2219. If it had been your own library, and you had such an accumulation of stuff, and you had an employee in charge of it, would you not demand a list from him before you disposed of the books and papers? Probably I would do so, but my library is a mere bagatelle compared to this one.
2220. As a matter of fact, was not the minute authorising the disposal of these books made before the books were selected from the shelves? It is possible, but I do not think that was the case.
2221. The Trustees did not go over the books? They certainly did not go through them all.
2222. When these books were taken up and put in a pile, were the Trustees brought down in a body to look at the books? Yes; but not all of them.
2223. Was the minute made prior to the books being culled out? I cannot say from memory.
2224. When these books were selected and placed in a heap for persons to inspect them, are you aware that the Trustees did not come and see these books in the pile? I am not so aware.
2225. Then the Trustees did not see the books in bulk, they had no list before them, and did not know what was disposed of? I believe they did see them in bulk. I cannot remember all these details. My belief is we did see them.
2226. With regard to calling for tenders for the supply of books, is it not the usual course in all public institutions to publicly advertise for tenders? It is possible that it may be so.
2227. Was that done in the case of the Free Public Library? No.
2228. Do you not think that was very wrong in a public institution? No; Sydney is a little place, and we know all the large booksellers.
2229. Do you not know that it is laid down with regard to all public departments that tenders must be called for by advertisement? Yes; but this is different to some departments; there are only three or four persons, or six at the outside, who could possibly tender for such a thing.
2230. Are you aware that one firm of booksellers tendered to supply the books at a discount of 25 per cent., while another tendered at a 20 per cent discount? Yes.
2231. Why was not the offer of 25 per cent. accepted? Because we did not think that the tender was from a firm which it was most suitable to deal with. George Robertson & Co. was a Melbourne firm, with a branch in Sydney.

2232. Because you did not think that George Robertson & Co. were suitable, you accepted a tender from Angus and Robertson, who offered only 20 per cent. discount, whereas the other firm offered 25 per cent? But there are other conditions besides those.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

2233. Was there not a clear loss on that transaction? You may argue that there was, but you must look at the other conditions.

2234. Could you not have enforced the conditions of the contract—was not George Robertson & Co. solvent? They were solvent then, I believe.

2235. Could you not have enforced the conditions upon them in accordance with the contract? I suppose so.

2236. What were your reasons for refusing to accept the lowest tender, thereby losing 5 per cent. to the public? The lowest tender is not always accepted by the Government or by private individuals. There were other advantages; Angus and Robertson dealt largely with Australian books.

2237. Is it not the usual system in tendering to set out different classes of goods, such as flour, bran, maize, pollard, and so on;—could not that course have been followed, and could you not have advertised for tenders for each separate class of books, so that in some cases you could get a discount of 20 per cent., and in others 25 per cent? We did not deal with the books in that way.

2238. *Mr. Hogue.*] Notwithstanding the 5 per cent. difference in the discount, did you consider that you would get better value from Angus and Robertson than from George Robertson & Co.? We considered that we could get better service from Angus and Robertson. We knew the men very well.

2239. Did you not think you would get better value from Angus and Robertson than from George Robertson & Co., notwithstanding the 5 per cent. difference? We did so consider the matter undoubtedly.

2240. *Mr. Price.*] You preferred Angus and Robertson because you thought they were the better firm? Yes; that was one reason.

2241. Turner and Henderson offered 16½ per cent. discount;—did you consider that that firm was capable to do your work in English publications? I did not think so. At all events, we preferred to accept the other tender.

2242. In fact, they got preferential treatment on account of the firm being more favoured? No; that was only one of the items we considered.

2243. What powers have the Trustees got with regard to the disposal of furniture, goods, chattels, and everything? I think that is in our constitution.

2244. What is your opinion with regard to your powers? If you show me the Act I will show you in a moment.

2245. Could you burn and throw them away? Yes, if need be. If the books were infected with disease we would burn them.

2246. Have you power to alter the salaries of the officials as voted by Parliament? No.

2247. What salary is Mr. Anderson paid? I do not know. It is in the Estimates.

2248. Are you aware that the sum of £130 per annum was supposed to be deducted from Mr. Anderson's salary for quarters? Yes.

2249. Was that deducted? We had nothing to do with that.

2250. Do the vouchers go through you? Yes.

2251. Did you make the deductions provided by Parliament? If the deduction was made by Parliament, of course, such reduction would be made.

2251½. Are the vouchers for salaries passed by the Trustees? I really cannot remember.

2252. *Mr. Hogue.*] Have they not gone through the Public Service Board? Yes.

2253. *Mr. Price.*] Was an allowance made by the Trustees to the Chief Librarian for fuel, railway travelling, and rent? I think it was made by the Government.

2254. *Chairman.*] Had the Trustees anything to do with these matters? No. When Mr. Walker left, Mr. Anderson stepped into his position. He went on enjoying all the privileges that Mr. Walker had before enjoyed. No one questioned the matter.

2255. *Mr. Price.*] What salary was paid to Mr. Anderson? I think he got £600 a year from the time of his appointment.

2256. *Chairman.*] Do you think it would be in the best interests of the Library if every time you have a superfluous number of books and pamphlets you had to appeal to Parliament for power to sell? We have the power to sell as it is without going to Parliament. To go through the formality of applying to Parliament would probably prevent the sale taking place altogether. We are not likely to make another large sale like this; it is an exceptional case.

2257. As compared with years gone by, do you say that the Library is shorthanded? Yes. The business has increased, but the vote has diminished.

2258. In your opinion, is the Library as well managed as it was in years gone by, when the staff was much larger? Quite as well, but the officers were rather more overworked. They are all very zealous men, otherwise we should not have got on.

2259. Do you think the officers have been rendered much more capable since Mr. Anderson gave certain instruction to them? I am quite sure they have. Mr. Anderson has taken a great deal of pains to instruct them in the nature of the duties, and to carry them out. Naturally, being willing to profit by that instruction, they have improved in the service, and the Library is better carried on.

2260. Do you think that the erection of a new building for the housing of the books is absolutely necessary? I cannot see how we can go on without it. The Library is now filled with books which cannot be displayed properly. They are stowed away in the cellars, and are practically of no value to the country.

2261. Have you given any consideration to the proper site for such an institution? Yes; all the Trustees have thought a good deal over it, and I believe that is the real difficulty in the way of getting a new Library. The present site is manifestly insufficient, and incapable of expansion in any reasonable way. You might extend it by taking other buildings, but they are not suitable for a library. When you have readers scattered about in various rooms you must have expert attendants to wait upon them and watch them, otherwise peculation would go on very much. In addition to that, Mr. Mitchell will not hand over his books until some permanent arrangement is made for accommodating them. Therefore, we cannot go on without increased accommodation in the shape of an entirely new building properly designed for a library. The Colony and the capital are growing, and the business of the Library must grow with them. So that in future we shall be worse off than at present.

2262.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

2262. What would you think of having such a building adjoining the Art Gallery in the Domain? I am afraid people would cry out against appropriating any of the land there. It would be a fairly good site. The original site contemplated was at the Immigration Barracks, where the Courts now are. That is the site beyond question, but I believe it is wanted for the Courts, and we cannot get it. There is another suggestion, that we should take a portion of Cook Park, where the bowling-green now is. I do not say that the people would like it, or that it would be a good thing to do, but the building would look very well there, and would be a great ornament. However, it would be taking away part of the park, and a great many would protest against that. At one time it was contemplated to extend the Museum down William-street, so as to include the present public school there. The idea was to throw the whole building into one, and have the Library there as well as the Museum. Then there is the present Grammar School site. I understand it is to be removed. That, no doubt, would make a very good site. There are difficulties about all those sites. Of course another great difficulty is the enormous cost.

2263. Has not the time arrived when something definite should be done? That is quite right. It has been put off, and little bits of property on the present site have been resumed; but they have been very unsuitable.

2264. Do you think there would be any popular outcry against portion of the Domain being taken for merely a public institution? I do not know. There are great outcries about the Park being taken for a railway. Of course it is quite an open question, and I have changed my views about it a great deal.

2265. Do you not recognise that there is a great deal of difference between taking the Park for one purpose and for the other? Supposing part of the Park were taken for a railway, it would then be important to preserve the Domain as a public recreation ground. Any encroachment on that in addition to the encroachment on the Park would be seriously objected to.

2266. Is it not always advisable to have institutions such as the Art Gallery, the Public Library, and the Museum in close proximity, in the interests of the sight-seeing public? I think so. The site would be a very good one. Mr. Perry suggested that the other day when we had a deputation to him about this very question. There is another site. I do not know whether it is intended to continue the Mint, but that would be a particularly good site if the Mint were removed.

2267. *Mr. Hogue.*] Of all the sites which you have suggested, which would be the best? I cannot tell; it is a toss up between them. There are great objections to each of them, and also great advantages.

2268. Apart from the objections, which site is the best for library purposes? At the head of King-street.

2269. Is that where the District Court is? Yes; it is decided now to put the Courts there. A motion was carried in Parliament that that should be the site for the Library.

2270. On the motion of Mr. Reid, did the Assembly affirm that that site should be set apart for a public library? Yes; and it has never been revoked in any way. Another possible site is where the Girls' Public High School is. If, however, a railway is brought up there it would greatly interfere with the Library.

2271. *Mr. Price.*] Would it not be possible to resume a few of the houses next to the Library, and so get increased accommodation? It would be a great expense, and you could not make it suitable. The only way would be to pull down the existing buildings and erect a suitable building for the Library.

2272. *Mr. Millard.*] After looking at the statement in evidence by Mr. Anderson, do you think that all reasonable care was taken in culling out the books before they were offered for sale? I do think that every possible care that could be taken was taken.

2273. By Mr. Anderson's assistants? By Mr. Anderson and his assistants.

2274. *Mr. Price.*] How do you account for the inclusion in those books of Mr. Justice Wise's presentation copies? It is easily accounted for. We wanted to sell duplicate and triplicate volumes. The assistants were instructed to pick out the most used and the worst copies in preference to good copies. They did it without noticing Mr. Justice Wise's mark in some of the books.

2275. Was that done irrespective of the date or edition? No; that was also considered. All the copies that were least valuable were picked out for sale.

2276. Would it not have been better to have given those books to the country libraries? No; the country readers would not care a button for one in a hundred of them.

2277. Would they not have formed a nucleus of Australian libraries in those country libraries? Yes.

2278. *Mr. Anderson.*] Do you think it was a better policy to get an exchange for those books—those which we knew were acceptable to the country libraries? Yes, that is what we thought.

2279. Are you aware that we got a large number of volumes in exchange, and that we have lent them out since that date? Yes.

2280. At what page of a book would an officer look when examining it? At the title-page.

2281. Is there anything on the title-page of this book (which I produce) to show that it ever belonged to Mr. Justice Wise's collection? No; there might be something in the body of it to show that.

2282. Is there anything on the title-page to show that these books belonged to the Wise collection? No.

2283. In the extract which Mr. Price read, you see that the aim of the Bill was to dispose of the volumes of newspapers to other towns in the United Kingdom? Yes.

2284. Do you not think there was a great difference between that and getting rid of duplicate or triplicate copies of books already in the Library? Yes; there is a vast difference.

2285. Do you not think that the newspapers of Great Britain or of New South Wales ought to be kept in the national library? Yes.

2286. Do we not make every effort to keep the most insignificant country newspaper in our Library? Yes, and they become valuable ultimately.

2287. Were those papers and books which you disposed of the accumulations of twenty-eight years, from the date of the Library's existence up to the present day? Yes.

2288. If we had made a list of those books, would we not have been in honor bound to show every defect and mutilation? That is the only honest way of making a list.

2289. Are you aware that Mr. Walker, my predecessor, inspected those duplicates and reported to the Trustees in favour of disposing of them? He did; he was present at the Board meeting.

2290. Had he not a personal interest in the matter, as he had bought some and gathered others for the Library? Of course he was interested in them, because he had collected them himself, and many of them came to the Library during his tenure of office.

2291. In considering the tenders submitted for our agency in 1894, did not the Trustees consider all the classes of literature, and the average discount on the whole of our business? Certainly.

2292. Does not my report to you show that the total discount minus the commission offered by Angus and Robertson is slightly better than that offered by George Robertson & Co.? Yes. And I remember the statement at the time, independent of this, that Angus and Robertson's tender was equal, or if not better than any other, it was better in some respects, and the fact that we knew them to be trustworthy men influenced us to some extent. Independently of that, we thought that upon the tender we would get better value from them than from others.

2293. *Mr. Price.*] Looking at page 61 of the evidence, do you not see that in the Bill submitted to the British Parliament there is a reference to duplicates? Yes.

2294. *Mr. Anderson.*] In that Bill, was there not a description of useless matter which it was proposed to destroy. Yes, I see that.

Hon.  
J. Norton,  
LL.D., M.L.C.  
9 Oct., 1900.

Mungo William MacCallum sworn and examined :—

2295. *Chairman.*] Are you Professor of Modern Literature at the Sydney University? Yes.

2296. *Mr. Anderson.*] When were you appointed to the position of Trustee of the Free Library? In January, 1890.

M. W.  
MacCallum.  
9 Oct., 1900.

2297. Had you experience of dealing with our London agency, and also with our Sydney agency? Yes.

2298. What is your opinion as to the expediency of the change? I was one of those who recommended the change. The London agency was by no means satisfactory. It was rather dilatory in sending out good books, and it seemed to send out a number of books which were not fitted for the Library at all. For these reasons, when the question came up I did what I could to bring about a change, which has been very beneficial. We have much more direct control over the selection of the books, which is a good thing. We do get more expeditiously a number of such books as we ought to have. Owing to the London agency not sending books that were urgently wanted by the public, the Library authorities had frequently to buy such books in Sydney. Then, ultimately, they came out from London, and we had duplicates which were quite unnecessary. I do not know a single argument in favour of the employment of a London agency.

2299. As a Trustee, are you quite satisfied with the results of that change? It would be going too far to say that I think our present method is beyond objection. I believe that some improvement might be made in it, but it is much better than the previous one.

2300. Were you thoroughly in accord with the other Trustees in getting rid of a number of duplicates in 1897? Most certainly.

2301. Did you inspect those duplicates at the time? I looked over some of them. In a matter of that kind, the Trustees are bound, generally, to go on the information which is supplied to them. It is impossible for the Trustees, all of whom are busy men, to examine the individual books proposed to be disposed of. They have to take the statements of the officers of the Library. My impression, from my examination of some of the books, was that it was quite useless to have more than one or two copies of that class of books. The space in the Library is very limited. Those books were doing no good. They were taking up room that might be better employed. We want duplicates and triplicates of only two classes of books—those for which there is very general demand and certain rare books, the value of which is likely to go up. It is convenient to have duplicates of them, either to replace our own copy if worn out, or with a view to exchange with some other library. Otherwise, I think we do not want duplicates.

2302. Do you know that we kept duplicates—in some cases, three copies, and in other cases six copies—of anything we really thought valuable in the sense you indicate? I did not know that we kept six copies. If I had known it I should have suggested that more should be disposed of.

2303. Do you think that it would have been a wise policy from any point of view to go on accumulating duplicates in the way in which that was done in past years? No; I think that it is a positive weakness. If we have, in some cases, five or six copies of the same book, so far from regretting our policy on that occasion, I would recommend that we should dispose of them in the same way.

2304. Knowing that our vote for books has been seriously reduced, do you not think we would do well to fill up gaps in our Library instead of having duplicates of any kind? There are two sets of duplicates which we ought to have, but apart from these two classes it would be best to dispose of our duplicates and to fill up gaps.

2305. Do you know the works of Casanova by repute? To some extent by repute.

2306. Have you read any critiques of that book? I believe only two, one of them was an article by a German scholar, entitled "Geschichtliche Personer in Casanova." That was giving an account of the various famous men of the 18th Century with whom Casanova came into contact. As far as I recollect, it examined the information he gave, and considered that "on the whole" that information was trustworthy, and not to be had elsewhere.

2307. *Mr. Hogue.*] Did you read an article on "The Real Barry Lyndon," in connection with Casanova's Memoirs in the English Illustrated Magazine of March, 1896? Yes.

2308. Does that give a fair estimate of the value of the work? I should say so. I have not read Casanova's Memoirs myself. I have only read one portion of his adventures called, "Ma Fuite des Plombs de Venise," which is extremely interesting.

2309. Are you aware that Thackeray took his story of "Barry Lyndon" from Casanova? I see that it is suggested in the article in the English Illustrated Magazine; but I cannot speak from personal knowledge.

2310. Do you know that whole incidents have been taken bodily out of Casanova by Thackeray, and used in his novel of "Barry Lyndon"? I have not read Casanova, and cannot speak from personal knowledge. I have long known, by reputation, Casanova's Memoirs as almost a classical specimen of what is known as picaresque biography. That is the biography that holds the same place in memoirs that Gil Blas does among novels.

2311. Is it comparable with Gil Blas and "Rousseau's Confessions"? Less with "Rousseau's Confessions" than with Gil Blas. The nearest analogies that I know of to Casanova is the Autobiography of Benvenuto Cellini, and Hamilton's Memoirs of the Comte de Grammont.

2312. There is nothing of an objectionable character in Gil Blas, but there is in Casanova? As I have not read Casanova, I cannot express an opinion.

M. W.  
MacCallum.  
9 Oct., 1900.

2313. Do you know that Casanova's book is the most licentious book ever known to be written? I can hardly believe that. One of my reasons for doubting that statement is that it was a favourite book with an extremely witty and respectable writer, that is, Leland, the writer of Hans Breitmann's Ballads. He mentions that he has read the book thrice. It was also a favourite book with Oliver Wendell Holmes. I do not see that the question of license comes very much into consideration here. I think that there are three classes of objectionable books that any great public collection ought to have. One of these classes is objectionable books of undoubted genius—masterpieces of literature like Rabelais.

