APPENDIX B.

THE TICK IN QUEENSLAND, AND MEASURES ADOPTED TO PREVENT ITS INTRODUCTION INTO THIS COLONY.

So far as information has been obtained from Queensland the spread of the tick pest has made but little advance since the publication of my last Annual Report, when the following was then given as an approximately correct description of the infested, suspected, and doubtful portion of Queensland, and may be accepted as the present extent of the disease there, with the few exceptions after mentioned.

All that country in Queensland, bounded on the south by the Colony boundary from Tweed Heads to Maryland; thence to the rabbit fence near Dalveen; thence by that rabbit fence north-westerly to Chinchella; and thence northerly to the north-east corner of the Walloon run, may be considered infected, suspected, or doubtful; as also all that part of Queensland lying north-east and north of a line starting from the last-mentioned point, and running north-westerly to Emerald, on the Central railway line; thence by that line to Longreach; and thence by a line north-westerly to the South Australian border, at the north-west corner of Herbertvale holding.

The

The principal difference to be noted between this year and last is that the coast country between Brisbane and Rockhampton has become more closely infected, and tick-fever (red-water) has appeared there in several places nearer Brisbane, carrying off considerable numbers of cattle; and it is to be feared that the movement of so many sheep and cattle from the drought-stricken portions of Queensland to the coast, and their return to their own runs when they have had the necessary rainfall, will tend to an increased spread of the tick, and necessitate the bringing the east and west boundaries of the infected area farther south, and further west also, as it approaches the main coast range.

At the date of the last report, ticks had reached Brisbane and its suburbs, and also been found at Ipswich, and it is very satisfactory to learn that through the effective manner in which the Logan buffer line on the south of Brisbane was guarded in the first instance by the inspectors from this Colony and Victoria, and latterly by the Queensland staff, the pest has been prevented from making any further advance towards our border, and that the clean buffer area between the line referred to and the Logan buffer area will be thoroughly maintained.

Queensland is also maintaining a strict watch along the coast range from our border northward as far as the northern watershed of the Burnett River; and it is hoped that also on the western side of the infected and doubtful area (A 1, from which only horses in actual work are admitted) the spread of ticks will be effectually blocked and prevented from passing into the buffer area, A 2.

*Regulations issued to prevent the introduction of the Tick by land.*

*From area described in Schedule A.*—No stock, except horses and camels in actual work (accompanied by owner's declaration and the inspector's certificate), which have been inspected and satisfactorily smeared, can be introduced into this Colony; not less than forty-eight hours notice of intention to cross to be given.

*From area described in Schedule A 1.*—The Regulations with respect to stock from this area are identical with those from Schedule A, except that the notice of intention to cross is not less than twenty-four instead of forty-eight hours.

*From area described in Schedule A 2.*—As regards that portion of the border to the east of Stanthorpe, the Regulations are identical with those relating to area A 1; but as regards the other portions of the border, horses in actual work, and sheep, pigs, and goats, which have been for upwards of three months in that area, can be introduced through area A 3 into this Colony, under the conditions applicable to the last mentioned area. No other stock from A 2, nor any stock from A or A 1, can be introduced. In this case also, twenty-four hours notice has to be given.

*From area described in Schedule A 3.*—Loose horses, camels, and cattle, accompanied by a declaration by the owner, and a certificate by the inspector for the district from which they came in the form of Schedule B, may, after inspection in a crush, if not infected, be introduced, and also all horses and camels in actual work, sheep, pigs, and goats may also be introduced if accompanied by Schedule B, and found after inspection to be not infected. Notice of intention to cross in this case, as regards loose horses, camels, and cattle being seven days, and as regards other stock mentioned, forty-eight hours.

*Special Regulations.*

Besides the Regulations already referred to, there are special Regulations relating to the horses belonging to residents on both sides of the border whose business requires that they should frequently cross the eastern portion of the border, under which the settlers' horses are allowed to cross and recross the border on condition that they do not go more than a certain distance from the border, and are submitted weekly to the inspector for inspection and smearing.

There are also special Regulations with respect to stock belonging to owners in the country contained in Schedule A 3, who hold land on both sides of the border, and which is worked as one run, and where stock entering on the Queensland portion of the run have to be crush-examined the same as if they were about to cross the border, and again on leaving the run for any part of this Colony.

Regulations are also issued for the protection of the border fences and the closing of gates, the disinfection of hides, and sheep and other skins.

*Regulations re Stock from Queensland by sea from country described in Schedule A and A 1.—  
Stock prohibited.*

All horses (except horses in actual work), and all cattle, camels, sheep, pigs, and goats.

*Stock admissible by sea.*

Horses in actual work under the following conditions:—

- (1.) That they are landed at Sydney or Newcastle.
- (2.) That the owner gives the inspector notice of their arrival.
- (3.) That a declaration by the owner, and a certificate from the inspector for the district from which the horses come that they are free from infection, and have been dipped or smeared, is produced to the inspector.
- (4.) That they are, on inspection, found free from disease, and smeared to the satisfaction of the inspector.

*The Staff engaged in carrying out these Regulations.*

One Supervising Inspector, ten Acting Inspectors, stationed at the following crossing-places, with assistants:—

Tullabudgera (Tweed Heads), with three assistants.  
Grady's Creek and Mount Lindsay, with five assistants.  
Killarney, with five assistants.  
Wallangarra, with four assistants.  
Boggabilla and Texas, with two assistants.  
Mungindi, with two assistants.  
Brenda.  
Barrington.  
Hungerford and Parragundy, with one assistant.  
Wompah.

*The*

*The Assistants' time is principally occupied in patrolling the Border.*

To carry out these Regulations, and prevent the introduction of infected or suspected stock, about 120 miles of the most dangerous portion of the border, including as it does the coast country from near Wallangarra to the Pacific Ocean at Tweed Heads, wherever it is not naturally impassable for stock, has been fenced with a five (5) barb-wire fence; and it will be seen, on reference to the Regulations applicable to the country included in Schedule A I, that no stock of any description, except horses in actual work, are admitted from that portion of Queensland, and those only after inspection and smearing. The gates at which horses are admitted are kept locked, and only opened when horses which have been inspected and smeared in accordance with the Regulations are crossed. The gatekeepers reside at the gates in cottages built by the Department.

**DR. TIDSWELL'S SECOND REPORT ON PROTECTIVE INOCULATION AGAINST TICK-FEVER.**

Frank Tidswell, M.B., Ch.M., D.P.H., the Principal Assistant Medical Officer of the Government, to whom our stockowners are deeply indebted for the thoroughly practical as well as scientific manner in which he has dealt with the question of the efficacy of protective inoculation against tick-fever, has recently submitted a second report on that subject, which has been published and circulated throughout the Colony.

This report, among other interesting and valuable matter, contains a full account of the exact and exhaustive test carried out at Rockhampton by Dr. Tidswell, with the assistance of Mr. Government Veterinarian Stewart, as to the efficacy of inoculation for tick-fever, in the case of the cattle inoculated in this Colony, and taken to Rockhampton, on such a scale, and extending over such a period as to dispel any doubt with respect to the correctness of the conclusion arrived at.

In order that the more important and practical portions of the information conveyed in his reports may be as widely disseminated as possible, Dr. Tidswell has kindly prepared the following summary of these reports:—

**PROTECTIVE INOCULATION AGAINST TICK-FEVER.**

**SUMMARY of Reports on Experimental Observations conducted at the instance of the Hon. the Secretary for Mines and Agriculture, by Frank Tidswell, M.B., Ch.M., D.P.H., Principal Assistant Medical Officer of the Government.**

The experimental work upon protective inoculation against tick-fever was commenced in July, 1898, and terminated in December, 1899, thus covering a period of eighteen months. The bulk of the work was performed at the Maritime Quarantine Station, North Head, Sydney, but its actual conclusion, which involved exposure of the animals to cattle ticks, was carried out at Greenfell, Rockhampton.

The investigations were directed towards ascertaining, in the first instance, the effect of inoculation upon the health and products of dairy cattle, and, secondly, its value as a protection against tick-fever. Incidentally information was obtained concerning cattle ticks and their effects on cattle; upon various matters connected with the practice of inoculation, and upon protective measures other than inoculation. The detailed accounts of the investigations are contained in two reports, presented under dates 29th December, 1899, and 20th February, 1900, respectively. The following summary of them has been prepared in accordance with instructions conveyed to me by the Chief Medical Officer of the Government from the Honorable the Minister for Mines and Agriculture, to meet the convenience of those who, whilst interested in the tick question generally, are not so directly concerned as to need acquaintance with the mass of details contained in the reports:—

*General.*

The tick-fever of Queensland is identical with the Texas or Southern Cattle Fever of the United States. It occurs also in Jamaica, Argentine Republic, South Africa, Roumania, and Java. The Australian name of tick-fever has become attached to it, owing to the part played in its dissemination by the cattle tick. The relationship of these ticks to tick-fever was first definitely demonstrated in America, and described in a report published in 1893, and since that time has been confirmed by observations in South Africa and Queensland, as well as elsewhere. The general outcome of such observations is to the effect that tick-fever only effects horned cattle; that it is not communicated directly from beast to beast, but under natural conditions is acquired by an animal as a consequence of infestation by cattle ticks.

*Cattle Ticks.*

Under the most favourable conditions the lifetime of a cattle tick is seven or eight weeks, spent partly as a parasite upon a bovine host, and partly as a non-parasite upon the ground; this latter period being occupied by the female in laying her eggs, by the hatching of these eggs, and by the young ticks in securing a new host upon which they recommence the parasitic period of their life. The duration of the parasitic period is practically always the same, viz., about three weeks; but the non-parasitic period, though usually lasting about four or five weeks, is liable to be prolonged by adverse conditions of temperature, moisture, environment, access to cattle, &c.; so that, whereas generation may succeed generation every seven or eight weeks, the succession may, on the other hand, be very much slower if inimical influences oppose a barrier to completion of the non-parasitic periods. Vicissitudes in this respect will necessarily have a determining influence on the rate of multiplication and spread of ticks after their introduction into clean country.

Introduction into clean country is practically always effected by the importation of tick-infested cattle. The next event in the spread is the infestation of the pastures, by the falling off of fully matured females, and the laying and hatching of their eggs. The young ticks emerging from these eggs invade the cattle from the ground. The time required for this infestation of the pasture, and consequent invasion of clean cattle, will vary accordingly as the ticks upon the imported cattle are already advanced (matured ticks), or have only just commenced their parasitic life (larval ticks); but, roughly, tick infestation of the clean cattle will begin in from three to five weeks after the tick-infested cattle have been brought into association with them.

When

When the tick-infested cattle have grazed for two or three weeks, the pasture must thenceforth be regarded as tick-infested country, since the females will have in that time dropped from the beasts and laid their eggs. Save in very exceptional cases these will hatch and the field be occupied by young ticks, which may remain alive for many months, even if the pasture be left entirely unstocked. They cannot multiply unless the cattle be present, and will eventually die; but, to ensure their destruction in this way, the pasture must be left entirely unstocked for at least two years. (Salmon.)

Under ordinary circumstances cattle ticks multiply very abundantly, each female laying over two thousand eggs. As successive generations commonly follow one another at intervals of seven or eight weeks, the resulting numerical increase is stupendous. Sooner or later increase ceases, owing to lack of means of subsistence for any greater number, but this state of affairs is not reached until the ticks are present in uncountable hordes. After having thus established themselves, they continue to remain in numbers which, though fluctuating, are always in myriads; and, provided the general circumstances be favourable, they maintain their foothold in spite of all human effort directed against them. This marvellous capacity for numerical increase and maintenance constitutes the most serious aspect of the tick question.

The young ticks exhibit great expertness in attaching themselves to cattle brought into infested country. Within twenty-four hours of their arrival at Greenfell, the experimental cattle were invaded by hundreds of larval ticks, and fresh crops were added day by day. After three weeks the cattle harboured numberless ticks in all stages of development.

The presence of the ticks was indicated at first by suggestive attitudes assumed by the cattle, rubbing their cheeks against the foreleg, biting at the hind legs, &c. Later on, small inflamed lumps appeared at the sites of attachment of the ticks, and still later fissures and ulcers in folds and regions where ticks were numerous and the skin soft, as the scrotum, groins, &c. These troubles received immediate treatment by us, and perhaps on this account we did not witness in our herd the more serious effects described by Dr. Hunt under the names of "tick poverty," &c. No doubt if left alone serious injury to the health of the cattle would have resulted from these ill-effects. It is said that in time cattle become inured to ticks and no longer suffer in the way just mentioned.

#### *Tick-fever.*

But apart from this injury directly done by the ticks, they are also the means of giving tick-fever to the cattle. This fever appears in from ten to twenty days after infestation, and lasts as a rule from eight to fifteen days, during which the temperature is raised to between 103°–107° F. It is accompanied by general outward appearances indicative of severe illness—weakness, loss of condition, failure of appetite, falling off of milk, &c., &c., as well as by special characters, pallor, jaundice, œdema, and red-water. This last sign is not constantly present. In serious cases the animals become extremely emaciated, and may die suddenly or only slowly, and either during the fever, or after it from debility.

This tick-fever is due to the fact that ticks carry and inoculate microbes (*Apiosoma pigeminum*), which live in and destroy the blood of the cattle, and in so doing cause the production of the fever, pallor, &c., just described. Because of the presence of this microbe, tick-fever can be set up without ticks by the inoculation into clean animals of the blood of a beast actually sick or recovered from the disease. In our experience the blood of sick or only recently-recovered cattle always produced the disease, but as time passes after recovery the blood may lose this infectious quality and cease to have any effect. In some animals the blood remained infective for over sixteen months; in others it was lost in less than six months. Therefore, one may not assume that an animal's blood will produce the fever on injection merely because it had an attack some time previously. Whether it will do so or not can only be ascertained by actual trial. The illness produced by inoculation of blood, although the same in kind, is much milder in degree than that produced in the natural way by ticks, and is not followed by any permanent ill-health.

#### *Protective Inoculation.*

It has been found that after recovery from one attack of tick-fever, either naturally or by inoculation, the animals either entirely escaped a second attack, or if they get one it is much less serious than in the case of cattle which have not previously suffered. Hence arose the practice of inoculating cattle with tick-fever blood in the hope that the mild illness so produced would protect them against the serious consequences likely to ensue if they were exposed to ticks without such protection. American observers stated that the protection obtained by a single attack did not confer complete protection, and the experimental observations made at Greenfell confirmed this opinion; but it was found that although the inoculated animals suffered with the rest, their illness was comparatively slight as compared with that experienced by uninoculated beasts exposed with them; and whereas the fatality in the uninoculated was 44·4 per cent., in the inoculated it was only 12·1 per cent. It was thus apparent that inoculation was capable of affording a very decided amount of protection against tick-fever.

We did not find that the amount of protection obtained could be influenced by any modification of the details of the method of inoculation. Animals treated in different ways were equally protected, and animals treated in the same way suffered in different degrees. Variations in the number of inoculations, the dosage, the kind of blood used, the degree of reactional fever, &c., did not appear to exert any effect upon the amount of protection subsequently exhibited. The issue appeared to us to depend more on the individual peculiarities of the animal than upon any factor under human control. We found that the protection could be produced in three or four weeks; that it could endure for twelve months (the longest period tested by us); that animals whose blood would not produce reaction might nevertheless be themselves protected; and that calves of protected cows did not inherit the protection.

#### *Protective Measures.*

From the foregoing paragraphs it will be seen that the tick invasion has to be combated in two different ways, viz., (a) by measures against tick-fever, and (b) by measures against the ticks themselves.

(a) Measures against tick-fever comprise essentially inoculation, and, secondarily, adequate pasturage for the cattle. The performance of inoculation must not be done in any hurried or perfunctory manner, but with careful attention to details, and accurate deposition of the blood under the skin of each animal operated upon. The most important thing of all is to make sure that the blood used really produces a reaction, otherwise the animals will not be protected. Because the blood of any recovered animals is apt to fail in this respect, it is necessary to place a check upon it every time it is used by keeping

keeping back certain of the inoculated animals and taking their temperatures. If those retained have fever it may be pretty safely assumed that the others have also had it. If the retained animals do not react the whole herd must be inoculated again with blood from another source, and the same precautions observed as regards verifying the reaction. In any case the surest plan is to inoculate two or three times with an interval of a month between the operations, as suggested by Mr. J. D. Stewart, M.R.C.V.S. It is best to have a suitable "bleeder" upon the spot, and to use its blood as soon as possible after it has been shed and defibrinated. In cases of emergency it is possible to make use of blood transmitted from a distance if such blood be not more than two days on the journey, but this is to be avoided if possible. There is room for a difference of opinion as to the time at which inoculation may best be performed. Our experimental experiences suggest that at all places in the direct routes from tick-infested country the cattle had better be inoculated at once, and re-inoculated when the ticks reach the neighbourhood. All young cattle must be inoculated as soon as possible, *e.g.*, at the periodical musterings. Where places are outside of direct routes from infested country, inoculation may be deferred till the ticks appear at some place in communication with them. Whether or not it be deemed advisable to inoculate at the present time, at all events matters should be in train to facilitate inoculation should the occasion arise, and this will be best accomplished by the establishment of convenient centres at which a succession of properly "salted" beasts can be maintained under the superintendence of a competent individual.

(b) Measures directed against the ticks themselves comprise quarantine, crush-inspection, and dipping; the two former designed to prevent the spread of ticks, and the latter to aid cattle in their fight against these parasites. External quarantine, or prohibition of importation of cattle from tick-infested country, will be of value so long as an adequate buffer area of clean country is maintained, but will become less and less useful as this area decreases in extent. Internal quarantine, or the isolation of an infected run, will not long serve to restrain the spread of ticks, and should only be made use of as a temporary expedient to enable neighbouring owners to get their cattle inoculated or otherwise prepare for the impending tick infestation of their cattle. Crush-inspection is only likely to be of service in detecting ticks when already advanced in their parasitic development. The small larval ticks would sooner or later escape detection. The principal reason for its continuance is its moral effect in preventing unscrupulous persons from attempting to bring tick-infested cattle across the border.

The ill-effects produced by the ticks themselves can only be minimised by aiding the cattle to get rid of the parasites. Change of pasture may aid by lessening for a time the number of invading ticks, and by fattening the cattle, but usually little benefit is gained, since the new pasture soon becomes as thickly tick-infested as the former one. In dairies, and especially with valuable beasts, something may be done by the removal of the ticks by hand, washing, or smearing, with or without preliminary clipping. But with herds the only method approaching efficacy is dipping. Dipping cannot be depended upon to kill all the ticks, but it greatly reduces their numbers, and gives the animals a fair chance of recovery. To be of value the dipping must be repeated at intervals of six or eight weeks at most, and this repetition can be indulged in without material injury to the cattle. The composition of dips, especially as regards the inclusion of arsenic, is a disputed question; but reports from America indicate that the "extra-dynamo" oil dip is worth a trial. At the present time the most pressing question is the discovery of a dip which, whilst efficacious against ticks, will be innocuous to cattle, and the importance of this point is such as to justify systematic experimentation. The erection of dips is not a matter of urgency in this Colony at the present time, except at the border crossing-places. (See also in Mr. Government Veterinary Stewart's report, Appendix C.)

## APPENDIX C.

ANNUAL REPORT by J. D. Stewart, M.R.C.V.S., Government Veterinarian.

### TICK-FEVER.

DURING last year temporary salting depôts were established at various central positions throughout these districts. To these depôts stockowners sent about 200 head of young cattle for treatment to render them suitable animals to inoculate other cattle from. The treatment consisted in the testing of the cattle with tuberculin and the injection of certain quantities of blood supplied by the Government experimental cows, which had been specially treated in Sydney. At this time the testing of young cattle was not considered necessary by many authorities, who were of the opinion that there was but little risk of spreading tuberculosis by this method of inoculation so long as only young cattle were used as "bleeders." From our records we are now in a position to prove that the precaution taken in applying the tuberculin test to all cattle previous to using their blood for inoculation purposes is very necessary. After the treatment of these cattle was completed they were returned to their various owners. At the time of their discharge the infectivity of the blood of a number was tested with satisfactory results.

Salting depôts have also been established in the Tenterfield district during the past few months. A number of cattle are being treated under my supervision at Undercliffe, Tooloom, and Amosfield, by Mr. C. J. Vyner, M.R.C.V.S., assisted by Messrs. Elliott and Ellis, Government inoculators.

During the past year a considerable amount of research work has been carried out in connection with tick-fever, the most important being the conduction by the Department of Agriculture of an experimental exposure of cattle, inoculated in this Colony, to virulent ticks at Rockhampton, Queensland. This experiment extended over a period of nearly three months, and has been fully reported on by Dr. Frank Tidswell, Principal Assistant Medical Officer of the Government. The results on the whole demonstrate that the inoculations carried out in this Colony are of a satisfactory nature, and also indicate that the system we have adopted is a proficient one.

Notwithstanding the fact that the ticks have not made much progress south from Brisbane during the past twelve months, stockowners are advised to still maintain their supply of reliable "bleeders." As previously stated, whenever the blood of cattle treated at the various depôts was tested at the time of their discharge it proved highly infectious; consequently, these cattle were then very servicable as "bleeders."

But,

But, as was pointed out to owners at the time, the infectivity of blood of cattle that have suffered tick-fever is subject to great variation as regards its duration, no matter whether the fever be induced by inoculation or in the natural way by ticks. In order to maintain a supply of "bleeders" it is necessary to test the infectivity of their blood by inoculating clean cattle from time to time—say every half-year. Reliable temperature records of each series of inoculations should be kept. "Bleeders" whose blood fails to produce a reactional fever when injected into cattle that have not previously suffered fever can no longer be regarded as serviceable, and should be replaced. From recent records it has been ascertained that while the blood of some animals treated at the depôts over twelve months ago still retains its infectivity, and produces good reactions, that of others treated at the same time, and in the same manner, with blood from a similar source, has proved to be valueless. The principle adopted by me at the commencement of inoculation in this Colony in holding back "check animals" to test the infectivity of the blood used has been stringently adhered to throughout all inoculations conducted by the Department. The value of checking the infectivity of blood used at each inoculation is now being generally recognised. I am aware that this repeated testing and replacing of "bleeders" involves a certain amount of time and trouble, still it is the only safe method of preserving a state of preparedness. No doubt if a permanent salting depôt is established at a central position in the North Coast district, with a trained inoculator in charge, owners would prefer sending cattle there from time to time to have them tested or treated, as the case may be.

To facilitate the recording of temperatures special record charts have been introduced. At the back of each chart are printed instructions directing attention to important details in operation which are potent factors in assuring the success of inoculation. These charts may be had by licensed inoculators on application to the Chief Inspector of Stock, Sydney.

Certain improvements and additions have been made to the inoculating apparatus which reduce the risk of the blood becoming contaminated by exposure to air, and also expedite the inoculation of large numbers of cattle.

#### *The Infestation of Horses by Cattle Ticks.*

In order to observe the infestation of horses by the cattle tick (*Exodes bovis*), a bay mare and a chestnut gelding were taken from the Richmond River district, New South Wales, with the experimental cattle, to Rockhampton, Queensland. These horses, which were of the hack class, were exposed to tick infestation on the 20th October, 1899, during their journey from Rockhampton to the experimental station at Greenfell, and daily from that date to the completion of the experiment, a period of nearly three months.

#### *The Development of Ticks.*

The horses quickly became tick-infested, as on the morning after their arrival numerous larval ticks were found on each of them. Six days later many larval ticks had attached themselves to the skin, and were growing. On the twelfth day after exposure the "eight-legged" ticks of the first moult were observed. During the following few days it was noted that the number of first moult ticks on the horses was considerably less than that of the previously infesting larval ticks, an observation which appears to indicate that a large proportion of larval ticks infesting horses do not develop successfully. It is also interesting to note that maturing larval ticks removed from the horses and placed in glass receptacles died within twenty-four hours, while those removed from cattle, and tested in a similar manner, were alive and active at the end of that period. By the nineteenth day many ticks were observed to have become sexually mature; on the twenty-fifth day engorged female ticks were removed from both horses. A number of the engorged female ticks were placed in glass receptacles, and on the fifth day after oviposition commenced. During the following ten days each female had laid between one and two thousand eggs, whose size and form appeared identical with those laid by ticks that had matured on cattle about the same time. On the eighteenth day after oviposition the eggs began to hatch out, and the larval ticks appeared very active.

The life cycle of ticks maturing on horses was thus successfully completed, and from the above description it seems to be practically identical with that passed through on cattle. It was, however, observed that the larval ticks maturing on horses were paler and plumper than those maturing on cattle. and, as previously stated, there was a great disproportion in number between the larval ticks which infested the horses and those that attained maturity. Many of the mature females removed from horses were of greater length but not so round in contour as similar ticks removed from cattle. Unfortunately we had no opportunity of ascertaining the pathogenic properties of these ticks.

#### *Tick Irritation.*

The infestation of horses by larval ticks causes these animals even more irritation than cattle apparently suffer. This irritation is manifested by the horses continually rubbing, scratching, licking, or nibbling the affected parts. Occasionally one horse was observed to be nibbling the other. At other times both were vigorously rubbing themselves against trees or stumps. When the ticks attach themselves to the skin and commence their development they are distinctly located by the small shot-like swellings which they give rise to. As the ticks mature these swellings increase in size and become very prominent. The skin of parts that are grossly infested by ticks becomes denuded of hair, thickened and corrugated, and often raw. Sometimes a sloughing of the skin occurs and the part becomes fly-blown if not dressed. Running in the same paddock as the experimental horses were two others that had, judging from the tick-marks on their skins, experienced their first infestation by ticks a year or two back. While our experimental horses vigorously exhibiting symptoms of tick irritation, the latter were calmly feeding, and apparently indifferent to the presence of ticks. On closer inspection, it was found, however, that these horses were not infested to anything like the same degree that the experimental horses were. Incidentally, it might be mentioned that our introduced experimental cattle also suffered grosser infestation and severer irritation than the Queensland native cattle that had previously been tick-infested. The tick-marks above referred to as indicative of previous infestation are small patches of skin denuded of hair, about the size of a split-pea, usually discrete, but often becoming confluent. They are caused by the tick in its attachment, and are specially prevalent about the face, under the jaw, on the neck, breast, and flanks, and inside the fore-arms and thighs.

*The Detection of Ticks on Horses.*

*Larval Ticks.*—Early on the first few mornings after exposure larval ticks were observed in numbers on the muzzles and legs of the horses, but by mid-day the ticks had disappeared from these parts and could not be found by an ordinary examination. On the hair being closely clipped off likely parts, such as the breast, &c., the larval ticks were found attached to the skin in great numbers; they had been hidden from view by the hair. As the mornings became hotter and the dews heavier there was no difficulty in finding larval ticks, which simply swarmed over the horses.

*Maturing Ticks.*—Owing to the small shot-like swellings the young ticks give rise to at their seats of attachment, it is not a difficult matter to detect their presence when numerous, excepting in the early stages of their development, or when infesting horses with very long coats. Swellings that are not perceptible to the eye can often be felt with the hand, consequently in inspecting horses the hand should always be passed in a flat manner over the breast, flanks, and inside fore-arms and thighs, and under the jaws.

*Matured Ticks.*—The sexually matured ticks give rise to so pronounced a swelling as to at once attract attention during a careful inspection, excepting when they are located in the ears, the mane, or the tail. Often they are found just on the border of the mane. The swellings usually vary in size from that of a pea to the size of a horse-bean. In order to detect ticks in the mane and tail every square inch of the skin on these parts must be thoroughly searched. As many as forty fully matured ticks have been removed from the tail of a horse at one time. Horses that are worked daily and sweated, and those that are well groomed, do not as a rule carry mature female ticks on parts where the hair is short. Still such horses might harbour these ticks in the mane and tail. Consequently these parts should always be carefully inspected.

## ANTHRAX.

Although no serious losses from anthrax have occurred during the past year, deaths from this disease have been reported from several districts. In most cases specimens and blood-smears were submitted for examination, and the presence of the specific micro-organism demonstrated microscopically. No doubt the meteorological conditions the Colony has experienced for some months past have assisted in reducing the prevalence of this disease. Moreover, the adoption of protective vaccination in certain districts on the appearance of the disease has lessened the mortality which usually follows an outbreak of anthrax. It is worthy of notice that stockowners are more generally recognising the advisability of burning all carcases of animals found dead on the run, no matter what the cause of death might be attributed to.

## BLACK LEG.

A few isolated cases of this disease have been reported as occurring in young cattle. It is, however, known that outbreaks of black leg occur almost annually in some localities. The curative treatment of this disease is not practicable in ordinary station cattle. As a preventive measure a number of owners season their young cattle in the dewlap, but I have greater faith in the removal of young stock from the infected paddocks before the period of the year that disease usually manifests itself. Protective vaccination has been proved to be the only successful protective measure, and is being generally adopted both on the Continent and in the United States of America. The vaccination consists in the artificial production of a mild form of black leg from which the animals recover and become immune to further attacks. According to the American veterinarians over 99 per cent. of susceptible animals can be saved if properly vaccinated. The vaccine is of bacterial origin, and can be prepared in a scientific laboratory.

## PLEURO-PNEUMONIA CONTAGIOSA.

In a few districts pleuro-pneumonia contagiosa has been fairly prevalent, but confined to certain localities. In the majority of outbreaks preventive inoculation was practised with apparently satisfactory results, although considerable difficulty was experienced by stockowners in obtaining reliable virus, and operations were consequently delayed. There is no doubt that preventive inoculation against this disease would be more extensively practised if stockowners could obtain a constant supply of reliable virus, free from contamination, within the Colony. Experiments are now being made with reference to the cultivation of virus, concerning which operations are not sufficiently advanced to make any definite statements.

It is, however, hoped that by next season we will be in a position to supply virus to stockowners who wish to inoculate their cattle.

It will probably interest stockowners to learn that Mons. Edw. Nocard, Professor of the Alfort Veterinary College, France, has succeeded in demonstrating a specific micro-organism in connection with this disease, which he regards as the causal agent. He is now engaged in endeavouring to attenuate the virulence of this micro-organism, so that by its inoculation cattle may be protected against pleuro-pneumonia naturally acquired. Should Professor Nocard succeed in accomplishing this, the protective inoculation of cattle against this disease will be robbed of the many objections now attributed to the use of virus, collected from the lungs, for this purpose.

## ZAMIA PARALYSIS IN CATTLE.

Among the diseases investigated during the year was one of paralysis in cattle, caused by eating the burrawang plant, which is a species of zamia. This occurred in the Moruya district, and was the subject of a special report. Since the report was submitted it has been ascertained that the disease also exists in Western Australia, where the zamia is again reported as the cause. During a recent visit to Queensland it was ascertained that the disease investigated at Moruya is similar to that met with in the northern colony. Dr. J. S. Hunt, who has devoted considerable attention to this disease as it exists in Queensland, is of the opinion that it is unquestionably caused by eating the zamia leaves. The toxic ingredient in these leaves has not yet been isolated, nor has the manner in which it operates been determined by pathologists. The importance of the subject is such as to demand further investigation.

## SPECIMENS FOR EXAMINATION.

During the past year numerous morbid specimens were received for examination. As a rule, they were carefully taken and securely packed. In some cases, however, sufficient care did not seem to have been exercised in their selection and transmission, as they were received in an unsatisfactory condition. All solid tissue specimens submitted for examination should be placed in vessels, such as the jars used in preserving fruit, containing one part of methylated spirits of wine and four of rain water, in the proportion of five volumes of fluid to one of the specimen. All fluids sent for examination should be placed in small strong bottles, which should be previously thoroughly cleansed with boiling water. The bottles, which should be filled up to the neck with the fluid, must be well corked, and sealed. When specimens are forwarded by post or by rail they should be securely packed in strong boxes, and so obviate any risk of breakage occurring. As many of the anthrax specimens have arrived in such a condition as to render a microscopic examination unreliable, owing to the presence of an overwhelming proportion of putrefactive organisms, and a consequent disintegration of the anthrax bacilli, I desire to draw attention to the necessity of forwarding the specimens preserved in spirits, as above described. When anthrax is suspected as the cause of death, all that is necessary is to forward an ear or a foot (from the fetlock downwards) from the dead beast. There is no necessity to forward bulky viscera, and it is not advisable to open the carcase, for when anthrax is suspected there is always a possible risk of the operator becoming affected by inoculation during handling of the carcase unless he understands what he is doing and exercises great care and uses a liberal allowance of some reliable disinfectant.

When cover-glass preparations of blood can be made by the inspector of stock within an hour or so of the animal's death, they alone are necessary, otherwise it is as well to also forward a foot or an ear. In preparing the cover-glass smears, the blood should be spread in as thin a layer as possible upon the glass. This is accomplished by placing a very small drop of blood on one cover-glass, and then pressing down a second cover-glass on the first, and quickly sliding the two apart. This also secures two specimens, which should be carefully dried and wrapped in fine paper, on which the source should be marked. Cover-glass preparations may be packed with surgeon's wool in match-boxes, and forwarded by post.

## EXPORTATION OF HORSES.

Since the outbreak of war in South Africa the exportation of horses from this Colony has been extensive. During the past six months about 10,000 horses purchased in this Colony and in Queensland have been despatched to the seat of war and India. Of this number, almost three-fourths were purchased by officers of the Imperial Government, while the balance has been acquired by the various Colonial Contingents. All the horses purchased were specially selected by officers appointed for that purpose. In the selection particular attention is paid to the colour, age, conformation, soundness, and activity of the horses submitted. By the expressed wish of the Imperial War authorities horses of light and conspicuous colours are not bought. Consequently there is only a demand for horses whose colour can be classed as either bay, brown, black, chestnut, or deep roan. The ages of horses for active service are strictly limited to between five and ten years. Although the confirmation must, to a certain extent, depend on the class the horse submitted belongs to, it might be stated in a general way that the desired conformation consists in the horse possessing an intelligent head, set on a well-formed neck, attached to a well-ribbed up body, of broad chest and of deep girth, which is supported by muscular limbs carrying good bone and hoof.

The horses are classified according to their height, weight, and shape. Major Thompson kindly supplied me with following particulars of each class, *i.e.* :—

- A. *Heavy Cavalry*.—Including upstanding horses of good bone and substance possessing exceptionally strong back and loins. They must be 15·2 to 15·3 high and be up to 17 stone.
- B. *Light Cavalry*.—Including horses similar to the above though lighter in conformation. Still they must be up to 15 stone and stand 15 hands to 15·2 high.
- C. *Mounted Infantry Cobs*.—Stout active cobs with strong back and loins and powerful shoulders and hind quarters; about 14·2 high, and up to 14 stone.
- D. *Horse Artillery*.—Horses somewhat similar to the heavy cavalry horse, but more suitable in conformation for harness work. They must be thoroughly staunch and equal to any pace. Height, 15·2 to 15·3.
- E. *Field Artillery*.—Active draught horses equal to trot 6 miles an hour in team. They must have weight and substance and be active. Height, 15·2 to 15·3.
- F. *Army Service Corps*.—Heavy draught horses suitable for work at port of embarkation.

Prior to purchase every horse is submitted to veterinary examination for soundness, and are tested as to their activity and docility. Unsound horses, "outlaws," and horses that are green or unbroken, are speedily rejected.

APPENDIX D.

TABLE 1.

RETURN prepared by the Board of Health showing the number and proportion of Cattle condemned out of all those slaughtered at the Abattoir, Sydney, 1899.

Description of Animals.	Number slaughtered.	Condemned diseased.		Condemned or bruised or unfit for food.	
		Number.	Percentage.	Number.	Percentage.
Bulls .....	314	38	12·10	.....	.....
Bullocks .....	52,498	1,325	2·52	3	·005
Cows .....	19,951	902	4·51	7	·03
Calves .....	15,259	2	·01	2,469*	.....
Pigs .....	52,818	1,400	2·65	1	·001

Besides these, considerable numbers were vaccinated by the Pasteur Anthrax Laboratory of Australia, particulars of which are not to hand.

APPENDIX H.

## APPENDIX H.

## FOOT-ROT.

DRESSINGS recommended by Mr. E. Stanley, Chief Veterinary Inspector. (For further details see *Agricultural Gazette*, July, 1891):—

*Arsenic Dressing.*

Arsenic, from 1 to 2 oz.; potash, from 2 to 4 oz.; water, 1 gallon.

To be used in troughs for the sheep to walk through. The mixture to be boiled slowly for half an hour at least, till the arsenic is thoroughly dissolved.

*Sulphate of Copper (Bluestone) Dressing.*

Sulphate of copper, from  $\frac{1}{2}$  lb. to 1 lb., dissolved in a gallon of water, may be used instead of arsenic.

The following healing dressings may be used by hand after the above caustic applications:—

*Tar Dressings.*

Stockholm tar, 20 parts; carbolic acid, 1 part; or, Stockholm tar, 8 parts; bluestone in powder, 1 part; or, oil of tar, 10 parts; carbolic acid, 1 part; olive oil, 1 part.

*Lime Dressing.*

Quick-lime, sprinkled on a dry surface, and the sheep walked through it frequently, will be found very beneficial. Before any dressings are used the whole of the loose horn should be pared carefully from the diseased feet. It is of the greatest importance that the sheep's feet should, on the dressing being applied, be kept thoroughly clean and dry for at least three hours afterwards. They should, therefore, on leaving the troughs, or being dressed, be passed directly on to a battened or wooden floor, if it can be got; and where neither of these is obtainable, they should be passed into a dry yard, in which there is a good coating of straw, cut grass, or dry bark taken from trees which have been rung, or, in fact, any other thing which will keep their feet clean and dry.

The following are the remedies reported by the Inspectors to have been used and the results:—

Application.	Result.	Application.	Result.
Arsenic in troughs .....	Good.	Corrosive sublimate and bluestone .....	Good.
„ bluestone, and carbolic acid.....	Not given.	Carbolic acid .....	Good.
„ and bluestone .....	Good.	„ and oil and butyr of antimony .....	Good.
„ and lime .....	Fair.	„ acid, bluestone, and arsenic ...	Not given.
„ and saltpetre .....	Not given.	Kerosene .....	Good.
Bluestone and corrosive sublimate .....	Satisfactory.	„ and bluestone.....	Good.
„ and arsenic .....	Good.	Lime and tar .....	Not given.
„ and kerosene .....	Good.	„ and arsenic .....	Not given.
„ and lime .....	Good.	Sulphur and bluestone .....	Good.
„ and sulphur .....	Good.	Saltpetre and arsenic.....	Not given.
„ arsenic, and carbolic acid .....	Good.	Tar and turpentine .....	Not given.
Butyr of antimony .....	Good.	„ and quick-lime .....	Good.
„ „ carbolic acid, and oil ..	Satisfactory.	„ and bluestone.....	Good.
Corrosive sublimate .....	Not given.		

*Specifics.*

Cooper's Dip .....	Satisfactory.	Quibell's Foot-rot Cure ...	Good.
Hayward's Dip.....	In some cases.	Graham's Foot-rot Powder .....	Not very satisfactory.
Little's Dip .....	Satisfactory.	Payton's Foot-rot Specific.....	Very satisfactory.
Pottie's Specific .....	Not stated.		

## APPENDIX I.

## NEW MODES OF BRANDING.

A DEMONSTRATION to test the efficacy of Cumings's Vapour brand took place at the Randwick Quarantine Station on the 18th of April, 1900, in the presence of a number of gentlemen particularly interested in branding.

The Vapour brand was tested on sheep and cattle, while some cattle were also branded by means of a chemical mixture applied by specially-devised branding-irons.

The result of the exhibition was not considered satisfactory. Owing to the explanations tendered by Mr. Cumings as to the cause of failure, it is probable that arrangements will be made for another demonstration.

## APPENDIX J.

APPENDIX J.

STATEMENT of the number of the different kinds of noxious animals killed during years from 1881 to 1899; the amount of assessment collected; the amount of Government subsidy paid; and the total expenditure for each of these years.

Year.	* Kangaroos. Number killed.	Wallabies. Number killed.	Native Dogs. Number killed.	Hares. Number killed.	Wild Pigs. Number killed.	Amount of Assess- ment collected.	Amount of Govern- ment subsidy paid.	Amount of Expenditure.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## AGRICULTURE.

(REPORT ON, FOR THE YEAR 1899.)

*Printed under No. 2 Report from Printing Committee, 28 June, 1900.*

The Under Secretary for Mines and Agriculture to The Honorable the Secretary for  
Mines and Agriculture.

Sir,

31 December, 1899.

In submitting the reports of the Staff of the Department for the year just ended, it affords me pleasure to say that, despite seasons which for the greater portion of the Colony were most unfavourable, the areas of cultivation of all classes of crops have been materially increased. As an instance of this substantial development, I may mention that at the date of my last report the area under wheat alone was 1,605,000 acres, being an increase of 397,930 acres for the year 1898. During the last season the area under wheat comprised 1,839,626 acres, of which 414,661 acres were cut for hay, leaving 1,424,965 acres to be harvested for grain, which resulted in an average of 9·5 bushels for the Colony. Although, as in the past season, the losses from rust were infinitesimal, it is to be regretted that a very wide extent of crops have suffered heavily from the fungus pest known as bunt or stinking smut. This disease is one that is most easily carried from place to place by means of infected seed, infected bags, and possibly by means of threshing machinery in contact with which diseased wheat has been placed. Scarcely any farmers neglect to take some measures, such as steeping the seed in a solution of bluestone, to prevent this disease, but the spores of the fungus are difficult to destroy and will resist treatment sufficiently drastic to impair the germination of the seed they infest. The grain when badly infested with bunt balls is almost useless for milling purposes, and it can, therefore, be understood that the spread of such a pest is a matter that demands our best attention.

The Wheat Experimentalist, Mr. W. Farrer, has been engaged investigating the disease and experimenting with the object of devising means that will be simple, economical, and effective for destroying the spores and preventing the spread of the disease. A full report embodying Mr. Farrer's recommendations will be published in the course of a couple of months, so that planters will have the information at hand just as the sowing season is about to commence.

Experiments with the object of improving the quality and disease-resisting ability of wheats have been continued, and the resulting grains have been milled and tested by Mr. Guthrie.

Everywhere the farmers are keeping pace with the times and availing to a most encouraging extent of improved machinery and appliances, so that with ever increasing areas, more systematic and effective culture, improved varieties and pests under control, it is inevitable that provision must soon be made to cope with a large export of wheat. I have, therefore, availed myself of the opportunity of Dr. Cobb's visit to America to get him to report on the latest and most economical methods of handling and transporting grain in bulk there, and I feel confident that good results will follow dissemination of the information he will be able to gather in respect to elevators and other matters upon which will depend

152—A

to

[1210 copies—Approximate Cost of Printing (labour and material), £84 14s. 11d.]

to such an extent our ability to compete successfully with more advanced traders in America and Europe. I have also directed Dr. Cobb to look closely into all methods of manipulating produce which may be of interest to the agriculturists of the Colony, and his reports will appear in the *Gazette*.

In addition to important work in connection with the testing of wheat for milling purposes, the Chemist has carried out numerous investigations in respect to the fodder value of the principal indigenous edible scrubs. During the past three years drought has devastated the flocks of a very large tract of the western country, and many pastoralists have had to not only fall back upon anything in the way of edible scrub available, but also to purchase large quantities of hay, straw, chaff, grass, molasses, &c., for fodder. The feeding of sheep under such circumstances in large numbers, if only to such an extent as may sustain life, involves problems upon which the general knowledge is, to say the least, somewhat vague, and it is gratifying to report that, as the result of his researches, Mr. Guthrie has been in a position to publish information that is acknowledged to have been availed of with most satisfactory results.

In no direction is the spirit of inquiry among agriculturists more active than in respect to manures. The keenest interest is taken in all trials of fertilisers, and it is clear that on all sides farmers and orchardists are beginning to find that the careful and intelligent use of fertilisers pays big dividends. Throughout the greater portion of New South Wales the land contains, so far as mere quantity is concerned, sufficient material to provide for the production of many successive crops. The difficulty is that the material is not always in a form that plants can avail of. The restoration of worn-out lands and the general maintenance of fertility are all problems that demand scientific investigation, and an Experimentalist has been appointed in the person of Mr. R. Helms, who will be able to assist Mr. Guthrie in experimental and bacteriological work of extreme value to agriculturists of all classes.

The gratuitous analysis of soils, fertilisers, water, &c., for *bona fide* agriculturists has been continued, but I purpose submitting some regulations which will restrict persons from availing of this privilege for purposes that are beyond the aim of the Department.

During the year the lease of paddocks and premises at Kirkham expired, and arrangements were completed for the leasing of a farm at Berry for the accommodation of the imported stud dairy cattle. The plan of locating the bulls under care of local bodies in various dairying districts has been adhered to throughout the year, and the services of the animals have been largely availed of. Now that we have a permanent place for stud purposes, it will be possible to extend the use of the bulls, and, in order to meet the convenience of those who will be most benefited by the improvement of their herds, arrangements will be made to permit of dairymen in isolated places securing a bull for a specified number of cows in due rotation.

The progeny of the imported stock have exceeded even Mr. O'Callaghan's expectations, and there is ready sale at handsome prices for the bull calves. Some of the youngsters thus disposed of have already figured prominently in the Show ring, and have carried off numerous first prizes. From a commercial standpoint the importation of these cattle will prove a sound investment. But it is on account of the good that these stud cattle will do in improving the productiveness and stamina of the dairy herds that we have best reason for congratulation.

The advances that are being made so far as actual output in butter is concerned have been in some slight degree impaired by some disadvantages in the way of uneven production inseparable from an industry of such rapid expansion, and which time and education alone can mend. The Dairy Expert is doing all in his power to demonstrate the advantages of absolute cleanliness and up-to-date methods of manufacture and manipulation. Mr. O'Callaghan and his assistant, Mr. Pedersen, have travelled from factory to factory and to many creameries, affording information and advice as to the best means of turning out an article that will be fit to hold its own in the London market. To encourage the manufacture of butter of uniform excellence, substantial prizes are awarded from time to time. The conditions of the competition are that no notice shall be given beforehand, but each factory competing must, on receipt of a notification from the Department, despatch by the next train or steamer two boxes of that day's make of butter. On arrival the butter is examined and awarded points. For two months it is stored under conditions similar to what might be experienced in shipment to London, and again examined. Each lot of butter is submitted to bacteriological investigations, and the fullest possible information is afforded competitors as to the reasons their produce has excelled or failed. As the result of his bacteriological researches, Mr. O'Callaghan has been enabled to demonstrate in a series of illustrated articles in the *Agricultural Gazette* how milk, cream, and butter are affected by various organisms. Experiments have also been conducted, in conjunction with the awarding of a complete pasteurising plant as a National prize, to illustrate the advantages of keeping, by means of pasteurisation and the use of lactic acid ferment, the cream and milk under complete control.

Affairs

Affairs at the Hawkesbury Agricultural College are in a most satisfactory condition. The number of applicants for admission, not only of resident, but of special-course non-resident, students, is still in excess of accommodation available. As opportunity has occurred Mr. Valder has extended the area of cultivation, thus affording students practical instruction in breaking up new land and providing a wider field wherein many interesting and valuable experiments can be conducted for the education of students and the solution of problems of importance to the agricultural advancement of the Colony. The principal work in this direction during the past year has been the comparative trial of crops, such as lupins, mustard, lucerne, cabbages, and turnips, for the twofold purpose of fattening sheep and improvement of the soil. The experiments have been carried out on the poor sandy soil which comprises the greater part of the College farm, and which is a class of soil that can produce now and then merely a fair crop of maize. By putting such land during autumn under crop and feeding off with sheep, as will be described by Mr. Valder in the *Agricultural Gazette*, the land is improved mechanically, and enriched to such an extent by the droppings of the animal's depastured upon it, that when it is planted for maize in spring a large crop is produced, and it is thus possible for the farmer to keep his land in use all the year round and reap the advantages of the sale of two or three fat sheep per acre and the production of a heavier crop of grain.

One of the most prominent features of the College farm is the piggery, which may safely be regarded as one of the most interesting stud establishments in the Colonies. In addition to representatives of the best local blood, there are located there boars and sows of all the most improved breeds, from the leading herds in Great Britain and elsewhere.

No animal deteriorates so rapidly in consequence of inbreeding as the pig, and, therefore, it is a matter for small surprise that Mr. Valder finds breeders throughout the Colony eager to procure progeny of this imported stock. The actual results of this importation are that the College piggery, besides well fulfilling its function as an educational factor, is a paying concern. This fact is, however, of minor importance compared to the good we hope to be able to do in inducing farmers to devote more attention to the development of the bacon and pork industry. In Canada and Denmark pig-raising has advanced step by step with dairying, until at the present time their output of bacon and hams is prodigious. Here we have, besides a rapidly-expanding dairying industry, greater facilities for the production of cheap supplementary foods, in the shape of grain and pasture, for competing with first-grade cured meats for a large share of the British trade those countries now enjoy. All sorts of crops have been grown on the farm during the year, and Mr. Valder and the College staff are to be congratulated upon the thriving condition of the whole establishment. Visitors have, as usual, been numerous, and all are agreed that the Hawkesbury Agricultural College is well worthy of the reputation it bears throughout the Colonies and elsewhere.

At Wagga Experimental Farm, Mr. McKeown has continued experiments to test the productiveness of a wide variety of fodder crops, and has carried out a large number of comparative tests of wheat sown in various ways, and manured and unmanured.

For many years now the Department has advocated the rotation of sheep and wheat as being the most profitable method of farming in the western districts, and the Manager at Wagga has devoted a considerable area to experiments in this connection.

A number of students were admitted during the year for instruction in the various operations of the farm and orchard. The whole time of the students at this farm is devoted to practical work, and the young men have, therefore, a good opportunity of learning the rudiments of agriculture in a way that will well fit them for the laborious tasks they will have to surmount when they take up land and commence farming on their own account.

The original idea with respect to the establishment of the Bathurst Farm was that it should be devoted to the demonstration of a system of mixed farming—crossbred sheep and crops—to which the greater portion of our table-land country is so well adapted. To this end Mr. Dunnieliff has devoted much of his attention to the raising of crossbred sheep, and the production of food, in the shape of harvested crops and pasturage, for them. A large number of interesting experiments have also been carried out in co-operation with the wheat experimented upon, and on the small riverside area all kinds of crops have been grown under a system of very simple and cheap irrigation.

The accommodation for students has been fully availed of during the year, and the lads have been well grounded in all the operations that appertain to a mixed farm where the raising of live stock is carried on in conjunction with the growth of cereals, roots, and fruit.

Work at the Coolabah Farm, in the Bogan scrub country, has been carried out under climatic conditions that can scarcely be regarded as favourable. Still, with a rainfall of only 10 inches, Mr. Peacock has done valuable work, which has added much to the knowledge which it will be necessary to possess before the millions of acres of now almost useless land, of which the farm is typical, can be turned

to

to good account. Mr. Peacock is to be commended for the assiduous attention he has devoted to the conservation of indigenous fodder plants, the trial of grasses, and problems concerning the treatment of land that has become barren in consequence of the eating out and destruction in other ways of all vegetation. His articles in the *Gazette* on these subjects have evoked the commendation of many western pastoralists, and will no doubt lead to good results.

Experiments in the growth of fruit and various crops under irrigation have been continued at the Pera Bore Experimental Farm. There has been some difficulty about the diminution of the water supply to the holders of cultivation blocks in the Settlement, but with soil of the peculiar character of that at Pera successful production, I am inclined to think, depends more upon scientific treatment of the soil and incessant cultivation with suitable implements than upon the lavish and indiscriminate use of water. Mr. Gorman is doing his best to encourage the settlers to adopt good systems of culture, and it is clear that those who work their land judiciously will make good returns.

While the red soil at Pera, owing to its slight alkalinity, is apt to set as hard as a rock in dry weather, the land at Moree Bore, where a small experimental farm was established in September last, is typical of a large tract of very rich black soil, that in consequence of its gluey nature is exceedingly difficult to cultivate. The productiveness of this soil is wonderful, and Mr. Thomson, the Manager, will devote his attention to experiments with the object of ascertaining methods by which such land can be best treated to overcome the mechanical difficulties that now debar its fullest utilisation.

The greatest activity has prevailed during the year in connection with the fruit industry. The orchards at Wagga, Bathurst, Richmond, and other establishments are in a flourishing condition, which reflects credit on Mr. Allen and his assistants. At most of these places the trees are now beginning to bear fair quantities of fruit. From Richmond a good quantity beyond the requirements of the College is disposed of fresh, and the rest is used for preserving in various ways for the instruction of students. It is out of the question to expect an orchard like that connected with the College, and used absolutely for educational purposes, to yield anything like a substantial monetary return, still the commercial results achieved are satisfactory. But at Wagga and Bathurst, where the number of students is less, it is fair to expect the orchards to become a source of revenue, and that such will be the case as soon as the trees have attained full bearing I have little reason to doubt. At present, Mr. Allen is using the suitable varieties of fruit available at Wagga for the purpose of demonstrating the possibility of drying, canning, and pulping. Samples of the produce are exhibited at Agricultural Shows, and these, in conjunction with numerous articles on the subject which appear in the *Gazette* and are reprinted in pamphlet form for distribution, are doing much to stimulate the fruit-preserving industry, for which, even so far as local consumption is concerned, there are such opportunities. Strenuous efforts continue to be made to induce fruit-growers to adopt the latest and most improved methods of combating insect and fungus pests, and if the sale of spraying appliances and the demand for information is anything to go by, it is clear that a majority of our fruit-growers realise that preventive and remedial means for pests are an indispensable part of the routine of orchard work. During the earlier part of the year, Mr. Allen, with the assistance of Mr. Chomley, conducted in one of the leading centre fruit districts a series of comparative tests of spraying mixtures and methods for the destruction of red scale, and later on experiments of a very comprehensive nature were made to demonstrate the practicability and efficacy of fumigating the trees with hydrocyanic acid gas. The results of these experiments were published, and it is reasonable to suppose have led to growers attacking the pests with greater vigour than ever.

In connection with viticulture, the time of the Expert has been almost solely devoted to the inspection of vineyards and treatment of phylloxera. This work is certainly the most thankless that falls to the lot of the Department. In the incessant search for the disease and rigid measures for its extinction, we are merely guided by the experience of other countries where, through neglect to prevent its spread, phylloxera has devastated thousands of vineyards and inflicted damage to the viticultural industry that only time and great expenditure can make good. No doubt many vigneron who have the misfortune to hold vineyards in which the disease is discovered feel that the eradication of their vines is a hardship, but as the trouble is confined to a limited area, it is necessary that the interests of the rest of the vine-growers throughout the Colony be implicitly safeguarded.

It is generally concurred that in the use of resistant vine-stocks lies the only practicable preventive against the inroads of this pest, and accordingly the Department has made provision for the establishment of nurseries wherein the best of the resistant varieties of American vines can be propagated for the use of vigneron throughout the Colony. By next season it is expected that several thousand rooted cuttings will be available. During vintage time Mr. Blunno visited the various centres of wine production, delivering lectures and affording personal advice concerning the making and maturing of wines. In  
co-operation

co-operation with some of the leading vigneron, experiments have been conducted with the object of producing wines fitted for export purposes. It is satisfactory to note that the area under vines is gradually increasing, and vine-growers are readily availing of more scientific methods of production.

The Entomologist has visited, as opportunity occurred, a large number of fruit-growing districts, and delivered lectures, as well as giving verbal information in the orchards, on insects and the means to be adopted to destroy them. As the efficacy of any treatment for insect pests depends much upon our knowledge of the insect's life-history, arrangements have been made for a well-fitted insectarium in which Mr. Froggatt may be able to work out for the information of farmers and fruit-growers, all the details that will assist them in combating such pests. The most serious trouble with insects during the year was the appearance, in countless millions, of the plague locust over a very wide tract of our pastoral country. The Entomologist obtained from the Cape cultures of a fungus with which to inoculate the locusts. It had been discovered in South Africa that by the infestation of a few insects with this parasitic fungus, the whole swarm of locusts would become affected and succumb. Mr. Froggatt conducted a number of tests with satisfactory results, and published in the *Gazette* full details of the treatment with particulars of measures that should be taken to prevent further invasions of the pest.

The inspection of imported and fumigation of exported fruit has proceeded smoothly, and there can be no doubt that, as a result of this enactment, the quality of fruit sent to New South Wales is vastly superior to what it used to be.

During the last few months the Board for Exports were invited by the Imperial authorities to supervise the grading and shipment of preserved meats, flour, fodder, &c., for use in the South African campaign. The quantity of produce despatched was very large, and the fact that no complaint whatever has been made speaks well for the skill and care of the Export Members of the Board who undertook the task of grading it.

Throughout the year poultry to the number of many thousands have been dispatched to London and South Africa, and poultry-farmers have fully utilised the cool storage accommodation for eggs.

Rabbits and hares are still a big item, and are dispatched in such great numbers as to more than cover all the costs of preparation and shipment.

Provision having been made for the establishment of cool stores and other facilities for export at Darling Island, the Board has made full investigation into the matter of building requirements, and in due course these matters will receive attention.

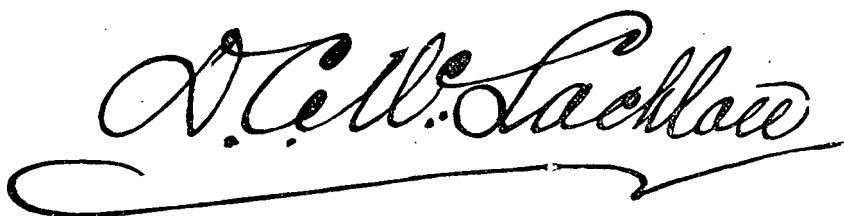

The Travelling Instructor in Agriculture has been able to afford great assistance in connection with the distribution of prizes and subsidy to Agricultural Societies. The system of allowing subsidy only on such amounts as the societies devoted to approved objects is now working satisfactorily. In addition to the subsidy there have been granted for competition under the auspices of various societies several important prizes in the shape of implements, &c., for the best-kept farm, best collection of produce, &c.

The *Agricultural Gazette*, by reason of its uniform excellence, can lay claim to a high place in the esteem of the agriculturists of the Colony. In order to keep thoroughly in touch with the requirements of readers, an invitation was extended to them in January last to suggest subjects for treatment. They were also asked to say in what direction, if any, they had benefited from the information imparted. The replies, to the number of over 5,000, left little reason for doubt that the efforts of the contributors and editor of the *Gazette* (Mr. W. H. Clarke) to make the publication a useful one have been successful. Messrs. Grosse, Burton, and Chambers are also to be congratulated on the excellence of their illustrations that form so attractive a part of the Departmental publication, and I must take this opportunity of expressing the Department's indebtedness to the Government Printer and his staff for the skill and attention they bestow upon our work.

I have the honor to be,

Sir,

Your most obedient Servant,

Report

## Report of the Chief Inspector of Agriculture.

Sir,

Department of Agriculture.

I have the honor to submit herewith the annual reports of the Principal of the Hawkesbury Agricultural College, of the Farm Managers at Wagga Wagga, Bathurst, Wollongbar, and Coolabah, as well as those of other officers connected with the Department of Agriculture.

The reports from Hawkesbury and the other farms give details of the work carried out by the managers. Some of the farms have suffered from the late severe drought which prevailed throughout many parts of New South Wales, but under the circumstances the results have been far better than could have been anticipated.

The Hawkesbury Agricultural College has become a very prominent establishment in the Colony, and so much are its advantages appreciated by the public that it is impossible to satisfy the whole of the numerous applications made for the admission of students.

The work performed by the students there has been satisfactory, and the knowledge and skill many of them have acquired at this College will be made good use of in the future by them when engaged in those branches of agriculture they intend to follow for their livelihood. It is most satisfactory to know that a large proportion of those students who have already passed through the College have either settled down to agricultural work on their own farms or obtained situations in various capacities in connection with agriculture.

The alterations and various improvements made on the farm by Mr. Valder are proving satisfactory, and I have no doubt other important improvements which are under contemplation cannot fail to facilitate the educational work of this important establishment.

The farm at Wagga has suffered to a considerable extent from the late drought, as well as from late frosts and the ravages of caterpillars and locusts, but, notwithstanding these drawbacks, the yield of produce has been far beyond expectations, being the best on record, and most creditable to the thorough work of the Manager, Mr. McKeown. Some extensive experiments with manures tend to show that a judicious use of some may prove remunerative even in such seasons as that just passed through.

I may state here that there is evidence on all sides to show that very soon our farmers and orchardists will find it imperative to make more extensive use of manures than they do at present. Some are finding out to their cost that continuous cropping impoverishes their land to such a degree that its productiveness is failing.

Signs are not wanting that before long fertilisers will be used extensively, and I hope to see the time arrive when we shall retain in this Colony for our own necessities the whole of the valuable fertilisers which are now being exported to Japan and New Zealand, and other Colonies, to our great loss.

The orchard, where an immense number of various fruits are being tested, is an admirable object lesson in good culture to the numerous persons who visit this farm, as well as to the students who are located there, for, notwithstanding the severity of the drought, the trees were in the perfection of healthy growth throughout the season.

At Bathurst the drought has been severely felt, and late frosts killed down many crops, but the results of the Manager's, Mr. Dunnicliff, work have proved satisfactory, thus demonstrating to the farmers of the district the value of practising good methods of working.

The success of the orchard shows that there should be a great future for fruit-growing in this district, and that excellent fruit—far better than the bulk that we import annually in vast quantities—can be produced in soil that appears to be of an indifferent quality at first sight.

Hitherto it has been necessary to make use of some of the most inferior parts of this farm for the growing of crops in consequence of the best portion being made use of for a racecourse; but I am pleased to say that as the racecourse has been given up, Mr. Dunnicliff's intended improvements will make a marked difference in the whole place, which has, since its inception, suffered the want of this racecourse area.

The work of the students here has been satisfactory, and I believe most, if not all, of them intend to settle in various parts of the Colony to agricultural pursuits.

The Wollongbar Experimental Farm, which is situated in our most humid semi-tropical district, continues to be a most useful and interesting object lesson to all visitors. Considerable improvements have been carried out by the Manager, Mr. Jackson, during the year, and an extensive area has now been cleared with a view to the establishment of a small agricultural practical school and more extensive work in dairying. The keenest interest is taken in the district in this experimental farm, and I have no doubt its establishment has resulted in much good.

The Coolabah Experimental Farm, situated in one of the driest districts in this Colony, has the very antithesis of climate to that at Wollongbar. The work carried out by the Manager, Mr. Peacock, has been of a most trying nature and most heart-breaking in the struggle against a continued drought; but I am pleased to say that the results of the experiments have been highly satisfactory under the circumstances. These experiments are of great importance towards the development of an immense district, and will, I think, in time solve the problem of mitigating the effects of drought sufficiently to permit of the profitable production of crops, and of increasing greatly the stock-carrying capacity of this sort of country.

It will be observed in Mr. Peacock's report that the total rainfall for the year was 10·79 inches, and the previous year it was less, consequently the soil was extremely dry when the experiments were begun, yet the yield of crops per acre justifies the expectation that when once the soil becomes thoroughly saturated again, good methods of working the land will result in satisfactory yields.

The interest taken by the settlers in this farm for more than a hundred miles around is very great, and the results obtained are looked upon with great surprise; but when the Manager can work this farm in connection with stock, I have not the least hesitation in anticipating still more remarkable results.

The experiments being conducted by Mr. Farrer in his work of "making" new wheats and testing them, are of exceptional importance to this, as well as to other wheat-growing Colonies of Australia, and the report of his year's work is of great interest.

Any

Any improvements that may be effected in wheats to make varieties rust-resisting or drought-resisting, and at the same time of a superior milling quality, must be of an almost incalculable value, but the work of improvement is tedious and trying, and considerable time must elapse before new varieties can be proved.

As will be seen from Mr. Guthrie's, the Chemist, report, the milling value of wheats bred by Mr. Farrer is tested in the Department in Sydney. This is an invaluable check, and prevents the continuation of further field work with varieties of low value.

Mr. Guthrie also tests wheats for the public, and this will, I think, lead to some of the old and well-known varieties of wheats to be discarded and thrown out of cultivation. Similar work to Mr. Guthrie's is likely to be carried out in other Colonies, as the Agricultural Departments are becoming alive to its value.

The systematic course of experiments which Mr. Guthrie has been good enough to undertake, with Mr. Helms' assistance, should prove of inestimable value eventually. There is an almost inexhaustible field open for such work, for at present but little is really known of the value of our soils, the best means of mitigating droughts, the proper treatment of our natural pastures, our soil temperatures, nor of various other matters which effect our real wealth and means of subsistence.

I may remark, with respect to wheat-growing generally in the Colony, that, to a considerable extent, this branch of agriculture may be considered at present to be in a pioneer stage of development, and carried out by persons, in numerous instances, who, perhaps, never saw wheat plants growing before they viewed their first crops. The work of clearing the land, ploughing it, and sowing the wheat is rough in the extreme, and it is not to be wondered at, apart from droughts, that statistics show the averages of our wheat yields to be low in comparison with the averages of countries where skill and good management obtain.

I have observed, in visits to wheat districts, that last season great losses resulted in some places from the shelling out of wheat before it could be harvested; as much, in many instances, as from 2 to 4 bushels per acre. This was due to variety and hot winds, or to the use of the stripper—an implement useful for pioneer work, but one which I feel sure it would be in the interests of the farmers to discard as soon as possible.

Notwithstanding present severe losses from drought, I believe the area under wheat next season will equal, if not exceed, that under crop last season; and should sufficient rain fall, the crop will be heavy, and there should be a considerable surplus beyond our requirements for export.

With respect to the dairying industry, there has been a considerable increase in the area devoted to that branch of agriculture, and from year to year it will continue to increase, until a lower price of dairy produce may not justify a further extension.

It would be a judicious practice of the dairy farmers to vary their dairying with the production of something besides their one product—milk; and it is quite within the bounds of possibility that this may become all the more necessary in view of, I may say, a certainty of an enormously increased production of butter and cheese in countries situated nearer than we are to the great world's market. There is also the possibility of a considerable increase in the dairy produce in England and Ireland, for great efforts are being made towards educating farmers and others to that end. In any case, before very long our butter for export will all have to be "the choicest" to hold its own against strong competition.

The Vegetation Diseases Act continues to be carried into effect satisfactorily, in so far as preventing the importation of insect and fungus pests. The inspectors have been vigilant, and have performed their unpalatable duties most satisfactorily, and have been most kindly assisted, as previously, by the Collector of Customs and his officers.

The fumigation of exported fruits and plants works well, and the experts in other Colonies are quite satisfied to admit all that is fumigated, having subjected scale insects which have been treated to all tests, but fail to find any alive.

So far as our orchards are concerned, various pests are only too abundant; but I trust that before long a Bill enabling the Department to take action will be introduced to Parliament, and become law. Until this comes to pass, the chances of any pests becoming eradicated, or even kept in check, seem hopeless.

Mr. Froggatt, the Entomologist, and Mr. Allen, the Fruit Expert, are unsparing in their efforts to spread a knowledge of means to keep fruit and plant pests in check, and have performed most useful work; but in a large Colony like this it cannot be expected that they can make much progress, and, indeed, can make none amongst those who prefer not to learn.

The efforts made by Mr. Blunno to eradicate the phylloxera have been unceasing, and he has been well supported by the vine inspectors; but I fear these efforts will be unavailing, in view of the strong hold the insect has gained in a certain portion of the Colony. It may be possible to prevent its spread to other districts, in any case until vignerons have time to renew their vineyards on resisting stocks, but I fear that some other districts are likely to suffer in consequence of their proximity to phylloxera-infested places in the adjoining Colony of Victoria. I cannot ascertain that any locality in Europe or in America which has become infested by this insect has ever been freed from it, no matter how gigantic have been the efforts made to eradicate it.

I have every reason to think that the recipients of our departmental publication, the *New South Wales Agricultural Gazette*, make good use of the information which it contains. The editor, Mr. Clarke, spares no pains to make this work as comprehensive as possible, and I think he is to be commended for his valuable efforts.

The illustrations by Mr. Grosse and assistants are admirable, and no doubt invaluable to readers in connection with the text.

I beg once again to invite particular attention to the wanton destruction of timber and shrubby vegetation throughout the Colony, particularly in the western districts.

This will, in a very few years, be most bitterly regretted, when extensive areas of country will be laid waste by unchecked sweeping winds, and become useless for cultivation.

I have noted during this last drought the large areas of wind-swept plains where *the whole of the surface soil has been carried clean away*, exposing a rock-like hard subsoil upon which probably nothing can grow, until time and exposure may break it into soil to be swept away again during the prevalence of any severe dry weather.

Miles and miles of wire-netting fences have become banked up with drift soil, so much so that one can drive over them anywhere with ease. Probably millions of tons of surface soil have been carried in air-currents far away, and sometimes to the ocean. I traced one dust-storm from beyond Wagga to Sydney, noticing it all along the railway. In Sydney it was considered to be smoke, but this was not so; it was simply dust from the far-away plains travelling out to sea.

If no extensive shelter-belts of forest are preserved in this western country, the surface soils of cultivated areas will, in times of drought, travel off to sea also, and it is not difficult to imagine the consequences. I have been most strongly advocating for years, officially and otherwise, the urgent need that action should be taken to compel owners and lessees of land to retain a percentage of forest to clearings made.

In conclusion, I may state that my observations lead me to think that lately settlers and farmers are becoming alive to the necessity for improvement on the usual rough system of farming which only too generally obtains, and I believe the efforts of the Agricultural Department are assisting considerably in this desirable course. I find that many of the farmers and settlers are extremely anxious for any reliable information they can obtain that may be likely to assist them in their different kinds of work, and so on. As soon as they become wise enough to join together and form farmers' clubs, farmers' combinations, farmers' improvement unions, or something of that nature, they will find much greater facilities for acquiring knowledge than by remaining isolated. Two or three unions of this kind are in existence and are working well; the expenses are almost nothing, but the good effected in various ways is considerable. The members meet monthly at one another's farms, talk over matters for individual and general benefit, read papers on various subjects, ask questions, carry out experiments, and come into close touch with the Department of Agriculture.

I have, &c.,  
WALTER S. CAMPBELL,  
Chief Inspector of Agriculture.

The Under Secretary for Mines and Agriculture.

Report of the Manager, Experimental Farm, Wagga Wagga.

I HAVE the honor to submit my report of operations for the year closing 31st December, 1899.

WHEAT.

The area devoted to the cultivation of wheat for seed is less than has hitherto been sown, viz., 109 acres, exclusive of the Wheat Experimentalist's plots.

In all, 339 acres were sown for hay and grain, but, as all early sown crops suffered from the effects of frosts, combined with the absence of rain at a critical period in their growth (20 points only having fallen from 9th August to 10th October), it was decided to cut 230 acres for hay. The yield was 220 tons of hay of excellent quality.

The rainfall of October and November arrived in time to ensure good crops from the remaining area of 109 acres, which having been sown later escaped the frosts which damaged those sown earlier.

These crops, which consist of several of the most popular varieties, have been reaped and stacked, but threshing has not yet been possible.

All late-sown crops suffered to some extent from the ravages of grasshoppers, which ate all the "flag," leaving only the straw and the ears, thus causing the grain to ripen somewhat prematurely.

Notwithstanding this, the yield promises to be the best on record, and a supply of good seed will be available for sale.

Appended is a table showing yields as far as practicable, the reaping and stacking having only just been completed.

Supplementary Report on 1898 Crops.

1898 Crops.  
POTATOES.

The land selected, about 3½ acres in area, was a free red loam of fair depth which had not previously been cropped. It was first ploughed some months before planting time and allowed to lie fallow till July, when it was again ploughed and the soil thoroughly pulverised.

Appended is a table of the rainfall for 1898, showing the conditions under which the crop was raised. The yields of the respective varieties are shown hereunder:—

Variety.	Yield per Acre.				Remarks.
	Tons	cwt.	qrs.	lb.	
Snowflake .....	1	5	1	9	Tubers small.
Lord Tennyson .....	1	3	2	8	75 per cent. large tubers.
Goulburn Redskin .....	1	2	2	18	50 „ tubers large.
Brownell's Beauty .....	1	2	0	9	Tubers small.
Early Vermont .....	1	0	2	21	Tubers medium.
Snowdrop .....	1	0	0	0	Small.
Bliss' Triumph .....	0	19	3	14	All large tubers.
Herd Laddie .....	0	17	2	9	Small.
Early Manhattan .....	0	15	1	10	„
Australian Monarch .....	0	13	2	5	All large tubers.
Eclipse .....	0	13	0	13	Small.
Avoca .....	0	11	2	4	„
Exeter Russet .....	0	7	1	10	„

Planting was carried out in the month of August. The tubers were cut into sets, leaving two to three eyes on each, and were planted in drills which were struck out in the way usually adopted with extensive field crops. The land was not manured.

The drills were opened to a depth of 6 inches, 3 feet apart, and the sets were placed 15 inches apart in the drills and covered with the plough, the land being twice harrowed with a lever harrow before the crop appeared above the ground.

The land was afterwards cultivated with the Planet Junior horse-hoe, and the crop was not hilled till the tubers were advanced in growth, the operation being then carried out to protect them from the heat.

The foliage of all the varieties suffered considerably from the scorching winds which were prevalent from October to December, the effects being especially noticeable in Eclipse, Snowflake, Avoca, Exeter Russet, and Australian Monarch.

RAINFALL.

June ...	...	...	196				
July ...	...	...	164				
							14.83 inches.

The following varieties were planted in September last, and have not yet (31st December, 1899) been harvested:—Adirondack, Goulburn Redskin, Bliss' Triumph, Early Rose, Lord Tennyson, Scotch Grey, Magnum Bonum, Australian Monarch, Beauty of Hebron, Brownell's Beauty.

FODDERS.

*Maize*.—Ten varieties are now under trial in areas of an acre each, with a view to obtaining suitable varieties for green fodder or ensilage, as, with our climate and soil, it is realised that except in wet seasons there is little probability of maize succeeding as a grain crop.

All varieties have suffered from insufficiency of moisture and the effects of hot winds which have prevailed during the past few weeks. With the exception of a small patch occupying the bed of a creek, last year's crops were destroyed by hot winds.

*Sorghum*.—The crops standing at date of last report were greatly injured by hot winds, a few varieties in experimental plots in a sheltered part of the farm only escaping. The greater proportion of the flag was thus destroyed, rendering it unfit for ensilage. The yield in consequence was light, very little of the crop having reached the flowering stage before early frosts set in.

The new varieties from India also were comparatively unsuccessful, their growth having been slight, very few varieties having borne seed. Experiments with these varieties are being continued this year; but the ravages of grasshoppers have greatly decreased their chances of success.

A field crop of 27 acres, consisting of the old varieties, now looks fairly well.

LEGUMINOUS CROPS.

*Cow-pea*.—A portion of one of the wheat paddocks, in area 12 acres 1 rood 10 perches, which was under cow-pea at date of last report, produced a light crop, the rainfall having been insufficient to bring the plants to perfection.

Sheep were placed in the paddock to eat the vines, but they did not appear to like them. After having been partly eaten off the vines made a second growth. They were then ploughed in and the land was sown with wheat for hay, the yield, 11 tons 18 cwt. 0 qrs. 8 lb., being about 2 cwt. per acre in excess of the average obtained from adjoining land.

Portion of the oldest paddock on the farm, about 40 acres, was sown with cow-peas in October last, but the crop has suffered severely from recent hot winds, which scorched the foliage.

*Florida Bean*.—A small test plot sown in 1898 made more vigorous growth than that attained by any other leguminous plant. The vines were, however, destroyed by an early frost. Flowers appeared on the vines, but no seed resulted.

*Clover*.

## 11

*Clover*.—Crimson clover was sown in the ordinary way in a half-acre plot, but the result was unsatisfactory. About 4 acres were also sown with wheat, but the result was nominal only, the supply of moisture in both cases having been insufficient to produce a satisfactory growth.

*Lucerne*.—50 acres were sown in August last on the most suitable part of the farm. A fair growth has resulted, and sheep are now being fed on it. It is intended to increase this area next season.

*Vetches*.—Early sown made poor growth, and those sown later were destroyed by grasshoppers.

*Serradella Sulla*.—Failed.

*Lupins*.—Made poor growth—destroyed by grasshoppers.

## RYE.

Trials of several varieties have been made in experimental areas, but as the grain is not yet threshed results cannot be furnished.

## PUMPKINS AND SQUASHES.

Almost all varieties sown in 1898 were destroyed by hot winds. Thirty-six kinds are again being tested, but at the present time their success appears doubtful, high temperatures and hot winds being prevalent.

## BARLEY.

A 10-acre block was sown with Chevalier, drilled in at half a bushel per acre, with Colonial Sugar Co.'s B superphosphate at 80 lb. per acre. The weight of straw with grain was 26 tons. Owing to dry weather which prevailed when the grain was forming it will be very light and inferior in quality. A small area of skinless barley, sown with 75 lb. superphosphate and during growth top-dressed with a similar quantity, has given excellent results. Three cuttings of green fodder were obtained from a portion of the land and the remainder was reserved for grain, which has not yet been threshed.

Walhalla, from France, and a malting variety received from Dookie College, gave unsatisfactory results.

## ORCHARD.

New varieties of fruit-trees are each year coming into bearing, and the value of the experimental portion of the orchard is thus being demonstrated apart from the commercial value of the fruit.

Considerable interest is being shown in the operations carried out in this and other departments of the farm, and much information is disseminated by practical demonstrations to visitors and by means of correspondence.

The orchard is also being availed of by persons desirous of obtaining scions of fruit-trees true to name, and they are supplied at the prices approved by the Department, the sales being limited to such varieties as have borne fruit here.

The crop of apricots, sultanas, and other fruits promises a fair return during this season.

## STUDENTS.

Fifteen students have attended the farm during the year, and have received practical instruction in the various branches of farm work.

The respective terms of a number of them expired in April, July, and December.

At the date of the annual examination the number on the books was six, and of these, three purpose returning after vacation.

It is hoped that during the coming year the course of instruction, which is now of a purely practical character, may be improved by the addition of lectures by the Travelling Instructor, the Entomologist, the Chemist, the Dairy and Fruit Experts respectively, and that practical demonstrations may be given by a competent wool-classer.

## SHEEP.

With judicious stocking the carrying capacity of the farm is fast increasing, and there are now 1,000 sheep in the paddock all in forward condition.

During the year 1,329 sheep were purchased, and 819 were sold at a good profit. A sum of £401 6s. was expended in the purchase of 1,031 sheep in July and August last. These sheep were shorn in September, and the wool realised £257 16s. 3d. net.

## HORSES.

The stock has been increased by the purchase of one horse and by the birth of a foal by the Suffolk Punch stallion "Brigand."

Four draught mares have recently been stinted by "Brigand," and a hackney mare has been sent to the thoroughbred stallion "Fairy King."

## CATTLE.

With the exception of two, the working bullocks have been fattened and sold, as they were no longer required. The prices ranged from £7 12s. 6d. to £8 10s. per head.

The young heifers on the farm at date of last report have calved, and are now in milk. The Jersey bull "Newman" and one of the crossbred cows having proved tuberculous, were destroyed. "Newman" has been replaced by the imported Kerry bull "Aicme Chin."

It has been necessary to hand-feed all dairy stock during the last two years, with the exception of a couple of months in the spring of each year. For this purpose wheat "headings" and straw chaff, with the addition of concentrated food, have been utilised.

## PIGS.

The additions to the stock by purchase consist of a pair of small Yorkshires and a pair of large Yorkshires, bred from the stock imported by the Department.

A number of young Berkshires from the old stock are now available for sale. It is intended to sell all the Berkshires of the old type and to replace them as early as possible with better animals.

## POULTRY.

POULTRY.

New breeds have been added, comprising Australian Game, White Wyandottes, and Buff Orpingtons. It is intended next season to discard all varieties for which the climate has proved unsuitable. The results of experiments so far have proved the superiority of Leghorns, Orpingtons, Minorcas, and Wyandottes.

PADDOCK EXPERIMENTS.

The following experiments have been carried out in paddocks Nos. 1 and 4 (not separated) for the purpose of testing rotation crops in wheat land, to be fed off by sheep.

Area, 182 acres. Half of this area was sown with rape, and the rest with common rye; the former broadcast at the rate of 5½ lb. per acre, the latter drilled at half to three-quarters of a bushel per acre.

Owing to the dry weather which succeeded the sowing of the rape the crop proved a failure. The seed germinated freely, but with the exception of patches representing about 15 per cent. of the whole, the plants died before reaching a height of 2 inches. As the more vigorous portions (which occupied the dampest spots) advanced in growth they were badly attacked by aphids.

The rye remained green till late in December, but as it became necessary in October to plough a portion of the land to test another catch crop, the carrying capacity of the paddock was considerably curtailed.

Appended will be found the results from a commercial point of view, the statement showing a loss.

The following experiments in paddocks Nos. 2 and 3 were carried out under special instructions from the Department. A total area of 318 acres was sown partly with common rye alone for hay, and partly with rye and grey peas to be fed off by sheep.

Part of the area was sown with rye at 56 lb. seed per acre and part at 80 lb. per acre, broadcast, and 40 acres were sown with the drill at 60 lb. per acre.

The rye and peas together were sown at the rate of 1 bushel of the former, and from 30 to 60 lb. of the latter per acre.

The superiority of the system of drilling over broadcasting was in this instance demonstrated very decisively, as seed sown with the drill from 10th May to 14th May showed freely above ground before the 27th instant, while that sown broadcast between 16th April and 5th May showed only a few blades before the 18th June. The drilled seed, therefore, gained an advantage of six weeks over the earlier sown portion of the broadcasted area. There was sufficient moisture to start the drilled seed, but not enough for the broadcasted seed—a good deal of which perished.

It was decided to retain for hay a portion only of the area specially sown for that purpose, and the result was very poor compared with that obtained from wheat. From rye, the seed of which alone cost 6s. 9d. per acre, the hay yield cannot be valued at more than 6s. 6d. per acre. On the other hand, 230 acres of wheat, costing for seed alone 2s. 10d. per acre, yielded hay worth £2 17s. per acre.

The rye stubble is proving very troublesome. Sheep and cattle preferring to “go hungry” rather than eat the aftermath, thus rapidly losing condition.

It has therefore become necessary to cut portions of it in order to clear the paddock.

Appended are commercial results.

DEBITS AND CREDITS TO FIELD CROPS, 1899.

*Paddocks Nos. 1 and 4, 182 acres.*

	£	s.	d.		£	s.	d.
To Disc-ploughing, harrowing, rolling, sowing	51	5	2	By Increase in value of 620 sheep grazed	41	13	5
„ Seed .....	19	2	3	41 days .....	1	17	8

Average for 25 years—22 inches.

I have, &c.,  
Bomen, 31st December, 1899. G. MAURICE McKEOWN, Manager.

Mr. Principal George Valder to The Under Secretary for Mines and Agriculture.

Sir,  
Hawkesbury Agricultural College, 31 December, 1899.  
I have the honor to submit the Eighth Annual Report, together with the reports of the outside Examiners to the College.  
A large number of improvements are still being made, and I have to thank you for your hearty co-operation and able assistance in this direction.  
The College is full, and the applications are more numerous than ever. Provided we have a fair season, there is every prospect of another successful year.  
Yours, &c.,  
GEORGE VALDER.

VISITORS TO THE COLLEGE.

The number of visitors to the College and Farm is steadily increasing. Large parties of farmers from Camden, Liverpool, Penrith, Castle Hill, and other smaller centres now make periodical visits. And scarcely a day passes but some few visitors, coming from all parts of this and the neighbouring Colonies, may be seen inspecting and making inquiries regarding the improved methods adopted in the various branches of the farm. This necessitates the experts devoting a considerable portion of their time to looking after the visitors, but I consider that this should be encouraged, as in imparting instruction in this way they are doing extremely valuable work.

CORRESPONDENCE.

Letters from all parts of the Colonies are received, making inquiries regarding subjects connected with agricultural pursuits. Often these are very numerous, and in answering them it entails considerable time and attention from the various experts. Every endeavour is made, however, to give them our prompt and best attention.

OFFICE WORK.

As the various branches of the farm are steadily growing, the work entailed in checking operations and answering correspondence steadily increases; but, notwithstanding this, the books are kept well up to date, and the work is carried out in a most efficient manner by our registrar, Mr. S. F. Adams.

MEDICAL OFFICER'S REPORT.

I have the honor to report that during the past year the general health of the students continued good.  
One case of fractured fore-arm, from machinery accident, occurred; another student sustained a severe injury to his foot and ankle; and a third had a bad abscess in connection with his lower jaw. These made good recoveries. A number of cases of influenza, in addition to several minor ailments and accidents, also came under observation.  
I have, &c.,  
JOHN GIBSON, M.D.

THE COLLEGE.

The new chemical and botanical laboratories have proved of great value, enabling the students to receive more demonstrations and laboratory work. The whole of the College buildings were thoroughly painted during the year, and many improvements have been made. Finding that the laundry, store-rooms, servants' quarters, &c., were inadequate for our requirements, the Minister approved of new and more commodious buildings being erected, and these have already been commenced. The applications for admission are still increasing, and the question of extending our accommodation will shortly have to be considered. A museum for exhibiting specimens of farm produce, different types of grain, and other objects of interest in is badly required.  
THE

## THE SCIENCE MASTER'S REPORT.

The Science Master, Mr. E. C. Wood, M.A., B.Sc., B.E., reports as follows:—

*Chemistry.*—The instruction in Chemistry has been carried out as usual by means of experimentally demonstrated lectures; and a large amount of laboratory work has been done, embracing a two years' course. Also it is to be noted that the students have had superior advantages in the improved equipment of the chemical laboratory, whereby they have been enabled to undertake practically all kinds of investigations generally required in connection with agricultural industries.

I have found it advantageous, however, to rearrange the work in certain respects—that is, by curtailing some of the descriptions and demonstrations formerly included in the lecture course, and putting the students through more practical exercises on such subjects at their benches. This also allows of somewhat fuller geological descriptions in the chemical lecture course. In fact, whatever portions of the work it has been practicable and advantageous for the students to take over for experimental study at their own benches have been relegated to that section of the chemical instruction.

There will apparently always be a great disparity in the natural abilities and the preparatory training of our students, and I consider that in a subject such as practical chemistry, where a considerable amount of mental discipline is necessary in order to obtain successful results, the difference between pass and honour standards will be great. Of ours it may be said, as perhaps of all agricultural colleges, the young men vary considerably in both the preparedness with which they enter and their adaptability for the various subjects they are required to study. I find that most students like chemistry, but they all regard it as their most difficult subject; still they appear to have realised its importance, and they are to be commended for their perseverance in following out the principles of the science very carefully. The curriculum, moreover, adapts itself to the requirements of all students. There is a certain amount of regular or fundamental bench-work to do—the students not repeating the preparation of gases, &c., as done experimentally for them in the theoretical lectures, but at once beginning the study and classification of the reactions of bases and acids—and after this they apply their skill to the examination of substances practically concerned with agriculture.

*Examinations.*—I have examined the first-year students each Saturday fortnight throughout the year in Theoretical and Practical Chemistry and Surveying. The results are tabulated side by side with the marks I have awarded them at the annual examinations recently held in the respective divisions of chemistry.

The second-year students have devoted attention, first, to the general principles of gravimetric and volumetric analysis, and afterwards to the practical analysis of various samples, such as milk and butter, manures and soils. The average marks obtained at the fortnightly examinations by the students of this class in Theoretical and Practical Chemistry and Mechanics are also furnished in an Appendix herewith.

*The Laboratory.*—During the year I have been enabled to undertake a considerable amount of analytical work, sometimes for the purpose of advising persons upon chemical matters outside the College, and sometimes investigations in connection with manures or produce of the farm; whilst it has been possible to set the students' exercises invariably upon the manures, &c., used on the farm and the actual soil they cultivate.

It is gratifying to recognise in this connection that good results are now being attained in realisation of our anticipations when introducing the teaching improvements some two years ago. I consider the standard of the laboratory work now gone through as equal to that of any other agricultural college except, perhaps, Cirencester.

*Analyses.*—In addition to my regular teaching duties I have during the year made and reported upon the following analyses:—

Eleven samples of milk, submitted at various dates by the Richmond Borough Council, of which several proved to have been extensively adulterated.

Two samples of milk for a resident also of this town.

Samples of butter for the College dairy.

Three samples of water, viz., from a well in Richmond, a spring of reported medicinal value near Windsor, and a sample of water from a stock tank in the interior of the Colony.

Some patent chemical compounds sent from various places for experimental trial by the Poultry Expert.

Soils and manures of the College farm, some of which were also given to the students for analytical practice.

Some Sydney firms kindly supplied me with a good variety of manures, both simple and mixed, and these have also afforded excellent practice for students.

*Engineering.*—The courses of instruction in Mechanics and Surveying have been carried through as usual with few modifications.

## ENGLISH MASTER'S REPORT.

The English Master, Mr. C. T. Musson, F.L.S., reports as follows:—

Courses of lectures have been delivered in my subjects as usual—Elementary Botany (1st year), Economic Botany (1st year), Vegetable Pathology (1st year), Agricultural Entomology (2nd year)—the matter being so arranged as to be specially adapted to agriculturists.

In English (1st year), lectures on Political Economy have filled the time with other usual work.

Book-keeping (2nd year) has occupied a considerable amount of time, the work after two introductory lectures consisting of practise examples worked out by students individually, assisted by occasional explanatory demonstrations.

Much more time has been devoted to laboratory work than in previous years, whilst frequent walks have been taken for purpose of observing plants in the field and becoming familiar with our grasses, weeds, and other detrimental plants, and for the study of insect pests and parasites. Amongst

Amongst other things dealt with in a practical way in laboratory, students doing the work under supervision, may be named :—

- Use of microscope in examining plants and insects.
- Determination of causes of plant disease. Nearly all the common fungus parasites have been studied and drawings made.
- Examination of insects, especially with regard to structural details. As insect pests and their parasites are exceptionally plentiful, students have every facility for becoming well grounded in this important branch of knowledge.
- Sisal hemp fibre has been extracted.
- Starch has been obtained from arrowroot and other plants.
- Seeds (wheat, Kaffir corn, imported grasses, and clovers, &c.) have been artificially germinated in order to ascertain fertility.

The orchard has been regularly visited for purpose of seeing and helping in all the operations carried on there, e.g., pruning (winter and summer), grafting, budding, topping, treatment for disease (spraying and fumigating), transplanting, &c.

The farm and experimental plots have been visited frequently to give opportunity for general observation and to study certain special matters in detail, such as eelworm on vetches, root bud-galls on turnips, burning out trees infested with fluted scale, observe method of taking meteorological observations, study the native and exotic trees, &c.

Among the more interesting observations made during the year may be noted :—

- Occurrence of the European fruit-fly in our peaches ; Calosoma, a beetle, feeding (in larval and perfect conditions) on army worm larvæ.
- Species of Phytomyza (leaf-mining flies) on sow thistle, mangel and other plants, proved to be largely parasitised by a minute Hymenopterous parasite (a Proctotrupid).
- Teia anartoides, a hairy grub attacking leaves of apple and pear, has proved largely parasitised by a Hymenopteron (Rhyssota semipunctata).
- Pea weevils attacking pods of Desert pea, and a Dolichos.
- Large root-galls on peach. (Cause ?)
- Imported walnuts badly damaged by the Cadelle beetle.
- Eelworms very plentiful on vetches, lupin, &c.

In addition to my instructional duties, the meteorological observations have been continuously taken by myself, assisted at times by Mr. Wicken and students. A tabulated statement is attached.

Numerous plant and insect specimens have been sent in for identification and report. Material is being accumulated for a herbarium and general museum.

Photographs have been taken, notably the series dealing with methods of fumigation published in *Agricultural Gazette*.

I have also completed some observations on soil temperature, details as to which are being communicated to the *Agricultural Gazette*.

Other ordinary detail work has been duly attended to.

METEOROLOGICAL OBSERVATIONS, HAWKESBURY AGRICULTURAL COLLEGE, RICHMOND.

SHEEP AND WOOL CLASS.

The Sheep and Wool Expert, Mr. A. Hawkesworth, reports as follows :—  
It is gratifying to state that there was a general inclination to pay great attention to the lectures and practical work. The lectures were continued weekly, until the end of May ; after, there was nothing but practical work till the end of the term.  
Skirting, rolling, and piece-sorting of Merino wool was earnestly carried out, by which the students obtained most serviceable instruction, which helped them considerably during shearing time.  
Early in April the ewes were classed into different grades, suited to be put to particular rams. The ewes and rams were put into different paddocks, the result being a satisfactory lambing in August and September.  
Whilst the sheep-classing was proceeding, a selection of fat wether lambs (Shropshire and Romney Marsh) was made, and sent to the Royal Show, Sydney, when favourable comments were made as to their suitability for the market. After the show the forty-seven lambs were sold, the purchaser being Mr. Woolfe, a butcher of high standing, who pronounced them as being in every way suitable for the market. This was high commendation, as the lambs were brought in from the bush paddocks, and in no way artificially fed. Prices obtained were—Shropshire (5 months), 8s. 9d. ; Romney Marsh, same age, 7s. 3d.  
The students, in August, commenced shearing the ewe hoggets, and right good progress did they make in this branch. Afterwards lamb-marking was undertaken with most satisfactory results, many of the students being both quick, careful, and safe in this delicate work. The general shearing work continued on and occupied two days a week until the end of October, and the sheep were both much better and more speedily shorn than in the previous year. All the sheep were afterwards dipped in Cooper's Dip. The ewes were again classed in November, and suitable rams selected for the separate flocks. There were many dry ewes, which it was deemed advisable to put in with the rams again, and should lamb in April, 1900. It is only right to mention that all the work was done exclusively by the students.  
Taking the time at the disposal of the students for this class, the results of the examination were very encouraging.

THE FARM.

At the commencement of last year the area of cleared land totalled 2,180 acres and uncleared 1,250 acres. During the year another 24 acres was cleared and 300 acres scrubbed. The pasture is gradually being improved, in order that the grazing area will carry more stock. At present there is not sufficient to carry enough sheep and cattle to supply the College with meat, but it is hoped that before long these improvements will enable us to do so. The land that has been lately cleared, and also that that has been scrubbed, is being divided into smaller paddocks in order that portions of the land may be spelled in turn, and also to admit of a rotation of crops and pasture being gradually adopted. Four of these paddocks have been netted in with netting of a wide mesh, this being necessary to keep the sheep from mixing or getting into the cultivation paddocks. The breeds we have here—Romney Marsh and Shropshire—are noted fence-breakers, getting through the ordinary wire fence (which would keep a Merino in check) with the greatest of ease. The netting prevents this, and when the sheep get accustomed to being in netted paddocks they do not attempt to get out. Another of these paddocks, which has a large swamp in it, is being netted in with marsupial wire, and, when completed, it will be utilised as a pig run. The swamp is a permanent one, and, as there is plenty of shade, it should be a very suitable paddock for this purpose. A stockman's cottage is being erected at the eastern end of the estate. This has been found necessary, as at present there is no building within a considerable distance of the paddocks at this portion, and great trouble has been caused by people breaking open the gates and putting in stock, carting off firewood, &c., and also by dogs getting in and worrying the sheep. The stockman who is at present employed on the farm will act as caretaker of these paddocks in addition to his present duties.  
The Farm Foreman, Mr. George Cobb, reports as follows :—  
The farm operations for the year just closed have been very satisfactory, especially those in connection with most of the cereal crops. The following varieties of wheat were grown for hay :—  
Blount's Lambrigg.—30 acres sown in April, harvested in November ; yield, 3 tons hay per acre. A good, bright sample and perfectly free from rust.  
White Lammas.—38 acres ; yield, about 2½ tons per acre. Good, sound hay.  
Australian Talavera.—35 acres. Much lighter ; badly affected with rust.  
Purple Straw.—6 acres. Hay very rusty ; bad sample.  
Steinwedel.—30 acres cut for hay ; sown early. Swayed down badly with too much rain in August ; very rusty ; experienced great difficulty in cutting it with the binder. Allora

Allora Spring.—25 acres cut for seed, not yet threshed; estimated yield, 20 bushels per acre. This is evidently a specially suitable variety for our climate, maturing very early. I have sown it side by side with a large number of varieties, and it gives surprisingly better results in a dry season than any other.

Macaroni Wheats.—A few acres of these wheats, of the Belatourka and Medeah varieties, were sown and cut for grain; estimated yield, 21 bushels per acre. They produced a heavy crop of straw, as they almost invariably do, causing a great disadvantage and loss of time in threshing. They are very suitable for ensilage, yielding heavy crops of green feed.

Oaten Hay.—150 acres sown of the following varieties—White Tartarian, Black Tartarian, Algerian, Potato, and Dun—gave an average yield of 35 cwt. per acre, the Black Tartarian giving the heaviest and the Dun being freest from rust.

Cape Barley.—50 acres sown, 25 acres cut for grain, yield light; 15 acres cut for green fodder, the balance cut for ensilage mixed with rye.

Rye.—About 30 acres sown, 15 cut for ensilage mixed with barley, alternate loads, balance cut for grain; estimated yield, 25 bushels per acre. The grain will be used for feeding to pigs.

Potatoes.—3 acres were planted. Early Rose and Brownell's Beauties promised well for a time, but the dry, hot weather during latter end of November and December gave them a severe check, from which they did not recover, consequently the yield will be very light. Potatoes are a very unprofitable crop as a rule in our poor sandy soil.

Maize Crops.—About 200 acres sown. I commenced sowing early in September and continued up to date (31st December). The early sown grain did not come up very well owing to land being too cold and wet at that time, but came on well a little later; and the crops sown later are looking fairly well, but feeling effects of the dry weather that has prevailed for the past five or six weeks. Should the weather continue hot and dry during January, I am afraid we shall have a poor yield.

Early Amber Cane.—15 acres, sown during December. Not sufficient moisture to germinate seed; very patchy.

Turnips.—20 acres were sown; variety, Anderson's Imperial Purple-top; gave an average yield of 13 tons per acre. Some 50 tons were marketed, but, owing to low prices ruling, it was decided to feed the balance off with sheep, which gave highly satisfactory results, the sheep doing remarkably well, besides returning manure to the soil. Maize now growing on this paddock promises heavy yield with favourable weather.

Rape (Dwarf Essex).—20 acres of this crop was sown, also fed off with sheep, with similar results as turnips. Land now under corn looking very well.

Water-melons.—24 acres sown. Promised well in the early stage, the land being new and recently cleared of scrub, it dried up fast. The melon vines are withering off in consequence of this, and unless rain comes soon the crop will be a very poor one.

Pumpkins.—32 acres sown, mostly of the large varieties, for stock. Promised a record crop for a time, but in spite of good cultivation was affected by continued dry weather.

Most of the maize sown in 1898 had to be all cut down for green feed and ensilage early this year, as it failed to produce grain, the season being a very bad one. It is almost a hopeless task trying to grow corn on this light, sandy soil in bad seasons, as unless there are good rains during the summer months the cobs will not mature. The hot, dry, loose nature of this sand and pipeclay causes the moisture to evaporate very quickly, and the corn then scorches up rapidly. Cultivation appears to do good in retaining the moisture, but it is not nearly as effective on these soils as on the river flats.

Stock.—The horses now number sixty-six, including six mules. They are all in good condition. We had the misfortune to lose two of our best brood mares this year, both suckling foals. One died of paralysis and the other inflammation following dry colic.

The new Massey-Harris binder purchased this season has given great satisfaction.

In reference to the students, I have from twelve to fifteen under my control every day. It affords me pleasure in testifying to the progress made by them at the various branches on the farm. With few exceptions they take a keen interest in the practical use of the many different implements on the farm.

I always do my utmost to instruct the students in all practical work, also the use of all machinery and implements, and endeavour to impart a knowledge generally of stock and all routine in connection with farming operations. The conduct of the students whilst under my control on the farm has been all that can be desired.

The Fencer, Mr George Stead, reports as follows:—

During the year my time was principally devoted to erecting dividing fences on the land lately cleared. The fencing on the main farm road was all post and top-rail with six wires, and the subdividing fences were partly the same as this and partly post and six wires, with barbed wire on the top. Altogether this measured a little over 5 miles. Besides this, I erected a 6-foot post, netting, and barbed wire fence round the orchard, of about 1 mile in length; also a drop fence along both sides of the avenue, measuring 1 mile, and other smaller jobs of paling, picket, and three-rail pig-fence, &c. Five small paddocks were netted in for the sheep, about 4 miles of netting being used. A number of new gates were erected, and others moved and repaired. Some few repairs to fences had to be made; but, taken altogether, I think that it can be said that the fences on this farm have proved to be of excellent material, and have been well erected. I have always had one or more of the students working with me; they behave well and do their share of the work in a very satisfactory manner.

#### EXPERIMENTAL PLOTS.

The Experimentalist, Mr. P. Wicken, reports as follows:—

Nearly 200 acre plots have been worked during the year, two crops being obtained off every plot. The land has been thoroughly cultivated, a good portion of it subsoiled, and the whole is now in first-class order. This result has been obtained by strict attention to manuring, both stable manure and the ploughing in of green crops, such as cow-pea, rape, &c., and also by a thorough system of rotation of crops, which is a large factor in keeping up the fertility of soils. With regard to the white pipeclay land, of which such a large part of the experimental ground consists, I have been very successful in obtaining some heavy crops of green feed and cereals from it during the winter and spring months, when the ground is fairly moist; but when the hot weather comes on it dries as hard as a rock, and it is difficult to grow anything on it. During the year we have had sufficient hurdles

made to enclose an acre of land, and we have been carrying out some interesting experiments in the feeding of sheep, and also topping up lambs for market, with most successful results, and by doing this on the poorer land we hope to increase its fertility to a marked degree.

I have also prepared collections of farm produce, and exhibited at the various agricultural shows in all parts of the country, including a large exhibit at the Sydney Show.

A number of experiments have been undertaken on behalf of Mr. Farrer, the Wheat Experimentalist, to which a considerable amount of time has been devoted.

I have also distributed to farmers in various parts of the country 1,320 lb. parcels of varieties of early maize imported from America, and also 1,814 packets of other seeds for trial in various districts.

#### *Root Crops, 1899.*

**Swede Turnips.**—Owing to the favourable season and the method of deep cultivation carried out this crop did remarkably well; the turnips were splendid for table and well flavoured; the size was regular and even, and the average weight was about 6 lb. One acre block of Anderson's Purple-top Swede was sown on 15th March and harvested as required in July. The total yield from the acre was 13½ tons.

The land was subsoiled for the previous crop, viz., wheat, and was ploughed up and well worked before sowing the turnips. They were sown in drills 3 ft. apart, and when well up were thinned by the hoe to about 16 in. apart.

The manure used was Colonial Sugar Company's No. 2 superphosphate, drilled in over the whole of the ground at the rate of 3 cwt. per acre.

**White Turnips.**—An acre block of white turnips were sown and did exceptionally well, the roots being large and sweet, heavy yielders, and good eating. Three-quarters of an acre was sown with White Pomeranian Globe. One-quarter of an acre was sown with Yellow Tankard.

The Pomeranian Globe grew quickly and yielded a splendid return; they were planted 16th March and harvested early in June; the roots were of large size, and when quite sweet and tender the average weight was nearly 7 lb.; in addition to the roots they yield a large amount of tops, which were used for the sheep.

The Yellow Tankard is a long yellow turnip, a good yielder; it not so good for table purposes as the previous variety, but is very valuable for feeding to stock.

They were planted in rows 3 ft. apart and thinned out by hoes; the land was thoroughly worked before planting, and was subsoiled for the previous crop (wheat).

The yield from the acre was 13 tons 11 cwt., and the manure used, Colonial Sugar Company's No. 2 superphosphate, at rate of 3 cwt. per acre, drilled in over all the ground, but not put in the drills with the seed.

A block of turnips was put in containing the following varieties for purpose of testing same:—

Sutton's Champion Purple-top Swede.	Green-top Yellow Aberdeen.
East Lothian Swede.	Early White Stone.
Skirving's Purple-top Swede.	Orange Jelly.
Scarlet Kashmyr.	Nepaul Turnip.
White Model.	Green-top Stone.
Red American.	Krempin's Best of all Swede.
Purple-top Yellow Aberdeen.	Long White Turnip.
Red-top Munich.	White-fleshed Swede.

Sown March 16th, harvested in July. For table purposes, White Nepaul, Red American, Scarlet Kashmyr, and Orange Jelly gave the best results. The Swedes were all very even in quality, and there was very little difference in the yield. The Aberdeen turnips gave a good return of even roots of excellent quality for feeding to stock, but the yield was not nearly equal to some of the white turnips, such as Pomeranian Globe. The land was manured with Sugar Company's No. 2 superphosphate, applied at the rate of 3 cwt. per acre.

**Kohal Rabi.**—An acre was sown, half each of the green and purple varieties; they yielded well, although not nearly as heavy a crop as the turnips. They were used for feeding to pigs with very satisfactory results, both tops and bulbs being readily eaten.

The purple variety seems to do the best, the yield being 6 tons 9 cwt. per acre of this variety, and 5 tons 4 cwt. of the green.

The ground was well worked before sowing, and was subsoiled for the previous crop (wheat). The manure used was Colonial Sugar Company's No. 2 superphosphate, drilled in all over the ground at rate of 3 cwt. per acre.

**Chicory.**—An acre of this plant was put in for a test; it grew very slowly on the poor soil, the yield of plant being too light to pay to grow for feed purposes.

**Jerusalem Artichokes (Purple).**—An acre block of this plant was put out and proved successful, the roots being used for feeding to the pigs, which did very well on them.

The land was well worked, and drills struck out 3 ft. apart, the artichokes being placed about 18 inches apart in the drills. Previous to planting, a dressing of stable manure was put into the drills at the rate of 5 loads per acre.

The crop was planted on 10th August with tubers raised here the previous year; the plants grew very slowly at first, but after rain came they soon made headway and were ready for harvesting in May. The yield was 4½ tons. The tubers were of a good size and shape.

**White Artichokes.**—A sample of these was received and planted, and although they grew quicker than the purple and yielded heavier clusters, the tubers were very much smaller, and not suitable for table purposes.

**Potatoes.**—A 2-acre block of land was specially prepared for a crop of potatoes. Hitherto we have not been successful with this crop; but this season I have made an effort to try and raise a good crop, and have succeeded with several of the varieties which were under trial.

The land was subsoiled during the winter, and a dressing of stable manure spread over the ground and ploughed in and the ground well worked up; drills were struck out 30 inches apart, and a light dressing of 250 lb. per acre of a mixed manure was spread in the drills. The tubers were planted 16 inches apart in the drills and harrowed in.

The

The varieties are as follows :—

Early Rose Potato.—This appears to be one of the best varieties for this district ; it is early and yields well. Planted in August, they were ready for digging in November. They proved to be of good quality for cooking, boiling firm and floury. It brought top price on the market, finding a ready sale.

Bliss Triumph.—This is another red potato, which is in good demand, nearly all ours being readily bought up for seed. It is of good quality, and nearly always yields well.

Ruby Potato.—These potatoes struck very well, there hardly being a miss in the ten rows that were sown. The yield was heavy, and the sample a good market one.

Brownell's Beauties.—This potato did fairly well, but is not such a regular cropper as those mentioned above.

Breeze's Prolific.—This variety gave the heaviest crop, yielding 6 tons 14 cwt. to the acre, but being a white variety, it does not sell so well on the market.

The following varieties were also grown, but in most instances failed to return seed :—

Early Vermont.  
The Bruce.  
Reading Giant.

Emperors.  
Beauty of Hebron.

The only potatoes that will suit our soil and climate are those that are hardy and mature early, before the very hot weather comes on.

Mangels.—An acre of these were grown, half Long Red Mangels and half Yellow Globe Mangels ; they were sown as an autumn crop on 13th March, and were harvested in October and November, and did very well ; the yield per acre was 25½ tons. Many of the roots of the Long Red variety weighed up to 50 lb. each. The Long Red is much the heavier yielder of the two, although the Yellow Globe are very uniform in size and weigh well, some going 30 lb. each.

Sugar Beets.—An acre of these were grown, and although the ground was by turns wet and boggy, and then dry and hard, they did fairly well, yielding 7 tons 7 cwt. per acre. They were used for feeding to pigs and sheep.

Carrots.—Half an acre of these were sown, but the yield was very light ; they were used principally for table purposes, and a few loads for the pigs.

The Long Red and the Alkingham were the varieties grown.

Parsnips.—Half an acre of Hollow-crown parsnips were planted, but the roots were forked, and they did not do much good. They were used for feeding to the pigs.

Arrowroot.—Half an acre block of this plant was grown, and yielded 57½ cwt. They form a valuable addition to the pig feed during the winter, the tubers when boiled being eaten by the pigs with great relish.

Sweet Potatoes.—A crop of these were planted out from cuttings, and, as usual, did very well ; they are good yielders, and come in very handy when vegetables are scarce. They also kept well when packed away in dry sand.

#### *Pumpkins.*

This is a crop which is generally very successful in this district, and it is also a profitable crop. A large number of varieties were grown, two sowings being made—one early in the spring, which was harvested in March, and another lot after the wheaten hay came off in November, the stubble being ploughed up and the crop sown as early as possible.

The early bed, sown 30th September, contained the following varieties :—

Cattle Rios.	Ohio squash.
Tuble Rios.	Connecticut Field pumpkin.
Crown pumpkin.	French Pot-iron squash.
Small Button pumpkin.	Cut Yellow Netted pumpkin.
Hubbard squash.	Japanese Ironbark.
Banana pumpkin.	Golden Oblong.
Warren squash.	White Crookneck.
Chinese Scarlet Sugar.	Large Grey Cattle.
Gregory Sugar.	French Striped pumpkin.
Red Cattle pumpkin.	

The above varieties were all grown from our own seed saved from the previous year's crop, and all gave very satisfactory results. Samples of the different varieties from this bed were exhibited at Sydney and other agricultural shows during the season. A large Red Cattle pumpkin shown weighed 86 lb. and several others over 75 lb.

The second bed sown 29th November from seed just received from America. Although it was late and the ground very dry, it was thought better to sow them than to keep the seed for another season. The following were the varieties :—

Fordhook squash.	Cashaw pumpkin.
Large Toms pumpkin.	Marblehead squash.
Hubbard squash.	Pineapple squash.
Faxon squash.	Der Wing squash.
Sweet Nut squash.	White Chestnut squash.
Bay State squash.	Golden Yellow Mammoth.
Large Red Etampes squash.	Early White Bush squash.
Large Yellow Mammoth squash.	Golden Custard Bush squash.
Essex Hybrid or Warren squash.	Yellow Summer Crookneck.
Winter Crookneck squash.	Japanese Pie pumpkin.
Large Cheese squash.	Red China squash.
Pike's Peak squash.	Brazil Sugar squash.
Cook's Favorite squash.	Golden Oblong pumpkin.
Tennessee Sweet Potato squash.	Golden Marrow pumpkin.
Boston marrow.	Hundredweight pumpkin.

Quaker

Quaker Pie pumpkin.  
 Winter Luxury pumpkin.  
 Calhoun pumpkin.  
 Delicata squash.  
 Silver Custard squash.  
 Jonathan pumpkin.  
 Jumbo pumpkin.  
 Early Prolific squash.  
 Tarton's Brazilian squash.

Vaughan's Prize pumpkin.  
 White Summer Crookneck squash.  
 Green Mountain squash.  
 Pie pumpkin.  
 Kentucky Field pumpkin.  
 Cream-colored Crookneck.  
 Long Island White Bush.  
 New Cocozelle Bush.  
 Crown pumpkin.

They experienced a long spell of dry weather after planting, and, the ground being dry after the wheat crop, it was January before they came up; but they made quick growth, and we soon had a very fair crop of pumpkins. They were, however, cut down by early frosts before most of them were fully matured. I was unable to save much seed. I hope next year to be able to get them sown earlier, so that they may have a better chance. Some of the varieties should turn out really good pumpkins for this district. I like the Bay State pumpkin and the Warren squash, as they are very hard-skinned, like the Ironbark, have a deep red flesh, and boil firm and dry.

Rios.—A crop of Rios was sown at the same time as the late pumpkins, and, although they were cut down by the frost before they were fully matured, they yielded a heavy crop and came in very useful for feeding to the pigs during the winter.

#### *Marrows and Squashes.*

The following varieties were grown and used for table purposes:—

Green Bush marrow.	White Bush marrow.
Pineapple squash.	Custard squash.
Delicata squash.	Summer Crookneck squash.

#### *Water-melons.*

An acre of water-melons was grown and contained the following varieties:—

Ice Cream.	Cuban Queen.
Kolb's Gem.	Volga.
Red-seeded Sugar.	Dixie.

They came on fairly well; the season was not a good one for melons, but some fine specimens of Ice Cream, Cuban Queen, and Dixie varieties were obtained.

#### *Rock-melons.*

The following varieties were grown:—

Banana Rock-melon.	Shiro-uri Rock-melon.
Japanese Rock-melon.	Osage Musk-melon.
Large Yellow Cantelope.	Nutmeg Musk-melon.
Silver-skinned Rock-melon.	Banquet Musk-melon.
Maruka Rock-melon.	

Of these, the ones that grew best and were of the finest quality were the Banquet and Banana.

#### *Preserving Melons.*

A very heavy crop was obtained, but prices being low, the melons were fed to stock. Pulped and mixed with chaff, they are valuable for this purpose.

#### *Leguminous Crops.*

Pigeon Pea.—This plant grows to a medium-size bush and has a yellow flower; it looks very nice when out in blossom, and yields a large quantity of seed, which is valuable for feeding to pigs. A half-acre was sown on 28th November, 1898, and, although it suffered severely from the dry weather in the early stages of growth, it afterwards came on very well. Part of the plot was harvested for seed on 15th May, and remainder was cut down and fed to pigs. It will not stand frost. The first frost we had turned the leaves black.

Florida Velvet Bean.—The seed of this bean has been lately imported, and comes to us with a great record. It has done very well here, and a quantity of the seed has been secured, although it matured late. This has been resown, and we hope that this season the plants will mature earlier. It should be a good crop for green manuring, as it makes a luxuriant growth.

Black Vetches or Tares.—A block of this variety was sown 18 inches apart in drills, and, although it made slow growth at first, it came on very well towards the spring, and was ploughed in for green manure.

White Lupin.—This plant made very slow growth in its early stages. It was sown in March, and in July was only 18 inches high, but by October had grown to about 7 feet high, and will yield large quantities of seed. This is a very suitable plant for green manuring, as it yields a great mass of foliage.

Yellow Lupin.—This crop with us is not nearly such a heavy yielder as the white lupin. One acre was grown. The plants looked very nice when out in flower. It was fed off by sheep in September, but the sheep do not seem to care much for it.

Chick Pea.—This plant does not succeed well with us. It has been tried several times, and at different seasons. Although it always comes up well, the yield is very light. It was ploughed in for green manure in October.

Scarlet Clover.—A 1-acre block was sown in April, and did remarkably well. It was cut the first time in September and the crop carted off, and then grew very rapidly, and when all in head it looked a picture. It was fed off by sheep, 100 sheep being fourteen days on the acre block.

A second block of 2 acres in area was sown later for green manuring, and it came on so well that it was cut and made into hay, the yield being 1½ ton per acre.

Lucerne.

Lucerne.—The 4-acre block of lucerne sown last year continues to do well. During the year we had five cuttings, three of which were used for green feed and two for hay, which was stacked at the dairy for future use. A small load of lucerne is also, when available, cut daily for feeding to the sty pigs. An acre block of a special variety of lucerne, said to be suitable for shallow soil, the seed of which was imported from France, has been laid down, but so far the yield is not nearly equal to that of the common variety.

#### *Sorghums.*

Seventy varieties of sorghums and millets were received from one of the Agricultural Colleges in India, and were sown together with thirty varieties procured locally, making 100 in all; but owing to the exceptional dry summer the sorghum did not grow sufficiently for the test to be of any great value.

The following varieties were grown in acre blocks and used for green feed for the dairy cows:—

Yellow Milo Maize.	White Dari.
African Sorghum.	Chinese Cane.
Kaffir Corn.	Red Dhourra.
Early Amber Cane.	Early Orange Cane.
Planter's Friend.	

Of these, the Amber Cane and Planter's Friend again gave the best results.

#### *Millets.*

These are a very useful crop to us—they are mostly very quick-growing, can be put in late, and will yield heavy crops of green feed.

Hungarian Millet.—This is one of the best; it can either be cut and used for green feed or else made into hay and chaffed. The seed is also used for feeding to birds. An acre block was grown, and yielded 3 tons of hay per acre, which was cut into chaff and fed to sheep.

Other varieties of this kind, with larger seed-heads, which gave heavy crops, were:—Golden Wonder, Saltzer's Dakota, and Panicum Italicum.

French Millet.—This is a very quick-growing crop and stands the dry weather well. A block was sown on 10th December, and harvested for seed on 21st February. At the present time we are feeding off another block with sheep, and they are doing well on it.

Johnston Grass, or Evergreen Millet.—This block, which has now been sown two years, still continues to grow well, and yields several cuttings during the summer. At the present time I have enclosed the acre, and am feeding it off with sheep, which eat it down to the ground, and seem to do well on it.

#### *Cereals.*

Skinless Barley.—This crop did fairly well, but was on a poor piece of pipeclayey land. Sown 23rd June, harvested 1st November; yield, 15 bushels grain and 2 tons straw.

French Skinless Barley.—This was a very fine sample of grain imported from France by Mr. Farrer, and it turned out to be a bearded skinless barley; it is quick-growing and a heavy yielder. It is suitable for early green feed, and it promised to yield a heavy crop of grain; but the rain laid the crop down nearly flat, and it never recovered; as a result, much of the grain was lost. The yield was 28 bushels grain and 2 tons straw.

English Barley.—This crop did very well this year, but was very much laid about by the wet. The grain turned out to be a bright, clear sample, and much above our average crop.

The yield was 28 bushels grain and the straw  $1\frac{1}{2}$  ton. Sown 13th May, harvested 1st November, threshed 3rd November.

Rye—Saxon Spring Rye.—This was one of the varieties of rye imported from France by Mr. Farrer. It did very well, yielding 16 bushels of grain per acre and a crop of straw nearly 7 feet high, and which averaged 3 tons to the acre.

#### *Wheat.*

French Bearded Wheat.—A 2-acre block of this variety was sown, and grew very well until early in October, when the rust took possession of the crop, and it simply died off, leaving very little grain.

Canning Downs Wheat.—A 2-acre block of this wheat was grown, and at first did well, but having a very weak straw, it was beaten down by heavy rains, and had to be cut with scythes.

It was threshed, and yielded 36 bushels of grain, or at the rate of 18 bushels to the acre.

Belatourka Wheat.—A 2-acre block of this wheat was sown and did very well, the straw growing over 6 feet high. It is one of the Macaroni wheats, and is valuable for pig and poultry feed. Yield per acre, 18 bushels.

Medeah Wheat.—2 acres of this were sown; it is a large black-bearded wheat, and is very suitable for pig and poultry feed, and not for milling: the straw was all over 6 feet in height. Yield per acre, 21 bushels.

#### *Oats for Hay.*

Dun Oats.—An acre of this variety was grown and did fairly well. This is the best variety tried for hay, the stems being thin and light. It was of a good colour, and yielded 2 tons per acre.

White Tartarian Oats.—An acre of this variety was grown and did very well, some of the stalks reaching between 7 and 8 feet in height. It was cut with the reaper and binder and made into hay; the hay was a good bright colour, and the yield 3 tons.

Black Tartarian Oats.—An acre of this variety was sown, but did not do any good; the stalks were very thick and coarse, and unsuitable for hay, and just after running into head the plants were attacked by rust.

#### *Fodder Plants.*

Large Dutch Rape.—An acre of this variety was sown, and came in very well for winter feed for the sheep. It was sown on 13th March and on 8th August; 130 sheep were turned into it, and were fattened for killing, being taken as required. An average of 100 sheep remained on this acre until 7th September, a period of thirty days; the land was then ploughed up and sown with maize.

Dwarf Essex Rape.—An acre of this was planted for the purpose of feeding sheep, and gave some very good results. This block, together with  $\frac{1}{4}$  acre of White Mustard, were fenced in and fed to sheep, with the following results:—

Thirty

Thirty Romney Marsh weighed 59 lb., and after being on the rape for forty days, and taken off, weighed 79½ lb. each, or an increase of 20½ lb. per head.

Eight Shropshire ewes weighed 64½ lb. each, and after being on the rape for forty days weighed 94½ lb. each, or an increase of 30 lb. in the forty days.

Total increase in weight, 847½ lb., from 1¼ acre of rape and mustard, and then we had to put on other sheep to finish eating it off.

White Mustard.—A plot of about ¼ acre was sown on 13th March, the seed germinated well, and the young plants made a rapid growth, this plot being ready for feeding off before any other fodder sown in March.

#### *Green Fodder.*

Rye.—An acre of this was sown for green feed for cows on 20th April, and was cut the first week in August; owing to good rains during the winter the yields of all green stuff were very heavy. It was cut as required, and used for the dairy cows. Yield per acre, 11 tons 16 cwt.

Barley and Tares.—Sown for winter green feed on 18th March and cut in first week in July, yielding 13 tons 6 cwt. of succulent green feed, which was used for feeding sheep.

Potato Oats.—This crop is a heavy yielder, and if cut young makes a splendid feed for the dairy cattle. It was sown 12th April and cut in October. Twenty-five loads were carted from the acre block and fed to cows.

Wheat and Peas.—Half an acre of these were sown and yielded well, but after the first cutting the peas did not grow again, and the wheat came on alone.

Wheat and Tares.—Half an acre was sown and used for green feed. After the first cutting the tares grew very strongly, and the second cutting the tares were as high as the wheat, and yielded a heavy mass of excellent feed for cattle.

Cape Barley.—A block of this was grown, and was used for green fodder for cattle and horses.

Sheep's Burnett.—An acre of this plant has been sown, but up to the present time it has not done at all well.

#### *Green Manures.*

Cow-pea.—A block of very poor land, 8 acres in extent, was sown with cow-pea, 2 acres each of the four varieties, viz. :—

Whip-poor-Will Cow-pea.  
Clay-coloured Cow Pea.

Black Cow-pea.  
White Cow-pea.

They were sown in January and ploughed in in April; the crop was not heavy, but they made a wonderful difference to the succeeding crop of wheat, which grew very strongly.

Rape.—A 4-acre block was sown in some of the pipeclay land during the winter, and ploughed in previous to sowing maize and sorghum. This pipeclay responds well to green manuring, and has evidently been much improved by the rape.

Wheat.—A 4-acre block of white pipeclay land was sown with wheat, which, when about 2 feet high, was ploughed in, and this was followed with a crop of cow-pea, which now looks very strong and healthy.

#### *Cabbages.*

Succession Cabbage.—An acre of this fine cabbage was planted out in April, and in July the crop was fit to cut. A total of 170 dozen cabbages was obtained for table use and sale from this acre, and also 5 tons for the pigs and sheep for feed purposes.

Ox-heart Cabbage.—Half an acre of these were grown, and yielded very well; they were used for sheep and pig feed, and came in very handy at a time when feed was very scarce.

Thousand-headed Kale.—Half an acre of this valuable fodder plant was grown, and yielded 7½ tons of green feed from the ½ acre, or at the rate of 15 tons per acre. This is a splendid crop to grow for sheep, as they eat it readily and do well on it.

#### *Grasses.*

*Paspalum dilatatum*.—This is our most valuable grass. We have tried cutting it down and feeding to stock, and it grows again most rapidly, and is ready to cut again in a few weeks' time. We have also tried feeding it off by turning sheep on to it, and although they eat it right down to the roots, in a few days it is up again. It is very hardy, and the dry weather does not affect it. It does better in the sandy ground than in the hard pipeclay.

Cocksfoot Grass.—An acre of this grass was planted out, and has been utilised for feeding off by sheep. It was planted out in March from seed, and in September was ready for feeding off, when 120 sheep were turned on to it and kept there for twenty-one days; it was then left, and was ready for feeding off again early in December, when another lot of sheep were put on.

Prairie Grass.—An acre of this grass was planted out, and has given exceptionally good results. It was planted in March, and by September was over 4 feet high, and a perfect mass of splendid feed. It was cut for feeding to dairy cows, and yielded 31 loads, or 18 tons 16 cwt., from the 1 acre, and the cattle ate every scrap of it.

It was left to grow again, but did not do so well. It was cut on 1st December and made into hay, and gave a good yield of grass hay, which has been stored for winter use.

Perennial Rye-grass.—An acre of this grass was sown in March, and during the winter and early spring months it looked a picture with its dark green colour, and the crop was perfectly level. It was fed off by sheep during October, and lasted 100 sheep for twenty-eight days. The unfortunate part about this grass is that it will not stand hot or dry weather, and since feeding off it has come on very poorly, and I do not anticipate it making any growth until the autumn.

Johnston Grass.—This grass still continues to do well, and the hot dry weather does not affect it, and it does well on our white pipeclay plots, where we cannot get anything else to grow. We have tried cutting it and feeding to stock and also feeding off by sheep, and it does well either way. The sheep eat it well down right to the roots, and would, I think, in a dry season eat the succulent roots in the ground.

*Fibre*

*Fibre Plants.*

**Sisal Hemp.**—This plant still continues to grow, but makes very little headway, the rate of growth being only about 1 foot per annum. It seems fairly hardy, and did not suffer so much from frost this last winter as it did the previous year.

**Ramie Fibre.**—This plant is very hardy and grows well, reaching between 3 and 4 feet high, but will never make the growth here that it does on the Northern rivers.

**New Zealand Flax.**—This plant grows well, and the fibre is very handy for a number of purposes. Any farmer or orchardist should have a few plants of flax about the premises, as they will save many a shilling in string for tying up plants, &c.

*Miscellaneous Plants.*

**Giant Russian Sunflower.**—This is a very useful plant, good for ensilage and the leaves for fodder. The seeds are eaten by either pigs or poultry, the flowers are good for making dye, and the stalks for fibre. It is hardy and stands dry weather well, and is well worth growing.

**Tagosaste, or Tree Lucerne,** continues to do well; it requires cutting back about twice a year, and the prunings are eaten by sheep.

**Old Man Saltbush.**—This has been replanted out, and the area increased to 1 acre. It was planted out from cuttings taken from the few plants we had; about 75 per cent. of the cuttings have taken root. This is a valuable fodder plant, and promises to do well in this district.

**Buckwheat.**—This is a very useful plant where there are bees about, but the yield for seed or forage is very poor.

**Sulla.**—This stands the dry weather well, and is worth further trials. I hope to put out an acre block in the autumn.

## THE DAIRY.

The Dairy Instructor, Mr. S. Martin, reports as follows:—

During the year there has been an excellent attendance of students; in fact, the applications for admission to the special dairy course have been far in excess of the vacancies. Most of the students had been more or less successful at the diploma or first-year examinations last year, or had had some training at the College; but there were a few who had had no previous education at this institution. Others had a fair practical training in some of our best factories or creameries, and came here for the purpose of receiving a more complete theoretical as well as practical education before entering into the responsibilities of taking a position on their own account. It is surprising to see with what interest the students take up the work of this section of the farm, although it is to be regretted that some few lack this enthusiasm. Taking all things into consideration, however, the dairy has passed through a very successful and prosperous year. At the present time we have students from both the North and South Coasts as well as from the city, and it is pleasing to note that the majority intend following dairying as a means of gaining a livelihood.

The course is still fixed at six months, and ten students are admitted each term; but some of them often find it necessary to remain longer before presenting themselves for the examination, which I may say is becoming harder each time. No alteration has been made in the sessions, as they commence on the 1st January and 1st July respectively. The work done during the course is practically the same as in former years, viz., butter and cheese making, separating, pasteurising, milk and cream testing with the Babcock and Gerber machines, cultivation and uses of lactic ferments, the milking, feeding, breeding, and management of stock, calf-feeding; in fact, all branches of dairy farming which are likely to occur in a factory or on a dairy farm. An excellent way of gaining useful practical information has been afforded the students by being allowed to visit the most prominent creameries in Sydney, and also some of the private dairies of some of the largest suburban milk-vendors. It was highly pleasing to see with what interest the various managers and owners of these dairies took the students in hand and explained anything of importance to them. Those students who completed their term last June and were leaving the College, accompanied by Mr. Cassidy, went on an excursion to the South Coast, and there inspected such noted dairy herds as Mr. D. Hyam's at Terara, Messrs. E. Pritchard's and W. Watts' at Numba, Mr. Dudgeon's and Mr. Lindsay's at Jamberoo, Dr. Hay's dairy herd and Coolangatta Estate, Berry butter factory, Berry, Jindiandy, and Worragee creameries, Mr. Binks' cheese factory at Cambewarra, Denham Brothers' bacon factory, Bomaderry, and other places of less importance. This proved of great educational value to the students, who were one and all loud in their praises as to the amount of valuable information they had obtained. In a tour of this description one is able to see the different systems adopted as regards method of feeding, kind of bails and yards, different kinds of separators, churns, &c., the handling of large supplies of milk and cream for butter-making purposes, and also to note the points of some of the best dairy cattle in the Colony.

As was done last year, the second-year or diploma students were again given three days' practical work and instructions prior to their final examination this month, and by their working and answers in general gave promise of becoming very proficient in this branch. I believe that six of the diploma class intend taking the special dairy course next session, and I have no hesitation in saying that they ought to be highly successful in their studies, considering the extensive theoretical training they have received during their two years' course.

**Dairy Herd.**—No alterations have been made in connection with the stock, only that we have had the services of some of the imported bulls. The herd consists of Ayrshires, Ayrshire and Jersey crosses, a few Jerseys, and South Coast cattle. We are now getting the progeny of the imported bulls; but as it will be years before we can expect any profit from them, it would be unsafe to predict as to their ultimate adaptability to the College pastures and climate. From general appearances the stock sired by the Red Poll bull from South Coast and crossbred mothers will make large and robust animals, but, being very heavy feeders, will be totally unsuited to the poor and scant pastures we have here. The majority of them are bulls, and being unfit for sires, would make good workers. Such a cross as this would, I think, be admirably suited to the heavy pastures of the South Coast, and would be almost certain to produce large quantities of rich milk. As regards the Holstein bull, we were unfortunate in having only three cows served, of which two gave birth to bulls. These two bulls are about the largest I have seen, and I think, like the Red Poll cross, would be a success on heavy pastures. We have a few really first-class pure

Ayrshires

Ayrshires by the imported bull "Mischiefmaker," one in particular being a really excellent animal, and which should in time command a very high price. As the pasture is not heavy enough for Shorthorn, and the Jersey is too delicate, I would suggest that in future we keep nothing but pure Ayrshires. It is not to the sale of milk, butter, or cheese that we have to look to for revenue, but to the sale of pure-bred stock, which, coming from such a reliable source as this, would command extremely high prices. Without a doubt Ayrshire cattle of any high breeding qualities are very scarce in this Colony save in a few herds, and as we now have some really first-class pure animals, I consider we have an excellent foundation for the building up and maintenance of ideal animals. All that we require are bulls of high breeding and from a tried milking strain, and then our future would be ensured. I think we have sufficient proof of this when we compare the calves sired by the imported bulls and those sired by our own, as in the former case they are fully 50 per cent. better.

The testing for tuberculosis is carried out twice a year, and all diseased animals have been destroyed. The disease seems to be on the decrease, as every time the test is conducted the reacting animals are fewer. No tuberculous animal is knowingly kept on the College farm, although there are two suspicious cases at present. These will be tested again early in the year, and should they show the slightest signs of reaction, will be immediately destroyed.

The work of testing the percentage of butter fat as given by each cow is carried out regularly, as also is her milk yield; and by this means we are not only able to ascertain which particular animal or breed is the most profitable, but also what cows are not worthy of a place in the yard. By this means I was enabled, towards the end of the year, to cull out some of our worst animals, which, I may say, did not nearly pay for the grass they ate.

As usual, cocoa-nut oilcake has been used very largely for calf-feeding purposes, and also cattle molasses. This latter concentrated food, when mixed with boiling water, makes an excellent mixture for moistening lucerne or oaten chaff for cow-feed. At the present time we have about 215 head of cattle on the College farm.

During the year the total amount of milk obtained totalled 385,900 lb., of which 89,400 lb. were used for calf-feeding and domestic purposes; 196,086 lb. were separated, and produced 9,843 lb. butter; whilst 100,414 lb. were made into cheese, producing 10,041 lb.

#### PIG FARM.

Mr. George Daley reports as follows:—

I have had all the students working with me in their turn, and have found them very willing to work, and anxious to learn all they can. The greater part of our time has been occupied feeding, pig-raising, cleaning out pig-stys, and liming the main buildings and out-houses, which tends to keep the pigs in proper health. I try to impress the students with the fact that cleanliness and kindness are the two main points—being the first steps towards successful pig-farming. Killing and dressing sheep, pigs, cattle, curing bacon, and carting feed from different parts of the farm has also taken up a considerable portion of our time. During the winter I killed twenty pigs for bacon, part of which was supplied to the College, the other being disposed of at a satisfactory price. I might mention that our time for bacon-curing is very limited, as we are only able to cure in the winter months, the other seasons of the year being too hot for us to cure properly without the aid of a refrigerator. At present I have fifty pigs grazing out in a grass paddock, which will be ready to kill for bacon by the beginning of May. They are fed once a day on wheat screenings, barley meal, and potatoes, mixed together and boiled. Then they are supplied with a load of cattle pumpkins, which keeps them occupied all day. This is the way to get nice, intermarbled bacon, well streaked with fat and lean. The stock at the piggery consists of fifty-six brood sows, eleven hogs, and one hundred and sixty-five young stock, which are all in fair condition and good health. During the year we have disposed of two hundred and twenty-eight pigs for stud purposes. In addition to the piggery, I have in my charge four hundred and ninety-five stud sheep, of the following breeds:—Romney Marsh, Shropshire, and Southdown. This season we had a splendid clip of wool, which realised a good price. We also had a very fair percentage of lambs, being about ninety-five; forty-three wether lambs were disposed of at the Royal Agricultural Show, Sydney; fifty-two killed for College consumption, and one hundred ewe hoggets kept for stud purposes. I have had four students on with me during the year taking special course of killing, bacon-curing, and general management of a pig farm; two of these passed the examination and received their certificates.

#### POULTRY AND BEE FARM.

The Expert, Mr. J. J. McCue, reports as follows:—

##### *Poultry Farm.*

Many improvements have been made during the year.

The area has been enlarged by utilising 5 acres adjoining for a duck farm. The necessary buildings, ponds, &c., are finished, and ready for the coming season of 1900.

A new incubator-house of special design is being built, which will give room for the incubation of 2,000 eggs at a time.

The laying season was good, and the fertility of the eggs fair, but the result in chickens and ducklings was poor, the young birds dying just before and after leaving the egg.

The imported birds laid well, but their eggs were poor in fertility, which may be accounted for by their late arrival in the season.

The deaths and losses on the farm were few—not more than 5 per cent.—and the majority of losses were through accidents.

The inquiries for poultry and poultry information have increased twofold. From 1st January to 22nd December I answered 734 letters, made up as follows:—New South Wales, 611; Queensland, 25; Victoria, 51; South Australia, 4; West Australia, 13; New Zealand, 18; Tasmania, 1; and England, 11.

The

The papers on poultry that appeared in *Agricultural Gazette* brought many inquiries relating to the management, &c., of poultry.

Visitors to the farm have been many, the average per week for year being 43.

During the year I made a number of careful experiments in artificial incubation, a summary of which will appear in the *Agricultural Gazette*. I also made experiments in the feeding of chicks and ducklings, making special notes of the cost and kinds of food, weight of birds each week, and the time the birds took to be ready for market.

The students attending the farm have taken a great interest in their duties, worked well and willingly, and were well-behaved.

#### Bees.

The honey season was only fair. Every colony went through the winter comfortably, and were very strong in the spring. Swarms were not as numerous as last year, which may be accounted for by the scarcity of the honey-flow. I expect to get most honey during January and February in next year. All colonies are strong, and free from disease.

#### FOREMAN CARPENTER'S REPORT.

The Foreman Carpenter, Mr. A. Brooks, reports as follows:—

The number of students who have received instruction in carpentry during the year has been much the same as the previous year, including the "specials," who are of much value as assistants. The class of work done has been of a mixed kind, taking in almost all branches of the building trades, and also wheelwrights' work.

Of the latter, in addition to the many repairs done to the carts, we have built two new carts and a four-wheeled truck for carting liquid manure and water. Even furniture-making has not been neglected, as the students have made several tables and other articles for their own dormitories.

A good deal of their spare time has been devoted to making small articles, such as picture-frames, deck-chairs, easels, various forms of boxes, insect cases, &c.; and I might mention that students Gibson and Faviell made and exhibited at our local show models of farm gates, which secured first prize.

I regret that my own time is so much occupied in supervising work outside the shop that I cannot arrange to have more model-making done by the students, as we could then get together a very fine exhibit. It should not, however, be forgotten that at each show the carpenters' shop is represented with the cases, &c., in which our fruits, &c., are exhibited.

During last year I carried out by day-labour various works, which cost nearly £800; and supervised the painting contract, which cost over another £400. The former included the enlargement of our stable accommodation by adding another five loose boxes and three stalls, also the building of the "cannery" in the orchard, the insectarium building, a new pig-sty shed with twelve stys, two additional rooms to the orchardist's cottage, as well as the painting of the whole of the various buildings and cottages.

It having been decided to utilise as far as possible the rain-water from the roofs of the several buildings, a sum of £400 was granted to carry out the work in connection therewith. The site of the buildings being almost a dead level all over, it was necessary to construct a large underground tank to receive the water, and from there to pump it into elevated tanks of sufficient height to supply to the different points required.

To carry out this idea, all the receiving-drains were brought to discharge into a 6-inch main emptying into the underground tank of 65,000 gallons capacity, into which the existing underground tank of 30,000 gallons was drained to overflow. The elevated tank, as supplied by the Department, was erected on a strong-framed stand 20 feet clear of the ground, and the water from both underground tanks connected to a "Blake" steam pump set in the boiler-room at the electric light plant. This delivers the water through a 1-inch pipe into the elevated tank, which discharges into the same service-pipes as are connected to the existing mains, which are shut off when the tank water is being used. There is also provision made for a supply to the nursery at some future time through a 3-inch pipe, which is all ready to connect to. The elevated tank is covered in with a light timber-framed roof, covered with boarding and ruberoid.

This work, which was commenced in 1898, was finished early in the year.

The work done by myself and students in and out of the carpenters' shop has entailed an expenditure of £126 for materials, and the value of the labour performed has been £204, exclusive of the time taken in the supervision of the building work before mentioned.

All the several buildings on the grounds are in good repair, and I am pleased to say that the damages to doors, windows, &c., have been much less than in former years.

At work the students are, fairly speaking, of good behaviour, and very attentive to their work and the instructions given.

#### BLACKSMITH.

The Blacksmith, Mr. I. Shaw, reports as follows:—

The year has been a very busy one for this branch. I have been kept continuously at work repairing and cleaning implements and machinery, shoeing horses, &c. The exceptionally dry season caused a considerable increase in the wear and tear of implements, necessitating constant care and attention. I am pleased to state the students I have had with me have been very obedient, attentive, and always willing to learn.

#### ENGINEER'S BRANCH.

The Engineer, Mr. Ausburn, reports as follows:—

During the past year many alterations and additions have been made to our machinery. A steam cooking-plant has been fitted up in the kitchen, and also steam service laid on to the laundry. This necessitated an additional boiler being put in, which has proved of great assistance, although it is too small for relieving the existing boiler. In the new engine-house, however, boilers of a larger size are to be fixed. I have also fitted up a steam plant in the canning-house at the orchard. In June last an assistant was appointed, and with his help I have been enabled to devote a considerable portion of my time to repairs, and several very extensive ones have now been completed. One boiler has been re-tubed

by the Government Architect's Department, and we have overhauled and repaired all the other boilers and engines on the farm. I am now pleased to be able to report that all the machinery in my charge is in good order and working satisfactorily. I have changed the pattern of the fire-grate in the dairy boiler with very satisfactory results, and a considerable saving has thereby been effected. Many small extensions and alterations have been made in the electric light branch, and at the present rate of increase this plant bids fair to soon become too small. We have not been without lights for a night during the year, but much difficulty has been experienced in maintaining the same, owing to heavy loading, small boiler capacity, and the unsuitable building in which the machinery is kept. During a very heavy storm in May last our mains were struck by lightning, causing considerable damage to light circuits, and rendering our telephone service useless. I had to rewind the whole of the machines before they could be again used.

However, considering all things, the past year has been a very successful one. I have had one or more students with me always, and have pleasure in reporting that their conduct has been very satisfactory. They have at all times shown a keen interest in, and have been very attentive to, the work of this branch.

#### PRIZE FUND DONATIONS.

I am indebted to the following ladies and gentlemen for their liberal donations to the Prize Fund, which enabled me to present valuable book prizes to all deserving students :—

The Hon. J. L. Fegan, M.P.	J. Heane, Esq.
Mrs. Sydney Burdekin.	G. Stenning, Esq.
Mrs. M. Wilson.	N. A. Joubert, Esq.
J. Paul, Esq.	Dr. T. Pickburn.
J. S. Peterson, Esq.	G. H. Pepper, Esq.
W. H. Burgess, Esq.	Mrs. C. Caughey.
T. Pridham, Esq.	C. J. McMaster, Esq.
F. Wilson, Esq.	T. Campbell, Esq.
F. Kanematsu, Esq.	Mrs. E. A. Wallace.
Capt. H. Olive.	W. Rigg, Esq., M.P.
C. G. Warburton, Esq.	J. Allan, Esq.
J. Richardson, Esq.	Mrs. M. George.
W. L. Carter, Esq.	T. O'Neill, Esq.
A. M. McPhillips, Esq.	W. Teitkins, Esq.
T. Wilkins, Esq.	J. Ford, Esq.
G. A. McKillop, Esq.	J. Stevenson, Esq.
G. Froome, Esq.	W. G. Bradley, Esq.
Rev. J. H. Price.	T. Harrison, Esq.
Dr. Samson.	D. Wilson, Esq.
J. F. Buchan, Esq.	H. G. McKinney, Esq.
T. H. Houghton, Esq.	J. Penzer, Esq.
Rev. Dr. Cameron.	Dr. Gibson.
W. Morgan, Esq., M.P.	B. Hall, Esq.
T. C. Worboys, Esq.	

#### PRIZE LIST.

##### *Diploma Students, 1899.*

1. E. Heane, Dubbo	... ..	Dux of College, gold medal, Burdekin medal, diploma, first aggregate book prize.
2. K. O. Warburton, Singleton	... ..	Diploma, Burdekin medal, second aggregate book prize.
3. E. H. Stevenson, Dubbo	... ..	First in practical examination, Minister's prize, diploma, Burdekin medal, third aggregate book prize.
4. A. E. George, Araluen	... ..	Diploma, Burdekin medal, fourth aggregate book prize.
5. D. Price, Richmond	... ..	Diploma, Burdekin medal, fifth aggregate book prize.
6. R. F. Weir, Cape Colony	... ..	Diploma, Burdekin medal.
7. F. Stening, Darlinghurst	... ..	Diploma, Burdekin medal.
8. H. P. Chapman, Manning River	... ..	Diploma, Burdekin medal.

##### *Special Book Prizes—Practical Work.*

W. Barrie, Marrickville	... ..	Best in dairy, practical certificate.
R. F. Weir, Cape Colony	... ..	Best on farm.
E. H. Stevenson, Dubbo	... ..	Best in orchard.
K. O. Warburton, Singleton	... ..	Best with carpenter.
A. E. George, Araluen	... ..	Best with blacksmith.
R. F. Weir, Cape Colony	... ..	Best with engineer.
A. E. George, Araluen	... ..	Veterinary science prize, presented by Mr. S. C. Pottie.
J. L. Wilson	... ..	Practical certificate.
G. L. Peacock	... ..	Practical certificate.

##### *First-year Students, 1899.*

1. J. T. Pridham, Turramurra	... ..	First-year certificate, first aggregate book prize.
2. R. G. McKillop, Narromine	... ..	First-year certificate, second aggregate book prize.
3. W. R. Fry, Freeman's Reach	... ..	First-year certificate, third aggregate book prize.
4. J. D. Richardson, Raymond Terrace	... ..	First-year certificate, fourth aggregate book prize.
5. M. Kanematsu, Japan	... ..	First-year certificate, fifth aggregate book prize.
6. H. C. Marks, Sydney	... ..	First-year certificate.
7. T. H. Samson, Victoria	... ..	First-year certificate.
8. H. C. Henderson, Petersham	... ..	First-year certificate.
9. J. Froome, Plattsburg	... ..	First-year certificate.
10. H. Warburton, Rhodes	... ..	First-year certificate.

*Special*

Special Book Prizes—Practical Work.

T. W. O'Neill, Bermagui ...	... Best in dairy.
J. T. Pridham, Turrumurra ...	... Best in orchard.
J. Froome, Plattsburg ...	... Best on farm.
J. Froome, Plattsburg ...	... Best with carpenter.

Practical Students, 1899.

C. Johnson, Wallsend ...	... Farm certificate, first aggregate book prize.
H. C. D'Elboux, Koorawatha ...	... Farm certificate, second aggregate book prize.
G. R. Campbell, Burrendong ...	... Farm certificate.
H. C. Olive, Sydney ...	... Farm certificate.

DIPLOMA STUDENTS, 1899.

EXAMINATION PAPERS, DECEMBER, 1899.

*Agriculture.—Diploma Students.*

Examiner: F. B. Kyngdon, M.R.A.C.

Three and a half hours allowed. Marks—100.

Introduction.—Answer in the order given. Begin an answer on a fresh sheet, and each section of an answer as a fresh paragraph.

1. What means are available in Australia to provide a supply of humus in a soil deficient in organic matter? Give the percentage of organic matter in a black soil, and in the soil of a Hawkesbury River flat of the best sort.
2. Describe briefly the leading features of the various forms of ploughs to be met with in Australian agriculture, and name their particular use.
3. Give the most desired features of the heavy, medium, and light types of military horse. What breeds or crosses would you use to produce each?
4. How much capital is required to purchase outright—(a) 100 acres of unimproved land of good dairying quality, say, on the Northern Rivers; (b) the sums needed to clear, fence, and lay it down to pasture; (c) the cost of farm buildings and a residence of six rooms; (d) the money to be invested in the necessary live stock (horses, cows, swine); and (e) implements, utensils, and vehicles?

5.

5. Outline the treatment of the mare, cow, ewe, and sow preparatory to, during, and after parturition noting—
  - (a) The accommodation and appliances to be provided ;
  - (b) The nature and composition of the diet and feeding of the mother during the same period ;
  - (c) The rearing of the young.
6. Enumerate the particular features of the present system of dealing with the ripe fruit crops of County Cumberland. Describe the preparation of citrus fruit for distant markets, or for keeping till the main crop has passed. Also state the advantages of co-operation, and the lines that should be followed by the orchardists of the county.
7. Give the weights of fertilisers (naming each) desirable in a compounded dressing for a cereal crop, a potato crop, and a vineyard. What would be the cost of each dressing, at Sydney prices ?
8. (a) What is the chemical composition of ordinary farm-yard manure, and its money value per ton ?  
(b) Describe the treatment necessary to produce a well-rotted dung ?
9. Give a rotation of crops suited for a mixed Hawkesbury farm, and explain what are the advantages of a rotation.
10. An earth dam is to be thrown across a stream : What methods of construction are necessary—(a) to secure solidity ; (b) to make the dam water-tight ; (c) to provide for the drawing off, when required, of the impounded water ; (d) to permit surplus water to overflow ? Describe any forms of cheap and simple dams for small streams.

*Sheep and Wool.*

Examiner : William Hayes.

Time allowed—Three hours.

1. Describe Australian Merino wool.
2. Describe Shropshire Merino wool.
3. Describe pure Romney Marsh.
4. In Merino wools, what do you understand by the terms combing and clothing ?
5. (a) What is a staple of wool ?  
(b) Describe a crimped wool.  
(c) What are serrations ?  
(d) Explain the difference between lustre and brightness.
6. What consideration would you give pasture when breeding sheep ?
7. At the present time, what do you consider the most profitable cross—Romney Marsh-Merino, or Shropshire Downs-Merino—for early lambs ?
8. What is considered a good weight for sheep required for the English market—(a) Merino, and (b) Lincoln-Merino ?
9. What treatment should sheep receive when fattening for the butcher ?
10. At what age should lambs be marked, and would you give the weather any consideration when performing the operation ?
11. What season of the year is the best for lambing, and give your reasons why ?
12. Explain the appearance of the broad teeth of sheep of the following ages :—
  - (a) 1 year.
  - (b) 4 years.
  - (c) 6 years.
13. What is a fair number of ewes to mate with a ram, and what percentage of progeny would you expect (say) from Romney-Merino cross in a good season ?

*Veterinary Science and Practice.*

Examiner : Edward Stanley, F.R.C.V.S., Chief Veterinary Officer, Health Department.

Time allowed—Three hours.

Students should answer twelve questions.

1. Describe the structure and function of the lungs.
2. Describe the structure and function of the liver.
3. Give the cause, symptoms, and treatment of hoven in cattle.
4. Describe strangles in horses, and the treatment.
5. Describe the Queensland Cattle Tick disease.
6. Describe pleuro-pneumonia in cattle ; give symptoms and treatment.
7. Name three hereditary diseases in horses.
8. State the comparative points of conformation required in a draught and in a race horse.
9. State the comparative points of conformation required in dairy and in beef cattle.
10. Name six important conditions of unsoundness in horses.
11. Name six conditions of meat warranting condemnation.
12. What veterinary instruments should be kept on a farm.
13. Describe a horse's foot and lamenesses associated with shoeing.
14. Name and describe six medicines most useful amongst farm animals.
15. Describe the processes of digestion of grass during its conversion into blood.

Maximum, 100 ; Pass, 50 ; Honors, 75.

*Chemistry.*

*Chemistry.—Diploma Examination.*

1. Describe briefly the chief physical properties that determine the agricultural value of soils.
2. Why does a soil generally receive greater benefit from the application of caustic lime than from crushed limestone?
3. Distinguish between organised and unorganised ferments.
4. Explain the deposition of dew. How would you estimate the weight of moisture in a given volume of air?
5. Calculate the weight of air at 20° C. and 750 mm. pressure in a room measuring 5 metres square by 3 metres high. (11.2 litre = 14.4 grm. at 0° C. and 760 mm.)
6. A sample of bone-dust has been found by analysis to contain 25 per cent. phosphoric acid and 3.5 per cent. nitrogen. Calculate the equivalent ammonia and tricalcic phosphate. (Ca = 40, P = 31.)
7. Mention the principal wet and dry reactions for copper.
8. Describe the estimation of potash in a sample of soil.
9. Describe the estimation of curd and fat in butter.
10. What are the functions of the three principal groups of food constituents essential to animal maintenance?

*Practical Chemistry.*

Two simple salts, marked A and B, are supplied for analysis. The student is required to find the base and the acid in each, and to describe the tests that establish the results arrived at.

In a third sample, marked C, containing a chloride, the percentage of chlorine is to be determined by volumetric analysis.

*Applied Mechanics and Heat.*

Examiner: Mr. S. H. Barraclough, M.M.E., Assoc. M.Inst. C.E.

1. Define the term *Horse-power*.  
Taking the average power of a man as  $\frac{1}{10}$ th of a horse-power, and the efficiency of the pump used as 0.4, in what time will 3 men empty a tank measuring 50 feet x 30 feet x 6 feet, filled with water, the lift being an average height of 30 feet?
2. A chain hanging vertically 520 feet long, weighing 20 lb. per foot, is wound up: How much work is done during the process?
3. A railway train is moving at the rate of 30 feet per second: Explain clearly, by means of a neatly drawn diagram, how a stone must be thrown from the window so that it shall leave the train laterally at 5 feet per second, but have no velocity in the direction of the train's motion.
4. Describe by means of sketches the essential parts of a cream separator, and explain clearly its mode of action.
5. Sketch any form of sheer-legs, and show how to determine the stress in the back leg or stay when a load is being lifted by the sheers.
6. Write down Boyle's law and Charles' law.  
A certain mass of gas occupies a volume of 1 cubic foot at a pressure of 1 atmosphere and a temperature of 70° F.: What will be its volume if the pressure is increased to 4 atmospheres and the temperature to 200° F.?
7. What do you understand by the term *latent heat*? How much boiling water would be required to just melt 10 lb. of ice?
8. Explain clearly the action of a vacuum pan and of a digester.

*Entomology.—Diploma Examination.*

Students may answer any 10 of the 12 Questions.

Time allowed—Three hours. Each Question, 10 marks.

1. To what family of insects does the Woolly or American Apple-blight belong? Give its scientific name. Where does it come from? what injury does it do? and why are some kinds of apple-trees exempt from its attack?
2. Explain the method of treating trees with hydrocyanic acid gas—the action upon insect life. What happens if the dose is too strong?
3. Give a brief outline of the life-history and food-plant of six of our commonest moths that are known as orchard or farm pests.
4. What spray would you use to destroy vine moth caterpillars; what spray for peach aphis; and what for red scale?
5. Give a list of the chief insect pests attacking the apple-tree.
6. What are "Fruit Maggot-flies"? Give the names of the two commonest species and the fruits to which they do the most damage in the county of Cumberland.
7. Why are introduced insects often so much more destructive to plants than native species? Give an instance.
8. To what order of insects do white ants belong? Do they ever attack fruit-trees?
9. What is the best formula for resin wash, and for what class of insects do you consider it most effective?
10. What are the chief points of difference between "Red Spider" and Pear Mite? What damage do they do to the tree?
11. Under what conditions do the different Colonies accept our fruit and plants at their ports?
12. What are cut-worms? How would you rid a tomato patch infested with them?

*Book-keeping.*

*Book-keeping.—Examination for Diploma.*

Examiner : Alfred Armstrong.

Time allowed—Three hours and a half. Marks—100.

Journalise and post into Ledger the following transactions. Draw up a "Trial Balance," "Profit and Loss Account," and Balance Sheet.

On 31st December, 1898, the position of Victor Neary was as follows :—

	£	s.	d.
Cash in Commercial Bank	560	0	0
Cash in hand	35	0	0
Stock, valued at	250	0	0
Crops, valued at	150	0	0
Implements and Machinery	250	0	0
Sundry Debtors—			
John Patterson	25	12	6
William Jones	30	0	0
Thomas Porter	23	10	0
Bills Receivable—			
Arthur Johnston, due 4th March	40	0	0
Joseph Roberts, due 15th March	35	10	0
His Liabilities consisted of—			
Acceptances current, Nos. 23-26	300	0	0
Amount due to F. Lassetter & Co.	45	10	0
Amount owing to S. Burdekin for rent...	75	0	0
1899.			
January 1.—Sold to Alfred Moon, 100 bushels barley, at 2s. 3d.	11	5	0
" 2.—Received from William Jones, cheque	28	10	0
Allowed him discount	1	10	0
" 4.—Sold to R. Stevenson, stock amounting to	45	0	0
" 6.—Paid by cash—wages	17	10	0
" 6.—Cash sales from dairy	7	7	0
" 10.—Paid at Bank my acceptance No. 23	75	0	0
" 11.—Received from John Patterson, cheque	25	12	6
" 13.—Paid wages, by cheque	15	15	0
Cash sales of butter and eggs	6	0	0
" 15.—Consigned to A. Mitchell, of Newcastle, to sell on my account and risk—			
Stock, valued at	80	0	0
Paid freight and insurance on above, by cheque	20	0	0
" 16.—Paid, by cheque, to S. Burdekin, amount of rent due	75	0	0
" 17.—Sold for cash—			
50 bushels barley, at 2s. 3d.	£5	12	6
75 bushels oats, at 2s.	7	10	0
	13	2	6
" 19.—Discounted at Bank, A. Johnston's p.n. for	40	0	0
Discount charged	1	10	0
" 20.—Sold to William Jones, 3 tons of chaff at £3 10s.	10	10	0
" 20.—Cash sales for week	6	12	6
" 20.—Paid wages, by cash	16	0	0
" 20.—Received from A. Mitchell, sight draft for part sales of consignment	75	0	0
" 22.—Honoured my acceptance No. 24...	100	0	0
" 23.—Sold to H. Kain, for bill at 2 months, stock, valued at...	35	0	0
" 25.—A. Mitchell, advise selling balance of consignment for ... and enclosed draft at sight, less his commission 10 per cent.	65	0	0
" 29.—Bought of A. Forsyth & Co.—			
1 ton harvest twine	25	0	0
Valuations—	£	s.	d.
Stock	175	0	0
Crops	140	0	0

*Agriculture.—First Year.*

Examiner : George Valder.

Time allowed—Three hours.

1. What are the various methods employed in improving poor soils?
2. Describe the different types of ploughs in use in this Colony.
3. What are the benefits derived from draining? Mention some of the causes of failure.
4. What are the necessary conditions for successful irrigation? From what sources is our water supply for irrigation purposes obtained?
5. Give a few notes regarding the selection of site and construction of stables and cow-sheds.
6. Describe the following fences, giving what you consider the best measurements for the posts, rails, &c., and cost of each fence per mile :—
  - (a) Post and single rail.
  - (b) Post and wire.
  - (c) Drop fence.

7. By what means should the farmer conserve the natural riches of the soil?
8. From what sources do we obtain our principal phosphatic manures? Give a few particulars regarding each of them.
9. Give a full description of the laying down of temporary and permanent pastures in our coastal districts, mentioning the grasses and fodder plants you would use.
10. Why are leguminous plants so valuable to the farmer? Give the names of the chief varieties, and state when they should be sown.
11. Describe fully the selection and preparation of land for wheat-farming. Give a few notes on the cultivation of wheat, mentioning the chief varieties grown in the Colony.
12. Give a full description of the cultivation of the following root crops:—
  - (a) Turnips.
  - (b) Mangolds.
  - (c) Chicory.

