Troy? I was not aware of it.
174. Were you present at the time when Quartermaster-sergeant Troy made mention of a conspiracy? Yes.
175. Was that the first time you had an inkling of a state of friction existing between Colonel Bayly and Quartermaster-sergeant Troy? That was the first time it came out before everybody.
176. Then Quartermaster-sergeant Troy had not previously complained to you? I think he might have done; probably he did during office work; I think he did say something about something “dragging out its weary length.”
177. Which thing? The Court that Colonel Bayly was holding. It was not an officially-constituted Court; it was simply a meeting of officers presided over by Colonel Bayly, to inquire into certain matters that had been brought forward.
178. But that covered all the officers—Captain Legge, Major Knight, and someone else? Are you asking about the inquiry?
179. There was something previous then? Yes.

A. Tower.  
8 Nov., 1900.

180. At the Court of Inquiry, Colonel Bayly acted as a sort of Prosecutor-General? I do not know; I was only called in to give evidence.
181. *Mr. Neild.*] It has been given in evidence before this Committee that Colonel Bayly, as officer commanding the Volunteers, made investigations into the regimental books;—do you know anything about that? He never came down to see my books, not that I remember.
182. This question was asked of Quartermaster-sergeant Troy: "Do you state that Colonel Bayly, who was practically the Brigadier of the Volunteer Forces, came to the regimental office making inquiry as to regimental matters? Yes, and without referring to the commanding officer, who was Colonel Campbell, because we were linked with the Scottish Rifles there. It was never referred to Colonel Campbell at all. This is the crime I was supposed to have committed. Mr. Tower came to me this day, and he said, 'Colonel Bayly is coming down to-morrow.' 'Well, now, Mr. Tower,' I said, 'I am about ma i with the treatment I have received at Colonel Bayly's hands, and it will have to end to-morrow; I will have no more of it.' Colonel Bayly came down the next day; Major Murray, Captain Mullins, and Mr. Tower were in the office, and he commenced again. 'Now, Colonel Bayly,' I said, 'this is only a conspiracy, and it was you that kept it up. You have followed me now for the last four or five years, and you have persecuted my life out. When I wanted to see the General you stopped me; you gave me no chance of explaining myself or redeeming myself; so it will have to stop. I will see what Parliament will do in my case.' " Do you endorse that evidence;—does your memory serve you as to what took place? The latter part serves me; but I do not remember him coming down to inspect the books at all.
183. It is alleged that you informed Quartermaster-sergeant Troy, "Colonel Bayly is coming down to-morrow"? Yes; he was warned to be there, and to bring any witnesses to prove or disprove what had been said.
184. Was Colonel Campbell invited to attend? He was not there, I think.
185. He was an officer in the regiment? He was.
186. Is it customary in military circles for a brigadier to investigate regimental matters of that sort? In the presence of the colonel.
187. Not in the presence of the colonel? Oh, yes; it should be customary in the presence of the colonel. I mean, the custom of the service would be to let the colonel of the regiment know that such and such a thing was going to take place.
188. Do you know if Colonel Campbell was advised? I do not know.
189. You were adjutant of the regiment at the time? Yes.
190. *Chairman.*] With reference to Quartermaster Troy as an instructor, what is your opinion of him? During the time he was with me he was most zealous, and as an instructor he was good; he brought recruits on wonderfully. He had a very hard uphill game, as I may say, to play on his own. Part of the time he was working night and day, and it was a most difficult thing with men who did not know any single thing of drill to break them all in, a most trying thing to do.
191. You never had any reason to complain of him on that score—that is, in reference to his capacity and his ability to perform his duties? No.
192. *Mr. Dacey.*] I understand you were assistant instructor in this Military school? Yes.
193. Would you not consider it *infra dig.* to place an officer of the rank of Quartermaster-sergeant Troy in the position of holding a rope in a school where he was instructor? It is impossible for me to express an opinion, because I am not commandant of the school—I am instructor under the commandant; he rules the school, and orders what he likes. What was done might have been for the general good.
194. But there are certain rules that are sanctified by usage, which he is bound to observe? Yes.
195. For instance, if you were commandant of that school, do you think you would place an officer of Troy's rank in that position? If I thought it would be for the good of the people being instructed I would; but it is not for me to express an opinion with regard to a higher authority.
196. Do you know anything of the allegation that Quartermaster-sergeant Troy was led to understand that he was to be there in the capacity of an officer giving instruction? As a Staff instructor?
197. Yes? It was an officers' school, and he went up there presumably as an instructor.
198. If he alleges that he went there, and was under the impression that he was going there in the full belief that he was to hold the position of instructor, do you believe that that would be true, that it was possible for him to go there under that impression? Oh, certainly; it is not usual for a Staff instructor to go to a school to be instructed; it is for him to instruct.
199. How long have you been connected with the Military Forces? About nine years.
200. During all that time, has Colonel Bayly been connected with the military also? Yes; he came into the service about eighty-five or eighty-six.
201. Is it not a fact that there has been a considerable amount of friction, from some cause or another, in connection with the discharge of Colonel Bayly's duties as an officer, one way or the other? Not that I know of.
202. You are not aware that Colonel Bayly has been the object of frequent complaint? I know nothing officially about that. We read things in the paper, and that sort of thing; but an adjutant's duty is simply with his regiment.
203. He has been intimately connected with you officially? Oh, yes.
204. But from your official knowledge, is it not a fact that there have been numerous complaints against Colonel Bayly's method of carrying out his duties? I have read in the paper something about it; but there have not been any official complaints.
205. Not within your official knowledge? No.
206. But this complaint came within your official knowledge, did it not, this case of Troy's? There was no complaint; there was a Court of Inquiry.
207. Perhaps you do not understand;—I am alluding to the particular case in which there were alleged grievances against Colonel Bayly's conduct as an officer? I do not know anything, in my official capacity, of his conduct as an officer being brought up.
208. You know that in this case his conduct as an officer was questioned by Quartermaster-sergeant Troy? Quartermaster-sergeant Troy made the allegation before Major Murray, Captain Mullins, and myself.
209. If you had official cognizance of his grievances it was made in your presence? In the orderly-room.
210. And you had no official knowledge of that? Yes; because the case was spoken of in presence of Colonel Bayly when I was there.
211. Did he not make any complaint officially to you before that? Not to my knowledge.

- A. Tower. 212. Are there any other complaints against Colonel Bayly's conduct as an officer known to you? Not known to me.
- 8 Nov., 1900. 213. None whatever? I have not heard of any in my official capacity.
214. Have you anything to do with any other regiment besides the 8th? Not at present.
215. You have no knowledge of any friction between Colonel Bayly and any of the officers of other regiments to which you have been attached? No, not officially.
216. Would you like to express an opinion with reference to the conduct of that officer during your official connection with him;—is he connected with the Military Forces now? He is special service officer in South Africa.
217. Quartermaster-sergeant Troy served under you for some time? For about two years, as far as I can remember.
218. And you say he is a good instructor? Yes; he brought on the recruits wonderfully.
219. Was there any charge made against him with regard to his using harsh language towards the recruits? There was.
220. It is considered a qualification in an officer to be able to utter an emphatic "damn" every now and then? Certainly not a qualification—rather the reverse.
221. It is generally considered allowable? I daresay, to say "damn" collectively, but not to say it individually.
222. You do not swear? I am afraid I am addicted to the use of that word at times.
223. Are there any officers of a regiment who do not swear? I would not say whether they do or not.
224. But it is a common practice with officers, when they get irritated by the awkwardness of their men, to use a bit of expressive language? It is not considered the correct thing to "damn" anybody.
225. You think it would be rather frivolous to bring a charge against an officer for a slip of the tongue like that? That depends. If I heard an officer use foul language, I should feel it to be my duty to pull him up; in his capacity as an officer he would be setting a bad example.
226. *Mr. Neild.* Were you not adjutant or Staff officer of the Railway Corps at one time? No.
227. Through what channel would correspondence with that corps go? They have only had Staff-sergeant Chidgey, I think; I am not quite sure.
228. Do you know where he is now? No.
229. *Chairman.* With reference to this matter of using the big big D, I suppose that an officer dealing with a number of raw recruits would be in somewhat the same position as the driver of a team of oxen—he would feel inclined very frequently to use strong language? An officer does not deal with raw recruits.
230. To take the case of an instructor, then? Yes; he might do so, certainly.
231. The use of a simple "damn" occasionally relieves a man's feelings, and lets off steam? I daresay it might; but it does not do the recruits any good, because they might get frightened and nervous.
232. Do you remember the incident that is recorded of General Hutton when he came here? I heard that he was pretty good at it.
233. Are you aware that he is credited with having said, after reviewing a number of men, that they were a "damn fine body of men; but they were damn badly officered"? I heard something about it.
234. The General's vocabulary in that direction was pretty extensive? They say he could open out a bit; he certainly never did it on any parade that I was on. Perhaps I did not deserve it.

WEDNESDAY, 14 NOVEMBER, 1900.

Present:—

MR. HAYNES,

MR. NOBBS.

MR. E. M. CLARK,

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

James Campbell Thom sworn and examined:—

- J. C. Thom. 235. *Chairman.* What are you? Solicitor for Railways.
- 14 Nov., 1900. 236. You were connected, at one time, with the Railway Volunteer Corps? I was the major commanding that corps at one time.
237. When was the corps established? In 1896.
238. How long did it remain in existence? Two and a half years.
239. It was then disbanded? Yes.
240. What were the reasons for its disbandment? Failing attendance on the part of the men.
241. To what did you attribute the lack of interest? On the organization of the corps the men understood that it would be a departmental corps—a Railway Service Corps. After they had passed through the necessary recruiting, such as infantry drill, steps were not taken to give them the means of training as a departmental corps. I may say that I was only associated with the corps as an infantry officer. I had other officers under me. I held the position of major in the Second Regiment, and I was simply attached to the Railway Corps for the purpose of instructing the men in infantry drill.
242. Was Major Bayly associated with the corps? He was the officer commanding purely Volunteer Forces, of which this corps was one.
243. There has been a suggestion to the effect that some trouble was caused by Major Bayly in connection with this corps—have you any knowledge of it? It is quite incorrect. He was my superior officer during nearly the whole of the time the corps was in existence.
244. You do not know anything in connection with the matter that is under complaint before this Committee? Nothing whatever, beyond what I have seen in the papers.
245. The disbandment of the corps was directly due to the fact, as you have told us, that it was not made a departmental corps? Yes. To make it a specially Railway Corps it had to be trained, in a limited degree, in infantry movements. To have become a Railway Corps they would have had to have railway drill, and that was not provided. To that I attribute the falling off in the attendance and the lack of interest on the part of the men.

246. Would Major Bayly have had anything to do with determining as to whether the corps should be a departmental corps or not? Nothing whatever. He did his very best for it in the direction which I wished, and which the military authorities wished. It was simply a matter of expense. It would have become an expensive matter to carry out the railway operations of a military character. J. C. Thom.  
14 Nov., 1900.
247. There has been a rumour about to the effect that Major Bayly's actions brought about the disbandment of the corps? Yes.
248. And there is no justification for such a rumour? No; my men had that impression, but it is quite wrong.

THURSDAY, 15 NOVEMBER, 1900.

Present:—

MR. E. M. CLARK, | MR. DACEY.  
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Major-General George Arthur French, C.M.G., R.A., sworn and examined:—

249. *Chairman.*] You are Major-General Commanding the Military Forces of New South Wales? Yes. Maj.-Gen.  
G. A. French.  
15 Nov., 1900.
250. You know that Quartermaster-sergeant Troy was an officer associated with one part of the Military Force? Yes; I know something of the case; but I have not had an opportunity of looking over the papers and refreshing my memory, as they have been in the possession of this Committee.
251. Have you any personal recollection of Troy's case? I remember the case in a general way. [*Papers were handed to witness by the Chairman, and Major-General French having looked through them, continued:*] I remember the case now.
252. Quartermaster-sergeant Troy was connected with the 8th Regiment? Yes, the Irish Rifles.
253. He appears to have been disgraced? Reduced; but I do not think he was reduced out of his rank; he was reduced to the bottom of the list of Staff colour-sergeants.
254. Had you any personal knowledge of Quartermaster-sergeant Troy's capacity as an instructor? No; I had no personal knowledge of him.
255. In the event of reports being made against an officer holding such a position as was held by Quartermaster Troy, would correspondence pass between any officer and yourself? They would come to me if there was anything serious.
256. But would the complaint or report be made in writing—would it be an officer's duty to make a complaint in writing? Not necessarily; but if it were anything serious it would be pretty sure to be put in writing.
257. Apart from the matter which came before a Court of Inquiry, have you any recollection of any other report being made with respect to Quartermaster-sergeant Troy's conduct? I cannot remember at present whether there was any other report.
258. Are you aware whether there was any friction between Quartermaster-sergeant Troy and Colonel Bayly, who was, I think, in command of the Volunteer Forces? I cannot remember whether there was anything definite. I think that Quartermaster-sergeant Troy laboured under the idea that Colonel Bayly had a grudge against him in some way.
259. When the complaint was made against Quartermaster-sergeant Troy, what was the action taken in placing him at the bottom of the list of Staff colour-sergeants—was that intended as a punishment? That was the punishment that was awarded to him; but practically it was not carried into effect, because he resigned shortly afterwards.
260. In the event of Quartermaster-sergeant Troy making an application to the officer above him in the regiment to see you, would it be customary for that permission to be granted;—would it rest with his superior officer to grant it or not, as he thought fit? Yes; but if a man has a grievance he can apply to have it brought before a higher authority, even though his commanding officer may have refused. Of course a commanding officer is generally instructed not to let frivolous cases come forward, but to deal with them himself.
261. Would the discretion be absolutely left with the officer above Quartermaster-sergeant Troy? No; because he could appeal to a higher authority, if he thought he had been unfairly treated.
262. Then he would be afforded an opportunity of appealing to a higher authority, whether the officer above him was favourably inclined or not? Yes; if he insisted upon the case being brought forward.
263. Is there anything in the papers before you indicating the opinion held by Colonel Bayly with regard to Quartermaster-sergeant Troy's qualifications as an instructor? I do not notice anything of the kind in this correspondence.
264. Do you recollect having received a report from Colonel Bayly with regard to Quartermaster-sergeant Troy as an instructor—a report with a suggestion by Major Murray attached to it, to the effect that Troy should have an opportunity afforded him of undergoing a test for the purpose of displaying his ability as an instructor? I do not recollect that. But I notice in one of these letters an expression which would rather give the idea that Colonel Bayly had a good opinion of Quartermaster-sergeant Troy. This is what Colonel Bayly remarks: "It is not clear why Quartermaster-sergeant Troy, who should, in his Staff capacity, have been of value, was left behind."
265. When punishment is inflicted upon an officer, what is the course usually adopted for conveying the intelligence to him? To a non-commissioned officer it would be sent through his commanding officer. Perhaps in the case in question it would be sent through the adjutant.
266. Would it be the correct thing to convey it to him by word of mouth in the orderly-room, in the presence of other persons? There should not be any juniors present. The general rule of the Force is that a senior should not be rebuked in presence of his juniors. That is the correct practice. It is not allowable to reprove a non-commissioned officer in the presence of privates.
267. I understand that Major Murray's suggestion, to which I have just referred, is attached to the last school's report, which is amongst the papers before you? Yes; I notice a letter written by Major Murray, dated October 15.

Maj.-Gen. 268. Would you mind reading it? It is from Major Murray, and reads:—  
G. A. French.

Irish Rifles, Oct. 15, 1897.

15 Nov., 1900.

Sir,

From the O.C., Irish Rifles to the A.A. General.

I have the honor to enclose herewith memorandum of 14th October, containing report upon Q.M.S. Troy of this corps, and desire to respectfully inform you that my experience of the way in which Q.M.S. Troy performs his duties at drill in no way corresponds with that report. I have always found him very good at company and battalion drill, and especially proficient in the manual; his word of command has also always appeared to me to be particularly good. I would therefore respectfully request that Q.M.S. Troy be subjected to any tests that may be approved in squad, company, and battalion drill, and also in manual and firing, in order to give him an opportunity of justifying himself against so unfavourable a report, especially in view of the fact that at the inspection of the last school he was not called upon to drill them.

I have, &c.

J. H. P. MURRAY,

Captain Commanding Irish Rifles.

269. What was the tenor of that memorandum? This is the memorandum attached:—

Q.M.S. Troy having been unfavourably reported on at the recent special Staff course, Infantry School of Instruction, the G.O.C. desires that this N.C.O. may be so informed, and cautioned as to making himself proficient. Squad drill, very good; company drill, fair; battalion drill, fair; manual and firing, fair. General qualifications: Rambling and verbose style, and though thoroughly acquainted with detail of squad and company drill, seems in an effort of memory to lose sight of his squad. No. of courses previously attended, 2. Remarks: Word of command very fair, but does not notice or check mistakes readily, and in some cases overlooks errors entirely. Attitude in rifle exercises clumsy and careless.

270. In the case of a school of instruction being held, in which officers only take part, what would be the usual course, so far as duties are concerned, to be adopted by an officer in the position held by Quartermaster-sergeant Troy? Do you mean commissioned officers?

271. Yes? Quartermaster-sergeant Troy would not be in it if it were a class of commissioned officers only. It would be an outside class altogether, and would be worked under whatever senior officer was conducting the class.

272. Would it be regarded as the correct thing on the part of an instructor such as Quartermaster-sergeant Troy for him to be placed at one end of a drill-rope and a recruit at the other end, during the whole of the school of instruction? He would be part of a squad if he were doing that—one of a section. He would be in the squad, not instructing it.

273. But assuming that he was deputed to go to that school to take the part of instructor, would you regard it as part of his duties to hold one end of a drill-rope? No; in that case he would be outside the squad, instructing it.

274. Your impression is that he did not go in the capacity of an instructor? I do not know.

275. Assuming that Quartermaster-sergeant Troy was told off as assistant instructor, do you think he would have any reason to take umbrage at having been put in such a position as the one it is said he occupied during the whole course of the school? He would have if he were sent there under the idea that he was to instruct the class, or assist to instruct it. But, of course, in these cases the whole of the officers and anybody else fall into the ranks and do privates' work, and take turn and turn about at it.

276. *Mr. Clark.*] I understood you to say that Quartermaster-sergeant Troy had been placed at the bottom of the list in his particular calling as quartermaster-sergeant;—do you know why he was so punished? I did it, acting on the report I received from the Court of Inquiry.

277. You had nothing beyond the simple report and certain recommendations of the Court of Inquiry? The Court took evidence on oath, and reported to me. I considered the report, and acted upon it. I see, on looking at the papers, the actual minute which I appended to the report. It is as follows:—“Quartermaster-sergeant T. Troy to be reduced to the bottom of the list of Staff colour-sergeants, third class. I merely refrain from exercising my power to discharge Quartermaster-sergeant Troy in consideration of his previous long service and good conduct.” That is the minute I wrote on the report from the Court.

278. And almost immediately after that report, or recommendation, was made, Quartermaster-sergeant Troy resigned his position in the corps? Yes.

279. *Chairman.*] You regarded the report as being of such a nature as to warrant you in taking the course you did? Yes. The evidence was all taken on oath.

280. *Mr. Dacey.*] Is it correctly reported that you stated at one time that it would be necessary to get rid of Colonel Bayly, in connection with the Volunteer Force? Of course I had some change made in regard to him, but I do not know that I made any statement exactly as you put it.

281. It is said that Colonel Bayly caused a considerable amount of friction in the Service? Yes.

282. And you consider that sometimes he was blamable for the friction that existed between himself and other people in the Service? Yes; I had to bring facts of that sort under the notice of the Minister.

283. Is there any right allowed to an officer to see you if he desires to do so? Yes.

284. He has a right? Yes. Any commanding officer who thinks a man has good reason for seeing me brings him forward at once, but if it is only a trivial matter he may object to do so. Even then a man has a right to see a higher authority. A matter may even be taken beyond me, and go to the Governor, as Commander-in-Chief.

285. Are you aware that there is a practice existing of refusing to allow non-commissioned officers to see you with regard to their grievances? I cannot say that I am aware that the practice exists. But the general instructions are that commanding officers shall inquire into any case, and not bring it forward unless, in their opinion, it is of sufficient importance.

286. Do you think it right that an officer commanding a regiment should be threatened with arrest for daring to speak about seeing you? That would be a very extreme case, I should think. I am seeing commanding officers every day of the week.

287. There was an officer commanding the Scottish Rifles—owing to some friction between him and his superior officer he was not allowed to see you? I suppose there was no one between him and me except Colonel Bayly.

288. Would Colonel Bayly have the power to prevent that officer from seeing you? If he exercised such power, it must have been in an extreme case.

289. You have read the papers in connection with the inquiry held some time ago in regard to Quartermaster-sergeant Troy;—did you notice that Colonel Bayly swore that Troy was an excellent instructor? It is a long time since I read the papers.

290. If Colonel Bayly swore at that inquiry that Quartermaster-sergeant Troy was an excellent instructor, would evidence of that description coincide with the report that Colonel Bayly sent in to you, behind a non-commissioned officer's back? No, it would not. Maj.-Gen.  
G. A. French.  
15 Nov., 1900.
291. With regard to Major Murray's letter, in which he invites you to put Quartermaster-sergeant Troy to the test, was that letter ever answered? I do not see any record in the papers before me of its having been answered. The letter is dated October, 1897.
292. Was Quartermaster-sergeant Troy examined, as suggested by his commanding officer? I do not remember.
293. I suppose in a case like that, where there is a palpable contradiction between the letter of Troy's commanding officer and the report of Colonel Bayly, it would be a fair thing to accept the suggestion that Troy should be tested as to his qualifications? I rather think he was told to join a school of instruction; I would not be certain.
294. If he was told to join a school of instruction there would be something wrong in Colonel Bayly saying that the man was an excellent instructor? The two reports would not be at all in agreement.
295. Does it not strike you as curious, the difference in the report sent in by Colonel Bayly as to Quartermaster Troy's qualifications as an instructor and his sworn testimony before the Court of Inquiry that Troy was an excellent instructor? I cannot find that at all in the evidence.
296. *Chairman.*] Was he recalled at all as a witness? Oh, I notice here, on page 15 of the report of the Court of Inquiry, that Colonel Bayly says, "I regard Quartermaster-sergeant Troy as an excellent instructor of recruits." That is a qualified statement. You want a great deal of detail; it is a gift to be a good instructor of recruits.
297. *Mr. Dacey.*] Was there not some allegation made that Quartermaster-sergeant Troy was an unsuitable man to deal with recruits;—that he used harsh language towards them? That was said by several officers of the Irish Rifles.
298. Was that stated by Colonel Bayly? No; he merely referred to him as an instructor.
299. You would not expect a man to impart his knowledge as an excellent instructor if he did not do it in a judicious way;—I understand that one of the charges made against Quartermaster-sergeant Troy was that he was particularly unsuitable for the office of instructor? I do not think that referred to the drill; it referred more to certain language that he used.
300. You have no personal knowledge of Quartermaster-sergeant Troy's ability as an instructor? No.
301. He was brought down from the country to take charge of the Irish Rifles, and do all the heavy work in connection with the organization of the regiment? I think he was one of the earlier instructors of the corps; I am not certain.
302. It is generally regarded as a compliment to a man to be called to that position? Yes; we usually look out for pretty good men for a new corps.
303. Has Major Murray ever reported against Quartermaster-sergeant Troy as an instructor? I cannot remember; his letter, which is amongst the documents before me, is favourable to him.
304. You would not be surprised to know that Adjutant Tower gave him an excellent character as a soldier? I have no intimate knowledge of that.
305. In the case of an officer wishing to see you with regard to any particular matter, what has he got to do? He would go to his commanding officer and state his request, and give his reasons, and if the commanding officer thought it the right thing to do he would bring the matter forward.
306. Did you notice Colonel Bayly's excuse for not allowing non-commissioned officer Troy to see you—that it was in the interest of Troy himself that he refused to allow him to see you? It might be so; if he thought the man was likely to put himself more deeply in; apparently, Troy had not sufficient guard over his tongue.
307. You think Colonel Bayly is a man who would take a very decided view of a matter? Yes; he is pretty strict in most ways.
308. If he were displeased with a man he would not be very anxious to let him go before you? He might not be.
309. With regard to this school of instruction, Colonel Bayly was the chief instructor? Then he was.
310. What was the school for—for drilling officers? Yes; for drilling officers and non-commissioned officers.
311. If Quartermaster-sergeant Troy were told to go there, under the impression that he was to be assistant instructor, and he was afterwards put at the end of a drill-rope with a man of a lower rank at the other end of it, would he not be entitled to regard such a position as *infra dig.*? If he was told to go and instruct a class. But as I have said, it is a common thing for them to take turn and turn about.
312. Do you not think that a man placed in the position that Quartermaster-sergeant Troy was placed in would be entitled to consider it an undesirable way of giving him a slap in the face? Yes; if he was led to understand that he was going as instructor. But we send all the instructors through, one after the other. Men from the country want freshening up occasionally. The mistake would be in giving him the idea that he was going to instruct the class.
313. The whole affair amounts to this, that Quartermaster-sergeant Troy firmly believes that this indignity was put upon him in order to hurt him? I think that is an exaggerated view of the case.
314. I suppose you think it desirable that a soldier should be careful of his dignity and honor? Yes.
315. And that would be likely to rouse a man if he had any spirit in him? Yes.
316. You do not remember making the statement that it would be necessary to get rid of Colonel Bayly in the interest of the Volunteer Force? I officially reported that it was desirable to change his position.

1900.

- \* The Honorable WILLIAM JOSEPH TRICKETT, Chairman.
- The Honorable PATRICK LINDESAY CRAWFORD SHEPHERD.
- The Honorable ANDREW GARRAN, LL.D.

### LEGISLATIVE ASSEMBLY.

- WILLIAM THOMAS DICK, Esquire, Vice-Chairman.
- \* JOHN PERRY, Esquire.
- JOHN CHRISTIAN WATSON, Esquire.
- ROBERT HENRY LEVIEN, Esquire.
- JOHN MCFARLANE, Esquire.

[\* On 18th September, 1899, Mr. JOHN PERRY, having accepted the office of Minister of Public Instruction and Minister for Labour and Industry, retired from the position of Chairman and a Member of the Committee. The Honorable WILLIAM JOSEPH TRICKETT, Vice-Chairman, was elected Chairman in the place of Mr. PERRY, and Mr. WILLIAM THOMAS DICK was chosen as Vice-Chairman. The vacancy on the Committee, caused by the retirement of Mr. PERRY, was, on 22nd December, 1899, filled, by the election by the Legislative Assembly of Mr. JOHN MCFARLANE.]

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## SEVENTEENTH GENERAL REPORT.

To His Excellency the Right Honourable WILLIAM, EARL BEAUCHAMP,  
Knight Commander of the Most Distinguished Order of Saint Michael  
and Saint George, Governor and Commander-in-Chief of the Colony  
of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

The Parliamentary Standing Committee on Public Works, appointed during the first session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, have the honor to submit the following General Report, containing a statement of proceedings from the date of the last Report, 14th July, 1899 :—

Since the date of the last General Report, the Committee have had under consideration four proposed works not then finally dealt with, and thirteen others subsequently referred to them by the Legislative Assembly.

The four works, the inquiries concerning which were incomplete in July, 1899, are :—

Railway from Cobar to Wilcannia	...	...	...	£497,000
Locks and Weirs on the River Darling, between Bourke and Menindie	...	...	...	530,000
Railway from Grenfell to Wyalong	...	...	...	142,293
Penitentiary and Prison for Females, Randwick	...	...	...	118,000
Total	...	...	...	£1,287,293

The thirteen works subsequently referred to the Committee are :—

Railway from Gundagai to Tumut	...	...	...	£148,310
Railway from Culcairn to Germanton	...	...	...	53,957
Tuckian Flood Escape Scheme	...	...	...	46,500
Glebe Island Improvements	...	...	...	273,600
Central Railway Station, Devonshire-street	...	...	...	421,000
Railway from Narrabri to Walgett, with branch to Collarenebri...	...	...	...	503,559
Railway from Wellington to Werris Creek	...	...	...	511,149
Railway from Bogan Gate to Bulbodney	...	...	...	229,370
Railway from Grenfell to Wyalong	...	...	...	142,292
Extension of the Railway into the City of Sydney	...	...	...	1,527,000
Railway from Grafton to Casino	...	...	...	501,375
Railway from Bowral to Robertson	...	...	...	94,578
Wharfage, Woolloomooloo Bay	...	...	...	23,000
Total	...	...	...	£4,475,690

Of

Of the total number of works before the Committee since the date of the last General Report, the inquiries respecting nine have been completed, and those concerning four others are in progress. The nine completed inquiries relate to the following works :—

Railway from Cobar to Wilcannia.  
 Locks and Weirs on the River Darling, between Bourke and Menindie.  
 Railway from Grenfell to Wyalong.  
 Penitentiary and Prison for Females, Randwick.  
 Railway from Gundagai to Tumut.  
 Glebe Island Improvements.  
 Wharfage, Woolloomooloo Bay.  
 Central Railway Station, Devonshire-street.  
 Extension of the Railway into the City of Sydney.