2314. It is a classic? Yes; in the second place every great public collection ought to have books, even if objectionable, which throw light on the origin of literary masterpieces. For instance, the book called "Shakespeare's Library" that gives the stores from which he drew, consisting of a number of extremely offensive stories and plays. It is indispensable to Shakesperian students. In the third place, I think a public collection should have such books as do not possess literary interest, but which, though not written by any man of genius, are still important as showing the manners of the time. I have felt quite ashamed of myself once or twice to-day in having to confess that I have not read Casanova. I ought to have read it. It is a book which historical and literary students ought to be familiar with. The only reason I have not read it is that everyone has his special fad in literature, and I have never been much attracted to the eighteenth century. I have read the Comte de Grammont, and I could not have gone on with my lectures about the Restoration period only for that.

2315. A question has been raised as to the impropriety of having such a book in the Public Library, even under lock and key;—would you suggest that it should be under lock and key? Yes.

2316. Has the book, apart from its objectionable character, a value for the student of history and sociology? That is undoubted from what I have heard and read of the book.

2317. Did Casanova visit Voltaire, Fredrick the Great, and the various Courts of Europe as well as of England, and make shrewd observations, thus rendering the book very valuable, apart from its objectionable features? Yes, I have no hesitation in saying that. There are two sets of readers for whom I have supreme contempt. The first are readers who read such books simply because they take a pleasure in their vileness—they have the morals of baboons; the other class are those who will not read such books when they come in the way of their reading—they have the brains of rabbits.

2318. In the old classics, principally Roman and Greek, are there not some things worse than appear in any English literature? I am not prepared to say that.

2319. Does not English literature deal with much that is vile—for instance, the dramatists of the Restoration period? Yes.

2320. Has not even such a critic as Macaulay made an eloquent plea for the preservation of such literature, although he calls it a disgrace to any literature and to our humanity? That is so.

2321. Would not that apply to literature of the character of Casanova's works? I quite agree with you.

2322. *Mr. Price.*] Are you aware that that book was exposed on the shelves of the Public Library, and that its character was only ascertained by accident? I am not aware that the book was on the public shelves of the Library, and I have no hesitation in saying that in my opinion that and other books of the same class should be made somewhat difficult of access.

2323. Do you condemn the fact that it was so available to the public? Yes.

2324. *Mr. Quinn.*] Do you assent, of your own knowledge, to the suggestion that Thackeray plagiarises to a large extent from Casanova without acknowledgment in the novel of "Barry Lyndon"? I cannot dissent or assent to that; I can only say from my knowledge of how Thackeray has treated other sources that it is extremely unlikely. He might have got suggestions, but he would make them up in his own way.

2325. *Mr. Anderson.*] Do you remember when we were asked by Mr. Jose, the University Extension Lecturer, to help his students in country districts about 1894? Yes.

2326. Do you know that the policy of the Trustees, as then formulated and since carried out, was to help country students in every way possible? Yes.

2327. Do you feel that I have been justified, as Principal Librarian, in doing everything in my power to help those country students? I certainly do. I think many country students are sincerely grateful for the assistance you have given. I have heard that expressed more than once by persons living in the country, especially those who have been connected with the University extension movement.

2328. In the answer to Question 764, it is stated: "I do not think that 'Moll Flanders' is a book that ought not to be in a public library";—do you agree with that? That is so extraordinary an opinion that I can hardly believe that anyone expressing it could know what English literature means. To reject from a great national collection the novels of Defoe is too absurd to refute.

2329. *Mr. Price.*] Would you put them all on the public shelves? I should think it would be very difficult to adopt a hard and fast line. If the question came up with regard to our University library, I should say let them be put in the main room, because "Moll Flanders," to my mind, is not a very objectionable book.

2330. Take a public institution, where youths and children go? We do not admit children into the Public Library. There are some gross parts in "Moll Flanders," and there are some gross parts in other novels by Defoe, but you have to take the whole lot. You have to take the good with the bad. I should like to ask: Do you think we ought to have Shakespeare on our shelves?

2331. Certainly? Then why not have Defoe? There is a great deal of admirable matter in Shakespeare, but also a great deal that is objectionable. It is the same with Defoe.

2332. *Mr. Anderson.*] Are you satisfied with the general progress made by the Library as an educational institution during my term of office? Yes; I have great pleasure in expressing my opinion on that point. Whilst I had the highest respect for the former librarian, Mr. Walker, who was an efficient librarian in every way, at the same time I feel bound to state that Mr. Anderson, partly no doubt because he is a younger man, has infused far more energy into the Library, and he has introduced a number of new methods which have greatly improved the Library as an educational institution.

2333. Do you think that my efforts to educate my staff have been productive of good? Yes; I have heard many statements to that effect; that they have increased the efficiency of the staff.

2334. Do you know the standard dictionary by Funk and Wagnall? Yes.

2335. Do you think it is a first-class dictionary? Yes; up to a certain point. It is a very high compliment to speak of any dictionary as first-class, because all dictionaries have defects, but certainly that dictionary, considering its pretensions and claims, is one of the best.

2336.

2336. Do you think I would be quite justified in recommending it for any small reference library in our country districts? Yes; it is very suitable.

2337. Are you perfectly satisfied with my efforts to administer the Public Library, and to make it a valuable educational institution? Certainly.

2338. *Mr. Quinn.*] Do you know Professor Morris of the Melbourne University? I have the pleasure of knowing him.

2339. Do you know his book on Austral-English? Yes.

2340. Do you know that Professor Morris was connected with an "Advisory Committee on Disputed Spelling and Pronunciation," for Funk and Wagnall's Dictionary? I did not know he was actually on the committee, but I know he was pressed to join it. I was asked to go on the committee, but I did not see my way to spare the time.

2341. Professor Morris says:—

It is quite evident that others had contributed Australasian words, and I must confess I hardly like to be held responsible for some of their statements. For instance:—"Ambee, an Australian medicinal bark said to promote perspiration." I never heard of it and my ignorance is shared by the greatest Australian botanist, the Baron von Muller. "Beauregarde, the zebra grass-parakeet of Australia; from, *F. beau regarde*—see beau, n., and regard." As a matter of fact, the name is altered out of recognition, but really comes from the aboriginal budgerie, good, and gar, parrot. "Imou-pine, a large New Zealand tree . . . called red pine by the colonists, and rimu by the natives." I can find no trace of the spelling "Imou." "Swagman (slang Austral.), (1) a dealer in cheap trinkets; (2) a swagger." In twenty-two years of residence in Australia, I have never heard the former sense. "Taihoa (Anglo-Tasmanian), no hurry; wait." The word is Maori, and Maori is the language of New Zealand, not of Tasmania.

Do you think that a dictionary which, on the authority of Dr. Morris, contains so many erroneous Australian definitions is a good one to send out to country libraries? Dictionaries are sure to be defective in some words. I remember that Murray, in the preface to the only real dictionary that exists of the English language, says of the standard dictionaries that preceded his, that besides absolute errors he had found numerous instances of words that he could not hunt up, that never existed. The dictionary that one uses for common reference is in no case beyond criticism. I have found several rather absurd mistakes of derivation in even such a dictionary as Webster's. It does not seem to me that because you pick out certain mistakes that the dictionaries are useless. Before Professor Morris's own dictionary appeared it was very hard to get reliable information as to Australian words. The subsequent editions of Funk and Wagnall will no doubt take advantage of Professor Morris's labours.

2342. You will admit that the errors are such that ought not to be in the dictionary, and that it ought not to be recommended in preference to a dictionary which does not contain those words? Undoubtedly, other things being equal, that is the case, but the dictionary with errors might have counterbalancing advantages.

2343. Then a wrong pronunciation is given in the dictionary for Albury and Geelong, and it is also wrongly stated that Bendigo was subsequently called Sandhurst, whereas the opposite is the case? These are things which should have been stated differently.

2344. The principal merit of this dictionary, in the eyes of Mr. Anderson, is that it contained a number of scientific terms;—the professors of the Smithsonian Institute offered 500,000 scientific definitions for Webster's Dictionary, which, I believe, the publishers refused to incorporate; but Funk and Wagnall appear to have incorporated a great many of them in their dictionary;—do you recognise that there is a difference between a general dictionary and a scientific dictionary? Of course there is.

2345. Do you think it is the province of a general dictionary to give a number of scientific terms which are absolutely without meaning to a non-scientific reader and which are useless to him? That question is put in such a way that I am afraid I scarcely understand it.

2346. The ordinary reader who consults a dictionary has no occasion to look for erudite scientific terms; if he should want them, he would be able to go to a scientific dictionary—to such a collection as that made by the Smithsonian Institute? It depends upon what you call an "erudite scientific term."

2347. I will give an instance from this dictionary:—

A gentleman in America reports the following as the process he went through in trying to get at the meaning of a word which he picked at random out of that dictionary. The word was "Coenosteum." On looking-up the definition he found it to be: "The common calcareous skeleton of a hydrocoralline." Not knowing the meaning of the last word, he had to look up its meaning, and the following is the result:—What is a Hydrocoralline? Looking under "Hydro-" we find that word without definition, but can see from its position that it means one of the hydrocorallia. What are they? Hydrocorallia are "a sub-order of coralligenous hydroids having a skeleton formed by coenosarcial tubes from which hydranths are developed, as in millipores." What are Hydroids? Looking under "Hydro-" for hydroids, we do not find them; but, turning to the general vocabulary, we find, "Hydroid, n. One of the hydroida, hydroidea, or hydridas." What are these three? We find that the hydroida are "an order of hydrozoans with generative elements discharging externally and never with a hydriform trophosome, united with the gonosome into a natatory colony, including most hydromedusae."

Do you think that a dictionary which pursues such methods is one which tends to illumine the minds of the ordinary students of a country or municipal library? Certainly if there are many specimens like that, I should say it is more likely to befog than to illumine; but I also think, in regard to the definitions of commoner words, and even words that are moderately erudite, that that dictionary is found very satisfactory. I am quite willing to admit that there are faults in it. It does not follow that it is a bad dictionary.

2348. Would you consider that it is a better dictionary for general purposes than Webster's? Webster's is very good. I have not compared them from such a point of view, and therefore, perhaps, should not answer the question.

2349. Will you glance at some of these words which appear in the dictionary, and say if you think they are proper to be in a general dictionary instead of in a slang dictionary, viewing a dictionary as preserving the purity of language? I do not think I would regard a dictionary from that point of view.

2350. Do you think that a dictionary should give permanence and stability to words which have not earned their position in the language? I should think that the object of a dictionary was rather to keep a record of all words, either literary or colloquial, which have fairly come into the language, and to give an explanation of them. It is extremely hard to say what words are ephemeral and what are not. One of the chief ways in which a language increases is by the importation of colloquial terms into the body of the language. That is recognised by such a consummate scholar and most experienced dictionary-maker as Dr. Murray. It must be left to the tact of the individual dictionary-maker to say when a word has got sufficient citizenship to be placed in a dictionary. Some of the words now placed before me are permanent. "Belly-timber" is, and "belly-button," for navel, is an old word. It occurred in the 18th century.

M. W.  
McCallum.

M. W.  
McCallum.  
9 Oct., 1900.

century. There are other words on this list which are certainly Shakespearian. Some of them are new to me. I am not prepared to say whether they have become part of the language or not.

2351. Do you think they ought to be in a dictionary? I think there is more real damage done by incorporating in a dictionary long-winded terms which practically no one ever uses than in putting in a larger number of colloquial terms than you generally find in a dictionary.

2352. What is your opinion with reference to these words as a literary expert? Some of them I would unhesitatingly put in. Such as "belly-button," "belly-timber," "pisspot," "to keep one's pecker up." I recognise these as words which are not merely colloquial, but I have met with them in literature.

2353. What about "to screw"? I have met that, but I cannot tell you where.

2354. Do you think that ought to be in a dictionary? It depends upon the idea that a dictionary is supposed to subserve. If it is supposed to give only a stock of the refined decent and cleanly words in the language it should not be there. But if the dictionary is to give a collection of words that are actually employed it should be there. That is not merely my personal opinion; it is an opinion which has guided the compilation of the great dictionary of this generation.

2355. That is, that such words should be in a dictionary? Yes.

2356. These words were in the first edition of Funk and Wagnall's dictionary, but they were taken out of the second edition;—what do you deduce from that? Very likely there had been some objection to them.

2357. I understand that there was some objection to them on the part of people in the United States as to allowing this Dictionary into their homes. I think you will find that in the later edition that even "belly-button" is eliminated? From my point of view, I do not see any more objection to a colloquial word than to a learned word. I do not see why "copulate" should be in a dictionary, and why "screw" should not be; if "screw" is an accepted word in common employment by the people. The fact that the Americans objected to those words carries very little weight with me, because I think the Americans are plagued with a prurient decency. Lately, on the occasion of a Highland festival, they prevented the wearing of the Highland kilts as indecorous.

2358. Do you not see where that would lead you to, and that if you are going to have the synonym "screw" for copulate, you must admit other even more objectionable words having the same meaning? You are right, but I do not see any less objection to the word "copulate."

2359. But you could not allow such a dictionary to go into the hands of girls in the public schools? But do you not think that the same word in its Latinised form of "copulate" should also be kept out of school dictionaries?

2360. But I mean a dictionary that might be in your university? I say that in the case of dictionaries to be used for ordinary general purposes there ought to be a pretty strict revision. Objectionable words, whether they are Latinised or Anglo-Saxonised, should be omitted. But as soon as you get to a reference dictionary it is another matter. I do not see that you then have any business to give preference to classical terms.

2361. Do you think it is necessary for any purpose that these common obscene definitions should be in a dictionary? All I know is that if you look at the Shakespearian dictionary you will find some of them there.

2362. We are talking about a dictionary for country libraries, which is in common use, and to which every person has access. If "screw" should be in the dictionary as a synonym for copulate, ought not more common and obscene words defining the same word be allowed in the dictionary? With regard to the word under discussion I cannot give an opinion, because I do not know sufficient of its history and usage, and with regard to other words of a similar character their place in the dictionary must be determined generally in the same way as other slang words have to be treated. You have to find, in point of fact, that the slang word deserves to go into the repository of the language; hardly two people would agree as to the limits.

2363. Taking the dictionary which contains definitions of that kind, and the one which does not, which would you prefer to see in common use? Undoubtedly the dictionary which contains the least objectionable matter. It is *pro tanto* the dictionary that ought to be commended for general use.

2364. Do you agree that the multiplication of extraordinary scientific definitions, such as I have read, is out of place in an ordinary dictionary? Yes.

2365. *Mr. Price.*] Do you remember when tenders were called for the supply of books in 1894? Yes.

2366. Is it not desirable to advertise and call for tenders publicly? In point of fact that is what we did for the supply of books.

2367. In calling for tenders, do you not think it desirable to do so through the public press, and to have the tenders opened simultaneously in the presence of the Trustees? We knew pretty well that only certain firms would be likely to answer our requirements. We had a pretty good idea that only those who tendered were at all likely to suit our requirements, when they were invited. I did not think any substantial injustice was done. I am willing to admit that it would have been more regular to invite them publicly.

2368. Do you not think it would have been possible for one firm to have supplied one line of the books which you wanted, and another firm to have supplied a different line? It is possible.

2369. If one firm offered a discount of 5 per cent. more than another firm for one line, would it not have been in the public interest to have accepted that tender? It is much more convenient to have one firm as our general agents. You have to put one thing against another.

2370. Do you not think it would have been desirable to accept the lowest tenders for particular lines? No, it is best to have one agent.

2371. Although that means an actual loss? Yes; unless the actual loss is very considerable. I think the convenience more than makes up for that.

2372. Is it not a fact that some firms are in a better position than others to supply English publications, while another firm would be better able to supply second-hand books? I suppose each class of trade is distinct.

2373. Therefore, if individual tenders had been accepted for each line, would it not have been more advantageous? I question very much if a firm would accept the contract for a particular branch. It is the whole lump of the dealing that is attractive. Possibly some booksellers would have undertaken one line, but might not some other line have been left out in the cold. You might get one bookseller to  
say

say I will take line A, another might say that he would take the line B, but you might find that you could not get D, E, and F taken at all, except in conjunction with the others.

2374. *Chairman.*] As a matter of fact, the booksellers were not asked to tender for one particular line but for the lot, and the varied classes of tenders which they were asked to submit, were made out in different lines for their convenience? Yes.

2375. *Mr. Price.*] Did you go through those tenders carefully? No.

2376. This contractor was taken in 1894; have not considerable fluctuations since taken place, and do you not think it would be desirable to have periodical contracts? I think it would be better to invite tenders at stated periods.

2377. Do you not think it would be better to have tenders called for publicly, and to have them opened by the Board? I certainly shall recommend that system in future—not because I think any injustice has been done, but I think it is well in every point to be above suspicion.

2378. With regard to the 5,000 volumes which were sold, are you aware that no list was made out? I am aware of that. The reason was that a great number of them were so worthless that it would cost more to catalogue them than they realised.

2379. Are you aware that some of Mr. Justice Wise's books were included in that collection? Yes; after the event.

2380. Are you aware that Mr. Anderson did not personally inspect the books taken out? Yes; in other words, Mr. Anderson must act on the supposition that his subordinates are efficient, just as the Trustees must act on the supposition that he is efficient.

2381. Then the Trustees relied on Mr. Anderson, and Mr. Anderson relied upon his subordinates? I suppose that is the way you can put it, but that is what everybody must do. For instance, with regard to the conduct of my own classes the Senate must suppose that I am efficient until it has good reason to assume the contrary.

2382. Did the Trustees go through the books with Mr. Anderson? The Trustees did not go through them.

2383. Do you see this book with the stamp on the back of it and on the other side of it, and are you aware that the books in the Free Public Library are not stamped in that way? That is a question for administration. That is a question to put to an experienced librarian, which I am not.