*Agricultural Chemistry.—First Year.*

Examiner: Mr. E. Clarence-Wood, M.A., B.Sc., B.E., &c.

Three hours allowed.

N.B.—Sketches of apparatus and chemical equations are always taken into account in marking the value of your answers.

Marks.

- |    |  |
|----|--|
| 12 | 1. Explain the terms: oxide, hydrate, sulphide, sulphate, chloride, anhydride, alkali, acid, fatty acid, base, organic substance, and combustion.  |
| 12 | 2. Describe the preparation and properties of hydrogen.  |
| 12 | 3. Describe nitrogen, and note those compounds of it which are of most importance in agriculture. Explain the mode of its occurrence in Nature, and how you could obtain it in quantity. How could you detect it in the composition of a substance?  |
| 12 | 4. Describe carbon and its varieties. Explain its connection with the soil and plant and animal life. What use is made of it in the arts and manufactures generally? In what minerals is it chiefly contained?   |
| 16 | 5. Describe the manufacture and properties of sulphuric acid. Which are the most useful sulphate manures? Explain their origin, and point out their respective merits as fertilisers. What will result from the action of strong sulphuric acid upon paper, sugar, common salt, potassium cyanide, sodium acetate, water, alcohol, nitre, and bone-ash respectively? |
| 12 | 6. Explain the composition of calcite, dolomite, quartz, orthoclase felspar, mica, gypsum, hæmatite, fluorspar, and clay ironstone; also of glass, porcelain, and steel.   |
| 12 | 7. Describe the varieties of sugar and where they occur in Nature. By what means would you be able to derive acetic acid from starch?  |
| 12 | 8. Describe the properties and preparation of common alcohol.  |

100

*Practical Chemistry.—First Year.*

Examiner: Mr. E. Clarence-Wood, M.A., B.Sc., B.E., &c.

Four hours allowed.

No marks will be given for *mere statements* of bases or acids present. You must supply the full bench notes of all the experimental work from which your conclusions are drawn. The results of preliminary examinations should always be confirmed.

Marks.

- |    |  |
|----|--|
| 20 | Examine the substance (A) for one acid and one base. |
| 20 | Examine the substance (B) for one acid and one base. |
| 60 | Analyse the powder (C).                              |

*Mensuration and Surveying.*

MENSURATION.

1. How many gallons of water would be required to cover a field 1 acre in area 1 inch deep, and what would be the weight of the water?
2. What number of fencing posts, averaging 7 feet long by 4 inches by 8 inches, could be split out of a log 35 feet long, 9 feet in circumference at one end and 2 feet in diameter at the other, allowing one-sixth as waste timber?
3. How many square yards are removed in excavating a tank 30 ft. x 15 ft. at the surface, and 8 feet deep at one end, the sides being perpendicular? State also how many gallons it would contain when the water is 4 feet at the deepest part.
4. Find the surface and contents of a sphere 10 feet in diameter.

SURVEYING.

## SURVEYING.

1. Lay out a 20-acre paddock with sides in the proportion of 3 to 1, and give the dimensions, first in links, and second in feet and inches.
2. The following are the bearings and lengths obtained by the aid of a prismatic compass and chain of certain lines which form the boundaries of a field. Make a plot of the field and calculate the area by scale:—
 

1.	25° 10'	320 links.	6.	90°	1,580 links.
2.	340° 30'	419 "	7.	164°	440 "
3.	10°	680 "	8.	239°	360 "

5.	359°	380 "	10.	270°	1,855 "
3. A rectangular block of land, 20 chains by 28 chains, is measured on the side of a hill, the fall of which is even, and equal to 1 vertical in 5 horizontal: What is the surface area?
4. The area of a triangular paddock A B C is 15 acres. Given perpendicular B D, find A C.

## LEVELLING.

Draw up the field notes of a section of levels containing twelve or more readings of the staff; reduce the levels, plot the section to a convenient scale, and give the grade or grades adopted.

*Botany and Vegetable Pathology.*

Credit will always be given for the intelligent use of diagrams to illustrate an answer.

1. What is a microfungus? Explain the structure and development of one which causes severe injury to any cereal crop.
2. Give a full explanation of the "damping off" of seedlings, and explain what steps you would take to endeavour to remove the disease from a given area.
3. The effects of what maladies of stock are commonly attributed to their eating poison-plants? I heard an eminent man say: "As a very general rule, the attributing of the deaths of stock to poison-plants in Australia is bunkum." Examine the statement.
4. What are the principal economic plants likely to be commercially profitable in the coast and coast-mountain districts, arranging them under the heads of fibres, oils, and perfumery plants? Give an account of the cultivation of any one such plant, and of the harvesting and preparation of its product of another.
5. Compare and contrast, in parallel columns, the structure and arrangement of the floral organs of the *Gramineæ*, *Vinifera*, *Cucurbitaceæ*.

*English and Arithmetic.—First Year Students.*

Time—Three hours.

1. Describe the meteorological instruments in use at the College. Give details as to methods of observation.
  2. Write an essay (limited to 60 lines) on "The Winter of 1899."
  3. Write a short account of the three requisites for production of wealth.
- 
4. Calculate the cost of spraying 3 acres peach-trees (80 to acre) with Bordeaux Mixture, 3 sprays winter strength, 1 gallon to every 3 trees. (Sulph. copper, 22s. 6d. per cwt.; lime, 2s. 9d. per cwt.; water, 1s. 6d. per 100 gallons; labour and machinery, 1d. per tree per spray.)
  5. 30 acres wheat, yielding  $21\frac{1}{2}$  bush. per acre, which cost when bagged £2 2s. 7d. per acre: Show profit per bushel if sold at 3s.  $1\frac{2}{3}$ d.
  6. Give cubic content of a tank required to hold  $\frac{1}{4}$  inch of rain falling on  $\frac{1}{4}$  acre of ground.
  7. Find cost of a mile of post and 3-rail fence. (Timber, £4 13s. 11d. per 100; erection, 1s. 3d. per rod.)
  8. Find compound interest on £111,  $2\frac{3}{4}$  years at  $2\frac{3}{4}$  per cent. per annum.
  9. Find square root of 1952472 to 5 places of decimals.

## EXAMINERS' REPORTS.

Sir,

Deanery Cottage, Bowral, 16 December, 1899.

Herewith please find results of the examination in Advanced Agriculture. The examination may be regarded as a highly satisfactory one, indicating careful instruction; and the students, judging from their answers, have been well grounded in the principles of Australian agriculture.

George Valder, Esq.

Yours, &c.,

F. B. KYNGDON.

Sir,

Sir,

Colonial Sugar Refining Company, Sydney, 16 December, 1899.

I have the honor to forward herewith the results of the recent diploma examinations in Chemistry at the Hawkesbury Agricultural College, and have pleasure in noting the increased knowledge of practical chemistry shown by the students.

I have, &amp;c.,

T. W. WALTON.

The Under Secretary, Department of Mines and Agriculture.

Sir,

15, Norton-street, Surry Hills, Sydney, 28 December, 1899.

I beg most respectfully to forward you herewith the results of the students who presented themselves for examination in Bookkeeping at the Hawkesbury Agricultural College, and I am pleased to say that this year's papers show a marked improvement in this important subject. Paper number 14 deserving special mention.

Yours, &amp;c.,

A. ARMSTRONG.

George Valder, Esq., Principal.

Sir,

The University of Sydney, P. N. Russell Engineering Laboratory,

27 December, 1899.

I have the honor to append hereto the marks gained in the recent examination in Applied Mechanics and Heat. The first paper (No. 7) was highly satisfactory, but the work on the whole was only fair. The most noticeable fault is that the candidates do not answer the precise question put to them, but in many cases supply a considerable amount of outside information which they have apparently committed to memory.

It should be stated that the ground covered by the course is fairly extensive, and it is possible that the College time-table does not allow sufficient time for a thorough treatment of all parts of the subject.

I have, &amp;c.,

S. HENRY BARRACLOUGH.

The Under Secretary for Mines and Agriculture, Sydney.

The Principal, Hawkesbury Agricultural College, Richmond,

I commenced the examination of the twenty-four students on Thursday, 14th December, on Practical Agriculture. I am pleased to report:—

The students all behaved splendidly throughout the examinations, and showed a very keen interest in all the various branches of farm work. The examination lasted three days, from 7 a.m. to 5.30 p.m., outside work; and from 7.30 p.m. to 10 p.m. inside on questions. Eight students were examined each day. The first section in which they were examined was ploughing and management of horses. The students as a body in this section were hardly equal to that of last year, although a few of them that obtained the highest marks did work of exceptional merit. The chief test in ploughing was striking out and opening up the work by splitting open the ridges—first with a single plough and two horses, and then with a two-furrow plough and three horses, which is a very severe test. The management of horses is one of the most important points in connection with farm work, and I am pleased to say most of the students came out fairly well on that point, handling their teams in a satisfactory manner. Next they were put through a series of harvesting operations, including the working of the reaper and binder, stocking, pitching and loading and carting in sheaves. Their working of the binder was fairly good, but in the other operations they were a little slow, and this is a point which is of very great importance in the harvest field. Next they were tested on the working of a steam chaff-cutter and bagger, and, considering the small amount of practice they get at this kind of work, they did very well. They were asked to give a demonstration in the erection of post and rail fencing, each student putting up one panel; some of them put up their fence in a workmanlike manner and in good time, whilst others were very much too slow. They were also examined regarding their knowledge of the various crops grown on the experimental plots, especially those not generally found on ordinary farms, and in this section they nearly all proved very competent. They were also examined with regard to their knowledge of the different and principal breeds of poultry and their special qualities. I may say that most all of them showed that their training in this direction was very complete. The piggery was then visited, and the students were examined on the characteristics of six of the leading breeds, and the result again proved what an interest the students take in farm stock, most of them obtaining full number of marks. In the evenings they were examined with regard to their knowledge of what is required when taking up land, the probable cost of clearing and fencing, ringbarking, &c., the best method of cultivation, and the way to manage horses and cattle, and the proper way to market produce, and the proper time to sell it. This portion of the examination proved very interesting to the students, as it gave them the opportunity to ask questions with regard to the special requirements of the different districts. In concluding my report, I might say the students complained very much of not having sufficient practical work, and I think there is plenty of room for complaint in this respect. It would be much better for the students, and the College too, if they could have more practical work. If the principle could be adopted that all students who had not previously had some experience on a farm should be sent for six or twelve months on one of the experimental farms, where they could get principally all practical work before coming to the College, it would be a great help to them. The result of the examination is as follows.

THOS. C. WÖRBOYS.

Sir,

Department of Agriculture, Sydney, 18 December, 1899.

Appended please find results of examination of the nineteen students whom I examined in Practical Fruit-growing, including the general management and cultivation of the orchard.

The students conducted themselves in a very creditable and gentlemanly manner throughout the three days which were occupied in putting them through the test.

The

The manner in which they handled the teams while ploughing, cultivating, &c., was very creditable when it is taken into consideration that many of the students there told me that they had never handled such implements before attending this College. This in itself shows one of the benefits which the students are deriving from the large area now under cultivation, thus giving them a better drilling in the practical work.

Particularly good work was done in budding, some of the students putting in as many as five buds in three minutes and doing first-class work. Summer pruning was neatly and well done; in fact, the majority of those examined had a fair idea not only as to the best soils to choose for fruit-growing, the manner of laying out the orchard, the best trees to purchase, and also the best varieties of fruits of their respective kinds, and what same should cost.

Although fruit-drying does not form a prominent feature of the orchard work at this College, many of the students could explain how to dry the different fruits, and appeared to have a fair grasp of this subject.

Generally speaking, replies to my questions were given without hesitation. I consider the results reflect great credit on the instructor in this particular branch, and demonstrates that the work is being done in a thoroughly sound and up to date manner.

I have, &c.,

W. J. ALLEN,

Examiner.

Geo. Valder, Esq., Principal, H. A. College, Richmond.

#### Report of Examination in Practical Dairying of Students at the Hawkesbury Agricultural College.

I HAVE the honor to report that on Wednesday, the 13th December, I was requested by the Department of Mines and Agriculture to undertake the examination in practical dairying of students at the Hawkesbury Agricultural College.

The examination was commenced at 4.30 a.m. on Thursday, the 14th December, and finished at 1.30 p.m. on Saturday, the 16th December.

In all, nineteen students were examined—on Thursday, numbers 13, 14, 15, 16, 40, and 43; on Friday, numbers 8, 9, 10, 11, 12, 41, and 42; on Saturday, numbers 1, 2, 3, 5, 6, 7.

The subjects examined in were a practical demonstration by each student of—

1st.—Milking and handling of stock.

2nd.—Treatment of milk, pasteurising and separating.

3rd.—Milk and cream testing by Babcock process.

4th.—Knowledge and judging of dairy stock.

5th.—Questions on above subjects, organisms in milk, and effect of pasteurisation on same; also questions of a general character pertaining to dairying, working out computations, &c.

The highest number of points that could be scored in each of the above subjects was fixed at 20, the aggregate being 100.

With regard to the result of the examination, I consider it to be very satisfactory, many of the students showing considerable aptitude, a fact which reflects credit on the instruction imparted at the College.

It gives me very great pleasure to report that the general conduct and behaviour of the students during examination was excellent.

In conclusion, I desire to sincerely thank the Principal (Mr. Valder) for the kindness which he extended towards me during my stay at the College, also Mr. Martin, the Dairy Instructor, for assistance rendered me in carrying out the examination.

D. C. PRYCE,

Examiner.

#### Report of the Wheat Experimentalist.

Sir,

Lambrigg, Tharwa, 28 December, 1899.

I have the honor to furnish a report of the wheat experimental work which has been carried on by me during the year 1899.

Experiments with selected old varieties and with fixed, partially fixed, and unfixed cross-bred wheats of my own making have been carried on at five different places, viz., (1) At the Wagga Experimental Farm; (2) at the Bathurst Farm; (3) at the Hawkesbury Farm; (4) at the Coolabah Farm; and (5) at Lambrigg. Experiments with bunt (stinking-smut) have also been initiated at Lambrigg and at the Wagga Farm, and will be continued during the coming year.

##### *The Wagga Experimental Farm.*

An area of about 6 acres was occupied with the wheat experiments at this farm. Of this, about 2 acres were devoted to the testing of cross-breds or of new varieties (including those which were recently imported by the Department from Hungary, Eastern Russia, Asia Minor, and Persia), which were planted in drills. These drills were about 50 feet long and 16 inches apart, and each contained about 100 plants. The remaining 4 acres or thereabouts were occupied with fixed cross-breds and old varieties which were planted for the purpose of testing their suitability for the Wagga climate, with the object of propagating on a large scale those which were found to behave the best in it. All these wheats were manured with a mixture of sulphate of ammonia and superphosphate of lime, which was placed in drills midway between those in which the seeds were planted. This is the manner I have adopted as the best for manuring my experimental wheats at Lambrigg; but it would probably have been better if I had left the land at Wagga unmanured; and I should have done so if I had realised how much richer it is than that in which I am in the habit of growing my experimental wheats at Lambrigg. The season at Wagga turned out to be on the whole very favourable for wheats, and very much more so than it promised to be at planting time. The result of the favourable winter and of the manuring, which was somewhat heavy for such strong land and so moist a season, was that the plants grew much taller than did plants of the same varieties at either Bathurst or Lambrigg; and that when some very severe thunderstorms occurred early

in

in November, much damage was done to the straw of all the earlier varieties, which at Bathurst and Lambrigg have remained uninjured. One part of the land at Wagga was manured with soluble superphosphate and the other with the reverted or citrate-soluble form; and the wheats on the former appeared to have been injured by the storms the most. As in 1893, when I manured my wheats at Lambrigg with soluble superphosphates, they also showed a greater degree of straw-weakness than they had ever done before or have done since, I think it desirable that I should next season carry on some comparative experiments for the purpose of ascertaining whether soluble superphosphate exercises, as I am disposed to think it does, an undesirable effect on the quality of the straw.

The results of the experiments at Wagga have not yet been ascertained; but I have seen enough to report that while many of the cross-breds and varieties which were tested there will have to be rejected as unsuitable for the climate, others promise to suit it well, and will be planted there next year with a view to their propagation on a large scale. A few of the wheats grown were not entirely free from rust (mostly *P. dispersa*) this year; but there was so little of this pest, or at any rate of the form (*P. graminis*) which, as I think, alone damages the grain, that it may be said to have been for all practical purposes absent altogether; and what little there was, was on plants which had been knocked down more or less by the November storms. Of the new wheats, "Jude" is the one which was affected the most; but as it comes from a cross between "Purple Straw" and "Early Baart," no power of resisting rust could be expected in it. As it appears to be a productive variety, is earlier than Purple Straw, and appears to hold its grain better than that variety, I do not propose to discard it, and think it likely to prove a valuable variety for the drier part of the Colony.

I may mention in connection with these experiments at Wagga that, although wheats were unusually late in ripening there this season, one at least, and, if I recollect correctly, more than one of the new cross-bred varieties were ripe enough to be marked for earliness of ripening before the end of October, and many of them very shortly afterwards. This circumstance shows that it is quite possible to get varieties which are early enough to harvest in an ordinarily early season before the end of October in the climate of Wagga. I find it to be a matter of little difficulty to make varieties that are exceedingly early; but to endow such early varieties with straw of sufficient height and strength to be suitable for harvesting by machinery I find to be exceedingly difficult, for weakness of straw seems to be a necessary accompaniment of earliness. The only solution of the difficulty seems to be content with shorter straw than we have been accustomed to. A serious drawback which is attached to such wheat is, of course, that they are quite unsuitable for hay.

In connection with the bunt experiments, I find that the treatment of the seed-grain that I suggested, viz., washing it in several changes of water—although at Lambrigg, at any rate, it has given very fair results—has not on the whole given the good results I had expected from it. I therefore withdraw my suggestion that this treatment be given a trial. The experiments, however, that I have made at Lambrigg have convinced me that for any treatment of the seed-grain to be really efficient, the bunt balls it contains must be got rid of before it is subjected to any spore-killing agent at all. Mr. D. W. Armstrong, engineer in the Roads Department, has very kindly designed and furnished me with a model of a simple apparatus by means of which I think this can be done expeditiously and easily. As this machine (if it deserves that name) can be made quite easily on a farm, and at a cost of only a few shillings, I propose to test it this autumn, and, if it answers its purpose satisfactorily, to have it described in the *Agricultural Gazette* at an early date.

At the Wagga Farm, as well as at Lambrigg, I made this year a trial of Schering's (Concentrated) Formalin Solution as a substitute for bluestone in the treatment of bunt-infected seed-grain. It appears to answer admirably for this purpose, and, indeed, has given better results than I ever saw from the use of bluestone. The solution tried—one part of the solution as purchased in 390 parts of water—did the work of killing the bunt spores perfectly, but it caused the grain to be slow in germinating and killed a small percentage of it. I am about to make some experiments for the purpose of ascertaining what solution is the strongest that can be used without injuring the germinating quality of the grain. When that has been learnt, I shall be able to make some experiments next season which I think will enable me to make precise recommendations in connection with the treatment of seed-grain with this substance.

The experimental wheats at Wagga were attended to by Mr. Robert Hurst, and he has managed them admirably. I was afraid that the area under his charge was too large to be done justice to by a single man, but he succeeded not only in doing what was required of him, but in doing it well.

#### *Bathurst Farm.*

An area of about  $2\frac{1}{2}$  acres was devoted to wheat experiments at this farm. Of this, about 1 acre was occupied by small lots in single drills, which were of the same length and arranged in much the same manner as were those at the Wagga Farm. The manures used at this farm were on one part of the land a mixture of sulphate of ammonia and reverted superphosphate, and on the other a mixture of nippo and the same superphosphate. Although the experimental plots were in a position where they were exposed to violent winds, I found when I was last at the farm (on 11th and 12th December) all the wheats, except a few with specially weak straw, to be standing up well. I find it far less difficult to select wheats that are suitable for the cool climate of Bathurst than for Wagga or Coolabah. On account of the fact of the climates of Bathurst and Lambrigg being so much alike, that varieties which are suitable for the one thrive well in the other, it is my intention to cease almost entirely from the testing of small lots at Bathurst, and instead to propagate there varieties which have proved themselves to be good at Lambrigg. I may state that two of the best of the Minnesota Fifes (which, from being pure Fifes, are much superior for the strength of the flour they yield to the Manitoba wheats, which appear to be for the most part only half-bred Fifes), viz., Power's Fife and Minnesota Blue Stem, were grown this year at Bathurst on a sufficiently large scale to provide seed enough for a few acres of each next season. Other good pure Fife varieties, which, however, are unsuitable for the warmer parts of the Colony, will be sent from Lambrigg and grown at this farm next year. These wheats are likely, I think, to be largely adopted in the Bathurst and Orange districts, as much on account of their being such good hay-wheats as for the high quality of the grain they produce.

Mr. Walton, a student, has attended to the experimental wheats at this farm. He has done his work so well that I think he ought to be given a substantial reward for his services.

*Hawkesbury*

*Hawkesbury Farm.*

An acre and a half was devoted to wheat experiments at this farm. The seeds were planted about the end of April in drills, in the same manner as at the other farms. They were also manured in the same manner. This land was planted almost entirely with single drills, mostly of cross-breds, of which there was an interesting collection. The season at first was favourable, and the germination prompt; but so much rain fell in the early winter that, when I inspected the plots on 26th July, many of the earlier sorts were in ear. As I saw the weather would be too cold to ripen the grain of these early ears, I had one-half of the plants in each of these drills cut down to within a few inches of the ground, and the other halves left. This I did for the purpose of watching what would happen. The result of this experiment was that neither of the halves did any good, the fresh growth made by the halves which had been cut down being meagre and unsatisfactory. This circumstance has shown me that, if very early wheats are to be grown in the coastal counties—and until now we have been in the habit of thinking that wheats could not be made too early for these districts—it will be necessary—in moist seasons, at any rate—to have them grazed down and prevented from running up before the winter is over. I do not think, however, it would be safe to do this with sheep, on account of their biting too close; but it is not likely that much damage would be done to the crop of grain if the grazing were done by horses, provided it were not too close. At the time of my visit, on 26th September, all the earlier varieties were in flower, and some had even gone out of bloom. The straw had then, also, been much knocked down by the rains. I am told that the rains which fell afterwards laid the wheat so badly, and that rust and sparrows played such havoc with the grain, that it was found necessary to plough the crop in. At any rate, when I visited the farm in December, I found that this had been done. Some Macaroni wheats, which I sent to this farm in larger quantity, fared better than the small lots, and will yield some grain. At present I am inclined to think that these will prove to be the best hay-wheats for our coastal counties, and certainly better than such varieties as Steinwedel, the hay of which, from usually being very rusty, can hardly be wholesome for stock.

I propose next season to continue to give special attention to Macaroni wheats at this farm, and shall furnish it with some fresh varieties for trial. It is useless, however, on account of the sparrows, to hope to raise stocks of new varieties from small samples at this farm. This will have to be done at the other farms and sent in lots of at least 3 or 4 lb.

*Coolabah Farm.*

At this farm an area of about  $1\frac{1}{2}$  acre was given to the experimental wheat, which consisted for the most part of cross-breds. These were planted in single drills in the same manner as at the other farms. The planting was begun on 14th April, but the soil was so dry at that time that the seed did not germinate for some weeks. The land was also manured in the same manner as at the other farms. When I inspected the plots on 19th September, I found that owing to the patchy nature of the soil a very uneven growth had been made, and that it had happened that in many apparently barren patches most of the seeds had failed to germinate, and that even where germination had taken place in them the plants were meagre and stunted; while in the other parts the "stand" was good and the growth of the plants vigorous. I have not yet received from Mr. Peacock a detailed report of these experiments, but I understand from him that on the whole they were fairly successful, and that he has made selections of the most promising kinds for further trial next season. In regard to the cultivation of wheat in so hot and dry a climate as that of Coolabah, I think it will eventually be found that the best results are given by varieties which approach the type of those which are grown in India; that is to say, by varieties with scanty foliage, which stool little, with short straw, and which (a most important quality) are drought-resisting in the respect that they possess in a high degree ability to produce plump grain in the face of severe drought. I know that there is a disposition to deride at drought-resisting varieties of wheat, but of their existence I have no doubt whatever, and one of the most valuable lessons I have learnt from the droughty seasons we have been having of late is that so great a difference in the ability of varieties to produce good grain in dry seasons exists. In selecting varieties for Coolabah, I shall give special attention to this quality. I also hope to be able to make good use of the Coolabah Farm for the purpose of testing the drought-resisting qualities of cross-breds.

This year Mr. Peacock himself looked after the experimental wheats, but he has found that they require so much of his time (and that cannot but be the case) that he will need to have some one to look after them next year.

*Lambrigg.*

The wheat experiments I have now been carrying on here for fourteen years were carried on this year on their usual scale. As has now been the case for many years, the work here consists almost entirely of the making and fixing of cross-breds. This work requires my undivided attention from the time the earliest plants begin to head until the harvesting has been completed. It is this circumstance which makes me to be so dependent on reliable and capable assistants at the other farms. This season I have made as many crosses as I usually do (and that, I fear, is almost too many to do full justice to), and have added some other experimental work to my usual routine. These additions consist of a series of preliminary experiments (I have already alluded to them in my report on the Wagga Farm) connected with dealing in the best manner with the bunt (stinking-smut) pest of some manurial experiments which have for their purpose an investigation of the effect of different nitrogenous manures on the constitution of the grain. I have also done something in the way of testing the comparative effects of thick and thin sowing on the yield of grain.

The season of 1899 has been on the whole a favourable one for wheats at Lambrigg, although the drought, which has continued since 7th November, will necessarily cause much of the grain to be pinched. This drought, however, cannot but be considered to be favourable for my experiments, inasmuch as it is likely to give me an opportunity of discovering some drought-resisting varieties.

At the time when my early wheats were in flower, towards the end of October, we had some excessively and unseasonably cold weather, and many of the hills to the south of Lambrigg had snow on them for a short time; this caused the wind which was blowing over them to be so cold as to force me to leave the paddock. It was at this time, I believe, that thousands of acres of wheat in different parts of the Colony are said to have been so blighted as to yield no grain at all. Although many crops in this district

are

are said to have been ruined, and amongst them one only some 3 miles from here, which was situated on ground that is not appreciably higher than my own paddock, my own plots containing varieties in flower, which—coming, as they have done, from India and other hot climates—might be expected to be specially tender, seem to have received no injury whatever. The precise cause of this widespread mischief is not clear, and this matter deserves, as I have suggested elsewhere, to be made the subject of a careful inquiry.

The results of my experiments with bunt, &c., have not yet been fully ascertained. They will shortly be given in the *Agricultural Gazette*.

It is scarcely necessary to mention that I have received great help from my assistant, Mr. George Norris. Without him, in fact, my other duties would have made it necessary to curtail my work here, and that I should not have been willing to do. Mr. Norris has proved to be a satisfactory assistant in every respect.

I have, &c.,  
WILLIAM FARRER.

The Under Secretary for Agriculture, Sydney.

Report of the Manager, Coolabah Experimental Farm.

I HAVE the honor to present herewith my report of the Coolabah Experimental Farm for the year 1899.

Before entering upon the work carried on at this farm, it will be necessary to give some idea of the climatic conditions under which we have laboured, and also something of the nature of the soil upon which we have been operating.

This farm is a portion of the West Bogan scrubbed lands; the average rainfall estimated from observations taken since 1882 being 17·96 inches. The rainfall for the present year, up to the present date (6th December), being only 10·79 inches, comprised in the following falls :—

	Points.		Points.
Jan. 19	38	July 14	14
„ 28	34	„ 16	5
Feb. 28	38	„ 17	14
Mar. 26	14	„ 31	40
„ 27	32	Aug. 21	5
April 4	50	„ 22	52
„ 5	23	„ 23	28
„ 21	1	„ 24	248
May	0	„ 25	1
June 3	9	Sept. 12	136
„ 4	27	„ 28	1
„ 7	16	„ 30	5
„ 9	3	Oct. 15	36
„ 12	6	Nov. 7	26
„ 23	27	„ 16	2
July 8	9	„ 5	5
„ 9	87		
„ 10	47	Total	10·79

This inadequate rainfall, coming after the disastrous drought of 1898, in which the rainfall at this farm did not exceed 8 inches, was not equal to the same amount, if preceded by the rainfall of an average season, the soil and sub-soil being perfectly devoid of all appreciable moisture, upon which to commence the year's operations. We were thus dependent solely upon the falls during the current year. This fall proved of a most patchy nature, and in its relation to the growth of cereals, anything but satisfactory; the slight rainfall early in April causing the early sown wheat to germinate, only to be afterwards almost completely destroyed by the following droughty conditions, prior to the light rains in June, which brought a large percentage of the crop above ground during that month. The succeeding months of July and August were most favourable, as also was the early portion of September, but the rainfall of the 12th of that month terminated the beneficial rains so much needed during the critical months of October and November, the few points recorded since that date doing practically no good. During the ploughing season, seven samples of soil from three different portions of the farm were analysed by the Departmental Chemist, Mr. Guthrie, proving the soil to be of a generally sour nature, deficient in lime, phosphates, humus, and nitrogenous matter. This was, to a great extent, due to continuous overstocking in the past, recurring dry seasons, and a heavy growth of scrub, which had been removed in its green state prior to cultivation. The nature of the soil is a red, light, sandy loam, which, being devoid of vegetable matter, lacks the mechanical condition of a richer soil, needing great care in the working to prevent its cementing together.

Of the many crops experimented with, wheat has received the most attention, over 300 varieties being under cultivation, as well as many hundreds of crosses, under the direction of the Wheat Experimentalist, Mr. Farrer. The majority of these were planted in but small quantities, many in single rows. The total area devoted to the cultivation of wheat was 130 acres. The varieties grown in areas extending from 3 to 10 acres being Hudson's Purple Straw, Australian Talavera, Steer's Purple Straw, Farmer's Friend, Steinwedel, Rattling Jack, Berthoud, White Lammas, Allora Spring, King's Jubilee, White Tuscan, Golden Drop, Early Lambrigg, and White Naples. The varieties grown in stud plots of about one-sixteenth of an acre in extent, comprising those above enumerated, as well as Early Baart, Marshall's No. 3, Tall Neapolitan, Medeah, Early Para, Tardent's Blue, White Essex, Red Straw, Canning Downs, Talavera de Bellevue, Red Clawson, and White Velvet. All these were also sown in single rows for comparison, as well as others, such as Dart's Imperial, Yandilla, and others. Over 300 others were cultivated in the nomenclature plot, as well as 900 rows for the Wheat Experimentalist.

A number of other wheats obtained by the Department from Asia Minor, Persia, Hungary, and Russia were experimented with. Out of the whole number over 80 per cent. matured fair grain. In many of the cases where the varieties completely failed the patchy nature of the soil was accountable for the failure. Owing to the low rainfall of the season, the drought resistance of the different varieties was severely tested, many only being fit for hay, whilst others matured good grain and were kept for wheat. The varieties in large areas which were kept for grain being Steinwedel, Steer's Purple Straw, Hudson's Purple Straw, Farmer's Friend, Allora Spring, and King's Jubilee. Some others would have matured good grain, but were cut for hay owing to their being grown from seed containing more than one variety. Others did so well as to be worthy of future trials, as the distribution of the rainfall this season certainly favoured quick-growing, early varieties. As a fair quantity of hay was required for the use of the farm horses, 79 acres were cut for hay, leaving 51 for grain; the estimated yield of hay being slightly over 50 tons, and the yield of grain to range from 4 to 10 bushels per acre, with an average for the 51 acres of about 6 bushels, the actual results of which will be given after it has been threshed.

The other cereals tried were malting, Cape, and skinless barleys, as well as two varieties of rye, all resulting in comparative failure, the skinless barley doing the best.

Grasses.—Owing to the very dry weather during the spring, nothing of much importance could be done with the native grasses of the district, the Mitchell grass being the only one which made any headway; the other principal grasses cultivated being *Paspalum dilatatum*, Couch, Kentucky Blue grass, and perennial rye grass.

The other forage crops under cultivation being lucerne, two varieties; clovers, four varieties; trefoil Spurrey, Sheep's Burnet, and several varieties of sorghums and millets. The severe dry weather preventing most of these from doing any good.

A number of leguminous plants from France were tried, a few of which have done fairly well, and are worthy of still further experiment.

Sorghums, maize, millets, cow-peas, cotton, &c., were planted, the drought affecting them more or less seriously. Ten acres of cow-peas are under cultivation to be ploughed under as a green manure for some of the experimental wheat plots of next season. A manure experiment has been carried out with different manures, upon the wheat-plant, the results so far proving that the manurial constituent most lacking being phosphates, the complete results of which form the substance of an article in the *Gazette*.

During the months of October and November over 100 interested persons—farmers, squatters, and others—visited the farm.

In reviewing the work here of the last twelve months, I have been agreeably surprised at the results obtained under such very adverse conditions, and, having taken the opportunity of visiting some of the farms around Girilambone just prior to harvesting, made comparisons which confirmed my belief, that the comparative success attained here would not have resulted but from *thorough cultivation* and *light sowing*, and I am convinced that these two principles are the key to successful wheat-farming in the Western district. There are millions of acres in this area adapted for wheat-culture, and under fair average seasons would produce profitable crops, with reasonable cultivation and the selection of our best drought-resisting varieties.

During the year I have devoted considerable attention to fodder problems, as they affect the Western squatter and agriculturist, and have contributed several papers on the conservation of edible scrub, the reclamation of scalded plains, and kindred subjects to the *Agricultural Gazette*, in addition to a number of papers in respect to experimental work.

I have, &c.,  
R. W. PEACOCK.

Report of the Manager, Experimental Farm, Wollongbar.

DURING the year the work of opening up the land has been steadily persevered in, with a view to as soon as possible having sites prepared for necessary buildings, and paddocks for stock put under grass and properly fenced.

Interest in the work of the farm in the district is unabated, and a large number of visitors from all parts have been received at the farm and shown the various crops and given any advice that certain of them might seek. In the early part of the year the work of burning off the fallen timber in what are to be the future paddocks was completed as far as circumstances would permit, 78 additional acres being brought under control, sown with grass-seed, and subdivided.

Four hundred and sixty-eight rods of split-rail fencing were erected, and 150 chains of wire fence; and about 3 acres on Marom Creek on a dark chocolate soil was placed under cultivation for trial plots of onions, maize, &c.

The total area cleared and under grass is now about 116 acres, with 46 acres comprising orchard and experimental blocks, 80 acres of fallen scrub, and some 21 acres of standing scrub.

The Rainfall and Temperature.

Month.	Average Temperature.		Rainfall.	Number of days on which rain fell.
	Maximum.	Minimum.		
January.....	92·7	64·3	10·01	7
February.....	77·08	59·5	6·62	20

November.....	85·38	52·8	1·99	8
December.....	87·6	54·6	10·43	11

By the following table the number of dry days in each month is shown. It will also be seen from the statement that while the conditions, generally speaking, throughout the year were moist, at the same time the rain most frequently came in flushes, with dry spells between.

Statement of Rainfall showing dry days.

The district is not altogether adapted to the growing of cereals for grain, the moist conditions of the climate being unfavourable.

*Wheat.*—Last year an experiment was made in growing about an acre of Allora Spring wheat. Particulars of this experiment appeared in the *Agricultural Gazette*, and it was shown that though sown late some seed was harvested.

The experiment was therefore followed up this year by sowing an acre with the seed saved previously. In the earlier stages this crop grew exceedingly well. It was sown on 18th March and met with 5 points of rain on the 20th, followed by eleven days dry. Slight showers fell in the first week of April. Then continuous showers from the 10th to the 19th of that month, and three light showers between that date and the 30th of April. From the 29th April to the 8th May no rain fell. Then there were nine days of continuous showery weather, followed by ten days dry. Then five days' rain at the end of May. In June no rain to speak of fell until the 17th, when there were six days' rain, followed by two or three showers between that date and the end of the month. On 9th July heavy rain commenced, and did not cease until the 17th, over 14 inches having fallen. After an interval of four days it rained continuously until the 4th August, when, after five days' cessation of rain, it rained more or less continuously until the 31st of that month. This rain laid the crop over considerably, added to which flocks of birds invaded the grain-plots and devoured the grain as rapidly as it came towards maturity. In September showery weather continued to prevail, and the idea of saving grain was out of the question. On 2nd October the block was cut and the straw saved. Rust had appeared at the last moment. Under the circumstances this Allora Spring wheat kept free of rust for a longer period than might be expected, and that was the only satisfactory feature in the experiment. The previous year there was no rust in the wheat, but that season was a droughty season in comparison with the one we have just passed through.

*Oats.*—The same remarks apply to the experiments in oat-growing as regards the weather conditions prevailing in the wheat experiment. Oats are rarely grown for seed, and it would appear the climatic conditions are such that it is the exception, not the rule, to be able to grow oats as a grain crop. Excellent oaten hay, however, can at times be made. This being the first experiment with oats on a broad scale, the crops were left to grow to a finish, in order to conclusively show whether any grain could possibly be obtained. Had the weather taken up at one stage of the experiment there is no doubt some seed would have been procurable. On the other hand, if the endeavour to grow for grain had been absolutely abandoned, there was a time when splendid hay could have been made if the weather had held up. As it stood, some hay was saved. The varieties sown were White Tartarian, Black Tartarian, Carter's Prolific, and Algerian. The Black Tartarian made a very poor growth, and was very coarse in the straw. The White Tartarian made good growth, but was also very coarse in the straw. Carter's Prolific oat made a beautiful crop as a green fodder, but so soon as it commenced to pass beyond that stage rust went through it like a fire. The Tartarians also rusted badly. The Algerian oat grew excellently, in fact was a marvellous crop with very fine straw, and visitors who were interested in such matters appeared greatly impressed with the result of the Algerian oat experiment. It certainly rusted in the end, but not till very late, and in every way as a crop proved the best variety. Owing to the conditions it was cut for hay, no seed being saved.

*Barley*—Small trials were made with Skinless and Cape barley, but in both cases were complete failures as grain crops.

*Rye*—Some small trials were made with Emerald rye, Mammoth rye, and Arctic rye, and half an acre was sown with White rye from seed of a previous crop. The Emerald rye was fine in the straw, and would make very fair hay. The Mammoth rye certainly grew very robust, but was not of a healthy appearance. The Arctic rye, when young, was fine in the flag, and would, no doubt, be fair grazing; but the whole three varieties were inferior in quality as they advanced towards maturity, and the grain was pinched.

The ½ acre of White Rye was an excellent crop, bright and clean in the straw and of a good length. The yield was 16 bushels of grain and 2 tons of straw per acre, the straw being worth £3 per ton in the local market,

*Lucerne.*—The lucerne plots have turned out much better than was expected, in the face of persistent statements that lucerne will not do here, or that, even if it grows for a while, it runs out eventually. Each plot has been mown every few weeks, and given as green food to stock or made into hay. The growing of lucerne appeared to be a source of much interest to visitors, especially those from the Hunter River districts.

*Maize.*

*Maize.*—The last season was very unfavourable to the maize crops in this locality, and consequently yields were mostly light. At the same time, these higher lands do not apparently at any time produce the quality of maize grown on the rich flats of the lower country. The following varieties were harvested and gave results as stated :—

		Name.	Yield per acre.
Sown in September, 1898	{	Golden Drop ... ..	11 $\frac{3}{4}$ bushels.
		Ninety-day ... ..	18 "
		Golden King ... ..	22 "
		Large Yellow Flint ... ..	21 "
		Red Nibbed ... ..	23 "
		Sixty-day ... ..	12 "
		Hawkesbury ... ..	37 "
		Mastodon ... ..	33 "
Sown in October, 1898	{	Leaming ... ..	42 "
		Conqueror ... ..	37 "
		Golden King ... ..	17 "
		White Maize ... ..	36 "
Sown in December, 1898	{	Sixty-day ... ..	30 "
		Ninety-day ... ..	Failed.
		Yellow Flint ... ..	"
		Red Nibbed ... ..	33 bushels.

This season the following varieties have been sown for trial :—

Hickory King, Queen of the Prairie, Early King, Red Hogan, Ninety-day, Sixty-day, Pride of the North, Clarke's Early Mastodon, Iowa Silver-mine, Iowa Gold-mine, Compton's Early Field Corn, Large Yellow Flint, Legal Tender, Early Missouri, Star Leaming, King Phillip, Long Yellow Field Corn, Early Mastodon, Early Butler, Improved Leaming, Riley's Favorite.

#### *Millet.*

Some seventy varieties of millet seed were received from India, under Indian vernacular names. In most cases the seed was found very hard to thresh, and as grain, would only be of value for fowl-feed and for seed purposes. As green fodder, however, they were in many cases very good, though there was nothing apparently very superior to the sorghums and millets already in use in this locality. The following are some of the varieties and their yield of green fodder :—

Name.	Field of green fodder per acre.
Nerio Perio ...	Failed
Deshi ...	"
Gund ...	"
	tons cwt.

The seed of the Indian millets was in small paper packets, and a large quantity could not be sown. A small quantity of seed, however, was saved from the varieties grown, and a sowing has been made of such seed in order to, if possible, obtain seed in sufficient quantity to distribute to farmers, so that they can test some of these varieties themselves.

Root Crops.—Potatoes.

A number of varieties of potatoes were sown, as per tabulated statement:—

No. 1 Plot.—Seed presented by Arthur Yates & Co., Sydney, for trial.

Date sown.	Name.	Harvested.	Yield per acre.			
1899.		1899.	tons	cwt.	qrs.	lb.
Aug. 9...	Premier .....	Nov. 30...	2	3	1	0
" 9...	Prizetaker .....	" 30...	1	3	0	19
" 9...	Herd Laddie .....	" 30...	3	4	3	14
" 9...	Early Manhattan .....	" 30...	3	4	3	14
" 9...	Victorian Early Rose .....	" 30...	3	14	0	16
" 9...	Dargaville Merit .....	" 30...	3	15	2	21
" 9...	Pink Perfection .....	" 30...	2	6	1	10
" 9...	New Zealand Early Rose .....	" 30...	2	9	1	20
" 9...	Brownell's Beauty .....	" 30...	3	4	3	4
" 9...	New South Wales Early Rose .....	" 30...	2	14	0	7
" 9...	Bliss' Triumph .....	" 30...	1	18	2	13
" 9...	Adirondach .....	" 30...	3	17	0	26
" 9...	Avoca .....	" 30...	4	0	1	8
" 9...	Australian Monarch .....	" 30...	5	8	0	14
" 9...	Goulburn Redskin .....	" 30...	4	1	3	13
" 9...	Beauty of Hebron .....	" 30...	5	14	1	6
" 9...	Peerless Rose .....	" 30...	2	6	1	10

In their order of merit for yield and quality they rank as follows:—

Beauty of Hebron	Adirondach
Australian Monarch	Dargaville Merit
Goulburn Redskin	Victorian Early Rose.
Avoca	

No. 2 Plot.—Purchased Seed Potatoes.

Date sown.	Name.	Harvested.	Yield per acre.			
1899.		1899.	tons	cwt.	qrs.	lb.
Aug. 14...	Beauty of Hebron .....	Dec. 8...	5	18	1	17
" 14...	Australian Monarch .....	" 8...	5	14	2	24
" 14...	Goulburn Redskin .....	" 8...	5	12	0	12
" 14...	Brownell's Beauty .....	" 8...	5	8	1	25
" 14...	New South Wales Early Rose .....	" 8...	4	11	1	18
" 14...	Victorian Early Rose .....	" 8...	4	1	3	12
" 14...	Lord Tennyson .....	" 8...	3	3	3	6
" 14...	Adirondach .....	" 8...	3	1	1	1
" 14...	New Zealand Early Rose .....	" 8...	2	17	2	18

In comparing the product from Nos. 1 and 2 plots, it is noticeable that Beauty of Hebron, Australian Monarch, and Goulburn Redskin top the yield. Besides the abovenamed, a small plot was sown with New Freeman potato with seed obtained from potato eyes originally supplied by the Herbert J. Rumsey Seed Company, near Goulburn. A small plot was also sown with fresh eyes from the same firm, the yield being 4 tons 13 cwt. per acre. This potato is a good-sized, sound potato, and excellent when cooked.

Onions.—A considerable area was sown with onions in trial plots. The following varieties were sown:—Red Tripoli, Flat Danvers, Brown Globe, Early Globe, Yellow Globe, Danvers, Giant Rocca, Early White Italian Tripoli, Brown Spanish, Giant White Italian Tripoli, Early Flat Red, Early Barletta pickling onions, Silverskin pickling onions, tree onions, and garlic. Some of the seed was imported from America, others were obtained from New South Wales seedsmen, and some was obtained direct from a grower on the Hunter River. None of the packet seeds obtained from different sources produced such good onions as those resulting from a bulk parcel of seed obtained from the Hunter River. Hunter River grown Red Tripoli seed gave a return of 4 tons 3 cwt. per acre. Hunter River grown seed of Brown Spanish gave a return of 3 tons 18 cwt. per acre. Some very fine onions were produced on both of the abovenamed blocks.

Mangel-wurzel.—The growing of mangels and such-like crops for cattle fodder has not yet been taken up by local dairy farmers. The fact is that in this locality, in ordinary Richmond River seasons, there is so much feed from artificial grasses that the necessity for a stand-by in the shape of root crops or of silage is seldom felt; but in some localities, where winter feed at times becomes scarce, a few of the younger rising scientific farmers have gone in for agricultural crops for stock-feeding a little more extensively. There is no doubt the mangel well repays its cultivation. It is much appreciated by stock, and in suitable soils gives a heavy yield. In some cases the nematode worm appears to infest the soil, attacking potatoes, mangels, and beets. This season two blocks were put under mangel-wurzel. No. 1 plot was on a slight slope, on an elevated portion of the farm. Previous crops grown on the area at various times had been millet, potatoes, maize. On this block the long yellow mangel gave a yield of 14 tons 12 cwt. per acre; the long red gave a yield of 14 tons 6 cwt. per acre. This was grown from Anderson and Co.'s seed. No. 2 block had previously been cropped with beans, then barley, followed by maize. At the time the beans were

were growing on this block it was noticed that *nematode* worms affected the roots; and the crop of mangel-wurzel, sugar beet, and red beet this season on this particular plot proved a complete failure through the attacks of the *nematode* worm.

Plots of Turnip, Thousand-headed Kale, and Kohl Rabi were sown, the yield being as follows:—

						Per acre.			
						Tons	cwt.	qrs.	lb.
Champion Purple-top Swede	...	...	...	...	...	6	9	2	16
Improved Purple-top Swede	...	...	...	...	...	7	13	0	24
Pomeranian White Globe...	...	...	...	...	...	8	5	0	0
Green-top Swede	...	...	...	...	...	7	1	1	20
White Stone or Early Snowball	...	...	...	...	...	6	11	1	1
Orange Jelly	...	...	...	...	...	3	18	3	0
Thousand-headed Kale	...	...	...	...	...	2	15	0	0
Kohl Rabi	...	...	...	...	...	4	2	2	0

*Cabbage*.—The following varieties of cabbage were sown:—Drumhead Savoy, Late Flat Dutch, Henderson's Succession, Dwarf Green Curled Savoy, Pe-tsai (Chinese cabbage), Sugar Loaf, Flat Dutch, Early Drumhead, Prize Red Pickling. The Flat Dutch and Drumhead Savoy cabbage appeared to be superior, though Henderson's Succession produced large clean plants. The Dwarf Green Curled Savoy was very stunted. Prize Red Pickling cabbage made splendid growth, and was in every way excellent.

*Spinach Beet*.—In the course of trials it has been found that the spinach beet is a most useful vegetable stand-by for the settler. There are times when even to the most experienced it is difficult to keep up a good show of vegetables. The spinach beet, however, appears to hold its own through all dry times, giving abundance of green foliage for culinary purposes.

Plots were also sown with varieties of lettuce, spinach, carrot, parsnip, chicory, salsify, artichokes, ginger, and turmeric.

*Pumpkins*.—The following varieties were grown:—Mammoth Cattle, King of Mammoth, Turk's Cap, Rio pumpkin, Bullock's Heart, Connecticut, Early Sugar, Mammoth Green Cattle, Globe Mammoth Table, Mammoth Trombone Rio, Large Button, Crown, Premier, Ironbark.

*Squashes*.—Hubbard, Essex, Hybrid, White Chestnut, Warren, Perfect Gem, Snakeskin marrow, Early Custard, Crookneck, Delicata.

*Water-melons*.—Kleckley's Sweet, Black Spanish, Ice-cream, Cuban Queen, Cole's Early, Wonderful Sugar, Red-seeded.

*Melons*.—Great Combination Rock, Columbus Rock, Mango Peach, Pie-melon, Japanese Silver-skin melon, English preserving melon, Citron preserving melon, New Colorado.

*Cucumbers*.—Short Green Pickling, Giant Pera, Fordhood White Spine, Snake, Japanese Climbing, Gherkins.

*Tomatoes*.—The following varieties of tomatoes were grown:—Buck Eye State, Stone, New Purple King, Golden Trophy, Matchless, Powderosa, Livingstone's Beauty, Fordhood First, Trophy, Tucker's Favorite, Dwarf, Red Trophy, King Humbert, Dwarf Aristocrat, Ignotum, Pear, Peach. The whole of these varieties grew exceedingly well. King Humbert, Trophy, Golden Trophy, and the Stone tomatoes were, if anything, the most free from blemish, and were vigorous in growth. The Peach tomato was also excellent.

*Beans*.—Varieties sown were Cherries, Governor Denison, Marrowfat, Best-of-all, Davis's Wax, Saddleback, Improved Golden Wax, Valentine, Golden Cluster Wax Climbing bean, Lima, Scarlet Runner, Madagascar, Windsor broad bean, Pale Dun, Yosemite Mammoth Butter bean. Most of these varieties had been grown previously, and the Governor Denison bean still proves to be the most vigorous cropper. The Golden Cluster Wax climbing bean was the only new variety; grown from imported American seed, this has proved to be a most excellent bean, vigorous, hardy, quick growing, and a most prolific bearer. Seed of this variety has been saved, with the object of raising a sufficient quantity for stock and distribution.

*Peas*.—The peas sown were Maclean, Pride of the Market, Telephone, Queen of Queens, Stanley, Yorkshire Hero, Trophy, Heroine, Duke of Albany, Telegraph, President Garfield.

Yorkshire Hero, Heroine, and Duke of Albany proved the best croppers.

*Coffee*.—The coffee-trees have so far grown fairly well, but the severe frosts experienced late on, together with the very high winds prevailing, caused them to suffer considerably, and it was only those in exceedingly well-sheltered situations that had as healthy and vigorous an appearance as a grower would wish for. Some seedling coffee-trees that had been planted out in an open situation, as a trial, were killed right out with the frost. If the situation is not naturally sheltered, it is necessary to provide the same by growing belts of bananas or some such quickly-growing plant. Some seedlings that have been raised will be planted out at the first favourable opportunity.

*Tea*.—Some seed of varieties of the tea-plant having been received from Ceylon, it was sown in seed-beds, and there is now a small plot of seedling tea-plants. These will in due course be planted out.

*Sugar-cane*.—Experiments have been continued in growing new varieties of cane. Twelve months ago an area of about 2 acres was planted out with specimen rows, for comparison, of every good variety of cane on the farm—there being over fifty different sorts on the block. There are nearly 100 varieties of cane being experimented with. The particulars of analysis and notes of observation will be prepared in due course.

*Fibre Plants (Furcraea)*.—Experiments are being continued with plants producing valuable fibre. Plants of the *Furcraea gigantea* have now commenced to make an excellent growth, and I anticipate very shortly being able to obtain leaves from the plants and treat the green stuff by means of Faure's decorticating machine.

*Sansevieria*.—Some plants of *Sansevieria zeylanica* were obtained some time ago; also, in the early part of this year, a few plants of other varieties were received, viz., *S. cylindrica* and *S. guineensis* and *S. zeylanica*. This plant has not made sufficient growth to produce leaves suitable for trial in fibre productions, and it does not seem to adapt itself to the climatic conditions here as readily as the Fourcroya and other fibre-producing plants.

Ramie

*Ramie Fibre.*—The machinery for decorticating ramie stems has been completed. Five acres are under *Boehmeria nivea*, but owing to the droughty conditions prevailing in 1898 the young growth appeared to receive a check from which it was a considerable while in recovering. Then, again, the whole of the land comprising the farm is comparatively new, and consequently more or less sour; therefore, when the crop of ramie should have reached the cutting stage in March, it did not turn out so well as could be wished. In the absence of the Manager, who had been called to Sydney, Mr. W. S. Campbell, Chief Inspector of Agriculture, visited the farm, in order to observe the operations attendant to the harvesting and decorticating of ramie. Some ramie fibre was obtained from the machinery, but the resultant fibre did not appear to be produced in satisfactory quantities; whether such was due to inferiority of crop or to the work of the machine, could not then be determined. Only sufficient ramie was obtained for a specimen to be sent to London, and for exhibits, but no record was taken of the yields. At a later period the crop was again cut as a waste crop, and in October the whole 5 acres of ramie was cut and the material passed through Faure's decorticating machine. Report on this trial run was forwarded to the Under Secretary for Mines and Agriculture on 30th November. The records of the trials show that 31,714 lb. of green stuff was obtained from 5 acres, and the product from the machine through which this material passed was 534 lb. of good dry ramie fibre, and 313 lb. of dry waste fibre. From the trial it was evident the crop was not yielding the quantity of sound well-grown ramie canes that it should do, and that consequently the yield of fibre from the weight per acre of green stuff was about one-half at most of what it should be. It is intended to continue cropping this area systematically, in order to work out the experiment to something conclusive.

*Sisal Hemp.*—There being a small nursery plot of sisal hemp plants, some of the plants were treated by means of the ramie decorticating machine, and the resultant fibre forwarded to the Department of Agriculture, in order that a sample might be sent to London to ascertain its value. After treating the more mature plants, the young plants were removed and planted out as a small plantation.

*Musa tentilis* (Manila hemp).—There being a small nursery patch of this plant also, the matured plants were treated with Faure's decorticating machine and some fibre obtained, the young plants being also planted out as a plantation.

*Arrowroot.*—Last year an experiment was concluded in the growing of purple arrowroot, and it was therefore followed up by an experiment in the growing of *Maranta arundinacea*—the true white arrowroot. Half an acre was sown, and the plants grew wonderfully well. When the proper time arrived to harvest the bulbs and have them treated, continuous rain prevented such being done. So soon as the weather permitted, a ton of the bulbs was sent to Mr. Barlow's mill at Teven Creek, for treatment. The result was practically a failure. Owing to the length of time the bulbs had to remain in the ground a large proportion of the starch was evidently lost. Many of the bulbs were inferior in appearance, and no arrowroot of any value in quantity or quality was obtained. The yield of tubers was about 7 tons per acre.

*Pineapples.*—The pineapple block gave its first crop of pineapples this season, the block consisting principally of the variety known as the Queen, some five rows only being what are known as the Smooth Cayenne. No manure has been applied to these pineapples, but the rows were limed, and between the rows the land has been occasionally cultivated with a Planet Junior cultivator. The cash sales of pineapples amounted to about £10, or equivalent to about £5 per acre; but this cannot be taken as a criterion of what the plot actually yielded, as pineapples have to be supplied from the area for show exhibits, and visitors occasionally have some. The Smooth Cayenne pineapple being a winter variety, comes in early, and being of large size, apparently commands a better price in the Sydney market than do the ordinary Queens. The plants of special varieties obtained from Ceylon and America have come on very slowly, no suckers yet being obtainable from them, but some of the Ceylons are showing signs of forming fruit now. The varieties at present growing at the farm are as follows:—Smooth Cayenne, Queen, Red Ceylon, Green Ceylon, Long Variegated, Giant New, Golden Queen, Abbadar, Porto Rico, Black Antigua, and common. Some losses were met with in the pineapple crop through the depredations of the rice weevil, as also ants. During one period of the harvesting of the Queen variety the quantity of culled pineapples, blemished in one way or another, was equal in point of numbers to the well-grown and clean pineapples packed for market. It does not appear to be advisable to ship ordinary Queen pineapples to the Sydney market when once the Queensland pineapples are coming in. In order to test the market, I sent twelve dozen Queen pineapples of excellent quality to Sydney, and after paying all expenses got about 2s. per dozen net. The pineapples of second-grade quality, and culls more or less blemished, brought 3s. per dozen in the local Lismore market.

*The Orchard.*—Owing to the deciduous fruit-trees not fruiting, in the winter of 1898 they were severely root-pruned. I am glad to say the operation had a beneficial effect upon some varieties. The Burbank Japanese plum, the Blood or Red Heart plum, as also the Ketsey, were thrown into fruit. The Wild Goose plum, the Shanghai peach, and one or two of the apple-trees were also thrown into fruit, though the quality was nothing to speak of. However, having been brought to fruit-bearing, it is hoped with age the crop on the trees will improve each year. The Japanese chestnut-trees are making heavy growth, and seem to do well in the locality. They bore a few nuts only this season, being the first crop. The native Bush nut tree, *Macadamia ternifolia*, commonly called the Queensland nut, has also flowered this season, and borne a few nuts. The citrons, lemons, and oranges, on the whole, are not doing so well as I could wish. Citrons and lemons especially suffer from the attacks of the borer in spite of every care. The orange-trees are becoming large in dimensions, and are fairly clean and healthy. In order to bind the soil, cow-peas at one time and rape at another have been grown in the orchard. Owing to the rapid growth of weeds, however, in this climate, the growing of such cover-crops is not satisfactory from a picturesque point of view, and, as the orchard is visible from the main thoroughfare, it looks in the distance as if it was very untidy and very uncared for, and I have been obliged, for the sake of appearances, to plough such crops in and keep the orchard land clean. Owing to the formation of the orchard site, which is a steep slope, there is a considerable loss of the upper layer of soil in heavy weather, causing the roots of fruit-trees to become more or less exposed, thereby requiring frequent attention to rectify this surface erosion. An addition has been made to the collection of fruit-trees, in the shape of two plants each of ten varieties, of mangoes, named as follows:—Strawberry, De Cruze's Favorite, Malda, Rose, Bindobunn, Kysapatie, Alfonso, Gopal Bhoj, Batavie, Bombay. These plants were obtained from Mr. Williams' nursery, Mount Gravatt, Brisbane. They were excellent plants, in pots, and since they have been planted out have done very well. A quantity of seedling oranges had been raised, and Mr. Allen, the Fruit Expert, visited the farm in the month of October, and some two hundred stocks were budded with different varieties of oranges and lemons.

*Grape-vines.*

*Grape-vines.*—Towards the end of winter the grape-vines were heavily mulched with refuse of one kind and another from the bull stable. At a later period this manure-mulch showed its beneficial effect in the wonderfully robust growth of the vines. Last season there was a very excellent crop of grapes, which, no doubt in consequence of the droughty conditions prevailing, ripened early. This season the grapes are much later, but the crop is quite as heavy as that of the former season. The first grape to mature this season is the Madeline Royal, while Early Chasselas and Golden Chasselas come next. The grapes generally are fairly clean and free from disease, the western end of the vine trellises alone showing an attack of oidium to be combated. The grapes on these trellises so affected are Royal Ascot, Black Damascus, Black Prince, and Esperione. The usual remedies have been applied. The varieties of grape-vines struck from the cuttings, originally obtained from France as phylloxera-proof varieties, have this season made robust growth. When cleaning up the plot in the winter the prunings were made into cuttings and used to fill up the gaps caused through any misses of the original cuttings. Should cuttings be required for other places in the coming winter, judging by present appearances, there will be no difficulty in supplying a moderate quantity.

*Stock.*—The horses on the farm consist of four draught mares and one spring-cart horse. Two of the mares have each a filly foal at foot by Daley Bros.' draught entire horse "Young Champion." They are very fine foals. In milking cows, there are four, Richmond River bred animals. One of these cows has calved since she was purchased. It is a heifer calf, by the Government imported Durham bull "Cornish Boy." Another of the cows has a bull calf to Mr. Dixon Cooke's Durham bull "Sir Robert." Two imported bulls are at present depastured on the farm, viz., the Durham bull "Lord Sandgrave" and the Jersey bull "Golden King." A pure-bred Tamworth sow is the only member of the pig family at present in stock.

A shed containing milking-bails has been completed, and the milking-yard has been properly stoned with broken metal, and now only awaits a top-dressing of suitable blinding. Proper drafting yards and small paddocks have been provided, a suitable bull stable has been erected in No. 2 bull paddock, and drafting yards and crush-pen erected, so that young stock can be properly handled, branded, &c. A small double pig-sty was erected and proper yard fenced in for same. It is proposed to shortly erect a building for a small separating plant, and when that is in working order, and an additional number of milking cows are provided, an extension will be made in providing for an increased number of pigs to utilise waste products and bring in some revenue. Arrangements have been made for the erection of a hay-shed, stable and loft, and two workmen's cottages, and plans are being made for a building for students' quarters, for a barn, implement shed, and other necessary buildings.

*Visitors.*—The visiting day has been considerably availed of, sometimes as many as forty people being present on one visiting day.

*The Tick Pest.*—Considerable anxiety having been shown by the district dairymen as to the possibility of the Queensland cattle tick invading this part of New South Wales, various arrangements were made by the Stock Department to make provision for dealing with this scourge, and in connection therewith eight heifers were sent to this farm for a series of experiments. These animals were put under the tuberculin test, were inoculated for tick fever, and, at later period, when pleura broke out at Bexhill, near Lismore, the animals were inoculated with pleura virus. These animals at a later period were moved to Casino. Any particulars as to temperature, &c., that were noted were in due course handed to Mr. Stewart, the Government Veterinary Surgeon.

*The Distribution of Plants.*—There has not been such a heavy demand for cuttings of varieties of sugar-cane this planting season. I attribute this to the fact that so many persons had their wants supplied last season. The Rous Mill Sugar Company have also a fine plantation now established of canes originally supplied from this farm, and cane-growers in that direction can obtain cuttings without coming so far as this farm. There has been a considerable inquiry for good varieties of pineapples, sweet potato cuttings, bananas, coffee seed or plants, and roots of *Paspalum dilatatum* grass and Guinea grass, &c. The total distribution of roots and cuttings amount to 10,620.

*Conclusion.*—Although the farm is small in area, the intensity of weed-growth in this district necessitates on a place that must, perforce, be kept clean, an amount of labour for which, in a manner of speaking, there is no return. There are many things continually under trial, and, as the general work of the farm is continually extending, the Manager will not at all times be able to be present to attend to certain work himself or supervise it when being done by others. Therefore, when the whole of the buildings are completed, and it is seen what live stock will be provided for, it will probably be necessary to revise or rearrange the working staff. So far that staff, in point of ability, meets present requirements. Before very long, however, it will be necessary to have a thoroughly good working gardener. By working gardener, I mean one who will do his own work and not expect to oversee, and who has also a knowledge of pruning and spraying and is competent to attend to orchard work without having to be shown or overlooked by the Manager personally. With the extended area brought under control, notwithstanding the multifarious matters requiring attention, where experimental crops are being grown, and changes, additions, and improvements made, the number of employees has not for the present been altered or permanently increased. At the same time, the farm generally has made an advance during the year in the direction of reaching its second and final stage of usefulness. The first stage, with simply a small area under cultivation, has enabled certain experiments with sugar-cane and other crops in various directions to be followed out, and in some cases brought to a conclusion. With the erection and completion of proper farm buildings in the near future, and the means of receiving a few students, the educational character of the farm will enter into another phase. In the past the work has been in the interest of the local farmer, whether that interest lay in the direction of cane-growing or of field crops, or of improving a dairy herd per medium of the service of imported bulls. Being a dairying district, which, owing to its climatic conditions, is usually well grassed, the main interest is centred in cattle, and the growing of crops for market or as fodder is only followed to a limited extent. There is no doubt, however, some of the farmers are now keenly alive to the necessity of improved methods all round and to a more wide system of actual cultivation.

I have, &c.,

31st December, 1899.

H. V. JACKSON.

## Report of the Manager, Bathurst Experimental Farm.

I HAVE pleasure in submitting the following report for the year ending 31st December, 1899 :—

The work in connection with the farm has been continued with satisfactory results. Unfortunately, the bad seasons from which the Western district has suffered for several years have so seriously affected the agricultural area around Bathurst that many of the farmers have suffered severe losses, while in some instances their crops have been complete failures. Notwithstanding the unfavourable soil which is to be found on the greater portion of this farm, some of the crops have yielded fairly well, while others have failed. The result of careful cultivation in the past, deep ploughing, and frequent working is to be seen on every hand. The soil consists mainly of granite and poor, stiff clays; but, in order to improve the quality, deep ploughing and subsoiling have been extensively resorted to.

As a result of experiments made, cereals and fodders which were never before known to grow in this district have been successfully cultivated, and have resisted the drought. Many stockowners and agriculturists who have seen the success of these experiments have been induced to cultivate crops of a similar character. In addition to the severity of the drought, the district last year was visited by severe frosts late in the season and destructive wind-storms. This not only retarded the growth, but in many instances cut off and completely destroyed the crops.

During the year frequent visits have been made to the farm by local residents, and a keen interest has been taken in the work carried out. Not only has a greater amount of interest been taken by these, but visitors from a distance have not failed to call when in town. Mr. H. W. Potts, President of the Board of Technical Education of Victoria, in company with members of the Board, were amongst the visitors; and in an interview subsequently with the local Press representatives he paid a very high compliment to the farm and management generally. Satisfaction has been expressed on every hand at the progress of the work; and, with the prospect of more favourable seasons, the farm should make great improvements in the near future.

At the various agricultural exhibitions, both in Sydney and in the Western districts, the farm has been well represented. Exhibits of produce, fruit, and vegetables have been carefully selected and tastefully arranged, making these displays instructive and attractive features of the shows. One or more students accompany the exhibit, and take the opportunity of bringing the farm under the notice of the public.

### *The Students.*

Twelve students have resided in the College during the year. Their work has, on the whole, been satisfactory. They have applied themselves diligently, and have shown a desire to gain all the information possible. Their time has not been altogether devoted to what may be termed agricultural work; but, in order to qualify them to thoroughly manage either their own estates in the future or the properties of others, instruction is given in carpentry, blacksmithing, fencing, &c. On several occasions exhibits of work done in wood and iron have been placed in the Royal Agricultural Association Exhibition, in Bathurst, and elsewhere, and it has always been favourably commented on. The conduct of the students, both on the farm and in the College, has been good. Care has been taken to make their home life as attractive as possible, and thus prevent them from forming associations outside the College which might be prejudicial to their future. The health of the students has been good, and in no instance has it been found necessary to call in the assistance or seek the advice of a medical man.

### *The Orchard.*

The orchard continues to be well cultivated. The trees are perfectly clean and healthy. This is the first year the trees have borne fruit, and the yield on the whole has been good. When the stone fruits were forming the district was visited with severe and successive frosts. As a result, all stone fruit, excepting cherries and plums, were completely spoiled. The apples were exceptionally good, both in quality and size.

### *Sheep.*

The experiments of last year in the cross-breeding of sheep have been continued with varying results. The breeding has been from pure rams, viz., Shropshire, Southdown, Border Leicester, Lincoln, Romney Marsh, Dorset, and English Leicester, mated with selected Merino ewes. This year we have proceeded with a trial in second crosses, particulars of which will be given by Mr. Alex. Bruce, Chief Inspector of Stock. The growth of the lambs was retarded by the scarcity of green fodder. While there was an abundance of other supplies on hand, yet, owing to the continued absence of rain, it was impossible to produce the necessary green and succulent food when it was most required. Immediately after the rain fell the improvement in the condition of the flock was marked and rapid. After the lambs had been fattened and topped up on rape, about 100 were sent to the Sydney market, and realised satisfactory prices. A portion of the females have been retained for breeding purposes. The percentage of lambs marked this season was 80%.

### *Cattle.*

Last year, following up the usual custom, the two bulls stationed on the farm were exhibited at the shows at Bathurst and Orange. In each instance they attracted great attention on the part of owners of dairy stock, and as a result their services have been well sought after. There is a marked improvement in the appearance of the young stock in the district. The Ayrshire bull "General" has been transferred to the north, and, as no suitable animal has since been procured, he has not been replaced on the farm. In number the stock remain the same as in last report.

### *Horses.*

The draught stock in possession of the farm consists of nine head. They are barely sufficient for all the work on the establishment, and an addition of a few good upstanding horses would be an advantage. Two light horses are kept for College use.

### *Improvements.*

*Improvements.*

In October last that portion of the Farm formerly used as a racecourse and recreation ground was closed against the public, and opportunity has since been given to erect subdivision fences and make other necessary improvements. A great portion of this land is the best in the whole area for cultivation, and the results of operations thereon will, undoubtedly, be more satisfactory than on the land hitherto worked. The subdivisions referred to consist of a mile of substantial fencing with nine wires and one mile with wires and wire netting. In addition to this, three quarters of a mile of rabbit-proof netting has been placed on the boundary fence. There have also been constructed and erected twelve large farm gates and two extra large gates (14 feet). This work will be continued until the plan of subdivision is complete.

A large shed, 100 feet long and 30 feet wide, averaging 18 feet high, with louvred roof overlapping, has been erected on a convenient site. The shed is closed on three sides, the front being formed by seven pairs of gates. This building has been largely used as a granary, and contains the threshing and cleaning plant, engine and chaff-cutting plant, and other machinery and implements. The stabling has been enlarged and accommodation provided for all the horses.

The dams have been kept in repair and planted with ornamental shrubs and trees. Notwithstanding the long period of dry weather, the water has never failed, there always being sufficient for stock and other requirements throughout the year. Considerable attention continues to be paid to the work of protecting the banks of the main creek and its tributaries. Three hundred basket willows have been planted in suitable spots, and have taken root, already diverting the courses of the currents into their proper channels. These trees are rapidly proving a shelter and protection to the stock, and they will also tend to beautify the farm. Two large weirs have been constructed across the main creek, and have proved useful in holding water for the stock. Two culverts, needed for the convenience of farm traffic, have also been built. About 500 ornamental shade and shelter trees have been planted over the farm. A large number of these, however, have failed owing to the drought and dry scorching winds, notwithstanding the continued care bestowed upon them.

In consequence of the failure of the water supply in the river, it was deemed necessary, in order to obtain water, to sink a considerable depth below the bed of the river and thus drain the sand. With this end in view, a wooden drum 8 feet in diameter was driven into the sand 8 feet below the surface, and from this an apparently inexhaustible supply of water was obtained for irrigation purposes.

It may be noted that the whole of the foregoing work, with the exception of the erection of the shed, was executed by the ordinary farm labourers, assisted by the students.

*Farm Crops.*

The area under cultivation has been increased by only 18 acres this season, this being new land broken up. The whole of the old land has been faithfully ploughed to a good depth, and, where considered necessary, was worked two, or even three times. About 370 acres are now under cultivation. One feature of the work is the growth of pure grain for seed purposes.

*Wheat.*

Fifty-three acres were devoted to various varieties of wheat, including White Lammas, Australian Talavera, Blount's Lambrigg, Farmer's Friend, Golden Drop, Early Lambrigg, Steinwedel, Allora Spring, Rattling Jack, Tardent's Blue, Manitoba, and Algerian. As with other crops, so with these, the late frosts and drought greatly interfered with the growth. Blount's Lambrigg withstood the adverse conditions most successfully, giving a return of 12 bushels per acre. Golden Crop came second with 11 bushels, Steinwedel returning 10 bushels. The remainder gave various returns, the average yield being 9 bushels.

*Oats.*

The farmers in this district have for years past been content to make wheat their principal crop. Feeling convinced that it would be profitable to devote more attention to oats, I have sought to find varieties most suitable to soil and climate. A few of the results are given below. Sixty acres of oats were planted, the four chief being—Carter's Royal Prize Prolific, Algerian, Dun, and White Tartarian. Of these the former returned 25 bushels per acre, while the others were less prolific. As an all-round oats for general purposes, Carter's is by far the best. The remainder, whilst yielding well, are suitable for hay only. Under separate conditions—the seed being sown a month later—six other varieties were tested: Algerian, Clydesdale, Wideawake, American Banner, Welcome, and Swedish. The relative value and productiveness of these is given below in the order named. The Algerian withstood the drought the best, the product being specially adapted for hay purposes, Clydesdale is specially suited for chaff, while with the remaining four there were no special features. A third series of oats was sown in August. The reason for this was that the seed was not obtainable earlier, while some of the varieties should have been sown three months before. The collection consisted of Peerless White Bonanza, Carter's Royal Cluster, British Hardy Winter Dun, Black Winter (English), Lincoln, White Bonanza, Dun (Colonial), Potato, Swedish, Red Rust Proof, Hopeton, Giant French Yellow, Egyptian, and Canadian. The five principal of these were: Peerless White Bonanza, a splendid oat for chaff trade; the Royal Cluster is good for feed grains, hay, or chaff; the British Hardy Winter Dun stands dry weather well and makes a fine race-horse hay; while the Black Winter (English) possesses the same qualities; the Lincoln is suitable for general purposes in a damper district; the balance are unequal in value to the foregoing.

*Barley.*

The barley crops were more or less burnt off by the hot winds before they had matured; only sufficient was saved for seed purposes and small exhibits to show the different types. In addition to the usual malting barleys planted, three new introductions from Japan were tested, and two French skinless barleys.

*Rye.*

Six varieties of rye were grown including the common rye, Winter, Arctic, French, Spring, and Emerald. The latter may be called the speciality for this season. Besides being a decided novelty, it is a valuable acquisition, being the only rye which is thoroughly adapted for hay purposes. The straw, whilst being sufficiently strong to stand all weathers, is of a soft nature. As hay it is palatable to all kinds of stock,

stock, particularly horses. It may be sown at almost any period of the year, and being quick in growth and very productive is particularly adapted for grazing purposes. Although only 4 lb. of seed to the acre was sown, the yield was good and bulky. The Bathurst Spring Rye can be sown in the spring, much later than any other variety. This strain is the result of careful selection on my own part for several years. A special feature in it is that the straw is very suitable for fine collar-making, in addition to its value as a fodder.

#### Hay.

The hay crops were grown on 107 acres, and consisted of 42 wheat, 22 oats, 21 rye, 22 Hungarian millet. The average return was 18 cwt. per acre.

#### Green Fodders, &c.

Sixty-three acres were devoted to green fodders—rape, lucerne, maize, Early Amber cane, and imphee. All these suffered more or less from drought.

Ten acres roots, consisting of swedes, sugar beet, and carrots were fairly successful, having been planted just prior to a fall of rain. Forty acres of miscellaneous crops—potatoes, broom millet, tomatoes, and onions, &c.—are now suffering from the effects of the drought and promise to be comparative failures. Thirteen acres maize, including nine new varieties recently introduced, and 4 acres pumpkins are total failures.

#### Experiments, &c.

A large number of comparative wheat trials were made with various crossbred and fixed varieties supplied by Mr. Farren, the results of his own experiments, together with selected strains obtained from various foreign and colonial sources. With these were also included a collection of White Lamma wheats, gathered with considerable care from the most likely colonial growers, with the object of recovering, if possible, the old White Lamma grown in this district some twenty or thirty years ago and from which the present strain seems to have deteriorated. 1,250 descriptions were planted separately with single grains, every 6 inches, in rows 18 inches apart, the whole occupying about 4 acres. By this method every individual plant could be critically examined and its varied characteristics observed and recorded. From these plants a large number of selections have been made in each section, with a view to future competitive trials. Portions of these plots were manured with superphosphate and sulphate of ammonia, and superphosphate with nippo. This was worked in between the rows, but owing to the dryness of the season no beneficial influence on the plants was noticeable. Detailed particulars of all this work have been given elsewhere. The foregoing experiments, together with 3 acres of similar lots of oats, barley and rye, and the Nomenclature Plot, were under the care of student S. A. Walton, who has developed special aptitude for this important work. The "Nomenclature Plot" was continued this year and consisted of 300 selected and named standard varieties of wheat in single rows. This experiment has proved valuable in giving growers and others an opportunity of seeing at once the different characteristics and habits of the plant during all stages of its growth, when sown under exactly the same conditions.

These experiments have attracted considerable attention from all classes of visitors and favourable comment has been freely expressed on the work. In the report for 1898, reference was made to 3 acres having been laid down with Prairie, Cocksfoot and Perennial Rye-grass, and withstanding the fierce heat of the summer. It is gratifying to be able to state that, although these plants have been grown on poor soil on the uplands, they have been proof against the severity of a second trying season. Amongst the grasses which have been most successful may be mentioned *Paspalum dilatatum* and two new varieties, viz., *P. virgatum* and *P. stolenifera*. The former promises to be equally valuable and popular with the well-known *P. dilatatum*. The latter promises to be a very valuable acquisition in districts having a fair rainfall with only light frosts. The analysis by the Chemist shows its nutrient value to be very good. The following are also standing well the present drought on poor upland soil:—Perennial Red Clover, Alsike and Yellow Clovers, Sainfoin, Lucerne, Timothy, Meadow Foxtail, Crested Dogstail, Smooth Meadow Grass, and Sheep Burnet. The latter, which grows an abundance of herbage for a number of years, is very nutritious and is much relished by sheep. This plant has attracted the attention of visiting sheep-owners, who, in consequence of what they have seen, intend laying down their lands with it. In this connection I would mention that we have had 17 acres of rape sown for winter and spring feed, which, although grown on comparatively poor land, produced such a large quantity of rich, fattening food as to be a theme of conversation amongst sheep-owners, who made special visits to the farm. As a result of their investigations, they intend planting several hundreds of acres for themselves during the coming autumn. The several varieties of saltbush have also made vigorous growth, and from these it is proposed to plant out half-acre lots of each for feeding and seed purposes. Attention has also been directed to some of the best of our native grasses, which are now being brought into regular cultivation on the farm.

#### The Rainfall.

During the year the rainfall was only 17·43. This was the lowest record for twenty years, with the exception of 1888, when the registered fall showed 15·04.

#### Farm Implements.

Economy has been observed in the purchase of additional machinery and implements during the year. The most valuable and useful addition was the Union oil and gas engine, 6 h.p., which has been the means of saving labour and time in the various operations of threshing, chaff-cutting, clearing, &c. A good chaff-cutting plant has proved of very great value, as also a large seed-drill, a double-furrow subsoil plough, drill plough, and hill-side plough.

#### Expenditure.

Whilst the labour of the farm and the money returns have considerably increased for the year, the expenditure has remained stationary. There is no doubt that, with the return of favourable seasons, the reports from this farm in the future may be of an eminently gratifying nature.

A. A. DUNNICLIFF,

Manager.

Report

## Report of the Government Botanist.

My work, on behalf of the Department of Agriculture during the year, has mainly consisted of three divisions, viz. —

- (1.) Naming and reporting upon plants sent by correspondents of the Department all over the Colony.
- (2.) The preparation of articles on economic botany for the *Agricultural Gazette*.
- (3.) The supply of cuttings and plants for the Hawkesbury Agricultural College and the various Experimental Farms of the Department, and the supervision of the gardens and grounds around the Caves House, Jenolan Caves.

(1.) A mere list of the reports (sometimes of considerable length) would be useless here without copies of the reports themselves. The increasing number of plants sent for identification points to an increased knowledge on the part of the people of New South Wales of the advantages open to agriculturists and others to obtain technical information in regard to matters affecting their interests. Following are a few of the subjects, showing their miscellaneous character:—

- a) The vegetation of Mount Kosciusko.
- (b) Bracken fern and its eradication.
- (c) The establishment of collections of Australian grasses at the various Experimental Farms.
- (d) Notes on ensilage.
- (e) Red-gum leaves as fodder.
- (f) The collection of saltbush seed.
- (g) Weeds of New South Wales.
- (h) Tree-planting.
- (j) The sand-drift problem.
- (k) The Valonia Oak and tanning materials.

(2.) List of Articles published in the *Agricultural Gazette* of New South Wales during 1899:—

Some Exotic Grasses.—No. 2.—*Paspalum dilatatum*, Poir. No. 3.—The Carpet Grass of the Southern United States, America (*Paspalum compressum*, Nees).  
 Useful Australian Plants.—No. 51.—*Agropyrum velutinum*, Nees. No. 52.—*Agrostis venusta*, Trin. No. 53.—*Agrostis muelleri*, Benth. No. 54.—*Agrostis scabra*, Willd. No. 55.—*Apluda mutica*. No. 56.—*Aristida arenaria*.  
 Some Native Australian Fodder Plants: Tagosaste or Tree Lucerne (*Cytisus prolyferus*).  
 Two Cruciferous Weeds new to the Colony.  
 Indigenous Vegetable Drugs.  
 Native Food-plants.  
 A new White Clover from Africa.  
 The Weeds of New South Wales, systematically arranged (in part).  
 Abnormal Flowers.  
 Supposed Poisoning of Sheep by Native Fuchsia.  
 A variety of *Panicum decompositum* (a so-called Native Millet Grass).  
 A Burrless Trefoil.  
 Edible and non-edible Red-gum leaves.  
 The Valonia Oak.  
 A second contribution towards a Flora of Mount Kosciusko.  
 The Noogoora Burr or Cockle Burr (*Xanthium strumarium*).  
 Effects on Cattle by eating *Macrozamia* Roots.

I have, &c.,  
 J. H. MAIDEN,  
 Government Botanist.

28 December, 1899.

## Report of the Chemist.

I HAVE the honor to submit a short report on the work done in the laboratory of the Department during the year ending 31st December, 1899.

The analytical work includes:—

Soils.....	102
Fertilisers .....	119
Wheats .....	148
Butter, milk, &c. ....	62
Waters .....	19
Fodders and plants .....	46
Miscellaneous .....	38

Under "Miscellaneous" are included analyses of agricultural products not previously enumerated, such as wines, tobacco, preservatives, insecticides, &c., &c.

There is, in addition, a large amount of unrecorded work, such as personal interviews and advice to farmers and others, analyses and investigations for other officers of the Department, &c., &c.

The number of official papers dealt with during the year was 785.

A comparison of these numbers with those furnished in my reports for the previous years shows that the chemical work of the Department is continually and rapidly increasing in amount, and during the past year especially it has severely taxed the resources of our small staff.

This has rendered necessary the appointment of an additional assistant in the laboratory, and in August of 1899, applications for the position having been invited, the Public Service Board appointed Mr. T. H. Laby (who was the successful candidate at the examination held for this purpose) to the position. Mr. Laby had no previous experience in laboratory work, but I am glad to be able to report that his progress has been very satisfactory.

*Soils and Manures.*

The nature of the work done under these headings has been fully dealt with in previous reports, and it will not be necessary to enter into further details in connection with it.

*Wheat-testing.*

The wheat-testing mill has been at work with very little interruption throughout the year. It is becoming more and more availed of for testing the milling quality of grain by millers, wheat-buyers, and farmers, and also in examining Mr. Farrer's new varieties. It has been unfortunately impossible to examine all the wheats for Mr. Farrer which he required, but I believe it has, nevertheless, been of some service to him. As Mr. Gurney could not be spared for this work during the entire year, Mr. Farrer sent his assistant, Mr. Norris, down for two months to learn our method of wheat-testing. Mr. Norris took a great interest in the work, and his services were of very great value to us in enabling us to examine the more important of Mr. Farrer's crossbreds, and in relieving Mr. Gurney at a time when the pressure of other work was considerable.

I hope that a similar arrangement can be made during the coming year, as otherwise Mr. Gurney's entire time threatens to be occupied with the mill.

I stated in my last report that Governments of the other colonies were making inquiries about the testing-mill, with the object of establishing similar ones.

During the year the South Australian Government have erected a similar testing-mill at the School of Mines, Adelaide, which will be at work in a very short time.

In Victoria, also, the advisability of so doing is being strongly forced on the Government.

The large amount of routine analytical and advisory work has made it impossible for me to undertake any systematic investigations of any importance during the year. Amongst the more interesting of the work which was not routine work were the following :—

*The Fodder-value of Scrub-plants.*

A number of the commoner scrub-plants were collected from stations in different parts of the Colony by Messrs. Goldsbrough, Mort, & Co., and forwarded to me for examination.

The subject of the feeding-value of the different native scrub-plants is one of special importance to stockowners during dry spells such as we have recently experienced. Cutting scrub for feeding stock is only resorted to as a last expedient, and the examination referred to showed fairly conclusively that very few indeed of the common scrub-plants could be regarded as good feed. The nutritive value is in all cases low and insufficient by itself to keep stock in good condition for any length of time. In addition, the excessive proportions of indigestible fibre and of astringent matters in a large number of cases render them objectionable as fodders. There seems to me, however, no doubt that most, if not all, the scrub could be profitably used in conjunction with purchased feed, and the stockowner who understands the principles of stock-feeding should have no difficulty in providing a suitable ration at reasonable cost by mixing the cut scrub with proper proportions of such food as grain, molasses, &c.

The analyses of these plants, together with some notes on the interpretation of similar analyses, and the feeding of stock were published in the *Agricultural Gazette*.

*Composition of the Air in Collieries.*

Analyses of some samples of air from the return air-way of the Wallsend Colliery, at Newcastle, were made in order to report upon the suitability of the air-way in question as a travelling way.

As I am not aware of analyses of such air having been made in any Australian coal-mine, it may not be without interest if I briefly summarise the results.

Of four samples taken from different parts of the return air-way, all showed a deficiency in oxygen and an excess of carbonic acid compared with ordinary air. The figures being as follows :—

	Deficiency in oxygen.		Excess of carbonic acid.	
Sample 1 ...	...	0.85 per cent.	.....	0.16
„ 2 ...	...	1.55 „	.....	0.24
„ 3 ...	...	1.59 „	.....	0.28
„ 4 ...	...	0.85 „	.....	0.21

*Examination of Water from the neighbourhood of a Gold-dredging Machine in the Macquarie River.*

This examination was undertaken in order to ascertain to what extent the operations of the gold-dredge affected the water in the river, the opinion having been expressed that the river would become polluted by the stirring up of mud and sand, &c., to such an extent as to render it unsuitable for drinking, and even to destroy the fish. The result of the examination of water obtained from the immediate neighbourhood of the dredge and from different parts of the river which had been disturbed by its passage went to show that this was not likely to be the case, that the disturbance was of a very local and temporary nature, and did not affect the general condition of the water.

*Appointment of Experimentalist.*

Late in the year steps were taken to fill the position of Experimentalist provided for on the Estimates of the previous year. Applications for the position having been invited by the Public Service Board, a committee was appointed, consisting of Professor Liversidge, Dr. Tidswell, and myself, to examine the applications received.

The report of the committee was in favour of the appointment of Mr. R. Helms, formerly connected with the Agricultural Department of New South Wales, and at present holding the position of Biologist to the Government of Western Australia. Mr. Helms was accordingly appointed to the position, and will enter upon his duties by the end of January, 1900.

*Experimental Work.*

The benefit to the Department of the appointment of an officer like Mr. Helms, who will be able to devote himself to the carrying out of systematic experiments in subjects of interest and value to farmers, will be very great. In

In my previous report for 1898, I submitted a general outline of the kind of work which could be advantageously carried out by the Chemist, provided he had the necessary assistance.

During December I visited the different farms attached to the Department, and consulted with the farm-managers as to the possibility of their co-operating with me in this work. I am glad to say that I found them all fully convinced of the necessity for carrying out systematic work of the kind and eager to co-operate.

The following is briefly the nature of the work I propose to carry out in conjunction with the farm-managers at the different farms:—

At Coolabah, Wagga, and Bathurst a series of experiments will be carried out in triplicate, with the object of testing the kind and quantity of manure, and the treatment of the soil, which gives the best result for certain crops. These experiments will be carried out in small plots, and they will be so arranged as to be of an educational as well as experimental character; that is to say, a part of them will be laid out on well-known lines, so that students and farmers will be able to see the actual effects of the different manures on different crops. Other plots will be of an experimental nature, and will test new manures and new combinations of manures. In addition to these, which will be conducted systematically at the farms mentioned, similar experimental plots on a larger scale, say 4 or 5 acres each, will be arranged by Mr. Peacock at Coolabah, and Mr. McKeown at Wagga.

The object of these larger plots will be to confirm the results obtained from the smaller ones, and also to afford an object lesson to farmers who may be inclined to doubt the results obtained on small plots. These plots will, necessarily, be fewer in number, and will be confined to those experiments whose results are fairly well known beforehand.

At Bathurst, Mr. Dunnicliff, in addition to the plot experiments, has promised to have carried out a number of pot experiments. The advantage of these experiments is, that they can be conducted with much greater accuracy than is possible with experiments in the field, and are more under control. These pot experiments will be carried out in duplicate in the Sydney laboratory.

A series of experiments will also be carried, under Mr. Dunnicliff's supervision, into the feeding value of a few of the fodder plants found to be most suitable to the district. These experiments will be carried out on sheep, in order to test the digestibility of the different fodders. These experiments will have to be carried out with extreme care, and the laboratory at Bathurst, which has been already partly fitted up, will be used in the chemical examination of the fodders, &c., &c.

In the laboratory at Sydney, in addition to the pot experiments already referred to, special attention will be devoted to soil bacteriology. The effect of different treatment of the soil upon its nitrifying power will be particularly studied, and the best means of increasing and maintaining the power of nitrification.

This will also afford invaluable information as to the fertility or otherwise of soils sent for examination, and assist in suggesting means for improvement of the soils in question.

Mr. Helms has worked with me on this subject just before he went to Western Australia, and as soon as he arrives here this part of the work can be at once proceeded with.

As time permits, the subject of the constitution of the wheat, grain, and the possibility of its improvement, in which some work has already been done, will be continued.

#### Publications.

The following articles, dealing with matters connected with Agricultural Chemistry, appeared during the year in the *Agricultural Gazette*:—

"The Milling Qualities of Wheats commonly grown in New South Wales."	June.
"Chemical Notes".....	} June.
"On the Germination of Grain passed through Sheep".....	
"Analyses of some Scrub-plants".....	
"Analysis of Sea-weed".....	} July, Sept., Dec.
"Formulae for Preparing Fertilisers".....	
"Soil Analysis and its Value".....	September.
"The Fodder Value of some common Scrub-plants".....	} October.
"The Interpretation of Analyses of Fodder and Feeding Stuff".....	

Also, in conjunction with Mr. E. H. Gurney.

"Analyses of Commercial Fertilisers—1899 List".....	May.
"Milling Notes on the Lambrigg Harvest of 1897".....	September.

In conjunction with Messrs. Allen, Blunno, and Froggatt.

"Insect and Fungus Diseases of Fruit-trees and their Remedies".....	January.
---	----------

This article, together with those appearing in the *Gazette* for 1898, were collected and published as a separate publication.

Mr. Gurney also contributed a series of articles, entitled:

"Explanation of some Scientific Terms met with in Agricultural Literature"	Jan., Feb., May.
--	------------------

In conclusion, I wish to express my great indebtedness to my assistants (Mr. E. H. Gurney, F.C.S., and Mr. Barker) for the valuable and reliable assistance they have always given me.

I have, &c.,

F. B. GUTHRIE.

#### Report of the Dairy Expert.

Sir,

Department of Mines and Agriculture, Sydney, 2 January, 1900.

I have the honor to submit the following report on the dairy industry of the Colony for 1899:—  
Compared with previous seasons, we have been blessed with a good rainfall, and in consequence have had what might be considered good feed for the bulk of the dairy cattle throughout the Colony. This, together with the increase which has taken place in dairying during the past twelve months, has led to a very greatly increased production of butter over that of 1898.

The export from New South Wales for the season 1898-99 amounted to 48,589½ cwt. (for the year ending 30th June, 1899). For the season 1899-1900 we shall almost double this, as with little more than half the season over I find that 101,574 boxes—or equal to 50,787 cwt.—were shipped up to last week, and add in

adding this week's shipment, which will amount to about 2,500 cwt., it brings the total up to about 53,287 cwt. for the season to date. This, as it is seen, means a big increase on the whole of last year's export. There is no better way of judging of the strides which dairying is making in this Colony.

This increase in export goes to show that not only is the industry advancing here, but that our butter is gaining in popularity in England. There is yet very great room for development in this Colony, and with good seasons in a few years time I expect to see the number of dairy cattle in the Colony multiply by leaps and bounds. It is a remarkable fact that while during 1898, when all other classes of live stock showed a falling off in number, the dairy cattle showed an increase. This is evidence that, despite droughts and bad times, the dairying industry was regarded by the farmer as the one which was to be his stand-by. Dairying means ready money, and unlike wheat or maize growing, even if we have a drought it is impossible to lose the work of a whole year in the industry.

During the year a good deal of my time has been given to the investigation of what may be termed milk and butter diseases. When I state that 325 samples of milk, cream, and butter have been subjected to bacteriological examination, and reports issued on same, some idea can be formed of the amount of this work done. I might mention that I consider this work is only in its initiatory stage, because when factory managers recognise the fact that, as Professor Lloyd pointed out in his report to the British Government, nearly all taints of dairy products are due in some way to the action of micro-organisms, they will avail to the fullest extent of the facilities placed at their disposal by this Department in discovering the causes of taints and troubles, and procuring a remedy therefor.

A considerable amount of attention has also been devoted to the question of pasteurisation, as I have foreseen the trouble which we are going to experience with butter containing undue percentages of preservatives. The British Dairy Farmers' Association, which is perhaps the most powerful body of its kind in the world, has passed a resolution which has been submitted to the Select Committee at present making inquiry into the question of preservatives, to the effect that the use of preservatives, other than common salt, should be altogether forbidden in butter-making. Many experts who gave evidence are of opinion that manufacturers ought to be allowed to use half of one per cent. of preservatives, such as borax or boracic acid, in the manufacture of butter, and if any quantity be allowed it is not probably that more than this half per cent. will be approved of. This will mean that a great many of our factories will have to alter their methods considerably in order to put a butter on the English market of fair keeping quality.

All experience goes to show that, when properly done, pasteurising is the one thing which will take the place of excessive preservatives, so as to ensure that our butter keeps well until consumed. It is a remarkable fact that at the two State Butter Shows which have been held by this Department the highest marks have been obtained by pasteurised butters, in the face of the fact that there were at least twelve unpasteurised butters for the one pasteurised exhibit.

I find that the Department of Agriculture of the United States has been making some experiments with regard to pasteurisation of butter for shipping to England, and it is significant that, though those who were entrusted with the experiments had no previous experience of the work the butter which they made, comprising about twenty samples, in every instance was awarded a higher total of points than butter made from the same cream unpasteurised. The scoring of points was done by a committee of experts, who had no idea whatever of the different conditions under which the butter was manufactured, and in summing up the United States authorities state that it is probable that pasteurisation will become general in America, and will be a distinct advantage if butter is to be manufactured for export.

In connection with this question of pasteurisation, I desire to point out that, as I previously stated in the *Agricultural Gazette*, the running of sour cream through a pasteurising machine does not mean pasteurising in the proper sense of the word. The cream must be treated as it leaves the separator, or either the milk must be pasteurised, because, whether it be the milk or cream thus treated, it must be pasteurised before fermentation has made any progress. Pasteurising sour cream may in some instances do good, but at best it is a very unreliable method, and it will be found in this Colony, where our temperatures are so high as to aid the rapid development of fermentation, pasteurising the whole milk before separation will give the best results.

In connection with this question of pasteurising, the Department has been supplying, free of cost, pure cultures of *bacillus acidi lactici* (lactic ferment) to those factories that have pasteurisation. Some trouble has been experienced in getting the managers of the separating stations to observe sufficient care in the cultivation of the *starter* from these lactic ferments. It means that the utmost cleanliness must be observed and the milk to which the ferment is added must be thoroughly pasteurised or almost sterilised if good work is to be done. Some factories have been merely running the milk through a machine for one minute, and then adding the *starter*. This is ridiculous, as the milk should be pasteurised for at least one hour at a temperature of 165 degrees before the ferment is added. Unless these instructions are strictly carried out, good results will be more a matter of chance than certainty. This ferment has, when intelligently used, been highly spoken of everywhere, and one large factory on the North Coast found it so vigorous and so pure that they were enabled to keep cultivating it and doing good work from it for three months without getting a renewal of the ferment. It is also worth pointing out that this ferment has been adopted, even by factories which do not pasteurise, for the purpose of ripening their cream during the cooler months of the year, and thus enabling them to have a uniform butter. The Unanderra Factory, which won the Government prize at the Berry Show for unpasteurised cream, ripened their cream by ferments supplied by this Department.

To encourage progress along this line, the Department has given a couple of pasteurising plants as prizes—one on the South Coast and one on the North Coast.

There are many districts in the Colony where dairying is too primitive or too scattered to fully avail of the advantages which may be gained by pasteurising. This is owing to the fact that the farmers are living too far from separating stations and can only utilise the hand-separator, and this, of course, means that to such people pasteurisation on proper lines is impossible.

In connection with the pasteurisation of butter, one of the large firms in Sydney, namely, the Fresh Food and Ice Company, have been paying  $\frac{1}{2}$ d. per lb. extra for butter properly made from carefully pasteurised cream. This has resulted in material benefit to the people in some districts, and I have noticed that this gain in price meant over £300 a month to the farmers of Shoalhaven during the summer of this year. It may be mentioned that the factories in this district were encouraged to take up pasteurisation by this Department.

"Fishy" Butter.—The cables from London tell us that a considerable number of complaints have been received of "fishiness" in Australian butter; and this is not to be wondered at. A couple of months ago, when the first intimation of "fishiness" was received, I made investigations at some of our separating stations, which went to show that the organism which, in my opinion, causes "fishy" butter, overruled everything else present in some of these factories. Shall we be surprised at this when I state that though some of these separating stations have been in existence for ten years, they have never received a coat of lime-wash or any other substance which would serve to destroy injurious micro-organisms. I have no doubt whatever but that "fishiness" in butter is due to the action of a micro-organism, and in some of these factories, though there is no bad smell, the dust on the wooden rafters and ceilings has not been disturbed for years save by the currents of wind which transfer this dust, bearing as it does fermentation organisms, to the milk and cream. Sterile milk exposed in one of these factories for a couple of months showed scarcely anything else but myriads of the organism which, in my opinion, causes "fishy" butter; and I have since found out that butter made from this cream turned out "fishy" on its arrival in London.

I would like to see an Act passed making it compulsory for every separating station and butter factory to lime-wash their premises inside and out at least twice a year. If this be done, I am certain that it will save hundreds of pounds annually to the dairying industry of this Colony.

#### *Imported Stock.*

The imported stock which this Department brought from Europe have been making good progress. The animals have been transferred from the farm at Camden to one at Berry, which is in a larger dairying centre. The cows and young stock are looking remarkably well, and are milking very heavily. Some of the young bulls have been sold at good prices, and I anticipate a very keen demand for the progeny of these imported animals. In no way can dairying be advanced so much in this Colony as by the general improvement of our dairy cattle, and in no way can the Department possibly bring about this improvement as well as by the grading and distribution of sires throughout the Colony. The bulls which were not required at the stud farm have been lent to the agricultural societies for utilisation by the dairy farmers. In some instances their services have been very fully employed, but in others, owing to want of facilities in getting the cows to the centre where the bull was stationed, the animals have not been the success that one should expect. A scheme is under way for the better distribution of these imported sires, and I have no doubt that they will be in a position to be more utilised by the dairy farmers under that system should it be adopted.

#### *Education.*

Our educational institute at the Hawkesbury Agricultural College has been doing good work, and some very capable students have been turned out there during 1899. We have, however, felt the great want of a commercial training, *i.e.*, the handling of butter in large quantities, for these students, and I am pleased to say that the Department has now made arrangements with one of the principal factories of the Colony, *viz.*, the Berry Central Factory, whereby students can be admitted thereto for education in the manufacture of butter in large quantities. This is bound to have a very material effect on the industry in time, because we shall there be enabled to turn out men who should do credit to the Colony as factory managers, and it must be borne in mind that progress must to a great extent depend on our factory managers.

#### *Condensed Milk.*

I have given some attention to the question of the manufacture of condensed milk in the Colony, and find that the troubles due to organisms of fermentation make it in this warm and moist atmosphere rather difficult to manufacture with success. There are, however, certain districts in the Colony where milk can be produced which would reach a condensing factory in a suitable condition for condensing, and no doubt in time some of these districts will be availed of, because this is an industry for which there is a good opening in this Colony. Concentrated milk, or unsweetened condensed milk, will in consequence be used to a much greater extent.

#### *Tuberculosis.*

The question of tuberculosis in dairy cattle has received from me some attention, though not so much as in 1898, because we have now attached to the Department Mr. Stewart, whose duty this more particularly is. From work done at Wagga and elsewhere, it is very evident to me that there is a good deal yet to be learned regarding this disease, and I am preparing for the *Agricultural Gazette* an article, a copy of which will be read at the Science Congress to be held next month in Melbourne, which will go to show that there is much yet to be learned regarding the use of tuberculin as a diagnostic agent for tuberculosis in cattle.

I have found considerable benefit from the assistance given me by Mr. Field Assistant Pederson, and my laboratory assistant, Mr. Denston.

I have, &c.,

M. A. O'CALLAGHAN

To D. C. McLachlan, Esq., J.P., Under Secretary for Mines and Agriculture.

### Report of the Fruit Expert.

I HAVE the honour to submit herewith a condensed report on the work accomplished under my branch during the year 1899.

During the year I have given numerous practical demonstrations and lectures in the different fruit-growing districts of the Colony. The meetings were, as a whole, well attended, and particular interest is always shown in the practical part of the work—especially so in pruning fruit-trees in the winter, spraying and fumigating for insect and fungus pests, processing fruits, &c. In many instances I have advised intending orchardists which fruits would succeed best on their particular soils, and this information is greatly appreciated, as many mistakes have been and are still being made by the inexperienced intending orchardists beginning without any knowledge as to which fruits are best adapted to their soil and climate. This is one of the many causes why so many growers have become disheartened with fruit-growing. Certainly there are many other reasons why growers have failed to make this business pay—among these being a want of proper cultivation, planting poor varieties, selecting unsuitable soil, not manuring when the soil has become impoverished, and last, but not by any means least, proper drainage—this latter being most essential on all land which has a heavy subsoil. On the other hand, those who have given due intelligence and attention to this industry have been and are still doing well, and I find many such increasing the area under fruits—which fact is in itself the best proof that fruit-growing is paying them.

#### *Advising Irrigation Settlements.*

During the year I have made two trips each to the Hay and Wentworth Irrigation Settlements for the purpose of advising how best, when, and how often to irrigate, how to work the holdings, &c., as also to advise which fruits were most suitable for each holder's allotment, there being a great diversity in the nature of the soils even of adjoining holdings. The Secretary of the Hay Settlers' Irrigation Committee met me and drove me around to each of the different holdings, when I had an opportunity of meeting each individual settler and inspecting his land and advising as to his particular needs. I regret to say that while some of the allotments are very good, many of them are almost worthless for fruit-growing, and it is matter for great regret that any poor soil should have been put under water for this purpose when there is good land available.

At Wentworth, Mr. Wilson, the engineer in charge of the irrigation scheme, drove me over that area which is under water, and I can only reiterate what I have said in my previous reports—that as far as fruit-growing is concerned, a worse place could possibly have been chosen.

It is to be regretted that some one irrigation scheme has not been started on land, all of which would have been such as was most suitable for fruit-growing, as New South Wales has to import all of her dried fruits, while we have land which would produce the very best fruits, and instead of being importers we should be exporters of raisins, sultanas, currants, and other dried and canned fruits, as also of apples and pears, which at present are imported in large quantities. Oranges and lemons could also be profitably grown both for local requirements as also for export on some of the best lands in the interior, and I predict that before many years all the best lands along the river where a good supply of water is available will be taken up for fruit and cereal growing, but principally the former.

In March I acted as arbitrator for the Department in the case of Beckingham v. the Secretary for Mines and Agriculture, in which the former sought to recover compensation for the destruction of his vineyard. Mr. Beckingham was represented by Mr. Zani, and Judge Backhouse as umpire in the event of our not agreeing as to the compensation.

During the year some interesting experiments have been carried on in spraying and fumigating at Galston, Richmond, and Kurrajong—detailed reports of which were furnished from time to time, and have already appeared in the *Agricultural Gazette*, so that it is needless for me to go into figures in this report. The results in each case I might, however, mention were very gratifying. At the present time the Entomologist and myself are conducting experiments at Mittagong with the codlin moth—results of which will not be known until autumn. All these results should prove of great value to the intelligent fruit-growers, as I have no doubt they will, and I am pleased to say that this year, after the publication of the results of the fumigating experiments, I had many inquiries and letters as to this process of dealing with scales, not only from correspondents in our own Colony, but even from South Australia and Victoria.

The work of preparing models of the different fruits has made satisfactory progress this year, and I am pleased to say that we will have about seventy to eighty new specimens to add to our present collection. These will be of great assistance for purposes of identification, and in order to facilitate growers in identifying their own, as well as to give them an idea of the better varieties of their respective kinds of fruits to grow, I have had recently published with each month's Orchard Notes cuts of the better varieties of fruits. These will continue to appear, when space permits, throughout the year.

Besides the Monthly Orchard Notes, I have contributed to the *Gazette* various articles pertaining to the growing and processing of fruits, the destruction of orchard pests, &c., as well as answering numerous inquiries through the *Gazette* and hundreds of inquiries which have been addressed to me personally. All this, with my official correspondence, has had to be done without assistance in the limited time which my travelling engagements allow me at headquarters, and necessitates a great deal of night-work and hard work.

I have been asked and have judged at many of the larger shows all over the Colony; in most instances acting singly, but occasionally in conjunction with others. Many requests have had to be refused owing to previous engagements. Also, acting under instructions, I have attended the meetings of the committee appointed for the purpose of selecting competent judges to act at any of our larger shows, a list of these having already been published.

In September last, with other New South Wales delegates, I visited Melbourne in order to attend the Conference held there to consider the best means of dealing with the Phylloxera question, and for the enactment of a Vegetation Diseases Act which would act satisfactorily for all the Colonies.

*Fruit*

*Fruit Exhibit at the Royal Agricultural Show.*

Last season some fine specimens of both dried and bottled fruits were put up at the Hawkesbury Agricultural College and Wagga orchards, the dried sultanas, peaches, and apricots being of especially good quality; and I had staged at the Royal Agricultural Show a good exhibit, comprising both dried and bottled fruits, which occupied a space of 180 square feet. This exhibit proved very attractive and instructive, and received favourable comment from all visitors to the Agricultural building and the metropolitan papers, the latter classing it as the best fruit exhibit ever staged in New South Wales.

This exhibit was afterwards broken up, and portions of it shown in different parts of the Colony; but I do not consider that such exhibits will do the most good educationally unless they are accompanied by a person who is competent to explain the methods of processing the different fruits.

A considerable portion of my time has been spent at the various Departmental orchards supervising, and at times assisting in doing the work; and I consider the condition of all these orchards is such as to reflect in every way great credit on my department. The orchardists at the Hawkesbury College and Wagga orchards, Messrs. Alford and Hogg, have in every way done their utmost to carry out my instructions, and have done their work in a thorough and creditable manner. At Pera Bore, Mr. Gorman, the Manager, who has had considerable experience in orchard work, has given the orchard thorough attention, and has done as good work as could be accomplished under existing conditions.

A few of the better varieties of citrus-trees have been ordered from California, which, on arrival, will be planted at the Hawkesbury Agricultural College orchard; and, when the trees have made a good growth, buds from same will be available for distribution, our aim being to assist the growers in every way possible to obtain the very best fruits of their respective kinds.

At the different orchards many new fruits have come into bearing this year, the names of a few of those showing worthy of special mention being given below.

Twice during the year I have examined students at the Hawkesbury Agricultural College in orchard work; in June I examined the special course students in both practical work and theory for certificates, and in December I examined the diploma students in practical work.

*Hawkesbury Orchard.*

Notwithstanding the fact that the greater portion of the land here is poor and altogether unsuitable for orchard purposes, we will have a good crop of fruit this year. To protect this we have been compelled to erect a 6-foot wire-netting fence with a barbed wire at top, bottom, and centre. This, I consider, will be a barrier to the outside public, and will help to save much of the fruit, a large quantity of which was destroyed by night hawks last year.

A good collection of all fruits grown were bottled and made into jam, and some of the varieties suitable for the purpose were dried, and we were successful in turning out a good sample of these fruits.

Citrus fruits are looking fairly well; some, however, have gone off, owing to the poor soil in which they are growing.

Pears are making a fair growth, and a few trees are carrying a little fruit this year.

Peaches are carrying a medium crop, the quality being excellent. Those which are doing best are the Alexander, Lady Palmerston, Susquehanna, Elberta, Henrietta, Lovell, and Early Crawford.

There are many varieties of Japanese plums growing on the poor white sand, and these are cropping well.

Persimmons are carrying a good crop of fruit again this year.

Apples are planted on some of the very worst soil in the orchard—on soil which is in every way unsuitable for their growth—consequently these are not doing well, and are no credit to the orchard.

A good many of the grapes have been grafted to better varieties, and most of the vines are carrying good crops of excellent fruit. The Gordo Blanco does particularly well on the deep, red sand here; but it is too early as yet to give any reliable information as to the other varieties recently grafted.

Sultanas are very susceptible to the black spot in this district, and it is a question whether they will prove profitable here in consequence.

The cannery and packing-house has been completed with an 8-h.p. boiler, the steam from which is used for cooking the bottled fruits and jams. The house is used for packing and storing any fruits we have.

There is a small nursery in connection with this College from which last year we distributed a few hundred dormant bud oranges in lots of from one to four. This will help to distribute these better varieties over the Colony, so that those who wish may in the future take buds from them for the purpose of working over any worthless stock in the orchard.

*Wagga Orchard.*

I am pleased to have to report that this is the best season we have experienced at Wagga for the last four years, and, although we had succeeded by a thorough system of cultivation in keeping the trees and vines growing well, they are this year, owing to the late spring rains, doing even better than we had hoped. The quality and size of the fruit is good, and many new varieties are this year bearing fruit for the first time.

The apricot-trees have now quite recovered from the damage done them last year by the grasshoppers, and we have just completed drying and canning the crop. The size and quality of the fruit was excellent, and the trees carried a fair crop. Most of the trees had to be thinned to keep them from bearing heavily, as when trees are allowed to overbear in this dry district the fruit either drops before ripening or withers slightly about the time of ripening, in which case it makes only an inferior dried fruit. Therefore, to enable us to get the largest and best quality of fruit, we have to thin systematically and always do our work in such a manner that there is no more fruit left on the tree than it can properly develop in a dry season.

The following varieties of apricots have done well this season viz.:—

1899.				1899.			
St. Ambrose	...	Ripening	14th December.	Mansfield Seedling	Ripening	23rd December.	
Newcastle	...	"	3rd December.	Warwick	...	"	14th December.
Luiyet	...	"	17th December.	Moorpark	...	"	27th December.
Hemskirke	...	"	22nd December.	Alsace	...	"	26th December.
Peach	...	"	30th December.	Kaisha	...	"	28th December.

Peaches.—Although the trees grow well, they have not yet borne heavy crops. I consider, however with age that they will bear larger crops. The following varieties have borne good fruit, viz. :—

1899.				
Lovell	...	...	Ripening 24th February	Freestone ; large, yellow flesh, good drying and canning.
Alexander	...	..	26th November	Early ; one of the best dessert varieties here.
Bonanza	...	...	10th April	Freestone ; white flesh, medium size, good flavour.
Comet	...	...	10th April	Freestone ; yellow flesh, medium size, good canning and drying.
Shanghai	...	...	2nd February	Large ; yellow flesh, good canning and drying.
Elberta	...	...	27th February	Freestone ; large, yellow flesh, good canning and drying.
George Fourth	...	..	23rd November	Freestone ; large, yellow flesh, good quality.

Cherries.—The young trees of some varieties have borne from 5 to 10 lb. this year, the following being some of the most promising kinds, viz. :—

1899.					1899.				
Elton	...	...	Ripening 10th November.		Louis XVIII.	...	Ripening 14th November.		
Black Eagle	...	..	13th November.		Kirkland's Mammoth	..	3rd November.		
Centennial	...	..	12th November.		Harrison's Heart	...	10th November.		
Yellow Spanish	..	..	14th November.		Twylford Bigarreau	..	31st October.		
Governor Wood	..	..	7th November.		Early Strawson	...	24th October.		
Black Tartarian	..	..	30th November.		Tally-Ho	...	9th November.		
Napoleon Bigarreau	..	..	14th November.		Scarlet Bigarreau	...	10th November.		
Rockpat	...	..	9th November.		Elizabeth	...	10th November.		
Black Hawk	...	..	9th November.		Bigarreau d'Hollande	..	10th November.		
Florence	...	..	20th November.		Bedford's Prolific	..	4th November.		
Bigarreau de Mezel	..	..	9th November.		St. Margaret	...	12th November.		

Plums.—Most of the plum-trees are carrying small crops of fruit this season, the following being some of those which fruited last season, and up to the present appearing to be the most promising for this district, viz. :—

1899.					1899.				
Kelsey	...	...	Ripening 30th March.		Diamond	...	...	Ripening 3rd February.	
Prunus Simonii	...	..	7th February.		Prune de Catalogue	..	..	16th February.	
Tragedy Prune	...	..	25th January.		Perdrigon Blanc	...	..	10th March.	
Fotheringham	...	..	20th January.		Prince of Wales	...	..	20th January.	
Washington	...	..	29th January.		Evans' Seedling	...	..	9th December.	
Oullin's Golden	...	..	5th March.		Purple Gage	...	..	10th November.	
Dennison's Superb	..	..	31st January.		Reine Claude de Bavay	..	..	20th January.	

Prunes are growing well, and many of them are carrying a little fruit, but they appear to be rather small. We will dry some this season as a sample.

Apples.—About fifty varieties are carrying a few apples this season for the first time. The trees are making a good growth, and the young fruit is free from codlin moth, although many are affected with the disease known as bitter pit, notwithstanding the fact that the trees have been sprayed with salt, sulphur, and lime, and Bordeaux mixture.

Figs are not doing as well as I would like, the dry seasons having affected them more than any other trees.

Pears are making satisfactory growth, and some of the trees are carrying fruit. Last year the crows took them before they were fully grown, but owing to the fact of there being so few it does not pay to keep a boy there to shoot the crows.

Olives.—Last season we made a very fair sample of oil, as also some pickles. The trees are doing very well, and are showing for a good crop again this year.

Grapes.—These have made a very good growth, and nearly all the varieties are carrying more or less fruit. As there were a greater number of table and wine grapes growing here than were profitable, I had a few of each variety grafted with Sultanas, this being the most profitable grape we grow here, the dried product last year selling at 7d. per pound. It will be interesting to growers to know how Sultanas will take when grafted on the different kinds of wine and other grape vines. The most useful lesson, however, I consider to be gained from this experiment for the vigneron will be the results shown from grafting Sultanas on the three resistant stocks, Riparia, Rupestris, and Solonis.

On the former stock the grafts took well, and the vines are making good growth and showing a fair crop.

Rupestris are showing nearly as well as Riparia, while the Solonis did not take the grafts so well ; the growth has not been nearly so vigorous, and the vines are carrying very little fruit. This is the second season since the grafts were put in, and gives a fair conception as to which of these three is the best stock to work upon in this district. Summing up, I consider the Riparia good, and the best stock of the three—the

the *Rupestris* following closely; but from the results we have had with the *Solonis* it is valueless as a stock for the *Sultana*, being too weak a grower. The following is a list of the varieties grafted to *Sultanas*, and which did well, together with a list showing those varieties on which the grafts did not take well, viz. :—

Varieties which took well.

Allen	Calabrian raisin	Ciotat	Linto
Leveir	Black Muscat	Golden Chasselas	Folle Blanc
Catawba	Baxter's Sherry	Black Damascus	Malbeck
Rebecca	Waltham Cross	Cook's Seedling	Black Burgundy
Delaware	Burgundy	Champion Muscat	Grand Turk
Lincoln	Sauvignon	Royal Vineyard	Cinsaut
Wilder	Zinfandel	Baxter's Sherry	White Hermitage
Elsinburg	Golden Queen	Chasselas Rose	Pride of Australia
Bell's Seedling	Golden Champion	Morrillon	Gonais
Salem	Carignane	Late Riesling	Thompson's Pride
Miles	Syrian	Mataro	Black Malvasia
Diana	Red Lombardy	Mission	" Morocco
Ihnas grape	Early White Malvasia	Shepherd's Riesling	Raisonette
Hermitage	Early Chasselas	Trebbiano	Emperor
Trentham Black	Mrs. Pearson	Aucarot	Semillon
Dutch Sweetwater	Chasselas de Sillery	Shiraz	Riparia
Black Muscadine	Cornichon Brown	Verdot	Alicante
Black Hamburg	Lady Downes	Grenache	Duc de Magenta
Riesling	Cornichon Blanc		

Varieties on which grafts have not taken well.

White Prince	Corinth	Jerusalem	Chili Rose
Cabernet Sauvignon	Royal Ascot	Dr. Hogg	Barbarossa
Gros. Guillaume	Chasselas Musque	Gros. Maroc	

*Bathurst Orchard.*

This orchard is making fair headway, the trees putting forth fairly vigorous growth from year to year. Last season a few varieties bore a few odd fruits of good quality for the first time, and this year most of these varieties are again showing a few fruits.

Apples.—There are almost seventy-five varieties of apples planted in this orchard, most of which are doing very well, and about thirty varieties of which are carrying some fruit this season. Codlin moth has made its appearance here this year, and precautions are being taken to exterminate it.

Pears.—These trees are growing well, and the Bartletts are carrying a few pears this year. During the time of pruning one tree was found to be badly affected with San José scale. This tree I painted twice in the same day with pure kerosene, which appears to have exterminated the disease, as I have not been able to see or find one live scale. I may state that I treated this tree in the presence of a large audience who were present at one of my practical demonstrations in pruning and spraying. Many of those present feared that the treatment would kill the tree, and have since visited the orchard to observe its effects, and at present there is not a pear-tree which has put on more growth nor is there a healthier-looking tree in the orchard.

Cherries.—This fruit does exceptionally well in this district, some of the varieties having borne particularly good fruit this year; but the trees are as yet too young and small to carry very great crops. The St. Margaret's, Bigarreau de Hollande, and Florence bore the best quality of fruit this season of those trees which have fruited.

Peaches.—Although the late frosts were very severe in this district, they did not destroy the little fruit which had set. Consequently there will be a few on four or five varieties this year. The trees are making very good growth.

Apricots.—These trees are growing well, and in the spring there was a very big showing of fruit on them, but the late frosts destroyed all of it.

Plums and prunes are making excellent growth in this orchard, and there are sixteen different varieties bearing more or less fruit this season.

Walnuts are making satisfactory growth.

Almonds are also making satisfactory growth, but both walnuts and almonds having been planted barely eighteen months, it is as yet too early to form any opinion as to whether or not they will be a success here.

*Pera Bore Orchard.*

This orchard is looking well, most of the trees and vines making fair growth.

Citrus-trees.—These trees at present are doing as well as could be desired, and are quite free from all diseases, consequently spraying has not been necessary as yet. Some of the trees which have borne have produced a good quality of fruit, and such as should find a ready sale in any market.

Apricots.—These trees have borne a little fruit for the first time this year, which has been dried. This is the first which has yet been processed at this farm; however, each year should see an increase in the quantity of fruit until the trees have attained the age of 12 to 16 years.

Peaches are growing well, but as yet have not shown any good fruiting qualities.

Olives.—These are doing well, and are carrying a little fruit. This tree will, I consider, do exceptionally well in this climate.

Prunes.—These trees continue to look very bad, and I fear will never prove profitable here.

Vines.—These are making good growth, although as yet they are too young to bear any fruit. Judging from a few grapes I have picked on the settlers' holdings, these should prove profitable here.

Mr. Gorman has done his best to make this place a success, but has been handicapped in not having sufficient water at times. If sufficient water is available, however, the quantity of fruit should increase from year to year from now on.

*Wollongbar*

Wollongbar Orchard.

This is the smallest of any of the Departmental orchards. Oranges and lemons do fairly well here. Pineapples are doing very well and should prove a profitable crop to grow, especially the Cayenne.

Owing to the prevalence of fruit-fly, it is almost impossible to make a success of raising medium and late season soft fruits, while the orange and other citrus trees suffer from scales and borers in this district.

Olives.—I do not consider that these will ever prove of any value in this district.

Lemons.—This fruit crops well here, but as the tree attains to any age the fruit is inclined to get very thick-skinned.

Oranges.—These make the best growth of any trees in the orchard, but so far the quality of fruit taken from the trees has been very ordinary. When the trees are older they may produce a better quality of fruit, as I found on some of the older trees in this district some very nice specimens of this fruit.

I have, &c.,  
W. J. ALLEN.

Report of the Inspector under Vegetation Diseases Act.

TIMBER AND AGRICULTURE.

Fruit.

I HAVE the honor to submit the attached schedules of particulars showing the duties performed by me under the Vegetation Diseases Act from 1st January to 31st December, 1899.

The number of steamers carrying fruit and plants to Sydney attended to were 740, and 848 inspections were made on those steamers. Mr. Inspector Chomley accompanied me during about a third of the inspections.

The number of cases of fruit and plants fumigated for export were 84,399, and 2,450 certificates were issued for such fruit, and copies of the certificates were forwarded to the Colonies that imported the fruit.

Timber for Export.

Some of my time was taken up in the classification of timbers, and I have inspected 666,586 superficial feet, which were exported to various countries, and have issued sixty-six certificates for the timber inspected.

The distribution of seed imported by the Department was carried out by me. I also supervised the Departmental exhibit at the Royal Agricultural Show.

I may state that I have been engaged on public duties overtime to the extent of 766 hours during this year, also on all the public holidays, with the exception of two.

J. MARTIN, JUN.  
Report

### Report of Inspector under Vegetation Diseases Act.

I HAVE the honor to report that during the year 1899 I have supervised the fumigation of 175,941 cases of fruit, and issued 4,378 certificates, as shown by accompanying sheet, in addition to which I have inspected various consignments of fruit and plants from the other Colonies and foreign countries, particulars of which are furnished by Mr. Martin.

Acting under instructions, I spent some time at Galston carrying out tests with various spraying solutions, the result of which is included in a report by Mr. W. J. Allen, and has appeared in the *Agricultural Gazette*. The administration of the Vegetation Diseases Act has had a very good effect on the condition of Queensland bananas, and has also prevented the importation of tomatoes and peaches affected with the Queensland fruit-fly; there has been a great improvement in Tasmanian apples, although large quantities have been condemned for black spot—carelessness in packing is noticeable, as good and bad fruit are included in the same case. The presence of San José scale and codlin moth on fruit locally grown and exposed for sale in our own markets shows how necessary it is in the interests of the fruit-growing industry that the provisions of the Act should be extended to prevent the wholesale distribution of fruit so affected. On 20th December I visited the Department's fumigating-room at Wallangarra, and found it to be well made and quite suitable for the purpose. I also instructed the Sub-Collector of Customs in the method of working the chamber. The concessions made to importers of Californian apples and Italian oranges and lemons seems to be working very well; and is a distinct advantage to importers, while the danger to our orchards is reduced to a minimum.

I have, &c.,

J. G. CHOMLEY.

### Report of the Entomologist.

I BEG to submit the following report upon the work carried out by the Entomological branch during the last year. A good deal of time has been taken up with the amount of correspondence passing through my hands dealing with the identification of insects, the naming of specimens, giving advice regarding the destruction of pests and the formulæ for the making of remedies to destroy them. Besides the papers coming through the head office, others come through the Stock and Forestry branches, the Director of the Botanic Gardens, and many other branches of the Service. There are also a number of visitors calling with specimens for identification which frequently take up a lot of time.

The following is a rough list of correspondence:—

(1) Insect pests of garden and field	...	...	...	...	400
(2) Ticks and animal parasites	...	...	...	...	25
(3) Collections of specimens to name	...	...	...	...	50
(4) Miscellaneous diseases	...	...	...	...	55
(5) Letters and reports on fumigation	...	...	...	...	60
(6) Foreign correspondence <i>re</i> exchanges	...	...	...	...	30

#### Exchange Collections.

Exchange collections have been made with the following:—

Dr. L. O. Howard, Department of Agriculture, Washington, U.S.A.: Specimens of our injurious insects, for which we received a typical collection of well-known American pests. A collection of *Diptera* (flies) was also reported upon by him, and the specimens named up by their specialists. Mr. F. V. Theobald, Wye College, Kent, England, received a similar collection of injurious insects. Specimens of American *Coleoptera* were exchanged with Mr. E. R. Ryan, Indiana, U.S.A., and specimens of fruit-flies were forwarded to the Horticultural Board, Launceston, Tasmania. Specimens of various groups have been forwarded to the following foreign specialists to determine:—Dr. Hovari, Hungary (*Hemiptera*); Mr. R. Newstead, Chester, England (scale insects); Professor Berlese, Italy (*Coccidae*, or scale insects); Dr. Forel, Switzerland (ants); Mr. W. Ashmead, Washington, U.S.A. (*Hymenoptera*); Mr. E. E. Green, Ceylon (*Coccidae*). Early in the year Major-General F. N. Wilson wrote from Penguin, Tasmania, asking for live ladybird beetles to destroy the scale insects in his orchard. After some trouble about 200 specimens of *Orcus chalybeus* were collected and forwarded to him, about half arriving in good condition.

Shortly

Shortly afterwards a similar collection was forwarded to the Government Entomologist at Cape Town (Mr. C. Lounsbury), but they were all dead on arrival, as they had been packed to go in the vessel's cool chamber, and the machinery broke down on the way. I found great difficulty in obtaining a good supply of suitable food for them during the voyage, and am in treaty to introduce the live cochineal coccus into the country to breed them as food for travelling ladybird beetles. An exchange collection of ladybird beetles was received from the Cape—*Exochomum nigromaculata*, a species said to be very useful to destroy woolly aphids. About forty were alive on arrival, and were taken up to the Hawkesbury Agricultural College, where they were liberated on an infested apple-tree enclosed in cheese-cloth. In May last Sir J. F. Price called at the office on behalf of the Tea-planters' Association of Southern India to see if we could send them any ladybird beetles to destroy the brown olive scale (*Lecanium oleæ*), which was very destructive to the tea-plants. I promised to do my best; but it was not until four months later that I obtained a suitable species, and in October and November we despatched nearly 1,000 larvæ and pupæ of one of our best species (*Rhizobius ventralis*) in two lots, but have not yet received notice of their arrival. About 200 specimens of this species, in fulfilment of a former promise, were forwarded to the Secretary of the Department of Agriculture, Wellington, New Zealand.

#### *Appointment of an Assistant.*

On the 19th of June last, my assistant, Mr. S. A. Giraud, was appointed, and up date we have been able to get through a lot of office work which was getting very much behind; and this has enabled me to devote much more of my time to original investigation.

We have also been able to arrange and name up a number of specimens and mount for microscopic work microscope slides of minute insects and insect preparations. Mr. Giraud also looks after the office in my absence in the country, and visits the insectarium at the Hawkesbury Agricultural College.

#### *Insectarium.*

I am glad to be able to report that a small insect-house has been built by Mr. Brooks from my plans at the Hawkesbury College. It consists of a square room with a green-house at one end. Here we have a number of shrubs and plants potted out, and will place them in the breeding-cages so that the life-histories can be worked out. This is a most important branch of Economic Entomology, as very little is actually known of the earlier stages of some of our commonest pests, such as the peach aphid, &c. This building was finished too late in the season to do much work, but I hope to report good work next season.

#### *Lectures.*

I have still continued delivering lectures upon "Useful and Injurious Insects," "Economic Entomology," &c., and have found a great deal of interest taken by the farmers and orchardists in the descriptions given and the lantern views shown. On several occasions as many as seventy and eighty have attended the lecture, and we have an interesting discussion and interchange of views upon the different pests. I lectured at Brengelly, Branxton, Sydney (to the members of the Horticultural Association of N.S.W.), Tumut, Gundagai, and Penrith.

#### *Fumigation.*

In consequence of the interest that was being taken in the early part of the year in the question of fumigation of citrus-trees with hydrocyanic acid gas, I obtained a small outfit, consisting of a tent 9 feet x 9 feet and chemicals, for experimental purposes. When ready, I had applications from a number of different orchardists offering their orchards and assistance. I therefore visited the following places, treating the trees and explaining the methods and formula as we went along:—

Mr. Wrench, Kenthurst. Orange and lemon trees for Red scale.

Mr. S. Hawk, Orange. Apple-trees for woolly Aphid.

In June I visited Captain Phillip's orchard at Gosford, and treated trees both for San José scale and Red scale on orange and apple trees.

At Emu Plains I treated oranges for Red scale, and at Branxton I experimented on plum-trees attacked by San José scale and Red scale on oranges. Afterwards at the Botanic Gardens we tented trees infested with Olive scale and Indian Wax scale, but the latter were not destroyed. At Cardiff, at Mr. Peatte's place, I had one of my largest meetings, about eighty people turning up, many of them bringing specimens of pests to hear something about them. My conclusions as to fumigation have been submitted in a previous report, but I am still more strongly of opinion that it is too expensive a method for small orchardists or even large ones unless their trees are all of a size handy for tenting. In South Africa fumigation has been tried on a large scale, the Government advancing £25 to any society wishing to purchase an outfit, and selling them the chemicals at cost price, each society appointing their own manager at £12 per month, who takes charge of everything. Nine societies fumigated over 24,000 trees. The average expense of each tree was from 1s. 3d. to 2s. 9d.; but it is to be remembered that fruit is much dearer in that country than in New South Wales. In regard to nursery stock, green-houses, or in a small well-kept orchard, fumigation will be found most useful.

#### *Inspection of Nurseries and duties as Fruit Inspector.*

During the year, at the request of a number of nurserymen, I visited and reported on their plantations regarding the absence of pests, and instructed them as to the treatment of some of the more serious pests. I might here point out that until there some regulations introduced or incorporated with our Vegetation Diseases Act to make the registration of plant nurseries compulsory, and have an annual inspection by an accredited entomologist, it is of no use thinking that we can check the spread of either fungus or insect disease among our plants. The Vegetation Diseases Act has done a great deal of good; but we must remember that it should have come into force at least ten years before it did, for during that time we have introduced nearly all the most serious pests, most of which are rapidly spreading. As Entomologist and Fruit Inspector, I have as occasion demanded visited the different wharfs, but since the appointment of regular inspectors, have not been acting as fruit inspector regularly, but only as a referee when foreign pests were expected or when an inspector was away.

*List*

*List of Papers contributed to the Agricultural Gazette.*

- (i) "*Insect and Fungus Pests of Fruit-trees and their Remedies.*" I wrote the additional entomological portions to be published in book form.
- (ii) "*Phylloxera on the Vine.*" In conjunction with Professor Blunno, I compiled a general account of this pest.
- (iii) "*The Common White Butterfly (Pieris teutonia).*" A native species attacking all forms of capers in the Botanic Gardens.
- (iv) "*The Fig Branch Borer (Hylesinus porcatus).*" A small beetle very destructive to the young wood.
- (v) "*The Lucerne Web Moth (Tortrix glaphyriana).*" A serious pest to lucerne-growers in the Morpeth and Maitland districts.
- (vi) "*Notes on Fruit-flies, with descriptions of new species.*" With two plates. This is a general account of them up to date, with the technical descriptions of two new species bred from introduced fruit.
- (vii) "*A Leaf-mining Caterpillar (Bedellia somnulentella).*" The life history of a small moth whose larvæ are very destructive to creepers in the gardens.
- (viii) "*Entomological Notes for 1898.*" Various pests are described and figured: *The Honey Beetle (Phyllotocus macleayi)*; *The Leaf Beetle (Galleruca semipullata)*; *Thrips and Persimmons*; *French-bean Fly (Agromyza phaseoli)*; *Light Apple Moth (Caecocia postvittata)*; *Horse-radish Moth (Godara comulis)*; *The Cherry-tree Borer (Cryptophaga unipunctata).*
- (ix) "*Australian Bag Moths.*" A popular description of the different species of our bag moths, with figures of the cocoons.
- (x) "*Lac Insects of Australia, with the description of a new species.*" A general account of commercial lac and descriptions of all our Australian species.
- (xi) "*Caterpillars.*" An account of the caterpillar plague, with notes and descriptions. Map of distribution.

*Special Visits to the Country.*

Caterpillar Plague (*Agrotis infusa*).—Early in July reports began to come in with regard to the ravages of these caterpillars. I therefore visited Narrabri, Boggabri, and Gunnedah, collecting information and specimens in the centre of the infested districts. On my return, at the request of the Forbes wheat-growers, I went all round that district, and later in the season went to Gundagai, Tumut, and Adelong. The report upon the fungus destroying this pest has been furnished to the Minister.

The Locust Pest (*Epacromia terminifera*).—This year has also been remarkable for the infestation of the south-western districts by the grasshoppers. I visited Wagga, and afterwards the Condobolin district, to experiment with the African locust fungus, but the experiments were carried on too late in the season to give any practical results.

San José Scale (*Aspidiotus perniciosus*).—A great deal of attention has been given to this terrible scale insect and methods of checking it, but during my visits to the country, Milton, Sutherland, Branxton, Adelong, Narrabeen, Pymble, Bankstown, Beecroft, Balmoral, Pennant Hills, East Hills, Somersby, Fairfield, Burrowa, Paterson, Cowra, and Seven Hills have all been found infested with San José scale, and, as all these are fresh infections since my last report, some idea may be obtained as to how widespread it has become, and yet we have no power to stop nurserymen from sending out diseased plants all over the country.

White Ants (*Termes lacteus*).—Early last May I visited Bourke and several of the artesian bores to report upon the damage done by the white ants to the fruit-trees. At Pera I found that, as the ground had been well cultivated, they had done very little damage, but further north—at Native Dog and Eugonia—they had destroyed a great number of the trees, but in both these places the trees had been sadly neglected. Various experiments were undertaken, the results of which will be reported this season.

Fruit-flies (*Tephritis and Haltophora*).—A number of visits were paid to orchards on account of this pest, which was very destructive to the late peaches and persimmons in particular in the county of Cumberland, and active up to the middle of May, many orchardists pulling and boiling all their late peaches.

Peach Aphis (*Aphis Persice-niger*).—This is, without doubt, the most serious pest that the growers of summer fruit have to contend with, and, as it has spread all over the Colonies, and winters both upon the roots and lower branches of the trees, it is very difficult to deal with. I have visited several orchards in regard to cures and remedies, but the constant spraying until the fruit is set seems to be the only check. In the southern districts many young trees were killed by the combined attacks of frost and aphid.

Indian Wax Scale (*Ceroplastus ceriferus*).—This introduced scale, though well known in our gardens, has only within the last few years appeared as an orchard pest, and, now that it has started, is spreading rapidly upon orange, mandarin, and persimmon trees. Several orchards have been visited around Sydney during the year, and a number of specimens sent in asking for remedies. Lime, salt, and sulphur has been found effective in winter, but the time to deal with it is before the scale has produced sufficient wax to protect itself—about new year. In India, its native country, it is very rare, on account of its numerous parasites. These might be profitably introduced.

Codlin Moth (*Carpocapsa pomonella*).—The interest taken in this pest induced me to suggest last year that it would be advisable to take over a small apple orchard handy to Sydney, where experiments could be tried on checking the ravages of this moth. Mr. Allen and myself were commissioned to find such an orchard, where the owner would allow us to treat the trees after our own methods. Early in the year I found one at Mittagong, after visiting a number in the Goulburn and other districts, and all the trees have been treated, Mr. Allen attending to the spraying and I looking after the cleaning, bandaging, &c., a report on which will be given at the end of the season.

*Removal*

*Removal to 140, George-street North.*

On 13th April I removed from 40, Young-street to the Old Naval Depot Buildings, George-street, where I have much better accommodation for working and getting at the collections than in the old quarters.

The collections of specimens of economic entomology and the naming-up of specimens for reference has been regularly attended to, and many valuable additions have been made from specimens received from correspondents, and those collected by me during my visits to the country have totalled up a good many thousand, both new and duplicates.

In conclusion, I would point out that at no time in the history of agricultural science has economic entomology been so prominently brought before the public as during the last year, through the Vegetation Diseases Act and the regulations for the export and importation of fruit and plants that have been passed both at home and elsewhere, as well as the progressive measures that have been taken in observing the habits of the different pests, and not only noticing the action of the sprays and mixtures used, but in visiting foreign countries to obtain the parasites of the different introduced pests in their native country, and in this manner fighting insect against insect. At the present time there are numbers of trained entomologists sent out by their different Governments to obtain this information, and, as regards San José scale, it would pay to visit Japan (its supposed native home) to see if its parasitic enemies could not be introduced here. Not only is much of my time taken up with answering correspondence, but seldom a day passes without several coming to the office for information.

I have, &c.,

WALTER W. FROGGATT.

### Board for Exports.

#### Report of the Secretary.

I HAVE the honor to report that during the year the operations of the Board have made further satisfactory progress, and that the opening of the season 1899-1900 gives promise of a still larger increase in the business and scope of the Board.

It is now two and a half years since the inception of the handling of perishable produce under Government auspices; and, notwithstanding adverse predictions, it may be claimed that operations have been conducted in such a manner as to give the producers of the Colony a maximum of assistance at a minimum cost to the taxpayer. The steady increase in demand for the Board's services by those interested in the production of exportable produce is, perhaps, the best answer to the critics who so bitterly attack the principle of Government inspection and grading, especially as British buyers have now such confidence in the Board's export brand that they make full advances on store warrants without question or personal inspection.

Early in the year the export of poultry to London began, one of the leading merchants there having established an agency in Sydney for the purpose of making advances on all stock passed by the Board. This system has been found to work well, and there are now several firms making advances against consignments for London and South Africa. The earliest shipment consisted of a small lot of ducklings, which were sold at the very satisfactory price of 4s. each, leaving the owner the handsome net return of over 6s. per pair for nine weeks old birds.

Throughout the season prices varied for ducklings from 2s. 9d. to 4s. each, and for chickens from 3s. to 4s. each. These figures, after paying all expenses, shows an average profit on local rates of from 40 to 60 per cent.; and we are informed by the merchants that the demand is practically unlimited.

Another favourable feature, and one on which we may congratulate ourselves, is that our poultry is acknowledged to be the best that reaches London from abroad. This flattering comment is due to the fact that a rigid system of selection was adopted from the first, and that all birds under a certain standard were rejected.

As the knowledge of poultry-raising increases, we can do still better in quality; and, having a market capable of absorbing 20,000 to 30,000 per week during five months in the year, we need not be afraid to increase our stocks a hundredfold.

The figures given in the table show a large increase since last year, and there is every reason to expect that the season now opening will exhibit a still larger improvement, and that the question of making poultry-raising pay has at last been solved.

The export season lasts for about five months; but, with the improved quality and better stocks, the local market will also benefit materially, and consumers who have held off purchasing on account of the poor quality of the birds hitherto available will be encouraged to purchase the neat, healthy stocks left after the British season is over.

Considerable progress has been made with the producers, and several pamphlets dealing with poultry have been published and circulated, including a reprint of Mr. Bradshaw's "Profitable Poultry Breeding," for which there is a great demand.

Exhibits of export poultry, &c., have been sent to various agricultural shows, and lectures on the export question generally have been delivered at various important centres, as mentioned later on.

In last annual report was mentioned the fact that about 10,000 dozen eggs were stored for the winter market, on behalf of various owners. This proved, as anticipated, a great success, several owners making quite 100 per cent. clear profit. The immediate result has been a tenfold increase, no less than 92,000 dozen having been stored on account of seventy-five holders.

Some fears have been expressed as to the large quantity held, in case the winter price should not rise as usual, but, although this may be the case to a limited extent, the difference is not expected to exceed 2d. per dozen, which would still leave a margin of from 60 to 80 per cent. after paying store charges. Recent information shows that in the United States immense quantities are now stored annually, Boston alone having put down 700,000,000, and although our figures, compared with these, are very small, it is satisfactory to know that we are not behind in adopting the most modern principles.

It

It may be justly claimed that more has been done during the last two seasons towards placing the poultry-raising industry in its proper position as a valuable adjunct to mixed farming than had previously been done in half a century of subsidising agricultural and poultry societies, which, almost without exception, catered more for the "fancy" than the utility classes of birds. The remarkable facilities we have for rearing and fattening poultry, at a season when we have the best market in the world to ourselves, are so self-evident as to require no comment, and the extent of the demand may be gauged by the fact that the agent of one firm alone is now advertising for half a million ducks, fowls, geese, and turkeys, and offering liberal advances on all birds handled and graded at the depôt of the Board for Exports.

Hares have been in good supply, and the quantity handled is about the same as last year—want of organisation and unfavourable weather having prevented the expected increase. This disadvantage will in future be obviated, as far as organisation is concerned, as several new firms are completing arrangements for making advances on all approved consignments. The season's price average has not as yet been made up, but advices received give quotations of from 2s. 9d. to 4s. per pair in the wholesale market, with an upward tendency. Since the initiation of the export scheme, upwards of 300,000 hares have been destroyed. The actual returns in cash exceed £25,000, while the "scalp-money" and the quantity of pasture saved make up a further handsome sum.

During the winter seasons from 200 to 400 men have been found employment in trapping, shooting, carting, packing, &c., and have earned good wages.

It is satisfactory to note that not a single complaint has been made as to quality, condition, or packing of any hares or rabbits which have passed through the Sydney depôt, although frequent complaints of the bad condition of those arriving from the other Colonies have appeared in the Press.

Rabbits, owing to the extent and severity of the drought, have not figured largely, but present reports point to a great increase in this pest, and the coming year should see the resources of the Board taxed to their utmost to accommodate the trade. It seems probable that in future the rabbits will come to hand throughout the whole year, instead of, as at present, only during the winter months. Small quantities have been coming in during the last two months, and from their condition on arrival it appears that, except in extremely muggy weather, they will carry sound and good from points as far away as Narrandera. The local value of rabbit carcasses and skins has been so high that the price was prohibitive for export, and it is a curious fact that several consignments of frozen carcasses were obtained from Melbourne to supply the Sydney demand.

Butter has not been stored in any quantity, the opposition of some firms to Government inspection and handling being still very strong; but the National Butter competitions are bringing many of the factory managers and owners together, and the prospect of a fair share of the trade being done through the depôt is now reasonably assured. In connection with the National competitions, it is interesting to note that the exhibits of butter were stored at two different temperatures—one box of each lot being kept at an average temperature of 32°, and the other at about 14° Fahrenheit. It was found on comparison that the samples kept in the colder range gave better results than the higher, as much as ten points separating the samples when judged at the end of two months from date of storing. From this it may be inferred that the temperature of 35° guaranteed by the shipping companies is not low enough; but further experiments will be made to verify this conclusion.

A feature in the question of Government inspection *versus* non-inspection is the number of inquiries now made for certified samples, especially from firms not represented by experts in this market. This is expected ultimately to bring a large proportion of the output under *visé*.

Fruit has not been a prominent feature for the season, the weather having been very much against the citrus-trees, while in apples and other deciduous fruits the supply has only been moderate. A few experiments have been made, and it has been shown that apricots, peaches, and other tender fruits can be kept for a long time practically unimpaired when the proper conditions of ripeness, temperature, and ventilation are observed. A few commercial lines of apricots, gooseberries, and plums have been tried during the past month with considerable success, considering the difficulties under which we work in the present stores as to ventilation and proper temperatures combined. The work so far done, however, will furnish data for the further series of experiments provided for in the present season's estimates, and the Board hopes to demonstrate the possibility of sending to British markets, not only citrus fruits, but some of the more tender sorts, without damage and with great financial success. This is the more certain on account of the result of the Board's first trial shipment in 1896.

Some two years ago the Board was instrumental in inaugurating the shipment of fruit pulp to Europe, and it is satisfactory to report that a trade has already sprung up from this small beginning, which promises to relieve the local market of a large proportion of its surplus, especially in apricots, some pulp made from which realised up to £26 per ton in London. One of the leading firms engaged in this industry gives the Board's experiment the credit for awakening the public to the possibilities of the export trade, and is sanguine of an enormous business resulting from the British demand.

In small goods not a great deal has been done, but what business transpired was of a satisfactory nature, and the services of the cold stores have been duly appreciated by those who have used them.

The present war in the Transvaal opened up a prospect of business in supplying H.M. troops engaged there with food-stuffs, and tenders were accordingly called, at the instance of the Board, for such lines of produce as our Colony could supply. The call was fairly well responded to, but on account of the continued droughts, and an apparent desire to profit by the opportunity on the part of tenderers, the prices on the whole did not encourage business, although orders to the extent of over 1,000,000 lb. of tinned meats and 500 tons flour, of the total value of over £27,000, have during the last two months been booked, and are now in course of execution. The War Office stipulates expressly that all supplies must be inspected and passed by experts under the Board; this also applying to some orders placed direct by London agents of New South Wales companies. This recognition by the British authorities gives the Board a higher standing, and further emphasises the contention that all supplies, especially of food-stuffs, should be duly and carefully inspected and certified to before being allowed to leave the Colony.

For the latter part of the year it has been found necessary to again increase the cold-storage space, in order to find room for the quantities of eggs, fruit, &c., coming forward. The rent, which was previously £1,200 per annum, has increased to nearly £1,700; but such has been the demand, that even with the increased facilities, large quantities of fruit, &c., have had to be refused. The increase of business is very satisfactory,

satisfactory, and at present the revenue from goods stored more than covers rent, and it is expected that, throughout the coming year, the total cost of working will be defrayed from revenue—thus leaving the Vote for outside expenses, such as experiments, prizes, travelling, and other unavoidable disbursements.

In last report it was mentioned that a recommendation had been made by the Board in connection with the utilising of Darling Island as a centre where the whole of the export arrangements could be provided for. A scheme was roughly drafted and submitted to the Works Department for report; more recently, a sum of £100,000 has been placed on the Loan Estimates, and passed by the Parliament, for the carrying out of the proposed improvements. It will be necessary, however, to make some arrangements immediately, and a subsidiary scheme is now under consideration.

In April the usual amount of money was offered in prizes at the Annual Show of the Royal Agricultural Society, and a fair amount of competition resulted—some of the produce shown being of high quality and fit to compete in any market in the world.

At the Show of the New South Wales Sheepbreeders' Association, £50 were offered in prizes for the best exhibits of export sheep, and thirteen exhibits were shown in the various sections. Ten of these exhibits were afterwards passed by the judges as being fit for export, and shipped for London by the ill-fated steamer "Thermopylae," which deposited herself and her cargo on the rocks of the South African coast. The loss of the mutton has been borne by the Board's funds, and the owners compensated for the full value of the carcasses lost.

It may be mentioned that the first prize for jams, jellies, &c., at the Royal Agricultural Show was awarded to Messrs. Taylor Bros., Annandale, who afterwards generously presented the whole exhibit, properly packed, to the Board, on condition that it should be distributed among the leading personages and merchants of Britain for report.

During the year the Secretary has visited and lectured at many of the leading towns and villages in the Colony, with the result that the export question is gradually becoming more generally understood. It is really wonderful how little some of our well-informed producers know of the possibilities of the export trade, and when the requirements of Britain alone are mentioned, the statement is received almost with incredulity. This shows the necessity for a much more extended campaign in the producing districts, combined, of course, with strict attention to the actual handling of the exports.

Then there is the question equally important of watching the interests of our producers, and tracing their shipments from farm to consumer. The Board has always held the opinion that this can best be done by appointing a commercial agent for Europe, empowered to take such steps as may be necessary to discover and rectify abuses, stop leakages in the shape of improper or unnecessary profits, and generally keep producers in touch with the best methods and means of reaching the actual consumer of their produce. The usefulness of such an official would not be confined to this only, as a smart commercial man would be of the utmost service in introducing Australian business to new buyers and fresh markets, keeping in touch with the march of events, and taking every opportunity of pushing the Colony's interests.

In many other ways besides the foregoing the Board has endeavoured to assist the man on the land, and I am glad to report that every individual member has at all times been ready and willing to give advice on any point affecting the particular industries represented by each, and that from all parts of this and the adjoining Colonies constant inquiries and letters of thanks for information supplied are received at this office.

The clerical work of the branch has very much increased, and in June Mr. J. V. Turner was appointed as probationary junior clerk. No other additions have been made to the staff, which now consists of four: Secretary, poultry expert, storekeeper, and clerk. All skilled and unskilled labour is employed as required, and is fully provided for in the charges made for handling goods.

The Board has met twenty-four times, the following list representing the attendance of each member:—

Chairman (absent in Europe)	...	...	...	...	...	...	nil.
Hon. A. Kethel, Vice-Chairman	...	...	...	...	...	...	21
Thos. Jessep, Esq., M.L.A.	...	...	...	...	...	...	6
J. L. Thompson (travelling)	...	...	...	...	...	...	3
Geo. Maiden	...	...	...	...	...	...	14
C. F. Lindeman	...	...	...	...	...	...	15
John Wildridge	...	...	...	...	...	...	15
H. W. Lee (since resigned)	...	...	...	...	...	...	4
T. C. Worboys	...	...	...	...	...	...	19
Secretary	...	...	...	...	...	...	24

Throughout the year the Chairman has been absent in Europe on private business, but has kept in touch with the Board, and is always ready to further the interests of producers by advice as to shipments, markets, &c.

The other members have given a great deal of valuable time to the Board's affairs, and, outside of regular meetings, are in constant consultation with the Secretary on various matters relating to production and handling of export goods.

The amount of funds voted for the encouragement of producers on the local and export markets amounted, for the year ending 30th June, to £2,250, and considerably less than this amount was actually expended.

It will be understood that the expenditure represents the total cost of the Board to the Colony, and includes all prize moneys, cost of experiments, cold-store rent, office rent, wages and salaries, travelling expenses, members' fees, packing material, implements, and fittings. Although it has been possible to manage the export dépôt and materially assist producers at such a small cost, it is not thought expedient that such an important work should be allowed to languish for want of funds, although it is anticipated that the amount recently passed on the Estimates, totalling about £3,000, will be amply sufficient for the current year's expenses, it being found that the revenue derived from store charges will practically cover expenditure on actual operations, thus leaving only the educational work as a charge against the taxpayer.

The

The quantity of goods passed through the hands of the Board during the current year is as follows :—

*Produce treated in Cold Stores.*

Hares	...	...	...	...	...	...	79,030
Rabbits	...	...	...	...	...	...	6,598
Fowls...	...	...	...	...	...	...	12,870
Ducks	...	...	...	...	...	...	8,034
Turkeys	...	...	...	...	...	...	1,799
Geese...	...	...	...	...	...	...	404
Eggs ...	...	...	...	...	...	...	93,096 dozen
Fruit ...	...	...	...	...	...	...	1,200 cases
Butter	...	...	...	...	...	...	550 boxes
Cheese	...	...	...	...	...	...	165 cases
Lambs	...	...	...	...	...	...	699
Marsupial tails	...	...	...	...	...	...	2,000

*Shipped under Board's Certificate.*

Meats	...	...	...	...	...	...	4,780 cases
Oats ...	...	...	...	...	...	...	2,500 sacks

*Orders on hand and in process of execution.*

Meats	...	...	...	...	...	...	16,000 cases
Flour ...	...	...	...	...	...	...	5,000 sacks

These figures show considerable improvement on last year's record, and the business already under way and promising for 1900 is of such magnitude as to assure a further great advance before the end of the financial year.

In conclusion, it may be well to point out that, although the neighbouring Colonies have spent very much larger sums in encouraging production and export, the Mother Colony has recently made good progress, and with very slight expenditure has at length begun to assert her proper position on the world's markets. It remains only for producer, merchant, and Government to combine in a further strenuous effort to place New South Wales products fairly before the consuming public, and, by aiming at the maintenance of the highest standard of quality, attain to the coveted honor of being first of the exporting Colonies.

I have, &c.,

JAS. STEPHENSON,  
Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## AGRICULTURAL SOCIETIES.

(REPORT OF ADVISORY BOARD ON MANAGEMENT OF.)

*Printed under No. 8 Report from Printing Committee, 9 August, 1900.*

Sir,

Department of Agriculture, Sydney, 27 June, 1900.

In accordance with a request made by you for an investigation into the management and control of Agricultural Societies in this Colony, and their educational value, we, the appointed Board, have the honor to submit the result of our investigation.

At our first meeting, a carefully-prepared circular (marked "A") was drafted, and agreed upon to be sent to every Agricultural Society in the Colony participating in the Vote for Subsidies and Grants to Agricultural Societies. The questions asked in the circular are, as will be seen, of a searching, although of a not too inquisitorial, nature, when it is remembered that these institutions are public bodies. The circular was sent out on the 11th January, 1900; but we regret to say that the whole of the Societies have not responded, and that many Societies only responded after a reminder was sent to them. The following Societies (Appendix C) have omitted or declined to send their returns.

A thorough digest of the answers to the circular has fully impressed us, as it will, no doubt, impress you, that there was a great need for the investigation in which we have been engaged. The main unsatisfactory factors of the analysis are—

1. The support given by graziers and agriculturists for whose benefit these Societies were established has only been of a lukewarm nature.

2. The general body of Societies has also evidently overlooked the aims for which they were brought into existence—(a) Not giving sufficient encouragement to the breeding of the most suitable stock; (b) the promotion of scientific farming; (c) supplementing these two primary objects with giving lectures on them at opportune occasions, and distributing to their members pamphlet literature on subjects of vital importance. We find, instead, that too much prominence has been given to objects calculated more to draw the people for amusement than for the sake of education.

The money given for jumping and trotting events has been abnormally large in proportion to that given for the right objects. We see no objection to prizes for the encouragement of breeding the best class of hunters and trotters, but our long personal knowledge of the body of horses that compete for these prizes lead us to the conclusion that the right stamp is met with few and far between.

3. The want of a universal standard of quality for various classes of the domestic breed of animals that compete has also tended to defeat the practical utility of shows. Here, again, our practical knowledge has convinced us that first prizes are often awarded to stock that do not in the least deserve them; whilst, in the Agricultural Section, prizes are given to small quantities of grain or produce, carefully picked by the exhibitor, without the committee taking any steps to find out whether these samples represent the quality of the whole of the exhibitor's produce. We are aware, however, of two notable exceptions to this practice—at Wagga and Grenfell—where the competitors' exhibits of wheats are collected at threshing time by the committee, who take them from the bulk, seal up in bags, and secure until show and judging time.

4. We consider, judging from the nature of the replies, that an efficient system of book-keeping has not been adopted by many of the Societies; also, that the amounts given, representing the value of the improvements on the show-ground, is, in many cases, open to query, as are likewise some of the replies to questions.

5. We consider that the annual subscription is, in many cases, far too low.

The above are the main unsatisfactory features we have extracted from the replies. There was sufficient evidence before us that Societies have leaned too much on the support, monetary or otherwise, they have obtained from the Government, and thus brought into existence a far greater number of Societies than would have been the case if they had been compelled to rely wholly on self-support.

A map submitted to the Minister shows that, in several districts, there are far more societies than are needed. The existence of so many in one district has resulted in several evils. One is the professional showman, who travels with a few superior exhibits from show to show within a comparatively small

circle, and thus obtains a large sum, most of which could have been given to suitable objects of local production. Another objection to the multiplicity of shows in one centre is, that their dates often clash with shows of far greater importance within easy access by rail, thus depriving the more important of exhibits, and nullifying the educational value of these sections.

A drastic reform of the present unsatisfactory state of affairs is necessary, if the interests of the high educational elements of the agricultural industry, in all its branches, is to be considered. This, after due consideration, can best be obtained by advising your Government to cease giving any more subsidies or grants. But, as it is advisable to give encouragement to breeding certain classes of stock, and to agricultural and horticultural objects, we would recommend that a certain sum be granted annually for these purposes, and that only money prizes be given.

For the better interests of this purpose, we beg to suggest that the control of this sum be given to a small Board, of which the Minister, for the time being, shall be the head.

We beg to invite attention to the accompanying replies from Victoria, South Australia, New Zealand, Queensland, Tasmania, and Western Australia, as to practices adopted with respect to subsidies to Agricultural Societies (papers 12,616). From these it will be seen that no subsidies are given in New Zealand, Tasmania, or Western Australia, and that in South Australia, Queensland, and Victoria the grants are exceedingly small compared with that given in New South Wales.

We have, &c.,

WALTER S. CAMPBELL.  
GEORGE VALDER.  
E. D. E. VAN WEENEN.

#### AGRICULTURAL SOCIETIES ADVISORY BOARD.

Department of Agriculture, January, 1900.

To the Secretary of the

Sir,

In view of a rearrangement of subsidies by the Hon. the Minister for Agriculture, we should be glad to receive at an early date the following information respecting your Society :—

1. Number of paying members.
2. Number of agriculturists that are members.
3. Amount of annual subscription.
4. Actual amount of prizes given by the Society, irrespective of donations.
5. Amount of donations from members living in the district.
6. " " outside members, firms, &c.
7. " " subsidy, special grants, and special prizes from the Department of Agriculture.
8. If shows have been held annually.
9. Revenue from subscriptions, donations, other sources, given separately.
10. Expenditure, salaries and wages excepted.
11. " " amount of salaries and wages.
12. Amount of prizes and donations given to Stock.
13. " " " " Agriculture.
14. " " " " Dairy Products.
15. " " " " Jumping events.
16. Amount spent in improvements.
17. Area of Show-ground.
18. Nature of improvements.
19. Age of Society.
20. Has any work been done to forward the aims of an Agricultural Society beyond giving annual shows?

The receipt of the above information will greatly assist the Government in determining the question of subsidy.

We have, &c.,

W. S. CAMPBELL, Chairman.  
J. L. THOMPSON.  
E. D. E. VAN WEENEN.

Secretary,

Society.

## Reply from New Zealand.

Sir,

Wellington, N.Z., 6 December, 1899.