The Committee's reports regarding the first four were laid upon the Table of the Legislative Assembly last session, and those relating to the remaining five will shortly be submitted.

In the case of the proposed Railway from Cobar to Wilcannia, the Committee added an important suggestion to their approval of the line. They were of opinion that the railway would be a means of much needed relief to the settlers in the north-western part of the Colony, and an aid to the greater development of the country ; but they could not overlook the fact that the direct revenue from it would fall far short of the amount required to pay interest and working expenses. By clause 12 of the Public Works Act, they are enjoined to have regard to the amount of revenue which a proposed work may reasonably be expected to produce, and to the present and prospective value of such work ; and bearing this in mind, and looking at "the present and prospective value" of the work, they added to their recommendation favouring the construction of the Railway, the suggestion that the Railway revenue should be subsidised to some substantial and suitable extent from the land revenue derived from the district benefited.

The proposal for the construction of Locks and Weirs on the River Darling, between Bourke and Menindie, the Committee negatived. The proposed works, it was admitted, would probably secure permanent navigation on the Darling River between the places named, though the advantages from navigable water for this distance were likely to be discounted by the absence of locks and weirs below Menindie, but no benefit would accrue from the improved river to the trade of New South Wales in connection with its railways. Irrigation on a large scale from the river was considered to be impracticable, and, therefore, the proposed works could not be justified on that ground. Another reason against the proposal was that any large expenditure upon the River Darling, such as that involved in the carrying out of these works, was a matter which might be fairly left for the consideration of the Federal Parliament.

With regard to the proposed Railway from Grenfell to Wyalong, the Committee reported that it was expedient it should be constructed. They very carefully investigated the proposal, attention being given not only to the route proposed, but also to that from Temora to Wyalong ; and they came to the conclusion that, regarding the connection with Wyalong as one not in the interests of that place alone, but as intended eventually, by a further extension, to serve the country west of Grenfell as far as the Lachlan, the line should be constructed. The true national policy in extending railways westward towards the Lachlan River was, in their opinion, to construct them in the manner represented by the Grenfell-Wyalong proposal, and by an extension, suggested by a previous Committee, from Temora to Gunbar.

In dealing with the Committee's Report on this proposed Railway, the Legislative Assembly decided to refer the proposal back to the Committee for further consideration and report, on the ground that the matter had not received sufficient consideration. This reason for sending back the proposal the Committee did not consider to be justified, as their inquiry had covered every point connected with the subject necessary to be investigated. They, therefore, through their Chairman, in reply to the letter of the Clerk of the Legislative Assembly, informing them of the passing of the resolutions referring the work back to them, addressed to the Honorable the

the Speaker, a letter stating that, while recognizing the authority of the Assembly to refer the matter back, and agreeing to reconsider the matter, the Committee respectfully took exception to the reason assigned for such reference, and drew attention to their Report and the Evidence and Plans attached thereto, which afforded ample proof that the proposed Railway received very full consideration in all its bearings. The Committee have decided that the whole of the evidence given in the inquiry of 1899 shall be regarded as evidence in the further inquiry, and they have appointed a Sectional Committee to further inspect the route of the proposed line.

The proposed Penitentiary and Prison for Females, Randwick, the Committee recommended should be carried out, as the institution was required, and would lead to a very beneficial change in the present method of dealing with two large classes of prisoners, and to a considerable saving in the expenditure connected with prison administration. Objection raised by a few witnesses to the site of the building, which is within the municipality of Randwick, the Committee thought might be met by giving to the Penitentiary and Prison, when erected, some name other than that of Randwick.

The recommendations of the Committee in the inquiries that have been completed, and the reports relating to which will shortly be laid before the Legislative Assembly, are as follows :—

Respecting the proposed Railway from Gundagai to Tumut, the Committee have come to the conclusion that the weight of the evidence points to a serious loss, and they are of opinion that, before its construction is decided upon, some satisfactory arrangement should be made by which the district shall contribute to the Railway Commissioners a sum sufficient to make good the loss which must result from the construction and working of the railway. Only on that condition do they approve of the proposed work being carried out.

The proposed Glebe Island Improvements were submitted by the Department of Public Works in two parts—(1) the complete scheme, estimated to cost £273,600; and (2) a partial scheme, to cost £178,000. After carefully considering the matter in all its bearings, the Committee arrived at the conclusion that it is inexpedient to construct either the complete or the partial scheme of wharfage, the proposal being premature; but they are of opinion that a portion of the works, estimated to cost £38,000, comprising excavation and filling, which would level the foreshore of the island, north of the Glebe Island bridge or causeway, to an extent suitable for temporary wharfage purposes—such, for instance, as those in connection with the timber trade—may be carried out with advantage. The cutting down of the island and the reclamation of the foreshores may, in their opinion, be made remunerative, while those improvements will, at any time, fit in with either the partial or the complete wharfage scheme, and they accordingly recommend that part of the proposal submitted to them.

Since the closing of the evidence in this inquiry, and the Committee's decision, circumstances have occurred which have led to the resumption by the Government of the Darling Harbour wharfs. Should it become necessary to close a part or the whole of the Darling Harbour frontages against trade while reconstruction works are in progress, then Glebe Island might be utilised temporarily for wharfage purposes during the somewhat lengthened period that must elapse whilst alterations are being carried out. The broadside wharfage at Darling Island could be utilised for coasting and intercolonial passenger steamers, access thereto for passengers being made by an extension of the tramway.

In the inquiry relating to the proposed Wharfage, Woolloomooloo Bay, the proposal being to lengthen by 100 feet the present wharf at the south-west corner of the bay, known as the Admiralty wharf, and construct a new wharf 500 feet long adjoining the Admiralty wharf, but placed 60 feet further from the shore line, and extending northwards to Robinson's ladies' baths, the Committee considered it expedient that the additional wharfage should be constructed. They also recommended that the new wharf be extended a further distance of 100 feet, beyond Robinson's ladies' baths.

The two proposals relating to City Railway Extension the Committee have dealt with by resolving that it is not expedient that the extension of the Railway system from the present terminus at Redfern into the city, including the erection  
of

of a large central station in the north-western division of Hyde Park, fronting St. James' Road, or the deviation suggested in the Legislative Assembly reference of 7th December, 1899, be carried out, and by approving of the proposed Central Railway Station, Devonshire-street. They consider that the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient; that it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present one; and that the best plan would be to extend the railway to the north side of Devonshire-street, and there construct a commodious station and administrative offices.

Four works are now being inquired into, and four others remain to be dealt with. The four under consideration are :—

- Tuckian Flood Escape Scheme.
- Railway from Grafton to Casino.
- Railway from Wellington to Werris Creek.
- Railway from Narrabri to Walgett, with branch to Collarenebri.

In the cases of the first two, some of the official evidence has been taken in Sydney, and a Sectional Committee has visited the districts concerned in the construction of the proposed works. With regard to the two others, part of the necessary witnesses have been examined in Sydney, and the Committee have recently investigated both matters in the country. The inquiries relating to all four will shortly be completed.

The works remaining to be dealt with are :—

- Railway from Culcairn to Germanton.
- Railway from Bogan Gate to Bulbodney.
- Railway from Grenfell to Wyalong.
- Railway from Bowral to Robertson.

Appended  
return and  
minutes.

Appended to this Report is a return containing a record of the inquiries by the several Committees appointed under the Public Works Act and the Amending Acts, and also a copy of the present Committee's Minutes of Proceedings.

W. J. TRICKETT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 8th June, 1900.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## RECORD OF INQUIRIES.

List of Proposed Public Works inquired into by the several Committees, with the results of their inquiries, from 27 August, 1888, the date of the first sitting of the first Committee appointed under the Act, to 8 June, 1900.

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1888. 4 Sept. to 22 Oct.	Improvements to the Circular Quay.	£ 120,000	£ 125,000	£ 5,000	£	The Committee recommended an alteration in the plan of these improvements, by which the total estimated cost would be increased to £125,000.
26 Sept. to 22 Oct.	Storage reservoir at Potts' Hill, and second line of pipes to Crown-street.	120,000 165,000	} 285,000	.....	.....	Recommended as proposed.
13 Sept. to 22 Oct.	New Central Police Court	48,000		.....	.....	Recommended as proposed.
4 Oct. to 22 Oct.	Drainage works, Manly...	34,114	22,000	.....	12,114	The Committee recommended the adoption of a modified plan of these drainage works, by which the total estimated cost would not exceed £22,000.
10 Oct. to 22 Oct.	Drainage works, North Shore.	77,062	107,000	29,938	.....	The Committee recommended the adoption of the complete scheme proposed in relation to this work, and the estimated cost of which, as shown by the evidence, is £107,000.
31 Aug. to 22 Oct.	Harbour improvements at Newcastle.	112,000	112,000	.....	.....	Recommended as proposed.
19 Sept. to 22 Oct.	Wharfage accommodation, Woolloomooloo Bay.	42,000	.....	.....	42,000	The Committee were of opinion that the proposed expenditure was not justified either by the requirements in connection with the wharfage accommodation of the port, or by the nature of the proposal if regarded as a scheme for the improvement of a very valuable Government property.
16 Nov. to 1889. 11 Jan.	Bridge at the Spit, Middle Harbour.	62,000	.....	.....	62,000	The Committee decided that the proposed expenditure was not justified by the evidence, and that a steam-punt would meet the requirements of the district in the vicinity of the proposed work for some years to come.
1888. 7 Dec. to 1889. 27 Aug.	Drainage works for the Western Suburbs.	830,304	830,304	.....	.....	Recommended as proposed.
26 June to 30 Sept.	Improvements to the entrance of the Richmond River.	326,000	326,000	.....	.....	The Committee recommended that the proposed works be carried out in a certain order, so that the results from the works first constructed might be ascertained before others were proceeded with.
9 Oct. to 11 Dec.	Railway to connect North Shore Railway with Port Jackson, at Milson's Point.*	262,000	.....	.....	262,000	The Committee considered, for various reasons stated in their report on the subject, that the work as proposed should not be carried out.
29 Aug. to 12 Dec.	Railway from Culcairn to Corowa.	197,300 (or £4,184 per mile.)	164,500 (or £3,500 per mile.)	.....	32,800	The Committee were of opinion that this line should be constructed at a cost not exceeding £3,500 per mile.
22 Aug. to 19 Dec.	Railway from Goulburn to Crookwell.	198,300 (or £5,984 per mile.)	148,500 (or £4,500 per mile.)	.....	49,800	The Committee considered that the cost of this railway should not exceed £4,500 per mile, and that a saving should also be effected by utilizing a certain portion of the present main line instead of taking the proposed railway through a part of the city of Goulburn.
1890. 22 Jan. to 6 Feb. 1889.	Dredge and plant for Sydney Harbour.	30,000	.....	.....	30,000	The evidence showed that this class of dredge was not required.
25 Sept. to 1890. 18 Feb.	Railway from Nyngan to Cobar.	207,360	207,360	.....	.....	The Committee recommended the construction of this railway as part of a line which should be extended to Wilcannia and Broken Hill.
14 Jan. to 11 Feb.	Offices for the Board of Water Supply and Sewerage.	50,000	50,000	.....	.....	Recommended as proposed.
14 Jan. to 6 Feb.	Reticulation of the Western Suburbs Drainage Scheme.	713,592	713,592	.....	.....	Recommended as proposed.
14 Jan. to 11 Feb.	Extension of Sydney Water Supply to Southern Suburbs—Hurstville and Rockdale.	66,000	.....	.....	66,000	This expenditure was rendered unnecessary by reason of a temporary water-supply scheme being sufficient to meet requirements for some years.
19 Nov. to 2 April.	Railway from Marrickville to the Burwood Road.	90,250	90,250	.....	.....	Recommended as proposed.
	Carried forward.....£	3,751,282	3,229,506	34,938	556,714	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued*.

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
	Brought forward ...£	£ 3,751,282	£ 3,229,506	£ 34,938	£ 556,714	
1890. 23 Oct. to 24 April.	Improvements to the entrance of the Clarence River.	580,900	211,900	.....	369,000	In this case the Committee recommended the construction of only a portion of the works proposed, as they were of opinion that when this portion had been constructed it might be found that the remainder would not be required.
31 Oct. to 15 April.	Breakwater at Byron Bay.	241,723	241,723	.....	.....	The original estimate for this work was £162,000; the increase was due to a difficulty in obtaining stone.
4 Dec. to 24 April.	Railway from Kiama to Nowra.	381,390	381,390	.....	.....	In this case there was an original estimate of £441,663. The reduction was due to an amended estimate made by the Acting Engineer-in-Chief for Railways since the railway was referred to the Committee.
12 Nov. to 24 April.	Railway from Grafton to the Tweed.*	1,728,100	800,000	.....	928,100	The Committee recommended that this railway should be constructed from Lismore to Murwillumbah, instead of from Grafton to Murwillumbah, the Committee's recommendation involving a length of about 60½ miles as compared with 140 miles 76 chains, the length of the line as referred to them by the Legislative Assembly.
15 Jan. to 24 April.	Railway from Cootamundra to Temora.	138,000 (or £3,656 per mile.)	125,400 (or £3,300 per mile.)	.....	12,600	The Committee considered that the cost of constructing this railway should not exceed £3,300 per mile.
23 Jan. to 24 April.	Railway from Moss Vale to Robertson.	84,900	.....	.....	84,900	The Committee negatived this proposal because they considered another route, described in their report, was preferable.
23 Jan. to 25 Mar.	Railway from Mudgee to Gulgong.	109,330	.....	.....	109,330	The Committee decided against this work, on the ground that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after the suggestion for the connection of the Northern and Western systems, by a line between Dubbo and Werris Creek, has been dealt with.
12 Feb. to 24 April.	Bridge over Tarban Creek, Parramatta River.	26,000	.....	.....	26,000	The Committee considered this bridge to be unnecessary.
20 Feb. to 15 April.	Bridge over the Hunter River, at Jerry's Plains.	20,000	.....	.....	20,000	The Committee considered that a less expensive bridge would be sufficient to meet requirements.
25 Feb. to 24 April.	Bridge to connect Bullock Island with the mainland at Newcastle.	33,000	.....	.....	33,000	The Committee considered that this proposed expenditure was premature, pending certain reclamation works.
12 Feb. to 21 May.	Iron Bridge at Cowra ...	26,537	26,537	.....	.....	The original proposal represented an expenditure of £69,971, which amount was afterwards reduced to £26,537, as the result of a revision of the system of bridge-building in the Colony.
22 Jan. to 21 May.	Railway from Molong to Parkes and Forbes.	433,000	433,000	.....	.....	Recommended as proposed.
28 May to 8 July.	Hospital for the Insane upon the Kenmore Estate, near Goulburn.*	120,000	.....	.....	120,000	This proposed work, after being partly considered, was withdrawn from the Committee by resolution of the Assembly.
28 May to 21 Aug.	Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.* (Second Reference.)	231,156	231,156	.....	.....	This proposal was before the Committee on a previous occasion (estimated cost, £262,000), when it was negatived; but having been referred to the Committee for further consideration, and circumstances appearing in the second inquiry which justified the construction of the railway, the Committee approved of the proposed work.
10 Dec. to 13 May, 1891.	Hospital Buildings, Macquarie-street.	140,000	56,000	.....	84,000	In this case, two sets of plans for the buildings were submitted to the Committee, one representing a design that was estimated to cost £140,000, and the other a design to cost £56,000, and the Committee approved of the latter.
1891. 11 Feb. to 25 Mar.	College for the Training of Teachers of Public Schools.	37,500	37,500	.....	.....	Recommended as proposed.
1 Feb. to 21 April.	Extension of the Kiama to Nowra Railway into the town of Nowra.	75,000	75,000	.....	.....	Recommended as proposed.
24 Feb. to 14 May.	Railway from Cobar to Cockburn.	1,168,000	1,018,000	.....	150,000	The Committee recommended the construction of this railway as far as Broken Hill only, which would reduce the proposed expenditure by £150,000.
22 Jan., 1890, to 19 May, 1891.	Cable Tramway from King-st., via William-street, to Ocean-street.	80,000	80,000	.....	.....	Recommended as proposed.
25 Nov., 1890, to 3 June, 1891.	Cable Tramway through George, Pitt, and Harris Streets, Sydney.	120,000	.....	.....	120,000	The Committee considered that it was not expedient at present, for reasons stated in their report, that this tramway should be constructed.
	Carried forward ..... £	9,525,818	6,947,112	34,938	2,613,644	

List of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1892. 5 May to 2 June.	Brought forward .. £ Improvements at Darling Island.	£ 9,525,818 142,000	£ 6,347,112 .....	£ 34,938 .....	£ 2,613,644 142,000	The Committee considered that the proposed works might be postponed for the present without inconvenience, and that a more suitable design might be submitted.
7 June to 12 July.	Stormwater sewers discharging into Johnstone's Bay.	51,352	51,352	.....	.....	Recommended as proposed.
15 June to 4 Aug.	Reservoir at Centennial Park for Sydney Water Supply.	83,000	83,000	.....	.....	Recommended with an alteration of site.
14 July to 24 Aug.	Water Supply for Wollongong and the surrounding districts.	66,000	30,000	.....	36,000	The Committee found that the Water Supply proposed for the surrounding districts was not needed, and that the estimate of cost for supplying Wollongong might be reduced to £30,000.
28 July to 24 Aug.	Second pipe-line from Warka to Buttai, for Hunter River District Water Supply.	50,000	50,000	.....	.....	Recommended as proposed.
26 July to 9 Aug.	Sewerage works at Cottage Creek.	25,000	13,000	.....	12,000	The amount of £25,000 provided for a covered sewer; but the Committee found that a cover was not necessary at present, and that by constructing an open sewer the cost could be reduced by £12,000.
21 April, 1891, to 27 May, 1892.	Railway from Glen Innes to Inverell.*	427,400	.....	.....	427,400	The evidence in this case showed that the estimated cost of constructing the railway was excessive, and indicated the probability of a serious annual loss in the working of the line. In addition to this, the Committee were not as fully informed as desirable with regard to connecting Inverell not only with the Great Northern Railway but with the coast, a matter of considerable importance in the inquiry.
31 May to 18 Aug.	Railway from Jerilderie to Deniliquin.	148,000	.....	.....	148,000	The Committee were of opinion that the consideration of this proposed work should be postponed until it should be determined by Parliament as a matter of public policy to purchase the Deniliquin to Moama Railway.
12 July to 24 Aug.	Lunatic Asylum at Kenmore, near Goulburn.* (Second Reference.)	150,000	150,000	.....	.....	Recommended as proposed.
14 June to 28 Sept.	Railway from Grafton to Lismore.*	662,000 (or £8,000 per mile.)	108,000 (or £6,000 per mile.)	.....	554,000	The Committee decided that, for the present, only the Lismore to Casino section of the proposed railway should be constructed, that the cost should not exceed £6,000 per mile, and that the betterment principle be applied to the land to be served by the proposed line.
10 July to 26 Oct.	Railway from Eden to Bega.	564,000 (or £15,350 per mile.)	.....	.....	564,000	The Committee considered that the present resources of the district did not warrant the construction of such an expensive line, but they were of opinion that a cheaply constructed railway might be favorably considered.
22 June to 4 Oct.	Sewerage Works for Parramatta.*	75,926	.....	.....	75,926	The Committee were of opinion that the sewage farm included in the scheme was too small for the purpose, and that the sewage should be dealt with by precipitation and filtration or other effective modern process at a proposed pumping station at Clay Cliff Creek.
12 Oct. to 21 Dec.	Water Supply for Tamworth.	22,500	22,500	.....	.....	Recommended as proposed, with a provision as to the quantity of water obtainable, and the resumption of land surrounding the well in the drift forming the source of supply.
14 Sept. to 16 Nov.	Water Supply for Lithgow	15,000	15,000	.....	.....	Recommended as proposed.
15 Sept. to 16 Nov.	Water Supply for Armidale.	43,500	43,500	.....	.....	Recommended as proposed.
17 Nov. to 10 Jan. 1893.	Railway from Glen Innes to Inverell.* (Second Reference.)	421,400 (or £7,975 per mile.)	369,862 (or £7,000 per mile.)	.....	51,538	The Committee considered it expedient this railway should be constructed, provided that the cost did not exceed £7,000 per mile, that special local rates were charged until the railway paid working expenses and interest on cost of construction, and that the betterment principle was applied to the land served by the railway.
14 Feb. to 8 Mar.	Waterworks for the town of Junee.	45,000	45,000	.....	.....	The Committee recommended that these works should be carried out, conditionally upon the Railway Commissioners undertaking to enter into an agreement for a period of not less than ten years to pay a minimum of £1,900 per annum for water supplied for railway purposes at Junee and Bethunga.
14 Nov., 1893, to 11 Jan., 1894.	Railway from Narrabri to Moree.	153,000	153,000	.....	.....	Recommended as proposed, with the condition that the work be not undertaken until a Betterment Act is passed.
	Carried forward .....	£12,670,896	8,081,326	34,938	4,624,508	

LIST of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1894. Feb. to 22 Mar.	Brought forward ... Sewerage Works for Parramatta.* (Second reference.)	£ 12,670,896 75,926	£ 8,081,326 .....	£ 34,938 .....	£ 4,624,508 75,926	The Committee decided that it was not expedient the proposed works should be carried out, for the reasons that the scheme had not been adequately considered, and that, according to the evidence, Parramatta was neither willing nor able to pay the rate necessary to provide the interest on the expenditure, and did not want the proposed works.
6 Mar. to 16 April.	Deviation to avoid the Lithgow Zigzag.	181,072	.....	.....	181,072	The Committee were of opinion that as the professional evidence, as well as much of the evidence generally, indicated that the proposed deviation was not a matter of urgency it was not expedient the work should be carried out.
9 April, to 22 May.	Railway from Temora to Wyalong.*	104,430	.....	.....	104,430	The Committee were of opinion that the decision upon the proposal should be deferred for six months.
11 April, to 20 June.	Removal of Pyrmont and Glebe Island Bridges.*	296,500	.....	.....	296,500	The Committee recommended that when renewal becomes necessary the existing bridges at Darling Harbour and Glebe Island should be replaced by timber structures of a kind specified in their report, which report, however, in consequence of the sudden dissolution of Parliament was not presented to the Legislative Assembly.
3 Oct. to 14 Nov.	Removal of Pyrmont and Glebe Island Bridges.* (Second reference.)	296,500	82,500	.....	214,000	The Committee recommended that the Pyrmont Bridge be replaced by a timber bridge with steel span, to cost £82,500, and decided that the Glebe Island Bridge did not at present require renewal.
19 Dec. to 27 Feb., 1895.	Railway from Jerilderie to Berrigan.	43,543	43,543	.....	.....	The construction of this railway was recommended, with the condition that the estimated cost, £2,000 per mile, should include goods and grain sheds, engineering charges, and all contingencies.
7 Mar. to 10 May.	Railway from Parkes to Condobolin.	127,000	127,000	.....	.....	In this inquiry the Committee, while considering it expedient the railway should be constructed, resolved that the cost should not exceed £2,100 per mile, including the cost of land resumptions.
17 May to 28 June.	Railway from Temora to Wyalong.* (Second reference.)	92,000	.....	.....	92,000	The Committee, in deciding against this proposed work, were of opinion that at the present time there is no justification for its construction, and the prospects of Wyalong's future are not such as to lead them to conclude that the line should be built in anticipation of what may be the condition of the gold-field and the district some years hence.
20 Mar. to 7 May.	Harbour Improvements at Newcastle.	141,000	141,000	.....	.....	In this inquiry the Committee recommended a modification of the works proposed by the Department and an additional work, the cost of the works as recommended by the Committee being about the same as that of the works proposed by the Department.
26 June, to July.	Tramway from Woolwich to the Field of Mars Common.	19,300	.....	.....	19,300	This proposed work was referred to the Fifth Committee who, at the termination of their existence, had inquired partly into it. A motion in the Legislative Assembly to refer the proposal to the Sixth Committee was, however, negatived on 11 December, 1895.
12 Dec. to 14 Dec.	Deviation at Locksley, Great Western Railway.	47,500	47,500	.....	.....	The Committee considered this work to be an urgent and necessary one, and recommended that it be carried out without delay.
17 Dec. to 24 Jan. 1896.	Water Supply for the Town of Tamworth.	32,824	32,824	.....	.....	The Committee recommended that this work be carried out, with the proviso that the capacity of the storage reservoir be increased from 35,000,000 to 50,000,000 gallons.
18 Mar. to 8 May.	Electric Tramway from Circular Quay, Sydney, to the Redfern Railway Station; and also along Harris-st. to the inter- section of John-street.	130,500	130,500	.....	.....	Recommended as proposed.
1 Jan. to 10 Mar.	Erection of Buildings at Rookwood for Infirm and Destitute Persons.	118,285	62,900	.....	55,385	The Committee decided that it was not expedient the proposed works should be carried out, deeming it inadvisable, for reasons stated in their Report, to concentrate the infirm and destitute at Rookwood. The Government estimate for the proposed buildings was £108,350 without, and £118,285 with, provision for sewage. The Committee recommended that the inmates of the Parramatta Asylums be removed, the healthy patients being housed at Rookwood and Liverpool, provision for the chronic and acute sick to be made on Crown lands near Campbelltown.
	Carried forward.....	£ 14,377,276	8,749,093	34,938	5,663,121	

List of Proposed Public Works inquired into by the Committee, &c.—*continued.*

Date of inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1896.	Brought forward.....	£ 14,377,276	£ 8,749,093	£ 34,938	£ 5,663,121	
9 Jan. to 17 July.	Additions to the Treasury Buildings.	21,500	21,500	.....	.....	Recommended as proposed.
20 Feb. to 1 Oct.	Railway from Tamworth to Manilla.	72,150	71,875	.....	275	The Committee's recommendation provided for an amended route, the cost of the railway not to exceed £2,500 per mile.
21 April, to 20 May.	Railway from Nevertire to Warren.	32,730	32,730	.....	.....	Recommended as proposed.
12 May, to 31 July.	Construction of Locks and Weirs on the River Darling.	121,100	.....	.....	121,100	The Committee negatived this proposed work.
5 June, to 19 Aug.	Railway from Berrigan to Finley.	27,250	27,250	.....	.....	The Committee recommended that this proposed railway should be constructed, the cost not to exceed £2,000 per mile.
16 June to 24 July.	Improvement of Cook's River.	36,400	15,000	.....	21,400	As recommended by the Committee the construction of the proposed works would involve an expenditure of £15,000—a reduction on the Departmental estimate of £21,400—which, in the opinion of the Committee, would meet the requirements of the case.
1 Sept. 1896. to April, 1897.	Railway from Morce to Inverell.	279,500	279,500	.....	.....	The Committee resolved that it was expedient this railway should be constructed as proposed.
28 Oct. 1896, to 10 Feb., 1897.	Construction of a Deep-water Harbour at Port Kembla.	440,000	200,000	.....	240,000	The Departmental estimate of cost provided for the construction of two breakwaters, known respectively as the northern and eastern, and the necessary equipment of the port for coal-shipping and general commercial purposes. The Committee were of opinion, however, that the proposed harbour would be rendered sufficiently secure to meet present requirements if the eastern breakwater only were carried out, and the estimated cost reduced by £240,000.
1896. 5 Aug. to 10 Dec.	Railway from Condobolin to Broken Hill.	955,063	.....	.....	955,063	The Committee, while having regard to the various aspects of this proposed work, and considering also that the annual loss on the working of the railway would amount to £60,000, were of opinion that it should not, at present, be proceeded with.
1897. 11 Feb. to 13 April.	*Sewerage Works for Parramatta. (Third Reference.)	60,000	60,000	.....	.....	This work was passed by the Committee with the provision that the cost should not exceed the Departmental estimate, and that the carrying out of the work should be subject to a guarantee (by the Municipal Council of Parramatta) of the annual payment required to cover maintenance and interest, and redemption of the principal outlay.
4 May to 8 June.	Duplicate Main from Prospect to Potts' Hill.	109,317	109,317	.....	.....	The Committee recommended the amended scheme submitted by the Engineer-in-Chief for Public Works, by which the sides of the canal between Prospect and the Pipe Head Basin would be raised, the canal strengthened, and the 6-foot pipe-line between the Basin and Potts' Hill Reservoir duplicated.
14 April to 6 Dec.	New Houses of Parliament.	533,484	15,000	.....	518,484	The Committee recommended the adoption of the scheme submitted by the Government Architect, providing for alterations to the present Parliamentary Buildings, at a cost not exceeding £15,000.
16 June to 15 Sept.	New Bridge at Glebe Island.	89,100	89,100	.....	.....	The Committee recommended that there be substituted for the existing structure a stone causeway, with a central, steel swing-span.
13 July to 25 Aug.	Railway from Redfern to St. James' Road.	650,000	650,000	.....	.....	Recommended as proposed.
31 Aug. to 7 Dec.	Railway from Condobolin to Euabalong.	108,225	.....	.....	108,225	The Committee negatived this proposed work, but recommended, in connection with any proposal for a railway towards Hillston, that a survey be made for a line from Koorawatha, with a view to its consideration in conjunction with existing surveys.
16 Sept. to 25 Nov.	Railway from The Rock to Green's Gunyah.	67,000	67,000	.....	.....	Recommended as proposed.
5 Sept. to 18 Nov.	Railway from Coolamon to Arianah.	91,307	.....	.....	91,307	The Committee negatived this proposal.
	Carried forward.....£	18,071,402	10,387,365	34,938	7,718,975	