2384. Would it not be desirable to keep a list of books which were about to be disposed of? To make a list of the 5,000 books would have been needless trouble, because they were such absolute rubbish.

2385. *Mr. Anderson.*] Are you of opinion that all your fellow Trustees entertain the same opinion about my ability, and my able administration of the Library as you do? All of those of whom I have knowledge. There are many of the Trustees with whom I have not been in recent intercourse. But all the Trustees with whom I have spoken with reference to Mr. Anderson's services are, I am convinced, as sure as I am that the whole administration and management of the Library had greatly improved under his regime.

2386. As far as you know, the Trustees, as a body, have perfect confidence in my ability and administration? I certainly think so. Since this matter of the duplicates has come up, I think it is only fair to the Trustees and the Librarian to say that the books which have been mentioned as belonging to Mr. Justice Wise's collection ought to have been placed together. They should have had a separate place in the Library. It is on account of the bad accommodation in the Library that that was not done, I suppose. Any mistake in the matter is due, not to Mr. Anderson, but to one or other of his predecessors. The books of the collection were scattered up and down, and were not in every case indicated on the title page as belonging to Mr. Justice Wise's collection, so it was most natural that they should get mixed up with some other books at that time.

WEDNESDAY, 10 OCTOBER, 1900.

Present:—

MR. HOGUE,  
MR. MEAGHER,

MR. SLEATH,  
MR. THOMAS,

MR. MILLARD.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Honorable John Hughes, M.L.C., sworn and examined:—

2387. *Chairman.*] Are you a Trustee of the Free Public Library? Yes; since last year.

2388. *Mr. Anderson.*] Do you remember being invited to inspect duplicates which the Library sold to Angus and Robertson in 1897? I do not remember being invited; but I saw them in Angus and Robertson's.

2389. Did you see them as a book collector who has got a very fair collection of his own? Yes. Angus and Robertson told me they had some stuff which I might like to look at, and I went up and inspected them.

2390. Did you get any new book for your collection from that lot? No.

2391. What was your opinion of the duplicates as seen by you? I have dealt with Angus and Robertson for many years, and have found it advantageous to do so, as they are booksellers who consider the interests of their clients. They told me that most of the books were imperfect, and that they would have to be very carefully collated. They told me that before I looked at them; consequently, the inference was that they were a rubbishy lot. I did look through them. There were one or two volumes which, possibly, I would have taken if complete; but they were not.

2392. Have you any idea of the number of saleable volumes in the lot? I do not think I would have bought any of them, except under pressure. If there was something very scarce which I was not likely to see again, I might have bought it; but, owing to the condition of the books with the Public Library binding and stamps, I would not have bought them for my private library.

2393. Can you form any estimate of the number displayed for sale? No; most of it consisted of stacks of rubbish on the floor, which I would not touch.

2394. Do you know that Angus and Robertson destroyed a great deal of the stuff, and did not attempt to sell it? Yes; I know they would have given me a lot of it if I liked to take it away.

2395.

M. W.  
McCallum.

9 Oct., 1900.

Hon. J.  
Hughes,  
M.L.C.  
10 Oct., 1900.

Hon. J.  
Hughes,  
M.L.C.

10 Oct., 1900.

2395. As a Trustee of the present time, do you think it was good policy on the part of the Trustees to get rid of those duplicates? I certainly do not see the advantage of keeping books which are imperfect, and, as far as I know, most of those books were imperfect. If you had other volumes of a like nature, I think it would be advantageous to get rid of them.

2396. Do you know a book called "White's Memoirs"? Yes.

2397. Evidence has been given that a copy of that was sold to an amateur book collector for £3;—do you think, from your knowledge of Angus and Robertson, that they got full value for it? I am sure they did. Some of the members of that firm have the best knowledge of any men in Sydney of the value of Australian books.

2398. This particular volume has in it writing showing that it was sent, presumably by the publishers, to Surgeon-General White himself;—do you think that that added greatly to the value of the book? That is a difficult question. I have many books which show that they have been the authors' own copies. If anyone will give me a fancy price for them, they can have them. I do not see any particular value in them. If the author was some very distinguished man, it would give additional value. It is not unusual to find half-a-dozen books with the author's name in them, but there is really nothing to show that it is really the author's handwriting.

2399. Do you think that this particular book would have its value increased by the fact I have mentioned? No.

2400. Are you, as a Trustee, satisfied with the service that Angus and Robertson gave us as agents? I think so; I cannot see that we can better it. Since I have been on the trust I find that every book which reaches their hands is sent up to the Library for inspection and approval, both new books and second-hand books. With the possible exception of Mr. Mitchell, who is one of the largest purchasers, and who very properly gets special consideration from his book-sellers, I believe we get the first offer of all libraries which Angus and Robertson purchase. I remember that, not very long ago, there was a valuable economic library sold by a well-known public man, and nearly all the books were sent to us first for approval.

2401. Do you consider that we are acting in the best interests of the Library by having local agents rather than London agents? I find that myself, and I think what is good enough for me is good enough for the Public Library. I have been a buyer of books for a good many years, and I have had experience of London booksellers. Although I have to pay a longer price, I get better value for the money by purchasing the books in Sydney instead of purchasing them in London. So much depends on the condition of a book—you cannot tell that from a catalogue.

2402. You can understand that we save time by getting books direct from the local agents rather than by having to order them after reading critiques from London? You save time and money. There are many books which, if we had a larger vote, we would be glad to buy, but we have to reject them on the ground of want of funds.

2403. By having local agents, have the trustees absolutely direct control over all purchases? Yes; the Trustees themselves select the books. If they have London agents, they must accept the selection of those agents. I take it that when that system was in existence the Trustees had to take the books selected by their agents in London whether they thought them suitable or not.

2404. Do you know a book called "Standing Orders," of the time of Governor Phillip and Governor King? Yes; well.

2405. In the evidence before this Committee it is described in this way: "There is a book called 'Standing Orders,' it was sold at Sir John Hay's sale, and it brought £25. It was simply a little pamphlet thrown out as of no use." Is that correct? It was not anything of the sort. "Standing Orders" is a book about the size of the Bible on the table. It is exceedingly scarce. It is practically the Legislative Acts of the form of government we had in those early days. It is not a pamphlet. There is a copy in the Colonial Secretary's Office. I saw that particular copy which was sold with Sir John Hay's library, and I know the history of it. I gave a commission for it; but I subsequently found that Mr. Mitchell had a commission out also, and I knew perfectly well that there was no use running against Mr. Mitchell if he wanted the book. He had offered a commission to the same people as I had, that is Angus and Robertson, and I withdrew. I got a letter from Mr. Mitchell thanking me. As soon as he found that Angus and Robertson had a commission for it, he gave Mr. Dymock a commission for it. The book was sold for £25; but I knew that it was run up by a gentleman who had fallen out with Mr. Dymock about something, and he was very much afraid it would be left on his hands. It was a valuable book, and everyone who collected Australian books knew that.

2406. Is it an exceedingly rare book? It is stated in Petherick's catalogue that there is only one copy, and that it is in the British Museum; but I know that is untrue. There is one in the Colonial Secretary's Office, and Mr. Mitchell has got that copy, and, I think, Mr. Mitchell got another copy from Petherick. I think there are a few copies in New South Wales.

2407. *Mr. Sleath.*] So that the information in Petherick's catalogue is very doubtful? It is absolutely wrong, because I have seen the other copies.

2408. *Mr. Anderson.*] It might have been true, so far as they knew? Yes.

2409. At any rate it would be quite unfair to compare that book as a pamphlet with the pamphlets and other stuff which the Public Library sold? It was not a pamphlet at all.

2410. Was there anything of that kind among the duplicates which the Trustees sold? No.

2411. Do you know in what a crowded state our present building is? It is in a disgraceful condition.

2412. Do you consider that it is very hard for myself, or any other officer to administer the Library in its present crowded condition? I would not like to have the job. I do not know how you get through it.

2413. Do you know that we cannot display our books properly? Yes; they are piled on the floor.

2414. Have we used every effort to move the Government to give us relief? Yes.

2415. As one of the new Trustees, are you perfectly satisfied with my efforts as Principal Librarian to advance the interests of the Institution and to do my duty on the whole? As far as I have been in contact with you, I think you are a very valuable officer.

2416. *Mr. Sleath.*] Supposing the Trustees had duplicates of all those books, would it not have been more in the public interest to have distributed them among some of the larger country libraries instead of selling them for a mere trifle? I do not profess to have a very extensive knowledge of country libraries; but I have never seen a decent library in a country town. As for these schools of arts, and especially municipal

municipal libraries, it is a waste of Government money to have anything to do with them. If the public want libraries of that sort, they ought to provide them themselves. I am strongly against the lending branch of the Public Library.

Hon. J.  
Hughes,  
M.L.C.

2417. Would not the same thing hold good with regard to Sydney as with regard to the country libraries? Absolutely. 10 Oct., 1900.

2418. Do you think that if people want libraries in the country they ought to provide them themselves? Yes, and Sydney too. I do not think it is the business of the Public Library to provide a lending branch for any class of the community. It should be a reference and national library solely. Of course, if we had sufficient funds I would not mind; but the funds provided at present are really not sufficient to enable us to manage it as a reference library properly.

2419. Do you think it is the duty, or in the power of the Trustees, to dictate what policy the country should pursue? We do not dictate; but we may hold opinions and put them forth.

2420. Seeing that for many years the Government have assisted libraries with lending branches, as well as for references, do you not think that those books, which were perhaps not very valuable, but which were not obtainable in country districts, might better have been sent to the country libraries instead of being sold for a trifle? I do not think they would have been of the slightest use. There are only a limited number of people in Sydney who take the least interest in or know anything about this early Australian literature.

2421. When has there been any opportunity afforded to people in the country to know anything about it? Most of those books could have been bought for a few pence or shillings; there were very few scarce books amongst them. The few that were worth anything were not scarce.

2422. Take "White's Memoirs";—could they be got in every place? No; but there are a great many copies in Sydney.

2423. At fancy prices? No; it depends upon the condition of the copy. If there was a first-class copy with uncut edges, which had not been mauled about by a binder, it might be worth from £3 to £4. I have an exceedingly good coloured copy, and I think I paid £4 for it. That is its full value; but I can get an inferior copy from 30s. to 35s. A damaged copy I could get for anything I liked to pay.

2424. But this copy which was sold apparently contained something showing that it was the author's copy? I do not attach any importance to that. If it had the stamp of Cardinal Mazarin or Diane de Poitiers, there would be remarkable value attached to it; but I do not think that is the case with the sign manual of Surgeon-General White, or of a great number of other people. If we had another lot of books like that to dispose of, and any country libraries expressed a wish to have them, I would not have the slightest objection to give them; but I do not think they would ever be used.

2425. Could a country library express a desire for something which it did not know was in existence? No.

2426. Were not some of Mr. Justice Wise's books sold at that time? Yes; but that was a blunder. I had nothing to do with that, and I do not think any one of the Trustees or Mr. Anderson would defend that for a moment.

2427. With regard to the employment of local agents, it seems to me that your evidence is somewhat contradictory; Mr. Anderson asked if it did not save the Trustees' time by getting their books through local agents, instead of waiting to get the London papers, and read critiques, and then order the books; to that you answered, "yes";—then you said that having local agents, it was the rule for the Trustees to select the books, whereas, if you got them from the London agents, you were compelled to take what the London agents sent you? I only assumed that. That was before my time. Certainly, if I was an agent in London to purchase books for a library, and I sent them out, I would object to the Trustees saying that some volumes would not be taken, or that they would only be held at my risk.

2428. In answer to Mr. Anderson's question, you said, "Yes"; that was, that you would wait until you got the London papers and read the critiques, and that you would then order the books;—of course then you would get what you ordered, and not what the agents wished to send to you? Certainly, if you gave an order for a book, you would get it. I would put it in this way: I would much sooner personally select these books than take what was selected by any man in London. By having local agents, the Trustees can always inspect the books, and that is done now. The Trustees go through the books, and satisfy themselves as to whether they should be on the shelves of the Library. That is more satisfactory than having to receive books, selected by somebody else in London, who has nothing to do with the Library.

2429. You would not expect an agent to go through a book, read it, and select it, on his private opinion, for a library? Probably he would not; but there might be a great many influences brought to bear upon an agent in London.

2430. Do I understand that all the books bought by the Library Trustees are first read carefully by them? No; such a thing would be absurd.

2431. After all, is it not a fact that the Trustees are guided to a large extent by the critiques which appear in the different papers? I do not think so. Personally, I do not go by those critiques.

2432. Would you lose time by reading the book? I can make time to do that.

2433. Is it not interesting to read what is supposed to be, in respectable papers, the opinion of an intelligent man whose business it is to write those critiques? If you knew that you were reading the critiques of some persons, they might be worth reading; but in the case of an average critique of a book in a Sydney paper for reasons that are obvious it is not of that character.

2434. Is it worse than a leading article? Or a speech in Parliament.

2435. Do the Trustees own this Library? Not that I am aware of.

2436. You would not say that the Trustees own it;—you would say that they own it in trust? Do you want me to define the term "owner?"

2437. It has been given in evidence by a very responsible officer that the Trustees own it;—I want to know whether they do own it? They are the owners in the eye of the law; but there is no private ownership. Trustees are owners in the eye of the law. I have no doubt about the trust or the ownership.

2438. *Mr. Meagher.*] Mr. Sleath is using the word "owner" in a colloquial sense? I do not want to give an opinion that may be considered to be a legal definition of the position of the Trustees. We own it in this sense:—If a book is stolen, we are the persons who can prosecute the person who steals it. We are the only people who can prosecute.

2439.

Hon. J.  
Hughes,  
M.L.C.  
10 Oct., 1900.

2439. *Mr. Sleath.*] If you are the owners, in the ordinary sense of the word, you would be able to say on your death that you would confer your ownership on somebody else? No; we have never pretended to have such ownership.

2440. *Mr. Hogue.*] Before the recent Act was passed incorporating the Library, if any one were prosecuted for stealing a book, would he not be prosecuted for stealing a book the property of Her Majesty the Queen, whereas now he would be prosecuted for stealing the property of the Trustees? Yes; we are only owners in that sense.

2441. *Mr. Sleath.*] Are not the owners the people of New South Wales? If some one stole a book, the Trustees, as owners, would be the parties to prosecute; but if I sold a book to you I would be liable to prosecution, like the man who stole the book.

2442. As we are all ordinary people on this Committee, is it not a mistake to get us mixed up as to the ownership? If there has been any impression of that sort conveyed to your mind, it is a great mistake.

2443. You are simply Trustees, who have the custody of all property belonging to the Library, and you are empowered to protect it and carry on the business? Yes; just as Members of Parliament are trustees of public property.

2444. Are there some Trustees who do not attend very regularly at the meetings? That may be.

2445. We are told that one Trustee did not attend for seven years? I have been there for twelve months, but I have not seen him.

2446. Are you anxious to get rid of the Lending Branch? Personally, I am. I think it ought to be carried on by the municipality, possibly with assistance from the Government.

2447. Do you think that the two do not necessarily go together? Yes; we have at present, under the Act, a sum of £2,000 a year for library purposes. That is apart from the salaries provided by Parliament. Out of that we have not only to purchase books for the Library which we ought to have, but we have also to purchase books for the Lending Branch, and to keep those books bound. You cannot do much with two libraries on £2,000 a year. If a rate of  $\frac{1}{2}$ d. in the £ were imposed in the municipality of Sydney, it would secure an income of double £2,000 a year for a library.

2448. Do you think they are ever likely to impose it? It should be done, as in England, under a Public Libraries Act, and the citizens could vote whether they would have it.

2449. Would they not vote not to have it? That is their business.

2450. You cannot compare Sydney to any decent town in Great Britain, as far as municipal government is concerned? It has nothing to do with municipal government.

2451. If the ratepayers were called upon to pay additional taxation, would not that mean wiping out the Library? I would vote for it readily.

2452. Supposing that your vote for the Library was increased or doubled? If it were a distinct vote to the Lending Branch, then, as Trustees, we would have to administer it.

2453. Is the chief difficulty the shortage of cash? Yes. I object to the principle altogether. We are providing a Lending Branch for certain people in Sydney at the expense of the country at large. Your constituents at Wilcannia are paying as much, proportionately, as the citizens of Sydney. Why should they?

2454. In Sydney the people are supplied with a splendid water-supply and sewerage system, whereas I have seen people paying 30s. a gallon for water;—why should that be? That is a public service and is not provided at the expense of the general taxpayer.

2455. As a Trustee, did you approve of trying to extend the Lending Branch by having books sent out post-free? I knew nothing about that until it came before us in the shape of a minute. The Librarian himself admitted that it was a mistake, as far as I remember. He brought it under the notice of the Trustees, and I believe he wrote a letter to the Post Office. I know very little about it. As far as I know, it was only done in a few exceptional instances.

2456. That was the greatest objection to it, that there were only a few exceptional instances? There is a great deal of argument in favour of it. It is very hard that students, who are not within reach of the Library, should not get the benefit of the books. We do provide boxes of books which are useful for students in country places.

2457. If one individual in this community is to have that advantage, why should it not be general? Yes; but that would mean that the practice would have to be stopped, because we could not do it.

2458. Would it not be unfair to select a few who knew Mr. Anderson? We made no selection.

2459. We know that the general public knew nothing about this practice until recently;—how could they apply for books? I cannot answer these conundrums.

2460. Do you think that if that system is to be carried on, every individual in the community of mature age should have the same privilege in getting books? If it was carried out to any extent, the Trustees would require to make regulations. We would have to reconsider the whole thing.

2461. As a Trustee, do you not consider that each member of the community ought to have the same privilege? Certainly not; because some of them do not deserve it.

2462. In what way? I would not give a man a book simply because he asked for it, but I would encourage students as much as possible. Every man in the community is not a student, or likely to be. If a great many applied for the privilege, we would have to consider the question of making rules or by-laws to meet the circumstances; but until that occasion arises, I do not see why we should go into supposition.