I have the honor to acknowledge the receipt of your letter of the 23rd ultimo. In reply, I have to say that no subsidies are paid in New Zealand. In one or two special instances, however, the Government has given small grants towards the building of agricultural halls and purchase of sites.

I have, &amp;c.,

JOHN D. RITCHIE, Secretary.

The Secretary, Department of Agriculture, Sydney.

## Reply from Western Australia.

SUBSIDIES TO AGRICULTURAL SOCIETIES.

Sir,

4 December, 1899.

In reply to your letter of the 23rd ultimo, I have to inform you that this Colony has no method in paying subsidies to Agricultural and kindred Societies.

When a Society is formed the secretary generally makes an application to the Treasury, usually through the member for the district, and a grant is made, varying, according to the importance of the district and size of the Society, from £10 to £50.

A good deal of agitation has been going on lately with a view to a more equable distribution of funds in this direction, most of the Societies suggesting a subsidy of £ for £ on their subscriptions, but nothing definite has resulted up to date.

I have, &amp;c.,

L. LINDLEY COWEN, Secretary.

The Under Secretary for Mines and Agriculture, Sydney, New South Wales.

## Reply from Tasmania.

Hobart, 6 December, 1899.

To D. C. McLachlan, Esq., Under Secretary for Agriculture, Sydney, N.S.W.,

In reply to yours of 23rd ultimo, I beg to state that, apart from a small sum voted for the purpose of maintaining an Agricultural School at Ulverstone, this Government does not subsidise.

T. A. TABART, Secretary.

## Reply from Queensland.

Sir,

Brisbane, 30 November, 1899.

I have the honor to acknowledge the receipt of your letter of the 23rd instant, on the subject of the subsidising of Agricultural and kindred Societies.

Subsidy to Agricultural Societies in this Colony is paid in one form only, in accordance with the regulations and subscription lists, of which copies are forwarded, and, with regard to the latter, attention is drawn to the foot-note, that provides safeguards for the transaction of the financial business of Societies through a bank. The accounts of Societies are audited by Government Audit Inspectors, by which means illegal claims for subsidy are detected. In such cases, the Society is asked to refund the over-endowment, failing which a deduction is made from the next endowment.

I have, &amp;c.,

PETER McLEAN, Under Secretary.

The Under Secretary, Department of Agriculture, Sydney, New South Wales.

## Reply from Victoria.

Sir,

Melbourne, 29 November, 1899.

In reply to your letter of 23rd instant, I have the honor to inform you that the vote for Agricultural and kindred Societies is distributed in accordance with the enclosed regulations.

I have, &amp;c.,

D. E. MARTIN, Secretary for Agriculture.

The Under Secretary for Mines and Agriculture, Sydney.

Reply

## Reply from South Australia.

Adelaide, 27 November, 1899.

Sir,

In reply to yours of the 23rd instant (99-11,974 A), I have to inform you that, in this Colony, assistance to Agricultural Societies is given (1st) to the Royal Agricultural Society and (2nd) to country Agricultural Societies.

The former Society holds two shows each year in Adelaide, and receives from the public funds £800 per annum, provided that at least an equal amount is raised from other sources, and is paid each year in prize money.

The grant to country Societies is £1,500 per annum. No Society within 20 miles of one already established receives assistance. The money is awarded *pro rata* amongst Societies raising from other sources and giving £100 or more in prize money. In the outside scattered districts, Societies giving less than this amount are allowed to participate, as are Field Trial Societies. The average amount received by the Societies varies from 18 per cent. to 25 per cent. of the prize money paid by them; last year it was 22·85 per cent.

In addition to these subsidies, special prizes to the amount of £15 are offered for poultry suitable for export, exhibited at the S. A. Dog and Poultry Show, and also at the Royal Agricultural Society's Show of Poultry.

I have, &amp;c.,

A. MOLINEUX, General Secretary.

The Under Secretary, Department of Agriculture, Sydney.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**VINE DISEASES ACT OF 1893.**

(PETITION FROM CERTAIN VINEGROWERS OF NEW SOUTH WALES, PRAYING FOR REPEAL OF.)

---

*Received by the Legislative Assembly, 3 July, 1900.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales.

We, the undersigned Vinegrowers,—

HUMBLY PRAY :—

That you will repeal the Vine Diseases Act of 1893, for the following reasons :—

Firstly.—That the Act has utterly failed to accomplish that for which it was passed, viz., to eradicate the insect known as phylloxera.

Secondly.—That we feel sure that the insect known as phylloxera here is almost harmless, and in no case has it been proved to have destroyed a single vine.

Thirdly.—That it has been very hard on those who have been unfortunate enough to have come under its operations, inasmuch as they have been deprived of their livelihood; and we have every reason to believe that the insect is still in the ground.

Fourthly.—That taking into consideration the small amount of compensation allowed to growers, and the immense expense caused to the Colony caused by the working of the Act, it would be more to our combined interests and to the interest of the Colony as a whole were the Government to leave the vinegrowers to cope with the insect themselves.

And we, your humble Petitioners, shall, as in duty bound, ever pray.

[*Here follow 177 signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## VINE DISEASES ACT, 1893.

(VINEYARDS CONDEMNED UNDER.)

*Printed under No. 6 Report from Printing Committee, 26 July, 1900.*

RETURN to an Order, dated 5th July, 1900, made by the Honorable the Legislative Assembly of New South Wales, That there be laid upon the Table of this House a Return showing,—

- “(1.) The number of vineyards condemned by the Department of Agriculture under the provisions of the Vine Diseases Act of 1893.
- “(2.) The date of condemnations; the area of such vineyards; names of owners; and the name and qualifications of the Inspector upon whose report action was determined.
- “(3.) The ratable value of the condemned vineyards, and how it was arrived at.
- “(4.) The value fixed by the Government Inspector.
- “(5.) The amount of compensation paid in each case.
- “(6.) The number of claims referred to arbitration as provided in clause 15 of the Vine Diseases Act of 1893.
- “(7.) The amount of award, and the amount recommended by Government Inspectors prior to such reference.
- “(8.) The number and particulars of claims still undealt with, and the cause of delay in dealing with same.”

(*Mr. Kidd.*)

## REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency The Right Honorable WILLIAM, EARL BEAUCHAMP,  
Knight Commander of the Most Distinguished Order of Saint  
Michael and Saint George, Governor and Commander-in-Chief of  
the Colony of New South Wales and its Dependencies.

May it please your Excellency,—

I have the honor to submit to your Excellency the Report  
of the Department of Public Instruction for the year 1899.

### SCHOOLS.

In 1899 there were 2,693 schools, containing 2,909 departments,  
as compared with 2,602 schools and 2,817 departments open in 1898.  
During the year, 112 schools were established, comprising 9 Public,  
57 Provisional, 32 Half-time, 2 House-to-house, and 12 Evening  
Schools. In addition to these, 35 schools were reopened, 27 Provisional  
and 4 Half-time Schools were raised to the rank of Public Schools,  
and 21 Half-time and 1 House-to-house Schools to the Provi-  
sional rank; while 13 Public and 15 Provisional Schools were reduced  
to Half-time Schools. Fifty-six of the schools in operation during  
the whole or some portion of 1898 do not appear on the list of schools  
open in 1899, and of those actually in operation in that year 52 were  
closed before the last quarter. The number of schools open at the  
close of 1899 was 2,641, containing 2,857 departments.

The following table shows the classification of the schools open  
in 1899 :—

#### 1. *High Schools* :—

	Schools.	Departments.

56—A

Of

Of the 22 applications for the establishment of new schools which were under consideration at the close of 1898, 12 were granted, and 10 were declined. In addition to these, 178 applications were received during 1899, namely, 35 for Public Schools, 107 for Provisional Schools, 24 for Half-time Schools, 1 for a House-to-house School, and 11 for Evening Schools. Of these, 106 were granted, 56 were declined, and 16 were under consideration at the end of the year. The total number of children to be accommodated in the new schools when established is 2,566.

The number of applications dealt with, and the action taken with regard to them, is shown in the following table:—

*Applications for the establishment of Schools.*

Schools.	Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools ... ..	35	14	17	4
Provisional Schools ... ..	107	64	35	8
Half-time Schools ... ..	24	17	4	3
House-to-house Schools...	1	1	0	0
Evening Public Schools...	11	10	0	1
Total... ..	178	106	56	16

Full details respecting these applications will be found in Appendices I, II, III, IV, V.

The number of schools in operation in 1881, the first full year during which the Department was under Ministerial control, as compared with the number open in 1899, is given in the following table:—

Schools.	Number of Schools or Departments in operation.		Increase, 1881-1899.
	1881.	1899.	
High Schools ... ..	.....	4	4
Superior Schools ... ..	58	253	195

Provisional Schools ... ..	246	358	112
Half-time Schools ... ..	93	456	363
House-to-house Schools ... ..	.....	33	33
Evening Schools ... ..	57	31	26*
Total ... ..	1,496	2,909	1,413
Seats provided ... ..	98,721	259,119	160,398

\* Decrease.

In addition to the schools established and maintained under the Public Instruction Act, the following State supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, the School for the Deaf and Dumb and the Blind, and the Carpenterian and Shaftesbury Reformatory Schools.

*School*

*School Premises and Sites.*—The number of school sites acquired during the year was 93. Of these, 64 were Government grants, 25 were resumed under the Public Works Act (51 Vic. No. 37), 3 were purchased, and one was a free grant to the Department. The cost of the purchased sites amounted to £200, and the sum of £140 1s. 9d. was paid on account of those resumed. In the case of 12 of the latter no claim was made by the original holders for compensation. The balance to be paid on the others, when all claims have been settled, is £302. Full particulars as to the sites will be found in Appendix XX.

*Buildings.*—At the close of 1899, existing school premises afforded room for 259,119 pupils. Of the school-places counted in 1898, 3,072 were lost in 1899 by the closing of schools and by the giving up of old buildings. The net increase was 6,328. Taking the building-work done in the last two years, it may be observed that, in 1899, 39 new schools and residences and 2 weather-sheds were erected under the supervision of the Department's professional officers, as compared with 33 and 12 respectively built in 1898; while the additions numbered 44, as compared with 33; the premises repaired, 478, as compared with 554; and the places provided, 3,917, as compared with 6,331 for the same period. The number of small school-buildings, residences, and weather-sheds erected under the Inspectors' supervision was 122, as compared with 115 put up in 1898; 22 school-buildings were enlarged, as against 31 in 1898; the number of places provided was 3,787, as compared with 4,634; and the buildings repaired numbered 1,198 in 1899, as against 1,245 in the previous year.

At the close of 1899 the following additional works were in progress:—58 new buildings and 39 additions, the whole to provide for about 7,400 children. One new weather-shed was in course of construction, as well as 5 teachers' residences. Repairs and improvements were being carried out in 208 existing buildings.

Full particulars respecting the building-work completed in the year, and that in progress at its close, are given in the following tables:—

*Works completed.*

1899	...	...	...	...	£90,926

*School Attendance.*—The returns for the year show an improvement as regards enrolment, the gross enrolment at Primary schools being 265,037 pupils, as compared with 258,592 in 1898, an increase of 6,445. Deducting 12 per cent. on account of multiple enrolments, the number of individual pupils under instruction was 233,233, an increase over the preceding year of 5,672.

The gross aggregate enrolment and the aggregate enrolment of distinct pupils for the last five years appear below :—

Years.	Gross Aggregate Enrolment.	Corrected Aggregate Enrolment of Distinct Pupils.	Increase.	
			Gross Enrolment.	Corrected Enrolment.
1895 ...	245,904	216,396	11,512	10,131
1896 ...	251,821	221,603	5,917	5,207
1897 ...	256,996	226,157	5,175	4,554
1898 ...	258,592	227,561	1,596	1,404
1899 ...	265,037	233,233	6,445	5,672

In addition to the 233,233 pupils enrolled in schools under the Public Instruction Act, there were 1,536 in attendance at other State-aided Schools, namely :—

The Sydney Grammar School	...	...	...	...	...	590
The Industrial Schools	...	...	...	...	...	667
The School for the Deaf and Dumb and the Blind	...	...	...	...	...	117

						<hr/>
Total	...	...	...	...	...	1,536

Estimating the mean population of the Colony for 1899 at 1,345,245, the population between 6 and 14 years of age was 253,212. Of this number, 201,014, or 79·4 per cent., attended State Schools, and 52,198, or 20·6 per cent., received instruction in Private Schools or at home, or else remained untaught. From the latest returns of Private Schools' attendance it is estimated that the total enrolment was 60,159. As of this enrolment 45,294 pupils were between the ages of 6 and 14, it will be seen that, of the total statutory school population of 253,212, 246,308, or 97·3 per cent., were enrolled at State and Private Schools, while 6,904, or 2·7 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 18,736 under 6 years of age, and 29,883 over 14 years, were also enrolled for school attendance—33,754 at State Schools, and 14,865 at Private Schools. Thus, of 356,232 children in the Colony between the ages of 4 and 15 years, 234,768 attended State Schools, and 60,159 attended Private Schools; while the remainder, 61,305, received instruction at home, had completed their education, or were untaught.

The average quarterly enrolment was 208,632, and the average attendance 149,349. In the first half of the year 151,603 pupils, and in the second half 161,746 pupils, attended the ordinary day-schools 70 days or more. The percentage of the quarterly enrolment attending the compulsory number of days was, in the first half-year, 72·7 per cent., and in the second, 77·4 per cent.

The percentages of the net yearly enrolment attending 70 days or more in each half-year, since 1894, are as follow :—

[illegible]

The enrolment and average attendance are shown in the following tables:—

(a) *Quarterly Enrolment and Average Attendance for 1898 and 1899.*

Quarters.	Number enrolled.		Average Attendance.			
			Number.		Percentages.	
	1898.	1899.	1898.	1899.	1898.	1899.
March quarter ..	203,362	206,909	143,256·2	151,717·6	70·4	73·3
June quarter ...	205,881	209,841	143,380·2	149,328·1	69·6	71·1
September quarter ...	204,350	211,264	140,436·5	147,840·4	68·7	69·9
December quarter ...	202,048	206,516	139,820·1	148,873·3	69·2	72·1
Year's average...	203,910	208,632	141,723·2	149,439·8	69·5	71·6

(b) *Enrolment and Average Attendance for the last five years.*

Years.	Year's Enrolment.	Quarterly Enrolment.	Average Attendance.		
			Number.	Percentage of Year's Enrolment.	Percentage of Quarterly Enrolment.
1895 ... ..	216,396	192,075	139,978	64·68	72·87
1896 ... ..	221,603	197,025	142,192	64·16	72·17
1897 ... ..	226,157	201,947	148,381	65·60	73·47
1898 ... ..	227,561	203,910	141,723	62·27	69·50
1899 ... ..	233,233	208,632	149,439	64·07	71·62

The main facts relative to school attendance may be summed up thus:—246,308, or 97·3 per cent. of the statutory population, were enrolled for school attendance; 201,014, or 79·4 per cent., at State Schools; and 45,294, or 17·9 per cent., at Private Schools. Of the school population between 4 and 15 years—294,927, or 82·8 per cent., were at school; 234,768, or 65·9 per cent., at State Schools; and 60,159, or 16·9 per cent., at Private Schools. 233,233 children attended schools under the Public Instruction Act; 200,317 being of the statutory school age, and 32,916 either above or below it. The mean quarterly enrolment was 208,632, or 89·4 per cent. of the year's enrolment; and the average attendance was 149,439, or 71·6 of the quarterly enrolment. Of the net yearly enrolment, 65 per cent. attended school 70 days or more in the first half-year, and 69·3 per cent. in the second half-year. The percentage of the population enrolled quarterly and the corresponding percentage in average attendance in 1899 were respectively 16·5 and 11·1, as compared with 15·3 and 10·6 in 1898.

*Compulsory clauses of the Act.*—62,908 children between the ages of 6 and 14 years failed to complete the minimum attendance of 70 days during the first half of the year; but in 417 cases only was the law set in motion. The parents of 3,422 were cautioned, while in the remaining cases satisfactory explanations were furnished, or the circumstances

circumstances were not such as to render any action necessary. In a large number of instances, pupils had obtained certificates by examination, and were thus legally exempt.

For the second half-year, the number between the compulsory ages who did not attend 70 days was 54,042. In 615 cases legal action was taken, and cautions were sent to parents in 3,223 cases.

*Special Religious Instruction.*—The provisions of clause 17 of the Public Instruction Act, under which not more than one hour a day may be set apart for the special religious instruction of pupils by clergymen or other authorised religious teachers, were largely taken advantage of during the year. The Visitors' Books of the schools show that 19,515 visits were made for this purpose by the representatives of the several denominations :—

Church of England	...	...	...	...	13,315
Roman Catholic	...	...	...	...	392
Presbyterian	..	...	...	...	2,421
Wesleyan...	...	...	...	...	1,916
Others	...	...	...	...	1,471

SCHOOL FEES.

Considerable improvement was shown as regards the payment of school fees. Debts to the amount of £1,509 9s. 8d. were cancelled, and free education authorised in the case of 34,476 pupils. In 352 cases only was recourse had to legal process for the recovery of arrears of fees. The amount of fees collected and paid into the Consolidated Revenue was—for Primary Schools, £75,263 1s., and for High Schools, £3,095 1s. 6d., making a total of £78,358 2s. 6d. These figures show an increase in the amount paid in Primary Schools, as compared with the payments of 1898, of £4,632 11s. 2d., and as regards High Schools of £632 6s. The prosecutions were fewer by more than 100, and the amount of debts cancelled less by £1,031.

INSPECTION.

No changes took place in the personnel of the inspectorial staff. As in 1898, the staff comprised 36 officers—Chief Inspector, Deputy Chief Inspector, 9 District Inspectors, and 25 Inspectors.

The amount of inspection accomplished in each district, and the manner in which the schools were apportioned, are shown in the table appended :—

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools not inspected.	No. of Pupils examined.

The following table summarises the progress in efficiency made in the different classes of schools during the past five years :—

Class of Schools.	Percentage up to or above the Standard.				
	1895.	1896.	1897.	1898.	1899.
Public ... ..	97	97	98	98	98
Provisional... ..	82	86	92	84	85
Half-time ... ..	89	89	91	90	91
House-to-house ... ..	91	95	77	77	74
Evening Schools ... ..	93	93	95	100	96
All Schools... ..	94	95	96	95	95

HIGH SCHOOLS.

The number of High Schools open in 1899 was 4, being one fewer than in the previous year. Owing to lack of support on the part of the public, the enrolment of pupils at the Bathurst High School for Girls fell so low that it was deemed expedient not to reopen the school after the end of 1898.

The total enrolment at those in operation was 606, and the average daily attendance 436, as against 527 and 376 respectively for 1898. The attendance at each school is shown below :—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.
Sydney (Boys)... ..	213	164	152·4
„ (Girls) ... ..	219	169	151·6
Maitland (Boys) ... ..	113	93	89·3
„ (Girls) ... ..	61	47	42·7
Totals ... ..	606	473	436·0
Totals for 1898 ... ..	527	420	376·3

473 pupils, or 91 per cent. of the average quarterly enrolment, were present at the annual examination, the percentage of results averaging nearly 80 per cent. At the University Examinations these schools took a good position, as will be seen from the table following :—

School.	No. of Passes, Junior Examination.	No. of Passes, Senior Examination.	No. of Passes, Matriculation Examination.
Sydney (Boys) ... ..	23	5	21
„ (Girls) ... ..	22	4	10
Maitland (Boys) ... ..	17	2	8
„ (Girls) ... ..	10	0	5
Totals ... ..	72	11	44

Of those who qualified for matriculation, 27 did so at the Junior and 7 at the Senior Examinations.

The total expenditure on High Schools was £5,778 17s. 7d., being £421 11s. 6d. less than in 1898; and the amount of fees received £3,095 1s. 6d., an increase of £632 6s. 0d. The actual cost to the State was £2,683 16s. 1d., or at the rate of £4 8s. 7d. per head of the total enrolment, as against £7 1s. 10d. in 1898.

#### STATE SCHOLARSHIPS AND BURSARIES.

At the examinations held under the Scholarship and Bursary scheme, 105 candidates were successful. Of these, 25 boys and 25 girls obtained Scholarships for High Schools and Superior Schools; 20 boys and 20 girls, Bursaries for High and Superior Schools; 5 boys, Bursaries for the Sydney Grammar School; and 6 boys and 4 girls, University Bursaries.

Of the 50 successful competitors for Scholarships, 17 boys and 15 girls have since attended the Sydney High Schools, 7 boys and 9 girls the Maitland High Schools, 1 boy the Gunnedah Superior Public School, and 1 girl the Wallsend Superior Public School. Of the 45 who succeeded in gaining State School Bursaries, 9 boys and 11 girls attend the Sydney High Schools, 8 boys and 5 girls the Maitland High Schools, 5 boys the Sydney Grammar School, 1 boy and 4 girls the Fort-street Model Public School, and 2 boys the Leichhardt Superior Public School.

Of the 10 University Bursaries awarded, 6 were obtained by pupils of the Fort-street Model Public School (5 boys and 1 girl), 3 by pupils of the Girls' High School, Sydney, and 1 by a pupil of the Sydney Grammar School. The last-mentioned previously held a State School Bursary.

Of 26 State Bursars attending University Lectures during 1899, 8 had formerly been State School Bursars or Scholars.

The total number of candidates examined for admission to the High Schools was 619; of these 615, or 99·3 per cent., were successful.

#### SUPERIOR SCHOOLS.

One school—Chatswood—was promoted to the rank of Superior School. At the end of the year Superior Schools numbered 102, comprising 253 departments. The enrolment and average attendance of pupils for December quarter were 74,162 and 55,438 respectively.

#### EVENING PUBLIC SCHOOLS.

Eleven applications for the establishment of Evening Schools were received; 10 were granted, and 1 had not been finally dealt with at the close of the year. The total number of schools in operation was 31, but 5 collapsed before the end of the year. On 31st December there were 26 schools in existence, having an enrolment of 841, with an average attendance of 446.

Twenty-eight of these Evening Schools were inspected, and, in 27, the results proved to be up to or in excess of standard requirements.

TECHNICAL

## TECHNICAL EDUCATION IN PUBLIC SCHOOLS.

*Drawing.*—156,851 pupils were examined in this subject, of whom 132,600, or 84 per cent., satisfied the standard. In 205 departments in the Metropolitan and Sub-metropolitan districts visited by the Superintendent of Drawing, 46,859 pupils were present at examination. 91 per cent. of these were found to reach the standard—an improvement of 1 per cent. upon the results of 1898. Detailed information upon this subject will be found in Appendix XIII.

*Manual Training.*—Ten workshops were in existence in 1899, which afforded instruction to the pupils of 29 schools. The total enrolment of these classes, including students in training, was 913. Of these 527 presented themselves for examination, and 484 passed.

*Cookery.*—The number of schools in operation in 1899 was 11, with an enrolment of 864 pupils. Of this number 771 presented themselves for examination, of whom 750, or 97 per cent., were successful.

*Needlework.*—57,938 female pupils were examined in needlework, of whom 52,586, or 90 per cent., passed the standard. In the Metropolitan and Sub-Metropolitan districts, 87 schools, representing 15,453 children, were examined by the Directress, who reports that the instruction given continues to be thorough and effective. [See Appendix XV.]

## PUBLIC SCHOOL SAVINGS BANKS.

630 Banks were in existence at the beginning of the year; 7 new ones were established and 4 closed, leaving 633 in operation on 31st December. The credit balance brought forward from 1898 was £8,103 13s. 8d., which by the end of the year amounted to £9,112 13s. 4d., showing an increase of £1,008 19s. 8d.

The deposits and withdrawals during the year, amounting to £16,664 8s. 6d. and £15,655 8s. 10d. respectively, also show a large increase on the previous year's transactions, the former of £2,084 13s. 1d., and the latter of £1,775 7s. The amount withdrawn for deposit to the credit of pupils in the Government Savings Bank was £4,506 4s. 10d., as compared with £4,101 17s. in 1898.

Since the establishment of these Banks in 1887 the deposits have totalled £155,783 3s. 4d., and the withdrawals £146,670 10s. Of this latter sum, £42,559 17s. 1d. was withdrawn for the purpose of being placed to the credit of children's own accounts in the Government Savings Bank.

## TEACHERS.

4,884 teachers of all classes were actually employed on 31st December, 1899, being 125 more than at the end of the previous year. 3,106 were classified teachers, 596 unclassified but certificated for small schools, 47 were Training-school students, 1,052 pupil-teachers, 60 work-mistresses, and 23 High School teachers. Of the whole number, 53·4 are males and 46·6 females; and of the teachers in charge of schools, 78·4 per cent. are males and 21·6 females. As regards assistants, the percentages are 27·7 males and 72·3 females.

The

The following table gives full information respecting the several classes into which teachers are divided :—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Unclassified.		Totals.		Grand Total.

Work-mistresses .....	.....										.....	...	60	60
High School Teachers...	.....										.....	14	9	23
Total Teachers of all ranks .....												2,609	2,275	4,884

Of the total number of classified teachers, 7·3 per cent. are in Class I, 35·9 per cent. in Class II, and 56·8 per cent. in Class III. Only 16 per cent. of our teachers are unclassified, and the majority of these had, before appointment, served four years at least as pupil-teachers.

The teachers whose connection with the Department ceased during the year numbered 185. Of these, 137 resigned, 21 retired under the Public Service Act, 10 were transferred to other Departments of the Service, and 17 died.

During 1899, 871 applicants for appointment to the office of pupil-teacher were submitted to competitive examination, of whom 139 were accepted. Of those awaiting employment, 181 were appointed to schools.

*Fort-street Training School.*—The number of students in training was 23; 15 held full scholarships, and 8 half-scholarships.

Instruction was given during the year in professional subjects, in the principles and practice of teaching and class management, and in manual training. Specimen, test, and criticism lessons were given every week. The examination with a view to the classification of the students was held in December and resulted as follows :—

II A.	II B.	III A.	Total.
7	10	6	23

The results of the examination in manual training were :—

First Grade.	Second Grade.	Total.
13	10	23

At

At an examination held under the auspices of the St. John's Ambulance Association, all the students qualified for the "first aid" certificate. The students, moreover, received instruction in drill every week, and, once a month, target practice was carried out at Randwick.

*Hurlstone Training School for Female Students.*—Twenty-four students were in residence, of whom 11 held full scholarships, and 13 special scholarships.

In addition to instruction in the usual professional subjects, each student had four weeks actual teaching and practical training in the Practising School, besides being required to give criticism lessons in various subjects, and to conduct drill, music, and drawing lessons before the respective tutors. All the students attended a course of practical cookery, and examinations were held in drill and cookery.

The results of the examination for classification, held at the end of the year, are given below :—

II A.	II B.	III A.	Total.
6	14	4	24

*Teachers' Examinations.*—The total number of examinees of all classes during 1899 was 2,968. The percentage of passes of teachers was 54·5 and of pupil-teachers 93·6. The total number of pupil-teachers reported on was 932, as against 778 in 1898. The male and female examinees who obtained the highest number of marks at the first-class pupil-teachers' examination for admission to training were Mr. Percival R. Cole, of Glebe Superior Public School, with 91·6 per cent. of marks, and Miss Katie Dunne, of the Superior Public School at Parramatta South, with 81·8 per cent. Each of them will be presented with the Jones Memorial Medal.

In the following table the results of the several examinations are given in detail :—

Persons examined.	Results.		
	Passed.	Failed.	Total.
Teachers and Assistant Teachers ... ..	180	150	330

Passed final Pupil-teacher examination 116 "			
Applicants for office of Pupil-teacher ... ..	139	732	†871
High School Candidates ... ..	615	4	619

†This examination is now competitive.

*Teachers' Mutual Assurance Association.*—During the year 2 members of the Association died. For the last ten years the death-rate has been 3·9 per annum. There is no legacy duty, nor have nominees of deceased members to wait for probate of will, as payment is made immediately on proof of death. Teachers of all grades are eligible for membership.

LOCAL SUPERVISION.

One sub-district was formed during the year, and a Public School Board appointed thereto. The number of persons thus appointed was 6. In addition, 47 members were added to Boards already in existence. The total number of Boards in operation was 301. On 58 of these, ladies to the number of 115 held seats. The resignations of 20 members were accepted, and 26 were reported as deceased, or having left the locality. The visitors' books of the schools record 612 visits paid by members of Public School Boards.

SCIENTIFIC AND TECHNICAL EDUCATION.

A comparative statement of the total enrolment of students at the colleges and branch schools for the years 1898 and 1899 is given below :—

	1898.	1899.
Sydney Technical College ... ..	4,052	4,837
Suburban classes ... ..	686	643
Country classes ... ..	2,336	2,654
Classes connected with Public Schools	1,444	2,122
	8,518	10,256

Deducting from this enrolment all cases where students were members of more than one class, the number of individuals attending the classes was 7,647, as against 6,291 for last year—an increase of 1,356. The average weekly attendance was 6,631, giving an increase over 1898 of 953.

The total number of classes in operation was distributed as shown below :—

	Under salaried Teachers.	Teachers paid fees only.	Total.
Sydney Technical College ... ..	68	6	74
Suburban classes ... ..	16	8	24
Classes in country towns ... ..	111	11	122
Classes from Public Schools ... ..	22	16	38
	217	41	258

The students examined at the end of the year numbered 3,833, of whom 2,886, or 75·3 per cent., were successful ; in 1898 there were 2,956 examined, 2,246 of whom, or 76 per cent., passed. At the technological examinations of “The City and Guild of London Institute,” held in May last, 25 students of the Technical Colleges were examined, of whom 21 passed.

The

The teaching staff comprises 109 persons, viz., 12 lecturers in charge of departments, 7 resident masters in charge of branch schools, 53 teachers, 15 assistant teachers, and 22 teachers of classes who are remunerated by pupils' fees only. Several changes in the staff took place during the year.

In February last, a new technical school was opened at Albury, with Mr. W. Powrie as resident master. A site for a branch college has been purchased at Goulburn, and plans are being prepared for a suitable building.

Science lecture courses in Physics, Geology, and Chemistry were given during the year by the resident masters to the elder pupils of the Public Schools at Bathurst, Goulburn, and Newcastle. The attendance at these lectures is reported to have been large, and the results of the examinations were gratifying.

Shorthand classes also were established at the Public Schools at Burwood, Croydon, Darlinghurst, Petersham, Newtown, Rockdale, Stanmore, Summer Hill, Waverley, and Woollahra, and at the Sydney High School for Girls. The total enrolment for these classes was 468, and the interest of the pupils was well sustained.

Detailed information of an interesting character, relating to technical education, will be found in the Superintendent's report. [*Appendix XIX.*]

The Technological Museum and branches were visited by 246,572 persons, an increase of 7,780 over the visitors of the previous year. The subjoined table gives the attendance at each.

	1898.	1899.
Technological Museum, Sydney ... ..	106,179	114,503
Branch Museum, Newcastle ... ..	45,942	42,294
„ Goulburn ... ..	22,497	24,526
„ Bathurst ... ..	32,597	33,302
„ West Maitland ... ..	23,263	23,802
„ Albury ... ..	8,314	8,145
	238,792	246,572

The total expenditure on technical education during 1899, including £3,822 11s. spent on the Technological Museums, amounted to £29,129 3s. 2d. Of this sum £23,040 1s. 10d. was a Parliamentary grant, £1,166 12s. 6d. represented payments by the Treasury from the Loan Vote for the erection of buildings, &c., and £66 15s. 8d. London payments by the Treasury; while the balance, £4,855 13s. 2d., shows the amount paid by students as fees to teachers, and for chemicals, &c., in connection with the Chemistry Class at the Sydney College.

PUBLIC SCHOOL CADET FORCE.

For the last quarter of 1899 the total enrolment of the Cadet Force was 3,452. The number of corps was 103. The amount expended for cadet purposes was £3,415 11s. 11d., as against £3,706 3s. 10d. in 1898.

Details of the year's work appear in Appendix XVIII.

FINANCE.

The sum available for expenditure under the Public Instruction Act was £751,818 19s. 6d., made up as follows :—

	£	s.	d.
Balance from 1898	18,912	8	1
Do of Petty Cash in hand	2	4	5
Amount received from Treasury on account of Vote for 1898-9	319,000	0	0
Do do Item 174	332	16	8
Do do Item 281	38	3	8
Amount received from Treasury on account of Vote for 1899-1900	337,000	0	0
Amount received from Loan Vote, 1897—Public School buildings and sites	25,000	0	0
Amount received from Public School Buildings Account	50,000	0	0
Amount of Minister's salary	1,370	0	0
Payment from Treasurer's Advance Account	133	6	8
	<hr/> £751,818 19 6		

The total outlay was £737,080 7s. 10d., namely, £90,926 8s. 8d. on school premises, £597,957 7s. 4d. on maintenance of schools, and £48,196 11s. 10d. on administration, &c., leaving a balance at the end of the year of £14,738 11s. 8d.

General Statement of Expenditure for 1899.

I. On School Premises :—	£	s.	d.
For sites, new buildings, additions, repairs, &c., including High Schools, £316 10s. 5d.	90,926	8	8
II. On Maintenance of Schools, &c. :—			
	£	s.	d.
1. Teachers' salaries and allowances in Primary Schools	557,255	9	3
Other maintenance expenses in such schools	31,598	2	8
2. High School salaries and maintenance expenses	5,462	7	2
State Scholarships and Bursaries	3,641	8	3
3. Administration, including Training Schools and enforcement of school attendance	48,196	11	10
	<hr/> 646,153 19 2		
	<hr/> £737,080 7 10		

The amount of school fees collected and paid into the Consolidated Revenue was £78,358 2s. 6d., namely, £75,263 1s. from Primary Schools, and £3,095 1s. 6d. from High Schools. Deducting this sum from the total expenditure, there will remain £658,722 5s. 4d. as the net school expenditure derived from State funds.

The

The total expenditure during the last five years is shown in the following table :—

	1895 Expenditure	Per- centage of total expen- diture	1896 Expenditure	Per- centage of total expen- diture	1897. Expenditure.	Per- centage of total expen- diture.	1898 Expenditure	Per- centage of total expen- diture.	1899 Expenditure	Per- centage of total expen- diture.

Information is furnished in the following summaries respecting educational establishments connected with this Department, but not carried on under the provisions of the Public Instruction Act :—

THE SYDNEY UNIVERSITY.

Five hundred and nineteen students, including 70 women, attended lectures during 1899. The total number qualified for Matriculation was 299, of whom 97 passed the ordinary Matriculation Examination, 111 the Junior Public Examination, 22 the Law Matriculation Examination, 53 the Senior Public Examination, and 16 the Entrance Examination for Law, Medicine, and Science. The number actually admitted to Matriculation was 124.

At the Senior Public Examinations, 123 candidates presented themselves, and 106 passed. At the Junior Examination, 752 were successful out of 1,091.

The degrees conferred during the year were 92, viz. :—M.A., 6; B.A., 46; LL.B., 7; M.B., 15; Ch.M., 12; B.Sc., 2; and B.E., 4.

The University Staff consisted of 14 Professors and 34 Lecturers and Demonstrators, of whom 7 Professors and 3 Lecturers are paid out of the Challis Fund; and 6 Teachers from the P. N. Russell Fund.

The year's expenditure was £34,131 14s. 5d., of which sum £11,266 13s. 4d. was granted by the Government. £5,187 2s. 4d. was derived from private foundations for the payment of scholarships, bursaries, prizes, &c., for the Fisher Library, and for maintenance of the P. N. Russell School of Engineering. The total income for the year was £34,466 14s. 10d.

## THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils for 1899 was 590, of whom 208 were under and 382 over the statutory age of 14 years. 180 new pupils were admitted, 103 being under and 77 above 14 years of age. The mean quarterly enrolment was 508, and the average attendance 484.

The income and expenditure for the year were as follows :—

<i>Income.</i>				£	s.	d.
From State grants	...	...	...	1,500	0	0
„ School fees	...	...	...	8,562	10	0
„ Special prizes, &c.	...	...	...	133	15	0
„ Balance in hand, 1898	...	...	...	365	3	6
				£10,561	8	6

<i>Expenditure.</i>				£	s.	d.
By expenditure	...	...	...	9,338	13	0
„ Balance in hand, 1899	...	...	...	1,222	15	6
				£10,561	8	6

The cost per pupil in average attendance was £19 5s. 10½d., being £1 17s. 7¾d. less than in 1898. The expense to the State was £3 1s. 11d. per head, as against £3 9s. 7¼d. in the previous year.

## THE OBSERVATORY.

*Astronomical Work.*—Regular work with the transit circle was carried on during the year. 1,963 observations were made, together with the necessary computations. With the equatorial telescope, 1,348 observations were made and computations completed. 125 photographs of stars were taken, of which 53 were long exposures for the chart of the heavens, and 72 were catalogue plates. During the year the star camera was removed to Red Hill, involving a loss of nearly four months in removal and erection in its new home.

*Meteorology.*—Weather charts and forecasts were issued twice daily—at 1 p.m. and at 9 p.m. These are based on telegrams from New Zealand, New Caledonia, and all the Australian Colonies. Over 600 are received daily, discussed, and combined into a midday and an evening chart. Monthly returns of rain and weather were received from 1,724 stations in New South Wales, which were combined into the annual rain report.

The daily time-ball service at Sydney and Newcastle was satisfactorily maintained.

During the year, the Government Astronomer prepared for publication the Rain Report for 1898, and many valuable pamphlets on scientific subjects.

Altogether 21,277 documents were transmitted to correspondents and to other Observatories.

The

The Observatory was open to the public every Monday afternoon, a privilege of which 1,366 visitors took advantage.

The staff numbered 13 persons, in addition to the Government Astronomer. The expenditure for 1899 was:—

	£	s.	d.
For salaries ... ..	3,614	0	0
„ maintenance ... ..	867	0	0
	£4,481	0	0

THE PUBLIC LIBRARY.

The total number of volumes in the Library at the end of 1899 was 144,244. During the year new books to the number of 20,144 were added, and 14,155 books sent out on loan to country libraries. 183,760 persons visited the reading-rooms, as against 176,879 in the previous year; 264,359 the newspaper-room, as compared with 162,170 in 1898; and 106,159 visits were paid to the Lending Branch, an increase of 20,144 over the number in 1898. The total number of visits, therefore, paid to the institution during the year was 554,278.

Thirty-seven persons were employed on the staff of the institution. The expenditure for the year was:—

	£	s.	d.
On buildings, repairs, &c. (under Government Architect) ...	754	0	0
On books, periodicals, newspapers, binding ... ..	2,330	0	0
On salaries ... ..	5,176	0	0
On Library appliances ... ..	369	0	0
On incidentals (insurance, lighting, freight, type, &c.) ... ..	610	0	0
	£9,239	0	0

THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum was—On week-days, 90,321; on Sundays, 31,298; total, 121,619. Twenty-six persons were employed on the staff of the institution. The Trustees report that the year's expenditure was as given below:—

	£	s.	d.
On salaries and allowances... ..	4,435	2	2
On specimens (purchase, collection, and carriage) ... ..	206	7	9
On books and binding ... ..	306	17	1
On catalogues ... ..	390	7	9
On cases and fittings ... ..	563	1	6
Expedition to Funafuti coral reef—Publication of scientific results continued ... ..	133	2	8
“Thetis” trawling expedition—Publication of scientific results ... ..	189	7	6
Towards publication of “Nest and Egg” catalogue ... ..	250	17	6
Miscellaneous ... ..	230	15	8
	£6,705	19	7

NATIONAL

## NATIONAL ART GALLERY.

During the year 243,998 visits to the Gallery were registered. The attendance on Sundays averaged 1,700; on week-days, 496. Fifteen additional students were admitted, making the total number 296. Six persons were permanently employed, with two extra assistants on Sundays and holidays.

The following is a statement of the year's expenditure:—

	£	s.	d.
For works of art purchased ...	1,905	0	0
For maintenance (frames, freight, fittings, repairs, insurances, &c.)	978	0	0
For salaries and wages ...	1,105	0	0
	<u>£3,988</u>	<u>0</u>	<u>0</u>

NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB  
AND THE BLIND.

The number of inmates during the year was 117, as compared with 116 for 1898. Of these, 75 were under and 42 were over 14 years of age. The new admissions were 10, all of whom were under 14 years. Five inmates were discharged—3 under 14 years, and 2 over that age.

The income of the institution was £5,655 6s. 2d., including legacies to the amount of £375, of which £350 was placed to the credit of the Perpetual Subscribers' Funds. The following statement shows the income was:—

	£	s.	d.
From State grants (two years) ...	900	0	0
From other sources ...	4,755	6	2
	<u>£5,655</u>	<u>6</u>	<u>2</u>

The expenditure for the year was:—

	£	s.	d.
For erection of new laundry, &c. ...	684	7	6
For maintenance ...	2,211	15	1
For salaries and wages ...	2,252	7	8
	<u>£5,148</u>	<u>10</u>	<u>3</u>

The number of teachers employed was 14, and the average cost per pupil £40 9s. 10d., as against £36 12s. 8d. in 1898.

## INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The enrolment for the year was 165, of whom 52 were under and 113 above the age of 14 years. There were 55 new admissions—24 under and 31 over 14 years old. Sixty-two inmates were discharged during the year, as follows:—

To Boarding-out Officer ...	...	4
As apprentices ...	...	29
On attaining age of 18 years ...	...	22
By order of Governor-in-Council ...	...	7

The

The number remaining in the institution on 31st December was 103. Compared with 1893, there was a decrease of 21 in the enrolment, and 5 in the new admissions.

The expenditure for the year was :—

	£	s.	d.
For maintenance ... ..	1,364	8	11
For salaries ... ..	1,212	9	4
	<hr/>	<hr/>	<hr/>
	£2,576	18	3

Calculated on the enrolment, the cost per inmate was £15 12s. 4d., as compared with £14 9s. 0d. for the previous year.

The Superintendent reports :—

“The material condition of the institution is fast approaching what may be termed perfection. The new kitchen range is proving all that could be desired, and the inmates are now served with properly cooked food, waste is obviated, and the safety of those engaged in cooking is ensured. By the building and fixing of the new range, the old kitchen is available for use as a cookery room, and 18 girls are now taught weekly the art of cookery by the teacher from the Technical Branch. Some of the girls become excellent cooks, and show great taste in their work.

All of them are systematically trained in general housework—kitchen, scullery, laundry, and dairy work in turn, according to their capacity. They are also carefully instructed in flower culture, needlework of all kinds, patching, darning, knitting and dressmaking; in fact, many girls who are admitted into the institution utterly devoid of the knowledge of the rudiments of domestic economy, are able when they leave it to make and mend their own clothing, and to prepare and cook a good meal.

The work of the laundry class was very successful during the year, the girls being very carefully instructed in all the details of this industrial division. The articles of clothing dealt with in this branch numbered 190,000, and the value of the work done was estimated at £978 15s. Of the above articles, 26,000 were sent from the students of Hurlstone College.

Of the other industrial classes, the sewing division occupies a very prominent position. All the inmates' dresses, cloaks, jackets, aprons, and other wearing apparel are made and repaired by this class. In addition, the members of this division are taught knitting, darning, and crochet work. All inmates are members in turn.

For practical training in household duties, the girls are placed in the institution kitchen, and in the officers' quarters.

All the cooking is done by the girls.

Much interest is taken by all in flower-culture, and advantage is taken of this to beautify, as far as possible, the interior of the institution. The flower gardens are kept in good order by the girls, under the matron's direction. In the schoolroom, good work has been done, and the teachers are most painstaking in the discharge of their duties.

A carefully drawn programme of evening recreation is prepared for the winter months, consisting of readings, recitations, and vocal and instrumental music. In addition to these, a course of lectures on 'plain talks' was given on each Friday evening during the winter by the matron. The elder girls only were permitted to attend this course of lectures."

#### NAUTICAL SCHOOL-SHIP "SOBRAON."

In this institution, 502 boys were enrolled, 284 of these being under and 218 over 14 years of age. The new admissions numbered 200, of whom 134 were below and 66 above the age stated. The number discharged was 181, made up as follows:—

For apprenticeship	...	...	...	98
On attaining 18 years of age	...	...	...	7
Transferred to Boarding-out Officer	...	...	...	8
Discharged to mercantile marine service	...	...	...	7
By order of the Governor-in-Council	...	...	...	54
Illegally committed	...	...	...	4
Transferred to Permanent Military Force	...	...	...	2
Death	...	...	...	1
				181

318 boys remained on the "Sobraon" at the end of the year. As compared with 1898, an increase of 27 is shown in the enrolment, of 8 in the discharges, and of 42 in the number of new admissions.

The total expenditure was £7,805 14s. 3d. viz.:—

				£	s.	d.
For maintenance	...	...	...	5,206	13	6
For salaries	...	...	...	2,599	0	9
				£7,805 14 3		
Deducting parents' contributions						
to the Treasury	...	...	...	291	18	0
				£7,513 16 3		

Calculated on the net expenditure, the cost to the State per head of the enrolment was £14 19s. 4d. as compared with £16 2s. 0d. for 1898.

#### CARPENTERIAN REFORMATORY.

At this institution the enrolment for the year was 139, 73 of the inmates being under and 66 over 14 years of age. The new admissions numbered 53, while 48 were discharged:

By order of Governor-in-Council	...	...	...	32
By expiry of time	...	...	...	14
By transference to N.S.S. "Sobraon"	...	...	...	1
„ Hospital for Insane, Newcastle...				1

Of the 53 admissions, 31 were under and 22 above the age of 14. 91 boys remained in the institution at the expiration of the year, 39 being under and 52 over 14 years of age.

The health of the inmates during the year has been excellent, and their conduct very good. All the officers report that the boys under their charge are making good progress in the various trades.

The

The Superintendent reports :—

“The industrial work done during the year shows an increase as to amount and value over that of 1898. The boys now are able to make all their own clothing, and carry out any alterations and repairs that are from time to time necessary. The trades taught are—(1) carpentry, (2) painting and glazing, (3) tinsmithing, (4) tailoring, (5) bootmaking, and (6) jam-making. In addition to these, all boys are taught the first principles of orchard and garden work, and quite a number learn milking and general farm work. The carpenters make all the furniture required in the institution, and carry out all repairs to the buildings. Several articles of furniture were also made for the Government Stores Department. In the tinsmith shop, the closet-pans for the metropolitan, suburban, and country schools are made, together with all kinds of tinware. The tailors produce all the clothing worn by the inmates, also the uniforms for the attendants. From the boot-shop comes all the boys' foot-wear, and it is intended that, in the near future, this shop will be able to repair boots for other Government institutions.

“The jam-house turns out, on an average, about 1,500 lb. of jam weekly, which goes to supply the various Government institutions.”

Industrial work was carried out to the value of £1,423 13s.

The net expenditure in connection with the reformatory was £2,269 14s. 5d. Calculated on the year's enrolment, the cost to the State per head was £16 6s. 7d.

#### SHAFTESBURY REFORMATORY.

At the commencement of 1899, there were 23 girls enrolled at this institution. During the year, 4 were admitted, and 8 discharged—7 owing to the expiry of the term of their sentences, and 1 by order of the Governor-in Council. On 31st December, the number of inmates was 15, of whom 5 were under and 10 over the age of 14 years.

The conduct and health of the girls during the year were both very good. The work of the institution, including washing, stoning, cooking, sewing, milking, gardening, &c., was satisfactorily performed by the inmates. All the girls attended school regularly.

The year's expenditure was as under :—

Salaries ... ..	£236
Maintenance ... ..	326
	<hr/>
	£562

The average cost per pupil enrolled was, therefore, £24 8s. 8d.

JOHN PERRY,  
Minister of Public Instruction.

Department of Public Instruction,  
Sydney, 20th April, 1900.

## APPENDIX XII.

## THE CHIEF INSPECTOR'S REPORT, WITH ITS ANNEXES.

THE expectation that the new and more liberal Regulations dealing with the establishment of small schools in the sparsely peopled districts of the Colony would result in a large increase in the number of schools has been fully realised. The records for 1899 show the substantial addition of 92 schools. Of the 2,597 schools in operation in 1898, 56 were closed during that year, or were allowed to lapse in December; so that 2,541 were carried on to 1899. These, with 148 new schools, and new departments brought into operation, gave 2,689 schools, representing 2,905 departments, as the record for 1899.

The following is the return of schools for the last five years :—

Year.	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
1895	1,685	317	483	57	16	2,558
1896	1,698	310	497	44	30	2,569
1897	1,755	294	457	41	25	2,572
1898	1,787	313	431	37	29	2,597
1899	1,811	358	456	33	31	2,689

Arranged in classes according to the average attendance at the end of the year, they are :—

Year.	Class I.	II.	III.	IV.	V.	VI.	VII.	VIII.	IX.	X.	Small Unclassified.	Total.
1895	39	36	27	64	124	198	214	370	796	165	525	2,558
1896	40	36	26	62	127	198	185	335	860	193	507	2,569
1897	43	38	29	59	124	226	202	362	862	141	486	2,572
1898	45	39	28	62	121	233	227	365	840	133	504	2,597
1899	46	39	29	61	122	240	230	394	836	128	564	2,689

*Buildings.*

The very limited funds at the disposal of the Department necessitated very rigid economy during the year. Matters, such as painting and fencing, were allowed to stand over in order that the pressing demands for school accommodation could be met. The needs of the country districts have been fairly well satisfied. Commodious, well-ventilated buildings have replaced the small box-like structures that the parents in past years thought good enough for school purposes, and additions have been made to those school-houses that were at all overcrowded. All new furniture is supplied from Sydney—a course somewhat costly, but of great advantage to the schools.

The plans and specifications prepared by the Special Committee during the Christmas vacation of 1898 have been printed and supplied to the Inspectors and Clerks of Works. These officers have thus been enabled to dispose of "new buildings" matters more expeditiously and effectively than formerly. The Architect and his staff have co-operated loyally with the Inspectoral staff, and have done all in their power to place the school buildings abreast of the educational wants of the Colony.

The works carried out under the supervision of the Architect were :—

New school buildings .....	25
Buildings enlarged .....	23
Buildings repaired.....	478
New residences .....	11
Residences enlarged .....	21
New weathersheds .....	2

The amount of work carried out under the supervision of the Inspectors has been considerable, as may be seen from the following return :—

New school buildings .....	110
Buildings enlarged .....	22
Buildings repaired.....	974
New residences .....	5
Residences enlarged or repaired.....	224

The cost of these works exceeded £20,000. Too much praise cannot be given to the Inspectors for the valuable services they render to the Department by their care, and the skill they have acquired in building matters.

*Accommodation.*

At the end of 1898, the school buildings provided places for 252,791 pupils. During 1899, after making good the loss of 9,425 places by closing schools, or abandoning old buildings, 6,326 additional places were provided; so that at the end of the year there was accommodation for 259,119 pupils.

The following table shows the accommodation in each district :—

District.	Number of places at end of 1899, reckoned at 8 square feet for each child.	Number of places at end of 1899, reckoned at 100 cubic feet of air space for each child.
Armidale .....	21,347	19,624
Bathurst.....	17,952	17,834
Bowral .....	20,265	19,771
Goulburn .....	20,655	18,328
Grafton .....	20,906	20,759
Maitland .....	26,949	28,638
Metropolitan.....	60,677	73,280
Sub-Metropolitan.....	18,576	17,588
Wagga Wagga .....	27,586	27,102
Wellington .....	16,238	16,195
Totals.....	251,151	259,119

As the highest quarterly enrolment was 211,264, it is clear that, in the aggregate, ample accommodation is provided. There are, of course, some schoolrooms that present a beggarly array of empty benches, and there are schools where weathersheds, verandahs, lavatories and even shady corners of the play-ground have to be utilised for teaching purposes. In Broken Hill the school buildings have not kept pace with the rapid increase of population, and at White Cliffs, from an unexpected rush of miners with their families, scores of children had for months to be excluded from the school as they could not be accommodated. But the overcrowding is most severe in the Metropolitan District. The popular schools

schools are filled up in the first week of each quarter, and then applicants for entrance must be refused. In some of these cases, the erection of additional buildings would not get over the trouble; already the number of pupils assembled each day is too great for the limited area of ground. Four or five new schools, capable of accommodating 1,000 pupils each, might, without detriment to existing schools, be placed within the Metropolitan District, but the cost of sites would be enormous. The rapidity with which the suburbs of Sydney are growing will, in the near future, force the establishment of these schools.

#### Enrolment and Attendance.

The gross enrolment of pupils at all schools in 1899 was 265,037.

Deducting 12 per cent. for multiple enrolments, the number of individual pupils on the books of schools was 233,233.

The following table gives the enrolment and average attendance for each quarter of 1899, together with the rates of increase :—

Quarter.	Enrolment in 1898.	Enrolment in 1899.	Increase for 1899.	Average daily attendance for 1898.	Average daily attendance for 1899.	Increase in average daily attendance for 1899.	Per-centage of increase of enrolment.	Per-centage of increase of average attendance.
March .....	203,362	206,909	3,547	143,256·2	151,717·6	8,461·4	1·74	5·90
June .....	205,881	209,841	3,960	143,380·2	149,328·1	5,947·9	1·92	4·14
September .....	204,350	211,264	6,914	140,436·5	147,840·4	7,403·9	3·38	5·27
December .....	202,048	206,516	4,468	139,820·1	148,873·3	9,053·2	2·21	6·47
Average .....	203,910	208,632	4,722	141,723·2	149,439·8	7,716·6	2·31	5·44

The percentage for each quarter was :—

Quarter.	Enrolment.	Average Attendance.	
		Number.	Percentage.
March .....	206,909	151,717·6	73·3
June .....	209,841	149,328·1	71·1
September .....	211,264	147,840·4	69·9
December .....	206,516	148,873·3	72·1
Year's average .....	208,632	149,439·8	71·6

Compared with 1898, there was an increase in the gross enrolment of 6,445, in the quarterly enrolment of 4,722, and in the average daily attendance of 7,717·6.

Although the circumstances in 1899 were more favourable for regular attendance than in the previous year, several serious epidemic diseases, as measles, diphtheria, and whooping-cough, were prevalent all over the Colony, necessitating closing many schools for weeks.

#### Compulsory Clauses.

The experience of every succeeding year strengthens the conviction that the compulsory clauses of the Public Instruction Act fail to accomplish much real good. Vicious parents find little difficulty in evading the law, and hence the streets swarm with children begging, pilfering, growing up in ignorance and crime. The compulsory clauses must be made more stringent, the parents made to feel that they *must* send their children to school, and truant schools provided, in which the police can temporarily place the children found about the streets during school hours.

The prosecutions for defaulting attendance were 1,032; the cautions were 6,645.

#### School Fees.

The total amount of school fees collected and paid into the Consolidated Revenue was £78,358 2s. 6d.

Cautions to pay were issued during the year to 1,192 debtors, and it was found necessary to prosecute in 352 cases, with the result that the sum of £171 16s. 6d. was recovered. Free education was granted to 34,476 pupils, as against 30,385 in 1898. In addition to the concession of free education, the sum of £1,509 9s. 8d. arrears of fees was cancelled. In all these cases full inquiry was made, and action taken as circumstances warranted.

The task of collecting the fees is, in many schools, the most trying work that falls to the lot of a teacher. Children lose their school money, and parents object to making good the loss. As a resolution for the abolition of school fees has been carried several times in the Legislative Assembly, many parents have the idea that they are not required to pay school fees. Teachers will be glad when fees are abolished.

#### Inspection.

No change was made in the inspectoral arrangements during the year. Unfortunately, Mr. Cooper, District Inspector at Goulburn, was forced by illness to rest for six months. During Mr. Cooper's absence the work of the district was entrusted to Mr. Walker. Several special inspections were placed in the hands of Mr. Walker, who also assisted the Metropolitan Inspectors, whose work is too heavy for the number of officers employed.

The number of schools inspected was 2,871—an increase of 78 on the work of 1898. The number of pupils examined was 164,006, an increase of 11,547.

The uninspected schools numbered 34, all small. Various causes operated to prevent the inspection of these schools. Some were closed very early in the year, before the Inspector could visit; others collapsed suddenly, and provision had to be made for the teacher elsewhere. Many of the small schools depend for their existence upon one or two families, and men who work on the share system are very uncertain residents; so, too, are miners and timber cutters.

The following are the details of inspection :—

Year.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.	No. of Inspectors.
1897 .....	2,785	2,763	22	160,183	33
1898 .....	2,812	2,793	19	152,457	33
1899 .....	2,905	2,871	34	164,006	33

The particulars for each district stand thus :—

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.
Armidale .....	4	364	359	5	13,034
Bathurst .....	3	273	270	3	10,878
Bowral .....	3	259	257	2	10,956
Goulburn .....	4	408	399	9	10,881
Grafton .....	3	335	328	7	12,479
Maitland .....	3	258	254	4	18,332
Metropolitan .....	4	217	216	1	51,271
Sub-Metropolitan .....	2	165	164	1	12,238
Wagga Wagga .....	4	357	357	...	14,723
Wellington .....	3	269	267	2	9,214
Totals .....	33	2,905	2,871	34	164,006

The inspected and uninspected schools were :—

	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected .....	2,021	355	436	31	28	2,871
Uninspected .....	5	3	20	3	3	34
Totals .....	2,026	358	456	34	31	2,905

The following table shows the proficiency of all schools :—

	Below Standard.	Up to Standard.	Above Standard.	Total.
Public—				
1. In operation a full year at time of inspection .....	20	57	1,919	1,996

Totals .....	2,631	120	120	2,871	95	95

The phrase "above the standard" does not give a clear idea of the high degree of efficiency that some of the schools have attained. No fewer than 37 have been conducted with such marked ability and success that they have been rated as "excellent" for general efficiency. These schools are not confined to one district, but are scattered all over the Colony.

The organisation of our schools gets better year by year. It is only in the case of a lazy or an inexperienced teacher that defects under this head are reported. Many teachers take a pride in making their schools bright and attractive; flowers beautify the play-ground, and pictures the inner walls of the school-room. Mr. Woodhouse, Superintendent of Drawing, has given very valuable help to the Sydney teachers by procuring for them splendid photographs of classic scenes and buildings. The decoration of school-rooms is a very important matter, and cannot be praised too warmly. The report upon the Hillgrove School, furnished by District Inspector Bradley last year, has had a good effect, and not a few teachers are endeavouring to copy Mr. Tonkin's action. I take the opportunity of mentioning, in terms of commendation, the work of Mr. Lumsden, of South Goulburn. Mr. Lumsden and his pupils have made a splendid collection of geological specimens of the district, and have placed them in cases—the work of their own hands. The supply of maps and diagrams to schools is not as liberal as I would like, but the amount voted for school requisites is too small to allow of a grant of more than bare necessities; indeed, in some cases, the supply of reading books has not been sufficient to allow of a book for each scholar. This, however, is a temporary trouble that will soon pass away.

The disciplinary condition of our schools is, as a rule, all that can be desired. No one can visit a school without being struck with the regularity and smoothness with which the school business is conducted; the orderly conduct of the children, and their attention to instruction. The teachers' government

government is usually firm, judicious, and effective. Corporal punishment is administered when necessary. Parents appear to be well satisfied with the treatment their children receive at the hands of teachers. Complaints are comparatively rare, and seldom well founded. It is possible that some teachers disregard the Regulations as to corporal punishment; but those who do run great risk, especially if a complaint is made against them.

The school drill, which is thorough and effective, is an important factor in raising the tone of a school; its physical benefits are undoubted, while it ensures a good word of command on the part of the teacher, prompt obedience on the part of the pupils, and precision in the school movements. The "Infantry Drill," the official text book for the British Army, is supplied to every school, and the information therein contained is supplemented and explained by a series of Manuals, specially prepared by Colonel Paul and his staff.

The matter of the conduct of pupils going to and returning from school has been brought very prominently under notice during the year. Teachers are enjoined by Regulation 108 "to see that, in proceeding to school and returning from it, their behaviour is orderly." This has been taken to give authority to punish for offences committed outside the school premises, and such punishment has usually had a very salutary effect; but though in most instances the teacher was *morally* right he was *legally* wrong, and occasionally a cross-grained parent takes advantage of the law, and summons the teacher to the police court. Such parents do irreparable injury to their own children, and set an evil example to others. If the restraining influences of the school are to be excluded from the street, larrikinism will rapidly develop. The parents, however, not schools or teachers, must bear the blame.

Attainments of Pupils.

The following table gives the number of pupils examined in each subject, and the number and percentage of passes :-

Subjects	Estimated Proficiency		
	Total Number Examined.	Number Passed.	Percentage up to or above Standard.
Reading—			
Alphabet . . . . .	9,353	6,801	72
Monosyllables . . . . .	35,997	29,742	82
Easy Narrative . . . . .	50,499	43,064	85
Ordinary Prose . . . . .	68,157	60,724	88
Totals..	164,006	140,331	85
Writing—			
On Slates	60,698	51,572	84
In Copy Books and on Paper..	102,345	87,981	85
Totals..	163,043	139,553	85
Dictation . . . . .	131,919	109,106	82
Arithmetic—			
Simple Rules . . . . .	94,727	74,520	78
Compound Rules . . . . .	40,349	29,478	73
Higher Rules . . . . .	26,027	18,684	71
Totals . . . . .	161,103	122,682	76
Grammar—			
Elementary . . . . .	34,419	26,225	76
Advanced	33,049	24,351	73
Totals . . . . .	67,468	50,576	74
Geography—			
Elementary . . . . .	31,989	24,697	77

Trigonometry ... . . . .	41	31	75
Needlework . . . . .	57,938	52,586	90
Drill . . . . .	154,486	131,226	84
Natural Science . . . . .	8,903	7,186	80

A perusal of this proficiency table will convince the most sceptical that really good work is done in our schools. The high percentages gained by so great a number of pupils, scattered over 2,871 schools, show that the teachers work with untiring zeal, and give evidence of superior ability. The satisfactory results reported by the Inspectors are corroborated by the results of the University, Public Service, Chamber of Commerce, and other examinations. The examination of a school by the Inspector is necessarily thorough, as in the essential subjects a distinct mark of proficiency must be awarded to each pupil.

The new standards came into force at the beginning of the year, and have had a very beneficial effect. The better gradation and the higher marks awarded to Reading, Spelling, Writing, and Arithmetic, especially in the lower classes, have ensured that these subjects shall everywhere receive the care and attention their importance demands. Improvement in the quality of the reading has been facilitated by the new reading books; their interesting matter, their brightness, and large proportion of dialogue, have pleased the pupils and lightened the teachers' work.

Teachers have a number of really good series of Copy Books at their disposal, and usually select the one by which they can achieve the best results. Those most used are Collins' "New Graphic," and Angus and Robertson's "Australian." It should, however, be impressed upon teachers that writing is more than mere copying of head lines, and that exposition of methods and principles, by means of the black-board, are as necessary in teaching Writing as in teaching any other subject.

Gratifying results have been accomplished in Arithmetic, but some teachers fail to bring their instruction up to date. The time has arrived when text books, like Colenso's and Hamblin Smith's, should give way to more modern works, where the Metric System and contracted methods of working, are fully exemplified. More attention is bestowed upon Mental Arithmetic, but this subject is not yet taught as systematically and skilfully as its usefulness merits.

There

There is probably no subject in which the teaching has improved so much as in Object Lessons. The old-fashioned book stock subjects—elephant, camel, &c.—have been generally dropped, and lessons of a practical character, as “How to prepare the ground for cultivation,” “Pruning,” “Bee-keeping,” “Poultry-rearing,” have been substituted. The tendency of all modern education is towards the utilitarian, and our teachers are not slow to recognise the fact.

In connection with the proficiency of the pupils, I would invite careful attention to the reports of the Superintendents of Music and Drawing, the Directors of Needlework, and the Officer Commanding the Cadet Force.

Exemption Certificates.

21,691 pupils were examined for exemption certificates during the year 1899. 15,556 pupils, or 71 per cent. of those examined, passed the prescribed test.

The subjoined return, giving results in connection with the certificate examinations for the past five years, proves gratifying, as showing the steady increase in the percentage of passes from quarter to quarter and from year to year. As this steady increase is the result of the corresponding increased efficiency in the important subjects, Reading, Writing, Spelling, and Arithmetic, it is unnecessary to emphasise the value of the work done in this direction.

Year.	Percentage of passes for March Quarter.	Percentage June Quarter.	Percentage September Quarter.	Percentage December Quarter.	No. pupils examined for certificates during year.	No. who Passed the Examination.	Percentage of Passes for Year.
1895.....	43	48	55	57	17,380	8,942	51
1896.....	52	61	60	63	14,768	8,800	59
1897.....	59	60	61	64	14,779	9,077	61
1898.....	55	66	69	72	19,916	13,649	68
1899.....	64	69	73	74	21,691	15,556	71

Superior Schools.

Chatswood was added to the list, bringing the number up to 102. These schools continue to do very good work, and bring the means of a secondary education to all parts of the Colony. From these schools, 216 pupils passed the Junior of 1899. The schools whose work may be regarded as specially creditable are :—

Fort-street .....	{ 4 Senior. 86 Junior. 41 Matriculation.	Molong .....	4 Junior.
Armidale .....	7 Junior.	Newtown .....	5 „
Cleveland-street .....	10 „	Petersham .....	7 „
Cooma .....	5 „	Pymont .....	5 „
Glen Innes .....	5 „	Tumut .....	4 „
Leichhardt .....	18 „	Wingham .....	4 „
		Mudgee .....	4 „

The Fort-street School carried off the great prize of the Senior examination—the John West medal—the first time it has been won by a Public School boy. The winner, E. M. Wellisch, gained the following pass :—First-class honours in Mathematics, Latin, Greek, French ; first-class in Latin, English, Ancient History, Arithmetic, Algebra, Geometry, Trigonometry, and Mechanics ; Medallist in French, Medallist in Geometry, John West medal, and Grahame medal for general proficiency, Barker Scholarship No. 2, and Horner Exhibition for Mathematics, Aitken Scholarship for general proficiency.

High Schools.

The High Schools show an improved attendance, and have done very satisfactory work during the year. The following are the returns :—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.	Fees received.
Sydney (Boys).....	213	164	152·4	£ 1,152 18 0
„ (Girls) .....	219	169	151·6	1,238 3 0
Maitland (Boys) .....	113	93	89·3	581 3 6
„ (Girls) .....	61	47	42·7	122 17 0
Total .....	606	473	436·0	3,095 1 6
The figures for 1898 were .....	527	420	376·3	2,462 15 6

Scholars and Bursars.—The number of Scholars and Bursars in attendance at each High School during December quarter is given below :—

School.	Scholars.	Bursars.
Sydney (Boys) .....	40	31
„ (Girls) .....	40	25
Maitland (Boys).....	26	22
„ (Girls).....	24	14
Totals .....	130	92

These schools were well represented at the University Examinations, as the following results evidence :—

School.	Junior.	Senior.	Matriculation.
Sydney (Boys) .....	23.	5	21*
„ (Girls) .....	22	4	10†
East Maitland (Boys) .....	17	2	8‡
West Maitland (Girls) .....	10	.....	5§
Total .....	72	11	44

\* Of these, 15 matriculated at the Junior and 4 at the Senior Examination.  
† Of these, 4 „ „ „ 1 „ „  
‡ Of these, 6 „ „ „ 2 „ „  
§ Of these, 2 „ „ at the Junior Examination.

Teachers.

Teachers.

The teachers employed in the Department's service on the 31st D cember, 1899, numbered 4,884—2,609 males, 2,275 females.

Too much praise cannot be given to this large body of public servants for their exemplary conduct, devotion to duty, and efficient work. The desire to rise in the profession is manifested by the number who voluntarily submit to examination with the view of gaining a higher classification. This is the more creditable as the mark for practical skill must be won before the examination is sanctioned.

It is much to be regretted that so many of our schools are of low grade—836 in ninth class, 128 in tenth class, and 564 in the provisional class. To all these small salaries are attached, and though most of the teachers in these schools are qualified for higher positions, the opportunities for promotion are exceedingly few. Though the hope deferred that makes the heart sick must trouble many teachers, they work on uncomplainingly and faithfully. It is, however, highly probable that an increase of salary will be granted at an early date.

The problem of teachers' residences causes me much worry and anxiety, as nearly all the low-grade schools have no dwellings attached. It is not practicable to provide these residences, because of want of money; but, even if the Department had the necessary funds, the expenditure could not be recommended, because the permanency of the school cannot be assured. Unfortunately, in the very localities where the Department dares not build there are no houses to be rented. The result is that scores of married teachers are subjected to great discomfort, by having to live in lodgings or at a great distance from their schools. I can, at present, see no way of getting over the difficulty.

The pupil-teachers, numbering 1,052, continue to do very good work. The applicants attending the competitive examinations are far in excess of our requirements, and the teachers spare no pains to have the candidates from their respective schools well prepared for tests in attainments and teaching power. As a consequence of this thorough preparation, the pupil-teacher enters on his period of probation well fitted for his work.

Two examinations of applicants for small schools were held during the year, and a very promising class of young men admitted into the service.

Training Schools.

In the years 1894 and 1895 very few pupil-teachers were appointed. The consequence was that only 16 males entered the Fort-street Training School in 1898, and only 12 were eligible for Hurlstone in 1899. In order to keep Hurlstone employed, it was decided to offer special scholarships to ex-pupil-teachers who had gained classifications. The privilege of being trained without cost was thrown open to competition, and 13 teachers proved themselves worthy of that privilege. The benefits of training are so marked that I shall be glad when it becomes practicable to bring more of our teachers under the influence of the Training School. The lessons in the Training Schools are practical and full of encouragement as well as instruction. Students are not only taught how to do their work intelligently, but, what is better, they are inspired with the zeal and self-possession essential to success. Their general knowledge is widened and deepened, and they are enriched with the understanding of those fundamental principles of school management that will enable them to devise good methods of their own when they go out in charge of schools.

Details of the work in the two Training Schools, and the results of the examinations will be found in the reports of the Principals annexed.

All the teachers charged with the instruction and supervision of the students have worked well during the year, and have given me full satisfaction.

School Libraries.

The work of establishing school libraries goes on apace, and there are now tens of thousands of good books in the hands of the youth of the Colony. This has been accomplished without the grant of one penny from the State. It is questionable, however, whether school libraries have not a better claim for endowment than many of the Schools of Arts whose library shelves are well nigh filled with rubbish. In the small out-of-the-way localities the books are read as eagerly by the parents as by the children. The teachers of the Newcastle district have made a united and systematic effort, and have succeeded in placing a really good library in every school of the district.

Manual Training and Science Teaching.

The importance of hand and eye training has not been overlooked. Workshops have been erected at Fort-street, Crown-street, Blackfriars, and Sussex-street. That at Fort-street serves not only that school, but also North Sydney and the students of the Training School. The boys of Cleveland-street and the High School receive instruction at the Technical College. At Albury, Bathurst, Goulburn, Maitland, and Newcastle the school boys are regularly instructed at the local Technical College. The Resident Masters also give lessons in science to the pupils of the local Public Schools. These lessons have proved to be very interesting and of great value, particularly in Goulburn, where the District Inspector manifests a very lively interest in the work. The boys at the Sydney High School are instructed by the operator of the Sydney Technical College, and from his teaching have for several years secured the silver medal for Physics at the University Examination.

The

The apparatus of the Sydney Technical College, and the specimens of the Technological Museum, are largely drawn upon by the teachers of the Metropolitan District for the purpose of experiment and illustration.

As a specimen of the practical teaching effected by our teachers, I attach a clipping from the *Agricultural Gazette*. This matter was deemed of sufficient importance by the *Sydney Morning Herald* to form the basis of a leading article. Mr. Bolus is by no means the only teacher who has taken up this work, but he has the good fortune to be brought into prominence :—

“Elementary Agricultural Education.—Mr. Geo. A. Bolus, of the St. Ives Public School, writes :—I accept with pleasure the invitation given in last month's *Gazette*, and will now give an account of the efforts made to interest the St. Ives children in agricultural matters.

“St. Ives Public School is situated 2 miles from Gordon, and 10 from Sydney, in the fruit-growing district of Lane Cove. It was opened ten years ago with a bare playground ; now, by means of arbor days, over 100 ornamental trees afford grateful shade in summer, and beauty all the year round. A quarter of an acre is planted with peaches, nectarines, apples, and plums of various kinds, and a few oranges and lemons. While the shade trees were young, the ground was divided among the elder scholars, and annual prizes were offered for the best kept garden. So much for outside work. Inside, our object-lessons have been, in a great measure, lessons on agricultural subjects—as a series, on vegetables, fruit-trees, pruning, budding, fowls, bush-trees, and manures. I have trees growing well which were budded by boys 9 years old. The subject-matter of most of these lessons I have obtained from the *Farmers' and Fruit-growers' Guide*, Mr. Bradshaw's poultry pamphlets, and the *Agricultural Gazette*. Quite delighted was I, after giving a lesson on the Jerusalem Artichoke, based on an article in the *Gazette*, to hear from many parents that their boys had worried them into buying and planting some.

“Of late, having profited by the able lectures on botany by Miss Hynes, B.A., at the Technical College, our lessons have taken a more scientific turn, on such subjects as roots, leaves, parts of the flower (examples being found in the playground), fruits, and seeds, alternated with special lessons on Australian flowers, as *Boronia*, *Teloepa*, *Acacia*, &c.

“One of our *Catalpa* trees having attracted much notice by its magnificent flowers, I offered a prize for the best three plants from three seeds given to each scholar, with the result that it was introduced to many homesteads.

“Last month sixpence worth of Madagascar Bean seeds were distributed after a short description of the plant. No doubt they will stock the district. Our apiary consists of five colonies, which afford samples of hives, frames, wax, cells, and bees, when giving lessons. How interesting these lessons can be made when such can be handled—bees excepted ! I often smile when I think of the lessons on bees, I have heard and given, when the information has been culled from books only.

“So much for a teacher's work in this department in school. Does his influence stop at the school gate ? I think not. Let me encourage other teachers by mentioning a few things that have been done here with little trouble. Many will help if someone will only take the lead. A visit of over twenty residents to the Richmond Agricultural College was successfully undertaken ; two agricultural lectures were delivered in the schoolroom ; Mr. Bradshaw's Poultry pamphlets were obtained and distributed ; and some residents induced to buy and study the *Farmers' and Fruit-growers' Guide*.

“I forward these few lines to show what a teacher interested in Agriculture can do, little though it may be, to help the worthy calling, with the hope that they will encourage others to do better.”

The following return will prove of interest :—

Manual Training.—Ten workshops were in existence in 1899, which afforded instruction to the pupils of 29 schools. The total enrolment of these classes, including students in training, was 913. Of these 527 presented themselves for examination, and 484 passed.

Summary.—Classes connected with Public Schools.

Enrolments.	
Manual Training .....	913
Art Subjects.....	234
Science Subjects .....	507
Shorthand .....	468
Total.....	2,122

The examinations for pupils attending the Science Courses of Lectures at Fathurst and Goulburn only was held. There were 135 examined, of whom 110 passed.

Cookery.

The number of Cookery Schools in operation during the year was 12—an increase of 2 on the number for 1898. New Cookery Schools were opened at Singleton, Nowra, Armidale, and Bowral, and those at Ashfield and Maitland (West) were closed. 864 girls attended the Cookery Classes. Of these 771 were examined at the end of a term of instruction, and 750 passed the applied tests. The Examining Committees were composed, as before, of ladies, who gave their services voluntarily and gratuitously, for which they were thanked by the Department.

Eight teachers of Cookery were employed. Misses Wright and Dawson resigned during the year, and their places were filled by the appointment of Miss J. Bailey and Miss J. Glad, trained and classified teachers, who had shown special aptitude in this subject during their term of training at Hurlstone College. A new departure was made by the establishment of Cookery Scholarships, open to those Public School girls who pass highest at the School of Cookery Examinations, and intend to become either public or private teachers of cookery. These girls are allowed to attend the Cookery Classes daily, and assist the teachers in their work and management, and they receive free tuition in advanced cookery. By this scheme it is hoped to obtain young ladies qualified to fill vacancies as teachers or assistant teachers of cookery, well versed in the Department's methods of imparting instruction in the subject. The first holders of these Scholarships were Misses Austin and Lowick, from the Fort-street School of Cookery, and Miss Lavender, from Paddington School of Cookery.

The following is a list of the schools in operation during the year :—

Place.	Remarks.	Place.	Remarks.
Hurlstone Training College...	Open all the year.	Newcastle .....	Open all the year
Parramatta Industrial School	“ “	Goulburn.....	Open for 6 months.
Fort-street .....	“ “	Singleton.....	“ “
Petersham .....	“ “	Nowra .....	“ “
Paddington.....	“ “	Armidale .....	“ “
West Redfern .....	“ “	Bowral .....	“ “

It is desirable that the staff of teachers of cookery should be increased, in order that a larger number of country centres may be included in the Department's sphere of operations.

The

Cadet Force.

The Cadet Force well maintains its efficiency. Great enthusiasm has been manifested by its members and by the teachers in command of the various corps. The parades and shooting practices have been well attended, and the work done has merited high praise. The teachers that take charge cannot be commended too highly for the time and care they devote to this important work, although it forms no part of their regular duty. The Annual Rifle Meeting was a distinct success; the boys shot remarkably well, notwithstanding the defective weapons they had to shoot with. The great prize of the meeting was won by the Bathurst team, taking it away from Orange, the winning corps for nine years in succession. If a serviceable rifle is supplied, and arrangements are made for a suitable uniform for the bigger boys, the Force will be largely augmented. It is very likely that both these wants will be satisfied at an early date, and there will then be no difficulty in placing 20,000 "efficients" at the disposal of the Government in a very short time. Our boys and our teachers know the drill well; practice with the rifle is all that is needed. The burst of warlike and patriotic feeling developed by the war in South Africa has aroused interest in the Cadets, and it is generally admitted that a thorough military training to Public School boys would be the best way of providing for the defence of our country.

Further particulars regarding the Cadet Force will be found in the report furnished by Colonel Paul. To that officer and his staff I am deeply indebted for their willingness to assist me in every possible way.

The Jubilee of the Model Public School—Fort-street.

This very interesting event was celebrated in August. Teachers, scholars, and parents displayed much enthusiasm, and all the proceedings connected with it were reported at great length by the Press. This was really the jubilee of our educational system; for although the Board of National Education was appointed in 1848, it did little real work till the following year. It is worth while to compare the statistics of 1849 with those of 1899:—

	1849.	1899.
Schools.....	25	2,689
Teachers.....	29	4,884
Pupils.....	1,582	233,230

This shows the marvellous progress New South Wales has made in fifty years. But the advance in the character of the buildings and apparatus, and the efficiency of the instruction, is even greater than that shown by the above figures. Fifty years ago schools were held in sheds, stables, attics, and cellars; proper lighting and ventilation were not thought of; the apparatus consisted of a few books and slates, and an instrument of punishment (generally a strap), which was used with no unsparing hand.

Technical Education.

The most important item in connection with Technical Education was the opening of the Branch at Albury. This is doing good work, and is fully appreciated by the residents of the Border City. At the head-quarters in Sydney, progress is practically blocked by insufficient accommodation, and hundreds of students are anxiously waiting for admission to the classes.

All the preliminary steps for the erection of new buildings at Broken Hill have been taken, and by the end of the current year that great mining centre will be in the possession of a perfectly equipped, and efficiently conducted Technical College.

The research work at the Technological Museum has been prosecuted with indefatigable industry, and much has been accomplished in the way of making known the value of our vegetable products. The Museum and its branches are in close touch with our teachers, and both are benefited.

The following summary of statistics will give some idea of the success attending the year's operations, but more complete information will be found in the report of the Superintendent:—

COMPARATIVE STATEMENT.

Herewith I forward reports of District Inspectors, and Inspectors and Superintendents of Music and Drawing, Directors of Needlework, Principals of the Training Schools, Officer in charge of Cadet Force.

F. BRIDGES,  
Chief Inspector.

## ANNEX A.

## INSPECTOR DAWSON'S REPORT.

THE schools under my supervision at the end of 1898 consisted of 52 schools and departments. To these were added during 1899, three new Evening Public Schools.

All schools and departments were fully inspected once. Mr. Inspector Walker examined three departments. There was no time for "ordinary" inspections, and very little for "incidental" inspections.

The number of pupils enrolled, and the average attendance, for each quarter may be seen from the following table :—

	Enrolment.	Average.
March quarter.....	16,420	12,583
June quarter.....	16,654	12,102
September quarter.....	16,784	12,293
December quarter.....	16,312	12,300

The prevalence of influenza during September and December quarters affected the attendance of both pupils and teachers. The total number examined was 13,278.

The staffs of the schools comprise 319 teachers of various grades, from First-class Teachers down to the probationer Pupil-teachers. I am able to commend their zeal and intelligence in the discharge of their duties, as well as their loyalty in carrying out instructions.

The accommodation provided is, in the gross, adequate; but in a few schools the accommodation is severely taxed. A popular school, or a successful teacher, may sometimes bring about this state of matters. At a few schools sheds are occasionally used in fine weather, but the practice is discouraged, and should be finally put a stop to.

At the regular inspection and examinations, the organisation of each Department, the order and discipline maintained, and the attainments of the pupils, come under review; but there is little opportunity for direct observation of the methods employed in imparting instruction.

The arrangement of lessons and the distribution of the staff proved satisfactory in most of the schools. The order and discipline are almost uniformly good. Complaints of undue severity are rare.

The new standards were followed during the year, and their effect has been beneficial. The increased values given to the important subjects have secured them greater attention, and the greater freedom allowed in the selection of oral lessons has made them of a more interesting character.

In Reading, Writing, Dictation, and Arithmetic, the percentages of passes were respectively 82, 84, 87, and 78.

For the "certificate examination," 2,561 pupils were presented; of these, 1,938 passed, 1,117 for the first time.

Statistics for the year have already been forwarded.

J. DAWSON,  
Inspector.

Sydney, 12 January, 1900.

## ANNEX B.

## INSPECTOR THOMPSON'S REPORT.

IN my section of the Metropolitan District, 25 schools were in operation during the year; of these 22 schools—comprising 48 departments—were Public Schools, and 3 were Evening Public Schools.

At the end of last year (1898), 4 Evening Public Schools were in operation; but at the beginning of this year, one—Ashfield—was not reopened, partly on account of the death of the teacher during the Christmas vacation, 1898, and partly on account of the attendance having so completely fallen away that the continuance of this school was found to be for the time being impracticable. These 3 Evening Public Schools only came into operation during 1899.

There is a possibility, but no great probability, of the Ashfield Evening School being reopened.

*Accommodation.*

Additional accommodation to the extent of 430 seats has been provided this year. In one or two of the larger Public Schools under my supervision the accommodation is not adequate to the present local requirements, but in other respects the provision made may be regarded as sufficient.

*Attendance.*

The gross enrolment of pupils for the year was 21,294; the actual enrolment, 16,872.

*Inspection.*

Every school and department was fully inspected during the year, 12,469 pupils having been presented for examination. 1,991 pupils were tested for exemption certificates; 1,595 of these satisfied the standard required in this connection.

The general proficiency exhibited in the several schools and departments was, with one exception, well above the past standard of 50 per cent.

The staff of teachers of all ranks numbered 296, viz., 104 males, 185 females, and 7 work-mistresses.

The schools are well organised, the government is firm and judiciously examined, and the teaching is intelligent, bright, and effective.

Sydney, January, 1900.

W. T. THOMPSON,  
Inspector.

## ANNEX C.

## INSPECTOR WILLIS' REPORT.

At the commencement of the year 1899, the schools under my supervision were :—19 Public, 2 Evening Schools, and the school on board the "Sobraon" Training Ship. All of these continued in operation throughout the year, and to them were added two newly established Evening Schools. During the year just closed, therefore, the schools of this portion of the Metropolitan District numbered 24, and these comprised in all 54 departments.

In these departments the gross enrolment for the year numbered 22,490 pupils; the multiple enrolment, 4,048; the net enrolment, 18,442; and the average attendance, 12,503.

All but two of the school buildings are in good material condition; and every school is well provided with the requisite educational appliances; while the class-rooms, one and all, present a clean and well-ordered appearance, very creditable to the teachers in charge. The schools at Marrickville, Woollahra, and Darling-road are now too small for the comfortable accommodation of the children eligible for enrolment, but tenders have been called for the erection in each of those suburbs of buildings which will afford all the additional space required.

Of the 54 departments fully inspected, 2 were found to be "up to" the standard, and the remaining 52 "above" it. There were 14,272 pupils examined. The percentage of passes in each of the following important branches was: Reading, 82 per cent.; Writing, 83 per cent.; Arithmetic, 70 per cent.; and Dictation, 84 per cent.

The teachers, numbering in all 313, are, with but one or two exceptions, capable, earnest, trustworthy officers, and, as such, have the confidence, goodwill, and loyal support of the parents amongst whom they labour.

All the statistics necessary in connection with this report were forwarded some days ago.

M. WILLIS,  
Inspector.

Sydney, 24 January, 1900.

#### ANNEX D.

##### INSPECTOR SKILLMAN'S REPORT.

THE Public Schools under my supervision during 1899 were the same as in 1898—29 schools, comprising 55 departments.

The Evening School at Bexley was closed in September, on account of the small attendance of pupils. An Evening School was opened at Dulwich Hill, in July, but its brief existence was terminated in September by the sudden resignation of the teacher. Commodious school buildings, to replace old and small structures, have been erected at Hurlstone, Hurstville, and Sandringham.

A new teacher's residence has been provided at Hurstville.

A schoolroom is almost completed at Kensington, where a new school will be established at the beginning of 1900.

A Primary School building is to be provided at Alexandria during next year.

New buildings, or additions, are urgently required at Burwood, Kogarah Boys, Mortdale, and Riley-street, but want of funds has hitherto prevented the execution of these works.

The quarterly enrolments and average attendance of pupils in this section of the Metropolitan District were:—In March quarter, 13,221 and 9,927·8; June quarter, 13,403 and 9,593·5; September quarter, 13,516 and 9,430·3; December quarter, 13,052 and 9,782·7 respectively.

In all, 58 schools under my supervision were in operation during 1899. Fifty-seven of these were regularly inspected; one was fully inspected a second time. Dulwich Hill Evening School was not examined. None of the schools were below standard, 5 satisfied it, and the remainder were above it.

Mr. Inspector Walker examined 7 of my schools, and assisted me in 5 others. 10,998 children were present under examination.

The percentages of passes in the important subjects were:—Reading, 85; Writing, 83; Dictation, 79; and Arithmetic, 70—an improvement upon the results of last year.

The number of teachers of all ranks employed in this section at the end of 1899 is 263. They do their duty to the best of their abilities, and there is every reason to expect the performance of a good year's work in 1900.

H. SKILLMAN,  
Inspector.

Sydney, 27 December, 1899.

#### ANNEX E.

##### DISTRICT INSPECTOR W. DWYER'S REPORT.

THE number of schools in operation under my supervision during the year 1899 was 131, containing 165 departments. These are classified as follows:—

Public .....	147
Provisional .....	6
Half-time .....	12

With the exception of one Half-time School, burned down in January and not reopened, all were duly inspected, and their efficiency, as estimated by the standard, may be summed up in the following figures:—

163, or nearly 99 per cent., above standard,  
2 up to standard,

and none below it. This is an advance upon the results of the preceding year.

As regards available accommodation, the condition of the schools will be understood from the subjoined statement:—

Number of places ready for occupation at end of year: Floor space, 18,576; air space, 17,588.

The number of pupils enrolled at the end of December was 15,683; the average attendance at same time, 10,117·5. It is therefore evident that teachers, generally speaking, are not harassed for want of room, and the places are distributed in fair proportion to the wants of the several localities.

The number of pupils examined was 12,471; and tabulated returns of their proficiency have been furnished as a separate appendix; but, to give a general idea of their knowledge in the principal subjects of instruction, a few figures taken from these tables may be inserted here:—

In Reading, a total of 86 per cent. is up to or above standard.				
„ Writing, „	75	„	„	„
„ Dictation „	81	„	„	„
„ Arithmetic „	73	„	„	„
„ Grammar „	77	„	„	„
„ Geography „	74	„	„	„

And in other subjects it ranges from 72 to 83 per cent. The results are, on the whole, and in the great majority of cases, highly satisfactory, and bear conclusive evidence to the efficiency of the schools.

The teaching staff includes 350 individuals, comprehended in the following classes:—

Principal Teachers .....	143
Mistresses of Departments .....	16
Assistants .....	89
Pupil-teachers .....	97
Work Mistresses .....	5

Good methods of teaching obtain in most schools, and hence good results follow as a natural consequence. One defect, however, is apparent, and that is the habit of copying and quiet prompting, which is more or less general among the pupils of several schools, and to which some teachers are, it seems to me, wilfully blind. They do nothing to check the evil, which appears rather to possess some advantages in their estimation; but as the practice greatly invalidates the main purpose and object of their efforts, blurs and weakens the characters of the pupils, it is to be hoped that the teachers concerned will at once set themselves to stamp out the mischief, and so be able to reflect that they have faithfully, honestly, and thoroughly performed, as far as they are able, the great duties entrusted to them.

WM. DWYER,  
District Inspector.

Sydney, 6 January, 1900.

#### ANNEX F.

## ANNEX F.

## INSPECTOR DETTMANN'S REPORT.

In my Report for 1898, I pointed out that the existing conditions were favourable to the continued progress of primary education in the Parramatta section of the Sub-Metropolitan District, that the section was provided with a sufficient number of suitable schools, properly distributed and centrally placed, equipped with necessary educational appliances, and provided with efficient and painstaking teachers.

This is still true, and affords continued evidence of the Department's practical recognition of the educational needs of the people.

There was no change in the number of schools during the year; and of the ninety existing schools, all but one—the Olive Mount Half-time School, which was accidentally burnt down early in the year—were fully inspected with satisfactory results, inasmuch as every school was found to be above standard requirements.

Several applications were received for the establishment of small schools, but these were declined on the ground that existing schools fully met all reasonable requirements.

So far as public funds were available, money has been expended on the buildings; and with the contemplated repairs and improvements, chiefly in the hands of the Architect, the section may be regarded as being as well served in this respect as any school district in the Colony. There are, of course, buildings which are not altogether satisfactory; but, taken as a whole, there is not much to complain of. The teachers take reasonable care of the Department's property, and in a number of instances spend time and money in effecting improvements by making the school surroundings more attractive and comfortable.

The School Statistics for 1899 have been duly furnished. These may be summarised as follows—namely, 90 schools, of which 5 are Superior Public Schools with a total of 14 departments, 62 Public, 3 Provisional, 10 Half-time, and 1 Industrial School for Girls (Parramatta). Total enrolment of pupils, 7,132; average attendance, 5,269.5; school fees received, £2,733 1s. 1½d.; teachers employed, 167; schools fully inspected, 89; pupils examined, 5,838; pupils presented for exemption certificate, 736, of whom 563 passed (76 per cent.). All the larger schools of the district are provided with school banks, and a number with school libraries, which are in most cases the only libraries in the respective localities, and are as great a boon to the parents as to the children.

Drill is taught in all schools, and in many instances exhibitions of drill-work have been given by the teachers for the edification of the parents.

A strong Public Schools Athletic Association is in operation, with head-quarters at Parramatta, and is most successful in its operations.

As a result of the teachers' efforts for the general advancement of the pupils, the schools of the district are popular; and are deservedly so.

The teachers are without exception industrious and respectable. They are, as a body, loyal to the Department they serve, and discharge their official duties intelligently and satisfactorily. They are, as a rule, well equipped for their work as teachers, and are fully sensible of its responsible nature and useful character.

The new standards of proficiency which came into operation this year are proving very satisfactory. They have been applied intelligently and successfully, and will add to the value of our system of public instruction, which must of course mainly be judged by the work done in the schools.

The organisation and discipline of the schools are very satisfactory, and have made my work of inspection comparatively light. The teachers certainly regard these as essentials to successful school-teaching, and make the most of them. It is pleasing to have to note that no teacher was censured during the year, and in no case was a teacher called upon to explain unsatisfactory inspection results.

Generally speaking, the year has been a successful one, and there is every reason to believe that the interests of the Department and of the public will be well served during the coming year.

JOHN DETTMANN,  
Inspector.

Parramatta, January, 1900.

## ANNEX G.

## DISTRICT INSPECTOR BRADLEY'S REPORT.

DURING the year 1898, or for some part of it, 354 schools were in operation in the Armidale District. Of this number, 12 were not open during any part of 1899, but the establishment of 22 new schools raises the aggregate for the year to 364—a net increase of 10. These schools are classified as follows:—Public, 217; Provisional, 63; Half-time, 74; House-to-house, 8; Evening Public, 2; total, 364.

No very extensive operations towards the provision of new buildings or additions have been effected under the Architect during the past year, although some important works are in progress, or contemplated, in the Tamworth and Quirindi sections of the District, where they are much needed.

Under the several Inspectors, 16 school buildings have been erected at a cost of £1,120, 2 have been enlarged at a cost of £79, and £1,208 has been expended on necessary repairs and improvements to school-rooms and residences. Ten other new school buildings approaching completion, and repairs to 3 in progress, will take £1,413 more; so that the total amount involved in the expenditure on works arranged for and supervised by the staff reaches £3,820—a sum slightly in excess of the record for the previous year. Towards the erection of these smaller school buildings a more liberal expenditure has of late been authorised, with the result that those more recently erected are of a better type than formerly, both as regards their external appearances and the accommodation afforded. The want of residences in connection with the smaller Public Schools is pressingly felt throughout the District; and, although the expense involved in providing such as are required would doubtless be large, the advantages accruing would prove commensurate. It is simply impossible to rent residences in many places where they are needed, and Inspectors are thus unduly hampered in their endeavours to arrange for suitable appointments, with the result that hardship, if not injustice, is at times imposed upon worthy men.

A net increase of 543 seats, calculated at 8 square feet per child, and of 411 at 100 cubic feet of air space, has been effected by means of the improvements provided within the year, and the total accommodation now stands at 21,347 and 19,624 places respectively.

Out of the 364 schools in operation during 1899, 359 were fully inspected. The gross enrolment in the 5 uninspected schools was about 35, and 2 of the number should have been closed at the end of 1898, as recommended. The 3 others were so small as to be grouped as House-to-house schools towards the end of the year, and were not visited owing to their remoteness and the illness of the local Inspector.

The total number of pupils present at the annual inspection of the schools was 13,034—886 more than in the previous year. This is more than satisfactory, when it is remembered that epidemic sickness—measles, scarlatina, whooping-cough and influenza—prevailed more or less throughout the year, and militated seriously both against school attendance and effective teaching. It is pleasing to note that, notwithstanding the hindrances to progress just mentioned, 94 per cent. of the schools examined met or exceeded the standard requirements, and only 6 per cent. fell below them.

About 100 more pupils were examined for exemption certificates than were presented last year; and, of 1,535 tested, 1,107, or 72 per cent., passed. 478 of these had passed previously; so that only 629 fresh certificates were issued. As compared with last year, a falling off of 2 per cent. in the passes for exemption certificates is to be recorded.

In

In the Armidale section of the District the following, among the larger schools, deserve special mention for creditable results accomplished during the year :—Armidale Superior Boys, Girls, and Infants, Rocky River, Hillgrove, Black Mountain, Armidale West, Dumaresq, Uralla, and Saumarez ; while, among the smaller schools, Everett, Wollun, and Arding stand first. Hillgrove Public School still holds its pre-eminence in the special features dwelt upon in my report of last year, and the meed of praise then awarded is equally well deserved now. I only regret to say that I know no other school in the District that can lay claim to being a good second to it.

The branches of the Public Schools Athletic Association established at Armidale, Glen Innes, Inverell, and Tamworth are all in a thriving condition, and the Annual Sports Meeting at each centre has been in all respects a pleasing success.

An increase of 17 members has taken place in the teaching strength of the District, and the list now comprises 318 principal teachers and mistresses of departments, 51 assistants, 61 pupil-teachers, and 1 work-mistress—431 in all. Ninety-three teachers are still unclassified, but most of the number are ex-pupil-teachers who should easily qualify when the time for their examination comes round. As a body, the teachers are exemplary in their conduct and diligent and efficient in the performance of duty, censure or punishment for shortcomings in either particular being of rare occurrence.

J. D. BRADLEY,  
District Inspector.

Armidale, 6 January, 1900.

ANNEX H.

INSPECTOR BLUMER'S REPORT.

At the beginning of the year, 89 schools were in operation in the Tamworth District. Wood's Reef Public, Oakley Creek Public, and Emu Creek and Moona Half-time were subsequently closed, and Terry-hie-hie Public and Berrigal Creek and Courallie Park Half-time were converted into House-to-house Stations on account of small attendance. Two new schools were opened, viz., Wooloban Public and Generoi-road Provisional. There are therefore 85 schools now under my supervision. Three others are to open immediately after the vacation, and 2 more a little later on.

Seven applications for the establishment of new schools were received. Five of these (Wooloban Public, Emu Creek Provisional, Limbri Provisional, and Watson's Creek and Ironbarks Half-time) were granted, one (Hallsville Public) was declined, and another (Glenmore Provisional) awaits the Minister's decision. No more schools are needed at present, and two now in operation will probably soon lapse on account of reduced attendance.

Consequent on children out-growing school age in many country places, the total accommodation provided in all schools exceeds the total number of pupils in attendance. Nevertheless, several schools are overcrowded. Each of these cases has been duly reported, and the necessary remedy suggested. To in some measure remove this serious defect, the schoolroom at Mungindi has been enlarged, the Barraba premises are being extended, additions are to be made to the Bechoe, Bundarra, and Tamworth buildings, and a commodious structure is to be erected on a more suitable site at Manilla.

Ninety-one schools were in operation during the whole or some portion of the year. All but 3 were fully inspected. The uninspected schools are small remote ones (Terry-hie-hie Public and Berrigal Creek and Courallie Park Half-time). At the time of my visit to the locality they were without teachers, and afterwards they were combined as a House-to-house School, under one teacher. The only subsequent opportunity for their inspection was during an exceptionally hot week, when my health rendered a visit, entailing a journey of 450 miles, impossible.

The most rigid economy has been practised in connection with repairs and improvements, and a much larger outlay will be necessary during the coming year, especially in the matter of painting. Accommodation for 48 pupils has been provided by the Inspector at a cost of £158 11s. 6d. The sum of £261 2s. was also expended by the same officer upon urgent repairs and improvements to 29 schools, and £25 17s. upon similar work in connection with residences. The want of residences is severely felt. The impossibility of obtaining them within a reasonable distance of the schools prevents many young men from marrying, and precludes the teaching of needlework where such instruction is most necessary. Except in the matter of maps and diagrams, little fault can be found with the equipment of the schools. Teachers exercise reasonable care in the preservation of the Department's property, and the construction and observance of the prescribed lesson-guides is becoming more and more satisfactory. The intense heat and limited rainfall in a large portion of this district prevent successful attempts at tree-planting. School libraries are increasing, both in numbers and popularity, and Banks exist in all schools with a staff of more than one teacher. Cadet corps are met with in two schools only—Tamworth Superior and West Tamworth Public. The want of suitable arms, and the fact that the only encouragement offered is the annual trip to Sydney in connection with the shooting contests, seriously retard the progress of this movement. On the other hand, the annual sports and competitions of the local Schools' Amateur Athletic Association have had a marked effect on drill in many schools.

As in former years, the discipline of the schools leaves little to be desired, except in the matters of punctuality and regularity of children in farming and dairying localities.

Of the schools inspected, 86, or 97·7 per cent., were up to or above standard, as against 91 per cent. for last year. 382 pupils were examined for certificates, and 67·5 per cent. passed. The number of new certificates issued was 149.

The results in the several subjects of instruction are compared hereunder with those for 1898.

Subjects.	Pupils Examined.	Percentage up to or above Standard.		Increase (+) or Decrease (—) Per cent. for 1899.
		1899.	1898.	
Reading .....	3,538	94	92	+ 2
Writing .....	3,538	96	94	+ 2
Dictation .....	2,788	88	83	+ 5
Arithmetic .....	3,538	79	78	+ 1
Grammar .....	1,250	81	79	+ 2
Geography .....	1,246	81	80	+ 1
History—English .....	1,248	79	75	+ 4
"    Australian .....	221	87	88	- 1
Scripture or Moral Lessons .....	3,212	83	80	+ 3
Object Lessons .....	3,442	82	81	+ 1
Drawing .....	3,453	87	85	+ 2
Music .....	3,165	73	71	+ 2
French .....	20	100	89	+11
Euclid .....	106	64	59	+ 5
Algebra .....	11	73	92	- 19
Mensuration .....	31	35	61	- 26
Latin .....	11	73	100	- 27
Needlework .....	1,341	89	90	- 1
Drill .....	3,158	82	77	+ 5
Natural Science .....	139	94	81	+13

As a whole, these results are more than satisfactory, being even higher in all the more important subjects than those for the preceding year.

It is noted with pleasure that the practical instruction in "First Aid," given in connection with Object Lessons in several schools, has proved invaluable. On more than one occasion the children have rendered effective aid, and in one case the teacher at Bundarra Public, by arresting arterial bleeding, undoubtedly saved a lad's life.

The results of efficiency show that the teachers are as a body assiduous and competent in their discharge of duty. No adverse comment upon their conduct has reached me, either directly or indirectly. On the contrary, there is unmistakable evidence that in many cases their influence for good extends far beyond the precincts of the schoolroom.

In conclusion, the schools are sufficient in number, and convenient of access. The total accommodation provided is ample, but additions are urgently required at some of the more important schools. The buildings are in fair condition, but an increased expenditure thereon will be necessary during the coming year. The results for 1899 are particularly satisfactory, being higher than any previously achieved.

L. BLUMER,  
Inspector.

Tamworth, 28 December, 1899.

#### ANNEX I.

##### INSPECTOR BEAVIS' REPORT.

OF 91 schools in operation in the Glen Innes section at the end of 1898, 89 resumed work after the Christmas vacation; two of these were immediately closed; so that the year 1899 commenced with 87 schools effective. The Provisional Schools at Bear Hill and Querra were not reopened, the former on account of failure of sufficient attendance, the latter because no teacher was for some time available. Glen Elgin House-to-house School and the Inverell Evening School had but nominal existence; the former (4 pupils) was closed on the 27th January, the latter (6 pupils) lived till the 3rd February. Both schools should have been closed in 1898.

Very few changes of designation are to be recorded. The Yarrow Provisional School was at the beginning of the year promoted to Public; and Fieldside and Querra, which last year were worked together as Half-time schools, have this year maintained separate existence as Provisional schools. The Querra school, however, did not resume till May.

Ten new schools have been established, viz., 7 Provisional: Acacia (Acacia Creek Bridge), Airlie Brake, Arthur Seat, Cairnmore (Ferndale), Lee-field (Clifton Ten-mile), Poolbrook (Chain of Ponds), Wellington Vale; 2 Half-time: Staines (Glen Creek), Stannum (The Gulf); 1 Evening: Glen Innes. Altogether 100 schools have been in operation during the year, viz., 70 Public, 23 Provisional, 4 Half-time, 1 House-to-house, 2 Evening.

The opinion expressed in my last report that "the easier conditions under which schools may now be established" would result in "a material increase in the number of schools," has been fully justified. My forecast for 1899 has been more than realised. Not only have 10 new schools been added to my list, but 6 others are in immediate prospect. New schools at Homestead (Tenterfield) and Auburn Vale (Inverell), and the school at Bear Hill (to be re-established) are ready for opening. Arrangements are in progress for the establishment of schools at Conrad (Bora Creek Silver Mines), Beaulieu (Inverell), and Glencoe, near Ashford; and inquiries to hand suggest the need of several other schools. Allowing for possible reductions by closing of schools, the effective list for next year should number not less than 105.

Population in this district tends to develop new centres rather than to grow materially at existing ones. Consequently the school accommodation demanded is chiefly in the form of small schoolrooms. During the current year 7 new buildings have been provided; existing buildings have undergone repair or renovation as such work became urgent; much necessary maintenance work had for various reasons to be deferred. The want most strongly felt is that of residence accommodation for married teachers in country places. Already 13 teachers occupy rented houses, several of which are of a very rough type, far from comfortable, and not conveniently situated. One teacher was for over a year obliged to reside 10 miles from his school, and compass the distance every day on his bicycle. How to provide for teachers of small Public Schools when they marry has become indeed a difficulty.

Omitting two schools—Glen Elgin House-to-house and Inverell Evening School, which, as previously mentioned, were practically non-existent—every school (98) was regularly inspected during the year. Other visits to schools, including one ordinary inspection, were of an incidental character. Eighty-eight schools (90 per cent.) were up to or above the standard of general efficiency, and 10 were below it. 3,448 pupils (100 more than last year) were examined; the results compare favourably with those of previous years. Of 399 pupils examined for exemption certificates, 287 passed (72 per cent., or 7 per cent. less than last year); 153 certificates were issued to pupils who passed for the first time.

The average attendance at the schools has been a little over 70 per cent. of the enrolment. Child ailments (measles, scarlatina, whooping-cough, &c.) have in the same desultory fashion as for the past three years militated against regular attendance.

To render school-life attractive is the aim of every earnest teacher. The means are necessarily varied, according to circumstances, but the object is the same. Apart from the ordinary routine of lessons, with perhaps a well-devised mark system and prize-giving, special outside aids in this direction include the school library, cadet corps, school picnic, school concert, Christmas-tree, athletic sports, cricket, tennis, &c.: all these have had their appropriate places in the work of the schools of this District, and the teachers are to be commended for their voluntary services in the interests of their schools. Associated with athletic sports held at Inverell was a competitive exhibition of school-work, which excited keen rivalry among local schools.

##### Summary.

The work of the year has been marked by considerable expansion, chiefly in respect of the number of new schools established; the tendency is to further increase. The efficiency of existing schools has been well maintained.

Glen Innes, 30 December, 1899.

W. BEAVIS,  
Inspector.

#### ANNEX J.

##### INSPECTOR PARKINSON'S REPORT.

FOR the last quarter of 1898 I had on my list 96 schools. Of these, Belltrees Evening School had already been closed, and Therribri Half-time School and Digby House-to-house School did not reopen. During this year a Half-time School has been established at Bando, in place of the Provisional School formerly in existence there; and six new schools have also been brought into operation—Ellerston Provisional, Gurley, Coomooma, Woolabra, and Flowerpot Half-time, and Coolanbilla House-to-house. I have, therefore, had supervision of 100 schools. The closing of 5 of these has been recommended; but 3 new schools have already been granted, a fourth has been recommended, and inquiry has been made at a fifth place where a school is required. Next year, therefore, is likely to commence with 98 schools, classified as follows:—52 Public, 19 Provisional, 20 Half-time, and 7 House-to-house.

At

At the close of last year the buildings provided accommodation for 5,707 pupils, calculated on the usual basis of 100 cubic feet of air space for each child. The number of places has been increased by 257, so that there is now room for 5,964 children. The principal increases have been caused by the erection of 4 new buildings and the enlargement of a fifth. As the combined average attendance for all schools is about 3,000, it will be seen that ample accommodation exists. New buildings are in course of erection at Gunnedah and Stewart's Brook, and a new wing, nearly doubling present accommodation, at Quirindi. An enlargement has also been sanctioned at Wee Waa. There is only one place in the district where a better building will then be required, viz., at West Narrabri, and local circumstances have prevented action from being taken there. Much has been done to keep the buildings in a good state of repair, upwards of £500 having been spent in the improvement, in various ways, of 35 schools and 8 residences. More than £350 has also been expended in erecting 4 small schools and enlarging the building at Carroll.

Each of the 100 schools in operation this year received a regular inspection; 3 ordinary inspections were made, and many schools were incidentally visited. Seven schools were found to be below standard, and 93 above. Only 2 schools were below standard on account of incompetent teaching; the other 5 did not possess all the requirements of schools up to standard. The efficiency of 21 schools was between 50 and 60 per cent., 58 others ranged from 60 to 70 per cent., 13 were between 70 and 80 per cent., and 1 exceeded 80 per cent. The most efficient schools were, in order of merit, Quirindi Superior, Gunnedah Superior, West Narrabri, Narrabri Boys' Superior, Boggabri, Narrabri Girls' Superior, Curlewis, Timor, Wingen, Jacob and Joseph Creek, Murrurundi, Werris Creek, Wallabadah, and Kilphysic. The number of pupils examined ranged from 3,390 in the principal subjects to 28 in French. In 11 subjects—Reading, Writing, Australian History, Object Lessons, Drawing, French, Algebra, Latin, Needlework, Drill, and Natural Science—the percentages of passes reached from 90 to 100; in six subjects—Dictation, Arithmetic, Geography, Scripture, Music, and Euclid—the percentages were from 80 to 90; and in three subjects—Grammar, English History, and Mensuration—the passes were from 70 to 80 per cent. It is pleasing to note that, although six small schools were opened, and 174 more children examined in 1899 than in 1898, the efficiency of the schools, and the percentages of passes in the various subjects, have been well maintained. For exemption certificates there were 510 children examined, and 362—71 per cent.—were successful. Last year the passes were 72 per cent. Of the 362 successful pupils, 159 obtained certificates at previous inspections.

Both teachers and pupils continue to take great interest in school libraries. There are now 87 of these in existence, and the aggregate number of volumes contained in them is nearly 6,000.

At the close of the year there were 119 teachers employed, classified as follows:—1—1B, 10—2A, 7—2 B, 40—3A, 5—3B, 5—3C, 18 ex-Pupil Teachers, 12 unclassified, and 19 Pupil-teachers. As usual, complaints against teachers have been rare, and the almost universal testimony of the public is to the effect that the teachers labour diligently, and conduct themselves in a praiseworthy manner.

To summarise:—

1. 100 schools have been in operation; 7 were below standard and 93 above.
2. Four new schools have been erected during the year, 1 enlarged, and 35 improved and repaired.
3. The buildings already afford ample accommodation for all pupils, and at four large centres new buildings or enlargements have been authorised.
4. The teachers continue to work industriously, and to conduct themselves in an exemplary manner.

Quirindi, 28 December, 1899.

H. PARKINSON,  
Inspector.

#### ANNEX K.

##### DISTRICT INSPECTOR MCCREDIE'S REPORT.

Of the 251 schools on my general list at the end of 1898, two did not reopen; so that the past year's work in the Bathurst District commenced with 249 schools in operation. This number was increased by the establishment of 24 new schools—10 in the Eastern, 4 in the Central, and 10 in the Western sections of the District. There were therefore 273 schools in operation during the whole or portion of the year.

The new schools opened in the Central Section were Spring Terrace Public, Wimbledon and Summerhill Creek Provisional, and Meadow Flat Evening Public.

Applications for new schools at Frederick near Lucknow, Tallwood near Forest Reef, and Wattle Hill near Sunny Corner, were declined, the educational wants of each of these localities being provided for by existing schools in their several neighbourhoods.

About the middle of the year, the Half-time School at Fitzgerald's Valley was permanently closed, and the buildings removed to Wimbledon, about 3 miles distant, where there is now an enrolment of nearly 30 pupils. At the same time its companion school, George's Plains Half-time was converted into a Provisional School, and the buildings removed to a site nearer the township.

The old school buildings at Flyer's Creek were removed to Summerhill Creek, near Orange (a distance of 26 miles), where a good Provisional School has been established.

At German's Hill, near Orange, the schoolroom was converted into a weather-shed, and the old buildings at Cave Creek erected in its place.

The schoolroom at Springmount was enlarged, and the weather sheds at Millthorpe were converted into a temporary classroom to provide accommodation for the increased attendance, pending the completion of the commodious new brick buildings in progress.

Small school buildings were erected at Winburndale and Spring Terrace, and others will soon be completed at Dark Corner and Bloomfield. Action will also have to be taken at an early date to enlarge the school building at Barry, a small farming settlement near Blayney.

The Evening Public School at Meadow Flat opened in the beginning of the year was closed in October last through insufficient attendance, but an effort will probably be made to reopen it during next year.

A considerable sum was expended in erecting new buildings, and in improving the material condition of old ones. As in past years, the more important works were carried out under the supervision of the Architect and his officers. The staff of Inspectors spent over £1,778 in erecting 13 school buildings and one small weather-shed, and in effecting repairs and improvements to 96 schools and 26 residences.

The total enrolment and average attendance for the year at all schools in the District were 15,804, and 10,051.4 respectively, the latter being about 63½ per cent. of the former. The amount received in school fees was £5,264 15s. 10½d., and the arrears on 31st September were £122 6s. 6d.

The schoolrooms provided accommodation for 17,952 pupils (8 square feet of floor space to each), and for 17,834 (100 cubic feet of air space to each), the gain for the year being 678 and 663 places respectively.

All schools, except 3 small ones in Forbes section closed in January, were fully inspected, and 19 schools received an ordinary inspection.

The standard for general efficiency was exceeded by 249 schools; 7 others just reached it; while the remaining 14, chiefly new schools, were below it. The percentage of schools up to or above the standard was nearly 95. In 1898 it was 94.

There were 10,878 children present at inspection. This number exceeds the attendance in the previous year by 1,134, the increase being greatest in schools in the Central section, where it reached 711.

The

The proficiency statistics for the year show a slight falling off in the percentages of passes in Geography and Drawing, and an advance in Writing, Dictation, Arithmetic, Australian History, Scripture, Music, French, Algebra, Mensuration, Latin, Needlework, and Natural Science. In other subjects, the percentages are the same as in 1898.

No less than 963 pupils, or 75 per cent., of 1,280 examined for exemption certificates, succeeded in passing the test, 551 of the number for the first time. This is a decided improvement upon the results obtained in past years.

A very successful meeting of the Bathurst Branch of the Public Schools Athletic Association was held on the Bathurst Cricket Ground in October. The success of the gathering was largely due to the zeal and energy of the Hon. Secretaries, the willing and cheerful co-operation of the teachers generally, and the interest in the movement and cordial support of the teachers of Orange, Millthorpe, and Blayney Public Schools, all of which were well represented numerically in the displays.

In the competition for the Schools Challenge Shield in December, the Bathurst cadets were at last victorious over their hitherto successful rivals—the Orange cadets—who had held possession of the shield since 1890. In the recent contest, the Orange team secured third place.

The returns received at the close of the year give a total of 353 teachers employed in the schools of the District. Of this number 232 are in charge of schools, 8 mistresses of departments, 58 assistants, 53 pupil-teachers, and 2 work mistresses.

J. MCCREDIE,  
District Inspector.

Bathurst, January, 1900.

## ANNEX L.

### INSPECTOR THOMAS' REPORT.

At the close of 1898 there were 87 schools on my list. Two new schools (Beargamil Provisional and Gilgies House-to-house) opened early in 1899; and Darroobalgie Provisional and Warroo Provisional, which had been closed for two years, were reopened; so that I commenced the year with 91 schools in operation. During the year new schools opened at Corridgery, Daisy Park, Wowingragong, and Yamma, and old schools were reopened at Double Peak and Mayview; while Ungarie Provisional and Warge Rock House-to-house were closed on account of diminished attendance; thus the year closes with 95 schools in operation, and to these may be added Carlachy Tank and Marshmead, which will open early in the coming year.

During the year the following applications for the establishment of new schools were received and dealt with:—

Yamma.....	Provisional...	Granted; school now in operation.
Brolgan Siding and Nelungaloo .....	Half-time ...	Provisional at Marshmead; granted.
Carlachy Tank .....	Public.....	Granted; will open in January.
Mogong.....	Provisional...	Declined.
Ironbarks.....	do	do
Brotherony .....	do	do
Mallee Plains .....	do	do
North Forks.....	Public.....	Granted.
Akhtiar.....	Half-time ...	do
Coates' Creek .....	Provisional...	Under consideration.

Applications for the reopening of Mayview and Double Peak Provisional Schools were also granted.

Settlement under the more recent provisions of the Land Acts is rapidly progressing, and I expect several early applications from homestead lessees and selectors in various parts of my district for the establishment of small schools. Leaving them out of the question, the educational needs of the district are fully satisfied by the schools now in operation or about to open.

Every school under my supervision, with exception of three, was fully inspected, and four received an ordinary inspection in addition. The three uninspected schools closed unexpectedly at the end of January, and before I could arrange to visit them. One of them (Green Grove Provisional) will reopen in January next as Half-time.

Of the 94 fully-inspected schools, 88 were found to be up to, or in advance of, standard requirements—a percentage of 93. The corresponding percentage for last year was 89, but it must be noted that the scale of marks was slightly remodelled this year, a higher proportion of marks being awarded to the three R's, while the amount of ground covered in each subject remains practically unaltered.

The total number of pupils examined was 3,208, as against 3,009 examined in 1898. In the more important subjects the results were:—

Reading .....	3,208 of whom 2,860 passed, or 89 per cent.
Writing... ..	3,166 " 2,918 " 92 "
Arithmetic .....	3,097 " 2,517 " 81 "
Dictation .....	2,608 " 2,172 " 83 "
Grammar .....	1,087 " 824 " 76 "
Geography .....	1,087 " 843 " 77 "
History.....	1,076 " 763 " 71 "

There is practically no difference between the above percentages and those for 1898.

The highest standard of efficiency for the year was attained by Wyalong Public, with Forbes Superior Public Boys' and Parkes Public next in order.

In Public Schools under one teacher, the palm is again carried off by Yalgogrin Public; while Gulgo Provisional stands first among the smaller schools.

Instruction is imparted upon approved methods, while the discipline is, in most cases, sound, and the organisation reasonably complete.

Careful attention has been bestowed upon the material condition of all vested school-buildings and residences, and all necessary repairs and improvements have been effected.

Under my own supervision, 5 new school-buildings have been completed during the year, and 3 others are in course of erection. Minor repairs and improvements have been effected at 39 schools and residences.

More extensive repairs, alterations, and improvements have been carried out, under the Architect's supervision, at several of the larger school premises.

On the whole, it may be said that all vested premises in this section of the district are in a very satisfactory state of repair, and that the schools provide sitting accommodation for pupils considerably in excess of the present enrolments.

110 teachers of all grades are employed under my supervision, of whom 99 are teachers and assistants, and 11 are pupil-teachers. The usual examinations for classification and promotion were held in June and December.

Summary.

*Summary.*

No. of schools in operation during 1899 .....	97
"    "    fully inspected .....	94
"    "    fully up to standard .....	88
"    "    pupils examined .....	3,208
Enrolment for December quarter, 1899 .....	4,164
Average attendance, December quarter, 1899.....	2,839·3
Accommodation provided (floor space).....	5,948
No. of teachers and pupil-teachers .....	110
Total amount of school fees paid .....	£1,565 12s. 9d.
"    "    in arrear .....	£48 3s. 3d.
No. of free pupils, December quarter .....	470

The usual statistics, upon which this report is based, have already been submitted.

Forbes, 23 December, 1899.

W. GEO. THOMAS,  
Inspector.

## ANNEX M.

## INSPECTOR MCKENZIE'S REPORT.

THE schools in this section are well distributed, fully staffed, and satisfactorily meet the requirements of the people. A marked feature of the section is the large number of small Half-time schools; and it would be advisable, where opportunity offers, to combine two of these, and form a Full-time school on a central site.

At the close of 1898 there were 95 schools in operation. Of these 2 were not reopened; and during the year 1899, 10 schools came into operation; so, that, in all, 103 schools have been in operation during the year. It is probable, however, that several of these will not be reopened after the Christmas vacation.

New schools were established at Mount David, North Springwood, Piper's Flat, Eusdale, Jenolan Caves, Little River, and Thommond. Schools were reopened at Bell, Mount Wilson, and Royal's. Applications from Antonio Creek and Black Mount were declined; and Mount Lawson school was removed to a more central site to meet the needs of the people of Taylor's Pit, who were agitating for a school.

All schools were fully inspected, and 15 received an ordinary inspection. As a rule, the buildings are in good repair, the accommodation is sufficient, the supply of furniture and material ample, and the general condition of the schools satisfactory as regards organisation, discipline, and instruction. Results were not so high as last year, but this is owing to the number of new schools opened, and the great amount of sickness throughout the section.

The gross enrolment for the year was 5,906, and the average attendance 3,288, whilst seats are provided for 5,579 pupils, and air space for 5,347. Ample accommodation is therefore provided.

Small school buildings were erected at Charlie's Hill, Eusdale, Megalong, and Piper's Flat. Repairs and improvements were effected in 41 schools and 9 residences, and further repairs are in course of completion in 6 schools and 5 residences. A considerable amount of work has also been carried out under the Chief Clerk of Works.

With few exceptions the teachers are painstaking, zealous, and loyal; and possess the esteem and good-will of parents and pupils.

A large proportion of the schools possess libraries. Savings Banks exist in the principal schools; and arboriculture receives a fair share of attention.

In conclusion, I wish to thank Mr. District Inspector McCredie for the assistance rendered me with the Mountain schools, and especially for his kindness and courtesy towards the teachers and pupils.

A. D. MCKENZIE,  
Inspector.

Blackheath, 1 January, 1900.

## ANNEX N.

## DISTRICT INSPECTOR JOHNSON'S REPORT.

There were 259 schools in operation in this district during the year, 89 of which were in the Wollongong section, under Mr. Inspector McLelland's supervision; 74 in the Crookwell section, under Mr. Inspector Smith's supervision; and 96 in the Bowral section, under my own direct supervision; 190 of them ranked as Public, 24 as Provisional, 39 as Half-time, and 6 as House-to-house schools; 4 small schools were opened during the year, and 3 others were closed on account of the attendance having fallen below the minimum required. There are 256 schools of all classes in the district at present, and 3 new ones will be opened early in the year.

The schools of the district are well placed, and, with the exception of one or two growing localities, this part of the Colony is fully supplied with the means of education.

The school buildings are in excellent condition, but a considerable yearly outlay is required to keep them so. During the year, 103 schoolrooms were repaired by the Inspectors at a total cost of £650 12s. 9d., and 28 teachers' residences at a cost of £223 7s. Seven new schoolrooms were erected, and 4 schoolrooms and 2 residences are being repaired. The schoolrooms of the district provide accommodation for 20,256 pupils, being an increase of 136 seats on last year.

All the schools of the district, except 2 Half-time ones, were inspected once during the year. One of those not inspected was unexpectedly closed by the removal of all the pupils to neighbouring full-time schools, and the other is a new school opened towards the end of the year and after my visit to the locality—a remote one in Upper Burragorang. Of the 257 schools inspected, only 11 failed to reach the standard; 6 reached it, and 240 exceeded it. Last year, 17 schools out of 255 inspected, failed to reach the standard.

10,956 pupils were present at the examinations held during the year, being an increase of 414 on the number examined last year. The results obtained in all subjects, except Writing, Needlework, and Natural Science are higher than those of 1898. In the subjects named the results equalled those of the preceding year.

There are 361 teachers of all grades employed in the schools of this district. As a body they are industrious and of high moral character.

Good work has been done during the year just ended, and satisfactory work may be looked for during the year now entered on.

W. H. JOHNSON,  
District Inspector.

Bowral, January, 1900.

## ANNEX O.

## ANNEX O.

## INSPECTOR McLELLAND'S REPORT.

THERE were some 90 schools in operation in the Wollongong section at the end of 1898. One school (Tullimbar) was not reopened this year, and no new schools were established, so that the numbers at the close of the year stand thus :

Public, 80 ; Provisional, 7 ; Half-Time, 2 ; total, 89. These schools are so distributed in a district practically fully settled, that few families are entirely out of reach of the means of education. Most of the buildings are in good general repair, and are of suitable design ; but though a considerable sum has been expended in improvements, some very necessary works have been postponed for lack of funds. Delay in repainting premises erected originally at great cost is always unfortunate, because the expenditure being inevitable, only becomes heavier as time goes on. In the past few weeks, however, various improvements have been sanctioned, and it is to be hoped that during the coming year the material condition of all schools needing attention will be brought up to the desired standard. Large class-rooms have been completed at Sutherland and Unanderra, and similar additions have been decided upon at Wollongong and Dapto. The total accommodation now provides floor space for 9,952, and air space for 9,724 pupils. Every school was fully inspected during the year. The Chief Inspector made ordinary inspections of Kiama and Shellharbour, and assisted me in the regular inspections of Gerringong, Nowra, and Wollongong. Of the 89 schools thus inspected none fell actually below, and 21 were considerably above, standard requirements. In some cases, however, the results were so far from indicating either earnest or skilful instruction, that the teachers were censured and warned that much better work would be expected of them in future. With these exceptions the teaching generally has been sound and thorough. Comparing the present with the past year, I find that the former shows a small but very uniform increase in the percentage of passes in almost every subject. This improvement is satisfactory, inasmuch as the year has not been a very favourable one for the best results. Various forms of sickness have been rather common among the pupils, and the average attendance has been noticeably affected. Good organisation and good discipline continue to be pleasing features of most of the schools. There are few teachers who do not realise the importance and comfort of orderly procedure in the performance of their duties, and consequently they are nearly all successful in applying intelligently the regulations framed for the purpose of carrying on school work smoothly and effectively. The appearance, behaviour, and mental activity of the pupils while under examination almost always deserve praise. Corporal punishment is seldom more frequent than circumstances warrant. If all parents were fully alive to the necessity of strengthening the teachers' authority by a stricter control of their children's actions at home, there would be little or no occasion for severity in our schools. One hears a good deal of thoughtless comment at times on the behaviour of school children *outside* the school. The teacher is held responsible for every peccadillo, as though the parent's obligation ceased as soon as his child was old enough to be handed over to the schoolmaster. Anyone who has observed the conduct of Public School children at school sports' meeting must have been struck by the restraining influence exercised by teachers over their pupils at a time when excitement and high spirits might reasonably have excused them for getting a little out of hand. Yet the behaviour of the children on these occasions is always excellent. At other public functions, where the teacher is not in evidence, the same steadiness is not so conspicuous.

There are 155 teachers of all ranks on my list. A few have failed, either through indolence or incapacity, or perhaps both, to give complete satisfaction, but of the rest it is pleasing to report that steady application to the work in hand is consistently maintained.

Before concluding, I may mention one direction in which more might have been done by some teachers. I refer to beautifying the school grounds. A good deal remains to be done in the way of tree-planting, but the time ought not to be far distant when it will be possible to say that all the schools are embowered in shade trees.

H. D. McLELLAND,  
Inspector.

Wollongong, 26 December, 1899.

## ANNEX P.

## INSPECTOR SMITH'S REPORT.

At the beginning of 1899 there were only 67 schools in the Crookwell section of the Bowral district—29 Public, 8 Provisional, 24 Half-time, and 6 House-to-house ; but during the last quarter 74 schools have been in operation. The difference in number may be accounted for by the establishment of 2 more Provisional Schools and 1 Half-time School in places where no school existed before, and the re-opening of 3 Half-time Schools which had been closed for a considerable time, and the conversion of 1 House School into 2 Half-time Schools. When a teacher has been appointed to Meryla, near Moss Vale, 75 schools may be reckoned as the number in this section of the Bowral District.

The material condition of a large number of school buildings has been improved during the past twelve months. The sum of £162 10s. 6d. was spent on the erection of three new buildings and the removal of two others to more central positions, and £164 9s. on necessary repairs to 21 school-rooms, including water supply and fencing.

The ornamentation of the school grounds also received some attention, although it is rather difficult in such a cold climate to procure trees and shrubs which will be sure to grow. A few teachers made gardens in front of their residences, or started them afresh. Inside the schoolrooms a stranger cannot but be struck with the appearance of cleanliness and order, the maps, diagrams, and public notices upon the walls, time-tables and programmes of lessons carefully constructed, and a sufficient supply of furniture and every kind of working apparatus. The records as a rule are kept with accuracy, and in accordance with the printed regulations.

Every school in this section received one regular inspection, and 61 of them turned out above standard, 2 up to, and 11 below standard by reckoning the 4 House Schools in the same category. The number of pupils examined for the first time for certificates of being able to read, write, and do arithmetic fairly well, was 62, and the number of those who passed the examination 35. The weak subjects in a great many small schools were Drawing, Music, Drill, and English Grammar ; in other subjects the passes up to or above the standard ranged from 70 to 90 per cent.

The attendance of the pupils has been fairly regular throughout the year, notwithstanding the prevalence of whooping-cough and influenza, and the fact that we have in this district sixteen months of wet wintry weather. Out of an enrolment of 1,934 children, the average daily attendance was 1,356, or at the rate of 70 per cent. for each quarter.

The number of teachers employed in the Crookwell section of the Bowral District at the present time is 64 ; there are 36 teachers with a classification, 26 unclassified, 1 pupil-teacher, and 1 work-mistress. Only one charge was made during the year—a very trivial one, and for want of evidence it had to be dismissed. It may be truthfully affirmed that the teachers, as a body of persons holding very responsible positions, are highly respected among all classes of the community, and the inspections of their schools regularly every year disclose such a zealous and faithful performance of duties that a steady progress on the right path may reasonably be expected in the future.

JOHN LESLIE SMITH,  
Inspector.

Crookwell, 14 December, 1899.

## ANNEX Q.

ANNEX Q.  
DISTRICT INSPECTOR COOPER'S REPORT.

Of the 386 schools that were on the list of the Goulburn District for the year 1898, thirteen were closed on account of small attendance during 1889 ; but, on the other hand, 22 schools were either reopened, or were established where none formerly existed. The total number of schools in the district is now, therefore, 395, grouped in four sections, as under :—

Section.	Schools.	Number of Places, allowing for each Pupil—		Highest Quarterly Enrolment.
		8 square feet	100 cubic feet.	
Goulburn .....	105	5,760	5,390	4,090
Braidwood.....	92	4,795	4,174	3,126
Bega.....	115	6,050	5,155	4,221
Yass.....	83	4,050	3,609	3,112
Totals.....	395	20,655	18,328	14,549

It is thus evident that the total accommodation is fully up to the needs of the children enrolled. It may be said, too, that only in a few places, where the school population frequently changes, has the space afforded by particular schools been found at all inadequate.

Under the supervision of the Inspectors, 15 new schools have been erected. These provide the requisite cubic space for 384 pupils, and cost £804 8s. 1d. Under like supervision, 157 schools and 29 residences have been repaired and improved, at a cost of £1,181 5s. 10d.

The material organisation of the schools under my personal superintendence is, I know, fully satisfactory; and I gather from the Inspectors' reports that, in the other sections of this district, there is no ground for complaint. The schools, generally, are well equipped with books and requisite appliances.

Attendance and fees.

	Goulburn.	Braidwood.	Bega.	Yass.	Totals.
Mean quarterly enrolment....	4,058	3,073	4,181	3,011	14,323
Mean average attendance .....	2,897	2,085	2,936	2,073	9,991
Fees received.....	£1,174	£905	£1,396	£959	£4,434

Comparing the enrolment and average attendance, the regularity comes out as follows :—

	1899.	1898.
Goulburn section.....	71 per cent.	69 per cent.
Braidwood „ .....	67 „	69 „
Bega „ .....	70 „	71 „
Yass „ .....	68 „	67 „
The whole district.....	69 „	69 „

These figures show but little change in the past two years ; and, in view of the serious interference with attendance caused by epidemic sickness, cannot be regarded as unsatisfactory.

The general discipline of the schools continues to be of a very high character, and it is pleasing to be able to report that resort to corporal punishment is becoming less frequent.

Inspection.

There were 408 schools or departments in operation during the whole of the year, or part of it. All of these, with the exception of nine, were regularly inspected. Those not inspected were very small schools. Some of them were not established until a few weeks before the end of the year, and none of them were open when the Inspectors visited the localities in which they are situated. Of the uninspected schools seven are in the Goulburn and two in the Bega section. On medical advice I obtained six months leave of absence from duty, dating from 13th February. During the former half of the year eight of the schools in Goulburn were inspected by the Chief Inspector, assisted by Inspectors Bailie and Walker, and 48 other schools were inspected by Mr. Walker. The regular inspections held in the several sections were :—

Section.	Regular.	Pupils examined.
Goulburn.....	101	3,120
Braidwood.....	95	2,264
Bega.....	118	3,275
Yass.....	85	2,222
Totals.....	399	10,881

In the subjoined table, the general efficiency of the schools inspected is presented :—

Section.	Class of School.	Above Standard.	Up to Standard.	Below Standard.	Totals.	Percentage up to or above Standard.	
						1899.	1898.
Goulburn.....	Public.....	53	1	...	54	100	100
	Provisional.....	6	1	...	7	100	100
	Half-time.....	38	1	1	40	97	100
	Totals .....	97	3	1	101	99	100
Braidwood.....	Public .....	40	1	...	41	100	100
	Provisional.....	6	...	4	10	60	72
	Half-time.....	34	2	8	44	82	89
	Totals ..	80	3	12	95	85	91
Bega.....	Public .....	66	11	...	77	100	100
	Provisional.....	14	3	...	17	100	100
	Half-time.....	23	1	...	24	100	100
	Totals ...	103	15	...	118	100	100
Yass.....	Public .....	52	1	1	54	98	100
	Provisional .....	15	...	1	16	93	94
	Half-time.....	13	...	1	14	93	100
	Evening.....	1	...	...	1	100	...
	Totals .....	81	1	3	85	96	98
Grand Totals.....		361	22	16	399	96	97

The proficiency of the pupils examined is exhibited hereunder :—

Subject.	Numbers Examined.		Percentage of Passes.				Percentage of total Passes.

The new series of Reading Books, published by Messrs. W. Brooks and Co., have been in use throughout the district during the year. The lessons are well graded and instructive, and the pictures with which they are illustrated help to render them interesting to the pupils. These books appear to be admirably adapted for the purpose for which they were compiled. The new standard of proficiency seems to be acceptable to the teachers, and if one of its effects should be to render the teaching less mechanical and more practical, less calculated to exercise the mere memory, and more conducive to the training of the senses and development of the reasoning faculties, it will prove a great boon to the children.

Exemption Certificates.

There were 1,462 pupils subjected to the examination prescribed for exemption certificates, of whom 1,039 passed. Of those who were successful, 573 passed for the first time, the others having gained these certificates in former years. It is estimated that not fewer than 500 children were still enrolled in the schools, although not all present at the inspections, who had already obtained exemption certificates. As pointed out in former reports, it is, I think, a gratifying fact that so large a proportion of the advanced pupils remain at school after they thus become free from compulsory attendance

Cookery Class.

The Cookery Class, conducted by Miss Rankin in 1898, was continued until June last. The pupils, 60 in number, were examined under the superintendence of a committee of ladies, and acquitted themselves very creditably.

Science Class and Manual Training.

The pupils in the Fifth Class in the three Goulburn Superior Schools, have, as formerly, attended the local Technical College for instruction in science. For 1899, Mr. Sach, the Resident Master, selected Geology as the subject for study, and the interesting lectures given by him have proved very attractive and beneficial. The results of a written examination held in November are very satisfactory, and show that the pupils have profited by Mr. Sach's lectures, and the painstaking work of their regular teachers. The Public Schools Manual Training Class, under the charge of Mr. T. A. Wilkie, has continued to be popular, so that there has been no difficulty in keeping up the full complement of pupils—55.

Athletic Association.

The interest shown in the Association in 1897 and 1898 increased during 1899; and, on the 6th October last, a sports meeting was held in the local Show Grounds which attracted a large number of entries from the pupils of the city and neighbouring schools, including the Crookwell Public School. The meeting was well attended by the public, and the results, in respect to the manner in which the different events were contested, the efficient and self-denying work of the officials of the Association, and the monetary profits, were very gratifying.

Teachers.

There were 406 teachers of all ranks employed in the district at the end of the year. These were :—

Principal Teachers .....	324
Mistresses of Departments .....	8
Assistant Teachers .....	30
Pupil-teachers .....	44

All

All the mistresses of departments, and 242 of the principal teachers, are classified. Of the 82 unclassified teachers, 48 have served as pupil-teachers. All the assistants, with the exception of two who were trained as pupil-teachers, hold certificates of classification. Most of the unclassified teachers who have had no experience as pupil-teachers, entered the Service in 1899, under the new arrangements for providing teachers for small schools. As a body, the teachers of the district are well-conducted, skilful, and zealous.

Summary.

The general results of the year's work may be regarded as satisfactory, and the outlook for 1900 is encouraging.

Goulburn, 3 January, 1900.

D. J. COOPER,  
District Inspector.

ANNEX R.

INSPECTOR BAILLIE'S REPORT.

At the close of the year 1899 the schools in the Braidwood section of the Goulburn District numbered 92, viz., 41 Public, 9 Provisional, and 42 Half-time.

At the beginning of the year, 90 schools were in operation, 3 of which have been closed through insufficient attendance, viz., Shellgrove and Virginia Half-time, and Ingebyra Provisional; Bunyan Provisional has not been working since April.

Schools were established at Long Flat and Umeralla River—the former a Public and the latter a Half-time.

Kalkite Half-time was reopened and worked with Middling Bank; and Yarrangobilly Provisional was transferred from the Wagga District to this section of the Goulburn District.

Thirty-five schoolrooms were repaired at a cost of £196 15s. 3d., and 4 teachers' residences at a cost of £55 5s. 2d.

The teachers' residences at Adaminaby and Umeralla Siding are undergoing repairs at an outlay of £74 5s., and improvements are being effected at Araluen West and Cooma Superior Schools; outlay, £25 9s.

A tender has been accepted for £69 19s. 10d. to erect a new school building at Currowan, to replace the old dilapidated building now used as a school. The Public School at Araluen West was enlarged by an additional 10 feet to the length.

The accommodation at end of 1899 provided floor space, allowing 8 square feet to each child, for 4,796 pupils; and cubic space, allowing 100 cubic feet to each child, for 4,174 pupils—being an increase from last year of 56 and 59 places respectively.

The schools are well distributed, the accommodation ample, and the material condition very fair.

On the whole, the Public School buildings are suitable, well ventilated, and in good repair; and the Provisional are fairly neat and comfortable. Several of the Half-time school buildings were originally erected for Public Schools; but, owing to diminished attendance, have been reduced to Half-time Schools. Others have been erected by the residents, who, on account of adverse circumstances, have been unable to erect other than rough buildings, imperfectly ventilated and badly lighted. However, I am pleased to remark that considerable improvements have been effected, and that the comfort of both pupils and teachers has received consideration.

The enrolment and average attendance are slightly less for each quarter than for similar quarters of last year. The diminished attendance has been caused principally by sickness, such as measles, whooping-cough, diphtheria, etc. Whole families were prevented from school attendance for months because one of the family suffered from the effects of one of the complaints named.

The number of pupils on the rolls for the year was 3,885. Of this number 424 attended some other school during some portion of the year. Free education was granted to 668 pupils.

All the schools in operation, i.e., 95, received a regular inspection, 1 an ordinary, and several, as opportunities offered, incidental inspections. Eighty schools were above standard, 3 up to, and 12 below. In 9 of the schools below standard there was no third class, owing mainly to insufficient time having elapsed since the schools were established to work the pupils up to third-class standard: otherwise the attainments of the pupils in these schools were very satisfactory, and the average proficiency above standard requirements for first and second classes.

298 pupils were examined for exemption certificates, of which 224 passed the necessary test, or a percentage of 75, being an increase of 11 per cent. over last year.

The general efficiency of the schools show good, steady progress, and a marked improvement upon last year's work.

The discipline is firm, mild, and sympathetic; the pupils are orderly, well trained, self-reliant, intelligent and respectful; and the organisation and management of the schools highly pleasing and gratifying.

The teachers as a body are earnest and zealous in the discharge of their duties, and, with few exceptions, take a deep and lively interest in their work, and do their utmost to stand in high estimation both with the Department and the public.

Classification of Teaching Staff.

Class 1 B .....	2
„ 2 A .....	5
„ 2 B .....	3
„ 3 A .....	38
„ 3 B .....	6
„ 3 C .....	4
Unclassified (majority served as Pupil-teachers) .....	20
Pupil-teachers .....	10
Total of all grades .....	88

Very creditable work has been done during the year, and the prospects for 1900 are good.

Braidwood, 29 December, 1899.

J. W. W. BAILLIE,  
Inspector.

ANNEX S.

INSPECTOR SHEEHY'S REPORT.

THE destruction by fire of the building at Godfrey's Creek reduced the number of schools with which the year's work commenced to 82. In the course of the June quarter the Half-time Schools at Broughtonsworth and Smelley's Lagoon were closed on account of small attendance. Garangula Public and Mountjoy Provisional were reduced to Half-time rank, and Five-mile Creek and Tumorrana Provisional were converted into Public Schools.

In August the Provisional School at Godfrey's Creek was reopened, a new building having been erected. In the following month two new schools, Wee Jasper Provisional and Demondrille Junction Evening Public, were opened. At the end of the year there were 83 schools under my supervision, viz., 54 Public, 16 Provisional, 12 Half-time, and 1 Evening Public.

Applications

Applications for new schools in the following localities were received and dealt with :—

Locality.	Kind of School applied for.	Result.
Back Station Creek .....	Provisional .....	Declined.
Bala .....	" .....	Granted.
Bongongo .....	" .....	Granted conditionally.
Reno .....	Public .....	Granted.
Kangiara Creek .....	Half-time .....	"
Rosehill .....	" .....	Granted conditionally.

An application for the establishment of a Provisional School at Bondo, which was under consideration at the close of 1898, was declined.

There were 85 schools in operation during the whole or some part of the year. All received a regular inspection, and two an ordinary or second inspection. Three schools were below the standard (50 per cent. of possible marks), 1 school was up to, and 81 were above its requirements. In 38 schools there was improved efficiency, in 18 the results were the same as at last inspection, and in 27 they showed a retrogression.

The organisation is on the whole satisfactory. The schoolrooms and premises are, generally speaking, clean and tidy, and the records properly kept. With few exceptions the programmes are suitably constructed, but the time-tables require, in several cases, more care and skill in their compilation.

The discipline continues to be of a pleasing character.

There are 87 teachers of all ranks employed in this section, viz., 51 males and 36 females; 75 are in charge of schools, 6 are assistants, and 6 are pupil-teachers. Of the former 23 are unclassified, but 15 served as pupil-teachers.

The teachers as a body have worked faithfully and earnestly during the year. It is to be regretted, however, that some do not take sufficient care to furnish correct and complete returns punctually. It is very important that they should do so, as negligence in this respect causes much inconvenience, especially at the end of the year.

#### Proficiency.

The subjects taught, number of pupils examined, number who passed, and percentages, are given in the table hereunder :—

Subjects.	Number Examined.	Number Passed.	Percentages.	
			1899.	1898.
Reading .....	2,222	1,940	87.3	81.8
Writing .....	2,166	2,097	96.8	96.7
Dictation .....	1,893	1,478	78.0	72.1
Arithmetic .....	2,170	1,941	89.4	84.5
Grammar .....	973	725	74.5	57.2
Geography .....	981	744	75.8	58.5
History—English .....	976	627	64.2	56.8
"      Australian .....	201	128	63.6	81.7
Scripture .....	2,217	1,399	63.1	62.3
Object Lessons .....	2,217	2,017	90.9	89.7
Drawing .....	2,132	1,960	91.9	88.7
Music .....	2,217	1,206	54.4	53.0
French .....	3	3	100.0	100.0
Euclid .....	66	63	95.4	100.0
Algebra .....	18	18	100.0	43.7
Mensuration .....	20	18	90.0	60.0
Latin .....	11	11	100.0	100.0
Needlework .....	896	896	100.0	99.3
Drill .....	2,217	1,842	83.0	82.8

The results in 10 subjects are higher, and in 3 are lower than those for last year. In the remaining subjects there is no variation.

The number of pupils who were examined for exemption certificates was 281. Of these 192 passed, and 128 gained certificates for the first time.

#### Accommodation.

In the course of the year 101 seats (reckoned at 100 cubic feet of air space for each pupil) were lost by the closing of two schools and the giving up of two old buildings. Eighty-one places, however, were provided by the erection of three new schoolrooms. Hence, as the number of seats at the end of 1898 was 3,621, the present sitting accommodation is 3,609 places.

Information in regard to the new buildings erected is furnished below :—

School.	Cost.	Places at 8 square feet of floor space.	Places at 100 cubic feet of air space.	Supervised by	Remarks.
Edgerton Half-time .....	£ s. d. 18 18 0	29	21	Inspector	Erected with old materials to replace non-vested building.
Godfrey's Creek Provisional .....	69 15 0	42	34	"	Erected in place of building destroyed by fire.
Wee Jasper Provisional .....	92 0 0	42	34	"	Erected where no school existed before.

Repairs and improvements to 54 schools and 6 teachers' residences have been carried out under my supervision during the year. The total cost was £415 2s. 6d. Repairs to 12 schools and 2 residences are in progress, and will cost £46 7s. 9d.

School buildings are in course of erection at Reno and Kangiara Creek. The contract prices of these amount to £194.

Under the supervision of the Chief Clerk of Works, additions have been made to the teacher's residence at Rye Park, and gas has been laid on to the residence at Yass.

Summary.

Summary.

All schools received a regular inspection, and 95 per cent. were above the standard. Two new schools have been opened ; the establishment of five others has been sanctioned. Three new buildings have been erected, and two more are nearly completed. The means of education are well distributed, and the prospects for 1900 are good.

P. F. SHEEHY,  
Inspector.

Yass, 1 January, 1900.

ANNEX T.

INSPECTOR DURIE'S REPORT.

THERE were 111 schools in existence in the Bega section of the Goulburn District at the close of 1898, made up of 75 Public, 14 Provisional, and 22 Half-time Schools. During 1899 six schools were permanently closed, viz., Dignam's Creek, Glenview and Pericoe Provisional, and Glen Allen, Curry Flat, and Glenbog Half-time. Ten new schools were opened in the year, viz., Wallaga Lake Public, Bimbimbie, One-tree Hill, Sane's Corner, Sane's Creek, Tombong, and Wagonga Provisional, and Kiah, Nullica, and Muskgrove Half-time. The following schools were raised from Provisional to Public :— Oakvale and Quinburra. The year, 1899, therefore, closes with 115 schools, made up of—

Public .....	78
Provisional .....	15
Half-time.....	22
Total.....	115

THE following table shows the attendance in all schools for the years 1898 and 1899 :—

Quarter.	Enrolment.		Average Attendance.		Percentage.	
	1898.	1899.	1898.	1899.	1898.	1899.
March .....	4,155	4,117	2,923·5	2,920 3	70·4	70·9
June .....	4,244	4,221	3,001·8	2,922·2	70·7	69·2
September .....	4,175	4,211	3,121·	2,907·2	74·7	69·
December .....	4,153	4,167	2,898·9	2,995·8	69·8	71·8

The average attendance for the year is slightly over 70 per cent. of the enrolment. Considering the many causes that interfere with the regular attendance of the pupils, this average should be deemed very satisfactory.

With the exception of two, all the schools in existence during 1899 were regularly inspected. One of those not inspected (Wapenga Public) was closed in November by the removal of the teacher, and not reopened. I had not been able to arrange to inspect it before its closing. The other school (Muskgrove Half-time) was not opened until late in November, and its companion school at Rockton is not yet in operation, but will be so in January next. Bemboka Public School was inspected twice by Mr. Inspector Walker. It will thus be seen that of the 120 schools in operation during the year 118 received a regular inspection, and one of these was inspected twice.

The following table shows a comparison of the efficiency of the schools inspected in 1898 and 1899 :—

School.	Below Standard.		Up to Standard.		Above Standard.	
	1898.	1899.	1898.	1899.	1898.	1899.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Public .....	...	...	18	14	82	86
Provisional .....	...	...	17	100	83	83
Half-Time .....	...	...	4	100	96	96
All .....	...	...	12	13	88	87

No school was below standard, while 13 per cent. were up to and 87 per cent. above standard. For exemption certificates 410 pupils were examined ; of these 347 passed the test, and 194 of these obtained certificates for the first time.

During the year 7 new school buildings were erected. One of these (Pericoe Provisional) replaced the old building, which was burnt down in January. Forty-two school-rooms and 13 teachers' residences were repaired, and 3 weathersheds were erected. These works cost £787 14s. 7d. At the close of the year 1 school-room is being enlarged, 3 school-rooms and 1 residence are undergoing repair, and a weathershed is in course of erection.

At the close of the year there were employed in the various schools under my supervision 118 teachers of the following grades :—

Class IB.....	1	Pupil-teachers.	
IIA .....	9	Class I .....	3
IIB.....	13	II .....	1
IIIA.....	46	III .....	1
IIIB.....	13	IV .....	3
IIIC.....	6		
Unclassified.....	22	Total.....	8
Total .....	110	Grand Total.....	118

In conclusion, I have to state that the number of schools in this section is steadily increasing ; the efficiency is well maintained ; the number of schools, with those whose establishment has been sanctioned, is ample for the requirements of the section ; and the outlook for 1900 is encouraging.

P. DÜRIE,  
Inspector.

Bega, 26 December, 1899.

ANNEX U.

DISTRICT INSPECTOR LOBBAN'S REPORT.

At the beginning of 1899 there were 107 schools or departments in operation in the Grafton section; 116 in the Port Macquarie section; and 100 in the Lismore section; total, 323.

At the close of the year the numbers were:—Grafton, 107; Port Macquarie, 118; and Lismore, 103; total, 328.

In the Grafton section 3 new schools were established, but 3 others were closed; 4 were established in the Port Macquarie section, and 2 were closed; while 5 were opened in the Lismore section, and 2 were closed. The net increase for the year was 5 schools.

In order to meet requirements as they occurred, much time was taken up by the Inspectors in each section in preparing plans and specifications for new buildings, and additions and repairs to old ones. The total expenditure on completed works in the Grafton section, under inspectorial supervision, was £1,665 12s. 9d.; Port Macquarie section, £1,911 10s. 4d.; and Lismore section, £2,013 16s. 8d.; total, £5,590 19s. 9d. In addition to this amount a considerable sum was expended in the Port Macquarie and Lismore sections on new works completed under the Architect's supervision. Besides the finished works supervised by the Inspectors, other works are in progress, which, when completed, will cost, in the Grafton section, £563 15s.; in the Port Macquarie section, £1,658 15s. 6d.; and in the Lismore section, £1,432 1s. 9d.; total, £3,654 12s. 3d.

Seating accommodation was provided at the beginning of 1899—floor-space and air-space respectively—for 6,631 and 6,634 pupils in the Grafton section; 7,300 and 7,243 in the Port Macquarie section; and 6,242 and 6,160 in the Lismore section; total, 20,173 and 20,037. At the close of the year it had increased in the Grafton section to 6,797 and 6,791 respectively; in the Port Macquarie section to 7,528 and 7,461; and in the Lismore section to 6,581 and 6,507; total, 20,906 and 20,759—a net increase of 733 and 722 respectively.

During some portion of the year there were 110 schools (or departments) in operation in the Grafton section. All received a regular inspection, and one of them an ordinary inspection also. There were 120 schools in operation in the Port Macquarie section, and 115 of them received a regular inspection; 5 were not inspected. In Lismore section 105 schools (or departments) were in operation; 103 of them were inspected, and 2 were not inspected. Thus, in the whole district, 335 schools (or departments) were in operation during some part of the year; 328 of them received a regular inspection, and 7 were not inspected, through circumstances beyond the Inspector's control.

In the Grafton section 2 schools were below and 108 were above the standard; in the Port Macquarie section 5 were below and 110 above the standard; while in the Lismore section none were below, 2 were up to, and 103 above the standard. In the whole district 7 were below, 2 up to, and 319 above the standard. The pupils examined in the Grafton section numbered 4,139; in the Lismore section, 4,330; and in the Port Macquarie section, 4,010; total, 12,479. This is an increase of 189 upon the previous year's inspection, although 7 schools were not inspected.

The difference in the percentage of passes in the three sections, as given below, is somewhat striking. In Reading, Writing, and Arithmetic the lowest results are obtained in the Port Macquarie section:—

Subjects.	Grafton.	Port Macquarie.	Lismore.	District.
Reading .....	93	79	91	88
Writing .....	91	77	91	86
Dictation .....	91	87	82	86
Arithmetic .....	73	70	74	72
Grammar .....	79	72	75	75
Geography .....	81	81	75	79
English History .....	78	71	71	73
Australian History .....	79	73	81	77
Scripture .....	78	74	77	76
Object Lessons .....	81	79	83	80
Drawing .....	78	74	83	79
Music .....	82	75	83	80
French .....	88	81	70	81
Euclid .....	77	69	77	71
Algebra .....	93	79	58	77
Mensuration .....	71	70	63	69
Latin .....	93	79	70	80
Needlework .....	88	80	88	86
Drill .....	87	72	85	81
Science .....	95	85	90	89

In many schools throughout the district a very high standard is reached. Latin, Euclid, Algebra are taught with marked success in the Grafton Superior Public School; while in the ordinary subjects solid proficiency is attained. Considerable improvement in the results of the examination for certificates is noted, and a much higher percentage of passes is recorded.

The general organisation of the schools continues to merit the higher mark given in previous years. The buildings are nearly all in very good order. The wall documents and maps are neatly arranged. The teaching appliances are ample and good; and a cheerful tone pervades the school-rooms.

The discipline aims at securing not only quiet and good behaviour in school, but a becoming deportment at all times. The pupils everywhere are clean in person and neatly and comfortably clad. They are subdued and respectful in demeanour; and they evince considerable industry and self-reliance.

The instruction is imparted by modern methods; and in the better schools all the lessons are carefully prepared. The small schools in the remote bush are often models of neatness, and, in point of efficiency, compare favourably with many more pretentious institutions. The pupil-teachers who completed their course before appointment do excellent work in these small schools. The Chief Inspector was enabled to visit the northern portion of the District during the year; and inspected schools on the Tweed, Richmond, and Clarence. The Deputy Chief Inspector also made a short visit to the Clarence and Richmond on official business.

The attendance during the first half of the year was reduced by wet weather, and a good deal of sickness prevailed in the latter half; so that no marked improvement in the average attendance can be reported. Although a great many pupils failed to make up the statutory attendance, yet only in a very few cases was it deemed necessary to resort to legal action. It has been my experience to note that most parents are anxious to send their children to school; and, when the teacher is popular, they make sacrifices to send them every day.

The list of free pupils continues to be comparatively large; but it is expected that, with the better times now upon us, the numbers needing free education will decrease.

The

The cadet movement is not widespread, the principal centres of action being Grafton and Lismore, where fairly strong corps are enrolled. The advantage of a thorough course of drill cannot be over-estimated; and it is to be regretted that in country districts so little can be done at most schools.

In all parts of the District Athletic Associations exist, and the annual gatherings are very popular with the children and their parents; and they are well patronised by the public. Swimming classes have been formed in connection with some schools in the Grafton section, and good results have been achieved at Grafton and Coff's Harbour.

The School Banks make fair progress. A few of them have been closed through lack of support, but the majority are thriving. In the Grafton Superior Public School there were at the end of the year 246 depositors, with £102 2s. 11d. at their credit.

Cookery classes were not in operation in any of the schools during the year.

There are 307 teachers, 4 mistresses, 1 work-mistress, and 75 pupil-teachers employed in the District, and nearly all of them deserve to be spoken of in the highest terms of praise. Most of the teachers are worthy of the honourable positions they occupy, and, by their irreproachable lives and neighbourly conduct, win the respect and esteem of the parents whose children they teach. The pupil-teachers deserve unstinted praise for their industry as teachers and their diligence as pupils. Only one failed at the annual examination.

Reviewing the year's operations, one feels that in some cases better work could have been done; but, taken as a whole, the results have been very satisfactory, and the outlook for the future is hope-inspiring.

Grafton, 10 January, 1900.

A. LOBBAN,  
District Inspector.

ANNEX V.

INSPECTOR WRIGHT'S REPORT.

ONE school in operation at the end of 1898 did not reopen in 1899, so that this year commenced with 116 schools. Two (Hatch and Moparrabah) that had previously been closed were reopened, and two new schools were established, viz., Nalla and Talarm Half-time; so that there were 120 schools in operation during some portion of the year. Two Half-time Schools (Rolland's Plains and Wauchope Half-time) were closed; so that there are now 118 schools in operation, classified as follows :—

Public	...	...	...	...	84
Provisional	...	...	...	...	14
Half-time	...	...	...	...	20

Four new Provisional Schools will be opened early in 1900, viz., Bappin, Kindee, Tamban, and Uralgurra; and as the expansion of the dairying industry is bringing more families to the district, and causing closer settlement, it is likely that a number of small schools will be required in the near future.

*Buildings, Grounds, &c.*

The condition of the buildings has received very careful consideration during the year. Under the Architect, many of the larger buildings have been repaired, while under my own supervision 9 school buildings and 1 residence have been erected, 44 schools and 14 residences repaired, and other works executed, at a total cost of £2,355 16s. 4d.; and at the present time I have works in progress which will entail a further expenditure of £974 9s. 6d. In a few instances the furniture is old-fashioned and somewhat dilapidated, and the supply of apparatus is scanty; but, as a whole, the schools are well provided with modern and suitable furniture and apparatus.

Nearly all the school sites present a neat and well-ordered appearance, and in many instances time and labour have been freely bestowed in beautifying the grounds. The teachers of the following schools are deserving of the highest commendation for their work in this respect :—Oxley Island, Euroka, Mitchell Island, and Cedar Party Creek.

*Accommodation.*

After deducting the losses caused by giving up old school buildings, closing of schools, &c., there has been a gain during the year of places for 228 pupils (floor space), or 218 pupils (air space), provision being now made for 7,528 (floor space), or 7,461 (air space). The enrolment and average attendance for the year have been as follows :—

	Enrolment.	Attendance.
First Quarter	... 5,395	... 4,045·8
Second „	... 5,469	... 3,933·3
Third „	... 5,511	... 3,414·8
Fourth „	... 5,366	... 3,913·4

So that adequate provision for the requirements of the district has been made. Of course, in some places, where the population has rapidly increased, more room is needed; but very few of such cases now exist.

*Inspection.*

Of the 120 schools open during the year, 5 were not inspected, viz., Thone Creek Provisional, Blackbird Flat and Brock's Flat Half-time, and Rolland's Plains and Wauchope Half-time. The two last-named closed early in the year, before I could reach them, and the others were not inspected owing to (a) the delays caused by the heavy rains and floods experienced during the third quarter of the year, and (b) the outbreak of an epidemic of whooping-cough at Blackbird Flat, which rendered the school there almost inoperative during the last quarter.