Date of Inquiry.	Proposed Work.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
	Brought forward.....	£ 18,071,402	£ 10,387,365	£ 34,938	£ 7,718,975	
20 Dec., 1897, to 1 April, 1898.	Railway from Koora-watha to Grenfell.	89,250	89,250	.....	.....	Recommended as proposed.
5 Jan. to 13 April.	Railway from the Terminus of the Rose Hill Railway to Dural.	57,000	.....	.....	57,000	The Committee negatived this proposal.
14 Dec., 1897, to 29 April, 1898.	Railway from Warren to Coonamble.	150,000	.....	.....	150,000	The Committee negatived this proposal, but recommended that a survey be made of a route from Dubbo to Coonamble.
15 Mar. to 26 April.	Harbour Works at Tweed River.	43,600	43,600	.....	.....	Recommended as proposed.
19 Oct., 1897, to 23 June, 1898.	Railway from Narrabri to Pilliga.	128,650	.....	.....	128,650	The Committee negatived this proposal, but suggested a route from Narrabri to Eurie Eurie, which could, if necessary, be extended on to Walgett.
1 Oct., 1897, to 22 June, 1898.	Railway from Byrock to Brewarrina.	146,350	146,350	.....	.....	The Committee recommended that the railway should be carried out, provided that it be made legally binding upon the Crown lessees in the district served to pay, until the railway shall become self-supporting, one farthing per acre rent additional to their present or ordinary assessment, such additional rent to be credited to the Railway Commissioners.
9 Mar. to 24 June.	Railway from Woolabra to Collarenebri.	207,798	.....	.....	207,798	The Committee negatived this proposal, but suggested a route by which a railway would go from Narrabri towards Eurie Eurie, and, at a point about 315 miles from Newcastle, proceed in a north-westerly direction to Collarenebri.
22 Feb. to 6 July.	Railway from Maitland to Taree.	982,283	.....	.....	982,283	The Committee negatived this proposal.
30 Mar. to 6 July.	Harbour Works at Bellinger River.	36,000	36,000	.....	.....	Recommended as proposed.
8 Feb. to 1 July.	Harbour Works at Macleay River.	95,000	95,000	.....	.....	Recommended as proposed.
27 April to 29 June.	Harbour Works at Hastings River.	46,500	13,915	.....	32,585	The Committee recommended that for the present the southern training-wall only, estimated to cost £13,915, should be carried out.
22 Mar. to 1 July.	Harbour Works at Manning River.	100,000	100,000	.....	.....	The Committee recommended the construction of the proposed work, with some slight modifications.
14 April to 7 July, 1899.	Harbour Works at Nambucca River.	72,500	49,393	.....	23,107	Recommended with modifications.
25 Jan. to 2 Mar.	Water Supply Works for the Borough of Wollongong.	25,211	25,211	.....	.....	The Committee recommended the larger of the two schemes submitted, providing for an extension to Port Kembla on the south, and Bulli on the north.
18 Jan. to 28 Mar.	Public Offices, Phillip and Hunter Streets, Sydney.	44,810	16,000	.....	28,810	The Committee recommended a modification of the Government proposal, providing for a building containing a basement, ground-floor, and first-floor, at a cost not exceeding £16,000.
2 Feb. to 28 April.	Public Offices, Phillip, Bridge, and Young Sts., Sydney.	97,000	.....	.....	97,000	The Committee were of opinion that it was inexpedient to erect this building until there had been a comprehensive investigation into the existing accommodation for the various public Departments and the possibility of improving it by fresh adjustments or slight structural alterations, and until the probable wants of the Government for ten years, at least, were approximately indicated.
9 Mar. to 13 July.	Railway from Dubbo to Coonamble.	207,285	207,285	.....	.....	Recommended as proposed.
17 May to 16 Aug.	Penitentiary and Prison for Females, Randwick.	118,000	118,000	.....	.....	Recommended as proposed.
30 May to 19 Sept.	Railway from Grenfell to Wyalong.	142,293	142,293	.....	.....	The Committee, in recommending this proposed work, urged in their report that the cost might be still further reduced by the use of a less expensive sleeper, and lighter ballasting, and by constructing only absolutely necessary station buildings.
	Carried forward.....	20,860,932	11,469,662	34,938	9,426,208	

Date of inquiry.	Proposed Works.	Expenditure proposed by the Government.	Expenditure recommended by the Committee.	Amount in excess of that proposed.	Amount in reduction of that proposed.	Remarks.
1899.	Brought forward .....	£ 20,860,932	£ 11,469,662	£ 34,938	£ 9,426,208	
15 Mar. to 12 Dec.	Railway from Cobar to Wilcannia.	497,000	497,000	.....	.. .....	The Committee recommended that the proposed railway be constructed to a point on the east side of the Darling River, 619½ miles from Sydney, and suggested that the railway revenue should be subsidised to some substantial and suitable extent from the land revenue derived from the district benefited by the line.
15 Mar. to 21 Nov.	Locks and Weirs on the River Darling, between Bourke and Menindie.	530,000	.....	.. .....	530,000	Negatived.
2 Nov. to	Railway from Gundagai to Tumut.	148,310	148,310	.....	.. .....	The Committee recommended the proposed railway be carried out, provided that some arrangement be made whereby the district benefited shall contribute to the Railway Commissioners such sum as may be necessary to make good any loss on the construction and working of the line—and not otherwise.
13 Dec. to	Glebe Island Improvements.	273,600	38,000	.....	235,600	The Committee recommended it is not expedient the proposed Glebe Island improvements, as referred to them by the Legislative Assembly, be carried out; but they recommended the carrying out of that portion of the improvements which comprises the cutting down of a part of the Island, and the partial reclamation of the foreshores, at an estimated cost of £38,000.
1900.						
19 Jan. to	Wharfage—Woolloomooloo Bay.	23,000	23,000	.....	.....	The Committee considered it expedient the proposed wharfage should be constructed, and recommended that it be extended a further distance of 100 feet.
21 April to 7 June.	Central Railway Station, Devonshire-street.	561,600	561,600	.....	.. .....	The Committee decided that as the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient, and it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present one, the best plan would be to extend the railway to the north side of Devonshire-street, and there construct a commodious station and administrative offices.
21 April to 7 June.	Extension of the Railway into the City of Sydney.	1,564,000	.....	.....	1,564,000	In view of their recommending the Devonshire-street proposal, the Committee resolved that it was not expedient to extend the railway to St. James'-road, or in accordance with the deviation suggested in the Legislative Assembly reference of 7th December, 1899.
		£ 24,458,442	12,737,572	34,938	11,755,808	

\* Works marked with an asterisk have been referred to the Committee more than once; and allowing for these repeated references, for the expenditure recommended in two instances in excess of that proposed, and for the cost of the Central Railway Station, Devonshire-street, which is an alternative scheme to the proposed Extension of the Railway into the City of Sydney, the actual saving effected amounts to £8,468,988.

WORKS RESPECTING WHICH THE INQUIRIES ARE PROCEEDING.

- Railway from Grafton to Casino.
- Railway from Wellington to Werris Creek.
- Railway from Narrabri to Walgett, with branch to Collarendabri.
- Tuckian Flood Escape Scheme.

WORKS REMAINING TO BE DEALT WITH.

- Railway from Culcairn to Gernantown.
- Railway from Bogan Gate to Bulbodney
- Railway from Grenfell to Wyalong.
- Railway from Bowral to Robertson.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF PROCEEDINGS.

SATURDAY, 15 JULY, 1899.

The Committee met at the "Royal Hotel," Goulburn, at 10 a.m.

MEMBERS PRESENT:—

John Perry, Esq., Chairman.

The Hon. William Joseph Trickett,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, then, in continuation of their inquiry respecting the expediency of erecting a Penitentiary and Prison for Females, at Randwick, and accompanied by the Comptroller-General of Prisons, proceeded to the Goulburn Gaol, where they inspected the gaol buildings, and acquainted themselves with the details of the prison system carried out there, as far as they were explanatory of what is intended in connection with the proposed buildings at Randwick.

At 3 o'clock p.m. the Committee met in the office of the gaol.

Samuel McCauley, Deputy Comptroller and Inspector of Prisons, and Alexander William Mackay, Governor of Goulburn Gaol, were sworn, and examined.

The Committee adjourned at half-past 4, until 2 o'clock p.m. on Monday, 17th July, at Sydney.

MONDAY, 17 JULY, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

John Perry, Esq., Chairman.

The Hon. Andrew Garran, LL.D.,  
The Hon. William Joseph Trickett,

William Thomas Dick, Esq.,  
John Christian Watson, Esq.,

Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of erecting a Penitentiary and Prison for Females, Randwick.

Arthur Herbert Collis, Governor, Darlinghurst Gaol, Charles Ulic Carruthers, Surgeon, Biloela Gaol, and Thomas James Barnett, Governor, Biloela Gaol, were sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, 19th July.

WEDNESDAY, 19 JULY, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

John Perry, Esq., Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
The Hon. William Joseph Trickett,

William Thomas Dick, Esq.,  
John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The following accounts were passed for payment:—

	£	s.	d.
J. C. Carmichael, <i>Bourke Banner</i> , advertising ... ..	1	7	0
A. Campbell, <i>Illawarra Mercury</i> , advertising ... ..	1	11	6
Total ... ..	£2	18	6

The Committee further considered the expediency of erecting a Penitentiary and Prison for Females, Randwick.

Robert Thomson Paton, Medical Officer, Darlinghurst Gaol, William Houston, ex-Mayor of Randwick, and John Allsop, resident, Randwick, were sworn, and examined.

The Committee adjourned at 20 minutes to 4, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY,

THURSDAY, 20 JULY, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

John Perry, Esq., Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.,
The Hon. William Joseph Trickett,	Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of erecting a Penitentiary and Prison for Females, Randwick.

Alderman Theodore Powell, Mayor of Randwick, Thomas Whitford Taylor, valuator, Randwick, Alderman James Hincks, Randwick, Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, and Hon. John Mildred Creed, M.L.C., were sworn, and examined.

The Committee adjourned at 5 minutes past 4, until 2 o'clock p.m. on Friday, the following day.

FRIDAY, 21 JULY, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

John Perry, Esq., Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.,
The Hon. William Joseph Trickett,	Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The following accounts were passed for payment:—

	£	s.	d.

John Perry, Esq., Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.,
The Hon. William Joseph Trickett,	Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Memorandum from Mr. G. Stevenson, Police Magistrate and Mining Warden, with reference to his evidence before the Committee in their inquiry respecting the proposed Railway from Grenfell to Wyalong.

The correspondence was received.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

John James Phelps, grazier, was sworn, and further examined.

The Committee further considered the expediency of constructing a line of Railway from Grenfell to Wyalong.

Dr. Garran moved,—“That the Committee proceed to consider the evidence on the proposed Railway from Grenfell to Wyalong, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Dick, and passed.

Dr. Garran moved,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Grenfell to Wyalong, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Shepherd seconded the motion.

The debate was adjourned.

The Committee adjourned at 25 minutes to 4, until 2 o'clock p.m. on Wednesday, the following day.

*WEDNESDAY,*

• *WEDNESDAY, 13 SEPTEMBER, 1899.*

The Committee met at 2 p.m.

MEMBERS PRESENT :—

John Perry, Esq., Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
The Hon. William Joseph Trickett,

William Thomas Dick, Esq.,  
John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Grenfell to Wyalong.

The adjourned debate upon Dr. Garran's motion,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Grenfell to Wyalong, as referred to the Committee by the Legislative Assembly, be carried out”—was resumed.

Mr. Dick moved,—“That the motion be amended by the insertion of the word ‘not’ before the word ‘expedient’.”

The Chairman ruled the amendment to be out of order, in accordance with a ruling on 24th November, 1897, that the object of the amendment could be attained by voting against the motion, and that any further amendment could be put before the Committee subsequently as a direct motion.

The motion was passed on the following division :—

Ayes, 4.	Noes, 3.
Mr. Perry,	Mr. Dick,
Mr. Shepherd,	Mr. Watson,
Dr. Garran,	Mr. Levien.
Mr. Trickett.	

The Committee adjourned at 20 minutes to 4, until 2 o'clock p.m. on Monday, 18th September.

*MONDAY, 18 SEPTEMBER, 1899.*

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,

William Thomas Dick, Esq.,  
John Christian Watson, Esq.,

Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from Mr. John Perry, M.P., intimating his retirement from the position of Chairman, and a Member, of the Committee, in consequence of his having accepted the offer of Minister of Public Instruction, and Minister for Labour and Industry.

Mr. Watson moved,—“That the letter be received, and that there be conveyed by letter to Mr. Perry the Committee's appreciation of his work as Chairman, and their congratulations upon his appointment to the position of Minister of Public Instruction, and Minister for Labour and Industry.”

The motion was seconded by Dr. Garran, and passed.

The Committee proceeded to elect a Chairman in the place of Mr. John Perry.

Mr. Levien moved,—“That the Honorable William Joseph Trickett be Chairman of the Committee.”

Dr. Garran seconded the motion.

Mr. Dick moved,—“That the motion be amended by the omission of all the words after the word ‘That,’ with a view to the insertion of the words ‘the Committee refrain from electing a Chairman until their number shall have been completed by the election of another member from the Legislative Assembly.’”

Mr. Watson seconded the amendment.

The amendment was negatived on the following division :—

Ayes, 2.	Noes, 3.
Mr. Dick,	Mr. Shepherd,
Mr. Watson.	Dr. Garran,
	Mr. Levien.

The motion was passed on the following division :—

Ayes, 3.	Noes, 2.
Mr. Shepherd,	Mr. Dick,
Dr. Garran,	Mr. Watson.
Mr. Levien.	

Dr. Garran moved,—“That Mr. William Thomas Dick be appointed Vice-Chairman of the Committee in the place of the Honorable William Joseph Trickett, elected Chairman.”

The motion was seconded by Mr. Watson, and passed.

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed Railway from Grenfell to Wyalong.

The Report was read by the Secretary, and its further consideration was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m., on Tuesday, the following day.

*TUESDAY,*

*TUESDAY, 19 SEPTEMBER, 1899.*

The Committee met at 2 p.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.,
Robert Henry Levien, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Committee further considered their Report to the Legislative Assembly on the proposed Railway from Grenfell to Wyalong.

The Report was adopted, and the Chairman was authorised to sign it for presentation to the Legislative Assembly.

The Committee adjourned at 4 o'clock, until 7 o'clock p.m. on Thursday, 21st instant, at Bourke.

*THURSDAY, 21 SEPTEMBER, 1899.*

The Committee having, in pursuance of their inquiry respecting the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, left Sydney by train on Wednesday, 20th instant, at 8 p.m., for the purpose of inspection and the taking of evidence, arrived at Bourke on Thursday, 21st instant, at 6 p.m.

The Committee met at the "Royal Hotel," Bourke, at 7 p.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.
--	-----------------------------

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, and arranged to visit and inspect the experimental lock and weir, on the Chanoine system, constructed a few miles below Bourke, and the Pera bore and irrigation farms, on the following day.

The Committee adjourned at 8 p.m., until 9 o'clock a.m. on Friday, the following day.

*FRIDAY, 22 SEPTEMBER, 1899.*

The Committee met at the "Royal Hotel," Bourke, at 9 a.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.
--	-----------------------------

The Hon. W. J. Trickett left Sydney by train on Thursday, 21st instant, at 6 p.m., and, arriving at Bourke on Friday, 22nd instant, joined the Committee at 6 p.m.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Accompanied by Mr. C. W. Darley, Engineer-in-Chief for Public Works, the Committee visited the experimental lock and weir on the Darling River, below Bourke, examined the lock and weir, and witnessed the process of raising and lowering the shutters.

In connection with that part of their inquiry which relates to the irrigation which might be carried on along the course of the Darling from the construction of locks and weirs on the river, the Committee then visited and inspected the Pera bore and the irrigation farms in its vicinity.

The Committee adjourned at 7 p.m., until 10 o'clock a.m. on Saturday, the following day.

*SATURDAY, 23 SEPTEMBER, 1899.*

The Committee met at the Court-house, Bourke, at 10 a.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
John Christian Watson, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Frederick Hersey, farmer, Arthur Senior, wool-scourer, John Plunkett Fitzgerald, grazier, Malcolm Robertson, grazier, Walter Bankes, Government caretaker, Bourke lock and weir, and George Pickhills, formerly master and owner of river steamers on Darling River, were sworn, and examined.

The Committee adjourned at a quarter-past 4, until 10 o'clock a.m. on Monday, 25th September.

*MONDAY, 25 SEPTEMBER, 1899.*

The Committee met at the Court-house, Bourke, at 10 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The following accounts were passed for payment :—

	£	s.	d.
W. B. Howarth ( <i>Grenfell Record</i> ) advertising ... ..	0	13	6
Kealy and Philip, altering despatch box ... ..	1	1	0
Total ... ..	£1	14	6

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Clarence Hardie Gorman, Manager, Government Experimental Farm, Pera bore, and John Hedrick, Secretary, Stock Board, Bourke, were sworn, and examined.

The Committee adjourned at half-past 11 a.m. until 10 o'clock a.m. on Tuesday, the following day.

*TUESDAY, 26 SEPTEMBER, 1899.*

The Committee met at the "Royal Hotel," Bourke, at 10 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Continuing their inquiry respecting the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, the Committee left Bourke at 1 p.m., by steamer, for the purpose of inspecting the sites for the locks and weirs, and taking necessary evidence, and steamed down the river until 7 p.m. (dark).

*WEDNESDAY, 27 SEPTEMBER, 1899.*

The Committee met on board the steamer "Lancashire Lass," on the Darling River, at 6.30 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Resuming their journey down the River Darling, in connection with their inquiry respecting the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, the Committee then visited site No. 1, or Yanda site, for the first lock and weir, 38½ miles below the lock and weir at Bourke, and carefully examined it.

At half-past 8 a.m., the Committee met at Yanda station, Darling River.

Henry Deane, Yanda station, was sworn, and examined.

At 2 o'clock p.m. the Committee met at Gundabooka station, Darling River.

David Langlands, manager, Gundabooka station, was sworn, and examined.

The Committee then visited and examined the site for the second lock and weir on the Darling, which is situated at Toorale Landing, 71 miles from the lock and weir at Bourke.

*THURSDAY, 28 SEPTEMBER, 1899.*

The Committee continued their inspection of the sites for the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, resuming their journey down the river at 7 p.m.

Site No. 3, near Singleton's Crossing, and 97½ miles from the Bourke lock and weir, and site No. 4, at Louth, and 115 miles from the lock and weir at Bourke, were inspected.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The Committee met at Louth at 12 o'clock noon.

The minutes of the previous meeting were read, and confirmed.

Thomas Andrew Mathews, grazier; Simon Oakes Laycock, store-keeper; George Leggatt, grazier; and Leonard Sydney Pearson, chemist and hotel-keeper, were sworn, and examined.

Leaving Louth, the Committee proceeded to Dunlop station, on the Darling River.

The Committee met at Dunlop station at 7.30 p.m.

James Wilson, grazier and part owner of Dunlop, was sworn, and examined.

The Committee adjourned at 9 o'clock p.m.

*FRIDAY,*

*FRIDAY, 29 SEPTEMBER, 1899.*

The Committee met at Dunlop station at 9 a.m., and acquainted themselves with what is being done at Dunlop in irrigating land with water from the Darling River.

The minutes of the previous meeting were read, and confirmed.

At 10 a.m. the Committee left Dunlop, and, in connection with their inquiry respecting the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, inspected site No. 5, which is situated about 2 miles below Dunlop station, and 133 miles below the Bourke lock and weir, and site No. 6, at the Curranyalpa Rocks, 187 miles from the lock and weir at Bourke.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The Committee met at Curranyalpa station, Darling River, at 8 p.m.

James Ireland, manager, and Herbert Cochrane Suttor, owner, Curranyalpa station, were sworn, and examined.

The Committee adjourned at half-past 9 p.m.

*SATURDAY, 30 SEPTEMBER, 1899.*

The Committee left Curranyalpa at daylight, and arrived at Kallara station, Darling River, at 9 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, continuing their inquiry as to the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, inspected some wheat and other crops cultivated at Kallara homestead by means of irrigation from the river.

Charles Graham Weir Officer, part owner, and Andrew Whittet, engineer, Kallara station, were sworn, and examined.

Leaving Kallara, the Committee proceeded to Tilpa, near which township they inspected site No. 7, in connection with the proposed locks and weirs, 211 miles 60 chains below the lock and weir at Bourke, and, later, site No. 8, at Ryan's Island, 253 miles from the Bourke lock and weir.

The Committee's inspection for the day closed at 8 p.m.

*MONDAY, 2 OCTOBER, 1899.*

The Committee resumed their journey down the Darling River, in connection with their inquiry respecting the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, at daylight on Sunday, 1st October, and during the day passed sites Nos. 9 and 10 for the proposed locks and weirs, the former 304 miles 35 chains, and the latter 326 miles 10 chains, from the lock and weir at Bourke.

Talyawalka Creek was observed sufficiently to ascertain that, by reason of its bed being considerably above the level of the water when the river shall have been locked, it will not benefit from the construction of the proposed locks and weirs; and Mount Murchison station was visited and certain information elicited.

On Monday the Committee resumed their inspection of the river at a quarter-past 6 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

At half-past 10 a.m. the Committee reached Surreyville, where cereals and fruit are grown successfully by means of irrigation from the river.

Henry William Ewan, selector, was sworn, and examined.

Leaving Surreyville, the Committee inspected site No. 11, near Murtee station, and 358 miles from the Bourke lock and weir, and arrived at Murtee at 1 p.m.

The Committee met at Murtee station at 3 p.m.

Arthur Irwin Johnston, manager, Murtee station, was sworn, and examined.

The Committee arrived at Wilcannia at 6 p.m.

*TUESDAY, 3 OCTOBER, 1899.*

The Committee continued their inspection of the sites for the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, leaving Wilcannia for Menindie at 10 a.m.

*MEMBERS PRESENT :—*

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Site No. 12, 393 miles 27 chains from the Bourke lock and weir, and 18 miles 27 chains from Wilcannia, and site No. 13, 418 miles 65 chains from the lock and weir at Bourke, and about 5 miles below Culpaulin homestead, were inspected.

The Committee's inspection for the day closed at 7 o'clock p.m.

*WEDNESDAY,*

*WEDNESDAY, 4 OCTOBER, 1899.*

The Committee resumed their journey down the Darling River from Wilcannia to Menindie, in connection with their inquiry respecting the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, at 7 a.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.  
The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Site No. 14, 451 miles 50 chains from the Bourke lock and weir, was inspected.

At 2 o'clock p.m. the Committee met at Tintinallogy station, Darling River.

Bertram Reid, of Tintinallogy station, was sworn, and examined.

The Committee then proceeded to Christmas Rocks, where site No. 15, 477 miles 15 chains from the lock and weir at Bourke, was inspected.

Later, the Committee visited Wenteriga station to see some fodder crops which are cultivated by means of irrigation from the river.

The inspection for the day closed at 7 p.m.

*THURSDAY, 5 OCTOBER, 1899.*

The Committee resumed their journey down the Darling River from Wilcannia to Menindie, in connection with their inquiry respecting the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, at 4 a.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.  
The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Site No. 16, near Henley station, and 510 miles 70 chains from Bourke lock and weir, was inspected.

At 2 o'clock p.m. the Committee reached Menindie, and thence visited site No. 17 (the last of the sites), about 8 miles beyond Menindie, and 569 miles 50 chains from the lock and weir at Bourke.

The Committee returned to Menindie at 6 p.m.

*FRIDAY, 6 OCTOBER, 1899.*

The Committee met at the Mechanics' Institute, Menindie, at 10 a.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.  
The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Samuel Klemm, jun., storekeeper, Alfred Edward Ellis, butcher, baker, and gardener, William Maiden, hotel-keeper, David Edwards, blacksmith, John Hugh Gordon, homestead lessee, Harry Webb, hotel manager, and Robert Scobie, saddler, were sworn, and examined.

In connection with the question of the flow of water from the River Darling, by way of Menindie Creek into Menindie Lake, the Committee visited Lake Menindie and the site of the old dam.

The Committee adjourned at 7 p.m.

*SATURDAY, 7 OCTOBER, 1899.*

The Committee met on board the steamer "Lancashire Lass," at Menindie, at 9 a.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.  
The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, having completed the taking of evidence at Menindie, respecting the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie, then left Menindie by steamer to return to Wilcannia, for the purpose of taking evidence with reference to the proposed Locks and Weirs on the River Darling, and the proposed Railway from Cobar to Wilcannia, and, travelling day and night, reached Wilcannia on Monday, at 9 a.m.

On the journey down the River Darling to Menindie, the Committee did not travel at night, for the reasons that the sites for the proposed locks and weirs could not be inspected at night, and it is the practice of the steamers to tie up at night for safety.

*MONDAY,*

*MONDAY, 9 OCTOBER, 1899.*

The Committee met at the Court-house, Wilcannia, at 11 a.m.

## MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Edmond O'Donnell, general agent, and Mayor of Wilcannia, Edwin Francis Murphy, opal buyer, and late mining manager, White Cliffs, George Donaldson, merchant, Wilcannia, John Banks, Customs Officer, Wilcannia, Robert Knox, merchant, Wilcannia, and Charles Nolan, sergeant of police, White Cliffs, were sworn, and examined.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Duncan Sinclair, master of the Darling River steamer "Lancashire Lass," and John Banks, Customs Officer, Wilcannia, were sworn, and examined.

The Committee adjourned at 10 minutes past 5, until half-past 9 a.m. on Tuesday, the following day.

*TUESDAY, 10 OCTOBER, 1899.*

The Committee met at the Court-house, Wilcannia, at 9:30 a.m.

## MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing Locks and Weirs on the River Darling, between Bourke and Menindie.

Edmond O'Donnell, general agent, and Mayor of Wilcannia, Alexander Munro, manager of the Mount Murchison portion of the Momba holding, Mark James Curry Tully, Inspector of Stock for the Sheep District of Wilcannia, Edward Quin, owner of Tarella station, and Thomas Henry Bell, editor and proprietor of the *Western Grazier* newspaper, were sworn, and examined.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Alexander Munro, manager of the Mount Murchison portion of Momba holding, Mark James Curry Tully, Inspector of Stock for the Sheep District of Wilcannia, Edward Quin, owner of Tarella station, Bertram George Millard, Road Superintendent, Thomas Henry Bell, editor and proprietor of the *Western Grazier* newspaper, James Rowand Holding, Post and Telegraph master, Wilcannia, and John Walter Fletcher, Police Magistrate and Mining Warden, were sworn, and examined.

The Committee adjourned at 20 minutes to 4 p.m.

At a quarter to 8 p.m. the Committee met at the "Wilcannia Club Hotel," Wilcannia.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

George Donaldson, merchant, Wilcannia, was sworn, and further examined.

The Committee adjourned at a quarter-past 8 p.m., until 7 o'clock a.m. on Wednesday, the following day.