2463. What would the Trustees term a student? There are twelve of them; and I am not prepared to give an opinion for the Trustees.

2464. As one of them, would you give your opinion as to whom you would consider a student? Any person trying to perfect his knowledge in any particular branch, whether he was attending a school or not. If a journalist, or a minister of any denomination, or a person who we thought was studying mining or metallurgy asked for a book, we would know from the class of book asked for whether he was likely to be a student.

2465. Would you think that a man or a woman studying theosophy would be a student? That might be the case.

2466. Seeing that you are supplied with funds provided by the taxpayers, do you not think they will feel rather annoyed if they find that they are not entitled to the same privileges as are granted to other people with regard to lending books for study? I do not think so. For instance, we have a Parliamentary Library. You might as well ask that everybody should be entitled to read the books which are in the Parliamentary Library. I do not think members would agree to that.

2467.

Hon. J.  
Hughes,  
M.L.C.

10 Oct., 1900.

2467. You make a mistake there;—one is a public library, the other is a private library placed there for special individuals, namely, Members of Parliament? Both are paid for by the same people.

2468. But one is placed there specially, for Members of Parliament, while the other library is for the public? Yes, for reference. Members of Parliament take books out of the Library, and lend them to friends who need information. In the same way, the Trustees take books from the Reference Library to be lent to students who want to read them; it is on all fours. If it rises above a certain percentage, we shall have to make rules and regulations to meet the altered circumstances.

2469. *Mr. Millard.*] Do you say that Members of Parliament take books from the Parliamentary Library, and lend them to their friends? I know they do.

2470. *Mr. Sleath.*] I think you refer only to Members of the Upper House? No; I think they are Members of the Lower House. I have seen books in the hands of the general public which belong to the Parliamentary Library, and I should not think that I was doing the least harm if I took a book out of the Parliamentary Library dealing, for instance, with municipal matters, which at present are under discussion, if that book could not be otherwise obtained, and lent it to a friend. I would be personally responsible. If I returned it in good order, I do not think I would be doing wrong.

2471. Although twenty-five members might be waiting to get that book? No; because the moment the such information was obtained by me I would return the book.

2472. *Mr. Hogue.*] Is not the accommodation in the Library altogether insufficient? Yes.

2473. Is it absolutely necessary to increase the accommodation? I am quite clear about that. The Trustees have made that plain to Minister after Minister.

2474. Is it not necessary, in the interests of the Library, if it is to increase in usefulness, that increased accommodation should be provided? Absolutely necessary. If Mr. Mitchell were to give us his books to-morrow, we could not possibly put them anywhere.

2475. If the Library is to serve its purpose as a national treasury of literature, is it not necessary that a new building should be erected? Absolutely. Mr. Mitchell's books would have to go, like the late Mr. Wise's books, among the general ruck.

2476. *Mr. Sleath.*] I suppose nothing has occurred during the last twelve or fifteen months which has made the want of accommodation worse than it was a little time before that? No; except with regard to this particular Library, which is at the disposal of the Trustees, if they can get accommodation.

2477. Is it not some time since Mr. Mitchell notified that he intended to hand over his books? Yes; but I understand Mr. Mitchell has not done so, because we are not in a position to take them. If I were in his position, I would adopt the same course. I believe that if the Government decided on a site for a new library, and build a wing to accommodate Mr. Mitchell's books, they would be almost immediately placed there.

2478. When the Trustees were notified that Mr. Mitchell intended to give his books, did the Trustees then make representations to the Government with regard to the necessity for increased accommodation? I believe they did.

2479. Did the Government at that time do anything? Presumably, no; because nothing has been done.

2480. Do you remember who was the Minister? Mr. Hogue; and if he remained the Minister I believe he would have had the Library started.

2481. He must have remained Minister some time after that? You cannot get these public works carried out at a moment's notice. The Cobar-Wilcannia railway, for instance, is hung up at present.

2482. Mr. Hogue must have had twelve months to carry out the work? It is not a matter between Mr. Hogue and Mr. Perry; it is a matter of persuading the whole Government.

2483. All governments, apparently, are alike with regard to this Library? Yes; because, unfortunately, all the Members of Parliament want roads and bridges, and do not look after the Library.

2484. Would you be in favour of their looking after the Library, and letting roads and bridges go to ruin? Certainly not.

2485. After all, are not the roads and bridges the most necessary? That is a matter of opinion.

2486. If you had on old, valuable book, do you think that would maintain the community as well as a few thousand acres of wheat? No.

2487. *Mr. Meagher.*] I suppose you would use discretionary power with regard to the financial position of students? Yes.

2488. Would you give preference to a man who was not in a position to purchase books? Yes.

2489. Mr. Anderson has told us that there was no public notification by which students could know that this privilege was available;—we were told that books were sent by post to eleven people; of these, a certain percentage were clergymen; one gentleman was in charge of a college at Penrith;—do you think they should have had preference over hundreds of students? If that matter had been put before me, I would probably have said, "No"; but I do not know anything about the circumstances. If Mr. Reid is in the position you describe, I think he ought not to get books.

2490. Do you not think that men, in places where there were no libraries, should have got the preference, instead of these books being sent, as they were, to places where there were Schools of Arts and libraries? Yes; if those institutions had the volumes.

2491. Should there not have been a notification in the Press that the privilege was available, instead of those books being given to clergymen and schoolmasters, some of whom were connected with the officials in the Library? Now that the matter has been ventilated, it seems to me the practice will have to be stopped altogether; it cannot be made general.

2492. If this boon is to be conferred on students, do you not think that a regulation should be framed, so that students who are not in a good financial position may have the preference over the principal of a college, who is able to buy books? If the thing has to be considered by the Trustees, we shall have to decide whether we shall do it at all. If it is to be done, it should not be done for the benefit of those who can purchase books.

2493. Were you a member of the trust when Mr. Mitchell made his offer? No.

2494. Can you explain the meaning of this evidence given by Mr. Anderson:

202. Did you not take some interest in connection with Mr. Mitchell's donation of his great library to New South Wales? Yes; the offer was made through me entirely on account of Mr. Mitchell's sympathy with my work, as he informed me himself. He thought I loved library work, and was trying my best to advance it through the Library Association of Australasia. He sent for me, and made the offer through me. The offer was made to my Trustee, and not to the Government of New South Wales.

Hon. J.  
Hughes,  
M.L.O.  
10 Oct., 1900.

Can you give any explanation with regard to that? What I have been told by one of my co-trustees is this: Mr. Mitchell was desirous of making the gift, and he consulted his solicitors. He was anxious that the Library should be kept for all time, and kept apart as the Mitchell Library. His solicitors advised him that the gift to the Library, as it stood then, practically meant placing the books at the mercy of the Government for the time being. If they decided to withdraw the subsidy to the Library, and to sell the Library, as they could have done, Mr. Mitchell's books, being a portion of it, would also be sold. Therefore, they advised him to make it a condition that the Library should be incorporated. Acting on that advice, Mr. Mitchell made it a condition that the Library should be incorporated before he made his donation. Of course, that is only hearsay.

2495-6. Do you think that a man who is anxious to read a book on travel, would come under the category of a student in the sense of the term that he is a man who is perfecting himself in any branch of knowledge;—for instance, a man who wanted to read a book on Polar Expeditions? It might be the case.

2497. What kind of student would you call him? It might be that a man wished to deliver a lecture in some local centre on Polar Exploration. I have had to get certain books, the titles of which would not lead you to think that I was a student, but they were absolutely got for that purpose. I have undertaken to read a paper to other people who wished to get the benefit of such information as I could give them. For that purpose I obtained books, and if you looked at the names of them you would not suppose that I was a student, yet I was.

2498. If the Trustees do not attend meetings, is there any rule by which their places can be vacated? Yes; that is now regulated by the Act.

2499. What is the provision? Being absent for six months without leave. At the present moment there are two vacancies on the Board.

2500. What special qualifications for a Trustee has the Hon. P. G. King;—has he passed any University Examination? I do not know; but he has, perhaps, more information about the early history of the Colony than any man on the Trust. For instance, family papers and things of that sort, which are of great value.

2501. Are they not all accessible in the historical records? No. I do not think it is fair to ask me about the qualifications of other members of the Trust. I think he has special and valuable knowledge for the benefit of the Library.

Arthur John Tarrant Casson sworn and examined:—

A. J. T.  
Casson.  
10 Oct., 1900.

2502. *Chairman.*] What are you? Library Assistant in the Reference Branch of the Public Library of New South Wales.

2503. *Mr. Anderson.*] Do you remember stamping with the embossed stamp the books which were sold by the Trustees in 1897? Yes.

2504. What were your instructions at the time? To stamp the title page with the embossed stamp, and then to put your signature in the same.

2505. Did you do that carefully upon the whole of the books that were to be sold? Yes.

2506. What did you do with the stamp bearing my signature? When it was finished with, I had it carefully locked up.

2507. How long were you engaged on that job? About eleven days.

2508. What was done with the embossed stamp and the press stamp after you finished with them? I gave them to Mr. Gifford, the Accountant.

2509. What was done with them? They were locked up in the iron safe.

2510. Did you ever give to any person, or send to any person, a copy of that embossed stamp? No.

2511. Could any member of the public by any means get at that embossed stamp while you were doing the work? No.

2512. Where were you doing the work? In the old Australian room.

2513. Have the public any access to that part of the Library at any time? No.

2514. Did you ever see this stamp on blue paper—(produced before the Committee by the late Mr. Dymock)? No; I do not remember seeing that paper.

2515. Look at the back of the paper and see if you can identify it? Yes.

2516. Can you throw any light on that piece of paper? The only light I can throw on it is that at the time the stamp was given to me, I might have stamped a piece of paper like that to see if the embossed stamp was the right way up.

2517. Do you remember ever giving that piece of paper, or anything similar to it, to any person? No; I am quite sure I did not.

2518. As far as you know, you might have made that stamp in an experimental way, and it might have got into some one's hands, but you can throw no light on it? Yes.

2519. *Mr. Sleath.*] By looking at the stamp, could you not see whether it was right side up? No; not the embossed stamp.

2520. Could you alter that stamp, and make the top of it appear in one place to-day, and in another place to-morrow? To find out the way in which the stamp worked, I put the paper in and stamped it down.

2521. Does it not always work in the same way? Yes.

2522. Did you ever work that stamp before? No.

2523. You never had anything to do with it? No.

2524. *Mr. Anderson.*] Was that a new stamp, made specially for that purpose by the Trustees? Yes.

2525. How did you know? The Accountant told me at the time that this was the stamp for the books, and I understood from that.

2526. *Mr. Sleath.*] Did the Accountant tell you that the Trustees had this stamp made for that especial purpose? Not in actual words. He said this was the stamp for the books, and I understood that.

2527. What is there on the back of this piece of blue paper that enabled you to recognise it? Certain printed letters.

2528. Have you come to the conclusion that the reason why the stamp is on this piece of paper is that you probably tried to see which way the stamp worked, and that you allowed that piece of paper to lie about? Yes.

2529. You say that no one had access to that portion of the building where you were stamping these books? Yes.

2530. How do you account for its getting outside, and being swept away with the rubbish? I cannot account for it at all.

2531. I suppose you understand that it was rather a serious thing to have this Free Library stamp on a piece of paper, mixed up with other pieces of paper, which might go all over the town? Yes; it was a responsible matter. It was a natural thing for me, when the stamping work was first given to me, to try the embossed stamp, and see how it worked.

2532. Was anyone else taking part in the work? No.

2533. Who showed you the books which you were to stamp? The Accountant.

2534. Did you stamp only those books which were shown to you? Yes.

2535. Did you take any notice of the titles of the books? No; I stamped only those which were shown to me to be stamped.

2536. Had you any instructions to look at the titles of the books? No.

2537. *Mr. Anderson.*] Were those books in special presses, marked "duplicates" on the top? Yes.

2538. Were there a number of paper-bound publications stacked alongside those presses on the floor? Yes.

2539. Did I visit you pretty frequently when you were doing the work to see how you were getting on? Yes.

2540. Do you know that it would be impossible for any one to get that embossed stamp or my signature from that date until now? Yes.

2541. That is, unless they got access to the iron safe, of which I have the key? Yes.

2542. *Chairman.*] Have you had any experience in the printing trade? No.

2543. *Mr. Meagher.*] Is this room where you stamped the books the place where Australian books were kept? No; it is the room where all the daily papers are kept.

2544. Are there any Australian works in that room? The Australian room is next to that.

2545. Is the Australian room accessible to the public? No.

2546. Do you know that Australian books have been stolen from the Australian room, and sold to booksellers in Sydney? I have not heard of that.

2547. Where is Spencer's "Faerie Queene" kept? That is kept upstairs.

Walter John Durie sworn and examined:—

2548. *Chairman.*] What are you? Clerk in the Department of Public Instruction.

2549. *Mr. Anderson.*] Will you give a brief *précis* of the Departmental matters in connection with the grant of £200 to the Annandale Municipal Library? On the 21st August last, Mr. Reginald Cohen, on behalf of the Municipal Council, wrote, asking for Government grant towards establishing a Free Library at Annandale. The usual Departmental reply was sent, giving conditions under which a library could be established—(1) Must be in room under control of Council; (2) List of books must be approved of; (3) If population 300, £100; if 1,000, £200; (4) By-laws must be approved of. The list of books was received from the Council Clerk on 26th August, and, in accordance with rule, sent to Principal Librarian for report. That officer reported, on 31st August, that the list was a satisfactory one, with a few alterations. The list, as amended, was approved of by the then Minister—Mr. Hogue—on 4th September, 1899. It was then returned to the Council Clerk. By this time the by-laws had also been approved of by the Governor-in-Council; and on 6th February, 1900, the Treasury was asked to pay £200 to the Council.

2550. Had the Minister at that time approved of the purchase of the books as shown in that list reported on by me? Yes.

2551. Might they, then, have been supplied by the firm concerned if that fact had been known? The fact was known.

2552. Was there anything to prevent the books being supplied by the booksellers to that Municipal Council? Nothing whatever. When the money was granted, the Council was at liberty to spend the money in the purchase of books. On 30th January, Mr. Price, M.P., wrote, asking that the Council might be instructed to call for tenders for the books. He was informed, on 6th February, that the Department had no power to give such direction; but it was suggested to the Council that if they had not arranged for the purchase of the books, they might call for tenders. On 7th March, Mr. Meagher, M.P., and later in the morning Mr. Dymock, accompanied by Mr. Price, M.P., waited on the present Minister. As the result of this interview, Mr. Dymock was informed that the Council might substitute certain standard works for others in the list (*see letter attached*). On 13th March, Mr. Dymock brought the list back to the office, with the names of his substituted books. This substituted list was sent to the Public Librarian for report. He reported favourably on 15th March, and on the same date Mr. Dymock's list was approved of by the Minister, and returned to him. Mr. Dymock was at the same time informed that if the Council approved of his list, they could purchase his books with the £200.

2553. Who sent that list to you originally? Mr. Cohen.

2554. Were the prices shown in that list? Yes.

2555. Have you a copy of it with you? Yes; I produce it.

2556. Were the prices shown on the copies which you struck off? Yes; this is the copy which I struck off.

2557. Is this a copy of the original list, as amended by me? Yes.

2558. Does it show the original prices, as charged by Angus and Robertson? It shows the prices as submitted to the Department. We did not know anything about Angus and Robertson. These are the prices as submitted by the Council.

2559. Showing all the prices as shown in the original list? Yes.

2560. Reported on by me? Yes.

2561. Then the books I recommended for excision are not shown on this list? No.

2562. Then the list, when brought back by Mr. Dymock, had a number of these struck off, and a number of other books put in their place? Yes.

2563. Was not that a very smart operation, as you have described it? It was done regularly; there was no irregularity about it; it was done quickly.

2564. Information was sent to the parties concerned on the same day on which I submitted my report? Yes. Mr. Dymock waited in the office while the letter was written. The list was received from the Librarian, approved of by the Minister, and returned to Mr. Dymock on the 15th March.

A. J. T.  
Casson.

10 Oct., 1900.

W. J. Durie.

10 Oct., 1900.

2565.

W. J. Durie. 2565. Then Mr. Dymock had abundant opportunity to alter the prices in the original list in any way he might like? He had a copy of the original list given to him, and he was allowed the privilege of altering any of the books on the list, and substituting others.

10 Oct., 1900.

2566. Do you remember if he altered any of the prices? I do not think he did. That I cannot say for certain, because the list as brought to the office was returned to him to supply the books.

2567. *Chairman.*] If it has been said that the list which was furnished to Mr. Dymock did not contain the prices which formed portion of the original list, is that incorrect? To the best of my knowledge, he had a copy of this list giving the prices.

2568. *Mr. Sleath.*] You say that Mr. Dymock called on the 7th March? Yes.

2569. And he got a list like this? I did not give him the list, but I understand he got the list from the Department.

2570. Did you see it when it was brought back? Yes.

2571. Do you say that it was practically the same as this now produced? He had crossed out a number of those books, and at the back he had added a number of his own books in red ink.

2572. Was the original list, before he scored out some of the books, got up in the same way as this one? Yes.

2573. Sometimes you do things a bit sudden in this Department, and sometimes make things hum? Yes.

2574. Sometimes you are pretty slow, but sometimes you are pretty quick? It all depends upon circumstances.

2575. So that after the communication had been returned from the Principal Librarian, there was nothing remarkable in Mr. Dymock, or anyone else, waiting until the letter was written? No; it is done sometimes. If a man comes and says he is very desirous to have a reply that day, he sits down and waits for half an hour or so until it is done. That is done occasionally, but it is not done usually.

2576. It would be only natural for Mr. Dymock to be anxious to get this notification from the Minister when the list had been reported upon? That was why he wished to have it done.