Of the 115 schools inspected, 110 (95·6 per cent.) were above and 5 (4·4 per cent.) below standard requirements. Last year only 91·4 per cent. of the schools inspected satisfied the requirements of the standard, so that a decided improvement (4·2 per cent.) is shown. Very little fault is to be found with the organisation and discipline generally, and the attainments speak well for the ability and assiduity of the teachers as a whole.

*Future Prospects.*

I look forward confidently to very successful work in the future. As a body, the teachers are capable and earnest, the schools are in good working order, the material condition of the buildings is good, and there is every prospect of a continuance of the creditable work which has been done.

Port Macquarie, 3 January, 1900.

S. WRIGHT,  
Inspector.

ANNEX W.

INSPECTOR BOARD'S REPORT.

In the Lismore section, during the past twelve months, 105 schools have been in operation, comprising 85 Public, 16 Provisional and 4 Half-time schools. Two schools—Cave Point and Riley—have been closed during the year owing to insufficient attendance; while 5 new schools—Jiggi, Crabbe's Creek, Goonengerry, Opossum Creek and Pretty Gully—have been opened. The increase of settlement, which has been a marked feature of the district in recent years, is still continuing; and in order to keep pace with it, the establishment of five new schools at Terranora, Mooyabil, Durrumbul, Bora Ridge, and Tygalgah has been decided upon, and these will come into operation early in the coming year, when the necessary buildings are completed. The school enrolments in this section for some years past have shown a regular yearly increase of 5 per cent.; and as this rate of growth is likely to be maintained for some time, it will need to be met partly by the establishment of new schools, but more especially by the enlargement of several existing buildings.

The maximum quarterly enrolment for the past year has been 5,725, and the highest quarterly average attendance 4,120. Existing school buildings provide accommodation for 6,507 pupils. It has been found necessary to make additions to 10 school buildings, of which 7 have been completed, and the remainder will be ready for occupation during the coming quarter. An expenditure larger than usual has been found necessary in order to keep existing buildings in good condition and to provide for increasing requirements. The outlay under the Inspector's supervision upon 4 new school buildings, 6 additions, 2 residences, and general repairs, has amounted to £2,013 16s. 8d., while similar work now in progress involves a further expenditure of £1,432 1s. 9d. In addition, contracts have been carried out under the Architect's supervision at a cost of £1,346 18s. 8d. Some buildings are still in need of repair, and will receive attention early in the new year. On the whole, the school premises throughout the District are in very fair condition, are suitably furnished, and are provided with the requisite material for the teachers' work.

Two schools were not inspected during the past year; one of them was closed soon after the last Christmas vacation, and the other was closed in compliance with the Public Health Act during the last six weeks of the year, when it should in the ordinary course have been inspected. The remaining 103 schools received a regular inspection, five of them from the Chief Inspector, who visited the District during the year. The results of inspection show that the efficiency of the schools has been well maintained. A comparison with the proficiency results of last year shows an advance of 2 per cent. in the passes in Reading, Dictation, and History; while in Writing, Arithmetic, Grammar and Geography the results are practically the same as those of last year. The number of pupils examined for exemption certificates during the year was 553; of these 339, or 61 per cent., passed, and to 222 of them, who passed for the first time, certificates were issued.

The management of the schools is in the hands of 136 teachers, comprising 99 principal teachers, 2 mistresses, 12 assistants and 23 pupil-teachers. Both for the manner in which they discharge the duties of their office, and for their personal influence, the teachers are generally appreciated and respected in the localities in which they labour.

P. BOARD,  
Inspector.

Lismore, 26 December, 1899.

ANNEX X.

DISTRICT INSPECTOR T. DWYER'S REPORT.

THE number of schools in operation in the Maitland District during some portion of the year 1899 is given hereunder:—

	Maitland Section.	Newcastle Section.	Dungog Section.	Total.
Public Schools.....	73	58	70	201
Provisional Schools .....	11	1	14	26
Half-time Schools .....	4	.....	23	27
House-to-house Schools .....	.....	.....	.....	.....
Evening Public Schools .....	1	3	.....	4
Total .....	89	62	107	258

In the Maitland section, the Half-time Schools at Rouchel Vale and Ravensworth North were advanced to full-time rank at the beginning of the year, and their names were changed to Segenhoe and Teralawn respectively.

New Provisional School buildings were opened at Gundal in January and at Stockrington in May. A small schoolroom (Public) was erected and opened at Marshwood, to replace an old and unsuitable non-vested building. The Provisional School at Rockview was shifted during the first half of the year to a more central site.

The residents of Upper Baerami Creek offered to erect a small schoolroom on a Crown land site if the Department would accept their offer. That offer was accepted, but the building is not yet completed. An application for the establishment of a Provisional School at Kerrabee has been acceded to.

Another application for a Provisional School at Dunn's Creek, between Iona and the Paterson, awaits my report.

The sum of £637 16s. 2d. was expended under my supervision in the erection of 3 new school-rooms and improving 46 school buildings and 24 residences.

New school premises and a teacher's residence, all brick buildings, of a superior character, were erected at Branxton, under the Architect, and were officially opened in July.

A new schoolroom (brick) for girls is in course of erection in connection with the Superior Public School, West Maitland, and the old buildings are being partially repaired. A new class-room at Homeville is nearly completed.

The sum of £1,411 19s. 2d. was expended by the Inspector of the Maitland district during the year in improving 149 schools and residences.

The number of schools in operation at the close of 1899 was:—

201 Public Schools and Departments.  
26 Provisional.  
27 Half-time.  
0 House-to-house.  
3 Evening Public.

Total 257

The Evening Public School at Morpeth was closed at the end of the first half-year. Existing schools are centrally situated and afford adequate space for more than the highest average attendance during any part of the year. The total floor space for 1899 for the whole district was 26,949, and the total cubical spaces for the same period 28,638, against 26,287 and 27,826 respectively for 1898.

The organisation and discipline of the schools continue to improve, and are on the whole very satisfactory. Corporal punishment is not so frequently resorted to as in past years, and several schools are disciplined without its aid at all. Of these schools the most important is Singleton Girls'. In regard to the instruction of the pupils, it may be stated that in nearly all schools the teachers carefully prepared their work, and although in some the methods were defective, satisfactory results were produced owing to the energy of the teacher.

The work of inspection for the year is shown hereunder :—

Section.	Schools in operation.	Regular inspections.	Ordinary inspections.	No. of pupils examined.
Maitland .....	89	89	.....	4,860
Newcastle .....	62	61	4	10,727
Dungog .....	107	104	13	2,745
Total.....	258	254	17	18,322

Of the 89 schools in Maitland section, every one had a regular inspection. One Evening Public School in Newcastle section was not inspected, and three small schools in Dungog did not receive regular inspection, as they were closed on account of small attendance before the Inspector could visit them.

The percentage of schools up to and above the standard in Maitland section was 100; in Newcastle section, 97; in Dungog section, 98; the percentage for the whole district being 99, against 98 for the year 1898.

It will be seen from this statement that the schools in the Maitland District are in a very satisfactory state of efficiency.

The Cookery Class held at Singleton was a great success. Miss Kirby gave general satisfaction.

The number of pupils examined in each subject of instruction, and the percentage of those who satisfied or exceeded the standard, are shown in the following table :—

Subjects.	Number examined.	Percentage.	Comparison of results with those of 1898.
Alphabet .....	1,701	77	1 per cent less than 1898.
Monosyllables .....	3,295	83	3 „ more „
Easy Narrative .....	6,495	83	1 „ less „
Ordinary Prose .....	6,841	87	1 „ more „
Total .....	18,322	84	1 per cent more than 1898.
Writing on Slates .....	6,347	86	6 per cent more than 1898.
Writing in Books .....	11,975	86	3 „ „ „
Total .....	18,322	86	3 per cent more than 1898.
Dictation .....	14,901	85	2 per cent more than 1898.
Arithmetic, Simple Rules .....	11,258	83	7 per cent more than 1898.
„ Compound Rules .....	4,036	82	3 „ „ „
„ Higher Rules.....	2,939	77	2 „ less „
Total .....	18,233	82	7 per cent more than 1898.
Grammer, Elementry.....	4,696	77	2 per cent less than 1898.
„ Advanced.....	3,411	74	3 „ „ „
Total .....	8,107	76	3 per cent less than 1898.
History, English .....	7,763	82	4 per cent more than 1898.
„ Australian .....	1,642	70	6 „ less „
Scripture .....	17,866	82	2 „ more „
Objects .....	18,083	83	4 „ „ „
Drawing .....	18,257	84	3 „ „ „
Music.....	17,629	85	3 „ „ „
French .....	306	76	1 „ less „
Euclid .....	1,177	69	Same as last year.
Algebra .....	249	84	4 per cent more than 1898.
Mensuration.....	455	84	8 „ „ „
Latin .....	253	75	2 „ less „
Needlework .....	6,589	85	5 „ more „
Drill .....	18,237	86	6 „ „ „
National Science.....	189	83	4 „ „ „
Geography, Elementry .....	4,244	78	Same as last year.
„ Advanced .....	3,827	77	4 per cent more than 1898.
Total .....	8,071	78	1 per cent more than 1898.

Summary.

Seven new schools were opened during the year. 149 schools and residences were improved under Inspectors' supervision at a cost of £1,411 19s. 2d. Every school in the district, except 4 small ones, received regular inspections; 17 received ordinary inspections.

School libraries are growing in favour. The prospects of the Maitland District for 1900 are very hopeful.

East Maitland, 13 January, 1900.

T. DWYER,  
District Inspector.

## ANNEX Y.

## INSPECTOR FLASHMAN'S REPORT.

No change was made in the extent of the Newcastle section during the year; the number of schools remained the same as in 1898.

A new infants' schoolroom was opened at Newcastle South in September last. This building has been provided with all the modern appliances for conducting a first-class infants' school, and will accommodate 300 pupils.

The boys' department at Minmi has been enlarged, and will now accommodate 100 extra pupils. A similar addition has been made to the Primary Department at West Wallsend.

At Adamstown the girls' room is being extended so as to provide seats for 70 additional pupils.

The girls' schoolroom at Hamilton is now being extended, and will provide 100 additional seats.

A new boys' department for 350 pupils is being erected at Hamilton, and a similar building at Cook's Hill will soon be available.

At Boolaroo a new building to seat 100 pupils is about to be erected.

In consequence of the increased attendance at several of the schools it became necessary to re-arrange many of the rooms and provide additional furniture.

Important improvements have been made to the school property at Wickham, Hamilton, Wallsend, Plattsburg, Hanbury, Lambton, and Waratah, and minor repairs have been done to many other schools.

When the various works now in hand are completed, the property of the Department in this section will be in excellent condition, and the accommodation not only sufficient but in all cases of a suitable character.

The enrolment of pupils was as follows :—

March quarter.....	12,883 pupils.
June quarter.....	12,973 „
September quarter.....	13,143 „
December quarter.....	12,794 „

The average daily attendance, about 9,620.

The number of pupils examined was 10,727, and the number examined for "exemption certificates" 1,454, of whom 495 obtained certificates for the first time. About 64 per cent. of those examined passed the tests for certificates—not by any means a high percentage.

During the past year a determined effort has been made to improve the writing of the pupils, and, I am pleased to note, with most encouraging results. Several of the schools are conspicuous for the excellent penmanship of their pupils. While no particular series of copy book is specially directed to be used, I find the best results are obtained by those using the "New Graphic" series. I have been much impressed with the excellent reading of many schools, particularly girls' departments. More attention has been given to clear and accurate enunciation than formerly, while the older pupils have developed a style which is not only intelligent, but attractive. The superior character of the composition of the new readers has done much to improve this important branch of education.

The selection of the piece of poetry to be learned by the pupils is not always as judicious as desirable. I am of the opinion it is preferable in the 3rd classes to have two or three short selections for the quarter's work rather than one long one.

Arithmetic has occupied much of the time and attention of teachers and pupils; the results, however, have in many cases been disappointing. The mechanical part of the subject cannot be found fault with, and most pupils are able to master those processes; but directly the practical part is touched upon, and a problem of only ordinary difficulty is placed before a class, it is not unusual to find two-thirds of the pupils so confounded as to be quite unable to make any attempt to solve it. In the fourth and fifth classes sufficient attention is not given to the theory of arithmetic. Pupils are told to follow certain rules in the solution of certain classes of sums; but the reasons for the rules are seldom explained.

Mental Arithmetic is regularly taught in all schools. In a few it is used, as it should be, as a means for developing mental effort. In other schools it is simply used to teach the children certain short methods of solving difficult problems. I frequently find children able to work problems such as "Find the price of a dozen articles at 2½d. each," but fail entirely when asked the cost of "2 articles at 1s. 10½d. each." On the whole, I think, mental arithmetic is better taught in the Infant's Department than in the Primary rooms. An Infant School teacher knows how useless it is to give set rules for the guidance of infants. She is, therefore, compelled to adopt other means to produce results, and these means are often conducive to considerable mental activity of a very marked character.

At the beginning of the year there seemed to be considerable doubt and uncertainty as to the correct interpretations of the revised standard for English History. Some teachers were of the opinion that less time and attention were to be given to this subject than formerly, and that the teaching of History was simply to consist of the relation of a few entertaining stories or anecdotes picked up anywhere and enlarged upon by the teacher; but when it was found that such so-called teaching invariably brought low marks, it was soon abandoned for a more intelligent treatment of the subject. Perhaps there is no subject the teaching of which has so much improved as that of Scripture History. Formerly it was the custom to treat this subject in a very perfunctory manner, and low results were altogether too common. Now it is treated as one of the important school subjects, and hundreds of pupils have an intelligent knowledge of the four volumes used in our schools.

The moral lessons given in the Infants' Schools have a distinct influence upon the bearing and character of the pupils.

The Cookery Classes have been attended by 120 girls, drawn from the senior pupils of the neighbouring schools. The attendance has been good and the interest taken by the pupils in the instruction given has been most marked.

The Manual Training Class has given valuable instruction to about 100 pupils. The lads of these classes are very regular in their attendance, and have shown great aptitude in mastering the details of their instruction.

Captain Mulholland has been employed the whole year as Drill Instructor. His instruction has been much appreciated by pupils and parents. He has done much to make Drill a popular school subject.

The organisation and discipline of the schools have been, during 1899, as satisfactory as in previous years.

There are employed in this section :—

34 principal teachers.
25 mistresses.
82 assistants.
7 work-mistresses.
102 pupil-teachers.
1 drill instructor.
1 teacher of manual training.
1 teacher of cookery.

A few teachers were examined with the object of obtaining promotion to a higher grade. Several succeeded.

All the pupil-teachers in this section gained promotion by examination during the year.

Three teachers applied to be promoted under the provisions of Regulation 179. After duly considering these applications, two were granted and one declined.

Arrangements

Arrangements have been made, without expense to the State, to supply every school in this section with a library. About three months ago an order was forwarded to London for £400 worth of suitable books. These are expected to arrive daily. Many of the schools have been provided with suitable presses wherein to accommodate the books as soon as they are distributed.

During the year the work of the schools has progressed smoothly. No difficulty of a serious nature has arisen. The teachers have been painstaking and enthusiastic, the accommodation for pupils has increased, and the property of the Department in very many instances much improved. The attendance of pupils has increased, the high character of the attainments maintained, and provision has been made to supply all schools with School Libraries.

Newcastle, 30 December, 1899.

C. O. FLASHMAN,  
Inspector.

ANNEX Z.

INSPECTOR KEVIN'S REPORT.

THERE were 107 schools in operation in my district during 1899, and of these 4 were new, viz., Mullwee Provisional, Bowman's Creek Lower, Bowman's Creek Upper Half-time, and Oban Vale Half-time. Four schools were closed, viz., Owendale Public, Tea-tree Half-time, and Howe's Valley and Springfield Half-time; but the two latter are to be reopened into 1900. Some slight changes were made, such as the conversion of 2 Provisional and 1 House-to-house Schools into Public.

All the schools on my list, with the exception of 3, received a regular inspection (these were closed before my visit of inspection, on account of small attendance). No school was regularly reinspected, but 13 received ordinary inspections, and a large number of incidental visits were made by me.

Forty-two school-rooms were repaired and received attention in many ways, at a cost of £385 18s. 4d., while 11 residences were also repaired at a cost of £93 9s. 3d., and 2 weathersheds were erected at a cost of £38 4s. 6d. The material condition of the buildings is satisfactory, and the accommodation both adequate and comfortable. New buildings were erected under my own supervision at Mullwee, Bericoe, Merannie, and Doyle's Creek, and at a total cost of £315. A new building will shortly be erected at Salt Ash.

The discipline in the schools continues generally satisfactory. Drill has improved, not only in the larger schools, but also in the smaller.

During the year 2,745 children were examined with satisfactory results; but, as in the case of last year, sickness and inclement weather interfered with the attendance and the work of inspection.

Of 266 children examined for exemption certificates, 221 passed, and 143 received certificates for the first time.

With the exception of 2, all the schools were up to or above the standard. The percentages in the more important subjects were :—

Reading .....	72
Writing .....	72
Dictation .....	77
Arithmetic .....	73

I am glad to state that the school libraries are in a very flourishing condition. The teachers, pupils, and parents continue to take the greatest interest in their welfare, and while such is the case I know they are in good hands and not likely to lose that prestige they have gained as a factor for working good in our schools. The aggregate number of volumes in the school libraries in my district is 11,659, and the money value I set on these books (including presses) is not less than £1,000.

There are 104 teachers of all grades under my supervision, and I have to report most satisfactorily of them. They are, as a body, steady, very attentive to their duty, anxious to uphold their positions, and well liked and respected by those with whom they come in contact. The pupil-teachers also have given satisfaction, and their teachers report well of them.

To summarise: The organisation and discipline are satisfactory, and the work of instruction has been carried out, on the whole, with skill, care and industry; the schools are well distributed and sufficient to meet the wants in their respective localities; and the accommodation is ample.

Looking back on the year's work, I am well satisfied with it, and look forward to equally good work being done in 1900.

Raymond Terrace, 29 December, 1899.

J. KEVIN,  
Inspector.

ANNEX Z 1.

DISTRICT INSPECTOR LAWFORD'S REPORT.

THERE is no change in the boundaries of the district, excepting that an outlying school, Yarrangobilly, was transferred to the Goulburn District in January, as it is more easily reached from Kiandra than from Tumut; and the same officers are in charge of the different sections.

The number of schools is increasing, 357 having been open during the year, as against 339 last year. The number of children examined was 14,723; six years ago this number was 11,565. The schools are classified as under :—

Public .....	251
Provisional .....	55
Half-time .....	45
House-to-house .....	5
Evening Public .....	1

28 being new schools. The whole of these were fully inspected, and 4 received an ordinary inspection as well.

The schools are distributed as follows, and the number of pupils examined in each section gives some idea of the school population :—

Section of District.	Schools.	Number of pupils examined.
Wagga .....	85	3,561
Albury .....	101	2,903
Hay .....	72	4,864
Young.....	99	3,395

As regards efficiency, the percentage of schools up to or above the standard is the same as it was last year—viz., 91. Twenty-eight schools are below standard, but half of these are new ones, only a short time in operation.

Accommodation.

Speaking generally, this is ample, there being places for 27,586 scholars at the end of the year. Occasionally there is some overcrowding, but steps are always taken at once to remedy this defect. In the country districts there is always the difficulty to contend with caused by the migratory nature of a certain section of the population. Men who take farms on the share system are, for example, very uncertain residents.

In

In the Wagga section the following work has been done under my own supervision :—

Building 9 new schoolrooms .....	£946 18 10
Enlarging 2 schoolrooms .....	274 11 6
Repairing 34 schoolrooms .....	304 2 8
Repairing 8 residences .....	50 0 6
Total .....	£1,575 13 6

The following new schools opened during the year :—

Devlin's Siding	Grubben	Brookongia
Mangain	Uley	Wilga
Mangoplah.		

Harefield and Elliott were closed, and Chanticleer did not reopen during the year owing to the falling off of attendance. June Infants' was closed as a separate department.

L. E. LAWFORD,  
District Inspector.

Wagga, 1 January, 1900.

ANNEX Z 2.

INSPECTOR FRIEND'S REPORT.

THE boundaries of this inspectorate are practically the same as last year's, though there are several more schools included now than heretofore.

In all, 99 schools have been in operation during the year, and all of these are still in existence.

Seven new Provisional Schools and an Evening School have been established. The majority of these are in the Temora portion of the district, where a considerable area of country has been subdivided and settled upon recently.

With one or two exceptions, which are at present receiving attention, the school-buildings provide liberal accommodation for the pupils; and, as a whole, they are in good condition.

The works carried out under my supervision, during the year, are summarised hereunder :—

	£	s.	d.
3 small school buildings erected .....	Cost 142	17	6
1 school building enlarged .....	" 48	15	6
55 school buildings repaired, &c. ....	" 266	2	11
9 teachers' residences repaired, &c. ....	" 24	13	6

The Architect effected the following works in the district :—

Bimbi .....	Erection of new school buildings.
Barmedman .....	" " class-room.
Cootamundra .....	Alterations to " "
Monteagle .....	Additions to teacher's residence.
Yarra .....	General improvements.

Every school in operation during any part of the year received a regular inspection, and four an ordinary inspection; 92 were found above Standard, 4 up to, and 3 below. None of these last had been twelve months in existence at the time of the regular inspection.

The return showing the "Estimated Proficiency of Pupils" discloses percentages of about the same value as last year's. They would probably have been somewhat higher, but for the schools newly established.

The results of the exemption certificate test follow :—

Pupils examined for exemption certificates .....	514
Pupils passed " " .....	395
Pupils " " " " for the first time .....	210

The discipline of the schools continues to maintain its creditable character, and the organisation is improving yearly.

The teachers at present employed in the district number 119 (exclusive of one who has been suspended for misconduct). In nearly all instances they are painstaking, exemplary in conduct, and efficient.

To conclude :—

1. The district is liberally supplied with schools; the buildings, in general, afford ample accommodation, and are well preserved.
2. All schools are tested by regular inspection.
3. A retrospect of the year's work reveals encouraging results.

CHAS. W. FRIEND,  
Inspector.

Young, 28 December, 1899.

ANNEX Z 3.

INSPECTOR NOLAN'S REPORT.

Of the 68 schools on my list at the close of 1898, two, having been permanently closed early in January last, were not in operation for any portion of the current year; on the other hand, 6 new schools were established during this year, thus leaving 72 schools in active operation.

Late in the year 2 small school buildings were erected, but they will not be opened until immediately after the Christmas vacation; thus the coming year will be commenced with 74 schools. Steps are being taken for the erection of buildings for 4 Provisional Schools, the establishment of which has already been sanctioned. The increased number of schools is required to keep pace with the extension of settlement in agricultural districts.

During 1899 the sum of £890 5s. 5d. was expended, under inspectorial supervision, in the erection of 7 small school buildings, the enlargement of 3 schools, repairs to 29 schools, and improvements to 3 residences. During the same period the following works were effected by the Architect :—

	£	s.	d.
Burke Ward Infants'—building .....	2,226	12	6
Alma Public—repairs .....	360	0	0
Hillston Public—repairs .....	255	0	0
Moama Public—repairs .....	95	0	0
Broken Hill Public—improvements .....	39	15	0
Broken Hill North Public—improvements .....	54	12	6
Hay Public—improvements .....	118	10	0
Euston Public—additions .....	225	17	6
Total .....	£3,375	7	6

The

The undermentioned works now on hand under the Architect will be completed at an early date :—

Wilcannia Public—improvements.....	£240	10	0
Wentworth Public—improvements .....	136	12	0
White Cliffs Public—new building .....	690	0	0
Pooncarie Public—new building.....	195	15	6
	£1,262	17	6

A further sum of £10,000 will be needed during the ensuing year for new buildings at Broken Hill, where the existing accommodation is unsuitable and altogether inadequate.

From the above it will be seen that active steps have been taken to improve the material condition of existing buildings, to erect new, to replace unsuitable buildings, and to provide schools rendered necessary by the extension of settlement.

All the schools on my list (72, with an attendance of 4,864 pupils) received regular inspection; 11 fell below, 3 were up to, and 58 were above standard requirements. The corresponding numbers for 1898 were, of 66 schools inspected, 9 below, 1 up to, and 56 above standard. Of the 11 schools that did not satisfy the standard, 6 had been, at the date of inspection, but a short time in operation; hence the low marks awarded. Thirty-seven schools failed to reach fair, or 60 per cent of possible marks—a fact which, in view of the well-defined and easily attained standard, reflects, in the majority of cases, discreditably on the teachers concerned.

Of 451 pupils examined for exemption certificates, only 228 passed the prescribed tests; of the latter number, 95 held certificates formerly obtained. The large number of failures is indicative of inefficient instruction.

Speaking generally, I am of opinion that much better results than those above disclosed might reasonably be expected from a body of trained teachers. The main ground for disappointment lies in the low-class attainments. As a rule, the organisation and the discipline are satisfactory, but the instruction is ineffective.

During the year several teachers were censured for the unsatisfactory condition of their schools. On the other hand, it is pleasing to note the high standard attained by the teachers of the under-mentioned schools :—

Broken Hill Girls' .....	9.0
Burke Ward Primary.....	9.0
Broken Hill North Infants' .....	9.0
Deniliquin Infants' .....	9.0

Sufficient interest is not shown in the formation and the maintenance of School Libraries. That is to be regretted, as a proper use of a carefully selected collection of books would be truly educative. No Cadet Corps exist in this district, but one is about to be formed in connection with the schools at Broken Hill. School Banks obtain in the more important schools; they are fairly well patronised.

The teaching staff comprises 58 principal teachers, 8 mistresses of departments, 39 assistant teachers, and 29 pupil-teachers. As a body the pupil-teachers continue to give satisfaction to all concerned in their training. All of the mistresses and the majority of the assistants have worked well; but, save in a few commendable instances, the principal teachers might, with advantage, infuse more energy and enthusiasm into their work.

W. NOLAN,  
Inspector.

Hay, 30 December, 1899.

#### ANNEX Z 4.

##### INSPECTOR PEARSON'S REPORT.

THE year commenced with 92 schools, classified as Public, 63; Provisional, 15; Half-time, 12; House-to-house, 2.

During the year Elsiedale, Guest's Swamp, and Nanguinco South Provisionals were established, and five others were reopened, viz.—Khancoban Provisional, Adelong Upper and Uplands Half-time, Mount Adrah Public, and Overton Provisional.

Benambra House-to-house was converted to Benambra and Thomond Half-time.

Thus there were 101 schools in operation during currency of the year.

Moorwatha and Major's Plains Public were converted to Half-time, Adelong Grove Half-time to Provisional, Gadara Provisional to Public.

Owing to closing of Gerogery and Guest's Swamp during December quarter, there were actually only 97 schools in operation at end of the year, classified as Public, 62; Provisional, 18; Half-time, 16; House-to-house, 1.

The establishment of three new schools has been authorised, and when these are opened the district will be liberally supplied with schools.

The whole of the 101 schools opened during the year were regularly inspected.

Eighty-four schools, or 83 per cent., exceeded standard limits, 8 were below, and 9 just reached the standard.

These results are an improvement on last year, for the numbers then were 78 per cent., 8, and 13, thus giving an increase of 5 per cent. on the number that exceeded standard limits. These results are specially satisfactory, in view of the fact that the attendance in most cases was very irregular through epidemics.

The following subjects show an advance:—Dictation, Arithmetic, Geography, Scripture, Music, Euclid, Algebra, Mensuration, Latin, and Drill.

Reading and Needlework were the same as last year, and the remaining subjects show a slight retrogression.

The results of the tests for exemption certificates show 57 per cent. of passes; this is an advance of 11 per cent. on last year.

Excepting new schools in charge of inexperienced teachers the organisation and discipline were up to usual standard, and in many cases a marked improvement was noted. The methods of government are, as a rule, judicious and effective; corporal punishment is less resorted to than heretofore, and a healthier and more pleasing tone exists.

The teachers, as a body, are conscientious and assiduous, and manifest an anxious desire to improve the efficiency of their schools.

School accommodation, allowing 8 square feet per child :—

Accommodation existing at end of 1898.....	6,099
Additional, provided during the year.....	373
Accommodation lost by closing, &c.....	179
Accommodation existing at end of 1899.....	6,293

This accommodation far exceeds requirements. One new school was erected at Elsiedale by the Inspector at a cost of £76 10s.; 46 school buildings were repaired at a cost of £396 16s.; and £27 12s. was spent on four residences.

The general efficiency has slightly improved, the means of education are sufficient and well distributed, and the outlook generally is promising.

F. PEARSON,  
Inspector.

Albury, 20 December, 1899.

#### ANNEX Z 5.

## ANNEX Z 5.

## DISTRICT INSPECTOR LONG'S REPORT.

At the beginning of the year there were 251 schools in the District. Eighteen new schools were opened during the year, and six, including two Evening schools, were closed. The number in operation during the year was 269, and of these 263 were in existence at its close.

The buildings in which these schools are conducted suffice for 16,238 pupils at the regulation allowance of floor space, being an increase of 860 places for the year. The whole number of pupils enrolled during the year was 15,061, of whom 1,759 are returned as enrolled at more than one school; the average daily attendance was 8,576.0. The accommodation provided is, therefore, in the aggregate in excess of requirements. The buildings are well equipped in regard to furniture, material, apparatus, means for water supply, and all other requisites, and their material condition generally, excepting very few of the smaller or non-vested structures, is satisfactory. All desirable improvements have been promptly sanctioned and effected, and the improved description of building now provided for the smaller schools has proved most acceptable.

During the year, under Inspector's supervision, 16 small school buildings and 1 weathershed have been erected, 2 schools enlarged, and 71 schools and 12 residences repaired or improved, at a cost of £1,575 6s. 4d., and similar work to cost £726 is in progress. Works of a more extensive nature, and involving a larger outlay, have been effected under the Department's Architect.

All the 269 schools in operation during the year were regularly inspected, excepting 2 Half-time Schools closed in January on account of insufficient attendance. Of the 267 inspections, 91 were by Mr. Inspector Rooney, 86 by Mr. Inspector Hunt, and 90 by myself. Incidental visits, and a few ordinary inspections were made, but other duties now render very little possible in this direction. Additional opportunities for such visits would be acceptable, especially in view of the number of probationers now admitted to the Service.

Of the schools inspected, 246, or 92 per cent., were found to reach or exceed standard in general efficiency, as against 93 per cent. for last year. In view, however, of the number of new schools, and the extent to which the attendance has been affected by epidemics and protracted drought, I regard this result as probably indicating an improvement in the general quality of the work done in the schools. The failure of the remaining 21 schools to show satisfactory results is, in regard to the majority, attributable to causes beyond a teacher's control. In a few cases, however, the defective condition is plainly the result of incompetency, or negligence, and these have been duly brought under notice.

At the inspections of the year, 9,214 pupils were examined, and the percentage of passes in the several subjects, ranging from 100 to 75 per cent, compare not unfavourably with the results of former years, and indicate that the teaching generally is of satisfactory efficiency. For exemption certificates, 622 candidates were presented, and of these 515 were successful, including 201 who had previously passed.

The organisation and discipline are rarely found to be otherwise than creditable, and, as a rule, they show the requisite knowledge of approved methods, and careful effort to efficiently apply them. Occasionally inaccuracy or neglect of neatness is observed in connection with records, or lesson documents, and one or two teachers have caused much inconvenience by their delay in furnishing their returns, or by carelessness in their preparation. It is to be hoped that the action taken in regard to such cases will be productive of the necessary amendment. Some few instances of weak, negligent, or unskilful government have been noted, but, as a rule, the general deportment of pupils, their earnest attention, and prompt response under examination, afford pleasing evidence of careful and efficient training. It is to be regretted that its influence appears, in so many instances, to be inoperative beyond the confines of the school premises. This is possibly due to some extent, to the law which renders teachers unable to hold pupils accountable for their conduct between their homes and the school. Cases have occurred which certainly indicate the expediency of an amendment in the law relative to this point.

At many schools the general appearance has been much improved by tree planting, and flower culture, and, when this is the case, other details almost invariably also afford evidence of good taste, and correct appreciation of the educative effect of well-ordered surroundings.

The number of teachers employed in my District at the end of the year was 317, including 69 who are unclassified, and 35 pupil-teachers. Their official status, and the classification held, ranging from 1A to 3C, are shown in the tabulated statement already furnished. With few exceptions they are competent, well-conducted, and successful in the discharge of their honourable and important duties, and occupy a satisfactory place in the local estimation. There have been a larger number of complaints than usual during the year, which have interfered most inconveniently with the work of inspection and other duties; but in all cases investigated by myself, they have, with three exceptions, proved to be frivolous or unfounded.

The existing means of education are sufficient for the requirements of the District. The material condition of the schools, and their efficiency, so far as can be indicated in a general statement, are good. The year's work shows a gratifying measure of success, and affords reason for anticipating satisfactory progress.

GEORGE ED. LONG.

District Inspector.

Wellington, 8 January, 1900.

## ANNEX Z 6.

## INSPECTOR ROONEY'S REPORT.

At the end of last year there were 90 schools in this section of the Wellington District.

In January the Half-time Schools at Lower Piambong and Yamble were closed, the attendance having fallen very low.

A Provisional School has been erected in a central position to take the place of the closed schools, and will be opened in January. The Provisional Schools at Carwell and Leaning Oak were converted into Public Schools in April.

Four Provisional Schools have been opened during the year—Maitland Bar, Moolarban, Piambong, and Torbane. A new building has been erected at Leaning Oak. The new Provisional Schools are held in new buildings. The Provisional School building at Budden was enlarged.

Eighteen school-rooms and six residences were repaired during the year. A new residence was completed at Hargraves.

A new school (Provisional) is in course of erection at Battle Abbey. School accommodation in this section is provided for 4,126 pupils.

The material condition of the 60 Public Schools is good; but that of 5 Provisional and 5 Half-time Schools is very inferior. All the Public, 7 of the Provisional, and 9 of the Half-time Schools are vested in the Department. The great heat and droughts during the past two years have retarded the planting of ornamental trees in the school grounds.

The total enrolment for the year was 4,178; of this number 393 were returned as having attended more than one school. The average daily attendance was 2,543. The enrolment and average attendance are less than last year; sickness and drought are the main causes of the decrease. The fees received for the year came to £1,223 15s. 7½d., being £33 10s. 1½d. less than last year. At the end of December quarter there were 408 free pupils on the rolls—a decrease of 40 on the previous year.

*Inspection,*

*Inspection.*

With the exception of Lower Piambong and Yamble Half-time, which were closed at the beginning of the year, after being but five days in operation, all schools in the Mudgee section received a regular inspection; in all, 2,651 pupils were examined. Of the 91 schools examined only four were found to be below the standard.

*Teachers.*

Under my supervision there were 83 teachers, 6 assistant teachers, 11 pupil-teachers, and one work-mistress; total 101. Thirteen of the teachers are unclassified, but six of them have served as pupil-teachers. With very few exceptions the teachers are respectable, and they display zeal in the discharge of their duties.

*Organisation and Discipline.*

The schools, on the whole, are well conducted, and the organisation and discipline are pleasing features.

In conclusion, it may be stated that satisfactory educational work has been done during the year.

JOHN P. ROONEY.

Mudgee, 30 December, 1899.

## ANNEX Z 7.

## INSPECTOR HUNT'S REPORT.

THE Half-time School at Minore was the only school closed in this section of the Wellington District during the year 1899; whilst, during the same period, nine schools were brought into operation.

Of these schools—

- Five were established where no school previously existed;
- One was reopened on a new site;
- Three were simply reopened.

The above schools are situated at:—Albertia, Armoy, Camborah, Coalbaggie, Dandaloo, Gongolgon, Gulargambone Camp, Kienbri, and June Vale.

It will thus be seen that the school accommodation of the district has been considerably increased during the year.

At the close of 1898 there was floor space for 6,438 pupils, and air space for 6,086. There is at the close of 1899, floor space for 6,806, and air space for 6,373; and very early in 1900 at least six new schools will be added to the present number.

The year closed with 85 schools in operation, being:—54 Public, 21 Provisional, 6 Half-time, 3 House-to-House, 1 Evening. These schools are being worked by 100 teachers, and 16 pupil-teachers.

For their efficiency, attention to duty, and sterling worth, nearly all the teachers and pupil-teachers are held in high esteem by those amongst whom they labour.

The protracted drought, which still prevails in many parts of the District, continues to interfere with the regular attendance of many of the pupils; nevertheless, steady all round improvement has crowned the efforts of most of the teachers.

The general proficiency of many of the schools is exceedingly satisfactory.

The manners of the pupils, and the moral tone of the school, receive praiseworthy attention from the majority of the teachers; and it is pleasing to notice how quiet, earnest, and self-reliant most of the pupils are under inspection.

Every school in operation during the year, or any part of it, received a regular inspection, and a few received an ordinary inspection; but the district being so very extensive, renders it impossible for the officer in charge to do much special visiting in the various circuits.

It is only by continuous effort, and working very long hours, that the ordinary duties of this large district can be discharged.

With very few exceptions, the neatness and correctness of the school records and lesson guides are deserving of the highest commendation.

I am happy to report that many of the teachers still take a lively interest in beautifying their school-grounds. These grounds not only reflect credit on the teachers, but materially add to the general appearance of the school premises.

The very trying climate seriously affects the health of many of the teachers who remain long in the far west; and, when possible, deserving teachers should be granted a removal to a milder climate after a term of three years.

Under inspectoral supervision, needed improvements to 31 schools have been effected during the year, at a cost of about £300; whilst nearly £100 have been spent in improving teacher's residences.

Under the Department's Architect, extensive improvements and additions are in progress at Bourke, Brewarrina, Byrock, Collarendabri, Collie, Gilgandra, Goodooga, and other schools. New buildings, to supersede the old, are being erected at Eringonia and Ford's Bridge.

The material condition of the schools of the District is fast becoming very satisfactory.

Great satisfaction prevails with the Department's efforts to meet the educational requirements of the District, and the teachers as a body feel that their needs receive the kindest consideration from those in authority.

In conclusion, I have to repeat that the proficiency of the schools is steadily increasing; that the teachers, as a rule, are most exemplary in their conduct, and earnest in their noble work; and that the educational prospects of this District for the year 1900 are radiant.

GEO. H. HUNT,

Inspector.

Burwood, 30 December, 1899.

## ANNEX Z 8.

## REPORT OF THE PRINCIPAL OF THE TRAINING SCHOOL, FORT-STREET.

THE number of students enrolled in 1899 was 23:—

- 15 full scholarships.
- 8 half scholarships.

*Course of Study.*

Latin—Dr. Smith's Smaller Latin Grammar; Bradley's Arnold; Cicero de Amicitia.

French—Macmillan's First and Second Course; Macmillan's First Reader.

English—Burke's Speech on Conciliation; Macaulay's Essay on Boswell's Life of Johnson; Bacon's

Essays; Literature of 18th Century—Gosse; Stopford Brookes' Outlines of English Literature;

Gow's Method of English; Nesfield's English Grammar.

English History—Expansion of the Empire: South Africa, Canada, West Indies, Australia;

Seeley's Expansion of the Empire; Ransome's Our Colonies and India.

Mathematics—The work prescribed for honor papers, Matriculation Examination.

School Management—Practical School Management; Theory and History of Education; Public Instruction Act and Regulations; The Kindergarten Principle,

Natural

Natural Science—Anatomy, Physiology, School Hygiene.  
 Music—Sutton's Theory of Music ; Part Songs ; Voice Training ; Stainer's Harmony.  
 Drawing—Practical, Plane, and Solid Geometry ; Perspective.  
 Manual Training—Application of Geometry to Mechanical Drawing ; Exercises in the use of common hand-tools for working in wood.  
 Drill—Squad, Company, and Battalion Drill ; Manual and Firing Exercise ; Physical Drill.

*Practical Training.*

The students were employed in class teaching for a week in each quarter. Specimen, test, and criticism lessons were given regularly each week.

*Staff.*

J. W. Turner, Principal ; J. D. St. Clair Maclardy, M.A., Languages and Mathematics ; J. Finney, B.A., English and English History ; Dr. Roth, Physiology ; H. Alpen, Music ; F. W. Woodhouse, Drawing ; W. Lockley, Manual Training ; Q.M.-S. Smith, Drill.

*Examinations.*

The Chief Inspector conducted written and oral examinations on each quarter's work. The tests for practical skill and the examinations for certificates were held in December. The results are given below :—

II A.	II B.	III A.	Total.
7	10	6	23

*Manual Training Results.*

First Grade.	Second Grade.	Total.
13	10	23

Drill.—Two hours on each Friday morning were set apart for drill. Rifle shooting was held at Randwick one afternoon in the month. Twenty-three qualified for certificates of efficiency.  
 Ambulance Work.—Dr. Williams, for the St. John's Ambulance Association, conducted the examination in this subject, and no student failed for the "First Aid" certificate.

*Health and Conduct.*

The health of the students was on the whole good, and their general conduct very satisfactory.  
 J. W. TURNER,  
 Principal.

ANNEX Z 9.

REPORT OF THE PRINCIPAL OF HURLSTONE TRAINING SCHOOL.

THE number of students enrolled in 1899 was 24, classified thus :—  
 11 full scholarships.  
 13 special non-scholarships.

*Course of Study.*

Latin—Bradley's Arnold ; Dr. Smith's Smaller Latin Grammar ; Lectures.  
 French—Balzac's Ursule Mirouët ; Macmillan's Third Year.  
 English—Meiklejohn's Book of English Composition ; Macaulay's and Bacon's Essays (selections).  
 History—Jose's Growth of the Empire.  
 Algebra—C. Smith's Elementary Algebra.  
 Geometry—Euclid's Elements, Book I ; Mackay's Euclid.  
 Arithmetic—Theory and Practice ; Lock's Arithmetic.  
 School—Gladman's School Method ; Criticism ; Management ; Lessons ; The Regulations and Records ; Kindergarten.  
 Music—Tonic Sol Fa and Staff Notation ; Stainer's Harmony ; Sutton's Theory of Music.  
 Drawing—Plane and Solid Geometry ; Freehand ; Perspective and Model Drawing.  
 Physiology—St. John's Ambulance Course.  
 Cookery—Theory and Practice of Plain Cookery and Sick Room Cookery.  
 Needlework—Setting and Cutting Out Garments.  
 Drill—Calisthenics ; Class Drilling.

*Examinations.*

The Chief Inspectors held periodical examinations during the year. The Needlework, Cookery, Drill, and Ambulance work were examined before the end of the year. The final examination ended on the 19th December.

*Practical Training.*

Each student had four weeks actual teaching and practical training in the Practising School, under the supervision of the Mistress. Each student has also given criticism lessons, and conducted drill and singing lessons before the various instructors. A course of practical cookery has also been given to all the students.

*The Teaching Staff.*

The Teaching Staff is the same as last year. Dr. Roth, who has gone to serve in the Transvaal, has been temporarily replaced by Dr. Vandeleur Kelly.

*General Remarks.*

The premises are in good order and condition, inside and outside. A new Practising School was opened at the beginning of the year, and the old building has been converted into a Cookery School and Recreation Room.

J. A. NICOLL,  
 Principal.

APPENDIX XIII.  
REPORT OF THE SUPERINTENDENT OF DRAWING.

I HAVE the honor to submit my report on the teaching of drawing in the Public Schools and Training Colleges, and on the examination of teachers of all grades in that subject, for the year 1899.

The results of my examination of 86 schools, including 205 departments, are as follows :—

	Above Standard.	Below Standard.	Total.	Percentage of Passes in 1899.	Percentage of Passes in 1898.	Average Class Mark in 1899.
Boys .....	14,451	1,247	15,698	92·05	91·4	7·57
Girls.....	12,657	1,283	13,940	90·8	89·9	7·44
Infants .....	15,477	1,744	17,221	89·8	88·9	7·80
Totals.....	42,585	4,274	46,859	91·03	90·0	7·6

The average class-mark again shows a slight increase, as well as the general percentage of passes.

On all hands I find teachers grateful for the changes in the Drawing Standard, and for the greater definiteness of aim and the guidance given by the Illustrated Syllabus. They feel that the Standard is one that can, under our conditions, be fairly reached, and many of the largest schools have now made a good effort to organise their work on its lines. To these causes I attribute in part the improvement noted above.

Although a few of the smallest schools were struck of my list this year, the number of children examined is 1,100 above the highest hitherto. The time occupied with the regular inspections gives practically no time for occasional visits, though these are very much needed. I was able to pay such visits to less than twenty departments last year.

Training Colleges.

The results of the examinations are not satisfactory ; but, for some reasons not apparent, these appear liable to considerable fluctuations from year to year. There is, of course, great pressure of other subjects on the time of the students ; but this cause does not effect the work of one year more than another.

Examinations.

I have before had occasion to comment on the deplorable ignorance of the first elements of Model Drawing shown by those who present themselves for examination. No previous study appears to be thought necessary by a large number who seem to know nothing of the existence of a text-book on the subject. There is much improvement in such subordinate points as neatness and size ; but principles and proportion are little recognised in Model Drawing or Freehand. The following table gives the results of the examination of the various grades of teachers, pupil-teachers, and applicants. In the work of these last, the disregard of proportion in very marked :—

	Blackboard.		Freehand.		Model.		Geometry.		Perspective.		Total.
	No. Exd.	Pass.	No. Exd.	Pass.	No. Exd.	Pass.	No. Exd.	Pass.	No. Exd.	Pass.	
Applicant Pupil-teachers	...	...	836	50·0	...	...	...	...	...	...	836
Pupil-teachers .....	302	85·8	379	66·5	216	55·5	...	...	...	...	897
Students in Training .....	...	...	...	...	10	40·0	41	43·9	1	100·0	52
Teachers .....	12	66·6	34	38·2	42	35·7	71	26·7	16	31·2	175
											1,960

A set of drawing-books has been compiled by me (with the approval of the Chief Inspector), in accordance with the new Standard and Syllabus, which will secure graduation of difficulty, and, by the instructions and diagrams given, will promote sound methods. They will, I trust, be found useful, more especially in the country districts, and in small schools.

F. W. WOODHOUSE,  
Superintendent of Drawing.

APPENDIX XIV.  
REPORT OF SUPERINTENDENT OF MUSIC.

DURING 1899, I have visited and examined all Public Schools in the Metropolitan District in Vocal Music and Theory.

I notice with pleasure a distinct improvement in many of the smaller schools, in several of which the singing is quite equal to that in the largest, and in a few the best singing in Sydney is found in them. There is a steady progression in the art of reading at sight in the lower classes as well as the higher ; to this, as being really one of the most important things, I have constantly directed the attention of the teachers, and am therefore pleased in being able to state that in many of our schools the children very successfully sang, in two and three parts, passages which were by no means easy.

There is also some improvement in the style of singing, and greater refinement in the rendering of songs. There, however, is still ample room for further improvement, as it depends chiefly upon the capability of the teacher. Perhaps the greatest blemish to be found is the enunciation of the children ; it really requires the most earnest attention of the teachers.

The general mark, both in singing and theory, averages within a point of eleven—"very fair ;" and it is a notable fact that the mark for the lower classes of the schools is much more satisfactory than in previous years.

It might not be out of place to refer to the musical celebration of Fort-street School Jubilee. There are not many schools in the world that could place a chorus of a thousand "picked" voices and render a long and somewhat difficult ode in the style in which it was given, as the time of preparation was very short. It is the best proof of what is done in our schools in the way of teaching children to sing "at sight."

I would also venture to make a reference to "School Concerts." These frequently somewhat disturb and interrupt the ordinary routine of school work, although they undoubtedly prove very acceptable to the parents as well as the children. My suggestion is that a teacher should ask permission to give a concert a reasonable time ahead, so that the concert-work could form part of the ordinary singing lessons ; thus a concert, thoroughly well-prepared, could be given without undue interference with the school work.

HUGO ALPEN,  
Superintendent of Music.

APPENDIX XV.

APPENDIX XV.

REPORT OF DIRECTRESS OF NEEDLEWORK.

THE needlework executed in the Metropolitan schools during 1899, under the supervision of work-mistresses, teachers' wives, and pupil-teachers, has been varied and useful, and bears more than favourable comparison with that accomplished in the past.

I have examined and reported on 87 Metropolitan and sub-Metropolitan schools, including Hurlstone College, the High School, Castlereagh-street, and the Randwick Asylum. In all, 15,453 pupils were present at examinations of needlework. This number does not include the examinations of needlework for Public School exhibitions or for prizes and awards at public competitions.

Head-mistresses in most large schools take interest in this subject, and evince pleasure at the success of pupils in this as in other subjects, thereby stimulating them in their endeavours to excel.

*Dressmaking.*

This subject still receives special attention from work-mistresses, and is carried out and made general throughout Metropolitan schools.

*Necessity of Separate Work-rooms.*

At present there exists in most of our schools a very great necessity for suitable accommodation for sewing classes. In my incidental visits to schools it is a common occurrence for an oral lesson to be going on immediately beside, or in the same class-room, where the sewing lesson is being conducted. It is painful to see the efforts of the work-mistress to keep order and retain her pupils' attention, and the strain on both teacher and pupils is very great, for needlework requires undivided attention.

At Fort-street Model School, where all the conditions are favourable, the needlework lesson is hailed with delight, the pupils feel peaceful and rested, and return to their other subjects with renewed zest and vigour.

*Mixed Schools.*

I cannot speak too highly of the industry displayed by mistresses, teachers' wives, and infant school mistresses in charge of mixed schools. Many of these schools are far above the standard required. The introduction of needlework in lower classes in these mixed schools continues to be a success. Young children are amused by the coloured cotton at sewing lessons, and become expert in form and in making small model clothing.

*Pupil-teachers.*

I may repeat, as in my last Annual Report, that in my incidental visits to schools it was apparent that the pupil-teachers were attentive to the instruction of work-mistresses, anxious to excel, showed the same proficiency in the art of needlework as formerly, and that the same aptitude and industry continue to prevail among them.

Since the introduction of work-aprons and needlebooks the sewing classes in most schools present a very artistic and orderly appearance. The effect and influence is very marked, as each girl cultivates independence by providing her own materials, and vies with her companions in neatness and form, and in many cases originality of design.

In conclusion, I am pleased to be able to commend the diligence and application to duty on the part of work-mistresses under my supervision during the past year; also to speak highly of the assistance accorded them by the head-mistresses and teachers in most Metropolitan schools.

ANNIE DADLEY,

Directress of Needlework.

APPENDIX XVI.

ARCHITECT'S REPORT.

DURING the past year the following works have been completed and delivered up for service :—

	£	s.	d.	Accommodation.
25 new schools .....	19,163	5	6	3,017
14 new residences .....	7,441	15	0	.....
*18 additions to schools .....	4,413	1	0	900
26 additions to residences .....	4,106	0	10	.....
2 weathersheds .....	149	15	0	.....
478 sundry works .....	16,710	17	2	.....

From the above, it will be seen that the total expenditure for finished works amounted to £51,984 14s. 6d., showing that although not quite up to the previous year, yet the one just closed has been a very busy and useful one, the work done having provided additional accommodation for 3,917 pupils, besides giving many improvements for the comfort of both pupils and teachers.

The largest works completed were :—

	£	s.	d.
Branxton .....	1,395	0	0
Burke Ward .....	1,975	0	0
Gardner's Road .....	2,755	0	0
Gladstone .....	1,414	0	0
Hurstville .....	2,048	0	0
Potts Hill .....	1,250	0	0
Newcastle South .....	1,948	15	0

Every attention has been paid to the sanitary aspect of the buildings, and in nearly all cases the air space has been in excess of the seating accommodation, and above the minimum required by the Act.

It is satisfactory to note that the development of sewers has led to many improvements being introduced in the drainage of school premises in and about the metropolis, and when sewers have not been available, the introduction of the "O'Brien system" has been a decided improvement on the ordinary pan system.

At the termination of the year the following works were in progress, and will appear as completed works in my next report :—

	£	s.	d.	Accommodation.
21 new schools .....	23,650	1	2	4,279
2 new residences .....	1,075	2	6	.....
19 additions to schools .....	8,339	13	6	1,520
4 additions to residences .....	2,840	3	2	.....
121 sundry works .....	8,501	18	0	.....

This represents a total valuation of £44,406 18s. 4d., with extra accommodation for 5,790 pupils, being greatly in excess of the work on hand at the same period of last year.

At the Girls' Industrial School, Parramatta, a new building was erected for an Isolation Block, at a cost of £464 16s.

Regarding

\* One case not affording additional accommodation.

Regarding the Technical College buildings, only minor works have been carried out, amounting in value to about £466, while the value of similar works still in progress amounts to about £120.

The total expenditure on works carried out by this Branch for the past year is represented by £52,915 13s. 6d., and the value of the works still in hand at the close of the year £44,525 3s. 4d.

The working expenses of the Branch have been £3,205—including the salaries of the Clerks of Works—and £1,220 7s. for travelling expenses. The percentage chargeable on the works being about 1·92 per cent., and the cost of supervision—outside of travelling—about 2½ per cent.

The supervision of the various works has been effectually carried out by a small staff of Clerks of Works, who have used, I may say, superhuman endeavours to cope with the tasks allotted to them. The following mileage will give some idea of the country covered by them in the performance of their duties :—

	Miles.
Southern District.....	22,666
Western District.....	14,333
Hunter and Northern Rivers and portion of North-western district	14,339
Northern District and portion of North Coast .....	7,986
Metropolitan, about .....	16,000
Temporary Clerks of Works, as relieving officers, about .....	10,000
Total.....	85,324

In conclusion, it is gratifying to note the official recognition of this office as the “ Architect’s Branch of the Department of Public Instruction,” which appeared in the *Government Gazette* of the 19th May last, and took effect on the 1st July. Beyond this, only a few minor alterations in the classification of the officers have been made, leaving the personnel of my staff as previously reported.  
J. S. WIGRAM,  
Architect.

APPENDIX XVII.

BOARD OF EXAMINERS’ REPORT.

THE total number of examinations reported upon during the year 1899 was 2,968—rather less than that of the previous year—a fact which is accounted for below. The figures relating to each class of examinees are as follow :—

Applicants for the office of pupil-teacher.....	871
Pupil-teachers .....	932
Training students .....	47
Teachers .....	499
Candidates for admission to High Schools .....	619
Total number of examinees.....	2,968

*Applicants for the Office of Pupil-teacher.*

Eligible for employment .....	139
Passed the prescribed test, but failed to secure sufficiently high marks to warrant appointment to vacancies .....	153
Failed at examination .....	573
Retired from examination (incomplete) .....	1
Total number of applicant pupil-teachers examined .....	871

*Pupil-teachers.*

Promoted from Class IV to Class III .....	279
“ “ Class III to Class II.....	296
“ “ Class II to Class I.....	182
Passed final examination as pupil-teachers .....	116
Failures in Class IV .....	13
“ “ III.....	11
“ “ II .....	9
“ “ I.....	26
Number of pupil-teachers successful.. .....	873
Number of failures .....	59
Percentage of passes was therefore 93·6.	

*Candidates for Training.*

Males—	
Passed .....	49
Of these 15 were recommended for full scholarships, and 10 for half scholarships.	
Failed at examination .....	3
Females—	
Passed .....	67
Sixteen were recommended for full scholarships (3 examinees being equal for the 14th position in the order of merit), and 9 for half scholarships.	
Failed at examination .....	26

*Students in Training.*

After examination at the termination of their course of training, students were recommended for classification as below :—

Males : Fort Street—	
For Class II A, provisionally .....	7
“ II B, “ .....	10
“ III A, “ .....	6
Females : Hurlstone—	
For Class II A, provisionally .....	6
“ II B, “ .....	14
“ III A, “ .....	4

*Teachers.*

Teachers.

Recommended for promotion to Class I .....	20
"    "    "    "    II A .....	10
"    "    "    "    II B .....	36
"    "    "    "    III A .....	81
"    "    "    "    III B .....	20
"    "    "    "    III C .....	13
Failed to gain promotion to Class I .....	13
"    "    "    "    II .....	66
"    "    "    "    III .....	71
Examined in Drawing only, and passed .....	36
"    "    "    "    and failed .....	32
Examined in Music only, and passed .....	81
"    "    "    "    and failed .....	12
Retired from examination before completion .....	8
Total number of examinations .....	499

The number of teachers who were successful in obtaining promotion or classification represents a percentage of 54·5.

High School Examinations.

The total number of candidates examined for admission to the Public High Schools, and for Scholarships and Bursaries in connection with those schools, was 619. In June 280 were examined, and 339 in December. Most of these succeeded in passing the qualifying entrance test. Scholarships and Bursaries were recommended for award as follows :—

	June.	December.	Total.
For Scholarships—			
Boys—			
Sydney .....	7	8	15
Maitland .....	5	5	10
Girls—			
Sydney .....	8	7	15
Maitland .....	5	5	10
Bursaries—			
Boys—			
Sydney .....	5	5	10
Country children in Sydney schools .....	2	3	5
Maitland .....	5	5	10
Girls—			
Sydney .....	5	5	10
Country children in Sydney schools .....	3	2	5
Maitland .....	2	3	5
Total .....	...	...	95

The number of applicants for the office of pupil-teacher is less than that for the previous year by 174. This decrease is not so much due to a lack of aspirants for the position of pupil-teacher as to the requirements of the Department being such as not to call for so large a number of competitions at various centres throughout the Colony as in 1898. In considering the fact that 139 examinees out of a total of 871 were declared eligible for employment, it has to be borne in mind that these examinations are strictly competitive in character. Only those for whom employment can be immediately found are accepted as eligible. By this method the Department has the benefit of culling out those who may be regarded as the cream of the candidates, and the services of these are utilised before their attainments have become dulled, a condition of things which experience has shown to be the case when successful applicants have had to wait an indefinite time for employment after passing the prescribed qualifying test. In addition to the 139 referred to above, 158 others reached the standard of pass, but failed to secure sufficient marks to warrant their employment in any of the then existing openings.

There was an increase of 154 in the number of pupil-teachers examined for promotion. The increase is most marked in the case of pupil-teachers of the first class. In 1898 that section contained but 39 pupil-teachers ; in the following year the number swelled to 142. In the other classes, particularly in Class III and Class IV, the numbers were very much larger. These increased numbers in the various divisions of the pupil-teacher employees should tend to increase and widen the spirit of rivalry among them so far as examination results are concerned. This means, therefore, closer study and more careful preparation of the subjects of examination. That this has been so is evidenced by the fact that the percentage of passes of pupil-teachers during the past year reached as high as 93·6. This must be regarded as eminently creditable to those concerned.

A larger number of candidates than that of the preceding year competed for the privilege of a year's course of training. Of the male examinees, 49 were successful in reaching the standard of pass, of whom 15 were recommended for admission to Fort-street Training School with full scholarships and 10 with half scholarships. The highest examinee secured 779 marks, or 91·6 per cent., out of a maximum of 850 marks. This must be regarded as an exceptionally high aggregate. Of the females, 67 qualified for a pass and 23 failed. Sixteen were recommended for full scholarships and 9 for half scholarships. The highest girl secured 573 marks out of 700, or 81·8 per cent.

All the students issuing from the Training Schools in December last, at the end of their year's sojourn thereat, were classified, as shown above. The results do not call for special comment.

There is a considerable decrease in the number of teachers who presented themselves for promotion, or classification, as compared with that of 1898. In the latter year 356 sought promotion, or classification, in one of the grades of Class III ; in 1899, however, only 185 were similarly examined. Applicants for Class III are largely represented by ex-pupil-teachers employed as assistants or as teachers of small country schools. The diminishing of the number of examinees in that class points, no doubt, to the fact that the majority of these have now been graded by examination. The proportion of failures to passes in second-class examinees is greater than that which exists in either Class I or Class III. Otherwise the attainments of teachers, as exhibited at examination, are of a reasonably satisfactory character.

So far as High School candidates are concerned, the number appears to be on the increase. The competition for the prizes offered at the half-yearly examinations continues to be particularly keen.

R. N. MORRIS,  
Examiner.

## APPENDIX XVIII.

## REPORT ON THE PUBLIC SCHOOLS' CADET FORCE.

THE Cadet Force has more than maintained the standard reached at the beginning of last year, both as regards efficiency and the number of corps and cadets on the roll. The Sydney and sub-Metropolitan companies especially show an increase of numbers and interest, but the limited funds placed at my disposal for the supply of rifles and equipment prevent the proper formation of many corps.

A considerable number of applications for the establishment of new corps have come to hand from all parts of the Colony, but permission to form could not be given for the reason stated.

On September 15th the City and Suburban Battalions were reviewed by Major-General French, the officer commanding the New South Wales Military Forces. In addition to the usual march-past, etc., the cadets, to the number of 800, performed to musical time the various practices of physical drill with rifles, an innovation in the afternoon's work that came as a surprise, and elicited the hearty applause of thousands of spectators. Major-General French said he was exceedingly pleased at the display given by so large a number of boys. He congratulated the Cadet Staff on the excellent work done, and stated that Colonel Chippendale, the West Australian Commandant, who was present, had asked him to express his gratification at what he had seen. The General spoke highly of the great utility of the cadet organisation, and of the value of early instruction in the use of arms, the training of the lad being of inestimable benefit as a preliminary step in the military education of the man. These boys would be future defenders of their country. The discipline and self-control which the lads acquired must be of inestimable benefit to them in after life. He (the General) had always been interested in the cadet movement, and in his long experience had observed many cadet systems, and the New South Wales one seemed to him to be the most perfect, as the training here is left entirely in the hands of those who supervise the education of the lads in school, and who understand them better than the purely military authorities. He would do all in his power to further the interests of the Cadet Force, for he regarded it as a feeder of the Defence Force of the Colony. Now that federation was fairly under weigh, the question of defence was highly important, for it would be admitted that defence was one of the first considerations of union. If he could assist the cadets he would do so. There would be an alteration in the pattern of the arms used by some of the military corps, and he would recommend to the Minister that the discarded carbines be passed on to the elder boys in the cadets. It would be a grand thing for them to have something they could feel they were handling. They would learn to shoot, too; for it must be recollected that riflemen would win the battles of the future. The work done that afternoon was most satisfactory, and he was highly pleased with all he had seen.

The Editor of the *Colonial Military Gazette*, writing on the performance of the cadets on the above occasion at the Royal Agricultural Ground, frankly admitted that there was a time when he was opposed to the Public School cadet system, but having with unbiassed mind carefully watched the development of the system he was free to confess that so far from having been a failure the movement had been a distinct success. The administration of the Cadet Force, he added, could be very well left in its present hands, and the conclusion forced upon the writer was that up to a certain point the cadets were better in the hands of the Department of Public Instruction than they would be under the control of the military authorities.

The usual inspection of the Metropolitan and sub-Metropolitan Battalions have been held, and I have to report a very noticeable improvement all round, which is most satisfactory in view of the limited staff of drill instructors whose duty it is to visit the schools in these large districts.

No visits for inspections or drills have been paid to the country centres by the Cadet Staff; but in November the Head-quarters Cadet Band, under Bugle-Major Westbrook, visited Bathurst and took part in the Federal Band Festival, their presence being highly appreciated. The boys were warmly welcomed and entertained by the local cadet officers, teachers, and others.

The regular monthly parades continue to be held, and visits have been paid to Manly, Bronte, Lady Robinson's Beach, etc., where enjoyable and instructive bathing parades followed the military drill and marching.

A memorable event took place on November 3, when a thousand cadets took part in the "send off" to the First Contingent of New South Wales troops for active service in South Africa. Several cadet officers and many old cadets are now serving with the Imperial troops at the front.

A great and growing interest is being taken in rifle shooting, and before the end of the financial year I had reached the limit of the funds available for ammunition for target practices. This scarcity of funds, together with the fact that so very few of the Brendlin carbines are serviceable, is a serious drawback to this most important feature of cadet work.

The Annual Rifle Meeting held at Randwick on December 16th, 18th and 19th was the most successful yet held, the attendance of officers and cadets being larger than on any previous occasion. Several new competitions were introduced, and medals and trophies to the value of between £80 and £90 were competed for. The Orange team, which has held possession of the Challenge Shield for nine years, has had the honour wrested from them by Bathurst, who had previously run the record-holders very close, coming second two years in succession. The placed teams were Bathurst 1st, Wellington 2nd, Orange 3rd, and Cleveland-street 4th. A new competition in volley firing for the Company Challenge Bugle was won by Kiama, Cleveland-street being second. Matches for officers, students, and pupil-teachers helped to increase interest in the meeting. The highest aggregate Championship Gold Medal, presented by Messrs. A. Hordern and Sons, was won by Cadet Gilbert Callaghan, of Bathurst, and four out of the next six in order of merit were also members of the Bathurst team. The Cadet Medal and Marksman's Badge were awarded to the highest scorer in each of the teams competing, and these awards are greatly valued.

The Minister, speaking at the officers' lunch on Monday, December 18th, at the Rifle Range, after referring to the war, said that the nucleus of a body of good shots could be found amongst the cadets for the defence of the Colony, if armed with proper weapons. The youngsters should be trained; and in order to give effective training, they should be supplied with up-to-date weapons. If he could do anything to help them, and he thought he could, he would see that the defective rifles he had seen in use that day would be replaced by more serviceable ones. Good shooting under the present circumstances was almost impossible.

The Royal Agricultural Society again kindly granted the use of the ground at Moore Park for the country cadets to camp during the Annual Rifle Meeting, and the Secretary has also granted permission for several parades to take place there during the year.

For a long time it has been noticed that the older and bigger boys many of the Sydney schools do not keep up their connection with the cadets; and the difficult problem of how to keep them identified with the force has continually puzzled officers and teachers. It has been suggested that if a separate detachment of senior cadets, with a distinct uniform, were instituted, a large proportion of the elder boys would join; and if something could be done in the way of retaining them after these boys have left school, a great service would be done to the State. A scheme with the above object in view is at present under consideration.

*School Drill.*

The Cadet Staff continues to visit the schools in the Metropolitan and sub-Metropolitan Districts to instruct teachers, pupils, and cadets in calisthenics and drill, but the number of my assistants is inadequate for the work in this large area. An idea of the ground covered by the staff may be obtained when I state that Sergt.-Major Murphy attends the schools on the Illawarra line from Hurstville to Sydney, including such large schools as Cleveland-street, Redfern, and Newtown; Quartermaster-Sergt. Smith visits the City Central and the Eastern and Northern Suburbs, ranging from

from Bondi to Gordon and Fort-street to Manly; while Staff Colour-Sergt. Reddish takes the drill at the schools on the main suburban and western lines from Stanmore to Parramatta and Penrith. The increasing population in these extensive districts require more attention than my staff is able to give. In addition to the systematic visits paid to the schools for the ordinary drill standard work, the Cadet Staff have to devote a great deal of their time to the preparation of the pupils for the various calisthenic and other displays which are the great features of the monster gatherings of the Public Schools Amateur Athletic Associations in Sydney and Parramatta. The country schools are visited regularly by the local staff-sergeants of the N.S.W. Military Forces, Major-General French kindly allowing the instructors to attend. I have continued the fortnightly classes for pupil-teachers, and an examination was held at the close of the year, when exemption from further attendance was granted to the first-class pupil-teachers. I wish to recommend that certificates of proficiency be issued to the pupil-teachers passing these examinations.

While classes for male and female teachers were carried on weekly for a lengthy period in preparation for the Annual Sports Meeting, I have not been able to arrange for permanent classes—partly on account of room not being available for the purpose. As it is, one of the pupil-teachers' classes on alternate Friday evenings has to drill almost in the dark. The need for the lighting-up of the play-ground at Castlereagh-street is very urgent, in order that instruction in military drill, calisthenic exercises, etc., can be given, especially to pupil-teachers.

The high standard of drill work performed at the annual gathering of the P.S.A. Athletic Association was widely and favourably commented on by the Press, the military critics, and the public generally.

Croydon Park again won the Challenge Shield, Paddington being second. Camperdown won the Manual and Firing Competition, and North Newtown the Physical Drill, both teams for the second time in succession. The displays at the last sports' meeting were exceptionally fine, and special mention must be made of the exhibition of Dumb-bell Exercises by a thousand boys from various schools, who performed the movements laid down in the Drill Standard of Proficiency, in addition to a set of practices arranged for display purposes, all being done to musical time with remarkable precision, the whole of the boys moving together as one, and making a most instructive, effective, and picturesque scene. It is intended to enlarge upon this work, and a series of wand exercises for girls has been prepared on similar lines and will be issued in due course.

A manual on "Light Dumb-bell Exercises," and a handbook on "Physical Drill and the Manual and Firing Exercises" were published during the year and were eagerly welcomed by all classes of teachers, and they have proved of great value and assistance to them in their work, as well as in effecting a uniformity of exercises throughout the Public Schools.

I hope before the end of the current year to issue other booklets giving in detail the Drill Standard work for both Boys' and Girls' Departments, and also a Manual of Free Exercises for Infants and Junior Classes. Wands and dumb-bells are still urgently required for the schools.

*Training Colleges and High Schools.*

The Hurlstone and Fort-street Students' Training Colleges and the Sydney High Schools have been visited regularly each week by members of the Cadet Staff, and systematic instruction in the principles and practice of drill is given. At the end of the year I inspected the various classes, and the work done was most satisfactory.

*Drill Inspection of Schools.*

I have inspected, as usual, the drill at the schools in the Metropolitan and sub-Metropolitan districts and found that the improvement recorded last year has been kept up, the classes arranged for pupil-teachers being mainly responsible for this satisfactory state of affairs.

A. PAUL, Lieut.-Col.,  
Chief Staff Officer and Superintendent of Drill.

PUBLIC SCHOOLS CADET CORPS BRANCH—DEPARTMENT OF PUBLIC INSTRUCTION.

Accountant.

APPENDIX XIX.

REPORT ON TECHNICAL EDUCATION, WITH ANNEXES.

It will be seen from the following comparative statement that there was an exceptionally large increase in the enrolments over that of 1898 :—

	1898.	1899.
Sydney Technical College .....	4,052	4,837
Suburban Classes .....	686	643
Country Classes .....	2,336	2,654
Classes connected with Public Schools .....	1,444	2,122
Total .....	8,518	10,256

The number of individuals attending the Colleges and Branch Schools was 7,647, as against 6,291 for the previous year, being an increase of 1,356. The weekly average attendance of individual students was 6,631. 3,833 candidates presented themselves for examination, of whom 2,866 passed, being an increase of 640 passes.

The

The standard of work reached last year has been maintained ; also the percentage of passes. At the Technological Examinations in the City and Guilds of London Institute, held in May last, 25 students of the various Colleges were examined, of whom 21 passed. During the year additional day and evening classes were arranged, but it is still quite impossible to meet the demands in consequence of the lack of space. Many classes remain crowded, and a large number of intending students are waiting to join as soon as vacancies occur. The want of additional accommodation seriously hampers the work of this Branch. As opportunity offered, I have, during the year, visited the country branches, and those localities desiring the establishment of technical classes.

In February last a new centre was formed at Albury, when Mr. W. Powrie, the appointed Resident Master, took up his duties. A site for the Goulburn Technical College has been purchased, and plans are being prepared for a new building.

The teaching staff consists of 109 persons, distributed as follows :—

- 12 lecturers in charge of departments.
- 7 resident masters in charge of branch Colleges and Schools.
- 53 teachers.
- 15 assistant teachers.
- 22 teachers in charge of classes, and remunerated by fees of pupils only.

The following changes were made in the teaching staff during the year :—

Name.	Position.
Cooper, Mrs. M. ....	Resigned, Teacher of Dresscutting at Newcastle.
Rich, Miss J. C. ....	Appointed Teacher of Dresscutting at Newcastle, <i>vice</i> Mrs. Cooper.
Williamson, H. T. ....	Appointed Teacher of Shorthand at Public Schools at Summer Hill, Petersham, Croydon, and Burwood.
Burness, James. ....	Promoted to Assistant Teacher of Fitting and Turning, Sydney Technical College.
Collingridge, A. ....	Appointed Teacher of Art, Epping.
Lockley, T. B. ....	Appointed Temporary Teacher of Carpentry, Sydney Technical College.
Newman, Miss ....	Resigned, Teacher of Typewriting, Bathurst.
Peach, J. A. ....	Additional services, China Painting.
Rolfe, James. ....	Appointed Assistant to Lecturer in Electrical Engineering, Sydney Technical College.
Patino, W. E. ....	Appointed Junior Assistant, Plumbing.
Meggy, P. G. ....	Appointed Teacher of Shorthand, Public Schools at Darlinghurst and Woollahra.
Ramsay, J. S. ....	Appointed Teacher of Shorthand, Sydney Technical College.
Bruce, James ....	Appointed Teacher of Penmanship, Sydney Technical College.
Elston, W. ....	Appointed Teacher of Shorthand, Albury.
Stuart, W. C. ....	Appointed Teacher of Shorthand, Rockdale Public School.
Stowe, F. Ernest ....	Appointed Teacher of Quantity Surveying, Sydney Technical College.
Griffiths, Peter ....	Appointed Teacher of Blacksmithing, Sydney Technical College.
Dunlop, James ....	Resigned, Teacher of Carpentry, Sydney Technical College.
Curnow, J. ....	Appointed Teacher of Farriery, Sydney Technical College.
Brown, Miss ....	Additional services, Assistant Teacher of Art, Sydney Technical College.
Edmonds, F. D. ....	Resigned, Teacher of Mechanical Drawing, Sydney Technical College.
Stone, W. J. ....	Appointed Temporary Assistant Teacher of Mechanical Drawing, Granville.
Stanford, Miss M. ....	Appointed Teacher of Typewriting, Bathurst.
Roberts, G. A. ....	Appointed Junior Assistant Teacher of Architectural and Trades Drawing, Sydney Technical College.
Forsyth, E. ....	Appointed Temporary Teacher of Carpentry, Sydney Technical College.
Sloman, G. A. ....	Appointed Teacher of Shorthand, Granville, <i>vice</i> Cropper, resigned.
Lockley, E. ....	Permanently appointed Teacher of Manual Training, Model Public School, Fort-street.
Downward, J. N. ....	Appointed Teacher of Mechanical Drawing and Elementary Applied Mechanics, Sydney Technical College.
Massey, W. D. ....	Appointed Assistant Teacher of Mechanical Drawing, Sydney Technical College.
Stuart, W. C. ....	Appointed Teacher of Shorthand, Sydney Technical College, <i>vice</i> Ramsay, resigned.

I regret that Mr. F. Meredith, Mechanical Assistant, met with a serious accident whilst discharging his duties, which resulted in the loss of three fingers and a thumb on his right hand. He has now been transferred to the Caretaker's staff.

#### CLASSES IN CONNECTION WITH THE PUBLIC SCHOOLS.

Science Lecture courses were given by the Resident Masters at Bathurst, Goulburn, and Newcastle, to the elder pupils of the Public Schools, in Physics, Geology, and Chemistry. The attendance was good, the enrolments large, and the results of the examinations were gratifying. It was thought advisable to discontinue the classes at Newcastle for a time.

During the year Shorthand classes were established at the following Public Schools:—Waverley, Woollahra, Girls' High School, Darlinghurst, Newtown, Petersham, Stanmore, Croydon, Burwood, Rockdale, and Summer Hill. The various teachers speak encouragingly of this work, and the importance of the subject is being more fully realised. It is not to be expected that the whole of those who take up shorthand will continue ; but so far a large portion remain on the rolls, and manifest interest in the subject. The teachers labour under some difficulty, as they have to give their lessons so as not to interfere with the ordinary school-work. The total enrolment for these classes was 468.

Manual training continues to be very popular amongst the Public School pupils, and no difficulty is experienced in maintaining the full roll. Mr. Edward Lockley succeeded Mr. Powrie as teacher of manual training at Fort-street, and the improved attendance at these classes calls for special mention. The establishment of a Technical College at Albury provided an additional centre for manual training, and the classes there were well attended. Ten workshops were in existence in 1899, which afforded instruction to 29 schools. No fewer than 913 individuals enrolled for these classes, including the students in training. There were 527 examined, and 484 passed.

#### AGRICULTURE.

The enrolment reached 186, which shows a slight increase over those of the previous year. To meet the needs of students, two extra day classes were formed, one for analysis of milk, butter, cheese, &c., and the other for advanced agriculture. The former was attended by many of those engaged by the milk and dairying companies, and the latter chiefly by ladies. During the year regular excursions were

were arranged, for obtaining practical knowledge of farming, dairying, fruit culture, &c. At Granville and Hunter's Hill the classes were well attended, and a higher percentage of passes was obtained at the last examination. The students take a warm interest in their work, and several entered the Hawkesbury College for the purpose of obtaining a diploma, and adopting the science of agriculture as a profession.

#### VETERINARY SCIENCE.

The classes have been fairly well attended, and good work was done. Mr. Stewart resigned his position as teacher, having been appointed veterinary surgeon to the Health Department. His place will not easily be filled.

The Farriery Class was separated from the Veterinary Classes, and placed under the charge of Mr. J. Curnow, a practical farrier, who was an ex-student. The number of pupils was small, but a larger attendance is anticipated next year.

#### BOTANY.

Last year the class began with 26 students on the roll, and this year there were 52, showing that the subject is becoming more popular. Teachers from the large public and private schools attend, and it is gratifying to find that they intend to give more attention to botany in their school work. In connection with these classes, a Field Botanists' Society has been founded, for the purpose of keeping students in touch with one another, and to take an intelligent interest in the science. The students did well at the examination.

#### SHEEP AND WOOL TRAINING.

Sixty-five pupils attended the day classes. The accommodation provides for 50 only, so that the attendance was very full throughout the year. A large proportion of students came from the country. About 200 packages of wool were handled on behalf of different firms, which gave excellent opportunities to the pupils to obtain a good knowledge of a variety of wools. The standard of the last examination was higher than that of previous years, more importance being attached to the theoretical work. Wherever possible, sheep sales and shows have been attended, to afford the students an opportunity of handling sheep. Requests from pastoralists for the services of the students for shearing season continue to be made, and more applications than in previous years were received for wool-classers. I take this to indicate that the instruction given at the College turns out students who give satisfaction. In the night classes there was an average enrolment of 34 for each term. Good progress was made during the year.

#### CHEMISTRY, GEOLOGY, &c.

The classes in this department have done good work, and the examination results are, taking them all round, satisfactory. In the teaching of chemistry a great advance has been made, quantitative analysis having been taken up for the first time. The provision of a laboratory course for the classes in geology has proved a great acquisition. A number of students devoted their Easter holidays to field-work in the South Coast district and on the Mountains. In addition to this, there were shorter geological excursions to places of interest near Sydney.

#### PHARMACY.

The attendance at the classes has been smaller during the last twelve months than any previous year, which is due, I think, to the action of the Pharmacy Board in recognising the Sydney University as the only place for pharmaceutical students to gain knowledge. Those who did attend were regular and persevering, and several honors were gained at the annual examinations.

#### MECHANICAL ENGINEERING.

##### *Applied Mechanics.*

This class has steadily increased each year, and the work done has been good. The enrolment of the second-year students is always smaller than that of the first, as many students only require an elementary knowledge. Models are badly needed, also modern diagrams for illustrating the lectures. The conduct and attention were good.

##### *Mechanical Drawing.*

The classes have completely outgrown the accommodation, notwithstanding that additional day classes have been arranged for. The excessive heat, arising from the gas lights, is very trying, both to teachers and students, and it cannot be reduced until the installation of the electric light. New drawing copies and models are required. Considerable improvement was shown in the students' work exhibited at the annual exhibition.

##### *Fitting and Turning.*

The same difficulty was again experienced this year in meeting the demand for admission to these classes, which are open daily from 9:30 a.m. to 9 p.m.; over 200 intending students could not be enrolled. During the year the ventilation was improved, and the students were able to work with greater comfort. Several new tools have been made for the workshop classes, and a good deal of repairing work done for the College and Museum. The display of work at the annual exhibition was highly creditable. Several working models were shown as the result of the year's work.

##### *Blacksmithing.*

Each term there was a full complement of pupils, and as the number of forges is limited, the whole of the intending students could not be accommodated. The ventilation and lighting need improving.

##### *Patternmaking.*

This class has done excellent work during the year. Although the space provides only for 16 persons, often 19 students were working. The workshop is far too small, and extra accommodation is urgently needed to meet the demand caused by the additional classes in the engineering section.

##### *Ironfounding.*

A considerable improvement took place in the attendance, and there were 35 on the roll during the third term, which necessitated an additional class on Saturday morning. Some difficulty is experienced in providing patterns for the students. Sixteen students presented themselves for examination, all of whom passed, two obtaining honors. The progress made during the year was marked.

##### *Slide Rule.*

A considerable improvement has taken place in the attendance, and the class was divided into junior and senior sections, which gave both teacher and student better facilities. By this means a wider range was covered, and the work made more applicable to the special requirements of the students. The results obtained at the examination were satisfactory.

#### ELECTRICAL

## ELECTRICAL ENGINEERING.

In the elementary section the subjects in the syllabus were treated a little more fully than in previous years, the matter being brought up to date. About 50 per cent. of the students attended both the lectures and practical classes, and from these the best results are expected. Additional practical day classes were formed during the year, and the work is designed to amplify the subjects taken up in the lectures.

In the advanced classes the attendance was regular, and good progress was made. Most of the pupils of this section have passed the elementary course, and the quantity and quality of the work done in the practical class showed a marked improvement. The applications are still numerous, and scores of pupils are waiting to join. Increased accommodation is needed.

## PHYSICS.

The classes this year have been characterised by a marked increase in enrolments. The lectures on Experimental Mechanics have been accompanied with numerous experiments, whereby the fundamental truths could be brought home more clearly to the students, whilst the mathematical proofs have received less attention.

The Electricity and Magnetism Classes have increased enormously—over 100 enrolled each term. Fewer took Sound, Light, and Heat, and it is difficult to understand why comparatively so small a percentage of those attending the trade classes realise the importance of these subjects, seeing that they are called upon to know some of the laws in connection therewith. The popularity of the practical physics was maintained throughout the year, and many were unable to gain admission to the laboratory, as individual instruction is given, and the accommodation is limited. There is still evident a deficiency of mathematical knowledge amongst the students. Several new pieces of apparatus were added, but the equipment is nothing like complete.

## MATHEMATICS.

The total enrolment for the year shows an increase of 32, whilst the average attendance almost doubled that of last year. In most of the classes the students took greater interest in the work, thus enabling more ground to be covered with better results than in previous years.

## SANITATION.

The Sanitary Engineering Classes were well attended, the influx of students from the practical plumbing being noticeable. In the Plumbing classes the attendance exceeds the accommodation, and the work is being carried on under great disadvantages. If the workshops were made as large again there would be no lack of students, as many are waiting admission. Special Health Lectures were delivered at Newcastle and Maitland, and were well patronised by the public. Regular visits were paid by the Lecturer to these centres, and instruction in the theory of plumbing and sanitation was given. The conduct of the students was excellent.

## ARCHITECTURE.

The classes in Architectural and Trades Drawing, Building Construction, and Historical Architecture have increased, the numbers reaching 81. The work done by the students was an advance upon the past year. In the Quantity Surveying Class satisfactory progress was made, and there was an improved attendance. Few enrolled for Masonry, and the prospects of a large class are not very bright. During the year a change was made in the teaching staff, and the Carpentry Classes were conducted by Messrs. T. B. Lockley and E. Forsyth. Although only temporarily engaged, they worked well, and held the classes together. One of the students obtained honors in Carpentry (theory and practice), thus winning the Mayor's gold medal.

## ART.

The past year has been a most satisfactory one. There was a larger attendance than in any previous year, and in most of the subjects greater efficiency was secured.

It was observed that a larger proportion of the students from the trade classes attended the Frechand and Model Drawing, but it is hoped that they will also join the Geometry, Perspective, and Sciography Classes.

A marked improvement was shown in the Antique Drawing Class, both as regards the attendance and the attainments. During the year many of the pupils of the Life and Antique Classes regularly attended the Art Gallery for instruction, making studies from the "old masters."

The general behaviour of the students has been excellent, and the results obtained were satisfactory. Increased accommodation is needed for teaching Geometrical Drawing, as the numbers have outgrown the room set apart for teaching this subject.

The enrolment of the Modelling Classes continues to be good, and there was a creditable display of work as the result of the year's teaching.

The Minerva Art Club connected with this Department did good work. The monthly meetings were well attended, and the variety of works submitted was greater, and the execution better, than in any previous year.

## INDUSTRIAL ART.

All the classes in this Department have been exceptionally well attended; the enrolment exceeded those of any other year. The instruction given followed the lines laid down in the calendar, but was augmented when possible. Owing to the increased attendance in the Signwriting Classes it became necessary to apply for help, which was promptly given. In the House Painting, Decoration, and Design Classes, good progress was made; many students attending the latter classes did excellent original pieces of work. The display of exhibits at the Annual Exhibition was the best yet made, and in every Department there was a distinct advance. Some excellent watercolour drawings for the use of the students have been executed by the Lecturer during the year.

## DOMESTIC ECONOMY.

The Cookery Classes were carried on under considerable difficulty. The number in each of the particular classes were too large for the accommodation, but as so many were waiting to be admitted, the teacher managed to meet the emergency by rearranging the kitchen and making room for several more pupils. However, over 30 were still unable to join. A larger and more convenient compartment for teaching Cookery is needed. There was an improved attendance for Domestic Economy. All through the year the Starching and Ironing Classes were full. The results of the examination were gratifying; 25 obtained honors.

## LITHOGRAPHY AND PHOTO-LITHOGRAPHY.

The instruction has been of a general character, according to the syllabus, which is arranged to meet trade requirements. Considerably more practical work was done. This is due to the installation of the electric light in the classroom. The Lithography Classes made an excellent show at the Annual Exhibition, at which the students gave demonstrations each evening, showing what was taught in these classes.

## DRESSCUTTING

## DRESSCUTTING AND DRESSMAKING.

Throughout the year the enrolment has been large, and it was difficult to provide for the numbers attending. Only a small proportion of the pupils presented themselves for examination, but the results were, on the whole, satisfactory. The Millinery Class is not so well attended, but the prospects are encouraging for the coming year.

## BOOKKEEPING.

The numbers attending the Bookkeeping Classes were large, but giving two lessons on the same evening is not satisfactory to the students. This arrangement cannot be altered until another room is available. The results of the examinations were good, and the percentage of passes was higher than last year. Some of the best pupils were unable to attend the examination, owing to an attack of influenza.

## PENMANSHIP.

These classes were reopened during the second term. The attendance in the last term improved, and the classes promise to regain the popularity which they enjoyed in former years. The students were largely drawn from the mercantile houses, although artisans were also represented. Several pupils succeeded in passing the examination creditably, with only two terms' tuition.

## PHYSIOLOGY.

The attendance was good all through the year, and the lectures were given in accordance with the syllabus. Dr. Roth obtained leave of absence for the purpose of accompanying the Medical Corps to the Transvaal, and Dr. R. Vandeleur Kelly acted as substitute.

## ALBURY.

The College was opened on 23rd of March by the Mayor, and active operations commenced the same evening. Classes were arranged for Freehand, Model, Perspective, and Geometrical Drawing, and Woodworking, including Carpentry and Manual Training, Wood Carving, and Turning. There was an average enrolment of 131 for each term. At the examinations the results obtained were beyond anticipation. So far, the undertaking has been satisfactory, and there is every reason to believe that Albury will become a large and important centre.

## ARMIDALE.

The progress made in the Art Classes was good, and the number of the pupils steadily increased each term, the day classes being particularly well attended. Several of the pupils competed at the Singleton Show, and the first prize for a pencil landscape was won by a student of this College. Others contributed to the Art Society's Exhibition, and were awarded prizes.

## ASHFIELD.

The Art Classes are attended by students who take up the elementary sections; a few are tradesmen and teachers. The accommodation is good, also the appliances. A few additional casts are needed to replace the broken ones.

The Bookkeeping and Penmanship Classes were conducted on similar lines to those at the Central College, and in the former class satisfactory work was accomplished.

Shorthand seems as popular as ever, and there was a fair attendance during the year.

## BATHURST.

Most of the classes have been well attended during the year, and the conduct of the students has been all that could be desired. The total enrolment was 633, whilst the individuals reached 441. The Science Classes have met with greater support, and the steady increased attendance was encouraging. Additional apparatus having been provided, the class lectures were more fully illustrated. Several models were prepared, under the direction of the Resident Science Master, by the Teacher of Carpentry, for demonstration purposes.

The Theoretical Mechanics' Lectures given to the pupils of the fifth classes of the Superior Public School were successful. A sketching club has been formed by the Art students, which is managed by themselves. To meet the requirements of druggists' apprentices, a class was formed in Materia Medica, and instruction was also given in Pharmaceutical Chemistry and Pharmacy; but the action of the Pharmacy Board is inimical to the progress of the class. It should be mentioned that more apparatus is needed for teaching Sound, Light, and Heat. The Geology Class needs a series of New South Wales fossils. The space allotted for teaching Carpentry has proved too limited, and additional room has been applied for.

## BROKEN HILL.

Seven subjects were taken, and the work done was highly satisfactory, especially in Metallurgy and Assaying. The proximity of the mines enables students here to experiment with a very large variety of ores and furnace products; at the same time, students have the opportunity of observing important metallurgical operations in progress on the working scale. The Mineralogy students did a large amount of practical work; but, as travelling is so expensive, those attending the Geology Classes were unable to do much field work. The students examined in Chemistry did remarkably well—21 obtained honors; thus showing that the teaching was very thorough in this subject. A good start has been made, and the temporary building proves altogether inadequate.

## EPPING.

Model and Freehand Drawing Classes were opened in April last, and the attendance was fairly good. The district is a new and growing one, and, with the railway facilities along the line towards Hornsby and Ryde, the residents will, no doubt, avail themselves of the advantages of the classes. Already there are some promising students attending.

## GOULBURN.

The number of individual students from all sources has been 449. As far as possible the work has been kept in accordance with the information contained in the Calendar. There was an increase in the attendance in the Chemistry and Physics Classes. Several geological excursions were arranged at which the Public School pupils attending the Science course of lectures were present. The Head Master of the Superior Public School made a series of diagrams, illustrating the entire course of lectures given to the Public School pupils, which proved of great assistance. The Woodworking classes are still popular, and excellent work has been done during the year. In December an Exhibition of students' work was held, and the carving exhibits were excellent.

The Parkes Bursary was won by a student of this College. When the new building is erected it may be expected that the progress will be more marked, and an increased attendance secured.

## GRANVILLE.

## GRANVILLE.

The improvement made in the previous year was sustained this year also. There were 251 enrolments, representing some 183 individuals. Throughout each term the attendance was regular. Mr. C. E. Stockwell, Assistant Teacher of Mechanical Drawing, met with an accident which caused his death. Both as a student and teacher he attained marked success, and was held in high esteem. Mr. Cropper resigned the position of teacher of Shorthand, and Mr. G. Sloman was appointed to the position. The Art Classes were well attended, and excellent results were obtained at the examinations. In all the subjects general satisfaction was given, and there are good prospects of another successful year.

## LITHGOW.

The Shorthand Classes were very successfully conducted, the enrolment was better, and the weekly average attendance reached 31·3. Most of the old pupils continue to attend. Fifteen sat for examination, and 12 passed, thus showing that steady work was done during the year.

## MAITLAND AND DISTRICT.

The individual enrolment for all classes throughout the district was 624. The work of the year compares well with previous ones, and the students have been assiduous in their studies, whilst several distinguished themselves. Miss F. Lavis gained the silver medal for drawing at the Junior University Examination, and the students' work shown at Northern Agricultural Association was very creditable. The Art Classes at Seaham, Clarence Town, Morpeth, Hinton, Raymond Terrace, East Maitland, and Singleton, have been successful, both as to numbers attending and results obtained. The Trade Classes are likely to be larger next year, as new works are being opened which will give regular employment to a number of adults. The attendance at the Woodworking Classes was better than in the previous year. Unfortunately, several persons attending the Dresscutting and Dressmaking Classes were unable to sit for examination, owing to illness. There is every reason to be satisfied with the results of the work achieved in this district.

## NEWCASTLE AND DISTRICT.

Taking all the classes into account, the enrolment shows a decided increase. There was a larger attendance in the Mechanical Drawing, Chemistry, Steam and Steam Engine, and Dressmaking and Dresscutting Classes, and the Art, Coal Mining, Plumbing, Carpentry, Boilermaking, and Mine Surveying continue to receive liberal support, and are doing good work. The Mineralogy Classes were closed through lack of attendance, and it was considered desirable to discontinue for a time the Science Lectures to the pupils from the Public Schools. Additional appliances were granted, which added much to the success of the teaching. Whenever practicable, the teacher of Carpentry has rendered help in making necessities for the College. Additional apparatus and instruments are needed for the Science Classes, and the work is handicapped on this account. The building still causes anxiety in wet weather, and needs attention, as the high winds and rain do considerable damage to the walls and exhibits.

It is gratifying to find that the Trade Classes are well attended, and applications have been made for extension in this direction. The accommodation is not sufficient, and further space is needed before other classes can be formed.

## NEWTOWN.

There has been a considerable increase in the number of students enrolled, and with few exceptions, caused by illness and removals from the district, the attendance show a high average. Many of the drawings, which are numerous, possess considerable merit.

In the evening Shorthand Class, 45 pupils enrolled, lessons were given regularly, and most of the students were industrious. A day class was started during the second term for boys and girls, and good work was done, though the examination standard was not reached, as a whole year is needed to attain it.

## NORTH SYDNEY.

Some 34 individuals enrolled, and most of these studied more than one subject. The attendance for the year was very good, the average per lesson reached 20, and the behaviour of the students was all that could be desired. Good work was done in the Shorthand Classes, which were well attended.

## PETERSHAM.

The classes were well attended during the year, and there were 304 individuals enrolled. In the Elementary Art section the attendance was good, but in the upper divisions there were fewer enrolments. An encouraging feature of this year's work was the large Geometrical Drawing class. The subject is an important one, and is very necessary for the architect, as well as the engineer.

There was a falling off in the attendance of the Shorthand Classes, as compared with other years; but the teaching is confined to one night only, which may in a measure account for it. Classes in Mathematics and Bookkeeping and Scientific Dresscutting were conducted with fair success.

## WAVERLEY.

The enrolment and average attendance have been good, and there is every prospect of the classes increasing in number during the next year. Four subjects were taught, viz., Freehand, Model, and Geometrical Drawing and Still Life Painting. Being a new school, most of the pupils are young; and a year or two must elapse before very good results can be gained, or the pupils distinguish themselves.

The total number of classes in operation was distributed as shown below :—

	Under Salaried Teachers.	Teachers paid Fees only.	Total.
Sydney Technical College.....	68	6	74
Suburban Classes.....	16	8	24
Classes in country towns .....	111	11	122
Classes from Public Schools .....	22	16	38
	217	41	258

## TECHNOLOGICAL MUSEUMS.

The exhibits during the past year have received the usual overhaul and attention, as the strictest care and supervision are required in the botanical and zoological sections, these particular exhibits being susceptible to the attacks of borers and insect life in general. Vigilance is our only safeguard against the preservation of these specimens from utter ruin.

In the mineral section a large number of reports have been made, and specimens determined for correspondents. Several individual specimens and small sets have thus been added to the mineral and rock collections.

New cases have been provided, and the temporary cases replaced.

As

As much routine work as possible has been done, several of the collections being rearranged and reclassified.

Among the collections donated during the year may be mentioned a large block of fire-clay, also fire bricks and other specimens made from it, presented by Mr. Devan, of Bathurst; also a number of collections of auriferous minerals and ores from Charters Towers and Ravenswood gold-fields, presented by the Mines Department, Queensland, through Mr. J. C. Cole. Sets of these were sent to the country Museums.

A very fine collection of models of apples, oranges, &c., has been added to the Agricultural Court. They have been modelled and coloured by members of the College staff, and named by the Fruit Expert of the Agricultural Department, and so should be of the greatest value to the orchardist.

Additional exhibits of models of our native flowers have also been executed by these officers, and so this valuable collection is steadily growing.

A number of new essential oils and perfumes have been obtained from our native trees by our own distillations and placed on exhibit. The chemical investigation of some of them have been completed and the results published.

Some valuable additions have been made to our collection of edible and non-edible fungi.

A very valuable exhibit has been received through Mrs. Walters, Glebe Point, being part of an old wooden water-main, taken up in Oxford-street, London. This main was laid in the reign of Charles I, and has not been in use for the last 150 years. The wood is in a perfect state of preservation.

Our timber collection has received several valuable additions, some of the principal donors being Mr. R. H. Cambage, L.S., Burwood; Mr. W. Farrell, Moss Vale; Mr. Richard Ridge, Bourke; and our collector has also rendered valuable services in the field in the matter of timber collecting.

We have made special efforts to bring our Colonial timbers under the notice of manufacturers, and during the year have sent away five collections and have received very encouraging reports in return. For violins some of our woods have been pronounced equal to any others.

Some very fine specimens of native yams have been presented by Mr. A. Paddison of New Angledool.

The botanical collector was recalled from the north, and has since worked over a large area of the south-east portion of the Colony in search of timber specimens, new products, and to collect, more particularly, material from oil-bearing trees and shrubs, in order to complete the work on New South Wales essential oils which is now well in hand.

The reorganising of the herbarium, commenced some time back, has at last been completed by the Herbarium-keeper, Mr. Beyer. The whole collection of plants, numbering some 50,000, is now in splendid order and condition, and its present efficiency will much facilitate the economic botanical work in the future.

It is gratifying to have to state that the number of reports and information given on general economics compares favourably with that of previous years—a fact which proves that the Museum is well in touch with the commercial claims of the Colony.

By encroaching much on private time some valuable or original researches have been accomplished—

By the Curator, R. T. Baker, F.L.S., Corrs. Memb. Phar. S. of Gt. Brit. :—

- (1.) On three new species of *Eucalyptus*; Proc. Linn. Soc. N.S.W., Vol. XIV, 2nd. Ser., June, 1899.—Three very important economic trees are described in this paper :—
  - (a) *Eucalyptus Smithii*. This species has an extensive range, and yields an oil very rich in Eucalyptol (70 per cent.)
  - (b) *Eucalyptus Dawsoni*, which is known as "Slaty Gum," and extends over a large area of the Colony, produces a remarkably hard timber, equal in durability to the best ironbark.
  - (c) *Eucalyptus camphora* is also a well distributed species, and is famous for its excellent oil, which is largely manufactured and exported. The oil also contains large quantities of the solid camphor, "eudesmol," which was first discovered in this Museum.
- (2.) On a new Apocynaceous plant, yielding large edible tubers; Proc. Linn. Soc. N.S.W., Vol. XIV, 2nd Series, July, 1899.—The plant here described occurs over the dry western plains of the Colony, and yields a plentiful supply of large edible tubers; and their greatest economic value appears to be that in these tubers the settlers in the dry interior of the continent have an indigenous vegetable in times of drought when ordinary garden vegetables are not procurable. The leaves of the plant, too, are reported as being much relished by stock.
- (3.) Contributions to a knowledge of the Flora of Australia; Proc. Linn. Soc. N.S.W., Part II, Vol. XIV, 2nd Series, August, 1899.—This paper comprises supplementary description of certain species known hitherto from imperfect material, and some additional localities for known species. A number of fungi (edible and otherwise) are recorded as new for New South Wales.
- (4.) On some new species of *Eucalyptus*; Proc. Linn. Soc. N.S.W., Vol. XIV, 2nd Series, October, 1899.—The following are described as new :—(1) *Eucalyptus oreades*, from the Blue Mountains; this tree produces a good working timber, known as Mountain Ash. (2) *Eucalyptus maculosa*, which yields an essential oil containing 46 to 56 per cent. eucalyptol; (3) *Eucalyptus patentinervis*, from the north coast, and commonly known as Bastard Mahogany.
- (5.) On two new species of *Casuarina*; Proc. Linn. Soc. N.S.W., Vol. XIV, 2nd Series, October, 1899.—The two well known She-Oaks—the "Belah," which extends over almost the whole of the interior of the Colony from the Main Dividing Range to the Darling River, and the "Bull Oak," with an almost equally extensive range—appear not to have been botanically placed, and so are accordingly given specific rank under the names of *C. Cambagei* and *C. Luehmanni* respectively.
- (6.) Conjointly with the Assistant Curator, H. G. Smith, F.C.S. :—  
On the Essential Oils of the Darwinias of Port Jackson; Roy. Soc. N.S.W., December 6th, 1899.—The principal constituent of the essential oil of *Darwinia fascicularis* is *Geranyl acetate*, an ester, the alcohol of which is geraniol and the acid acetic acid. Geraniol is the principal constituent of the liquid portion of rose-oil and also of geranium-oil. This is probably the first time geraniol has been found in an oil obtained from the natural order Myrtaceæ.

By the Assistant Curator, H. F. Smith, F.C.S. :—

On the Crystalline Camphor of *Eucalyptus* Oil (Eudesmol) and the natural formation of Eucalyptol; Roy. Soc. N.S.W., August 2nd, 1899.—The formula of eudesmol is here shown to be  $C_{10}H_{16}O$ , and that it is an intermediate product in the formation of eucalyptol. This stearoptene was unknown until discovered at this Museum.

Besides the above a very large amount of original work has been done in connection with the botany and chemistry of the *Eucalypts*, and a very large amount of valuable information obtained, by which the species have been more correctly classified, and the commercial possibilities of their timbers and oils determined. This work has received very favourable comment in Europe.

During the year the Curator devoted much time to the preparation of the "Guide to the Museum."

Such a work has always been a desideratum in this Institution; and it is hoped its early publication may be looked for, although at present the printing of it is held in abeyance.

ECONOMIC

In the Economic Zoology section the collection of models of the food-fishes of New South Wales has increased to such an extent as to become one of the most interesting and valuable exhibits in the section. The accurate anatomical detail of the casts, which are in bold relief, and the life-like coloration, make them objects of scientific value, as well as of popular interest, and they have been much admired by all zoologists who have had an opportunity of seeing them.

The collection of internal parasites of stock and domestic animals, as well as of the indigenous fauna, has been added to by many valuable specimens. Many specimens of Natural History have been collected and classified for the country museums, in which much work has been done setting in order their local zoological collections.

Identification of and general information on many specimens and subjects connected with Economic Zoology has been supplied to the public, especially our Public School teachers.

In the wool section there were 390 samples and fleeces of wool presented; many were of the most renowned breeds of the present day. The breeders and owners were anxious to have an official report upon the same.

The pastoralists throughout the Colonies generally are seeking information from this Department, and many specimens are thus received without canvassing. The New South Wales Sheep-Breeders' Association is especially anxious to have the assistance of this Institution in deciding the much disputed question of fine, medium, and strong wools. At the last general meeting of this Association this Museum was tendered a special vote of thanks for the assistance rendered; also the warmest thanks of the Murrumbidgee Pastoral Association's Committee were received for the satisfactory manner their ninth scouring test was carried out under our Wool Expert, Mr. Hawkesworth. Mr. Johnson, the Economic Zoologist, has rendered valuable service to this Department by his microscopical work in connection with the measuring of the fibres of some hundreds of samples of wool.

The two large new cases for the spinning counts or qualities of wool are a decided success, being both suitable and useful.

Mr. A. E. Finckh has donated a very interesting collection of specimens from Funafuti.

The Blind Asylum, Boomerang-street, has sent a very instructive collection of basket and brush ware in exchange for a number of books for the blind which were received from Italy some years ago.

Messrs. Winchcombe, Carson, and Co. have presented a specimen of hide, showing tanning properties of wattle-bark and valonia.

Captain E. C. Hore has lent a very interesting collection of South Sea Island curios.

At the request of the Trustees of the Australian Museum, our numismatic collection has been transferred to that Institution. As that body of gentlemen were desirous of making a national collection, it seemed preferable to have one series as perfect as possible, in preference to one or more perhaps indifferent ones. As the result of a conference with the Curator of the Australian Museum in regard to the future *modus operandi* of these two national Institutions, and in order to prevent any overlapping, the specimens were transferred to the custody of the Trustees.

The number of specimens added during the year to our collection was 1,317, made up as under:—

Presented .....	1,060
Exchanged .....	97
Collected .....	82
Loan .....	56
Purchased .....	22

COUNTRY MUSEUMS.

During the year the Curator has inspected Goulburn and Bathurst Museums, and carried out several alterations in the classification of exhibits. They were both in good order.

The Economic Zoologist has visited all the country Museums, and commenced a system of rearrangement, and named the various collections coming under his particular science. As this branch has been rather neglected in the past, the Resident Masters much appreciated his visit, which it is proposed to make annual, as well as that of other experts on the staff.

A complete set of the Proceedings of the Linnean Society of New South Wales has been sent to each Museum, to be used as a work of reference by local students and naturalists.

As far as possible, duplicates are evenly distributed amongst our Branch Museums. Last year they received 1,040 specimens from the Sydney Museum, whilst specimens received at local Museums were:—

Donations ..	217
Loans ..	12
Purchases ..	20
Total .....	249

Total number of visitors for the year at this Museum were 114,503, being an increase of 8,324 on the previous year.

Back, George	Tumut	Principal	June, 1894	1 Dec , 1894	IV	Feb , 1882
Elston, William	Darling Road	Assistant	June, 1894	1 July, 1897	I	April, 1882
Langley, Herbert	Deniliquin	Principal	June, 1894	1 Jan , 1900	IV	Feb , 1882
Long, Samuel A	Casino	Principal	June, 1899	1 Sept , 1900	V	April, 1882
Guthrie James	Hay	Principal	Dec , 1885	1 Oct , 1886	III	April, 1882
Craig, John J	Wallerawang	Principal	Dec , 1885	1 June, 1891	V	July, 1882
Dickenson, Edwd	Waverley	Assistant	Dec , 1891	1 May, 1892	I	July, 1882
Carroll, Wm	June	Principal	June, 1892	1 Oct , 1892	III	July, 1882
Denning, Benjamin	Pymont	Assistant	June, 1899	1 Sept , 1900	I	Nov , 1881
Mahoney, Wm	Cooma	Principal	June, 1893	1 Sept , 1893	IV	July, 1882
Boome, John	Coonabarabran	Principal	June, 1893	1 Sept , 1893	VI	Oct , 1883
Henry, Mark	St Leonards	Assistant	June, 1893	1 Dec , 1893	I	Jan , 1883
Faulks, John	Newtown	Assistant	June, 1894	1 July, 1898	I	Feb , 1883
McMahon, Edmund	Stanmore	Assistant	June, 1898	1 July, 1900	I	March, 1883
Smith, Chas R	Boy's High School, Sydney	Assistant	Dec , 1886	1 Nov , 1892		Nov , 1883
McCoy, Arthur	Alstonville	Principal	June, 1894	1 July, 1899	V	July, 1883
Lyell, George E	Shellharbour	Principal	June, 1896	1 Oct , 1900	VI	July, 1883
Reay, Albert	Canley Vale	Principal	June, 1897	1 May, 1900	VI	Jan , 1884
Jacobs, James	Murrumbidgee	Principal	June, 1899	1 Nov , 1899	V	Oct , 1883
Howell, David	Bourke	Principal	June, 1898	1 May, 1899	III	Feb , 1884
Williams, William	Fort street Practising School	Principal	Dec , 1891	1 July, 1892		March, 1884
Squire, Hilton	Leichhardt	Assistant	June, 1897	1 July, 1898	I	Jan , 1885
Hall, Alfred	Bradwood	Principal	June, 1898	1 Oct , 1898	V	Dec , 1884
Lewis, Henry	Kogarah	Assistant	June, 1898	1 March, 1899	I	Aug , 1894
Hadley, Albert	Annandale	Assistant	June, 1897	1 July, 1899	I	May, 1884
Cambourn, Thomas	Windeyer	Principal	June, 1899	1 July, 1900	VI	Jan , 1885
Wallace, Peter	Waterloo	Substitute for Principal	June, 1899	1 Jan , 1900	II	March, 1885
Williams, John	Burwood	Assistant	June, 1897	1 Jan , 1898	I	April, 1886
Riley, Patrick	Newcastle	Assistant	June, 1897	1 Jan , 1898	I	Nov , 1885
McMullen, Frank	Parramatta South	Assistant	June, 1897	1 May, 1900	I	May, 1886
Lasker, Samuel	Fort street	Assistant	June, 1894	1 Oct , 1896	I	March, 1884
Thompson, Alexander	N S S "Sobraon"	Schoolmaster	June, 1899	1 Feb , 1900		July, 1886
Robins, Alfred	Parramatta	Substitute for Principal	June, 1898	1 June, 1900	I	Nov , 1886
Redshaw, George	East Maitland High School	Assistant	June, 1898	1 Nov , 1898		Sept , 1887
Maguire, George F	Coonamble	Principal	June, 1898	1 Oct , 1900	V	Nov , 1881
Saunders, Arthur	Bathurst	Assistant	June, 1898	1 Oct , 1900	I	March, 1885
Lydon, James	Dubbo	Assistant	June, 1897	1 Oct , 1900	II	July, 1885
Clarke, Alice	North New town Girls'	Mistress	June, 1884	1 July, 1884	II	Aug , 1863
De Courcy, Frances	Goulburn Infants'	Mistress	June, 1888	1 July, 1889	II	Aug , 1863
Murray, Maria	Summer Hill Infants'	Mistress	June, 1887	1 June, 1893	II	Jan , 1867
O Byrne, Mary	Granville Girls'	Mistress	June, 1887	1 July, 1887	I	*Jan , 1861
Nord, Ahson	East Maitland Girls'	Mistress	June, 1894	1 April, 1896	II	Jan , 1870
Wilkes, Mary	William street Girls'	Mistress	Dec , 1885	1 Dec , 1886	I	July, 1873
Golding, Annie	Croydon Girls'	Mistress	June, 1892	1 Aug , 1892	II	July, 1874
Proudlock, Annie	Burwood Girls'	Mistress	Dec , 1886	1 Nov , 1889	I	July, 1876
Fraser, Sarah	Annandale Girls'	Mistress	June, 1887	1 June, 1888	I	March, 1878
Lindstrom, Florence	Balmnain Infants'	Mistress	Dec , 1887	1 March, 1888	I	Feb , 1877
Chambers, Eliza	Darlinghurst Girls'	Mistress	June, 1893	1 Sept , 1893	II	Jan , 1879
Mallinson, Ellen	Pymont Girls'	Mistress	June, 1893	1 Sept , 1893	I	Feb , 1879
Chappell, Annie	Enmore Girls'	Mistress	Dec , 1889	1 June, 1890	II	July, 1879
McCall, Agnes	Ultimo Girls'	Mistress	June, 1888	1 Nov , 1889	II	Jan , 1879
Kilminster, Agnes	Albion street Girls'	Mistress	June, 1889	1 Nov , 1889	I	March, 1879
Collins, Elizabeth	West Leichhardt Girls'	Mistress	June, 1892	1 Oct , 1892	I	Aug , 1879
Houtson, Nellie	Dubbo Girls'	Mistress	Dec , 1889	1 June, 1890	II	Oct , 1880
Mahoney, Annie	West Murrumbidgee Girls'	Mistress	Dec , 1891	1 May, 1892	II	April, 1881
Thomas, Harriet	Bathurst Girls'	Mistress	June, 1894	1 Oct , 1894	I	Jan , 1880
Wade, Emily	Adamstown Girls'	Mistress	June, 1893	1 Sept , 1893	II	Nov , 1882
Holt, Elizabeth	St Peters Girls'	Mistress	Dec , 1891	1 June, 1892	II	Aug , 1883
Sullivan, Adelaide	Cook s Hill Girls'	Mistress	June, 1893	1 Nov , 1893	I	June, 1883
Wright, Dorothea	Albury Girls'	Mistress	June, 1894	1 Dec , 1894	II	Jan , 1882
Hennessey, Ellen	Rockdale Girls'	Mistress	June, 1888	1 Nov , 1888	II	Sept , 1883
King, Annie	Hamilton Girls'	Mistress	June, 1892	1 Aug , 1892	I	March, 1884
Reilly, Alice	Camperdown Infants'	Mistress	June, 1894	1 Jan , 1899	I	Nov , 1884
Hodgkins, Amy	Tamworth Girls'	Mistress	June, 1898	1 Feb , 1899	II	Jan , 1887

\* Not continuous

(2.) Teachers holding Class I B, subject to passing in one or more subjects.

Name.	School	Position.	Date of Literary Examination	Date of award of Classification	Class of School	Date of entry into Service.
Kelly, Cornelius . . . . .	Young . . . . .	Principal . . . . .	Dec., 1884	1 July, 1887	II	July, 1873.

McDiarmid, Kate . . . . .	William street Infants' . .	Mistress . . . . .	June, 1893	1 Nov , 1894	I	March,1881.
Lagleyse, Christina . . . . .	Waterloo Girls' . . . . .	Mistress . . . . .	June, 1897	1 Jan , 1898	II	March,1882
Coles, Gertrude . . . . .	Wallsend Girls' . . . . .	Mistress . . . . .	June, 1900	1 Sept , 1900	I	Sept , 1883
Fitzpatrick, Elizabeth . . . .	Darling Road Girls' . . . .	Mistress . . . . .	June, 1894	1 June, 1895	I	March,1883
Newton, Florence . . . . .	Neutral Bay Girls' . . . . .	Mistress . . . . .	June, 1897	1 Nov., 1897	II	Dec , 1884
McGlynn, Rebecca . . . . .	Mudgee Girls' . . . . .	Mistress . . . . .	June, 1899	1 July, 1900	II	Jan , 1885.

NOTE.—The issue of I B Certificates to these Teachers is deferred, pending their passing the prescribed Examination in Drawing  
In the cases marked †, the subject of Music has also to be taken.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.  
(REPORT OF SENATE FOR THE YEAR 1899.)

Presented to Parliament, pursuant to the provisions of Act 14 Vic. No. 31, sec. 22.

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

REPORT of the Senate of the University of Sydney for the year ended  
31st December, 1899.

1. The Senate of the University of Sydney, in pursuance of the provisions of section 22 of the Act of Incorporation, has the honor to transmit the account of its proceedings during the year 1899, for the information of His Excellency the Governor and the Executive Council.

Matriculation.

2. The number of persons who qualified themselves for Matriculation in 1899 by passing one of the various University Examinations was 299. Of these, 97 passed the ordinary Matriculation Examination, 111 the Junior Public Examination, 22 the Law Matriculation Examination, 53 the Senior Public Examination, and 16 the Entrance Examination for Law, Medicine, and Science. The number of students actually admitted to Matriculation, with a view of proceeding with the curriculum in one of the various Faculties, was 124.

Annual University Examinations.

3. The numbers of students who attended and passed the annual examinations in December, 1898, and March, 1899, after attending the prescribed courses of lectures, are shown in the following table:—

Faculty of Arts.			Candidates.	Passed.
First-year examination	...	...	82	70
Second-year examination	...	...	48	42
Third-year examination	...	...	51	46

In addition to the students passing through the regular curriculum, 12 evening students and students of special subjects passed examinations in individual subjects, after attendance upon the prescribed lectures.

Faculty of Law.			Candidates.	Passed.
Intermediate examination	...	...	14	12
Final examination	...	...	9	7

Faculty of Medicine.			Candidates.	Passed.
First-year examination	...	...	34	25
Second-year examination	...	...	34	27
Third-year examination	...	...	31	29
Fourth-year examination	...	...	25	22
Fifth-year examination	...	...	23	15

Faculty of Science.			Candidates.	Passed.
First-year examination	...	...	10	10
Second-year examination	...	...	3	3
Third-year examination	...	...	2	2

Faculty of Science—Department of Engineering.			Candidates.	Passed.
First-year examination	...	...	16	14
Second-year examination	{ Civil	...	4	2
	{ Mining	...	8	
Third-year examination	{ Civil	...	2	
	{ Mining	...	2	

In the Faculty of Science and the Department of Engineering three students of special subjects passed in the final examinations of their subjects.

*Attendance at Lectures.*

4. The following table shows the number of students who attended Lectures in the several Faculties:—

Faculty of Arts (day), 170 ; (evening), 36 ; total	...	...	206
Faculty of Law	...	...	39
Faculty of Medicine	...	...	182
Faculty of Science	...	...	24
Faculty of Science—Department of Engineering	...	...	68
Total	...	...	519

Included are 53 women who attended in the Faculty of Arts, 1 in Law, 13 in Medicine, and 3 in Science; total, 70.

The above total number also includes 37 non-matriculated students.

*Degrees conferred.*

5. The following degrees were conferred after examination:—

Master of Arts (M.A.):—Stephen Drummond Chalmers, Robert Randolph Garran, Alfred Chalmers Gill, George Arthur Hill, Elizabeth Ironside Taylor, Donald Wallace.

Bachelor of Arts (B.A.):—Nellie Mildred Blanche Bonamy, Leslie George Barton Cadden, William Carnegie Clegg, Gertrude Mary Clipsham, Estelle Muriel Bridson Cribb, William John Curtis, Antoine William M. d'Apice, Colin George Watt Davidson, Edith Warlow Davies, Leo Septimus Day, Edward Moseley Dickinson, Joseph Jerry E. Durack, Elsie Mary Elphinstone, James Galt, Chas. William Hadley, Terence Matthew Lafferty, Thomas Nelson Lee, Jessie Hunsdon Liggins, Bertie Patrick McEvoy, Bertha Adeline Hilda Mackintosh, Henry Normand MacLaurin, John Thos. Maloney, Fannie Augusta Marr, Hamilton Bartlett Mathews, John Joseph Mulholland, George Gibb Nicholson, Arthur Ernest Page, Emily Waugh Parsons, Joseph Parsons, Frederick Thomas Perkins, Elizabeth Jane Read, Dansie Thomas Sawkins, Colin Archibald Sinclair, Ida Leslie Slack, Denis Joseph Sullivan, William Frank Swyny, Richard Clive Teece, Seymour Darvell Tozer, Annie Elizabeth Turner, John Verge, John James Walsh, George Henry Montague Walton, Leslie Ballesat Williams, Percy Leyden Williamson, Ernest John Withycombe, Isabel May Yarnold.

Bachelor of Laws (LL.B.):—Ernest Robert Abigail, Francis Egerton Barraclough, William John Bloomfield, David Sutherland Edwards, David Scoular, George Washington Waddell, Frank Ernest Wallace.

Bachelor of Medicine (M.B.):—Charles Bickerton Blackburn, Gerald Francis Brade, Henry John Wolverton Brennand, William Duthie Cargill, Henry Charles Delohery, Edward Wilfred Fairfax, Edward Ludowici, John Mackenzie, Donald Æneas Dunlop MacMaster, Frank William Ashley Magarey, Francis Percival Sandes, Herbert Leopold Ashton Shorter, John Cadell Windeyer, Charles Savill Willis, Thos. George Wilson.

Master of Surgery (Ch.M.):—Charles Bickerton Blackburn, Henry John Wolverton Brennand, William Duthie Cargill, Edward Wilfred Fairfax, Edward Ludowici, John Mackenzie, Donald Æneas Dunlop MacMaster, Frank William Ashley Magarey, Francis Percival Sandes, Charles Savill Willis, Thomas George Wilson, John Cadell Windeyer.

Bachelor of Science (B.Sc.):—George Harker, Gustavus Athol Waterhouse.

Bachelor of Engineering (B.E.):—Civil Engineering: William Richard Beaver, Walter Charles Mathison. Mining Engineering: Robert Lockhart Jack, John Fossbrook Morris.

6. The total number of degrees conferred during the year was 92, divided as follows:—M.A., 6; B.A., 46; LL.B., 7; M.B., 15; Ch.M., 12; B.Sc., 2; B.E., 4. Total, 92.

7. The degrees conferred by the University from its foundation to the end of 1899 are:—M.A., 269; B.A., 988; LL.D., 23; LL.B., 78; M.D., 38; M.B., 156; Ch.M., 112; B.Sc., 32; M.E., 3; B.E., 56. Total, 1,755.

*Honours at Degree Examinations.*

8. The following honours were awarded at Degree Examinations:—

*Faculty of Arts—M.A. Examination.*

School of Philosophy—Class I:—R. R. Garran, B.A. (University Medal). Class II:—Elizabeth I. Taylor, B.A.

*B.A. Examination.*

Latin—Class I:—R. C. Teece (University Medal for Classics), J. Parsons. Class II:—J. Galt, J. J. Walsh, Elizabeth J. Read, Jessie H. Liggins. Class III:—Fannie A. Marr, F. T. Perkins.

Greek—Class I:—R. C. Teece (University Medal for Classics), J. J. Walsh. Class II:—J. Galt. Class III:—F. T. Perkins.

French—Class I:—G. G. Nicholson, J. Parsons. Class II:—W. J. Curtis. Class III:—A. E. Page, T. N. Lee.

German—Class I:—G. G. Nicholson.

English—Class I:—G. G. Nicholson. Class III:—Ida L. Slack.

Mathematics—Class I:—D. T. Sawkins (University Medal), J. J. E. Durack, H. B. Mathews.

Logic and Mental Philosophy—Class I:—G. G. Nicholson (University Medal), Edith W. Davies, Ida L. Slack. Class II:—E. J. Withycombe, W. J. Curtis, T. M. Lafferty (3 *æq.*).

Class III:—Gertrude M. Clipsham, Annie E. Turner (2 *æq.*).

History—Class I:—R. C. Teece. Class II:—Elizabeth J. Read.

Geology and Palæontology—Class II:—T. N. Lee.

Physics—Class I:—J. J. E. Durack.

*Faculty of Law—LL.B. Examination.*

Class II:—G. W. Waddell, B.A.; D. S. Edwards, B.A.; W. J. Bloomfield, B.A.

*Faculty*

*Faculty of Medicine—Examination for M.B. and Ch.M.*

Class II:—D. Æ. D. MacMaster, B.A., B.Sc.; C. B. Blackburn, *æq.*, W. D. Cargill, F. W. A. Magarey, *æq.*

*Faculty of Science—B.Sc. Examination.*

Geology and Palæontology—Class I:—G. A. Waterhouse.  
Chemistry—Class I:—G. Harker.

*Department of Engineering—Civil Engineering.*

Civil Engineering, Materials and Structures, and Surveying—Class II:—W. R. Beaver, W. C. Mathison.

*Department of Mining and Metallurgy.*

Mining and Metallurgy—Class II:—R. L. Jack, J. F. Morris.

*Scholarships.*

9. The following Scholarships were awarded:—

*(a) At the Matriculation Examination.*

Bowman-Cameron Scholarship for General Proficiency—R. N. Teece, H. Wilshire, *prox. acc.*  
Cooper Scholarship, No. II, for Classics—R. N. Teece.\*  
Barker Scholarship, No. II, and Horner Exhibition for Mathematics—J. P. Tivey and O. U. Vonwiller, *æq.*, W. Smith, *prox. acc.*  
Lithgow Scholarship for French and German—H. Wilshire.  
Freemasons' Scholarship for General Proficiency amongst the sons of Freemasons—R. N. Teece.

*(b) At the First-year Examination in Arts.*

Cooper Scholarship, No. III, for Classics—F. A. Todd.

*(c) At the Second-year Examination in Arts.*

Cooper Scholarship, No. I, for Classics—R. N. Robson.  
Barker Scholarship, No. I, and Norbert Quirk Prize for Mathematics—H. M. Stephen, W. S. Boyd, *prox. acc.*  
Garton Scholarship, No. II, for French and German—Margaret A. Bailey.

*(d) At the B.A. Examination.*

• Frazer Scholarship for History—R. C. Teece.

*(e) At the Intermediate LL.B. Examination.*

G. Wigram Allen Scholarship for proficiency in the subjects of the examination—N. G. S. Pilcher, B.A.

*(f) At the First-year Examination in Medicine.*

Renwick Scholarship for General Proficiency—St. J. W. Dansey.

*(g) At the Third-year Examination in Medicine.*

John Harris Scholarship for Anatomy and Physiology—Mabel J. Graham and J. E. V. Barling, *æq.*

*(h) At the First-year Examination in Science.*

Levey Scholarship for Chemistry and Physics—W. S. Boyd and E. C. Heden, B.A., *æq.*  
George Allen Scholarship for Mathematics—H. S. Mort.

*(i) At the Second-year Examination in Science.*

Deas-Thomson Scholarship for Geology—L. C. Ball and S. R. Mort, *æq.*  
Deas-Thomson Scholarship for Physics—J. P. V. Madsen.

*Prize Compositions.*

10. The awards made for Prize Compositions were as follows:—

Wentworth Medal for an English Essay—Subject: "The Influence of Great Men in History."  
Prize for Graduates—H. S. Dettmann, B.A.; Prize for Undergraduates—N. J. Gough.

*First Classes at Annual Examinations.*

11. The following students were placed in the first class in Honours at the annual examinations other than the final examinations for degrees:—

*Faculty of Arts.*

First-year Examination:—Latin—F. A. Todd, G. N. Woodd, Elsie A. Mills (2 *æq.*), J. G. W. Hill, J. W. Ryan, Betha Paxton (3 *æq.*). Greek—F. A. Todd, G. N. Woodd. Junior French—Betha Paxton, Ina B. H. Armstrong, Selina E. Palmer, Annie Bruce.  
Second-year Examination:—English—Caroline M. Scrutton. Latin—R. N. Robson, J. H. F. Hill, *æq.*, I. Mutton. Greek—R. N. Robson, J. H. F. Hill. Senior French—N. J. Gough, Margaret A. Bailey, Mary H. Uther. Senior German—Margaret A. Bailey. Mathematics—H. M. Stephen, W. S. Boyd, G. A. Waterhouse (Engineering), J. P. V. Madsen (Engineering), R. W. Hawken (Engineering). Logic and Mental Philosophy—E. N. Merrington. History—R. N. Robson, Florence M. Rutherford, *æq.*, Caroline M. Scrutton, Catherine I. Fell, J. H. M. Nolan.

*Faculty of Medicine.*

First-year Examination:—Chemistry—St. J. W. Dansey. Physics—J. S. Davis, P. L. Weston (Science), W. S. Boyd (Engineering), St. J. W. Dansey, O. Latham, E. C. Heden (Science).  
Second-year Examination:—Anatomy and Physiology—Passed with distinction, A. Muscio, D. Wallace, B.A., *æq.*, E. C. G. Page. Organic Chemistry—Class I:—A. Muscio, E. C. G. Page.  
Third-year Examination:—Passed with distinction—Mabel J. Graham, J. E. V. Barling and A. H. Macintosh, *æq.*  
Fourth-year Examination:—Passed with distinction—W. F. Burfitt, B.A., B.Sc.

*Faculty*

\* R. N. Teece was unable to retain the Cooper Scholarship in consequence of being the holder of two other scholarships.

*Faculty of Science.*

First-year Examination:—Chemistry—J. M. Petrie, E. C. Heden, B.A. Mathematics—H. S. Mort.

*Department of Engineering.*

First-year Examination:—Applied Mechanics—Descriptive Geometry, and Drawing—A. Boyd, W. S. Boyd, C. F. de J. Grut. Chemistry (for Civil Engineers)—A. Boyd. Chemistry (for Mining Engineers)—E. C. Heden, B.A., J. M. Newman, W. S. Boyd. Mathematics—W. H. Gregson, B.A.

Second-year Examination:—Geology—L. C. Ball, L. K. Ward (Arts), S. R. Mort, W. Poole, G. Harker (Science). Civil Engineering, Applied Mechanics, and Surveying—J. P. V. Madsen. Physics—J. P. V. Madsen.

*Annual Prizes.*

12. Annual Prizes were awarded as follows:—

University Prize for Physiography—Marjorie K. Jarrett, W. Poole, *æq.*, *prox. acc.*, G. A. Buchanan. Professor MacCallum's Prizes for English Essays—First Year, Frances L. K. Adams, D. Wilson, *æq.*; Second Year, N. J. Gough; Third Year (English), G. G. Nicholson. Professor Anderson's Class Prizes for Logic and Mental Philosophy—Second Year, A. N. Merrington, Florence M. Rutherford, *prox. acc.*; Third Year, G. G. Nicholson. Professor Woods' Prize for History—Second Year, Florence M. Rutherford and R. N. Robson, *æq.* Professor Haswell's Prizes for Zoology (Class Examination)—F. M. Suckling, R. F. Woolnough, *prox. acc.*; Zoology (Laboratory Notes), W. C. Mansfield and S. A. Smith, *æq.* Dr. Dixon's Prize for Materia Medica and Therapeutics—Mabel J. Graham. Smith Prize for Physics—G. E. G. Jordan. Slade Prize for Practical Physics—P. L. Weston and R. C. Wilson, *æq.* Slade Prize for Chemistry—E. C. Heden, B.A., and J. M. Newman, *æq.* Professor David's Prizes for Geology—Second Year, L. C. Ball and L. J. Winton; Third Year, G. A. Waterhouse. Collie Prize for Botany—T. E. C. Higgins. Dr. Wilkinson's Prize for Pathology—W. F. Burfitt, B.A., B.Sc. Dr. Scot-Skirving's Prize for Class Examinations in Clinical Medicine—F. W. A. Magarey.

*Bursaries.*

13. The following bursaries were awarded, each consisting of a payment to the student of £50 per annum (or in the case of a half-bursary £25 per annum) for three years, together with exemption from the payment of lecture fees in the Faculty of Arts or that of pure Science:—

John Ewan Frazer Bursary.	Thomas Walker Bursary, No. IV.
Ernest Manson Frazer Bursary (one half).	Watt Exhibition.
Hunter-Baillie Bursary, No. II (one half).	

14. The number of students permitted to attend lectures without paying fees was 62, including 46 State bursars and holders of the University bursaries. The payments to bursars amounted to £782 10s., and to scholars £1,083. One ex-student of a State Training School attended at a reduced scale of fees.

*Public Examinations.*

15. The Junior Public Examination was held in the month of June, in Sydney, and at the following local centres:—

*New South Wales.*—Albury, Armidale, Bathurst, Bega, Bowral, Broken Hill, Bungendore, Camden, Casino, Cooma, Coonamble, Cootamundra, Cowra, Deniliquin, Dubbo, Eurobodalla, Glen Innes, Goulburn, Grafton, Grenfell, Gulgong, Hay, Inverell, West Kempsey, Kiama, Lismore, Lithgow, Liverpool, Maclean, West Maitland, Molong, Mount Victoria, Mudgee, Murrumburrah, Murwillumbah, Newcastle, Nowra, Orange, Parramatta, Pymble, Queanbeyan, Richmond, Scone, Singleton, Tamworth, Tumut, Wagga Wagga, Windsor, Wingham, Wollongong, Young.

*Queensland.*—Brisbane, Ipswich, Mackay, Maryborough, Rockhampton, Toowoomba, Townsville. The number of candidates was 1,091, and of these 752 gained certificates.

16. The Senior Public Examination was held in November, concurrently with an examination for Matriculation Honours and Scholarships, in Sydney, and at the following local centres:—

*New South Wales.*—Armidale, Bathurst, Goulburn, Maitland, Parramatta, Rylstone, Wollongong, and Young.

*Queensland.*—Brisbane, Ipswich, Maryborough, Rockhampton, Townsville.

The number of candidates was 123, and of these 106 were successful.

17. The prizes for general proficiency in the Senior and Junior Examinations were awarded as follows:—

*Seniors.*

John West Medal and Grahame Prize Medal—Edward Montagu Wellisch (Model Public School, Fort Street), Reginald Claude Roe (Brisbane Boys' Grammar School), *æq.*  
Fairfax Prize for Female Candidates—Lilian Mary Armitage (Maryborough Girls' Grammar School).

*Juniors.*

University Prize for Boys—Percival Halse Rogers (Newington College), James Farish Stephen (Sydney Grammar School), and John Paterson (Boys' Public High School, Sydney), 3 *æq.*  
Fairfax Prize for General Proficiency amongst Junior Girls—Jessie Skillman (Girls' Public High School, Sydney).

18. Three Law Examinations were held similar to that prescribed for Matriculation for candidates for Articles of Clerkship with Solicitors. At these there were 32 candidates, and 22 passed.

*Meetings*

*Meetings of Senate.*

19. The Senate held eleven ordinary meetings, and in addition the annual commemoration, and two meetings of the Conjoint Board, consisting of the Senate of the University and the Board of Directors of the Prince Alfred Hospital.

The attendances of the various Fellows were as follows:—

MacLaurin, the Hon. H. N., M.A., LL.D., M.D., M.L.C., Chancellor...	14
Backhouse, His Honor Judge, M.A., Vice-Chancellor ... ..	14
Anderson, H. C. L., Esq., M.A. ... ..	13
Barton, the Hon. E., M.A. ... ..	3
Butler, Professor, B.A. ... ..	12
Cobbett, Professor, M.A., D.C.L. ... ..	11
Cullen, the Hon. W. P., M.A., LL.D. ... ..	12
* Jones, P. Sydney, Esq., M.D. ... ..	1
Knox, Edward W., Esq. ... ..	13
Liversidge, Professor, M.A., LL.D., F.R.S. ... ..	10
MacCallum, Professor, M.A. ... ..	14
O'Connor, the Hon. R. E., M.A. ... ..	8
Oliver, Alexander, Esq., M.A. ... ..	7
Renwick, the Hon. Sir Arthur, B.A., M.D. ... ..	13
Rogers, F. E., His Honor Judge, M.A., LL.B. ... ..	5
Russell, H. C., Esq., B.A., F.R.S., C.M.G. ... ..	12
Simpson, His Honor Mr. Justice A. H., M.A. ... ..	11
Stephen, C. B., Esq., M.A. ... ..	8
Stuart, Professor T. P. Anderson, M.A. ... ..	11
Teece, Richard, Esq., F.I.A. ... ..	10

\* Absent on leave.

20. At various meetings of Sub-Committees of the Senate, for finance, by-laws, and other matters, held during the year, the attendance of members was as follows:—The Chancellor (the Hon. Dr. MacLaurin), 19; the Vice-Chancellor (His Honor Judge Backhouse), 20; the Hon. Dr. Cullen, 7; H. C. L. Anderson, Esq., 3; Edward W. Knox, Esq., 7; the Hon. Sir Arthur Renwick, 4; Richard Teece, Esq., 8.

*Vice-Chancellor.*

21. The annual election to the office of Vice-Chancellor in the month of April resulted in the re-election of His Honor Judge Alfred Paxton Backhouse, M.A.

*Leave of Absence.*

22. In February further leave of absence from the meetings of the Senate for a period of twelve months was granted to Dr. P. Sydney Jones, who had not then returned to Sydney, but who subsequently returned in time to attend the December meeting.

*Staff Appointments, &c.*

23. The vacancy in the Chair of Physics caused by the retirement of Professor Threlfall, referred to in the last annual report, was filled in the month of April by the appointment of Mr. James Arthur Pollock, B.E., B.Sc. The committee of selection in London, consisting of the Agent-General for New South Wales and a number of other gentlemen, including several distinguished Professors of Physics in the United Kingdom, reported that twenty applications had been received for the appointment, and, in accordance with the request of the Senate, they selected and forwarded the names of three candidates whom they considered most suitable. The name of Mr. Pollock was included in the three selected, and the committee reported that they considered that the scientific claims of Mr. Pollock were at least as strong as those of either of the other two selected candidates, and they recommended him for appointment.

Professor Pollock graduated as Bachelor of Engineering in the Royal University, Ireland, and subsequently passed through the Faculty of Science in the University of Sydney, gaining the University medal for proficiency in Physics at his graduation as B.Sc. He was then appointed Demonstrator in Physics, which position he held for a period of eight years, and he also acted as Professor Threlfall's *locum tenens* during his leave of absence.

24. The Lectureship in Metallurgy became vacant in the month of February by the resignation of James Taylor, Esq., B.Sc., and the vacancy was filled in the month of April by the appointment of Basil Turner, Esq., A.R.S.M.

25. In the month of June, Miss J. F. Russell, M.A., resigned the office of Tutor to the Women Students, and the vacancy was temporarily filled until the end of the year by the appointment of Miss Florence Martin. Miss Isabel M. Fidler, B.A., has been appointed to the position permanently from the beginning of the academic year of 1900.

26. A vacancy was created in the position of Lecturer in Clinical Surgery by the death of Dr. J. F. MacAllister, and this was filled by the appointment of Dr. H. V. Crichtley Hinder, who held the office of Surgical Tutor, but resigned it on receiving the above-mentioned appointment. Dr. L. E. F. Neill, B.A., was appointed to the office of Surgical Tutor.

27. Mr. Harrie Cox was appointed to the position of Junior Demonstrator in Anatomy for the year 1899.

28. In the month of June a communication was received from Professor Walter Scott, M.A., Professor of Greek, stating that he felt himself compelled, on account of continued ill-health, to tender the resignation of his Chair; but the Senate, feeling that his resignation would be a serious loss to the University, suggested to him to substitute for it an application for leave of absence, in the hope that his health might be restored and that he would not find it necessary to completely sever his connection with the University. Professor Scott accepted this suggestion, and he has now been granted leave of absence without salary for the year 1900. In order to discharge the duties of his Chair, Basil de Selincourt, Esq., B.A., of New College, Oxford, has been appointed Acting Professor of Greek for the year, this gentleman having been strongly recommended for the position by Dr. Caird, the Master of Balliol College, Oxford, and by other persons of authority in that University.

29. The position of Auditor to the University, which was rendered vacant by the death of John Campbell Dibbs, Esq., was filled by the appointment of David Fell, Esq., for a period of two years.

30. Leave of absence for the year 1900 has been granted to Professor Theodore T. Gurney, M.A., Professor of Mathematics, after twenty-two years' service. The duties of the Chair of Mathematics will be carried out by Professor McAulay, of the University of Hobart, who has been appointed Acting Professor of Mathematics for the period of Professor Gurney's absence.

31. Leave has also been granted for Lent and Trinity Terms of 1900 to Professor W. H. Warren, Professor of Engineering. During his absence Professor Warren proposes to visit a number of Engineering laboratories, and to specially examine the engineering exhibits at the Paris Exhibition, with a view to improving the position and efficiency of the Engineering School in Sydney. The Engineering Department will be under the charge of S. H. Barraclough, Esq., M.M.E., the Assistant Lecturer in Mechanical Engineering, who has been appointed Acting Professor of Engineering for the two Terms. He will deliver the Lectures on Applied Mechanics and Materials and Structures, and will be assisted by J. P. V. Madsen, Esq., as Junior Demonstrator. The Lectures upon Bridge Design and Civil Engineering will be delivered by J. J. C. Bradfield, Esq., M.A., and those upon Railway Construction by C. O. Burge, Esq.

32. Leave of absence for the same period has been granted to Professor Francis Anderson, M.A., Professor of Logic and Mental Philosophy. The duties of his Chair will be performed by G. C. Henderson, Esq., M.A., who has been appointed Acting Professor for the period of Professor Anderson's absence. Acting Professor Henderson is a distinguished Graduate of this University, and also of the University of Oxford, where, after completing his course, he was immediately placed in the list of University Extension Lecturers of the first class.

#### *University Extension.*

33. The University Extension Board for the year 1899 reports a revival of interest in University Extension Lectures. Courses of lectures were delivered at Gundagai, Hillgrove, Croydon, the Railway Institute, Nowra, Brisbane, and Ipswich (Q.) The average attendance was 61, and the largest average attendance was 180 at the Croydon centre. The Board acknowledges the assistance rendered to it by the Chief Librarian of the Public Library, who has sent boxes of books of a suitable character to those country centres where courses of lectures have been delivered. The annual election of the University Extension Board for the year 1900 took place in the month of December, and resulted in the following appointments:—Members of the Senate: His Honor Judge Backhouse, M.A., H. C. L. Anderson, Esq., M.A., the Hon. W. P. Cullen, M.A., LL.D., M.L.C., Richard Teece, Esq. Members of the Teaching Staff: Professor MacCallum, M.A., Professor David, B.A., Professor Wilson, M.B., Ch.M., Professor G. Arnold Wood, M.A. Other members: Rev. James Hill, M.A., H. Goodhere, Esq., G. C. Henderson, Esq., M.A., F. G. Robinson, Esq., G. C. Henderson, Esq., M.A., was appointed Hon. Secretary of the Board in lieu of A. W. Jose, Esq., who resigned the appointment early in the year.

#### *Benefactions.*

34. The Senate has to acknowledge the following benefactions:—

1. A long collection of Egyptian Antiquities, presented to the Nicholson Museum of Antiquities by the Egypt Exploration Fund.
2. Valuable donations of books from Sir Charles Nicholson, Bart., D.C.L., for the University Library.

#### *Science Research Scholarships.*

35. Her Majesty's Commissioners to the Exhibition of 1851 have granted the nomination to a Science Research Scholarship of the value of £150 per annum for the year 1900 under the usual conditions. This concession is made in lieu of the nomination which was offered for the year 1899, when no suitable candidate was forthcoming.

#### *Roberts' Bequest.*

36. In 1888 William Roberts, Esq., of Penrith, by his will, bequeathed to the University of Sydney a sum of £1,500 for the foundation of a bursary, conditionally upon the sale of certain land, which was to be sold by his executors as soon as it would bring a fixed price per acre, which he named in his will. As there appeared to be little probability of this price being obtained by the executors, the permission of the Court of Equity was last year obtained to an arrangement being made under which the land became the property of the University. As the land is not at present productive, it has not yet been found possible to found the bursary which was contemplated by Mr. Roberts.

#### *Women's College.*

37. The Hon. Sir Arthur Renwick, M.A., M.D., and the Hon. W. P. Cullen, M.A., LL.D., M.L.C., have been reappointed *ex officio* members of the Women's College Council for a period of two years from August, 1899.

#### *Amended By-laws.*

38. Appended to this report are amended By-laws which have been adopted by the Senate during the year.

In the Faculty of Arts, Chap. 14, section 14, of the By-laws, has been amended in such a way as to allow greater freedom of choice in subjects of study to those students who have shown great proficiency in modern literature.

The By-laws relating to the Department of Engineering have been revised and modified.

#### *Accounts.*

39. The Annual Statement of Receipts and Expenditure and statements showing the position of the various Trust Funds of the University at the 31st December, duly certified by the Auditor, David Fell, Esq., are appended to this report.

H. E. BARFF,  
Registrar.

## LIBRARY WITHIN THE UNIVERSITY GROUNDS.

### REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of erecting a Library within the University grounds in connection with the University of Sydney," have, after due inquiry, resolved that it is expedient the proposed library be erected, at a cost of £67,500; and, in accordance with the provisions of sub-section (iv), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

#### REASONS FOR THE PROPOSAL.

1. In 1885, the sum of £30,000 was bequeathed to the University of Sydney by the late Mr. Thomas Fisher for the establishing and maintaining of a library for the use of the University. At that time it was thought by the Senate, the Committee are informed, that if a capital sum of £10,000 were retained from the Fisher fund it would provide an annual income of £500 for the purchase of books; and it was determined to apply the sum of £20,000 and its accumulations to the erection of a building to be called the Fisher Library, the Government to be requested to provide an equal sum for annexes to the library, which should comprise a reading-room, common rooms for students, a room for the Nicholson Museum, additional lecture rooms, and a refectory for students. The reduction in the rate of interest of late years has, however, rendered it necessary to retain a larger capital amount for purchasing books, and it is now proposed to retain the whole of the Fisher fund—which amounts, with accumulations, to £40,000—to provide an annual endowment for defraying all the expenses of the library, including salaries of librarians, and the purchase and binding of books,—a plan which makes it necessary to find provision for the erection of a suitable library building, and the Government and Parliament are now asked to "show their respect for the interest of learning by undertaking the charge of erecting the necessary building, and so adding to the architectural beauty of the city."

#### THE PROPOSED BUILDING.

2. The proposed new building has been placed before the Committee in two parts, one to be erected immediately, and the other in the future, when requirements justify it. The portion to be erected at once, which, it is considered, will be sufficient for many years, is shown on the site plan in light-red colour, and the postponed

postponed portion in dark-red. It is proposed that the new building shall be erected along the southern and western side of the University quadrangle, as contemplated in the original plans of the University, a site at present occupied by temporary buildings, partly brick and partly weatherboard, which are used as common rooms by the women students. The library building, when complete, will consist of :—

- (1.) A large reading-room, with seating accommodation for 250 persons.
- (2.) A store-room for books, or book-stack erected upon the most modern principles, and sufficient to accommodate about 250,000 volumes.
- (3.) A room for serial publications.
- (3A.) A room for transactions of learned societies.
- (4.) A room for manuscripts and rare books.
- (5.) A room for books on Australia's early history.
- (6.) A librarian's room, together with rooms for cataloguing, bookbinding, and unpacking.

In addition to which there will be underneath the reading-room accommodation for the Nicholson Museum of Antiquities, and two or three rooms for the accommodation of women students, in place of the buildings which, when the erection of the second portion of the library building has been determined, will have to be removed; and, in the basement of the building, rooms for a caretaker, as well as a lunch-room for students, and some rooms for other purposes.

The portion of the building not to be erected at present will contain the rooms for periodicals, transactions of learned societies, Australian books, and books of a rare character, the librarian's room, a room for the Curator of the Nicholson Museum, and the rooms for the women students. In this portion, also, there will be the main staircase leading to the library.

The whole of the construction will be on fireproof principles.

#### ESTIMATED TOTAL COST.

3. The estimated total cost of the building as proposed at present is £67,500, the details being as follow :—

Library, reading-room, block (three storeys) ... ..	£53,000
Book-stack ... ..	8,500
Book-stack fittings ... ..	5,300
Lavatories ... ..	700
	<hr/>
	£67,500

For the portion of the building to be erected later on, including £3,750 for cloister and external staircase, the estimated cost is ... .. £29,400

The building having been designed so that eventually it shall form a portion of the quadrangular block of which the existing building, including the great hall, will also be a part, the style of architecture of the existing portion has been preserved in the proposed additions.

#### THE COMMITTEE'S INQUIRY.

4. The Committee have made careful inquiry respecting the proposal before them, though they have not examined many witnesses. The Government Architect, the Registrar and the Chancellor of the University, the Principal Librarian of the Public Library of New South Wales, and the Superintendent of Technical Education at the Technical College, have given evidence, and the Committee have visited the University and inspected the present arrangements in connection with the University Library, and the site of the proposed new building. Advertisements and paragraphs were inserted in the newspapers, inviting anyone desirous of being examined in the inquiry to attend for that purpose.

THE

### THE PRESENT LIBRARY ARRANGEMENTS.

5. Under the present arrangements in connection with the University Library, the stacking of the books is very unsatisfactory, and the accommodation for readers extremely limited. The library contains, at present, about 52,000 volumes, stacked on ordinary wooden shelving, with no means available for keeping books of the same class together, and much too little space between the different stacks of books. Some of the valuable books have to be kept for safety in the Registrar's office, where they take up a great deal of the room required for other purposes, and many of the books on scientific subjects are separated from the main collection and placed in the laboratories to which they refer, no other method of dealing with them being possible. The reading-room holds about sixty readers, all the available space being filled with chairs and desks, and during term time it is so full in the morning that students are often kept waiting until a seat is vacated. Nearly 600 students attend the University lectures, and the library is also consulted by the graduates, and by persons not members of the University having admission to the library under the regulations.

### THE EVIDENCE.

6. According to the evidence given by the authorities of the University, it is impossible to find the money for the Library in any way other than that proposed, and the new building is absolutely indispensable. Since 1892, the Government grants have been reduced, so that the income of the University has been diminished from £23,300 to £12,000, and it has been only with the most rigid economy that the institution has been carried on. With regard to the library, it is pointed out that it contains books which, in the main, are not to be found in other libraries—such, for instance, as the most recent scientific and philosophical journals, journals that deal with literature from a scientific standpoint, books on philology, &c. At the same time, the Committee are assured, there is no extravagant expenditure. The books obtained are those regarded as absolutely necessary for the conduct of the various classes—useful to the professors and to the students, and also to any person really desirous of seriously studying any matter. In the course of the inquiry the question was raised as to whether a division of the books and publications among the different professors, in their rooms, would not be a more economical and generally advantageous plan than having everything in one central library. It is far better, it was explained, to have everything in one central library, because there the books are more accessible, one man is responsible for them, and the necessity for obtaining duplicates or triplicates—certain books being required by more than one department—is avoided. A distribution of the books among the professors would mean several librarians, separate accommodation, and divided authority. It was also suggested to the Chancellor that as a number of buildings connected with the scientific classes of the University had been erected cheaply, perhaps a somewhat similar building might do for the library; but in answer to this, it was urged (1) that from a public point of view it was necessary to proceed as far as possible in keeping with the design of the present main building; and (2) that the scientific buildings were erected in the nature of a makeshift for science classes that were never expected to grow to their present size and importance, and that now have outgrown their accommodation, except in the case of the Medical School, which was erected at the Government expense, is a great ornament to the grounds, and has been found exceedingly satisfactory. The Library building, it is represented, is not only wanted—the University is crippled without it.

### ADVANTAGES TO THE PUBLIC FROM THE LIBRARY AND THE UNIVERSITY.

7. In considering a matter of this kind, it may be asked what advantage will the public derive from the new building—is so large an expenditure as that proposed justifiable from a public point of view? The Committee gave attention to this, and an explanation of the manner in which the public will be benefited by the construction of the Library building will be found in the evidence of the Chancellor. The library will not be open to the public in the way the Public Library of New South Wales is—it could not be so under the circumstances; but it will

will be, as it is now, open to any *bonâ fide* student, or searcher after information which the books or journals may contain. The regulation on the subject is as follows :—

The Chancellor or Vice-Chancellor may grant an order of admission for the purpose of study and research to any person who shall produce to him a recommendation from any Fellow of the Senate or Professor, or any member of the University who has been admitted to the degree of Master of Arts, or any higher degree, stating that the person recommended is well known to him, and is a fit and proper person to obtain such order.

There is not the slightest difficulty in the way of anyone getting access to the library, the Committee are assured, if the person applying is properly accredited. No application has ever been refused, and when a person applies he is given a "chair and a table, where he can sit and study, and there is absolute quiet, and he is made as comfortable as he would be in the British Museum." The University, in respect of the use of its library by the public, is in fact, it is pointed out, more liberal than the British Museum, where a person desiring admission to the library requires a recommendation from two householders before he can obtain a reading ticket. The University Library has been consulted from time to time by officers in the Government service, by members of the learned professions, and by persons engaged in scientific research. No one wishing to get access to it has found any difficulty in obtaining what he wanted, and under certain conditions a person who is not a member of the University is allowed to take a book from the library for use outside. It is the desire of the Chancellor, he states in his evidence, not merely to see the students of the University use the library, but also to make every person in Sydney, engaged in any special subject of study, welcome, so that he may go there and increase his opportunities of learning.

As to the general character of the University, the Chancellor describes the institution as a poor man's University, where scarcely any gentlemen's sons go to merely get an educational polish, and where most of the students are those who go there to obtain a course of higher education with a view to making their living. The Chancellor holds that the University exists for the benefit of the whole Colony, every young man and young woman with a desire for higher culture having the opportunity to obtain it, poor students, according to the evidence, receiving special consideration. There has been no case, the Committee are informed, of a talented student wanting to attend the University being rejected because of his poverty. Every year there is a considerable proportion of students who either pay no fees or pay only half fees, and if a student's means are such that he cannot afford to live in Sydney, he is given a bursary; that is, he receives from the University a sum of money to enable him to live, and he gets his education gratis.

During recent years, a notable development has taken place in the Faculty of Science. Every year the number of students graduating in this department increases, with the result that the University is annually supplying numbers of young men with a scientific equipment, which promises to be of the highest value to the mining, agricultural, and commercial interests.

#### CONCLUSION ARRIVED AT BY THE COMMITTEE.

8. In view of all the circumstances of the case, the Committee are of opinion that the Library building as proposed, to cost £67,500, should be erected. The cost seems large, but adequate accommodation for the books now in the University, and for those which, under the ordinary procedure, will be purchased from time to time, must be provided; and, though a cheaper building than that proposed might be put up, it would be, the Committee consider, a matter of public regret if, for the sake of a few thousand pounds, the architecture of the present main building, which is admittedly one of the finest specimens of its style in existence, should be departed from. The evidence of the Chancellor of the University shows that the University is not a class institution, but is one in which the general public are deeply interested, and from which, directly and indirectly, they reap great benefit. There can be no question that a library building is urgently required, and if it be considered right to erect one consistent with the style of the present main building there are only two methods of finding the money; and in either case it must come from

from the Government, for the University authorities cannot supply it. One method is that now proposed ; the other is that the University authorities should share in the expense of erecting the building by applying the Fisher fund to that purpose, the Government reimbursing them by increasing the annual Parliamentary Vote. The first method the Committee regard as the better. The building, as designed, will accommodate the Nicholson Museum, and also provide some much needed additional rooms.

RESOLUTION PASSED.

9. The resolution passed by the Committee is contained in the following extract from the Committee's Minutes of Proceedings :—

Dr. Garran moved,—“That, in the opinion of the Committee, it is expedient the proposed erection of a Library within the University grounds, to cost £67,500, as referred to the Committee by the Legislative Assembly, be carried out.”

The motion was seconded by Mr. Watson, and passed.

W. T. DICK,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 4 December, 1900.

---

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### PROPOSED LIBRARY WITHIN THE UNIVERSITY GROUNDS.

THURSDAY, 22 NOVEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.

The Hon. ANDREW GARRAN, LL.D.

The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

The Committee proceeded to consider the expediency of erecting a Library within the University Grounds, in connection with the University of Sydney.

Walter Liberty Vernon, Government Architect, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Have you an official description of the scheme to place before the Committee? Yes; I W.L. Vernon. have the following very short description, which I will read to the Committee:—

IN submitting drawings (as per Schedule A) for the proposed "Fisher" Library buildings, at the University of Sydney, 22 Nov., 1900. for the consideration of the Parliamentary Standing Committee on Public Works, I would draw attention to the following extract from the Chancellor's Commemoration Address in April, 1899:—"It will be remembered that, in 1885, the sum of £30,000 was bequeathed to the University by the late Mr. Thomas Fisher, for the establishing and maintaining of a library for the use of the University. In 1888 the Senate determined to apply the sum of £20,000, and its accumulations, to the erection of a building to be called the "Fisher Library," and to request the Government to provide an equal sum for annexes to the library, comprising reading-rooms, common rooms for students, a room for the "Nicholson" Museum, additional lecture rooms, and a refectory for students. The remainder of the principal, amounting to about £10,000, was invested as a perpetual endowment fund, for keeping up and adding to the collection of books. The growth of our collection has been rapid. In 1886 the catalogue represented nearly 18,000 volumes; at present there are about 50,000. It has been found, however, to be quite impossible, with the limited accommodation at our command, to classify and arrange the books in a proper manner, and the limit of shelf accommodation has now been reached. Lecture rooms have been made use of for this purpose, and our collection is now scattered over various parts of the building, causing great inconvenience to the administration, and interfering sadly with the proper use of the library, and sometimes with the arrangements for lectures. Moreover, the reading-room, which has sitting accommodation for only sixty readers, is quite inadequate for the requirements of over 500 students, almost all of whom have frequent occasion to use the library for works of reference. The necessity for a new building is imperative. We propose that it should occupy the south side and about half of the west side of the quadrangle, thus taking a step towards the completion of the quadrangle, which has always been the idea of the main University building. By this extension we shall be able to provide ample accommodation for our books for many years to come, together with rooms for special books, reading-rooms, common rooms, and a room for the Nicholson Museum, which contains the finest collection of Egyptian and classical antiquities to be found south of the Line. And now comes in the question of ways and means. The careful nursing of the Senate has raised the corpus of the Fisher estate to about £40,000, the income of which would form a fairly liberal endowment for the purchase of books, librarian's salary, and the other incidental expenses of a library. If we bear in mind that the Parliamentary vote for the maintenance of the Public Library for the year 1898-99 is £7,545, of which no less a sum than £2,000 is devoted to the purchase of books, it will be obvious that the estimate of £1,200 or £1,400 for the maintenance of a library worthy of the University is by no means high. It is true that we may spend our capital in erecting a building of an architectural style in keeping with the other buildings of the University; but, if so, how is the library to be kept up? We shall find ourselves with a handsome building, but without the funds necessary to fill up our present deficiencies, and to stock our shelves with the constant accessions of valuable books in literature and science necessary to keep the University abreast of the age. What we now suggest is, that the Government and Parliament, following the laudable example of custodians of the public purse in former years, should show their respect for the interests of learning, by undertaking the charge of erecting the necessary building, and so add to the architectural beauties of the city. The Senate, on the part of the University, would undertake the maintenance of the library in all respects, providing for the purchase of books, for proper administration, and for the salaries of officers. In this way we should, in a very few years, be in possession of a collection worthy of the University, equipped with the most modern requirements, and offering a convenient field of study, not merely to our own students and graduates, but also, under section 17 of our Regulations, to any other person who may take the proper steps to be admitted to the privilege of its use."

This extract, I think, sufficiently details the history of this bequest, and explains the inadequacy of the present accommodation and the urgency of erecting a new library, as determined by the Senate. I have prepared plans for new buildings, with the following accommodation:—

<i>Library.</i>	
Library reading-room (to seat 250 students).....	122 ft. x 50 ft.
Book-stack (seven storeys high, and capable of extension) .....	42 ft. x 40 ft.
Cataloguing-room .....	40 ft. x 20 ft.
Bookbinding-room .....	22 ft. x 20 ft.
Unpacking-room .....	17 ft. 3 in. x 14 ft. 9 in.
Room for transactions of learned societies .....	27 ft. x 14 ft.
Room for periodicals .....	40 ft. x 24 ft. 6 in.
Room for Australian books .....	40 ft. x 22 ft. 9 in.
Room for rare books .....	40 ft. x 32 ft. 6 in.
Librarian's room .....	21 ft. 9 in. x 20 ft.