*WEDNESDAY, 11 OCTOBER, 1899.*

The Committee met at the "Wilcannia Club Hotel," Wilcannia, at 7 a.m.

## MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Mr. Dick and Mr. Watson then proceeded along the Ivanhoe Road, in the vicinity of the surveyed route of the proposed railway, to Talyawalka Creek, in order to inspect the area subject to flood between the Talyawalka and Wilcannia.

At 11 o'clock the Committee, accompanied by Mr. G. Marshall, Surveyor, Department of Public Works, left Wilcannia for Cobar, for the purpose of inspecting, as far as possible, the country through which the proposed railway would go, and taking evidence with reference to the railway.

At 9 o'clock p.m. the Committee met at Petyuna out-station, on Murtee holding.

John Williamson, overseer, Petyuna out-station, was sworn, and examined.

The Committee adjourned at half-past 9 p.m., until 7 o'clock a.m. on Thursday, the following day.

*THURSDAY,*

*THURSDAY, 12 OCTOBER, 1899.*

The Committee met at Petyuna out-station, on Murtee holding, at 7 a.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, continuing their journey from Wilcannia to Cobar, in connection with their inquiry respecting the expediency of constructing a line of Railway from Cobar to Wilcannia, then left Petyuna and travelled to Yoe well, where they came on to the surveyed railway route. From Yoe well they travelled along the route until reaching the boundary of Cultowa and Murtee holdings, and thence, keeping on the left or north side of the route, and within easy distance of it, reached Bulla tank at half-past 8 p.m.

The Committee met at Bulla tank at 10 p.m.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Edward Pearce Kevan, lessee of Bulla tank, was sworn, and examined.

The Committee adjourned at 5 minutes to 11 p.m., until 9 o'clock a.m. on Friday, the following day.

*FRIDAY, 13 OCTOBER, 1899.*

The Committee met at Bulla tank, on the Cobar-Wilcannia Road, at 9 a.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

Resuming their journey of inspection and inquiry with reference to the expediency of constructing a line of Railway from Cobar to Wilcannia, the Committee left Bulla tank at 10 a.m., and reached Barnato out-station, on Nelyambo holding,  $2\frac{1}{2}$  miles north of the surveyed route for the railway, at 4 p.m.

The Committee met at Barnato out-station, on Nelyambo holding, at a quarter to 5 p.m.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

William Rodier, grazier, Tambua station, Edward Francis Hayes, station inspector, Australian Mortgage, Land, and Finance Co., and Sydney Hamilton, manager, Nelyambo and Barnato stations, were sworn, and examined.

The Committee adjourned at 9 p.m., until 7 o'clock a.m. on Saturday, the following day.

*SATURDAY, 14 OCTOBER, 1899.*

The Committee met at Barnato out-station, on Nelyambo holding, at 7 a.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee then left Barnato to resume their journey of inspection and inquiry with reference to the expediency of constructing a line of Railway from Cobar to Wilcannia.

Nine miles from Barnato the surveyed route for the railway was come upon, and thence the Committee travelled close to the route for 42 miles through Mulgoa Downs, The Meadows, Springfield, and Amphitheatre holdings to Cobar, where they arrived at 7 o'clock p.m.

*MONDAY, 16 OCTOBER, 1899.*

The Committee met at the Court-house, Cobar, at 10.30 a.m.

**MEMBERS PRESENT:—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Peter Snelson, Mayor of Cobar, Walterus Le Brun Brown, Police Magistrate and Mining Warden, Edwin James, storekeeper, Neil Morrison, auctioneer and commission agent, Thomas Byrne, hotel-keeper, John Leah, Council-clerk, Halbert James Edgar, hotel-keeper, Robert Kinkead, storekeeper, William Henry Bannister, butcher and homestead lessee, and Henry Burt Welsh, manager of The Meadows and Kew stations, were sworn, and examined.

The Committee adjourned at 4 p.m., until 7 o'clock a.m. on Tuesday, the following day.

*TUESDAY,*

*TUESDAY, 17 OCTOBER, 1899.*

The Committee met at the "Grand Hotel," Cobar, at 7 a.m.

## MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.  
The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, having completed the taking of evidence at Cobar, with reference to the expediency of constructing a line of Railway from Cobar to Wilcannia, then left Cobar by the 7.35 a.m. train for Sydney, arriving there at 5.45 a.m. on Wednesday, the following day.

*THURSDAY, 19 OCTOBER, 1899.*

The Committee met at 2 p.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
William Thomas Dick, Esq., | Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The following account was passed for payment:—

£ s. d.

Charles Lyne—Travelling expenses as Secretary accompanying Committee on visit of inspection and inquiry with reference to the proposed Locks and Weirs on the River Darling, between Bourke and Menindie, and the proposed Railway from Cobar to Wilcannia ... ..	40	10	0
---	----	----	---

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Charles Frederick Arno Thierman, mine-owner, White Cliffs, and James William Boulton, Superintendent of Public Watering Places and Artesian Boring, Department of Mines and Agriculture, were sworn, and examined.

The Committee adjourned at 10 minutes past 4, until 2 o'clock p.m. on Tuesday, 24th October.

*TUESDAY, 24 OCTOBER, 1899.*

The Committee met at 2 p.m.

## MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Ernest Macartney De Burgh, Assistant Engineer, Bridges Branch, Department of Public Works; George Charles Yeo, draftsman, Stock Branch, department of Mines and Agriculture; William John Hanna, Principal Assistant Engineer, Roads Branch, Department of Public Works; and Joseph Clarke, Inland Mail Clerk, Postal and Electric Telegraph Department, were sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 28th November.

*TUESDAY, 28 NOVEMBER, 1899.*

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,		William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,		John Christian Watson, Esq.,
		Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letters from the Clerk of the Legislative Assembly, informing the Committee of the passing by the Legislative Assembly of resolutions referring to them for consideration and report the expediency of constructing a line of railway from Culcairn to Gernantown, and the expediency of constructing works in connection with the Tuckian Flood Escape Scheme.

Return of postal, telegraph, and money order receipts during the four years, 1895 to 1898, in the Gundagai-Tumut district, forwarded by Mr. J. Clarke, Inland Mail Clerk, Postal and Electric Telegraph Department, in connection with his evidence before the Committee in their inquiry respecting the proposed Railway from Gundagai to Tumut.

The correspondence was received.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

Mr. Watson moved,—“That the Committee proceed to consider the evidence on the proposed Railway from Cobar to Wilcannia, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Shepherd, and passed.

Mr..

Mr. Watson moved,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Cobar to Wilcannia, as referred to the Committee by the Legislative Assembly, be carried out to a point on the east side of the Darling River, 619½ miles from Sydney.”

Mr. Dick seconded the motion.

The debate was adjourned.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day.

#### WEDNESDAY, 29 NOVEMBER, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.,
Robert Henry Levien, Esq.	

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Cobar to Wilcannia.

The adjourned debate upon Mr. Watson's motion,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Cobar to Wilcannia, as referred to the Committee by the Legislative Assembly, be carried out to a point on the east side of the Darling River, 619½ miles from Sydney,”—was resumed.

Mr. Trickett moved,—“That the motion be amended by the addition of the following words: ‘The Committee, however, having “regard to the amount of revenue which such work may reasonably be expected to produce,” recognise that, at present, the direct revenue will fall far short of the amount required to pay interest and working expenses; but looking at “the present and prospective value of such work,” they regard the proposed railway as a means of much needed relief to the settlers in the north-western part of the Colony, and an aid to the greater development of the country, and, therefore, they suggest that the railway revenue should be subsidised to some substantial and suitable extent from the land revenue derived from the district benefited by the line.’”

The amendment was passed, and the motion, as amended, was then agreed to.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Travers Jones was sworn, and further examined.

John James Miller, manager, Farmers and Settlers' Co-operative Association, Ltd., was sworn, and examined.

The Committee adjourned at 10 minutes past 4, until 2 o'clock p.m. on Thursday, the following day.

#### THURSDAY, 30 NOVEMBER, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garran, LL.D.,	John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Clerk of the Legislative Assembly, informing the Committee of the passing by the Legislative Assembly of a resolution referring to the Committee for consideration and report the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

The correspondence was received.

The following account was passed for payment:—

	0	15	0

The Committee proceeded to consider their Report to the Legislative Assembly on the proposed Railway from Cobar to Wilcannia.

Clauses 1 to 5 were passed.

Clause 6, nature of the country; clause 7, land occupation and revenue; and clause 8, population, were postponed.

Clauses 9 and 10 were passed.

The Committee adjourned at 10 minutes past 4, until 11 o'clock a.m. on Friday, the following day, at Gundagai.

#### FRIDAY, 1 DECEMBER, 1899.

The Committee having, in pursuance of their inquiry respecting the expediency of constructing a line of Railway from Gundagai to Tumut, left Sydney by train on Thursday, 30th November, at 9.20 p.m., to inspect the route of the proposed Railway, and take further evidence, arrived at Gundagai on Friday, 1st December, at 9.25 a.m.

The Committee met at the Court-house, Gundagai, at 11 a.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.
--	-----------------------------

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Gundagai and Tumut,

Morgan Ryan, Mayor of Gundagai, Frederick John Clements, Railway station-master, George Woodbridge, landowner, William Matchett, J.P., Postmaster, South Gundagai, Walter Edward Cox, Railway goods-porter, and Harold Braine, stationer, were sworn, and examined.

The Committee adjourned at 10 minutes to 3, until 10 o'clock a.m. on Saturday, the following day.

#### SATURDAY, 2 DECEMBER, 1899.

The Committee met at the "Royal Hotel," Gundagai, at 10 o'clock a.m.

##### MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
John Christian Watson, Esq.,

William Thomas Dick, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

Accompanied by Mr. Melrose, surveyor, Railway Construction Branch, Department of Public Works, the Committee then left Gundagai to inspect the route of the proposed Railway from Gundagai to Tumut, travelling to Adelong Crossing and Adelong, and keeping as near to the route as practicable.

At 11.30 a.m. the Committee met at the "Coach and Horses Hotel," Adelong Crossing.

James Edward Charles Turner, farmer and grazier, Adelong Crossing, was sworn, and examined.

The Committee arrived at Adelong at 3 p.m.

On Saturday the Committee divided and drove out from Adelong to inspect the country to the south and south-west, with a view to ascertain the character and extent of both agricultural and pastoral land in those directions.

#### MONDAY, 4 DECEMBER, 1899.

The Committee met at the "Royal Hotel," Adelong, at 10 a.m.

##### MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Frederick Charles Park, storekeeper, Adelong, Walter Witley Well, Manager, Bank of New South Wales, Adelong, Thomas Arragon, grazier, Adelong Creek, George Thomas Kenney Cole, miner, Mount Adrah, Charles Purcell, farmer and grazier, Adelong Creek, James Thompson Mackie, station manager, Ellerslie, near Adelong, Albert Edward Merryfull, storekeeper, Adelong, and Arthur Williamson Mollineaux, auctioneer and general agent, Adelong, were sworn, and examined.

The Committee adjourned at 3 p.m., and subsequently left Adelong for Tumut, the railway surveyor accompanying them pointing out the position of the surveyed route for the proposed railway.

The Committee arrived at Tumut at 6 p.m.

#### TUESDAY, 5 DECEMBER, 1899.

The Committee met at the Court-house, Tumut, at 10 a.m.

##### MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
William Thomas Dick, Esq.,

Arnold Hamilton Peter Watts, manager, West Blowering station, Charles Gilbert Long, farmer and grazier, Lacmalac, Henry Wharton Mason, medical practitioner, Tumut, Alexander Davis, farmer, Upper Gilmore, John O'Sullivan, farmer and grazier, Lower Gilmore, Henry Francis Hayes, manager for Sanderson and Taylor, millers and grain-buyers, Tumut and Gilmore, William Henry Bridle, auctioneer, Tumut, William Bridle, farmer and fruit-grower, Bumbowlee, Charles Sylvester Byrne, auctioneer, Tumut; and Sivyer John Rootes, senior-sergeant of police, Tumut, were sworn, and examined.

The Committee adjourned at half-past 5 p.m., until 9 o'clock a.m. on Thursday, the following day.

#### THURSDAY, 7 DECEMBER, 1899.

The Committee met at the "Commercial Hotel," Tumut, at 9 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

Continuing their inquiry respecting the expediency of constructing a line of Railway from Gundagai to Tumut, and in order to further inspect the country which would be within the influence of the proposed railway, the Committee divided into four parties, and visited the Gilmore valley, Lacmalac and Springfield, the Tumut Plains, and Batlow, the inspection terminating at 7 p.m.

At 8 p.m. the Committee met at the "Commercial Hotel," Tumut.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Charles Richards, farmer, Wondowie, John Weeden, storekeeper, Tumut, Robert Albert Newman, storekeeper, Tumut, James Daniel Walker, C.P.S., Mining Warden, and Crown Lands Agent, Tumut, and Spencer Groves, newspaper proprietor, and Secretary of the District Improvement League, Tumut, were sworn, and examined.

The Committee adjourned at 5 minutes past 10, until 9 o'clock a.m. on Friday, the following day.

#### FRIDAY, 8 DECEMBER, 1899.

The Committee met at the "Commercial Hotel," Tumut, at 9 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, in continuation of the inquiry respecting the proposed Railway from Gundagai to Tumut, then left Tumut to return to Gundagai, *via* Brungle, in order to, as far as practicable, inspect the country through which a railway to Tumut would go by the explored route from Coolac along the Tumut River valley.

At 1 p.m. the Committee met at Brungle.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Alexander McGruer, grazier, Brungle, was sworn, and examined.

The Committee reached Gundagai at a quarter-past 4, and at 5:20 p.m. left by train for Sydney.

#### TUESDAY, 12 DECEMBER, 1899.

The Committee met at 2 p.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Clerk of the Legislative Assembly, informing the Committee of the passing by the Legislative Assembly of a resolution referring to the Committee for consideration and report the expediency of erecting a central railway station and administrative offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Letter from Mr. R. Donaldson, M.P., suggesting the names of witnesses in the Committee's inquiry respecting the proposed Railway from Gundagai to Tumut.

The correspondence was received.

The following accounts were passed for payment:—

Total ... .. £1 4 10

The

The Committee further considered their Report to the Legislative Assembly on the proposed Railway from Cobar to Wilcannia.

Clauses 6 to 8 were passed.

Clause 11—Traffic Prospects—Railway Commissioners' Estimate.

Mr. Watson moved the omission from the clause of paragraph 2, as follows:—"In the estimate of the goods traffic, general goods for the Wilcannia district are not included, on the ground that the close business relations of Wilcannia and the Darling with Adelaide and Melbourne, together with the shorter distance and cheaper carriage between those places, make it idle to expect that any general goods would be carried. Produce, it is explained, is landed at Wilcannia from Moama, Morgan, or other Murray ports, at the rate of £1 7s. 6d. per ton, and general goods from Adelaide or Melbourne at £2 15s. per ton; and as the lowest New South Wales railway rates for flour for the same distance would be £2 6s. 1d. per ton, woolpacks £4 4s. 4d. per ton, sugar £7 8s. per ton, and general goods £10 13s. 6d. per ton, it is evident that under the circumstances the proposed line could not hope to compete with the river in the carriage of general goods. It is possible, however, that the exigencies of the case might permit of obtaining occasional consignments of produce, the margin of difference, it is pointed out, not being so great."

The amendment was seconded by Mr. Levien, and passed on the following division:—

Ayes, 4.	Noes, 1.
Mr. Trickett,	Dr. Garrahan.
Mr. Shepherd,	
Mr. Watson,	
Mr. Levien.	

The clause, as amended, was then passed.

The remaining clauses of the Report were passed, the Report was adopted, and the Chairman was authorised to sign it for presentation to the Legislative Assembly.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day.

#### WEDNESDAY, 13 DECEMBER, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	William Thomas Dick, Esq.,
The Hon. Andrew Garrahan, LL.D.,	John Christian Watson, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee proceeded to consider the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, was sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Wednesday, the following day

WEDNESDAY,

WEDNESDAY, 20 DECEMBER, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.  
 The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
 The Hon. Andrew Garran, LL.D., | John Christian Watson, Esq.,  
 Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from Mr. John Forsyth, Ryde, enclosing a description of a scheme for a circular railway "to connect the north shores of the Parramatta River with the main railway systems of the Colony."

Letter from Mr. Spencer Groves, Tumut, with reference to the Committee's inquiry respecting the proposed Railway from Gundagai to Tumut.

The correspondence was received.

The Committee further considered the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

James McMahon, carrier, and John Meloy, carrier, were sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY, 21 DECEMBER, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.  
 The Hon. Patrick Lindesay Crawford Shepherd, | William Thomas Dick, Esq.,  
 The Hon. Andrew Garran, LL.D., | John Christian Watson, Esq.,  
 Robert Henry Levien, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from the Clerk of the Legislative Assembly, informing the Committee of the passing by the Legislative Assembly of a resolution referring back to them for further consideration and report the expediency of constructing a line of railway from Grenfell to Wyalong, for the reason that the matter had not received sufficient consideration.

Dr. Garran moved,—“That a reply be forwarded to the Honorable the Speaker stating that, while recognising the authority of the Assembly to refer the matter back, and agreeing to reconsider the matter, the Committee respectfully take exception to the reason assigned for such reference, and draw attention to their report, and the evidence and plans attached thereto, which afford ample proof that the proposed railway received very full consideration in all its bearings.”

The motion was seconded by Mr. Shepherd, and passed.

The Committee further considered the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

Edmund Charles Beckett, acting secretary, Geddes, Birt, & Co., steamship agents, and James Powell, late Collector of Customs, Sydney, were sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 9th January, 1900.

TUESDAY, 9 JANUARY, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.  
 The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
 William Thomas Dick, Esq., | Robert Henry Levien, Esq.,  
 John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary reported that he had received from Mr. John McFarlane the declaration, necessary under the 6th clause of the Public Works Act, to be made by a Member of the Committee before entering on the duties of his office or sitting at any meeting.

The Secretary read the following correspondence :—

Letters from the Clerk of the Legislative Assembly, informing the Committee of the passing by the Assembly of a resolution referring back to them for further consideration and report the proposed "extension of the railway system of the Colony from the present terminus at Redfern into the city, including the erection of a large central station in the north-western division of the park, fronting St. James' Road," in view of certain proposals to deviate from the route already recommended; and resolutions referring to them, for consideration and report, the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney; a line of railway from Grafton to Casino; and a line of railway from Bowral to Robertson.

Letter from the Under Secretary and Commissioner for Roads, Department of Public Works, enclosing for the information of the Committee a copy of a petition in favour of the construction of a railway from Narrabri West to Wee Waa.

Letter from Mr. Alexander Wilson, with reference to the proposed Railway from Wellington to Werris Creek, and a route from Curlewis to Gilgandra.

Letter from the Secretary, Co-operative Wool and Producer Co., Ltd., with reference to the Committee's inquiry respecting the proposed Improvements at Glebe Island.

The correspondence was received.

The following accounts were passed for payment:—

	£	s.	d.
J. Fairfax and Sons ( <i>Sydney Morning Herald</i> ), advertising	...	...	...
Daily Telegraph Newspaper Co. (Limited), advertising	...	...	...
Sullivan Bros. ( <i>Gundagai Independent</i> ), advertising	...	...	...
S. Bennett ( <i>Evening News</i> ), advertising	...	...	...

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Francis Henry Wilson, Chief Clerk, Department of Lands, and Acting Chairman of the Metropolitan Land Board, was sworn, and examined.

Mr. Levien gave notice that he would move, at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed wharfage, Woolloomooloo Bay, with a view to reporting on the subject to the Legislative Assembly.”

The Committee adjourned at 10 minutes past 4, until 2 o'clock p.m. on Friday, the following day.

#### FRIDAY, 2 FEBRUARY, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,

The Hon. Andrew Garran, LL.D.,

William Thomas Dick, Esq.,

John Christian Watson, Esq.,

Robert Henry Levien, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

John Harper, Chief Traffic Manager, Department of Railways, was sworn, and further examined.

Mr. Shepherd gave notice that he would move, at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed Railway from Gundagai to Tumut, with a view to reporting on the subject to the Legislative Assembly.”

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Joseph Henry Maiden, Director of the Botanic Gardens; James McMahon, carrier; and Charles Lyne, Secretary, Parliamentary Standing Committee on Public Works, were sworn, and examined.

Mr. Levien moved,—“That the Committee proceed to consider the evidence on the proposed wharfage, Woolloomooloo Bay, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Shepherd, and passed.

Mr. Levien moved,—“That, in the opinion of the Committee, it is expedient the proposed construction of about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney, as referred to the Committee by the Legislative Assembly, be carried out; and the Committee recommend that the proposed new wharf be extended northward a further distance of 100 feet.”

The motion was seconded by Mr. Shepherd, and passed.

The Committee further considered the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

Mr. Watson moved,—“That the Committee proceed to consider the evidence on the proposed Glebe Island Improvements, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. McFarlane, and passed.

Mr. Watson moved,—“That, in the opinion of the Committee, it is not expedient the proposed Glebe Island Improvements, as referred to the Committee by the Legislative Assembly, be carried out; but they recommend the carrying out of that portion of the improvements which comprises the cutting down of a part of the island, and the partial reclamation of the foreshores, at an estimated cost of £38,000.”

Dr. Garran seconded the motion.

The debate was adjourned.

The Committee adjourned at 4 o'clock, until 10 o'clock a.m. on Saturday, the following day.

SATURDAY,

SATURDAY, 3 FEBRUARY, 1900.

The Committee met at 10 a.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.	
The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.,
The Hon. Andrew Garran, LL.D.,	Robert Henry Levien, Esq.,
William Thomas Dick, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of cutting down Glebe Island, reclaiming the foreshores, and constructing a wharf round the island.

The adjourned debate upon Mr. Watson's motion,—“That, in the opinion of the Committee, it is not expedient the proposed Glebe Island Improvements, as referred to the Committee by the Legislative Assembly, be carried out; but they recommend the carrying out of that portion of the improvements which comprises the cutting down of a part of the island, and the partial reclamation of the foreshores, at an estimated cost of £38,000,”—was resumed.

The motion was passed on the following division:—

Ayes, 5.	Noes, 2.
Dr. Garran,	Mr. Trickett,
Mr. Dick,	Mr. Shepherd.
Mr. Watson,	
Mr. Levien,	
Mr. McFarlane.	

The Committee further considered the expediency of constructing a line of Railway from Gundagai to Tumut.

Mr. Shepherd moved,—“That the Committee proceed to consider the evidence on the proposed Railway from Gundagai to Tumut, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Levien, and passed.

Mr. Shepherd moved,—“That, in the opinion of the Committee, it is expedient the proposed Railway from Gundagai to Tumut, as referred to the Committee by the Legislative Assembly, be carried out: Provided that some satisfactory arrangement be made whereby the district benefited shall contribute to the Railway Commissioners such sum as may be necessary to make good any loss on the construction and working of the line,—and not otherwise.”

Mr. Watson seconded the motion.

Mr. McFarlane moved,—“That the motion be amended by the omission of all the words after the word ‘out.’”

The amendment was negatived on the following division:—

Ayes, 2.	Noes, 5.
Mr. Levien,	Mr. Trickett,
Mr. McFarlane.	Mr. Shepherd,
	Dr. Garran,
	Mr. Dick,
	Mr. Watson.

The motion was then passed.

The Committee adjourned at 12 o'clock noon, until 2 o'clock p.m. on Tuesday, 6th February.

TUESDAY, 6 FEBRUARY, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.	
The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.,
The Hon. Andrew Garran, LL.D.,	Robert Henry Levien, Esq.,
William Thomas Dick, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Honorary Secretary, Cootamundra District Council, with reference to railway extension towards Hillston.

The correspondence was received.

The following accounts were passed for payment:—

	£	s.	d.
Spencer Groves ( <i>Tumut and Adelong Times</i> ), advertising...	...	...	...
T. H. Bell ( <i>Western Grazier</i> ), advertising...	...	...	...

A. Elworthy ( <i>Gundagai Times</i> ), advertising...	...	...	...
John Sands, <i>Sydney Directory</i> ...	...	...	...
	£3	6	0

The Committee proceeded to consider the reference back to them, for further consideration and report, in view of certain proposals to deviate from the route already recommended, of the proposed extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large central station in the north-western division of the Park, fronting St. James' Road.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, was sworn, and examined.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, explained the plans relating to the several schemes referred to in the Under Secretary's evidence.

The Committee adjourned at 10 minutes past 4, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY,

*WEDNESDAY, 7 FEBRUARY, 1900.*

The Committee met at the Redfern Railway Station at 2 p.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	John Christian Watson, Esq.,
The Hon. Andrew Garran, LL.D.,	Robert Henry Levien, Esq.,
William Thomas Dick, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large central station.

John Parry, Outdoor Traffic Superintendent, Department of Railways, explained to the Committee, from plans, the condition of the Redfern Railway Station and yard and the difficulties experienced in working the traffic.

Accompanied by Mr. Parry and by Mr. Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, the Committee then inspected the railway yard, and subsequently visited the proposed site for a central station near Devonshire-street, and that portion of Belmore Road and Belmore Park which, in the scheme for extending the railway into the city, is crossed by viaduct.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Thursday, the following day.

*THURSDAY, 8 FEBRUARY, 1900.*

The Committee met at 2 p.m.

**MEMBERS PRESENT:—**

The Committee then left Coolah, and, taking the main road to Gunnedah, passed Queensborough and Binnia pastoral holding, and then branching off on the road to Coonabarabran travelled direct to Weetalibah, and on to Ulinda, which was reached at 5 p.m.

*TUESDAY, 8 MAY, 1900.*

Continuing their journey of inspection and inquiry in connection with the proposed Railway from Wellington to Werris Creek, the Committee left Ulinda at 9:15 a.m., and reached Binnaway at 10 a.m.

The Committee met at the "Exchange Hotel," Binnaway, at 10:15 a.m.

*MEMBERS PRESENT:—*

William Thomas Dick, Esq., Vice-President.

The Hon. Patrick Lindesay Crawford Shepherd,	Robert Henry Levien, Esq.,
John Christian Watson, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

David Innes Watt, grazier, Ulinda; Frank John Sheppard, grazier and farmer, Mooren; Robert Beames, farmer and grazier, Binnaway; Samuel George Sheumack, farmer, Binnaway; and Charles Naseby McWhirter, hotelkeeper, Binnaway, were sworn, and examined.

The Committee then left Binnaway for Coonabarabran, arriving there at 20 minutes past 5 p.m.

*WEDNESDAY, 9 MAY, 1900.*

The Committee met at Court-house, Coonabarabran, at 10:30 a.m.

*MEMBERS PRESENT:—*

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindsay Crawford Shepherd,	Robert Henry Levien, Esq.,
John Christian Watson, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Kenneth Murchison, journalist, Robert Neilson, storekeeper, Richard Johnson Parker, manager, Coonabarabran Branch, Australian Joint Stock Bank, William Nash, grazier, Frederick George Failes, M.R.C.S., Eng., George Edgar Wright, Road superintendent, Alexander Deans, butcher, John Henderson, grazier, Edwin May-Steers, Stock Inspector, John Taylor, farmer and carrier, and Thomas Deans, farmer and grazier, were sworn, and examined.

The Committee adjourned at 10 minutes past 4 p.m., until 8 o'clock a.m. on Thursday, the following day.

*THURSDAY, 10 MAY, 1900.*

The Committee met at the "Club House Hotel," Coonabarabran, at 8 a.m.

*MEMBERS PRESENT:—*

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	Robert Henry Levien, Esq.,
John Christian Watson, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

In continuation of their inquiry with reference to the proposed Railway from Wellington to Werris Creek, the Committee then left Coonabarabran for Bundella, and reached Weetalibah at 5 p.m.

The Committee met at "Morven," Weetalibah Homestead, at 8 p.m.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

James Mair Alison, grazier, Oakey Creek, made an affirmation, and was examined.

John McMaster, grazier, Binnia, was sworn, and examined.

The Committee adjourned at a quarter past 9 p.m., until 9 o'clock a.m. on Friday, the following day.

*FRIDAY, 11 MAY, 1900.*

The Committee met at "Morven," Weetalibah Homestead, at 9:30 a.m.

*MEMBERS PRESENT:—*

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,	Robert Henry Levien, Esq.,
John Christian Watson, Esq.,	John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Leaving

Leaving "Morven," close to which the route of the proposed Railway from Wellington to Werris Creek passes, the Committee, keeping close to the railway route all the way, travelled up the valley of Weetalibah Creek; thence from where that creek joins Oakey Creek, up the valley of the latter, to Oakey Creek station; and thence by way of the Gunnedah-road to The Flags.