John Redden Cameron sworn and examined:—

J. R.  
Cameron.

10 Oct., 1900.

2577. *Chairman.*] What are you? I am cataloguer, shorthand-writer, and typist in the Public Library of New South Wales.

2578. *Mr. Anderson.*] When were you appointed to the Public Library? In October, 1893.

2579. Was that shortly after I went there? I believe so.

2580. Then I may call you one of my own boys, as far as training goes? Yes.

2581. Will you tell the Committee what steps I have taken to train you, in common with other assistants in the Library? About the end of 1893, three or four months after you were appointed, you held a preliminary test of the juniors, and the result, taken as a whole, was not very satisfactory. After that you instituted classes and gave us instruction in library work, dictation, and English literature particularly. You read through Milton's "Comus" and "Samson Agonistes" and Shakespeare's "Julius Cæsar." At the end of 1894 you held an examination in these and other subjects. The result showed a great improvement. In this year, I think, you instituted the senior class. Later on you instructed those who were desirous of learning Latin and French, and other juniors in other subjects whatever they liked to choose.

2582. Do you remember that I tried my best to prepare a number of the juniors to pass the Public Service examination? Yes.

2583. Do you know that a number of them did pass? Yes.

2584. Did you yourself pass the matriculation examination at the University? Yes.

2585. Was that in consequence of my direct encouragement and assistance? Yes.

2586. Has that been a very great assistance to you as Librarian? Yes.

2587. What steps did I take to help the seniors? I may state that after you instructed us in Latin and French—I was one of those who attended that instruction—at the special request of a number of us you took us through Shakespeare's "Hamlet," and later on you gave us a course of instruction on the rules of cataloguing and indexing. Afterwards you went through the "Guide to the System of Cataloguing," explaining the meanings of the various headings. The "Guide" was compiled by you, and includes the headings under which books are published, and the books are indexed under their suitable headings. The "Guide" is used principally with the index. There were, I think, sixty-six rules for cataloguing and indexing; fifty of them deal with cataloguing.

2588. Does that "Guide" enable every man in the Library to catalogue and index on one common plan? Yes; I think that was the object of it in the first instance.

2589. Before I made that "Guide," would not every man in the place go on in his own way and catalogue in his own style? Yes.

2590. Did that cause a great want of uniformity? Yes.

2591. Do you know yourself that the intellectual and educational standard of the officers in the Library has been raised by my action? Yes.

2592. Did I give those classes in my own spare time? Yes; you devoted two or three afternoons in the week to it, beginning at about a quarter-past 4 and concluding at 5 or half-past 5. It was very often later, and sometimes four afternoons a week.

2593. As the result of that instruction, are you now cataloguing the whole of the books received in any year? Yes.

2594. Is this catalogue of the books received in the Library this year your work? Yes.

2595. Does that catalogue bring our books right up to this very date? Yes.

2596. Are the books which were bought by the Trustees at their last meeting catalogued, and available for the public and our staff? That is the case with regard to the books bought at the meeting before last.

2597. Was this subject index prepared by another member of the staff trained by me? Yes; Mr. James Pierce.

2598. Did he attend my classes, and receive the whole of his instruction from me, and assist me in indexing? Yes.

2599. Do you remember when you used to stamp the books in the Library? Yes; I used to stamp the books received towards the end of the year 1895.

2600. Did you succeed somebody else in that duty? Yes.

2601. While you were engaged in that duty, did you stamp every book that came into the Library and was placed on the shelves? Yes; all the books had to go through my hands. I had to enter them in the index register, and I stamped them as they went through my hands.

2602.

2602. Do you know that the policy of the Library and my earnest wish was to have every book properly stamped? Yes.

2603. After you were removed to other duties, how was the stamping done? By the assistants in the Reading-rooms, under the superintendence of the chief senior assistant.

2604. If any books were not stamped in the Library, whose fault must it have been? It must have been the fault of the assistants in the rooms. They were instructed to stamp all the books received, and they were also instructed to go over the shelves, and ascertain if books had not been stamped in past years, and to stamp them.

2605. If any books on our shelves were not stamped, was it due to carelessness on the part of some junior officer? Yes.

2606. Do you know that all the senior officers in the place were keen and anxious to have all the books stamped and properly registered? Yes. I may state with regard to the classes that you finally delivered a course of lectures on cataloguing, dealing with the subject specially from a lending library point of view, and the seniors in the Lending Branch, together with as many of the juniors as could get away, attended the lectures, as well as most of the Reference Library staff.

2607. In consequence of these lectures, did a young officer named Gilchirst become an efficient and capable cataloguer? Yes.

2608. Do you consider that he is a really good officer, like yourself, at cataloguing? Yes.

2609. Did he receive all his instruction from me? Yes.

2610. Could he and you have become cataloguers without my personal assistance and sympathy? No.

2611. You would not have picked up information in library economy except in a haphazard way? No.

2612. Have you been up for examination lately for promotion in another Department? Yes.

2613. Do you know unofficially that you have got promotion to another Department? Yes.

2614. Do you not think it is hard on me that you, as a good cataloguer, should be taken away? You may feel that it is, while it is gratifying to me.

2615. *Mr. Sleath.*] Do you do the stamping with the rubber stamps? Yes.

2616. *Mr. Anderson.*] Do you know now that, as far as you are aware, the books of the Library are thoroughly well stamped? Yes; they are all supposed to be stamped.

2617. Do you know that we have searched the whole of the shelves to find any books that were not stamped, and that by my instructions the attendants have stamped them all? Yes.

Henry Charles Lennox Anderson recalled and further examined:—

2618. *Chairman.*] Do you want to give any further evidence? Yes; I propose to notice a number of questions throughout the evidence, which I can disprove by my own testimony, or if you desire it, by additional testimony from my officers or persons outside the Library. A good deal of trouble has been caused by the imputation against me that I did not attend to my own duties at the Library, and that thereby losses were caused from our shelves. In August, 1896, we found out, which was quite inevitable by our system of checking the shelves every day, that some books were disappearing, and we felt sure that they were not being mislaid, as often happens, in a large library, but that they were being stolen. I moved the police at once, and three detectives at different times came round and consulted with me. They watched in our galleries, and our own private constable watched. They made inquiries at book-stalls without any result for a few weeks. The Trustees took further steps, and I wrote this letter to the Minister:—

Sir,

Sydney, 14 August, 1896.

I have the honor to bring under the Minister's notice, by order of the Trustees, the fact that, during the past few months, valuable books have been found to be mutilated by the loss of pages and paragraphs, which have apparently been torn out by persons seeking for special information on different subjects. During the past seven weeks, no fewer than twenty-four books, all stamped and bound with our new bindings, have been removed from the Library, and replaced on the shelves after longer or shorter periods of absence. It is noteworthy that this has been very much worse since the reduction of the staff of attendants, which now necessitates working the two rooms with only three, and often two attendants, and that means that for a large part of the day there is no attendant in the room, while he is running upstairs and downstairs for books. We have not been able to detect the delinquents, but it is evident that they do not belong to the class of petty thieves. The Trustees, therefore, beg to suggest that a reward of £5 be offered for the conviction of any person mutilating or removing without authority any book from this Library.

I mention this to show that the Trustees were alive to the fact that our books were being stolen, and that we took all proper steps. Within a month of this date I got word from Angus and Robertson that a young fellow had been found offering books for sale to a bookseller near them, named Blackwood. I went along once, and also informed the Police Department by telephone. I believe that Mr. Blackwood also informed the police at the very same time. When I got there the detectives were in the shop looking at the books. I identified the books at once as our property, although I am sorry to say that those particular books had not been stamped with our Library stamp as they should have been. That was owing to some junior who should, in the ordinary course of library routine, have stamped the books before placing them on the shelves. It is not for me to foul my own nest, and I do not want to know now who was responsible for the neglect of years ago. I can say that by my present system it is almost impossible for such a neglect of duty to take place. I have one special man whom I can pin to this work. While we were discussing the matter with the police a young fellow passed the shop, and was identified by a boy in the shop. He was apprehended there and then, handcuffed, and he afterwards received six months. That shows that as far as I could, and I honestly believe as far as my staff could, we did our best to detect the delinquent. It is evident that we thought it very serious when we offered such a reward, and my juniors would be pretty keen to earn that reward. We found afterwards that the thief must have taken the books at tea-time when there was a very small staff on duty, and when he might easily have watched the attendant go downstairs or upstairs, meanwhile taking one or more books off the shelf, and walking out. He cleverly chose only the books that were not stamped. I regret to say he got quite a number of books that had not any of our stamps on them, although there were lots of private marks by which we could easily identify the books. I now show you some of those books that were stolen. First of all you can see that our number was on that book originally, secondly, you open the book, and you see there has been writing on the first page, where we put the price and a little mark to indicate where we have entered the book in our register. Then on another page we enter the firm from which it was got, the published price, the discount, and the net price. Although it has been rubbed out you can see there has been writing there. Then we put on the back of it a label indicating

J. R.  
Cameron.

indicating its place in the Library. This label has been taken off. Then we have little private marks showing that the book has passed through certain hands, has been catalogued, indexed, and finally dealt with. By these marks we can identify any book that has been in our Library. None the less, I now admit that some of these books were not stamped; but I did not know it until we detected this thief. The reward of £5 was paid to the detectives who had charge of the case, and on their recommendation I suggested a certain allocation of the money, namely, £1 10s. to each of the two detectives, £1 to the young man in Angus and Robertson's, who rung me up and warned me that a book had been offered to him by Blackwood which he recognised as our property, and £1 to the little boy who identified the thief. I was guided entirely by the advice of the detectives in this matter. Mr. Blackwood has asserted that I offered him £1 1s. ostensibly to hush up the case. I give that the most emphatic denial. It is absurd on the face of it. If I wanted to pacify Mr. Blackwood, all I had to do was to give him the prices he demanded for his books; but, as he told you, I did not give him one-third of the prices which he demanded, because I considered that he was somewhat to blame in taking these books with such a number of very patent marks on them. I was warned, moreover, that he did not exercise the care that he should have done. In my zeal for protecting the Library funds, I reduced his account to about one-third, and recommended the Trustees to pay that very small amount, including only 2s. 6d. for one book which is certainly worth £2, and about 1s., or 1s. 6d., each for the rest. I recommended the Trustees to pay that amount to him and two other booksellers, who have given evidence, simply because I felt that we, as a library, were partly to blame for not having these books adequately stamped. Mr. Blackwood afterwards demanded from me the full amount of his bill, or that he would make an exposure. He has told you the exact truth in his account of the interview he had with me, when, instead of offering him £1 1s., I told him plainly that if he said one word more I would prosecute him for receiving stolen property, knowing that it had been stolen. The detectives had reported to me privately what Mr. Dymock has since told you publicly, that Blackwood had been found in possession of hundreds of Dymock's books, and I was told that he had paid a handsome sum by way of hush-money. You can imagine that I was not at all likely to offer him or anyone else a guinea to hold his tongue. There has been a good deal of confusion shown in Mr. Dymock's evidence about the invitation to tender for our duplicates. I assert that I wrote a note to him myself on 16th March, 1897, a copy of which I produce in our official letter-book as follows:—

Dymock & Co., George-street,—

THE Trustees of the Library having determined to dispose of the duplicates in the Library, about 5,000 volumes, tenders are privately invited for the purchase of the same up to the 23rd instant.

You will notice that Mr. Dymock himself was not very clear in his evidence, because in one place he admitted that some intimation had been received; in another he asserted that no official invitation was sent to him, but that he had got some verbal message. I have hinted at some matters in the course of my cross-examination which I will content myself by saying I could prove to the hilt by producing at least three witnesses to the very occurrence that I have hinted at. But if I can say nothing good of a dead man I will say nothing at all, and if the Committee are satisfied, I propose to call no evidence whatsoever that will have any personal bearing on the character of the late Mr. Dymock. I am very sorry indeed that he is not here to allow me the privilege of calling all the witnesses whom I had wished to call to thoroughly expose what I consider are his unwarrantable statements, and to justify me in the position which I have indicated in my own evidence, and the evidence which I have called, and indirectly in the cross-examination to which I have subjected him especially. A good deal of surprise has been expressed at the action of my Trustees in inviting tenders for these duplicates for cash, and subsequently taking books in exchange. The explanation is very simple. We found that, if we took cash, the Trustees, not being a corporate body, could not hold it, and could not use it in any shape or form, but that it must be paid into the Consolidated Revenue, and it would be lost entirely to the Library. I think you would hardly blame the Trustees for determining that, under those circumstances, they should, in the interests of the Library, take good standard books in exchange, especially such as would be useful to country readers, equipping, in fact, twenty new boxes. As a matter of fact, I think we got the ordinary discount of 20 per cent. on all books which were new, and on such as were secondhand we got 30 per cent. off the published prices, and then 20 per cent. off those reduced prices. We got books of the original published value of £300 in lieu of £219 cash. That was done in no way at the instigation of Angus and Robertson, but simply by direction of the Trustees on the grounds I have stated. A great deal of stress has been laid on the fact that tenders for the Library agency received in 1894 were not opened in the presence of the Trustees. They were opened by the Assistant Librarian, Mr. Wright, in my presence, at 12.45 p.m. on the day on which they were received, as is shown by the minute written by Mr. Wright on those tenders, which I have produced here in evidence. My reason for doing so was this: If I had waited for a Board meeting to open the tenders in the presence of the Trustees, which I would have gladly done, I would have had to wait for another month to get the matter dealt with, because you will easily understand that the statement which I would have to draw up so as to put the tenders on a common basis so that they might be compared on equal terms by my Trustees, must necessarily take an hour or two. I could not do that while the Trustees were sitting at a meeting, and, as they only met once a month, the business would have been delayed for a month. I opened the tenders the day before the Trustees' meeting, prepared the schedule which we have in evidence, submitted it to the Trustees next day at their ordinary monthly meeting, and they chose the successful tenderer. Intimation was sent the next day, and thus we were able to start fair and square with our new agents on the 1st January; that was three months afterwards. Time was precious. We had to give the new men ample notice to allow them to order all our magazines, to provide for our continuations, and to allow them to make their own arrangements for their London agent to take up the business and carry it out effectively. A great deal of comment has been made upon the fact that "Casanova's Memoirs" were placed out on the shelves when first bought. They could not have been placed elsewhere. There was no reserve in those days. I made two special reserves myself, in July, 1898, by direction of the Trustees, in order to provide for that special book and a few others which are really not quite so bad. I made two reserves called special reserves. The first for exceedingly rare and valuable books like the first volume of our *Sydney Gazette*; "Gould's Birds of Australia," and other books that could not, perhaps, be replaced if damaged or destroyed. I made a second reserve of books that were not suitable for indiscriminate use by the public. In that I placed about thirty volumes, including Rabelais' works, Casanova's "Memoirs," and a few medical books. The books in these two reserves can be had only by special written application, on the printed

printed form supplied by us, presented to the senior officer in charge of the Library at the time, and approved by me on his judgment of the appearance and suitability of the applicant. We never lend these books in the second reserve to young people or disreputable-looking people. We are particularly strict about it. I can safely say, as these books are kept in my room, that they are not asked for on an average more than once a month, and in every case I strictly examine the officer who brings in the form to me to know if the person seems reputable and middle-aged. I have refused them frequently to young people, and, strange to say, once to a woman, and often to people who are disreputable, loafing-looking people, whom I considered to be in search of nasty intellectual fodder. To illustrate the very wild statements that have been made in some evidence, let me refer to Question 670, where it is said that "De Quiros's Voyage" was only a pamphlet of about six pages, and that it was offered to the Government here for £50 by a London bookseller, that Sir Henry Parkes thought the price was excessive, but that he asked for permission to have it reprinted, that he obtained the services of Mr. Duncan to reprint a fac-simile, and also a translation; that the original was then sent back to England, and there purchased by Mr. Henniker Heaton for £80, and that later on he sold it for £100. Not one statement there is in any way correct. I think you will be interested in seeing a copy of that book, which I now produce. It is a copy which my trustees made at the time by photo-lithography. It is supposed to be the only copy in the world of this work of De Quiros, in the original Spanish, Concerning his Discovery of the fourth part of the World—Australia, the Unknown. As a matter of fact, he did not touch Australia at all, as we now know. This volume was bought, from description alone, by the trustees, from F. S. Ellis, of London, for £42, in June, 1873. When the trustees saw the book, consisting of eight pages, they thought they were not justified in paying 40 guineas for it, although it was supposed to be unique, and, so far as we know to-day, it is unique. They, therefore, sent it back to their agents, and sold it for the same price, through Trübner & Co., to the Earl of Crawford, and from his library it was afterwards bought by Mr. Henniker Heaton for £55. It was sold from his library in 1897, and I am glad to say it was bought by a collector in Sydney, and is now in Sydney, but for much less than the price mentioned there. Sir Henry Parkes had nothing in the world to do with it; but Mr. Duncan, who was a trustee at the time, and who was a good Spanish scholar, kindly translated it, and wrote a note describing the work. It was published in the Government Printing Office in the form I now show you. It is a photo-lithographic reproduction, with Mr. Duncan's translation, and an introductory note by him.

H. C. L.  
Anderson:  
10 Oct., 1900.

THURSDAY, 11 OCTOBER, 1900.

Present:—  
MR. HOGUE, MR. MILLARD,  
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Henry Charles Lennox Anderson recalled and further examined:—

2619. *Chairman.*] Are you prepared to proceed with your general statement? Yes; I wish to give some figures to show how many books have actually been lost from our Library since its formation. I commenced taking stock at the end of 1894, and I found a number of books missing, which rather surprised me at the time. I soon learnt that they were not really lost. Through inadvertence some had been sent into the Government Printing Office for binding without a record being made, others had been misplaced by carelessness, and so on. At the end of 1895 our stock books showed that 220 books had been missed during the year, and 175 of those missing in the previous year had been recovered. In 1896, 280 missed, 194 recovered; in 1897, 221 missed, 118 recovered; 1898, 125 missed, 105 recovered; 1899, 79 missed, 136 recovered. Thus there is a total of 925 volumes missed during the five years, of which 728 had been recovered during that period, making a net loss of 197 volumes in five years. On the 1st January this year there were 546 volumes missing, representing the total apparent loss since the formation of the Library thirty years ago; of which number 138 have been found during the current year by means of our daily checking of the shelves, so that the total number of volumes missing to-day, after thirty years' wear and tear, is 408.