W. L. Vernon.  
22 Nov., 1900.

<i>Nicholson Museum.</i>	
Museum.....	75 ft. 6 in. x 50 ft.
Greek and Roman antiquities .....	45 ft. x 23 ft. 6 in.
Mediæval antiquities .....	45 ft. x 23 ft. 6 in.
Curator's room.....	21 ft. 9 in. x 13 ft.
<i>Ladies' Rooms.</i>	
Common room .....	40 ft. x 32 ft. 6 in.
Tea-room .....	22 ft. x 21 ft.
Reading-room .....	24 ft. x 21 ft.
Tutor's room .....	14 ft. 3 in. x 12 ft. 6 in.
Lavatories, W.Cs., &c.	
<i>Generally.</i>	
Students' dining-hall .....	75 ft. 6 in. x 24 ft. 6 in.
Caretaker's quarters .....	28 ft. 6 in. x 24 ft. 6 in.

The library reading-room has been arranged with large windows facing south, to be thoroughly well lighted with an even diffused light. It is shown with an open timber roof, 20 feet 9 inches from floor to the wall-plate, and 34 feet to the flat portion half-way up roof. A panelled dado, about 7 feet high, will be fixed round the walls, and, if thought desirable, shelves for books of reference can be arranged below window-sill level, to carry about 7,000 volumes.

In order to provide for the ventilation of the room, a flèche has been designed on the roof, to contain the necessary exhaust apparatus. Readers will be served with books from two counters, each 11 feet long, by attendants in the cataloguing-room, where the general administration of the library will be carried on; it is connected by a lift and staircase, with the unpacking and bookbinding-rooms on the ground floor, and opens direct into the book-stack on its middle storey, *i.e.*, with three storeys above and three below, the entrance being protected with a fireproof door.

The book-stack is a special feature in the design, and is in accordance with the latest developments of library-planning. It is seven storeys in height, and is capable of extension at the northern end. At present it is intended to include only 42 feet in length to carry about 250,000 volumes; but another 14 feet is drawn on the plan, so as to show how future extension can be effected. The outside shell will be of stone to harmonise with the rest of the building, and alternative designs are shown, one with a window at the end of each range on each storey, and the other, with windows placed without reference to the floor levels of the different storeys. The first is undoubtedly the best constructionally and for lighting purposes, and should be carried out on the façade facing the quadrangle; but for that facing west, the window area towards the hot afternoon sun would, perhaps, be excessive, and therefore the second arrangement is recommended.

The whole of the construction and fittings of this stack are to be fire-resisting, and the system is shown in detail on drawing No. 9. Each storey is planned with a central passage, with ranges 17 feet long on each side, and served with an iron staircase and book lift at the library end. The ranges are all of iron, and are divided into six compartments with seven shelves, 11 inches wide, on each side, and thus every book in each range is within easy reach of the attendant without the aid of a ladder or steps. Each range contains 245 feet lineal of shelving, and calculating at the usual rate of 8½ volumes per foot, will carry about 2,080 volumes. Thus each storey will carry about 35,500 volumes, or in all seven storeys 248,500 volumes. (Every additional set of two ranges, seven storeys high, planned on the northern end, will carry 29,120 volumes.)

Thorough ventilation is obtained by a space of 5 inches being left open in the deck along the front of each book range which, besides aiding the circulation of air, helps to diffuse the light, and affords communication between decks.

The shelves themselves are fully perforated, being constructed of inverted "U" section of rolled steel, all strongly framed together. The whole of the shelves and partitions will be subjected to the Bower-Barff treatment, which permanently protects them from rust or corrosion in contact with the books. Thus the danger of lodgment of dust, and the harbouring of silver-fish, and other enemies to books, will be minimised.

The other rooms in connection with the library are not included in the present scheme, but are shown in the proposed wing to connect the library with the main building. The Librarian's room is made sufficiently large to accommodate meetings of the Library Trust.

On the ground floor, the Nicholson Museum has been planned immediately below the Library reading-room, and the space divided into three spacious courts 17 feet high.

In the suggested connecting wing is the entrance hall and main staircase, with porter's, cloak-rooms, &c.; and here, also, rooms are arranged for the lady students and candidates for examinations, with a separate lavatory and w.c. block. In the angle of the quadrangle, adjoining these ladies' rooms, is a staircase leading up to the mathematical lecture-rooms in existing building. As the ground level falls considerably at this portion of the site, a basement floor has been arranged 12 feet high, in which the caretaker's quarters and a dining-hall for students are located: the caretaker's kitchen being large enough to serve the dining-hall, which will be approached by a staircase leading down from quadrangle. Outside the building, and on level of this basement storey, is a small block connected to main building by an open covered way, and containing lavatories, urinals, w.c's, &c., for male students.

As can be seen from the site-plan, the buildings have been arranged so as, eventually, to be part of the quadrangular block, of which the existing building and great hall, &c., will also form part,—the style of architecture of the existing portion being preserved in the proposed additions: special care has been taken to emphasise the reading-room and museum on the elevations, so that its purpose may be recognised from the exterior. A feature has also been made of a balcony to shield the west-end of the reading-room and museum from the glaring afternoon sun. The whole of the construction throughout will be on fireproof principles.

*Cost.*

The estimated cost of the buildings proposed to be erected immediately, is, £67,500, viz. :—	
Library reading-room block (three storeys) .....	£53,000
Book-stack .....	8,500
Book-stack fittings .....	5,300
Lavatories .....	700

*Schedule "A."* £67,500

1. Site plan .....	16 feet to 1 inch.
2. Plan of basement .....	8 " " 1 "
3. " ground floor .....	8 " " 1 "
4. " first floor .....	8 " " 1 "
5. Geometrical elevation of southern façade.....	8 " " 1 "
6. " " northern façade .....	8 " " 1 "
7. " " western façade and section through library.....	8 " " 1 "
8. Perspective drawing of library exterior.	
9. Detail of fittings to book-stack .....	2 " " 1 "

2. *Dr. Garraan.*] We will begin with the site plan; the part coloured sepia is the existing building I suppose? Yes.
3. On the side adjoining that you have two portions coloured red,—one dark and the other light? Yes.
4. What is the dark-red? The dark-red is a connecting portion which is not included in the present immediate scheme.
5. You are going to leave a gap there for the present? Yes. There are some temporary buildings in the gap which are used by ladies as a common room for undergraduates, and we propose to leave them for the present.
6. Then the light-red is the only portion we are concerned with? Yes.
7. What do you intend to do with the blue? That is a continuation of the quadrangle,—to carry out in some future years the original intention as regards the first portion of the building.
8. That also is left over for future consideration? Yes.
- 9.

9. The first portion, coloured red, seems exactly the same in appearance as the present great hall;—is it W.L. Vernon intended to be so? That is by mere accident; but it is so.
10. It was not architecturally intended for that purpose? Well, nature made the place one in which a bold architectural treatment should be given to the building. 22 Nov., 1900.
11. Did you work out the plan of that library from within—that is, to meet the necessities of the library, and it incidentally matched the other; or did you begin with a design to reproduce, and then fit the library into it? The principal object was to find the accommodation required, and we began with the internal dimensions; but we also knew that that was the spot originally intended, and most suitable for the library itself.
12. It will, in fact, really be a bolder building at that corner than at the other? I think so. The perspective drawings show what it will be.
13. Will there be any covered way connecting this library with the existing portion, *pro tem*? That is such a small matter that it has not been considered; but it could easily be done. It is intended, eventually, to form a cloister entirely round the quadrangle, and the estimate includes that portion immediately adjoining the library itself. It is shown upon the drawings in several positions.
14. Is the whole length of the new corner you propose to build with its main frontage to the south, to be devoted to the library proper—that is, for the custody of books, and as the reading-room? The library, itself, takes the whole length on the first floor. It measures 122 feet x 50 feet, giving sitting accommodation for 250 students at one time.
15. What will be the weight of books that you will have to carry on that floor? The books are not to be stacked on the library floor. The books are to be stacked on what is called the "book-stack." That is the annexe leading off at right angles from the library itself.
16. Where are the books themselves to be located? According to the plan, the books are to be in the annexe which is called the "book-stack," leading at right angles from the library itself. The books are not to be stacked in the reading-room.
17. These book-stacks will be ranged end-on to the walls? Yes.
18. So as to make so many bays between? Yes.
19. Not ranged around the walls? No.
20. That gives the largest quantity of frontage to the shelves? Quite so; and it gives perfect access too.
21. These book-stacks will be about 6 feet in height, I suppose? There are 7 feet from floor to floor.
22. And how many ranges have you? Seven storeys in height. They are shown on the section.
23. I suppose you will put the existing library into this library? Yes.
24. And also the Stenhouse library? Mr. Barff can tell you more about that. We are providing for 240,000 volumes.
25. Taking the rest of the building—what is that to be devoted to? On the ground-floor, the space under the library itself, is to be occupied by the Nicholson Museum, with its various adjuncts;—the book-stack of course running from top to bottom is necessarily on the same floor, but there is no connection between the two. There is an area on the ground-floor under the Librarian's cataloguing-room above, which is to be devoted to book-binding and other necessary work in connection with the book-stacks.
26. And that library part is open from floor to roof, inside? Yes.
27. One lofty building? Yes, it is full of floors; but they are skeleton floors.
28. Where is the common room for reading? It is in the portion not proposed to be built yet.
29. But I mean the reading-room to which students will take books to read? I have taken advantage of the fall of the ground, which is very rapid; it is necessary to put in a basement, and we are making use of that for this large common dining-room for the use of students.
30. Is it not inconvenient for the reading-room to be on a different floor from the room where you get your book;—you have to go up and down stairs? Oh, no. The reading-room of the library is on the first-floor, and the cataloguing-room is on the same level, and the Librarian and his assistants obtain their book out of the book-stack either from above or from below by means of a lift; but they are all centralised on the first floor.
31. They all pass from that room to get to the reading-room? Yes. There are two counters, and you call at these and get your book either from above or from below, according to the position in which it is stacked.
32. Will you tell the Committee the subdivision of the area on that floor, according to the plan? On the first floor the whole of the area of the main building is taken up by the library and reading-room proper, and then the annexe contains a cataloguing-room and a curator's and librarian's business-room; and adjoining that is about the centre of the height of the stack.
33. The reading-room takes a larger area than the book-stacks? A larger area on the floor only. The book-stack is multiplied by seven.
34. I understand that; but, looking at it from outside, it seems that you give a smaller space to the storage of books than to the rest of the purposes? Yes.
35. Because the use of all the remainder of the library books is incidental to the use of these books? Yes.
36. The part given to the library itself—that is for the storage of the books—you say is thoroughly fire-proof? Yes. It is all built of steel.
37. Is that built on the model of any existing library that you know of? Yes; the new National Library at Washington.
38. Is that one of the latest libraries erected? Yes. There are some similar State libraries in the United States; in fact the stacking of books on these principles has become such a science that it is possible to obtain the fittings you want.
39. You think that the Americans are as much up-to-date in the matter of libraries as any other country is? As far as my investigation proves, they are.
40. What you saw when travelling? Yes; and what I have read.
41. You found no better model than the American model to go by? I must speak guardedly as to the arrangement of the library itself. Of course, a public library must be treated in a very different fashion from a library to be used by University students. This library is to be used entirely by students who have some connection in other ways, as undergraduates, with the University itself, and therefore are under very great control. They are also limited, to some extent, in number. Therefore, the form of library adopted here is more suitable for an educational establishment, whilst possibly for public purposes a circular library might be thought more advisable.

- W.L. Vernon. 42. More like the British Museum? Yes, and others too, but not for a University—not for an educational establishment.
- 22 Nov., 1900. 43. Would a circular library here harmonise with the rest of the building? No; it would not.
44. You could not fit it in with that quadrangle? Impossible.
45. Any architect would feel himself tied by the necessity of completing this quadrangular plan? We have tried it otherwise, and it cannot be done.
46. You cannot escape from that? No.
47. With regard to the architecture, have you kept pretty close to the present style? We have followed it literally—of course, not slavishly. I have always considered that the Great Hall of the University is one of the best examples of the late Perpendicular Gothic one could wish for. It is equally as good as anything at home, and having that as a prototype, I would not depart from it, but have followed the spirit of the design in all particulars.
48. I have seen it stated by a critic that our University is the best specimen of Tudor architecture built in the present generation? I would not say as much as that; but the Great Hall is undeniably an extremely fine building. We hardly know what we have in that Hall.
49. And, so far as you can see, this library, as you have planned it, will answer the purposes of the University indefinitely? Undoubtedly.
50. Because there are, of course, limits to the number of students in the University at any one time, and I suppose they will be the principal users of the books? Yes. According to the style, it requires these large windows which you see on the side elevation, and being on the southern frontage, enables a very fine diffused light to travel all over the reading-room.
51. You will get no sun-glare? None at all.
52. In this climate I have noticed that there is a great tendency for the binding on the back of books to give way;—is that caused by the sun? Yes.
53. Not so much the heat? No; the sun principally.
54. Will any of your books be exposed to the direct sun? We have a little difficulty with the book-stack. The reading-room has a southern frontage. There is a northern light for these windows which are both good; but on the west, instead of putting in windows, I have put a sort of arcaded balcony, to prevent the necessity of having windows, so there should be no westerly sun in that room. But when we come to the book-stack, unfortunately we have a direct westerly sun; but that has been minimised. The shelves will be end on, and there will be large shutters to these windows.
55. Do you propose to have iron shutters or wooden shutters? Wooden shutters are quite sufficient.
56. No iron revolving-shutters? It is hardly necessary.
57. You want to get rid of weight as much as possible? Yes. It might be a good suggestion to put revolving iron or steel shutters; but that is a matter of detail.
58. Do you happen to recollect how much the existing University building cost—I do not mean the outside building, but the original block? No; we have no record in the office. It was not built by the Government.
59. It was built by the Trustees? Yes; I think the Government helped. The late Mr. Blacket was the architect.
60. You mean to say there is no record of what it cost? I cannot find any record at all.
61. I am looking at the cost of your new block as compared with the existing stone building, because you are going to spend £67,500 for a smaller piece of work? I do not think it will be a smaller work when you put the whole thing together, inasmuch as I am building to a greater height, and with a greater span, and with more floors.
62. And you have a long basement, which they have not? Yes, a very extensive basement. We also have an extensive system of book-racking, such as there is not in the other buildings.
63. Will the library proper have any cross-ties to keep the walls together on the way up? Yes; the floors themselves will be all steel-framed.
64. So there will be no outward thrust with the weight of the books? No; there will be simply the dead weight of the books.
65. Will the weight of the books fall perpendicularly? Yes.
66. No side thrust? No.
67. The iron columns will carry that weight? We shall not require iron columns, because the book-stacks themselves form supports.
68. But they are made of iron? Yes; but they go from floor to ceiling.
69. If any particular block of books should catch fire, it would not spread very far? I do not think it is possible.
70. What other Departments are you going to accommodate besides the library? In the present building, the museum, and eventually the lady undergraduates, and, of course, the common-room for the men undergraduates in the basement.
71. Then the whole of the room is really in demand at the present time? Yes.
72. You have no surplus room? None whatever. The future requirements of the University will be met by completing the quadrangle. We are building now only what is actually required.
73. Do you think your estimate for the works is a fair one, according to the present prices of material and labour? Yes; it is estimated on the present rates.
74. And you think you are pretty close to what it will cost? I do not think it can go much higher. Of course, prices are good just now, and I have based my estimate on the present prices.
75. The price of stonework is high now? Yes.
76. And all the outside will be stone? Yes.
77. What stone do you propose to use? It is immaterial whether we use Pyrmont or Waverley, or any other good quarry of which we know there is sufficient for the whole.
78. How has the stone in the present building stood the weathering? I do not think any too well.
79. Where did that come from? I do not know, but I think Pyrmont. We have used Pyrmont stone there ourselves. I re-erected the turrets on the main tower six or eight years ago, and that stone came from Pyrmont.
80. *Chairman.*] Was not the split there the result of the stone all being put on its natural bed? No; it was the result of running iron rods up through the centre of the stone; at least, that is the impression we had.

81. *Dr. Garran.*] Is the weathering of the University stone anything like as bad as that at Government House? No. The workmanship is better. There is no bedding at all at Government House. The stones in the present University building are properly bedded, and worked properly by the masons. W. L. Vernon.  
22 Nov., 1900.
82. Which aspect stands it best and which worst at the University? Perhaps I may answer that by saying that the most exposed sides stand it less well.
83. I suppose that is the south and east? Yes.
84. They get the heavy rain? Yes. But I think there are signs of deterioration on the north as well.
85. All round? Yes, all round. There are signs of great discoloration—more than there should be in first-class stone.
86. Is that from the smoke of Sydney at all? No; I think it is from the nature of the stone. I think that all Sydney sandstone is liable to that.
87. You do not think, then, that our Sydney sandstone is so very durable? I think it is a very good stone to use, but not so durable as others I have known. It is the best we can get.
88. Can we count on more than 100 years? Not without signs of deterioration.
89. What you have done to Government House I suppose makes the frontage as good as new? Yes.
90. How much per cent. is that as compared with the cost of building a wall afresh? As a matter of fact, I built entirely new walls at Government House lately. At first I faced some walls, and since then we have made structural alterations, which necessitated entirely new walls.
91. Would the facing cost half as much as building? Well, any stonemason would rather build a new wall than face an old one.
92. Yes, I know; but would it cost as much; I am looking to the future; if we put up these colossal stone buildings, what have we to face in the future;—have we to spend, some day, 50 per cent. on the original cost to make the face right? It is a long time to look ahead to. I think that with careful induration you can stave that off very much longer.
93. There is no external wash you know of that would harden the stone? Yes; we use solutions of that kind, but, of course, they are lasting only for a time; and where we are at fault is that we do not do it sufficiently often.
94. Are there any silicated solutions that will sometimes keep a front good? Yes.
95. How often would you call frequently enough to do that? Some solutions are better than others, but probably every eight or ten years.
96. Then all our brand new stone buildings ought to be silicate-washed every ten years to preserve them? Yes.
97. If we do not do that they will decay? Yes, undoubtedly.
98. With regard to the fireproof arrangements, I suppose there is nothing special about the ordinary domestic part for living rooms? No; it is simply a small set of rooms, with a kitchen.
99. There is nothing fireproof about them? It is all fireproof.
100. I suppose that is the most likely part for a fire to break out? Yes, it is. The ceiling overhead is all fireproof, and these walls are all solid. Of course, the external walls are of unusual thickness.
101. What will you use to make the ceilings fireproof? I shall very likely use terra-cotta lumber.
102. As we shall not have the whole of these books at first, are you going to put up the whole of the standage, or add that as you want it afterwards? Add it as it is wanted.
103. You put up now only what is wanted? We provide enough for 240,000 books—as far as the end of the bright red.
104. All you build you will occupy to the full height? Yes.
105. *Chairman.*] Do you think that the carrying out of the original plan of the quadrangle is, under present circumstances and conditions, the best thing to do, from an architectural point of view? You mean the present condition of the University buildings.
106. Yes, and its surroundings? Undoubtedly it is the best. The rear of the main building now suffers very much as an educational place from want of enclosing walls.
107. In what way? Because there is an intensely strong afternoon sun and a most unpleasant westerly wind sometimes blowing into that place, which makes it hardly usable. But there are better reasons than that: there is the chance of using the falling ground for this front façade, which will be the making of the place architecturally.
108. Can you state why you selected the corner to operate on first, instead of taking the dark-brown portion and building on it? Because it would be impossible to attach the book-stack to that portion without impinging on the quadrangle, and upsetting the whole of the future arrangements; and we found by many trials that the best way to do it was to take the extreme end of the library and reading-room, and then let the book-stack take the future form of the quadrangle itself.
109. Why do you regard the quadrangle as being too sacred to be trespassed upon by the book-stack;—is it from architectural considerations? Not altogether, but for purposes of utility as well. It would be impossible to plan that book-stack sufficiently suitable elsewhere in the quadrangle, because it would destroy a lot of light, and you would break the continuity of the educational portions of the University itself on that side, and nothing at all would be gained from it.
110. Do you think the proximity of the Medical School to that side of the proposed building will interfere with its full architectural effect? I do not think so. There is a very large open part facing this façade, with the Colleges of St. Andrew's and St. Paul's, and so on, which gives a very large open vista.
111. I suppose you had consultations with Mr. Barff and other gentlemen at the University with respect to allotting the space? Yes; and with a special committee of the Senate. I met them on several occasions and went into every detail, and we have had a considerable number of trial plans made, and they eventually all agreed, I think, on this one as meeting their requirements.
112. You do not think that any considerable loss of time will ensue for placing this library at that corner of the quadrangle so far from the existing lecture and other rooms? I do not think so. It is not a great number of feet away. It is about 170 feet across the quadrangle. It must be understood, too, that the students from these detached schools also would use the library as well as those in the new portion of the building.
113. Where is the students' dining-hall situated? In the basement.
114. Is it practically another common-room? Yes, a common dining-room where they will eat their lunches. I believe they have no such accommodation now, and that it is extremely inconvenient.

Henry

Henry Ebenezer Barff, M.A., Registrar, University of Sydney, sworn, and examined:—

H. E. Barff, 115. *Chairman.*] Can you briefly outline the finances of the library of the Sydney University, not from the earliest times, but in the most recent times;—what money has been spent, and in what way it has been obtained? I have prepared a short statement which I thought would be useful to the Committee. It is as follows:—

M.A.  
22 Nov., 1900.

*The University of Sydney.—The proposed University Library.*

The books are at present stored in the following rooms:—

On the first floor—

- \* (1) Reading-room (40 x 34).
- \* (2, 3) Two small rooms adjoining, one the Librarian's room (21 x 12), (15 x 12).
- \* (4, 5) Two rooms in the tower, one used as a periodical room, and room for transactions of societies (23 x 23).
- (6) A small room adjoining (13 x 11).

On the ground floor—

\* (7) The Ante-room to the Great Hall (34 x 40), which contains not only the Stenhouse Library Collection, presented to the University by the late Thomas Walker, Esq., but which is filled with book-shelves on the floor space, leaving only a passage to the Great Hall.

(8) Some of the valuable books are kept for safety in the Registrar's office, where they take up a great deal of space which is required for other purposes.

(9) Many of the books upon scientific subjects are separated from the main collection, and placed in the laboratories to which they refer, e.g., Engineering, Physics, &c., &c.

The reading-room holds about sixty readers when all available space is filled with chairs and desks, and during term-time it is always full in the mornings, students being often kept waiting until there is a vacant seat. There are nearly 600 students attending lectures, and the library is also consulted by the graduates and other persons, not members of the University, having admission to the library under the regulations. Among these may be mentioned many of the officers in the professional scientific branches of the Government Service. The aim of the Senate is to make the library a store-house for all the most important literature of an educational and scientific character, and the library is open not only to members of the University, but to any member of the general public who may wish to consult it, and who is properly accredited.

The library contains at present about 52,000 volumes. The present annual grant for the purchase of books is £600 (£500 from the Fisher Fund, and £100 from the General Funds), and about £100 for binding in addition. The vote of £600 is divided amongst the various teaching departments, in order that they may be kept up to date; but all departments complain of the small amount at their disposal.

The division of the £600 for 1900 amongst the various departments of the library was as follows:—Chemistry, Geology, Physiology, Engineering, Physics, Biology, Anatomy, each £42 17s. 2d.; Classics (Latin and Greek), Ancient History and Philology, Mathematics, Modern Literature, Logic and Mental Philosophy, Law, History—each £50.

Of the £300 devoted to scientific departments, almost the whole is expended in the purchase of serial literature, containing the latest information, discoveries, investigations, &c., in scientific subjects, and published in Europe and America, with the result that there is no fund for the purchase of standard books in these branches.

In addition to purchases, the University receives annually donations of books, to the number of several hundred, from Governments, scientific and other societies, universities, and private persons. The Imperial Government has lately made a second donation of two or three hundred volumes of the Imperial Records, which are most valuable in the Department of Modern History.

The present vote for the expenditure of books is considered by all departments to be most inadequate, and the liberation of the Fisher Fund from accumulation will enable the Senate to set apart a larger fund for the purpose.

The Fisher Fund—an amount of about £30,000—was bequeathed to the University, in 1885, by the late Thomas Fisher, Esq., “to be applied and expended by the Senate for the time being of the University in establishing and maintaining a library for the University, for which purpose they may erect a building, and may purchase books, and do anything that may be thought desirable for effectuating the purposes aforesaid.”

It was at that time thought by the Senate that a capital sum of £10,000, if retained from the Fisher Fund, would provide an annual income of £500 for the purchase of books, but the reduction in the rate of interest of late years has rendered it necessary to retain a larger capital amount for this purpose. It is now proposed to retain the whole of the Fisher Fund—now amounting, with accumulations, to £40,000—to provide an annual endowment for defraying all the expenses of the library, including salaries of librarians, attendants, and the purchase and binding of books. When a new building has been provided, the University will thus be in a position to maintain it adequately.

It is proposed that the new building should be erected along the southern and western sides of the quadrangle, which was contemplated in the original plans of the University building. This site is at present occupied by temporary buildings, partly of brick and partly of weatherboard, which are used as common rooms for the women students.

The library building will consist of:—

- (1) A large reading-room, with seating accommodation for 250 persons.
- (2) A store-room for books, or book-stack, erected upon modern principles, and similar in construction to the book-stacks in use in the Great Library of Congress at Washington, which has just been completed. The book-stack will be constructed of iron, and will occupy the two floors of the building, and will contain seven tiers of shelves, running east and west, the space between being well lighted by the windows at each end of the shelves. It will provide accommodation for about 200,000 volumes, or nearly four times the present number. As the library is being added to at the rate of about 5,000 volumes a year, and this number is likely to be increased, by reason of an increased library grant for purchase and by increasing donations, it is anticipated that this book-stack will provide accommodation for about twenty years. The book-stack is also placed in such a position as will make it easy to increase the storage accommodation for books, when additions are made to the main building, by extending the western front.
- (3) A room for serial publications.
- (3A) A room for transactions of societies.
- (4) A room for manuscripts and rare books, not to be consulted without special permission.
- (5) A room for books on Australia and its Early History.
- (6) A Librarian's room, together with rooms for cataloguing and bookbinding.

Underneath the reading-room it is proposed to provide accommodation for the Nicholson Museum of Antiquities, which has received many accessions since its presentation to the University by Sir Charles Nicholson, and which is so inconveniently arranged in the limited space at present allotted to it in the main building that it is almost impossible to examine the exhibits with profit. The Nicholson Collection includes Egyptian, Greek, and Roman Antiquities, and Mediaeval objects of great interest. There is no similar museum in the Southern Hemisphere.

Two or three rooms are also provided for the accommodation of the women students, in the place of the buildings which are to be removed.

The nature of the ground renders a basement necessary, and here it is proposed to provide rooms for a caretaker, together with a lunch-room for students, an unpacking-room for cases of books, and other additional rooms that may be required.

116. From Mr. Vernon's official statement I find that:

In 1888 the Senate determined to apply the sum of £20,000 and its accumulations to the erection of a building to be called the “Fisher Library,” and to request the Government to provide an equal sum for annexes to the library, comprising reading-rooms, common rooms for students, a room for the “Nicholson” Museum, additional lecture rooms, and a refectory for students.

Was that request made to the Government in 1888? I think the request was made to the Government at the time, but it was not granted, and the money has gone on accumulating. The total fund, including £10,000, the amount to be used as an endowment for the library, is now £40,000. 117.

\* In these rooms the shelves are 14 feet high, necessitating the use of ladders.

H. E. Barff,  
M.A.

22 Nov., 1900.

117. Does that include the £10,000, the interest of which you have been using every year? Yes.

118. *Mr. Hyam.*] How has the money been invested? Partly on mortgage, partly on bank deposit, and partly in Government stock.

119. It is an asset that that can be realised at any moment? Yes, we can realise it at any time.

120. *Chairman.*] The present intention is to retain the whole of the accumulated Fisher bequest for the purpose of purchasing books and defraying other expenses, and it is the desire now that the Government should spend £67,500 for the erection of the building and the housing of the books? Yes.

121. I suppose that considerable inconvenience is felt on all sides through the inability to concentrate all the books in one spot? Yes, very great inconvenience.

122. Is it a fact that rooms that should be used for other purposes are now hampered with accumulations of books? There are three rooms that should be used as lecture-rooms. Some of the lecture-rooms are double-banked, and three rooms that should be used as lecture-rooms, and were so used before the number of books increased so much, are now being used for the storage of books.

123. Were the whole of the designs now before us submitted to a Committee of the Senate with the view of getting their approval of them? Yes, practically the same designs. They were not framed, but they were the same plans.

124. Do they meet with the entire approval of the University authorities? Yes.

125. Can you state whether within the last ten years the average number of students attending the University lectures has been steadily increasing? The number increased up to 1893. In 1893 there were 600 students, which is the largest number the University has had; but included in those were about 130 training college students from the Public Instruction Department, and in 1894 their attendance at the University ceased. The present number is about 560, so that, training college students apart, there has been a steady increase in the number of students, and the number of students now is greater than it has been.

126. Can you state how the Nicholson Museum is at present housed? The Nicholson Museum is in two ante-rooms at the southern side of the tower in the main building; the large room is about 34 feet square, and it is filled up with cases to such an extent that it is almost impossible to see the exhibits in the cases properly.

127. Do you propose to concentrate the whole of the libraries of the University within the new building—that is, the engineering, the medical, and so on? Yes, we propose to put them all in the main library building, so that they may be accessible to all.

128. Will that be as convenient to the separate colleges as if they had each their own library within their own building? It is thought so by the Committee.

129. Some of the special school buildings are of a very temporary nature, are they not? Well, they are built of brick. I do not know that they are very temporary. They were built of brick designedly at the request of the Senate, because scientific buildings want altering a few years after they are built; the different sciences alter so much that the requirements become quite different.

130. Is there not danger of loss of books in these special departments through fire? There is a greater risk there certainly than there would be in the main library building, and there is the difficulty of their not being under the supervision of the officer who is really responsible for them—the Librarian of the University.

131. Do you think that the building, as proposed, will afford ample room for reading and consulting the books for the full number of students who desire to use them? Yes, I think it will.

132. Have you made any calculation as to the total floor-space available for students consulting the books at present and under the proposed scheme? No, I have not made any calculations; but the reading-room was designed at the size it is proposed to be made at my suggestion, and I got my idea from the library of the Cornell University, in New York. The Cornell University, about nine or ten years ago, built a new library with a reading-room exactly this size, which was intended to seat 250 students, and their book-stack is very much on the same principle as ours, except that it is at the corner of the reading-room instead of at the side.

133. Has any suggestion been made to house the Mitchell Library within the University? Not to the University authorities.

134. You consider that the plan before the Committee will suffice for the next twenty years? Yes, I think it will.

135. *Mr. Hyam.*] Is there more than one museum in the University? There are the Nicholson Museum of Antiquities, the Macleay Museum of Natural History, and the Medical Museum; and there is a museum attached to the Biological Department, for teaching purposes.

136. Do you intend to concentrate those museums, or to leave them as they are? We propose to leave those museums as they are, with the exception of accommodating the Nicholson Museum in the new building.

137. But it is evidently the intention of the Trustees to concentrate the whole of the libraries in this new building? Yes.

138. I suppose the books on Medical Science are in the Medical School at the present time? No, they are not.

139. Is there no accommodation for them there? No. It was not proposed. It is generally found better to have all the books in one central building.

140. I think that, when the Medical School was built, there was a proposition to make provision for large library accommodation in the Medical School;—was that ever done? No; there is no library accommodation there. None of the medical books are kept there.

141. In the statement you read just now you said there is some provision made for the public? Yes.

142. How do they avail themselves of the library books? The Library Regulations provide that any person who gets a proper recommendation to the Chancellor may get an order for reading in the library, and may have it renewed from time to time as often as he pleases.

143. Who would be considered a proper person to recommend? This is the regulation that bears on it:—

The Chancellor or Vice-Chancellor may grant an order of admission, for the purpose of study and research, to any person who shall produce to him a recommendation from any Fellow of the Senate, or Professor, or any member of the University who has been admitted to the degree of Master of Arts, or any higher degree, stating that the person recommended is well known to him, and is a fit and proper person to obtain such order.

- H. E. Barff, M.A.  
22 Nov., 1900.
144. No one besides those you have mentioned is entitled to make a recommendation? No; not under the regulation.
145. It seems to be very restrictive? Well, there are some 500 graduates at the University? A University Library is more or less an educational library, and any person interested in any subject, who wished to consult a book in the library, would no doubt know one of those persons; or, if not, if he made an application, and was shown to be a respectable person, his application would be immediately granted.
146. Who would consider that application? The Chancellor, in the first instance; and, if he thought it was a proper application, he would grant it.
147. That seems to me to be a very hard way of getting access to the library? I do not remember any case where admission to the library has been refused.
148. Would there be any chance of altering that rule in any way, so that it might be made easier? I am sure the Senate would have no objection to alter it in such a way as to allow the library to be consulted by any person who wished to acquire information contained in it, so long as he was respectable and recommended.
149. You think that a modification to that effect might be secured? I think it is very likely. I do not think there would be any objection to that.
150. Do you think that, before this inquiry closes, you can give this Committee some further information on that head? I can consult the Chancellor, Dr. MacLaurin, in reference to having a modification of the regulation.
151. These plans were, I believe, submitted to a committee? They were submitted to the Senate, and afterwards were considered by the Building Committee of the Senate, and also by the Library Committee.
152. How many members are there in the Senate? Twenty.
153. And did you submit the plan to the whole of the twenty? It was submitted to a meeting of the Senate. I do not know if they were all present. I think two or three were absent.
154. *Dr. Garran.*] You say that you will have plenty of money to pay all the current expenses of the library out of the interest? Yes. We expect to have from £1,200 to £1,400 a year from the £40,000.
155. You are going to spend the whole of the interest of the £40,000 on books, are you not? Not the whole of it. We spend it on books and administrative expenses.
156. You are going to keep the corpus of that trust unbroken? Yes.
157. How much do you expect the administrative expenses will be? The salaries at present are £350 and the present library grant is £600; that makes £950.
158. You will have to keep an additional librarian, I suppose? Yes.
159. That will run you up to £500 or £600? Yes.
160. Will there be any other administrative expenses besides the salaries of the librarians? Not very much. I suppose there will be a caretaker who will have his residence, and there will probably be a library attendant.
161. Still £1,000 will cover the administrative expenses? Yes; I should think so.
162. And all the balance of the interest will be available for the purchase of books? Yes.
163. All the money the University gets in fees now, I suppose, goes in various expenses? Yes; it goes into the general fund, which is used for the general expenditure of the University.
164. There is no margin there for providing for library expenses? No, there is not, unless there is an increase of students; of course, an increase of students brings an increase of fees.
165. The £350 you spend now comes out of that general fund? No; the £350 comes out of the Fisher Fund.
166. Then you have been charging the Fisher Fund with your present library expenses? We have been charging the Fisher Fund with the salaries of the librarians.
167. Although there is no Fisher building and no Fisher books? There are Fisher books; we have been spending £500 a year from the Fisher Fund for the purchase of books. Under the terms of Mr. Fisher's bequest the University is empowered to use the money in any way it pleases, subject to the proviso that it is—
- To be applied and expended by the Senate for the time being of the University in establishing and maintaining a library for the use of the University, for which purpose they may erect a building and may purchase books and do anything that may be thought desirable for effectuating the purposes aforesaid.
168. The librarian who gets this £300 has to attend to a great many more books than the Fisher books? Yes.
169. The Senate has not seen any difficulty in putting the salary of their own librarian, which they had to pay before the Fisher bequest was made, on to the Fisher Fund? They have paid him from the Fisher Fund only since 1893. The endowment of the University was considerably reduced at that time, and they had to shave a little and find more funds.
170. And ever since that they have put the librarian on the Fisher Fund? Yes.
171. Is the dining-room intended to be a room in which the students can purchase a dinner, or merely sit and eat the lunches they bring with them? In which they can purchase dinners.
172. But if they bring their lunches they will be able to eat them there? Yes; there is at present a small room used for the purpose in the basement of the Medical School building, but it is very small, and accommodates only the medical students.
173. How long has that been in existence? For five or six years.
174. The non-medical students do not use that? They do not use it.
175. What accommodation have they? Practically, none; in the Engineering Department there is a small room students use for eating their lunch in, but they have no facilities for purchasing a lunch at the University.
176. Then there is a great want at present? Yes.
177. Are the lectures mostly in the morning? In the Faculty of Arts the lectures are mostly in the morning; in the other departments the students are generally there the whole day.
178. In the Science Department? Yes; in Medicine and Science.
179. Then the students who are not medical students have at present no accommodation of that kind? No; many of the Art students remain at the University to read in the library during the afternoon.
180. And they have to shift as best they can? Yes.

181. Are there any luncheon-rooms in the neighbourhood of the University to which they could go to get lunch? I do not know of any good place. H. E. Barff.
182. As far as you have seen the working of the existing library, are you satisfied with the proposed new scheme? Yes. 23 Nov., 1900.
183. Is one librarian at present able to look after books scattered about in half-a-dozen different rooms as you have them at present? There is one librarian with two assistants. The two assistants are young; they are not exactly boys. For some years it has been the practice to have a student assistant and give him a small salary and certain facilities for attending lectures, and in that way we have had librarian assistants of some intelligence. Two of them have graduated, and one of them is remaining on now at a small salary.
184. It has given an opportunity for poor students to earn a little? Yes; but we found that plan to not work well, and this year we appointed a junior at a small salary. His salary is to be increased regularly, and he is to be brought up to the library business.
185. But you spend only £350 a year altogether on the salaries of the library? Yes; we pay £300 to one and £25 to each of the two juniors.
186. *Mr. Hyam.*] Under the new arrangement there is to be a periodical increase? Yes.
187. *Chairman.*] What has the Parliamentary vote for the University been during recent years? £4,000 per annum.
188. In the last year, when Sir George Dibbs was at the head of the Government, it was £8,000? £8,900 in 1893.
189. Some years before that it was up to that amount? Yes.
190. Has the reduction of that vote seriously interfered with the operations of the University? Yes, very much indeed.
191. Has any attempt been made to get it increased? Yes; repeated applications have been made by the Senate to the Government, but nothing has been done.
192. Do you think that if a considerably increased vote to the University were guaranteed the Senate could participate in the expense of building this Library as an alternative to the Government providing the whole £67,500? I think the University Senate would very gladly fall in with an arrangement of that kind, but they would like the increased vote to be statutory, the same as the original endowment. It is very difficult for a University to carry on its operations if it is in danger every year of having the amount of its vote altered.
193. *Mr. Hyam.*] Have you any revenue from large endowments? Yes; we have a revenue from the Challis Fund.
194. Is that considerable? About £8,000 a year.
195. How is that expended? It is expended chiefly in the payment of Professors' salaries.
196. The Professors' salaries then are not paid by the Government? Partly by the Government. Some of the Professors are on the Challis Fund, and some on the General Fund.
197. Is that the only endowment you have? The only endowment we have for general purposes. The other endowments are for special purposes—bursaries, scholarships, and so on.
198. Then it is a good job you had the Challis endowment? Yes; we could not have got through this financial trouble without it.
199. At the present time the Government endowment is less than half the amount in 1893? Under the Act of Incorporation of the University, the University receives a statutory endowment of £5,000 a year. In addition to that it has been receiving an endowment on the estimates. The endowment on the estimates before 1892 was £8,900. Now that endowment has been reduced to £4,000. Therefore, the total Government endowment is £9,000 a year.
200. In 1893 you had £5,000 and £8,900? Yes.
201. You are working with considerably less income now? Yes.
202. And with an increasing number of students? Yes.
203. *Chairman.*] Has your general return from investments been reduced much during past years? Yes; it has been reduced a great deal. As investments fall in we are not able to get investments at the old rate of interest.
204. So that in several ways your finances have been restricted during recent years? Yes.
205. Whereas the drain upon them in the way of increased number of students and the attendant expenses has been increased? Yes; on the question of endowment I have a paper shewing the endowment of the State University in California. I have got this information from a pamphlet called the "Overland Monthly" of May, 1898. The population of the State of California is 1,500,000. The income of the University from a special University tax imposed by the Government is £42,000 per annum. It has also an income from the United States Federal Government of £7,200, making a total Government endowment of £49,000. It has an income from productive funds of its own—like the Challis Fund—of £24,000, and the Government, according to this pamphlet, has lately also renewed an appropriation of £50,000 for a building in San Francisco for professional schools.
206. How does that total income of £49,000 compare with your income? Our total income from the Government is £9,000 for general purposes, £2,000 for evening lectures, and £1,000 for keeping the buildings in repair—£12,000 altogether.
207. *Dr. Garrahan.*] Is that enough? No, it is not. The vote for additions, repairs, and furniture is quite insufficient. It is always spent before the financial year is half over.

FRIDAY, 23 NOVEMBER, 1900.

Present:

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.  
THE HON. ANDREW GARRAN, LL.D.THE HON. SOLOMON HERBERT HYAM.  
JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of erecting a Library within the University Grounds in connection with the University of Sydney.

Henry Ebenezer Barff, M.A., Registrar, University of Sydney, sworn, and further examined:—

H. E. Barff. 208. *Dr. Garran.*] I understand you wish to add something to your evidence? Mr. Hyam asked me yesterday about the Regulation for the admission of the public to the library, and I promised that I would see the Chancellor about it. I saw him yesterday, and he says that he is quite willing to propose to the Senate a Regulation which will make it possible for any person who is a *bonâ fide* student to use the library.  
23 Nov., 1900. 209. His respectability will have to be certified? Yes; any person who shows that he wishes to use the library for *bonâ fide* purposes of study.

Henry Charles Lennox Anderson, Principal Librarian, Public Library of New South Wales, sworn, and examined:—

H. C. L. Anderson. 210. *Dr. Garran.*] How many years have you been Principal Librarian? Seven years.  
23 Nov., 1900. 211. Was the new building erected during your term of office? No.  
212. Have you travelled at all since you were appointed Librarian? Yes; I have been to Europe, and have seen the principal libraries of the Old World.  
213. Did you go to America? No; I had not sufficient time.  
214. Which library in the Old World seemed to you to be most up to date? There is no library in the Old World so much up to date as the American libraries. For example, as regards book stacks, I saw no library at Home with the modern book stack that is suggested for our University library; but a very good up to date library was the one in Manchester, and also the one in Birmingham, and several in London, especially one in connection with the War Office—a new library with steel presses and the latest improvements, except that they had not the stack system now in vogue in America.  
215. Is that stack system made with perforated bottoms or with solid shelves? The shelves are generally made of thin polished steel.  
216. But they are not open at all so that the air can come up through the shelves? No; but the backs and sides are very often open. They are all made of fine lattice work.  
217. Does it affect the preservation of books whether you have them enclosed in a semi-box, as we have on our wooden shelves, or whether they are open at the back? If closed up they are more likely to be infested with insect pests—the larvæ of small beetles.  
218. There ought to be an opening at the back, if not on the shelf itself? They ought to be open as much as possible to allow the circulation of air, which of course prevents mildew or fungus.  
219. Would it not be better, then, to put the books on a network instead of on solid steel? No; I think that that would abrade the bottoms of the books. When they are being put in or pulled out, you want a polished surface in order to make the friction as little as possible.  
220. It is proposed to make these stacks about 7 feet high, so that the top shelf may be easily reached from the floor;—I suppose you quite agree with that? Yes. I may mention that we have a sample of each of these presses in our library, which you can see if you like. I imported a sample of each press that is made in the world, for my Trustees to choose which they would like for our own library.  
221. Have you a sample of what Mr. Vernon is going to use? Yes, exactly the same—made by the Sneed Iron Company in America.  
222. In dealing with a variety of books, do you arrange your taller books on the bottom shelves and so on, diminishing in size as you go up? No; we have folio presses for the large books, and we have also octavo presses. But that is not according to the latest system of library economy, because that makes us separate books on the same subject.  
223. If you put your books according to the subject, you cannot put them according to the size? No; we cannot.  
224. Therefore, you disregard the size? By the latest methods of library economy we disregard the size.  
225. Then the space between the shelves must be the same all the way up? Yes; but presses you can adjust to one-eighth of an inch.  
226. Have you inspected Mr. Vernon's plans? Yes; they were submitted to the Senate, and also to the Building and Grounds Committee of the University, where I inspected them very carefully.  
227. Were you asked officially to inspect them? I am on the Senate, and also on the Building and Grounds Committee of the University. I inspected the plans in both capacities.  
228. You are thoroughly familiar with them? Yes; I made suggestions in regard to certain points. You will notice that the book-stack faces the west. We, as librarians, know that the westerly sun is very deleterious to the colour and binding of books. Therefore, I suggested that the stack on the west side should be made as narrow as possible, and if possible protected by shutters, or by a balcony if it could be done architecturally.  
229. That is only one side? Yes, the westerly aspect. It could easily be obviated.  
230. The northerly aspect would not be better than the west, I suppose? I think it would be.  
231. It is very warm? Yes, it is; but the westerly sun and wind are very trying.  
232. Still, the westerly sun, in coming through the window, would strike the books sideways, and the books would not be actually exposed to the light? It would strike them only in that way. But the heat takes the colour out of the bindings of books, and decomposes the glue, and makes the backs of the books come off. The sulphurous fumes from the gas is also very injurious to books.  
233. Then you would recommend the electric light, I suppose, for lighting purposes? Most emphatically. It is the only artificial light that should be used in a really good library. 234.

H. C. L.  
Anderson.  
23 Nov., 1900.

234. In building this library, there is a very large addition for other rooms; do you think that Mr. Vernon is giving more space than is required for the services to be met? No. I think he has utilised the fall of the ground very economically for that purpose, and the rooms will be exceedingly valuable for women students, and will not cost much, because they will be in the foundation.

235. You think these basement rooms will all come in very conveniently? They will be very useful indeed.

236. He does not carry the basement the whole length of the building? No, because he has to go by the fall of the ground.

237. You do not want more room in the basement? No; basements are not preferable, other things being equal.

238. You have got all the space you want in that basement? Yes; I think so. That really replaces the temporary building that will have to be taken down if this building be erected.

239. The book-stack itself will never have many people in it at the same time? The book-stack will have no one in it but the officers. There will be small narrow passages between the book-stacks for the purpose of getting and replacing books.

240. The students, then, will not be allowed there? No.

241. The reading-room will be well occupied? I think that, with 600 students, accommodation for 250 is quite reasonable.

242. Have you looked into the ventilation of that room? I did not specially do that.

243. I suppose you know that people who want to read hard ought to be in fresh air as much as possible? Yes. The question was mentioned, and Mr. Vernon assured us that the ventilation was ample. In our hot summers ventilation is of enormous importance. We find in our library that on still sultry days it is very hard to ventilate the room without artificial ventilation. In all the big libraries at Home now they have fans, driven either by electricity or by water, but no other ventilation in the cold weather, when they must have artificial heat, or in hot weather when the air is muggy.

244. Would you have any difficulty in putting up one of these fans with water-power? No; I think it would be very cheap.

245. I suppose the pressure of the water that is now laid on would be sufficient? Yes; I am sure it would.

246. Would there be any inconvenience in having this library detached from the existing building? It is not detached.

247. The part coloured light red is the new building, and the part coloured dark red is not built upon and will not be for the present; Mr. Vernon has gone to that corner for the sake of getting a right-angle projection for his book-stack? This is a new idea. I suppose it is dictated by questions of economy.

248. He told us he would not go straight out from the existing building as he would have to project his book-stack into the quadrangle, which would be objectionable? Well, this plan is dictated by questions of economy, I am sure. Originally it was intended for the library to abut on to the existing building, and to gradually extend the quadrangle and make one complete wing.

249. It appears now that we are to have a detached building? Yes. It is an exceedingly costly style of architecture.

250. That cannot be avoided if the new building is to be in keeping with the present building. All the students will have to go out into the weather to get to the library;—would there be any objection to that? I understand there was to be a covered colonnade connecting the existing building with this building.

251. No; Mr. Vernon says he could make one, but he proposes ultimately to have cloisters all round the inside of the quadrangle? That would cost very little.

252. *Mr. Shepherd.*] Have you ever seen a library where the presses were only 7 feet high? Yes; all the libraries now conform to a regulation height—7 feet within an inch or two. I think that this is exactly 6 ft. 10 in. That is the regulation height adopted, I think, by every library in the world.

253. Was it found that steps were inconvenient in getting up to the books? A great inconvenience.

254. Do you not think it is a great waste of space? No, because we make our storeys only 7 feet high, to fit presses. This stack will be in seven storeys. We have altogether altered the old idea of libraries, which was to have books up 14 feet high, and in alcoves. The alcove system has been abandoned for several reasons, and the high press has been abandoned for the sake of the attendants. This is really a series of galleries, bounded on each side by presses containing books, going up 7 feet high. The building is made of glass, steel, and stone, and you have a good light all through.

255. *Dr. Garrahan.*] Are all these stacks going to be at right-angles to the main wall of the building? Yes.

256. And the window in the centre between? A window between the two presses.

257. Practically that will make a little alcove? But the students are not allowed there.

258. I mean for holding the books? Yes.

259. You mean a reading alcove? Yes. We used to have nice little recesses into which a few students could get, and perhaps mutilate the books. A student will go to the counter and ask for a certain book, and the attendant will go up in the lift and go along a passage and get the book and bring it back.

260. *Mr. Levien.*] Then the student must know what he wants before he gets there? Yes—find that out from the catalogue or from the officer in charge. Mr. Hardy has adopted the decimal system of classification by which all the books on a given subject in the library will be placed together in one spot in the library, in a relative position.

261. It would not be the correct thing to allow everybody to go round and search? It would not answer.

262. You could not keep control of the establishment under such circumstances? No; books would be replaced in the wrong positions, and books might be stolen.

263. *Mr. Watson.*] I understand it is suggested that this building is to be practically for the use of the University students; there is no present suggestion that it should be for the use of the public? It was always understood that the library of the University should be freely open to any *bonâ fide* student. At present any gentleman to whom I or any University man or recognised student would give his card, by presenting it to the librarian always gets the loan of the book he wants. At present that is allowed, and I think it would be still more allowable if we had more room and more facilities. I have never known a student refused the loan of a book from the University library if his *bonâ fides* were guaranteed by some responsible person.

H. C. L.  
Anderson.  
23 Nov., 1900.

264. So that, though nominally a library for the University, it would practically be a library available to the public? To *bonâ fide* students. Of course we could not allow the public to go in there and read, because they would be entrenching on the space necessary for the University students; but a man studying any subject of human thought, who wanted a book which he could not get in the Public Library, would certainly get it on application to the University librarian.

265. Do you think that the necessity for the erection of this building, from a public point of view, has been proved—at the public cost, of course? I am quite sure it is necessary for the University, in order to complete its functions as an educational institution. The University is a State institution, and I assume that the State must provide the money for the capital expenditure. Of course you know we have a large sum at our disposal for the purposes of a library. We have £40,000 available.

266. I understood from an extract that Mr. Vernon read yesterday from a speech made by the Chancellor that it was at one time suggested, or thought, that that £40,000 would be sufficient to provide for the erection as well as the maintenance of a library? Yes; but interest was much higher then than it is now, unfortunately. We are getting only  $3\frac{1}{2}$  per cent. on our money now. We used to get from 5 to 6.

267. It seems a pretty big jump from £40,000 for buildings and endowment to £116,000, counting £75,000 as the cost of this building? But, of course, this bequest was left by a private gentleman for the University. He did not intimate that he thought that was adequate for all our future purposes, but simply left it as his fortune for our use.

268. I was not thinking of what was in the mind of the donor, but evidently the Senate or the Chancellor, a little while ago, thought that that £40,000 would be sufficient, and now they are asking practically for £116,000 in all? I do not think the Senate ever dreamt that the Fisher bequest would provide enough for the building, and the upkeep or maintenance of the library, because for many years past it has been understood that we should use the interest of that money entirely for salaries, and for the purchase of books.

269. Mr. Vernon yesterday quoted from the commemoration address of the Chancellor, delivered in April of last year, to this effect:—

It will be remembered that in 1885 the sum of £30,000 was bequeathed to the University by the late Mr. Thomas Fisher for the establishing and maintaining of a library for the use of the University. In 1888 the Senate determined to apply the sum of £20,000 and its accumulations to the erection of a building to be called the "Fisher Library," and to request the Government to provide an equal sum for annexes to the library, comprising reading rooms, common rooms for students, a room for the "Nicholson" Museum, additional lecture rooms, and a refectory for students. The remainder of the principal, amounting to about £10,000, was invested as a perpetual endowment fund for keeping up and adding to the collection of books.

I see that I was slightly in error in saying they expected that that £40,000 would be sufficient for the whole thing, but practically what they asked the Government then to provide was £30,000—a sum equal to the sum they set aside? But that is eighteen years ago. There is an enormous development in our University in eighteen years. When I was a student there—not so long ago—we had in my year only twenty-nine matriculated students—no women were admitted then—and the total number of students, I think, in the University was 120. To-day there are 600. Taking that ratio of 5 to 1, our requirements for the library have not grown as rapidly as the students have increased in number.

270. *Dr. Garran.*] I suppose that in planning this library you are compelled to a certain extent to follow the architecture of the present building? That is what makes the expenditure so large. I am sure that we could build a very effective and ample library, giving the same accommodation, for half the money, if it were not absolutely necessary to follow this Gothic style of architecture, and use the same kind of stone.

271. If you were to put up another building like the Macleay Museum you could do that more cheaply? Yes, for half the money.

272. So it is the matter of national pride, in erecting a large national building, that costs the money? Yes.

273. Would there be any strong objection to putting the Mitchell Library at the University? A very strong objection. The Public Library owns it, and we cannot give it over to the University.

274. It has been given to the Public Library? Yes. It is the most valuable library we possess, and we could not dream of giving it over to the University. Besides, the donor has bequeathed it to the Public Library of the State.

THURSDAY, 29 NOVEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN, LL.D.  
The Hon. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.  
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of erecting a Library within the University Grounds, in connection with the University of Sydney.

The Hon. Henry Norman MacLaurin, M.A., LL.D., M.L.C., Chancellor of the University of Sydney, sworn, and examined:—

Hon. H. N. MacLaurin, M.A., LL.D., M.L.C.  
29 Nov., 1900.

275. *Dr. Garran.*] I presume that the policy of this Library has been under your attention, as Chancellor of the University of Sydney, for a long time? A good many years—ever since Mr. Fisher made his bequest to us.

276. We understand that, after due consideration, you desire to reserve the whole of his bequest for books, if you can get the State to put up the building? That is what we propose. We say that if the State will provide the building for us we shall devote the whole of the income of Mr. Fisher's bequest to the providing of books, and the necessary attendants—mainly for the purchase of books.

277. So that his bequest shall serve the purpose of an adequate endowment for gradually enriching the Library? Yes.

278. Unless some millionaire private citizen comes forward to build a wing for you, you have no resource but to go to the Government? No.

279. If Mr. Tyson had offered you £100,000 it would have saved you the trouble of going to the Government? If Mr. Tyson had offered us £100,000 we would have built the Library at once.

280. It is quite impossible for you to find the necessary funds in any other way? We cannot find the necessary funds in any other way. If the Committee would like, for their information, I will prove how utterly impossible it is for us to do so. I will show the diminution of our income since 1892. It is shown by the following figures:—

Hon. H. N.  
MacLaurin,  
M. A., LL. D.,  
M. L. C.

29 Nov., 1900.

University Endowment.		1892.	1900.
For general purposes—Statutory .....		£5,000	£5,000
Additional .....		8,900	4,000
Evening Lectures .....		2,000	2,000
(a) Scientific apparatus—(General) .....	£1,000		
(Physics) .....	250		
(Chemistry) .....	250		
(Medical School) .....	400		
		1,900	
Machinery for Engineering School .....		*2,500	
Additions, repairs, and furniture .....		3,000	1,000
		£23,300	£12,000
		*2,500	
		£20,800	

(b) Scientific Apparatus Votes—1800, £1,000; 1882, £1,500; 1883, £1,500; 1884, £1,500; 1885, £2,500; 1886, £1,500; 1887, £1,900; 1888, £1,900; 1889, £1,900; 1890, £2,400; 1891, £2,400.

The Vote for scientific purposes is quite inadequate, and we must do the best we can. Our income has been reduced from £23,300 in 1892, to £12,000. We have had to carry on with a diminution of our income of £11,300 as compared with what it was in 1892, and I need not say that it is with only the most rigid economy that we have been able to do it. The figures I have quoted show how liberal the Government used to be to us as regards the Scientific Apparatus Votes, but now we get nothing.

281. At the time your statutory endowment was first commenced the number of pupils was very small?  
Yes.

282. If you take the proportion now between the whole of the Government endowment and your present number of pupils, you get far less per pupil than you had fifteen or twenty years ago? Much less than we had forty or fifty years ago, when the University was commenced.

283. The reduction, I think, was commenced during the time the Government were very much pressed for income, after the commercial collapse? That was the time. In 1893 they reduced the vote for additions, repairs, and furniture from £3,000 to £1,000, and took £1,000 a year off our Endowment Vote on the Estimates, and did so until at last Mr. Reid, seeing that it was impossible we could go on if we were bled to death in that way, was good enough to stop the process of reduction when it had come to £4,000.

281. But he did not reverse it? No. I have been at every Ministry ever since then to endeavour to get them to go back again.

285. In 1893 the Treasurer felt himself obliged to put in the pruning-knife wherever he could? Yes.

286. And, of course, he naturally looked to the University, in order to cut off something? He had to cut off something somewhere. I did not complain at the time, but still it was very hard on the University.

287. Still we hear remarks now to the effect that the Government are rolling in wealth—getting a larger income than they expected ;—do you think that the Government would be quite impervious now to any representation for an increase of your income? I have put the matter before them ; but I thought if we could get the library from them we should, perhaps, be content for the present. We are bound to get the library in some way or other, for we have had Mr. Fisher's money all these years, and he bequeathed it specifically for a library—either for building or for books. It has always struck me, and I have repeatedly brought it under the notice of the Government, that if the Government could give us the building, we would provide the books.

288. If you did apply Mr. Fisher's bequest to building, you would still have to go to the Government every year for money for books? We would require a vote of £1,500 a year for that purpose only; that is the least with which we could do. That would not by any means be an excessive endowment for the library. The Parliamentary Library, and the Free Public Library, each gets a much larger grant than we do.

289. Probably a larger number of persons use the books in those libraries? Not in the Parliamentary Library, but in the Free Public Library. However, the kind of books we provide are, in the main, books that no other institution would provide; for example, we have a most admirable collection of all the most recent scientific journals and philosophical journals, and journals that deal with literature from a scientific standpoint; books on philology, and so forth. We make a point of keeping those up, so that students who use the library may have access to the most recent information they desire, bearing on any department of literature or science.

290. I suppose that, to a great extent, the books are suggested by the different Professors? We vote so much of the Fisher income for the library, and the Library Committee, consisting of the Professors, make an apportionment of the money to each department. The apportionment is submitted to the Senate to obtain its approval, so that one department shall not be absolutely starved for the benefit of another department; but practically the Senate always adopts the recommendation of the Professors, and then the expenditure of the money on books for each department is supervised by the Professor who selects.

291. So that the Senate has a general check over the expenditure? Yes; but in all cases it is advised as to the details by the Professors in charge of the special departments.

292. But in looking at those details, do you see that there is no extravagant expenditure on what I may call very nearly useless books—that is, books useful only to one or two persons? There is no extravagant expenditure of that kind, because we have been, and are still engaged as quickly as we can, in filling up the list of what one might call the books which are absolutely indispensable for the conduct of the various classes. All these books are really useful, either to the Professors or to the students, and also to any person who really desires seriously to study any matter.

293. Of course a Professor engaged in original research might want a book that would not be useful to any of his students? The requirements of a Professor engaged in original research are generally met by the

Hon. H. N.  
MacLaurin,  
M.A., LL.D.,  
M.L.C.

29 Nov., 1900.

the scientific periodicals; and the scientific periodicals are extremely useful to any one, especially to any students who may be engaged in original research, because from time to time we get a scholarship from the Commissioners of 1851—every year or two years—and that has been of inestimable advantage to our young men. The essential condition is that the young man shall be in a position to conduct some original research himself, but cannot do it unless he has these periodicals.

294. Of course these periodicals contain the very latest information on every science? The very latest discoveries in every science, whether one of the physical or biological sciences or one of the sciences more essentially connected with literature.

295. With regard to persons who are not members of your University, such as medical men, engineers, and so forth, outside—if for any professional purpose they want to make use of your books there—they have no difficulty in getting access to the library if they are properly accredited? Not the slightest difficulty whatever. The regulation is as follows:—

The Chancellor or Vice-Chancellor may grant an order of admission to the library for the purpose of study and research to any person who shall produce to him a recommendation from any Fellow of the Senate, or Professor, or any member of the University who shall have been admitted to the degree of M.A. or any higher degree, stating "That the person recommended is well known to him," and "That he is a fit and proper person to obtain such order."

296. Do you frequently have applications from outsiders? From time to time we have. Of course at the present place, when the reading-rooms are so small and there are so many students, there would not be room for that; but an application has never been refused, and when a man applies we give him a chair and a table where he can sit and study, and there is absolute quiet, and he is made as comfortable as he would be in the British Museum. Of course, to read in the British Museum Library a person requires a recommendation by two householders.

297. Or by a Professor of a University, I suppose? Well, the regulation is very strict. You must have a recommendation from two householders, and that recommendation must be placed before the Principal Librarian, and if he is satisfied with it he issues you a reading-ticket which is given for a certain length of time, and on the production of that ticket you are permitted to go into the British Museum Library, take a chair and sit down. We are a little more liberal than the British Museum, for in our case the recommendation of anyone known is sufficient. Our library has been consulted in this way by officers in the Government service, such as Mr. Maiden, Mr. Etheridge, Mr. Guthrie; by members of the learned professions; and by others engaged in scientific research, amongst whom may be mentioned several distinguished visitors to Sydney from Europe and America. This class of persons naturally resort to the University Library. We have had all these there, and also medical officers of the navy, and so forth.

298. Although you say you will take one recommendation, the recommendations come from a limited class of people; they must be Fellows or graduates of the University, or something of that kind, must they not;—you would not take a recommendation from one householder? Well, there are a very large number of graduates of the University, and we put in the recommendation of a graduate because a man engaged in study is more likely to know a graduate than anyone else.

299. You have never known any scholar wanting, for scholarly purposes, to get into your University Library who has been refused permission? There has never been one refused. We go even a little further, because, under certain conditions, we will allow a person who is not a member of the University to take a book out of the library, so long as its return is properly guaranteed. We must be careful that it is not going to be lost. Of course, there are some books which on no consideration would we allow to be taken out of the library—books of very great cost and of unique value.

300. *Mr. Hyam.* Would graduates of Edinburgh or London, or other Universities, be allowed to go into your library? If they made application.

301. Without recommendation, if they could prove they were graduates? The recommendation is merely a form. If a graduate of another University came to this city, and wrote or called on me, I would give him a recommendation if he proved that he was a graduate, and a person who ought to get such a privilege, because you may sometimes find even a graduate of a University who is not a fit person.

302. *Mr. Levien.* It is more for the identity of the man who applies than anything else? Yes; and we must have some satisfaction that he is a person who desires to use the library for the purposes of study. We do not want to make it a lounge for persons who might wish to go there to read novels or newspapers, or that kind of thing.

303. *Dr. Garran.* You were saying something just now about the loss of books;—do you allow the ordinary students to take out books? Regulation 6 provides—

Every Professor shall have the privilege of obtaining books for each student attending his lectures, and being a member of the University.

That is, a student can take out whatever books he wants that are not likely to be required by other students. He can get books on the order of the Professor.

304. Do you find that the number of students wanting to sit in the library is very much greater than the library will accommodate? Yes; the library is always full. Suppose there are 500 students, you see there is not room for half of them there. Moreover, it is not a good thing for any library to be crowded.

305. But do students, who mostly have their own text-books each year for their work, largely require to sit in the library to study? There are many books that a student should have an opportunity to consult. In the first place, if he has no lecture on, and has a vacant hour, it is desirable that he should go into the library and study there; instead of idling his time away; and, secondly, there are many books of reference that a student cannot be expected to purchase for himself; and there are valuable editions that a student cannot be expected to purchase for himself, but which it is very desirable he should have an opportunity to consult.

306. What I mean is, in the general course of the term are there, beyond the ordinary text-books that they are studying, books that are very much required by them? Very often for a special purpose.

307. The number in the library reading-room is a mere fraction of the number attending the classes? Yes; you visited the University yesterday in the afternoon. Many of the students in the Faculty of Arts would be at home at that time, because in the first year there are practically no lectures after one o'clock. And many of the medical students would be at the hospital, and other students might be engaged in laboratories and so forth, but when they have a spare hour or two they go to the library for the purpose of study, and it is, of course, better that they should have a comfortable place in which to study.

308. You could not accommodate that surplus in the Great Hall which is not much used in the afternoon?

It

It is frequently used for examinations. We have not merely the University examinations, but also the senior and junior public examinations, and also the examinations for the Public Service Board. The Public Service Board asked our permission to hold their examinations there, and as we have always desired to make the University of as much use as possible to the public, we at once fell in with their request.

Hon. H. N.  
MacLaurin,  
M.A., LL.D.,  
M.L.C.

309. Then the reading-room provided for on the plan is in your judgment not excessive in size for the needs of a reading-room? By no means, for I desire not merely to see the students there, but also to see every person in Sydney who has any special subject of study welcome—that he shall go there and increase his opportunities of learning.

29 Nov., 1900.

310. You think it would be adequate for the present? I think it would be quite adequate.

311. Do you know the size of similar rooms at other universities in Europe—Edinburgh for instance? I cannot recall to mind just now the size of the reading-room at the University of Edinburgh. It was considerably larger, but there were about 3,000 students.

312. You think this one is not disproportionate? I think this is very satisfactory.

313. Have you considered the question of dividing the books amongst the different Professors in their rooms as compared with having all the scientific works in one central library? It is better to have them in one central library because they are much more accessible, and one man is responsible for them, and there are certain books wanted by more than one department. You would in that case require to have duplicates or triplicates. Take, for example, the Faculty of Medicine. Books on the subject of medicine in general may be required for lectures on medicine, pathology, therapeutics, and clinical medicine, and so on, and it would be foolish to have four copies for the Professors.

314. And you would want different librarians and separate rooms for them? Yes.

315. So there is no doubt that one common library is the best? Yes.

316. Is that the experience of universities in general, so far as you know? Yes; it prevents a duplication of the books; it is much cheaper in the way of attendants; it is much more convenient for everyone because he knows when he wants a book that if he goes to such and such a place he will be provided with it, whereas if the books were scattered abroad he might have to go to half-a-dozen places and might get discouraged before he got what he wanted.

317. And you concentrate the responsibility by having only one library? You have one library and one librarian who is responsible for everything.

318. And no one else, except with special permission, is allowed to go to the book stack? Yes; all that a person who desires to study has to do is to ask for the books required.

319. So the only oversight needed is in the reading-room, in order to see that persons do not disfigure books or take them away? Yes; but that oversight is not very great, for after all University students are generally very well-behaved.

320. There is another question of considerable importance on which I want your opinion; you have already attached to this University a number of outbuildings which I may say are not quite so architectural as the original building? Unfortunately.

321. I presume that they have been put up under the pressure of necessity? Yes.

322. As you multiplied your Professors you had to find them room? Yes.

323. You were pinched for funds and had to put up the cheapest buildings you could? Yes.

324. And they are not altogether in keeping with the general style of the University front? No.

325. Now you are going to put up a library in harmony with the magnificent style of the University façade? Yes.

326. I suppose you have considered the question whether it would have been possible to put up a cheap wood or galvanized-iron structure instead and save money? It would not answer at all, for various reasons. In the first place, from a public point of view, we are bound to carry on as far as we can in keeping with the magnificent design which was one of a very high character. Secondly, it must be borne in mind that those scientific buildings were erected simply in the nature of a makeshift. About eighteen years ago the University determined to add scientific instruction to the instruction it gave before which was almost of a purely literary character, and, therefore, it entered upon a course of expansion to which mainly the Challis Fund was devoted. But the Senate never had the slightest idea that the scientific instruction would take on with the people of this Colony in the way it has done, and we are, therefore, constantly engaged in a race to get our accommodation a little more, so that it shall be sufficient for the number of students we have. The engineering students, the mining students, the medical students, in fact all the scientific students, had come in numbers we never expected, and, therefore, the small and almost temporary accommodation we provided at first has been found to be quite insufficient for them. These outbuildings began with the Medical School—a small building that was made for that school when it was started—the Senate thought that that would be quite sufficient for a length of time, but in a very short time it was found to be absolutely incapable of carrying out the work; the students began to overflow, and then the Government gave us the Medical School, which is certainly a great ornament to the grounds and has been found exceedingly satisfactory. But the Chemical and the Physical Departments, which are common to the medical students and to the art students, were left where they are, and the irregular position was mainly due to the character of the ground.

327. And as your students are now, the number of them who want to study the sciences is larger than the number who are anxious to study what I may call the humanities? Yes, on the whole. There are a great number still studying the humanities, but the scientific branch of the University has increased at a rate far beyond what we anticipated.

328. I suppose that is due to the very practical reason that those studies are bread-and-butter studies? So are the others. Most of the persons who go into the Faculty of Arts also do so with the view of earning bread and butter. A course in the Faculty of Arts is of great assistance to a man who intends to follow the profession of the law, and of very great assistance to a man who intends to follow the profession of teaching. Most of the people who come to the University come there, of course, for the higher education; but also with a view of making their living; and therefore all our studies are, to a certain extent, of that kind.

329. Then the number of gentlemen's sons who go there merely to get an educational polish is very few? Scarcely any. It is a poor man's University; that is what it is.

330. It is an institution for educating men in the professions mainly? Yes.

331. Then some of those science buildings were originally intended to dispense with the necessity of having a separate medical school in the first instance? It was supposed that the medical education could be

Hon. H. N.  
MacLaurin,  
M.A., LL.D.,  
M.L.C.

29 Nov., 1900.

be carried on in one of these buildings. It was on a very small scale because the funds were very small and we did not desire to press very hard on the Government at that time for money.

332. The very success of your scientific and medical schools is an additional reason why you want this library? Yes, because it is common to all the faculties.

333. Really to do justice to your classes as compared with what is done in other parts of the world—for instance at the American Universities—you must have this additional literature? We must have this library. The University is crippled without it.

334. The only question is how to house the books? Yes. If you saw the books and noticed how they were distributed when you visited the place yesterday you must say that it is humiliating to see it. Many of them are in cases—not unpacked.

335. You recognise the fact that the proposed expenditure is partly due to the necessity of keeping up the style of the architecture? Undoubtedly.

336. And that it would not become a great colony like this—the leading one of the group—to build a pig-sty library at the back of the very fine front we have now? I should think it would be monstrous to do it. Moreover, a building of this kind is so much safer, because there is practically no risk of fire. If you were to build it of weatherboard or something of that kind you could do it very cheaply, but some fine day you might, as in the case of the Exhibition Building, have all these valuable books destroyed. An iron building would be intensely hot.

337. Conversant as you have been with public expenditure for many years, it is your opinion that it would be a judicious and fair expenditure of public money to make this library architecturally equal to the rest of the building, and as nearly fireproof as possible? I think so. I think it would be money very well spent, and you must bear in mind that is for all time.

338. Prosperous as the University is just now, and good as the number of students is, of course they are only a fraction of the young men of the whole colony? Yes.

339. Does it seem to you that this expenditure is an expenditure for the select few, or is there any way in which it seems to you to be purely and truly a national expenditure? I have always held, and over and over again in my public addresses I have said, that the University does not exist simply for the benefit of the young men who go there, but that it exists for the benefit of the whole colony, in order that every young man and woman who has a desire for higher culture may have the opportunity if he or she thinks proper; moreover, in order that the University may provide the colony with a body of skilled professional advisers in all departments, it is absolutely necessary. Besides, I think that every young man in the colony should have a career open to him if he has the ability to profit by it.

340. Have you in your long experience on the Senate ever known a case in which a poor student who wanted to go to the University, and obviously had the talent, has been rejected because of his poverty? No, I have never known such a case. I cannot, of course, give the names, because these are kept absolutely private—no one knows them but myself—but every year there is a considerable proportion of students who either pay no fees or pay only half-fees, and if a student's means are such that he cannot even afford to live in Sydney we give him a bursary—that is to say, he gets a sum of money to enable him to live, and he gets his education gratis.

341. You have no fund which enables you to say, "If you cannot afford to pay for board and lodging we will pay for you?" We give him a bursary for that purpose.

342. You do that instead of allowing him to settle terms for himself? The bursaries were originally intended to provide board and lodging for students at one of the colleges, but it was found that that limited to a certain extent the application of the bursary, and therefore some years ago we decided to leave it perfectly open to a student to live wheresoever he pleased. If he chose to go into a college he had a bursary there; if, on the other hand, his circumstances were such, or the conditions of his religious belief were such, that he did not desire to go into a college, then, so long as he lived in an honest and decent way—we were bound to see that the young men, as they always do, live properly—he could live wherever he liked.

343. If he elects to go to college do you give him the money to pay his way there, or do you arrange with the college authorities? He would have the £50. We would not tell the college authorities; in fact, no one but myself would know that he had a bursary. I would not send to the college authorities and say, "This man has a bursary."

344. He makes his own arrangements? Yes, he draws the money quarterly, and makes his own arrangements.

345. The number of your bursaries is not limited? No; you can find them all in the Calendar. We find that there are a great number of persons who, though not able to pay the whole of their way, are able to pay a little. I may say for the poorer classes of this community that they are very desirous of sacrificing themselves as much as possible in order to help their children along. Sometimes we find, perhaps, half a dozen who with a little assistance would be able to get along, and then I divide a bursary into two, so that, instead of giving three whole bursaries, on finding that there are half a dozen persons who are not absolutely deprived of means, I say, "Very well, we will divide the three bursaries among six of you."

346. Up to the present time you have not been stuck up for want of funds and utterly unable to help a poor man? Not at any time. No matter what the number may be, we can get remission of fees.

347. But you cannot provide board and lodging always? Not unless I have the means. But when the question comes as to providing board and lodging, I permit myself to introduce the element of relative merit. If there are two persons, both in straitened circumstances, and if I have means sufficient only to provide for one of them, then, I say, rather than turn them both off, "I will pick out the one I think the most likely to benefit by the help." But that is a question which very seldom arises.

348. You have not had to turn many off? I very seldom turn any off.

349. But you could do with a few more bursaries if some liberal gentleman would give you the necessary money? Yes, by-and-by.

350. There is no general fund for bursaries? No; but the University dispenses with fees in the case of persons who are unable to pay them. Of course that is a subject about which we do not say much.

351. *Mr. Watson.* You do not want to encourage it unnecessarily? It is not that; but we do not want to hurt the feelings of young men whose circumstances are poor. The public know about the bursaries very well; there is a statement in regard to them in the University Calendar, and if you were to see the applicants

applications that come you would know that the matter of the bursaries is very well known. But we do not like to speak too much about it.

352. *Dr. Garran.*] Feeling your responsibility, you as Chancellor of the University, and also as a private citizen have no hesitation in recommending this expenditure to the Government? I recommend it very strongly.

Hon. H. N. MacLaurin,  
M.A., LL.D.,  
M.L.C.

29 Nov., 1900.

353. *Mr. Hyam.*] When was the University established? About the year 1850 or 1851. It was incorporated by Act of Parliament of the colonial legislature, which received the Royal assent on the 1st October, 1850.

354. And in fifty years we have managed to build about one-third of the University? Well, our fathers did most of it.

355. Most of it was done forty years ago? Yes, fully that.

356. And very little money has been expended on the principal building during the last forty years? Scarcely anything; just keeping it in repair. If you look carefully at the stone, on the eastern front especially, where it is exposed to sea breezes, you will find that it is beginning to crumble away. I know that the persons who took the greatest interest in the University at the time of its erection were the late Mr. Merewether and Sir Charles Nicholson, who is still alive, and they left the colony many years ago. Therefore it must be forty years since any money in particular was expended on the principal building.

357. *Mr. Watson.*] In reference to the statutory vote for general purposes which you have mentioned, did the cost of the erection of those additional buildings outside the main plan come out of that or out of special votes? Special votes.

358. So although we have not spent anything during the last forty years on the main building, we have spent money in addition to the vote for general purposes? The buildings you see there on the plan have been built, and the Medical School has been built.

359. *Mr. Hyam.*] That was built in '86, I believe? Yes.

360. A lot of those buildings will have to come down in course of time? Yes, I think so, but they will last us some time yet.

361. *Dr. Garran.*] Is it not a fact that the pressure for new books is far greater on the scientific side than on the old Art side? The cost of purchasing new books is greater on the scientific side.

362. So it is the very great development on the scientific side that has multiplied the number of your books? It has multiplied the number of the books and the requirements of the library. But I must point out that before the "Fisher" fund was obtained, there was no special income devoted to the library, and therefore, although the library possessed a very large number of useful and valuable books, still there were a large number of blanks on the literary side, and the Professors of humanities, especially of modern literature, has been obliged to require considerable sums of money in order to fill up deficiencies.

363. The classical literature does not make the same strain on you as literature in connection with the medical profession? No, but there is a considerable amount required for that too, because there are constantly new works coming out, both in Greek and Latin and in connection with archæology and matters of that kind, and we must keep up with the latest style. We cannot allow the young men to fall behind. There are constantly very valuable editions of ancient authors coming out, in the light of recent discoveries.

364. Perhaps the purchase of the latest publications of all the scientific schools combined means more than one-half of the expense of the new books? Yes.

365. And of course they will rather increase than diminish? Those must increase.

366. Because new serials are always being started? Yes; science is making rapid progress, and we hope it will make still more rapid progress. Every day there are valuable new publications. Our ideas have been revolutionised since the University was started.

367. The whole conception of the University has altered? Yes.

368. Do you find that the University is in an inconvenient position for your students generally? If it were an open question, I do not know that I would put the University where it is.

369. You will remember that in the early days it was on the site of the present Grammar School? Yes.

370. And there was a great outcry against removing it into the outskirts of the town? I think there would have been many conveniences in having it in the centre of the town. If we had had that fine site overlooking the Domain it would have been an exceedingly valuable site for the University, and probably more convenient than the present site.

371. If you could have had the site now occupied by the Mint and the Sydney Hospital it would have suited you very well? We should have liked one a little larger.

372. Phillip Park or Cook Park? If we could have taken the whole of the slope of that hill it would have been very nice.

373. But as matters now stand you would not think of removing the University? No.

374. The University being where it is, you think will stay there for all time? Yes. The town has been attracted out towards the University.

375. And with the tram service it is practically accessible now, as it was not when it was first opened? Yes, it is quite accessible.

376. You never hear any complaints on that score? There are no serious complaints. Some man may get his feet wet on a rainy day, but the distance is no greater than was the University in Edinburgh from where I lived—in fact, I think I lived further from that University than the Colonial Secretary's Office is from the University. It is two miles from the obelisk in Macquarie-place to abreast of the University building.

377. There is no objection to spending more money in completing the University where it is? Not the slightest. It is absolutely necessary to complete it there now. All the colleges and other buildings are round it, and there is quite a settlement there of higher culture.

378. *Mr. Watson.*] Has there been any marked growth in what may be termed the utilitarian side of the University—that is, in the teaching and general promotion of those arts capable of more practical application, such as mining, engineering, and physics generally? Very great.

379. Besides an actual increase in the number of students, has there been an increase of subjects to which attention is devoted? Yes.

380. Sub-branches and so on? Yes. For instance, within the last few years we have made a complete course of mining engineering, and my impression is that the course of mining engineering here is far and away the best in Australia, and I believe it is as good as a similar course in nearly every other part of the

Hon. H. N. MacLaurin, M.A., LL.D., M.L.C.

29 Nov., 1900.

the world. There is no doubt that the course of mining engineering at the University of Sydney is surpassed by none. It is a very important matter in this Colony, where the mining interest is so great. Whenever any man passes at the University in this subject he is at once snapped up.

381. So the University now is filling a gap to a larger extent than previously in connection with commercial life? For developing the resources of the colony; and that is a direction in which we wish, as far as possible, to extend it.

382. *Dr. Garran.*] And you are finding places for men who otherwise would have to be sent to Europe? Yes. Ten years ago it was hardly possible for a man to get a really thorough education as a mining engineer in Australia; he had either to go to New York, Germany, or London.

383. Knowing what you do of English and Scotch Universities, do you really think that a young man may do as well by stopping here and getting his education in Sydney as by being sent Home? I do, from an educational point of view. Of course a young man who goes round the world—who goes to the great centres—sees many things he will not see in Australia; and that strengthening of his mind is of very great advantage.

384. But might he not get his University education here, and take his grand tour afterwards to more advantage? That is very desirable, and many who can afford it do so. We have two travelling fellowships, and we get scholarships from the Commissioners of 1851 for the purpose of enabling young men to do that, if they have distinguished themselves here.

385. *Mr. Hyam.*] Is it possible for a young man to obtain at the Sydney University an education in any of the sciences which would fit him to occupy any position that might be taken by a man from any of the universities of the world? In most of the sciences. Of course there are some in which there is room for considerable development; for instance, the question of electrical engineering has not yet been thoroughly worked out by us because the expense is so great. If we had the money we would do it to-morrow.

386. Perhaps the time has come when it should be? What we want to do at the University is to give a career to every young man in the colony if he is fit to take it—to give him any career he would like to have.

387. Every branch of the University is in the direction of usefulness? Yes.

388. It is not ornamental? We do not despise the ornamental.

389. But it is more practical and useful than ornamental? What we want to do is to give every young man the opportunity to develop his mind in the direction that suits him. If he is a person of a literary turn of mind we endeavour to help him to cultivate that, or if he is a person of a scientific turn of mind we endeavour to help him to cultivate that. If a man is a man of talent we desire that at the University he should have the opportunity of getting the highest culture it is possible for a man to get. That is distinctly in the public interest.

FRIDAY, 30 NOVEMBER, 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

THE HON. ANDREW GARRAN, LL.D.  
THE HON. SOLOMON HERBERT HYAM.

JOHN CHRISTIAN WATSON, Esq.  
ROBERT HENRY LEVIEN, Esq.

The Committee further considered the expediency of erecting a Library within the University Grounds in connection with the University of Sydney.

Robert Newton Morris, M.A., LL.D., Superintendent of Technical Education, Department of Public Instruction, sworn, and examined:—

R. N. Morris, M.A., LL.D.

30 Nov., 1900.

390. *Chairman.*] During the course of this enquiry we found that the University Library, instead of being concentrated in one portion of the building is, through want of library space, distributed over several rooms, some of them a considerable distance from one another; from the point of view of utility to the students do you regard that as being a serious inconvenience? Very serious.

391. It was also pointed out that each particular school—school of geology, mineralogy, mining, medical, and so on—required special scientific works; is it a good thing, from the point of view of the students, to have the whole of the works on such subjects concentrated in one large building or one large stack? I think that if the division of the books exactly corresponded with the division of the subjects in the various schools there would be little disadvantage.

392. We are told, however, that many of the professional schools would consult the same works? Yes, they would.

393. In that case do you think it would be advantageous to have all the works in one place? Unless you had duplicates in the separate rooms, it would be a disadvantage to have them divided. If each school had its library complete, regardless of the others, then the separation would not matter, but unless there were a duplication of works it would be a great disadvantage to have the books divided.

394. Seeing that science has been making such rapid strides recently, and that a text book or scientific work which may be of considerable value in one year is displaced by a superior one in the next, do you think the practice of duplicating the works and letting each professional school have its own professional library would be a good one for the University? I should say it would be very extravagant.

395. The concentration in the one building would be a far more economical method of dealing with the work? Certainly.

396. Have you had any opportunity to consider the matter of book-stacks in connection with a library? No, I have not. All our books in the reference library at the Technical College are on shelves round the room. There are not book-stacks spread through the room. The reading tables occupy the main floor space, and the books are all ranged round on shelves; but, I think that having book-stacks would be an economical way of utilising space, and very convenient as regards getting at the books.

397. Seeing that there are some 500 students at the University, do you think that the amount of space available for reading purposes there is sufficient for the number of students? I have not been in that library lately, but, speaking from recollection, I should say that the space is much too confined.

398.

R. N. Morris,  
M.A., LL.D.  
30 Nov., 1900.

398. It is just the old library? I should say that much more space would be necessary.
399. *Dr. Garran.*] What is the size of your library at the Technical College? About 30 ft. by 20 ft., I should say.
400. How many books have you? I cannot tell you exactly, but I should say not more than 5,000.
401. Is it adequate for your present purposes? No, it is not adequate.
402. Do you get it out of your annual vote? Yes; there is a fixed sum voted each year to add to the library.
403. Is the library-room itself adequate for your wants? No.
404. Some day you will be wanting a new library? Yes; I think that we shall before very long.
405. We are told by Dr. MacLaurin yesterday that every facility is given at the University library to bona-fide students who are recommended as students;—do you ever have occasion, either yourself or any of your students, to go to the University library? Not officially. Some of them, I believe, have had the use of that library, but merely on their own personal private application. If it is not out of place, I should like to say that, with so fine a library as the University would of course have, and it being provided with housing at the public expense, there should be provision to allow of bona-fide students in science, art, and literature, and the arts, to have access under proper conditions to the University library.
406. That is exactly what it is said they have now;—it is stated that no student who is certified as a student is refused admission to the University library;—you say you do not give that certificate to your students? I have never been officially informed that they could have the use of the library at the University, and I have had no applications of that character; but I know that a few have had the advantage of consulting that library without any assistance of my own.
407. Though the natural course would be for you to give a certificate to one of your students that he is a student and wants access to the University library, you say you have not been applied to? No.
408. Would it not be a better plan to let your students know that you would give them at any time a certificate? Yes. If I had been authorised I would have been very glad to do so.
409. The printed regulations of the University library gives that information? My attention has not been called to that.
410. Have you ever wanted the use of the University library yourself. No.
411. How far do your classes run parallel with the classes at the University; how far do you cover the same ground? Well, we teach chemistry, and practical chemistry, and geology, and mineralogy, and of course these are all taught at the University.
412. Are your classes more elementary than theirs, or do you take advanced students up to the point that they do? I think you might fairly regard our work as elementary in comparison with the University work. We do not take the students to that finishing point where they would be suitable persons to hold degrees.
413. Do any of your best students go on from you to the University? Occasionally, they do.
414. Are they able to get any kind of bursary or scholarship to help them forward? The University has made provision for a scholarship for a student from the Technical College in connection with the P. N. Russell legacy. That is the only one. The Minister for Public Instruction has had under consideration the establishment of a bursary from the college to the University, but that has never actually been completed.
415. Then the P. N. Russell scholarship is the only ladder by which your students can climb from the college to the University? Yes—with any assistance, of course.
416. If they do not want assistance, of course there is no trouble? No.
417. Are you working in complete harmony with the University authorities? Yes. Some of the University Professors examine for the College, and Mr. Russell, a member of the Senate, Professor Warren, and Professor Gurney have seen me on various occasions and consulted me on matters they thought would be of interest connected with the College as compared with the University.
418. Some of your students may come to you without much knowledge of the University, and if you see a student whom you think would do better at the University than at your College, do you pass him on? We recommend him to go to the University if he can. They come sometimes asking to be prepared for certain positions, and my advice is "If you wish to get really a complete stamp put upon you, indicating that you are capable of taking a certain position, I think it is wise for you, if you can, to go to the University and get their degree."
419. Supposing a man comes to you and says, "I want to be qualified as a mining manager," can you carry him as far in that direction as the University can? No, not quite so far. Usually the title they say they are aiming at is that of mining engineer, and whenever they say they are aiming at that title I say: "We can give you certain subjects, and prepare you to a certain extent, but if you really want the position of a mining engineer you ought to go to the University, if you can." In many cases, of course, they prefer to take the best we can do for them, because the expense is so much less.
420. When they say "mining engineer," do they mean merely an attendant on the mining machinery above ground, or an engineer to lay out a mine? They mean, to have a complete knowledge of the whole question; of the mathematics of engineering as well as of the practical part of it.
421. The laying out of a mine, and the underground work, as well as the work on the top? Yes.
422. Have you sent forward any men from your engineering school to the University? I think only one or two; one or two have gone on.
423. Your education is a cheaper one than that given at the University? Yes.
424. Therefore the poorer students come to you first? Yes.
425. And if they show special talent there is a way of passing them on? Of course the prizes are very few. Only a small number of those who would be really suitable to go to the University can go so far as help is concerned.
426. Then it would be of advantage to those students if there were greater facilities for passing on clever young men? Very great.
427. That is a want we have not yet filled? Yes.
428. Either private beneficence or a public grant would have to fill that want? Yes. We scarcely ever get any private beneficence, with the exception of small prizes, because the College is a Government institution.
429. The people say "that the Government do everything, and there is no need for me to do anything"? Yes.

R. N. Morris,  
M.A., LL.D.  
30 Nov., 1900.

430. You begin at the very beginning with your students? Yes.
431. And the University does not? No; the University requires the passing of an entering examination.
432. They presuppose a certain quantity of proved capacity and of learning before it is worth their while to invite a student into their classes? Yes.
433. I suppose you think that is quite correct? Yes.
434. Because if they were to load their classes with incompetent and backward students it would be very unfair to others who had done justice to themselves? I see no objection to that; in fact, the question has been discussed in some of our class-rooms, which are very much overcrowded—we have hundreds of students waiting for some of the classes—whether it would not be wise to have an entrance examination for the College. The question has never been more than indefinitely considered; it has never been brought to an issue.
435. If you find a lad comes who is obviously incompetent and never will make his mark, do you say to him, “I think you had better drop this?” After finding that he does not show aptitude we tell him that we think he is wasting his time, but we have no power to say to him, “You shall not continue.”
436. I mean do you give them advice? Yes.
437. What is the number of students in your largest classes? I cannot say exactly from memory. We have about 300 in the night class for fitting and turning, and we have about 200 in the electrical engineering class. We have 330 waiting for the fitting and turning class, and about 420 waiting for the electrical engineering class. Some of them, I think, have been waiting for a year or eighteen months.
438. Because you have not room for them? Yes; there is also a very large number waiting for the plumbing class; and in many other classes we have to refuse students.
439. Could you not duplicate the lecture in some way? In fitting and turning, which we have every night and day, the shops are full.
440. I suppose it is principally in the shops where you are crowded for room? Mainly so. The mechanical drawing is about as much crowded. Of course, that is a branch of engineering.
441. One of the elementary parts, I suppose? Well, hardly elementary; it must go on concurrently with a knowledge of machinery. Then the physics classes are crowded a good deal, and other classes, too. The chemistry class is remarkably well attended.
442. The bulk of your teaching is done at night? Yes.
443. I suppose that all your students are getting their own living? No; most of those who come at night are getting their own living.
444. Do you find that they are very tired and unable to give their minds properly to the work? Of course, there are considerable varieties in that regard, but, as a general rule, we have not to complain of their showing lassitude, or indifference in any way.
445. They go into their work with spirit? Very much so.
446. There is, on the whole, a fine tone amongst the students? Yes.
447. How many hours do they spend in your Institute at night? Usually from 7 o'clock until 9 for the most part, but some of them are perhaps attending several classes, and they commence at 6 and go on until 9 30.
448. Do they come every evening of the week? No; some one, some two, and some three evenings a week.
449. And they work a little at home, I suppose—reading? Yes. Of course we have some day students. For mechanical drawing, fitting and turning, plumbing, electrical engineering, carpentry, and drawing, we have day students.
450. You say that in your library you have your bookshelves round the wall, according to the old-fashioned style? Yes.
451. I suppose you use a ladder? Yes.
452. Do you not find a ladder very inconvenient? Of course; and many books are kept out of sight. A student does not know what he wants till he comes there; and many books would be more useful if more in sight.
453. It is the perfection of a library to have all the books within reach of the eye? Yes.
454. The scheme we have before us, to have book-stacks—none of which will be than 7 ft. high—is a very good arrangement? A great improvement on the ordinary up-to-ceiling method.
455. There are no ladders, but a succession of floors, and only the librarians going to the book-stack, and every book is asked for from the catalogue—you think that is a very superior plan as compared with having an open room with the books all round it? I am not quite sure about its being necessary for a student always to know beforehand the book he wants; that may be a matter of convenience, but it is advantageous for every man to have as wide a range as he can to see what he likes.
456. Your library is sufficient in quality for your present purposes? Yes; of course we could considerably improve it if we had more means, but it is a very fair library for the purpose.
457. Are the books you get mostly of the text-book class? Well, we get any book that discusses a modern and important subject, in whatever form; but our books are almost all absolutely technical books, in fact, you may say they are all technical books.
458. At the University they lay themselves out to get the latest serials in every department of science, and, as you understand, the most modern ideas are always to be found in the first instance in the serial publications? Yes.
459. You do not go in for that class of publications? We get a good many serials.
460. Do you duplicate in your library what is kept in the University library? I think so.
461. Is there any real necessity for that? Yes, I think so, when you have not only to make provision for the information of those who are anxious to learn, but also to facilitate in every possible way and to encourage reference to books.
462. Of course a penny tram would take your students on to the University at any time? Yes; but I am afraid that if it depended on their making a journey like that the thing would be postponed and never done.
463. Do you find that these serial publications are much used by your students? Yes; they are very much used by them and very much used also by the teachers and lecturers. They are looked upon as being quite as valuable a part of the library as the standard volumes are.
464. Is your library accessible to every bona-fide student? Yes; I would never refuse admission to the library to anyone who came and asked for it, unless I thought there was a good reason for refusing, and I have never yet had to refuse anyone who came and asked.
465. You know something of the University, of course? Yes.

466. Are you of opinion that the library accommodation there at present is insufficient? I think so.
467. Do you think that additional reading-room as well as storage room for books is wanted? Yes.
468. And that if we do anything at all we ought to make some provision for the years to come while we are about it? I think so.
469. Do you think that in adding to the University it is a fair expenditure to make the wing in harmony with the architectural style of the University? If my opinion were of any value, I should strongly recommend it.
470. You do not think it would be a waste of public money? I do not.
471. It is a very unfinished structure we have so far? I have been informed that a library was provided for in the original plan by Mr. Blackett, who was the designer of the present building, and, of course, he designed it in harmony with the present building, and in view of what I believe is in your mind, I think that if possible the library should be a building of equally noble character.
472. I think the present library was intended for a storage-room? When I was a student it was simply used as an occasional lecture-room.
473. You think it is a legitimate public expenditure to make the new building in harmony with the present structure? Yes, I think so.
474. The estimated cost altogether is £71,000, but that includes reading-rooms and a number of other rooms, a refectory downstairs for students, and a variety of additions badly wanted, which are all to be packed into the new block;—the expenditure is not all for the library, but partly for additional room that is wanted besides? Of course that is a considerable sum of money in comparison with the number of persons who would have the immediate use of the place, but I think when we are dealing with the highest institution for learning in the Colony we should not be niggardly; and I think that if proper facilities be given for bona-fide students to get the use of the library the expenditure will be thoroughly justified.
475. You understand, for the future, that you or any of your students can have access without the slightest difficulty to that library?—
476. *Mr. Hyam.*] I think it is proposed to give the public greater facilities for using the library at the University than they have at present; and I think some alteration is going to be made in the rule;—do you approve of that? Yes. I do not think that the University library should be open the same as the Free Public Library in Macquarie-street, but I think that special facilities might be given for the use of the University library by bona-fide students in science or in literature.
477. Any person who wishes to acquire scientific or technical information should be able to go to the University library and consult books there, and proper accommodation should be given to such people while they are there? If that could be done, with reasonable convenience, I think it should be done.
478. You teach trades in your institution? Yes.
479. And also scientific subjects? Yes.
480. Can you give any diploma or certificate as to the status of the pupils when they leave your institution? There is a syllabus laid down in the calendar and there are certificates for first, second, or third year passes, and honours, which are signed by the Under-Secretary, the Minister, and myself, certifying that the pupils in question had satisfied the examiners in those subjects, according to the syllabus.
481. But is that any qualification for the students? There is no legal qualification.
482. Do you in the Technical College teach any branch of science that cannot be continued in the University? Well, so far we teach veterinary science, and there is no other institution here that can teach it.
483. There is no chance of their completing their education in veterinary science at the University? No; at present there is a committee that has been appointed by the Minister to see if some plan can be devised to confer some degree that would be recognised, but some of the committee seem to see difficulties and we have not been able to come to any decision yet; but I think something should be done.
484. Do you not think it is very necessary that a college of veterinary science should be established in connection with the University; considering the outcry there is about diseases and the numerous diseases with which cattle, horses, and sheep are afflicted, do you not think that it is absolutely necessary that some immediate steps should be taken in the direction of establishing a college of veterinary science that would qualify our young men to hold positions as veterinary surgeons? I hold very strongly that some kind of authority should be established which would confer degrees in that subject.
485. There are very few M.R.C.V.S.'s in the colony, and the few who are here monopolise the whole of the profession, and I am told that the young men who have received certificates from your institution are very clever? Some of them have done very well, indeed.
486. And are quite competent to take positions. Yes, I think so.
487. It is to be hoped that in the near future a college of veterinary science may be established at the University? Yes.

MONDAY, 3 DECEMBER. 1900.

Present:—

WILLIAM THOMAS DICK, Esq. (CHAIRMAN).

THE HON. ANDREW GARRAN, LL.D.

JOHN CHRISTIAN WATSON, Esq.

THE HON. SOLOMON HERBERT HYAM.

ROBERT HENRY LEVIE, Esq.

JOHN MCFARLANE, Esq.

The Committee further considered the expediency of erecting a Library within the University Grounds, in connection with the University of Sydney.

Walter Liberty Vernon, Government Architect, Department of Public Works, sworn and further examined:—

488. *Chairman.*] In the statement which you read to the Committee concerning the detailed cost of the additions to the University, the total cost of the new structure amounts to something like £96,000; is the whole of that cost to be debited against the Fisher Library? No, I should say not. The connecting portion

540—D.

R. N. Morris.  
M.A., LL.D.

W. L.  
Vernon.

3 Dec., 1900.

W. L.  
Vernon.  
3 Dec., 1900.

portion of the building, which is marked dark red on the plan, contains accommodation not necessarily in connection with the library; in fact, some of it has no connection at all with it, except from the University point of view, and although some day it will be necessary to build that in order to complete the scheme, it does not necessarily follow that it should be charged against the library itself. I understand, however, that none of this cost is charged against the Fisher Library funds, but all against Government funds, or what is practically the same thing.

489. What is the actual cost of the part marked light red, and described on the coloured plan as "the Fisher Library"? £67,500.

490. Part of the suggested further extension contains certain library accommodation—to what extent in value;—I think it is £25,650, as set forth in your statement? It will be about £12,000 or £13,000.

491. While the total cost of that suggested further alteration is £25,650? That is so.

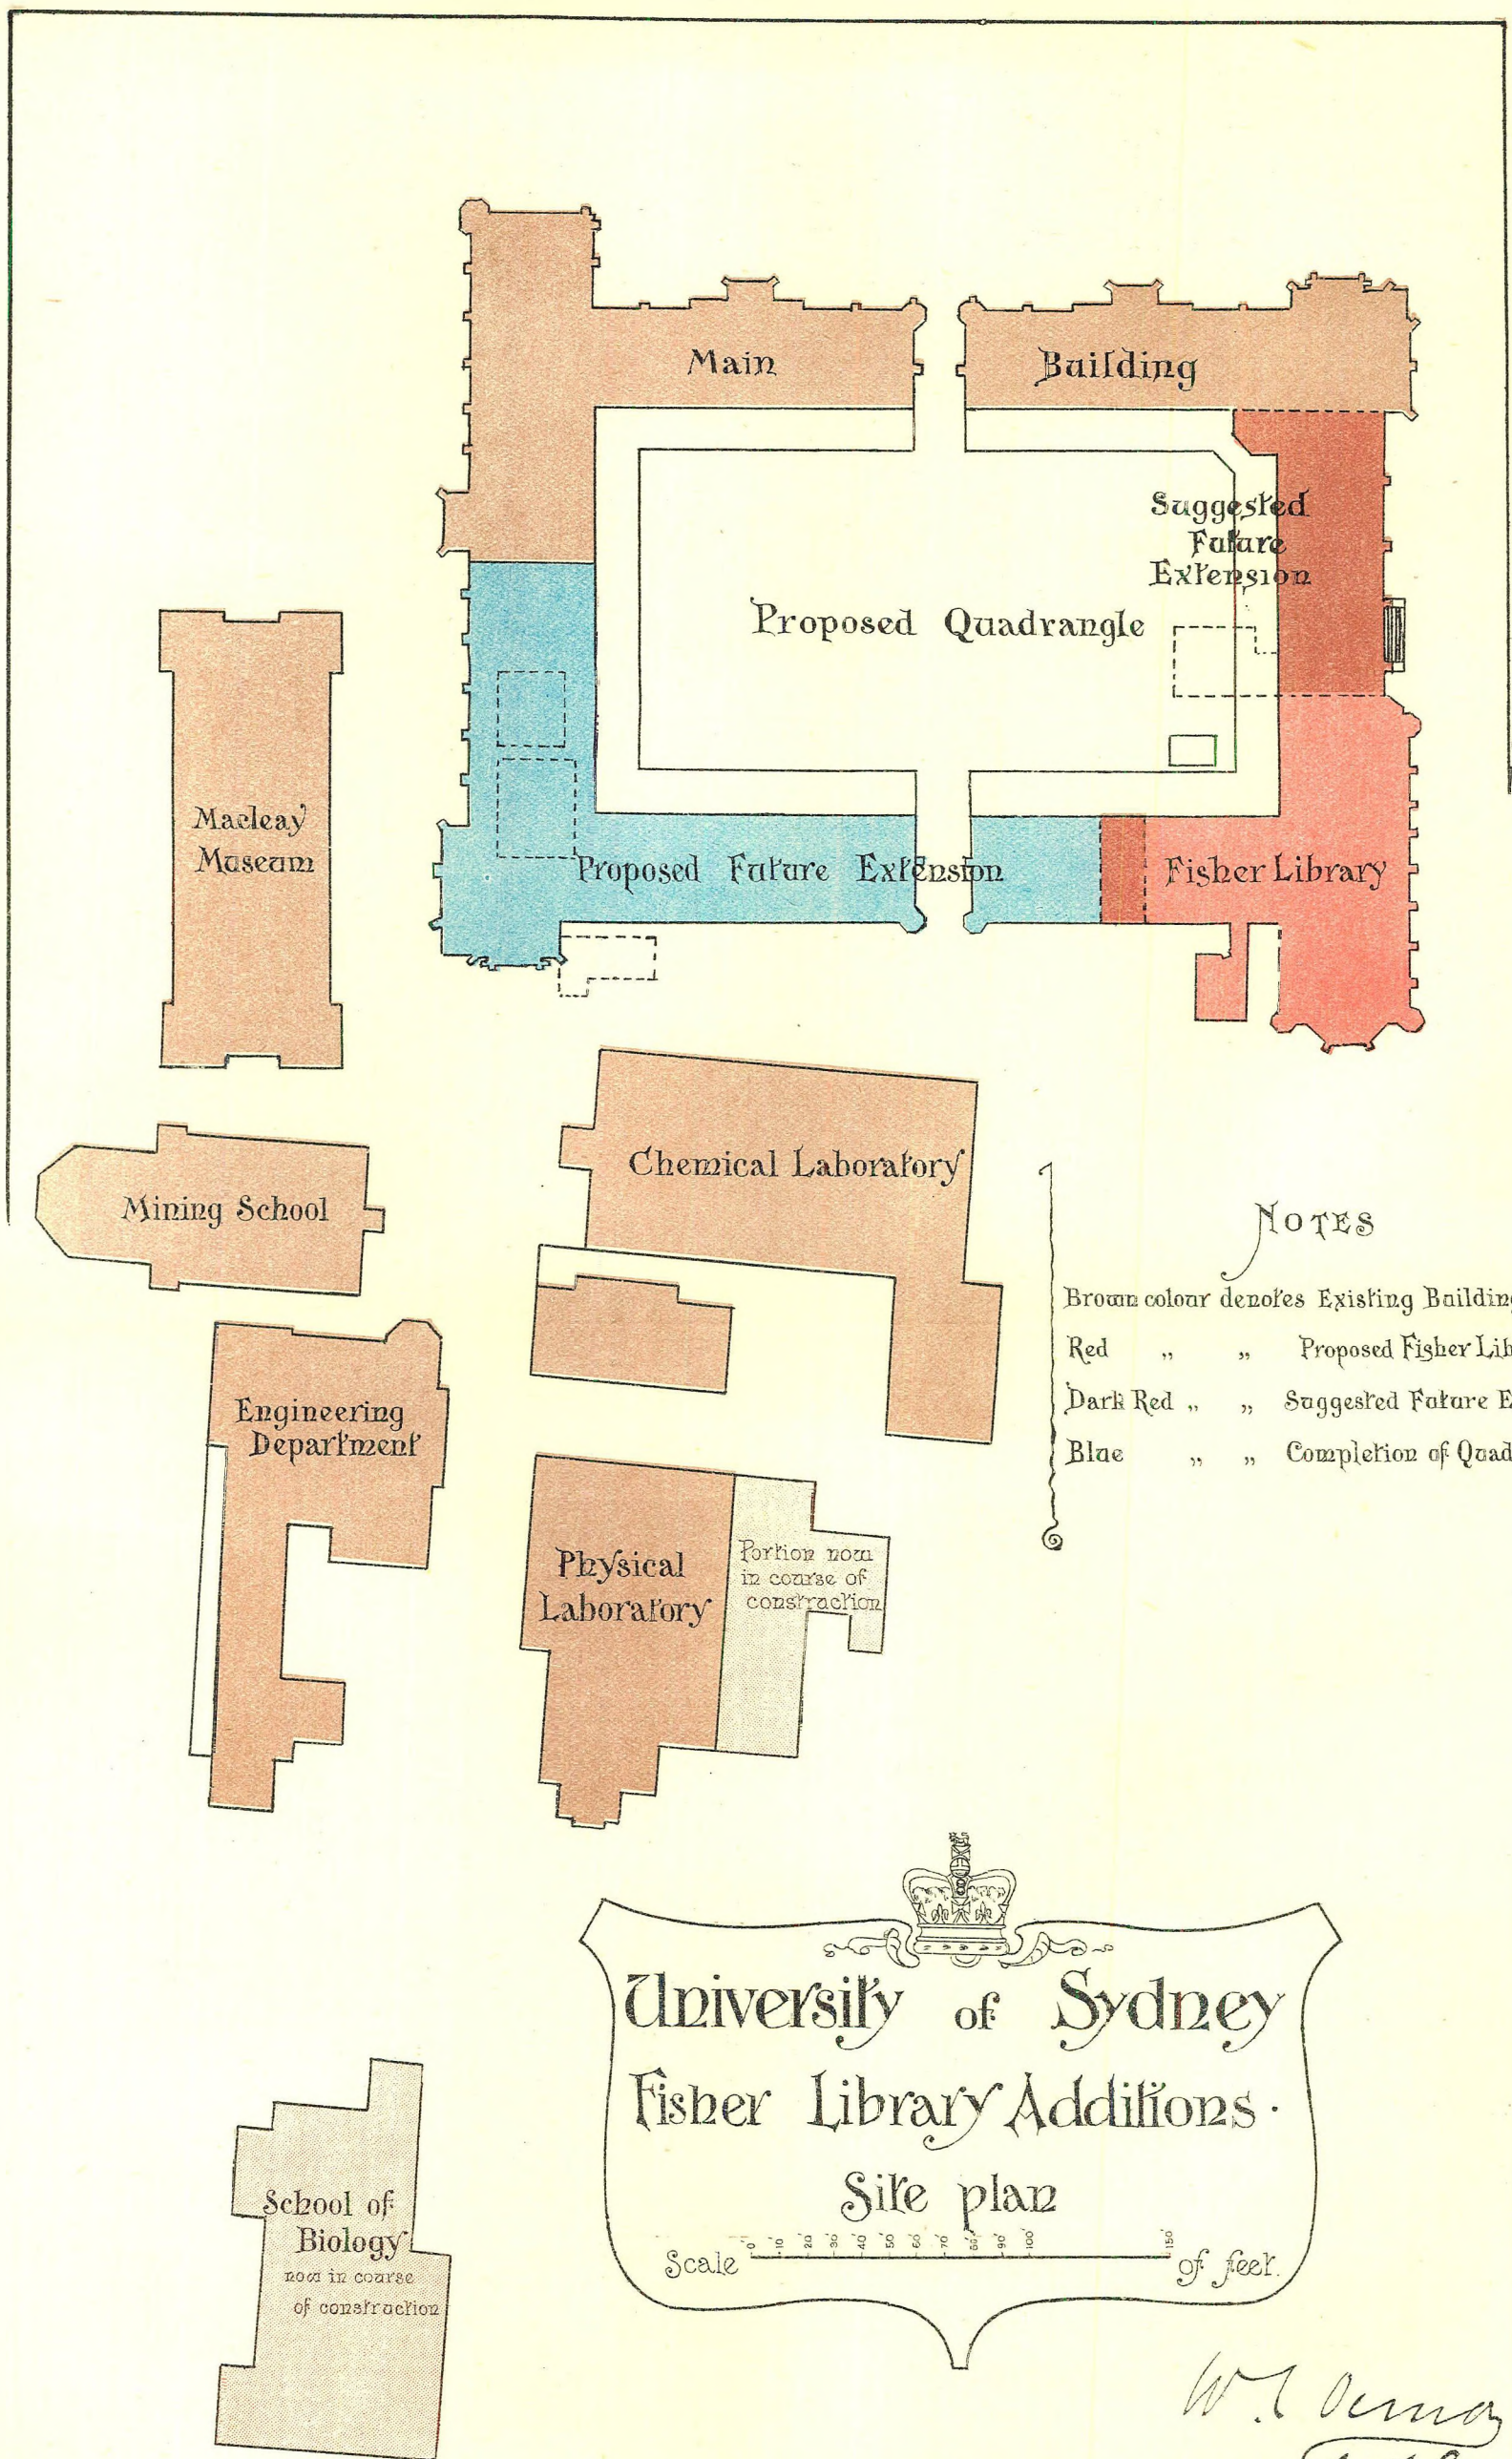

492. Then there is the cloister and external staircase, amounting altogether to £3,750? Yes.

493. So dividing that £96,000 into its three parts, you will have £67,000 for the part marked light red, which is to house the library, £25,650 for the postponed portion of the library and other accommodation, and £3,750 for the cloister and external staircase? Yes, that is so.

494. *Mr. Hyam.* Is it the intention to connect that red portion with the building already erected? Ultimately. The same might be said of the part marked blue; of course, that is still more remote.

[One plan.]

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

PUBLIC LIBRARY OF NEW SOUTH WALES.

(REPORT OF TRUSTEES FOR THE YEAR 1899.)

Presented to Parliament, pursuant to the provisions of the "Library and Art Gallery Act, 1899."

*Printed under No. 1 Report from Printing Committee, 26 June, 1900.*

The Trustees of the Public Library of New South Wales to The Minister for  
Public Instruction.

Sir,

Public Library of New South Wales,  
Sydney, 14 March, 1900.

In accordance with the provisions of "The Public Library and Art Gallery Act, 1899," the Trustees beg to submit their Report for the year 1899, being the twenty-ninth Annual Report of the Institution.

1. There were fourteen meetings of the Trustees during the year, the average attendance being between five and six. In March seven additional Trustees were appointed, viz., The Chancellor of the Sydney University (Hon. Dr. Henry Norman MacLaurin, M.A., M.D., M.L.C.) *ex officio*; Professor Tannett William Edgeworth David, B.A., F.G.S.; Professor Thomas Butler, B.A.; Hon. John Hughes, M.L.C.; Hon. Alexander Kethel, M.L.C.; Lachlan John Brient, Esquire; William Wood, Esquire.

The attendances were as follow:—Hon. James Norton, LL.D., 12; Hon. J. F. Burns, 12; Hon. A. Kethel, 8\*; Hon. J. Hughes, 7\*; Professor W. M. Macallum, 6; A. Oliver, Esq., 6; Professor T. Butler, 5\*; Hon. H. N. MacLaurin, 5\*; Hon. E. Greville, 4; Prof. T. W. E. David, 4\*; W. Wood, Esq., 3\*; L. J. Brient, Esq., 1\*; Hon. P. G. King, 1; Hon. E. Barton, 0.

2. The general collection of books has been increased by 20,144 volumes; from the Reference Library stock 41 volumes have been struck off; and from the Lending Branch 260 volumes; leaving the total now in the Library as 144,244. Details of the classification of the books are given in Appendix A.

3. The Reference Library was open for 352 days, including 51 Sundays, and the attendance was 183,760, showing an increase of 6,881 over that of the previous year. The Lending Branch was open for 307 days, including 22 Sundays, and the total number of borrowers' visits reached 106,159, being an increase of 20,723 over the number for 1898. The attendance at the Newspaper-room for 351 days, including

\* Appointed in March.

including 52 Sundays, was 264,359, which shows the large increase of 102,189, equal to 63 per cent. over the figures for the previous year. The average daily attendance at the Library was 1,811 on week-days, and 365 on Sundays (four hours). Details are given in Appendix B.

4. In the Lending Branch the borrowers numbered 8,675, being an increase of 2,327, equal to nearly 37 per cent. over the number for the previous year. Each borrower used, on the average, 14 books during the year. In Appendix C will be found details of the classes of books used, showing for each class—

- (a) The number of volumes available at the end of the year.
- (b) The number issued during the year.
- (c) The daily average of volumes issued.
- (d) The ratio between volumes and issues.

These figures show that fiction forms 13·7 per cent. of the total volumes in the Lending Branch, and 34·9 per cent. of the total issues, and that each volume of fiction was borrowed, on an average, nearly 11 times during the year. It may be pointed out that, although the percentage of issues of fiction seems large, it is small compared with that shown in the reports of Municipal Lending Libraries and subscription libraries, where the percentage generally varies between 80 and 90. Among the total 3,588 volumes of fiction, most of the popular standard works, such as those of Scott, Dickens, Thackeray, Stevenson, and George Eliot, are represented by a number of copies ranging from 2 to 15, and, consequently, there are altogether only 1,040 separate works of fiction in the collection.

5. The figures given in Appendix D show to what extent, and in what direction, the public avail themselves of the contents of the Library on Sundays. The Trustees, with the concurrence of the Minister for Public Instruction, closed the Lending Branch on Sundays, upon its removal to new quarters, in June.

6. During the past year 60 new boxes were made and equipped with books for loan to country libraries and groups of students in remote districts, making the total number of travelling libraries now available 161; the number of volumes added to stock was 1,720, making the total 9,259. The 77 old boxes which have hitherto been in circulation have been temporarily withdrawn, such of the books as have proved unsuitable for this class of students, and those which have become obsolete, have been taken out of the boxes, and their places are being supplied with more modern books and good useful literature of a more popular character than the original works, which were sent out fifteen years ago. The change has been much appreciated, and the whole of the books now being sent out are read more or less, as the condition of the volumes abundantly proves. There is now a box of books available for each Country Library desiring to borrow, consequently there will be little delay in future in supplying demands for loans.

There were 233 boxes, containing 14,155 volumes, sent to 130 country centres, and these boxes travelled no less than 90,283 miles, one having travelled 2,226 miles during the year, and 21 of them over 1,000 miles each.

The Trustees are of opinion that the appropriation of £300, made by Parliament for this object, has done much educational work in the country districts, and has been the means of extending knowledge and intellectual pleasure, and of enkindling nobler ambitions in many thousands of readers in every part of the Colony; and they venture to hope that this branch of their work will be yet much more extended till every hamlet in this Colony may be able to share in the benefits derivable from this national Library.

Appendix E gives further details of this branch of the Library's operations.

7. The donations for the year have assumed generous proportions owing to the splendid gift of 10,024 volumes, with fifty pictures and engravings, made by David Scott Mitchell, Esq., M.A., as a first instalment of his unrivalled Australian collection. Mr. Mitchell, having made certain simple conditions as to the accommodation of his library, and the regulations which should govern admission to it, the Minister notified his acceptance of them on behalf of the Government, and Mr. Mitchell

Mitchell at once gave the Trustees an earnest of his generous intentions towards the Library in this first donation of books worth fully £6,000. The total donations for the year amounted to 13,658 volumes and 50 pictures, of the estimated value of £6,595; also 107 volumes of newspapers, comprising 13,270 single parts, and valued at £53, which were presented by the proprietors in Great Britain and the Australasian Colonies for current use. Under the Copyright Act of 1879 the Library received 237 volumes and pamphlets, 14 photographs, and 10 maps, valued at £40; also 302 sets of newspapers and magazines, comprising 21,934 single issues, and valued at £207.

The question of preserving and binding files of these newspapers is one that demands special attention. Many of them are of comparatively little value, but they contain the local records of the development of their respective districts, and may, therefore, be of great interest in future years. At the present time Mr. James Bonwick, F.R.G.S., who is searching for and transcribing the materials for the early history of Australia only a century ago, finds frequent references to newspapers of the beginning of this century, but cannot find files of the papers in the proprietors' offices, nor even in the great national collection of the British Museum. The Trustees, recognising the potential value of complete files of papers from all the country districts of New South Wales, asked each of the proprietors to co-operate with them by presenting a copy of each issue besides the one supplied in terms of the Copyright Act, in order that one might be presently available to the public in the Newspaper-room, and the other preserved and bound for future use. The proprietors to the number of one hundred and thirty have responded to this invitation, and consequently the Trustees are able to bind complete files of their papers, and they also preserve all the others in as complete a state as is possible after a week's use in the Newspaper-room.

8. The Newspaper-room was supplied during last year with 413 newspapers, numbering 35,204 single issues, of which 111 were received from Great Britain, the Australasian Colonies, India, South Africa, Fiji, Samoa, Japan, Canada, and the United States. The daily average attendance was 864 on week-days, and 113 on Sunday afternoons. The appreciation of the change of quarters is shown in the increase of 63 per cent. in the attendance for the whole year.

9. In June the Trustees entered upon possession of their new rooms in the Queen Victoria Market Buildings, and the results have been very gratifying in every way. The two large rooms rented from the Municipal Council of Sydney are bright, commodious, and centrally situated. The Newspaper-room has been fitted with suitable reading-desks, and an undesirable class of visitors has been almost entirely banished merely by removing the chairs, thereby encouraging only the visits of persons who wish to refer to the newspapers for short periods, and not to lounge and doze in library chairs for a few lazy hours. The attendance increased by 124 per cent. during the latter half of the year. The collection of books in the Lending Branch has been strengthened by the addition of 2,145 volumes of popular current literature, and there has consequently been an influx of new borrowers to the extent of 37 per cent. and the issues have increased by 44 per cent.

10. The work of cataloguing the latest additions to the Library has gone on steadily. A supplement, with a complete subject-index for the books added to the Reference Library during the years 1896-8, was issued during the year. The whole of the books received during 1899 were catalogued and printed on slips by our own staff month by month; these slips were promptly available to the public, and the printed catalogue of the Library has in that way been kept up to date.

The Trustees have received encouraging testimony to the value of the system of cataloguing now being pursued in this Library in the form of a highly appreciative letter from Mr. G. K. Fortescue, of the British Museum, and in the applications of the leading libraries of Great Britain and America for as many as 160 copies of the Guide to the System of Cataloguing in our Reference Library. The criticisms which have appeared in all the Library Journals, and the acknowledgments from the Librarians of the largest libraries in England and the United States, have been uniformly friendly and laudatory.

It

It has been found advisable to compile a new catalogue for the Lending Branch, to consist of two parts, covering respectively the periods 1877-85 and 1886-98, which will supersede the existing catalogue and seven supplements. A copious subject-index has been compiled for the use of students which will be printed as early as possible. Meanwhile the two catalogues of authors satisfy the requirements of most of the borrowers.

11. The question of binding is a very important one in all libraries, and is now an urgent one in this Library. It is obvious that as the Library grows in size and usefulness the expense for binding must grow in a still greater ratio, for many of the new books have to be bound before they can be made available to the public, and the old ones in due course demand rebinding. During the past year 4,631 volumes were bound—1,502 for the Reference Library, 1,810 for the Lending Branch, and 1,319 for the Travelling Libraries. Of this total only 1,492 volumes of newspapers, magazines, and periodicals were bound by the Government Printer, and the small Special Vote of £100 for binding did not meet the expense of binding more than one quarter of those needed for the Lending Branch and Travelling Libraries; consequently about £300 of the very moderate amount voted for new books had to be expended in rebinding the old books. Many thousands of books in the Reference Library are still in the paper covers and other temporary bindings in which they were originally received. The merely ordinary wear and tear of these books soon destroys them, and the Trustees hope that provision will be made in the next Estimates for covering all books in the Library with some strong but cheap form of binding. The absolutely necessary binding for a library of 120,000 volumes, such as this, used by 290,000 readers, cannot be carried out for less than £1,000 a year, even allowing for only the cheapest form of strong binding for 90 per cent. of the books.

12. Owing to the Special Vote granted by Parliament, the Trustees have been able to procure a Chivers Indicator for the Lending Branch, which, it is confidently hoped, will prove of great service to the public, and will greatly reduce the mechanical work of the staff. Some steel presses of the latest pattern have been got from the United States, where great attention has been paid to such mechanical contrivances. Our experience of them will be of service when the time comes for making specifications for a new building.

13. In response to a letter sent to some of the leading British and American publishers, 992 volumes of very suitable literature for the Travelling Libraries were received from twelve of them—Messrs. G. Bell and Sons, the Society for Promoting Christian Knowledge, Blackie and Sons, C. A. Pearson (Limited), Boston Book Co., Religious Tract Society, Routledge and Sons, Kegan Paul, Trench, Trübner, & Co., Williams and Norgate, Blackwood and Sons, Harper and Bros., McMillan & Co.; while seven others offered handsome discounts, ranging from 25 to 60 per cent. on any of their publications that the Trustees might wish to choose for loan to country students. This generosity will enable the Trustees to equip twenty new boxes with modern high-class literature, which will prove very acceptable to the small country libraries. They will be distinguished by the respective names of the publishers who have so kindly presented them.

14. Mr. D. S. Mitchell having intimated his intention of endowing this Library with sufficient means to enable the Trustees to permanently maintain the excellence of its Australasian department, the necessity of providing for the incorporation of the Trustees became urgent. Mr. Mitchell wished to bequeath to the Trustees his whole collection, together with an endowment which would enable them to keep on adding to the collection as opportunity might arise, and to accumulate the revenue of a series of years, if necessary, in order to secure unique treasures or collections of Australian literature.

In March I urged the Minister to introduce a Bill to incorporate the Trustees and providing for the necessary powers. In November the Attorney-General (Hon. B. R. Wise, M.P.) introduced a Bill for this purpose, which was passed as "The Public Library and Art Gallery Act" on 29th December. This Act gives the Trustees powers to deal with bequests, and to make by-laws relating to the internal administration of the Library, and endows it with £2,000 per annum for the purchase of books. It will, doubtless, be of great service to the welfare of the institution.

15. At the same time I pressed on the Minister the urgent necessity of choosing a site for the new building that must soon be erected to accommodate the rapidly-growing national collection, as well as the Mitchell Library, of 35,000 volumes, which will need a separate wing. The present building is in every way unsuitable for the main purposes of a large public library, and its awkward construction makes it impossible to administer it in accordance with the best principles of library economy. In certain departments it is already crowded, so that many books, more especially the bound volumes of newspapers, cannot be provided with shelf-room, but are stacked in piles wherever odd corners of space can be found.

Some classes ought to be rearranged on some more scientific basis than that adopted thirty years ago, when library administration was not systematically studied; but it is impossible, in this cramped building, to remove the thousands of volumes and simplify their arrangement as the Librarian would like to do. About two years hence all parts of the building—galleries and basement—will be absolutely packed full of presses of books, with only 2 feet passages between them, and it will be impossible to find a book in most parts of the building without some artificial light. As it is impracticable to extend the present building, it is an urgent matter that steps should be taken at once to choose a site for a new library, and to prepare plans for a suitable building which will serve the needs of generations to come. The collection of books has reached such a stage of development that it demands a much larger basis of arrangement, and much wider functions as an educational institution, than were contemplated when the present site was granted to the Australian Subscription Library in 1842. When the original building on this site was completed, it was one of the leading architectural features of Sydney, and its public lecture hall was the centre of the city's intellectual life, providing the meeting-place for the Philosophical Society, the University Debating Club, and all high-class lectures and scientific meetings. The present building is quite unworthy of the Sydney of to-day, and the institution is not able to expand in legitimate spheres of educational usefulness.

The Trustees would again urge the necessity for early consideration of the best method of dealing with this important matter.

16. The Trustees regret that no provision was made on the last Estimates for a salary for some competent person to catalogue the section of the Mitchell Library (10,024 volumes) already handed over to them. Meanwhile the books have been placed on shelves and are properly cared for in a separate building adjoining the Library, which was formerly the Principal Librarian's residence; but it has been impossible to commence to classify them, or to arrange them according to any orderly plan, and they are therefore practically useless to the public for whom they are intended. It is hoped that the Government will be able to provide on the next Estimates the modest salary of £150 suggested for a Cataloguer for the Mitchell Library.

17. The Trustees would place on record the terms of the resolution in which they conveyed to Mr. Mitchell their thanks for his munificent gift and generous intentions for the future :—

The Trustees of the Public Library of New South Wales having carefully examined the donation of 10,024 books and 50 pictures and engravings, presented to this library by Mr. David Scott Mitchell, M.A., desire to place on record their high appreciation of the very great importance of this splendid gift to the people of New South Wales. They recognise that these books are specially useful as supplementing the present collection, and will be of inestimable value to future students of literature, history, language, and fine arts. This public-spirited generosity being unprecedented in Australia will probably stimulate other Australians to follow the example set them by Mr. Mitchell, to the enrichment of our Public Libraries, and a marked increase of the appreciation in which the Colony is already held by lovers of literature. The Trustees, in making this record, have been unable to ignore the fact that the present donation is only an earnest of Mr. Mitchell's intentions to bequeath to this Library the whole of this unequalled collection of Australian books, pictures, and engravings, and to make provision for its future maintenance and growth, and that by these means the Public Library of New South Wales must necessarily become pre-eminently the greatest Library in Australia, and must take its place as one of the remarkable national collections of the world. The Trustees, recognising the full importance of the present munificent gift, and to assure him of their cordial appreciation of his efforts, and of their determination to their utmost ability to care for and treat his collection in accordance with his wishes.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## SALE OF BOOKS FROM THE PUBLIC LIBRARY.

(RETURN RESPECTING.)

*Printed under No. 8 Report from Printing Committee, 9 August, 1900.*

Answers to Questions (No. 11) asked by Mr. J. C. L. Fitzpatrick, 7th August, 1900.

1. In May, 1897, about 5,000 volumes, a large majority of which were pamphlets, periodicals, Parliamentary papers, directories, year-books, Army and Navy lists, and other literature not needed by the Library, were exchanged with Messrs. Angus and Robertson for a selection of modern books to be included in the Travelling Libraries, lent to Schools of Arts and groups of students in the country. Since that date no books have been sold.

2. By order of the Trustees of the Public Library of New South Wales.

3. It was not practicable, in view of the pressure of work on the staff of the Library, to make a list of these books, and it was not necessary, as the tenderers were enabled to inspect the books and make any lists necessary for their own purpose. The larger part of the books had never been received into the Library's collection, and had therefore not been catalogued. Those which were taken from the shelves as unnecessary duplicates can be listed at any time.

4. No cash was paid for these books. The tender of Messrs. Angus and Robertson, £219, was accepted on condition that modern books, to the value of £274, should be chosen in lieu of them, thus allowing 20 per cent. off the shop price. A large number of the books were second-hand, and were thus bought at 30 per cent. below the published price, with 20 per cent. taken off that. There is a complete invoice of these books so received.

5. Tenders were invited from the firms of Angus and Robertson, E. W. Cole, and W. Dymock, the only ones deemed by the Trustees likely to deal in such stock. They were inspected by representatives from these three firms, but a tender was received from only the first.

6. No.

7. The cost cannot be ascertained, since comparatively few of the books were bought directly, very many of them being donations from foreign countries or from Government Departments, and being of no special value. A number of others were duplicates of books already in the Library, and were purchased in several large collections bought by the Trustees, no special value being assigned to each volume.

8. A few books, containing some newspaper cuttings and autographs of persons of no special renown, were sold, but in each case at least one, and generally two or three copies in duplicate, were retained by the Institution. No book "extremely valuable" was sold.

9. The books were inspected by Mr. R. C. Walker, the late Principal Librarian, at that time one of the Trustees, and by whom all the books had been acquired during his term of office. They were also carefully inspected by the two senior officers of the Institution in order to make sure that no unique book was allowed to go away.

10. By the error of a subordinate officer who picked the duplicates off the shelves, some works of the Wise Bequest were included in the lot exchanged with Messrs. Angus and Robertson. As soon as this was discovered this firm reserved all the books that could be found bearing the stamp of the Wise Bequest, and thirty volumes were re-purchased by the Trustees for £12 5s. 6d., this amount being deducted from the sum tendered for the books.

11. Any Australian book now in the Library can readily be identified by the marks and stamps put in certain places throughout the book. A number of persons have been prosecuted for stealing books during the last few years, and there has been no difficulty in identifying the property of the Trustees. Most of the books of any value are bound in the Library's own binding, and all are systematically marked and stamped as soon as received.

12. The Trustees have approved of the loan of books from the duplicates and from the Lending Branch to any *bond-fide* students in country districts on the same terms as they lend boxes of books to country Schools of Arts and groups of students. Only books such as cannot be readily got in country towns are lent in this way. The books are sent and returned free of cost to all borrowers, and the expense is defrayed from the amount of £300 voted annually by Parliament.

13. An account is kept of all books on loan, and a list of the names of all borrowers, as far as practicable. No distinction is made between a borrower in the country and one in the city.

14. The amount of money spent on fiction during the three years ending 30th June, 1900, was as follows:—

LENDING BRANCH.								
Renewals of books worn out	...	...	...	...	...	£212	3	5
New fiction added to the Library, as chosen by the Trustees	...	...	...	...	...	91	9	0
REFERENCE LIBRARY...						£67	4	6

15. In December, 1894, at the request of the widow of the late Dr. Bennett, the Principal Librarian, in conjunction with the agents for the Library (Messrs. Angus and Robertson), valued Dr. Bennett's books, and conjointly estimated their value at £850. The Trustees were agreeable to take a few very choice books, which they needed, at a cost of less than £100, the agents taking all the rest. Five months afterwards a few of these books were chosen from the stock of a Sydney bookseller, although the choicest ones had been meanwhile sold to a gentleman who has since presented them to the Library as a gift. The books selected were submitted to the Trustees at their meeting in June, 1895, but their reduced vote for books having been meanwhile exhausted, the Trustees had to reject the books offered, as also all other books then submitted.

H.C.L.A.

*Note.*—The most of these questions were asked in June, 1897, and answered by the late Mr. R. C. Walker, in my absence in England.

## WORKING OF THE FREE PUBLIC LIBRARY.

(PETITION FROM H. C. L. ANDERSON, PRAYING TO BE REPRESENTED BY COUNSEL OR ATTORNEY, OR IN PERSON, BEFORE THE SELECT COMMITTEE ON.)

---

*Received by the Legislative Assembly, 23 August, 1900.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of H. C. L. Anderson, of the Public Library, Sydney, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

1. That on the 16th day of August, in the year of our Lord one thousand nine hundred, your Honorable House appointed a Select Committee to inquire into and report upon the working of the Free Public Library.

2. That your Petitioner humbly prays that he may be represented by Counsel or Attorney, or in person, before the Select Committee appointed to inquire and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

23 August, 1900.

HY. C. L. ANDERSON.

WORKING OF THE FREE PUBLIC LIBRARY.

(PETITION FROM WILLIAM DYMOCK, PRAYING TO BE REPRESENTED BY COUNSEL OR ATTORNEY  
OR IN PERSON, BEFORE SELECT COMMITTEE ON.)

---

*Received by the Legislative Assembly, 18 September, 1900.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in  
Parliament assembled.

HUMBLY SHOWETH:—

1. That on the 16th day of August, in the year of our Lord one thousand nine hundred, your Honorable House appointed a Select Committee to inquire into and report upon the working of the Free Public Library.

2. That your Petitioner humbly prays that he may be represented by Counsel or Attorney, or in person, before the Select Committee appointed to inquire and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

WILLIAM DYMOCK.

*Received by the Legislative Assembly, 20 September, 1900.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in  
Parliament assembled.

The Petition of George Robertson, of the firm of Angus and Robertson, of Sydney, in the Colony of  
New South Wales, booksellers,—

HUMBLY SHOWETH :—

1. That on the 16th day of August, in the year of our Lord one thousand nine hundred, your  
Honorable House appointed a Select Committee to inquire into and report upon the working of the Free  
Public Library.

2. That your Petitioner humbly prays that he may be represented by Counsel or Attorney, or in  
person, before the Select Committee appointed to inquire and report upon the matter, with the right to  
call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence  
before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.  
20th September, 1900.

GEORGE ROBERTSON.

## WORKING OF THE FREE PUBLIC LIBRARY.

## REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 16th August, 1900, "*to inquire into and report upon the working of the Free Public Library,*" and to whom was granted, on 23rd August, 1900, "*leave to sit during any adjournment of the House,*" on 28th August, 1900, "*leave to sit during the sitting of the House,*" and, on 31st October, 1900, "*leave to make a visit of inspection to the Public Library of New South Wales and its Lending Branch,*"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List\* (whose evidence will be found appended hereto), find as follows, upon the several matters brought before them:—

\*See List,  
page 13.

1. That books of reference had, for some years prior to this inquiry, been franked through the post to persons resident in the country who claimed to be students of the special subjects upon which the aforesaid books of reference treated; and that these same books were returned by the borrowers free of charge. The system appears to have been in vogue for quite a number of years before any protest on the part of the postal authorities was made against its continuance, the Library authorities conceiving it to be one of the functions of their institution to meet as far as practicable the requests of individual, as well as groups of, students, in localities removed from the metropolis, for books dealing with the particular subjects to which they were devoting special educational attention. In justification of his action in this matter, the direct outcome of a decision arrived at by the Trustees, Mr. H. C. L. Anderson, the Principal Librarian, in his evidence (reply to Question 114) says: "I never dreamt that I was not just as much justified in getting my Library books back free as a farmer is justified in sending an apple to be named or a diseased cabbage to be examined." In every case in which application for the loan of works of reference was made by country residents, such request appears to have been at once complied with where practicable, and the system is one that commends itself as worthy of encouragement and extension.
2. Your Committee have inquired exhaustively into the matter of the sale by the authorities, in 1897, of some 5,000 volumes from the library shelves to Messrs. Angus and Robertson, and have arrived at the following conclusions:
  - (a) That Mr. Anderson duly notified the several principal city book firms of the intention of the Trustees *re* those books, and that no special consideration was shown in this connection towards Messrs. Angus and Robertson, the successful tenderers.
  - (b) That a very large proportion of the books so sold were practically valueless, and occupied space in the already congested library which could be put to better use. At the same time, some few at least of this collection were of such a character that they should not have been parted with, notably those volumes which bore the stamp of Mr. Justice Wise, and which, originally presented by his widow to the Museum authorities, ultimately found place

place on the Public Library shelves. Your Committee are also of opinion that in future the utmost care should be taken to prevent the disposition of such publications relating to the history, exploration, and circumstances of early Australia as promise to become rare and of inestimable value to private collectors and national institutions. It has been explained by Mr. Anderson that the Wise bequest volumes were by mere accident included amongst the 5,000 volumes sold, and that, on the discovery being made, every effort to recover possession was put forth by the Trustees and himself, with satisfactory results.

- (c) That the acceptance from Messrs. Angus and Robertson by the Library authorities of books in exchange for the 5,000 volumes above referred to was perfectly justifiable, because of the circumstance that had the amount tendered been paid in cash it would of necessity gone into the Consolidated Revenue, and have thus been lost to the Trustees.
- (d) That the system of stamping and otherwise marking books in the Library is now very complete in every particular; and the risk of loss by theft or otherwise is reduced to a minimum.
- (e) That the action of the Trustees in discontinuing their London agency, and in calling for tenders from Sydney firms for the supply to the Library of books, periodicals, &c., was fully warranted, and that the change has, on the whole, proved eminently successful. Four firms appear to have competed (see page 19), with the result that Messrs. Angus and Robertson's tender was accepted; and up to date this firm would seem to have thoroughly satisfied the Trustees and the Principal Librarian in every particular.

3. Your Committee made complete inquiry of all competent witnesses—particularly of Mr. H. C. L. Anderson, Hon. Dr. Norton, Hon. John Hughes, and Professor MacCallum—with regard to the condition of and accommodation afforded by the building at present used as a storehouse for the treasures of the Reference Library. They learned from one and all that grave necessity exists for the early selection of a site for, and the erection of, a commodious and convenient Library building, more especially in view of the fact that Mr. D. S. Mitchell has presented the institution with his valuable collection, totalling some 36,000 volumes, the greater portion of which cannot be taken possession of until such increased accommodation is provided. Mr. Mitchell's library has been referred to by no less an authority than Professor Morris (Professor of English Literature at Melbourne University) as "a collection to which it is impossible to affix any money value, because it is simply unique and unrivalled"; and in view of all the circumstances, the inconvenience to which the public and the Library officials are subjected, by reason of want of space, &c., your Committee feel it incumbent upon them to urge that steps be taken, without further delay, in the direction of providing a building capable of accommodating the accumulated literary treasures of the State. On many occasions the Trustees have referred to this matter in their annual reports, and have pointed out the disabilities under which the Principal Librarian and his staff labour in consequence of the present building being possessed of such scanty accommodation; whilst in August of the present year a deputation of prominent citizens interviewed the Minister of Public Instruction on the same subject, intimating that at least four times more room than is at present available would be needed before the requirements of the Library could be met. The Press has also taken up the question in a spirited manner, one prominent publication recently remarking, in the course of an article on "A Great Australian Inheritance," that "the building which serves as a Public Library for the Mother Colony is notoriously unequal to the demands of its own local requirements, quite irrespective of Mr. Mitchell's substantial addition; whilst it compares most unfavourably, and even discredibly, with the imposing and commodious edifice that adorns the capital of the younger colony of Victoria." These expressions of individual and collective opinion are quoted in support of the contention of your Committee that some definite steps should be at once taken to  
make

make good the deficiencies complained of. It is but fair to the Principal Librarian and his staff to add that your Committee, several of whose members have lately visited and inspected the Library, are satisfied that the very best use is made of the limited wall and floor space which they have at their disposal.

4. In conclusion, your Committee are of opinion that the inquiry they have just concluded will be found to have served many very excellent purposes, not the least useful of which will be that of having fully disproved the incorrect statements that were current in regard to alleged maladministration of the Public Library affairs by the Trustees and the Principal Librarian.

J. C. L. FITZPATRICK,  
Chairman.

[Adjourned till To-morrow, at 10.30 o'clock.]

THURSDAY, 1 NOVEMBER, 1900.

MEMBERS PRESENT —

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. Meagher, | Mr. Millard.

Entry from Votes and Proceedings, granting leave to the Committee to make a visit of inspection, read by the Clerk.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 21 NOVEMBER, 1900.

MEMBERS PRESENT —

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. Hogue, | Mr. Quinn.

The Committee proceeded on a visit of inspection to the Public Library of New South Wales.

The Committee having returned,—

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 28 NOVEMBER, 1900.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. Jessep, | Mr. Millard.

The Chairman submitted the following claims for witnesses' expenses:—Mr. T. H. Lennard, £1 2s. 6d.; Mr. C. Meadmore, 15s.; Mr. J. W. Child, £2 5s.; Mr. H. J. Blackwood, £3 15s.

Claims considered and passed.

The Chairman submitted letter from Mr H. C. L. Anderson, intimating that, being on leave of absence, he had had to come from Springwood on two occasions to attend the Committee, and asking to be recouped the expense of two return tickets, Springwood-Sydney, 19s. 10d.

Claim considered and passed.

The Chairman then submitted a letter addressed to the Clerk of the Legislative Assembly by Mr. H. W. H. Huntington, enclosing copy of a letter and declaration, forwarded by him to the Chairman of the Committee on 5th November, 1900.

*Resolved (on motion of Mr. Jessep),*—That the evidence having been closed, and a Draft Report submitted, Mr. Huntington be informed that it is the intention of the Committee not to re-open the inquiry, and that the documents be returned to Mr. Huntington.

Chairman submitted Draft Report.

Same read, verbally amended, and *agreed* to.

Chairman to report to the House.

LIST OF WITNESSES.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

WORKING OF THE FREE PUBLIC LIBRARY.

TUESDAY, 28 AUGUST, 1900.

AFTERNOON SITTING, 2:30 O'CLOCK.

Present:—

MR. MEAGHER,  
MR. HOGUE,  
MR. JESSEP,

MR. SLEATH,  
MR. PRICE,  
MR. THOMAS,

MR. MILLARD.

J. C. L. FITZPATRICK, ESQ. IN THE CHAIR.

Henry Charles Lennox Anderson, Principal Librarian, sworn and examined:—

1. *Chairman.*] How long have you occupied the position of Principal Librarian? Seven years on the 1st September.
2. Prior to being appointed you were in another branch of the Public Service? I was head of the Department of Agriculture.
3. *Mr. Price.*] But prior to that, had you any experience in connection with libraries or books—that is, in the capacity of librarian? No; I was Chief Examiner to the Department of Public Instruction for eight years, and I was Senior Assistant Master in the Sydney Grammar School for over nine years, after taking a Degree at the University.
4. *Mr. Hogue.*] You are a graduate of the University? I am a Master of Arts of the Sydney University, and a Fellow of the Senate of the Sydney University.
5. *Mr. Price.*] Before leaving the Department of Agriculture, was there any difference between the Minister and you? Any difference?
6. Was there any inquiry or any row? Nothing at all.
7. Was there not an inquiry held in connection with Mr. Slattery? That was long after I left the Department. I think about two years after I left the Department.
8. Were the charges that you made proved? I do not know; I never heard.
9. *Mr. Sleath.*] What position did you hold in the Mines Department? I was called the Director of Agriculture; but I was really the head of the Department of Agriculture, which was worked in conjunction with the Department of Mines by the Minister for Mines and Agriculture.
10. How long did you hold that appointment? From March, 1890, to August, 1893.
11. Who was Minister for Mines when you were first appointed? Mr. Sydney Smith; he appointed me.

H. C. L.  
Anderson.  
28 Aug., 1900.

This concluded the examination of Mr. Anderson, and by permission of the Committee he was allowed to be present in the room during the examination of other witnesses.

John William Holliman, Secretary to the Public Service Board, sworn and examined:—

12. *Chairman.*] The Committee has determined to call you for the purpose of securing some information with reference to an inquiry that is being held by the Public Service Board in connection with some allegations made in regard to Mr. Anderson;—are you in a position to produce any papers relating to that? The inquiry which is being held by the Board is still in progress, and the Board being somewhat doubtful whether, under the circumstances, the evidence should be produced, seeing that only one side has been heard, instructed me to wait upon the Honorable the Attorney-General and ask him what he thought. Mr. Wise suggested that I should submit to the Committee that, in view of the fact that only one side had been heard, and that the evidence was incomplete, the possibility that they would see the desirableness at this stage of not asking that the evidence should be produced.

J. W.  
Holliman.  
28 Aug., 1900.

- J. W. Holliman.  
28 Aug., 1900.
13. How long has this investigation been in progress? About a fortnight. There have been three or four sittings.
14. And how long do you expect it to continue before it is completed? I think only a few days.
15. *Mr. Meagher.*] Were you present during this inquiry? I have not been present.
16. Can you say whether Mr. Anderson has been fully examined? Mr. Anderson has not been examined—at least, I do not think so. I understand that Mr. Anderson has been present, and has had the opportunity of cross-examining the witnesses on the other side; but so far as I am aware he has not yet been heard in defence.

Stephen Harbord Lambton, Deputy Postmaster-General, sworn and examined:—

S. H. Lambton.  
28 Aug., 1900.

17. *Chairman.*] Have you given any evidence before the Public Service Board relating to some matters affecting Mr. Anderson, Principal Librarian? No.
18. Certain allegations have been made to the effect that both Mr. Anderson and Mr. Bladen have been in the habit of sending books from the Public Library to people in different parts of the Colony, and have been franking them on Service stamps;—have you any knowledge of the matter? Yes; in fact we have challenged the action of the Library authorities. They were sending, under cover of O.H.M.S. envelopes, books to private persons. This is the kind of envelope (*produced*) which is supposed to frank official correspondence, and we found that, under cover of these envelopes, the Library authorities have been sending books to private persons and receiving books from private persons. As soon as we became aware of that practice we took steps to stop it.
19. *Mr. Sleath.*] I think there is a notification on the outside of the envelope as to what purpose it should be used for? Yes. Each Department has supplies of these, and the name of the Department is put in the corner.
20. *Chairman.*] Is there any further information you can give? We found in the course of inquiry that a person named Reid, at Jamison Town, near Penrith, had been receiving heavy parcels of books, some weighing 11 lb., under cover of these O.H.M.S. envelopes, and that the books were returned under similar envelopes.
21. In order to obtain information on the point, I presume that you have certain parcels opened? Yes; and concurrently with that Mr. Dymock, a book merchant, of Sydney, after seeing Mr. Crick, wrote a letter complaining of the action of the Library authorities. That was almost concurrently with our discovery through correspondence with Mr. Reid. And also, almost concurrently, we had a letter from the Library authorities, asking us to acquiesce with the arrangement which had been going on. I have that letter here, and also a copy of the letter we sent to the Library authorities pointing out the irregular course they were following, and stating that the Postmaster-General had directed that these books must not be considered as being sent on the public service, and should not be so sent unless the postage was paid.
22. Am I to understand that a request was received from the Library authorities asking for your concurrence in the arrangement prior to your letter to them complaining about the system they had adopted? Yes.
23. Their letter was received prior to yours being sent? Yes. Their letter was received on the 1st August, and we wrote to them on the 8th August.
24. *Mr. Price.*] But you had taken action before that? We had taken action before that. Our letter of the 8th August gives the history of the whole matter. It is as follows:—

Sir,  
Postal and Electric Telegraph Department, General Post Office, Sydney 8 August, 1900.

I am directed to bring under your notice the following illustration of the abuse by the Public Library authorities and borrowers from the Public Library, of the regulations relating to the postage of official correspondence.

On the 2nd ultimo a parcel of Library books weighing 11 lb., addressed to the Lending Library, Sydney, sent by Mr. W. Reid, of Jamisontown, without postage, reached the Penrith Post Office *en route* to its destination from Jamisontown, and the Postmaster at Penrith thereupon caused the sender to be communicated with by the Postmaster at Jamisontown asking why the parcel had been sent free. Mr. Reid replied that he had been informed by the Librarian that the books could be sent per post free, and the Postmaster at Penrith then sent the parcel on to Sydney with a report of the circumstances. The parcel was, however, intercepted at Sydney for the postage, which Mr. Reid subsequently paid. Later Mr. Reid informed the Postmaster that the Public Librarian was about to send him O.H.M.S. wrappers whereby the books could be returned unstamped, and on the 1st instant he handed in for transmission a parcel of books bearing a printed O.H.M.S. wrapper issued from the Public Library, with the name of the latter printed in the lower left-hand corner, and stated that the return wrapper had been sent him with the books by Mr. Bladen, librarian of the Queen Victoria Markets Branch, who instructed him to return the books post free by means of the wrapper which Mr. Bladen had himself addressed.

On examination of the contents of the parcel it is found that not only are two books enclosed, but the borrower's cards and two written communications as well—one communication being a request for certain books to be supplied, and the other for another printed wrapper similar to the one now used to be sent to cover the return of the books. Mr. Reid, who is the proprietor of the Penrith Boys' College, has informed the Postmaster that the books he receives are required in his professional capacity for reference. [*Parcel herewith enclosed.*]

From the foregoing it will be seen that the Public Library authorities, not content with franking books to a private individual, actually send O.H.M.S. covers to that individual so that he may return the books free, the irregularity being added to by enclosing with the books written communications. The wording of these communications indicate that this state of things has been going on for some considerable time, and fully bears out a complaint made to this Department by Mr. Wm. Dymock, bookseller, &c., Sydney—a copy of which communication is attached hereto.

It will be seen that Mr. Dymock alleges that the practice herein described is followed by the Public Library with a number of borrowers therefrom in the country, notwithstanding that, according to the regulations of the Library itself, books are not allowed to be lent outside the one penny postage radius.

It is considered that Mr. Reid's statement that he requires the books in his professional capacity for reference, does not in any way justify the books being sent in either direction on the Public Service, and at the public cost.

Since exception was first taken to Mr. Reid's returning books free, and no doubt as the result of the Departmental action in this case, the Principal Librarian has communicated with this office in regard to the question, and he has been informed in reply that the Department cannot consent to an extension of the free postage system as desired. In view therefore of the serious breach of the Postal Regulations in Mr. Reid's case, the Postmaster-General considers that the matter should be referred to your Department for the explanation of the Library authorities, and he has given instructions that, for the present, books from the Public Library to private persons, or from the latter to the Library, are not to be allowed to pass under O.H.M.S. covers free, the same being required to be paid at book rates of postage, no written communications to be enclosed, and the books to be otherwise posted in accordance with the book post regulations

I have, &c.,  
S. H. LAMBTON.

25. *Mr. Sleath.*] Did you get a reply from the Library? Not yet. I have Mr. Dymock's letter here.
26. *Mr. Price.*] What is the date of Mr. Dymock's letter? 31st July, 1900.
- 27.

27. And what is the date of the application by the Public Library? There are two letters from the Public Library—one dated 23rd July, and one 31st July. The following is the letter of 23rd July.

S. H.  
Lambton.

28 Aug., 1900.

Sir,

The Public Library of New South Wales, Sydney, 23 July, 1900. I have the honor to bring the following matter under your notice, and beg to request, by direction of the Trustees, that you may give this matter your sympathetic notice, with a view to taking some official steps towards co-operating with them in their scheme for extending the advantages of this library to country students.

For many years past the Trustees have sent boxes of books to country Schools of Arts, and groups of students in remote parts of the Colony, which have been supplied absolutely free of cost to the persons concerned, proper guarantees being obtained for the good use and safe return of the books so lent. Taking this as a precedent, single students in country districts, nearly always clergymen and schoolmasters, have asked for the loan of books appropriate for their respective courses of study, and the Trustees have determined that these single students should, if possible, be treated as generously as groups of students or country libraries have been. I have therefore in every case where possible sent the book required with free postage. I may mention that under no condition will my Trustees lend any work of fiction or ordinary book of travel, or recent book of a low price; but they lend only rare books, such as cannot be generally obtained outside our own library, such as works on philology, ancient history, geography, literature, and science. Since the beginning of this year eight persons have sought for this privilege, and each person has received books more or less frequently. I need hardly say that, in our own interests, we do not wish this custom to extend unduly, and we therefore take no steps to encourage it, as we find that books suffer more or less from transit through the post, and, moreover, metropolitan students need the books as much as any others; but so long as the Library is a national institution we feel that its treasures ought to be freely open to *bona-fide* students in the country as well as in the city, as far as our resources will allow us.

But now the question has been raised whether the Trustees should not make the loan of these books absolutely free by providing also for the return postage. Generally the parcels are returned by train, the borrowers paying the freight, and I paying the cartage at this end. In cases where the post-office must be used, it would be a great relief if you could see your way to help the Trustees in their educational work by taking the necessary steps to get Ministerial authority to a regulation adequately dealing with this matter, somewhat on the lines of the concession allowed to persons sending entomological specimens, &c., to the Department of Agriculture.

I have, &c.,

H. C. L. ANDERSON,

Principal Librarian.

This is a copy of my report upon it:

I strongly advise that no further extension of the free postage system be allowed, as I think we have gone quite far enough in that direction.

Under several Acts of Parliament we now carry petitions to the Queen, Governor, Executive Council and Parliament; statistics under the Census and Industrial Returns Act, Land and Income Tax returns, absolutely free, whilst the postage on official correspondence from Public Departments, Members of Parliament, and licensed surveyors, on samples of noxious weeds and Museum specimens; and more recently on Indian Famine Relief circulars and Vigilance Committee circulars, is supposed to be represented by the annual vote of £32,875, which, of course, does not really cover the postages.

It will be seen from the papers that what appears to have given rise to this request was the claim of a Mr. W. Reid, of Jamison Town, to have a parcel of books, weighing 11 lb., sent free to the Public Library. It is not shown whether Mr. Reid was unable to pay for his books, or that there was any other reason why he should have them carried free.

Mr. Anderson asks that the same concession be allowed as in the case of persons sending entomological specimens, &c., to the Department of Agriculture, namely, that they should be sent O.H.M.S. There is, however, obviously no analogy between the two. These specimens are carried O.H.M.S., and the regulation distinctly gives as a reason for their being so treated "with a view to information for the public benefit in relation thereto being circulated," whilst the books are sent to and from a private individual for the sole benefit of that individual.

The Principal Librarian might be informed accordingly.

That was the reply we sent to Mr. Anderson's letter, and to this he made further reply on 31st July, as follows:—

Sir,

The Public Library of New South Wales, Sydney, 31st July, 1900.

In reply to your letter No. B00, 18,431, of the 27th July, received to-day, I regret very much that the Postmaster-General cannot see his way to approve of any further extension of the free postage system in the direction requested by my Trustees. As the matter is not perfectly clear, I shall be glad to be assured by you that the Trustees are justified in sending out any volume from their Lending Branch O.H.M.S., and therefore free of postage, as we have been doing for some considerable time.

I would like you to understand the Trustees' position in this matter. As they have for years past been lending boxes of books to country libraries, and groups of students absolutely free of cost to the persons concerned, the railway freight and other charges being paid from an appropriation under the Library Vote for that special purpose, the Trustees have always desired to treat individual borrowers as generously as groups of borrowers, for the evident intention of Parliament has been to make the use of our books absolutely free, and we have always felt a deep sympathy with students in remote country districts, who wish to avail themselves of the benefits of our collection. However, I have informed the Librarian of the Lending Branch that he must take steps to have the return postage prepaid by borrowers, and hope that I am correct in assuming that we may in future frank our books as we have done in the past in despatching them to approved students.

I have, &c.,

H. C. L. ANDERSON,

Principal Librarian.

This is Mr. Dymock's letter of 31st July. Mr. Dymock saw Mr. Crick a few days before, and, at Mr. Crick's request, he made this representation in writing. This letter of Mr. Dymock's is not signed, but Mr. Dymock's business mark is printed in the corner.

28. *Mr. Jessop.*] If it is not signed, how can you put it in as a document? We accepted it as from Mr. Dymock because it bore his business mark in the corner, and he had already made a similar statement to Mr. Crick.

29. *Mr. Meagher.*] It followed a personal conversation with the Postmaster-General? Yes.

30. *Mr. Jessop.*] You have reason to believe that it came from Mr. Dymock? Oh, yes; it agrees with what he told Mr. Crick and myself a day or two before. This is Mr. Dymock's letter:—

Book Arcade and Circulating Library, 428, George-street, Sydney, 31 July, 1900.

Hon. W. P. Crick, Postmaster-General, General Post Office, Sydney,--

Dear Sir,

I feel it my public duty to draw your attention to what I have been informed, and, if true, I consider is a most gross abuse of the franking system allowed by the Government Department over which you preside, viz., that Mr. H. C. L. Anderson, the Public Librarian, and Mr. Bladen, the head of the Lending Branch of that Institution, are in the habit of sending parcels of books to private people in the country, and affixing the O.H.M.S. envelopes on same to avoid the postage.

2. That O.H.M.S. envelopes are also used by the people returning the books to the Library.

3. According to the By-laws of the Free Public Library (which find enclosed) no books are allowed to be lent outside the 1d. radius, and books are now sent all over the Colony, and, at times, free.

4. To prove the truth of the above statement, I enclose an O.H.M.S. envelope, which was used to convey a number of books from Tamworth to the Library, and the address is said to be in the handwriting of Mr. Bladen. Here, also, you will find a letter from Mr. T. W. Hynes, of Moree, thanking the Librarian for his kindness in lending him the books, and asking that a number more be sent.

If you desire, I am in a position to give you a number of names of people who are in the habit of receiving books continually from the Public Library improperly.

If

S. H.  
Lambton.  
28 Aug., 1900.

If you think it necessary, I will forward you a list of names of witnesses who are willing to give evidence in the above to vouch for the truthfulness of same.

What I would ask you is that an inquiry be held, and I feel sure that you will become possessed of such information as will surprise you, and will be of great service to your Department.

Hoping you will give this matter your prompt attention.

I have the honor to be,  
Dear Sir,  
Your obedient servant,

I may say that in discussing this matter with Mr. Crick, and in view of questions asked in the House a short time ago by Dr. Ross, Mr. Crick, seeing some force in Mr. Anderson's statement about the benefit to be derived from the circulation of these books, approved of a minute being put before the Executive Council, recommending that the Post Office take them at half-price.

31. *Chairman.*] Has any decision been arrived at? The matter is now before the Executive Council. The minute is to the following effect:—

20 August, 1900.

I REQUEST authority, in accordance with the provisions of the 10th section of the Postage Act, 31 Vic. No. 4, for the transmission within New South Wales of books from and to the Public Library at half the usual rates chargeable for this description of mail matter.

W. P. CRICK.

32. *Mr. Jessop.*] Has that minute of the Postmaster-General's any reference to the distribution of works indiscriminately to any person? Yes; provided the books go to and from the Library. The Postmaster-General thinks that it is only a fair thing to allow some concession on the ordinary rates. That means that the books would go for 2d. per lb. instead of 4d. I believe this minute will pass the Executive Council to-day.