The Committee met at "The Flags Hotel," Bomera, at 12.30 p.m.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Donald M'Gillivray, station manager, Bomera; Charles John Smith, grazier and farmer, Tambar Springs; Frederick John Turner, farmer, grazier, and storekeeper, Tambar Springs; and James Nicholas O'Rourke, farmer and grazier, Tambar Springs, were sworn, and examined.

The Committee then left Bomera, and, crossing the railway route, took the track to Rockgedgel station, and thence followed the main road to Bundella, where they arrived at 6 p.m.

The Committee met at the "Bundella Hotel," Bundella, at 8 p.m.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Hugh M'Master, grazier, Rockgedgel; Thomas James Finlay, junior, grazier, Bundella; Thomas Davidson, farmer, Merrigala; Robert Thomas Slack Smith, station manager, Merrigala; Edward Hayden, farmer, The Plantation; Richard John Stevenson, grazier, Brennan's Gap; Boyd Peter Sievers, grazier, Brennan's Gap; Richard Curtis, farmer and grazier, Brennan's Gap; and John Ewbank, grazier and storekeeper, Bundella, were sworn, and examined.

The Committee adjourned at 10 p.m., until 9 o'clock a.m. on Saturday, the following day.

#### SATURDAY, 12 MAY, 1900.

The Committee met at Bundella Homestead, at 9 a.m.

##### MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
John Christian Watson, Esq.,

Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Resuming their journey of inspection and inquiry with reference to the proposed Railway from Wellington to Werris Creek, the Committee left Bundella, and taking the Quirindi-road over a low saddle in a spur of the Liverpool Range, travelled to Colly Blue.

The Committee met at the "Colly Blue Hotel," Colly Blue, at 12 o'clock noon.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Thomas Woore Busby, grazier, Colly Blue; Alexander Pyke, storekeeper, Yarraman; Francis Lord, farmer, Spring Ridge; Francis Wilson Darby, farmer and grazier, Coolanbilla; and William Douglas Simpson, grazier, Trinkey, were sworn, and examined.

Leaving Colly Blue the Committee journeyed to Spring Ridge.

The Committee met at the "Spring Ridge House," Spring Ridge, at 4.45 p.m.

George Clift, grazier, Breeza; Archibald Campbell, grazier, Spring Ridge; Richard Kingston, farmer, Spring Ridge; David Lawrence, sawmiller, Spring Ridge; and Charles Binnie, grazier, Spring Ridge, were sworn, and examined.

The Committee adjourned at 7 p.m., until 9 o'clock a.m. on Monday, 14th May.

#### MONDAY, 14 MAY, 1900.

The Committee, leaving Spring Ridge on Sunday at 9.30 a.m., journeyed to Werris Creek, arriving there at 2 p.m.

The Committee met at the Werris Creek Railway Refreshment Rooms on Monday, at 9 a.m.

##### MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
John Christian Watson, Esq.,

Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Samuel Clift, pastoralist, East Maitland; James Scott, farmer, Terrible Vale; Michael Joseph Daly, farmer and grazier, Currabubula; Michael Henry Ryan, grazier, Walhallow; and Henry Thomas Lucerne, butcher and stockbuyer, were sworn, and examined.

At 11.47 a.m. the Committee left Werris Creek for Quirindi, where they met at 3 p.m.

The Committee proceeded to consider their Seventeenth General Report to His Excellency the Governor.

The Report was adopted, and the Chairman was authorised to sign it for presentation to His Excellency the Governor.

The Committee then interviewed the Mayor, together with some of the aldermen and residents, of Quirindi, with reference to the proposed Railway from Wellington to Werris Creek, and, finding that they were not prepared with evidence in the inquiry, left for Tamworth by train at 7.14 p.m.

TUESDAY,

*TUESDAY, 15 MAY, 1900.*

The Committee met at the Council Chambers, Tamworth, at 10:30 a.m.

## MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.  
 The Hon. Patrick Lindesay Crawford Shepherd, | Robert Henry Levien, Esq.,  
 John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

	31	10	0
	£63	0	0

The Committee adjourned at quarter-past 4 p.m., until half-past 7 o'clock a.m. on Monday, 21st May.

#### MONDAY, 21 MAY, 1900.

The Committee met at the "Club House Hotel," Narrabri, at 7.30 a.m.

##### MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

In continuation of their inquiry respecting the proposed Railway from Narrabri to Walgett, with branch to Collarenebri, the Committee, accompanied by Mr. C. McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, then left Narrabri to inspect the route of the proposed railway, and to take further evidence, and, dividing into three parties in order to see as much as possible of the land along and in the vicinity of the route, travelled to Wee Waa, which was reached at 3 p.m.

The Committee met at the Court-house, Wee Waa, at 3.30 p.m.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collarenebri.

Laurence Brennan, pastoralist, The Brae, Wee Waa; Stephen Dempsey, selector, Pilliga; Walter William Richard Holcombe, grazier, Weetawaa; George McFarlane, grazier and farmer, Sandy Hook; William Hocken, grazier, Rossmore; Joseph Wall, grazier, Apple Tree Clump; Albert Coppleson, storekeeper, Wee Waa; Ernest Albert Anniversary Holcombe, settlement lessee, Wee Waa; Arthur George Lane, homestead selector, Wee Waa; Charles Peter O'Rourke, hotel-keeper, Wee Waa; Archibald Mackenzie, grazier, Wee Waa; Sydney Powell, grazier, Pilliga; and Cornelius Kelaher, grazier, Pian Creek, were sworn, and examined.

The Committee adjourned at a quarter-past 9 p.m., until half-past 8 a.m. on Tuesday, the following day.

#### TUESDAY, 22 MAY, 1900.

The Committee met at the "Imperial Hotel," Wee Waa, at 8.30 a.m.

##### MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Resuming their journey of inspection and inquiry with reference to the proposed Railway from Narrabri to Walgett, with branch to Collarenebri, the Committee then left Wee Waa for Burren. Dividing again, two members of the Committee proceeded to the north side of the Namoi River to examine

examine the country along the route for the railway from East Narrabri, between Wee Waa and Tulladurra, while the two other members visited Sandy Hook and a number of homestead selections between Wee Waa and Pilliga.

Burren Station was reached by one portion of the Committee at 7 p.m.; the other members, in consequence of rain and the bad condition of the roads, being detained at Rossmore, where they arrived at 6:30 p.m.

*WEDNESDAY, 23 MAY, 1900.*

The Committee met at Burren Homestead, at 9 a.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Leaving Burren Homestead at 10:20 a.m., the Committee reached Burren at 12:35 p.m., and met at the "Burren Hotel," at 3 p.m.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

Robert Darvall Barton, grazier, Burren; James Cousins Duncan, hotel-keeper and grazier, Burren; James Joseph Burrell, settlement lessee, Merrywinbone; Gerald Loder Herring, grazier, Rose Lea; Alexander Donaldson, settlement lessee, Merrywinbone; William Cusson Cormie, grazier, Mercadool and Merrywinbone; and William Green, selector, Burren, were sworn, and examined.

The Committee adjourned at 10 minutes past 5 p.m., until 9 o'clock a.m. on Thursday, the following day.

*THURSDAY, 24 MAY, 1900.*

The Committee met at the "Burren Hotel," Burren, at 9 a.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Burren being near the point of junction of the proposed Railways, Narrabri to Walgett, with branch to Collareendabri, the Committee divided, Mr. Dick, Mr. Watson, and Mr. McFarlane proceeding to Collareendabri, *via* Merrywinbone, to inspect the route for the proposed line to that town, and to take evidence, and Mr. Shepherd to Walgett, in the vicinity and along the route of the Narrabri-Walgett line.

Following the route of the railway to Collareendabri, Mr. Dick, Mr. Watson, and Mr. McFarlane travelled through Burren and Merrywinbone Holdings to the "Avondale Hotel," 20 miles from Collareendabri, where they arrived at 5:30 p.m.

Mr. Shepherd leaving Burren, kept about 8 miles to the north of the surveyed line to Walgett, crossing the branch railway to Collareendabri at Old Burren, and thence proceeding to Gorian Station, 12 miles from Burren, where he arrived at 5 p.m.

*FRIDAY, 25 MAY, 1900.*

The Committee met at 2 p.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

Continuing their journey in connection with the proposed branch Railway to Collareendabri, Mr. Dick, Mr. Watson, and Mr. McFarlane, following the travelling stock route which is also the route of the proposed line, reached Collareendabri at 2 p.m.

The Committee met at "Tattersall's Hotel," Collareendabri, at 3:30 p.m.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

Edmund Brennan Loughnan, J.P., Honorary Secretary, Railway League, Collareendabri; Stanley James Greenaway, settlement lessee, Oreel (Merrywinbone), and representative of Thalaba Farmers' and Settlers' Association; Joseph William Cook Langhorne, grazier, Oreel; Charles Edward Brown, homestead lessee, "Derrima," Bundaborina; and Alfred Blomfield, homestead lessee and selector, Mount Brandon, near Collareendabri, were sworn, and examined.

The Committee adjourned, at 5:30 p.m., until half-past 10 o'clock a.m. on Saturday, the following day, but in the meantime inspected the site for the railway bridge crossing the Barwon River, about 2 miles above the town of Collareendabri, and the station yard.

Mr. Shepherd leaving Gorian at 9 a.m., and travelling from 2 to 6 miles from the route for the railway to Walgett, reached Cryon Station, 14 miles from Gorian, at 5:30 p.m.

*SATURDAY,*

SATURDAY, 26 MAY, 1900.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

Mr. Dick, Mr. Watson, and Mr. McFarlane met at "Tattersall's Hotel," Collareendabri, at 10.30 a.m.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

Francis Kirby, grazier, "Frankston," near Collareendabri; John Francis Kirby, grazier, "Bolaro," near Collareendabri; Wyndham Dallas Bruce, homestead lessee, "Dumeinda," Gundabluie; William Henry Wordsworth, J.P., storekeeper, Collareendabri; and Charles Seymour, hotel-keeper, Moongulla Bore, Angledool-road, were sworn, and examined.

The Committee adjourned at 12.30 p.m.

Mr. Shepherd left Cryon Station at 6.50 a.m., and, continuing his inspection of the Narrabri-Walgett Railway route, travelled close to and along the route to Walgett, where he arrived at 10.30 p.m.

MONDAY, 28 MAY, 1900.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

In continuation of the Committee's inquiry respecting the proposed Railway from Narrabri to Walgett, with branch to Collareendabri, Mr. Dick, Mr. Watson, and Mr. McFarlane left Collareendabri at 1 o'clock on Sunday afternoon, and, travelling *via* Mercadool and Eurie Eurie, arrived at Walgett at half-past 4 o'clock p.m. on Monday, the following day. At Walgett they were joined by Mr. Shepherd.

TUESDAY, 29 MAY, 1900.

The Committee met at the Court-house, Walgett, at 10.30 a.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the four previous meetings were read, and confirmed.

The Committee further considered the expediency of constructing a line of railway from Narrabri to Walgett, with branch to Collareendabri.

Thomas Clarke, Honorary Secretary, Railway League, Walgett; Isaac Collins, sheep farmer, Barwon Vale, Walgett; Horatio William Smith, selector, Eurie Eurie, near Walgett; Charles Speight Haigh, storekeeper, Walgett; John Young Bell, grazier, Marsh Mead, near Walgett; Robert Moyse, Stock Inspector, Walgett; Abram Falstein, storekeeper, Walgett; Robert Henderson Duncan, homestead lessee, Narran Point, near Walgett; Charles Neam Vaughan, storekeeper, Walgett; Andrew Essex Scott, pastoralist, Gingie, near Walgett; George Matthews, grazier, Forest Lodge, near Walgett; Charles Edward Colwell, settlement lessee, Prospect, near Walgett; William Vanstone, hotel-keeper, Walgett; Terence Francis Fagan, coachbuilder, Walgett; and Archibald Edward Park Skinner, stock and station agent, Walgett, were sworn, and examined.

The Committee adjourned at half-past 4, until 9 o'clock a.m. on Wednesday, the following day.

WEDNESDAY, 30 MAY, 1900.

The Committee met at the "Imperial Hotel," Walgett, at 9 a.m.

MEMBERS PRESENT:—

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

In continuation of their inquiry respecting the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri, the Committee then left Walgett for Coonamble, to take evidence there with regard to connecting Walgett by railway with Coonamble, as suggested by the Railway Commissioners in their report upon the Narrabri-Walgett proposal.

The Committee reached Combogolong at 5 o'clock p.m.

THURSDAY,

*THURSDAY, 31 MAY, 1900.*

The Committee met at the "Bridge Hotel," Combogolong, at 8:30 a.m.

**MEMBERS PRESENT :—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Resuming their journey to Coonamble, in connection with their inquiry respecting the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri, the Committee then left Combogolong, and reached Coonamble at half-past 6 o'clock p.m.

*FRIDAY, 1 JUNE, 1900.*

The Committee met at the Municipal Council Chambers, Coonamble, at 10:30 a.m.

**MEMBERS PRESENT :—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing a line of Railway from Narrabri to Walgett, with branch to Collareendabri.

George Charles Arthur Cobb, forwarding and coach agent, Coonamble; Donald Fletcher, President, Coonamble section of Dubbo-Coonamble Railway League; Thomas William Medley, Stock Inspector, Coonamble; William Pedley, cordial manufacturer; Henry Lyons, representative of Wright, Heaton, & Co., Coonamble; and Charles McDonnell Stuart, Supervising Engineer, Railway Construction Branch, Department of Public Works, were sworn, and examined.

The Committee adjourned at a quarter to 12 noon, and at 2 o'clock p.m. left for Galargambone, on their way to Gilgandra.

*SATURDAY, 2 JUNE, 1900.*

The Committee met at the "Galargambone Hotel," Galargambone, at 9 a.m.

**MEMBERS PRESENT :—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee then left Galargambone for Gilgandra, where they arrived at a quarter to 4 p.m., and took evidence with regard to the suggested route from Gilgandra to Curlewis, as an alternative route to that in connection with the proposed Railway from Wellington to Werris Creek.

The Committee met at the "Telegraph Hotel," Gilgandra, at 4:30 p.m.

The Committee further considered the expediency of constructing a line of Railway from Wellington to Werris Creek.

Alfred Arthur Mudie, Secretary, Gilgandra Railway League, Gilgandra; Arthur Frederick Garling, storekeeper, Gilgandra; Archibald Campbell Berry, senior-constable and Clerk of Petty Sessions, Gilgandra; and Richard Gware Hitchen, farmer and grazier, near Gilgandra, were sworn, and examined.

The Committee adjourned at a quarter to 6 p.m., until 8 o'clock a.m. on Monday, 4th June.

*MONDAY, 4 JUNE, 1900.*

The Committee met at the "Telegraph Hotel," Gilgandra, at 8 a.m.

**MEMBERS PRESENT :—**

William Thomas Dick, Esq., Vice-Chairman.

The Hon. Patrick Lindesay Crawford Shepherd, | John Christian Watson, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee, having completed their inspection and inquiry in the country with reference to the proposed Railway from Wellington to Werris Creek, and the proposed Railway from Narrabri to Walgett, with branch to Collareendabri, then left Gilgandra for Sydney, where they arrived by train from Dubbo at a quarter to 6 o'clock a.m. on Tuesday, the following day.

*TUESDAY,*

TUESDAY, 5 JUNE, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letters from Messrs. C. L. Garland, J. Miller, W. N. Willis, M.P., and H. McLachlan, Secretary to the Railway Commissioners, with reference to the proposed Railway from Narrabri to Walgett, with branch to Collarendabri.

Letters from Messrs. W. A. Holman, M.P., and R. R. P. Hickson, Under Secretary, Department of Public Works, with reference to the proposed Railway from Grenfell to Wyalong.

The Committee further considered the reference back to them, for further consideration and report of the proposed Railway from Grenfell to Wyalong.

Mr. Watson moved, by consent, without notice,—“That Mr. Shepherd, Mr. Levien, and Mr. McFarlane be appointed a Sectional Committee to make a further inspection with reference to the proposed Railway from Grenfell to Wyalong.”

The motion was seconded by Mr. Dick, and passed.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station.

Mr. Dick gave notice that he would move at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed extension of the Railway into the City of Sydney, with a view to reporting on the subject to the Legislative Assembly.”

The Chairman drew the attention of the Committee to the fact that the reply of Mr. Norman Selfe to the comments of the Government officials on his scheme for city railway extension contained an introductory statement regarding his qualifications and credentials as a civil engineer, which he had informed the Committee he desired only to bring under their notice, and which might, without injury to the reply, be omitted; and the omission of this portion of the reply was agreed to.

The Committee further considered the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Mr. Dick gave notice that he would move at the next meeting of the Committee,—“That the Committee proceed to consider the evidence on the proposed Central Railway Station, Devonshire-street, with a view to reporting on the subject to the Legislative Assembly.”

The Committee proceeded to consider their report to the Legislative Assembly on the proposed Railway from Gundagai to Tumut.

The report was adopted, and the Chairman was authorised to sign it for presentation to the Legislative Assembly.

The Committee adjourned at 5 minutes to 4, until 2 o'clock p.m. on Wednesday, the following day.

WEDNESDAY, 6 JUNE, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Accounts amounting to £64 16s. 3d. were passed.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station.

Mr. Dick moved,—“That the Committee proceed to consider the evidence on the proposed extension of the Railway into the City of Sydney, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Dr. Garran, and passed.

The Committee further considered the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the railway system of the Colony thereto.

Hugh McLachlan, Secretary to the Railway Commissioners, was sworn, and examined.

Mr. Dick moved,—“That the Committee proceed to consider the evidence on the proposed Central Railway Station, Devonshire-street, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Watson, and passed.

With a view to arriving at a general agreement as to the points in the evidence necessary to be considered before coming to a decision, the evidence in the two inquiries—that relating to the proposed extension of the Railway into the City of Sydney, and that respecting the proposed Central Railway Station, Devonshire-street—was then submitted to a general discussion.

The Committee adjourned at 20 minutes past 4, until 2 o'clock p.m. on Thursday, the following day.

THURSDAY,

THURSDAY, 7 JUNE, 1900.

The Committee met at 2 p.m.

MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. Thomas Brown, M.P., with reference to the Committee's inquiry respecting the proposed Railway from Grenfell to Wyalong.

The correspondence was received.

An account amounting to 15s. was passed.

The Committee further considered the expediency of extending the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station.

The Secretary reported that the Engineer-in-Chief for Railway Construction desired to appear before the Committee and make a supplementary statement with reference to the proposed extension of the Railway into the City of Sydney, and the Committee decided that, as the evidence in the inquiry had been closed, it was undesirable that the inquiry should be re-opened.

Dr. Garran moved,—“That the Committee having given due consideration to the resolution of the Legislative Assembly of the 20th December, 1899,—‘That it is expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James' Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, be referred back to the Public Works Committee for further consideration and report, in view of certain proposals to deviate from the route already recommended,’ and having given special consideration to the new proposals submitted, have arrived at the following conclusions:—

- “1. That the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient.
- “2. That it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present station.
- “3. That the best plan will be to extend the railway into the city and erect a terminal station there, as this will give the suburban passengers what they have so long demanded, viz., a station nearer to the business centre of Sydney.
- “4. That of all the extension schemes submitted to the Committee the simplest, the most economical, and the easiest of construction is the scheme known as the St. James' Road scheme, being that originally proposed by the Railway Commissioners. The Committee, therefore, endorses the recommendation made by the previous Public Works Committee in its report dated the 26th August, 1897.”

Mr. Trickett seconded the motion.

Mr. Dick moved,—“That the motion be amended by omitting all the words after the word ‘station’ in paragraph 2, and inserting in lieu thereof the following words:—

- “(3.) That the best plan will be to extend the railway to the north of Devonshire-street and there construct a commodious station and administrative offices.
- “(4.) That in view of the foregoing it is not expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James' Road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, nor the deviations suggested in the reference of the 7th December, 1899, be carried out.”

The question,—“That the words proposed to be omitted stand part of the motion,”—was negatived on the following division:—

Ayes, 2.

Mr. Trickett,  
Dr. Garran,

Noes, 5.

Mr. Shepherd,  
Mr. Dick,  
Mr. Watson,  
Mr. Levien,  
Mr. McFarlane.

The question,—“That the words proposed to be inserted be so inserted,”—was passed on the following division:—

Ayes, 5.

Mr. Shepherd,  
Mr. Dick,  
Mr. Watson,  
Mr. Levien,  
Mr. McFarlane.

Noes, 2.

Mr. Trickett,  
Dr. Garran.

The question,—“That the resolution, as amended, be now agreed to,”—was passed, on the following division:—

Ayes, 5.

Mr. Shepherd,  
Mr. Dick,  
Mr. Watson,  
Mr. Levien,  
Mr. McFarlane.

Noes, 2.

Mr. Trickett,  
Dr. Garran.

On

On the question,—“That the following be the resolution of the Committee” :—

“That the Committee, having given due consideration to the resolution of the Legislative Assembly of the 20th December, 1899, that it is expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large central station in the north-western division of the Park, fronting St. James' road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, be referred back to the Public Works Committee for further consideration and report, in view of certain proposals to deviate from the route already recommended—and having given special consideration to the new proposals submitted, have arrived at the following conclusions :—

- “1. That the accommodation for passenger traffic at the present Redfern terminus is wholly insufficient.
- “2. That it would be better in every respect to construct an entirely new station than to attempt a reconstruction of the present station.
- “3. That the best plan will be to extend the railway to the north of Devonshire-street, and there construct a commodious station and administrative offices.
- “4. That in view of the foregoing, it is not expedient that the extension of the railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large central station in the north-western division of the Park, fronting St. James' road, as referred by the Legislative Assembly to the Parliamentary Standing Committee on Public Works, nor the deviations suggested in the reference of the 7th December, 1899, be carried out.”

The Committee divided.

Ayes 5.

Mr. Shepherd,  
Mr. Dick,  
Mr. Watson,  
Mr. Levien,  
Mr. McFarlane.

Noes 2.

Mr. Trickett,  
Dr. Garran.

The resolution was therefore passed.

The Committee further considered the expediency of erecting a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and extending the Railway System of the Colony thereto.

Mr. McFarlane moved,—“That, in the opinion of the Committee, it is expedient that the proposed erection of a Central Railway Station and Administrative Offices on the north side of Devonshire-street, and the extension of the railway system of the Colony thereto, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Shepherd seconded the motion.

The motion was passed on the following division :—

Ayes 5.

Mr. Shepherd,  
Mr. Dick,  
Mr. Watson,  
Mr. Levien,  
Mr. McFarlane.

Noes 2.

Mr. Trickett,  
Dr. Garran.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Friday the following day.

---

FRIDAY, 8 JUNE, 1899.

The Committee met at 2 p.m.

MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.

The Hon. Patrick Lindesay Crawford Shepherd,  
The Hon. Andrew Garran, LL.D.,  
William Thomas Dick, Esq.,

John Christian Watson, Esq.,  
Robert Henry Levien, Esq.,  
John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Committee further considered the expediency of constructing works in connection with the Tuckian Flood Escape Scheme.

Thomas Thomson Ewing, Esq., M.P. was sworn, and examined.

The Committee adjourned at 4 o'clock, until 2 o'clock p.m. on Tuesday, 12th June

---

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## SECTIONAL COMMITTEE.

### Railway from Grafton to Casino.

#### MINUTES OF PROCEEDINGS.

MINUTES of the Proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works, appointed on Thursday, 22nd February, 1900, to inspect, take evidence, and report with reference to the proposed Railway from Grafton to Casino.

*MONDAY, 26 FEBRUARY, 1900.*

The Sectional Committee met at the "Yamba Hotel," Yamba, Clarence River Heads, at 8:30 a.m.

#### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

On the motion of Mr. Watson, seconded by Mr. McFarlane, the Hon. W. J. Trickett was elected Chairman.

The Sectional Committee inspected the works at the entrance to the Clarence River, the particulars of which were explained to them by Mr. H. A. Blomfield, District Engineer, Harbours and Rivers Department.

The Sectional Committee received a deputation at the "Yamba Hotel" from the Yamba Progress Association, on the subject of the harbour works.

Mr. D. Tullock, Chairman of the Association, read a petition urging the importance of proceeding with the outer works, in accordance with the scheme of Sir John Coode.

Mr. Tullock addressed the Sectional Committee in support of the petition.

The Chairman said the Committee had no power to make any recommendation in the matter, but he would have pleasure in sending on the petition to the Minister for Public Works.

The Sectional Committee proceeded up the Clarence River by the Government launch, calling at Palmer's Island, the Government Dock, near Maclean, the township of Maclean, the Government quarry, at which stone was being obtained for the harbour works, and Ulmarra, arriving at Grafton at 6 p.m.

*TUESDAY, 27 FEBRUARY, 1900.*

The Sectional Committee met at the Municipal Council Chambers, Grafton, at 10:30 a.m.

#### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

Mr. Samuel See, Mayor of Grafton, introduced a deputation consisting of the following gentlemen, on the subject of the works for the improvement of the entrance to the Clarence River:—Representing Grafton: Mr. Samuel See, Mayor; Aldermen Carson, Bawden, Maxted, Selman, McFarlane, Shore, and D. Beatson; Messrs. Crispin, Jackson, T. Page, E. G. Elworthy, A. Lipman, and G. H. Varley, Chairman of the Chamber of Commerce. Representing South Grafton: Mr. A. E. Schwinghammer, Mayor; and Alderman J. T. McKittrick. Representing Ulmarra: Mr. W. Baillie, Mayor; Aldermen Cameron and Morris. Representing Brushgrove: Messrs. T. C. Davis and Thomas Henderson. Representing Maclean: Mr. D. See, Mayor; and Alderman Lobban.

Several members of the deputation spoke in favour of the extension of the Southern breakwater, in order to improve the crossing at the Heads.

The Chairman said the Sectional Committee would lay before the Minister for Public Works the facts brought under its notice by the deputation.

The Sectional Committee proceeded to consider the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—Alexander Lobban, District Inspector of Schools; Samuel See, Mayor of Grafton; Joseph Spencer, storekeeper; George Henry Varley, Chairman, Grafton Chamber of Commerce; and David Baillie, grazier and dairy-farmer.

The Sectional Committee adjourned at 5 o'clock p.m.

*WEDNESDAY, 28 FEBRUARY, 1900.*

The Sectional Committee met at the Municipal Council Chambers, Grafton, at 10:30 a.m.

#### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The

The following witnesses were sworn, and examined:—Edward Ebsworth, District Surveyor; Angus McSwan, farmer; Cornelius Duggan, butcher and grazier; Frederick Vernon Hunter, licensed surveyor; John Henry Munro, stock and station agent; Duncan Beatson, ex-Mayor of Grafton; Henry Jordan, piano and music-seller; Thomas Page, accountant.

The Sectional Committee adjourned at 5 o'clock p.m.

#### THURSDAY, 1 MARCH, 1900.

The Sectional Committee met at the Municipal Council Chambers, Grafton, at 10.30 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—George Smith Stening, manager at Grafton for the Fresh Food and Ice Company, Limited; Edward Chapman Lewington, bank manager; William Small, junior, town clerk and auctioneer; Thomas J. Bawden, auctioneer; Abraham Lipman, commission agent; Edward Farrell, master mariner.

George Henry Varley, Chairman of the Grafton Chamber of Commerce; Edward Ebsworth, District Surveyor; and Samuel See, Mayor of Grafton, were sworn, and further examined.

The Sectional Committee then visited the proposed site of the railway station at Grafton, and drove along the railway route as far as the Junction, a distance of about 2 miles.

#### FRIDAY, 2 MARCH, 1900.

The Sectional Committee met at the "Crown Hotel," Grafton, at 7.45 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee left Grafton by special coach at 8 a.m., travelling along the Grafton-Casino road, and arrived at Myrtle Creek, a distance of 44 miles, at 7 p.m., having left the road at Sportsman-Creek and Camira Station, to inspect the country off the line.

The Sectional Committee met at the "Commercial Hotel," Myrtle Creek, at 8 p.m.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—Edward Thomas Smith, grazier; Cunningham Henderson, grazier; Thomas Francis O'Keeffe, grazier; Henry Valentine Rapp; George Henry McKee; Henry Harris; and Alfred Edward Harris.

The Sectional Committee adjourned at 10.30 p.m.

#### SATURDAY, 3 MARCH, 1900.

The Sectional Committee met at the "Commercial Hotel," Myrtle Creek, at 9 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded by special coach along the main road to Casino, a distance of 19 miles, arriving there at 12 o'clock noon.