H. C. L.  
Anderson:  
11 Oct., 1900.

2620. Do those numbers which you have quoted include the books that were stolen? Yes; and, of course, those recovered include those we bought back. The only way in which I can convince you that there is nothing abnormal in this is by giving you the figures for the same years of the Melbourne Public Library, which correspond very closely with our own. Those figures have been supplied to me by Mr. Armstrong, the Librarian of the Melbourne Library, and they are as follows:—

NUMBER of volumes missing from the Public Library of Victoria, 1894-99.

Year,	No. reported missing at monthly stock-taking.	No. found later.	No. actually missing.
1894 .....	108 .....	70 .....	38
1895 .....	91 .....	55 .....	36
1896 .....	125 .....	95 .....	30
1897 .....	101 .....	78 .....	23
1898 .....	191 .....	55 .....	136
1899 .....	105 .....	68 .....	37
Total .....			300

You may notice that they had their heavy years of losses as we had; in fact, there seems to be an epidemic of stealing. They, however, have enormous advantages over us. The people are admitted there by turnstiles, which are guarded by two officers in uniform, and a person cannot get past that turnstile without leaving umbrella, stick, and any parcel, so you can imagine it would be a daring thief who would try to go out past them with a book of any size secreted.

2621. Does the increased accommodation which they have enable them to work on a systematic basis with regard to matters of that kind? Yes; we had a constable on duty in our institution when I went there, drawing £130 a year. I convinced myself that the game was not worth the candle. First of all, I thought it looked ugly to see a constable in uniform always sitting at the door of our University of literature, and I found that his influence did not prevent the total loss of books, perhaps for the reason that he could not be on duty during the whole twelve hours, and perhaps the thieves operated while he

was

H. C. L.  
Anderson.  
11 Oct., 1900.

was away. I recommended dispensing with his services, and we got a carpenter who makes presses, and also acts as special constable. I have had another return prepared which Mr. Hogue asked me unofficially to produce, and which, I think, no one can make objection to, showing the attendance of the Trustees for the last five years. There have been sixty-nine meetings of the Board, and a great number of committee meetings of which I keep no record, at which the Trustees attend informally, coming in late or early as they think fit, and examine the books to be presented at the next Trustees' meeting. I think it is only fair to say that several of the Trustees who do not come to the Board meetings, notably the Chancellor of the University and Mr. Alexander Oliver, frequently come in this informal way, and their assistance is of the greatest possible value to me in settling difficult questions about old and rare books. I do not know, in my acquaintance, a man with such a marvellous knowledge of books as the Hon. Dr. MacLaurin. I never saw him puzzled, and I have heard him give an account of books *ex tempore* which I could not have done better out of my encyclopedias.

2622. Does his acquaintance extend to Australian books? I do not suppose it does; but we do not now buy Australian books, because we know that we will get them all from Mr. Mitchell. Inferentially it will be seen that Mr. Mitchell is not only making us a magnificent gift, but he is enabling us to make an annual saving of at least £300. I will divide the Trustees into two groups—the group of old Trustees, consisting of eight, who have borne the heat and burden of the day until March, 1899, when seven new Trustees were appointed, whom I shall call the group of new Trustees. Amongst the old group, the Hon. Dr. James Norton, M.L.C., President, attended 64 meetings; the Hon. J. F. Burns, 62; Professor M. F. McCallum, M.A., 42; the Hon. Edward Greville, M.L.C., 35; Mr. R. Cooper Walker (died 25th July, 1897), 19; the Hon. P. G. King, M.L.C., 18; Mr. Alexander Oliver, M.A., 13; Mr. Edmund Barton, none. I may say, with regard to these figures, that Mr. Walker, my predecessor, who died on the 25th July, 1897, was a most regular attendant up to that time; I think he only missed one meeting. Mr. King has been long stricken with paralysis, and is often unable to enter or leave his carriage. I have seen him fairly frequently during the last few years, and I can assure you that he takes the deepest interest in the institution. It would be a very great misfortune if the Trustees had to declare his seat vacant under the new Act, because he has a great knowledge of Australian literature, and has done excellent work in years gone by. Mr. Oliver, as you know, is President of the Land Court, and has lately been acting as a Royal Commission to choose the site for our Federal capital. These circumstances will explain to you how it is that he has not been able to attend very frequently at our Board meetings, or at our University Senate meetings; but none the less, Mr. Oliver gave magnificent service when we were drafting our Bill. His great knowledge of Parliamentary drafting was invaluable to us. He has frequently helped me at long meetings of sub-committees in selecting German and French literature, in which he is an expert, with Professor McCallum. You must not estimate his value to the Board merely by the attendances he has given. Of the new group of Trustees, the attendances have been as follows:—The Hon. John Hughes, M.L.C., 15 out of 20 possible; the Hon. Alexander Kethel, M.L.C., 14; Professor Thomas Butler, B.A., 10; Mr. William Wood, 7; the Hon. Dr. MacLaurin, M.L.C., 6; Professor T. W. Edgeworth David, B.A., 5; Mr. L. J. Brient, 2. It is only fair to mention that the Hon. Dr. MacLaurin comes in frequently and gives me most valuable assistance on delicate points, in settling whether we should have certain books. He is always willing to see me at his house, and to give me all the assistance in his power. As Chancellor of the University, he is an *ex officio* member, and he considers he is there to represent the University in emergencies. Professor David has been away from Sydney six months out of eighteen. Mr. Brient is editor of the *Daily Telegraph*, and he cannot possibly come to our meetings at 4 o'clock in the afternoon; but he has given me great assistance on several occasions, and he has shown a keen interest in our work. Possibly, he can help us a great deal more than men who attend a great deal better with less capabilities of helping us. I would respectfully ask you to direct that there be printed two returns, which I handed in, showing the books that we lent to country students and the persons to whom we lent them. I am anxious to show that we have nothing to hide as to the people we lent them to, nor as to the class of books that we lent. A good deal of comment has been made on the fact that we lent books, sent by post, to only eleven students; but that has been quite a recent development of our work, and it was really an afterthought of my own, to save the expense of making up parcels and sending them by train; but I wish you to notice that during the past five years, since the Trustees started this branch of educational work, we have sent parcels of books by train to thirty-seven groups of students, besides twenty-six individual students, making the total number of students assisted 720, and the total number of volumes sent out 1,005. These books were sent entirely free of cost in every case. We pay the cost to and fro out of the vote of £300, which Parliament gives us every year for sending books to country libraries. To show how our educational work in the country has grown, I think it is fair to give these figures also: In 1893, 136 boxes of books, containing 10,612 volumes, were issued to 74 country centres; last year, 223 boxes, containing 14,155 volumes, were lent to 129 institutions in the country. You have heard a good deal about the stamping of our books. Dr. Norton has thrown a good deal of light into my own mind on the vexed question of the Wise bequest. Those books were never bequeathed to the Library at all; they were left, with other personal property, to Mrs. Wise. The Free Public Library did not exist at the date of his death in 1865. Mrs. Wise handed the books over—most of them were newspapers and old *Gazettes*, books which are exceedingly valuable to us to-day—to the Australian Museum, to keep in safe custody. When the Free Public Library of Sydney was formed as a Government institution, in 1869, those books were simply incorporated with the volumes of the old Australian Subscription Library. We have never made the slightest distinction between them. Personally, I have never seen one of the Wise books wittingly in my experience, as I never happened to study the kind of books that belongs to that collection, except the old Sydney *Gazettes*. When Mr. Mitchell handed over his 10,000 volumes, I at once set a trustworthy officer to stamp every book on the title page and on the last page. I think it took six weeks. It has been done, and every book is now identified. We have also Mr. Mitchell's book-plate on the front cover. Mr. Mitchell would not allow ugly rubber-stamps to go on his books; and, as book-lovers, you will sympathise with him. He had an embossed stamp made, which is more trouble to use; but it is more sightly. At the same time, I am bound to admit that I know that stamp can be effaced more easily, and, I am afraid, more effectually than a rubber stamp. We now use an embossed stamp for all our own choice books and illustrated books, simply to avoid the hideousness of those ugly rubber-stamps. You have heard a reference made to the fact that when I went to the Library, the catalogue was not up to date. When I went there in 1893, I found that

that my predecessor, who was a most indefatigable worker, a most zealous librarian, and a man esteemed and respected by everyone in the Library, had just finished the great catalogue of all the Australian books in the Library, which he called the Australasian Bibliography; but the main catalogue was in arrears for nine years. No catalogue of the main Library was later than 1884, but there was in type the great part of this main catalogue, bringing the authors down to the year 1887. I revised the whole of the proofs of that catalogue myself, correcting hundreds of mistakes in Latin, French, German, and Greek authors; for the Library was not at that time strong in men who were able to deal with that class of books. I made that my special care. It took us eighteen months to finish this authors' catalogue from 1869 to 1887. I at once set to work with all my available staff to bring the authors' catalogues up to date, for I found that, owing to the absence of printed catalogues, we were getting duplicates without knowing it. The immense trouble of going over written catalogues not properly arranged in real alphabetical order caused such mistakes that distressed me. I then got out supplementary catalogues, bringing the authors right up to the year 1895. When that was out of hand, I determined to make our catalogue as good as I could make it, and to make our current catalogue right up to date, month by month. I, therefore, first made a Guide to our system of cataloguing, which is entirely my own work, done almost entirely in my own spare hours at night. I made rules for cataloguing, so that every one of my officers should work on a common plan. Owing to the want of a common plan, the same book had been catalogued in two or three different ways, and had been practically lost. I myself several times almost bought duplicates, because I could not find the book in the catalogue under the heading where I thought it should have been. As many men, as many opinions about cataloguing; but I was determined that there should be only one system in our Library. I made this Guide, which provides for any number of cataloguers working at the same time in exactly the same way. I do not think it is in place now to explain the difficulties of cataloguing, but I might show you what serious mistakes can be made in cataloguing one book. I can assure you that six equally-intelligent, well-educated men might deal with the same book in six different ways, not one of which I would dare to say was superior to the others; but such a want of system in the Library would be absolutely fatal to its efficiency. Whether my system be good or only fairly good, at any rate it is uniform; and now our catalogues are made on one plan which has won the very highest encomiums from the British Museum as conveyed to my Trustees. The chief officer of that library, Mr. G. K. Fortescue, next to Sir Edward Thompson, the Principal Librarian, wrote to my Trustees that it was the best system that he had ever seen carried out, and that he would be proud when he could see his own library catalogued on a similar plan; but, of course, with their 3,000,000 books, they can never overtake their work as, I am proud to say, I have now overtaken mine. We first put the books under their authors, and then we put every book under its subject, in what I call the subject index. But many a book is put under fifty headings in that subject index. For example, the annual volume of the Royal Society of New South Wales would go under fifty different headings, such as Entomology of Australia, Geology of Australia, Physical Geography of Australia, Physics, Astronomy, Botany, Organic Chemistry, Forestry, and all sorts of headings. We put every article and every paper in a scientific journal under its heading in our index, so that we can show a student to-day every book and every article that we have in our 120,000 volumes on any subject of human thought. You can quite understand that I could not be printing a catalogue every year as a separate volume; it would be too expensive. This printing is done entirely by our own staff. Every week the printers are at work, and they turn out the catalogue in the shape I now show you in galleys, which are bound together and made available week by week, for our own and the public use. That is all done on the premises. Therefore, you can go into the Library to-morrow and find out instantly every book that is in the Library up to the meeting of the Trustees one month ago. You can, moreover, find out what those books are about. If you want the latest book we have on bacteriology, the Chinese war, or the Transvaal question, you will find it in that index.

2623. How do you treat the type? The type belonging to the three years' supplement is still standing. At the end of this year, I am going to embody with this type the type belonging to the last and the current year's supplements. That will take a five years' supplement ending with the year, and with the century. It will make a volume of 1,200 pages. That is large enough for practical purposes. We shall then break up all that type, and commence a new five years' supplement. Next year we shall have a yearly supplement; at the end of two years a two years' supplement; at the end of three years a combined three years' supplement; and at the end of five years we shall have another finished supplement, forming an integral part of our great catalogue, thus always keeping our catalogue complete. This five years' volume will make the catalogue complete up to the end of the century, when we have added these galley slips which you have in your hand. We are very anxious to keep our catalogue up to date, and as effective as possible for the students who use the Library. I am not aware of any reference library whose printed catalogue is so well up to date, or nearly approaching this one, for completeness and efficiency. I do not wish to say that our system is the best in the world; but for our circumstances, and with the staff at my disposal, I believe we are doing as well as we can—at any rate, we are always looking out for hints from older libraries, which, of course, are doing their best to solve the great problems of library management. You heard some questions asked two days ago, of which I cannot understand the trend; but in order that there may be no mistake about any insinuations, I wish to say that when I was offered the position of Principal Librarian, Mr. Walker, my predecessor, was due for a pension, and he wished to take that pension. His salary has been £650 a year, together with quarters, fuel, and light, which were valued at £150 a year. That value was simply placed on them for the purpose of calculating his pension when he retired. He also received £100 a year for the duties of Chairman of the Board for International Exchanges, and £50 a year as Chairman of the Historical Board, which supervised the publishing and editing of the "Historical Records of New South Wales." I have discharged the whole of those duties, besides some other duties as Registrar of Copyright, and the whole of my salary has been £500 a year. When the Public Service Board came into power they inaugurated a slightly different system, and they put down my emoluments at £630 a year, deducting £130 for the value of the quarters, fuel, and light, which I enjoyed. Of course, I never drew a penny of that £130 a year, so I could not repay it. Every month the twelfth part of £500 was paid to me as salary, and I have never drawn a penny of anything else. When I voluntarily gave up my quarters, fuel, and light in order to accommodate the Mitchell Library, Mr. Hogue, who was then Minister, approved of a recommendation to the Public Service Board that I should get the £130 a year, which had hitherto been deducted from my emoluments; and from the 1st July, 1899, I have drawn that sum of £130 a year in

lieu of quarters, fuel, and light. What probably has bothered the gentleman who asked those questions is a statement which I made in another place—that I have lost by drawing those allowances. I make no fuss about that; but I mentioned it as a fact that I pay £100 a year rent, £30 a year travelling expenses for my children and myself, and £22 a year for fuel and light, showing that I have lost at any rate £22 a year by my voluntary action. I need hardly remind you that living as I did on the premises, I had no travelling expenses either for myself or my children who went to a school a few hundred yards away. I also had no expense for my meals, and little things like that. Although I do not wish to lay any stress on that, it bears out my contention that I have lost financially by my own voluntary action in the interests of Mr. Mitchell and the Library. There were also some questions asked yesterday which I venture to say assume certain things which are not facts, and which, therefore, elicited answers which might be misleading. Reference was made to Mr. Reid as the Principal of the Penrith College. I happen to know Penrith very well, as I own a farm 2 miles away from it. I can assure you that this College is a small private school, and that Mr. Reid is a poor student in every sense of the term, which I say without the slightest disparagement to him. As I said before, I have been a poor student most of my life. Mr. Reid has as much claim on the sympathy and practical assistance of the Trustees as any of the men who ever borrowed a book from us. I say this, although I have never seen Mr. Reid in my life, and have never received a letter from him. But I have investigated the circumstances of this little private school at Penrith. As practical men of the world, you know that there are no principals of secondary schools in New South Wales to-day who are making great wealth. There is far too keen competition from the State itself. I respectfully ask that Mr. Reid's letter be made an Appendix to the evidence. To persons who, in after years, read this evidence, it will present the point of view of country students whom we were trying to assist. It was a letter absolutely uninspired by myself. He applied direct to the Librarian of the Lending Branch, because he was an old Sydney borrower, and he thought he might be granted the privilege of continuing his borrowing, although he had removed to Penrith to start a small school.

2624. *Mr. Millard.*] How long did you allow a book to remain with a student? Nominally, a fortnight; but we never made a demur to leaving it as long as the student wished, provided that it was not being demanded by some person in town; but if a book had been asked for by some one else, we have always insisted upon its being returned in a fortnight. Sometimes they have been kept for months.