33. *Mr. Price.*] Do I understand that private letters were enclosed in these parcels which were returned? You might call them private letters. They were epistolary communications which are not supposed to be sent with books, but, being under cover of an O.H.M.S. cover, we accepted them in good faith. When books are sent by the public they are not supposed to have written matter posted with them.

34. In sending those they were liable to prosecution? I do not think so, because we accepted them in good faith, as the person sending them was supplied with O.H.M.S. covers. We accept anything in good faith which is put before us in O.H.M.S. covers. We do not ask any questions. In our letter to the Library we only pointed out that these books should not only pay postage, but should not have any epistolary communications in them.

35. Have you any way of testing how long this practice has been going on? No.

36. The application from the Library was made after the personal complaint made by Mr. Dymock? The first one was made before; the second was about the same time.

37. *Mr. Sleath.*] You know the note that appears on the outside of official envelopes? Yes.

38. The note is the same on all such envelopes? Yes; it is to this effect:—

This envelope can only be lawfully used by Government Departments on the public business. The use of it by public officials to avoid payment of postage on private matter of any kind is punishable, and involves the letter being charged double postage. The public are cautioned against using it under any circumstances.

39. Do you take it that Mr. Reid is one of the public? Yes.

40. And was he using the envelopes on the business of a public Department? No; and that is the very point on which we joined issue. We contended that it was not on public business. That is why we stopped the use of the envelopes; but Mr. Reid is excusable, because he was supplied by the Library authorities with the envelopes.

41. So in your opinion the sending of books to private individuals cannot be termed the business of a public Department? Certainly not; and that is why we challenge the practice. If the Committee like, I shall put in a copy of the official regulations on this point. (*Copy produced.*) We hold that the books were not sent on public business; but were simply books returned by private people on private business.

42. Therefore, it was a contravention of the regulations appearing on the envelope itself? Quite so.

43. *Mr. Hoque.*] I suppose you are aware that the Library, as a matter of policy, sends books to different parts of the country to groups of students? We were not aware of it until this matter cropped up.

44. But it appears from the correspondence? Yes; but we were not aware of it previously.

45. But, as a matter of fact, they do, as a matter of policy, send books out to different parts of the Colony? So we found out later.

46. Interpreting the regulations of your Postal Department, you would not consider it as one transaction—the sending of books franked by a Government envelope and returned in the same way? No; we do not regard it so. It was, no doubt, done by the Library, as they considered, in the public interest; but we considered that the books were not sent O.H.M.S. in the meaning of our regulations.

47. You are aware that they are public books, and that it is one part of one transaction either to send them or to receive them? It may be part of one transaction.

48. *Mr. Meagher.*] In the supply of the O.H.M.S. envelopes to Government Departments, do you transmit a copy of the regulations you have handed in? The Department have these regulations.

49. Therefore, I may take it that Mr. Anderson was in possession of these documents? I take it that he gets our Postal Guide, and every Department has had circulars from time to time containing these regulations.

50. And it is clear enough from these that books are not provided for? Anything that is sent under cover of these envelopes we should not question unless we had reason to do so.

51. But the transmission of books does not fall within the category mentioned within the regulations? Nothing at all. If people like to put tea or sugar in these envelopes we would not question the act, unless we had reason to believe that the regulations were being infringed, as we find was the case in this matter. We found that the books were not on Public Service, and were not sent to a Public Department, but were sent to a private individual for his own use, and by that individual returned when he had done with them. We did not consider that they were sent on public business; but if they were sent to a Clerk of Petty Sessions or a schoolmaster we would hold that they were on the Public Service, and we would not question the action. But it was brought out in the correspondence with Mr. Reid and Mr. Dymock that this was a private transaction.

52. *Mr. Hogue.*] Is Mr. Reid a Public School teacher? I understand that he has a boy's college, a private institution. Nothing can be sent O.H.M.S. from private people to a Department. The regulations only provide for the sending of mail matter O.H.M.S. from, not to, the Departments. The public have no right to send, under O.H.M.S. covers, to the Departments even on public business. This matter coming from Mr. Reid was marked as from a Public Department, so we passed it as a matter of course until we had reason to challenge it.

S. H.  
Lambton.  
29 Aug., 1900.

53. For instance, a private individual sending down an insect pest would not require to put a stamp on the parcel? Such a case is distinctly provided for in the examples given in the regulations. I have said that the Postmaster-General has now arranged that these books may be transmitted to private individuals at half rates.

54. I suppose no refund has been made to Mr. Reid;—I suppose he paid the full rate? He paid the full rate. These new regulations are not yet in force. Mr. Crick seemed to take my view of it, that it was a matter in which we might fairly make some concession. The Library authorities pointed out that they were handicapped if they had to pay the Department full rates; and we thought to help them by reducing the rates to one half. That is better than sending the books for nothing.

55. In regard to this alleged abuse by Mr. Reid, a parcel of 11 lb. weight is pretty substantial; how many volumes would that consist of? I think there were two books.

56. *Mr. Price.*] Were you aware of these two clauses in the regulations:—

2. Books will be lent only to persons residing in the city or suburbs, or in the districts to which the penny postage extends.

5. It is not necessary that books should be delivered and returned by the borrowers personally; but they must send a messenger competent to deliver their message, and to take due care of the books; the officer in charge having instructions to refuse books to messengers whom he may consider incompetent to take proper care of them.

57. Was your attention directed to these? Yes, I think so; but they have nothing to do with us.

58. *Mr. Anderson.*] Are you aware that this is a copy of the printed address [*copy produced*] that is sent out with each copy of the *Agricultural Gazette* every month to persons who receive the *Gazette*? No; I am not. I do not personally see all the matter that passes through the Post Office, and I was not aware of this.

59. These are included in every copy of the *Agricultural Gazette*? Possibly these may refer to specimens, and, if so, they are allowed in our regulations.

60. Are not the specimens of insects, samples of soils, fruit, diseased vegetables, and so on, sent from farmers and others in the country? Yes.

61. And are they not sent in order to get information for their own benefit and guidance? Very likely.

62. Do you remember when the regulations affecting them came into force? I cannot say; it must be eight or nine years ago.

63. As a matter of fact, when I was Director of Agriculture I had this regulation made? That may be. But such things are held to be transmissible O.H.M.S. There is a distinct regulation providing for that.

64. But the whole tendency of the regulation is to help in the education of people in the country, is it not? Well, I do not know. I would not go so far as that. I can only say that, unfortunately for us, we have to send these things free. But the reason the regulations were made was that it was considered that these specimens were on Public Service, whereas it has not yet been so decided in the case of books.

65. *Mr. Meagher.*] A man's livelihood might depend on the eradication of a pest, but his livelihood would not depend on a book? I do not wish to argue as to the reason; but I only speak as to the fact that books coming from private people are not included amongst these things spoken of in the regulation.

66. *Mr. Sleath.*] You are only here to speak of the regulations? That is all.

67. *Mr. Millard.*] But the fact remains that a farmer in the country might get information under the O.H.M.S. cover which would be only of advantage to himself? Quite so; he might. Specimens could be sent under that cover, if in accordance with our regulations.

68. *Mr. Anderson.*] I think you have already said that this regulation was passed while I was Director of Agriculture? Yes.

69. Do you know that samples of soil are sent under cover of this envelope? I could not say what is sent. We do not usually examine what purports to go free. Occasionally these things are looked at.

70. Granting that one of these forms, copy of which I have produced, is sent out in each of the 5,000 copies of the *Agricultural Gazette* distributed every month, there is a direct inducement to farmers to avail themselves of the privilege? Possibly, if they have anything to send which comes within our regulations, but they should not send everything. The regulation says what may be sent. It is to this effect:—

Small samples of noxious weeds, fruits for naming, specimens of diseased fruits, botanical specimens, or insect pests, forwarded by country correspondents to the Department of Mines and Agriculture, with a view to information for the public benefit in relation thereto being circulated; also specimens addressed to the Australian Museum, Botanical Gardens, Technical College, and Technological Museum, may be transmitted through the post, O.H.M.S., if they bear labels (supplied by the Department or branch to which they are to be forwarded) with the address thereon, the superscription O.H.M.S., and in the lower left-hand corner the words "Specimens only from" (name and address of sender). "By authority of" (name of Department or official designation of head of the branch to which the article is to be forwarded).

71. *Mr. Price.*] They cannot send letters under that? No.

72. *Mr. Anderson.*] Do you think that the education of each farmer adds to the wealth of the community. In framing that regulation, was it your idea that educating each farmer is really increasing the wealth of the whole community? I do not know that occurred to me. We framed the regulation with the view that the information would be of public benefit.

73. Do you think it would be fair to argue from that, that educating schoolmasters, clergymen, and others throughout the country will add to the wealth of the community? I do not know that I am quite prepared to argue upon that. I have to be guided by the regulations.

74. *Mr. Millard.*] I suppose you have a voice in making the regulations? Yes; but it has never been put before us that it might be to the public interest to allow books to go to private teachers.

75. *Mr. Anderson.*] Can you see that there will be grave difficulties from the Departmental point of view, if we have to pay for the postage of books going to country students? I do not think so. You have only to get a supply of stamps from the regular quarter, and you can send stamps to prepay the replies. Or it might be arranged to pay in bulk. So all you would have to do would be to mark the correspondence prepaid, and we would send you an account.

S. H.  
Lambton.  
28 Aug., 1903.

76. Would there not be a difficulty in keeping an account of the stamps we disburse? That would be for you to do.

77. That would throw a good deal more responsibility on me? Yes; no doubt it would.

78. And open the way to the abuse of stamps by my junior officers who post the parcels? You can do as private firms do, and get perforated stamps. Under the old system the Departments had stamps to affix, and that is why we introduced the O.H.M.S. envelopes. I do not know how many books would go out; but they might have stamps put upon them, or payment might be made in bulk, as is done by such large firms as Lassetter's and Farmer's, who give us a cheque for the full amount of the postage.

79. *Mr. Price.*] Every day in the week? Every day in the week. The Library Department could do the same, and make out a voucher.

80. *Mr. Anderson.*] Do you not think it would open the road to abuses if I were to send stamps to country students to enable them to send back the books? I do not think so. If you chose to be generous you could send them stamps; but as far as you are concerned there would be no difficulty. You would send your package, and we would tell you the postage; but instead of your giving us your cheque for the amount, you would make out a voucher.

81. Assuming that we send a large number of foreign catalogues of books to a gentleman who is going to bequeath his great library to us, do you think we would have the right to send those catalogues O.H.M.S.? I think you would; but reason or common sense would decide what is O.H.M.S. They would be O.H.M.S. if they referred to public business, and the question of a library he is going to bequeath to you might be considered O.H.M.S. But we take the broad fact that, in the case under review, private books have been coming from private individuals.

82. The catalogues I referred to are catalogues of books for sale in Europe, which I bring under this gentleman's notice for his private information? That is a very nice point; but a catalogue would not be heavy matter. When you send parcels of books weighing 11 lb. that is a different matter.

83. But it is a matter of principle? I suppose it would be, strictly speaking. Of course, I do not know what kind of a catalogue it is; but assuming that it is as you describe it, I think the transaction would be a private one. At the same time, there is a difference between one single article and a large number of books.

84. If a person writes from the country asking for information relating to his own affairs, do you think we would be entitled to send the reply O.H.M.S.? Yes.

85. Even if the reply is purely on his private business? Well, I do not know about that. But he would have to pay postage in sending to you.

86. But should we write to him O.H.M.S.? Would you consider it on service?

87. We want to know what you do? The answer is in the regulations. You are entitled to send the answer if on public business; if not on public business you are not entitled to send it.

88. *Mr. Jessep.*] The attention of the Department was first called to the irregularity by the postmaster at Penrith? Yes.

89. Do you think that arose out of any action on the part of some person outside? I cannot say. Mr. Reid was seen in the matter, and he argued that he was entitled to send the books O.H.M.S., and mentioned the fact that, not only were they sent to him O.H.M.S., but covers were sent to him for the purpose of returning the books.

90. Had your Department, prior to that calling of your attention to the fact, any communication to the effect that books were being sent out franked? No; that is the first we heard of it. The postmaster at Penrith made a report to me on 3rd July, in which occurs the following words:—

A parcel of books, 11 lbs. weight, addressed "Lending Library, Sydney," was received on the 2nd instant from Jamiesontown without any stamps attached for postage. The sender, W. Reid, had previously applied here to be allowed to send a similar parcel free. Finding no authority in the Departmental rules the application could not be granted.

That is the first intimation we had.

91. *Mr. Meagher.*] Mr. Anderson has asked you a question in regard to permitting O.H.M.S. envelopes to be used by persons sending an insect pest through the post, and he asked you whether you did not consider it for the benefit of the community that a man should have books for the purpose of instruction;—as the laws of this country are based on Christianity, would you consider that the transmission through the post of the poems of a poet, some of which might be in the realms of Atheism, for instance, such as some of Mr. Browning's poems, would be for the benefit of the community;—I do not think that anything on the subject of Atheism should be sent post free? I would rather not express an opinion.

92. *Mr. Jessep.*] I have frequently seen parcels of minerals, stones, agricultural exhibits, in hundreds of cases, going backwards and forwards to different parts of the country, with O.H.M.S. stamps on;—is your Department aware that all these samples are being transmitted free all over the Colony from private individuals to Departments in Sydney? I am not aware that anything goes contrary to the regulation which I have already read. If we detected anything of the kind we would put a stop to it.

93. Is it possible for the Executive to frame a special regulation, say, during the time of an exhibition, so that these parcels may be sent to and from bearing the letters O.H.M.S.? I do not think so.

94. Are you aware that all the exhibits forwarded to the Board of Exports, of which I am a member, bear the letters O.H.M.S.? I am not aware.

95. Would it be contrary to the regulations? Provision would have to be made. In theory we do not say that anything should go free, except land and income tax papers, and statistics, which are free by law. We are supposed to be paid out of a vote taken by the Treasury annually for some £33,000 odd. Certain things go free of charge by law, such as land and income tax returns, statistics, and returns of births, marriages, and deaths; but as to these other things we are paid out of the annual vote of the Treasury.

96. *Mr. Hogue.*] I suppose you have no idea as to the extent to which the revenue of the Postal Department may suffer through the transmission of books to persons in the country, and back again? I cannot say, because we send these things away by the tens of thousands. We make an examination periodically when we have reason to suspect. We sometimes find things sent by the public in newspapers. The other day we caught some persons sending a lot of manuscript in printed matter, and no doubt a vast amount of stuff goes through the Post Office that should be paid for.

97. In the case of a Department sending anything to persons in the country, and getting it returned, if the case were not covered by the regulation, I suppose you would think that an irregularity? Oh, yes.

98. But in the case of a private individual using frank envelopes, you would consider that a fraud? It would be hardly a fraud in the case of Mr. Reid, because the Department sent him the envelopes.

99. But if private individuals made use of these frank envelopes that would be a fraud? It would.

100. But you would not consider it a fraud if done by a Department? No; not unless it was done to escape postage. We looked upon this matter as an error of judgment on the part of the Library Department. The Library Department supposed that they could give O.H.M.S. envelopes.

101. Whatever the amount would be, you would consider that your Department would be the sufferer to that extent? Yes.

102. But it would not matter a farthing to the Consolidated Revenue? Except that the senders should pay the postage. When we get letters for, say, the Treasury with "more to pay" marked on them, we deliver them to the Treasury, but we get the name and address of the sender, and write to him and make him pay. Our law says that when a letter is insufficiently stamped, or wholly unstamped, it shall nevertheless be delivered, but before delivery the deficient amounts shall be paid. So the proper course would be for the Treasury to pay or refuse to pay the deficient postage; but in the latter event they might throw away revenue. And in the case of the Lands Department, they might think it a great misfortune if a letter had to be sent on to the Dead Letter Office; so the arrangement is that we deliver such letters; but in doing so we get the cover back, write to the sender, and demand postage from him, and in nine cases out of ten we get it.

103. *Mr. Sleath.*] That is only done in Public Departments? Only in Public Departments.

S. H.  
Lambton.  
28 Aug., 1900.

WEDNESDAY, 29 AUGUST, 1900.

Present:—

MR. JESSEP,  
MR. MILLARD,

MR. HOGUE,  
MR. MEAGHER,

MR. QUINN.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Henry Charles Lennox Anderson, Principal Librarian, recalled and further examined:—

104. *Chairman.*] You heard the evidence given with reference to books which had been sent from time to time from the Library to different persons in the country? Yes.

104½. Do you wish to make a statement with reference to that? Yes; when I took office in 1893 as Principal Librarian, I found a system in existence of lending stereotyped boxes of books to country libraries. There were about sixty-four, and the books in those boxes were very old and heavy reading. We found that they were not doing the educational work that we wished, so I gave the matter a lot of personal attention, and consulted the President and the Board. In 1894 an application was received from Mr. A. W. Jose, Secretary of the University Extension Board, for the loan of books to centres where lectures were being delivered by the University Extension Lecturers, the University Board guaranteeing the safety and the proper use of the books. I quote from a minute of my Board, dated 14th November, 1894:—"The Minute of the Principal Librarian, recommending that three suitable boxes and books, say fifty in a set, should be procured, was approved." The Board at the same time considered the "advisability of getting a few boxes to suit the special studies of any country circle of students in addition to the seventy stereotyped boxes now in use. The general principle was approved of helping country students." Of course, we discussed the matter very fully, and I had to do the best I could to help those country students. I had the deepest sympathy with them. I have been a student all my life. I was the son of a very poor man, and I had to get my books as I could. I could not afford to buy them, and I had the deepest sympathy with young fellows who could not afford to buy books. There has been no secret about the matter. I at once set to work, and I lent little parcels of books from the Reference Library to groups of students in all parts of the country—persons whom I had never heard of by name. For instance, at Inverell, some young ladies asked for a collection of books on painting and fine arts. We sent on the best we could. A clergyman at Springwood also sent for some books, and people all over the country—not one of whom was a personal friend of mine. The next year in the Annual Report the Trustees referred to the matter. At the request of the University Extension Board the Trustees determined to lend parcels of suitable books to students attending the lectures in country towns, and further extended the privilege to any group of students who might desire to study some subjects requiring books which could not be easily procured. In the next Annual Report reference is made to the subject; it is signed by the Chairman, but I am responsible for the truth and accuracy of the statements. Paragraph 6 of that report gives full details of the number of boxes lent in the country, and all the additions and withdrawals from the boxes, and mentions that the Trustees have expended over £4,200 already in connection with the supply of books to such country libraries. "The Trustees are well satisfied with the results of this valuable educational work, which is fully appreciated by the ninety-one Schools of Arts, Municipal Libraries, and Free Public Libraries, which are thus supplied with a class of literature not usually found on the shelves of young libraries." Paragraph 9 says: "The usefulness of the Library has been extended by the loan of special boxes of books to circles of students in country districts, more especially to those attending University Extension Course of Lectures. A selection of the best text-books to illustrate courses of lectures on Darwinism, Elizabethan literature, Teachers of Modern Thought, and the British Empire has been made, and they have been lent to groups of students at Goulburn, Nowra, Camden, Cootamundra, Junee, Tamworth, Berry, and East Maitland. A selection of valuable text-books on astronomy and geology has been made for the use of a class of private students at Young Wallsend. A number of individual students throughout the country who were studying for University examinations, or pursuing special lines of research, under the disadvantages incidental to isolation in country districts, had been assisted with the loan of parcels of books whenever practicable." "Whenever practicable" meant that we could not deplete our Reference Library for the sake of country students. It is only robbing Peter to pay Paul, and I am sorry that we have frequently had to refuse books because they were in demand in Sydney. A man wrote for the latest book on bacteriology, which was just as necessary to Sydney students as to that man. I remember some young ladies asking for very modern books, like "Roberts' Forty-one Years in India." We could not lend them books which were in hourly demand in Sydney. I meant in that report that wherever I possibly could I helped those students. The expense was always defrayed from a vote by Parliament for the lending of those books. The vote at present is £300 per annum. We sent them by train, and got them back by train, and paid the total cost. My Trustees discussed it, and said that it was logical—if the Sydney people got the books absolutely

Anderson.  
29 Aug., 1900.

absolutely free, that the same should be the case with country people. If we were to send the books out free, why should they not come back free. I am stating the position taken up by the Trustees, and I heartily sympathise with that view.

105. *Mr. Meagher.*] Could any individual in the country, who called himself a student, who was pursuing a line of research, say in chemistry, write down to you and you would send him the book? Yes, if I could. 106. Was that fact notified publicly in any way, so that people in the country could know that that could be done? We did not notify it, for the simple reason that it would have been impracticable to supply the enormous demand which would have sprung up. We had only one copy of the books in our Reference Library, and we simply wished to comply with requests that came in spontaneously. Paragraphs must have appeared in the papers taken from the Annual Report, but we never published them.

107. I might be a friend of some gentleman in Sydney who is connected with the Library, and might I not be able to take advantage of this system; whereas another individual, probably more competent than myself, residing in the same town, would be unaware of the fact, and would be unable to take advantage of this system? We did all we could to satisfy every demand, but we did not put any notification in a newspaper.

108. *Chairman.*] Still, the intimation was conveyed to any one who read the Annual Report? Yes; I know the paragraphs must have appeared in the papers, because I remember applicants referring to them; but not one of these applications was from a man personally acquainted with me. The thing has developed in a remarkable way; it has been a course of evolution. In the next year the Trustees realised that this was getting to be an expensive business with them, with their very small income, which had been reduced from £3,500 to £2,000. Mr. Millard can bear me out that he came and asked me to help a little group of students at Central Tilba. I had never heard of the place. I explained to him our position—that we had not books to oblige these people; but I said that I made a suggestion to the Minister through the Trustees, that country Libraries or groups of students should subscribe a yearly sum of £5 each, which I estimated would provide about 1,500 volumes a year, which would soon make it possible to provide all the books reasonably required, at an average cost to themselves of 3d. a volume; the State to pay the cost of transit. I was desperately in earnest to help these people, but I thought they also ought to help themselves. The Minister, Mr. Garrard, wrote a minute that he was quite sure that they would not do any such thing, and that it was of no use for him to take any action. It did not go any further. In the Report for 1896 the Trustees again referred to the matter. They said: “The practice of lending special collections of text-books to groups of students in country districts has been continued with encouraging results, and is much appreciated by the students and the University Extension Board.” In 1898, in the Report, the President gives very full details of the work done in this direction, and he says: “The Trustees are of opinion that this branch of their educational work is worthy of every encouragement, and that these boxes have been the means of extending knowledge and intellectual brightness to many homes, and of relieving the dreariness and monotony of the lives of many persons living in the remoter parts of the Colony, and they would be glad to see the number of boxes largely increased, so that even the remotest villages and groups of settlers and young people growing up on the soil may eventually be reached.” Paragraph 8 says: “As far as the resources of the Library will allow, everything possible has been done to encourage students in country districts, and the scientific and rarer works in the Lending Branch, together with any duplicates in the Reference Library, have been as freely lent to country students as to those in the metropolitan district.” I think that that shows that our position was very logical, and that we have been consistent in our efforts to help country students. I should like to see the country Member of Parliament who would say we were wrong. This is a National, and not a Municipal, Library; it is not a Free Public Library for Sydney only.

109. *Mr. Quinn.*] Is it customary to lend only duplicates;—do you lend books from the Reference Library? That is completely stopped. I am trying to show how the system has evolved. We have now made a hard and fast rule that we cannot send books from the Reference Library to the country, because it causes inconvenience to city students.

110. How long has that rule been in existence? From the promulgation of our present by-laws, which have not yet received Executive sanction.

111. Then it is not in operation yet? The Trustees were incorporated last December. In January they drew up by-laws for their own guidance, but they have not yet received Executive authority. They tried to make by-laws several times before, but the Attorney-General decided they had no power to do so until they were incorporated. We have practically been working without by-laws. The by-laws for the Reference Library are thirty years old, and for the Lending Library twenty years old, and they are quite obsolete.

112. Then up to date has there been a practice of lending books from the Reference Library? I will explain that. I have found great difficulty owing to people in the country wanting exactly the same books as the people in town. I therefore made it a rule that we should lend books as far as possible from duplicates of which we have a fair number, and also from the Lending Branch. Then that habit commenced. I discussed the matter with the Trustees, and said, “What shall we do about this matter?” I said, “If we lend a box of books to a School of Arts which has a Government grant, and if we lend a parcel of books which we send by train to a small group of students, surely, to be logical, we should send a single book absolutely free to a single student in the country.” They agreed with me. We have therefore now confined ourselves to this understanding, and I have given instructions to the Lending Branch to follow it; that in the case of any *bonâ fide* student in the country, who applies for a book which is evidently intended for study, excluding fiction, modern travel, and commonplace books, the book shall be lent to the student, whosoever he may be, provided he gives a guarantee of good use and safe return. That practice has prevailed during the last eighteen months, and applications have been received from about a dozen people. The applications come from little groups of men in the country. Last week we sent twelve books on Ambulance Work and Human Anatomy to a group of miners at Keiraville. They were taken from the Lending Branch, and sent at our expense both ways. At the same time, we have sent different books on all kinds of subjects to about twelve students during the eighteen months. I have a complete list of them. Of these men, one is my brother, who is a Presbyterian clergyman at Bowenfels; the others are personally unknown to me. I did not know of their applications; they have gone to the Librarian of the Lending Branch, and he has dealt with them without reference to me. Mr. Reid's name was mentioned yesterday. I never heard of him before. I know the details now; they are disclosed here quite truly. That application was dealt with on a recognised plan, the same as a number of others, who are chiefly clergymen and schoolmasters in different parts of the country. In the list which I have got from the Lending Branch I do not find the name of one personal friend of mine, except my brother, who is treated just the same as any other applicant. I sent on his application to Mr. Bladen, and told him to help

help him where he could. He is a poor student, a clergyman, with five children, and £150 a-year. He was entitled to it as well as anyone else; there was nothing secret about it, and my Trustees were perfectly aware of it. As Mr. Hughes said, "Why should not your brother have books as well as anyone else?"

H. C. L.  
Anderson.

29 Aug., 1900.

113. *Chairman.*] Was there anything else said in the Reports? In our latest Report of 14th of March this year the President gives very full details about the number of books sent out, and very full information is given in the Appendix as to how they were sent. 14,155 volumes were sent to 233 different places, then he adds: "The Trustees are of opinion that the appropriation of £300 made by Parliament for this object has done much educational work in the country districts, and has been the means of extending knowledge and intellectual pleasure and of enkindling nobler ambitions in many thousands of readers in every part of the Colony, and they venture to hope that this branch of their work will be yet much more extended, till every hamlet in this Colony may be able to share in the benefits derivable from this National Library." This gives a synopsis of our plan of operations as it has evolved from a crude beginning up to a well-recognised system. By-laws have been approved, and we are working under them at present, from the time the Library was incorporated. The 24th by-law, part 4, dealing with the Lending Branch, says:— "While it is not practicable to undertake, generally, to send books by post to borrowers, every effort will be made to help students in country districts by the loan of any special books not otherwise procurable. Country borrowers must pay return postage, and give a personal guarantee against loss or damage of the property of the Trustees while in their possession." We gave great consideration to that by-law. I was anxious that people in the country should receive the greatest consideration, and this was the compromise the Trustees made. You heard yesterday that I applied to the Postmaster-General to give us this privilege, which I myself got for the Department of Agriculture, for the sake of farmers and producers on the soil, nine years ago. I asked for the same privilege for students in the country, and the Postmaster-General dealt with the matter.

114. Prior to making your application for the right to send these books by post in the same fashion as was done in the Agricultural Department, had you been in the habit of sending goods by frank? Yes; we sent away a number. I say at once that I am entirely responsible; my Trustees gave me general authority, and my assistants simply carried out my instructions. I am responsible for any mistake that was made. It would have been the simplest thing in the world for me to send postage stamps to these people, and to pay the cost out of the vote of £300, but that would be opening the way to speculation and trouble in a Government Department. If you have the handling of stamps, and let boys and juniors send away stamps to return books, or give them stamps to put on books, you are opening the door to great trouble. Every copy of the Government *Agricultural Gazette* that goes out contains a wrapper sent to encourage people to send things back free. I never dreamt that I was not just as much justified in getting my library books back free, as a farmer is justified in sending an apple to be named, or a diseased cabbage to be examined.

115. Was that the reason why you acted in that manner? Yes; I thought that I was simply acting by analogy. I thought the circumstances were exactly parallel, and I think so now. We are doing educational work. If education does not add to the wealth of the community, why not shut up the Public Library and every educational institution.

116. *Mr. Quinn.*] Had you authority to send things post free in the case of the Agricultural Department? Yes; there was a by-law made which I never read, although I had caused it to be framed. I sent down to the Librarian of the Lending Branch to furnish a list of every book he has lent, and I now produce the list. I may mention that Mr. Reid was a Sydney borrower for some years. He removed to Penrith and is head master of the college there, and his ticket was continued to him.

117. *Mr. Jessep.*] In sending out these books, was there any undue preference on the ground that he was a personal friend? No request has been refused since we began lending the books. We have in the Reference Library about 2,000 duplicates, which were principally taken out of the boxes because several were rather heavy, and some were, perhaps, getting old-fashioned. If we could possibly lend any of these, we lent them. A man might write asking for a first-class work on philosophy. We had some tip-top works on philosophy taken out of the boxes. If an officer could find a book to suit that borrower, we took it from those duplicates, and sent it out. We do not now lend any books from the Reference Library to country districts. We lend them in the city only under very strict regulations. For instance, to heads of Government Departments on public business, the heads of the University, and managers of newspapers for the day only. We do not allow them to keep a book over night. We issue them also to the Trustees. This regulation was made at my instigation for my own protection. I have had thousands of applications from people in Sydney and different parts of the country, and I have been perplexed and worried. The Trustees, to strengthen my hands, have gradually tightened the regulations, which are now reduced to a very good intelligible basis. We could not encourage the indiscriminate lending of books from our Lending Branch. We have not the staff to manage such a large business.

118. *Mr. Quinn.*] Do you not depart in this by-law from the practice which has prevailed up to the drafting of these by-laws? Yes; we have utterly ignored that by-law. That might have been wrong, departmentally; but this old by-law, which is twenty years old, has been utterly ignored. These by-laws have no legal value. We were anxious during the last two years to make by-laws to punish people who destroyed books, but the Attorney-General decided that we had no power to make by-laws.

119. What I mean is, that under this by-law you restrict the practice which has been hitherto followed? I do not think so; we have really extended it. There is no doubt there will be a much greater demand now that the matter has been published.

120. *Chairman.*] Until the correspondence took place between you and the Postmaster-General's Department with reference to sending these books by frank envelopes, had your attention been directed to the postal regulations? No; I never heard a word about it.

121. Were you under the impression that it was quite competent for you to send these books by post, and also to enclose in each parcel an envelope to secure the return of these books under the franking system? Yes, I thought it was perfectly legitimate. I had the enclosed envelope always addressed to the Librarian, so that it could not possibly be used for any other purpose. Moreover, I considered that it would come back more safely to us with the frank than with an ordinary postage stamp which perhaps would be underpaid.

H. C. L.  
Anderson.  
29 Aug., 1900.

122. Reference was made to some correspondence which was said to have been discovered in some of these parcels;—was that correspondence of a personal nature? No; it was simply a request from the Rev. Mr. Hynes, whom I do not know, to send a list of books which he wanted to get in sections. As the books were supplied, they were struck out of the list by the boy at the Lending Branch, and the list was sent back inside his book to show him what had been sent. That letter has evidently travelled to and fro for about four months, and that gentleman has been getting the list of books in regular succession. He still wants three, which he will not get. At one time he asked for a London or Sydney University calendar, and he has gone on minuting the letter. It has been re-enclosed in the book; but whether we sent it in the book or in a closed envelope it really did not matter to us, because we could have sent it "O.S."
123. *Mr. Jessep.*] You would be wrong technically in sending it back to him? No; we could have sent it back "O.H.M.S."
124. *Mr. Quinn.*] With reference to this new by-law, I remarked that you were restricting the practice in the Library which had hitherto prevailed;—of course, you had no by-law under which you lent those books? No.
125. So that you were not able to obtain the guarantees? Yes.
126. Did you restrict the books issued to books not otherwise procurable? Yes, not procurable in small country towns. In a town like Moree, where they could not get that high-class literature. In a place like Hinton, Rev. Mr. Davies could not get "Shakesperiana."
127. Were the books lent because they were not always otherwise procurable? Yes.
128. Was this personal guarantee always executed? They always wrote undertaking to pay the cost of any book lost or damaged in their possession.
129. Were any books lost? No; we have never lost a book or had one damaged in any shape or form, although we suffer very much in Sydney in that respect.
130. *Mr. Meagher.*] The list which you produce includes the period from November, 1898, to August, 1900. You have told us that they have been issued to students who may be engaged in some line of research in remote parts of the country and who should be assisted by the State. I find that the list comprises eleven students all told, during this period from 1898 to 1900, and instead of being issued to places in remote parts of the country, far removed from civilisation, they are nearly all well-known towns where there are Schools of Arts;—for instance, is there not a School of Arts at Hinton? There is a School of Arts at Hinton, from which this borrower certainly could not get the books he wanted.
131. *Mr. Quinn.*] Could not the School of Arts get any book from you which a subscriber might want? I do not know about that.
132. If you lent a book to a private individual, could you not lend it also to the School of Arts? On behalf of a borrower we would, but we have never had such an application.
133. *Mr. Meagher.*] I understand this sending out of books was done in three instances—first, you sent them to Schools of Arts; second, to groups of students; and third, to any individual student in any part of the country where they were pursuing some line of research? Yes; studying any intellectual subject.
134. I think you said any matter of research of a scientific character? I think those were the words used in the Annual Report.
135. I think you said that in a case where a man was studying such subjects as astronomy or chemistry you would have no objection to send a book? Yes.
136. I am dealing with a student concentrating his energy on some object, scientific or otherwise;—would you consider that he would be a student if he asked for some book of travel in the polar seas? Yes.
137. And you would send him a book of travels? Yes; if it was a first-class book of travels.
138. If a man in the country sent for a book of travels in the polar sea, or the torrid zone, would you send it to him? It would depend upon the book he picked out.
139. What would be the differentiation? If he sent for a classical book not easily procurable I am quite sure I would send it; but if he sent for Nansen's "Farthest North"—a modern book that anyone could buy for a few shillings—I would probably not send it.
140. If he asked for Greeley's book would you send it? I think we would send that.
141. If it was not a book sold upon the market, would you send it if you had it? Yes.
142. The object, I think you told us, was to educate students throughout the country;—had Bowenfels a School of Arts? I am not sure of that.
143. Had Nowra a School of Arts? Yes.
144. Is that not a pretty good School of Arts? No. I inspected it and was amazed to find that there were not one hundred good books in it. The country Schools of Arts generally have few good books, and it is hard for a student in a country town to get a fairly good book.
145. What kind of a student would you call a man who borrowed books of this kind, "Whaling Cruise," and "Travel amongst the Andes"? I believe those are old books, which are really very rare.
146. Would you call that student an antiquarian? He might want them to write articles for a newspaper. I know that that man was editor of a newspaper.
147. *Chairman.*] Do you assume that he was going to write personal experiences in the Andes? I do not know, but he might have written for them in order to help him in his articles.
148. *Mr. Meagher.*] If a man wrote to you asking for a book of travel among the Andes, what kind of student would you call him? I would call him a student of geography.
149. Is Mr. Bladen, of Tamworth, a relative of Mr. Bladen who is in the Library? Mr. Bladen has since informed me that he is his brother. I did not know that until the last few days.
150. I take it that we may put it in this way: That from 1898 to 1900, this great innovation which was to bring enlightenment to so many people in New South Wales, only affected eleven people, two or three of whom obtained books of travel, and nearly all of whom lived near Schools of Arts? It is merely the sequence of our lending books from the Reference Library. This list refers to people who got books by post. It has no reference to people who got parcels by train, who were the real students. The parcel of books sent to the coal-miners at Keiraville were sent by train.
151. Does this list represent all the individual students who ever received books? No; it only comprises individual students who received books by post from the Lending Branch during the last two years.
152. When did you begin to lend to individual students? In 1895.
153. Then why did you select the period from November, 1898, to August, 1900, to make out a list of books sent to individual students? Because those were sent by post, and reference was made to that.

154. Then you only started to send books by post in 1898? Yes; before that they were sent by train entirely.  
 155. It is clear that for two years, as far as the ramifications of the Free Public Library are concerned, the benefit to individual students throughout the whole of New South Wales is represented by eleven individuals as far as the post is concerned? Yes.

H. C. L.  
 Anderson.  
 29 Aug., 1900.

156. You will admit that the class of people you desired to benefit are people that the train did not run near? Those are the very people we would like to reach.

157. As a rule, it would be people whom the train did not serve that you sent the books to by post? Yes.

158. *Mr. Quinn.*] You stated that you knew that the editor of the newspaper wanted those books to write articles? Yes; he said so in his letter.

159. Was that a function of a Public Library? Yes; we have lent books to other editors besides him, and I have been quite proud to do so, because it was carrying out educational work. The information would reach thousands through the instrumentality of the newspapers.

160. Take the case of Penrith: is there not a School of Arts there? Yes; I am going up there next week to inspect it. I know the quality of the books there is exceedingly poor.

161. I see in this list the books "Influence of Sea Power," "Growth of British Policy," and "Historical Research";—ought not these books to be in any School of Arts? Yes, but they are not.

162. I presume that Mr. Reid would be a member of the School of Arts, and could he not have used the School of Arts as a medium for borrowing from the Free Public Library? We have included special books which students wanted in the box which we were sending at the time to a School of Arts?

163. Is it not a multiplication of work to lend books to a local School of Arts and also to lend books to people in the same town? A box of books is lent for four months, and no student would have the audacity to ask for a book for four months. If we sent a particular book in the box it would stay there for four months, or the person who got it would have to take steps to send it back to us.

164. Do you lend technical books? Yes.

165. If Mr. Reid, of Penrith, went to the Penrith School of Arts and put down on the list of books which that School of Arts wanted a particular book, would you send it? No. The books are not selected by the School of Arts; they are fixed boxes of books, and we could not allow the School of Arts to pick out the books which it wanted.

166. But you would allow individual students to do that? Yes, as far as we could; but imagine 223 Schools of Arts picking out books. They would all pick out the very latest books.

167. Well, imagine 10,000 individual students doing the same thing? That would stop the practice at once.

168. There does not seem to be a great demand, according to this list? We never made the matter known; we never advertised it.

169. *Mr. Hogue.*] Were some of these individuals to whom books were lent a class of men who, in your opinion, were likely to be teachers, lecturers, or preachers, and were they men who were likely to disseminate the information they obtained? Yes; they were all students; they were mostly clergymen or schoolmasters.

170. Do a great many teachers, journalists, and literary men make use of the Library in Sydney? Yes; a great number of them do so. A large amount of the matter purveyed to the public every day comes from our Library.

171. Do journalists and literary men largely use the books in your Library? Yes.

172. Do you lend books to city journalists for the day only? Yes; only for the purpose of copying photographs to illustrate their papers.

173. Do students of literature and journalists make a large use of the Reference Library? Yes; some men get their living by working in our Library day after day.

174. Has one gentleman a room in the Library where he works? No; the room is open to all students. There might be thirty of them there at a time, but the gentlemen you refer to works there every day of his life when he is well. He gets his living by means of that privilege; but every student who wants to write with ink is allowed the use of that room.

175. Has your Library been incorporated lately by Act of Parliament? Yes; in December last, along with the Art Gallery.

176. Did you for a long time advocate the incorporation of the Library? Yes; we urged it very strongly, because Mr. Mitchell made it a condition of the endowment of his great collection. He would not leave money to endow the Library unless the Trustees were an incorporated body, so that they could hold his wealth and deal with it.

177. Did you advocate the incorporation of the Library before Mr. Mitchell's offer? Yes; because of the difficulty of making by-laws.

178. Was there a special reason for incorporating the Library, because of the mutilation of books, and the necessity for punishing offenders, and also for the purpose of the general government of the institution? Yes; we once tried to prosecute a man for stealing books, but we found we had no authority. The Queen, and not the Trustees, had to prosecute, and that caused great trouble and loss of time.

179. Did the Board of Trustees for many years consist of comparatively few members? No; but they had dwindled away, and only seven or eight used to attend regularly.

180. Is it not a fact that only about two or three attended? Five attended very regularly.

181. About half the number? Yes.

182. Some gentlemen did not attend at all? One gentleman has never attended during all the time I have been there—that is seven years.

183. Were some additions made to the Trust last year? Yes; it was strengthened by the appointment of seven additional Trustees. That was to fill up three vacancies by death, and to strengthen the Board.

184. Has there been any better attendance since the appointment of the new Trustees? I do not think the average has been better, but the meetings have been larger. Most of the Trustees have attended very well.

185. Has there been a more active interest taken by the Trustees in the management of this institution since the appointment of the new Trustees? Yes; I think there is a very keen interest taken in every detail.

186. Do you think that the influence of the Library is extending throughout the country? Yes, enormously, if we can judge by the number of people who frequent it, and the enormous demand made upon us for information of all sorts and from all parts of the country.

187.

H. C. L.  
Anderson.  
29 Aug., 1900.

187. Was it the policy of the Trustees not to confine the advantages of the Library solely to the metropolitan districts? Yes; they have recognised frequently and have openly expressed it—that the Library was a national one, and should be open, as far as practicable, to the Colony in general.
188. So that the people in the country districts could get the benefit of the superior literature in the institution? Yes.
189. Are there not many free Municipal Libraries throughout the Colony? Yes.
190. In addition to Schools of Art? Yes; sometimes.
191. Does not the State subsidise Municipal Libraries? The State gives them an initial grant of £200, to form the nucleus of a reference library.
192. And are these Libraries in municipal districts accessible to the people? I believe so.
193. Have you had many opportunities of visiting the Municipal Libraries? I have visited a few, and I have been distressed to find how they were conducted, and their bad condition. There is no library spirit in most country towns; they do not know the meaning of a library in a proper sense. If they do get books they do not utilise them in the way they ought to do.
194. Are the Free Libraries and Schools of Art stocked with good standard works? No; with the exception of Bathurst and Newcastle. They have very good Libraries; some other towns have very fair Libraries.
195. Is there not a good one at West Maitland? I have not been there. I know by repute that it is a good Library. I found at a place like Wagga Wagga, which is a very large town, that the circulation of fiction was 98 per cent. of the whole; in some fortnights it beat the record, because it was 100 per cent.
196. Have those Libraries any means of obtaining the latest standard works? No; they are not able to spend much on good modern works.
197. Then it is practically impossible in country districts for the people to get access to good modern works on science, literature, travel, and the like, except through your Library? Yes; I am quite sure that is true. In an ordinary country town the students cannot get high-class literature from the local School of Arts.
198. *Mr. Quinn.* Do you say that the books which are sent to local Libraries are stereotyped? One hundred and seventy-six boxes contain an average of eighty or 100 volumes each of good books.
199. *Mr. Hogue.* You have been asked questions about a book of travels and a book on whaling expeditions;—does not your Library contain a large number of volumes on sport and travel? Yes; the Lending Branch does.
200. Are they all works of very high value? Yes.
201. Has there not been a very considerable addition to modern literature by writers on travel and sport in South Africa and in Asia? Yes; they are very high-class works on zoology, botany, geology, and natural history. They are not merely books of every-day travel. I do not think the Trustees would buy a book of travel which would be of only ephemeral value. We have no boys' books of travel.
202. Did you not take some interest in connection with Mr. Mitchell's donation of his great library to New South Wales? Yes; the offer was made through me entirely on account of Mr. Mitchell's sympathy with our work, as he informed me himself. He thought I loved library work, and was trying my best to advance it through the Library Association of Australasia. He sent for me, and made the offer through me. The offer was made to my Trustees, and not to the Government of New South Wales. That was emphatically laid down. Through me personally the offer was made, and then the offer was conveyed to Mr. Hogue, who happened to be Minister for Public Instruction at the time, under certain conditions, which the Government might or might not accept. Mr. Hogue accepted them.
203. When was that offer made? In November, 1898, while you were in office.
204. Did you communicate with me at the time? Yes.
205. Have you 16,000 or 20,000 volumes of that library already housed in your Public Library? We have 10,025 volumes, and fifty choice Australian pictures.
206. You have no proper place for these books in the Library? No; we had no place where we could accommodate one-tenth of them, without removing them to my official residence.
207. Did you apply to give up your residence in order to accommodate the books? I did not want to give up my residence.
208. But Mr. Mitchell said the Government should meet him half way in the matter. He said, "What are you going to do? My house is full of books; I want you to take 15,000 vols. to make room for additions." I deliberated over the matter for months. I said to the President, "I do not know where to put the books, unless I give up my house"; and I did give up my house for the purpose.
209. You vacated your premises, and took up your residence elsewhere, in order that the books might be accommodated in the only place possible? Yes.
210. Are the books there now? Yes.
211. Are they accessible to the general public? If any person wants a book, we get it; and we take anyone in who wishes to see the books.
212. Are they accessible in the same way as are the books in the General Reference Library? No.
213. Has Mr. Mitchell made it a condition that there should be proper housing accommodation, and that the Government should build a national library before he makes over the balance of the books? Yes.
214. Is it not the most valuable library in Australasia? It is the most valuable library of its kind in the world.
215. Is it comparable with the British Museum? It is far larger than the Australasian section of the British Museum.
216. Is it possible to put a money value on those books? No; because a great many of the manuscripts are unique; he has the manuscripts of our greatest Australian writers, the manuscript journals of our explorers, first navigators, and men of that sort. No money value can be put on such things, although we know he gave enormous prices for them. I now buy all his books for him, and I sent away £670 last week for one book, and I have sent away during the last fifteen months over £2,200 for books which he has purchased for it. I do his work as secretary in ordering books from Europe; he spends £2,000 a year on fresh books.
217. Are all these books to come into the possession of the people of New South Wales by being bequeathed to them by Mr. Mitchell? Yes; they are all bought for the Mitchell collection, which is to be bequeathed by him.
218. On condition that a national library is to be erected? Yes; and that it should be done promptly.

H. C. L.  
Anderson.

29 Aug., 1900.

219. On condition that he should get an assurance that the Government would undertake to make provision for the books as early as possible? Yes; and that they should be accommodated in a wing to be called the Mitchell Library.

220. Did Professor Morris, the professor of English literature in Melbourne University, pay a visit to the Library a short time ago? Yes.

221. Did he have the advantage of seeing Mr. Mitchell's Library? Yes; he has seen many of its choicest treasures, and he has borrowed some of the books for his life of Sir Joseph Banks.

222. Did he put a money value upon the collection? He told me it was worth £100,000; but he said its value in reality was beyond all price.

223. Did he visit our Library and express any opinion upon it? Yes; he thought it was a very bad building for its purpose, but that it was a splendid collection of books.

224. Did he visit the old Lending Branch in Macquarie-street? Yes.

225. Was he fascinated with the building? No; he said it was a disgrace to Sydney.

226. Shortly after that was the Lending Branch of the Library removed to the Victoria Markets? Yes, by yourself; premises were taken there and the Library was transferred.

227. How has the Lending Branch been conducted since it was taken to Victoria Markets? It has been conducted with satisfaction to the public. I have not heard of any complaints.

228. Do you believe that the Lending Branch is now in a position to be carried out more satisfactorily than before? Yes; from our point of view.

229. Have any complaints reached you or have you seen any in the Press as to the management of the Reference Library and Lending Branch? I cannot remember a single complaint.

230. *Mr. Quinn.*] Did the practice of lending books to students in the country arise out of the conviction of the Trustees as to the function which a national library should fulfil, that is, that it should not be confined to the suburban population around Sydney, and that it should extend its benefits to the people in the remote districts? Yes; that was in conjunction with the lending of boxes of books.

231. That was the justification for lending books to individual students? Yes.

232. Do you say that if the system were extended it would have to cease immediately? Yes, with our present staff, because we could not carry it out.

233. So that it can only be carried out while it remains restricted? Unfortunately the number of students in the country is very restricted.

234. If the demand were enlarged you would have to stop the system? Yes, or else get a larger grant from Parliament.

235. *Mr. Millard.*] You do not wish it to be inferred that the benefit of the Library could not be extended to the country if Parliament voted more money? It is only a question of money.

236. *Mr. Jessep.*] You say that from November, 1898, you first began to issue books franked through the post? Yes; we began then to issue books from the Lending Branch.

237. And you continued the practice from that date until your attention was drawn to the matter by the Postmaster at Penrith? I heard from the Librarian of the Lending Branch that he believed exception had been taken. I at once wrote to the Postmaster-General, as mentioned yesterday.

238. During the latter part of 1898 and in 1899 and portion of 1900 you still continued sending the books by the same system until your attention was called to it? Yes, until last month. I never heard the slightest objection before that. It is quite extraneous work, and it only gives me more trouble and responsibility, and loads the work on our staff.

239. Have you lost a number of books from the Reference Library? Yes; we were constantly losing books.

240. Were they valuable books? No; we never have lost really valuable books. They are always rather common books. Our valuable books are down in the basement, or else they are in inaccessible places.

241. For instance, have you lost any books relating to early explorations? No; most of those are kept in the basement. We keep a record of all the books lost, and they sometimes come back in a marvellous way. A book was lost on the 14th July last, but it came back yesterday by post. A book is sometimes taken for five or six weeks, and then it is sent back.

242. Under present conditions, is it not rather easy to abstract a book from the Library? I admit that they go, and we cannot catch the persons taking the books. We have apprehended six people during the last two years, but we cannot catch them in the room.

243. Has there been a considerable amount of mutilation of books? No; I think we have almost stopped that. I have not known a case of mutilation for a few years.

244. Take, for instance, the Mitchell Library;—could not persons, under present conditions, abstract half-a-dozen books from that collection? We would not allow any person in there without an officer being in his company, unless it was someone I knew very well.

245. Are not many of these books in the Mitchell Library heaped one on top of the other in consequence of the paucity of room? Certainly not; they are all on shelves, and arranged beautifully and methodically. They are not classified or catalogued yet, because we have not a sufficient staff. But I have now an officer at work doing nothing else but cataloguing and classifying those books.

246. Then, it is not possible for persons to go indiscriminately and handle the books? No; that is absolutely impossible.

247. On several occasions have not a number of books been sold from the Library? We had one large exchange of books some three years ago; it was a very large exchange of duplicates. Every book was a duplicate as far as I know. Of course I am dependent on my officers for that information; but I trust them implicitly. Every book was a duplicate or a triplicate.

248. *Mr. Meagher.*] Would it not have been more advisable in the case of duplicates of a valuable character to present them to leading Schools of Arts throughout the country? Yes; assuming that they were valuable, which I deny. I say that of the 5,000 not 300 were worth more than 15s. each.

249. What were they sold for? They were not sold; they were exchanged.

250. What value did you receive in exchange for it? Books of the value of about £258, which we put in country boxes entirely for the benefit of country students.

251. *Chairman.*] Are you aware that a number of valuable books were included in the 5,000? I do not think so.

H. C. L.  
Anderson.  
29 Aug., 1900.

252. Would you venture to say that if you have a duplicate of a presentation-book of the late Mr. Justice Wise—that is, the life of Joseph Holt;—you can call that a book which anyone could pick up in the street or at a bookstall? I would not call a book of that sort a valuable book.

253. Would you not call it a valuable book by reason of the fact that it was a presentation volume? I say it was invaluable in that sense, and ought to have been kept in the Library. On no account should it have been parted with if presented by a donor with his stamp upon it. The great mistake made was that when Mr. Justice Wise's collection was presented many years ago, long before my time, the books were incorporated in the General Library, and it is almost impossible to say whether a book belongs to the Wise collection or not, because the books are not stamped on the title-page, as they ought to have been. They were stamped inside and on all sorts of places. There were some books of the Wise collection disposed of to the grief of every honourable man connected with the Library. Of course, I do not refer to spies. Every honourable man connected with the Library is deeply grieved that any book belonging to the Wise collection was parted with.

254. Take, for instance, the *Journal of a Voyage to New South Wales*, by John White, the author's own copy;—should that have been included in the books which were exchanged? I could not say until I saw the book. I know we had three copies of that book in the Library. I instructed an officer whom I trusted to pick out the least valuable of the duplicates. I did not see one of those books myself. I was just about to leave for England at that time, and I was exceedingly worried with work. I trusted my assistant librarians, who are exceedingly trustworthy men, to go over the books, and I am sure they picked out as far as they saw the least valuable of the duplicates.

255. Would you call the book I have just mentioned a common-place production? No; I think that is one of the rarest books we sold.

256. Assuming that you had three copies of that book or twenty-three copies of it, do you not think that a better purpose would have been served by setting it aside for future use or by sending it to a country library instead of including it in a bundle of 5,000 books which were to be sold? First of all I am not here to question the action of my Trustees. My Trustees did this entirely. One of the Trustees was Mr. R. C. Walker, my predecessor in my present position. Mr. Walker bought those books. He thought it was a good idea to buy duplicates, but he lived to see that he was wrong, and as a Trustee he strongly supported getting rid of duplicates, as they encumbered the shelves. I know this for a fact, that there is not a country School of Arts which would value an old book of that sort, because they never looked at books of the kind which we included in the country boxes. I authorised the Librarian of the Lending Branch to take any duplicates that he wanted for the Lending Branch; he only took ninety. I then authorised the officer-in-charge of the country boxes to take any that he thought would be interesting to country students; he only took twenty-five. The people in the country do not want to read books of that sort.

257. *Mr. Meagher.*] At Bathurst and Newcastle are there not Public Libraries where such books would be acceptable? Why should the Trustees give away books for nothing which they had bought?

258. Because the State is practically subsidising those Libraries in two great centres of population? In return for those books we got some very acceptable books.

259. *Chairman.*] Were they not works of modern fiction, for the most part? I do not remember a work of fiction in the lot. We got, in return, books which were all acceptable to country students. We got twenty new boxes sent out.

260. *Mr. Meagher.*] Can you supply us with a list of the books which were given in exchange? Yes.

261. *Chairman.*] Was any list kept of the books which were sold? No; we had not an officer whom we could detail for that duty. To have made out an ordinary bookseller's list would have taken the smartest man I had several months.

262. Is it not rather a dangerous practice that some 5,000 volumes should be sold in that way without a list being retained with details of at any rate the valuable books? We can trace all the valuable books, as they were taken off the shelves by our officers, and they were on the shelf-register. Every book of any value can be traced. Four hundred and ninety volumes can be traced.

263. Did you not trace them and repurchase them? I was in England at the time. As soon as it was found out that some of the volumes belonging to Mr. Justice Wise's collection were included, the firm which bought the books very generously went over the lot and took out any books which had Mr. Justice Wise's stamp inside them. They reserved the books until I came back from England, and the Trustees authorised me to buy them at a fair price. I bought back thirty-eight volumes which we felt should certainly never have been parted with, and which were included by error. I paid £12 5s. 6d. for those books.

264. Dealing with the matter of duplicate copies, you say that the Trustees came to the conclusion that the system of retaining duplicate copies was of no utility, and rather a disadvantage than otherwise;—would it not be better to keep duplicate copies of those books, so that when one copy became mutilated the remaining copies would serve the purpose? We have done so. We have duplicates of every rare book, and many of those disposed of were triplicates. We have four copies of "*White's Journal*." We were cramped for room, and that was the cause of the action which was taken.

265. Would lack of room be sufficient justification for disposing of valuable books? Of the 5,000 books, not 500 were in any sense valuable, and not 800 of them were tolerably valuable. The others were odd parts of magazines, navy and army lists, parliamentary papers, reports from agricultural stations in America, odd volumes of periodicals, and all kinds of rubbish. I can give full details from our books showing exactly what were taken off the shelves. We included a few duplicates which had some value, because without them we could not have sold the others at all; they would have been dead stock.

266. *Mr. Quinn.*] What was the value of the books you got in exchange? Shop value, £258.

267. Have you a catalogue of the rare books which were disposed of? No; but they are included in our shelf-registers, and we can trace them.

268. Would that be a guide in preparing a list of those books? Yes. The value of books is the most peculiar thing in the world; a book might be worth 100 guineas one day, but it might be worth almost nothing in a few years.

THURSDAY, 6 SEPTEMBER, 1900.

H. C. L.  
Anderson.

6 Sept., 1900.

Present:—

MR. SLEATH,

MR. MILLARD.

MR. J. C. L. FITZPATRICK, Esq., in the Chair.

Mr. H. C. L. Anderson appeared on his own behalf.

Henry Charles Lennox Anderson recalled and further examined:—

269. *Chairman.*] At the last meeting I was speaking with reference to the books which had been sold. I think you said that you had not a catalogue of those books? No, we did not make a catalogue.

270. Did you say that they were included in the shelf-register, and you could trace them? I have had a list prepared of those books, and with the permission of the Committee I will read the statement on the subject:—

In December, 1892, according to our Stock Book, there were 1,950 volumes of duplicates, consisting principally of Directories, Army Lists, Navy Lists, Almanacs, Parliamentary Reports, odd volumes of "Hansard," mutilated books, incomplete works, unbound periodicals, and foreign publications which had been received in duplicate through the Board for International Exchanges.

During 1893 and 1894 the number of duplicates had grown to 2,118, being increased by 166 unbound periodicals, and two mutilated books. On the 31st December, 1894, the whole of these were struck off the stock by the Trustees, as reported by the President in his Report for the year 1894. That means that all of these duplicates were considered absolutely worthless, and were, therefore, struck off the nominal strength of the Library's collection, and appeared no longer in our totals in future Reports. The whole of them were, however, stored in the basement of the Library, and the numbers were swelled to 2,675 during 1895, and in February, 1896, 1,550 loose periodicals, which were duplicates of our bound volumes, were also placed amongst these odds and ends, making the total 4,225.

In December, 1896, owing to complaints of want of room in the part of the Library devoted to our Australian collection, I instructed the Chief Assistant in charge of the Reading-rooms, to pick out the least valuable copy of each of the duplicates from that collection, and he selected about 1,000 volumes, leaving in most cases only one copy of any Australian book. I then instructed the two assistant librarians to examine this lot of books, and pick out anything which they deemed worthy of being retained of special value or peculiar interest. They returned to the shelves over 300 volumes which they considered worth keeping in duplicate for any reason that seemed sufficient for themselves. They placed aside in a special press, where they now are, 159 volumes, which were in nearly every case triplicates of books on the shelves, deeming them specially worthy of being retained for exchange with other libraries, or to replace books that might be worn out through constant use. They left altogether 507 volumes, taken from the shelves of the Australian collection, and which were disposed of in the general lot. A complete list of these is herewith submitted.

In December, 1896, Mr. Bladen, the Editor of the Historical Records of New South Wales, was transferred to the Library, and brought with him 324 volumes relating to Australian history and geography. Nearly all of these were duplicates, but eighty-eight volumes which were either new or were new editions were added to our stock, and placed on the shelves, thirty-one volumes were placed amongst the other choice duplicates in the cupboard previously referred to, where they now are, and 205 volumes were placed amongst the general duplicates for disposal.

The whole of these duplicates, which were, of any value at all in our eyes, were placed in alphabetical order by authors' names, in some presses specially made for them, in a corner of the basement. After they had been arranged in alphabetical order, further steps were taken to protect ourselves against losing anything that might be of use to us in any of our branches, and in the first case three volumes were picked out for return to the shelves, which had been inadvertently placed among the duplicates. I authorised the Librarian of the Lending Branch to carefully examine the whole of the duplicates and pick out anything he wanted, or anything he thought desirable to add to his stock, and he took out ninety volumes, which were all that he could find that were, in his opinion, suitable for his borrowers. These were transferred to the Lending Branch; at the same time we made an exchange with the Australian Museum for nine volumes from these duplicates, for which we got corresponding value for addition to our shelves. I also invited the Librarian of the Parliamentary Library to inspect the lot with a view to exchange. He took out some 135 volumes of Parliamentary Reports from Canada and from the United States, which had never been received into the Library officially, as they had been sent up from the Colonial Secretary's Department as useless for their purposes, and were found to be duplicates of our own stock. In return the Parliamentary Librarian gave us a number of duplicates from his collection. I also invited the University Librarian to inspect these books with a view to effecting an exchange, but all he could find that appealed to him were a few University Calendars. At this same time I took the opportunity of remodelling a few of the country boxes, that had been equipped for about fifteen years, and the books in which were obsolete and rather too heavy for the requirements of country readers. I removed 228 volumes from these boxes, all good literature, and had them carefully examined to see that any of them, which were not already in the Reference Library, should be retained. The consequence was, that the Assistant Librarian picked fifty-six volumes which were added to the stock of the Reference Department, leaving 172 volumes, which were placed amongst the duplicates.

The total number of duplicates thus amounts to 5,109, and subtracting the ninety volumes taken for the Lending Branch, we have a balance of 5,019.

I hope I have made it perfectly clear that of these 5,019 volumes, 4,225 were practically worthless from our point of view, and most certainly included very few volumes worth as much as 5s. The remaining 794 volumes were all, more or less, valuable, and had all been taken from our stock. It was only by means of these that we could sell the great mass of rubbish, and, according to the estimates of persons qualified to express an opinion, the retail shop prices of the whole of them would not have been more than £250. These books were examined by the Trustees, and examined with special care by Mr. R. C. Walker, the late Principal Librarian, who was at that time a Trustee. He entirely concurred in the advisability of getting rid of these books, most of which he himself had been instrumental in adding to the Library in some way or another, and he was present at each of the meetings of Trustees, at which the whole matter was fully discussed. Of these Australian volumes, it was found out, after they had been delivered to the purchasers—Angus and Robertson—when I was on my way to England, that some volumes bore the stamp of the Wise bequest, and arrangements were made with that firm to reserve every volume that could be found bearing this stamp in any part. Thirty-eight volumes were thus returned, shown on the list herewith in red ink, and the Trustees allowed the sum of £12 5s. 6d. for the repurchase of these books, leaving the net amount of £253 8s. 3d., which they received in the shape of books, to the number of 898, which were received from Angus and Robertson, in exchange for these duplicates. The whole of these books were used to equip twenty new boxes, which have since that time been lent, on an average, to seven country libraries each, and have thus done infinitely more educational work than the Australian books could have done, whether they were retained on our shelves or even sent out on loan to country libraries.

Herewith is a list of the books as exchanged by Angus and Robertson for these duplicates, a list of modern useful books of that period, 1897, thoroughly fitted for the use of country students and readers, and not containing one single work of fiction or anything worthless from a literary point of view. As nearly 40 per cent. of these were second-hand, though in excellent order, we got large reductions on the publishers' prices, so that the total value of the books at published prices was quite £300.

It is as well to point out that tenders were invited for the purchase of these duplicates from the only three firms in Sydney whom the Trustees deemed able to deal with this class of stuff—Angus and Robertson, W. Dymock, and E. W. Cole. Though they all inspected the duplicates, Angus and Robertson submitted the only tender, namely, for £219 cash, or for books of that net value, allowing 20 per cent. discount off the shop or published prices.

I may here remark that if it had not been for my action in inciting this firm not to allow themselves to be beaten in a public competition of this sort, they would certainly not have tendered at all, as they did not appreciate the lot of rubbish that was included in the whole parcel.

In

H. C. L.  
Anderson.  
6 Sept., 1900.

In pursuing this course, the Trustees strictly followed the precedents of the British Museum and many other great libraries, and determined to imitate the British Museum by having an embossed stamp with which to impress the title page of each volume sold. We have at the present time, in our Library, duplicates which have been sold by the British Museum, the Boston Public Library, the New York Public Library, Newford, Mass., U.S.A., the Tasmanian Public Library, Sydney School of Arts, University of Melbourne, Royal Colonial Institute, Perth Public Library, W.A., and others.

As there was a very great fuss made at the time of the transaction, both in Parliament and in the press, the purchasers recognised, as shrewd men, that they might take advantage of the free advertisement they were getting, and accordingly sent nearly all of the books which they got from us, together with a number of other volumes from their own stock, to the auction room, and, after the best possible advertisement, they sold 607 volumes of the Australian books for £65 3s. 9d., an average of nearly 2s. 2d. each, and 355 volumes of general literature for £35 19s. 4d., an average of 2s. a volume. They had previously offered the choicest books in the collection to private buyers, and had apparently sold sixty-seven of the Australian books, which were probably the best of the lot. To show that none of them were exceedingly rare and valuable, I may merely mention that Mr. D. S. Mitchell, our greatest Australian collector, was not able to get a single new author from the lot. He took some new editions, other than those he already had, of well-known authors. His total purchases amounted to £6, as he has commissioned me to inform you.

I happen to know that a few private buyers bought some volumes which they considered particularly rare and choice, at prices far above the current market value, as shown by the catalogue of Australian books, which was offered for sale just about the same time by a London bookseller—Edwards—now considered the best English authority on the market value of Australian literature.

271. Did you say the books which were sold had an embossed stamp on the title page? Yes; every book sold should have been so stamped.

272. *Mr. Sleath.*] Was that the case? I instructed a trustworthy officer to do so, and I have every confidence that he carried out my instructions. First the embossed stamp is put on, and afterwards my signature is put in a small space on the stamp. The Trustees did not insist upon that, but I thought it was desirable so that no book could go out of the Library without two people being responsible.

273. Did you stamp the books with your own signature? No; it would have taken a fortnight to do that.

274. Then you did not know personally anything about it? No; I trusted a reliable officer.

275. *Chairman.*] Assuming that a book was stolen from the Library, and also that a book was sold from the Library and the title page was destroyed, would there be any means by which you could determine whether the book was sold or stolen? Yes, very easily. No man in the world would destroy his title deed. The stamp is the title deed from the Library. Secondly, if anyone tore out the title page of a book it would be worthless from a bookseller's point of view. Even supposing it were torn out, we have a lot of private marks on every book which is our property, by which we certainly could detect the book. At any rate, there have been fifty-two books stolen from us during the last six years, which have been recovered, and every one of them we were positively able to swear to. They were easily identified by the private marks.

276. Have you any idea as to the total number of books which have been missed or stolen during each year for three years? Yes; we know every book which has been stolen. When I came to the Library in 1894, no stock had been taken since 1885. I took stock in 1894, and I found that there were hundreds of books missing. I may tell you that a book came back to us by post to-day which had been missing for twenty years. Books are very often kept by people whom you would never dream of suspecting, and then they are sent back. On Tuesday night at 6 o'clock one of my officers found a book on a table used by one of our students. It had been missing for three years. I am morally certain that some student using that room brought the book back, but I cannot prove it. I have written to several persons in hope of getting an explanation.

277. *Mr. Sleath.*] If you lend out books do you not know to whom you lend them? These books that I refer to are taken away unlawfully. I say they were stolen. If the people were caught in the public streets with these books in their possession they would be apprehended and put in gaol. Last year we lost fifty-one books; two of them have turned up during the last week. During the whole thirty years of the Library's existence there have been 408 books missed. At the end of 1898 there were 357 books missing. The whole of them are on this list which I produce. That includes the whole period since 1885.

278. *Chairman.*] I presume the books which are missing are for the most part valuable? I do not know one book among the lot that was really valuable.

279. Then whoever took them did so because the subject of the book was one in which he was interested at the time? The book returned on Tuesday night was "Ironbark Chips," worth 2s. 6d. The book returned by post was on "Neurasthenia." I have known books of shorthand taken away for months and then returned. Text-books for examination are frequently taken for three months, and about three days after the examination they are returned. I have stopped the practice of bringing bags into the Library, and that has had a very good effect. Still, last year, fifty-one books were taken—stolen, if you will—but we believe that in many cases they have been unlawfully borrowed. Still, there is stealing going on, because during the last two months we have caught a man with books in his possession which he was trying to sell.

280. Have you any knowledge as to how many of the books given to the Library by the late Mr. Justice Wise are now actually missing? No; we have no record of the number of those books.

281. Did you not repurchase some? Yes, thirty-eight volumes, as shown in the list I am handing in. There may be two or three others which we have not got. I understand that Angus and Robertson discovered, through a purchaser, that one of the books bore Justice Wise's stamp. They reported the matter to my *locum tenens*, Mr. Cullen, and he reported to the Trustees instantly.

282. Had Mr. Cullen something to do with the selection of the books for sale? He selected some of the books which he wanted for the Lending Branch. The others he did not think worth putting there. The President of the Trustees at once instructed Angus and Robertson to keep back every book which had on it Justice Wise's stamp. They searched, and found thirty-eight. They were kept back, and when I returned I negotiated for their purchase.

283. *Mr. Sleath.*] Would you be surprised to learn that there are books belonging to the Wise bequest scattered all over the town now? I do not believe it possible. I should not think there are six.

284. I have seen a great many of them myself? I should be very glad to see them.

285. *Chairman.*] What value would you put on the most valuable book which was sold on that occasion? Value is an arbitrary thing. I did not know the books very well myself. I never handled them.

286. Take the book called "White's Journal"? That is not a very valuable book.

287. Would you be surprised to learn that the present owner has refused £10 for it? Then he is a great fool, because I can buy any number of copies at 35s. He must be a man who has no knowledge of the value of books if he has refused such a price.

H. C. L.  
Anderson.  
6 Sept., 1900.

288. Do you know the man who has the book? Yes, Mr. Lennard. I can show a catalogue with that book in it at the price of 5s. up to £3; I can scarcely believe that the owner would refuse £10 for it. We have three copies of the book on our shelves, and the dearest one cost us £3 in the good old times when books were very dear.
289. Then you actually did send particulars to three firms to tender for these books? Yes; we called for tenders from all the firms in Sydney who could possibly deal with such stuff. They all inspected the books but only one firm tendered.
290. *Mr. Sleath.*] Is it not a fact that while you called for tenders, a number of volumes were taken away from the general collection after Angus and Robertson had seen them, and no one else had a right to tender for them? Most certainly not.
291. Did you not say you were in England at the time? No; not until after the books were sold. The tender was accepted before I went to England, and all the stamping was done. They were handed over to Angus and Robertson a week before I went away. It took them some time to re-arrange the books themselves.
292. Then you did not superintend all these books yourself? I was responsible.
293. Did you personally supervise everything? No.
294. Then how can you positively swear that certain things were done? I believe that my officers carried out my instructions faithfully.
295. When you did not personally supervise these things you cannot speak from personal knowledge, and therefore your evidence has no value? I think the records in the Public Library ought to be good enough to swear by, and I believe they are.
296. *Chairman.*] You said that you had some knowledge as to the sale of these books, with regard to the selection of them, and so on;—If you had made a close examination of these books, would you have consented to the sale of those which were included in the bequest of the late Mr. Justice Wise? No.
297. Then you admit that you had no actual knowledge with reference to the details; for instance, what works were supposed to be sold? No, I did not examine the books individually.
298. Did I understand you to tell the Committee that some of these books which you bought back from Angus and Robertson were books that were stolen, and not books that were sold? No; the only books that we bought from Angus and Robertson were the thirty-eight volumes which bore the stamp of Mr. Justice Wise.
299. Did you buy any books from a bookseller named Child or Skinner which were previously in your Library? Yes, we bought some books which we found had been stolen. The stamps had been very carefully obliterated, and sold to three booksellers in Sydney, namely, Child, Meadmore, and a man known as Skinner.
300. Did you buy any books from Angus and Robertson at any time? No, only from those three men. I think there were 120 volumes altogether.
301. Were there any means whereby you could prove those books were stolen? Yes, the man got six months' imprisonment for stealing them. Perhaps it would be well to explain the matter fully. The young man came to the library apparently at some slack time, when he used to prow about, probably at tea time when the staff was small. He went round to the presses, and picked out a number of books not in our binding and with not many stamps on them. There was only one book in the lot worth 10s. They were common place modern books. He took them in small batches and sold them, during a period of two months, to three booksellers. One of the booksellers reported to us that he had a book which he thought was our property, Angus and Robertson having drawn his attention to a private mark which they knew indicated that it was our property. We at once reported to the police, and a detective went along to the shop. While he was in the shop the young fellow came in to sell another book, and he was at once apprehended. We then found out where the other books were, and there were 120 volumes in the three shops. The rubber stamps on the books had been obliterated.
302. *Mr. Sleath.*] I thought you said that there was an embossed stamp on the books? No, they only had an ordinary rubber stamp. The embossed stamp was only put on the books that were sold. These booksellers said to me "we think we have been victimised, we bought those books in good faith, we had not the slightest idea that they were your property; do you not think you ought to pay us what we paid for them?" As a matter of fact, I recommended the Trustees to give these men from 6d. to 2s. a volume. The Trustees approved of the payment of £5 5s. 6d. to these three booksellers.
303. Was there not a transaction in connection with Dr. Bennett's library. Do you recollect having an offer or making an offer for that library? Yes. Mrs. Bennett came to me, with an introduction from the President of the Trustees, to ask if the Trustees would buy her late husband's library. I assured her at once that it was hopeless for us to buy a library which she valued at £2,000. Firstly, because we had not the money, and secondly, because a large number of the books were already in our collection. I told her that I would look over her books and pick out what we wanted. Of course, she was aware that I would pick out the eyes of the collection and that she would not be readily able to sell the balance, and she would not allow that. I suggested that the agents of the Library, Angus and Robertson, might buy the balance of the books in conjunction with us. After deliberating, she wrote to me and said she would be glad if I would inspect the books in conjunction with our agents. We did so; I picked out what I thought the Trustees would be likely to buy. I should think about £100 worth; and Angus and Robertson expressed their willingness to take the rest. I told Mrs. Bennett that I would allow Angus and Robertson to buy the lot and that I would then pick out what I wanted. She said she would not take a tender from a firm who might not be financially responsible. We said we were quite satisfied with Angus and Robertson, and said we were willing to take the library over for £850 in conjunction with Angus and Robertson, they being willing to take all we did not want. She never replied to my offer in any shape or form.
304. Did you eventually purchase some of those books? No; they were purchased by Mr. Mitchell who presented them to us for nothing.
305. Were they actually purchased, originally, by Mr. Mitchell from Mrs. Bennett? No; they were afterwards purchased from Dymock, the bookseller, and they are now in our library as part of the Mitchell collection.
306. Were there a number of books in that collection which eventually you approved of by purchasing them? No; we did not purchase them.
307. Well, there were a number of books included in that library which you were desirous of securing for the Free Public Library? Yes.

H. C. L.  
Anderson.  
6 Sept., 1900.

308. Did you have any opportunity afforded you by Mr. Dymock, to make a selection from his stock after he purchased it? Yes, he afterwards wrote and told us he had purchased the library and that he would be glad if we purchased some of the books. I sent my Assistant Librarian to inspect his stock, but he found that nearly all the books we wanted were gone. We afterwards found that they had been purchased by Mr. Mitchell. However he found a few which we still wanted. He made a list of them and I presented it to the Trustees at their next meeting. Parliament meanwhile had reduced our vote by £950, and we had no money available. We had to reject all recommendations made by the public and all books offered by any persons for several months.

309. How do you find the prices of Angus and Robertson compare with the prices which you paid for books from the English publisher with whom I believe you dealt prior to dealing with Angus and Robertson? We get our books cheaper than we ever got them from England. What is still better we got them much more promptly. We get them at least six weeks or two months earlier than we could get them from any English agents. They used to keep the books back to bind them, which always took from six weeks to two months. We now get a discount which is certainly better than we ever got from the English agents, but I must say I only had experience of an English firm for about one year. I then persuaded the Trustees to change the arrangements.

310. *Mr. Sleath.*] Do you swear that you get better conditions from an agent in Sydney than you can get from an English publisher? No, from an agent in England. We used to get them from Kegan Paul, Trench, Trübner, & Co. They had the right to pick the books for us in London, and they did pick them to the value of £500 a year. They used to pick a lot of books we did not want, and they did not send those we did want, that was my great objection to the arrangement. I found for example on one occasion that Kidd's "Social Evolution" was not sent out. I had to wait to see if it would come, because if it came by the next mail, and I bought it in the meantime, it would be a duplicate. I waited for several months; meanwhile people asked for the book, as it was a celebrated work at the time. That annoyed me very much. The same thing happened in scores of instances. For us to get out a book would take at least three months from date of ordering it. I advised the Trustees to have local agents with whom we could deal at once.

311. *Chairman.*] Is not the selection made here just as it was made in the old country by the agents? Most certainly not. The selection is made here entirely by the Trustees and myself. First of all I sift out the books and reject those which are obviously unsuitable. Then the list is sifted out by a sub-committee of the Trustees. The result of their sifting is submitted to the monthly meeting of the Trustees, and then they are finally selected.

312. Take the case of the supply of £200 worth of books to a Municipal Library;—is not the selection made by the booksellers, subject, of course, to your examination of the list of books subsequently? That has nothing at all to do with the Public Library.

313. *Mr. Sleath.*] Have you nothing to do with that officially? The Minister of Public Instruction asks me on each occasion to revise the list of books as submitted by the Municipal Council. I have always done so for his information.

314. He may or may not do that? He may not, but he frequently does it.

315. Did you supervise the list of books sent to Brewarrina in 1894? I do not remember it, but if it was done in 1894, I probably did so.

316. It is alleged that there was some very interesting literature in that lot? If I revised it, I will be bound that it was a lot of excellent books, but possibly it was not supplied according to the list approved by me. I am well aware that lists have not been supplied to the libraries as approved by the Minister. I have never passed a French novel in my life. It was a standing rule in Mr. Carruthers' time that no fiction whatsoever should be allowed in any Municipal library. I thought that rule might be relaxed, and now the Minister does not object to some classical fiction being put into the Municipal libraries.

317. *Chairman.*] There is a story current to the effect that a number of volumes of a French work of a rather questionable character once occupied a place on the shelves of the Free Public Library, and that in consequence of the popularity of these particular volumes, and the number of times they were inquired for by bald-headed gentlemen, it was decided to divide them amongst the Trustees? It is a scandalous lie. My Trustees selected the books, and were entirely responsible for the selection.

318. I did not suggest that these gentlemen selected the books, but that the books were on the shelves of the library, and that in consequence of the number of applications that were made for them, the officials and others discovered the real character of the work, and that subsequently it was decided the best course to get rid of them was to distribute a volume each amongst the Trustees? There is no foundation for that statement. There are books in our library which are decidedly "blue," and of course they include some of the best classical works. They are kept under lock and key in my room, and they are only issued on a written requisition. Any member of the public who is a responsible adult can get the books on a written requisition.

319. *Mr. Sleath.*] From whom would he get a written authority? From the senior officer in charge of the Library. That officer would go into what we call the reserve, and issue the book if he thought the person should get it.

320. You do not keep these books specially locked up in your safe for your own special benefit? I can lend you some of them, and they will make your hair stand on end.

321. *Chairman.*] Are these books catalogued? Yes; in the general catalogue.

322. Do you use your discretion as to whom you allow to use these books? Very valuable books, or books that are objectionable, are put in that special reserve, and they are not issued without the authority of the senior officer in charge.

323. With reference to the most valuable works in the library, assuming that a person comes in and makes application for the privilege of perusing one of them, is any care taken to see that they are not mutilated in any way? Yes; we never allow a valuable book to be used except under the strict supervision of some member of the staff.

324. Notwithstanding that every care has been exercised, have not some books been mutilated? Yes.

325. For instance, have not illustrations been torn out? Yes; but not in the case of valuable books. It has been done with the *Illustrated London News* and also ladies' fashion papers.

326. In the case of purchases made from year to year, are the booksellers requested to send in a price for a certain list of books, or are Angus and Robertson practically the booksellers to the library? They are the

the Library agents. We called for tenders for our business in 1894 from the four leading firms in Sydney, and we got tenders from all of them. I presented a report to my Trustees on these tenders, and it is as follows:—

H. O. L.  
Anderson.  
6 Sept., 1900.

*Covering Four Tenders and Tabulated Statement.*

Recommendation approved.—JAMES NORTON, 22/10/94.

Sir,

Free Public Library, Sydney, 20 October, 1894.

Herewith I have the honor to submit tenders received from four Sydney booksellers for the agency of this Library.

The terms offered by all four are very satisfactory, and three of them have every confidence that the business of the Library can be managed by local agents with entire satisfaction to the Library.

As the tenders are framed in different ways, I have endeavoured to reduce them to a common basis for the purpose of comparison by analysing our classes of business for the past two years, and thence deducing an estimate for 1895.

According to this table, submitted herewith, the tenders of Angus and Robertson and George Robertson & Co. are practically equal, for any variation in the classes of books purchased might make a balance in favour of either of these two tenderers.

I recognise that either of these firms can do very good service for the Library, and that the terms of each are very favourable to us—better, in fact, than those now received from our London agents.

Having regard, however, to our large trade in second-hand books, more especially those on Australia, and to the special trade done by Angus and Robertson in that line of business, I recommend the acceptance of the tender of that firm.

By the return submitted herewith it will be seen that, on a business of £2,200, the estimated discount is £202 10s.—equal to 9½ per cent. on the whole.

I have, &c.,

HENRY C. L. ANDERSON,

Principal Librarian.

Hon. Dr. Norton, M.L.C., President, Board of Trustees.

*Accompanying Report on the Tenders.*

Estimated Discounts shown on Four Tenders for Library Business.

20 October, 1894.

Class of Books and Estimated Cost.	*Angus and Robertson.	Geo. Robertson & Co.	Turner and Henderson.	W. Dymock.
English publishers—ordinary, £700 ...	20% off=£140 ...	25% off=£175 ...	16¼% off=£113 15s.	10% commission; estimated discount, £122 10s.
English publishers—net, £200 .....	7½% off=£15 .....	5% off=£10 .....	7½% off=£15 .....	10% commission; estimated discount, nil.
Books at agents' risk—ordinary, £200	15% off=£30 .....	20% off=£40 .....	16¼% off=£32 10s.	10% commission; estimated discount, £24.
Books at agents' risk—net, £100 ...	7½% off=£7 10s.	2½% off=£2 10s.	7½% off=£7 10s. ...	10% commission; estimated discount, nil.
Second-hand books, £400 .....	7½% on=£30 .....	15% on=£60 .....	15% on=£60 .....	10% commission—£40.
American and foreign books, £200 .....	10% off=£20 ...	15% off=£30 .....	16¼% off=£32 10s.	10% commission; estimated discount, £24.
Magazines and periodicals, £400 .....	5% off=£20 .....	Net .....	2½% off=£10 .....	Net.
Total discounts .....	£ 232 10 0	£ 257 10 0	£ 211 5 0	£ 170 10 0 (estimated).
Commissions .....	£ 30 0 0	£ 60 0 0	£ 60 0 0	£ 40 0 0
Net discounts .....	£ *202 10 0	£ 197 10 0	£ 151 5 0	£ +130 10 0

\* Recommended for acceptance.

† This is merely an estimate, as the terms of the tender do not permit of an exact comparison. I have estimated the average shop profits on English books at 25 per cent.; net books, 10 per cent.; American books, 20 per cent.; books at agents' risk, 20 per cent.

HENRY C. L. ANDERSON,

Principal Librarian.

The President, Board of Trustees.

The schedule shows the discounts accompanying the four tenders. As a matter of fact Mr. Dymock was out of the question, because he said he was quite sure the work could not be done satisfactorily by any local firm, and he did not tender in the way that the others did. He said, "I fail to see how any Colonial bookseller can carry out your wishes so as to give entire satisfaction. I regard it as almost an impossibility for Australian booksellers to compete with a London house, no matter how good an agent he may have."

327. *Mr. Sleath.*] Have you called for tenders since? No.

328. Do you think that in handling any articles from Home there would not be some alteration in six or seven years;—for instance, with regard to price? It is simply a question of discount. They simply give us certain discounts on the published price, and we find the terms very fair indeed.

329. You got a certain discount in 1894; and do you think that certain tenders should be accepted then, and go on for ever, or should they be called for periodically in the interests of the Library? I do not think it would be to our interests to make a change. They are acquainted with our business—they have got into the run of it. They have a man specially detailed to look after it, and it would be a misfortune for us to get another firm to do the business.

330. Your present agents had to start under the same disadvantages as any other firm would have to start now? They gave you a certain discount six or seven years ago. They might want to alter the conditions now—either to reduce or increase the discount? The question has only been mentioned in this way—that they had expressed a desire to get rid of the contract some time ago.

331. Is there no limit as to the terms of a contract? No; they were appointed agents for the Library on a certain date; and I think there was no special limit.

332. Do you think they have the right to withdraw if they choose? Yes.

333. And you have the right to withdraw also? That is a legal question. I think we would have such a right by giving them a fair honorable notice—say, six months—which we did in the case of Kegan Paul, Trench, Trübner, & Co.

334. Would it not be advisable periodically to invite fresh tenders both in the interests of the Library and the men who are contracting? I have never given the matter any consideration.

335. *Mr. Millard.*] Do I understand you to say that the present firm do not value their connection with your Library? They have said so. They have been very huffy several times about my action, and said they would like to give up the contract.

336. Would that not be an inducement to you to put up the work for public competition? We did so in 1894.

337.

H. C. L.  
Anderson.  
6 Sept., 1900.

337. But that was a very long time ago? It might be well to renew it at intervals of ten years.
338. *Mr. Sleath.*] Would not five years be long enough? You will understand that for a firm to take on our work means a lot of extra labour for them, and a peculiarly risky kind of business. They get out books for us on approval, which we often reject, and they are sometimes worth from 5 to 16 guineas each.
339. Surely you would not order books of that character without knowing what they were? They get the books, and submit them entirely at their risk. The books we order we must take, and on these we get 20 per cent. discount; but on the books which they submit at their risk we only get 15 per cent.
340. In any ordinary business would not a risk of that kind be the same? Yes.
341. Might not the same occur in a grocery business with regard to a side of bacon? Yes; but many people might want the side of bacon, whereas there might be no one else in New South Wales who would want the class of book I refer to.
342. But would it not be an ordinary business risk? I would call it an extraordinary business risk.
343. If you take an extraordinary business risk would you want an extraordinary business consideration? Yes.
344. Would not a book at 15 guineas be a fancy price? No; it would be a special price.
345. You do not pay fancy prices for second-hand books? We do not buy many second-hand books, because they are presented to us by Mr. Mitchell.
346. In importing new books at a big price, I suppose they know beforehand that it is a question of trying to drive a trade? Yes.
347. They simply want to sell the books and they know they are liable to rejection? Yes; but still we have to encourage them to get out the best books they can to submit to us. It is an important matter to have the best English books submitted to us at once instead of waiting for publishers' circulars.
348. The only encouragement you can give a firm doing business is to give them a decent price when you select them? We pay them the publisher's price with a discount of 15 per cent.
349. *Chairman.*] There is no signed contract between you and Angus and Robertson, so if they are not satisfied with their business transactions with you they could break it off at a moment's notice? Yes; they submitted a tender and we accepted it.
350. No particular period was specified? No.
351. *Mr. Millard.*] Have you any idea as to what is the amount of your transactions with this firm each year? Yes. It has been greatly reduced. Our vote used to be £3,500 a year for books; that was the year before I came to the Library. Now it is only £2,000. Out of that we spend a good deal in binding. We spend with Angus and Robertson about £1,700 a year.
352. You think you are best served by having a Sydney agent? I am sure of that, and my Trustees are convinced of it.
353. Because you believe that this firm does your business satisfactorily you have dealt with them? We have never wished to change. We could not change with advantage in Sydney.
354. You believe that they have done your business well, and you have remained with them? Yes.
355. *Mr. Sleath.*] Because it is advantageous to the Library? Yes.
356. *Chairman.*] With reference to the Mitchell library, has that yet been catalogued? No. An officer is employed on that work, and he is doing it as fast as he can. That has reference to the 10,000 volumes handed over.
357. On the point of erecting a new building to accommodate the whole of the sections of the Public Library, have you come to the conclusion that it is essential that such a building should be erected? Yes, absolutely essential. Attention has been drawn to the matter for years in our annual reports. We are cramped for room, we cannot do our administrative work, we cannot help students as we should like.
358. Have you, in your mind's eye, a site for such a building? The trustees have suggested sites one after the other, but I am sorry to say that we are not likely to get the site which we think would be pre-eminently the site for a National Library. That is Chancery Square. That is the best in the world. The site in the Domain would not be as central.
359. *Mr. Sleath.*] How would Hyde Park do? It would do very well—just opposite St. Mary's Cathedral.
360. It would not injure the Park very much? No; it would be ornamental, and be very popular.
361. *Chairman.*] I believe that one of the reasons why Mr. Mitchell has not actually completed his gift is the fact that there is no housing-room for the remainder of his library? That is the reason why he has not sent us a great many more books. I do not think he would give us the whole of his library in his lifetime. He would like to keep his choicest treasures around him, but I am sure he would give us a great many more volumes if we had room for them.
362. Have you reason to believe that Mr. Mitchell is not altogether satisfied with the housing-room now given for those books? He inspected the books after he handed them over to us, and when we had them arranged. He expressed himself entirely satisfied with the mode of arrangement, but he is very much dissatisfied that something had not been done for the whole collection. He feels that life is uncertain, and he would like to see some definite steps taken to provide for the collection in the terms of his offer.
363. Assuming that funds were available, would it not be possible to start the building and establish a section at once for the accommodation of the Mitchell Library? Yes; that has been suggested by one of my Trustees—that the Government should build the Mitchell wing first.
364. *Mr. Sleath.*] Have you not rented a portion of the Victoria Markets? Yes; that is for the Lending Branch.
365. If you had a new building erected, might not the present building be used for the Lending Branch? Yes; but my Trustees wish to get rid of the Lending Branch. They do not think it is part of their business, and the Minister I believe agrees with that view. The Trustees, through the Minister of Public Instruction, offered in 1892 to give the Lending Branch to the Municipal Council of Sydney, but the then Mayor declined the offer. The matter has been again brought up, and my Trustees are willing to dissociate that part of their work.
366. Is that not a question of public policy? Yes.
367. Can it be controlled altogether by your Trustees? No. The Trustees have only intimated their willingness in the matter.
368. Is not the Library owned by the Government? No, it is owned by the Trustees. They own the books and the Lending Branch, and if they should refuse to give them up, the books could not be taken over without an Act of Parliament.
369. But the Government could shift the Trustees? Perhaps.

370. Do your Trustees claim that the Library is practically their private property? Not at all. It is public property. The books have been vested in the Trustees; they own the land, building, and books by Act of Parliament.

H. C. L. .  
Anderson.

6 Sept., 1900.

371. Are they a Trust or do they own the property? They actually own it by Act of Parliament.

372. *Chairman.*] They own the property this way; that it would be impossible for them to dispose of the land, building, or Library without the concurrence of Parliament? They could sell anything in the Library without the concurrence of anybody; but they could only sell the land with the concurrence of the Government.

373. They could sell old books, but would it be possible for them to dispose of that Library—lock, stock, and barrel? It would be possible, but it would be absurd.

374. *Mr. Millard.*] The only justification they would need would be that it was in the public interest? Yes, a body of trustees like that would only act in the public interest.

375. Do they not occupy the same position as the Trustees of the Art Gallery or the Trustees of a race-course? Yes; they have power to exchange or sell any of the property in the Library.

376. But there is a power behind them? Yes.

377. So that after all it is not their property—they only hold it in trust? Legally it is their property.

378. *Mr. Sleath.*] Legally they hold it only in trust? They have the power specially to sell or exchange.

379. Is not it only a position of trust and not ownership? I do not know the distinction. I believe they are legally the owners of the property in trust for the people of New South Wales.

380. *Chairman.*] Do you suggest that they have the power without consulting the authorities to hand over the Lending Branch to the Municipal Council of Sydney of their own free-will? I am sure they would not do so.

381. Do you suggest that they have the power? I am not sure. I believe they have the power, but I am quite sure they would not dream of exercising such a power without consulting the Ministry of the day.

382. *Mr. Sleath.*] It is a serious thing if you do not know what they have power to do, and you think they own what is generally supposed to belong to the public? The Trustees could answer the question better than I can.

383. Do you still insist that the Trustees own the property? There is no doubt that they own the books in trust for the public of New South Wales.

384. Then the public were gulled all the time when they thought they owned the property? Well, the Trustees own it in trust. They can dispose of the books.

385. *Mr. Millard.*] There is no doubt they have very large powers? Yes; they can exchange and sell any books if they think it desirable to do so.

386. *Mr. Sleath.*] Is it not a fact that you and your Trustees think that the Library is specially your little preserve? We are very proud of it, and we do the best we can for it.

387. Do you practically look upon it as your own private property? Nonsense; no such sentiment could enter into any sensible man's head that the National Library is private property.

388. You say the Trustees own it? That is my interpretation of the law.

389. And they think so? They can prosecute a thief.

390. Do you think the Trustees own the Library? I do.

391. And no doubt they think so too? I do not know what they think.

392. *Chairman.*] What kind of attendance do the Trustees give; if a number of them think they have ownership they show very little interest in the way of attendance? Some of them attend very regularly, except those who cannot do so from ill-health or something of that kind. Only one of them has been absent altogether since I have been there.

393. *Mr. Sleath.*] Is there one Trustee who has never attended during the seven years you have been there? Yes.

394. *Chairman.*] Who was the member who was not present during all that time? The Hon. Edmund Barton. His position has been declared vacant in accordance with a provision of our Act of Incorporation.

395. Who fills the vacancies? The Government. The Trustees have not taken any steps to recommend anyone.

396. Do they leave it absolutely for the Cabinet? They instruct me to report the vacancy only. There are now two vacancies; there were fifteen seats when the Act was passed, and only fourteen Trustees then existed.

397. *Mr. Sleath.*] You said there were about 5,000 volumes disposed of? Yes.

398. Did you keep any list of the books which were sent out? No.

399. You did not know what you sold and what you retained? We knew what books were sold from our own stock, but a large number of those books were never on our stock, and therefore were not listed or catalogued.

400. Did you keep a tabulated statement of the books you sold? No.

401. So you would not be able to swear whether you sold a book or not? I can swear to any books that were our property.

402. If a book were stolen, and one were sold, could you distinguish between them? Yes.

403. Would there be any special mark on a stolen book? Yes, there would be our private marks. If a book were sold it would have an embossed stamp on the title page with my stamped signature. A stolen book would not have that.

404. Suppose the title page were missing, could you tell the difference between them? Yes; we could trace the book by the list I have shown you. If the book were in that list we would know it was sold. If it were not in that list, we would find it in our register and know that it was stolen.

405. You have already sworn that you kept no list of the books you have sold? We know by the shelf-registers what books we have disposed of.

406. Then you have a list? No. We prepared a list to oblige you during the last few days.

407. You swear you did not make any list of the books you sold, but you know from the shelf registers what books are not there? We know what books were taken off on that particular day.

408. How can you tell what books were taken off on that particular day? Because they are ticked off the shelf registers by the officer who removed them.

409. Then he took a list? No; he struck them out of the shelf registers to show that they were removed from stock.

410. Would it not have been well to have taken a list of books disposed of? Yes, if we had time; but I had not an officer to spare for three months for that work.

H. C. L.  
Anderson.  
6 Sept., 1900.

411. It seems that all Public Departments have not much time at their disposal? I know we have a lot of work to do, and can hardly get it done.
412. When were these books disposed of? In 1897.
413. In 1894 you said there were 2,118 books struck off the list? The return shows it.
414. You did not keep any list of those books struck off? No, they were mostly periodicals.
415. Do you think it would take three months to make out a list of 2,118 books? It would depend upon the nature of the list, and a good deal upon the officer.
416. Under ordinary conditions, would it take a man even three days to make out a total of 2,118 books? You must take far more than the mere titles and authors' names if you make an honest list of books for sale. You must put down the faults; you must show the defective volumes, and the pages missing. The onus would then have been on us. For example, there was a work on architecture in which there was a volume missing. Personally, I considered that that work was worth nothing, but I believe that somebody bought it at a good price, not knowing, perhaps, that a volume was missing.
417. Would you be surprised to learn that at the present time there are a lot of books in the town bearing the embossed stamp of the Library? I dare say that is the case. There were about 1,500 sold at that time, and no doubt they are all round the city.
418. Would you be surprised to learn that some of the books held at present by the different booksellers are supposed to be rather valuable? I do not know of any myself.
419. Have you ever seen any books where a portion of the title page has been cut off and the embossed stamp placed in the centre? The embossed stamp could only be placed on the bottom of the page owing to the shape of the press used for embossing.
420. Would you be surprised to learn that some of the books bearing the embossed stamp have that stamp in the centre? I do not know what would be the motive for doing so. Lots of our books were mutilated, and the leaf might have been mutilated before the stamp was put on. No doubt the officer would put the embossed stamp at the bottom of the mutilated page.
421. Is it likely that the title page would be mutilated? No; but I can imagine people trying to steal a title page for their own copy of the work.
422. But would that necessitate cutting it off half way up? No; I cannot understand such an imaginary case.
423. It is not an imaginary case, it is a reality;—I could show it to you? The man might be arrested for having it. If I found you with one of our books unlawfully, I would have you arrested at once.
424. Did you send round an officer to find out how many books there were in the different booksellers' shops belonging to your Library? At the time this young man I have referred to was stealing and selling our books we made every effort to get back every book that could be found.
425. Did you specially send an officer to the different booksellers? I believe I did so; I dare say we sent to every second-hand bookseller in Sydney.
426. Do you know whether on the visit of that officer a certain number of books were secured which really belonged to the Library? We got back 120 books from the three booksellers I have mentioned.
427. Did they go to Mr. Dymock? I do not know.
428. Do you know whether he has any books belonging to the Free Public Library? I have no idea.
429. Did you send to inquire? Not specially; I imagine the officer would go there.
430. Suppose any of those books sold to Angus and Robertson got into the hands of another bookseller, how could you distinguish them from a book anyone stole from the Library? I have explained that very fully. We have a record on our shelf registers of any book taken off our stock at that time and disposed of. If the book submitted were one of these we could see that it was a book sold lawfully. If it were a book which our shelf register shows as having been missing since then, I would at once see that it had been stolen.
431. The unfortunate thing is that you are now asserting what you would be called upon to prove? Yes; we could easily prove it from our shelf registers. We could show that the book was in our possession on a certain date, and that it had since disappeared without lawful authority, and it must therefore be unlawfully in the possession of the present holder. We have prosecuted frequently since then.
432. Sometimes you have not prosecuted? We have prosecuted whenever we have found a man in possession of our books.
433. Were there not some occasions when it was rather doubtful whether they were your books? There has never been such a case that I know of.
434. Would they all come within your personal knowledge? I do not know. I cannot imagine any book would be found missing or stolen without its being reported to me.
435. How often do you take stock? In December every year.
436. There was no stock taken between 1885 and 1894? No.
437. Is not that rather a long period? That is a reflection on my predecessor, and I do not wish to say anything about that.
438. I simply ask you whether that is not a long period? I would not allow such a period to elapse.
439. Would any man in ordinary business do so? I do not know; I would not allow my affairs to go on for nine years without taking stock.
440. You think it necessary to take stock every year? Yes; and we check our shelves every month, and we thus detect the absence of a book within a month of the book being stolen.
441. The oftener you take stock, the less likelihood there would be of books going astray? We would have a better chance of finding out where they go to.
442. Are you personally very anxious that the full advantages of this Library should be given to the general public? Yes; I have raised the attendance of the public to more than half a million, and I think that is a very fine record for a city like Sydney. It is far greater than the attendance at the British Museum.
443. Although a great many of the books which you sold to Angus and Robertson were duplicates, were they not rather scarce? I do not think so.
444. Are not some of them practically out of print? They are all out of print, but that does not make them scarce. There were none of those books that would be called very rare by Australian book collectors.
445. I am not speaking from the standpoint of a book collector—the general public are not generally great book collectors? The people who bought these books were generally book collectors. 446.

446. Although to a book collector these books were not very rare; were they not something which the general public could not get every day except through the Free Library? Yes; but they would not value them very much. We knew that by the small number of them constantly being used in the Library.

H. C. L. Anderson.  
6 Sept., 1900.

447. But you only have experience of those who have access to the Library? Yes.

448. You would not say that a person in Wilcannia could come down to the Library and use those books? No; but we know their tastes in Wilcannia, because we send boxes of books there from the Library, and in some cases at a cost of £4.

449. So you come to the conclusion that the people of Wilcannia labour under a great many disadvantages? Yes.

450. If you had duplicates could you not have sent them to the country Schools of Arts? The country Schools of Arts would not have thanked us generally speaking.

451. Did you try them? We sent them scores of these books in our Loan Boxes, but they were not appreciated.

452. How did you form that opinion? By the cleanliness of the books after five or six years, and from the returns from the borrowing Library.

453. Is it not likely that the people who read such books would take care of them? If a book is absolutely clean after being sent out, say for ten years, and another book is well thumbed over, you cannot help drawing the inference that one book was used and the other was not.

454. Are not books in your Library mutilated at times, and would it not be well to retain duplicates to make good any damaged book? We have not room for many of them as duplicates.

455. Suppose a book were mutilated of which you had only one copy, how would you replace it? The class of books which we disposed of at that time are not often mutilated.

456. *Mr. Sleath.*] If a valuable work of which you had no duplicate were mutilated, how would you replace it? By getting another copy as best we could. I do not remember having to replace three mutilated books during my seven years.

457. *Chairman.*] Is it not a fact that many books dealing with early exploration and the history of the Colony, which have gone out of print are becoming scarcer every year, so that it will be more difficult to secure a renewal of mutilated or stolen books? Yes, those books are becoming scarcer.

458. *Mr. Sleath.*] In the sale of those books to Angus and Robertson, how did you get paid? By an exchange of books—they are shown in the list.

459. Did you ever hear of a case like this: Someone went to Angus and Robertson to purchase a rather rare book, but they were not able to supply it, but next day that purchaser was asked by Angus and Robertson to return, and they submitted a copy of this particular work with the stamp of the Library on it? That would be impossible, that would be stealing the book.

460. Might not they come up and buy it from you? No.

461. If they offered to buy a book from you, would you sell it? Certainly not.

462. Do you make any friendly exchanges? No; we had but one transaction of the kind, and they have never approached us in any shape or form since then for a book. I produce a list of the persons in the country to whom books have been lent in parcels generally sent by train rather than by post. It shows that 1,005 high-class books have been lent to 720 students throughout the Colony during the past five years.

463. How did these individual students come to know that they could get the loan of these books? By applying; I do not know how they could apply except by feeling the need of a book.

464. You do not make the system public? I do not think we ever made a public intimation except through our annual reports.

465. Then a man with most cheek would get on best? A man with most need for the books would get them.

TUESDAY, 11 SEPTEMBER, 1900.

Present:—

MR. JESSEP, | MR. MILLARD.  
J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

William Stewart Mowle, Clerk of Select Committees, Legislative Assembly, sworn and examined:—

W. S. Mowle.  
11 Sept., 1900.

465. *Mr. Jessep.*] I understand that you are the Custodian of the Records of this Committee? Yes.

466. Is it the practice to distribute printed copies of the proceedings to persons outside of the Committee during the course of the inquiry? Not without the expressed direction of the Committee.

467. Have you supplied copies of the proceedings of this inquiry to any person outside of the Committee? Yes; to Mr. Anderson.

468. To any other person? No.

469. How many copies have you supplied to Mr. Anderson? He has had a copy of his own evidence, and he has had a copy of all the evidence up to, and inclusive of, the 29th August. That was his own evidence, the evidence of Mr. Holliman, Secretary to the Public Service Board, and of Mr. Lambton, Deputy Postmaster-General. That was done by direction of the Committee on the application of Mr. Anderson.

470. Is it usual for anyone outside of the Committee, or for a probable witness, to obtain copies of the evidence from the Government Printing Office? I can only say what I think about it; but I do not think the Government Printer, or one of his officials, would supply copies of the evidence without referring to the Clerk of the Legislative Assembly, or the Chairman of the Committee.

471. Is it the practice for Members sitting on a Committee to hand over copies of the evidence to a probable witness? I cannot say, but I know it has been done. The matter was brought up in the House, and it was the subject of a ruling by Mr. Speaker Abbott. That was in connection with Mr. J. C. Neild's Committee with respect to the Public Service Board; and it was done by Mr. Dowell O'Reilly, then Member for Parramatta.

472. *Mr. Millard.*] What was the ruling of the Speaker? His decision, practically, was that the rule as to the publication of evidence was honoured more in the breach than the observance, and that Committees would do well to pass some resolution as to whether they would admit the press and the public to their inquiries. In the case of this Committee it has been decided that the press should be admitted.

Henry

H. O. L.  
Anderson.

Henry Charles Lennex Anderson recalled and further examined :—

11 Sept., 1900. 473. *Mr. Jessep.*] Portion of your evidence has been the subject of a good deal of comment ;—what I refer to is the following :—

I now buy all his (Mr. Mitchell's) books for him, and I sent away £670 last week for one work ; and I have sent away, during the last fifteen months, over £2,000 for books which he has purchased for it. I do his work as secretary. He spends £2,200 a year on fresh books.

474. Are we to understand that you are in the employ or pay of Mr. Mitchell ? I get no pay whatsoever from Mr. Mitchell, but I send his orders for European books. I spoke in a hurry when giving my evidence, and I left out the word "European." Of course, he buys books in Sydney, without any reference to me whatever. All books obtained from Great Britain and Europe by Mr. Mitchell are ordered through me. I write his letters, and send the money for him through the Agent-General of New South Wales, and do all the business connected with the matter. It entails a great deal of work ; it gives me at least 30 per cent. more work than I had before. It takes up a great deal of my spare time, and I have never got a fraction of a penny for it, nor do I look for it. I am proud to do the work in the interests of the country. In my proof of the evidence I inserted the word "European."

475. Do you do the secretarial work on behalf of Mr. Mitchell during the time which ought to be given to the service of the State ? No ; it is done in my own spare time.

476. *Chairman.*] I presume that in doing this work for Mr. Mitchell you regard it in the light of work which is in the interests of the State, apart from the circumstance that you do most of it outside of your official hours, for the reason that the whole of these books will eventually become State property ? Undoubtedly so. Mr. Mitchell has pledged himself to bequeath everything he is now buying to the State, and to handsomely endow the library with enough money to provide a yearly income to keep up the increments to the library on the same scale as at present. That is what I have understood from Mr. Mitchell. By my action I save Mr. Mitchell at least 12½ per cent. to 15 per cent. on all his purchases ; therefore I save that much for the country. First of all, it costs nothing to send the money home, because I send it through the Agent-General. The business is done by arrangement with the Treasury, free of cost to Mr. Mitchell. It would cost at least £11 in exchange to send home the money for the one work which I refer to. Then I get the books from booksellers in Germany, France, and Great Britain, at the published price, less 10 per cent. discount, and the books come out with parcels through the Agent-General, at a very small charge, very often for nothing. I thus save charges in making the purchases, and perhaps that excites jealousy on the part of some local bookseller.

477. *Mr. Jessep.*] Have you had any protests from Sydney booksellers as to your action in connection with the Mitchell library, or in connection with doing this particular work of this excellent gentleman ? I have never heard a word of objection.

478. Has there been any protest that it interferes with their legitimate trade ? No.

479. What are your relations with the booksellers of the city ? We do not have any business relations with any except with our agents, Angus and Robertson. Our relations with them are most friendly.

480. Did you ever have any remonstrance from the prominent booksellers of the city in connection with your disposal of 5,000 volumes some time ago ? No.

481. Was not the action of the Trustees called in question by the booksellers generally ? No ; I cannot remember any official action. Of course, there was a great fuss in the newspapers at the time. I was then in England. I do not think there was any official remonstrance made to the Trustees by anyone in Sydney.

482. Does it enhance the value of a particular book because it has been presented to you by some distinguished gentleman ? Yes. I think that if the book were a presentation copy from a distinguished author, we would reckon that book to be more valuable than an ordinary copy of the same book.

483. Would that be an explanation of the answers you gave to the Chairman at a previous examination, as follows :—

Would you venture to say that if you had a duplicate of a presentation book of the late Mr. Justice Wise (that is the "Life of Joseph Holt"), you can call that a book which anyone could pick up in the street, or at a bookstall ? I would not call a book of that sort a valuable book.

Would you not call it a valuable book by reason of the fact that it was a presentation volume ? I say it was invaluable, and ought to have been kept in the Library. On no account should it have been parted with if presented by a donor with his stamp upon it.

? Yes. First of all I consider the "Life of Joseph Holt" as being a book of no value. It is a very commonplace book, but if it were a presentation copy from the late Mr. Justice Wise, being part of his collection, then I think it becomes valuable, and we would not part with it wittingly.

484. *Chairman.*] At the last meeting I asked you a question with regard to "White's Voyages"; it was a book for which it was alleged £10 had been offered to its present possessor ? Yes.

485. Do you not think that the fact that it is alleged to be the author's own copy, would lend an additional value to that book ? I really do not know, because there are no notes in it.

486. But if it is annotated ? If it were annotated by the author that would lend a value to it.

487. Do you know that that is the case ? I do not ; I do not think my officers would let a book go if it had the author's annotations in it. If they did so it was a slip.

488. What I wish to know is whether that circumstance would lend a considerable additional value to the book ? Yes ; if annotations known to be the author's were in the book, I consider that that would add a good deal of sentimental value to the book. We would consider it to be of value.

489. In the eyes of a collector ? Certainly it would make it more valuable.

490. With reference to the late Mr. Justice Wise's books, did the present Attorney-General, Mr. B. R. Wise, write to you or to the Trustees with reference to the fact that a number of his late father's books had been sold ? I believe he did, but the letter arrived a few days after I left for England, so that I have not seen it. I saw by the minutes of the Board that Mr. B. R. Wise had drawn the attention of the Trustees to the fact. I think that was after the Trustees had been made aware of it by the action of Angus and Robertson. I am not sure of that, because I was not here. I know that the Trustees expressed their great regret to Mr. B. R. Wise, and he accepted their apologies at the time. I learnt that from the minutes.

491. *Mr. Jessep.*] How many printed copies of the evidence have you received ? One copy.

492. Have you handed that copy to any other person ? I have not shown it to a living soul. I understand that these minutes are quite confidential, and I asked for a copy so that I might present a summary of the case to the Committee at the close of the proceedings, in order to help you in your investigation.

WEDNESDAY, 12 SEPTEMBER, 1900.

Present:—

MR. HOGUE,		MR. MEAGHER,
MR. MILLARD,		MR. PRICE,
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.		

Mr. H. C. L. Anderson appeared on his own behalf.

Henry Charles Lennox Anderson recalled and further examined:—

493. *Mr. Meagher.*] We admit that in the classics some portions of a book may be more than broad; they may be gross and indecent; but I suppose it is needless to ask that you would scarcely contend that everything indecent is classic? No.

H. C. L.  
Anderson.

494. Having arrived at that, can you tell me the names of some of those books which you stated in a former examination you keep under lock and key? There is the "Decameron of Bocaccio," Rabelais' works, the "Memoirs of Casanova."

12 Sept., 1900.

495. Do you call the last named a classical work? Yes; it is an exceedingly valuable book, a distinct classic, and it ought to be in a national library.

496. Would you mind telling me wherein consists the classical value of that book? It is a splendid picture of the manners of the time in which he lived, and of the customs in the different countries he visited.

497. So that a graphic narrative of vice in the time or in the countries visited by an individual would be a classical work? You are assuming something about vice.

498. I presume you have read the "Memoirs of Casanova"? No; it consists of about twelve volumes.

499. Was it purchased in your time? Yes.

500. How much was paid for it? I am not quite sure; I know it was a dear book.

501. I want you to try and recollect how much public money was paid for that book? I should think it was about £6.

502. Was he a man who relates his experience of unnatural vice? I never heard of that; I do not know that.

503. How much did you read of the book? I read pieces here and there to see the character of the book, but I did not see anything of that kind. There are in it some very broad descriptions of amours, which are certainly not nice reading, but I did not see anything of the kind you mention.

504. Are not some of what you call "broad descriptions of amours" absolutely fiendish—indescribably filthy? They are very coarse.

505. Do you not consider some of his descriptions indescribably filthy? I do not know; I have not read the whole book.

506. Well, I ask you about what you have read of it? It is as broad as anything I have ever seen in the classics.

507. Do you know who Casanova was? Yes.

508. Was he a man of literary attainments? Yes; I should think he was a highly-educated man, and he must have written very good Italian.

509. I suppose you will admit that a man may be well educated and yet have no literary attainments? Yes.

510. I suppose you would have no objection to bring Casanova's works here, so that some of the vilest things in the English language can be read? I shall do so if the Committee wish to see the work.

511. How many volumes altogether are there of books which you term of a "blue" character? It depends upon what you include in that definition.

512. How many books are there under lock and key in your private room by which no junior is allowed to have his morals contaminated by handing them about? About twenty-four to thirty. For example, there are scientific books amongst them, such as the "Psychology of Sex."

513. That is in no way on the same plane as Casanova's works? It is kept in the same reserve.

514. Was not Casanova's Memoirs kept out of the Library for a number of years very wisely by the Trustees? It was not kept out of the Library. It was not published in English until very lately. Before that it was in French and Italian. It was not in the Library until the English edition was noticed in a most complimentary critique in the *English Illustrated Magazine*. Then, I believe, a copy came to Sydney. It was offered to the Trustees, and they accepted it. I am bound to say that at the time we accepted it we did not see some of the worst spots in it. Our attention was drawn to these passages after we owned it. In fact, we were so ignorant of the objectionable passages in it, which are comparatively few in the twelve volumes, that it was out in the open library for months before we found out about it. My attention was drawn to these very bad spots, and after that it was locked up.

515. *Chairman.*] Was there any demand for the work? I believe there was; and that was why one of my officers drew my attention to it. He pointed out that there was a demand for the work, and I suppose he found out why there was such a special demand for it.

516. *Mr. Meagher.*] How long ago is it since you purchased the work? I think it was published about 1896.

517. Of course you know that Casanova's work had been published for about 150 or 200 years, that it was well known as a vicious French work, and yet that it was only translated into English a short time ago? It was well known as a French and Italian work long before it was translated into English.

518. You admit that Zola writes particularly strong stuff at times? I believe so. I have never read one of Zola's works. I have not had time.

519. As a student and M.A., I suppose you are acquainted with the writings of some of the leading critics of the age? Yes, I think so.

520. Would you consider that Ferd. Brunetiere is one of the ablest living critics? One of the ablest French critics.

521. One of the ablest living critics, leaving out French? I would not compare him with the critics of any other country. He is one of the recognised French critics.

522.

H. C. L.  
Anderson.  
12 Sept., 1900.

522. Are not his criticisms and writings quoted by Germans, Swedes, Italians, and other enlightened nations? I have no means of knowing that.

523. In your reading, did you never see anything quoted from Brunetiere's writings? I never read Swedish or Italian writings.

524. Neither do I, but I read translations; for instance, might you not have read the preface to any of Ibsen's works;—I suppose you will admit that Edmund Gosse is one of the ablest English critics? Yes; one of the best English literary critics of the day.

525. Would you not regard anything that he has written in commendation of Brunetiere as worthy of some attention? Yes.

526. Do you know that with regard to this very work of Casanova's that Brunetiere has denounced it as being drawn from the dregs of the canals of literature? No. I would not bother my head about it if I did know it.

527. As a matter of fact, was not Casanova a man who wandered from country to country and from Court to Court, and does not "Chambers' Biographical Dictionary" describe him as being regarded as the acme of scoundrelism? I believe that to be a true description from what I have seen of the writings of the man.

528. And these memoirs of his filthy life is what you term a classic? It certainly is.

529. If a man like Brunetiere, who is the greatest French critic, with his keen intellect and insight into the value of books, has described Casanova's Memoirs as being the very dregs of the literary canal, would you be inclined to agree with him? I would say that the work might have a very distinct value apart from that.

530. If an eminent critic has referred to Casanova's works as the very dregs of the literary canal, would you agree with him? Certainly not. Classics are not valued by their morality.

531. No, but classics do not owe their value to the fact that they are sometimes indescribably filthy; classics are necessarily associated with the manners of the times in which they are written; what I am referring to is the work of a man who has written filthy memoirs describing unnatural vices;—if Zola were to publish the narrative of a hall porter in a Parisian brothel, do you think that such a book should be published because it gave an exact description of Parisian life? Emphatically it should be published to show future generations what the state of morality and manners was at that time. Most emphatically it should be in a national library just the same as we have books of the old Greeks and Romans which describe filthy unnatural vices, in order to show the vices of the period in which the books were written. Otherwise how could students know that these things existed?

532. That is holding the mirror up to the times;—but supposing that Zola gave a graphic description of what took place in a Parisian brothel, and it was published, would you purchase it? I do not say that.

533. Would you buy such a book because it gave a faithful and graphic description of what actually took place? I would say that it was worthy of being in a national library as a picture of the times, but whether I would purchase it is a different matter. It would depend upon what money I had to spare.

534. I suppose you have heard that some passages in Zola's works are rather strong? Yes.

535. Do you know that Zola wrote a work called the "Adventures of a Page d'Amour"? I never heard of it.

536. Do you know that he was accused of plagiarising some of the incidents in Casanova's Memoirs, and do you know that Zola repudiated taking suggestions from such a source? No. Looking at "Chambers' Biographical Dictionary," I find the following description of the author of the Memoirs to which we have been referring:—

Casanova de Seingalt, Guovanni Jacopo, adventurer, was born at Venice, 2nd April, 1725, and by 1750 had been abbe, secretary to Cardinal Aquaviva, ensign, and violinist at Rome, Constantinople, Corfu, and his own birthplace, where he cured a senator of apoplexy. His irregularities drove him from Venice, but after roaming through Northern Italy and France he was back there in 1755, and was then condemned to five years' imprisonment in the "Piombi." In fifteen months' time he effected a daring escape, and for nearly twenty years wandered through Europe, visiting most of its capitals, and making the acquaintance of the greatest men and women of the day, from the Pope to Madame de Pompadour, and from Cagliostro to Frederick the Great. Alchemist, cabalist, Knight of the Papal Order of the Golden Spur, and spy, he was everywhere introduced to the best society, and had always to "vanish" after a brief period of felicity. In 1785 he established himself with the Count of Waldstein, at his Castle of Dux, in Bohemia, and there he died, 4th June, 1798. His clever cynical "Memoirs écrit par Lui-meme" (12 vols., Leip., 1823-33; new ed., 8 vols., Par., 1880) are unmatched as a self-revelation of scoundrelism.

537. What do you think of that description of the author? That is exactly what the Memoirs are. You will notice that they are described as being celebrated, and, therefore, they ought to be in a first-class library.

538. Have you read any of Lombroso's works? Yes.

539. You may remember that he refers to certain German poets, who are celebrated, but who fall from the noblest heights down to the depths of everything that is vile? Yes.

540. Have you any of those works in your Library? I cannot say. We are not strong in German literature.

541. Have you any of Marquis de Sade's works? No.

542. Do you know, as a gentleman of culture, that, in the opinion of many literary men, the Marquis de Sade's works stand like Olympus to a molehill when compared with the "Memoirs of Casanova"? We do not choose works by their literary merit. First of all, we have to take the books which are offered to us which are available. We choose very few foreign books.

543. Who offered Casanova's Memoirs to you? Our agents, Angus and Robertson.

544. Have you read any of the works of the Marquis de Sade? No.

545. So that you are not in a position to express an opinion as to the literary merits of his works as compared with those of Casanova? No; we do not measure books by their literary merit alone. We have to measure them by a good many other things.

546. In how many pages of Casanova's works that you have read can you show me any literary style or merit? It is a translation, and therefore the literary style and merit would depend a great deal on the translator. I can show you a great deal in the Memoirs that is interesting. For instance, the story of his escape from prison. It is one of the most interesting things in the language.

547. The man was a romancer;—he was an execrable liar, and, consequently, his story of his escape would not be accepted? It is always accepted as being true, and is one of the most wonderful things in literature.

548. Have you a copy of the "Memoirs of Fanny Hill"? No.

549.

549. Would that be recognised as a graphic description of the manners and customs of the time? I have never seen the book.

H. C. L.  
Anderson.

550. *Mr. Hogue.*] Is it not a book of pure fiction? I have never seen it, but I understand it is a work of imagination. I would like to point out that we get books in the Library as records of any phase of history, and not because we admire them. For example, we bind for reference some newspapers in New South Wales, some of them, as you know, of actually no literary merit, but they are valuable as the history of the district in which they are published, and they will become more and more valuable in future years. Lots of people think it is quite ridiculous for a great library like ours to keep bound volumes of little obscure provincial papers. People come to us sometimes and say, "Do you allow into your library these common vulgar books published in Sydney?" They are simply books which are supplied to us under copyright, and we keep them as records perhaps of a low debased period of our civilisation and history.

12 Sept., 1900.

551. No one would argue against keeping a book, which is a faithful record of the manners and morals of the time, but I was referring to the memoirs of a man who is a notorious liar, wanton, and scoundrel? I do not think Casanova was a liar. He was a profligate man, but I do not think he was a liar. I think that his descriptions, painful as they are, were true. No doubt that is a horrible thing, but if they were imaginary writings, they would not have attracted literary men as they have done during the last 100 years, and they would not have been translated into an expensive English edition.

552. Have you in your Library any of Sacher Masoch's works, seeing that his story of the Empress Catherine of Russia is regarded as possessing a good deal of literary merit? No; as a matter of fact, we have not many works of that class. We never buy foreign literature.

553. I am speaking of an English translation? I have never seen a translation of it. It has never been submitted to us.

554. Have you not heard of the author? I have heard the name, but have seen none of his works.

555. With respect to those books which are kept under lock and key, if anyone wishes to see them, he can only do so by personally attending there? Yes; of course.

556. Do you know if you paid £40 for Casanova's Memoirs? No; I am certain of that; the price was between £6 and £10, I believe.

557. Have you only one copy of the Memoirs? Yes.

558. Do you lend out those Memoirs? I think a volume was lent to one of the Trustees. I think a Trustee borrowed a volume at one time, and I believe that Mr. Hogue, when Minister of Public Instruction, also borrowed one. I suppose his attention had been drawn to the nature of the book. I believe the Hon. A. Kethel had a volume at Parliament House one night in order to compare it with a Scotch book. He heard that this book was a peculiar picture of Italian customs; and, by the way, Casanova visited England, and he depicted English manners pretty freely. Mr. Kethel said he would show me a Scotch book describing Scotch manners about the same time, and he wanted to see if there was any striking difference between them.

559. Would not Casanova strike Robert Burns with paralysis? I do not think so, although Burns did not write anything so dirty. At the same time, he wrote things which had a worse influence. Filthy things have not a bad influence, simply because they are so disgusting that they shock people; it is insidious writing which does the most harm.

560. It all depends upon what is called the power of suggestion;—some minds are so peculiarly balanced that what would shock a normal mind would simply be a stimulus to experiment on an abnormal mind? That is true.

561. With regard to the list which you have prepared of books which were sent by rail, how many books were so sent? 1,005; that is, we sent books out to 37 groups of students, and to 26 individual students, making a total estimated at 720 persons. That is quite independent of the boxes of books to which reference has been made. For example, in 1893, 136 boxes of books, containing 10,612 volumes, were sent out to 74 country libraries. Last year 223 boxes, containing 14,155 volumes, were lent to 129 institutions in the country.

562. And the list of books sent by post showed that in two years you lent books to eleven people? Yes, by post, as contradistinguished from books sent by rail.

563. Were some of the books which were sent by post books of travel? Yes.

564. Did not the editor of a South Coast paper want to know something about travel in the Polar Seas and whale-catching? Yes; Mr. McLean, I may mention, waited on me last week, and wished to give evidence before the Committee on that subject; but, unfortunately, on that day there was no quorum of the Committee. He told me that he borrowed that book on whaling in order to give a course of lectures on whaling at Bega and Twofold Bay. He has been complimented on those lectures, and they have been reproduced in many South Coast papers. He thinks they have been instrumental in advancing the whaling industry. I did not know the book; but he called on me spontaneously and gave me that information.

565. Do you know whether the gentleman who had all those books on Shakespeare ever delivered a lecture on the beauties of Shakespeare? No; I do not know the gentleman.

566. *Mr. Price.*] A question was asked by the Chairman—No. 317—as follows:—

317. *Chairman.*] There is a story current to the effect that a number of volumes of a French work of a rather questionable character once occupied a place on the shelves of the Free Public Library, and that in consequence of the popularity of these particular volumes, and the number of times they were inquired for by bald-headed gentlemen, it was decided to divide them amongst the Trustees? It is a scandalous lie. My Trustees selected the books, and were entirely responsible for the selection.

318. I did not suggest that these gentlemen selected the books, but that the books were on the shelves of the Library, and that in consequence of the number of applications that were made for them, the officials and others discovered the real character of the work, and that subsequently it was decided the best course to get rid of them was to distribute a volume each amongst the Trustees? There is no foundation for that statement.

You emphatically denied that you gained a knowledge of the character of the work by Casanova by the fact that inquiry was made for it? No; I did not. The question put was whether the volumes were divided amongst the Trustees, and I denied that.

567. You did not qualify that the other day;—is it not a fact that when these volumes were purchased they were placed openly on the shelves in the Library, and that it was only owing to inquiries being frequently made for the work that its character was discovered, and the volumes were then placed under lock and key? It is true that some parts of the books were found to be quite unsuitable for general distribution.

568.

- J. C. L. Anderson: 12Sept., 1900.
568. The main fact is that these books were purchased and placed on the shelves of the Library? Yes; like all the other books.
569. And owing to the excessive demand made for these books you decided to place them under lock and key? Not at all. There was a special reserve made on my report to the Trustees, embracing all books in the Library which I thought were unfit for general distribution, not these books specially. Books which were in the Library for thirty years were withdrawn on my recommendation, and were placed in a special reserve. Those embraced, I think, about twenty-four or thirty volumes.
570. I understood you to say, in answer to Mr. Meagher, that the discovery of the character of Casanova's Memoirs was owing to the demand for it? I believe it was owing to a report from one of my officers that those books were unduly and improperly used, that I moved the Trustees in the matter. That officer was the officer who read them with most zest. I may say that at first I did not come across in the twelve volumes a single nasty line. The things I saw were deeply interesting and worthy of the study of any student of literature and history. But, of course, upon closer investigation I found that some of the volumes contained very objectionable passages.
571. On whose authority in the first instance were the 5,000 volumes disposed of to Angus and Robertson? By the Trustees, of course.
572. Did the Trustees pass any resolution bearing on the subject? Yes; they resolved that duplicates should be offered by competition to any booksellers in Sydney, who could deal with them. They picked out two booksellers; but I really offered them to three.
573. Will you produce the minutes dealing with that? Yes.
574. Was a list furnished to the Trustees of the books proposed to be disposed of? No, the Trustees inspected the books themselves.
575. Did they inspect the books presented by the late Mr. Justice Wise? They did not inspect the books individually—they looked at the books generally. But I believe most attention was given to them by my predecessor, Mr. Walker, who was then a Trustee.
576. How did the Trustees know what books were disposed of? Simply because they looked at them as the tenderers did.
577. Did they look at any of the books which were afterwards repurchased? I am sure they did not see any of those books.
578. Did the Trustees really inspect all the books disposed of to Angus and Robertson? They could not. They certainly looked at them and examined them for perhaps half an hour or something of that kind. They looked at the character of the books. We were guided very much by the opinion of Mr. Walker, who bought the books. Of course many of them were not bought at all. They came to us in the course of exchange, but Mr. Walker had bought all those which had been bought, and therefore I was bound to be guided a good deal by his decision.
579. Then Mr. Walker was really the one who selected these books to be disposed of? No; they were selected first of all by the Chief Assistant of the reading-rooms.
580. Then he was responsible for the whole of the books included? No.
581. Did the Chief Assistant select those books? He selected the duplicates which he thought ought to be got rid of, and which were cumbering the shelves. Those were about 1,000 volumes.
582. Did you supervise them? I did not look at them, but I entrusted that duty to two Assistant Librarians who had been in the Library for many years, and who knew the books very well.
583. Then the whole matter rested with the Assistant Librarians? No; after that the Trustees looked at them.
584. But someone must have selected them, and who was that? The Chief Assistant from the reading-rooms, who had charge of the shelves.
585. Did you subsequently go through the books yourself? No.
586. Did the Trustees go through them? They went through them just to see the class of books.
587. What steps did you take to invite tenders? I sent a letter to the three second-hand booksellers in Sydney.
588. Is it true, as stated, that Angus and Robertson were the first firm to come and examine the books? I cannot tell; they all got the notice on the same day.
589. Is it true that Angus and Robertson's representative selected 200 volumes, and that they were placed in an adjoining room, and that none of the other firms saw those volumes? That cannot possibly be true, because there is no adjoining room in which they could be placed.
590. Were they taken away from the main room? I was not there myself, but I am quite sure such a thing could not happen. I do not believe it can possibly be true.
591. Was a large quantity of linen for covering the books purchased by you or your predecessor? I think you are referring to calico. I have known of a quantity of calico being purchased by my predecessor.
592. Is it true that that calico was sent to your private residence subsequently? I believe some pieces were put in my private residence for the purpose of protecting my furniture from whitewash and paint when the painters were doing up the house. It was not my private house; it was part of the Library, and was my official residence.
593. Was any of the calico ever sent to Medlow? No.
594. Was it taken from the Library to your residence? I am quite sure it was not.
595. What became of the quantity of calico which was sent from the Library to your residence? It is impossible for me to say. I know it was taken back into the Library and used.
596. Have vouchers for kerosene and candles been charged to the Library? They have been got from the Government stores every six months for the use of the Library.
597. Were the kerosene and the candles used by you for your private purposes? Certainly; every day some of them were used in my official quarters, not in my private residence. I was entitled to fuel and light, and other things belonging to the quarters.
598. Was soap included in that? Yes; anything used by my predecessor. I was following exactly the custom of my predecessor. That matter has been sifted most fully by the Public Service Board.
599. This is a Select Committee of Parliament, and I am within my right in asking these questions. Is it true that some of the employees performed some work, and that the voucher was passed by you and charged to the Treasury, and that the money was never paid to those persons? It is absolutely untrue.

600. Were any tables, or furniture of any description, made at the Free Public Library by the carpenters and afterwards sent to your private residence? Fittings have been put up in the quarters several times by the Library carpenter.
601. Did any portion of that go to the Mountains? Certainly not.

H. C. L.  
Anderson.  
12 Sept., 1900.

Michael Francis Cullen, Expert dealing with requisitions at the Government Printing Office, sworn and examined:—

602. *Chairman.*] Were you at one time Librarian of the Lending Branch of the Free Public Library? M. F. Cullen. Yes.

12 Sept., 1900.

603. Had you anything to do with the selection of 5,000 volumes which were sold to Angus and Robertson? All I had to do with that was that I went to the Library and selected any books which I thought might be suitable for the Lending Branch. I did not go through them all. I simply looked at the titles of many of them. Those which I saw were not suitable I did not touch.

604. Did you cull from that mass of literature a number of books which were eventually retained? Yes, I picked eighty or ninety volumes.

605. What class of literature did they represent? All classes of literature; some were historical works, and many books of voyages and travels. There were some Australian books of exploration. There were some students of the Library who asked for books of that character, which were not in the Lending Branch.

606. Which were the most valuable of the books you selected? I could hardly put a value on them.

607. Do you recollect the titles of any of the Australian books? There were some of Sturt's explorations, also Blaxland's, and I think Wentworth's.

608. Were they transferred to the Lending Branch? Yes.

609. Did you, on a second occasion, go through the residue of the books at the Reference Library? No.

610. Speaking generally, what opinion did you form with reference to the utility of disposing of those books? At the time I looked at the books I was not aware that they were to be disposed of. Mr. Anderson said there was a number of duplicate books from which I could pick out what I wanted for the Lending Branch.

611. What is your opinion in reference to the retention of duplicate copies of works on exploration which are gradually going out of print? In a library like the Public Library, where there is only a limited sum available for books, there must be a limit to the purchasing of such books. If there are several copies of a particular work in a library I do not think the Trustees should spend money in purchasing more.

612. After having had considerable experience in the Library, are you of opinion that duplicate and triplicate copies of books which are becoming rarer year by year should be retained instead of being disposed of in job lots with other books? I certainly think there should be a certain number of them kept.

613. Would you consider it to be a wise course if there were three copies of a book which was daily becoming rare, to dispose of one or two of those copies, and to retain only the third? I hardly think it would be wise. Of course I would defer to my Trustees' opinion in those matters.

614. You were not aware that the Trustees had given any very close consideration or attention to those books? No. I was only informed by the Trustees, when I was asked about these books in Mr. Anderson's absence, that they were fully informed of the whole matter. I was certainly led to believe that.

615. Had you known that these books were to be disposed of in the manner in which they were eventually disposed of at the time when you were asked to make the selection, would you have made a larger selection? I doubt if I would. I did not think that they were suitable books for a circulating library.

616. Then you took from these books such volumes as you thought would be of some utility in the Lending Branch? Yes.

617. Have you given any evidence before the Public Service Board? No.

618. *Mr. Price.*] Have you any knowledge of the repurchase of some of the books which were disposed of to Angus and Robertson? No. I know there was one book which came to the Lending Branch which had been disposed of by the other branch. It was not the book that was asked for. I myself took that book back to Angus and Robertson.

619. Does any speculation go on with regard to the books in the Lending Branch? I do not think so.

620. Do you know if any list was kept of the volumes sold? I do not know. I do not think there was.

621. I understand that cancelled books simply have a stamp on the title-page, and no further mark? Yes.

622. Supposing that a man was in your Library, and that he had a book with the title-page torn out, would you have any means of proving whether that book was stolen? I believe the officers of the Reference Library have some private marks of their own. If the title-page were removed it would certainly be very suspicious.

623. Could you prove that it was one of the books belonging to the Library? I could not. I do not know what means they have taken in the Reference Library to prove such a thing.

624. Is the stamp on the title-page dated? I am not sure of that.

625. Had you anything to do with the purchase of books for the Library? I had to do with the selection of them. I sent a list to the Trustees. They approved of it, and the list was forwarded to Angus and Robertson.

626. Had you anything to do with the making up of the parcels of books which were sent to the country? No, except in this way: Sometimes books were required by country libraries, and if they had not the books at the Reference Library they would obtain them from the Lending Branch. Nothing was done in my time with regard to the posting of books.

627. *Mr. Millard.*] As the officer in charge of the Lending Branch, did you take an interest in the work? Yes.

628. Were you anxious to make that branch as useful as possible to the public? Yes.

629. Did you receive instructions from Mr. Anderson to go through the 5,000 volumes, and take what you required for your branch? Yes.

630. Did you go carefully through the books? Yes; but not the 5,000, as many of them were pamphlets and papers.

- M. F. Cullen. 631. Did you take what volumes you thought would be of service to your branch? Yes, according to my judgment. Of course, there was no question with me as to the money value.
- 12 Sept., 1900. 632. It was only a question of value to you for the Lending Branch? Yes. I would not attempt to offer an opinion as to the value of those books.
633. *Chairman.*] Assuming that you went through that collection of books for the purpose of selecting them for a Reference Library, or for a library that would to a great extent be composed of books for reference on exploration or matters of that kind,—did you see anything that you would select for that purpose? I suppose that the majority of the books would have been suitable for a Reference Library; that is why I passed them over as not being suitable for the Lending Branch.
634. *Mr. Millard.*] You say that there were some books which would have been valuable for a Reference Library? Yes.
635. But would not their intrinsic value for that purpose depend very much upon whether there were one or two other copies in the Reference Library at that time? Yes.
636. Do you think that, in that case, it would be wise to dispose of them at a low cost? Yes; that is done in most large libraries. In the purchase of libraries there was a large number of books which never would have been bought were it not that the Trustees were compelled to buy in that way in order to secure a number of books which they did want.
637. Would many of such books be of more value to outside persons than to the Library? Yes.
638. *Mr. Price.*] Are you aware that the British Museum recently applied to the Imperial Parliament for authority to dispose of duplicate copies of books, and that the Parliament refused to give that authority, even to the extent of a pamphlet? No; but I know that there are books in our Library which have been disposed of by the British Museum. I was asked a question about that during Mr. Anderson's absence, and a book was produced which at one time belonged to the British Museum, and it was stamped almost in the same way as we use the "cancelled" stamp.
639. *Mr. Millard.*] Does not that point to the fact that it is the practice of the British Museum to dispose of books? Yes.
640. *Mr. Price.*] Have you read an article in the *Sydney Morning Herald* in which that statement I have referred to is made? No.
641. Is it not a fact that a number of books may be injured or mutilated, and, therefore, it is desirable to keep duplicate copies? Of course, that has happened.
642. Is it not a fact that some persons have mutilated books by cutting out certain passages which were obnoxious to them? I only know that from hearsay. I know very little about the Reference Library.
643. Have you noticed any mutilation in the Lending Branch? We have noticed missing leaves, but not passages cut out.
644. Are you aware that Mr. Walker, the former Principal Librarian, was very jealous about obtaining duplicate copies of old books? No; he never mentioned that fact to me.
645. Do you think it is desirable to keep duplicates if possible? Yes, of very rare books.
646. Did you see a number of books which were put aside to be sold? Yes; a large number of them.
647. From your experience of country libraries for reference, do you think that those books would have been valuable? Some of them would have been if you had a really first-class reference library in the country; I daresay many of them.
648. With growing libraries in different towns, would it have been desirable to retain those books as part of a National collection? Yes, some of them.
649. What is the proportion of fiction which is read in the Lending Branch? Between 30 and 40 per cent. I think it is 70 or 80 per cent. in the School of Arts.

THURSDAY, 13 SEPTEMBER, 1900.

Present:—

MR. HOGUE,  
MR. JESSEP,

MR. MEAGHER,  
MR. PRICE.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

William Dymock, bookseller and publisher, sworn and examined:—

W. Dymock. 650. *Chairman.*] Do you know the object of this inquiry? Yes.

13 Sept., 1900. 651. One feature of the inquiry relates to the purchase of books by the authorities of the Free Public Library, and more particularly to the sale of about 5,000 vols. some time ago, the purchasers being Angus and Robertson;—do you desire to make a statement with reference to your association with, or knowledge of that matter? Yes; my knowledge of the transaction is in connection with the purchase of the books. In Mr. Walker's time it was generally the case that certain books were imported from London. Mr. Walker used to give all the local booksellers a fair chance of supplying the Free Public Library with any books which might be wanted there. There is also the supplying of Municipal Libraries with books. The Government usually give a grant of £200 for that purpose. The booksellers generally also had a chance of supplying those books. One bookseller would supply them at one time, and another would supply them the next time. It was generally a free open tender for the various booksellers of Sydney. But since Mr. Anderson took his present position in the Free Public Library that has been stopped. No advertisement has ever been issued for any of the Municipal Libraries, and from the information which I can gain the whole of the libraries have been supplied by Angus and Robertson without any tender of any description. The last tender that I was successful in getting was with the Botany Municipal Council. After it was accepted by the local people Mr. Anderson came to me, and I think it is the only time he ever came to my establishment, and informed me that he was Inspector of Libraries. At any rate, he gave himself some designation, and led me to understand that he had power to go over the books. He was in the place for about half an hour, and then I received information that my books were not to be accepted.

652.

652. What was the number of books to be supplied? 816. I was not at my place when Mr. Anderson W. Dymock. called; but he was shown over the books by Mr. Gibson, who is in my employ.

653. What was the result of that? I was informed that my books were to be rejected.

13 Sept., 1900.

654. Was any reason given? Simply that they were to be rejected. I then attended a deputation to the Minister, Mr. Garrard, and Mr. McGowen and several other members of Parliament accompanied me with that deputation. I laid the case before the Minister, and the Minister called for a report from Mr. Anderson. I will procure a copy of that report in a few minutes, and will place it before the Committee. Mr. Anderson stated in the report that he had visited my establishment, and spent several hours in the place looking over the books, and that after very careful deliberation and a great amount of thought, throwing out all the worthless rubbish, looking at the different prices that had been wrongly shown, he then went round with my list to Angus and Robertson, and asked them what they thought about my prices and list of books. That is his own statement. He never brought any list to me from Angus and Robertson to give my opinion upon it. Then after going through about twenty of the most valuable books, he was forced to admit that my prices agreed very fairly with Angus and Robertson's, but that he had no knowledge of the books, and that he was guided by Angus and Robertson.

655. *Mr. Price.*] He had no personal knowledge of the value, but took the list to Angus and Robertson for their estimate? Yes; and then asked them only about the price of twenty. He then further goes on to say that he threw out the worthless rubbish from my lot of books, and did not recommend any classical books.

656. *Chairman.*] Who selected the books in the first instance? The Mayor and Aldermen of Botany. That was always done.

657. Did they submit to you a list, or did you submit to them a list from which they selected? The booksellers were generally asked to submit a list of books, and the Municipal authorities took the books which they considered most suitable. Up to the advent of the present Minister, no one has had an opportunity of submitting a list or of supplying those libraries. Mr. Perry, when I drew his attention to what I considered to be the injustice of the method adopted, called attention to the matter, and we did receive a list of books to be supplied to the Annandale School of Arts; but this list of books was made up by Angus and Robertson.

658. Do you know that of your own knowledge? Yes; we were asked to put in a tender of prices on this list. We were unsuccessful in getting it. I then waited on the Minister again, and pointed out how unfair this system of dealing was, and I believe he informed Mr. Anderson that in future all booksellers should get a list. Then there was a tender called for for the Rookwood Library.

659. Has a decision been arrived at recently? Yes; by the present Minister. Since then we had another opportunity; but the same idea was carried out. The list was offered to us instead of our inviting the aldermen to come in and make up their own list. The list was sent to us by Mr. Anderson to put our prices on them; but we were not successful. George Robertson & Co. were successful in getting the Rookwood tender. For five years those were the only two occasions on which the booksellers of Sydney had an opportunity of supplying the libraries or of knowing anything about it.

660. Some time ago, were you requested by Mr. Anderson, or some officer from the Free Public Library, to make an offer for a number of books which they proposed to sell? I believe there was some such communication sent down; but I did not see it.

661. Did you inspect the 5,000 volumes which were to be disposed of? No.

662. Was there any reason why you did not make an offer for those books? Yes; I was told that Angus and Robertson's tender was in, or was to be put in, and I said, "It is not a bit of good going against them, because we will not get it, and it would be a waste of time to go up and make a valuation."

663. *Mr. Price.*] What led you to think that? Previous transactions, when I went to a lot of trouble, but had not an opportunity of tendering or of being successful.

664. Is there any incident which you remember when you tendered at a lower sum than Angus and Robertson, and they got the preference? Yes; a notable instance is when the Free Public Library asked for tenders for books after they had dealt with Trübner & Co., of London. I went up to see Mr. Anderson, for the tender was so poorly put together. I went to him to ascertain what books he wanted—whether they were new books, net books, or anything of that description. I thought a personal interview would be best. Mr. Anderson informed me that it would be necessary for me to import all publications, and that the Library authorities would then have the privilege of selecting or rejecting whatever books they wished. I told Mr. Anderson that such a thing was impossible for any man to do. I saw the absurdity of such a request that we should import every book. It would cost thousands of pounds to do so, and after all the Library authorities might not accept 20 per cent. of them. I explained that to Mr. Anderson, but he said those were the terms. I wrote him a letter stating that it would be impossible for anyone to do such a thing. I then approached another firm, and we had a conversation on the subject. I said, "You send in a tender offering 25 per cent. off every book." The other bookseller said, "Look at the loss." I said, "You get the contract, and I will guarantee you against the loss." Under these circumstances George Robertson & Co. sent in a tender taking 25 per cent. off all books; but they were not successful. I afterwards saw a letter written by Mr. Anderson to the Minister, in which he stated that he was getting all his books from Angus and Robertson at a discount of from 15 to 20 per cent., thus showing a clear loss to the country of from 5 to 10 per cent.

665. Do you base your calculation on George Robertson & Co.'s tender? Yes.

666. Would it have paid George Robertson & Co. to have sold their books according to their tender? No; but I knew that no one could do business with the Free Public Library except through Angus and Robertson.

667. *Chairman.*] Coming to the volumes selected by Angus and Robertson from the Free Public Library, if you did not directly purchase any of them, have you since had any of those books in your possession? Yes, I have purchased about 130 or 140 volumes.

668. What do they represent? Early Australian books, dating from 1804 to 1870.

669. Can you give the titles of the books? I will produce them later on to the Committee.

670. Which would you regard as the most valuable amongst the volumes which you have so purchased? The value of such books varies greatly. They really have no market value except when they are wanted by anyone. For instance, "De Quiros' Voyage" was only a pamphlet of about six pages, and it was offered to the Government here for £50 by a London bookseller. Sir Henry Parkes thought the price was excessive;

W. Dymock. excessive; but he asked for permission to have it reprinted. He obtained the services of Mr. Duncan to reprint a fac-simile and also a translation. The original was then sent back to England, and was purchased by Mr. Henniker Heaton for £80. Later on he sold it for £100. I mention that to show that many of these books are valuable because, in the event of a duplicate in the Free Public Library being destroyed, it would be impossible to buy other copies except at exorbitant prices.

13 Sept., 1900.

671. Have you included in the 140 volumes a number of books which you think, if not very valuable at the present time, must become so in future? In the course of time I will be able to sell them at from 10s. each to £2 each.

672. How have you purchased these books? I bought some at public auction, and I purchased others privately.

673. Was that at the auction sale held by Angus and Robertson? Yes; in the name of Angus and Robertson.

674. Are you aware that it has been stated that the result of that auction did not nearly come up to the expectations of the vendors? I know nothing about what they expected.

675. Do you know that it has been stated as a justification for the sale of those books by the Free Library, that the books could not have been valuable on account of the low prices obtained at public auction, although they were very well advertised? I cannot answer the question, unless you give me the date on which the books were sold to Angus and Robertson, the date of the sale by auction, the prices that were obtained, and a list of the valuable books which were sold in the interval.

676. *Mr. Price.* At the auction sale, were a number of books offered from the ordinary stock of Angus and Robertson along with the Free Library books? Yes; a great many.

677. *Chairman.* With reference to the volumes which you purchased other than those purchased at auction, from whom did you obtain them? From different people who came to my shop.

678. Have you ever inspected the 140 volumes to which you have referred? Yes.

679. Do they all bear a stamp as having been sold by the Free Public Library? Yes.

680. Is there anything to justify the impression that some of these books were not included in those sold by auction, but that they had been stolen from the Library? If anyone removed the title-page, or tore the stamp off one of these books, it would be impossible, unless the Librarian has taken the precaution, which was not taken two years ago, to put a private mark on them to tell whether they had been stolen or not. The Library stamp was simply on the right-hand corner of the title page, on the lower side.

681. Have you anything further to say with reference to those books? The late Mr. Walker made it a special point to get duplicates of those books, so that in the event of any of the books being mutilated he would have another copy. Books do get mutilated in the Free Public Library. By selling the duplicates which the Trustees had accumulated for so many years, the Library is now left with only one volume, and in the event of that volume being stolen or mutilated it would cost the Trustees a large sum of money to replace it.

682. With your experience as a bookseller and publisher, would you think it a proper course to adopt in the case of a library possessing duplicates or triplicates of a work which is regarded as rare to retain possession of such a work rather than dispose of it, even at a fair price? I think that to throw a lot of books on the market in the way these were was very unwise. You might ask Mr. Anderson if there was any list made up of those books. I have applied several times for such a list, but I could not get it. To throw a lot of books like that upon the market, with a stamp upon them, affords no security whatever with regard to the books now in the possession of the Library. There will always be a difficulty in distinguishing what were sold and what were stolen. If we apply to the Library they cannot tell us whether the books were sold or stolen. Some time ago Mr. Anderson had to send round the city and collect and pay cash for a large number of books which he said had been stolen from the Library. Some of them were large folios. To show you how insecure the Library is, I may say that one of those books was submitted to Mr. Anderson himself. He was asked the value of it. He spent about a quarter of an hour going over it; then he called in Mr. Gifford, who spent over three-quarters of an hour going over the book. They gave the man their idea of the value of the book, and the man sold it. When Mr. Anderson was informed that the book was stolen property he claimed it as Government property after it had been through their hands. Then out of all that were stolen they bought back something like 105 books. These books were not sold in this lot said to have been stolen from the Library.

683. Were any of these books purchased from you? No.

684. Have you any correspondence relating to the supplying of books to the Municipal Libraries? Yes; I have now got the correspondence to which I have already referred. It is as follows:—

Sir,

Free Public Library, Sydney, 5th September, 1895.

I have the honor to submit the following remarks on the statement made by Mr. W. Dymock and other members of the deputation, reported in Papers 95-49,585, Department of Public Instruction:—

On July 11 I received the Minister's instructions to report on the list of books submitted by the Botany Council for his approval, with a view to being purchased by the Government for the nucleus of a Municipal Free Reference Library.

I spent several hours in going over the list thoroughly, and then went to Mr. Dymock's store, where I spent several hours in inspecting the books themselves, and I satisfied myself as to the condition of the books, and noted which editions were being offered. When I went there Mr. Dymock was not in, but one of his assistants was very courteous and gave me the shop prices of a number of the more expensive items, which I jotted down on the price lists submitted to me, and these are the actual prices which I quoted in my report to the Minister. When going away I saw Mr. Dymock, and I pointed out to him what I considered the objectionable features of the list of books—the bad selection, the inferior quality (literary and scientific) and the deceptive way in which the values were shown.

Mr. Dymock did not attempt to defend the choice of books, but said that they had been carefully chosen from his supplies by a sub-committee of the Council, and explained that he had shown on the price lists the original publishing price of each book, and thus was able to show a large apparent discount.

I then visited the shop of Messrs. Angus and Robertson, the Agents of this Library, who have the only stock of second-hand books that would be likely to contain those on this list.

I asked Mr. Robertson for the prices of about twenty of the most expensive books, such as he was then charging to the public, and found them to agree very closely with Mr. Dymock's own shop prices.

Having given this sketch of my knowledge of this matter, I would venture to point out:—

1. That I kept back nothing from the Minister regarding the discounts; in fact I drew special attention to these as being, in my opinion, too large to be genuine. But I have shown that the allowance made is not really a discount, for the prices charged are not the shop prices, but the original publishing prices, and that books charged in the invoice at £188 8s. 6d. can be bought in Sydney shops by any private buyer for £58 6s. 6d., and by a library for £46 13s. 3d.

2. I made myself acquainted with the decision of previous Ministers on the character of the books to be selected, and based my criticisms accordingly. I consider the choice of books on the whole a poor one, but I have not endeavoured to reject all the books which could be well replaced. I have advised the Minister to reject the most worthless rubbish, and

and to replace them by the best standard books that I can suggest. These are all very valuable modern works of reference, specially adapted for technical students and general readers. There are none of these books suited for "College-bred men," except, perhaps, the Greek, Latin, French, and German dictionaries which I put in to replace the useless 3s. 6d. editions of the same, chosen by the Council's committee.

3. I understood that the Council had decided to get these books from Mr. Dymock, and I had, therefore, no need to consider his interests, but merely to see that he supplied full value for the public money, and gave the Council the most valuable books and best editions available.

I may indicate my meaning by saying that the Annual Register which Mr. Dymock charges at £70 is in this Library, and is never asked for; while the Encyclopædia Britannica is used many times each day. Again, the last edition but one of this work is now worth £4, while the latest (published at £37) costs £20. But any edition but the latest is worse than useless for reference in many branches of science and technical industry.

4. Mr. Dymock asserts that I have not bought books from his firm. In October, 1894, the Trustees called for tenders for the agency of this Library, in order to transfer the business from London to Sydney. Mr. Dymock wrote to me that "he failed to see how any Colonial bookseller could carry out our wishes so as to give satisfaction," and his terms were quite useless to us. Messrs. Angus and Robertson undertook to do our work and give discounts varying from 15 to 20 per cent. They were appointed agents for the Library, and I am in honor bound to send them all our ordinary orders. When Mr. Dymock submits second-hand books, if they are Australian ones that we have not already got, as very rarely happens, we gladly take them at once. If they are of a general character, they are submitted to the Board, who have taken the majority of those submitted. Mr. Dymock is disappointed that the Trustees have not bought a large number of the late Dr. Bennett's books from him, but the reduction of our vote by £954 has precluded the Trustees from buying any expensive books, much as we should like to do so. I have gone into this matter rather fully, because I consider the present method of forming Municipal Reference Libraries is not wholly satisfactory, and I propose to submit on another paper some suggestions for the Minister's consideration.

I have, &c.,

HENRY C. L. ANDERSON,  
Principal Librarian.

The Under Secretary, Department of Public Instruction.

The following is my reply:—

The Under Secretary for Public Instruction.

Sir,

Sydney, 5 October, 1895.

I have to acknowledge the receipt of your communication having reference to the purchase of a library by the Botany Council, under the provisions of the Municipalities Act, for the convenience of the people of Botany. I join issue with all material points of Mr. Anderson's communication of the 5th ultimo, and I propose to show that he was entirely wrong in all the conclusions he arrived at. At the outset, I desire in common fairness to myself that the circumstances under which my tender was accepted by the Botany Council should now be fairly stated, as Mr. Anderson has strangely ignored the material facts and misrepresented, and indeed exaggerated, a number of minor details in dealing with the selection of the books and their values, in his privileged communication to the Minister already referred to, and in which he makes no claim, although the principal Librarian of the Free Public Library, to a particular knowledge of the subject, outside what he admits having gathered from a rival firm of booksellers. I was one amongst many invited by the Botany Council to submit proposals for the nucleus of a free library, not to exceed £200, and at the special request of the committee placed the publishing prices upon about thirteen hundred to fourteen hundred carefully-selected volumes, totalling nearly £500 at published price; and after many of the volumes and editions had been rejected and others substituted by the Committee, I ultimately offered the whole collection for the sum of £200, and the Council, acting, I understand, upon the approval of two literary experts, accepted the offer. Now, in the ordinary course of business over the counter, the books forming this collection would undoubtedly have realised upwards of £250—that is to say, that an average of 50 per cent. of the published prices would ultimately be realised, though the period of sale might be somewhat extended; but in numerous instances it is known that many of the books, so bulked together and arranged, are marketable daily over the counter at full published prices, and in two instances in this collection offers of double the publishing price have been declined for single volumes out of a particular edition that could not safely be broken; indeed, as the collection now stands, it is an admirable nucleus library, and I have no hesitation in asserting that it has been submitted to an average all-round reduction of 20 per cent. upon what Mr. Anderson is pleased to term "shop prices." I am prepared to submit the testimony of two competent literary judges who have had a long practical experience of books, and are not interested in any particular firm of booksellers as to the monetary value, literary excellence, and the good condition of the books forming the collection, notwithstanding the insinuations of Mr. Anderson that the selection was bad, the quality of the books inferior, and their value deceptively shown. Mr. Anderson is absolutely misleading and inaccurate when he declares, in his communication of 5th ultimo, that I did not defend the choice of books. I explained that the Committee itself was responsible for the selection, even to the extent of rejecting certain volumes which I suggested should be included, and I fully explained to Mr. Anderson how publishing prices came to be shown in the list, and I am now convinced that the idea propounded by Mr. Anderson that these prices were given by me for the purpose of showing a large apparent discount really only occurred to him after he had hawked my list of books and prices through the establishment of Messrs. Angus and Robertson, whom he makes no secret of favouring in his dealings on behalf of that important branch of the Public Service now under his control. I take the strongest exceptions to this unfair and unbusiness-like procedure. At the same time, I desire to draw your particular attention to the fact that even after adopting this unusual and extremely unfair course of hawking my list to a rival firm of booksellers, and even then only comparing 20 out of 816 books, Mr. Anderson has been compelled to admit that he found them to agree very closely with my shop prices, yet Mr. Anderson submits to the Minister a document in which he shows only a certain number of my invoiced prices to be £188 8s., and also states that the same books may be purchased in Sydney for £46 13s. 3d., withholding from the Minister that my prices on the whole of the books purchased for the Library were really less than those quoted in this way. Why did Mr. Anderson not deal with the whole invoice when asking his friends, Messrs. Angus and Robertson, their opinion? Of what value is an opinion sent to the Minister in such circumstances? I have already stated that, taking the collection as a whole, my accepted tender was at least 20 per cent. below my shop prices. The papers do not corroborate Mr. Anderson's statement that he kept nothing from the Minister regarding the discounts. I go further and distinctly charge Mr. Anderson with misleading the Minister and with misstating and misrepresenting the true state of the case. In the first place Mr. Anderson describes the publishing prices given by my list as the prices charged on invoice to the Botany Council. I will give one instance out of many. On the list submitted by Mr. Anderson it is shown that the Annual Register of 120 volumes is charged at £70, when the shop price is only £12. Both these statements are incorrect. The publishing price of the 120 volumes of the Annual Register would be £146 15s., and the price at which it was offered to the Botany Council was £10, not £70 as stated by Mr. Anderson, being an error on his part on one item alone of £60. Mr. Anderson's accusation that he has thrown out the worthless rubbish is in the same bad taste as his declaration that none of these books are suited for college-bred men. What that strange expression may mean I do not know. I did not know that the people of Botany claimed to be college-bred, and therefore required more expensive editions than those selected by their Committee. But that is not my business. Though I certainly do think, and I give expression to my opinion, that the Botany Mayor and Aldermen should know their requirements in literature as in worldly things much better than Mr. Anderson can tell them, and are, perhaps, as competent as he to select the nucleus of a popular library, suitable to their requirements. I have nothing to express with regard to Mr. Anderson's disingenuous explanation of his preference for Messrs. Angus and Robertson, when purchasing books for the Free Public Library, as I propose to deal with that matter in another way, and at a more opportune time, and I am prepared to make a present of his unworthy insinuations about the purchase of Dr. Bennett's books. In conclusion, I beg to say that I am quite willing that any unbiassed judge should inspect these books. I feel certain that the selection made was a good one, and a library suitable for the district, and the prices were fair and reasonable. I appeal to the Minister, in confidence, to say the act of the Botany Council in purchasing these books is not now to be repudiated, after they have been withdrawn from sale for nearly three months time, on the erroneous and misleading testimony of Mr. Anderson.