The Mayor of Casino and the Secretary of the Casino Railway League were seen, but they had no evidence available for that afternoon. Later, Captain F. G. Fanning was introduced to the Committee, and his evidence was taken.

On Sunday the country in the Upper Richmond, in the direction of Kyogle, for about 16 miles, was inspected.

#### MONDAY, 5 MARCH, 1900.

The Sectional Committee met at the Town Hall, Casino, at 10 a.m.

##### MEMBERS PRESENT:—

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq.,

John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—Donald Campbell, grazier; Alfred Clark Simpson, storekeeper; Granville Moore Elliott, council clerk; James Golding Draper, sergeant of police; Edward James Robinson, butter-factory manager; William George Simpson, Mayor of Casino; Lawrence Edwin Cope, solicitor; and Charles Frederick Napier North, Road Superintendent.

The Sectional Committee left Casino by special coach at 3.30 p.m., and, travelling by the main road, arrived at Lismore, a distance of 19 miles, at 6 p.m.

TUESDAY,

*TUESDAY, 6 MARCH, 1900.*

The Sectional Committee met at the Municipal Council Chambers, Lismore, at 10.15 a.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.  
John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—Wilfred Parsley Pope, Inspector of Conditional Purchases; James Stocks, chemist; Denis Carroll, inspector of police; John William Pidcock, hotelkeeper; John Gibson, district manager, New South Wales Creamery and Butter Company; William Kennedy, Surveyor, Railway Construction Branch, Department of Public Works; Christopher Balger, mail contractor; and George Nesbitt, storekeeper.

The Sectional Committee adjourned at 4 p.m.

*WEDNESDAY, 7 MARCH, 1900.*

The Sectional Committee met at the Municipal Council Chambers, Lismore, at 10 a.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.  
John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing a line of Railway from Grafton to Casino.

The following witnesses were sworn, and examined:—Thomas Barton, mail contractor; and Louis O. Paulsen, master mariner.

The Sectional Committee adjourned at 11 a.m.

*TUESDAY, 13 MARCH, 1900.*

The Sectional Committee met at "Murray's Hotel," Ballina, at 8 p.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.  
John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee considered and adopted their report on the proposed Railway from Grafton to Casino.\*

**PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.***SECTIONAL COMMITTEE.***Tuckian Flood Escape Scheme.****MINUTES OF PROCEEDINGS.**

MINUTES of the Proceedings of the Sectional Committee of the Parliamentary Standing Committee on Public Works, appointed on Thursday, 22nd February, 1900, to inspect, take evidence, and report, with reference to the proposed Tuckian Flood Escape Scheme.

*WEDNESDAY, 7 MARCH, 1900.*

The Sectional Committee met at the Municipal Council Chambers, Lismore, at 11 a.m.

**MEMBERS PRESENT:—**

The Hon. William Joseph Trickett, Chairman.  
John Christian Watson, Esq., | John McFarlane, Esq.

The Sectional Committee proceeded to consider the expediency of constructing works in connection with the Tuckian Flood Escape Scheme.

The following witnesses were sworn, and examined:—Louis O. Paulsen, master mariner; John William Coleman, Mayor of Lismore; James Francis O'Flynn, engineer; and John Greenhalgh, fisherman.

The Sectional Committee adjourned at 1 p.m., having taken all the evidence available at Lismore.

*THURSDAY,*

\* See also Sectional Committee's proceedings on 13th March, in relation to proposed Tuckian Flood Escape Scheme.

*THURSDAY, 8 MARCH, 1900.*

The Sectional Committee met at the "Commercial Hotel," Lismore, at 9 a.m.

*MEMBERS PRESENT:—*

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded by Government launch down the Richmond River as far as Tucki wharf, where they were met by the Mayor of Coraki, and others. They then drove for about 5 miles along the Tucki Ridge, and from an elevated position were able to inspect a great portion of the country subject to flood, and obtain a comprehensive view of the proposed drainage scheme. They next visited the off-take site, and also the point at which the proposed channel would cross the Coraki Road, and afterwards proceeded to Coraki. The inspection occupied the greater part of the day.

*FRIDAY, 9 MARCH, 1900.*

The Sectional Committee met at "McFadden's Hotel," Coraki, at 10:30 a.m.

*MEMBERS PRESENT:—*

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing works in connection with the Tuckian Flood Escape Scheme.

The following witnesses were sworn, and examined:—John McKinnon, dairy farmer; Samuel Cook, grazier; William Yabsley, saw-mill proprietor and grazier; John Robert Fagan, Roman Catholic priest; John Storey, representative of the North Coast Shipping Company; George William Sharp, farmer and dairyman; and Samuel Baxter, farmer and dairyman.

Samuel Cook, grazier, was sworn, and further examined.

The Sectional Committee adjourned at 5 p.m.

*SATURDAY, 10 MARCH, 1900.*

The Sectional Committee met at "McFadden's Hotel," Coraki, at 9 a.m.

*MEMBERS PRESENT:—*

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee left Coraki by Government launch at 9:15 a.m., and arrived at Woodburn at 10:30 a.m. After inspecting the Tuckambil weir, about a mile from Woodburn, the Sectional Committee met at "Murray's Hotel."

The following witnesses were sworn, and examined:—William Gollan, grazier and dairy farmer; Alexander Meston, grazier and dairy farmer; Alexander Macpherson, dairy farmer and sugar-mill owner; John Lang, farmer; Thomas Casey, farmer; George McLean, grazier; John Carmichael, blacksmith; and Edward Murray, hotelkeeper.

The Sectional Committee left Woodburn by Government launch at 3:30 p.m., and arrived at Ballina at 7 p.m.

*MONDAY, 12 MARCH, 1900.*

On Sunday, the Sectional Committee inspected the northern and southern breakwaters, the training-walls, and other works at the entrance to the Richmond River.

On Monday, the Sectional Committee met at "Murray's Hotel," Ballina, at 8 a.m.

*MEMBERS PRESENT:—*

The Hon. William Joseph Trickett, Chairman.

John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee proceeded by Government launch to Broadwater, and met at the "Victoria Hall," where the following witnesses were sworn, and examined:—Albert Ernest Armbruster, grazier; William Frederick Armbruster, grazier; John Byrne, hotelkeeper and farmer; Thomas McFadden, hotelkeeper; and Edwin Collard, grazier.

At 2:30 p.m., the Sectional Committee proceeded by Government launch to Wardell, where the following witnesses were sworn, and examined:—William Anderson, farmer; James Gould, farmer; Patrick Baker, farmer; Edward Barrett Hollingworth, labourer; and Timothy O'Keeffe, farmer.

The Sectional Committee returned by Government launch to Ballina, where they arrived at 6 p.m.

*TUESDAY,*

*TUESDAY, 13 MARCH, 1900.*

The Sectional Committee met at the Court-house, Ballina, at 10.15 a.m.

## MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.  
 John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read, and confirmed.

The Sectional Committee further considered the expediency of constructing works in connection with the Tuckian Flood Escape Scheme.

The following witnesses were sworn, and examined :—William Webster, hotelkeeper ; Joseph John Lewis, tug-master ; John Guy Bagot, timber merchant ; Robert Adie Fraser, pilot ; William Edmund Kemp, Acting District Engineer, Harbours and Rivers Branch, Department of Public Works ; and Thomas McDonough, surveyor, Harbours and Rivers Branch, Department of Public Works.

It was here arranged that Messrs. Watson and McFarlane should, before returning to Sydney, visit and inspect the Tuckian Swamp, by way of the Broadwater.

The Sectional Committee adjourned at 5 p.m.\*

*TUESDAY, 20 MARCH, 1900.*

The Sectional Committee met at the Committee's Board-room, Sydney, at 1.45 p.m.

## MEMBERS PRESENT :—

The Hon. William Joseph Trickett, Chairman.  
 John Christian Watson, Esq., | John McFarlane, Esq.

The minutes of the previous meeting were read and confirmed.

The Sectional Committee considered and adopted their report.

USE OF THE GROSE, COLO, AND WARRAGAMBA RIVERS  
TO GENERATE ELECTRIC POWER.

(RETURN RESPECTING.)

*Printed under No. 16 Report from Printing Committee, 15 November, 1900.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 25th October, 1900, That there be laid upon the Table of this House,—

“All papers, including the report of an officer of the Public Works Department, relating to the recent inspection of the Grose, Colo, and Warragamba Rivers, with the object of discovering whether these waters might not be put to profitable use as a medium for the generation of electricity for city lighting and other purposes.”

(*Mr. J. C. L. Fitzpatrick.*)

Minute Paper.

Department of Public Works, Government Architect's Branch,  
Sydney, 25 July, 1900.

Proposal to utilise the waters in the Blue Mountain Streams for generating Electricity for Transportation, Lighting, and Motive Purposes.

IN accordance with the instructions of the Honorable the Secretary for Public Works, I have the honor to report having given most anxious and careful consideration to the above proposal. I have considered the question in all its bearings, and from every standpoint that occurred to me, viz.:—

- (a) Approximate quantity of electric current likely to be required in Sydney and immediate suburbs for traction, lighting, and other purposes.
- (b) Approximate quantity likely to be required for lighting and other purposes in towns *en route*.
- (c) The variations in the demand for current on different days, and at various times of the day, during the different seasons of the year.
- (d) The practicability of transmitting the maximum current from the generating station to Sydney.
- (e) The quantity of water necessary under various pressures to drive the generating machinery.
- (f) The quantity of water usually available in the several streams in summer months.
- (g) The average annual rainfall over the several watersheds, bearing in mind the period over which the rainfall extends; whether spread over a greater or lesser number of days, comparing one watershed with another, or whether it falls in heavy quantities either after prolonged dry weather or during general rains.
- (h) The necessity for, and possibility of, water storage on a large scale.
- (i) The effect that the controlling of flood waters and uniform discharge would have on the Hawkesbury River.
- (j) The possibility of supplying the small towns—Richmond, Windsor, Penrith, Riverstone, &c.—with water at all times, and of supplementing the Parramatta or Sydney supply in times of emergency.
- (k) The cost of the scheme.
- (l) The annual cost of working, annual revenue, and profit.

The

The remarkably low cost at which electric current could be supplied, compared with the general ruling rate, would unquestionably lead to a demand probably greater than could be satisfied from any one scheme. The difficulty of even approximately determining the quantity likely to be required is at once apparent, more particularly if private customers are to be served.

I can, however, form some idea, as, in order to satisfactorily cope with the existing and proposed tram services and for the electric trains (which I would suggest should be introduced for the city underground or overhead railway and suburban railways), a quantity approximately equal to 25,000 h.p. would be required during busy times. Major Cardew advised the City Council to provide generating plant for lighting purposes equal to 2,500 h.p., to be ultimately increased to 10,500 h.p.; and as the towns *en route* are to be served in addition, it will be at once seen that nothing less than 35,000 h.p. will be sufficient.

To meet such a heavy demand it would be necessary to provide for water storage on a comprehensive scale, as in dry weather the combined flow of all the available streams would not be anything like sufficient. The storm waters must be impounded and retained ready for use. The impounding of the flood waters would result beneficially to the inhabitants of the Hawkesbury valley during all seasons. The practically uniform discharge from the turbines would keep up a stream in dry weather, and during flood time the retention of the water in reservoirs would tend to minimise the disastrous results now experienced.

I have found it necessary to calculate very carefully whether it would be wiser to work under a high, medium, or low head of water. The advantages and difficulties in the way of each system have been anxiously weighed. It is at once apparent that an initial high-pressure system will permit of smaller machinery and a smaller quantity of water being used, but the effective catchment area would be so much reduced as to make it very doubtful whether sufficient water would be available. Again, the low-pressure system on such a large scale would require heavy and bulky generating plant, and unusually large tunnels, aqueducts, and reservoirs. On that account I have reluctantly decided that the splendid volume of water at all times available in the Warragamba and Colo Rivers must be sacrificed, their beds for a great distance being very little above Sydney high-water mark.

I have been at great pains to find suitable natural storage sites. Though they are none too plentiful at the necessary elevation, I am satisfied that in wet weather 40,000 millions of gallons can be secured, stored, and held ready for use as required—a quantity equal to five and a half times that available in the Prospect Reservoir, and enough to keep the plant going at its utmost capacity for about 150 days.

The evaporation in Sydney is about 48 inches per annum; but the proposed sites of reservoirs are at such an elevation above the sea, and at such a depth below the surrounding hills, that loss through evaporation will be comparatively small.

I propose the following sites for reservoirs, viz.:—One on the Kanimbla side of Blackheath or Medlow, for the flood waters of Cox's River; two in the Grose Valley, and one in the Govett's Leap Creek above the Junction, and one main reservoir below the junction of the two streams; another lower down at the 600 feet level; two in the Buralow Creek; one in Barton's Creek, and other smaller intercepting weirs on some of the tributaries of the Grose and Colo Rivers.

The whole of the waters in the upper reaches of the Grose River would thus be impounded; the overflow of the Cox's River would be intercepted and conducted into the Grose Valley; and the whole of the water in the upper reaches of the Wollangambe River and Bowen's Creek that now flows into the Colo River would be intercepted and conducted into the balance or working reservoir. This reservoir would be situated at the elevation necessary to work the turbines, and as near as practicable to the generating station.

The work of clearing sites for and constructing reservoirs, tunnels, and aqueducts will be one of some magnitude, and will give work to a large number of labouring men of all classes.

It will be observed that the proposed sites for reservoirs and generating station are situated either clear away from the main stream, or so near the source, that no danger will exist to the weirs either during or after construction.

There is at times an immense volume of water in the Warragamba and Colo Rivers, but for a great distance their beds are so little above sea level, and the gorges so narrow and deep, frequently from 1,000 to 1,400 feet, with almost perpendicular sides, that I cannot advise any attempt to construct dams in those two rivers.

I am persuaded that no dam could be constructed that would withstand the full force of the immense body of water collected off such a very large watershed and concentrated in the gorges referred to.

The generating plant would have to be specially designed, of the most modern type, and of such sizes as would give the highest efficiency; yet care would have to be taken that no part was designed of such bulk or weight as would lead to difficulty in conveyance to site, the country being in parts extremely hilly and precipitous.

The transmission of the electric current can be successfully accomplished, and no great difficulty in that particular is apprehended.

In order to fully utilise the generating plant during the hours of least demand for current, it would be necessary and profitable to provide electric storage batteries on a large scale. These batteries would largely tend to equalise the load on the generating machines, which would be subjected, under other conditions, to very unequal strains, the variations in traction loading being sudden and considerable.

As the high tension system of transmission would be adopted, it would be necessary to establish sub-stations in which rotary transformers would be worked for converting the current and altering the voltage to suit the various purposes for which the current would be used, whether for transportation, arc or incandescent lighting, or manufactures.

I further propose (so that the utmost may be obtained from the forces at command) to utilise the water flowing through the proposed tunnel from the Kanimbla into the Grose Valley for generating current for any desired purpose, such as the lighting of the mountain resorts, and propelling of lifts or trams, all of which, I take it, would be of a very profitable character.

In fixing the main generating plant, it would be incumbent to keep above the highest flood-level, which in ordinary seasons would be about 40 feet above the level of the stream into which the water, after doing its duty, would be discharged. This water, I find, would be of such volume as would enable about 10,000,000 gallons to be returned daily to the balance reservoir. This water, which would be exceptionally pure, might be at the service of the towns of Penrith, Richmond, and Windsor. At present they have to

put

put up with the water pumped out of the Nepean and Hawkesbury Rivers. Other towns, such as Riverstone, Blacktown, St. Mary's, &c., might also be supplied, and a high-pressure service would even be available for use in Sydney in the event of anything happening to the present Prospect service.

The total cost of the complete scheme, which would include the whole of the generating and transforming plants, allowing for all reasonable contingencies, I estimate at £1,450,000.

The total annual cost of working, including interest, after the scheme is finished, I estimate as follows:—

Interest on total cost, £1,450,000, at 4 per cent. ... ..	£58,000
Maintenance of machinery, up-keep of all earthworks, tunnels, weirs, aqueducts, &c., and making good all damage done by flood or other causes ... ..	75,000
Working expenses, including all labour ... ..	25,000
	<hr/>
	£158,000

The revenue derived would depend entirely upon the rate charged.

Major Cardew, in reporting to the City Council, recommended a charge of 4½d. per unit, which might be reduced, after a few years, to 3½d.

I should recommend a differential rate, based on the quantity taken; but for the purpose of estimate I have based on the low average rate of 1½d. per unit. Owing to the variations in the demand, slack periods, &c., I assume that the plant would be earning revenue all the year round to the extent of three-fifths of its capacity only, yet the income would amount to £639,000 per annum, thus showing an annual profit of £481,000.

The same amount of work, performed by the most perfect and favourably-situated steam plants, would require 240,000 tons of coal per annum, to which would have to be added a large water account, heavy up-keep, and labour for working steam boilers and engines.

It is at once apparent that the scheme, properly handled, admits of immense possibilities; and as I have made a liberal allowance for leakage, soakage, evaporation, and overflow of reservoirs, no doubt whatever need exist about the feasibility, reliableness, and permanence of the scheme.

It is so planned that, within a few months after commencement of operations, sufficient power could be generated to make it revenue producing, thus obviating the payment of interest on expended but unproductive capital, and at the same time save the purchase of any large additional steam plants that may be contemplated.

I would like to clearly point out that I have prepared the scheme from such reports and plans as are available, verified by short flying visits to such localities as were readily accessible. The very limited, time prevented any detailed investigation. If the scheme is entertained, I should like a few weeks in which to make more accurate surveys.

I have, &c.,  
T. RAW.

The above report of Mr. Raw is now forwarded for the consideration of the Minister. It may be noted that the time and facilities available for its preparation have been very limited.—W.L.V., Government Architect, 26/7/1900. The Under Secretary for Public Works, and Commissioner for Roads.

Tracing of site plan attached. Submitted.—Jno. P., 28/7/1900. Re-submit in a month.—E.W.O'S., 30/7/1900.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES No. 24. THURSDAY, 2 AUGUST, 1900.

16. CLAIM BY MESSRS. MADDISON AND EWING, CONTRACTORS:—Mr. E. M. Clark moved, pursuant to Notice,—  
(1.) That a Select Committee be appointed to inquire into and report upon a claim for law costs in connection with Contract No. 127, Sewerage Construction Branch of the Public Works Department, by Messrs. Maddison and Ewing, contractors.  
(2.) That such Committee consist of Mr. O'Sullivan, Mr. Anderson, Mr. Garland, Dr. Graham, Mr. Meagher, Mr. Hughes, Mr. Rigg, Mr. W. W. Davis, Mr. F. Clarke, and the Mover.  
Debate ensued.  
Question put and passed.

VOTES No. 41. WEDNESDAY, 12 SEPTEMBER, 1900.

4. CLAIM BY MESSRS. MADDISON AND EWING, CONTRACTORS:—Mr. E. M. Clark (*by consent*) moved, without Notice, That Mr. W. W. Davis be added to the Select Committee now sitting on "Claim by Messrs. Maddison and Ewing, Contractors."  
Question put and passed.

VOTES No. 47. WEDNESDAY, 26 SEPTEMBER, 1900.

14. CLAIM BY MESSRS. MADDISON AND EWING, CONTRACTORS:—*Mr. Norton*, for Mr. E. M. Clark, Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 3rd August, 1900, a.m.  
Ordered to be printed.

**CLAIM BY MESSRS. MADDISON AND EWING, CONTRACTORS.**

---

---

**REPORT.**

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 3rd August, 1900, A.M., "*to inquire into and report upon a claim for law costs in connection with Contract No. 127, Sewerage Construction Branch of the Public Works Department, by Messrs. Maddison and Ewing, contractors,*"—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the List\* \* See List, page 6. (whose evidence will be found appended hereto), find as follows:—

1. That Messrs. Maddison and Ewing were tenderers for, and secured the contract of, No. 127, in connection with the Western Suburbs Sewerage Scheme.
2. That on the plan in connection with the said contract, at two places, appeared the words "guttering and gadding, unless otherwise ordered."
3. It is admitted by the witnesses in the Government employ that the words "guttering and gadding" were inserted in view of the proximity of houses at those points, and really for the protection of such property, which, with blasting operations, would probably be injured.
4. The contractors proceeded with, and were carrying out their contract in a proper way, when they were ordered to blast at one of the points marked on the plan "guttering and gadding."
5. As the contractors admit they would have never dreamt of blasting at this juncture (even if it was optional with them to do so), and were compelled to carry out the orders received—which were in countermand of those on the plan—the result was an institution of legal proceedings by one Darnley in respect of damage alleged to have been caused to property by the said blasting.
6. That the contractors defended the said action, with the result that the two first trials proved abortive, the jury being equally divided. The contractors were again dragged to Court, and on the third trial, by a majority verdict, a judgment was given against the contractors for £30, with costs.
7. The costs of the three actions—including the costs of the successful plaintiff, and costs incurred by the contractors in legal assistance in resisting the said claim—are £900.
8. It is admitted by the officers of the Department that no fault can be found with the manner the blasting was carried out by the contractors, and that everything in regard thereto was carried out in a careful and workmanlike manner.
9. That the building alleged to have been damaged was examined by the officers of the Department of Sewerage Construction, and admitted by one of them, and Mr. Noble, to have been in a dilapidated condition, which, in your Committee's opinion, would have been a strong reason for adhering to the original instructions of "guttering and gadding."

10. That the evidence of the Departmental Officers in this inquiry shows that, though sewerage contracts had been carried out for many years, this was the first occasion on which a contract was let wherein certain portions of the work were specifically marked ordering the carrying out of "guttering and gadding, unless otherwise ordered."
11. That your Committee consider the words, "unless otherwise ordered," can only have the reasonable meaning attached to them which would be at once suggested to reasonable minds—namely, a closer investigation which revealed changed conditions that rendered damage practically impossible, by adopting a new departure such as blasting. Your Committee do not consider that the words entitle the Department to give any capricious order as to the method of carrying out the said work.
12. That your Committee feel satisfied that the reasons which operated in the mind of the Department in originally placing the words in the plan, "guttering and gadding, unless otherwise ordered," would be justified, on closer scrutiny and inquiry, in view of the nature of the ground, the contiguity, and "dilapidated condition" of the building.
13. That the carrying out of the instructions of guttering and gadding would have safeguarded the contractors against any risk of such law suit.
14. That your Committee, in view of the unique nature of this contract, do not see that there can be any analogy between claims made by contractors against the Government in respect of actions brought against them in the carrying out of their contracts and the present claim, inasmuch as the mention of the words "guttering" and "gadding" at certain points were, as admitted by the Crown, for the protection of the property contiguous to the work, was regarded by the contractors as practically an insurance to them, as no risk of blasting would be required—otherwise, they would, like all other contractors, have made a margin for loss or damage which they would probably sustain in carrying out their contract.
15. That the evidence of the Department is of the highest character as to the manner the said contractors have carried out Government works and as to their capability and efficiency.
16. That your Committee did not deem it necessary to go into a Departmental Inquiry which was held in this matter, as it was not on oath; and the Officers who made statements therein have been examined on oath before this Committee.
17. Your Committee are of opinion that Messrs. Maddison and Ewing, contractors, should not be penalised by payment of £900 law costs in carrying out an order of the Government which was never anticipated, and originally was never contemplated.

Your Committee strongly recommend the case of Messrs. Maddison and Ewing to the favourable consideration of the Government.

EDWARD M. CLARK,  
Chairman.

No. 2 Committee Room,  
Legislative Assembly,  
26th September, 1900.

## PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 14 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. Anderson,		Mr. E. M. Clark,
	Mr. W. W. Davis.	

Mr. E. M. Clark called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Adjourned till Thursday next at 2:15 o'clock.

THURSDAY, 16 AUGUST, 1900.

The meeting ordered for to-day postponed by order of the Chairman.

TUESDAY, 21 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.

Mr. Anderson,		Mr. W. W. Davis,
Mr. Garland,		Mr. Rigg.

Alfred James Coates (*an officer of the Public Works Department*) called in, sworn, and examined.  
Witness produced papers in connection with Contract No. 127, the original contract for the work, and plans numbered 1 to 7 inclusive.

Witness withdrew.

George Maddison (*contractor*) called in, sworn, and examined.

Witness withdrew.

Peter Ewing (*contractor*) called in, sworn, and examined.

Witness withdrew.

Adjourned till Thursday next at 2:30 o'clock.

THURSDAY, 23 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.

Mr. Anderson,		Mr. W. W. Davis.
---------------	--	------------------

Joseph Davis (*Engineer-in-Chief for Sewerage Construction*) called in, sworn, and examined.

Witness withdrew.

Adjourned till Tuesday next at 2 o'clock.

TUESDAY, 28 AUGUST, 1900.

MEMBER PRESENT :—

Mr. E. M. Clark.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 30 AUGUST, 1900.

MEMBER PRESENT :—

Mr. E. M. Clark.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 4 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.

Mr. F. Clarke,		Mr. Meagher,
	Mr. Rigg.	

Peter Ewing recalled and further examined.

Thomas Williams (*contractor*) called in, sworn, and examined.

Algernon Peake (*Surveyor, Sewerage Construction Branch, Public Works Department*) called in, sworn, and examined.

Witness withdrew.

Edward George Noble (*Resident Assistant Engineer, Sewerage Construction Branch, Public Works Department*) called in, sworn, and examined.

Witness withdrew.

Adjourned till Thursday next at 2:15 o'clock.

*THURSDAY, 6 SEPTEMBER, 1900.*

MEMBERS PRESENT :—

Mr. E. M. Clark. | Mr. Rigg.

In the absence of a Quorum, the meeting called for this day lapsed.

*TUESDAY, 11 SEPTEMBER, 1900.*

MEMBER PRESENT :—

Mr. Anderson.

In the absence of a Quorum, the meeting called for this day lapsed.

*THURSDAY, 13 SEPTEMBER, 1900.*

MEMBER PRESENT :—

Mr. Anderson.

In the absence of a Quorum, the meeting called for this day lapsed.

*TUESDAY, 18 SEPTEMBER, 1900.*

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

*WEDNESDAY, 19 SEPTEMBER, 1900.*

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

*THURSDAY, 20 SEPTEMBER, 1900.*

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.

Mr. Anderson.

Mr. Meagher.

Entry from Votes and Proceedings, adding Mr. W. W. Davis to the Committee, *read* by the Clerk.  
Thomas Williams recalled and further examined.

Witness withdrew.

Adjourned till Tuesday next at 10:30 o'clock.

*TUESDAY, 25 SEPTEMBER, 1900.*

MEMBER PRESENT :—

Mr. E. M. Clark.

In the absence of a Quorum, the meeting called for this day lapsed.

*WEDNESDAY, 26 SEPTEMBER, 1900.*

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.

Mr. W. W. Davis.

Mr. Meagher.

Chairman submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CLAIM BY MESSRS. MADDISON & EWING,  
CONTRACTORS.

TUESDAY, 21 AUGUST, 1900.

Present:—

MR. RIGG,  
MR. GARLAND,MR. W. W. DAVIS,  
MR. ANDERSON.

E. M. CLARK, ESQ., IN THE CHAIR.

Alfred James Coates sworn and examined:—

1. *Chairman.*] You are an officer in the Public Works Department? I am.
2. And you produce certain papers in connection with Contract No. 127? Yes; also the original contract for the work.
3. What other papers have you? Plans, numbered 1 to 7, inclusive. The specification is annexed to the agreement.
4. And what other papers? These papers (*produced*) are the office papers relating to the matter.

A. J. Coates.  
21 Aug., 1900.

George Maddison sworn, and examined:—

5. *Chairman.*] You are a contractor? Yes.
6. You were the contractor for Contract No. 127 in connection with the Western Suburbs Sewerage scheme? Yes.
7. Are these the plans of the work (*produced*)? Yes.
8. In connection with the work, an action at law was brought against you? Yes.
9. What was the cause of that action? It was through blasting in a certain portion of the work.
10. How can we locate that portion on the plan? It is shown on the plan by the words "guttering and gadding." We took the contract on the understanding that there would be no blasting.
11. *Mr. Davis.*] Was that stipulated for in the contract? We took the words guttering and gadding to mean there would be no blasting.
12. *Chairman.*] But afterwards you were ordered to blast? We were ordered to blast.
13. *Mr. Rigg.*] Who gave you the orders to blast? The Engineer-in-Chief of the Sewerage Department.
14. *Chairman.*] While the work was proceeding, an action at law was brought against you? Yes.
15. The scene of the alleged damage was in the neighbourhood of this spot, where guttering and gadding had been provided for? Yes; close to this shaft.
16. *Mr. Davis.*] The action was consequent upon the blasting? They said so; but, of course, we denied the damage.
17. *Chairman.*] You fought the matter in the Court? Yes.
18. *Mr. Rigg.*] Who entered the action? The owner, Mrs. Darnley. The case came on three times in the Supreme Court. On the first two occasions the jury was divided, two against two. On the third occasion she got three jurymen, and we had one.