2625. *Chairman.*] As a matter of fact, to your knowledge, have ever any applications from respectable people in the country, for books on subjects which indicated that they were students, been refused? No application has been refused if we could grant it. For example, a gentleman wrote from Moree, about two weeks ago, asking us to send books on Australian birds. As you are well aware, the only books on Australian birds are extremely valuable books. I could not possibly send Gould's book to Moree—first, on account of its great value; and, second, because it is in constant demand in our own Library. I, therefore, told that gentleman that I could not send him any book on Australian birds; but I could send him dozens of books on British birds, if it was simply ornithology in the abstract which he wished to study. I have not heard from him since. Several times we have received applications for other rare books, or books in very common demand, which we could not supply in fairness to our city students; but we have never refused an application on any other ground. Perhaps I may again emphasise the statement I made once before: that not one of the whole of the persons who have borrowed from the Library is in any way a personal friend of mine, except my own brother. I will now make a few remarks upon some points in the evidence which I think ought to be cleared up. A great deal has been said about the tenders which we received in 1894 for doing the work of the Library. Some gentlemen seemed to think that we ought to have given one part of our business to the firm that gave the most favourable terms for it, and another part to another firm which gave better terms for that section. I could never bring myself to recommend such a contemptible Jewish policy to my Trustees, even if I could believe that those firms would agree to such a thing. You must see that they offer to do this business as a whole on £2,200 annual business. I can understand that they would lose on some branches of the contract, and gain on others. At any rate, Mr. Dymock himself has told us that no bookseller could possibly give 25 per cent. off the class of books that we buy, and I know that that is a fact. I know by my practical experience now that the high class of literature which we buy for the Reference Library does not carry more than 33½ per cent. profit, often much less. If you allow 5½ per cent. for bringing out the books, insurance, freight, cartage, and so on, which we have proved to be the cost of importing, you will see that you will leave 28 per cent. profit. Giving us 25 per cent. discount would leave the bookseller 3 per cent. profit. On a business, say, of £2,000 a year, that would leave the enormous profit of £60 a year for clerical assistance, risk, and all the incidentals to a business of £2,000 a year. The thing is absurd. If you examine the schedule, which is on page 19, and which I presented to my Trustees in October, 1894, you will see that I had to estimate which of the tenders would suit us best in our business, as calculated on the amount spent during the two preceding years. The business has altered very much since then. For example, we used to spend £400 a year on second-hand books, most of which were Australian books. We do not spend £10 a year now on Australian books; we are looking to Mr. Mitchell to do all that. He most generously buys anything Australian that I bring under his notice. By Australian, I mean any book which has the slightest reference to Australasia, from the Sandwich Islands to the Philippine Islands. Any book that relates to the science, anthropology, history, geography, or exploration, of that enormous tract of the world's surface, he will buy at once, if I ask him to buy. He has bought books in all kinds of languages, clearing up many problems connected with the early exploration of Australia, which we could not have afforded to buy. Then magazines and periodicals, you will notice, were estimated at that time at £400. The tendency is for them to go up in value. I believe that a great National Library ought to buy many periodicals, magazines, scientific serials, and such like literature, which nobody else can possibly buy, or give accommodation to, as it grows beyond control. You will see from that schedule, as I clearly pointed out in my report to the Trustees, there was practically no difference between the tender of George Robertson & Co. and that of Angus and Robertson. Considering that the former was a Melbourne firm, with only a branch in Sydney, and that it did not deal at all in second-hand books, neither the Trustees nor myself had the slightest hesitation for an instant in feeling that we were bound to accept the tender of Angus and Robertson. In Question 654, Mr. Dymock made a statement to this effect: that I never brought any list to him from Angus and Robertson, and asked him to give his opinion upon it. I simply ask you to read in that connection my report on the next page, in which there is not one word to bear out the insinuations repeated

repeated over and over again in that gentleman's evidence. In Question 660, Mr. Dymock said, when he was asked whether he had received an invitation to tender for these duplicates, "I believe there was some such communication sent down, but I did not see it." To show how unguardedly and rashly Mr. Dymock used to speak, I would point out that, in Question 728, he says, "They must have sent word to us, but not in any official manner." I have produced my letter-book, showing you a copy of the invitation written by myself, sent to him in common with the other two firms whom the Trustees deemed capable of dealing with such a mass of heterogeneous stuff. It has been asserted here that there are other firms who could have bought those duplicates which were valued at £219 cash. I do not know of such a firm, and I have yet to hear of any other firm that would have dreamt of dealing with such a mass of stuff.

H. C. L.  
Anderson.  
11 Oct., 1900.

2626. Do you think that Mr. Blackwood would have purchased them? No. Mr. Blackwood does not deal with Australian books, and he certainly has not the accommodation in his shop to deal with a large miscellaneous lot of stuff like that. I asked you to summon Mr. George W. Robertson, who was, in 1894, connected with the firm of George Robertson & Co., who sent in the tender which that firm submitted to us. I should have very much liked to have heard his account of the very extraordinary story which has been told us about him sending in a tender on which he knew that there must be a loss, against which loss he was to be guaranteed by a rival firm. I direct your attention specially to the evidence on that point in Questions, 664, 841, 843, 844, and 1230. You will remember that there is no writing in connection with this extraordinary arrangement, and that Mr. Dymock had frequently to admit that he was not acquainted with the terms of that tender which he guaranteed against loss; he had no copy of the tender, and he had to ask the reorganised firm of George Robertson & Co., which to-day does not contain a Robertson in it, to give him a copy of the very tender. No one could have been more surprised at the tender when I produced it than I believe Mr. Dymock was. He asserted over and over again that 25 per cent. discount was offered off "*all the books*." I ask you to look at the terms of the tender, and you will see that I calculated that the average discount on a business of £2,200, which we used to do then, is 9½ per cent. In one line alone that firm demanded 15 per cent. commission for getting second-hand books. That can be easily understood, because they did not deal in second-hand books, whereas the successful firm only asked for 7½ per cent. commission on all second-hand books which might be procured from other parts of the world. It is only fair to them to say that they give us 10 per cent. discount on all second-hand books which we buy out of their shop, and which they are not bound to do by the terms of the tender. But, of course, they have to charge a commission of 7½ per cent. on the comparatively few books which we now order from Germany, France, and Great Britain. In Question 666, Mr. Dymock says that he knew that no one could do business with the Free Public Library except through Angus and Robertson. I would remind you that at the time these tenders were invited, I had been in my position thirteen months. I had done almost no business whatsoever with Angus and Robertson, because I loyally abided by the Trustees' agreement with our London agents. Mr. Robertson has told you that the business I did during that year was only half as much as was done by my predecessor during his last year of office. I may tell you that the total business done was a little over £90. That was entirely for second-hand Australian books which we could not get from London, and for a few very popular books which we had to get to supply the current demand, and which, unfortunately, our London agents had not sent to us. Mr. Dymock, in Question 681, asserts that the Public Library is now left with only one volume, and that, in the event of that volume being stolen or mutilated, it would cost the Trustees a large sum of money to replace it. I have only to assert what a number of witnesses have proved, that we have duplicates of every one of those books which were sold at that time, and as many as six copies of some of them. In Question 682 he says, "There will always be a difficulty in distinguishing what were sold and what were stolen. If we apply to the Library they cannot tell us whether the books were sold or stolen." That is absolutely incorrect. As I have shown you clearly, we can recognise every book that has ever been on our shelves, or, in other words, has been in the possession of the Trustees. In Mr. Dymock's letter, at page 33, he says, "The price at which the 'Annual Register' was offered to the Botany Council was £10, not £70, as stated by Mr. Anderson." Mr. Dymock could not have kept a copy of his own tender, for I have shown you the tender here, and at page 64 I have given you a list of the prices charged by Mr. Dymock for a few of the books. By that you will see that he was actually charging £70, and the price of £10 was never hinted at in any shape or form. In Question 686, Mr. Dymock says, "Mr. Anderson threw out the Greek, Latin, and German dictionaries which I put in, and which were Cassell's 3s. 6d. editions." I had no objections to Cassell's 3s. 6d. editions; I know the value of them thoroughly; you could not have better books for boys and girls at school. But I was prescribing a reference library for an important suburb of Sydney. I had in my mind's eye the sort of dictionary—such as Liddell and Scott's Greek Dictionary, and Dr. Smith's Latin's Dictionary—which would suit any student, however advanced, and which would be the kind of book that he could not be reasonably expected to buy if he was a poor man's son, and it is for poor men's sons that we are providing these dictionaries. A lad who is going to a high school can surely provide himself with a 3s. 6d. dictionary. A good deal of stress has been laid upon the fact that the average price brought by those 5,000 volumes which were sold was 10d. each. That is very unfair. I think it has been clearly proved that of those 5,000 volumes only 1,500 were saleable. If you take the average of the 1,500 volumes, dividing that number into £219, you will find that the average is nearly 3s. a volume; and that average, I consider, was an exceedingly fair one. Although there were two or three books worth between £2 and £3, there were a great number, as you can see on the floor of this room, which were worth only from 6d. to 3s. each, and which will not bring in any second-hand shop at this moment more than that price from people who know what they are buying. In Question 711, Mr. Dymock, in producing a copy of that embossed stamp, said, "If one can be had, hundreds can be had." That is only another example of the wild statements that have been made here. I cannot tell you how that one copy was got, but Mr. Casson yesterday, when he saw it, advanced what seemed a plausible reason. But this I am quite sure of, that no one can possibly get one copy of it now, nor could have got a copy of it during the last three years. Certainly, a number of copies of the embossed stamp, but without signature, might have been got while Mr. Casson was carrying on the stamping day by day; but he locked up the signature every night to my knowledge, because I was very scrupulous about that. It is a very good imitation of my signature, and it occurred to me that, although it is very small, and might not be mistaken, still it might be used for putting on a cheque, or anything of that sort. I took particular care that that was locked up every night. The embossed

H. C. L.  
Anderson.  
11 Oct., 1900.

embossed stamp was not locked up every night during those eleven days, for the simple reason that no one had access to the basement except members of the staff, and I never had any suspicion that any improper use could be or would be made of the stamp. Since then it has been locked up in the safe, and can only be got at by myself.

2627. Do you endorse the suggestion that that piece of paper with the stamp on it was swept out? No. I know that that was given three years ago, when all this trouble took place. I could have proved it to-day, only dead men tell no tales, and anybody can contradict a dead man's words. If, happily, Mr. Dymock had lived, I could have proved who gave that to him, not a few weeks ago, and not sent by post anonymously, but given to him to help him in that agitation he made in 1897, when I was away in England. In Question 734, Mr. Dymock says there were some books which bore original marginal notes. You have seen the book to which he referred, and there is not a single marginal note in it. You have seen "White's Memoirs," and the only thing to give it exceptional value is an inscription from some person, presumably the publisher, directing it to him in care of some London firm. There has also been produced a copy of "Mudie's Felonry," which contains some newspaper cuttings relating to a law suit which Major Mudie incurred through publishing that book, and of which we have a copy in another volume, but which cannot possibly be called marginal notes. In Question 742, Mr. Dymock says that Angus and Robertson had a preferential claim within a fortnight of my taking my present position. I think that has been refuted enough. The agency was not given to Angus and Robertson until sixteen months after I took my present position, and during that interval I think I can say that I did not enter their shop six times, for I was trying to master the intricacies of the London business, which certainly entailed a great deal of trouble on a new chum like myself in this library work. In Question 755, Mr. Dymock says, "I would be very sorry to offer 'Casanova's Memoirs' to any one." I will prove to you, if you like, that he sold a copy for 15 guineas to a gentleman in Sydney. I would like to say a few words about very voluminous extracts made by a member of the Committee from the debate in the House of Lords on the Bill which was submitted to that House to authorise the Trustees of the British Museum to deposit copies of local newspapers with local authorities, and to destroy valueless printed matter. You will find that in this debate the only reference is to destroying a lot of stuff that is sent to the British Museum to the number of 50,000 volumes a year under the Copyright Act, and that it incidentally refers to "destroying duplicates of single volumes, odd parts of periodicals, or broken sets, together with duplicates of books complete; but so valueless that no library would accept them as a gift." To-day, the British Museum is selling its duplicates and exchanging them. That has never been brought into question. What has been brought into question is the very debatable point as to whether they should absolutely destroy things which have been lodged with them under the Copyright Act; and whether they should send away to other towns in the United Kingdom the sets of newspapers which belong to those towns, but which many people think should be kept in one central place—that is, the British Museum.

2628. It is not the question of utility—it is the right? Yes; it is the same as if we sent the *Cootamundra Herald* away from our Library up to Cootamundra, and thus deprived the 400,000 people in Sydney of the opportunity of referring to that newspaper. The day will come when we shall have to consider seriously the desirability of destroying the utterly useless trash, such as racing calendars, political pamphlets of merely ephemeral interest, and sometimes some dirty pamphlets which are sent to us under the terms of the Copyright Act; but there is nothing in all this contention analogous to the position of my Trustees in getting rid of things which were duplicate or triplicate of something they had already in the Library. There are a great many points that I would like to comment upon, simply to show the inconsistencies in the evidence; but I have called witnesses to disprove the really important assertions, and I have warned more than sixty witnesses that I wanted their evidence on points more or less important; but as many of the witnesses would simply endorse or emphasise what has been already said, I will, with your permission, not call any more.

2629. Some reference has been made to what seemed a somewhat surprising change, as far as your position in the Public Service is concerned—that is, your transformation from Director of Agriculture to Principal Librarian;—I understand you had some experience prior to your going to the Agricultural Department in that industry—that is, that you had been a student of agriculture for a considerable time prior to your appointment? When I was at the University, the Earl of Belmore, in order to encourage the study of agricultural chemistry, gave a gold medal to the graduate who would show the greatest proficiency in chemistry as applied to agriculture. That appealed to my tastes, and in order to win that honor, I studied chemistry and all the allied science connected with agriculture for some years. I had the good fortune to win that gold medal, and that gave a current to my tastes which has lasted until to-day. As a matter of fact, I have analysed soils, manures, ashes of plants, fruits, and cereals. I have carried out an immense amount of work in agricultural chemistry during twenty years as a hobby and recreation, and to-day every shilling which I have in the world is invested in a farm and orchard on which I hope to live when, perchance, I become a Member of Parliament, and take my part in conducting investigations by Select Committees; or better still, help to substitute a more effective system than the present one.

2630. Is the whole of the bookbinding in connection with the Free Public Library done at the Government Printing Office, or are there any outside contracts entered into? Yes; we have one contract. We bind the common books of the Lending Branch at the private firm of George Short and Son. We got tenders from several firms, although it is only about £100 a year. We get them done there, because they are done more promptly and a great deal more cheaply than at the Government Printing Office. It is an inferior kind of binding, but it suits our purpose. We also get a good deal of binding done by Cedric Chivers, of Bath, England, because his system is remarkably good. We got out about 700 volumes bound in the duro-flexile system, and it is a great success. We actually get the book uniformly bound in England at about the same price as we can buy the book in the original cloth in England. The binding is indestructible. Chivers buys the sheets from the publishers, he puts on his binding, and he gives us the book at 3d. to 10d. a volume more than the original cloth-bound book would cost us. I now wish to hand in a series of answers to questions asked in the House on the 7th August, by Mr. J. C. L. Fitzpatrick. I also wish to hand in this list of duplicate books sold from our shelves, which I ask to be made an Appendix to your Report, and which I have carefully revised since the original rough list was put in, at a few hours' notice. [*Appendix A4.*]

FRIDAY,

FRIDAY, 19 OCTOBER, 1900.

Present:—

MR. HOGUE,

MR. MILLARD.

MR. THOMAS,

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Henry William Hemsworth Huntington sworn and examined:—

2631. *Chairman.*] What is your occupation? I am following literary pursuits. I have committed the evidence which I wish to give to writing. The standpoint I take is for the national improvement of the Free Public Library. I have had over thirty years' experience of the institution. Mr. Hogue will bear me out that I have had over twenty-five years' literary experience. The statement I wish to submit is as follows:—

H. W. H. Huntington.

19 Oct., 1900.

*Tenders.*—Before adverting to the method adopted by the committee of the old Subscription Library and the Trustees of the Free Public Library, in procuring books from Trubner & Co., the London agents, I would like to mention it is with considerable diffidence I intrude on the Committee, and in doing so, I am no less influenced by a principle of duty than a desire to promote the best interests of the Public Library—to have the institution managed on the same lines as the British Museum and other great State libraries of the world. During the sixties, I was a constant contributor to the press, and had free access to the old Australian Subscription Library, being intimately acquainted with Mr. Hawley, the Librarian, and all the committee. I have a vivid recollection of the many negotiations between the committee and the Government, the City Corporation, and various auctioneers, for the sale of the library. Eventually, Sir John Robertson bought the books, and on 30th September, 1869, Lord Belmore formally opened the Free Public Library. I was present at the opening, and being on close terms of intimacy with Mr. R. C. Walker, I had frequent opportunities of becoming acquainted with his multifarious duties. During the first ten years of the Library, it often fell to my lot to see the various consignment of books, as they were received from London, spread out on the office tables. Being one of the small band of Sydney daily-press reporters, between 1871 and 1879, I wrote innumerable paragraphs about the concerns of the Library, therefore may be able to speak of the superiority of the methods of book-selecting at that period, compared with the present system. Times out of number, I have been present when the Trustees and the Librarians have eulogised Trubner & Co. for the satisfactory manner in which the Trustees' orders were carried out, and the books supplied at a considerable reduction on the cost price. Mr. Walker would explain to me how the London agents would procure from the publishers books in an unbound state, and then cause them to be bound in the strongest manner; in fact, in very much stronger binding than that adopted by the publishers. Trubner's style of binding was uniform, while the lettering and ornaments, with the name of the Library, &c., was certainly a sort of safeguard or provision for the security of the books as Government property. The old system afforded less facilities for stolen or borrowed books being disposed to private persons, as against the want of uniformity in the cheap and expeditiously-bound books placed on the shelves since 1895. I have heard the Rev. Dr. Lang, the Rev. W. B. Clarke, the Honorable Robert Owen, Mr. Walker, Mr. Hawley, and a host of others I could mention, express opinions to the effect that it would be a suicidal policy, for the Trustees to alter their plan of operations, of having a London agent, and discretionary power to buy books privately from the Sydney booksellers and others. In verification of what I say, I can produce many proofs, and I would like the Committee to read the extract from the Trustees' Report of 1872, which I now tender:—

EXTRACT from Trustees' Report on the Library for the year 1872.

"As the Trustees pointed out in their reports for the years 1870-71, their arrangements for the purchase of books in England are made with the firm of Messrs. Trubner & Co., of London, by whom the business has hitherto been carefully and satisfactorily performed. The advantages of this agency do not consist merely in the punctuality with which orders are executed, and the great reduction in cost at which the books are obtained in comparison with the prices which would be charged by Colonial importers, but in the certainty that all copies received are well-bound, properly collated, and guaranteed to be perfect. It is impossible to overrate the importance of this circumstance; and the Library itself furnishes the best testimony to the propriety of the course adopted by the Trustees in the establishment of their London agency, and in fixing on a respectable London house the responsibility of selecting perfect copies. In the books purchased by the Government, in 1869, from the Australian Library and Literary Association, were many valuable works in their original cloth covers, which had either been imported from England or procured in the Colonies. A number of these books, on being collated for binding, have been found by the Trustees to be almost worthless, owing to the numerous deficiencies in pages, indices, plates, and other important matter."