Yours, &c.,

WM. DYMOCK.

Afterwards the Mayor of Botany came in and told me that everything was settled, and that I could send out the books.

W. Dymock. 685. *Mr. Meagher.*] Were they accepted? Yes. They are all on the shelves of the library now, and I received another order from the Council. Mr. Anderson, in his statement to the Minister, said that he spent several hours in going over the books. At the outside it was impossible for him to have been at my shop for more than three-quarters of an hour, and that was the only occasion, as far as my knowledge goes, when Mr. Anderson was ever there. He has never been there on any business, or I would have known of it. He goes on to talk about the deceptive way in which my values were shown, yet he went round to Angus and Robertson, after picking out only about twenty books, and he has to admit that my prices compare favourably with theirs. It was a most unbusiness-like thing to hawk my books round to Angus and Robertson's. If such a thing were done in all cases, how would a man have a chance of honestly tendering?

13 Sept., 1900.

686. *Mr. Jessop.*] Was your list of prices first obtained by Mr. Anderson, and then taken to Angus and Robertson? Yes; he took their opinion about twenty of the most expensive books, and he found that their prices agreed with mine. Then he goes on to show how £188 worth of books can be bought for £58 by private individuals, and for a library at £46 13s. 3d. I would like to point out that the worthless rubbish spoken of in Mr. Anderson's letter must come under the heading of the college-bred books. Mr. Anderson threw out the Greek, Latin, and German dictionaries which I put in, and which were Cassell's 3s. 6d. editions. For every one of the books selected by Mr. Anderson for these libraries we sell 500 of the 3s. 6d. edition, which is the recognised school-book in Australia at present. That was what was called worthless rubbish in my tender. My reason for clearing up this matter is to show that if Mr. Anderson had not been answered I would have lost that order. Then Mr. Anderson says that he accepted Angus and Robertson's tender giving a discount of from 15 to 20 per cent. I have stated that I went to George Robertson & Co. on the subject. Here is a letter which I have received from George Robertson & Co. :—

Dear Sir,

Sydney, 20 July, 1900.  
Replying to your inquiry *re* Free Public Library tender, we beg to say that, after due deliberation, we have decided to furnish you with the required information, viz., that on 17th October, 1894, we tendered to supply ordinary English publications to the Free Public Library at a discount of 25 per cent. off published prices. We were not successful in our tender, and have no doubt some other firm offered better terms and secured the contract.

We are, &c.,

Mr. W. Dymock, bookseller, George-street.

GEORGE ROBERTSON & CO.

I also went to Dunlop & Co. with reference to this tender. Mr. Kettlewell was the head of the firm at that time, but two years ago he came into my employ, and he is with me now. The following is a letter from him to me :—

Woolwich, 31 July, 1900.

On the occasion of the Trustees of the Free Public Library advertising for tenders for supply of books, I called upon the Chief Librarian, Mr. H. C. L. Anderson, on behalf of Messrs. Edwards, Dunlop, & Co., Limited, of this city, and at the conclusion of a long interview Mr. Anderson gave it as his opinion that it was useless to tender, as Messrs. Angus and Robertson were undoubtedly the firm to do business with.

J. W. KETTLEWELL.

That firm is one of the largest book-selling firms in Sydney, and that was the way in which they were put aside.

687. *Chairman.*] Did you purchase the late Dr. Bennett's library? Yes.

688. Did you ever make an offer of portion of that library to the Free Public Library? Yes; they could select whatever they liked.

689. Did the Free Public Library authorities make any such purchase from you? No.

690. Are you aware, of your own knowledge, that the Free Library authorities made any offer to Mrs. Bennett for that library? Yes.

691. What was their offer? £850.

692. Did you eventually purchase the library? Yes. Dr. Bennett, before his death, bequeathed six or seven valuable books to the Free Public Library. It was the wish of Dr. Bennett that his library should be bought *in globo* by the Free Public Library, as it had taken him a lifetime to collect the books, but he left them to his widow. She was to sell them at a lower price if the Free Library took them than she would sell them to the booksellers. He told me that. Mrs. Bennett after his death came up to see about the matter. I said, "If you do decide to sell the library the Free Library authorities are the best people to deal with. The University will not buy the books at present. I will do all I can to help you; but do not accept any price for them until you see me." She came up to my place one morning and said, "They have offered me only £850 for the library." I said, "That is absurd; that library is worth £1,500 if it is worth a penny to any Government library." She said, "They would not do that, and I am tired of having these men in the house." I said, "Mrs. Bennett, I would give £1,000 for your library without looking at it." She said, "When?" I said, "Now. If you like I will give you a cheque at once." She said, "No; the banks are breaking, and I was told to get cash." I said, "Very well." I went round to the London Bank in Pitt-street, and I got £1,000 in £50 notes and brought them round. She objected to one A.J.S. Banknote and I had to change it. I went back, and I then became the owner of the library. It appeared in the newspapers that the Free Public Library had purchased £100 worth of Dr. Bennett's books. I asked Mrs. Bennett if that was the case, because the statement either proved that Mrs. Bennett had robbed me of £100 or that the authorities of the Free Public Library were deceiving the public. It placed me in a very awkward position, because a number of people had bought books from me expressly because they were Dr. Bennett's books. Among them were men whose lives had been saved by Dr. Bennett, or who had been served by him in other ways. They sent me, in some cases, £1 for some of the Doctor's books, and it appeared from this paragraph that I had deceived them in stating that I had bought all Dr. Bennett's library. When I spoke to Mrs. Bennett, she said, "No one but you bought a book of the Doctor's." I then went to the *Herald* on the subject, and they apologised for what had appeared in the paper. I know she was very indignant about it, and I am sure she would give evidence if necessary. Then, again, I notice in the report of the proceedings of the Committee that Angus and Robertson, in connection with some of the Trustees of the Free Library, valued Dr. Bennett's books, and it was their intention to select books to the value of £100, and hand over the remainder to their agents, Angus and Robertson; in other words, they would obtain Dr. Bennett's library from his widow, she being under the impression that all the books were to go into the Free Library at a low price rather than dispose of them by competition. How do I know that the same thing is not going on at present with reference to other libraries? We cannot sell any books to the Government.

693.

693. *Mr. Hogue.*] Is that one of your chief causes of complaint against the Free Public Library, that you get no fair play from the authorities? Yes, we cannot sell them a book. A library which they thought it was worth three weeks' time to go over and look at was not to be bought for £850, yet out of the whole of that collection we did not sell a paltry book to the Free Library. It is the same with regard to many libraries which I have purchased since then. W. Dymock.  
13 Sept., 1930.
694. *Chairman.*] Did you suggest to the Library authorities, after your purchase of Dr. Bennett's books, that they might make some purchases from that collection? Certainly; they would be advised amongst the first.
695. Did anyone come from the Free Public Library to inspect them? Not in the name of the Free Public Library.
696. Did you have any communication with them in reference to those books? Undoubtedly; we would write and ask them, because we were sure they would buy some of the books. I went up personally to see the Librarian about that and other libraries, but we could not sell a book.
697. *Mr. Price.*] Do you contend that preferential treatment is given to one firm as against you? Yes.
698. Is that the experience of other booksellers? They can be called to answer that.
699. Are you aware that the British Museum applied to the Imperial Parliament recently to get authority to dispose of handbills, duplicates, old documents, and papers, and that permission was refused? I know that such a thing would be refused.
700. Mr. Anderson has sworn that the late Librarian suggested that these obsolete duplicates should be removed from the shelves? I do not know anything about that.
701. Mr. Anderson has sworn that the late Librarian approved of the disposal of these duplicates, went through the books that were taken out—including, I presume, some of the late Mr. Justice Wise's presentation copies—and approved of the whole of them being disposed of? If Mr. Anderson states that it should be corroborated, because it is a slur on the late Mr. Walker's character. Mr. Walker instructed me, along with the other booksellers, for years to send up books, and if he had a duplicate, and he could get a better copy than the duplicate, he would buy it.
702. Then in your opinion it was absolutely necessary to keep all those duplicates? Absolutely.
703. As duplicates, do you think they were worth more than an average price of 10d. per copy? Such a price is simply absurd for the books which I know, and which I have heard were sold.
704. Had you known that books would have been taken in exchange from your stock, would you have been inclined to make an offer for the books? No. I knew that it would be simply wasting time to go near the Library.
705. Was it a businesslike transaction to call for offers for the disposal of a number of books and to accept a number of books in exchange? I never heard of it before. I am one of the largest booksellers in Sydney, and I never heard of such a thing. I have known a man to exchange books in a small way; but I have never known of a library to be disposed of in that way.
706. Mr. Anderson has sworn that no list was kept of the books disposed of;—have books been offered to you from the Library in a mutilated condition? No.
707. Has a book ever been offered to you from the Free Public Library without a title-page? Yes, one or two.
708. If a book is offered to you for sale with the title-page torn out, is there any means of determining whether it belongs to the Free Public Library? No.
709. Could a duplicate stamp of the kind used by the Free Public Library be in existence? Yes.
710. Do you know of any being in existence? No, but I know that there is a stamp which has come into my possession that was never upon any book; it is stamped on the back of a voucher. This is a *facsimile* of it which I now produce. I know that a great many of the books which were bought back by the Free Library bore no stamp whatever, and how they were identified I do not know.
711. Do you put that stamp in as an exhibit? Yes; if one can be had, hundreds can be had.
712. Is this a *facsimile* of the cancelled stamp used on the Free Library books? Yes. If that stamp was on a copy of Casanova's works now in this room, any man could claim it, and it would be impossible for the Free Library to get it back.
713. How long would it take one of your smartest invoice clerks to make out a list of 5,000 pamphlets and books? To make a list so as to be able to trace the books would not take more than three days with one man calling over and another writing; then some of the 5,000 books were in sets, so that the total might be brought down to 3,000.
714. How long would that take? A good man could list books at the rate of twenty or thirty an hour.
715. Would you or any librarian allow a lot of books to go out of your place without a list being made out? I do not know what any other man would do, but if it were done by an employee of mine I would dismiss him; I could not keep stock or know what had gone out.
716. What is the general practice in libraries? To list the books and stamp them in several places as sold; not with a stamp at the bottom of the title-page. It is sometimes done with a perforated stamp, at other times with a rubber stamp; but you would so mutilate the book that it could not be mistaken. In the case of some of the books sold by the Free Library it would pay a man to tear off the old title-page and put in a new one.
717. Do you consider that the whole transaction was most unbusinesslike? Yes. I took a great interest in the Library, and it was because I took a great interest in the Australian collection of books that I made all the inquiries I did.
718. Although these old books and pamphlets might have appeared apparently worthless to a casual observer, yet as part of a national collection might they not prove in future to be invaluable? To give you a forcible idea on that subject, I may say that it is rumoured that the Right Honorable G. H. Reid once published a volume of poems; if that is true, and if I could get a copy, I would give £5 for it.
719. Would that be on account of its literary merit? No; on account of the scarcity of the book.
720. Is it suggested that there is a copy of Mr. Reid's poems included in those books? No; but we want a copy. Again, there is a book called "Standing Orders," which is supposed to be one of the first books published in Australia. It was sold at Sir John Hay's sale, and it brought £25. That was merely a little pamphlet thrown out as being of no use. I merely mention these things to show how these little books increase in value. Australian books are always getting more valuable.

- W. Dymock. 721. Would it have been better to have given the 5,000 volumes to country libraries? Yes; a hundred times better.
- 18 Sept., 1900. 722. Would they be worth more than they brought as a national asset? Yes.
723. Was any list of those books sent to the various booksellers? No letter was even sent to us, and I have been round to other booksellers. No one knew that books were to be taken in exchange. Many booksellers might not have been able to pay £200 cash for the books; but it would be quite different if they knew that they could give other books in exchange; only three booksellers were consulted about the sale of these books according to an answer given in Parliament.
724. Was the matter publicly advertised? No.
725. There was no public competition? No.
726. If an advertisement had appeared in the ordinary way calling for tenders for the right to purchase these books, or to exchange others for them, would it have led to competition? Yes; if the Trustees were to open the tenders.
727. Would that be the businesslike way? Yes.
728. Were you communicated with by the Library authorities as to the sale of those books? They must have sent word to us, but not in any official manner, because one of my boys told me that the Library authorities had a lot of books for sale, and that is all I heard about it. I said, "It will go to Angus and Robertson."
729. Were you led to believe that after Angus and Robertson inspected the books 150 or 200 volumes were taken away from the collection and put aside before other persons could see them? I can only give that from hearsay.
730. Do you know anyone who would give information on the subject? I should inquire from the various Library officials.
731. Mr. Anderson has sworn that he did not inspect the 5,000 volumes which were taken out for disposal, but that he left the matter to his subordinates;—is it the practice of businesslike men or librarians when they dispose of books to look through them? Certainly.
732. Would it be gross negligence on the part of a business man or a librarian to do such a thing? I do not know any man in business who would do it.
733. Do you know whether some presentation copies of the late Mr. Justice Wise were included in those 5,000 volumes? Yes.
734. Were any copies included which bore original marginal notes? Yes; that is the case with some of the books I have seen.
735. Is it possible to name the additional value which would be given to books by such marginal notes? No, it is impossible. A man might value a book of that description according to what he could get for it.
736. Would it be like purchasing autographs? It would be more than that; it would be purchasing a man's own copy of the work.
737. Do you know that some of those books had marginal notes? Yes; and some were presentation copies by authors.
738. Should those have gone out of the Library? No; it is a scandal that such a thing has happened.
739. You said that if public tenders had been invited to be opened by the Trustees you would have tendered? Certainly, that is the usual way.
740. Your reason was that you had come to the conclusion that it would be useless to attempt to do any business with the Free Library, as Angus and Robertson have a preferential claim there? That was my opinion; that has been my experience.
741. Is that your experience up to the present day? Yes.
742. How long has that been going on? Within a fortnight of Mr. Anderson's taking his present position. The only things we have supplied were books which had to be bought, as they were issued in parts; outside of that not £25 worth of books have been sold to the Free Library.
743. Do you think the Free Library can get as good terms by purchasing through local agents as they could get from London people? No.
744. Do you say that even against your own interests? Yes; we cannot do it. In the first place, binding and everything else is cheaper in England. I would like Mr. Anderson to be called upon to produce some of the old invoices of Trübner and Co. and compare them with Angus and Robertson's.
745. Have you any interest in Trübner and Co.? No; I think the firm is now insolvent. There are certain books called "inducement books"—that is, when the author and the publisher decide to clear out of certain lines, and they put them on the market very cheap. Trübner and Co. had the advantage of always getting the first copies of such books.
746. Does it expedite matters to have the business done in the Colony? I should think it was the very opposite.
747. Mr. Anderson says it is a saving of four months? I should like to know how that can be proved. Angus and Robertson cannot get the books cheaper than a London firm.
748. By the time lists have been submitted and all the other delays have taken place, do you think the business would be slower? Yes, it would be impossible for the local agents to do it quicker, because Trübner and Co. supplied the books direct; now they have to go to Angus and Robertson's, then they have to be sent to the Library.
749. Do Angus and Robertson buy from the London people? They must, because they are the publishers; according to Mr. Anderson's own report, when he sent home to England the booksellers offered 25 to 60 per cent. discount.
750. From your experience of the way the Library is run at present by the authorities as compared with the period before 1898, are the facilities for selling books and the general management more satisfactory to the trade and the public and to literary men than it was in the earlier period? I can only answer for myself. I can say that there have been most extraordinary dealings with us. In the British Museum or anywhere else they have no hard and fast rule for going to a special firm and recommending friends to go to that special firm.
751. What do you mean by recommending friends? I am talking of libraries which have been bought.
752. Is it the fact that people have no show unless they sell their libraries to Angus and Robertson? That is my experience.
753. Mr. Meagher.] Have you had a lot of experience in supplying country libraries and others? Yes.

754. I think Mr. Anderson has stated that in some of the country libraries the consumption of fiction is something like 99 per cent. of the whole—is that your experience? It must be very large, but works on Biography and Travels are supplied. W. Dymock.  
13 Sept., 1900.

755. Can you say that Casanova's Memoirs is a work which you would care to offer to a library? No, I should be very sorry to offer it to any one.

756. Mr. Anderson told us originally that he thought it was a classic; however, some very able critics do not recognise it as a classic, and Mr. Anderson now says that he meant by that that the work faithfully depicts the manners of the times; do you not think that there are sufficient histories dealing with that particular century, and with the manners of the times without securing the Memoirs of a man whose whole works are nothing else but filthy annals. As a man of experience, do you think that there are sufficient historical works available without buying such books? I should think there were a sufficient number of books without purchasing a book of that character; if as a publisher I were to take extracts from Casanova's Memoirs, and publish them as a book, I would be liable to a very heavy fine or imprisonment.

757. *Mr. Jessep.*] Is there something spicy in his works? I say it is a dirty, smutty book, and no man would put it in the hands of his children.

758. Is not "spicy" the bookseller's phrase for naughty? No. This book of Casanova's has been privately printed. They dare not put their imprint on it. The book must have cost a vast amount of money.

759. *Mr. Meagher.*] Mr. Anderson said it only cost £8? I would like to see the invoice for it.

760. *Chairman.*] What would you give for the book? I would value it rather at £40, because it is extremely scarce.

761. *Mr. Meagher.*] Do you think any old *roué* would give £40 to have these volumes? I have no doubt he would.

762. At any rate, you say, with all due respect to Mr. Anderson's statement as to the price being £8, that you would like to see the invoice? Yes; there are twelve volumes of the work.

763. Do you think that, after reading Casanova's works, your mental wealth would be increased as to the habits of the people in that century? I am sure that it would not be; you might as well ask the same question about "The Amours of a Lustful Turk," or the "Memoirs of a Russian Princess." Books of that kind are to a great extent founded on literature of the same description as Casanova's books. They are published in smaller editions, which can be obtained more cheaply.

764. Do you think that the history of "Moll Flanders" would be a very good book? I do not think it is a book that should be in a public library.

765. Do you think that there is enough English literature extant to show the condition of England during that age without the aid of the history of "Moll Flanders"? Yes.

766. *Mr. Jessep.*] Is not a copy of the history of "Moll Flanders" in the British Museum? I cannot tell you that.

767. As a practical bookseller, do you not believe that public libraries should possess those very peculiar books only for purposes of information? No; you cannot say that this peculiar book would give you any medical advice. You could not put it down as a book of an instructive nature. It cannot be called a classical book.

768. *Mr. Price.*] Is it a book that ought to be placed openly on the shelves of a public library? Mr. Anderson is not game to put it there.

769. But it was there? Then it shows the ignorance of the people connected with the Library. I believe you could go and have the book condemned.

770. *Mr. Meagher.*] Where was that book published without any publisher's name on it? It would be difficult to say.

771. Where would you be able to obtain it if you wanted to get it? You would have to send home to a man like Quaritch, and then it would bring a very fancy price.

772. There is no reason put forward for the presence of this book in the Library on the ground of its idiomatic power of expression, its allegorical beauty, or anything of that kind; it is not a classic in any sense; it is only the diary of the life of a vagabond, a man who was not allowed to remain in any particular place, and the only reason given by the Librarian is, that it is a history of the times in which the man lived; I suppose you will admit that a man like Paul de Kock has some claim to authorship, compared with Casanova;—can you see any reason why a filthy book by that author, such as the "Amours of Gustave," advertised in the public Press in this city, which describes the adventures of a gentleman in the 19th Century, should not also be placed in the Free Library by Mr. Anderson, as a record of the morals of the present day? I look upon a Free Public Library as a place where men can learn something, but I do not think that we better the case if they read "the Amours of Gustave"; why not put in "Fanny Hill"?

773. Do you think "Fanny Hill" is worse than Casanova's book? I do not think so. Casanova's book must be most expensive. I will look up the list of book prices current.

774. *Mr. Jessep.*] What would be the object of the Trustees of the Public Library in securing volumes of that character? I cannot tell you.

775. Must they not have some object in view? I cannot tell you; but it seems a pity that the public money should be wasted in buying such books.

776. Are you aware that books of the same kind are in the Melbourne Free Public Library? I do not know; but two wrongs would not make a right.

777. *Chairman.*] Did Mr. Lennard come to you with any books? Yes; I have often seen him.

778. Did you make him an offer for any book he possesses which he alleges he purchased? He showed me "White's Memoirs," and I made him an offer.

779. What offer did you make him? I offered him at first 8 guineas; I then got an offer for the book, and I think I offered him 12 guineas.

780. Having a customer for the book, you regarded that offer as a fair one? I wanted to buy the book for my own stock at 8 guineas; having obtained a customer for it, I was willing to give a higher price. I would give 8 guineas at any time for a book of that unique description.

781. *Mr. Price.*] Is it your complaint that there are transactions in connection with the Free Public Library which cause dissatisfaction? Yes; in the first place it stands to reason that if we cannot have an opportunity of supplying books to the Free Public Library it prevents us from making good offers for private

W. Dymock.  
13 Sept., 1900.

private libraries when they come before us, and that naturally tends to such libraries getting into the hands of Angus and Robertson. If they are made aware of the kind of books which the Free Public Library are willing to take from them, as in Dr. Bennett's case, and that information is kept back from all other booksellers, it prevents us from giving such good prices as we would otherwise give; in the second place, knowing that the orders of the Free Public Library are given to a particular bookseller, it prevents us from importing books which we would be sure to have in hand if we had an opportunity of selling to the Free Public Library. When Mr. Walker was alive, he would come round and make a selection of books from us; and that practice being stopped, it is like removing the best customer that we had and putting the business in one man's hands. When our tenders are overhauled by another firm of that description (one of the most respectable firms that could be), it gives them a great pull over any local bookseller who has just made an offer.

782. Is it unfair competition? It is favouritism towards Angus and Robertson. I would point out here that according to the letter which I have from Mr. Anderson, which is the only tender that has ever been asked for, he says the books were supplied at from 15 per cent. to 20 per cent. off; in the latest report of the Free Library's Trustees, it is stated that Mr. Anderson has been in direct communication with the Boston Book Club, the Religious Tract Society, Kegan Paul, Trübner & Co., Blackwood and Sons, Harper Bros., McMillan & Co., and others. He states that these firms offer discounts from 25 per cent. to 60 per cent. on any of their publications that the Trustees might choose. When Mr. Anderson has such an offer, why should he get books from a firm which only gives an outside discount of 20 per cent.—that seems an extraordinary thing to me.

783. Are the prices which you quote c.i.f. or f.o.b.? Delivered here.

784. That is c.i.f.? Yes. It can be easily understood what disadvantages local booksellers labour under when Mr. Anderson can get books as secretary to private individuals, and on the strength of his being Principal Librarian, at such a large discount.

785. Do I understand you to say that the Free Public Library acts as a buyer of books for other people? Yes, I state that Mr. Anderson buys books for the largest buyer we have.

786. Do they charge anything for the clerical labour and work performed? I would like that question to be put to Mr. Anderson. I was told Mr. Anderson's statement was that he acts as Mr. Mitchell's secretary, and that he has given £2,000 worth of orders in one year. If that is done in one case, how do we know, unless we see the books of the Free Public Library, that it is not done in many other cases.

787. Do you think that acting as agent for private persons comes within the province of a Public Librarian? I do not think so.

788. Did Mr. Walker ever do so? Never.

789. To the best of your belief did that practice exist during Mr. Walker's time? I never knew it to exist in any Government Department.

790. Is it an unfair interference with trade for a paid Public Librarian to act as private agent for individuals? Certainly.

791. Is it calculated to take his mind away from the duties for which the State pays him? I should think so.

792. Would you describe it as a gross interference with ordinary business pursuits? I certainly consider it a grave interference with the living of a bookseller. I put it this way: If a trusted servant can pick out anyone he likes and import these books, obtaining for a private individual the advantages given to a public library, must it not be a great interference with those engaged in the trade?

793. Is this done through the agency of Angus and Robertson? I believe it is done directly through Mr. Anderson. That could be ascertained if the invoices were produced.

794. *Chairman.*] Are the books now produced those which you referred to in your evidence as having been purchased by you, the whole of them having come from the Free Public Library? Yes.

795. *Mr. Price.*] Are these books those described as worthless? I do not know. It was stated in print in the *Herald* that they were bought for £210; now it is up to £276.

796. *Chairman.*] Included in these books are there a number of pamphlets? Yes.

797. Although a pamphlet might now be regarded as commonplace, might it not in years to come attain a value that would be scarcely contemplated even by the author himself? Yes; many pamphlets are now worth their weight in gold, although at the time of publication they were valueless. The authors subsequently attained important positions, and thus the books become valuable. The first edition of Sir Henry Parkes' poems are now bringing £3. The pamphlet on John Norton, by Gilbert Smith, is at present worth 6d.; if that pamphlet is out of print, and John Norton becomes the Mayor of the city, which a number of people think is very likely, that pamphlet might be worth its weight in gold. It was Mr. Walker's idea when he was Librarian to keep duplicates of the books which were in the Library in one lot, and no one was allowed to look at them unless attended by an officer. No living man can tell what may be the value of a pamphlet in a year or two.

798. *Mr. Price.*] Are you aware that in the British Museum every pamphlet, handbill, political cartoon and lampoon bearing upon any political or social subject is kept? They keep more than one copy; but I could not speak positively unless I look up some authority. I know that playbills in which would appear the names of actors like Garrick would be worth their weight in gold.

799. Considering the numbers of libraries being established in various growing towns in the Colony, and the possibilities of their growth in fifty or 100 years, would it not have been a wise policy on the part of the Free Library to have disposed of those 5,000 books to the various country institutions? I think they should never have been disposed of on any account, as they were duplicates. As for there not being room for them in the Library, "Gould's Birds of Australia" might be thrown out for the same reason.

800. Have you a number of volumes of saleable duplicates that you have stowed away? Yes.

801. Is that your practice? Yes; we subscribe to get what we call the original edition. That is a question which might be put to Mr. Anderson, whether in removing these books he disposed of first editions. There might be one edition in 1800, another in 1810, and another in 1820; would he keep one and regard the other two as duplicates?

802. He swears that he knows nothing about them, and that he left the matter to his subordinates? I thought that in answer to a question by the Chairman it was stated that the books were looked over by Mr. Anderson.

803. Would the first, second, and third editions be very important? Yes; one edition of a book might be comparatively valueless, while other editions would be highly valuable. A first edition might contain

a very severe lampoon, or a mistake might have been made. When the author brought out a second edition he might leave out that particular part; there are a number of first editions among the books which I have laid before the Committee. W. Dymock,  
13 Sept., 1900.

804. *Mr. Meagher.*] As an expert bibliophile would you say that this work called "Maori Mementoes," by Sir George Grey, being a series of addresses presented to him by the native people in 1855, and apparently sold by the authority of the Trustees of the Free Library, is of much value? The books I have produced were all part of the 5,000 volumes, because he says that he sold nothing since. I would not sell the book which you have mentioned under 25s., because there is a good demand for Sir George Grey's books at present.

805. Then there is "The Natural History of the Sperm Whale"? That book is one which I have sold to the Free Public Library for 7s. 6d.

806. How does it come to be in your possession? I bought it with others that had been sold.

807. Here is a Sydney directory dealing with matters between 1828 and 1835? That is incomplete; it is wanting a title page. I received 30s. for the last copy of that book which I sold; it is a book which will increase in value; as the book is, I should reckon it is worth from 8s. to 10s.

808. Would you have any difficulty in obtaining that price? No; a book like that should be kept in the event of the other copies being destroyed.

809. Then there is the "Voyage of the Meander in the Indian Archipelago"? That was published at about £1 1s.; I would charge 15s. for it; I would give about 11s. for it.

810. Then there is the "Memoir of Peter Haywood"? It is worth about 12s.

811. At any rate there were a great number of these volumes worth more than 10d. Yes.

812. What would be the average value of the hundred and odd volumes which you have purchased out of the 5,000 volumes which Mr. Anderson said were worth, on an average, 10d. per copy? I would willingly give 5s. and 6s. a volume for them.

813. So that if you got them at 10d. a copy you would think you were doing a good stroke of business? Yes. Here are some books which were purchased from Angus and Robertson—"Oceana, 1847." I would willingly give 10s. 6d. for it.

814. Does every year make these books more valuable? Yes.

815. Here is a catalogue of the books disposed of by Angus and Robertson;—will you tell us the valuable books in that catalogue, and what is their value at present? I see in the list "Dampier's Voyages," 4 vols.

816. If I came to you as a patron and wanted to purchase a lot of historical books dealing with early Australian navigators, explorers, and others, and I wanted "Dampier's Voyages," what would you ask for them? I would get a copy from London from £3 to £4; you will get a copy in the catalogue for £1. There may be something additional in it—a name, for instance—but a good copy of "Dampier" I would not undertake to supply under £3 to £4. I will buy it to put in stock at £2 10s.

817. Glancing down the list of books sold by Angus and Robertson, formerly belonging to the Free Library, can you mention any others? Here is Barrington's "Voyage to Botany Bay," that has fallen in price, but good copies are always worth £1. Then there is Dr. Bennett's "Gatherings of a Naturalist," in 2 vols., worth 15s.; "Wanderings in New South Wales," 25s.; Bligh's "Voyage to the South Seas," £2 10s.; Bougainville's "Voyages," worth from £2 to £4, in good condition. Captain Burney's "Voyage to the South Seas," if complete, is worth from £4 10s. to £5 10s. I sold my own copy for £6. Collins' "Account of New South Wales" varies from £2 10s. to £4; if it is a 2 vol. edition it will be worth £5; in 1890 we were paying £10 for it. "Corbyn's Sydney Revels," worth 25s. "The Memoirs of Holt" is incomplete, but a complete copy would be worth from £3 to £4. Dampier's "Voyage Round the World," in 4 vols., is worth £4 10s.; the original edition of Darling's "Voyage of the Beagle" is worth about £5; Flannagan's "History of New South Wales" is worth £1 10s.; Flinders' "Voyage to New South Wales," 2 vols., if it contains the atlas, would be worth £8, it is worth £4 without the atlas. I have never yet been able to buy that atlas. Eyre's "Trip to Central Australia," 30s.; Lieut. Grant's "Voyage of Discovery," £2 10s.; Harris' "Settlers and Convicts" (the last copy of that work was bought by Mr. Badgery for £2); "Hill's Poems," £1; Juke's "Voyage of H.M.S. Fly," £2 10s.; Kerr's "Glimpses of Australian Life in Victoria," 2 vols., £2 10s.; King's "Survey of the Coast of Australia," £2; Kotzebue's "Voyage to the South Seas," £2 5s.; Labillardiere's "Voyage in Search of La Perouse," 35s.; La Perouse's "Voyage Round the World," £2 10s.; Leichhardt's "Overland Expedition in Australia," £2; "Voyage in Rattlesnake," £2 15s.; Maconochie's "Convict Management," 15s.; Mitchell's "Expedition to Tropical Australia," £1 17s. 6d.; "Three Expeditions into the Interior of Eastern Australia," 16s. and 37s.; "Felonry of New South Wales," from £1 to 15s.; "Oxley's Journals," £3; "Perron's Voyages," £3; "Phillip's Voyage to Botany Bay," from £2 to £3 10s., according to condition; "Ruskin's History of Australia," 3 vols., 30s.; "Stoke's Discoveries in New South Wales," £2 2s.; "Tench's Botany Bay," £2 10s.; "Tenison Wood's Geological Observations," 15s.; "Terry's Reminiscences of New South Wales," 25s.; "Turnbull's Voyage Round the World in 1885," £1 17s. 6d. These are books which I have lists of, and I think I could prove the price of every one.

818. *Chairman.*] Do you regard these prices as fair purchasing prices for a retailer? I could sell them at these prices easily.

819. Did you buy those books separately? No; I bought a lot at auction and a few separately from persons who came to me casually. I am giving the value on the assumption that they are in the same condition as the books which I have now.

820. Is it essential that one who purchases books of that character should have some considerable knowledge in order to know exactly how they stand in the market? Yes.

821. Have you a knowledge of only one sale by the Free Library of a number of books? That is all I have heard of; but of all the books which I have read out, I do not think you will get twenty of them which are included in the 140 books which I have produced.

822. *Mr. Anderson.*] You mentioned about the Minister asking me to report on the list of books which were chosen by the Botany Municipal Council for purchase from you? The only authority which I have for that is your own letter.

823. Are you aware that the Minister has called for a report from me upon every selection of books paid for by the Government for Municipal Libraries? No.

- W. Dymock. 824. Did you tender for a collection of books which the Government were going to buy for the Rookwood Library? Yes.
- 13 Sept., 1900. 825. Was your tender accepted? No.
826. Whose tender was accepted? George Robertson & Co.
827. So that, in open tendering, you were not able to get that? Do not take one case; at that time George Robertson & Co. were selling off their stock, and they were able to outbid me.
828. Was your tender the lowest? I can prove that my tender was not the lowest, as it was not accepted.
829. Was it the highest tender? I do not know. It was not accepted, so there must have been a lower tender. Of course, you say the lowest tender was accepted, but we know that in some cases they do not accept the lowest tender.
830. Did any of your employees inspect the duplicates that were offered in 1897? No.
831. Did any person from your firm come to the Free Library? If they went up to the Library they did not remain a quarter of an hour; they came back and told me about it. I was told that the books were in a room. I said, "It is no use troubling, because Angus and Robertson will get them." I did not dream that all these books were to be sold; had the thing been done in a business-like manner, and if we had a list or something sent to us it would have made all the difference; but I was misled; I thought it was a lot of rubbish that was to be disposed of.
832. Did your officer have full opportunity to inspect the books? As far as I know, he had.
833. Had he not abundant facilities for finding out whether they were all rubbish? He could have done so.
834. As a matter of fact, you did not submit a tender at all? I never saw the books.
835. Did your firm submit a tender? No.
836. Did you get a letter from me inviting you to inspect the books? No.
837. Are you quite sure? Yes; we register all our letters.
838. Why did you send a man in your employment? Because we got verbal information.
839. From whom? I cannot tell. I was told that there were some books to be sold in the Free Public Library, and I said to a young fellow, "Go up and have a look at them"; he said, "There are a lot of books, and you might go up there; Angus and Robertson are in for them," and then I said, "It is no use for us to waste time."
840. Did I understand you to say that George Robertson & Co., in their tender, offered 25 per cent. discount off all books purchased by the Free Public Library? The tender is there, and can be seen.
841. Did you say that you were aware at the time of George Robertson & Co.'s tender? Yes.
842. Who told you about the character of their tender? We had a conversation. I wished to see if it were possible to have a tender accepted by the Free Public Library.
843. Were you acquainted with the whole terms of the tender? I saw the tender.
844. So that really it was not a *bona fide* tender against you? It was a *bona fide* tender, because we were bound by the tender.
845. Do I understand that you were in partnership with George Robertson & Co.? I would be in partnership when I would have to pay the loss on it.
846. With what member of the firm did you make that arrangement? George Robertson, junior.
847. Is he in Sydney now? I believe he is.
848. Is he still connected with the business? No.
849. What is he doing now? I do not know, I do not look after him.
850. Is he in the book business? I do not know; his father left him a large amount of money, and I think he is leading the life of a gentleman.
851. Is that in contra-distinction to the life of a bookseller? I do not know, I should hope not; at any rate I have always regarded the life of a bookseller as an honourable one until lately.
852. From what source did you get the 140 volumes? Some at auction, some privately, and some at public sales.
853. Did you purchase any from private gentlemen? I have purchased some privately.
854. Can you tell me the names of some of the private persons? No. I bought them and put them away; they have been collected for the last four years.
855. Can you explain why? I was so dissatisfied with the manner in which you went away to England, that I wanted this thing inquired into. I knew the day would come when I would have an opportunity to get at the bottom of it, and I knew the books would be a very good source of information, because, being a bookseller, and being in a public position, I did not like to see the property of the Government sold for nothing.
856. So that you bought and collected these books for the purposes of an inquiry? I have bought and collected the books to prove an assertion I made that a lot of valuable books were sold when Dr. Norton, in the Press, said they were such a lot of rubbish that they would have been burnt. He stated that in a letter to the *Herald*.
857. Was it a letter signed by Dr. Norton? It appeared in the Press under the name of Dr. Norton.
858. What was the date of it? I think I can get that.
859. Have Australian books of this character gone up in price during the last ten years? No; as a rule they have gone down in price.
860. Was it a good speculation to buy these books in a falling market? Certainly; when I say they have come down in price, some of the standard books, such as Phillips', have gone up. I can produce catalogues where they are offered from £5 to £6. Mr. Badgery bought one for £5 at auction. It was always regarded as a valuable book at £5; I have only put it down at £2. Then a copy of "Settlers and Convicts" was sold at £2; it used to bring £4 10s.; I put it down at 37s. 6d. Then, again, Collins' book—the two-volume edition—is shown in an invoice, which I can produce, at the price of £10. I believe the owner would now be pleased to take £7 for it. But, outside rare books, there is no doubt the prices have come down. One reason why the Australian market has fallen is because the Free Public Library has stopped buying; they have got their library almost complete; they were the great source of revenue to booksellers.
861. Do you think that the Free Library should go on buying duplicates for the benefit of booksellers? Once they get duplicates they do not want to go on buying a stock of books.
862. If they had triplicates, would they be justified in disposing of them? Certainly not; you must not sell a book once the Government has bought it.

863. Do you know that the British Museum sells duplicates? I have already stated that I am not an authority on the British Museum. I now find that the date of the letter signed by Dr. Norton, which I have already referred to as having appeared in the *Sydney Morning Herald* and *Daily Telegraph*, is 12th November, 1896; I am almost certain that is the letter, but I will trace it. W. Dymock.  
13 Sept., 1900.
864. You say that the date of that letter was 12th November, 1896? I have explained to the best of my knowledge when the letter appeared. An important letter with regard to the sale of these books appeared in the newspapers, and I believe the letter I have just given the date of is the one in which Dr. Norton said that the books would have been burnt.
865. Do you know that the books were sold in May, 1897? No. However, I can look up the letter, as I may have made a mistake about it.
866. You said a large folio book was submitted to me for valuation;—what was the name of it? I never said a large folio book. I said that amongst the books stolen from you was a large folio.
867. What was the name of the book submitted to me for valuation? I can get the name of the man you bought it from.
868. What was his name? If the Committee want him, I will bring him. I have reasons for not giving the names of my witnesses. I will produce him in half an hour. The book in dispute between us was a small book in Latin published in the seventeenth century. It was submitted to Mr. Anderson, and he did not recognise it. It was then sold to Mr. Mitchell for 10s. Mr. Anderson then claimed it as the property of the Free Library.
869. I wish the witness to tell the Committee who brought the book to me to be valued? Mr. Meadmore.
870. Do I understand you to have said that we bought back one stolen book from Mr. Blackwood? No, forty-four.
871. As a matter of fact, we bought back 120. I want to know the name of the folio book? It was a folio that the man stole. You had him arrested, so Blackwood tells me. You allowed Blackwood 10s. for the book, and he grumbled very much.
872. Then Mr. Blackwood thought I did not allow him nearly enough for those books? Yes; I told him he was lucky to get anything if they were stolen property.
873. Did I understand you to say that you supplied the books to the Botany Council as originally chosen by the aldermen? Yes.
874. The same books that they originally had chosen? No. I show in my letter that a lot were rejected which I wrote out. Others were put in their place; but what you rejected as rubbish was never removed—the 3s. 6d. edition of Cassell's books.
875. Did you change that list of books supplied to the Botany Council in accordance with the Minister's directions? Yes.
876. Was the list as eventually supplied that which was approved by the Minister? Yes.
877. Was that considerably different from the original list? No.
878. What discount did you allow on the original list? About 20 per cent.
879. What discount did you allow on the list eventually supplied? About 20 per cent.; we only allow 15 per cent. and 20 per cent., and in special cases we allow 25 per cent., if we know the class of books; we never give more than 25 per cent.
880. Do you think 25 per cent. is very low for a respectable firm to give on that class of business? Yes; on general books they cannot afford to give 25 per cent.
881. On really good books they cannot afford to give 25 per cent.? No.
882. If a higher percentage were offered by a firm, what would you conclude? That they were overstocked or hard up for money.
883. Or offering some good old rubbish? No.
884. Some stuff that was unsaleable, and that they wanted to get rid of? No; I am the custodian of what I do myself; not of what others do.
885. Is it possible that they might put down too high prices, in order to show an excessive discount? No; not if they were dealing honestly.
886. Did Angus and Robertson also tender for the same library at Botany? I have no doubt they did.
887. You said your list was hawked round to Angus and Robertson;—how do you know that? According to your own letter.
888. Does my report to the Minister say that? Yes; you say you visited Angus and Robertson's after being at my place; that you compared my prices which were deceptively shown; yet you afterwards agreed that my prices were fair, after comparing twenty of the books out of 800.
889. Did it not occur to you that it might have been necessary to only find out the prices of twenty uncommon or rather rare books, which I might not know familiarly? You say you compared twenty of the most valuable books, and you surely ought to know the value of books.
890. I am free to confess that I do not know the value of all books? Then God help the Free Library.
891. I do not know the value of all books, and I will prove that you do not know the value of books that you are selling every day;—what brought forth that letter to George Robertson & Co, which you quoted this morning? To see if you would even accept a higher tender.
892. I refer to that little letter of July this year—what induced them to write that letter? Because I lost the copy of the original which I had. I told them that an inquiry was going on, and asked them if they would give me a copy and produce their letter-book if necessary. They said, "Yes," and then I said, "Give me a copy."
893. Was it necessary for you to ask them to do so when you were a partner to their original tender? I knew that proof would be wanted, and I got the proof.
894. You produced a letter from another gentleman, Mr. Kettlewell;—is he an employee of yours? I said so.
895. What was the firm by whom he was engaged? Edwards, Dunlop & Co.
896. Are they retail booksellers in Sydney? Yes, as far as libraries are concerned.
897. Could they do the trade needed in our Library? Yes; their operations are so large, and their means so extensive, that they could do so.
898. Do they import the class of books which we want week by week? They would import them.
899. Do they import that class of books week by week, so that I could go down and choose them, and the Trustees inspect them? No one would import all the books you choose unless they had an order from you.
900. Do they import the class of books we need? You seem to think I am an encyclopædia of every bookseller in Sydney; ask me about my own business and call these men here.

W. Dymock. 901. How do you know the price of £850, which you have quoted here, as having been offered to Mrs. Bennett for her late husband's library? Mrs. Bennett told me so.

13 Sept., 1900. 902. Did you ever see any letters to that effect? I cannot recollect it at present.

903. Did Mrs. Bennett use that to make you spring a little higher? No; I am surprised that a lady should be accused of doing such a thing. Mrs. Bennett is above that; it is a cruel thing to make such a statement with regard to a leading doctor's wife.

904. Do you think that it is a usual thing for a person who has received an offer from one party to go to another likely buyer, and tell him the price offered? You have done the same thing;—you went to Angus and Robertson and showed them my list. If a lady was going to sell a library, and her late husband told her to consult me about it, I can easily understand her coming to consult me.

905. Did Mrs. Bennett tell you that she had not invited Angus and Robertson to value the books? Yes.

906. Did she ever see any of the firm? I do not know; ask me about myself.

907. Did she tell you that any of the firm had inspected the books and valued them? No; she said she never saw them—that it was only the Free Public Library authorities who had inspected them.

908. Would you be surprised to know that she wrote me a letter asking me to bring Angus and Robertson along to value her books? Yes; I would be very much surprised.

909. Do you recognise Mrs. Bennett's signature to this letter? Yes; but I identify the signature of the letter, which is as follows:—

167, William-street, 8 December, 1894.

Sir,  
In reference to our conversation, *re* Messrs. Angus and Robertson going through and valuing the late Dr. Bennett's books, I shall be much pleased if you could arrange that they could be done this next week. Kindly advise me what day they can come.  
Yours faithfully,  
SARAH BENNETT.  
To the Principal Librarian, Sydney Free Library.

910. What do you think was the value of the books which Mr. Mitchell bought? I do not know.

911. Do you think he has bought £400 worth? If he said so it would be true. You did not know he was going to buy the books.

912. Are you aware that we have since got those books from him? It is good luck that you have; but you might have missed them.

913. *Mr. Meagher.*] Is the date of Mrs. Bennett's letter to Mr. Anderson anterior or subsequent to the interview you mention? 8th December, 1894. I was talking to Mrs. Bennett, who is now Mrs. Priddle, three weeks ago. She said that no one bought a book, and also that Messrs. Angus and Robertson were never there.

914. *Mr. Anderson.*] You seem to make some trouble about the answers which were given to the questions asked by the Chairman of this Committee in the House on the use of the word "selecting";—I suppose you recognise the difference between selecting books and purchasing them? There is a difference; but I said the idea was conveyed that you had bought them.

915. Have you read the whole answers? I read the answers in the *Herald*, and they were of the same opinion as I am.

916. Did you read the full answers in the Parliamentary papers? No.

917. Have you only read the newspaper condensation of the answers? I read that.

918. Supposing you had got the agency of the Free Public Library in 1894, when Angus and Robertson got it, would you have expected me to loyally hold by you and buy the Library books from you? I would have expected that you would have bought books from me; but also be at liberty to buy books elsewhere.

919. But if you were the agent, would you not consider that we were in honor bound to buy from you? All the new books.

920. Do you think as a bookseller of long experience that it would be a wise thing for us to change our agency frequently? I should think so, say every two or three years.

921. Would that be good for the booksellers? Yes.

922. Do you not think they would find some difficulty in getting into our line of business? No more difficulty than Angus and Robertson had.

923. Did you not yourself make great difficulty in your tender? Yes; because I was misled by your telling me that I would have to bring out every book published. I said no one could do so.

924. How could anyone possibly expect every book to be brought out when we know that 50,000 books a year are published in England? That was what I meant when I said that it was absurd. Knowing that your knowledge as a bookseller was limited, I pointed out to you the absurdity of the terms of your tender.

925. Why did the other booksellers gladly tender and confidently promise that they could do the business, *i.e.*, Geo. Robertson and Co., Turner and Henderson, and Angus and Robertson? You did not give them as full information as you gave me, otherwise they would not have done it.

926. You think I gave you fuller information? I think you must have given me a different class of information in saying that you wanted all books brought out here; I pointed out the absurdity; I mentioned a book which was then about to be published on St. Mark's in Venice at a cost of 100 guineas; you said, "We want all books, and to make our selection from here"; then I wrote and told you how absurd it would be to do such a thing.

927. *Mr. Meagher.*] Did you draw attention to that book? Yes.

928. What would have been the cost to land that book here? At least 100 guineas.

929. Would you have had to take the risk? Yes; that is the reason why I wrote.

930. *Mr. Anderson.*] I think you said you were suffering a grievance owing to our dealing with Angus and Robertson to the exclusion of your firm in buying new books? In buying any books; you buy none from us.

931. Have you submitted any books to the Trustees during the last few years? No; it was a waste of time; we all found that out.

932. Whom do you mean by all? Turner and Henderson, Geo. Robertson and Co., and myself.

933. Have you submitted a single book during the last seven years to the Trustees? Ask them during the last seven years.

934. How can you say that all of them found out when you do not know what they did? Because I have asked them about it.

935. Did they tell you that? I did not cross-question them.

936. Some reference has been made to the British Museum applying for permission to get rid of an enormous number of pamphlets and comparatively worthless literature from their collection;—I suppose you are aware that these are sent in to the Museum under the terms of the Copyright Act of Great Britain to the number of 50,000 a year? They would receive only one copy of each.
937. Are you aware of the fact that everything published in Great Britain, however worthless, is sent in? Yes.
938. Is it not natural that they would wish to get rid of such trash? I do not think so; what is trash to-day may be most valuable in a year or two.
939. You said that some book had been offered to you without the title-page;—would you give me the name of that book? No; I said if a book were offered without a title-page it would be impossible for me to decide if it were stolen.
940. Are you sure that it would be impossible for the Free Public Library authorities to do so? I should think so, judging from your conduct in the past; but from what you say now I gather that you have had private marks put on the books.
941. Do you know that during the last three years we have prosecuted six men for stealing books? I am glad to see that my efforts have been rewarded even in that; it shows that you can identify the books now.
942. Do you know that there ever was any difficulty in identifying the books? I can produce a man to show that you could not identify your own book, although it was at the Free Library for three-quarters of an hour.
943. Did he show the book with the object of our identifying it as our property? He showed it to you for your opinion; but he will be called as a witness.
944. You produced a copy of our impression of the embossed stamp;—who gave it to you? I got it by post.
945. From whom? I do not know.
946. Anonymously by post? Yes; would you like some more of them?
947. Yes? Then I will show you another one; did you ever see one of these which I produce?
948. There is one traitor in the Free Public Library; I ask you, Mr. Chairman, to help me to discover him in the course of this inquiry; a traitorous dog who would use the Public Library to take a copy of a confidential thing like that and send it out to the world? It should be locked up in your desk.
949. It is locked up in an iron safe? Then how could people use it?
950. I ask the Chairman to help me in every way to find out this thing? It simply shows the incompetency of the management of the Free Public Library when such things can be sent about; a man's cheque might be left lying about in the same way. It bears out my words that the valuable property of the Government is unsafe.

W. Dymock  
13 Sept., 1900.

Henry John Blackwood, bookseller, sworn and examined:—

951. *Chairman.*] Did you at any time offer to Mr. Anderson a folio book of any description which was alleged to have been stolen from the Free Public Library;—I do not suggest anything in the shape of saying that you did not come by it in a businesslike manner, but did you submit a book of that kind to Mr. Anderson at any time? I did not do so personally, although I bought several books which I found out afterwards belonged to the Free Public Library.
952. You did not personally have anything to do with the transaction as between Mr. Anderson and your establishment? No.
953. Was there a folio volume amongst any of the books you purchased? Yes.
954. What was it? There was Spenser's "Faerie Queen" and several other volumes of the same size, and some even larger; it was about 18 inches by 13 inches and about 3 inches thick.
955. Then, personally, you did not submit the book to Mr. Anderson? No.
956. Was there any other folio volume? The books I bought from the young man must have been eight or nine; one book, I think, was bigger than the "Faerie Queene."
957. How did you purchase those books? A young man offered them to me for sale. I said to him, "What do you want?" He offered the "Faerie Queen" for 7s. 6d.; another book for 5s. I gave him 15s. or £1 for the first lot of books. I am buying books all day, and there was nothing on the books to show me where they came from; there were no marks of any kind; no stamp of any kind to inform me that they were from any Government institution.
958. At a later period did the knowledge come to you that they were the property of the Free Public Library? Yes; I was the means of discovering the robbery and of putting Detective Brown on the scent, and he captured the man.
959. *Mr. Anderson.*] I think we bought back some of these books from you which had been stolen, and we paid you something? You paid something which was very unsatisfactory to me, and you know that.
960. You were not at all satisfied with what you got? No; when I paid 7s. 6d. for a book you put down 2s. 6d. You said to me, "You are a second-hand bookseller; and I think that is all you would give for the book."
961. Do you remember what we paid for them? No; you ought to have an account of it.
962. *Mr. Meagher.*] You have had a good deal of experience in buying books, and I suppose you know pretty well by the use of a magnifying glass when a man has erased the stamp;—for instance, take the Free Public Library stamp here, do you think that embossed stamp could be taken off without tearing it? No; I would notice it at once.
963. Were any of the pages of the books you bought torn? No.
964. Then it was simply an impossibility to eradicate that stamp? It would be impossible without tearing the leaf, and I would notice that. As a rule, in order to guard against buying any books belonging to the Government, we examine the book carefully. Only the other day I brought three or four books to light; the books which I bought did not bear any stamp at all. We skim a book through when we are about to buy it, especially rare books like those sold to me by that young man.
965. From your experience in purchasing books, do you not think that in the case of a book like Spenser's "Faerie Queen" that, in addition to having a rubber stamp on the internal pages, it should have some stamp on the binding of an indelible nature? It should have been stamped there.
966. *Mr. Price.*] Did you purchase those books in the ordinary way of trade? Yes.

H. J. Blackwood.  
13 Sept., 1900.

H. J.  
Blackwood.  
13 Sept., 1900.

967. Did something lead you to believe that they were Government property? Yes.

968. Was there anything in the books to indicate that fact? Nothing.

969. The inquiry with regard to their being stolen was instituted by you? Yes.

970. So that the Library people knew nothing about the matter until you had spoken to the detectives? They knew nothing about it.

971. You told the police about the matter, and you protected the property of the Government? Yes.

972. That was not done by the Free Library authorities? No; I was the means of finding it out, and I will show the treatment I got from the Government. I never got the money back which I paid for the books. Mr. Anderson would not take my word, and he said I only paid 2s. 6d. for what I paid 7s. 6d.

973. How did you institute the police action? After I purchased the books Angus and Robertson asked me for the "Faerie Queen" on approbation." I said "All right." There was nothing on that book to show it belonged to any institution whatever. They submitted the book to a certain party in Sydney, and while he was overhauling it, it was found out that it belonged to the Free Public Library. I do not know how they found it out.

974. *Mr. Anderson.*] Who was the party? I do not know; it was told to me an hour afterwards that it was believed this book belonged to the Free Public Library. I said, "If that is the case, I will telephone to the police," and Detective Browne was the man I engaged. By making inquiries at the Library, I believe, he found that those books were missing; that is how the robbery was first found out.

975. *Mr. Meagher.*] Is the effect of what you say this: That even the absence of the books was not known until you set the police into action? No; they could not have been missed, otherwise it would have been reported to the police.

976. *Mr. Anderson.*] How do you know it was not reported to the police? I do not know. I said to Detective Browne, "I paid a certain amount of money for these books. Of course, the robbery has been found out, and the man has been captured; now, what about my money?" He said, "I will see Mr. Anderson, and I have no doubt you will get the money." There is a reward of £5 offered by the Free Public Library for the detection of any person stealing books; of that I got £1. £1 went to Angus and Robertson, and, as far as I can learn, £2 of the balance went to the police. I sent in my account to Mr. Anderson; he said, "You never paid that price for these books." I said, "Thank you very much"; he said, "Did you pay 7s. 6d. for the 'Faerie Queen'?" I said, "Yes"; he said, "I do not think you did, you being a second-hand book-dealer. In my opinion you only paid 2s. 6d. for it." I said, "Thank you very much." Then I said, "If you do not give me my money I will put it all in the papers, and show up the whole thing." Mr. Anderson then said, "I tell you what I will do: I will give you a cheque for £1 ls. out of my private purse for you to hold your tongue, and that will be all right." I said, "I do not care a rap where you get the money. I do not care where you are going to get it. I want my money." I ask Mr. Anderson did he give me that cheque?

977. Did I give you any money for those books? I only wish I had kept a record of what money was paid to me. I am doubtful whether I got the money by cheque from Mr. Anderson, although he promised it.

978. Did you sign a voucher for the money paid to you? Yes; the amount of money paid to me for the books, but not the full amount I paid for them.

979. Whatever money was paid to you, you signed the voucher? Of course, I had to. If I could not get my full amount I might as well take something. In the case of the School of Arts, when I discovered books to be stolen they at once gave me my full amount without a word.

980. *Mr. Meagher.*] Is it the common custom of these institutions to give you the full value of the books without question? It has been done in all cases except the Free Public Library. I wasted three days looking for this man at North Shore, and I found that he never lived there. I think my trouble ought to be worth something.

981. *Mr. Price.*] Did you do all this to protect the public interests? Not only in this case, but in half a dozen other cases I have acted in the same way. I was the man who unearthed one of the biggest robberies in Sydney, which occurred in the Lands Department only three months ago.

982. *Mr. Meagher.*] After all your trouble and detective work, and doing a public service, you only got as much as Angus and Robertson got? Yes.

983. What did they do? I submitted this copy of the "Faerie Queene" to them; I do not know whom they took it to, but through their submitting the book to some one we got the first trace of the robbery. It was only through a fluke they found out that that was the case. I do not know what marks might have been in the book. It was announced to me afterwards that they believed that the book came from the Free Public Library, and I put the police on the track.

984. Were you at the police court when the man was convicted? Yes.

985. How was the book identified as being the property of the Free Public Library? I do not know. I have a strong recollection of the head man in the Free Public Library coming down to my place of business and turning up a certain leaf and looking at the binding. I could not distinguish what it was. When I buy a book I cannot go through every leaf, but if it is stamped I can see it.

986. *Mr. Anderson.*] Who paid you that reward of £1? I cannot tell.

987. Would it not be Detective Browne? I believe it was. He offered it to me; I said, "You had better give it to my son Harry; he pointed out the man."

988. Do you know that Detective Browne got the reward, and that he distributed it as he thought fair? I do not know. I think he gave my son £1.

989. You know that I had nothing to do with it? I do not know.

990. If Detective Browne gave you the money it could not have been my allocation? I do not know how it was arranged.

991. *Mr. Meagher.*] I understood you to say that when you went to Mr. Anderson's office, and stated that you would make the whole matter public in the Press, and show how the Library was managed, he said, "I will give you a cheque for a guinea out of my own money if you hold your tongue, and create no more disturbance"? Yes, he said, "I will give you a guinea out of my own private purse, and that will settle matters."

992. *Mr. Anderson.*] Did I give you the guinea? I looked up my books the other day knowing that this meeting was to be held, but at the present time I cannot swear whether you gave it to me or not; I do not believe you gave me that guinea. I was in Angus and Robertson's shop one day, and I met Mr

Andersor

Anderson there; I said to him, "What about that guinea"? He said, "Hold your tongue, I know something about you, you hold your tongue; if you do not I will have you up for receiving stolen property."

H. J.  
Blackwood.  
13 Sept., 1900.

993. *Mr. Price.*] Here is a book containing Kipling's original works; they were published at 4s. 6d., now I find the price is £20 15s.;—do these old editions possess a value quite irrespective of their actual value from a literary point of view? Yes.

994. Might duplicates in a library become of incalculable value after a few years? Yes; when we have four or five copies of a book it makes no difference. I may say that I stated to Mr. Anderson that those books were not stamped, and we had no guide, otherwise we would have held the man; he said, "Very well, I will see that the books are stamped for the future."

995. If the binding of the books had an embossed stamp, would that be comparatively inexpensive if it were not gilt? Yes. The expense would be very little.

996. If you were running a library, would you see that the books were stamped properly on the back and the front? Yes; it would be very cheaply done.

997. Do you know the stamp now used in the Free Public Library? I have not seen it, but I suppose it has the words "Free Public Library" on it.

TUESDAY, 18 SEPTEMBER, 1900.

Present:—

MR. HOGUE,  
MR. MILLARD,

MR. MEAGHER,  
MR. PRICE.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

William Dymock recalled and further examined:—

998. *Mr. Meagher.*] When you gave evidence before you named a list of books which you considered were worth more than 10s.? I think you will find from my evidence that I said they were worth from 5s. to 10s.

W. Dymock.  
18 Sept., 1900.

999. Were some of them worth more than 10s.? Yes.

1000. Can you name a book which was worth more than 10s. which is on the list produced by Mr. Anderson? There is "Histoire de L'Océanie," two volumes, which were worth 15s. It is in French.

1001. *Mr. Anderson*] You referred the other day to a selection of books made for the Botany Municipal Council? Yes.

1002. Do you remember a book on that list named the "Annual Register"? Yes.

1003. How many volumes were there? 140, as far as my memory goes.

1004. What price did you charge on your list for that book? £10. I produce a volume of the work.

1005. Was that the shop price at which it was offered for sale in your shop at that time? No; I think it was offered at £12. I can hardly be sure from memory.

1006. Are you quite sure you offered it to the Botany Council for £10? Yes, as far as my memory goes.

1007. Did you include "Men of Mark" in that list? I cannot tell from memory.

1008. What would be the value of "Men of Mark," two volumes? I should think I could buy it to-day from 15s. to £1.

1009. Did you include the "Picturesque Atlas of Australia" in that list? I cannot tell.

1010. Did you charge shop prices in your list—I mean the prices at which the books were then available in your shop? Yes.

1011. What discount did you allow on the total list of books as submitted? I stated that the total published prices of the books was £500. We offered them for £200, and then allowed a discount of 20 per cent. I have already stated that the books would realise over my counter about £250.

1012. Did you show on your list as submitted to the Municipal Council the shop prices? I told you that I submitted a list of books valued at £500 at the published prices. I said that undoubtedly they would realise £250; but we eventually sold them for £200 at 20 per cent. off what you are pleased to term shop prices.

1013. Did you show the Municipal Council on that list your shop prices? I have told you that I showed them a list of books worth £500 at published prices.

1014. Is the published price any guide whatsoever to your shop prices? Not always; it depends upon the class of books.

1015. Did you tell the Municipal Council that the shop price of the "Annual Register" was £10? I will not say what I told them. I say I sold it at £10.

1016. Did they take it? I refuse to answer the question until I get my books.

1017. Are you aware that the Mayor and the aldermen of the Botany Council were requested to confer with me as to the improvement of the list of books, and to make a final choice? I would say, in reply, did you approach them first?

1018. Are you aware of that? I am not aware that they approached you.

1019. Are you aware that the Minister, on my final report, said that Mr. Dymock and Mr. Dacey, M.P., should be informed that he was of opinion that Mr. Anderson was studying the interests of the Department and of the Botany Council in what he had done? Yes.

1020. Did he send you that intimation? Yes.

1021. Do you recognise the list I produce as the original list which you submitted? Yes; it looks like it.

1022.

- W. Dymock. 1022. What price do you charge, at page 29, for the "Annual Register"? It is simply the "Register" charged at £70.
- 18 Sept., 1900. 1023. What price have you put down to the "Annual Register" on that list? £70. As I said, this list of books was sent out to show the prices of the books when new, but after they went through the books I said, "I am prepared to supply you with the whole lot of books at so much." Then Mr. Anderson, in his statement to the Minister, said that I charged this book at £70, whereas, if it was sold to them, I believe it was charged at £10.
1024. Is there any mention whatsoever of £10 in that list? This is simply what we used to do before your time, when we all had a share, before the list of books was made out by Angus and Robertson. We were asked by the various Councils to submit a list; we would submit a list to them, and the Councils would then select what they considered was the best list of books. This list was sent to the Council as a guide for them to go through. We would say, "There is the published price, but we are willing to supply them on our usual terms." I put in the "Register" at £70; it is a most valuable standard book. I then sold all the books to the Botany Council for £200, after they had made certain changes. I deliberately stated that they reduced the number from 1,400 to 800. That was what we used to do when we all had a chance, not as is done now, when one bookseller makes up a list, and then we are asked to tender on that, as in the case of Annandale and Rookwood. The Minister saw the difficulty we were placed in, and now he has tenders advertised for; but for five years we never had a chance of tendering, until the present Minister took action.
1025. Did I understand you to say that the present Minister instituted any system of advertising for Municipal libraries? The present Minister instructed you to deal with other booksellers, and to give them a chance to tender, and for the first time in five years you asked for tenders from George Robertson & Co., myself, and others.
1026. Do you know that I had absolutely nothing whatever to do with inviting tenders, and that they were invited by the Under Secretary for Public Instruction? I do not know your private business; I am not your private secretary.
1027. *Mr. Meagher.*] Do you say that the communication emanated from the Minister for Public Instruction, or from Mr. Anderson? I can only explain the matter in this way: That I waited on the Minister, Mr. Perry, and pointed out the grievance which the booksellers laboured under—that they had no chance against Angus and Robertson. I instanced the Rookwood Library, and pointed out that there was a book put down in that list at £6 15s., which I was willing to supply at 30s.—that was Carter's "History of Architecture." He said, "I will see that you get a chance of tendering." A list then came to me, but whether it came from the Minister or Mr. Anderson, I am not in a position to say. That was the first time for five years that any bookseller was allowed a chance of tendering for books during Mr. Anderson's career.
1028. *Mr. Anderson.*] Are you aware that I made some suggestions to the Minister on 11th September, 1895, asking him to always call for tenders in these cases? I repeat that I am not your private secretary; you never informed me that you had done so.
1029. Are you aware that the Minister, Mr. Garrard, approved of my suggestion on 11th September, 1895? No.
1030. Did you submit a tender when you were invited to do so for the Rookwood Library? Yes.
1031. Do you remember what your price was for the list of books I submitted to you? No; I will have to consult my head man to ascertain; I daresay it would be 20 per cent. off published prices. The same thing occurred there. A list of books was prepared, and we were not asked to submit a list, as we were in Mr. Walker's time. It was provided by a firm, and we were asked to tender for them. I will bring evidence to show what firm it was.
1032. Do you know that that list of books for the Rookwood Public Library was entirely prepared by myself? I tell you that I do not know what you did.
1033. Have you not just asserted that it was made by a bookseller? I say that we did not get an opportunity; we were asked to tender on a list.
1034. You have just asserted that the list was made by a bookseller in Sydney? Mr. Meagher suggested that I should name the bookseller, but I refused to do so.
1035. Do you think that the selection of books for a Municipal library, which is to be endowed by the State, should be limited to the contents of any one bookseller's shop? Certainly not.
1036. Why, then, do you ask that the bookseller himself should make out the list, as in the old days? Because that gives an opportunity to the people who buy the books to select £10 worth of books at one bookseller's, and £10 worth of books at another bookseller's. A list of books might be made up by one individual who might be radically inclined or religiously inclined, which might not be suitable for a Municipal library.
1037. Do you know that the list of books is invariably considered and approved by the Municipal Council before it is submitted to the Minister? That is since your time. I know that the Council must approve of the list of books.
1038. Is not the list of books eventually their choice? That used to be the case; I do not know what it has been during the last five years.
1039. Do you consider that it is a wise thing for the Municipal Council to choose the best lists of books to suit themselves, and then for the Department which administer the vote to invite tenders, and get the best possible terms? I consider that the best way is for the Department first of all to consult the booksellers, or anyone they like, and make up a list to get the approval of the Minister, and then apply for the best tenders. That is all that I want.
1040. Would you be quite satisfied if that was carried out? Yes.
1041. Was that carried out in the last case in which you were concerned, as far as you know? Yes; in the last case, on account of my going to Mr. Perry, and showing him the injustice we were suffering under; but these are the only two cases in which it was done since 1895.
1042. If my suggestion of 1895 covered the ground which you have indicated, are you of opinion that I have done my duty? No; because we have never had an opportunity of tendering for these books, and you have been paying more than you should have paid. If you undertook this work it was your duty to get books as cheaply as you could, and not at one bookseller's.
1043. If the Department has to call for tenders according to regulations approved of by the Minister, can I have possibly interfered with it? I do not know anything about Departmental matters.

1044. *Mr. Meagher.*] Do you say that before 1895 you had a fair field and no favour, but that since 1895 there has been a mysterious monopoly? Yes, until the matter was laid before the Minister rather forcibly. One list was made, and it contained the books in Angus and Robertson's shop—that is the Annandale Library. I swear that it was made out from the books in Angus and Robertson's shop. Mr. Anderson says that he made up that list; but I swear that the books were in Angus and Robertson's shop, and one book offered at £6 15s. I was ready to supply at 35s. W. Dymock.  
18 Sept., 1900.
1045. Do you know that the Annandale list was submitted to me for report by the Minister in the ordinary course? I do not know anything about your private matters.
1046. Would you be surprised to know that I altered a great many books in that list, and, as I thought, improved it? I do not know what you did. I have stated that all the books on the last list submitted were in Angus and Robertson's shop. It was a list of books that no one else in Sydney could supply. One book, "The Ancient Architecture of England," was charged at £6 15s. That was in my shop, and I was prepared to supply it at 30s. or 35s. Of course, I do not bind myself to a shilling or a number.
1047. Was the list which you submitted to the Botany Council confined entirely to the books on your shelves? Yes.
1048. Is there any reason why Angus and Robertson should not do what you did? Do Angus and Robertson get a chance of submitting a list?—I do not.
1049. Who invites those tenders? All that I can say is that for five years we never had a tender.
1050. Is there anything in the world to prevent any Municipal Council from inviting a tender from you if they think it worth while? In Mr. Walker's time we had an opportunity of tendering, but for five years afterwards we never had an opportunity. I do not know what the Councils or you are doing.
1051. Are you not aware that the Municipal Councils themselves choose the books and have to certify to the correctness of the list to the Minister? I think that was the case at one time, but I do not know what has been going on for five years.
1052. Did the Annandale Council get a list from you? No; that list was made up, and by mere chance a paragraph appeared in the newspaper that they were going to start a library. I saw the Mayor and one or two members of the Council and got the particulars. I then went to the Minister and explained to him how unjust it was to the other booksellers that £200 was to be given away to a particular firm of booksellers without even a tender being called. The thing would have been done in the same way as all these libraries have been supplied for five years if I had not gone to the Minister.
1053. Did you submit a tender for the Annandale Library? Yes; but it was useless to submit it at the time, because the list was completed, and every book in that list was in Angus and Robertson's shop.
1054. Who finally settled the choice of those books? I know that Angus and Robertson's got the order.
1055. *Mr. Millard.*] To whom did you tender? To the Municipal Council.
1056. Did you get any information that the tender was refused or accepted? That it was refused.
1057. You got that from the Council? Yes.
1058. *Mr. Hogue.*] Mr. Anderson asked you if the Council settled the matter? Yes.
1059. *Mr. Price.*] Why was the tender refused? This was the first tender we had for five years, and it was almost completed when I came in. One or two of the aldermen told me that they were tired of the thing, and they let it go; others were willing that I should get the tender. I will call evidence to show by how many votes I was beaten.
1060. *Mr. Anderson.*] Do you say that you used to sell a good many books to the Library in Mr. Walker's time? Yes.
1061. Used you to sell a good many Australian books? Yes, and others.
1062. Do you remember selling a copy of Gould's "Mammals of Australia"? I am not sure.
1063. What would be the value of that book to-day? That is a different thing; that book at that time would be worth, I should think, from £40 to £60. It might be worth more.
1064. What would be the value of it to-day? I would give £25 for it if you brought it to my shop.
1065. Then you think that the value of that class of book has gone down? They have gone down in price; but do not take individual books.
1066. Would it be good policy for me to continue that practice of buying duplicate volumes, which were likely to go down in value? If you knew the books that were going down in value it would be madness for you to do so, but I think it would have been right to continue the practice of duplicating the books.
1067. Would it be wise to buy an odd volume of Gould's "Birds of Australia" in duplicate? If it was a volume about birds in and around Sydney I think you would be justified, but otherwise it would be most idiotic to do so.
1068. Do you know what the vote for books was in 1892, in Mr. Walker's time? No.
1069. Do you know that the vote has been reduced by one-half? No.
1070. Do you know that the total vote for the Library has been reduced by £2,200? Since you have been there my interest in the Library has completely collapsed. I know nothing about it.
1071. Have you lost many books from your own shop? I have lost books.
1072. Did you ever buy back any of your own books which a man stole from your table and sold to you? Yes; it was one of the funniest things ever heard of. I was sitting in my office upstairs, when I was approached by a man very well dressed, who came in and shook hands with me. He said, "Hulloa, Dymock, how are you?" I said, "Sit down." I did not know him. He said, "How is your brother-in-law and sister?" and he mentioned several other relatives, calling them by their Christian names. He asked about Mr. George Kiss, and several other friends; then he said, "You know something about old books, Dymock. What is the value of that?" and he produced one. I said, "That is a Collins; it is worth about £4." He said, "It belongs to my father. What would you give for it?" I said, "From 50s. to £3." He said, "Give me more than that." I said, "No; I have a copy as good as that, and I will sell it for £4." I gave him 50s. for it out of my purse, and then he asked me out to have a drink. Then he pulled out his watch, and said, "I have to go." He went away, and I never found out his name. When I went back, my man asked me, "Did you buy that book?" I replied, "Yes." He said, "But it is your own book"; and it was a fact that I had bought my own book, which the man had taken from the table downstairs.
1073. Did you ever recover any books from Skinner's shop? Yes.
1074. Did you get a search-warrant to have his shop searched? Yes.
1075. Did Skinner or Blackwood pay you a sum of money as compensation? No.

- W. Dymock. 1076. Did he pay you nothing at all for the value of your books? No; I took all my books back. I go a great many.
- 18 Sept., 1900. 1077. As a matter of fact, he was a receiver of stolen property? No; I will not put it in that way. He was not aware that he was a receiver. If he had been, I would have put him in gaol, as I put five others.
1078. Why did you get a search-warrant? Because I wanted to go thoroughly over his place.
1079. Then you evidently suspected him of being a receiver of stolen property? Yes; as buying theft books. I wanted to see every book he had.
1080. Did he pay you nothing at all to hush up the matter? No.
1081. What induced you not to prosecute him? Because, through the evidence he gave me, I was able to trace four or five thieves, and I put them all in gaol. I thought at first that it was a conspiracy; but I found that I could not prove that, and I simply went for the men who were stealing.
1082. Then you suffer from the loss of books as well as the Public Library? A man who runs a shop is bound to lose some goods.
1083. Have you not asserted that the British Museum would not dispose of any books whatever? I refused to answer the question. I do not know what policy the British Museum carries out.
1084. Do you see this book with the British Museum stamp on it—"duplicate for sale"? Yes.
1085. Do you see this book which formerly belonged to the Public Library of the City of Boston, and which is marked "duplicate sold"? Yes; it is dated 1856.
1086. Do you see this book from the Library, University of Melbourne, marked "exchanged from the University of Melbourne"? Yes.
1087. You mentioned in your evidence the other day that, amongst the volumes stolen from us and sold to Skinner was a large folio? I said there was a folio.
1088. Did you hear Mr. Blackwood identify it as Spencer's "Faerie Queen"? No; I did not hear him identify the large folio as the "Faerie Queen."
1089. Do you call this book which I produce a large folio? No; it is a quarto.
1090. Is it not a royal octavo? Yes.
1091. Can it be described as a book 18 in. x 13 in. x 2½ in.? No. Skinner's evidence was that he had bought one book. You suggested the size, and gave the size yourself.
1092. You produced the other day a copy of the impression of our embossed stamp? Yes.
1093. When did you receive that? I suppose about three or four weeks ago—since the 12th July.
1094. Have you any idea who gave it to you? No.
1095. Did you ask anyone to get you a copy of such a thing? You are referring to a private conversation; I was speaking to Mr. Mitchell about it. I had asked a man about it, and he said, "Yes; you can get that easily." If you want to ask anything about a private conversation I had with that gentleman, I am quite willing to go on with it.
1096. Did you ask any person? I asked a man if he could get a copy, and he said, "You can get it easily."
1097. Who was the person? I refuse. It was given in the street casually, and he has left Sydney.
1098. Was he an officer in the Library? No.
1099. Did you understand that he meant that they could be got easily? That is what he said; we were talking about it.
1100. How long ago? Since the 12th July.
1101. Was it then that this person told you that? It was since then that I got the stamp.
1102. Was it since then that this person told you? No, it was a general conversation; he said the stamp could be got. I will not say that he said it could be got easily; he said, "You could get one," and I received one by post.
1103. Did he tell you since the 12th July? It must be. I did not have it in my possession then.
1104. What is your object in refusing to give his name? Because you would not know him if I told you.
1105. You assert that a man, whom I would not know, told you he could easily get a copy of that? He said he would get a copy of it.
1106. Was it after that that you got a copy sent by post? It was after the conversation.
1107. Did you get the two copies, which you produced, sent by post? No.
1108. Where did you get the other one? I took it out of one of your books. I knew that question would be asked. In stamping your books you stamp them right through, and I cut it out. You have been stamping the leaves twice when you thought you were stamping them once.
1109. Would not that be a better precaution? One was not signed. Later on you will find a very valuable book where the same thing has occurred. That shows you what a man could do if he wished to be designful.
1110. You said that you got no invitation to tender for these duplicates? What I said was that all I had was that one of my men told me. We can easily look it up in our letter-book. Every letter is registered. Your letter-book does not prove that I got a copy of that.
1111. Will you swear that you did not get a letter? Wait till I get at my letter-book. I may have been away at the time. I swear that I never saw a letter.
1112. I think you said the other day that you bought a second copy of "Governor King's Standing Orders" for £50? It was either Phillip or King.
1113. What did you mean? The book of which Mr. Mitchell has a duplicate.
1114. From whom did you buy the second copy? From Petherick.
1115. In London? No, in Sydney.
1116. To whom did you sell it? Mr. Mitchell bought it from Petherick after I told him about it.
1117. I understood you to say you bought it for £50? It was bought by Mr. Mitchell for £50. I was simply talking about pamphlets, and how valuable they often became. One copy was bought in a bundle of books at Sir John Hay's sale; the other was bought by Petherick. I was told about it, and I think I told Mr. Mitchell about it. It might be that Mr. Mitchell bought it from the gentleman who spoke to Petherick about it.
1118. Then you did not buy it, and did not sell it at all? No; it never came through my hands.
1119. *Mr. Meagher.*] Did you simply give it as an illustration of the immense value of one pamphlet? Yes.
1120. *Mr. Anderson.*] You said something the other day about withdrawing 150 or 200 books from the duplicates submitted to Angus and Robertson? I never said that.
- 1121.

W. Dymock.

18 Sept., 1900.

1121. I have got it in my notes? You can see my evidence later on.
1122. Can you give any information in regard to that assertion? No.
1123. Did anyone ever mention that to you? Yes.
1124. Who did so? Alexander.
1125. Anyone else? Blackwood told me.
1126. How did he know? I do not know.
1127. Would you take his word? You are asking me, and I tell you.
1128. Did anyone else tell you? No; I do not know personally anything about it.
1129. You mentioned some books of the Wise presentation containing marginal notes;—can you mention the names? No; I said I saw some books containing marginal notes.
1130. What books? You are going to examine the witness, Lennard; he can tell you.
1131. You mentioned something about presentation copies;—can you identify them? There is Dr. Bennett's presentation copy, "The Gatherings of a Naturalist."
1132. You said something about choosing our books at Home;—who could possibly choose books for the New South Wales Public Library in London? It was carried out for many years before you went there, by Trübner, Kegan Paul, and Sampson Low.
1133. Was it a success? As far as I heard from Mr. Walker, he was quite satisfied. As to whether it was a success or not, how could I know? I do not manage the Library.
1134. Do you know that that system was changed by the Trustees while Mr. Walker was a Trustee, in 1894? I am not aware of that. If you put it that it occurred when you went there, I admit the change was made.
1135. Do you know that at that time Mr. Walker was a Trustee of the Library? He was an Honorary Trustee for life.
1136. You referred to some large discounts which were offered by English and American firms, as reported in the Trustees' last report for the year 1899? Yes.
1137. Does not the paragraph clearly show that these discounts were offered in response to an invitation from me to give us some books free for distribution to country libraries? If I see the paragraph I can answer the question. By this letter I understand you sent round begging books, representing yourself as the Librarian of the Free Library. These people knew that the letter came from the Free Public Library of New South Wales—not a charitable library. Under these circumstances they sent you out books for nothing.
1138. How many volumes? I do not see that in the paragraph. Men like Macmillan, in answer to a begging letter, sent books to a wealthy Colony like New South Wales. Then, on the same lay, they offered you discounts ranging from 25 to 60 per cent.
1139. Is it not clearly shown there that these discounts were offered on books for loan to country districts? We are told that a letter was sent by you to the leading British and American publishers. I now see that you mention 992 volumes were sent of very suitable literature for the travelling libraries. You say that they were received from twelve publishers, "Messrs. G. Bell and Sons, the Society for Promoting Christian Knowledge, Blackie and Sons, C. A. Pearson (Limited), Boston Book Company, Religious Tract Society, Routledge and Sons, Kegan Paul, Trench, Trübner, and Co., Williams and Norgate, Blackwood and Sons, Harper and Brothers, Macmillan and Company; while seven others offered handsome discounts, ranging from 25 to 60 per cent. on any of their publications that the Trustees might wish to choose for loan to country students. This generosity will enable the Trustees to equip twenty new boxes with modern high-class literature, which will prove very acceptable to the small country libraries. They will be distinguished by the respective names of the publishers who have so kindly presented them." That was making these boxes an advertising medium.
1140. Does not that paragraph make it quite clear that these books were given simply for distribution on loan to country districts? This paragraph contains the names of the leading publishers, and I had a conversation with the representative in Sydney of one of them, Blackwood and Co. He said, "Good God! Is it possible that our firm would do such a thing? I cannot believe it." I said, "I will show you." He said, "Charity." I refer to Mr. Ferguson.
1141. *Mr. Price.*] Did we send a begging letter? A begging letter was sent to these firms, asking for the books. Then the books were used as an advertising medium.
1142. *Mr. Anderson.*] You can clearly see from the paragraph that we were not offered these percentages for the ordinary books which we buy for our national collection? No; it is a special affair. But when I saw that you got that offer, and that you were only getting 20 per cent. discount from Angus and Robertson, I was induced to ask the question.
1143. Do you remember sending a letter to the Postmaster-General some time ago about our sending books up country? Yes.
1144. Who gave you the letter signed by the Rev. H. W. Hynes? I got it by post anonymously.
1145. How did you receive that envelope attached to it? That was given to me by Mr. Fox.
1146. That was given to you by an officer of the Library? Yes.
1147. He did not give you that letter, or send that letter, as far as you know? No.
1148. Have you any idea who sent that letter? No.
1149. Did you express a wish to get a letter of that sort from any officers? No; but I have been always pleased to get anything about the Free Public Library, and it is known to several.
1150. Then you have let it be known that you were open to receive information about the Free Library that would certainly do it discredit? Certainly not; but ever since about three years ago, when certain accusations were made and repeated at different times, I had taken notice more particularly of anything which I thought was of an unfair nature, or which might lead to an inquiry, which I have been anxious to obtain; but no man could have more sympathetic or honest feeling towards the Free Public Library than I have entertained. Since two men from the Free Public Library waited on me and asked me to perform certain duties, I have received something anonymously, and the stamp of the Free Public Library and a letter on Her Majesty's Service was given to me by Mr. Fox.
1151. Did you keep the envelopes in which you have got these anonymous things? No.]
1152. Do you identify the writing on the envelope? No.
1153. Have you any idea who sent you the letters? No.
1154. Has anyone ever mentioned the matter to you? No.

- W. Dymock. 1155. You cannot help the Committee in any way to discover who sent them to you? No; but in the event of anything else coming, I will keep it and show everything that I may receive.
- 18 Sept., 1900. 1156. You gave some evidence about Casanova's book the other day? Yes.
1157. Have you ever sold a copy of it? No. I would like to point out that a remark was made across the table that Casanova's book was worth £10, and that has appeared in the Press. I did not mean to convey that the copy on the table was worth £40.
1158. Did you ever read any of that book? Yes.
1159. Where? I had extracts of it, and I have had a copy, but not of that edition.
1160. In English? Yes; I have it in my pocket. It has gone forth publicly that I sent a letter to the Postmaster-General unsigned. That letter is signed. I prepared the letter; it was typewritten and sent.
1161. Have you expressed an opinion about the "History of Moll Flanders"? Yes.
1162. Who was the author? Defoe.
1163. What age was he describing in that book? The seventeenth century.
1164. Have you ever sold that book yourself? Yes.
1165. Have you ever sold Bocaccio's "Decameron"? Yes.
1166. Would you sell Casanova's book if you could get a copy? Yes; I would buy it and sell it.
1167. What do you value it at to-day? I would give you £10 net for it; but I would not give that for the copy on the table.
1168. What is the market value to-day of this book? It has a kind of notoriety at present. I would give £10 for a copy.
1169. What is the market value of it in London? I have looked it up, and I notice a copy brought £6 10s. That is in "Book Prices Current"; but that is misleading, because you do not know the condition it was in.
1170. Did you say something about Whites "Memoirs," for a copy of which you offered £12 12s.? Yes.
1171. Are you aware that that book can be got from Edwards, the London bookseller, from 25s. up to £3? I am aware of that; but you could not get this special copy.
1172. What is the great value of this special copy? It is a very early copy—original boards, uncut, and autograph writing in it.
1173. Whose autograph is it? I imagine it is Surgeon White's own copy.
1174. Is it not the writing of the publishers who sent him a copy of his own work? I should not think so.

WEDNESDAY, 19 SEPTEMBER, 1900.

Present:—

MR. HOGUE,  
MR. MILLARD,

MR. MEAGHER,  
MR. PRICE.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.  
Mr. William Dymock appeared on his own behalf.

William Dymock, bookseller, recalled and further examined:—

- W. Dymock. 1175. *Mr. Anderson.*] Did you produce a book yesterday consisting of extracts from Casanova's book, and have you it here to-day? No.
- 19 Sept., 1900. 1176. Where did you get that from? I do not know.
1177. Is it a book that you have in your shop? It is a book that I have not sold. It is a private book; it is not in my stock. It is my private property.
1178. Do you know where you bought it? No.
1179. How long have you had it? I do not know. I have been a bookseller for twenty-two years, and how do I know.
1180. Have you sold a copy of that book? Not to my knowledge.
1181. You bought that book for your own private use? I do not say that I bought the book.
1182. Does it belong to your own private collection? It belongs to my private collection. That is not saying that I would not sell it if I got a price for it.
1183. What do you value it at? 10s. 6d.
1184. Would you compare a book of that sort, which is evidently composed of extracts of the vile parts of the Memoirs, with the original work? I judge from that book what the original work must be like.
1185. From these extracts? Yes.
1186. You would judge the character of the twelve volumes of the original work by these extracts, which are everyone of them of a very low character? It must be a very bad book when they could get extracts of that kind from it.
1187. Would you judge Shakespeare in the same way? No.
1188. Why not? Because I have a better knowledge of Shakespeare than I have of Casanova. One is a well-known classic that every man should read; the other is one that a man might live a lifetime and never hear of.
1189. Why should you judge one book according to small extracts, and not the other in the same way? Casanova is known to be a roué, a rake, a prisoner, a thief, according to history. The other I know to be the greatest shining light of English literature.
1190. You mentioned something about "De Quiros' Voyages," and you gave that as an illustration of the value of books? Yes.
1191. Are you aware that is the only copy of that book in the world? No; it is the only copy I know of.
1192. Does not that give a really unique value to that book? Yes; that shows that we do not know how valuable a book may become.
1193. Does that apply to pamphlets many copies of which are in existence? Many copies of the work you mention were once in existence, and it has now become valuable because a great many have been destroyed.
- 1194.

1194. You said in your evidence that George Robertson & Co. offered in a tender to take off 25 per cent. for all books? You see the evidence. I have their tender here. W. Dymock.

1195. Is that correct? I am not an encyclopædia—I cannot carry everything in my head. I have read already the following reply which I received from Robertson & Co.—“Dear Sir, replying to your inquiry, *re* Free Public Library tender, we beg to say that after due deliberation we have decided to furnish you with the required information, viz.:—That on 17th October, 1894, we tendered to supply ordinary English publications to the Free Public Library at a discount of 25 per cent. off published prices. We were not successful in our tender, and have no doubt some other firm offered better terms and secured the contract. Yours, &c., George Robertson & Co.” 19 Sept., 1900.

1196. Your evidence was that they offered to take 25 per cent. off all books. That letter says they will give a discount of 25 per cent. on ordinary publications? —

1197. I must ask your protection, Mr. Chairman, when all my answers are misconstrued or misstated. Did I not hand in George Robertson & Co.’s tender. How could I say it was on all and net books in the tender? I will likely be asked about net books.

1198. In your answer, No. 664, you say, “Under these circumstances George Robertson & Co., sent in a tender taking 25 per cent. off all books, but they were not successful”;—will you explain that? No. I ask is it usual that before evidence is printed Mr. Anderson can go through it?

1199. As a matter of fact, do you admit that in their tender they give varying discounts, and in some cases charge a commission on the business? I know that this was the tender which was sent in by George Robertson & Co. When I wrote to them and asked for a copy, that document which I have just read was what I received.

1200. Is that a copy of their tender? It is a forgery if it is not. That is a copy of the tender which I received, when I wrote to George Robertson & Co. for it.

1201. In that tender do you still assert that they give a discount of 25 per cent. off all books that we should purchase? I did not. All I know is that George Robertson & Co. have offered a discount of 25 per cent. off the published prices of all ordinary English publications.

1202. You have already given evidence that you joined them in that tender, and guaranteed them against any loss? I told them if the tender was accepted, and that if they lost by it, I would pay the loss.

1203. Do you recognise this as the tender from that firm? No; I never saw that in conjunction with them.

1204. The tender is as follows:—

George Robertson and Company, Melbourne, Sydney, Adelaide, Brisbane, and London.

Dear Sir,

Sydney, 17 October, 1894.

According to your instructions, we beg to submit the following terms for supply of books:—

1. (a) English publications obtained to order—25 per cent. off published prices, except net books; net books, 5 per cent. off published prices.

(b) Colonial publications obtained to order—10 per cent. commission on cost.

2. English publications, at agents’ risk—20 per cent. off published prices, except net books; net books, 2½ per cent. off published prices.

3. Secondhand books—15 per cent. on cost.

4. American and foreign publications—15 per cent. off published prices.

5. Magazines, periodicals, and newspapers—Published prices net.

All the above to be delivered carriage free to the Library.

In tendering for this business we desire to call your attention to the special facilities we have over all other Australian houses for the conduct of such, which we tabulate on the following sheet:—

1. We have our own establishment in London, and employ there a manager and several hands, each told off to a separate duty. For example, one man for the new books, one man for the magazines, &c., one man for the special orders and secondhand books.

2. We have agencies in America and on the Continent of Europe.

3. We have separate establishments in Melbourne, Adelaide, and Brisbane, and travellers in New Zealand and Tasmania.

4. We are one of the oldest-established firms in Australia, and have had a long and successful experience in library work. We may mention that although not holding the agency for the Melbourne Public Library, their account with us for books supplied from stock and by indent is a large one.

Hoping to be the successful tenderers.

We are, &c.,

GEO. ROBERTSON & CO.

(per GEO. W. ROBERTSON).

H. C. L. Anderson, Esq., Chief Librarian, Free Public Library.

You see that in that tender they only give 25 per cent. on one limited class of our business? That is the only way in which they could do it. They could not give 25 per cent. off net books.

1205. Then it was not correct that they offered 25 per cent. off all our books? I never stated all.

1206. *Mr. Millard.*] I think Mr. Dymock’s object was to prove that George Robertson & Co.’s offer was more advantageous than that which was accepted? No; I waited on Mr. Anderson, and he put such obstacles in the way by saying that we would have to import all books for the inspection of the Library, and things of that description, that I wrote a letter saying that it would be impossible. I then saw it was impossible for me to tender. I saw George Robertson & Co., and had a chat over the matter. I told them it would be no good tendering for the Free Public Library, that Angus and Robertson would get it.

1207. What was the object of your evidence;—was it not to show that that offer was more advantageous than the one which was accepted by the Library authorities? Yes.

1208. *Mr. Meagher.*] Will you define what net books are? They are books which are published at what they call net prices—that is to say, a stamp of 3s. 6d. is put on the book, and that is the cost of the book. That is what a bookseller has to pay for them.

1209. If I were to use this expression, that I would supply ordinary English publications for the Library, with a discount of 25 per cent., would you consider that there would be a reservation in regard to net books? Certainly.

1210. *Chairman.*] Would not the circumstance be mentioned in the case of net books;—is it not mentioned in the tender that has just been read, and is not a reference made distinctly to net books, as distinguished from books on which 25 per cent. is to be allowed? Off ordinary books, booksellers are allowed 33½ per cent.—that is, for ordinary publications; but in the case of a book published at net price, say at 4s., the bookseller gets what he likes for it; but he must pay the publisher, generally speaking, the exact price marked on it.

1211-2. *Mr. Price.*] As a matter of fact, is it not a practice of trade, not only in the bookselling, but in all other trades, that lists are furnished with certain designations, such as “f.o.b” or “c.i.f.,” and in the case of quotations on lists net goods are always excluded? Tenders like that submitted would not include net books. It is a trade practice.

1213.

- W. Dymock. 1213. *Mr. Meagher.*] Between two booksellers, you would understand that fact without mentioning it;—if I were secretary to a library, and you were giving me an estimate of the cost, you would set out the meaning of net books, as far as the price was concerned; but if you were communicating with, say, Angus and Robertson, would you require to do that? No.
1214. This tender of George Robertson & Co. says 25 per cent., except net books, 5 per cent.? Yes.
1215. The expression is, "We tendered to supply ordinary English publications to the Free Public Library at a discount of 25 per cent. off published prices"? Yes.
1216. That letter being from one bookseller to another, there was no necessity to put in anything about net books? No.
1217. Therefore, do you see any discrepancy whatever between that tender of 1894 and the other communication to you in 1900? No. We are talking of books. Mr. Anderson is now bringing in magazines, and things of that sort. That tender of George Robertson & Co. was 25 per cent. off all ordinary books; but when the bookseller has to pay full prices for net books, no one could expect to get 25 per cent. off them.
1218. Your answer is, that there is no discrepancy? Yes. This tender of Robertson & Co. which has been handed in is a detailed tender. I did not know it was coming on, otherwise I would have obtained a copy of it. Their offer was 25 per cent. off ordinary English publications. If books were published in Switzerland, a bookseller would expect to get more for them than if they were published in England. The tender would embrace 25 per cent. off every book ordinarily published, and excepting net books.
1219. *Mr. Hogue.*] Then your statement that George Robertson & Co. tendered 25 per cent. discount on all books must be taken with a qualification? I did not use the word "all." It would be impossible to do that on all books.
1220. Under these circumstances, George Robertson & Co. sent in a tender, taking 25 per cent. off all books, and they were not successful; that makes all the difference;—must that be taken with some qualification? That must be taken with the qualification that it was covered by the tender of George Robertson & Co. which was submitted.
1221. With the qualification which you have explained? Yes.
1222. *Mr. Meagher.*] And with regard to people in the trade, you would not need any explanation? No; men acquainted with books would not need that explanation.
1223. *Mr. Millard.*] Do you withdraw this statement with reference to Robertson & Co.'s tender, to the effect that they offered to supply these books at a 25 per cent. discount upon all books? I do not withdraw the statement; I withdraw the word "all";—and the words should be there, "Supply ordinary English publications."
1224. Is it not a fact that, as a consequence of the withdrawal and alteration of your evidence the other day, that you destroy this tender of George Robertson & Co.'s as a comparison against the other one—absolutely destroy it for use as a comparison? No; not unless the other tender is put in. That statement of mine stands good, because it is effected by the letter that Mr. Anderson wrote to the Minister, and he says that Angus and Robertson undertook to do our work and give discounts varying from 15 to 20 per cent. Mr. Anderson might have been speaking of ordinary books when he made that statement; because it stands to reason that Angus and Robertson cannot allow him 12 per cent. to 20 per cent. off net books.
1225. You answer, "No, it does not destroy the value of the comparison with the other one";—does it not modify it, in a great measure? No, not at all.
1226. *Chairman.*] Assuming that an order was given for a number of books to any bookseller in town, would it be possible to allow 25 per cent. off ordinary English publications? No; because, in talking generally of discounts, net books are altogether exempt. There are only a few firms which publish net books.
1227. I mean ordinary English publications? It would be 25 per cent. off.
1228. Would it be possible to allow 25 per cent. off ordinary English books? No.
1229. Would it be impossible, or would it be a bad bargain on the part of a bookseller, to allow 25 per cent. discount off ordinary English literature? The answer to that is that, speaking as a bookseller, I could not do it. I would lose by it.
1230. *Mr. Meagher.*] The only reason you did that was to test the Chief Librarian as to the way in which he supported Angus and Robertson? Yes; that is why George Robertson & Co. objected to send in a tender, and I said, "If you get it I will pay you the loss." The reason why net books were brought out was that lots of publishers got into the habit of clapping 6s. on to a book, and letting it go out to various booksellers with an offer of 50 per cent. off that price. It is only done by one or two firms, such as McMillan & Co. Kipling's poems would be published at net price—that is to say, booksellers would have to pay what is marked on the book; but on all ordinary books he gets 33½ per cent. discount.
1231. *Mr. Hogue.*] This explanation which you have given as to the discount with regard to ordinary English literature and net books are recognised practices of the booksellers' or publishers' trade? Yes.
1232. Is it what you might call a trick of the trade? No; it is done to get over the tricks of the trade.
1233. Well, it is a practice of the bookselling or publishing trade, but you would not call it a trick of the trade? Yes.
1234. Is it a fact that the general public are not intimate with this practice? All book-buyers know it; all book-dealers know it.
1235. Would those who purchase books for libraries be conversant with the practice? They would be made conversant with it if they were not.
1236. The whole strength of your complaint is that you, as the head of a bookselling firm, and other booksellers in Sydney, have not had fair play from the Public Library? Yes.
1237. That one firm in Sydney has been favoured by the Free Public Library? That is what I am trying to ferret out now. Yes; that is my complaint.
1238. Have you ever made any complaint to that effect? Certainly. I made it to you when you were Minister.
1239. Do you attribute that to the Principal Librarian? As far as my knowledge goes.
1240. Have you any reason to suppose that the Trustees have any interest in favouring one bookseller more than another? I believe the Trustees in Mr. Walker's time would be greatly guided by the Librarian.
1241. Is that the case now? I do not know; I simply state what has taken place.

1242. You attribute it all to Mr. Anderson's influence? I certainly think Mr. Anderson could have given the booksellers a better chance if he wished. W. Dymock.

1243. The grounds on which you have made this complaint and have come to this conclusion are those generally stated in your evidence? Yes. 19 Sept., 1900.

1244. Have you any further evidence to offer in support of that contention? I will do so further on.

1245. *Mr. Anderson.*] Having seen the tender of George Robertson & Co. now for the first time, will you explain how it was that you let that firm send in a tender on which you were going to pay the loss without even seeing it? The tender is exactly the same as what they showed me—25 per cent. off published prices.

1246. You see there that they charge 15 per cent. commission on some of our business? That is not ordinary English literature.

1247. Do you see there that they charge 15 per cent. commission on some of our business? Yes.

1248. You see that they charge 10 per cent. commission on an important part of our business? Yes; that has nothing to do with their tender at all, that I produce.

1249. Would not these little commissions and variations in percentages modify the tender very much? I cannot say until I see the tender, but no bookseller could tender in any other way. A bookseller cannot pay net prices for books and allow 25 per cent off.

1250. Were not the tenders based on my specifications as sent to each tenderer? I do not know—let me see the tender.

1251. Did you make a tender yourself? No.

1252. Do you recognise this tender as being received at the time appointed from your firm? I do not recognise this as a tender.

1253. The document is as follows:—

Dear Sir,

Book Arcade, 428, George-street, Sydney, 18 October, 1894.

I duly received your favour of 11th instant, and while thanking you for your consideration of myself in this matter, I fail to see how any colonial bookseller could possibly carry out your wishes so as to give entire satisfaction. I will take the liberty of pointing out a few of the difficulties that present themselves to my mind.

*Re clause 1.*

(a) Almost all publishers give different terms and discounts.

(b) Books subscribed for in London are offered at greater inducements than when ordered from the colonies.

(c) Many books that might be ordered for on account of the Trustees might, by the time the order reached England, be out of print, and thus command a higher price than when published, and might even be unobtainable.

*Re clause 2.*

The difficulty would be to know what your Library already contains, as you have no catalogue up to date, and then again the great risk that would be incurred by having books left on hand that would prove unsaleable.

*Re clause 3.*

All second-hand books ordered by the Trustees, and provided they be obtainable when the order reached England, I would be willing to supply at 10 per cent. on cost.

*Re clauses 4 and 5.*

The same difficulty occurs here as I have already pointed out in reference to clause 1.

In my foregoing remarks I have only enumerated a very few of the many obstacles in the way of tendering, and I regard it as almost impossible for the Australian bookseller to compete against the London houses, no matter how good a representative he may have in England.

If the Trustees would be willing, I would undertake to do the whole of their business, allowing them all discounts, and exhibiting to them all original invoices and documents, for a commission to myself of 10 per cent., and would also undertake to import all standard works as published at my own risk, and allow the Trustees first selection on these terms.

Yours, &c.,

WILLIAM DYMCK.

H. C. L. Anderson, Esq., Free Public Library, Macquarie-street.

Did you send that in reply to my letter of 11th October, which I will put in, a copy of which was sent to George Robertson & Co., and other booksellers in Sydney;—

It is as follows:—

(Copy.)

Gentlemen,

Free Public Library, 11 October, 1894.

I have the honor, by direction of the Board of Trustees, to invite from you, in common with seven other firms of booksellers in Sydney, a tender for the agency of this Library, to be delivered to me before noon on the 18th instant.

The tender should indicate as from 1st January, 1895:—

1. The discount to be allowed on all British publications obtained to our order, delivered carriage free to this Library.

2. The discount to be allowed on all British or other publications imported at agents' risk, and submitted to this Library on approval.

3. The terms on which second-hand books would be secured from any part of the world to the Library's order.

4. The discount to be allowed on (a) American; (b) other foreign publications (new) from publisher's prices.

5. The terms for all magazines, periodicals, and newspapers, for which the Library may wish to subscribe.

The Trustees would expect a deal of personal attention to be devoted to our particular business, especially in the direction of keeping the Library well supplied with the standard publications and works of reference, that it aims at receiving, and I would therefore suggest that you make yourselves acquainted with our general requirements before submitting a tender.

I shall be happy to give any information you may require.

I have, &c.,

HENRY C. L. ANDERSON,

Principal Librarian.

Messrs. Turner and Henderson, 16, Hunter-street.

Copies of this invitation were also sent to the following booksellers:—

George Robertson & Company.

William Maddock.

E. A. Petherick.

W. Dymock.

Eyre and Spottiswoode.

Edwards, Dunlop, & Company.

Angus and Robertson.

was your tender sent in response to that letter? Yes.

1254-5. Are you aware that three other firms besides yourself sent in an answer? Yes.

1256. Are you aware that they made no difficulty about the matter, and submitted tenders in accordance with the specification? No.

1257. Do you see that George Robertson & Co. tendered and made no difficulty, the tender being exactly according to specifications? I noticed that they did,

1258.

- W. Dymock. 1258. You state in your evidence that all the 140 volumes produced by you bear the stamp as having been sold by the Free Public Library, have you verified the statement that there are 140 volumes? When we counted them here, my man stated there were 140, but you have stated 124, but I am not responsible since this room was left open, and the books left around.
1259. Do you insinuate? I insinuate nothing. I stated it that day. You and others have had access to the books. Let me count my books now, and look at them, and I will tell you; but I cannot say what happened since they were handled by others.
1260. Will you swear that there were not fifteen books there without the stamp of the Free Public Library on them? I will not swear anything in regard to these books until I can overhaul them again.
1261. You would like to revise your evidence on that point? No; I will not revise my evidence; but I will not be responsible for anything with regard to these books now.
1262. Will you look at those books in a parcel tied up with string? Yes; the "Annual Register" was brought up to show you what that book was like. These books have evidently been sent up here. They do not bear your stamp; but that is carried out by other books. I say that some of the books may not have been stamped. I do not know them.
1263. Will you swear that those fifteen volumes bear the stamp of the Free Public Library? They have not got it.
1264. Will you swear that they were ever in the Free Public Library? I do not know that.
1265. Why did you bring these fifteen volumes amongst the others? I do not know. I can explain this in one moment. These fourteen books now on the table were in my office, and you know how quickly I sent down the order for them. The boy has evidently taken them up. I appeal to the Chair. Did I go over the books individually. There are now 124 other books.
1266. Are you sure about 124? I do not know what is here now. Those fifteen books, so far as my knowledge goes, are not Library books. These books were sent up by mistake.
1267. In answer 667, Mr. Dymock says, "I have purchased about 130 or 140 volumes";—do you now admit that the number of volumes once belonging to the Public Library, as produced here, is 108? There are over 100 books lying on the floor here.
1268. Are you aware that a number of these volumes are odd volumes? No; there might be five of them, but I have not gone through them particularly.
1269. You said, in answer to question 681, "By selling the duplicates which the Trustees had accumulated for so many years, the Library is now left with only one volumes";—Can you prove that statement? I went on the statement made by you, that you sold all duplicates.
1270. When did I make that statement? You said the duplicates had been all sold.
1271. Where did I say that? By the assertion always appearing in the papers that duplicates were taking up room, and, therefore, were sold.
1272. *Mr. Hogue.*] Therefore, it is not of your own knowledge? Yes.
1273. *Mr. Anderson.*] Are you aware that we kept a duplicate, and in many cases a triplicate of works that we considered of value? No.
1274. Was that stated in the Answers to Questions asked in the House at the time of this trouble? I do not know.
1275. You testified that I spent a quarter of an hour in looking over a book that some person brought to me to be valued, and that Mr. Gifford spent three-quarters of an hour;—have you any authority for that, or is it hearsay? Yes; I will produce the witness.
1276. Can you imagine that any person would take three-quarters of an hour to find out the value of a book? I do; I have taken a day.
1277. Referring to that letter of 5th October, 1895, did you ever see my first report to the Minister on your selection of books for the Botany Council? I was not in the Minister's confidence, and I have never seen any of his private correspondence. No, I did not see it—it was never printed; it is a private letter from Mr. Anderson to the Minister.
1278. No; it is an official report? Well, I never saw it. Mr. Anderson wrote a private letter to the Minister, and he wishes to know if I have seen it.
1279. Is it not a fact that you saw a subsequent report of mine to the Minister? No. This report which you have produced in evidence is all that I have seen.
1280. I ask, did you see a subsequent report of mine to the Minister? No.
1281. Have you not produced a copy of that report here? I saw this one which is in evidence. I do not know how many letters you have written to the Minister.
1282. Did you not get a copy of a report of the 5th September, 1895? Yes; here it is.
1283. Was that sent at my own request? I do not know. Mr. Anderson says I received one, when I did not receive any; this report of 5th September, 1895, is in answer to a deputation to the Minister. Mr. Anderson here refers to some other report of which I know nothing.
1284. Do you remember that, at the deputation to the Minister one of the deputation made use of the expression, "college-bred men"? No.
1285. Do you understand that my remark in my subsequent report produced here is really an allusion to this remark by one of the deputation? No.
1286. In your letter of the 5th October, which you produced, you say, "Mr. Anderson's accusation that he has thrown out the worthless rubbish is in the same bad taste as his declaration that none of these books are suited for college-bred men. I do not know that the people of Botany claim to be college-bred"? Yes.
1287. Are you aware that that expression was used by a member of the deputation, and was, therefore, quoted by me in inverted commas in my report? All I know is what is in the letter to me.
1288. You said in answer to Question 695 that no one went to your shop to inspect the late Dr. Bennett's books in the name of the Free Public Library? That you did not, as far as my memory serves me.
1289. You said that no one went there? No; I was most explicit, because I said no one officially came there.
1290. The question was, "Did anyone come from the Free Public Library to inspect them"? and your answer was, "Not in the name of the Free Public Library"? That is my answer. Not officially.
1291. Are you aware that I sent the officer next in rank to myself to inspect them? No.

1292. Do you know on what date I took up my position as Public Librarian;—you know it was 1st W. Dymock. September, 1893? It is in the evidence; whatever you say I take for granted.
1293. Are you aware that I only made a change in the method of doing the business of the Library in 19 Sept., 1900. October, 1894? No; I cannot say from memory.
1294. You know that date by inviting these tenders on behalf of the Trustees? Yes.
1295. Have you any proof whatsoever of your statement that Angus and Robertson have had preferential treatment within a fortnight of my commencing to act in my present position? I will have to look up a letter-book of mine; I can answer that to-morrow.
1296. Have you any proof now? On what date did you write a letter telling me to stop immediately supplying all books, when I told you a number of books had been subscribed for any they would have to go on? That is documentary proof.
1297. Of course, that is after they got the agency you may be sure;—you have made a statement, and you cannot give any proof at once? I will look up the thing.
1298. Can you give me any proof now? Not just now.
1299. Why did you make a statement that you cannot substantiate? I did not say that. I ask the protection of the Chair. It is impossible to carry everything in my head. I have not my books and notes. I have not even got my own evidence.
1300. You have stated that “having obtained a customer for ‘White’s Memoirs’ for eight guineas,”—will you tell us who that customer was? No, I will not give my customers’ names.
1301. In answer to question 781, “When our tenders are overhauled by another firm . . . it gives them a great pull over any local bookseller, who has just made an offer”;—can you prove that statement? I will. I quote from a letter written by Mr. Anderson to the Minister on 5th September, 1895. He says, “I spent several hours in going over the list thoroughly, and then went to Mr. Dymock’s store, where I spent several hours in inspecting the books themselves.” He then says, “I then visited the shop of Messrs. Angus and Robertson, the agents of this Library, who have the only stock of second-hand books that would be likely to contain those on this list. I asked Mr. Robertson for the prices of about twenty of the most expensive books, such as he was then charging to the public.”
1302. Does that justify you in saying that your tender was overhauled by the firm? Certainly.
1303. Because I asked our agents the price of twenty books with the object of checking your prices, you say that your tender was overhauled by a firm? Yes; you say you came to my place and spent several hours—I say only half an hour—and then you go to a rival firm and you check the books by twenty; at the same time you had a list of my prices. That is overhauling my tender.
1304. Do you know I took down with that list of books your shop prices at the same time? I do not know what you did, but I know you went to Angus and Robertson after you had been at my place.
1305. *Mr. Meagher.*] You complain that he went to your rival’s place to sit in judgment upon you? Yes.
1306. *Mr. Anderson.*] Can you give me any proof of that? I do not want better proof than your own handwriting. I did not search for it.
1307. Do you know that they tendered for the same library previous to this? Naturally they would have, and that makes it worse. We all had a chance of tendering in this case.
1308. How could it possibly matter, if they had previously tendered for these books, what they knew about your subsequent prices? Because it was not settled then. I then wrote in October, a month afterwards, these words to the Minister—I am quoting from my letter, dated 5th October, 1895, to show that it was not settled when you took this course—“In conclusion, I beg to say that I am quite willing that any unbiassed judge should inspect these books. I feel certain that the selection made was a good one, and the library suitable for the district, and the prices were fair and reasonable. I appeal to the Minister in confidence to say the act of the Botany Council in purchasing these books is not now to be repudiated after they have been withdrawn from sale for nearly three months’ time.” That was a month after Mr. Anderson had been round showing my prices.
1309. *Mr. Price.*] Was it possible for Angus and Robertson to modify their tender after seeing your tender? Certainly, as far as I know. That shows that the thing was not settled until a month afterwards.
1310. *Mr. Anderson.*] Are you aware that I recommended the Minister to accept your tender, provided it were amended? No; I do not know what you recommended the Minister.
1311. In answer to Question 784, you say, “It can be easily understood what disadvantages local book-sellers labour under when Mr. Anderson can get books as secretary to private individuals”? Yes.
1312. To what do you refer? I refer to your conduct in saying you are private secretary to Mr. Mitchell, and importing books for him.
1313. Is Mr. Mitchell “private individuals”? He is a private individual.
1314. So you refer to the singular number? I refer to your acting in your public capacity as public Librarian and doing work—as you have already stated—to the extent of £2,600 for a private gentleman.
1315. You seem to have a most unfortunate memory; it is not £2,600, it is £2,000? It is the principle I object to.
1316. Is there any other private individual that you refer to? No; not as far as I know. Not so far as I have found out yet. I do not know that either.
1317. Have Mr. Mitchell’s purchases from you gone down during the last few years? Certainly.
1318. How much used he to buy from you per annum? He used to buy various amounts. I could find out by looking at my books.
1319. How much does he purchase from you in a year? Very little; how can he? I am out of Mr. Mitchell’s particular line of business. I have gone into a cheaper class of books.
1320. Do you feel it to be a grievance that you have lost some custom through my acting as secretary for Mr. Mitchell? Not personally to Mr. Mitchell. It is the principle I object to.
1321. You take your stand on general principles? On the principle that you are a highly-paid civil servant, and that you have no right to do private person’s business.
1322. Seeing that Mr. Mitchell has already given us a very large collection of books, and has intimated his intention of bequeathing to us the whole of his library and handsomely endowing it, do you consider that I ought to help him in every way possible to consummate that intention? So long as you do it legitimately, without interfering with legitimate business men.
1323. I suppose you realise that if Mr. Mitchell saves a certain commission every year, he will have so much more to spend on books? I am not here to deal with Mr. Mitchell’s financial affairs. All that  
Mr.

- W. Dymock.** Mr. Mitchell will say will not interfere with his buying books, even if it were £1,000. He is a wealthy gentleman, and I am sure that he is the last man in the world to wish to do the bookselling trade, or any one, any harm. I would prefer not to be examined as regards Mr. Mitchell, because he is a gentleman I have long known, and I have a great respect for. I am sure he does not wish his name to be dragged through this Committee. What I ask on broad grounds is, is it fair and proper that you should do any private gentleman's work? I cannot answer any more questions about Mr. Mitchell.
- 9 Sept., 1900. 1324. *Mr. Meagher.*] I think it is right that you should answer some more;—having known Mr. Mitchell for many years, knowing his character as a philanthropic and big-hearted man, do you think the fact of a salaried public servant doing any work for him free of charge would influence Mr. Mitchell in giving an extra book to the Public Library? No; and it is degrading to him to say so.
1325. *Mr. Price.*] Would he do it for economy—to get books “on the cheap”? No.
1326. *Mr. Anderson.*] Are you aware that he asked me to undertake this work on his behalf? No; I have already said, I am not your private secretary.
1327. Would you assert that I would wish to have all this extra labour unless Mr. Mitchell asked me to undertake it? You seem to like outside work—library conferences and secretary to Mr. Mitchell.
1328. Do you not think it is highly commendable in me to do anything in my power to advance Library work by means of the Library Association, or anything else of that sort? I think you are the paid servant of the public as Librarian, and you ought not to go into trade and other things.
1329. *Mr. Price.*] Do you think it would take a man all his time to carry out the duties of Librarian? There might have been fewer books missed from the Library if he was there more looking after his own work.
1330. Do you say Mr. Anderson interferes too much outside, instead of attending to his work in the Library? Yes.
1331. *Mr. Anderson.*] Will you give me specific examples of what you think outside work? I am not here for that.
1332. I understood you to express the opinion that it is not part of my duties as Public Librarian of New South Wales to help the Library movement by means of the Library Association? No; your duty is what you are paid for as Librarian. You could do lots of things to help literary work outside, but you should stick to your work as Librarian and nothing else.
1333. Would it be a good thing for me to improve knowledge of Library economy in country districts where Librarians have no opportunity of learning that? Your duty is Librarian here—you are not a philanthropist. I only know you as Librarian, for which you receive a salary.
1334. Do you think it would be part of my duties to make a list of standard works of reference, and of general literature, for selection by Municipal Libraries which are being endowed by the State, to aid them in their choice from my experience of books? No, I do not; because I do not think you have had experience sufficient in these libraries to do it.
1335. What libraries? In libraries; you have already stated you do not know the value of books.
1336. Will you produce that? I will produce it. You said, “I do not know the value of books; I am only the custodian of books.”
1337. Do you not know that I said I did not know the price of all books? I would not ask you for the price of all books.
1338. Do you not know that my evidence was that I did not profess to know the prices of all books? I would not ask you such a question.
1339. You say, in answer to Question 797, that no one was allowed to look at the duplicates unless attended by an officer;—will you explain what that means? That was in Mr. Walker's time. When a book was mutilated, and there was only one copy remaining, I was informed by Mr. Walker that he would then only allow a man to look at the book when an officer was there.
1340. You say that no one was allowed to look at a duplicate? I give you my authority. Mr. Walker stated that the duplicates were never taken out unless the man looking at them was attended by an officer.
1341. What do you mean? He had duplicates in reserve, I am led to believe.
1342. Are you quite sure that Mr. Walker kept the duplicates in a reserve or in one lot? Mr. Walker's word is quite sufficient.
1343. *Mr. Meagher.*] You are only speaking of a conversation? Yes.
1344. *Mr. Anderson.*] Will you swear that the duplicates were not intermingled promiscuously with the other books of the Australian collection during the whole history of the Library? I do not know that.
1345. In Question 798, you say that the British Museum keeps more than one copy;—can you prove that? Yes; I can prove that, because I have been in the British Museum, and I have seen duplicates of books there, if my memory serves me.
1346. Can you remember some of the books that you saw duplicates of? No; I was there in 1881. I was collecting Australian books, and I went there frequently. I have also a knowledge of what is stated in some books, and it was in the newspaper on Saturday, that they had requested leave to sell some books.
1347. Had that anything to do with duplicates? Yes, they were talking about selling books.
1348. Can you produce any proof that the British Museum keeps duplicates of books? I will put a note down and see. I have no proof with me.
1349. In answer to Question 812, you say you would willingly give 5s. and 6s. a volume for the volumes you have produced here? I value them at that.
1350. Which do you mean, 5s. or 6s.? I will give 5s. a volume for a lot like that.
1351. Will you be surprised to learn that they can be bought in retail shops for an average of 3s. a volume? I would be surprised to learn that such a collection of books can be bought anywhere. I will give 10s. a volume for a duplicate set of the whole lot, not bearing the Free Public Library stamp.
1352. Then you will be surprised if I show you an English catalogue in which you can buy the whole of them for 3s. a volume? No; there are certain booksellers in London who put books in their catalogue with the object of getting inquiries; but when you send Home, the books are sold, or they will get you another copy. I find frequently that the copy which you do get is terribly mauled, so I do not put any reliance on catalogues. Give me prices current.
1353. Would you not expect to get a book at the price quoted by a respectable London bookseller, if you sent Home for it? Yes, if it was not sold; but I would want to know what sort of copy it was. I know the sort of copy I have here.

1354. Did you ever supply any books to the Library at Bourke? I might have.
1355. Did you supply them with a number of volumes of the "Dublin Medical Journal?" I do not know. It was eight or nine years ago.
1356. Did you receive any copies of the printed evidence given before this Committee some time ago? Yes.
1357. How many copies? One, which I left with Mr. Mitchell to look over.
1358. Who gave you that copy? I sent up to Parliament House, and it was sent to me. I wanted a copy of it, thinking that Mr. Mitchell would take an interest in it. I obtained a copy of it, and left it with Mr. Mitchell.
1359. From whom did you obtain the copy? It was sent by one of the officials of Parliament House. I received a copy from Parliament House. I sent up my man to ask if any of the Committee were here, and he asked for a copy of the evidence? I received a copy of the evidence in an official envelope from Parliament House.
1360. To whom did you send for a copy? I sent my man up here to see if there was any of the Library Committee, or anyone here who could give me a copy. I did not know whom to apply to.
1361. *Chairman.*] Did you understand that it came from Mr. Meagher? I could not swear that it came from him.
1362. *Mr. Meagher.*] As a member of the Committee, as Mr. Dymock wished to have a copy of the evidence I handed it to him? Yes.
1363. *Mr. Anderson.*] Have you paid anyone money for giving evidence or collecting evidence with regard to this matter? Not a penny.
1364. Has anyone offered to give or procure evidence for you for money? No.
1365. Did you engage any private detective to get information about this case? No.
1366. Did any private detective offer to give you evidence with regard to this case? No.
1367. Did you boast to any gentleman in Sydney that a private detective had offered you valuable evidence, and that you had to pay for it? No.
1368. Did you say anything to a gentleman in Sydney about having a private detective engaged, or a private detective offering you any evidence whatever? No.
1369. What officers in my Library, to your knowledge, have given you information to help you in this matter? I suppose there is hardly an officer in your Library who has been of use to me. I have sent up to the Library just as an ordinary man. I have sent up my own men, to ask for books, and see how long they took to look them up in some cases; in other cases, to see if you have books. I have never been there myself. Information which I received in that way I do not know which officer gave it; but if you want to know the name of one officer I did speak to about this Library, it was Mr. Fox.
1370. Has he given you information with regard to the working of the Library? No.
1371. Has he given you private information about the Library? No.
1372. Has any other officer in the Library given you information, besides Mr. Fox, about the working of the Library? No; not about the working of the Library, but about the doings of the Library.
1373. Who? A man named Alexander, and Warden, and a man named Gannon.

W. Dymock.  
19 Sept., 1900.

THURSDAY, 20 SEPTEMBER, 1900.

Present:—

Mr. MEAGHER,  
Mr. PRICE,

Mr. THOMAS.

Mr. MILLARD,  
Mr. QUINN,

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Mr. William Dymock appeared on his own behalf.

William Dymock recalled and further examined:—

1374. *Chairman.*] When you were under examination yesterday you stated that you did not use the word "all" when referring to a tender submitted by G. Robertson & Co., in which it was alleged you said they offered to supply books to the Free Public Library with a discount of 25 per cent. off all books. After having had an opportunity of looking at the official report of your evidence, do you wish to adhere to that statement? I admit that the official report of my evidence on the 13th September, 1900, is correct. I did use the words "all books" when speaking of that tender, but I did not mean in giving that answer to include net books. I referred to all ordinary English publications.

W. Dymock.  
20 Sept., 1900.

1375. *Mr. Anderson.*] In Question 780 you stated that you offered 12 guineas for a copy of "White's Memoirs?" Yes.

1376. Was that for the copy now held by Mr. Lennard? Yes.

1377. Did he ever leave that copy with you? No.

1378. How did your customer make an offer for that book? My customer has so much faith in my knowledge of books that he took my recommendation.

1379. Would he give you that for any particular copy? No; this is a special copy.

1380. Am I to understand that the customer made you an offer which justified you in giving 12 guineas for "White's Memoirs" without ever having seen the book? I have stated so; it was after I told him what a fine copy it was.

1381. Do you know that you can get copies of that book in London from 25s. up to £3 for the very finest copy? No; another thing is that this is a specially fine copy. The book published at 25s. may be an uncoloured copy: this is a coloured copy; this is supposed to be the author's own copy.

1382. Do you think that that would make such an enormous difference in the price? I do.

1383. For example, in a catalogue, the book is described as White's Voyage, coloured plates, Fonthill and Hamilton edition, bound in full Russia, gilt edges, £3 10s.? That does not matter. I wanted this copy which was in Sydney.

1384. What would be the effect of the Library stamp being upon books that were sold? It would lessen their value.

1385.

- W. Dymock. 1385. By how much? According to the stamping of the book, I should say from 20 to 33½ per cent.  
 20 Sept., 1900. 1386. Would not the presence of the embossed stamp on the title page also depreciate the value? I included that.
1387. We should allow that much off prices generally quoted in reputable catalogues of the same books? I do not go with catalogues; the great thing is the condition of the book. I have seen a lot of these books, and I produce them. I know the value of them, but I know nothing of the value of the books on the catalogue which you are quoting from.
1388. But I suppose you would accept the prices given by respectable booksellers? Yes, if it applies to the same copy. I will produce a copy, and let the other bookseller produce a copy. The difference of as much as one eighteenth of an inch on the marginal line of an original folio copy of Shakespeare would make a difference of hundreds of pounds in the price.
1389. Do you assume the condition of all the duplicates from the condition of the 104 volumes which you have produced here? I assume nothing. I only assume what I have here, and what books will be afterwards produced.
1390. Granting that the Library retains at least one or two copies of these books, I suppose it would be likely that, in most cases, they would get rid of the worst copy? That would be the sensible thing to do.
1391. Do you know Edwards, the London bookseller? Yes.
1392. Is he a reputable bookseller, and acknowledged to be an authority on Australian literature? Yes.
1393. Have you bought many Australian books from him? I have had dealings with him.
1394. Did you find that you got the books from him at the price he submitted? If he had them in stock.
1395. Did you get a fair proportion of them from his stock when you ordered them? Yes, with regard to the ordinary books, but frequently the rarer books were gone.
1396. Does he procure those books to your order at a subsequent date, and at the same price? I do not allow him to do that.
1397. Would he do so? I do not know what he would do.
1398. Have you seen his catalogue of last year's date? Yes.
1399. Do you consider the books in that catalogue are honestly and correctly described? Yes.
1400. Would you have complete confidence in his description of the binding and condition of a book? Yes.
1401. Would it be fair to compare the prices at which he would sell books with what we could afford to sell them at in Sydney? No.
1402. Why not? Because he has at times an erroneous opinion about the price of books. He wants higher prices sometimes than they are worth in Sydney, and at other times his prices are lower than what the books are worth in Sydney.
1403. Has he not an opportunity of comparing prices with the best sellers in the world, such as Quaritch, and Sotheran, and others? That is his business, not mine.
1404. Do you not know that he has an opportunity of comparing prices with those famous booksellers? I do not know his business.
1405. With regard to the purchase of a Municipal Library for Annandale, did one of the Aldermen bring a list of books to you to be valued? No; we sent for the list of books.
1406. Did you get it? Yes.
1407. Did you make a compilation of that list of books? Yes.
1408. Whose list of books was it? I cannot swear, but rumour says it was prepared by you from Angus & Robertson's stock.
1409. Did you make another list nearly identical with that? Yes.
1410. Did you submit a price for the whole list? Yes; the reason for making another list was because Angus & Robertson had the only copies of the books in Sydney, and it would be impossible for us to complete the order. Therefore we asked the Minister, with the sanction of the Committee, to submit other books for those which Angus & Robertson only had.
1411. Do you consider that the Municipal Council, in submitting Angus & Robertson's list to you, were hawking it round your shop? No; it was at the request of the Minister.
1412. Have you not just sworn that you saw a list compiled by Angus & Robertson? I did not see the list; we did not see the prices.
1413. How could you see the list without seeing the prices? By a cover being placed over the prices.
1414. Did you not say just now that you sent for this list of books? Certainly; how could we tender unless we sent for a list of the books.
1415. Did I not ask you if an Alderman brought the list, and you said no? We were informed that an Alderman had a list, and that by sending to his office we could get a copy of it.
1416. In what way was that list given to you? We went to the gentleman's office; how could we tender unless we got a list of the books? I sent a clerk for a copy of the list of books, and we were forbidden to see the prices; we did not want to see the prices; he put a cover over the prices.
1417. Who was the gentleman? I. R. Cohen, alderman of Annandale.
1418. Did that gentleman bring a list of books to your office? I have stated that we went to his office.
1419. And he showed you a list submitted already by Angus & Robertson? Yes.
1420. What discount did you offer on the list submitted by you? I would have to look up my books for that?
1421. Did you offer any special cash discount in addition to the ordinary discount shown on the invoice? Mr. Kettlewell can answer that question.
1422. Do I understand that you as proprietor of this business cannot tell the Committee what special offer you made for this lot of books? No; I have got such a large business that I do not know the ins and outs of every order; I have a managing man to help me.
1423. Did you interview aldermen personally about this matter? Yes.
1424. Did you interview them all? No; as many as I could.
1425. Did you inform them that you would give them a special cash discount to the funds of the Municipal Council in addition to the trade discount if you got the order? No; I do not believe I did; but I am not sure of that, because I saw such a lot of them. At any rate, our tender was put in, and I will produce it.
1426. Did you make any special offer? No; as far as my knowledge goes.
1427. Who was the chairman of the book committee at that time? I do not know from memory. Once we lost the order, I lost interest in it.
1428. Do you know as a matter of fact that the Council fully considered your tender together with that of another firm? Yes.

W. Dymock.  
20 Sept., 1900

1429. Do you know that your tender was rejected? I have said so.
1430. Do you know that I was the means of drawing the Council's attention to the fact that they should call for tenders? I do not know your private business.
1431. Have you not just given evidence to the effect that I made that list of books? I said that rumour said you had made it.
1432. Do you consider it is fair to bring forward rumours and hearsay statements to put into sworn evidence? You asked for my reasons and I gave them.
1433. Do you know Alderman Horton, of Annandale? I may know him; I know two or three of them, but I have forgotten their names.
1434. You mentioned a work on architecture? Yes; "Carter's Ancient Architecture."
1435. What was the cost? You charged £6.
1436. What do you mean by saying I charged? It was sold for £6 odd. My price for it was 30s. or 35s.
1437. That was one item, I understand, in a large lot of books numbering about 800? I have taken that book as an instance; if the Chairman wishes it, I can send for my tender.
1438. *Mr. Quinn.*] Who charged £6 odd for the book? Angus and Robertson in their tender. It was a list of books made up and practically sold to the Annandale Library.
1439. *Mr. Anderson.*] How did you know the price of that book? Because I found out afterwards by asking some of the aldermen the prices.
1440. Did they have the prices in their memory? They looked it up for me.
1441. Did you ask them to see twenty books, so that you could have the prices? Mr. Kettlewell, who has that in charge, can be called.
1442. Are you talking from hearsay from Mr. Kettlewell? I am talking about my managing man. He offered me this evidence, but I said "you had better give it yourself."
1443. What evidence? About the Annandale list of books, and the prices and discounts we offered.
1444. What we are talking about now are the prices charged in another firm's tender? Mr. Kettlewell can answer all questions in relation to the Annandale library.
1445. *Chairman.*] Do you know personally anything with reference to the prices charged? No; it is in Mr. Kettlewell's department. I adhere to the evidence I have already given as to "Carter's Architecture."
1446. *Mr. Anderson.*] Do you know of your own knowledge? Yes.
1447. How do you know of your own knowledge? Mr. Kettlewell, my head man, informed me.
1448. Do you mean to say that that is of your own knowledge? That is as far as I can get at it. If you ask me did I handle the book, I will say No.
1449. How many more books did you refer to as being priced more highly on the other list than in yours? Let me have the tender, and I will tell you.
1450. Did you see the copy of "Carter's Architecture" which was offered by the other firm? No.
1451. How do you know that it is of the same quality, and that it is the same copy as yours? Because I know the book; it is just the same as asking me about a copy of any ordinary book. Ours was bound in half morocco, and theirs would not be bound in full morocco.
1452. Did the Committee of the Annandale Council inspect the books offered by you? Ask Mr. Kettlewell; I do not know of my own knowledge.
1453. Have you taken any steps to test the truth of your statements that I made that list of books? I have your own evidence that you went through lists of books of that description.
1454. Do you tell the Committee that that means that I made the list? I said that all the books on that list were at Angus and Robertson's.
1455. Is that the proof you gave that I made up the list? Will you tell me where I said you made it.
1456. Have you found the date of Dr. Norton's letter which you were in doubt about when you were examined before? I was speaking from memory when I gave the date. I find that it was a report of an interview which the *Daily Telegraph* reporter had with different gentlemen, and Dr. Norton's name is mentioned. Dr. Norton is interviewed lower down; but above that it says, "These books would have been burnt if Angus and Robertson had not bought them." The date given me is 3rd July, 1897, but I cannot find the interview in the paper of that date. I will look the matter up.
1457. In Question 831 you say, "I was misled; I thought it was a lot of rubbish that would be disposed of." Did not your officer have every opportunity of seeing how much was rubbish and how much was good stuff? Yes.
1458. Then, if you were misled, were you not misled by your own employee? Yes; I was misled.
1459. Do you remember paying a visit to my office about two years ago, in September, 1898? Yes.
1460. Did you take off your coat and challenge me to fight? No.
1461. Were you not under the influence of drink on that day? No.
1462. Did I send for a policeman to remove you from my office? No; you sent for an official;—the man at the door.
1463. Did you go out with that person, whoever he was? Prior to that you threatened to give me in charge, and I said, "Give me in charge and I will put you in the witness box." Mr. Anderson got up and went out for a man in uniform. Mr. Anderson insinuates that I was drunk. He has full permission to remove any man who is drunk from the Free Library.
1464. Do you know if that was the reason why I sent for a policeman—because you were drunk? No; the reason is that you were so insulting to me that I lost my temper and I said, "If you are a man, put up your fists."
1465. You did challenge me to fight? You asked me did I take my coat off. I did not. I said, "If you are a man, put up your fists."
1466. Did I not ask you not to show your dirty cuffs? No; that would have been a lie if you did.
1467. Was not that the way I chaffed you? No; my linen is always clean. You speak for yourself.
1468. *Mr. Meagher.*] You know the Press are reporting this inquiry? Yes.
1469. You are a well-known business man and an alderman? Yes.
1470. Whatever may be the object of asking you peculiarly insulting questions as to your habits, let me ask you this—Is there a word of truth in the suggestion that on the date of the incident which Mr. Anderson relates took place you were in the Free Library in a state of intoxication? No; the business which took me there was of too serious a nature for me to be in such a state.
1471. Mr. Anderson has attempted to lead the Committee to believe that the reason he sent for a constable was your condition of intoxication. Do you adhere to your statement that the reason he sent for

W. Dymock. for somebody was that you threatened personal chastisement? It was on account of the insulting manner in which I was received by Mr. Anderson when I went to him on public business. If I had been some scoundrel, instead of a citizen, I could not have been more grossly insulted by a public servant.

20 Sept., 1900.

1472. On what day of the week was it? I cannot say from memory.

1473. Could you say that you were attending to your business on that day? Certainly; I was busy the whole morning. It was a very important matter that I went to see Mr. Anderson about. I lost my temper, and I said, "You are a liar to say a thing like that; now, if you are a man, put up your hands." He said, "Get a constable." I said, "Thank you, give me in charge and you are run out of your office."

1474. Did Mr. Anderson during that interview at any time call attention to the fact that you were drunk, and that he would have nothing to do with you? No, a discussion had been going on for some time.

1475. During this interview did Mr. Anderson accuse you of what he has accused you to-day, that is intoxication? No; it is a vile insinuation to make.

1476. *Mr. Anderson.*] Did you come two days running to see me at that time? I only saw you once.

1477. Just think a little bit? I only saw you once.

1478. Did you see me in my office two days running, on Friday and Saturday, in that month and year? To the best of my knowledge I did not. I remember seeing you on that day.

1479. *Chairman.*] Do you recollect whether it was a Friday or Saturday? I cannot say.

1480. *Mr. Meagher.*] What part of the day was it? In the afternoon about 3 o'clock.

1481. *Mr. Quinn.*] Did you go there in connection with the business of the Public Library? It was about a librarian's business.

1482. What was it in connection with? The Library Association. It was my first intention, on seeing Mr. Anderson, to offer a valuable collection of books that I had, so that they might be on exhibition. One word brought on another, and I was almost told that I was an intruder in the Library, although I was willing to offer these valuable books of which no one else had copies. I lost my temper.

1483. Were the books declined by Mr. Anderson? They were never offered afterwards.

1484. That his feelings became so excited that whatever transaction you had with Mr. Anderson it could not be proceeded with? Yes, and we never met again until lately. Mr. Anderson has constituted himself into something or another in connection with the Library Association. People can go and converse with him during his business hours about these private matters while he is paid by the country.

1485. Was this a private matter? That is what I would like to know, whether it is private or public. It is in connection with the Library Association of Australasia.

1486. Did you go to Mr. Anderson to offer some books for exhibition? Yes; and then it got into a personal matter.

1487. Do you complain that for five years books for the Public Libraries have always been bought from one firm? Yes; until the Annandale and Rookwood Libraries were tendered for.

1488. Is this copy of White's Memoirs which you have referred to the author's copy? We have reason to believe that that is the case, but the man who owns the book will produce it.

1489. Would not the fact that this is the author's copy, in the opinion of a bibliophile, increase the value of that book by thousands per cent? The fact of its being the author's copy would increase it very much, but this is a specially fine and very large copy. If, in those days there had been proof copies, this would have been a proof copy. The plates could almost be taken out and framed, they are so beautiful. For instance, it would be impossible to say what would be the value of a book with Kipling's autograph in it.

1490. Or a copy that Kipling had presented to anyone? Yes. If it were a 6s. book it would bring £6. It would be impossible to say what it would be worth.

1491. *Mr. Price.*] You were asked a question the other day with regard to books being disposed of by the British Museum? I have here a copy of a Bill introduced into the British Parliament dealing with that subject, it is as follows:—

A BILL intituled "An Act to authorise the Trustees of the British Museum to deposit copies of local newspapers with local authorities, and to dispose of valueless printed matter."

Be it enacted, &c.:—

1. The Trustees of the British Museum may make and give effect to arrangements with the council of any county or borough (including the town council or borough commissioners of any borough or police borough in Scotland) for placing in the custody of the council copies of any newspaper published in or near the county or borough which have been received by the Trustees since the year one thousand eight hundred and thirty-seven, or which may be hereafter received by them, and every council shall make due provision for the preservation of copies so placed in their custody.

2. The Trustees of the British Museum may, with the approval of the Treasury, make rules respecting the disposal by destruction or otherwise of printed matter deposited in the British Museum which is not of sufficient value to justify its preservation in the Museum.

The rules made under this section, and the power of disposal under rules so made, shall be subject to the conditions applying to the rules which may be made and the power of disposal of documents which may be exercised under section one of the Public Record Office Act, 1877, as amended by the Public Record Office Act, 1898 (being the section set forth in the Schedule to this Act), with the substitution of references to the Trustees for references to the Master of the Rolls, and of references to the British Museum for references to the Public Record Office.

3. This Act may be cited as the British Museum Act, 1900.

#### SCHEDULE.

1. The Master of the Rolls, with the approval of the Commissioners of Her Majesty's Treasury, and such further approval in the case of certain documents as is hereinafter mentioned, may, if he sees fit, from time to time make, and when made revoke, add to, and vary, rules respecting the disposal by destruction or otherwise of documents which are deposited in or can be removed to the Public Record Office, and which are not of sufficient public value to justify their preservation in the Public Record Office.

Such rules shall:—

(1) So far as they relate to documents of any court mentioned in section three of the Public Record Office Act, 1838, be made with the further approval of the Lord High Chancellor of Great Britain; and

(2.) So far as they relate to documents removed, or about to be removed to the Public Record Office from the office of one of Her Majesty's Principal Secretaries of State, or other Department of the Government (except the Treasury), be made with the further approval of such Secretary of State, or head of such Department.

Before the power of disposal given by this section shall be exercised as to any documents, the Master of the Rolls shall cause a schedule to be prepared of the documents for the time being proposed to be disposed of, containing a list of the documents, and such particulars as to their character and contents as may be calculated to enable the Houses of Parliament to judge of the expediency of disposing of such documents in the proposed manner; but where there shall be several documents of the same class or description, it shall be sufficient to classify them, as far as practicable, according to their nature and contents, instead of specifying each document separately, and the power of disposal given by this section shall not be exercised in respect of any documents until the schedule relating to such documents before required has been submitted to both Houses of Parliament for a period of not less than four weeks.

No

No rule made in pursuance of this section shall provide for the disposal of any document of older date than the year W. Dymock.  
one thousand six hundred and sixty.

Every rule made in pursuance of this section shall be laid before both Houses of Parliament, and when the same has  
lain not less than nine weeks before both Houses of Parliament it shall be lawful for Her Majesty, by Order in Council, to  
declare her approbation of the rule, or any part of the rule, from which rule or part Her Majesty has not been prayed by an  
address of either House of Parliament to withhold her approbation. 20 Sept., 1900.

Every such rule, when approved by Order in Council, shall be deemed to have been within the powers of this Act and  
duly made, and shall while in force have effect as if it were enacted by Parliament.

In the House of Lords, the following speeches were made on that Bill:—

VISCOUNT PEEL:—My Lords, I rise to ask your Lordships to read a second time a Bill promoted by the Trustees of the  
British Museum, in the interests, I hope, of that great institution. \* \* \* \* \* I will  
give your Lordships an idea of the class of matter to which the power to destroy would apply, and it will be seen that it is  
such matter as can be of no conceivable value to anybody or to any institution. The following is a description of the classes  
of useless printed matter which it is proposed to destroy:—

1. Wall-diaries and books of blank forms, such as washing-books, household and trade account-books, &c.
2. Wall-sheets of texts, alphabets or elementary instruction, and blank register and other forms for use in elementary schools.
3. Trade advertisements (excepting those which are well illustrated, or which may be useful as showing the progress of  
manufactures, machinery, &c.).
4. Christmas, birthday and similar cards and coloured texts. (Some publishers supply these mounted in bound volumes,  
which will sufficiently show the nature of these cards and the progress of printing in colours.)
5. Children's toy-books, packets of games, boxes of alphabets, &c. (The larger and better coloured children's books are  
catalogued and placed on the shelves.)
6. Single sheet and small miscellaneous religious tracts. (All tracts issued in series which can be catalogued together and  
bound in volumes are kept.)
7. Single sheet songs, ballads and hymns. (All those by known writers or of any interest, historical, political, or literary,  
are catalogued and placed on the shelves.)
8. Duplicates of single volumes, odd parts of periodicals or broken sets, together with duplicates of books complete, but so  
valueless that no library would accept them as a gift.

Some trade advertisements would illustrate the trade of the day, and be a valuable record, perhaps for some future  
historian in dealing with that particular item of history. Of course, those advertisements would be preserved. The bill  
provides that in the case of matter to be destroyed the same rule and process should be followed as is followed in the Public  
Record Office Act, 1877, as amended by the Public Record Office Act, 1898. It is proposed that the rules should be laid  
before Parliament for nine weeks; and when the schedules of printed matter proposed to be destroyed have been prepared  
they are to be laid on the Table of both Houses of Parliament for another four weeks. With that precaution I cannot  
conceive that there can be much danger of the destruction of any printed matter. The question will not be left to any single  
authority in the British Museum. The Chief Librarian will not be able from time to time to destroy any printed matter. It  
will all be done methodically and regularly, say once a year. The Chief Librarian would schedule in a list the matter which  
it was proposed to destroy, and if the sanction of the Trustees was obtained to this destruction the schedule of these papers  
would have to be laid on the Table of Parliament for four weeks. I have explained the two objects of this Bill, and if it is  
passed into law Parliament will be doing three very good deeds—it will be encouraging local antiquarian and historical  
research, it will be paying a proper compliment to those great institutions, the county councils and the municipal corporations,  
and it will, at the same time prevent the British Museum from being suffocated by the accumulation of its own material.

The LORD CHANCELLOR (The Earl of Halsbury): My Lords, I do not wish to object to the Third Reading, but I think  
that there are points with regard to the Bill which will deserve consideration in another place. I can testify to the difficulty,  
growing year by year, which the Trustees of the British Museum have in dealing with such things as railway guides and other  
matter which nobody can possibly suggest will be of any historical value, and which it is desirable to get rid of. At the same  
time, if the Bill is passed in its present shape, serious questions may arise as to what is of historical importance, and I am  
under the impression that the Bill does not sufficiently provide for giving Parliament the opportunity of determining what  
shall be destroyed and what shall be kept. A difficulty has occurred to me with regard to the form of the Schedule, and I  
confess I regret that those who are responsible for it have observed the practice, most mischievous in our legislation, of  
legislating by reference, and not making the Schedule applicable to the matter in hand. While I have no desire to hamper  
the progress of the Bill, I do not think it is sufficiently provided that the Parliament should have the power of selecting what  
documents should be destroyed and what should not. Of course, what is proposed is that the Schedule of the documents to  
be disposed of shall be laid before both Houses of Parliament, but there is no power of selection given to Parliament. I have  
suggested to the Right Rev. Prelate, who has moved the Third Reading on behalf of the noble Viscount (Viscount Peel), that  
those who have charge of the Bill in another place should have their attention directed to that part of the machinery, so that  
the necessary precautions may be taken to give Parliament the power of disapproving of the destruction of one or more classes  
of documents, and of allowing the order to proceed with regard to the rest. The Right Rev. Prelate has promised that that  
shall be done, and therefore I shall not oppose the Third Reading of the Bill.

Are you aware that that Bill was shelved in the English Parliament? Yes; that shows that they would  
not even let these books and papers go out of the British Museum.

1492. Are you aware that the British Museum have no authority to dispose of or sell books? I cannot  
say, but what you have quoted supports the very thing that I have been fighting for. The Parliament of  
England will not allow even advertisements to go out of the British Museum, yet our Government allow  
5,000 volumes to be sold, many of them being valuable historical books.

1493. Had those 5,000 volumes been scheduled and submitted by public tender to the booksellers of  
Sydney, would there have been a fair amount of competition for them? Yes; not only booksellers but  
dealers would have gone in for them, especially as the Free Library did not want money for them but  
books in exchange.

1494. If the disposal of the 5,000 volumes had been properly advertised in the press and a tender accepted  
in a proper way, would a larger amount of money have been obtained? I certainly think so. Even if  
they had been sold by public auction before an inference was sent out that they were incomplete, I would  
have given more for them.

1495. What would have been the cost of making out a list of those 5,000 volumes for public information?  
I would undertake to catalogue the whole list in a fortnight.

1496. What would be the cost? £15; I would do it willingly for that sum, that is to make a list suitable  
for that business.

1497. An alternative offer was made by Angus & Robertson of £219 cash for the books, or to exchange  
books of the value of about £300. As a bookseller, would you consider that it would be more beneficial  
to you to give books in exchange from your stock than to pay cash for the books? It would be more  
beneficial to give books in exchange.

1498. *Chairman.* I have been glancing through the evidence which has been given by a couple of men  
connected with the Free Public Library. It was stated in evidence that I was sent for as a J.P. to witness  
their signatures; I want that matter to be put perfectly clear. Do you recollect the evening when that  
statement was witnessed by me in one of the Minister's rooms? Yes; it was on the 12th July.

1499. Did you meet me for the first time on that occasion? Yes; that is the first time I ever knew you.

1500. Are you aware that I was sent for on that occasion? Yes, you were sent for. You knew nothing  
about it. 1501.

- W. Dymock. 1501. *Mr. Anderson.*] You stated that dealers would have tendered for the 5,000 volumes if they had had an opportunity;—what dealers, do you think, would have tendered for such a large lot of books, worth £219 cash? A lot of men like Graveur, who are always in the habit of buying up what are called job lines. A great deal of what was sold then would have done very well for Paddy's Market. If I went to the sale, one of them would probably come up to me and say, "If you buy that lot, I will give you £5 for all the newspapers." All that was necessary was to have it free and open.
1502. Do you think they would do what you did not see fit to do? I was not going to waste my time when I knew Angus and Robertson were in for it. Once I knew they were in, I knew I was done.
1503. Would you not infer from the beginning that they would be asked to tender, as well as yourself, when you sent up your officer? No. I said to an employee, "Run up and take a look at the books."
1504. In making a list of those books, which you estimated could be done at a cost of £15, do you think it would be fair to make simply a booksellers' list without making frank notes about the deficiencies and mutilations? Certainly, in a case like that.
1505. Would it be right for the Free Public Library, or any public institution, to offer a lot of mutilated and imperfect books without giving the fullest possible information to intending buyers? You could get over that difficulty by saying that they were duplicates of the Free Library, and that they were sold with all faults.
1506. Is not that exactly what we did? No; you never kept a list at all, and you only sent out to three people.
1507. What other second-hand booksellers in Sydney could have dealt with such a lot of stuff? No one knows who is going to buy until goods are publicly offered.
1508. Do you know any others who could have dealt with that class of stuff? Blackwood for instance; then there was Child and several others about town; they might have clubbed together. What I object to is that the books were not advertised for sale. Certainly the valuable books should have been listed.
1509. *Chairman.*] Had you known, as you know now, that, included in the 5,000 volumes, there were a number of works, the titles of which you have given, would you have been prepared to give a higher price than was obtained? Certainly.
1510. Have you any idea of the price which you would have given? If the books were in anything like the condition of the books which I have since succeeded in obtaining, I would have given £300 cash for the books I now know of.
1511. You sent an employee to the Library to have a look at those books? Yes.
1512. If he had given these books close examination, would you have had a better knowledge of their value, and would you in all probability have been able to make a larger offer than Angus and Robertson? Yes, if the matter had been conducted in a business-like manner; but I understood that the books were worth nothing. That was proved by my not going there. If I had had official notice that they contained a number of early Australian books, which is now proved by Mr. Anderson producing a list of 600 standard books, and by my producing over 100 books, I would have looked after the business. Some of these books have been sold at a price as high as £7.
1513. *Mr. Millard.*] How do you reconcile the statement which you now make, that if you had known more of the character of the books, and if more publicity had been given to the matter, you would have gone up and inspected the books, with the other statement which you have made—that you knew it would be waste of time to have anything to do with them, as Angus and Robertson were putting in an offer? I admit that I cannot reconcile the two statements; but I would have adopted the course of inspecting the books if I had known that such a valuable library was to be sold.
1514. You previously said that it was no use going to the Free Library on account of the partisanship of the officials? Yes; but if I had known that it was such a valuable library I would have made a bigger attempt at it. I admit that the two statements are not reconcilable.
1515. *Mr. Meagher.*] If public tenders had been called for, would you have had a better check as to what Angus and Robertson and others tendered, even though you did not get it? Yes; if public tenders had been called for, it would have been a different thing altogether; but when it was done in this manner, I did not think it was worth my while to go through the books. If I had known that the books were so valuable, and if public tenders had been called for, to be opened in the presence of the Trustees, I would have gone in for it. As it was, I thought there was no chance, and I did not trouble.
1516. *Mr. Anderson.*] Would it not have been more prudent for you, as a business man, to have inspected this likely-looking stuff? I might have been busy on that day.
1517. There was a week's grace given, and would it not have been more prudent for you to go up any day in the week? No; I am often asked to look at books at Waverley and other places, and I send my man out to look at them.
1518. *Mr. Meagher.*] As a business man, your attention is attracted by the titles of the books offered, and if you saw that it was a very large collection of Australian literature, you would go to look at it; but knowing that it was only described as a heap of books you did not go? I did not go. I am to blame.
1519. *Mr. Millard.*] Did not someone in your employ inspect the books? No, he did not inspect them; he just went up, and told me that Angus and Robertson were in for them.
1520. He went up for the purpose, but did not inspect? He asked me if he would go up, and I said yes.
1521. *Mr. Anderson.*] You stated, in answer to Question 713, that it would not take more than three days to make a list of the 5,000 books which were sold? Yes; but I was asked a different question to-day by Mr. Price. He asked about a list which would be suitable. If it was simply to write the names of 5,000 books, three days would be sufficient for the work. To-day Mr. Price asked, what would be a fair amount of time to make out a list suitable for people to be guided by in buying the books? I said it would cost £15 to do that. If, however, it was necessary to make out a proper catalogue, showing the mutilations, discrepancies, bindings, sizes, and everything else of that kind, the work would go into months.
1522. Do you realise that, at your rate of cataloguing, a man would have to catalogue 143 books an hour, working seven hours a day, or 125 an hour, working eight hours a day? I do not believe a man could catalogue the books as quickly as that; he ought to do forty an hour listing.

Henry

Henry Charles Lennox Anderson recalled and further examined:—

1533. *Chairman.*] Do you wish to make a statement to the Committee? Yes. In order to remove a deal of misapprehension which exists, or ignorance of the facts which I referred to the other day in no insulting way, as I think you will admit when you have heard my statement, I would like to give the Committee a resumé of one case which has occupied a good deal of attention, viz., the supply of the nucleus of a reference library to the Botany Municipal Council at the Government expense in 1895. I have with me a file of papers connected with the case. On the 10th May, 1895, the Council Clerk of Botany wrote to the Under Secretary of Public Instruction informing him that his Council had established a Free Public Library in the Borough, and he therefore requested, by direction of the Mayor, that a grant of £200 in books might be made to them in accordance with the Municipalities Act, 1867. On the 1st July, 1895, the Mayor of Botany wrote to the Under Secretary giving a certificate in accordance with the Act that the Free Public Library had been established and was in actual operation in a room at the Council Chambers, and he forwarded therewith a list of the books which they proposed to purchase. That paper was minuted to the Principal Librarian by the Under Secretary on the 10th July, 1895; I presented my report on that list of books on the 15th July, 1895, and returned it to the Under Secretary; that is the list of books which is already in evidence. My report was as follows:—

H. C. L.  
Anderson.  
20 Sept., 1900.

Papers 95/37141, Department of Public Instruction. Free Public Library, Sydney, 15th July, 1895.  
Re list of books submitted by Botany Municipal Council.

THE list of books submitted for Minister's approval is a very poor one, quite unworthy of selection for a Reference Library. The books have evidently been chosen on a wrong principle, having been selected from the stock of a bookseller instead of being first chosen as the very best possible for the district, and then ordered from the bookseller, irrespective of his stock of old friends that must be cleared out, even at 70 per cent. discount on published prices.

I herewith submit a list (B) of a few of the more expensive items, showing, 1st, the published price, as charged in the invoice; 2nd, the price at which each is now being offered to the general public.

It will be seen therefrom that books which are ostensibly worth £188 8s. 6d. may be bought this minute by a private buyer for £58 6s. 6d., and allowing the usual discount of 20 per cent. for such books, a Public Library could get them for £46 13s. 3d.—a discount of 73½ per cent. on the prices shown in this invoice. Of course, this discount cannot be allowed on the whole of the books chosen by the committee guided by the bookseller, but the gross discount of £255 2s. 5d. on £455 2s. 5d., which = 56 per cent., is far too large to be wholesome. It is not possible to buy first-class modern works of reference and standard books fit for a Library endowed by Government, with more than 20 per cent. discount. The better the class of books the lower the discount allowed. This Library receives about 16½ per cent. discount on all its purchases.

I shall note a few of the most glaring inconsistencies, and indicate which of the books seem to me absolutely unworthy of the Minister's approval:—

- 1. There is no Encyclopædia included.
- 2. While the trashy "Men of Mark" is recommended, there is no Biographical Dictionary of the great men of the world.
- 3. A slang dictionary at £4 4s. is recommended, while no English dictionary is put down, and no French one; the German, Latin, and Italian dictionaries are valued at 3s. 6d. each.
- 4. Two hundred and twenty novels—some of them trash—are chosen, but no works on social questions of modern thought. Seven works on Theosophy and Spiritualism, but not one standard book on the Fundamental Principles of Christianity.

Without wishing to unduly interfere with the list of books which is, ostensibly the choice of the Municipal Council, necessarily limited by the contents of Mr. Dymock's book-store, I recommend that the books marked with blue pencil be disallowed, and that those on List A herewith be substituted therefor,—representing about an equal money value.

H.C.L.A.

Here let me remark that these prices were of course the prices of new books. You might easily get them cheaper, but it would be impossible for me to say what might be the second-hand price of any book at any particular time. I am now about to read Appendix B. The first price given after each book is the invoice price, the second is the shop price. I mean by that the price at which you or I could have bought each book on the day I inspected them at Mr. Dymock's shop. I took down those prices from the information given by an assistant in Mr. Dymock's store. Afterwards I went to the only other store in Sydney that keeps such a stock of second-hand books, and asked the price of twenty books which I have already mentioned as being the most striking items there, I mean striking on account of the tremendous discrepancy

H. C. L.  
Anderson.  
20 Sept., 1900.

discrepancy between invoice price and shop price. I did that, as you will easily understand, to make a comparison, and to see if Mr. Dymock's shop price was a fair one at that date. In my report I stated that they agreed wonderfully well—that is, the shop prices, but not the invoice prices.  
1524. *Mr. Dymock.*] What would I charge you for them? Invoice price.  
1525. How did you have these shop prices on the list? I got the shop prices from a young assistant in Mr. Dymock's establishment, and I jotted them down at the very time I got them. The list is as follows:—

What flabbergasted me was the item *Annual Register*, 120 volumes, £70. I said to the young fellow, "What is the price of this?" I could not find the price inside the volumes. It was a poorly-bound set which had been bought, he informed me, from the library of the late Mr. Street, a well-known citizen. It was not complete up to date. It started about 140 years ago, and it was a work that was absolutely unnecessary in a small Municipal library. We have it in our large Library, and it is not consulted on an average more than twice a year. It is only consulted by ourselves when we want to look up some important political event which cannot otherwise be found, but it is a clumsy book even for our Library. I said to this young gentleman, "What is the price of this book?" He said, "It is marked £12; you can have it for £10." He had not the slightest idea who I was, and he did not find out for half an hour. I merely told him I was waiting for Mr. Dymock, and I asked him to let me look over the books.  
1526. Is your Library still subscribing to the *Annual Register*? Yes; if it is still going on. I may now go on with my *resumé*. On the 21st August, 1895, the Council Clerk wrote asking that the matter might be settled, and the books granted and made available for public use. On the 30th August, 1895, a deputation from the Municipal Council at Botany waited upon the Minister to object to the alleged treatment of Mr. Dymock, bookseller, a tenderer for the books he referred to. The deputation consisted of Mr. McGowen, M.L.A., Mr. Dacey, M.L.A., the Mayor, Alderman Luland, and Mr. William Dymock. At the deputation Mr. Dymock made a number of statements which are contradicted by the minutes of the Under Secretary on the margin of this report. I was not present at the deputation or I should have at once put things straight, but upon the report from the shorthand notes of the officer who was in attendance the Under Secretary has written minutes. Mr. Dymock said that he and other booksellers were asked to tender for the supply of books to the Municipal library at Botany. The Council accepted his tender, and the Mayor, Mr. McFadyen, and Mr. Luland were appointed to make a selection of the books they required. Mr. Maynard, the Under Secretary, writes: "They were not asked by this Department to tender," which they should have been. The next note is: "They had no power to accept unless they were prepared to pay from their own funds. The Government only grants an aid on approved books." "According to these papers," says Mr. Dymock, "it was shown he was charging the Botany Council £188 8s. 6d. for books which could be purchased for £46 13s. 3d.; and that he had reason to believe that Mr. Anderson had suppressed or withheld from the Minister's knowledge that he was allowing the Council a discount amounting to £255, which fact was stated in his letter of the 26th June last to the Botany Council." The Under Secretary writes this minute: "Fully stated by Mr. Anderson, with the remark that it is too large a discount to be wholesome." Mr. Dymock goes on to say, "He did not care whether he received the order or not, but his business reputation was at stake, and he demanded some explanation why such a misrepresentation was made to the Minister." The Under Secretary puts a note of interrogation opposite the word "misrepresentation." Mr. Dymock goes on to say, "He had been in business

business for twenty years, and it was the first time he had such an experience. Upwards of £500 worth of books were selected, and he offered the lot for £200. He had good reason to believe that it was Mr. Anderson who misrepresented this matter. It was not shown that the Council was to get £255 discount." The Under Secretary again marks a note of interrogation to the word "misrepresented," and puts "Yes" opposite this last statement. Mr. Dymock goes on, "He felt his position in the matter very keenly." Then Mr. McFadyen said that they had been guided in their selection by the wants of the people—they were of the labouring class; and if the gentleman who made the selection on behalf of the Department thought they wanted books to suit college-bred people, he made a mistake. This was referred to me for a report. I then submitted a report on September 5th, 1895, which is already in evidence. The last paragraph of that report, which is not in evidence, is as follows:—"I would respectfully ask that the Minister would be pleased to convey to Mr. McGowen and Mr. Dymock the gist of my report, in order to prevent any misconception, and also to indicate on these papers his own opinion of my line of action." I did not act in any secret way; I am not built that way. As a matter of fact, I had nothing to be ashamed of, and I asked that my report should be sent to the gentlemen concerned; there was nothing private to the Minister. The Minister wrote this minute: "Let the substance of this report be furnished to Mr. Dymock and Mr. Dacey, M.P., and inform them that I am of opinion that Mr. Anderson was studying the interests of the Department and of the Botany Council in what he has done.—J.G., 12/9/95." On the 13th September, a resolution of the Botany Council was forwarded by the Council Clerk to this effect: "That a communication be forwarded to the Hon. the Minister for Education, respectfully requesting an early settlement in connection with the books for the Public Library which have been selected by the Mayor and Library Committee for a considerable time." On the 5th October, 1895, Mr. Dymock wrote a letter, which is in evidence, dated 5th October, 1895. The following letter had been received from the Municipal Council:—

H. C. L.  
Anderson.  
20 Sept., 1900.

Borough of Botany, 23 September, 1895.