G. Maddison.  
21 Aug., 1900.

G. Maddison. 19. *Chairman.*] Was she nonsuited in both the previous cases, or was it that the jury did not agree? They did not agree. The verdict was for £30 and costs.

21 Aug., 1900. 20. What was the amount of the costs? I could not say exactly; but somewhere between £800 and £900. We had to pay the costs of the three actions. The house and land were only worth about £100.

21. So far as you were concerned, was there any special reason why the shaft should have been gadded and guttered;—was there a larger population at that point? There were two big houses close to this spot; but they were some distance away from the shaft. The cottage that all the dispute was about was about 30 feet away from the shaft. There was a very big house about 100 feet away.

22. Was this the only portion of the work that had to be gadded and guttered? There was another portion.

23. And was that gadded and guttered? No; that was blasted out. That portion was pretty free of property.

24. *Mr. Rigg.*] Was any action entered against you for damage to property in the other section? No.

25. How far was this property from the blasting operations? It was about 40 feet from the shaft.

26. Was it consequent upon the instructions to blast that the damage occurred? We deny the damage; but the jury brought in a verdict against us.

27. Was it made clear that the damage was through the blasting? Yes.

28. You maintained that the damage was not caused by the blasting? Yes.

29. But the fact was that an action was entered against you, and you were mulcted in damages to the extent of £800 or £900? Yes.

30. Was it under instructions from the Department that you blasted? We carried it out under instructions from the Department.

31. Have you the instructions in writing? Yes.

32. Have you the paper on you? No.

33. *Chairman.*] Can you produce it? Yes.

34. It was not through any representations of yours that it was altered from gadding and guttering to blasting? No; we understood that we would have to cut the rock out.

35. *Mr. Rigg.*] Is it stated in the specification that it was to be gadded and guttered? I do not think it says anything on that point in the specification.

36. What was there to show that you were to gad? The plan shows that it was to be “gadded and guttered unless otherwise ordered.”

37. Does it say that on the plan? Yes; there is a length of 6 chains that was supposed to be gadded and guttered.

38. You say that you were ordered officially in writing by the Department to blast? Yes.

39. *Chairman.*] Even if you had objected, I suppose the Department would have insisted, under the conditions of your contract, upon blasting? Yes.

40. Did the officer of the Department give any evidence in Court in connection with the action? Yes. We had four from the Department as witnesses, I think.

41. Who were they? Inspector Husband, District Engineer Noble, Mr. Miller, Assistant Engineer, and Mr. Simpson, who was, I think, in the Colonial Architect's Department.

42. You subpoenaed them? Yes.

43. *Mr. Rigg.*] I suppose the nature of their duties took them on this particular job from time to time? Yes, the engineer and inspector were continuously there.

44. And your instructions were to blast? To blast this particular portion.

45. Are you sure that it was in consequence of the blasting that the action was brought? Oh, yes.

46. What was the service that you had from the party who took action;—did they specify in the action taken against you that the damage was caused through blasting? Yes.

47. They mentioned blasting? Yes, they mentioned blasting.

48. Gadding, I understand, is simply done with a hammer and chisel? With a hammer and picks. There are no reports. It would have been a little more expensive to gad and gutter.

49. *Chairman.*] But it would make no difference to you? No.

50. *Mr. Davis.*] You got authority from the Department to blast? Yes.

51. *Mr. Rigg.*] What claim have you made on the Government for the damage you have sustained? I think it is pretty well for the whole amount.

52. But you have sent a claim in? Yes.

53. And what is the amount? I have forgotten now; but something about £800.

54. And the Department declined to pay? Yes.

55. On what ground? On the ground that we are responsible for all damage whether they order us to do a thing or not.

56. What is the condition in tendering? A good deal of responsibility is thrown on the contractor, no doubt.

57. Have you a copy of the contract;—if so, you might read out that part relating to the responsibility thrown upon you? It is in clause 19, as follows:—

The contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties, and owners thereof, against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any trespass be committed, or any such loss, damage, or injury occur, the contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the contractor under this contract, or may be recoverable from the contractor as liquidated damages in that respect incurred.

58. According to that plan before you, the Government have the option of determining which it shall be, gadding or blasting, have they not? Yes.

59. Seeing that that is the case, do you not think that that condition which has just been read under which you accepted the contract relieves the Government of any claim? This was a very shallow shaft, only about 18 feet deep, and we made sure it would be gadded out on account of that remark on the plan.

60. *Mr. Davis.*] Why did the officer of the Department authorise you to blast? There is a difference in price betwixt gadding and guttering. We had 15s. per cubic yard more for gadding than for blasting.

61. You started to gad out? Yes.

62. Why did they alter it from gadding to blasting? We gadded the shaft for I do not know how many feet. The only thing I can imagine is that it would be the difference in price.

63. *Chairman.*] What would be the saving to the Government on that work in the alteration from gadding and guttering to blasting? I could not say; it would be a few pounds. There were 6 chains in one place and 5½ chains in another. We naturally thought that those two places would be gadded. Gr. Maddison.  
21 Aug., 1900.
64. *Mr. Rigg.*] In putting in a tender for that kind of a job now, how would you tender;—would you tender for gadding alone? When we have our own prices we put in a separate price for gadding and guttering, and another price for blasting.
65. What tender did you send in in this case;—did you send in one for simply gadding, or a combined tender for gadding and blasting? There was one price for gadding and guttering and one for blasting. There was a difference of 15s. per cubic yard more for gadding and guttering than for blasting. We cut the shaft down a certain depth without blasting, and after we went down a few feet they ordered us to blast the balance of it. Then our price came down to the blasting price.
66. *Mr. Davis.*] And the risk went up? Yes; the risk went up.
67. *Mr. Anderson.*] In consequence of the hardness of the ground, you had to use powder? Yes.
68. *Chairman.*] Personally, you do not think you did any damage to the house? I do not think so. A little over £15 per chain would be the extra cost of gadding.
69. *Mr. Anderson.*] Was it in consequence of the Government's desire that you used powder in that shaft? Yes; they compelled us to do it. We had no choice but to obey.
70. *Chairman.*] This question of damage caused by blasting has been a very vexed question with contractors? Yes.
71. There have been successful actions against contractors before? Yes.
72. But you contend that yours is an exceptional case—that it was not on all-fours with other cases of damage by blasting? Yes.
73. Wherever damage has occurred before, so far as you know, it has been in cases where blasting has been specified? Yes; specified on the specifications and the plans.
74. And yours is an exceptional case because, although gadding and guttering were provided, the Government insisted on blasting? Yes.
75. That is virtually your whole case? Yes. And this was the only place in the whole contract where we had a case against us.
76. Was there as large a population in other parts on the contract? A great deal more so; and the shafts were a good deal deeper. This was one of the very shallowest parts of the work.
77. *Mr. Davis.*] Can you produce your authority for the blasting subsequent to the signing of the agreement? Yes.
78. Is it a general letter? A general letter.
79. Does it set forth the reason why you should blast? No.
80. *Mr. Rigg.*] That was after you had started gadding? Yes, after we had started gadding.
81. In matters of this kind, where it is expressed either way in the specification, is it usual for the Government to alter the mode of procedure after the work has started—that is, to alter the style of work from gadding to blasting? Yes, they often deviate. I never knew any particular portion to be set out like this, and blasting to be done later on.
82. After you start a job, and they tell you it is to be gadded, you take it for granted that the job is to be completed under that system? Yes.
83. Has it ever occurred before that you went half way through a job and they altered the system? Not in this contract.
84. *Chairman.*] And if the Department give you instructions you have no power to object, even if you see danger? No power.
85. *Mr. Rigg.*] But in sending in your price they ask you to cover that risk, do they not? We thought that as these two portions were marked for gadding, the Department would have them gadded. We did not think they would do anything else, on account of their not marking on the plan any other portion of the contract for gadding.
86. *Chairman.*] You relied on the work being gadded? We understood that the work would be carried out as shown on the plan.
87. *Mr. Rigg.*] And if it had been gadded you would have considered that you carried no risk as far as the adjoining property was concerned;—you consider that in gadding there is no risk to adjoining property? No risk.
88. What was the extent and the style of the damage done to the house;—did you see it yourself? Yes; I saw it several times. There were some small cracks.
89. About the ceiling? Yes. It was a little two-roomed skillion-roofed cottage, with a kitchen added on to the back.
90. What was the nature of the damage? Bits of cracks, which you find in every house in the Western suburbs; little cracks in the ceiling.
91. You do not know whether you made the cracks or whether they were there before? No.
92. *Mr. Davis.*] You are not concerned in the damage to the house; but you are concerned as to the damage to your pocket? I am quite sure the house was not damaged. They make out that the house was liable to fall in at any time; but the people are living in it yet, and nothing has been done to it.
93. *Mr. Rigg.*] Did you examine the cracks to see whether they were new or old? The cracks were old, and there were witnesses to prove that the cracks were there before the blasting started. I was called in to the house very shortly after the damage was supposed to have occurred, and the cracks were all dark. There was not a new crack.
94. *Mr. Anderson.*] In the course of your contract, if you saw that there was likely to be any danger to any property on account of blasting, would you draw the attention of the Department to it? Yes; I think we should stop and see if we could not gad and gutter the work.
95. *Chairman.*] I suppose in your business as a contractor you often meet cases where people complain of damage done to their property. I suppose even in this matter you have had to pay compensation where the blasting has taken place? Oh, yes. It is cheaper to do that than to go to court.
96. In this case I suppose they made a big demand upon you? They made a demand of £500.
97. For a house of two rooms with a skillion roof? Yes.
98. You had to defend an action like that? Yes.
99. *Mr. Anderson.*] What was about the value of the cottage? I think Richardson and Wrench valued house, ground and all, at £120. We had an architect who offered to fill all the cracks and make them good, for £10.

- G. Maddison. 100. *Chairman.*] There is nothing more you desire to say on the matter? No; I think I have said the principal things. We thoroughly understood that the work would be gadded and guttered.
- 21 Aug., 1900. 101. If you had asked for blasting, the Department would have been likely to insist on gadding and guttering, according to the plan? If the price had been the same, we would have had to gad and gutter.
102. *Mr. Rigg.*] You made a claim against the Government? Yes.
103. And they repudiated it, and referred you to the conditions of the specification? Yes.
104. Is that all that has taken place between you and the Department? Yes.
105. *Chairman.*] The Department held an inquiry into the matter, and came to the conclusion that they could not recognise your claims? Yes; their sympathies were with us, but that was no good to us. They said it was a very hard case, but they could not see where they were liable.

Peter Ewing sworn and examined:—

- P. Ewing. 106. *Chairman.*] You are a member of the firm of Maddison and Ewing, contractors? Yes.
- 21 Aug., 1900. 107. You were the contractors for Contract No. 127? Yes.
108. Do you recognise this plan (*produced*) as the plan of the contract? Yes.
109. You carried out the contract, and you had an action at law in connection with the contract through some blasting? Yes.
110. Do you notice on that plan that gadding and guttering are provided there? Yes; guttering and gadding.
111. Did the Department alter that? They ordered us to blast.
112. It was in the neighbourhood where the blasting was ordered that the alleged accident happened? Yes.
113. When you undertook that work, did you expect and intend to do guttering and gadding? Yes; we intended to gutter and gad.
114. Did you have any idea that it would be altered? Not at the time we tendered.
115. Would that alleged accident have happened if the work had been guttered and gadded, as provided on the plan? No.
116. There would have been no cause for complaint? No.
117. Do you contend that there was really no cause at all for the action? I do.
118. All the same, this lent assistance to it? Yes.
119. You were quite willing to gad and gutter? Yes.
120. *Mr. Davis.*] Did you commence the shaft with blasting? We gadded and guttered a little bit on the top.
121. And, subsequently, you blasted? Yes.
122. Why did you blast? We got orders for it.
123. Where is the authority? I do not know where it is.
124. *Chairman.*] The Department never denied having given you instructions to blast? No.
125. Is it an exceptional thing for gadding and guttering to be marked on the plans? Yes; I never saw it on the plans before.
126. You have been contracting for some time? Seventeen or eighteen years. It is always in the specifications.
127. *Mr. Anderson.*] This is the first litigation you have had with the Department? Yes.
128. *Mr. Rigg.*] Was gadding and guttering on the plan when you tendered? Yes.
129. According to what is on the plan, you would understand when you were tendering that the Department had the right to say whether the work should be gadded or blasted? They would have the right.
130. *Mr. Davis.*] What do you suppose was the object of the Department in changing the work from gadding to blasting? To save money.
131. *Chairman.*] Can you think of any special reason why gadding and guttering should have been provided for at that particular part of the contract? There is property very close to that part.
132. *Mr. Rigg.*] In your tender, would you provide for gadding or for blasting? There is a schedule—so much for gadding and guttering, and so much for blasting.
133. Would you tender on each? Yes.
134. *Chairman.*] You tender at so much below or above the schedule rates, and the Department can insist upon your gadding and guttering or blasting, as they like? Yes; I never saw gadding and guttering marked on a plan before. It is marked on this plan in two different places.
135. *Mr. Rigg.*] But the Department having decided to do it by blasting, would you not understand, according to the printed conditions, that you have to take any risk of damage that might be done to adjoining property;—the Government expect you to take that risk, do they not? It says on the plan, "Gadding and guttering, unless otherwise ordered."
136. But you accepted the contract on certain printed conditions, which are attached to the plans? Yes.
137. And one of those conditions is that contractors take the risk of any damage done to adjoining property? We have already paid for damage done on this job—items that we have never mentioned to the Government.
138. But which you consider yourselves responsible for? Yes.
139. *Chairman.*] You think the Government must have anticipated some difficulty in this spot, else they would not have specified gadding and guttering? Yes; there was no trouble at the other portion of the contract, where gadding and guttering was specified.
140. *Mr. Rigg.*] Were there any buildings there? Just the same class of buildings.
141. *Chairman.*] And wherever along the line it was represented to you that damage had been done by blasting, you met the cases, and had no difficulty except in this particular portion? That is it.
142. *Mr. Rigg.*] You accepted the liability in all the other cases, and refused it in this one? Because it is marked "gadding and guttering" on the plan.
143. *Chairman.*] You did not even refuse in this case, but they demanded £500 from you, which was, in your opinion, blackmail? Yes.
144. *Mr. Rigg.*] If it was a matter of £15 or £20, I suppose you would have paid it? Yes; the highest valuation of the property was £120. That was Richardson and Wrench's valuation, and it included ground and house.

P. Ewing.  
21 Aug., 1900.

145. You would have been prepared to accept a little risk without going to law? Undoubtedly.
146. *Mr. Anderson.*] If any damage was done to the property, you believe it was in consequence of the blasting? Yes; if there had been no blasting there would have been no action.
147. And it was in consequence of the Department having given you instructions to commence blasting that you did so? Yes.
148. And if you thought there was any danger to the property, you would have apprised the Department of it? Yes.
149. What steps were taken to recover the amount of the claim? We had three cases in the Supreme Court. On the first two the jury could not agree; in the third case we took a majority verdict, and the claimant got a verdict for £30.
150. *Chairman.*] Although this woman claimed £500? Yes.
151. *Mr. Anderson.*] You would not have commenced blasting if it had not been for instructions from the Department? No.
152. And there would have been no risk? No. We had not long started when there was a complaint from the people.
153. *Chairman.*] The people complained shortly after you started blasting? Yes.
154. *Mr. Anderson.*] What course did you pursue? The engineer went to see the place and inspected it.
155. *Chairman.*] What engineer was that? Mr. Noble, the Government Engineer.
156. Did he set any valuation on the damage done? No.
157. Did he think there was any damage? He did not think there was any damage.
158. And he gave evidence to that effect in the Court? Oh, yes.
159. You say it was exceptional for gadding and guttering to be marked on the plan? Yes.
160. There have been other blasting accidents where actions at Court have been successful against contractors? Yes.
161. This is a case where the contractors have asked the Government to compensate them? Yes.
162. You know of no case where gadding and guttering has been marked on the plans—that is, any case in which claims have been made against the Government? No.
163. As a rule, you generally tender for all kinds of sewerage work? Yes.
164. And you never saw gadding and guttering specified on a plan before? No.
165. *Mr. Rigg.*] Does the fact of those words being on the plan alter your position as a contractor in any risk that you take in connection with the job;—suppose the words were not there, and you were doing the work under a blasting contract, you would have to take the risks of action by any people who might suffer damage? We have done it.
166. The words “unless otherwise ordered” leave an opening for the Government to say: “Although the work is tendered for, in the first instance, to be guttered and gadded, yet we will have this portion blasted”;—do you not think that, as the Government had given you these instructions, you would have to take the same risk as though you were tendering under the ordinary conditions? No; I do not think so. As it was marked “gadding and guttering” on the plan, that shows that the Department must have had a doubt, or they would not have put the words there.
167. Whatever doubt there may be in connection with the plan, how does that affect the conditions under which you took the contract? If you look at the plan you will see that there is property close to this spot, and that is why the plan is marked “guttering and gadding.”
168. You, as a contractor, took the risk, outside the job altogether, of damage to property? I do not know. That is a question I would not like to answer.
169. I was always under the impression that the contractor took the risk, and provided for it in his price? A contractor is supposed to take the risk; but why does the Department come along and alter the work from one thing to the other?
170. But they are not violating their contract by doing that; if they alter the plan in any way I can understand that you would have cause for an action; but they provided by that memorandum on the plan that a certain thing should be done unless otherwise ordered; that gives them an open hand? As they put those words on the plan they ought to take the responsibility. If they did not put them on the plan we would have thought it was to be all shooting.
171. *Mr. Anderson.*] If you had anticipated any of this, you would have prepared for the blasting in your price? We would have to put so much per cent. on.
172. *Chairman.*] If it had been all blasting, you would probably have made provision for risk in this particular spot? Yes.
173. *Mr. Rigg.*] Did you take this work at schedule rates? I think it was  $3\frac{1}{2}$  per cent. above schedule.
174. Did that  $3\frac{1}{2}$  per cent. cover any risk which you would have to take in your contract for damage to adjoining property? I do not think it would.
175. *Chairman.*] You did not anticipate risk at these two places? No.
176. Suppose you had protested when the Department ordered you to gad and gutter, do you think they would have taken any notice of your protest? No. They have the power to say, “Do this, or do the other.”
177. *Mr. Rigg.*] Are the schedule rates of the Government supposed to be a fair estimate of the cost of a job, including the risk to the Government, if they carry out the work themselves? I do not know that.
178. *Chairman.*] Sometimes tenders are very much above schedule rates? Yes.
179. How much have you known them to be above schedule rates? Fifty per cent.
180. And you have known them to be below schedule rates? Yes; 25 per cent.
181. *Mr. Rigg.*] I only asked my question to find out whether the Government provided for the risk in what they call schedule rates? I do not know.
182. *Mr. Davis.*] If the Government did not think there was a risk, they would have ordered you to blast from the jump? Yes. They did not pay us for gadding and guttering the first part of the shaft. We did that ourselves.
183. *Chairman.*] You started gadding and guttering, and then they told you to blast? Yes.
184. *Mr. Anderson.*] As a matter of fact, you would just as soon blast as gad? Yes; just as soon.
185. It would make no difference to you? No; the schedule price is 15s. per cubic yard more for gadding and guttering than for blasting.

THURSDAY, 23 AUGUST, 1900.

Present:—

MR. W. W. DAVIS,

MR. ANDERSON.

E. M. CLARK, Esq., IN THE CHAIR.

J. Davis.

Joseph Davis, Engineer-in-Chief for Sewerage Construction, sworn and examined:—

23 Aug., 1900.

186. You know about this contract—No. 127? Yes.
187. You know that Maddison and Ewing were the tenderers for that work? Yes, and the contractors.
188. You know that it was provided that certain portions of the work should be carried out by guttering and gadding? Unless otherwise ordered.
189. Why was it specified that it should be guttered and gadded unless otherwise ordered? The meaning of that is, that in the specification, which is part of the contract, provision is made for the excavation to be carried out in either of three ways, and it is optional with the Engineer, and at his discretion entirely, as to how the work shall be carried out. He can order it to be carried out without the use of explosives, by means of guttering and gadding—in which case the contractor is allowed the Schedule rate for that kind of work; or he can order it to be carried out by means of 2 inches of compressed powder (that is, half a plug), and in that case the contractor is paid the Schedule rate for that kind of work; or he can order it to be carried out by means of 4 inches of compressed powder, in which case the contractor is paid the price for that kind of work. This is necessary because the exigencies that arise during the progress of the work require that it should be so. Sickness or other things occur in the houses along the line of the sewer, which require that the use of explosives should be abandoned.
190. *Mr. Davis.*] There must be a reason for altering the course of procedure, inasmuch as you start by ordering guttering and gadding, and when the work is progressed to a certain extent, you alter that and authorise or order them to use explosives? No; in this case the work of guttering and gadding was not ordered. The system is this: First of all, the shafts along the line of sewer are marked out by our officers, and the contractor immediately starts to excavate. Usually for some distance below the surface we find sand capping the rock. That sand is paid for at Schedule rates for sand excavation. Then when we get to the rock the question arises how it is to be taken out; and after inquiry I instruct the contractor, in accordance with the terms of the contract, to take the rock out in a particular way. That continues until something occurs to make it necessary to alter the order, or it may be that it continues right down to the bottom of the shaft. When the shaft is bottomed then the question arises, in view of the kind of ground that is met with, what thickness of lining should be put in, and furthermore whether explosives are to be used or not. That also is decided in the same way as the sinking of the shafts, and the contractor is given instructions as to how he is to take it out, and how he will be paid for it. This is all in accordance with the terms of the contract.
191. *Chairman.*] You order explosives because you think there is no danger? Yes.
192. In this particular case you ordered explosives because you thought there was no danger? We took that into consideration in ordering explosives.
193. You did not do it upon any representation of the contractors? No; entirely on our own responsibility.
194. *Mr. Davis.*] That portion of the work was commenced with gads? No.
195. I understood from the evidence of the contractors that it was? No; there was no order of that description. The mode of procedure was precisely as I have stated.
196. *Chairman.*] What Mr. Ewing and Mr. Maddison said was that they had started to carry out the work by guttering and gadding, but were ordered to use explosives—that is, that they did a certain amount of work by guttering and gadding? When I say we order explosives, we do not order that explosives are to be used, but we say that explosives may be used up to a certain charge of compressed powder, leaving it entirely to the option of contractors whether they use explosives or not. They in their wisdom may say, "We do not want to use explosives in this portion"; or, "It is not advisable to use explosives in this portion." We do not control them in that respect. We leave them entirely at liberty. All we say is that we will pay for the work under a certain schedule item in the contract, and we allow explosives to be used, as we did in this case, up to 4 inches of compressed powder.
197. We will say, for argument's sake, that you admit it was necessary or advisable to alter your procedure;—did you do it in this case in writing or verbally? In writing, but we did not alter it at all. I do not admit that we made any alteration.
198. If it was altered the contractor would have it in writing? Yes.
199. You must have had a reason for specifying guttering and gadding at the particular places marked on the plan;—there must have been some special reason for this, seeing that blasting was provided all along the line;—what reason was there for providing for guttering and gadding at these particular points? I do not agree with the statement that blasting was to be adopted all along the line. With regard to the remarks on the plan as to guttering and gadding, I may say that when the surveyor went on to the ground it is very possible that he thought it probable I should order guttering and gadding there;—in fact, I believe that that was the way in which remarks came to be put on the plan. It is not unusual to put such remarks on the plan.
200. The surveyor thought so? He thought so, and, therefore, he put the remarks on his drawing.
201. Guttering and gadding meant a larger expenditure to the Department than blasting? Yes.
202. Then, thinking there was no danger at either of the two points, you decided to recommend blasting? Yes, in accordance with the terms of the contract, and furthermore because these remarks were in accordance in every respect with the contract, which allows me the option of ordering guttering and gadding or otherwise. As a matter of fact these remarks are quite superfluous. They might just as well have put "guttering and gadding, unless otherwise ordered," right along the contract.
203. Beyond some reason that your surveyor had, you had no special reason for recommending guttering and gadding? I had no reason.
204. And yet it was recommended that blasting should be carried out haphazard at every part but that part? No. This part evidently assumed a different character in the mind of the surveyor than the other part. He knew, because it is so in all the contracts, that it is optional with the Engineer whether the work is carried out by guttering and gadding or with compressed powder.

205. I suppose you are aware that the supposed accident happened somewhere in the neighbourhood of Albert-street? Yes, somewhere there.
206. What special reason would there be for guttering and gadding at one particular point? Well, there was no reason any more than there was anywhere else.
207. What would be the length of the line under the contract? About a mile and five chains—that is, 85 chains.
208. Then your surveyor decided that  $11\frac{1}{2}$  chains of the 85 chains should be carried out in this particular manner? No; it was not his province to decide.
209. Well, they provided for it on the plan? No, they left it to me, except that they put down on the plan in one case what was in the specification.
210. The contractors tendered according to this plan; they were led to understand that, according to the specification, certain work was worth £3 per cubic yard, and certain other work was worth so much less, and they took the risk whether it would be guttered and gadded, or blasted, but they always understood that it should be guttered and gadded? I do not see why they should have understood it so.
211. But they must have inferred it from the plan? If they read the specification they would see that the remarks on the plan coincided with the remarks in the specification.
212. It looks as if there was some reason for the remark on the plan;—was it because there is a hospital in the neighbourhood, and it was feared that some injury might be done to the patients? I cannot tell you what operated on the mind of the surveyor when he put those remarks on the plan; but if it was because of the hospital, then the fact that the hospital received no damage shows clearly that it was unnecessary to gutter and gad.
213. Do you yourself think that the people who brought this action against the contractors suffered any damage? I do not think they did.
214. But the contractors had to pay? You must bear in mind, in regard to guttering and gadding, that it is not altogether a question of a little saving to the Department, but it is a very cruel thing to put men in those small tunnels to cut out rock with a pick, and gutter and gad. For that reason we have obviated guttering and gadding wherever we could.
215. What was the name of the surveyor you referred to? Mr. Peake.
216. What is his position? He is Assistant Engineer now.
217. If you desire to do so you may make any statement you like? First of all, I would like the Committee to go back about twelve or thirteen years, when in so far as the city of Sydney and its immediate surroundings were concerned, these sewerage works were initiated. It is manifest that works of this description cannot be carried out without a good deal of inconvenience, and it may be, in some cases, possible damage to property in the immediate vicinity of them. Blasting cannot be carried on without perhaps some little damage occurring in some cases. Knowing that, and knowing, furthermore, that in many cases in the neighbourhood of Sydney the houses are built on clayey foundations, which are liable to contract, and that in many cases the buildings are of a shoddy character, and that on account of the materials that are used in their construction, the structures are likely to shrink, we were of opinion that it was necessary that the Department should be absolutely free from all liability in regard to damages that might occur, or that might be alleged to have occurred. That is the position which the Department took up thirteen years ago, and that is the position the Department has maintained from first to last. As anticipated, there have been a series of actions brought against contractors for damage to property.
218. *Mr. Davis.*] Might I ask, without interrupting you, whether the Department, in holding itself free from liability, takes into consideration the relief from that risk in paying for the work? The contractors do that in fixing their price. In every case, with the exception of about two or three,—and they were cases where the Crown Solicitor advised the Department that if the property owners decided to enter an action against the Department, instead of the Contractor, the Department would have to defend the action,—the Department has succeeded in getting the contractors to fight their own battles. Those were two cases where compensation was granted by the Department, and in both those instances the contractors recouped the Department for the expense. Now the position is simply this, that if Maddison and Ewing, because they have been dealt with very unfairly by the owner of the property in question, or because it is a very hard case, are to be considered, I am sure that to every fair mind it will appear that the other contractors concerned should also be considered. I may state that, at the present moment, there are several contractors who have made claims on the Department for law costs and damages, for which they have paid, but we have, on the advice of the Crown Solicitor, resisted all such claims on the part of contractors. I would, therefore, like the Committee to bear in mind that in dealing with this particular case it is not an isolated one, by any means. If these men are to be considered, necessarily other contractors will look for consideration too, and there will be no answer, as far as I can see, to give to the other contractors.
219. I understand you to say that the contractors take all risk? Yes.
220. Very well; that work was started with guttering and gadding, and you subsequently ordered them to shoot;—is it in the province of the contractors to say that they think there is a risk to the property adjacent in shooting? But they did not start with guttering and gadding.
221. That is the evidence of both contractors? We gave orders from the beginning that compressed powder could be used.
222. And, although you said that they might use compressed powder, if they, seeing that they were responsible to the Department to liquidate all claims for damages, in their wisdom thought proper not to use compressed powder,—it was quite within their rights to do so;—if they thought there was a risk by using explosives they could have continued to gutter and gad? Yes.
223. *Chairman.*] But it was at no request of theirs that you instructed them to blast instead of to gutter and gad? We instructed them that, in accordance with the terms of the contract, they might use 4 inches of compressed powder, and we told them they would be paid under that item.
224. Is it a common thing on your plans to specify guttering and gadding in particular portions of a work? I think this is the last occasion on which that remark was made on sections for contracts of this description. Previous to this it often happened, but I regarded these remarks as quite superfluous, because we have full power under the contract to take out the excavation, either by guttering and gadding, or by the use of explosives.
225. *Mr. Anderson.*] What was the construction of the cottage that was supposed to be injured? It was a brick-built cottage, of a very poor nature indeed.

J. Davis.  
23 Aug., 1900.

- J. Davis. 226. What was the thickness of the walls? Some would be 9 inches and some 4½. I suppose there would be more 4½ than 9.
- 23 Aug., 1900. 227. What was the distance of the cottage from the shaft that was being sunk? I cannot tell you from memory, but it was a long distance. If you desire my opinion, I am satisfied that no damage was done to the cottage; but the question has gone beyond that stage.
228. At the time of the reputed damage, what was the depth of the shaft? Eighteen feet from the surface, and the tunnel would be in some distance. Mr. Noble will be able to tell you, probably, the exact distance when the owner of the property complained of the damage.
229. Was it during the time that the tunnelling was going on, or during the sinking of the shaft, that the injury was supposed to be done? When the complaint reached the contractors it was during the time the tunnel was being driven.
230. As a rule, I suppose you test the ground where sewerage work is to be done to see the strata? These bores indicated on the longitudinal section show that the ground has been tested in the way you speak of.
231. *Chairman.*] Of course, the contractors would have been paid less for blasting than for guttering and gadding? Yes.
232. I suppose the Department had good reasons for making the change in the method of the work? The reasons which operated in ordinary blasting were "a," there was the question of the men's health; and, secondly, there was the question of expense. If the work is taken out by guttering and gadding the Department has to pay £3 per cubic yard, and if it is taken out by means of charges of powder not exceeding 4 inches in length, the price is £2 5s.
233. And when the Department decided to authorise blasting instead of guttering and gadding, they thought there was no possibility of an accident to any property in the neighbourhood? We thought so, and I think the evidence has proved that we were correct; and in this the contractors concurred.
234. *Mr. Anderson.*] You believe that the contractors were exceptionally careful, and that if they thought there was likely to be any damage done to any property through blasting, they would apprise the Engineer or the officer-in-charge? I think that if they thought they were going to do any damage to property, they would have exercised the necessary care to prevent it. I believe they did exercise care; and I believe, furthermore, that they did not do any damage to property.
235. I understand that these contractors have been for some years carrying out contracts for the different Departments? Maddison and Ewing have been working for the Department since 1837.
236. You always found them reliable? I have nothing to complain of with regard to them; they are very decent men, indeed.
237. *Chairman.*] Is it an exceptional thing to provide, as is shown on this plan, for guttering and gadding in particular portions of a contract; I may tell you that the contractors maintain that it is an exceptional thing? Since the preparation of this longitudinal section, I may say that I issued instructions that these remarks should not be put on the longitudinal section. Formerly it was not customary, but it was not unusual for these remarks to be put on. I regarded them as superfluous, and possibly as misleading, and consequently, being unnecessary from any point of view, I issued instructions that they were not to be put on. But up to the date of the signing of this contract, it did happen, in some cases, that we put these remarks on.
238. One of the strong arguments used by the Department is—and I think you mentioned it—that, if we recognise this claim, we will have to recognise a large number of other claims; are there any other claims you know of on all-fours with this, where guttering and gadding is provided on the plan;—do you know of any case where claims have been urged against the Government for actions at law in regard to blasting? There are a number of cases that are on all-fours with this; but I do not know of any case where the contractors have taken the point that, because "guttering and gadding, unless otherwise ordered," is shown on the longitudinal section, they have been misled.

TUESDAY, 4 SEPTEMBER, 1900.

Present:—

MR. F. CLARKE.

MR. MEAGHER.

MR. RIGG.

E. M. CLARK, ESQ., IN THE CHAIR.

Peter Ewing, contractor, recalled and further examined:—

- P. Ewing. 239. *Chairman.*] When you gave your evidence on a former occasion, you promised to hand in certain letters received by your firm from the Sewerage Construction Department? Yes; I produce them.
- 4 Sept., 1900. They are as follows:—

Department of Public Works, Engineer for Sewerage Construction,

Gentlemen,

Sydney, 7 December, 1896.

In reply to your letter of the 23rd ultimo, asking to be allowed to use explosives at shaft No. 7, I have the honor to inform you that you may excavate the shaft named at 4 miles 36·09 chains, from 15 feet below the surface, by means of 4-inch charges of compressed powder. You will be paid for this work under schedule item No. 6 of your contract in so far as it proves to be in rock.

I have also to request that you will please excavate the tunnel from shafts at 4 miles 17·42 chains, 4 miles 28·90 chains, 4 miles 21·50 chains, and 4 miles 36·09 chains for one-ring lining, by means of 4-inch charges of compressed powder. You will be paid for this work under schedule item No. 10.

I have, &c.,

J. DAVIS,

Messrs. Maddison and Ewing, Contractors for Contract No. 127.

Engineer for Sewerage Construction.

Through Mr. Noble. Seen E.G.N., 8/12/96.

Department of Public Works, Engineer for Sewerage Construction,

Gentlemen,

Sydney, 13 November, 1896.

I have the honor to request that you will be good enough to excavate the shaft at 4 miles 28·90 chains, from 2 feet 6 inches below the surface, by means of 4-inch charges of compressed powder. You will be paid for this work under schedule item No. 6 of your contract.

I have, &c.,

J. DAVIS,

Messrs. Maddison and Ewing, Contractors for Contract No. 127.

Engineer for Sewerage Construction.

Through Mr. Noble. Seen E.G.N., 14/11/96.

240. The letter of 7th December, 1896, appears to be in reply to some letter of yours written on the 23rd of the previous month, in which you ask to be allowed to use explosives at shaft No. 7? Yes. P. Ewing.
241. The latter part of the letter only refers to the lining of the shaft? Yes. 4 Sept., 1900.
242. Did you make any application to blast at either portion of the shaft where gadding and guttering are provided? No.
243. I understand that you desire to make some correction of your previous evidence? Yes; in regard to Question 173, which is as follows:—

Did you take this work at schedule rate? I think it was  $3\frac{1}{2}$  per cent. above schedule.  
Instead of being  $3\frac{1}{2}$  per cent. above schedule, it should be  $\frac{1}{4}$  per cent. below schedule.

Thomas Williams, contractor, sworn and examined:—

244. *Chairman.*] Are you a partner in the firm of Maddison and Ewing? Yes. T. Williams.
245. Did you sign a contract under a power of attorney from them? Yes; for Mr. Maddison. 4 Sept., 1900.
246. Are you fully acquainted with contract No. 127? Yes; I went over the ground and made up a tender for it.
247. Do you generally make up the tenders for the contracts in connection with the sewerage work of the firm? Yes.
248. Did you make any allowance in your tender for claims which might be brought against you in connection with the work you had to do? We generally do that; but I did not do it in this instance, because where there was any likelihood of damage it was shown on the plan, which was marked "gadding and guttering, unless otherwise ordered."
249. *Mr. Rigg.*] Inasmuch as the plan contained those words, was it not left to the Engineer to determine what should be done? I do not think so. The officials could order us to gad and gutter any portion of the work. I have been tendering for work of this kind for twelve years, and I have never before seen such words marked on a plan.
250. Why are the words "unless otherwise ordered" marked on the plan? I cannot say, because we were liable to receive orders to gad and gutter any portion of the contract.
251. When you make out tenders, do you not make provision for the ordinary risks incurred in the carrying out of the contract? Not when the plan is marked as this was. There would have been no risk if we had gone into the gadding and guttering.
252. *Chairman.*] Do you think the Department was of opinion that there was risk to property, and that that was why the words "gadding and guttering" were marked on the plan? Certainly, or they would not have put those words there.
253. Was there much property in the immediate neighbourhood of the shaft? Yes. The sewer, in fact, runs right along the footpath, and the nearest point of the sewer from the house, the owner of which brought an action against us, is only 20 feet.
254. Then you say you did not make any allowance in your tender for this particular contract, because you did not think there would be any risk on account of the gadding and guttering being provided for? There would have been no risk if it had been carried out according to the plan, as we thought it would have been.
255. Do you think the Department thought there would be any risk? If they did not think there would be any risk, why did they put those words on the plan?
256. Then you think they put those words on the plan, because they thought there would be some risk? It was the only part of the job in connection with which those words were marked on the plan.
257. What was the length of that portion of the work? Six chains.
258. What was the length of the whole of the work? Eighty-five chains.
259. And they provided for gadding and guttering for 6 chains at a particular spot? Yes; for 6 chains in one spot, and for 5 chains in another spot further on.
260. You say that the alteration which was made meant a difference in your price? Yes; a difference of 6 or 7 per cent.
261. Then, instead of being  $\frac{1}{4}$  per cent. below schedule rates, you should have been about  $7\frac{1}{4}$  per cent. above schedule rates? Yes, about that. I went very carefully over the job, and that, in my opinion, was the only place in which there would be likely to be any risk.
262. What would have been the difference in the contract price if you had tendered  $7\frac{1}{4}$  per cent. above instead of  $\frac{1}{4}$  per cent. below schedule rates? From £600 to £700 on the job. I think the job worked out to nearly £10,000.
263. And the Government must have got the work done cheaper, at that rate, by providing gadding and guttering? Certainly; if the gadding and guttering had been carried out as shown on the plan, there would have been no risk on the job.
264. When the action at law was taken, were you compelled to fight it or lose it by default? Yes; the claim against us was for £500, and we had to defend it.
265. The person who brought the action could have brought it either against you or the Government? Yes.
266. If she had brought it against the Government and had won, the Government might have come down upon the firm in respect of it? Yes; they would have deducted it from our certificate. I may mention that if we had settled the case, there would have been five or six others brought against us by people who were waiting to do so.
267. In that particular neighbourhood? Yes.
268. *Mr. Rigg.*] Did you inspect the property alleged to be damaged? I did not; but Mr. Ewing inspected it, along with the District Engineer.
269. Was that before the job was started? Yes.
270. Did you take a photograph at any time? Yes.
271. Did the building display any difference after the work was done? We did not think there was any difference in it. Mr. Noble went through the place and took notes, and he could not see any difference whatever.
272. Did not the building show a crack after the photograph was taken? Yes; but the crack also appears in the photograph which was taken before the blasting work was done. 273.

- T. Williams. 273. Is the building in the same condition now that it was in when the photograph was taken? Yes.
- 4 Sept., 1900. 274. In the face of that the case went against you in the Court? Yes.
275. Can you produce evidence to corroborate what you have stated? Yes; Mr. Noble and Mr. Simpson, of the Works Department, can corroborate it.
276. I understand that you defended three actions in respect of this particular claim? Yes. In the first two the jury disagreed; the third verdict was against us for £30, and that carried the cost of the three actions.
277. *Chairman.*] What was the amount of the claim against you? £500.
278. Did you obtain a valuation of the property? Yes. Messrs. Richardson and Wrench valued it at £120, including land, and Mr. Kemp, the architect, valued it at £100, including land.
279. *Mr. Rigg.*] I understand that you have made application to the Government for out-of-pocket expenses in connection with the legal proceedings which were taken against you? Yes. I may mention that we had a claim against us in respect of work at No. 1 shaft, which we settled for £30, as the plan did not provide for gadding and guttering, as did the other places. We did not ask for that amount to be refunded.
280. *Mr. Meagher.*] You have stated that you have not noticed gadding and guttering provided for in connection with previous plans? No; I think this is the first.
281. You are positive that the only reason why it was provided for was for the protection of property? Yes.
282. Then, in making out your contract, you based your calculations on the fact that the property was protected, and you allowed no margin for damage? Certainly not. The officers of the Department could have ordered us to gad and gutter any portion of the contract which was not so marked. I think gadding and guttering has been shown on the plans of two contracts since this occurred.
283. *Chairman.*] Do you think this contract was the first upon which the words "gadding and guttering" were shown? Yes.
284. *Mr. Rigg.*] After all, you consider that no damage was done to the properties? No; we think the case was one of blackmail. Our argument is, that if we had not been ordered to blast, the people would have had no chance of going against us.
285. *Mr. F. Clarke.*] Were you ordered to blast instead of gadding and guttering at the points marked "gadding and guttering" on the plan? Yes.
286. *Chairman.*] Did you yourselves make a start to blast? The general rule, when we come into rock, is to write an application to the Department to be allowed to blast; but we did not do so in respect of the particular places marked "gadding and guttering" on the plan. The officers of the Department came along and ordered us to do it without our asking for permission. Paragraph 9 of the specification says: "The contractor shall take upon himself the whole risk of executing work to the satisfaction of the Engineer, and in accordance with the plans, specifications, and schedule of specification." That refers to the contractor's risks.
287. *Mr. Meagher.*] Did you interview the Works Department in regard to proceedings being taken against you? Yes. Of course, we summoned all the engineers as witnesses.
288. But did you have any conversation in regard to the point which you have been talking about to-day, namely, that practically you were being penalised on account of the orders of the Department; that, as a matter of fact, they gave you instructions contrary to those which appeared upon the plans; and that you were being penalised on account of those instructions by an action at law? I do not think we drew their attention to that aspect of the matter.
289. When did you first make a claim against the Department for compensation? After the case was settled.
290. And prior to that you made no overtures to them to indemnify you? No.
291. *Mr. Rigg.*] Was there much blasting in the shaft? A good bit.
292. Was there only one dangerous part? No; there was another part in regard to which the plan was marked "gadding and guttering." We got complaints from people living a mile away.
293. Where from? We got one from near to shaft No. 1. We did not think that any damage was done, but we settled the claim for £30 rather than go to the expense of appearing in Court.
294. Although, under your tender, you did not consider yourself responsible for the damage? That is so. We did not ask the Department to refund it.
295. How do you explain your responsibility for that damage and your irresponsibility in regard to a similar claim on another part of the job? Simply on account of the memorandum on the plan. We signed the plan to gad and gutter one portion. Although we did not think any damage was done, the owner thought differently.
296. *Mr. Meagher.*] Was there any official correspondence between your firm and the Department in regard to paying you the damage you have suffered? No.
297. Then, practically, the matter comes before the Committee untrammelled in any way? I ought to explain that we did write a letter to the Department asking them to refund us £766 law expenses.
298. Did they repudiate it? Yes.
299. *Mr. Rigg.*] When you received the order to blast, did you draw the attention of the Department to the fact that you would require an additional allowance to cover any compensation which you might be called upon to pay? No. We were excavating the shaft, and we did not intend to ask permission to blast. One of the engineers, however, came along one day, and the matter cropped up, and he told us to blast. That was a day or two before we received the notice dated 7th December, which I have read.
300. Would it not have been better for you to have told him on the spot that you would require some allowance to cover any risk which you might have to take? The officials had the power to order us to do whatever they liked. As soon as people commenced to complain the engineer in charge went through the properties again, and told the owners he could not see any difference in them.
301. *Mr. Rigg.*] Do you know whether the Department, in former days, has carried out a lot of contracting by gadding and guttering? Some years back some sewerage work was carried out in Castlereagh-street, and no provision was made in the plan for gadding and guttering. A lot of people complained, and they took the contract off the contractor's hands and called for tenders, which included gadding and guttering.

302. Was not gadding and guttering carried out some time ago in connection with a work at which a number of human lives were sacrificed? Yes, at North Sydney, I think. I might mention that the Department, by ordering us to blast instead of gadding and guttering, saved about £150 on the contract. T. Williams.  
4 Sept., 1900.
303. What was the original estimate for the work? £11,000.
304. What did it cost? Something less than £10,000. I think there was a margin of about £2,000.
305. So that the Department saved about £2,000 on their original estimate? Yes.

Algernon Peake, Assistant Engineer, Sewerage Construction Branch, Department of Public Works,  
sworn and examined :—

306. *Chairman.*] Did you make a survey in connection with the western suburbs sewerage contract 127? I was in charge of the survey; I made an inspection. The plan of the contract has been put in. A. Peake.  
4 Sept., 1900.
307. Gadding and guttering is provided in connection with a certain portion of the plan; can you tell the Committee why that provision was made in one portion of the survey, and not in the other? I might tell the Committee the method of getting out these drawings. To begin with, an inspection was made by myself, and then I instructed the surveyor to make a survey. The plans were then prepared and I computed the sizes and the grades of the proposed sewer. The plans were then handed over to the Chief Draftsman for the preparation of details and estimates. To enable the Chief Draftsman to prepare his estimate, it is necessary to give him an idea of the work on the contract which I thought would be necessary. This note of "guttering and gadding" is suggestive more than anything else. I intended it to be a guide to the Chief Draftsman in the preparation of his estimate. Of course, I was aware, when preparing this, that anything which was on the plan was not binding. In fact, I put it in this way:—"Unless otherwise ordered." In our general specifications there is a clause which enables the Engineer to have the ground taken out if he thinks fit. I have been carrying out works of a similar nature since I had charge of the survey work, and it is usual to decide how the ground shall be taken out after the houses have been examined. That is taken into consideration. For instance, if a house is badly built, it might be prudent to take it out by gadding and guttering if it is near the line of sewer. Of course, whatever the structure is, we must not damage it; and if we considered that a badly-built house was within the range of concussion we might decide to gutter and gad in going past it.
308. *Mr. Rigg.*] When you placed that note on the plan were you guided by the property immediately joining that particular part of the work? I noticed that the houses were very close to the sewer. I did not examine them before putting the note on the plan; but if I had charge of that construction, and found one of the houses badly built, I might recommend guttering and gadding.
309. Was it in consequence of the property being there that you made that recommendation? It is so long ago that I cannot say exactly what actuated me in the matter; but there is that probability, seeing that the houses are close to the sewer.
310. You have prepared plans for similar work before? Yes.
311. Did you ever make a similar memorandum upon any of those plans? Yes; I made similar notes on Contract 123—Balmain sewerage. When the Balmain plan was prepared by me, I had only just taken over the work of supervising surveys, and it was prepared in accordance with my idea.
312. I believe the dates of the whole of the plans are almost identical? Yes.
313. Was it customary for some time prior to the date contained on these plans to place similar memos. on other plans? I cannot say; but I believe it was.
314. *Chairman.*] Was the Balmain job—Contract 123—gadded and guttered? Much of the work which I suggested should be gadded and guttered was not gadded and guttered; but some portion of it was. The plan shows exactly how the work was carried out.
315. *Mr. Rigg.*] Apart from contract 123, have you any knowledge of the memo. "unless otherwise ordered" being placed on any previous plan? I cannot call it to mind.
316. *Chairman.*] Who were the contractors for the Balmain job? Carter, Gummow, & Co.
317. *Mr. Meagher.*] Were the instructions to gutter and gad purely a departmental matter? Yes; they could have been altered by the Chief Engineer.
318. But at that stage the calling for tenders had not arisen? No.
- 318½. If a departmental note is permitted to be made upon a plan, and it is not carried out, is it not misleading to allow it to remain there? I hardly think so. Contractors are aware that alterations are constantly made in the way the ground is taken out.
319. If houses are badly built contiguous to the line of sewerage, and guttering and gadding has been provided for, would not the contractors make a margin in connection with their contract in case they were called upon to blast;—would you, as a business man, expect to be called upon to provide for a contingency of that kind? There is a saving clause, "unless otherwise ordered." If guttering and gadding had been noted on the plan without the three following words, "unless otherwise ordered," I should have said the contractors might think themselves hardly treated if they were struck out, although under the specifications we should have power to strike them out.
320. I suppose you have not the slightest doubt that "guttering and gadding" was inserted in the plan for no other reason than the protection of houses? As I have already told you, it was made by me chiefly for the purpose of getting out an estimate.
321. Why did you not provide for gadding and guttering in other parts? Of course the nearness of the houses guided me to some extent.
322. Is there any other reason which would guide you to provide for gadding and guttering apart from the nearness of the houses? No; that would be the chief reason.
323. And the real reason? Yes.
324. Wherever gadding and guttering is marked on the plan houses appear in close proximity? They do. Of course, if these houses upon examination were found to be of faulty construction, if I had charge of the work, I should feel inclined to carry out gadding and guttering; but if I found, on the other hand, that the houses were not likely to be damaged by concussion I should blast.
325. I suppose you are aware that the jury have penalised the contractors for practically carrying out the orders of the Department? I do not know the ins and outs of the matter, but I have heard something of it.

- A. Peake.** 326. How many years have you been in the Department? Ten, continuously.  
 327. What is the date of the contract? October, 1896.  
**4 Sept., 1900.** 328. Can you say how many contracts during the previous six years have contained, in connection with the plans, the words "gadding and guttering"? Prior to 1896 I was doing survey work, and I had nothing to do with the preparation of plans; but I have seen them. I cannot recollect seeing that note on plans prior to that date.  
 329. Although doing survey work, you in the course of your business saw plans, and you cannot recollect an instance in which similar words appeared? I cannot recollect; but, of course, there may have been cases.  
 330. The Balmain contract to which you referred was practically subsequent to the western suburbs sewerage contract? They were practically of the same date. The Balmain contract was let three weeks after the other.  
 331. *Mr. Rigg.*] Do you consider that the words on the plan, "unless otherwise ordered," throw the risk of the job on the contractor? I certainly do. I consider the contractor takes the whole of the risk; otherwise, what need for those words?  
 332. *Mr. Meagher.*] You admit that the words "gadding and guttering" are put in the plan for the protection of property? If I considered them to be final I certainly should not add the words "unless otherwise ordered."  
 333. But gadding and guttering is for the protection of property;—there may be houses built in a certain way in regard to which you might take some risk? Yes; of course, when we gutter and gad it is for the protection of property.  
 334. In view of the fact that the order contained on the plan was countermanded, and the property was damaged, is it fair to penalise the contractor? It depends on how the work is carried out. Of course we are supposed to see that the contractors carry out their work faithfully.  
 335. *Mr. Rigg.*] The Department has the option of saying which way the work should be carried out? Yes.  
 336. *Chairman.*] Could you order guttering and gadding to be carried out where blasting was provided for? We could order it anywhere.  
 337. *Mr. Meagher.*] Supposing you ordered gadding and guttering at some place not marked on the plan, would you do it for the protection of property only? Yes; it is necessary in some places for gadding and guttering to be carried out. The Chief Draftsman must make some allowance, and the estimate of course should be on the right side.  
 338. Of course the contractor cannot blast where guttering and gadding is provided? That is so.

---

Edward George Noble, Resident Assistant Engineer, Sewerage Construction Branch, Department of Public Works, sworn, and examined:—

- E. G. Noble.** 339. *Chairman.*] Were you the Supervising Engineer in connection with contract 127? Yes.  
**4 Sept., 1900.** 340. Do you know the portion of the work where gadding and guttering is provided? Yes.  
 341. Did you receive instructions from the Department to the effect that the contractors had been ordered to blast in that particular portion? Yes.  
 342. What depth was the shaft before the contractor started to use explosives? We ordered them to blast near the surface as soon as they struck the rock, but they did not do it. I daresay they started to blast at a depth of 10 feet. The ground is hard at that point.  
 343. Do you know the house which is supposed to be damaged? Yes.  
 344. Did you inspect it before or after it was supposed to be damaged? Yes; before we started blasting, and three or four times since. Mr. Ewing was with me at the time. In my opinion no damage was done to it.  
 345. Did Maddison and Ewing carry out all your instructions? Yes.  
 346. *Mr. Meagher.*] If the Department instructed them to blast when they were just going below the surface, would there have been more risk of damage to the house than there would have been at a depth of 10 feet or 12 feet? No; there might have been a chance of breaking the windows. In my opinion, it is not possible to damage a house that distance away.  
 347. Would a house be more liable to be damaged by blasting lower down than by blasting closer to the surface? It is a difficult question to answer with regard to that particular place.  
 348. You say that the Department practically ordered these men to blast when they had broken the surface; but that they went 10 feet deeper before starting to blast? Yes; that was because we struck a water-main at the surface. That was one reason. In addition to that, the ground was soft.  
 349. Did you supervise the blasting by the contractors? No; the inspector was there.  
 350. Did the inspector at any time complain of the negligent manner in which the blasting was carried out, or was everything done in a thoroughly workmanlike way? There was no complaint throughout the whole of the job.  
 351. *Mr. Rigg.*] How long have you been connected with the Department? Ten years.  
 352. How long have you been accustomed to this kind of work? Ever since I started.  
 353. Have you, during any previous period of your experience, seen the memo. "gadding and guttering, unless otherwise ordered" printed on a plan? No; this is the first time it has come under my notice.  
 354. Do you know why that memo. was put upon the plan? No; I have no idea, especially as the houses are very scattered about there.  
 355. You say you looked at this particular property before the work was started? Yes; I went through it; I took mental notes of it, and I know exactly the condition it was in.  
 356. Did you inspect it subsequent to the work being completed? Yes; a couple of weeks afterwards.  
 357. Did you notice any difference in the condition of the building? Not the slightest.  
 358. In your opinion, was any damage done to the property? No; in fact, it was stated in the district the woman intended to go for the contractors from the very start. That, of course, is only hearsay.  
 359. I suppose you are aware of the fact that she did go for them? Yes; I gave evidence in connection with the trial.  
 360. *Chairman.*] Did you go through the house after the blasting was completed? Yes, on several occasions.

361. And you say it was in the same condition as it was before the blasting was commenced? Yes; it was a very dilapidated building; in fact, I do not know how people could have lived in it. E. G. Noble.

362. *Mr. Rigg.*] Did you consider that you had the privilege of ordering blasting to be carried out because of the memo. on the plan? I do not think the memo. interferes with the matter at all. 4 Sept., 1900.

363. I suppose you had the power to say whether the work should be blasted or gadded? Yes; in similarly situated country we carry out blasting; in fact, I do not know what the memorandum was put upon the plan for.

364. Whom do you consider takes the risk of any damage to property—the Government or the contractor? Of course, we say the contractor.

365. *Chairman.*] Have you any further evidence to offer? I feel very strongly about that house. I am perfectly certain no damage was done.

366. *Mr. Rigg.*] You consider that the contractors were got at? I do. From what I saw, I consider the decision was a bad one.

367. *Chairman.*] You say that it was generally understood in the neighbourhood that this woman intended to take action? It appears so; the people talked about it.

THURSDAY, 20 SEPTEMBER, 1900.

Present:—

MR. ANDERSON,

MR. MEAGHER.

E. M. CLARK, ESQ., IN THE CHAIR.

Thomas Williams recalled and further examined:—

368. *Chairman.*] You desire to put in a letter from Messrs. Jones and Jones, solicitors, Sydney, showing the amount of costs incurred by you in the action of Darnley v. yourself? Yes. It is as follows:— T. Williams.  
20 Sept., 1900.

We certify that the verdict and the plaintiff's taxed costs herein amounted together to the sum of £434 7s. 9d., and that such sum was paid by you through us to the plaintiff's attorney on the 15th day of July, 1899. The amount of costs paid by you to us herein came to the sum of £341 13s.; the total amount paid by you being £776 0s. 9d.

369. Were those the whole of the costs you incurred in connection with this action? No; we paid between £150 and £200 for professional witnesses in the three cases. Those payments were not made through the solicitors.

370. So your total costs in connection with this action would amount to a sum exceeding £900? Yes; about £950.

371. This one action, of course, represented three cases? Yes.

372. That is to say, the jury disagreed twice, and the third time, by a majority, the jury decided in favour of the plaintiff? Yes.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MONTHLY RETURNS OF ACCIDENTS.

(DEPARTMENT OF PUBLIC WORKS, DECEMBER, 1899, JANUARY, FEBRUARY, MARCH, AND APRIL, 1900.)