Sir,

We have the honour to acknowledge receipt of yours of the 27th August, and also, in reference to deputation, yours of the 19th instant.

In reply, permit us to express our surprise at the position taken up by the gentleman who in this matter is acting for your Department; and, whilst willing to bow with becoming respect to your final decision, would very respectfully submit—that with the literary assistance at our disposal, as practical men, representative, and knowing the requirements of the district, we were in a specially favourable position to make a selection that would meet the requirements of a working-class population such as ours, and were of the opinion that we were doing a service to the Department, as well as to the district we represent, by giving so much time to the consideration of the books to be included in the list of books in this unfortunate library. We very respectfully submit—that the very report of your officers lends weight to our contention that the list is a good one, Mr. Anderson notwithstanding; and whilst we are quite willing, if Mr. Anderson will point out the volumes he does not approve of, to select others to which no possible objection can be urged, and so bring the matter to a close. We may be pardoned if we point out that we believe we are being dealt with unfairly, and that objection in our case to a course of procedure that let other Library Committees select their own books without hindrance, works of fiction being included in all of the Public Library Catalogues that we can get, seems, to say the least of it, unfair. You remark that Mr. Anderson, in the opinion of Mr. Garrard, was studying the interest of the Department and the Botany Council in what he has done. Possibly the Minister is right, and we have certainly no desire to impute any other motive to that officer; but we certainly think we are, with the assistance we have had, in quite as good a position as Mr. Anderson to judge what, in the circumstances, is a good selection.

As to the quality of any particular volume (literary or scientific), the most eminent authorities are not always agreed.

As to the deceptive way in which the values were shown, we can only say that we were offered, and we believe would receive, the best value from the gentleman whose tender was accepted of the competing firms, viz., Messrs. Turner and Henderson, Angus and Robertson, and W. Dymock. We were, after careful consideration, of the opinion that the latter gentleman's offer was the best, and we have no reason to think differently now, after we have spent much time in the selection.

We very respectfully resent the only inference to be drawn from your officer's remarks, viz., that we were deceived as to the value of the books presented. During our selection we have received every information from Mr. Dymock and his courteous assistants, and we compared values with different firms, in many cases with those of Messrs. Angus and Robertson, with whose prices our experience has shown that Mr. Dymock's compare favourably.

We are not prepared to say that we have made the best possible selection. Doubtless, in the hundreds of books we have selected, there are some that do not meet with the approval of that gentleman; but it was our object to select books that we thought would be of benefit to the people for reading purposes, and not for show. As an authority on values, that gentleman does not compare with men of less pretensions, as witness the following: some of the reference volumes recommended by that gentleman have been offered to us during our selection of prices that are very much below those quoted by Mr. Anderson. To give a few instances—

Farriery, quoted by Mr. A., 42s., offered by Mr. Dymock, 7s. 6d., but declined.

Mulhall's Dictionary, quoted by Mr. A., 31s. 6d., offered by Mr. Dymock, 20s., but declined.

Book of the Dog, quoted by Mr. A., 45s., offered by Mr. Dymock, 21s., but declined.

Beaton's Dictionary, quoted by Mr. A., 30s., offered by Mr. Dymock, 7s. 6d., but declined.

These prices, we were led to understand, were to be subject to the Library discount.

Mr. Anderson also objects to some of the Dictionaries (foreign and otherwise) we had selected; but we are assured by competent authorities that the books we have selected are recommended by the Department and used by students.

With regard to the Encyclopædia Britannica, he recommends we would respectfully point out that the first volume of that publication (last edition) was published in 1875, and is too ponderous and expensive for this Library; but we much favour Chambers' Encyclopædia, which was published some fourteen years later, and is much more suitable to our requirements.

Seeing that there are only a few works that Mr. Anderson has taken exception to outside of fiction (best authors) which is included in every free public library, we believe, in the Colony, whilst we would like to retain, apart from fiction, our list complete, we are perfectly willing to take away any books you may object to, and, after consultation with Mr. Dymock, he is prepared to include up to the value anything you may choose in place of that removed.

We have, &c.,

JAMES J. MACFADYEN, Mayor,  
FRANK J. LULAND, Alderman,

The Under Secretary for Education.

Library Committee of the Botany Borough Council.

This letter was referred to me for report by the Minister on 11th October, 1895, and I wrote this reply, which has not been in evidence:—

Free Public Library, Sydney, 18 October, 1895.

REFERRING, first, to the letter of 23rd September, received by me on 17th October, from the Library Committee of the Botany Council:—

1. The position taken by myself is one dictated by the ruling of Mr. Carruthers, when Minister of Public Instruction, that only works of reference should be bought with Government money, and no works of fiction. If other libraries have got works of fiction with their Government grant, it has been in violation of the Minister's decision, and has certainly not been done since I have been here.

I yield to none in admiration of such works as "George Eliot's," which are valuable alike for their literary merit, their marvellous knowledge of human character, and their historic fidelity; but they are not "works of reference;" but what can be said in favour of Fennimore Cooper's, Mayne Reid's, and Smollett's productions in a municipal reference library? Or how could I approve of little shilling primers as works of reference? The

H. C. L.  
Anderson.  
20 Sept., 1900.

The Committee refer to the literary assistance they have had in selecting these books. One gentleman, who was asked by Mr. Dymock to give an opinion on the books, came to congratulate me on taking a stand against such books being bought with Government money for a suburban library, which rather reminds a Bible student of the parable of Balaam and his ass.

I do not desire to underrate the Committee's literary taste, but I fancy they can have little acquaintance with the great bulk of the 1,300 books chosen by them, and they might give me credit for trying to give them the benefit of twenty-seven years of hard study and rather varied acquaintance with books, knowing that I cannot have any selfish object to serve, while the bookseller is naturally interested in getting rid of his own stock, especially the sort that hangs long on his hands.

Though I did not recommend their excision, there are many books which I think, and I know, may well be replaced. For instance, I read Hugh Miller's works with the deepest interest twenty-five years ago, but who would read them now for their geology, and who, but an old Scotchman, would read them for their local interest? These are charged at £4 18s., equal to 43s. after the average discount of 56 per cent. is allowed. But the Council can buy them for 26s. in the shop—a fair criterion of their value in public taste, and another proof of my assertion that the prices are shown in a way which prevents any one knowing the market value of each book. How would the Library Committee enter the value of each book in their ledger? For example, the "Annual Register," the early volumes of which are much more than a century old, is charged at £70, which, with the average 56 per cent. discount allowed, leaves that work at £30 16s. Yet the price to any ordinary customer is only £12. How can the Committee know the real price of this or any other on the list? I may here remark that the prices of the alternative list submitted by me are for new books and latest editions; if the Committee can get them cheaper, so much the better.

Perhaps I may be pardoned for being unwilling to further occupy my own leisure hours by arguing about these matters.

If the Minister has the least doubt about my judgment, he might ask the Professor of English Literature in Sydney University to advise as to the value of these books for the purposes of a State-endowed public reference library. I shall cheerfully accept the opinion of any unbiassed and capable literary authority chosen by the Minister.

I would respectfully suggest that the Committee be invited to confer with me, and I think that I shall soon show them the sort of books they will be proud to have, even if they do not get 56 per cent. discount on them, and they possibly do not suit the stock of any one bookseller. The result of our conference may safely be presented for the Minister's approval.

With regard to Mr. Dymock's letter of the 5th October, I need make but very few remarks. Mr. Dymock makes several references to "my friends, Messrs. Angus and Robertson," and asserts that "I make no secret of favouring them." In order that there may be no misapprehension, I now state that I have never had any dealings or intercourse whatever with this firm, except in business connected with this Library or my old department. I have never spoken a sentence to Mr. Angus; and I have never had any intercourse with Mr. Robertson outside his shop and this Library. Our business relations are very cordial; I look well after the quality of books supplied and the discounts given, and Mr. Robertson treats us in a way entirely satisfactory. Outside this, I know absolutely nothing of the firm. I have not shown them Mr. Dymock's list; I have never asked their opinion about the Council's choice; nor have I discussed Mr. Dymock's style of doing business. I got the prices of about twenty second-hand books which I could not get elsewhere; if they had been new, I could have more readily got them from our own catalogues. Mr. Dymock admits now, as he also told me, "that he placed the publishing prices" on the books; on page 4, he says the publishing price of the "Annual Register" is £141 15s.; yet his price is plainly £70. He then goes on to say that it was offered to the Council for £10. I must plead inability to understand Mr. Dymock's style of doing business. He plainly shows the price in the list herewith as £70, and there is no word of £10 in the list.

Allowing the average 56 per cent. discount, the price is clearly £30 16s.; while the attendant quoted to me the shop price to the general public as £12.

The phrase "college-bred" men is not mine. It was used twice by members of the deputation, and I quote it, and assert that none of the alternative books suggested by myself are intended for "college-bred" men. I would gladly put in a lot of the best works on Market Gardening, Leather, Manure-making, Perfumery, &c., and leave out a lot of the Poetry and Theosophy.

I would welcome the testimony of two competent literary judges; one of them I have already received, who entertained me with Mr. Dymock's loud-voiced and slanderous talk in the bar of the Royal Hotel, which gave this gentleman the first intimation of the real object of Mr. Dymock's desire for his opinions on a varied lot of books, "which," he asserted, "a Municipal Council wish to purchase." Mr. Dymock's anger may be excused under the circumstances, but I trust he will pardon me and take me back to his favour, when he shall have received the order for a first-class list of *good stock* chosen by the Library Committee and myself in conference. Perhaps he will not give 56 per cent. discount on our list; but the Council will get something more useful than the Annual Register of 120 years ago, and Captain Mayne Reid's Wild Indian yarns.

HENRY C. L. ANDERSON.

On that report the Minister wrote, "Request the Mayor of Botany to kindly confer with Mr. Anderson so that their differences of opinion may, if possible, be reconciled, and I may receive a final list of books for approval, 21/10/95." That was remitted to me with a note that the Mayor was to confer with me. I returned on the 2nd December, 1895, a list of books made by the Library Committee in conjunction with myself. The accompanying letter is as follows:—

HEREWITH I submit for the Minister's approval a list of books chosen by the Library Committee of the Botany Council in conjunction with myself, which I deem fairly suitable for a Municipal Reference Library. To explain the delay that has occurred in dealing with these papers I would report as follows:—

On October 22nd, in accordance with the Minister's minute of October 21st, Mr. Macfadyen waited on me, and we discussed the original list of books submitted by Mr. Dymock, and we agreed on the books that must be omitted. I then prepared a list of the best works of reference available in Great Britain and America on all branches of science and literature, showing the ordinary sale price of each.

On October 25th, Mr. Macfadyen and Alderman Luland, the new Mayor of Botany, came here and very thoroughly discussed the list prepared by me; and we mutually agreed which would be most useful for their special requirements. I then allowed them to take away both lists—Dymock's original one and my own—so that a final one might be made out of the books in both lists considered suitable. The Mayor promised to send this list to me on the following Tuesday, October 29th.

He seems to have then sent the two lists to Mr. Dymock, who compiled a list of books that he could supply from his stock.

Mr. Dymock then inquired if the list was all right now and could be supplied at once. I explained that I had not yet seen the list, and that it must be submitted to the Minister. I received the accompanying list on November 28th, after two special requests. As the original list had not been returned, I had to telegraph for it, and received it this morning.

I have found it impossible to convince His Worship that he must choose the best books possible, without any reference to the special stock of any Sydney bookseller, and that the books must be valuable for reference purposes, and for their educational value, and not merely adapted to the ordinary Lending Library standard.

I believe that under the simple regulations approved by the Minister all similar difficulty will be obviated in future.

If the Minister has determined to give the grant to this Council, I recommend, with due regard to the history of the case, that Mr. Dymock be invited to submit a price for each book on the list and to show the total discount he can allow. A fair shop value is £255, and a fair discount will be £55.

If Mr. Dymock's terms are reasonable, the order might be given to him, with the ordinary precautions as to fulfilment of the order as indicated in the Regulations lately approved.

HENRY C. L. ANDERSON,  
Principal Librarian.

Under Secretary, Department of Public Instruction.

The Minister noted on that "Mr. Anderson's action approved, J.G., 11/12/95." A copy of the list was submitted to Mr. Dymock, and he was asked to submit a price for each book and say what discount he would

would allow. Let me here remark that in my report of September 5th, which is in evidence, I have this paragraph "I have gone into this matter rather fully, because I consider the present method of forming Municipal Reference Libraries is not wholly satisfactory, and I propose to submit in another paper some suggestions for the Minister's consideration." On 11th September, I submitted this report:—

H. C. L.  
Anderson.  
20 Sept., 1900.

Sir,

Free Public Library, Sydney, 11 September, 1895.

I have the honor to submit for the Minister's consideration the enclosed few and simple suggestions, for the more effective administration of the Grants in aid of establishing Municipal Reference Libraries.

The Minister has, during the past year, thought fit to ask me to report on the lists of books submitted by the Hilston, Hurstville, and Botany Councils.

I went over each list very thoroughly, feeling great pleasure in the extra labour thus given me, since I recognise that this is work of great educational value.

I have kept two main principles in view to guide me in my criticisms and recommendations:—

1. That each of these libraries is to be one for reference, not for lending, and is to be the nucleus of a library capable of expansion in future years and suited for the literary, scientific, technical, and industrial wants of all classes.

2. That each book chosen should be the best and latest of its kind, and should be valuable principally—

(a) For its generally utility.

(b) For the special requirements of the district concerned, every consideration being given to the local industries and literary tastes.

I have no desire to unduly magnify my office, nor to interfere with the choice of local authorities, but I shall be happy (1) to give the benefit of our experience in this library to those who may not have the same acquaintance with books; (2) to point out to the Minister any works that the Committee may desire to purchase, which I deem unfit for a reference library, subsidised by the Government.

Regulations for administering the grants to municipal councils for reference libraries.

1. The approval of the Minister for Public Instruction to the proposed grant, and necessary authority for the Library Rules and By-laws, must first be obtained.

2. The council be then invited to submit to the Minister a list of works of reference and standard works on any branch of learning, chosen by themselves. That such list be referred to the Principal Librarian, with power to confer with the Council, with the object of amending and improving the list, if possible, for final approval by the Minister.

Note.—This would save much unnecessary arguing, correspondence, and re-submitting of lists.

3. That the Department then invite tenders from the local booksellers, for the supply of these books as approved.

Note.—This would ensure the Council and the Government best value for their money, and would obviate the danger of bribery by "commissions" on the business.

4. That both Council and bookseller be informed that no subsequent variation must be made in the list as approved, or in the books supplied, without the Minister's sanction.

I have, &c.,

H. C. L. ANDERSON,

Principal Librarian.

The Under Secretary, Department of Public Instruction, Sydney.

On that the Minister wrote: "I approve of Mr. Anderson's suggestions.—J.G., 12/9/95." What more could I have done in my position as an officer entrusted by the Minister with this very important work? Five years ago I did exactly what Mr. Dymock has urged should have been done. It is not my business, and it would be officially very improper for me to let anyone know what I recommended to the Minister. I have never wittingly shown a minute or a report addressed to my Minister to any other person in the world. I know, as an officer, that such a course would be improper, but I am well aware that my Minister may show—and I have myself urged him to show—my reports to those concerned. I would never dream of telling the world what I had done in this matter, but this is what I have done: The Annandale Municipal Council applied for a grant some nine months ago. One day I received a list of books in the same old fashion, submitted to me for my report. I was exceedingly annoyed. I said, "Look at this list of books; it is not the best possible. I shall have to pick out some dear old dead stock that are to be got rid of, and to put in better books." I went over the list very carefully, and recommended the rejection of a number—I can safely say from 60 to 100. I insisted as strongly as I could that they should be replaced by standard works of reference. These works vary from year to year; the best dictionary of five years ago is not the best to-day. For example, I consider the standard dictionary published by Funk and Wagnall, of America, is the most valuable dictionary in the world for the purposes of an ordinary reference library, and I unhesitatingly recommend it. I have it in my office, and I refer to it every day. For technical and scientific terms it is invaluable. I always recommend it; it is better than Webster. I am talking of a small library. The Oxford Dictionary is too large; it costs about £120, and I could not recommend it for a small library. The Century edition is worth about £27. It is the same with Encyclopædias; those of ten years ago may not be suitable for to-day. Mr. Carruthers gave a decision before my time that no fiction should be included in these Municipal libraries. To show that I am not of the rigid literary stamp of librarian, I moved the Minister (Mr. Garrard) to allow me to put in some classic fiction. He said, "I do not think the Government ought to pay for books that are merely entertaining." I said, "George Eliott's works are infinitely more than that; they are philosophical; they are of high literary value. Sir Walter Scott's works are most valuable as teaching history. "Quentin Durward" is the best picture of the time of Louis XI that was ever written. I persuaded the Minister to allow me to permit good classical works of fiction to remain in. The result is that from that time if Sir Walter Scott's, Dickens', Thackeray's, George Eliot's, Kingsley's, and other similar high-class authors' novels were included in a list I did not object to them, but I have objected always to the inclusion of any fiction of a low literary or an ephemeral value.

1527. *Mr. Meagher.*] Would you classify Fielding and Smollett amongst them? No; but you would have to get expurgated editions. There are such editions, and they are beautiful reading. Defoe's "Roxana" and "Moll Flanders" are right enough but for perhaps six sentences, and you would not exclude them any more than "Robinson Crusoe." Even the original "Robinson Crusoe" was rather strong. I would not exclude books unless there was some remarkably good reason. When that list from Annandale was submitted to me by the Minister for my report I protested. I said that this was not fair, and that I thought my regulation should be strictly adhered to; that I should not have these constant references of large lists of books for amendment and improvement, and that the business should be conducted according to the regulations approved by the Minister five years ago. I believe an intimation was sent to the Council that they should invite tenders and get the best value possible. In fact, the Department should have invited tenders. A few months afterwards the Rookwood Council applied for a grant. It came on to me in accordance with my own regulations. I recommended that the Mayor be invited to confer with me to make up a list. The Mayor and Council Clerk came in to see me. The Mayor said, "I know nothing about books; you will do us a great favour if you will make a list yourself." I said, "That is hardly fair; I think you ought to make a list that will suit your local

H. C. I.  
Anderson.  
20 Sept., 1900.

local conditions and I will supplement it with works of reference about which I am really well qualified to give an opinion. I will give you the best dictionaries, encyclopædias, dictionaries of biography, geography, and so on." He said, "Really, I have no time, and none of us have the necessary qualifications." I may say that I spent twenty hours in making a standard list, and I made up my mind that I would have no more of this trouble. I made up a list which should be of use in future years with very little amendment. The list was sent to the Mayor by me. I believe he did not alter a book of it. It was an excellent list of books, from my point of view. I put in all the best works of reference that I could think would be useful to the Rookwood people. As I understood there were a great many University students and Technical College students living in that district who would welcome a reference library, I made it particularly strong in the best text-books. The list was submitted to the Minister for his approval, which he gave. I knew, from my own knowledge, that scores of these books were not in Sydney at the time, because they were American books which might not be much used in New South Wales; for example, I tried to divide the books fairly amongst the different classes of literature. I added what I considered was a fair number on Christianity, and a fair number on other aspects of religious belief, also a good number of works on social economy in all its aspects. I put in many books on aspects of social life, such as Socialism, that I believe many people would think dangerous.

1528. *Chairman.*] As a matter of fact, you were engaged, then, in carrying out a Socialistic experiment? Yes; I am, by nature, a Christian Socialist. I put in a lot of books that older and wiser men have told me were rather dangerous in the present experimental stage of human thought. The Department acted strictly in accordance with my own regulations, approved by the Minister five years ago, and I insisted upon it. Tenders were invited in the same way, and I believe six were received. I made out a list of books of the value, as near as possible, of £200, allowing them a fair discount of 20 per cent. I quite agree with Mr. Dymock that no bookseller can, under ordinary circumstances, give more than 20 per cent. on the class of books which I would pick for a reference library.

1529. *Mr. Dymock.*] That is not net books? Yes; ordinary books. There are very few net books in a case like this; but in the case of ephemeral literature, such as would be found in an ordinary School of Arts lending library, you might get 45 to 60 per cent. discount. Six tenders were received, and I cannot help priding myself on the fact that they were marvellously close to my estimate; George Robertson & Co. sent in a tender for £200 2s. 7d.; Angus & Robertson, £211 9s. 10d.; Wm. Dymock, £226 15s. 3d.; Edwards, Dunlop & Co. offered to at once import the books and deliver them within four months, and charge net cost price plus a ten per cent. commission; Turner & Henderson, £276 2s. 9d. less 15 per cent.; E. W. Cole, £216 13s. The two last tenderers stated that a number of these books were not included in their stock, but they would import and deliver them promptly if their tender were accepted. The tenders were sent to the Rookwood Council and I believe the lowest tender was accepted. The Mayor came to see me after the tenders were received. His difficulty was, that none of the tenderers had the books. I knew perfectly well that that was the case. He said to me, "G. Robertson & Co. have not three-fourths of these books, and Angus and Robertson have not nearly all of them, what are we to do?" I said, "Accept the tender, and give them two months' grace to get the books from Melbourne if possible, or, if necessary, from America and England." Most of the books missing were American. I know nothing further about it, except that I have heard in some way that the lowest tender was accepted, as it should have been. Mr. Dymock, in answer to Q. 817, has given you the prices of a number of books which are contained in a list of works which were originally in our stock, and which were parted with amongst our duplicates in 1897. Let it be clearly understood, that we kept in every case, as far as I know, a copy of each edition of every work, and it stands to reason, that my officers, the assistant librarians, who are keenly zealous, with from fifteen to twenty years' service, naturally having a very deep interest in the welfare of the place, would keep the best copies of the best editions for our own use. They have an intimate knowledge of Australian literature, they have handled the books over and over again, and they know the books by the outside of them: They can tell the colour and binding of our best books, and I am sure they took every care that only the comparatively worthless copies were parted with. Certainly they have kept a copy of each edition of every book of any value, and in many cases, as I have satisfied myself from personal inspection, there are three copies. As far as I know there are two copies of all the books we parted with which are of any value whatsoever. To show that values vary considerably, I will give you a few values of these same books from a catalogue of Edwards, whom we consider the best authority on Australian literature in Great Britain. He issued this catalogue, from which I quote, last year, but he was compiling it when I was in London in 1897, because I had first choice at that time of all his works for our library. He had bought the library of Mr. Henniker Heaton, who was a great collector of Australian literature. He had got together a lot of very good stuff, and I bought everything we had not already in our library. The total of my purchases of Australian literature did not amount to £15, which shows inferentially what a marvellously fine collection we had of Australian books. When this catalogue was issued last year, Mr. Mitchell went over it and picked out a great many books, which he ordered through me, and a great proportion of them was supplied.

1530. What proportion? Nine-tenths, I should think, of what he ordered was supplied. A few rare little pamphlets had gone, because, as we found out afterwards, there was another great collector in England at the time, and he had snapped them up after personal inspection. That catalogue is reckoned by us as a standard. Of the books which I quote, there are frequently five to ten copies shown in the catalogue. The prices vary, as I shall indicate, according to the binding of the book. Some are bound in original cloth, some in the very choicest Russia, with beautiful tooling by some celebrated binder. I now give you the price of Edwards, as contrasted with the prices of Mr. Dymock, given to this Committee. They are all second-hand.

1531. *Mr. Price.*] Does he show the mutilations in a book? Yes. An honest bookseller will always do that. Edwards is a most honest cataloguer in that way. I will put Mr. Dymock's price first. Barrington's "Voyage to Botany Bay," £1, as against 7s. 6d.

1532. *Mr. Dymock.*] Is that copy the two-volume edition? It is the one you gave the price of, only you gave it as the voyage to New South Wales. In nearly every case these books are bound in half-calf or half-morocco. The voyage and the history are sometimes bound in two volumes, but they have nothing to do with each other. Dr. Bennett's "Wanderings in New South Wales," two volumes, 25s., against 11s.; Bligh's "Voyage to the South Seas," 50s., against 24s.; "Bougainville's Voyage," £2 to £4, against £1; Collins' "Account of New South Wales," £2 10s. to £4, against 28s.; "Corbyn's Sydney Revels," 25s., against 4s.; "Memoirs of Holt," £3 to £4, as against 14s. to 16s.; "Darwin's Voyage of the Beagle," £5, as against 12s. 6d. to 63s., according to the edition, 1533.

1533. *Mr. Dymock.*] Quote the edition I quoted ;—that is the four-volume edition ? That is 63s. We sold an incomplete edition, not the complete edition. "History of N.S.W.," 30s., as against 18s.

H. C. L.  
Anderson.

1534. *Mr. Meagher.*] There is nothing in the list to show that the edition you mention is incomplete ? The list shows that we had only one volume ; if there is no number of volumes mentioned, it is at once known that there is only one volume.

20 Sept., 1900.

1535. *Chairman.*] Then, in those cases, where two, three, and four volumes are shown, a work is complete ? Yes ; we would assume it is complete unless there is something to express the opposite.

1536. *Mr. Price.*] I think you swore the other day that you did not inspect those books, and that you made out no list ? My officers knew them well. "Flinder's Voyage to N.S.W.," £3 with atlas, £4 without the atlas ; ours had not the atlas.

1537. *Mr. Dymock.*] Where did you get the three volumes ? Perhaps there were three copies.

1538. If I said I had a copy of "Flinder's Voyage," in three volumes, what would you say as Librarian ? I would say you had not the atlas ; you know it is a rare thing.

1539. There are three volumes, and it did contain the atlas ? The atlas is comparatively rare ; it has, unfortunately, been lost in most copies. We have got three atlases in the Library. Mr. Mitchell had not the atlas until quite recently.

1540. Ninety-nine out of 100 people would tell you that "Flinders," in three volumes, meant it had the atlas ? Then there is "Harris' Settlers and Convicts," £2, against 4s. 6d. ; "Miss Hill's Poems," £1, against 7s. 6d. ; "Kerr's Glimpses of Australian life in Victoria," £2 10s., against 4s.

1541. Do you know that you are quoting two different books—I meant "Kerr's Aborigines" ? That is another book ;—that is by Curr, this is by Kerr. It is an anonymous book ; few people know the author, but we as Librarians know it. This book is in two volumes ; Curr's book is in four volumes. "Kotzebue's Voyage to the South Seas," 45s., against 32s. ; "Mitchell's Expedition to Tropical Australia," 37s. 6d., against 12s. ; Mitchell's three Expeditions into the interior of Eastern Australia," 16s. and 37s., against 14s. ; "Peron's Voyages," £3, against 24s. ; "Tench's Botany Bay," 50s., against 8s. 6d. to 18s.

1542. Do you know what edition ? It is the best, I am sure ; it is the quarto. You can get the octavo for 12s. "Tenison Wood's Geological Observations," 15s., against 6s. ; "Therry's Reminiscences of N.S.W.," 25s., against 13s. ; "Turnbull's Voyage around the World," 37s. 6d., against 16s. to 32s. I just show you these to indicate that there are very great variations in the prices of the same books as given by different persons.

### WEDNESDAY, 26 SEPTEMBER, 1900.

Present:—

MR. JESSEP,  
MR. HOGUE,

MR. MILLARD,  
MR. MEAGHER,

MR. QUINN.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Messrs. H. C. L. Anderson, W. Dymock, and Geo. Robertson (Angus and Robertson) appeared on their own behalf.

Isaiah Reginald Cohen sworn and examined :—

1543. *Chairman.*] What is your occupation ? Accountant, residing at Annandale. I am an alderman of the Annandale Council. I. R. Cohen.

1544. *Mr. Dymock.*] Have you been connected with literature for a number of years ? I was an author at the age of 17 years, and I have been writing since. 26 Sept., 1900.

1545. Are you associated with the Annandale Free Public Library ? Yes, as its Secretary.

1546. Do you remember a purchase of books in the early part of this year for that Institution ? Yes, about March of this year.

1547. Were tenders advertised for books for that Library ? No.

1548. Were tenders called for ? No.

1549. How did you get a list of books for the Institution ? It was suggested by the Library Committee that we should go to Angus and Robertson and make a selection of books there ; one of the aldermen and myself spent the best portion of a day in selecting a certain number of books at Angus and Robertson's, and we instructed them to complete the list with such books as they suggested ; they did so, and sent on the list to the Annandale Library Committee, who in its turn sent it on to the Department of Public Instruction. The Department excised a number of books and returned the list to us, and thereupon a question arose in the committee as to the ultimate selection of the books. A letter from Mr. Dymock to the Mayor of Annandale was placed before my committee asking that he should be afforded an opportunity of tendering for those books ; the committee instructed me to see Mr. Dymock, and I did so with the result that Mr. Dymock furnished me with a list of books containing a number of those approved by the Department of Public Instruction, and substituting those which he had not with other suggested books ; in company with one or two of the aldermen I inspected certain books which were laid out by Mr. Dymock for our inspection, and I submitted a report to my committee on the matter. My report, and I think it was substantiated by one of my colleagues, was that a number of books which we had inspected were cheaper in price from Mr. Dymock than from Angus and Robertson, and the report showed that the difference was from 20 to 25 per cent. in favour of Mr. Dymock. The committee were of opinion that, considering that Angus and Robertson had selected a number of these books, had put them aside and kept them for something like eight months awaiting our decision, and believing that the quality of the books from Angus and Robertson was superior to those from Mr. Dymock, and that they would be better served by giving the order to Angus and Robertson than to Mr. Dymock, decided upon giving the order to Angus and Robertson. I was under a different impression. I only had to consider the question of the people's money, and a motion by me that the order be given to Mr. Dymock found no seconder. The order was accordingly given to Angus and Robertson. I wish to state distinctly that my presence here must not be in any way construed as any reflection on the Public Librarian or Angus and Robertson, from whom we have received every courtesy. 1550. I understood you to say that I was not the successful tenderer, although my prices were 20 per cent. lower than the booksellers who got the contract ? That is the prices in some instances ; certain books had

- I. R. Cohen. had been compared by us—for instance, Dick's "Encyclopædia of Practical Receipts," the same binding and the same edition was invoiced by Mr. Dymock at 16s. and by Angus and Robertson at 25s.—that was afterwards reduced by Angus and Robertson to £1 1s., on my representation that there was a difference. If I remember aright they had made some error in that respect; there was Day's book "The Horse," invoiced price, Angus and Robertson, 16s.; Dymock, 10s. I think there was an apparent difference of 20 to 25 per cent. in the prices of many books. I am not prepared to say the quality was the same, or that the binding and the edition were the same. A great many books were invoiced by Angus and Robertson at 5s. which were invoiced by Dymock at 4s. A number were invoiced by Angus and Robertson at 3s. 6d. which were invoiced by Dymock at 2s. 6d., and so on. We made a report that there was a difference from 20 to 25 per cent. The minute reads as follows:—"The Chairman reported that he, with Aldermen New and Cohen, had inspected books as per lists at Angus and Robertson's and Dymock's, and that the prices of these when compared were from 20 to 25 per cent. in favour of Dymock. He, however, recommended the placing of the books with Angus and Robertson, as he believed he would be better served. The secretary, Mr. Cohen, stated that in four or five cases the comparison showed the same books bindings and editions was a considerable difference in price in favour of Dymock. Alderman New confirmed this; discussion ensued; resolved, that the chairman, secretary, and Alderman New be authorised to close with Angus and Robertson, subject to a revision of prices to the satisfaction of the three gentlemen. An amendment from Alderman Cohen, that the books be purchased from Dymock subject to the approval thereof by the Government, found no seconder." Now I am not prepared to say that, except where compared although there appeared to be a difference, there was not a greater value in Angus and Robertson's books than in Dymock's. I can only speak from what I actually compared.
1551. In the face of what you have asserted, can you state why the committee ignored my offer, although the prices were absolutely in my favour; and, of course, if a book is published at 3s. 6d., the paper and binding must be the same in both cases? There were some instances in which your prices were higher than Angus and Robertson's prices; but, of course, on the whole, they were absolutely in your favour. There were some instances in which your prices were much higher.
1552. Upon the whole they were in my favour? Yes.
1553. I have stated that there was a certain book, named "Carter's Ancient Architecture," in Angus and Robertson's list, and that it was charged in their list at over £6, while in my list it was from 30s. to 35s.—can you corroborate that evidence? No, it is not correct; included in the books excised by the Department was "Carter's Specimens of Ancient Sculpture and Painting."
1554. *Mr. Anderson.*] No; it was "Carter's Architecture"? If that is not the book there was such a book, if I remember aright, excised by the Department, the price of which was £3 odd. I find in the list a book called "Carter's Ancient Architecture of England," illustrated, half morocco, £3 10s. That book was excised by the Department, and was not purchased. Dymock's price for that was £1 10s. I am not prepared to say it is the same book. I do not remember that I ever saw the book.
1555. *Mr. Dymock.*] If it had been an individual purchase instead of a Government contract, would I have obtained that contract, my tender being so much cheaper? If you had asked me I would have given you the contract.
1556. Was it mere sentiment, in your opinion, on the part of the committee that caused them to give this order to Angus and Robertson? In face of the minute I have read I am not prepared to say it was only sentiment. They were evidently under the impression that they would be better served by getting the books from Angus and Robertson.
1557. They gave no reasons for that? Yes; they thought that the binding would be better and that the quality of the books, generally, would be better. What I refer to is the paper, printing, and the binding of the book.
1558. *Mr. Anderson.*] Might Angus and Robertson's books be new while the others were second-hand? I do not think that consideration came up, because Mr. Dymock's offer was to bind in such manner as the committee might deem advisable any books the bindings of which did not commend themselves to the committee.
1559. *Mr. Dymock.*] Did you see those books in my place? I saw a number of books.
1560. Were they in as good condition as the books afterwards purchased from Angus and Robertson? I am not prepared to say that, because, with the exception of a few which I compared, I have no knowledge of the whole of the books.
1561. Have you any knowledge of the Chief Librarian inspecting the books? No.
1562. He did not go and inspect them at all? No; I do not think that was his duty.
1563. Then, in fact, he had nothing to do with them at all? No; except that a letter came from the Department of Public Instruction advising my committee to invite tenders for the books.
1564. Mr. Anderson, in his evidence, stated that it was his duty to see that full value was given for public moneys;—as far as you know, he never inspected these books, and did not go through your prices? No; except that a communication came from the Department that the books had been approved of. The communication from the Department, under date 15th January, 1900, says: "I am directed to acquaint you that the Principal Librarian of the Public Library of New South Wales reports that the books are generally valuable and well worthy of being bought for a small reference library. He has marked with a blue circle the titles of some of the books which, in his opinion, would be less valuable for the circumstances of a suburb like Annandale." Carter's book was thus excised.
1565. *Mr. Anderson.*] I never got a list as far as you are concerned to compare it with the list of any bookseller to see if the prices of Angus and Robertson were correct? I know nothing of that; both my committee and myself were undoubtedly well satisfied with the books I selected.
1566. *Mr. Millard.*] I gather from your evidence that you admit that your comparison of the books offered by Angus and Robertson and Dymock was only very partial? The practical comparison was limited to a very few books.
1567. Do you not think that a partial comparison of the books would probably be very misleading as to their value as a whole? One must see all the books to give an undoubtedly fair estimate of their respective value.
1568. Then, practically, owing to the partial comparison which you made, your opinion as to the relative value of the two offers was of very little use? I am not prepared to say that. It was the value of a number of books which went to show that Mr. Dymock's prices were considerably lower than Angus and Robertson's.

Robertson's. There was the "Men of Letters" series, 10 vols., each of these was invoiced by Angus and Robertson at 3s. 6d.; Dymock's price was 3s. In the aggregate, the difference was considerable. I would assume from the small difference in the prices that there was no difference in the quality of the books; then there were several books of Ruskin's—"A Joy for Ever," "Elements of Drawings," "Time and Tide"; they were all invoiced by Angus and Robertson at 5s. each; Dymock's price was 4s; then there was the Social Science series, 21 vols.—Angus and Robertson's price averaged from 1s. 6d. to 2s. 6d., whilst Dymock's uniform price was 1s. 3d.; that difference in price did not indicate to me that there was any difference in the value of the books. Although I was unable to actually compare all the books, I calculated from these facts that I had arrived at a just conclusion when I stated that the prices given by Mr. Dymock were lower than those of Angus and Robertson. That was absolutely set at rest by the fact that when I compared books of the same number, edition, and binding they were considerably cheaper in price at Dymock's than at Angus and Robertson's.

I. R. Cohen.  
26 Sept., 1900.

1569. *Mr. Dymock.*] When these books were excised from the list was it after the list had been submitted to you? Yes; it was after your list had been submitted.

1570. I understand that when I sent in this tender Carter's book was on this list, and it was only after my tender had been sent in to you that it was rejected by someone? Yes.

1571. Then it would have been necessary for some one to know that another tender was in? No; it was known to the Department of Public Instruction through you.

1572. By my waiting on the Minister? Yes; and the Department accordingly wrote to us on the matter.

1573. After I waited on the Minister this list was evidently revised? First of all we received a letter from Mr. Dymock, addressed to the Library Committee, inviting an inspection of his books—that is dated 14th February, 1900.

1574. Was that when I tendered? You tendered shortly afterwards;—you submitted a list shortly afterwards.

1575. I tendered shortly afterwards, and those books were on that list at the time? I then received from you certain letters which were addressed to you by the Department of Public Instruction dealing with the matter.

1576. *Mr. Meagher.*] Are you a man of literary tastes, and do you go in for writing? Yes.

1577. You are an author? Yes.

1578. Of both prose and poetical works? Yes.

1579. Are you as capable a man to deal with this matter as other aldermen in that Council? Without being deemed egotistical, I think I am.

1580. If you wished to make a differentiation between certain prices given by two publishers you might do it in two ways—you might do it voluntarily and accidentally by putting your hands on some books, or knowing from something you had heard that one offer was cheaper than another, you might pick out books and look at them;—did you make this comparison purely in an accidental way without any suggestion? No; I made the comparison because I considered that inasmuch as I had to give a report to my committee on the difference between the prices of Dymock and Angus and Robertson, it was my duty to make as careful a research as I possibly could.

1581. In making that comparison were you guided solely by your own judgment, or were you influenced by anything? Absolutely by my own judgment.

1582. You practically had no prejudice with regard to either of these gentlemen? Absolutely none. But for the fact of Mr. Dymock's communication coming to the Mayor, by whom it was sent to my committee, the order would have been given to Angus and Robertson with the utmost satisfaction, I presume, to all the parties concerned.

1583. So that in making this comparison, which you say was in favour of one of the tenderers, you were not guided by any prejudice or undue influence in any way? Absolutely none.

1584. You have no prejudice in the matter even now? None whatsoever.

1585. With your experience as a lover of literature and a buyer of books, would you still say, looking back at the whole question, that you would personally, as a business matter, give the order to Mr. Dymock? Yes; that is substantiated by the fact that for the second time, in 13th March, 1900, when a resolution was moved that the order for the books for the library should be placed with Angus and Robertson to-morrow morning, I again moved an amendment that the order should be placed with Mr. Dymock, but it found no seconder. That shows that my impression was that as a matter of business, as a matter of pounds, shillings, and pence, I thought that the money should have been saved.

1586. That is if you were going to add a certain class of books to your own library you would have got them from Mr. Dymock instead of from Angus and Robertson? Yes, with the sum of money at my disposal; it is possible that if I had unlimited means I would want the best bindings; with a limited sum at my disposal I would have placed the order with Mr. Dymock.

1587. *Mr. Hogue.*] Are there any other poets and authors, or persons interested in literature, in the Annandale Council besides yourself? Yes, I think that Mr. Alderman Horton, who is now the chairman of our library, is interested in literature; I also think Alderman New is.

1588. Generally speaking, I suppose, the aldermen of Annandale are fairly well qualified to judge the value of general literature? I do not think so; I think books require some specific knowledge in order to value them.

1589. Do you think there are in the Council men who are not qualified to judge the value of books? I do not put it in that way. I think that some of them are better qualified to judge than others.

1590. Are there any members of the Council who disapproved of the books supplied? With all due respect, you must limit the matter to the committee; the discussions did not take place before the Council.

1591. I will not limit it; I want to know if there are any members in the Council who are dissatisfied with the library as it was eventually selected? Not one; nor am I dissatisfied.

1592. Do you think that the library as selected represents a fair value for the money, and was the price paid for the books fair and reasonable? As far as I am able to judge, I do not think there was a grave difference between the rest of the prices of Angus and Robertson and Dymock other than those compared and marked.

1593. I am not asking for a comparison, but was the price paid for the library fair and reasonable? I am not prepared to say so unless you put a book before me which I know.

1594.

- I. R. Cohen. 1594. Then you did not make a calculation of the value? Yes, with those I had compared, and then taking the lists side by side.
- 26 Sept., 1900. 1595. You did not examine very many of the books yourself? Yes; I spent the best portion of a day in selecting the books at Angus and Robertson's, and I spent a considerable time in inspecting the books at Dymock's.
1596. Generally speaking, in looking at the books did you notice if there were the same editions at both places? Owing to the lapse of time I am only prepared to speak with regard to two books which were exactly the same—that is Day's "Books on the Horse" and Dick's "Encyclopædia of Practical Receipts."
1597. Are you prepared to say that in other cases where there was a difference of price they were the same editions? No.
1598. Take for example, Ruskin's works—would they be the same edition and binding? I only assume they were owing to the closeness of the price.
1599. *Chairman.*] What is your experience as to the extent to which the books in the Free Library at Annandale have been availed of by the general public? Speaking from memory, I should say that the attendance averages about 400 per month.
1600. Then the class of books which have been placed on the shelves were such that the public have made use of them? There is no question of that; they are absolutely pleased with the selection of the books, as I am myself; I speak of the class of books.
1601. When you originally went to Angus and Robertson's was your visit to that establishment suggested in any way by any person? Yes; I think I suggested it myself.
1602. Was there any suggestion from an outside source to that effect as far as you are concerned? None whatsoever.
1603. *Mr. Anderson.*] I understand you to say the Under Secretary for Public Instruction informed you that tenders for your library should be invited? Yes; there is a letter to that effect suggesting that if books were not already selected tenders should be invited; I cannot find the letter at present.
1604. You say that Mr. Dymock wrote to you on 14th February of this year asking for permission to submit a list of books? Yes; he wrote to the Mayor, and that was placed by the Mayor in my hands.
1605. What is the date of the communication from the Department in which they intimated that I had reviewed the list of books and struck out a number of items? 15th January, 1900.
1606. Was that a month before Mr. Dymock had taken any steps towards submitting a list? Yes.
1607. Are you aware that on the list returned to you there were some little blue circles to indicate the books, which, in the opinion of the Principal Librarian, should be omitted? Yes.
1608. To your knowledge was a copy of that list of books which you originally chose given to Mr. Dymock at any time? It was never given to him; what was done was this: Mr. Dymock's employee, in the presence of a clerk, took down a copy of the original list, and every sheet of the list was fastened down; the marks are plainly left where the pins were put in each sheet, so that Mr. Dymock could not learn the price of one of those books.
1609. Where was that done? In my office.
1610. In your presence? During a portion of the time in my presence, and during another portion in the presence of one of the clerks.
1611. By whom was the list made out? It was by someone in the employ of Mr. Dymock.
1612. Have you got a list which Mr. Dymock afterwards submitted to you? Yes; I produce it.
1613. Are you aware that a copy of the original list which you sent to the Department was supplied to Mr. Dymock by an officer in the Department of Public Instruction? No. I know absolutely nothing about that. All I know is that Mr. Dymock sent up his clerk. It is referred to in my minutes; it is stated there that Mr. Dymock took the list, and the precautions I adopted to prevent Mr. Dymock seeing the price of any books from Angus and Robertson's are described because I thought it would be dishonourable to allow Mr. Dymock the slightest opportunity of inspecting any of the prices of Angus and Robertson.
1614. In the list submitted by Mr. Dymock were there a great many of the books identical with those on the original list as chosen by yourself? Yes.
1615. And were some of them left out? Yes; a number which Mr. Dymock did not have in stock, and for which he substituted others, at his own suggestion.
1616. Can you identify the list, showing the original list and the additions as made by Mr. Dymock? Taking the first sheet, there are many of the books here which were suggested by Mr. Dymock by reason of his not having some of them in stock. I assume that is the case with the whole of this list marked in red ink. I have a list which shows his substitutions, and I could easily compare them. I take it that the red ink interlineations in the list produced are the substitutions by Mr. Dymock.
1617. You are quite positive that the first choice at Angus and Robertson's store was made entirely by yourself, aided by some of your aldermen? Quite.
1618. And that no one else—myself, for example—had anything whatsoever to do with that choice, and never had anything to do with it? Until I saw you here to-day, this is my first interview or conversation with you on the question of the Annandale Free Library, or on the question of the selection of the books, or in any way appertaining to the books selected by the Annandale Council.
1619. Were you satisfied with the judiciousness of my excisions from the list as submitted by you? You excised certain books, and I had such implicit faith in your judicious excision that I was perfectly satisfied.
1620. I suppose that you noticed that I excised the expensive and rare books which would not be so useful for a suburban as for a large metropolitan library? That was so, and it was commented upon in a letter from the Department.
1621. *Mr. George Robertson.*] You saw certain books at Mr. Dymock's, and you compared them with the prices in our list? Yes.
1622. How many did you see? I should suppose that I saw between 200 and 300 books.
1623. Which were on our list and in Mr. Dymock's stock? I cannot say without comparing the lists.
1624. How many books that were on the list do you think you saw at Mr. Dymock's store? I cannot say after this lapse of time.

1625. At any rate, you only saw a small proportion of the books on our list at Mr. Dymock's? I am not prepared to say that; we went through a number of books, but how many I cannot say. I. R. Cohen.  
 1626. How long were you there? I suppose the committee were there about half an hour or three-quarters; then, on another occasion, I was there about an hour or one and a half hours. 26 Sept., 1900.  
 1627. How many of the books on our list did you see on Mr. Dymock's? I cannot remember.  
 1628. Did you compare the prices on the second occasion that you were there? Not at Mr. Dymock's place; I did not have your invoice with me; after going back I compared the prices and prepared my report.  
 1629. Seeing that you did not compare all the books, you might not have made a fair comparison? I am quite willing to concede that.  
 1630. You mentioned Dick's "Practical Receipts" which Mr. Dymock offered at 16s.;—is it possible that that was a second-hand copy? No.  
 1631. Then you mentioned Day's "Book on the Racehorse";—do you know there are two books by Day on the racehorse, and that, practically, they are the same size? There is more than one book by Day, but they are different classes of books. I saw the same edition and class of book at Mr. Dymock's that I saw at your place.  
 1632. *Mr. Dymock.*] Could you have seen all the books on my list if you had liked? Yes.  
 1633. Did we offer to show you all the books? All that you had.  
 1634. And were all those you saw in good order and condition? No. There were some second-hand, and your offer was to bind any books which were not bound to the satisfaction of the committee. You undertook to bind them in a way that would be satisfactory.  
 1635. *Mr. Anderson.*] Did you conceive the impression that Mr. Dymock was exceedingly anxious to get this order? Yes.  
 1636. Did he give you any special reason for believing that he was exceedingly anxious to get it? His first letter to us gave us that impression.  
 1637. Did he make any special offer to you that would lead you to suppose that he was very keen about it? Yes; I think the discount was higher than that offered by Angus and Robertson.  
 1638. Did he make you any special offer besides the discount? Yes; there was to be a donation to the funds of the Library.  
 1639. A cash donation? Yes.  
 1640. How much? I think it is in the minute. It is as follows:—"To donate a cheque representing 5 per cent. on £200, being £10 to the funds of the Library, and to take back within three months any book not found suitable for substitution by others; to number books; to supply a catalogue and stamp; to stamp books; to give and mark a book or books for presentation to Alderman Horton." And most of which concessions, with the exception of the donation of the cheque, were likewise granted to us by Angus and Robertson.  
 1641. *Mr. Jessop.*] Did Angus and Robertson also promise this presentation to Mr. Horton? That promise was made through me as secretary to the committee.  
 1642. I understand that you wrote your minutes showing that Mr. Dymock made a certain offer to give a present to some person? No. The terms submitted by Mr. Dymock were these: That he was willing to number books, to supply a catalogue and a stamp to stamp books, to give and mark a book or books for presentation to Alderman Horton, who was the initiator of the movement for establishing the Annandale Free Public Library, and to whom the committee purposed to present a book on the occasion of the opening of the Library.  
 1643. Did Angus and Robertson make the same promise to your committee to present Mr. Alderman Horton with a presentation volume? Yes, at my suggestion. It was not the suggestion of Mr. Dymock; the suggestion came from me to Angus and Robertson, and I put the identical suggestion before Mr. Dymock, not only that, but we got from Angus and Robertson a further consideration in the way of a presentation of five or six books to the members of the Library Committee. Let it be plainly understood that these books were presented to the committee to mark an epoch in Annandale history—that is, the opening of the Free Public Library.  
 1644. Then it was at the suggestion of your Committee that these offers of presentation volumes were submitted by Mr. Dymock and Angus and Robertson? Yes, absolutely at the suggestion of the committee through me.  
 1645. Therefore, there can be no charge against either of those firms? Absolutely none.  
 1646. Is that suggestion incorporated in the previous minutes of your Council or committee, or did it come from you personally? In the minutes of 22nd February, 1900, there is this entry: "Secretary Alderman Cohen detailed an interview between Mr. Thomson, of Angus and Robertson, and Alderman Wells and himself, that Angus and Robertson undertook to number books, to supply a catalogue and stamp, to stamp books, to include a book for presentation to Alderman Horton, and to donate a cheque representing a further discount of 5 per cent. to the Library. That since then Mr. Thomson had waited on him (the secretary), and stated that his firm had declined to send a cheque, but would allow a discount of 5 per cent. in the shape of extra books; that then and since he (the secretary) had besought Mr. Thomson to adhere to the original terms without success; that thereafter he (the secretary) had placed himself in communication with Mr. Dymock; that an interview of over two hours had taken place between Mr. Dymock, his manager, and himself, in which Angus and Robertson's list of books had been gone through without any opportunity of inspecting their prices, and that Mr. Dymock had marked his prices against a number; that in Mr. Dymock's opinion many of the books in Angus and Robertson's list would be found quite unsuitable for a library, and that he, Mr. Dymock, was prepared to submit a list of books, taking in such of Angus and Robertson's as appeared suitable, with an addition in substitution"; then follows what has already been read, that Mr. Dymock was willing to number the books, and so on.  
 1647. Do you not see by an analysis of these minutes that you place Mr. Dymock in a very unfair position as compared with Angus and Robertson; first, Angus and Robertson absolutely declined to give you the cheque; secondly, they refused to give you these presentation volumes? No; they did not refuse to give these presentation volumes.  
 1648. Do not they refuse to give the cheque, to begin with? Yes; but they would give us 5 per cent. in the shape of extra books.  
 1649. What for—not for presentation volumes? They gave us the presentation volumes.

- I. R. Cohen. 1650. You say that you had another interview with Angus and Robertson, and that they then declined to accede to your previous request? No, they declined to give a cheque as a donation; they said they would give a further discount of 5 per cent. instead.
- 26 Sept., 1900. 1651. *Chairman.*] It would be practically £10 worth of books? Yes.
1652. *Mr. Jessep.*] Having failed with Angus and Robertson, were you authorised by the committee to wait upon Mr. Dymock? Yes.
1653. Therefore, Mr. Dymock submitted his offer purely from a business standpoint? Yes; as Angus and Robertson did.
1654. Then, after the negotiations had all ceased, did Angus and Robertson supply you with presentation volumes? Yes.
1655. Distinctly as such? As agreed upon in the original negotiations.
1656. But I cannot find in all your minutes that they agreed to give presentation volumes? Yes; it was agreed to in the original negotiations. If there is any doubt in Mr. Jessep's mind I shall clear it away.
1657. Your committee, I presume, in making that suggestion did not think it was an unwise suggestion to make—that a member of a public body should be presented with volumes on that occasion? No; they were not to be presented; they were to be supplied with the books, and the presentation came from the committee; the presentation did not come from Angus and Robertson. I wanted to make the best terms I could; I knew the committee were desirous of making a presentation to Alderman Horton; if I could get the books for my committee without having to pay for them I thought it was perfectly justifiable, and the committee got them.
1658. *Mr. Robertson.*] It did not affect the original tender at all? No.
1659. *Mr. Anderson.*] If the £10 cash had been paid into your funds would you have drawn a subsidy upon it from the Government? No.
1660. You could not have drawn anything on it? Absolutely nothing. If Angus and Robertson or Dymock had not agreed to supply us with those presentation books it would not have interfered in the slightest manner with our purchasing the books, either from Angus and Robertson or Mr. Dymock.
1661. *Mr. Dymock.*] I understand that the £10 which I offered would have been spent in books for the Library? Yes.

WEDNESDAY, 3 OCTOBER, 1900.

Present:—

MR. HOGUE,  
MR. QUINN,

MR. MEAGHER,  
MR. SLEATH.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Mr. George Robertson (Angus and Robertson) appeared on his own behalf.

Clement Meadmore sworn and examined:—

- C. Meadmore. 1662. *Chairman.*] What are you? Draper's clerk at present. I was at one time in the book trade.
- 3 Oct., 1900. 1663. During the course of your business as a bookseller, did you ever purchase any book that had been the property of the Free Public Library? Yes—or rather, the Free Public Library claimed books which I paid for.
1664. What number did you purchase? I think it was about a dozen.
1665. Was that during the whole course of your career as a bookseller? I bought them all during a fortnight.
1666. Did you purchase those books in the ordinary way from itinerant vendors? These particular books, which were claimed by the Library, were all sold to me by one young man.
1667. Who came to your shop for the purpose of claiming these books? I think the first person who saw me about it was a young man from Angus and Robertson's. He came here, and I asked him about a book I had. He looked at it, and asked me whom I bought it from, and I described the young man. He said, "I believe there is a young man going about selling books which he has stolen from some public institution." I am not sure whether he mentioned Skinner's name at that time, but he said Skinner had been buying a lot of books of the same description. That was the first I heard about it.
1668. Did you inspect those books when you purchased them? Yes; we always look through them to see that they are not School of Arts' books, and that they are not stamped. Of course, we could not sell them again if they were stamped.
1669. Did you notice anything in the books yourself to indicate that they came from any public institution? No; they were not marked or stamped in any way.
1670. Were they subsequently claimed? Yes, but only after I had taken one of these books up to Mr. Anderson to get some information about it. He examined the book, and then referred me to Mr. Gifford, who took me into another room, where he turned up various catalogues. At last we found this particular book mentioned. On seeing it mentioned in this catalogue of rare books, I sold it to Mr. Mitchell, who, I knew, collected rare editions of that description.
1671. Do I understand you to say that that book was one of the Free Library books? It was one claimed as a Free Public Library book.
1672. After taking it to the Library, did you sell it to Mr. Mitchell? Yes; that was the only way I found out what the book was; it was in Latin. I forget the title, but it was in old parchment. The volume now produced by Mr. Anderson is the book. Instead of the title being displayed in the modern way, it looks as if the book started in the middle. I believe the first page is the title-page. I see there is a Free Public Library stamp on it now.
1673. Was there no stamp on it when it was in your possession? No; I would not have bought it if it had been stamped, nor would Mr. Mitchell have bought it from me.
1674. When you went to the Free Public Library, was there any demand made on you for the book? Certainly not.
1675. *Mr. Anderson.*] As a bookseller, could you tell who is the author of that book? Yes, if I could get your catalogue again; I cannot tell you the author by looking at the book.
1676. Can you tell me the year in which it was published from the book itself? No. 1677.

1677. In other words, is it a very difficult book to catalogue or to value in any way whatever? It is a difficult book to describe unless you refer to the catalogue. The catalogue that I saw gives the first few lines, and also a few lines at the end. It also gives the number of pages. C. Meadmore.  
3 Oct., 1900.

1678. Would it not need a Latin scholar to identify that book, or even to discover the author from the title-page? Yes.

1679. Did Mr. Mitchell return that book to you? No; he made a claim of 10s. I did not pay it, because I did not get the book from the Library.

1680. In view of a statement that it took some considerable time for us to help you in identifying that book, do you think that an unreasonable time was so taken? Certainly not. I was treated at the Free Public Library with every courtesy. I am not at all surprised that a book of that kind should be overlooked by anyone not a Latin scholar who did not take the trouble to look at the book carefully. I am not surprised that you did not recognise the book, although some people seem to make a point out of it. I do not think there is anything in it myself.

1681. When you took the book to me, did I only look at it for a few minutes? Yes, you looked at it cursorily; you said you did not know, but that a gentleman you had there would find out for me.

1682. I was not looking at the book to discover if it were our stolen property—I was looking at it to help you to find out its value? Yes, exactly.

Henry John Blackwood recalled and further examined:—

1683. Have you any further statement to make in addition to the evidence already given by you? No; I am prepared to answer any questions. I have only attended because I got a notice to do so. H. J.  
Blackwood.  
3 Oct., 1900.

1684. A statement has been made to the effect that when the 5,000 volumes were set out for inspection at the Free Public Library some person had the first choice, and removed from those books some 200 volumes;—do you know anything personally about that? Only what I have heard—nothing personally.

1685. *Mr. Meagher.*] Whom did you hear it from? I do not know the gentleman's name.

1686. Was he an employee of the Free Public Library? Yes. I might state what really did happen. I was in my place of business one morning when a gentleman came in. He said, "Are you a witness in the Library Inquiry?" I think this was about a week or ten days ago. I replied to him, "No, I do not think I am." I did not know whether he was trying to pump me or quiz me to get some information. The conversation went on, and when I found out what he was speaking of I said that I thought I would be summoned to give evidence. A conversation took place with reference to selling these books from the Public Library. I said, "I think it is pretty well about selling these books that the barney is. I do not think it right for the Government to sell the property of the people; there seems to be some barney between two firms in the town with reference to the sale of the books, and the booksellers did not get proper notice to tender for them." He made the remark to me, "No, they would not tender for them. The simple reason was that pretty well all the best books—I do not think he said the number—were taken off the shelves and put away, consequently when a man came along to examine these books and put in a price he would simply say, 'They are no good; the best of them are picked out.'"

1687. *Mr. Anderson.*] Could you identify the man you speak about? I think I could; but I do not think I would be justified in doing so.

1688. *Mr. George Robertson.*] Do you not think you are injuring some one else by repeating this statement? I do not think I am justified in pointing out the man. I do not know how the Chairman got hold of it. I did not broach the question.

1689. *Mr. Meagher.*] Do you know whether that man is at present an employee of the Public Library, or was he at one time? I cannot tell.

1690. Did he indicate to you whether he is at present an employee, or that he was previously? No; I do not think he brought that out.

1691. *Mr. Anderson.*] Was this man a stranger to you? No; I may have seen him some years ago. I have a slight recollection of having seen him before.

1692. *Chairman.*] Do you know whether he is in the employ of the Library now? I cannot swear to that. He made a reference that he was engaged in the Free Public Library, whether now or previously I do not know.

1693. *Mr. Anderson.*] Was he an old or a young man? A middle-aged man.

1694. Do you identify this book as the book you spoke of when giving evidence before—that is, Spencer's "Faerie Queene"? It is now five or six years ago since the book was offered to me for sale. I cannot positively swear that this is the book. I think it was a little bit larger. Judging from the stamps which are on it now I distinctly swear it is not the book.

1695.] I admit that there were no stamps on it then;—taking that admission, can you identify the book as the one we got from you? I cannot.

1696. *Mr. Sleath.*] Did you put any mark upon it? No.

1697. Can you tell one edition from another? It might be the book, but after a lapse of six years a man might be mistaken as to an inch in the length or breadth.

1698. *Mr. Anderson.*] Were you not a little mistaken in giving the size of the book as 18 inches x 13 inches x 3 inches, and is it not 10½ inches x 7 inches x 1 inch? You cannot make a point of that. In six years it is easy to make a mistake as to the size of a book, and it does not alter the value of my evidence. The most important part of my evidence was that valuable books, which were stolen from the Free Public Library, ought to have been stamped so that booksellers would know exactly where they came from when they were offered for sale. If the book had been stamped outside it would never have been bought by me.

1699. Supposing a stamp were put on the outside, do you not know as a practical bookseller that it would be easy to rip off the covers and to put on another cover so as to make the book incapable of identification? I do not think that a man stealing a book would go to that expense.

1700. Would you not re-bind that book for 1s. by ripping off the cardboard covers and putting on new ones? No. You might put on half leather, and it would cost 2s.

1701. You would not need to do that. It would only be necessary to rip off the cardboard and put on new pieces of cardboard, which could be done for 6d.? I do not know.

John

John William Child made an affirmation and was examined:—

- J. W. Child. 1702. *Chairman.*] What are you by occupation? A bookseller in Oxford-street, Sydney.  
 1703. How long have you been in business? Since 1895.  
 3 Oct., 1900. 1704. During that period, have you at any time purchased books which either bore the stamp of the Free Public Library or were eventually claimed as having been the property of that institution? I had about forty of those books that were proved to be stolen from the Free Public Library three or four years ago. I have since returned two books to Mr. Anderson personally. I found them in my stock. They had not the Free Public Library stamp on the outside, only the cost price, and private marks inside.  
 1705. Did you purchase them from different persons? From two different persons. That is what raised doubts in my mind when I found two persons bringing books with the same stamp on them. I mentioned it to Skinner, and to Wymark in Angus and Robertson's.  
 1706. Were these books eventually re-purchased from you, or were they handed back by you to the Free Public Library? Yes; they came and picked out as many as they could find, and they paid for them within a few shillings.  
 1707. *Mr. Anderson.*] Were any of the books very large? No; they were not of any great price. I think about 1s. 6d. was the highest price I paid.  
 1708. Were any of the books large in size? No; there were no quarto editions; they were nearly all small books. The most valuable was one published about 1690, a sort of magical witchcraft book.  
 1709. *Chairman.*] I suppose it is an every-day occurrence with you to purchase books over the counter? Yes. In the case of the last one, which I took personally to Mr. Anderson, I was having my tea at the back of the shop when it was offered for sale. Mrs. Child was in the shop. I came in and looked at the book, and said 1s. The man took the shilling and went away. When I came to look at the book I saw a little mark at the back. I took it down to Mr. Anderson, and he gave me a shilling for it.  
 1710. *Mr. Anderson.*] Over what period were these books bought by you? The first lot were bought about three months\* after I first commenced business.  
 1711. Did you identify the young fellow who stole the books? No; I was not called as a witness.

Thomas Handcock Lennard made an affirmation and was examined.

- T. H. Lennard.  
 3 Oct., 1900. 1712. *Chairman.*] What are you by occupation? A bootmaker.  
 1713. Where do you reside? Park Avenue, Randwick.  
 1714. For some considerable time have you been a collector of books relating principally to the early history of the Colonies? Yes; I have been collecting books since I was in a bookseller's shop in London in 1856. I was in the trade till 1864.  
 1715. Have you been in the habit of attending sales and purchasing books promiscuously? Yes.  
 1716. Did you purchase from any second-hand book stores recently, or at any time, any of the volumes that were supposed to have formed portion of the 5,000 which were sold from the Free Public Library? Some four years ago I bought some at Angus and Robertson's, and some at auction.  
 1717. Were the books which you purchased from Angus and Robertson exposed in the usual way? Yes; there was a counter full of books. I ran my eye over them. I saw a few that I wanted, and I bought them. If I could have afforded it, I would have bought more.  
 1718. Were you endeavouring to secure possession of any of these books specially? No; I think I went in that day to pay a bill.  
 1719. What were the books you purchased at Angus and Robertson's? The first I bought was "The Justice Wise Bequest Life of Joseph Holt," 2 volumes. I produce them.  
 1720. What price did you pay for that book? I think it was 9s. for two volumes. I bought it in Angus and Robertson's shop.  
 1721. What other books did you buy? Bennett's "Wanderings of a Naturalist," 2 volumes. I think that was the same price; I bought it in the shop. I also bought "Kotzebue's Voyage of Discovery in the South Seas." I gave 7s. 6d. for the three volumes; that was also bought in the shop. I bought "White's Journal of a Voyage to New South Wales." I gave £3 for it.  
 1722. I presume you came to the conclusion that you had got a bargain? Yes, a very great bargain.  
 1723. Have you been in the habit of looking into the prices of books of this character? Not of late years.  
 1724. Still you came to the conclusion that you had made a bargain? I knew the price that was asked for the book many years ago in London.  
 1725. Have you had any offers for these books? Two different parties have offered me £10 for White's book because of the inscription in it, which shows that it is the author's own copy. The author's own copy is of more value than an ordinary copy.  
 1726. Did you decline to sell the book? Yes.  
 1727. *Mr. Anderson.*] Are there any original notes by the author in the book? No, but the writing there is conclusive to any bibliophile.  
 1728. The inscription is, "To John White, Esq., Surgeon-General, Botany Bay, or Sydney Cove, Port Jackson, New South Wales; to the care of Robert Innes, Esq., merchant, No. 2 Duke-street, York Buildings, London." Will you state who offered you ten guineas for the book? I will not make the name public; it is a private affair.  
 1729. *Mr. Robertson.*] When were you offered ten guineas for the book? I was offered ten guineas for it soon after I bought it by one party. He was in my place looking over the collection. He said, "Will you sell this?" I said, "No." "Not if you get a price for it?" I said, "No." He said, "I will give you ten guineas for it." I said, "No." I suppose he thought, because I was a poor man, I would jump at the money when the money was put on the table.  
 1730. You have told us you had said to him you would not sell? I tell you, plainly and honestly, the man offered me the money.  
 1731. *Mr. Anderson.*] Do you know that the same book, the coloured edition, is offered in Edwards' catalogue for £3? It may be; that is not the author's own copy. It is not the copy with an inscription in it.  
 1732. *Mr. Robertson.*] Is there any other mark in it? There are marginal notes by different authors.  
 1733. Were you one of the very earliest to see these books? I believe I was. I was one of the earliest.  
 1734. *Mr. Hogue.*] Have you had some experience in the valuation of books? Yes. 1735.

\* NOTE (on revision):—I think "three months" in my answer had reference to "the period over which the books were bought."

1735. Do you consider you have a good knowledge of the commercial value of books? Yes.
1736. Whenever you see a rare volume, do you purchase it? Yes; if I can afford to do so.
1737. Not for any commercial value? No; simply because I want the book.
1738. How many volumes altogether did you buy from Angus and Robertson? I think there were nine volumes.
1739. How much did you pay for the whole of them? £4 5s. 6d.
1740. *Mr. Quinn.*] Can you get £10 now for White's book? Yes; but I do not want to sell it. The money has been put down for me, and I did not take it.
1741. *Chairman.*] Were these offers made by persons who, from your point of view, were in a position to have some knowledge of books? Yes. The man I have spoken of is not in the Colony at present, but from his position and experience I do not think there was his equal in the Colony.
1742. *Mr. Quinn.*] Were two offers made to you? Yes.
1743. Were those offers made to you by people who would value the books as an article of commerce, or merely as bibliophiles? As bibliophiles.
1744. Were they men who would keep these as literary treasures? Yes; they were not in the trade.
1745. *Mr. Robertson.*] Did any bookseller ever make an offer of £10 to you? It was made by bibliophiles who wanted the book. With regard to a man in the trade here, I was offered that amount, but I did not reckon that as anything. A man in the trade offers money for a book merely from a commercial point of view.
1746. *Chairman.*] Did Mr. Dymock make an offer to you for that book? Yes; he offered me 10 guineas. I was not speaking of him when I was giving my evidence. I was speaking of private individuals.
1747. *Mr. Hogue.*] Did Mr. Dymock offer you 10 guineas for that book? Yes; he offered me £10. I did not entertain his offer, for the reason that he is in the trade, and he wanted to make money on it.
1748. *Mr. Robertson.*] What price did you pay for "Bennett's Wanderings"? Nine shillings.
1749. Is that as valuable as one would be in original boards? I imagine this is more valuable. That is the original cover, so far as I can see.
1750. It is not, as a matter of fact—it has been rebound. Do you not know that it is not usual to have marbled edges in the original edition? I was not here when it was published.
1751. Will you look at Edwards' catalogue, where a copy in original boards is offered at 11s.? That may be. I have been asked £1 for that book in original boards by a bookseller in Sydney. I have been asked 35s. for the book in original boards by another bookseller. I have another Free Library book which I bought at auction for £2 14s.; that is "The Voyage of the Lady Nelson, by James Grant, presentation copy to Henry Hobart." Only for me that book would have gone to Melbourne. A gentleman sent a telegram to buy it, but I thought it would be a disgrace to allow it to go out of the Colony. I bought Hill's poems, 1840, for 10s. 6d., and Moodie's Felony of New South Wales—I think I gave 32s. 6d. for it. There are newspaper notes all round the pages.

T. H.  
Lennard.  
3 Oct., 1900.

THURSDAY, 4 OCTOBER, 1900.

Present:—

MR. HOGUE,	MR. MILLARD,
MR. MEAGHER,	MR. QUINN.

J. C. L. FITZPATRICK, Esq., in the Chair.

Mr. H. C. L. Anderson appeared on his own behalf.  
Mr. George Robertson (Angus and Robertson) appeared on his own behalf.

Caleb Hardy sworn and examined:—

1752. *Chairman.*] What are you? Assistant Librarian at the University.
1753. *Mr. Robertson.*] Is Mr. Barff nominal Librarian? Yes; he has the general supervision.
1754. When were you appointed? July, 1888.
1755. At that time, was the Library supplied with books and periodicals by a London house? Yes.
1756. During 1895, did my firm begin to supply those books and periodicals? Yes.
1757. I want you to tell the Committee whether you think the University has suffered by making the change from London to Sydney? No; not in any way that I am aware of.
1758. Do you think the service has been improved? Yes, in many ways.
1759. As a whole, are you satisfied with the service, and do you wish to revert to the London agency? There is no desire whatever to revert to the London agency.
1760. Is the value of your business about £600 per annum? Yes, about that amount.
1761. Is it £400 for books, and £200 for periodicals? Yes; roughly, I think that is about it.
1762. I think two-thirds of the periodicals supplied by us to the University Library are French, German, Italian, and Russian? I am not exactly certain about the proportion, but, roughly, that is about it. A very large proportion are French and German.
1763. Have you any complaint to make of our service? No.
1764. *Mr. Meagher.*] When you took over the duties which you now discharge, was it a London firm that supplied your University? Yes.
1765. How long did they continue to supply the University? From 1888, when I went there, until January, 1895, when Messrs. Angus and Robertson took it over.
1766. What was the name of the London firm? It was Trübner & Co. then; but I think it was afterwards changed to the title "Kegan Paul, Trench, Trübner, & Co."
1767. Prior to your taking this position, had you much experience in supplies from London houses? None whatever.
1768. Was it any defect or dereliction of duty on the part of that firm in London that necessitated your severing any further connection with them? No; we simply thought we would be more conveniently served in Sydney.
1769. In what way? Time was one consideration. For instance, Angus and Robertson have a good many of the books which we purchase in stock in Sydney. We send orders for a great many English books, which they have in Sydney, and previously we had to send the orders to London for them.

C. Hardy.  
4 Oct., 1900.

C. Hardy.  
4 Oct., 1900.

1770. Would not a library like the University be kept up to date in scientific and literary publications that come out year after year, and would the University wait for four or five years and then make purchases of books that might be lying in a bookseller's shop here;—I mean that, as books are published, I suppose you would receive them? Angus and Robertson would have those books in Sydney.

1771. I presume that on the front page of any magazine of standing, English publishers would have a notification as to certain books which were about to appear? Yes.

1772. Are not publishers' circulars sent to your library promptly, containing any scientific work or book of value which should be in the University library, and announcing that certain works would be out in a certain time? Yes.

1773. Where would the greater expedition come in when, by simply writing Home, you could say at once that such and such a work which was coming out would be required, and that you wanted two or three copies, as compared with going down to Angus and Robertson, who would have to go through the same process? I cannot speak about what is done by them, but they usually have the books out immediately. Books are sent out to Angus and Robertson as soon as they are published in England. The books are out here very nearly as soon as the publisher's circular, unless there is a notification a long time beforehand, which happens rarely.

1774. With regard to these German, French, and Russian periodicals, are they not published monthly and quarterly, or take, for instance, the *Quarterly Review*, do you not think you would get that review out as quickly from the publishing house as you would by getting them through Angus and Robertson? You would not get them so cheaply—at least I do not think so. We have a standing order for these things, and they come out in the usual course through Angus and Robertson. There might be a week less in transit, but not much.

1775. Take the *Revue des Deux Mondes*, do you think that if you communicated with the English house who are the agents for that magazine, it would not be out here quicker than by asking Angus and Robertson to send it to you? Probably you would get it quicker by post.

1776. Is there any other advantage besides convenience? Because they supply them to us at a contract price.

1777. What saving does the University make on these periodicals by dealing with Angus and Robertson? We save the freight.

1778. How much would be the freight on a book of a few ounces? I suppose we get probably between 2,000 or 3,000 periodicals in a year.

1779. What saving do you make by dealing with Angus and Robertson;—is it 25 or 50 per cent.? I have not gone into it in that way, but probably it would be 20 per cent.

1780. Would there be any record in 1894 of the periodicals you bought and what you paid for them at the University? Yes.

1781. Will you kindly look up your records for 1894 to see what you paid for the periodicals, and the contract with Angus and Robertson? Yes. We always had the works in a case from Trübner and Co., as well as from Angus and Robertson.

1782. I am talking of periodicals? They come together in the same case.

1783. You purchase about £600 worth in the year; would twenty magazines, or twenty reviews, cover the periodicals? There are probably sixty or seventy every week; some are weekly, some monthly, and some quarterly.

1784. Would not the prices of periodicals like the *Nineteenth Century* and the *Edinburgh Review* be practically the same now as they were six or seven years ago? Yes.

1785. That is the case with the leading English magazines? Yes.

1786. Do you get the leading English magazines cheaper from Angus and Robertson than you would from the London houses? No.

1787. Therefore, so far as prices are concerned, there is no difference? Very little difference, as far as prices are concerned.

1788. As far as convenience is concerned, do Angus and Robertson deliver these magazines quicker to you than you got them from the Home house? They do, in this way: they send them up weekly. We used to get a parcel fortnightly from Trübner; that was more a matter of expense.

1789. Are not the leading English reviews monthly and quarterly? Yes; but most of the magazines we get are scientific magazines, relating to the various subjects taught in the University, and a good portion of the French and German are issued weekly.

1790. Do you think that there is a saving of 20 per cent. in price in getting books by dealing with Angus and Robertson, rather than with Trübner & Co.? No.

1791. How much is the saving on £600? It does not appeal to us from the question of price. I suppose the prices charged by Angus and Robertson are very much the same as Trübner & Co.'s.

1792. You told us that the saving was 20 per cent.; now, after leading me to think that there was a 20 per cent. saving by dealing with Angus and Robertson, you now tell me that there is no saving? I do not say that at all.

1793. What do you say? I understood you to say, what would be the saving if we got them direct from the publisher by post?

1794. The question I intended to put was in connection with the fact that Trübner & Co. supplied you up to 1895, and that Angus and Robertson have since supplied you;—am I to understand that there is no advantage as far as price is concerned? I should say that it was practically the same.

1795. Do you say that the only advantage is in the direction of the delivery of these periodicals every week? That is not the only advantage; there is a saving.

1796. In what way? We used to get them shipped out to us from Trübner & Co., and we had to pay freight and shipping expenses in London, and we also had to pay an agent here to deliver to us. Angus and Robertson, of course, do all that for us.

1797. Did you ever make an investigation as to whether there were other firms in London which would have served you cheaper than Trübner & Co.? No.

1798. Have you had any experience as to other London houses? No.

1799. I suppose that, as an ordinary member of the public, like myself, you know that changes are continually taking place with regard to publishing houses in London, and that what might have been a leading house ten years ago might not be so now? Yes.

C. Hardy.  
4 Oct., 1900.

1800. So that you would not be prepared to say that at the present time you could not deal with houses in London which might be cheaper even than Angus and Robertson? It is quite possible; I cannot make any statement on that point.
1801. Then your evidence as to the cheapest method of getting books and magazines is only by comparison with Trübner & Co.? Yes; I can only speak in regard to that question.
1802. You know that there are a large number of publishing firms in London? Yes.
1803. Do you consider that Kegan Paul, Trench, Trübner, & Co. is the biggest publishing firm? I do not think so.
1804. *Mr. Quinn.*] Who selects the books for the University Library? Usually a Professor interested in the subject recommends a book for purchase.
1805. Are they mainly technical books? Yes; the books referring to the subject which the individual Professor teaches.
1806. Who made the alteration from purchasing these books in London and giving the business to Angus and Robertson? The Senate is the ultimate authority.
1807. *Mr. Meagher.*] Is Mr. Anderson a member of the Senate? He was not at that time.
1808. *Mr. Quinn.*] Do you say that there is a contract with Angus and Robertson? Yes.
1809. Are they under a contract to deliver £600 worth of books to you? Yes.
1810. Are magazines specified in the contract? Yes; they are delivered to us at specified prices.
1811. Were tenders called for that contract? Yes.
1812. By the Senate? Yes.
1813. Did Angus and Robertson get that contract in open competition with other firms in Sydney. Yes.
1814. *Mr. Robertson.*] Mr. Meagher has asked you a question respecting there being larger publishing houses than Kegan Paul, Trench, Trübner, & Co.;—in supplying you with these publications, did that firm do so in their capacity as publishers or as agents? As agents.
1815. Do you know that large publishers like Macmillan & Co. would not supply them as agents? They do not act as agents.
1816. *Mr. Anderson.*] Do you know that Kegan Paul, Trench, Trübner, & Co. was the most famous firm in London in the year 1893, the period during which we dealt with them? Yes.
1817. Do you know that Martin Trübner was reckoned the greatest book-buyer, and one of the greatest authorities in London at that time? Yes.
1818. Do you know that that firm supplied books to all our scientific societies as well as to the University and Public Library? Yes.
1819. Do you know that on the death of Martin Trübner the business fell off and was very much neglected? Yes.
1820. Owing to that neglect, did you, as well as the Public Library, find it expedient to make some change? Yes.
1821. Were any of your books chosen by Trübner & Co. without reference to you? None whatever.
1822. Do I understand that your magazines and scientific periodicals were sent out in cases at certain intervals? Yes; fortnightly as a rule.
1823. You are aware, I presume, that if they were sent directly by post, there would have been a very great expenditure for postage? Yes; that was the question which I thought Mr. Meagher asked.
1824. By getting these periodicals and books and cases once a week, do we save all that postage? Yes.
1825. We also get them as frequently as possible by the mail steamers—that is, once a week? Yes.
1826. *Mr. Meagher.*] Did any of these books ever come by post? Not to us.
1827. *Mr. Anderson.*] In order to save expense, did the London agents keep back books and magazines until they had a box full? They came every fortnight.
1828. Supposing a small box came out at any time, would there not be a minimum charge for that box, however small it might be? Yes.
1829. Do you remember what that minimum charge is? I have not gone into that question, but probably a case would cost 7s. 6d. to make. That was charged to us. Then there were freight and shipping expenses at the other end for the case, amounting, perhaps, to 10s. The agent here who looked after the box and delivered it would, perhaps, charge another 5s. That would roughly give an idea of what it cost us to get a small case.
1830. *Mr. Meagher.*] What would you call a small case? About 3 feet by 2 feet by 4 feet; they were not always the same size. That is what I mean by a small case.
1831. *Mr. Anderson.*] Do you know that if a case was small, the expenses were just about the same as if a much larger case were sent? Yes.
1832. Then, in getting a box through the local agent, would that form a small part of their weekly shipments? I suppose so.
1833. And you would get them without any of these extra expenses for cost, freight, insurance, and shipping charges? Yes; that is chiefly where our saving comes in, I think, in dealing with Angus and Robertson.
1834. *Mr. Meagher.*] Mr. Quinn has asked you if tenders were called in 1895 for the University business? Yes.
1835. How many firms tendered? About three or four.
1836. Who were they? Angus and Robertson, Turner and Henderson, George Robertson & Co.; I think that was all. I am only speaking from memory.
1837. What advantage was there in the acceptance of the tender of Angus and Robertson in comparison with their competitors? Their contract price for the periodicals was less than the others.
1838. What was the case with regard to the books? I cannot remember the discount they allowed.
1839. Have you these tenders at the University? I fancy we have them.
1840. Would you mind producing them here? Yes, if I can find them.
1841. In case you cannot find them, what saving was there in the periodicals in comparison with the other firms' tenders? Probably about 15 to 20 per cent., speaking from memory.
1842. Is there a Library Committee at the University? Yes.
1843. Does the Senate keep minutes of its proceedings? Yes.
1844. Would those tenders go before the Senate? Yes, and they would select.

C. Hardy.  
4 Oct., 1900.

1845. Would the amount of this contract be embodied in the minutes of that particular meeting of the Senate at which they were under consideration? I do not think so. I should think that there would be a minute to this effect: "It was decided that Messrs. Angus and Robertson's tender, being the most favourable, should be accepted."

1846. So that really you have no record by which you could show us the disparity of prices or the advantage of Angus and Robertson's tender? Not unless the tenders which were sent in were kept, of which I am not quite sure.

1847. You cannot tell us what was the saving in books in comparison with other firms? I cannot speak definitely on the subject.

1848. Will you see if you can find those tenders? Yes.

1849. *Chairman.*] Do you say that there was an advantage in accepting Angus and Robertson's tender as compared with the other tenders, as far as periodicals were concerned? Yes.

1850. Do you know whether there was an advantage as far as books were concerned? I do not remember exactly, but if I can find the tenders I will submit them to the Committee.

1851. *Mr. Meagher.*] In fact, it might be possible that, although there was an advantage in periodicals in Angus and Robertson's offer, there might have been an advantage with regard to the books in the tenders of other competitors? There might have been, but that was the decision—that the tender of Angus and Robertson was the most favourable to the University.

1852. Did the advertisement for tenders specify a number of years for the contract, or was it given to Angus and Robertson for ever? There was no specification as to time.

1853. Have you ever called for tenders since? No.

1854. Is the term of the contract in perpetuity? I am afraid there was nothing stated as to the time.

1855. *Mr. Robertson.*] If any other firm had succeeded in obtaining the agency would that have made any difference as to the term? No; it would be a very inconvenient thing to change the contract just now.

1856. *Mr. Meagher.*] In what way? We get a number of periodicals, some of which appear at irregular times. Our present booksellers have them on their orders. There would be a little inconvenience in changing the contract.

1857. If you call for tenders, you have what are known as details; for instance, you get sixty magazines of different nationalities, and you would have them tabulated in the tender; Angus and Robertson already supply them;—if any other bookseller could not get them, would not that show the advantage of Angus and Robertson's position? Yes.

1858. Supposing that another bookseller were able to supply the sixty magazines cheaper than Angus and Robertson, would it not be an advantage to the State? Yes.

1859. The money voted on the Estimates for the University is the taxpayers' money, and they ought to have the best value for it;—do you think it would be injurious to the University to call for tenders (say) every three years, specifying the magazines that you want, and if Angus and Robertson can supply the sixty magazines and no one else can, and they quote the same price, would there be any harm done, and would any machinery be thrown out of gear? Yes; to some extent. A great many books come out irregularly. When you change your agent there might be three volumes of a work coming out, and at that time only one might have been published. It is not an impossibility to change, but it would be a lot of labour.

1860. *Mr. Quinn.*] It would be highly inconvenient to change from Angus and Robertson at any time? Yes; a great inconvenience to change every two or three years.

1861. *Chairman.*] Would it not also be inconvenient to change from George Robertson & Co. if they had the contract? Yes.

1862. *Mr. Meagher.*] Would not that inconvenience be compensated for by the fact that somebody else would do the business cheaper? It would depend upon the extent to which it would be cheaper.

1863. For instance, the inconvenience of changing the English publishers resulted in the saving of 20 per cent. on periodicals? Yes.

1864. Was not that inconvenience well worth trying? Yes.

1865. *Mr. Anderson.*] Are you perfectly satisfied, as Assistant Librarian, with the services rendered by Angus and Robertson? Yes.

1866. And the Book Committee? Yes.

1867. And the Senate? I have never heard of any expression of dissatisfaction.

1868. You understand what continuations mean? Yes.

1869. A book comes out in a number of volumes at very irregular intervals over a long period of years? Yes.

1870. Would it not be a great inconvenience to a library, with regard to these continuations, if the agents were changed? Yes; it would be a very great inconvenience.

George Robertson sworn and examined:—

G.  
Robertson.  
4 Oct., 1900.

1871. *Chairman.*] Are you a member of the firm of Angus and Robertson? Yes.

1872. Have you obtained the right to appear before this Committee? Yes; I petitioned the House for the right to appear.

1873. In reply to certain evidence that has been given, are you desirous of making a statement? Yes. It seems to me, that so far as my firm is concerned, Mr. Dymock's charge is, that it has been unduly favoured by the Principal Librarian. Indeed, this is really his only charge (see Questions 1236-41) against the Library itself. This being so, I will preface my statement with a few remarks on our personal relations with Mr. Anderson. I never saw him to my knowledge until some time after his appointment as Director of Agriculture, and can only remember meeting him three or four times during his tenure of that office, and always on official business at the Department of Mines. Mr. Angus, my late partner, never exchanged a word with him until long after we had been appointed agents for the Public Library. Towards the latter half of his stay at the Department of Agriculture we did a good deal of business with his branch of the Service, and I well remember we got the impression that he was a hard man to please. I recollect that we imported some second-hand books for him then, that he compared our prices with those in English second-hand catalogues, and threw some part of the shipment on our hands. I forget the details, but remember we were

G.  
Robertson.  
4 Oct., 1900.

were not satisfied, though we could not but admit that he was trying to do his duty. The impression I then formed I have never had cause to change. He is as jealous of the expenditure of public money as he could be were it his own. He always wants as much for it as ever he can get. From the time he was appointed Principal Librarian until the calling of tenders for the agency, I do not remember being once inside the walls of the Library, not even to congratulate him on the appointment. Indeed, I visited it rarely in Mr. Walker's time, for we had a theory that every absence from our place of business cost, on an average, a five-pound note. We had not then the large and carefully-trained staff we now have. After Mr. Anderson's appointment we continued to submit second-hand books on approval as in the time of his predecessor. Mr. Dymock having sworn (Q. 742) that within a fortnight of Mr. Anderson's appointment he saw that Angus and Robertson were the favourites, this honorable Committee will naturally expect to hear that we began at once to do a much larger trade with the Library. But the fact is that in Mr. Anderson's first year we did scarcely half as much as in Mr. Walker's last, and this, although our stock and turnover had grown considerably, and our sales to Mr. Mitchell, comparing the same periods, show a very large increase indeed. Until the Principal Librarian's return from England, towards the end of 1897, neither Mr. Angus nor myself had received from him anything but the most frigid official courtesy. We had never, nor have I to this day, met him outside business hours, and I do not know that we have a single friend in common. At no time has he ever asked a favour of me, or of my firm, and at no time has my firm asked one of him. Indeed, I cannot imagine him putting himself under an obligation to anyone; he is not built that way, I should say. On his return from England he sent for me, and expressed his satisfaction at the course I took in sending the "Duplicates" to auction. It was, he said, the only possible answer that could have been given, in his absence, to the mendacious statements respecting them. Since then he has been a little more genial, or less frigid, rather; but is still, so far as my firm is concerned, a zealous official. Our work, as agents, brings me very seldom into contact with him; sometimes a couple of months elapse without me seeing him. The new books arrive from England, are submitted on approval, and are approved or returned; so the routine goes on. My firm received, in October, 1894, a request to tender for the supply of books and periodicals to the Public Library as from 1st January, 1895. I waited upon Mr. Anderson for further information, and made myself thoroughly conversant with the services at that time being rendered by Kegan Paul & Co., and with the alterations necessary consequent to the transfer of agency to Sydney. It never occurred to me that there was anything about it that Angus and Robertson could not perform, and I rather resented the Librarian's inquiry on that head. When I told Mr. Angus that my resentment seemed rather to please Mr. Anderson than otherwise, he admitted that there might be some good in the man after all. I can assure Mr. Dymock that Mr. Anderson was no favourite of ours. Well, we decided to tender, the only serious drawback to the agency being the certainty that we would, if our tender were accepted, lose by it for a year or two. We did lose by it for two or three years. Having sent in our tender, we never had the slightest doubt but that it would be accepted. How could we? We knew our competitors. The faint-hearted who pitched his tender in the minor key, and the other who accepted verbal guarantees against loss in such a childlike manner, surely never expected they would get it. It is very unpleasant to have to speak like this; but Mr. Dymock has given his reason for my firm's success, and I am accounting for his failure. That we are the leading publishers he cannot deny; how does he account for that? We get the largest subscription to our circulating library; how does he account for that? Well, we began to import all the standard books as published, and submitted them on approval. A few mistakes were made, and Mr. Anderson corrected us with some harshness, as we thought. But, on the whole, we performed the duties well from the outset, and probably the Librarian used his "Nasmyth" judiciously, for we certainly improved, and that with alacrity. In a couple of years we learned where the rejected books could be placed, and the agency began to pay us a small profit. Mr. Dymock (Q. 926) talks with awe about a hundred-guinea book. Our trouble is that there are not more of them published. Why, a couple of months ago, we had one at £105 coming out, and the Library having intimated, on receipt of prospectus, that it could not afford it, we sold it elsewhere, at full price, before it landed. Mr. Dymock (Q. 1253) said in his tender that he regarded it as almost impossible to compete against the London houses. Now that we have proved this possible, he wants to know if Angus and Robertson is the only firm that can do it; so we have taught him something. His tender (Q. 1253) offers to import all standard books as published, and thereby seriously discredits his contention (Q. 925) that he did not get the same information as the rest of us. I understand that the average annual account of our predecessors ran to £3,200; ours has only been £1,700 per annum; which is not enough to pay for the magazines, serial volumes, and other "continuations," and the new publications the Library ought to buy. It would be grossly unfair, therefore, if the Trustees made purchases out of the vote from other booksellers, because, if they did, they would be without funds for three or four months in the year, and unable even to consider the books we might then submit in accordance with the terms of agency. No body of gentlemen would do so. If Mr. Dymock had used his surplus energy to obtain for them a larger vote, I am sure he might have got his share of it. The Trustees will never, I believe, consider the submitter, but the submitted. In dealing with the purchase of the duplicates, I propose, in the main, to confine myself to a short statement of facts; for to attempt to pursue the numberless wild and inaccurate statements made respecting them would occupy your time unnecessarily. In March, 1897, my firm received an intimation from the Public Library that it had some duplicates to dispose of. I went up at once and looked them over, but felt indisposed to make an offer. The Principal Librarian urged me to tender, and I told him if we did it would only be because we wished them to fetch a fair price. There were undoubtedly a few very good books, and a considerable number of fair books in the lot, but the bulk, I saw, would have to be thrown out. We eventually decided to offer, in order that none of the competing firms might get a "snap," but if one of them had tendered a pound more, nobody would have been better pleased than myself. We have always had the reputation for keeping a stock of good copies of Australian books, and this lot was not likely to sustain it. I valued them, offered £219 cash, and was informed shortly after that our tender had been accepted. We took delivery a little before Mr. Anderson's departure for England, and in the course of a few days those suitable for sale were marked and placed on our counters. I have no means now of ascertaining the number I destroyed, but they constituted by far the larger part, and consisted of army lists, directories, worthless Government publications, and so on. Now you must remember that it never occurred to me that there was going to be any bother about these books. Had I dreamt of such a thing the rubbish would have been stacked in our store, and an examination would probably have furnished very good

G.  
Robertson.  
4 Oct., 1900.

good ground on which to indict the Trustees for having encumbered their premises by collecting it. You have heard a great deal about the value, present and prospective, of Australian pamphlets, and no doubt you think it possible I may have destroyed some valuable things of the sort in the weeding out. But, excepting Mr. Mitchell, there is no one in Australasia with so large a knowledge of Australianiana as myself, and it is not likely I would throw out anything of value. I am well within the mark when I say that my firm has sold during the last fourteen years more Australian books than all the booksellers in Australia put together; we know all the collectors and their particular requirements. I have no means of accurately estimating the number of effective volumes, but remembering the counterspace they occupied I should say there were about 1,500. Mr. Mitchell was one of the earliest to see them. He had long been a buyer of all editions of the more valuable Australian books, and finding here a lot of the commoner sort, at low prices, he took them when they differed from those in his collection. He had a good big parcel, but it did not contain a single scarce book, and it cost him only £6. I remember this figure because I mentioned it in a letter, written at the time, to Mr. Archibald, of the *Bulletin*, protesting against the lying paragraphs which were appearing in his paper. It was the only occasion on which I put pen to paper about it, for I did not concern myself with what the others were saying. Mr. Archibald had known me since 1886 and, I am proud to say, he accepted my word without demur—no more paragraphs appeared in the *Bulletin*. But they continued to appear in other papers of a certain class, and wild things were said in the House. I knew then, and now, in the light of recent developments, we all know whence this attack emanated. Meanwhile we were selling a number of the best books at satisfactory prices, and, doubtless, in the course of time would have disposed of the lot. I wish I could tell the Committee how much we realised; but, unfortunately, I do not know that myself. The disturbance about them kept increasing, and it occurred to me that an auction sale would be a good line from every point of view. It would certainly be the best advertised one ever held in Australia, we stood fair chance of getting good prices for the balance of the lot as well as for books put in out of stock, and we would quit them in one act. So, with the exception of about twenty volumes which were overlooked, or were, at the time, on one side awaiting customers' decisions, every remaining book was sent to Mr. Lawson's. But, alas! my country, the patriots did not bid as one would have expected. A gentleman would value one of the books at £25 from his place in the House the night before, and then let it go ignominiously for 12s. 6d. Deducting a proportion of the expenses and the value of those put in from stock, the duplicates—over 900 volumes, gentlemen—fetched £70. The *Evening News* had actually set up the whole catalogue days before, and had messengers running from the saleroom with the prices in batches of twenty or thirty. I have had, if possible, a much greater respect for Angus and Robertson since that day, for I am convinced that had they been present as buyers at least £100 would have been realised. At any rate the sale had the effect of silencing the malicious, and those—and there were many, I am sorry to say—who had honestly believed much that was said respecting "the job." I do not think anything more was said about it until now when it is resurrected for the purpose we are acquainted with. On the valuations made by Mr. Dymock (Q. 816-818) perhaps sufficient discredit has been thrown by Mr. Anderson (Q. 1532-1542). But as they were compared by him with prices in the catalogue of a London bookseller who in very many instances asks more than my firm, I venture to supplement them. The figures within brackets are the numbers in Angus and Robertson's Australian Catalogue of July, 1899. Mr. Dymock's valuation, which is a retail one, follows the titles:—

	£	s.	d.			
Darwin's Beagle, 4 vols. ...	5	0	0	...	(211)	63s.
Flanagan's History, 2 vols. ...	1	10	0	...	(397)	15s.
Settlers and Convicts ...	2	0	0	...	(446)	5s.
La Perouse, Voyage ...	2	10	0	...	(723)	21s.
Leichhardt's Expeditions ...	2	0	0	...	(536)	18s.
Maconchie's Convict Management ...	0	15	0	...	(577)	5s.
Wood's Geological Observations ...	0	15	0	...	(1014)	7s. 6d.
Phillip's Botany Bay ...	£2 to 3	10	0	...	(725)	30s.

Angus  
and  
Robertson's  
retail price.

We shall be glad of an order from Mr. Dymock. But these valuations are all wide of the mark because they do not refer to duplicate library copies, in many cases imperfect, and never desirable on account of the defacing stamps. If Bennett's "Gatherings of a Naturalist" is worth 15s. why did not Mr. Dymock give 5s. 6d. for it at Lawson's sale? If Bougainville's "Voyage" is worth £2 to £4, why did he let it go at 14s.? If Burney's "South Seas" is worth £5 10s. to £6, why did he allow the "duplicate" copy to sell for 18s. at auction? "Settlers and Convicts" fetched (for some inscrutable reason) 14s., but Mr. Dymock values it at £2. Kerr's "Glimpses of Australian Life" fetched 1s. 6d., but Mr. Dymock, who was present when it was sold, now values it at £2 10s. Labillardiere's "Voyage in Search of La Perouse" he values at 35s., yet it sold in his presence for 8s. Leichhardt's "Overland Expedition" he puts down now at £2, but he let it go then for 13s. He allowed two copies of Mitchell's "Three Expeditions" to sell for 7s. 6d. per volume. Peron's "Voyage," which he values at £3, only brought 19s. Why did he not buy Rusden's "Australia" at 19s., when he values it at 30s.? Turnbull's "Voyage" fetched 12s. in the presence of the gentleman who now values it at 37s. 6d. Can it be that he had conscientious scruples about making money out of these books? I know the Burney, the Flinders, the Stokes, the Rusden, and a few others were imperfect, but some were surely good enough for him. That they were rather "grubby" this honorable Committee will infer from an inspection of the choice selection Mr. Dymock displays on the floor of this room. This selection of 100 volumes or so are, with a few exceptions, the cheapest books of their class, yet Mr. Dymock hopes to persuade this Committee that the trustees never ought to have parted with such jewels. I beg you to have a catalogue of them prepared by a competent man in order that the public may judge whether their alleged cost of 10d. per volume is not too much for most of them. Yet he has told you that he would give 5s. or 6s. per volume for them, and that, in time, he could retail them at 10s. I wish he had been of the same mind in Lawson's room. Mr. Lennard showed you yesterday Holt's "Memoirs," for which he paid 9s. (Edwards' price, 14s.); Bennett's "Wanderings," 9s. (Edwards' price, 11s.); White's "Voyage," 60s. (Edwards' price, £3); Hill's "Poems," 10s. 6d.; Mudie's "Felonry," 32s. (Edwards' price, 22s.); and Grant's "Lady Nelson," 54s. (Edwards' price, 50s.). The Mudie, Grant, and Hill were purchased at Lawson's sale and the others off our counter. Holt's "Life" wants the portrait, and Mudie the folding plan of Sydney. The others I have had no chance of collating; but assuming them to be perfect, I cannot see that they prove anything. I have already said there were some good books in the

lot,

lot, and Mr. Lennard has some knowledge of Australian books, and was among the first who looked them over. He told us that he had been offered £10 10s. by two persons for the White, which has an inscription to the author by someone, probably the publisher. I am glad it is in the hands of a gentleman who values it so highly, but surely he need not have declined to furnish the two would-be purchasers' names. I can conceive no good reason for withholding them. The book is certainly not worth more than £3 defaced as it is by Library stamps. I quote the following from Edwards' catalogue in order to show how little inscriptions of the kind are valued:—

No. 113.	Backhouse's Narrative of a Visit to the Australian Colonies (cloth), 1843	6s. 0d.
No. 114.	The same. Presentation copy, with the author's autograph (calf)...	9s. 0d.
No. 1,452.	Macarthur's New South Wales (cloth), 1837...	5s. 0d.
No. 1,453.	The same. Lady Franklin's copy, with part of her autograph ...	7s. 0d.
No. 2,612.	Whately's (Archbishop) Remarks on Transportation (boards), 1834 ...	3s. 0d.
No. 2,613.	The same: with Author's autograph inscription ...	5s. 6d.
No. 2,306.	Strzelecki's Physical Description of New South Wales (cloth), 1845 ...	12s. 6d.
No. 2,307.	The same: with inscription from the Author ...	15s. 0d.
No. 1,704.	Mudie ("Major" James): The Felony of New South Wales: a Faithful Picture of the Real Romance of Life in Botany Bay, with Anecdotes of Botany Bay Society, and a Plan of Sydney. 8vo. (cloth), 1837 ...	£1 2s.
No. 1,705.	— Felony: another copy, with Author's autograph inscription. 8vo. (half calf), 1837 ...	£1 5s.

I venture to suggest to the Committee that it considers whether the State does a service to the community by locking up a number of duplicate copies of these Australian books. Of "White's Voyage" the Library still has three copies, and of "Flinders," with the atlas, no fewer than four. Mr. Blackwood has stated that £1 was paid Angus and Robertson for informing the Library respecting the "Faerie Queen." This is not so; it was paid to Shenstone, one of our employees, who retained it, he having been instrumental in making the discovery. Mr. Blackwood told you yesterday that one of the Library staff called on him a fortnight ago, and said that some of the duplicates were shown to Angus and Robertson only, the inference being, I suppose, that one or more of the librarians dishonestly wished to help us to get them. I have already said that we would have been glad had there been a higher tender put in, and can only add that I hope the gentleman in question will have the decency to give his evidence to this Committee instead of whispering it about in this unmanly way. To the best of my recollection, both Mr. George Gifford and Mr. Wright were there, and pointed the books out to me; they were in the shelves and on the floor, and they were certainly all in the one room. I have now the pleasure of making a few remarks about £200 Government grants to municipal councils. It appears that, since the Botany Bay order in 1895, all these grants, save one, have come to Angus and Robertson. I am sure that any Sydney bookbuyer would be surprised if it were otherwise. The explanation is simple—they come to us because we endeavour to deserve them. If we gave a large portion of our time to the mismanagement of the affairs of the City, to organising deputations, to running after members of Parliament, &c., &c., these orders would go elsewhere. We stick to our business, and a mayor about to apply for the grant is sure to find us in. He will find, too, that our stock is replete with the kind of book he wants, whether new or second-hand. Mr. Anderson has never assisted my firm to obtain an order from a municipal council; he could not if he wished to, and we do not want him to if he could. So far as I am able to judge from the evidence given before this Committee, the only person he has ever helped is Mr. Dymock, for that gentleman would never have done the Botany order but for the lenient way in which Mr. Anderson reported upon it. I hope I have made it clear that my firm does not require any outside assistance in the management of its affairs. We have always been able to carry on without such help; we never waited upon a Minister in our life, and the only Members of Parliament we know are bookbuyers. My firm obtained the University, Public Library, and Parliament Library agencies without canvassing a single senator, trustee, or committeeman. Whatever the result of this inquiry may be, I trust it will, at least, show booksellers how not to run their business. From the pothole that has been made, this honourable Committee will, doubtless, expect to be told that my firm has executed scores of these municipal orders. As a matter of fact, I can only trace seven—two of them, I think, pre-Andersonian. We cannot help it; had there been more going, no doubt they would have come to us. The procedure, until it was altered recently (in compliance, as I now understand, with Mr. Anderson's advice to the Minister in 1895), has been this:—The Member for the district, or some representative of the Borough Council, looked round the various bookshops in town, and formed his own opinion as to the fittest firm to prepare a list for submission to the Minister, with the request for a grant. The Minister forwarded the list to Mr. Anderson for report. Mr. Anderson struck out some books and added others, and always, I am bound to say, effected an improvement, no matter how great the pains we had taken to make it worthy the confidence reposed in us by our customer. The list would then be returned by the Principal Librarian to his Minister, as amended, would receive the Ministerial sanction, and the books be supplied. In some cases—as, for instance, Murrumburrah—we received valuable assistance in our labours from the Member for the district and the Mayor; in every case a good lot was supplied, and we do not care who inspects them. Mr. Anderson could not help us in any way, and he did not try to. I do not think he cared a straw who supplied, so long as the books were fit and proper. Mr. Dymock heard about the Annandale lot, and the usual deputations and visits to the Minister ensued. Unfortunately, I happened to be in England, and missed the fun, but my partners say the scrimmage was glorious. I understand that just when Mr. Dymock was about to surpass himself in the deputation line, the Council woke up and accepted our offer. I may say I never in my life had a list of Mr. Dymock's in my hands, and do not think it would have helped me if I had. He had our list in the Annandale case (I do not say Mr. I. Reginald Cohen supplied it), and even then he did not oust us. However, let us hope that, under the new regulations, unseemly scrimmages, deputations, and other political interferences will cease. We have the consolation of knowing that, under the new conditions, the holder of the Library Agency will no longer be placed at a disadvantage. Mr. Dymock has made such a large number of misstatements that it would be a wearisome task to run them down. I do not insinuate that he has made them intentionally, because, in many cases, they do not tend to help the object he has in view. For instance, in Question 720, he refers to the "Standing Orders" as pamphlets, though one copy is over 2 inches thick, and the other is in two thick volumes. In Question 670 he misstates the price Mr. Heaton paid for "De Quiros," and that at which he parted with it. In Question 1172 he

G.  
Robertson.  
4 Oct., 1900.

he speaks of an early copy of White's "Voyage," as if there were more than one edition of the book. In Q. 1230 and 1210 he says that booksellers have to pay the marked price for net books, although he must know that every net book publisher gives us a discount. In Q. 1230 he speaks of Kipling's Poems as net books, whereas they are ordinary publications. And, finally, for I am tired of him, he says (Q. 1435) that Carter's "Ancient Architecture" was supplied by us to Annandale at £6. In Q. 1027 and Q. 1044 he puts it at £6 15s. The truth is, that it was offered at £3 10s., less twenty per cent., to the Annandale Council. It was struck out as unsuitable by the Principal Librarian, and when Mr. Dymock had our list supplied to him it was marked out. If the Committee wishes it, I will go into the evidence thoroughly and make another statement; but I must confess that I am tired, although I have only glanced through it.

1874. With reference to the 5,000 volumes which you purchased from the Public Library, portion of which were procured afterwards by Mr. Lennard, had any one looked over those books, as set out on your counter, before he made his purchases? I cannot tell you that, but he was in during the first day or two.

1875. For instance, you say that Mr. Mitchell invariably called upon you, or had an intimation conveyed to him when you had books which were likely to suit him;—did Mr. Mitchell see those books before Lennard did? Mr. Mitchell would come down the first day, but Lennard would not come in at 9 o'clock in the morning. Mr. Mitchell was amongst the first, but there was not one amongst Lennard's books that he would take. He would not have looked at White's book if he saw it on the counter, for the reason that he already has the book. I wish he had seen it.

1876. With reference to at least two volumes that Mr. Lennard produced yesterday, could you give any expression of opinion as to whether they constituted the best or most valuable amongst that collection of 5,000 volumes? I cannot remember any better Australian books than Mr. Lennard had. I believe Mr. Mitchell had fifty volumes out of that collection, but the whole of his expenditure was not more than £6.

1877. *Mr. Meagher.*] With regard to Carter's book on Architecture, for which you asked £3 10s., is that a book which is very much asked for? No.

1878. To use an appropriate expression of Mr. Anderson's, was this one of the "dead birds" which occasionally find their way into these lists of books? I have sold it since, so that it is somebody else's "dead bird" now.

1879. The price agreed upon for the purchase of those 5,000 volumes for cash was £219;—whose suggestion was it that books should be given in place of cash? I cannot tell you. I cannot even tell you when it was made.

1880. You personally inspected the books in order to form an idea of their value, and I suppose you were prepared to write out your cheque for that amount on delivery of the books? Yes.

1881. How long after you practically agreed to pay cash was it decided that the cash offer should materialise into an exchange of books? I cannot tell you. I cannot even tell you when we supplied the books.

1882. You remember going to inspect the books, and making the offer;—can you give us any information as to whether the suggestion came from you, or from Mr. Anderson? I would not have dreamt of suggesting books in place of cash.

1883. Supposing I had 10,000 volumes, and you said you would give me £100 cash for them;—if I said that I would take that amount in books, would it not be more advantageous to you? Probably it would be more advantageous.

1884. Was it Mr. Anderson who made the suggestion? I regret I cannot tell you.

1885. You see the Chief Librarian was in Sydney for a fortnight after you inspected the books? No; a fortnight after we took delivery.

1886. Can you say this: was it before Mr. Anderson went to England that you agreed to give books in place of cash? I cannot say.

1887. When did you deliver these books in exchange? I cannot say without reference to our books.

1888. At any rate, you preferred to give books instead of paying cash? Yes, on the whole I did so.

1889. We have had the evidence of Mr. Reginald Cohen, who says he is something of a bibliophile, and an author in prose and poetry, and he said that, in looking down the prices, he noticed with regard to "Men of Letters," ten volumes, that they were invoiced by you at 3s. 6d. each, and Dymock's price was 3s.;—would that be correct? It might be; it is a 3s. 6d. book.

1890. Holding a monopoly of business here, and with the immense trade you are doing, do you not think you would have been able to sell those books at the same price as Mr. Dymock? I do not think we hold any monopoly.

1891. I am judging from your sworn statement as to your success in business, due to your concentration of effort, and not attending deputations and so on; whereas others who do those things, practically mismanage their business, so that you are growing while they are retrograding? That is not so. We only compare ourselves with Dymock, who is the only other new and second-hand bookseller.

1892. Then he is your only competitor? No; only in connection with municipal libraries, where both new and second-hand books are required.

1893. I presume your editions of Ruskin's works would be the same as Dymock's—for instance, "A Joy for Ever," the "Elements of Drawing," and "Time and Tide;" I think it is on these books that Dymock showed a saving of 20 per cent.;—you offered them at 5s. each, and he offered them at 4s. each? I do not think Dymock showed that saving. Mr. Cohen informed him that his recollection was that these works were offered at different prices. But that does not show that they were the same edition, or in the same condition. You are assuming all that sort of thing.

1894. If you look at Question 1568, you will see that when that matter was put to him, he said, "I assume, from the small difference in prices, that there was no difference in the quality of the books?" Yes.

1895. Are not all these books of Ruskin's by the one publisher? Not necessarily; there are sundry American reprints.

1896. Take that work, "The Elements of Drawing," 5s.—is not that the English edition? Yes.

1897. What would be the American price? I do not know. I do not say that it is the American edition.

1898. Have you any reason to believe that this book, "The Elements of Drawing," which you offered at 5s., and which Dymock offered at 4s., was not precisely the same edition? I really do not know. We sometimes have a copy of the "Elements of Drawing" which we might offer at 4s. or 5s.; it would be a question of condition as well as edition.

1899.

G.  
Robertson.  
4 Oct., 1900.

1899. I presume that the books which you were offering to a new library would be practically new books, and practically in good condition? You can presume what you like.
1900. Do you put in a large number of second-hand books? A fair percentage.
1901. Are not those publications of Ruskin's, which you offered at 5s., in a series of ten or twelve volumes, in cloth? There is no set in that way.
1902. I have seen eight or nine in our library? Only a few of his books are like that.
1903. What are the value of Ruskin's books, like those in the Parliamentary library? From 3s. up to 7s. 6d. the smaller books, such as the "Elements of Drawing."
1904. Would they be the same type of volume as you offered for 5s.? I cannot say. His might have been second-hand, and mine might have been new. I do not know what made the difference in price.
1905. Have you any reason to believe that they were not the same edition? I have never given it any consideration.
1906. As a business man, have you any reason to doubt that the series of Ruskin's works which you offered at 5s. each were not identical with what Mr. Dymock offered at 4s., when Mr. Cohen says that, in his opinion, they were? I would not take Mr. Cohen's judgment on the condition of a book. He sees one book to-day, and the other, perhaps, a fortnight afterwards.
1907. Would a man require to have special training to speak on the condition of books? Yes. If a man sees a book to-day, and another copy of the same book a month hence, how can he compare them unless he has had some training.
1908. But if both books presented a new appearance, would not a man be able to judge;—if I see eight volumes in the Parliamentary Library bound in a lavender colour, and see the same lot of books there in the same condition, do you not think I would be able to say that they were practically the same type of book? Yes, you probably would.
1909. There would be no great difficulty in Mr. Cohen forming an opinion if he saw books of the same type at both places? You want me to assume that Dymock's books, which he offered at 4s., were the same as I offered at 5s. I say I do not know.
1910. Take the "Social Science" series, twenty-one volumes;—is that a recent publication? I think it started fifteen years ago, and was continued until four years ago.
1911. How many editions would there be? I do not know; the publisher could not tell you.
1912. Is it not indicated on the frontispiece of the edition? Yes.
1913. So that you would not need to go home and ask the publisher, if it is there stated that it is the fifth edition? You are assuming that the fifth edition is shown. I cannot say that it was.
1914. As a rule, is not the edition shown on the face of a book like the "Social Science" series? No; they are cheap books.
1915. Have you any reason to doubt that it was the same series as Dymock was sending in? Not the slightest doubt.
1916. Upon that he showed a saving of 50 per cent.? Yes; he had more second-hand copies than we had, that is all.
1917. Your assumption, then, is that the saving of 50 per cent. on the "Social Science" series was owing to yours being new and Dymock's being second-hand; and that is the only explanation you can offer for the difference? Where there was any difference.
1918. The only reason you can give the Committee for this difference between Mr. Dymock's tender and yours of from 50 per cent. to 20 per cent. on various volumes, is that yours were new and that his were second-hand? I do not know.
1919. You have no explanation of this difference of 50 per cent.? Dymock was not 50 per cent. cheaper with reference to some of his books. As a matter of fact, the list was placed in Mr. Dymock's hands, and he could supply very few of the books on it. But some of those he had in stock he seems to have quoted at a lower price than our's. That does not prove anything, because we do not know what price he is charging for those that do not appear on the list. There is nothing in it.
1920. *Mr. Quinn.* Do you know this dictionary which I produce—that is, Funk and Wagnall's Standard Dictionary? Yes.
1921. Are you the agents for it? No.
1922. Have you sold many of them? Yes.
1923. Have you sold them at Mr. Anderson's suggestion on the Municipal Library list? Yes.
1924. Did Mr. Anderson suggest that dictionary? Yes. I would not put it that way—he altered the list.
1925. What dictionary would you put in? We might have had Webster in the list, and he put in this one.
1926. Would Mr. Anderson alter your Webster, and put in Funk and Wagnall's Standard Dictionary? Yes; I think he would generally alter it.
1927. What do you charge the Municipal libraries for Funk and Wagnall's dictionary? There are two editions of it; one contains about 8,000 words more than the other; that is the new edition.
1928. I think there are only two editions of it? I cannot say.
1929. One version was issued, and that was revised? Yes, as far as I know, that is so. I have had only two.
1930. What do you charge for those? I cannot tell you. I imagine 45s. is the price now. I think it was originally £3 10s. The new one is £3 10s.; it is in nice binding.
1931. What is it in half-Russia? One volume half-Russia would be £3 5s. The older edition would be £2 5s. now.
1932. Published in two volumes half-Russia, what is the price? It used to be £3 10s. I do not know what they charge for the old edition in two volumes. I might explain how the other edition happened to be on the market at all. The publisher cleared out the whole of the balance—we will call it the first edition; I do not know that it is. He sold it to Ward, Lock, & Co., of London, in sheets. I believe they kept the sheets for a year or two before they did anything with them. In the meantime a new American edition came out. I presume the American publisher thought that Ward, Lock, & Co. would clear them out of the way before he got out the revised edition. The result is that two editions were selling at the same time, which is very unusual. Ward, Lock, & Co.'s edition has 8,000 fewer words.
- 1932½. Are you aware that there is a difficulty in selling this dictionary in the United States, owing to some objectionable definitions of words given in it? I have not heard anything about that.

G.  
Robertson.  
4 Oct., 1900.

1933. Have you seen the old edition? Yes; I only know how they sell.
1934. As a matter of fact, do you know that this dictionary was objected to by ministers and others in the United States on account of several scandalously indecent definitions in it which, in the opinion of those ministers and others, ought not to have found a place in popular family dictionary? I do not know that.
1935. Do you know that, on account of the objections raised to those terms in the first edition, they were left out in the second edition? No; I never heard a word about it. I only know the book for selling purposes. We can sell it easier than the others.
1936. Because it is cheaper? It has not always been so.
1937. How do you account for the extraordinary fall in price in so good a dictionary? Because the new edition has come out.
1938. Do you sell the old edition? Yes; but I would explain that it contains 8,000 fewer words than the later edition.
1939. Will you bring the edition you have up here? I will bring both up if I have them.
1940. I have here an edition of the dictionary, which Mr. Anderson has brought up from the Free Public Library. I see that the most objectionable words are taken out. There is one I have been able to find out, that is "bellybutton"; do you know that? No.
1941. Do you know that those words are a synonym for navel? No.
1942. Do you think a word of that kind is a proper word to be in a proper dictionary, or should it be in a slang dictionary? Certainly.
1943. Would you find it in Dr. Murray's dictionary? I should think so.
1944. Then there is the expression "to screw," meaning to copulate; do you think that word would be found in Murray's dictionary? I think it ought to be in every large dictionary.
1945. Is it the function of a dictionary to give permanence and currency to slang? A dictionary has nothing to do with the purity of the language.
1946. Do you think it is the function of a dictionary to give permanence to slang? I do not think the dictionary gives permanence to anything. It tells a man who wants to know what is the meaning of the words "to screw." It is certainly the meaning of those words.
1947. Then there is another definition "to knock," meaning to get with child? You have enlightened me. I did not know that before.
1948. Do you think that is a definition that ought to be included in a dictionary of the English language? I think so.
1949. Then there is the word "snatch," meaning vulva; is it your opinion that that ought to be in a dictionary of the English language other than a slang dictionary? I think so in a large dictionary.
1950. Then there is the word "nuts," a second name for testicles? I suppose that is so.
1951. Then there are the words "bloody nuisance?" I think that would be very useful in this House sometimes.
1952. Then there is another word, "twat," meaning the female pudendum? I think that ought to be in a large dictionary.
1953. If you think so can you tell me why these words, having been in the first edition, have been eliminated from the second? I do not know.
1954. The first edition from your point of view was the one which fulfilled the proper functions of a dictionary, the other edition falls short of that, inasmuch as these words are elided, which you think should be in the dictionary, so that you are on the horns of a dilemma? No; because you say that I stated that the first edition of the dictionary fulfils the functions of a dictionary. I said nothing of the sort; I said those words should be in a large dictionary.
1955. But they have been struck out of the edition which is in the Free Public Library? I am not responsible for that.
1956. If they ought to be in the dictionary and they are not in it, is not the dictionary faulty? Yes.
1957. And the editors of the second edition of the dictionary, in eliminating those words, have acted wrongly as dictionary makers? I do not know.
1958. *Chairman.*] Have you carefully examined this dictionary? No; I was not aware that there were such words in it.
1959. As a matter of fact, you have not searched the dictionary to find out whether or not there are indecent expressions in it? No; I learnt it for the first time to-day.
1960. From a popular point of view, how do you regard that dictionary? We have found it to be the best seller, that is all I can say.
1961. Have any of your customers, who bought the dictionary, come to you and complained that the second edition did not contain these words to which objection has been taken? No; I never heard a word from the purchasers of the first or the second editions.
1962. Then, presumably, they did not purchase the dictionary for the purpose of discovering expressions of an indecent nature? No.
1963. *Mr. Quinn.*] With regard to the 5,000 volumes which you purchased from the Free Library, can you tell us, approximately, whether it was a paying transaction? I do not think so.
1964. You did not get back the £219? I do not think so.
1965. Did you sell the directories? No.
1966. What did you do with the Australian Directories? They were thrown out. They had not acquired any value on account of their age.
1967. Were they old enough to be of value? No.
1968. *Mr. Anderson.*] Can you give an idea as to what period elapsed between the time of your taking delivery of the books and the auction sale? Not without going into the matter; it was not long. I think about two months elapsed between the time we took delivery of the books and the time we sold them by auction.
1969. You have mentioned that at the auction sale about 900 volumes were sold? I think so.
1970. And you have estimated that about 1,500 saleable volumes were delivered to you? Yes.
1971. So that, approximately, you sold 600 volumes in your shop? Yes.

Michael

Michael Francis Cullen recalled and further examined :—

1972. *Mr. Robertson.*] During what period were you Librarian of the Lending Branch? From 1885 until M. F. Cullen. 1898.
1973. Then you have had experience of the supplying of the Library by a London house, and by Angus and Robertson? Yes. 4 Oct., 1900.
1974. Will you tell the Committee, whether, in your opinion, the Lending Branch is better served by Angus and Robertson than by the London agents? I think it was undoubtedly an advantage for the Library to be supplied by the local agents, Angus and Robertson, because we were able to get the exact books we required, and to reject those which were not required. Our London agents always selected the books and sent them out to us.
1975. Did the London people send you books that you had before? They sometimes did so; at other times they sent us books that we never asked for.
1976. By being able to personally select the books from shipments as they came in, is the Lending Branch better served? Yes; we were able to select exactly what we wanted, according to our experience; also in replacing books we were better served; we were able to get books quickly from our local agents. We had to wait many months when we sent to London for them.
1977. *Mr. Anderson.*] Do you remember inspecting the duplicates in 1897? Yes.
1978. What proportion of them would you roughly estimate as being quite worthless for any purpose? About two-thirds.
1979. Were two-thirds of them not worth looking at? There were old directories, blue-books, and parliamentary papers, stuff that I afterwards saw torn up in Angus and Robertson's place as being absolutely worthless.
1980. Did you get full permission from me to take anything from those volumes which you thought might be of any service to the Lending Branch? I did.
1981. *Mr. Meagher.*] What was the object in collecting a great deal of matter which, in your opinion, was valueless, and which ought to be burnt, and then asking experts to come round and put a value on it? I think the only object was to get rid of them from the shelves, they were filling up valuable space.
1982. What was the object of asking men to come and buy such things when you could have made a bonfire of them, or have carried them out to the Moore Park tip? I do not know.
1983. What possible object was there in asking expert men to come round and look at a heap of rubbish with a few good works mixed up with them? I do not know, except to get rid of them off the shelves.
1984. How much of them were taken from your branch? None.
1985. How did you come to inspect them? Because Mr. Anderson said to me there were a number of duplicate books which I could select, if I thought they were any use to the Lending Branch.
1986. How many duplicate books did you see there? I understood they were all duplicates.
1987. How many volumes were there? I certainly did not count them.
1988. Did you go through them to see which would answer your purpose? Yes, except Parliamentary papers, directories, and so on. I went through the books on the shelves.
1989. How many volumes were there? About two thousand or three thousand.
1990. Did you go through that number? Yes.
1991. And you did not consider one duplicate worth having? I took between ninety and one hundred volumes.
1992. And the rest you rejected? Yes.
1993. What do you think was the value of those you rejected? I cannot offer an opinion on that. I certainly did not look at the books to place a value on them, but only to see if they were suitable for the Library Lending Branch.
1994. Do you think that 10d. a volume would be a fair price for what you rejected? I cannot tell; I would have to go through the whole of them to make a valuation.
1995. How long did you take to go through them? Two or three days off and on, when I could spare the time.
1996. Had tenders been called at that time? I do not know anything about that.
1997. You do not know how books came to be taken in exchange instead of cash? I believe the Trustees did that. I understood they selected books for country libraries. Those books were submitted to the Trustees during Mr. Anderson's absence. That is how I knew of it.
1998. Did you represent Mr. Anderson at the meeting of Trustees? Yes.
1999. Were you present at every meeting? Yes, except the first.
2000. Did the offer emanate from the Trustees as to accepting books? I cannot say that.
2001. Can you say where the offer emanated from? No. All I know is that it was spoken of as to accepting books for country libraries.
2002. Who had to check the value of the books? The officers of the Reference Library with the Trustees. All books were taken there and placed on the table for the examination of the Trustees.
2003. *Mr. Quinn.*] In the collection which you saw, were there any presentation volumes? I do not remember having seen any there. I saw one or two afterwards. Of course when I inspected the books I merely looked at the title; I did not open the books. I do not mean to say that I took every book in my hand and examined it. I was satisfied with the title.
2004. Do you know that books belonging to a bequest were sold? I know that some were, and they were recalled immediately, when they were discovered.
2005. Do you not think, as a man skilled in library work, that it showed great carelessness by responsible people to part with books of that kind having the intimation stamped on them that they were part of a bequest, and if you only looked at the outside ought not the people who selected them for sale to have looked at the inside? The officers entrusted with that duty should have done so.
2006. Were they not careless in not doing so? Yes; the Trustees stated that they did not know that such books were among them.
2007. That puts the responsibility on the Library officials? I do not know how it happened. There is the fact that some of them were among those books, and some were recalled.
2008. Do you say that the Trustees investigated personally the value of the books accepted in exchange? I was not present, but I know the books were always placed on the table, and the Trustees went through them.
- 2009.

- M. F. Cullen. 2009. We are to believe that the Trustees, although they do this in connection with new books, did not go through the names of library books which were being parted with? I do not know that.
- 4 Oct., 1900. 2010. If they say they did not know anything about the presentation volumes being in the collection, does it not follow that they could not have examined the books? That might have been so.
2011. Who were the officials responsible for the examination at that time? I do not know.
2012. Was Mr. Anderson? Mr. Anderson would naturally nominate his men to take out those books.
2013. Was it part of Mr. Anderson's duty to have at least known the character of those books? I presume Mr. Anderson depended very much on his officers, who were old experienced men in the Library. It would be an impossibility for him to go through every book.
2014. Were you acting as Mr. Anderson's *locum tenens* for a time? Yes.
2015. In a matter like that would you have depended upon your officers, or would you have examined the books yourselves? If I could trust my men, and I knew that they were experienced, I would certainly trust them to do the work. The Principal Librarian would have to neglect other work in order to go through the books.
2016. Did you examine only a few thousand volumes? I examined them carefully.
2017. If the Trustees can examine personally every new book, thousands and thousands of which come into the Library, would it have been too much to expect the Library officials to have made sure that they were not dealing with any books which were part of a bequest? I do not know what was done by the Reference Library officials.

Hugh Wright sworn and examined :—

- H. Wright, 2018. *Chairman.*] What office do you hold? Assistant Librarian of the Public Library of New South Wales.
- 4 Oct., 1900. 2019. What branch do you belong to? The Reference Library.
2020. *Mr. Anderson.*] Have you inspected the books on the floor of this room and made a list of them? Yes.
2021. Did you find out the current value of each book? Yes.
2022. From what sources did you get the values? From Edwards', Quaritch's, Sotheran's, and Angus and Robertson's catalogues.
2023. Are the prices which you have marked down the retail or shop prices? Yes; the shop prices.
2024. How many volumes are there? One hundred and twenty-three volumes altogether. Of the lot 108 are from the Public Library stock.
2025. There are fifteen volumes which never belonged to our Library? Yes.
2026. What is the total value of the 108 volumes? £17 11s. 6d. That is the retail selling price for good, clean copies.
2027. What would be a fair wholesale price for these, if sold by a bookseller, without the Library stamps in them? About £10 to £12.
2028. How much do you think they would be depreciated by having our cancelling or other stamps in them? Fully one-third.
2029. Are there a number of volumes there which are quite valueless? Yes; a lot of them are odd volumes. There are fourteen volumes which are quite valueless. For instance, in some cases there are only two volumes of works that should be complete in four volumes.
2030. Will you narrate the precise form in which we came to take off some of the duplicates from our shelves in 1896? We have one room devoted wholly to Australasian books, books either published in or about Australasia. As we are adding 6,000 to 7,000 volumes a year, we are becoming crowded for space. The Australasian collection was particularly cramped, and Mr. Anderson instructed the senior attendant to go round the shelves of the Australasian collection and pick out the least valuable of the duplicate volumes. They were all placed in presses in another room, where we had other incomplete books or duplicates that had accumulated for some time past.
2031. About how many volumes were taken off the shelves? Between 900 and 1,000—say about 1,000 volumes.
2032. What was then done with them? After the books were arranged by the lads in rough alphabetical order, myself and the other assistant librarian were told to go over them and pick out any volumes that we should keep on account of their being special editions, or any books with special notes in them, or any books which we wished to keep for exchange purposes with other libraries, and replace them on the shelves. I and Mr. Gifford, the Assistant Librarian, were deputed to do that. We picked out about 300 altogether. Of that lot, we kept 160 in a cupboard, either to replace copies already on the shelves in case they wore out, and were, perhaps, hard to get locally, or to keep them for exchange purposes to complete sets which were in the possession of other libraries.
2033. Did you take special care that every edition of any work was kept? Yes.
2034. Did you keep duplicates of many of the books? We have at least two copies, I am sure, of every Australian book that was sold. In some cases we have more than two copies. Take "Flinders' Voyage"—we have six copies of the text, and four copies of the atlas. Of "White's Journal" we have four copies on the shelves—two copies coloured, and two plain. They are all in excellent condition.
2035. Were they as good in every way as the copy that was disposed of which you have seen in Mr. Lennard's possession? Well, I should say so.
2036. Of the total duplicates, what number would you estimate as being saleable books? One thousand five hundred volumes.
2037. What did the others consist of? Rubbish. Parliamentary papers, blue-books, estimates, public accounts, reports of departments, navy and army lists, worn-out Sydney directories, almanacs that were valueless.
2038. Where did these come from? Mostly from the Colonial Secretary's office. They sent us two cart loads; we weeded out what we required. Some of the directories which they sent up were cleaner than those which we had on the shelves.
2039. As a matter of fact, amongst those books which you characterise as rubbish, there were practically none that were ever purchased by the Trustees? Practically none. Of course there were some periodicals, unbound incomplete volumes of the "Athenæum" and "Nature," which were really valueless. They had been purchased by the Library.

2040. Do you know that a large number of those directories, guides, and army lists, had been sent to us from the Colonial Secretary's Department to see if we would be able to utilise them? Yes. H. Wright.
2041. Do you know that all possible pains were taken to utilise any that would complete our sets or fill in gaps? Yes. 4 Oct., 1900.
2042. Were the rest put away in a heap and called duplicates? Yes. We picked out one volume, a London Directory, that was fairly recent, and sent it to the Post Office.
2043. Do you know of any others that we allowed other Government departments to get? The Parliamentary Librarian picked out a lot of Canadian and United States official publications.
2044. Did he give us some in exchange for them? That I forget; but I believe he did.
2045. Were any others selected from that lot of duplicates by other Government librarians? Yes; there were some volumes—old University Calendars—given to the University, to complete their sets.
2046. Did Mr. Cullen, the Librarian of the Lending Branch, have his pick also? Yes; he went over the whole of them and picked out ninety volumes.
2047. Were those duplicates inspected by any Sydney firms with a view of tendering for their purchase? Yes; Angus and Robertson, and somebody came up from Mr. Dymock, also, Mr. Ogle, the manager for Mr. Cole.
2048. Was every facility given to those three representatives to inspect the duplicates? Yes.
2049. Were any of these duplicates removed from the shelves after they had been inspected by anyone of those firms? No; not a volume.
2050. Could they possibly have been removed without your being aware of that fact? I should think not; unless they were taken after I left at 5 o'clock.
2051. Could two hundred volumes have been removed from the lot and put in another place with the object of not allowing another tenderer to see the whole lot? No; 200 volumes would make a decent heap, and anyone could see them.
2052. Was there any space in our crowded building where such a pile of books could be placed? No, not without being seen.
2053. How long would it have taken you, as a cataloguer, to make a proper catalogue of all those books? To have gone through the lot, to have weeded out the good from the bad, and to have made a proper bibliographic exchange list, would have taken about two months. It would have been necessary to point out the imperfections of the different volumes. In some cases two or three leaves were torn out in the middle of a volume.
2054. What other imperfections were there to your knowledge? Plates and maps were missing. In several cases, only the first two volumes out of three or four were there. In one case, White's History of the Maoris in New Zealand—the work is complete in six volumes—we got rid of two copies which had only volumes one and two.
2055. Of what value would incomplete works of that kind be? Practically nothing.
2056. What was the expenditure on books and binding in the years 1890 to 1892—the three years before I came to the Library? £3,500 each year.
2057. What was the total expenditure of the Library for salaries and everything else in those years? In 1890 the total expenditure was £9,658, in 1891, the same, in 1892, £10,008.
2058. Will you give the same figures during the years since then? In 1893, £8,654; in 1894, £8,396; in 1895, £8,389; in 1896, £6,970; in 1897, £7,576; in 1898, £7,133; in 1899, £8,485.
2059. Generally speaking, the expenditure on books and binding has been curtailed very much lately? Yes.
2060. Have the total expenses of the Library been reduced very much since I took office? In 1892, it was £10,008; last year, it was only £8,485.
2061. Can you give some examples to show how I dispensed with the services of some highly-paid officers without replacing them in any way, still keeping on the work of the Department? Yes; just after you came there was an Assistant Librarian of the Lending Branch, Mr. Stevens, who got £260 a year and quarters. He was retired, and his position practically abolished. No one benefited by the change. Later on, the Assistant Librarian of the Reference Library, D. Richard Hawley, was pensioned off, and his position not filled. His salary was then £490. That was at the end of 1894.
2062. Has the work of the Library grown very much during the last three years? Yes; considerably.
2063. And has the work of the Library suffered in any way through the diminution of the staff? Not at all. We are worked harder, and all the men have worked more loyally. We had to. It is only fair to say that Mr. Anderson made the dunderheads wake up, and gave them to understand that if they did not work they would have to find other positions. When Mr. Anderson came, he instituted classes for the juniors, for the study of English literature—
2064. *Mr. Quinn.*] In the Library? Yes;—and cataloguing.
2065. *Mr. Anderson.*] Has that had a good effect to your knowledge, as a librarian? Undoubtedly. Lads could not go through, say, Saintsbury's Text Book of English Literature or through the study of the play of "Hamlet," besides doing a little French and Latin, without benefiting.
2066. As a matter of fact, do you know that many of the juniors are now efficient young library assistants? Yes.
2067. Men whom you are proud to have working with you? Yes.
2068. Do you know that I continued those classes for some years after my office hours? Yes.
2069. Did I make them free? Yes.
2070. Did I afterwards insist on some of the senior officers coming to the class because they were so much inferior to the juniors? Yes.
2071. Do you think that the intellectual tone of our Library is steadily improving? I think so; and not only the attendants but the public too, because Mr. Anderson got the newspapers moved out of the reading-rooms of the Library. He established a newspaper-room, and by that means we got rid of a lot of loafers. All the people who use the newspapers are not loafers, but a good many who used the papers in the Library were.
2072. Do you know, as a matter of fact, that the Library is now frequented by students and scholars of every grade in Sydney? Yes; we have a very decent lot of students now.
2073. Is everything possible done in the Library to help *bona fide* students and inquirers for any sort of information? Yes; we do our utmost to help them.
2074. When the duplicates were finally got ready for disposal what procedure was followed? After the tender of Angus and Robertson had been accepted, a special embossed stamp was made, and also a signature

H. Wright.  
4 Oct., 1900.

signature stamp. One junior was specially deputed to do the stamping, and nothing else. He stamped the title page of each duplicate. One stamp was, "Sold by order of the Trustees of the Public Library of N.S.W." "Principal Librarian" was at bottom; above that was stamped Mr. Anderson's signature. One of the boys did that.

2075. Have you every reason to believe that that junior carried out his duty faithfully and carefully? Yes.

2076. Was it possible for any of the public to lawfully get access to the part of the Library where that work was done? No; because it was done in the basement, and we do not allow the public down there. Now and again a carter might come in with a case of books.

2077. Would it be possible for anyone to lawfully get possession of a sample of that embossed stamp, or a sample of my stamped signature? No; I do not think so.

2078. What was done with the signature stamp, to your knowledge, while the work was going on? It was kept in the custody of the accountant.

2079. I mean while the stamping was going on? The lad had charge of it; I do not know what became of it.

2080. Do you know what was done with the embossed stamp and the brass stamp when the work was finished? The embossed stamp was locked up, and the signature stamp was kept by the accountant in his drawer.

2081. With other stamps which we use in our business? Yes.

2082. Could anyone possibly have got those two stamps from that date to this without improperly going to some of our locked up cupboards? Certainly not, unless he was in league with those in charge of the stamps.

2083. Do you know where they are kept now? Yes; the embossed stamp is locked up in the iron safe, and the other stamp is still in the accountant's drawer.

2084. Who has charge of the key of that iron safe? You have.

2085. Does anyone else ever get charge of that key but myself? No.

2086. What is your opinion of the improvement in value given to a book by a mere autograph? I should say it is a sentimental value. If I knew the person I would value the autograph much more than if I did not know him. A copy of "Fenton's History of Tasmania," which belonged to G. A. Sala, and which bears his autograph, can now be bought in London for 16s. A copy without that autograph can be bought from the same bookseller for 14s. He is a man of some repute, and I would give 2s. for his signature any day. Then there is "Mudie's Felony of New South Wales" with the author's autograph inscription, it can be bought for 25s. A copy without the autograph from the same bookseller is offered for 22s. Unless a man be some one very distinguished like Gladstone, Disraeli, Dickens, Thackeray, or Lamb, or like Kruger at present, the autograph value is merely sentimental.

2087. *Mr. Quinn.*] Is not the value of a book the price at which it can be sold? Yes, the demand for it.

2088. If an offer were made by one or two people of a certain amount for a book would not that be the market value of that particular book? Not necessarily.

2089. Why? If you had the book and I wanted it particularly I should give more for it than perhaps Mr Anderson would—that would not be the market value. The market value is the booksellers' value.

2090. *Mr. Anderson.*] Do you remember when the agency of the Library was changed? Yes, in 1895.

2091. As far as you know, what were the reasons which prompted the Trustees in doing that? Kegan Paul, Trench, Trubner & Co. were our London agents. They had *carte blanche* to send us books to a large amount—something like £1,000. They bought and bound those books, and sent them out. Often some of those volumes were not suitable, but we had to take them. Then again, books that had been favourably reviewed, even by the Sydney Press, would not arrive for six weeks or two months afterwards. Books could be bought in Sydney six weeks and two months before we got them from London. That caused a good deal of annoyance, and the public growled considerably over it.

2092. *Mr. Quinn.*] Do not most of the books that are reviewed in the Sydney Press come direct from the publishers? Yes; but it would not make a difference of six weeks or two months.

2093. *Chairman.*] Are they not generally advance copies? Yes.

2094. *Mr. Anderson.*] Do we not now generally get books within a week or two after seeing any critiques of them? Yes, say two weeks.

2095. Do you know that frequently books were not sent at all that we would very much desire to have? Yes.

2096. Was it not a fact that we dared not buy those books locally for fear that they might arrive six weeks or two months afterwards from our agents in London? Yes; that was another source of annoyance. There was such a demand for them locally that we would buy a copy, and two or three months afterwards we would get a copy from London. We then passed the duplicate on to the Lending Branch, or if the interest in it had died out, we passed it on to the country libraries.

2097. Do you know, as a Librarian, what practical disadvantages ensued after changing the agency, in the matter of "continuations," and other things? Yes; some of the periodicals and scientific societies' publications did not reach us regularly for twelve or eighteen months—until we got into the proper swing of completing continuations with the new agents.

2098. Do you consider that the Library has benefited by the change of agency? Yes, as far as new books and Australian publications are concerned.

2099. Do you believe that we are better served by our present agents than we were by the London agents? Certainly; for new books.

2100. Do you remember the copy of "Flinders' Voyage" that was sold amongst the duplicates? Yes.

2101. Was that a complete copy? No; only two volumes of text.

2102. What did we do with the atlas which belonged to that copy? We have still got it.

2103. Why did we keep it? Because it is the rarest part of the book. We have in our collection now an incomplete copy of the atlas. Although we have got three others we thought it well to keep this one to replace the incomplete one.

2104. Do you know what was paid for one of those duplicate copies which you have seen? Two volumes and the atlas; but the atlas is incomplete. It only contains ten plates. We paid £5 5s. for it in February, 1884, to Mr. Dymock.

2105. Can you mention some other valuable duplicates bought from Mr. Dymock about that time? In the same year we bought a copy of "Gould's Mammals of Australia," for which we paid £47 10s. In the same month we bought a copy of Maclehos's "Picture of Sydney," for which we paid £5 10s. H. Wright.  
4 Oct., 1900.
2106. What is the present value of "Gould's Mammals"? £25.
2107. What is the value of the "Picture of Sydney"? 22s.
2108. What other duplicates did we buy? The Supplementary Volume of "Gould's Birds of Australia." We purchased that in September, 1892, for £30.
2109. Do you think it could be possibly called a wise proceeding for our Library to buy a duplicate odd volume? Certainly not.
2110. What would be the market value of a duplicate odd volume in an ordinary shop? I believe the present value of that supplementary volume of "Gould's Birds" is only £20.
2111. From your experience of the Library, is there the slightest necessity for us to have duplicates of these expensive works? Certainly not. Perhaps it would be wise to keep a complete duplicate set of "Gould's Birds," but I do not think it would be wise to get an odd volume, especially the supplement, which is so seldom used.
2112. Do you find that there is much demand for that class of book in our Library? Very little indeed. "Gould's Birds" is used principally by ladies who want to copy birds for Christmas cards.
2113. Even if we could afford to buy these expensive duplicates in those days when we had a vote of £3,500, do you not consider that it would be impossible now with our greatly diminished vote? Yes; it would be unwise. It was unwise to buy them then.
2114. Would it not be wiser to spend our money in completing our sets of scientific periodicals and in buying foreign high-class literature rather than in duplicating old Australian books? Yes.

TUESDAY, 9 OCTOBER, 1900.

Present:—

MR. HOGUE,  
MR. MILLARD,

MR. PRICE,  
MR. QUINN.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Honorable James Norton, LL.D., M.L.C., sworn and examined:—

2115. *Chairman.*] Are you President of the Trustees of the Free Public Library? Yes.
2116. *Mr. Anderson.*] Were you appointed to succeed Dr. Lang? Yes; in November, 1878.
2117. Were you elected President in 1890? Yes.
2118. Have you frequently visited the Library and seen its work in every branch? Yes.
2119. Have you studied the gradual growth of the Library up to its present condition? Yes; I have watched it very carefully for twenty-two years.
2120. Do you remember the application in 1894 to send out books to students in the country who were attending University Extension Lectures? Yes.
2121. Do you remember that the clear policy of the Trustees, expressed to me at that time, was to assist country students in any way practicable? Yes.
2122. Were the Trustees well aware, as shown in your annual reports, that I have ever since done every thing in my power to help country students equally with city students? Yes.
2123. Are you, as President, satisfied with my efforts to maintain the character of the Library and to improve it where possible? Yes, thoroughly satisfied.
2124. Do you know that I have used special means to stimulate my officers, and to improve them intellectually and educationally? Yes, by lectures and otherwise.
2125. Do you know that I instituted classes for my officers in order to make them efficient in library economy? Yes.
2126. Do you know that there has been a steady diminution in our vote during the past twenty years? Yes.
2127. Do you know that I have myself at my own instigation caused great economy in the working expenses of the Library? Yes.
2128. Do you know that I have dispensed with some highly-paid officers, and have carried on the work of the Library without replacing them? Yes; very often at great trouble to yourself.
2129. Do you know that we have brought our catalogues right up to date? Yes; a most unusual thing in such libraries.
2130. Do you know that the catalogues were very much in arrear when I went there? Yes; for years.
2131. And you can judge that my staff and myself have had to work very hard to bring the catalogues right up to date? Yes.
2132. Do you know that we have a subject index showing what our books treat of, which is also up to date, as well as our author catalogue? Yes.
2133. Do you remember that the agency of the Library was changed in 1894? Yes.
2134. Was that some considerable time after I assumed office? The change took place a year or so afterwards.
2135. Was that done really at your instigation because you were dissatisfied with the way in which Trübner and Co. were carrying on our work? I do not think it was so much at the instigation of myself and the other Trustees as at your own suggestion, but I was quite aware that the work was not properly carried on by our then London agents. The result to the Library was most unsatisfactory.
2136. Have you been satisfied with the change we made at that time? Thoroughly satisfied.
2137. Do you feel confident that the Library is better served by the local agents than it was by the London agents? Very much better. We have now an opportunity to examine books before we purchase them. Kegan Paul & Co. used to send out books which were practically worthless, and our shelves were encumbered with what was of very little use.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

2138. Do you know that we often failed to get new books which we should have got only for the want of judgment on the part of our London agents? Yes.

2139. Do you remember the following minute which I submitted to the Board :—

Free Public Library, Sydney, 10 October, 1894.

I WOULD respectfully invite the attention of the Board to the question of the Library's agency for the purchase of English and European books.

We are, at present, very much dependent on the judgment and zeal of our London agents, Kegan Paul, Trench, Trübner & Co., and I regret to report that lately the Library has not been treated with the care and attention which might have been expected.

I have noticed with surprise that we have not been supplied with the newest works on Social, Philosophical, and Scientific questions as we might have reasonably expected, *e.g.*, Drummond's "Ascent of Man," Caird's "Evolution of Religion," Kidd's "Social Evolution," &c.

The result is that we have to get a large number of books locally, or wait three months for our orders to be executed from England.

As a general rule, the new books supplied by our London agents reach us six weeks after the same books are available in Sydney, because of the delay in binding and waiting for complete shipments.

The expenses connected with our present agency—freights, insurance, cases, cartage and wharf charges—amount to 5·3 per cent. (amount paid in 1893, £1,563 12s. 7d.; packing and shipping charges, £59 9s. 8d., exchange on above, £24 10s. 4d.; total, £81) on the total cost of the books. The average discount allowed on published prices is 20 per cent. I submit, herewith, the terms on which Angus and Robertson, the local booksellers, offer to do our business.

I estimate that these terms are fully equal to those now extended to this Library by the London agents.

In the event of the Board deciding to take local agents, there would be some disadvantages in the matter of securing second-hand books and of being brought into the closest touch with English publishers, but there would be the advantages of getting new books much more promptly, of having the selection more completely under the Board's control, and of having only one firm to deal with, thus obviating many mistakes.

H.C.L.A.

? Yes.

2140. On that minute, did the Board decide to change the agency to a local firm? Yes.

2141. Did the Board consider the tenders submitted at that time by four booksellers? Yes; from three or four.

2142. Do you remember what was the result? Angus and Robertson were appointed agents to the library.

2143. Can you give the Committee some information about the books which we got from the late Mr. Justice Wise? They were not got from the late Mr. Justice Wise, really. I find that by his will he left all his property, absolutely, to his wife, trusting to her to carry out and manage the same to the best advantage of the children. Some time after his death, Mrs. Wise gave his books to the library. Whether that was in pursuance of any arrangement with her husband, we have no means of knowing. The books did not come into our possession at once. I think they were lying in the Museum for several years. Ultimately they were handed over to the Library without any conditions whatever. They were then mixed with the ordinary collection of the Library—that is, the old Australian Subscription Library. They came to the Public Library of New South Wales, then called the Free Public Library, with the rest of their assets, and the Government took the institution over, so that we are bound by no conditions—none were expected or asked for. It was simply for the benefit of the Library.

2144. Do you remember that Mr. Justice Wise died in September, 1865? Yes, about that time.

2145. And was the Free Public Library formed as a Government Department in 1869? Yes. So that these books were incorporated with the old subscription library, which became a new Government institution called The Free Public Library of Sydney.

2146. Do you recognise this extract from the report of the Trustees of the Australian Museum in 1865? Yes; it is as follows :—"The Trustees also report that, at the request of Mrs. Wise, they have taken charge of the valuable and highly interesting library of Australian books collected by the late Mr. Justice Wise, and bequeathed by him to the Free Public Library of Sydney, a catalogue of which is appended." That statement about the books being bequeathed to the Free Public Library is a mistake, as I have just explained.

2147. What is your opinion about the policy of buying duplicates for our library? In some cases duplicates are valuable, but those are only rare cases, and considering our want of room for stowing even single books it is not possible to have duplicates of many books. In the British Museum, I believe, they do not keep duplicates.

2148. Do you know, as a matter of fact, that we have in our libraries some duplicates sold by the British Museum? No doubt.

2149. With our diminished vote for books, from £3,500 in 1892 to £3,000 at present, is it possible to buy duplicates without losing other valuable works that we ought to have? Certainly not, and we have less and less room every year to stow them away.

2150. Have I always shown a great anxiety to restrain or restrict the loan of books from the Reference Library in every possible way? Certainly; there have been very few lent.

2151. Are you aware that I suggested regulations at different times to stop the loan of books from our Reference Library? Yes.

2152. Have I done everything possible to lend books from the Lending Branch and from our duplicates to *bona fide* students anywhere? Yes.

2153. Are you aware that I have always shown the greatest anxiety about the petty thieving which we have suffered from? Yes, very great anxiety, as the Trustees also have.

2154. Do you know that the Trustees reported these thefts to the police, and persuaded the Minister to give a special reward of £5 in order to detect the thief? Yes.

2155. Do you know that in consequence of that reward we have caught several thieves? Yes.

2156. And have paid the reward to the police and others who have helped us in this way? Yes.

2157. In the evidence, Question 856, it is stated that you wrote a letter to the *Herald* saying that our duplicates were such a lot of rubbish that they would have been burnt;—did you ever write such a statement? No; I never wrote such a letter.

2158. As a matter of fact, did the Trustees know that a large number of our papers were rubbish, and only fit to be burned? I am satisfied that many of them did know that a great deal of those papers were utterly worthless.

2159. Did you see them lying in stacks on the floor before they were taken away by Angus and Robertson? Yes.

2160. Was the late Principal Librarian one of the Trustees at the time we sold those duplicates? Yes.

2161. Did he thoroughly agree with the action of his co-Trustees? Yes.

2162.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1930.

2162. Did he actually confess that he had seen fit to change his ideas about accumulating duplicates? I believe he did.
2163. Were the Trustees quite unanimous in endorsing his action and mine in getting rid of these unnecessary duplicates? Absolutely unanimous.
2164. It has been asserted here that I am neglecting my duty by acting as Secretary of the Library Association of Australasia;—do you think that is correct? Certainly not. I think the Library Association forwards the interests of our Library, and therefore any trouble you take with that is for the benefit of our Library. Even if it were not so, there is nothing neglected in our Library.
2165. It is said that it is improper for me to act as secretary to Mr. D. S. Mitchell in getting his books from Europe. Do you think that it is to the advantage of our Library for me to do so? It is extremely advantageous to the Library that you should do so. Mr. Mitchell is an old man, and cannot attend to these things minutely. He is accumulating a large fresh library of books to be handed to the Public Library of New South Wales, and therefore anything you do to perfect that library of his will ultimately tend to the advantage of the Free Public Library.
2166. Do you know that Mr. Mitchell is really not a wealthy man, in so far as he cannot afford to neglect any savings he can legitimately make in buying books? I fancy he is wealthy enough, but he is not fond of spending money if he can avoid it.
2167. Do you know that he spends the whole of his income, except what is needed for his personal expenses, in building up the library? Yes; a library which will ultimately become ours.
2168. Therefore, in saving any money for Mr. Mitchell, it really means more books for the use of our library? Certainly.
2169. Do you know of your own knowledge that Mr. Mitchell is anxious that I should help him in this way, and save him any commission, discount, and expense which I can? I understand so; but I cannot say of my own knowledge.
2170. Are you satisfied that I have done everything in my power to assist you in managing this institution and advancing its best interests? I am quite satisfied.
2171. *Mr. Hogue.* Has Mr. Anderson the complete confidence of the Trustees? Yes, thoroughly.
2172. Have there been any complaints made as to the management of the Library by any portion of the public? I know of none. I do not even know of letters in the newspapers making complaints to any extent worth mentioning.
2173. Do you yourself know of anything in the shape of abuses in connection with the Free Library? I know of nothing.
2174. Do you consider that the staff is well organised and managed? Very well managed. But the staff is insufficient. It is very clever of Mr. Anderson to manage as he does with an insufficient staff. It is only by systematically working with them and training them that he is able to get along comfortably.
2175. Do you think that Mr. Anderson devotes his whole time to the duties of his position? Yes.
2176. Does he give good service to the institution? Yes, thoroughly.
2177. You consider that he is highly qualified for his position? He is peculiarly well qualified for such a position. His training, education, and ideas all tend to make him a valuable servant to the institution. I cannot conceive that we could get a better man anywhere in New South Wales, taking all these things into account.
2178. *Mr. Price.* Are you aware that 5,000 pamphlets, duplicates, &c., were sold? Yes, about that number.
2179. Was a list furnished to the Trustees containing the names of those pamphlets and books? I do not think there was any complete list.
2180. How did you know what was going to be disposed of? From Mr. Anderson, and by seeing them. The books were open to us for inspection, and we did inspect some of them.
2181. Were the 5,000 copies taken out and shown to you? Yes.
2182. Including those books given by Mr. Justice Wise? Everything they sold.
2183. Including the work called "White's Voyage to New South Wales"? Yes.
2184. Including those works which you re-purchased? Yes, including everything. We could not go laboriously through every one of them.
2185. Whom did the Trustees rely on for the selection? Mainly Mr. Anderson, and, of course, his subordinates.
2186. Are you aware that Mr. Anderson has sworn that he did not go through the books—that he did not select them? I think I noticed that in the evidence.
2187. What steps did the Trustees take to ascertain the character of the books? All they could do was to examine them, and to rely on Mr. Anderson's judgment. We knew he had good officers under him.
2188. Before passing a minute for the sale of these books, did the Trustees go down and examine the books or take any steps to satisfy themselves as to their character? They only took such steps as I have mentioned.
2189. The fact is that the Trustees did not know what was sold among these 5,000 books? Mr. Anderson explained the character of the books. We took his word, and had every confidence in him.
2190. Did he explain that the volumes bequeathed by Mr. Justice Wise were included in those books? No; he did not know it. They were included by a mere accident.
2191. Did he explain that a number of volumes which Mr. Lennard and others have were included in those books? No.
2192. Did he explain that all the books now on the floor of this room were included in them? No.
2193. Are you aware of that? I do not know what those books are.
2194. Then, practically, the Trustees did not know what was sold? They did not know.
2195. Did they leave it to Mr. Anderson? Mainly.
2196. Would you be surprised if Mr. Anderson has sworn that he did not go through the books? No; because I know he did not go through them.
2197. Who was supposed to go through them? His officers.
2198. Would it not have been more systematic and more in accordance with the trust if the Trustees had had a schedule prepared showing the books? Yes, it would have been better to have had a list; but we had not the officers necessary to make out that list without an immense waste of time and neglecting their other duties.
- 2199.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

2199. How long would it have taken to make out simply a list of the names? I suppose that in a week you could make out some list, but without giving any information as to the nature of the books?
2200. Would not that be a necessary step to take in view of the nature of the trust? If we could have done it, it would have been better.
2201. You have said that you are aware that the British Museum is in the habit of disposing of duplicates? Yes.
2202. Do you see that the date of the sale of the last book produced here as having been sold by the British Museum is 1831? Yes.
2203. Are you aware that the trustees of the British Museum have no authority now to sell, dispose of, or exchange books, &c.? No.
2204. Are you aware that a Bill was introduced into the British House of Lords for the purpose of authorising the trustees of the British Museum to dispose of pamphlets, papers, duplicates, and so on, and that that authority was refused? I am not.
2205. Are you aware that, although that Bill laid down stringent provisions for submitting schedules of all these papers to Parliament before they were disposed of, Parliament would not entrust these powers to the trustees? I am not aware of it.
2206. Do you now think that the statement which you made as to the British Museum having the right to dispose of duplicates is correct? I did not say that they had the right. I say they were accustomed to do it. I am not aware whether they did so rightly or wrongly.
2207. Are you aware that a Royal Commission sat in England to deal with this matter? No.
2208. Are you aware that they could not arrive at a basis of agreement? No, I am not aware of it.
2209. Are you aware that even with those reservations the trustees of the British Museum would not be allowed to lend the books to Edinburgh, Glasgow, Dublin, Leeds, and other centres? I am not aware. I do not know much about that question.
2210. I want to know your idea with regard to your position. It has been sworn that the Trustees have full power to sell, dispose of, or deal in any way they wish with the property of the Free Public Library; —is that your view? Not with the property altogether, but with the books.
2211. Can they dispose of them as they choose? I think so.
2212. Can they exchange or sell them? Yes.
2213. Do you think that is a wise provision? You must have Trustees.
2214. Do you not think it would be better if provision were made limiting the powers of Trustees in this way, that schedules of the books to be disposed of should be made out, and placed on the Table of Parliament for a certain time, so that the public might know? I am not sure that it would.
2215. Why? Because it is a great deal of formality, and it would probably defeat the object altogether. If it is desired to retain the power, it should not be restricted by too many conditions. We are not in the same position as the British Museum. That is an immense institution, with a vast number of employees. Ours is a small institution, with a very small staff of employees; and we could not go through all those formalities.
2216. Do you think it is a better plan to sell 5,000 books without any list being furnished to the Trustees? I do not say it was a good plan to sell without a list; but the cost and trouble of making a list would be enormous.
2217. Are you aware that it would only take a man a week to make out an ordinary list? No.
2218. As a trustee of a public institution, do you approve of 5,000 volumes being sold without a list being furnished to you? I cannot say that I would approve of it, as a general rule. This was an exceptional case. The place was overcrowded, and we had a lot of rubbish there. It is all very well to say there were 5,000 books, but some were mere scraps of paper. There were oceans of Parliamentary papers which had become obsolete. To the Library they were worth nothing. We could not make a list of all that without immense labour. You might have made a mere delusive list, and put down two or three words to represent a book. I have had a great deal of experience in making catalogues of my own books, and I know it is an immense labour to do it properly. You want a list that will be valuable for future reference. To make such a list you must do it carefully, otherwise you could not identify a book.