There can be no question about the undoubted advantages the London agents have over the Sydney booksellers. They are in the midst of the book-world, so to speak, and eminently possess a thorough knowledge of all matters pertaining to the wants of a State Library, like our Public Library. It is hardly necessary to enlarge on a subject like this, but everyone must admit it is necessary to have the latest publications, not merely for the gratification of curiosity, but for the actual progress of literature. To make our State Library noble and worthy of being regarded with great and general interest, there must be no monopoly in the purchase of books, and the many departments of literature must be conducted on the most liberal principles. The Trustees should have a free hand to consult persons who are conversant with every branch of science, philosophy, literature, and the arts, with a view to the selection of books of a high character. Indeed, the Library should be a boon to all classes, and the friendly societies should be allowed to make suggestions for the purchase of books which appeal to the condition, feelings, and wants of the working classes. Let any one look through the poverty-stricken lists of books posted up monthly in the entrance to the Library, and he will discover that works on the most momentous topics of the day are conspicuous by their absence. Hundreds of books on stirring events in the political history of Africa, China, and other countries are published weekly in London; but it seems that few, if any, reach the Library before all interest in the subject is lost. London is within a month's steam of Sydney, but it takes months—nay, years—before any historical books or political works, on such subjects as "old-age pensions," reach our State Library. When one glances through the publications in the "Literary Year Book" and similar publications and then at our Library additions, as contained in the small lists posted, one cannot help saying there is little effort made to keep alive that enthusiasm in the cause of letters, without which nothing permanent or great can ever be attempted. I am told there is a suggestion, or proposal, book in the Library, but although I have often asked to view it, I have failed to see it. Perhaps, if the Committee sent for it, they may see many proposals in it, or, at least, a few made during the last five years.

*Copyright Act.*—Knowing that the Committee's desire is to obtain evidence of any reform which would improve the usefulness of the Library by the deposit of Colonial books, and effect a great improvement in national habits and manners, I would ask to be allowed to show, in all its true light and all its bearings, the maladministration of the Copyright Act, by which the Library has been recklessly deprived of thousands of books, maps, &c. By section 5 of the Copyright Act (42 Victoria No. 20), passed 14th May, 1879, and assented to on 1st July, the same year, it is enacted—"A printed copy of the whole of every book which shall be first published in this Colony after the passing of this Act," must be "for the use of the Free Public Library and the Library of the University of Sydney, bound, sewed, or stitched together, and upon the best paper on which the same shall be printed, shall within two calendar months after the day on which any such book shall be first sold, published, or offered for sale within this Colony, be delivered by or on behalf of the publisher thereof at the said Library." The penalty for default in delivering Library copies is set out in the 8th section, in these words: "If any such publisher shall neglect to deliver such book as aforesaid he shall, for every such default, forfeit, besides the value of such copy of such book or edition which he ought to have delivered, a sum not exceeding £10, to be recovered by the librarian of the said Library." According to the Act and the best authorities, Library copies must be delivered

H. W. H.  
Huntingdon.  
19 Oct., 1900.

delivered to the librarians (who have to keep books of entry) whether the books are or are not registered. It is difficult to speak with moderation when one ponders over the criminal negligence displayed by the librarians in the exercise of the powers with which they were and are vested by the Act. For nearly twenty years the libraries have been virtually defrauded of a harvest of rich colonial productions, which would have enhanced the value of the Library as a storehouse of works, up-to-date, concerning topics immediately occurring in our midst, and as necessary as the daily newspaper. The Trustees have admitted that between 200 and 300 books have been annually published in the Colony, nearly all of them absent from the Library. Thousands of pamphlets containing historical facts or matter which acquire great importance in the future have been let slip into oblivion as too unimportant to keep for anyone hereafter to inform himself in detail of the changes which have taken place in the institutions and in the manners of the Colony or nation. With regard to the proper working of the Copyright Act, and the lodging of published books in the Colony with the librarian within two months of publication, I had many interviews and some correspondence with the author of the Act (Mr. Justice Windeyer), and Mr. Walker, the Librarian. They paid respectful attention to my representations, as they knew I had received a good legal training under various lawyers, nine years law-reporter of the daily press, and was then Deposition Clerk at the Central Police Court. My efforts to see the Library shelves filled with the hundreds of books, plans, pamphlets, &c., were futile. It was a sad state of affairs to see the Librarians contending that it was the duty of the Registrar of Copyrights to compel the publishers to send in their publications, and that the Registrar should not register any publication until the copies were deposited in the Libraries; while, on the other hand, the Registrar pointed out that the Librarians should prosecute; and that he had no power to reject any registration. In 1885, I again took up the subject, and the Attorney-General (I believe the Hon. W. B. Dalley) admitted that the publishers could be prosecuted for default in delivering library copies; but he strongly advocated their being first cautioned. It is evident the Trustees were adverse to any prosecution, and as they would not buy the books, the Library sustained a great loss. I remember distinctly pointing out that the British Government encouraged literature by purchasing copies of nearly every work of high character published. When Mr. Walker retired, in August, 1893, Mr. Anderson was appointed Librarian; and, in 1896, I find that the work connected with the Copyright Act was transferred to Mr. Anderson. In the year 1898 we have the Trustees making this confession: "There can be no doubt that the publishers in this Colony are very remiss in complying with the provisions of the Copyright Act of 1879, and the Trustees are determined to take steps to enforce their rights in the matter." The following year I find them repeating the same stereotyped story: "Every effort has been made to impress publishers with their obligations to the Library under the Copyright Act of 1879; but many of them are still remiss in complying with its provisions." When one considers that, in 1898, the Library received 349 volumes and pamphlets, twenty-one photographs, and seven maps, to the value of £42 16s. 9d., it seems some interest is now being taken in the Act. This list, which includes pamphlets, is very misleading, and anything but satisfactory when one thinks of the hundreds of pamphlets printed yearly throughout the Colony. If the Committee please, I would prepare a lengthy list of books and pamphlets published during the last few years, and not one of them are to be found in the Library. Whether any steps will be taken to recover the thousands of books due to the Library during the first twenty years of the existence of the Act, is a problem yet to be solved. They would have made a valuable reference library in themselves.

*Newspapers.*—Without assuming the office of a dictator, pray let me now point out how the Library could easily be made to afford important services to the cause of learning and science, to say nothing of the augmentation of works on the history of the Colonies. It must be obvious to the Committee that the writing of books on the resources of the Colony, the rise and progress of the industries of the Colonies, &c., should hold a principal place in the institution. It is a notorious fact that the magnificent collection of bound volumes of newspapers in the basement of the Free Public Library are sealed books to writers on historical and biographical subjects, by reason of the absurd arrangements of the institution by the management. The newspaper rooms are sacred to the attendants only, and no one is permitted to enter them, no matter how important is the nature of his work of research. Of the numerous evils which abound in the Library, and disgrace the objects for which it was founded, the present system of access to the presses of newspapers is the worst that could be devised. Newspapers are the manufactories of learning and science, and, in a word, they are to the literary man what the compass is to the mariner, or the tools of his trade to the artisan. The following explanation will reveal the *modus operandi* to make a search in a volume of newspapers. As you are only allowed to use pen and ink in the first floor students' room all searches must be made in that room, which is some hundreds of feet away from the newspaper room. The attendant, on receiving your requisition for a volume of a newspaper, passes down the student's room staircase and through the readers' wing to another staircase, leading to the newspaper room in the basement. Here he secures the required volume and carries it to the lift, which only admits newspaper volumes. He then reascends the basement staircase and passes through the readers' room to the lift where he begins to haul up the cumbersome volume. Having raised the volume and shouldered it, he carries it through the readers' room and up the students' staircase. Here he deposits it on your table, and you commence to make a search for a date from a volume which only records the events of three months—should it be the *Sydney Morning Herald* or the *Daily Telegraph* you are looking at. The noise, the confusion, and the interruption to the readers seeing the attendant labouring with the unwieldy volume on his shoulders, can better be imagined than described. What a pleasing and encouraging view does this system hold out to anyone making searches for mining events, municipal events, church news, and the like, covering a period of, say, four or five years. How can authors write books from the newspapers under such restrictions? And can anyone wonder that the costly newspaper acquisitions are virtually entombed. It would be well if the mischief was not more deeply rooted by the wanton destruction of the volumes being dumped about by such reckless and ludicrous practices, and that in a State Library, where the time of the attendants is money, leave alone the time and annoyance to the public. In appealing to the Committee for some expression of opinion to effect the important and desirable objects of the institution by free access of authors to the newspaper room, I feel the strongest confidence in my appeal not being made in vain. The newspapers are most generally in demand by writers, hence the necessity of being able to hand them quickly, not one at a time, but two or three volumes, for reference to contemporary reports of events. I have no hesitation in saying it would be hard to find a reference library in the world with such an absurd system, and such rules of a prohibitory character. At the School of Arts, I obtain the keys of the newspaper cupboards and use the papers without hindrance.

*Requisitions.*—It is not, however, exclusively to the ridiculous system adopted towards students of the newspapers in the Reference Library I would like to draw the attention of the Committee, but to another species of persecution which authors are obliged to submit to, and which threatens to destroy the usefulness and the honor and integrity of the National Library of this Colony. If you will bear with me for a few minutes longer, I will show you how the Parliament and the public have been deceived in the Trustees' Report for the year 1898. The thirteenth paragraph of the Trustees' Report of the year 1898 reads as follows:—"It has been found expedient to make two special reserves in the Reference Library, and to provide that books included therein may be referred to only on written application—(a) Books of special value, demanding exceptional care; (b) books which should not be indiscriminately issued to all classes of readers. In the great Reference Libraries of the old world no book whatever is issued except on written requisition, and this system has been found to be very useful in helping library authorities to trace damage and losses." The question now arises is this true, and to test the matter one has only to refer to the Guide-book of the British Museum, the National Library at Paris, the Berlin Library, and any other library in the world, except the State Library of this Colony. That it is a gross fabrication, I will take, for example, the British Museum, which Mr. Anderson visited about the middle of 1896. In the "Literary Year Book of 1898" there is an account of the mode of issuing books in the British Museum, written by Dr. R. Garnett, C.B., and subscribed with the name of Sir Edward Maunde Thompson, K.C.B., the Principal Librarian. After getting a numbered desk to write at books are issued as follows, says Dr. Garnett:—"Application for books. Round the central desk, occupied by the Superintendent and his attendants, will be seen bundles of printed slips. These are filled in, as indicated, from the catalogues; the chief items to note being the correct press mark of the book and the number of the readers' seat. The other particulars, *i.e.*, place and date of publication, title, author, and size of the book are also, however, of importance, and not to be omitted by those desiring to be served without delay. The slips are placed in a basket at the centre counter, the reader retiring to his desk to await the books, a matter of usually between ten and thirty minutes, according to the pressure of work and the portion of the library in which the books are stored. When reading is over for the day, the reader returns the books to the centre desk, receiving in exchange the slips, which, unless he intends again using the same book or books within the next few days are best destroyed." Dr. Garnett then describes the reference shelves, which are freely used by the readers without the slightest interference by the attendants, or the necessity of slips. Here is his account:—"Reference shelves.—In addition to the bulk of the collection, numbering approximately 2,000,000 volumes, which are only available as indicated in the foregoing remarks, there are on the shelves of the Rotunda itself some 20,000 reference volumes, ranging through history, geography, and travel, and every science down to such works of reference as encyclopedias, lexicons, directories, and the like,

like. These the reader is permitted to take down for himself, but must replace on the proper shelf when he has finished using them. With regard to the encyclopedias, dictionaries, &c., the etiquette of an unwritten law prescribes that they be returned to the shelves as soon as done with. In continental libraries readers are not permitted to carry off to their own desks purely reference works of this description."

Dr. Garnett describes the *modus operandi* at the National Library at Paris, the Great Library at Berlin, in almost the same terms to show that the plan of the British Museum is closely followed. In all the great continental libraries (I have read about), readers can take down all books available on the shelves, but must return them when done with, either to the shelves, or to one of the attendants. The Sydney Trustees' statement, in their report—"In the great reference libraries of the old world, no book whatever is issued, except on written requisition," &c.—is, to say the least of it, incorrect, and without the slightest foundation. When the Committee learns the pernicious system adopted by the management towards the readers and authors in particular, it will require little sagacity to understand why such a specious statement was inserted in the report. Whatever is calculated to extend our interest in the welfare of the noblest institution in the land should have our zealous advocacy and liberal support. This being so, my pen and my voice has ever been and will be vigorously exercised in defending its character and honorable conduct against any misrepresentation; but the formidable evils alluded to call for restraint and suppression. Unfortunately for me, I have to earn my living by my pen, having been more than ten months laid up with broken knee-joints; hence a cripple for life. I have several historical works in course of preparation for the English Press. On the 2nd instant, my wife accompanied me as far as the Library, and on my reaching the student's room, I gave the assistant a written requisition for some old almanacs, and the recently printed volume of the *Sydney Gazette*. The assistant brought me the books, but refused to let me handle them, unless I filled up a printed form with my name and address, the date, and the full catalogue details of the books. I demurred to fill up the form, unless it was necessary, under some rule or regulation, as I never refused to honor constituted authority. He said the rules and regulations required me to fill up the form, and this was according to Mr. Anderson's positive instructions. I asked him to show me the rules and regulations, and also ask Mr. Anderson to kindly come to me, for he was in the building, having passed my wife and myself at the entrance to the Library. The assistant took the books away, and the senior attendant came back with them, and said I should not use them, unless I filled up the form, and that was Mr. Anderson's orders, which were in strict accordance with the rules and regulations. I again asked to see the rules and regulations, or Mr. Anderson, and my request was conveyed to Mr. Anderson, as I was told by the senior attendant. From half-past 11 a.m. to nearly 4 p.m. (five hours) I waited for the books, for Mr. Anderson, and for the return of my requisition, but I waited in vain. I went to Mr. Anderson's office, or rather near to it, and was told Mr. Anderson was engaged. I waited a little and went home. I have used these books before, without being called upon to fill up such a form. Reason, and a proper sense of dignity and honour, has guided me not to allow the Librarian to keep lists of what books I use in my historical work. A number of those slips put together would reveal the class of work I was employed upon, and would afford a clue to anyone following in my steps, and defrauding me of my means of living. To the fullest extent I have enjoyed the confidence of Mr. Anderson and all his predecessors, and it is simply on principle I protest against any new-fangled rule or regulation, which has a tendency to lower the dignity and honour of the institution. As a matter of fact, it seems there is no such rule or regulation, which Mr. Anderson induces the attendants to beguile the public with, and such tactics are not creditable to such a noble institution. The arrogation of such a power is odious.

*Gazette*.—Whether or no I have succeeded in exposing evils which do not, and could not, exist in any State library outside this Colony, I think it will not be denied that the compulsory list lowers the tone of the true dignity of a State library, and that some good would be effected by the opening of the Newspaper Room in the basement of the Reference Library, even if it required the presence of one of the cataloguing clerks to superintend it. There is one matter I would like to call the attention of the Committee to, which I hope will never be repeated by the management of the institution. When Mr. Anderson went to England in 1896, he took with him the first two years of the *Sydney Gazette*, which he caused to be reproduced by photo-lithography, and the book was sold by Messrs. Angus and Robertson at something like £3 per copy. The work could easily have been produced in Sydney, and thus save its being out of the Colony for something like twelve months or thereabouts. I was writing the "History of Early Newcastle" at the time, and the volumes would have been a very great help to me, as they described the history of the foundation of the city of Newcastle and all its early shipping. It was amusing to hear the excuses for its absence from the Library—that it was at the binders, and so forth, to prevent any knowledge of Mr. Anderson's reprinting undertaking. It was pretty well known that I intended to have it reproduced; but I was not the Librarian. About the end of 1881 the Trustees proposed to the Government to have the *Sydney Gazette* from 1803 to 1842 printed at the Government Printing Office; but the negotiations fell through, and I never thought a Government official would be allowed to take the most valuable book in the Library to England, and have it reproduced as a private speculation. I can hardly believe the Trustees' minute-book will show that the speculation was under the auspices of the Trustees, and if it was it was most improper. Catalogues are necessary as a means of education, and historians and biographers could not do without them. The great desideratum of a library is a perfect catalogue, and not a series of catalogues. Great improvements have been made in the catalogue during Mr. Anderson's time compared with his predecessor. But there are four catalogues instead of one or two. Readers have to wade through four catalogues before they can find the class of book, or any particular book, they may wish to read. When Mr. Anderson became Librarian he abolished all previous catalogues, and in 1895 published a catalogue of the books deposited in the Library between 1869 and 1887, leaving out of the work the books deposited between 1888 and 1894. However, in the same year he issues a second catalogue, containing the books received between 1888 and 1892, still leaving three years unaccounted for. Surely these two catalogues, published in 1895, should have been combined in one volume alphabetically. In 1897, yet another catalogue appears, with the books of 1893 and 1895 still two years behind. In 1899, the last catalogue appears with the books received between 1896 and 1898. Unless anyone knows the run of the catalogue it is most complexing and confusing to find any particular book. The loss of time wading through four catalogues is very irritating. What is now wanted is an alphabetical catalogue of all the books in the four catalogues, which could easily be effected in less than twelve months by an expert cataloguer, even if he only used paste and scissors, and two copies of the catalogues. Such a general alphabetical catalogue would be a god-send to thousands, and particularly the attendants. The loss of time trying to solve the mysteries of each of the four catalogues before you are sure you have got the latest or the requisite book is incredible and disheartening. Here are some notes on the four catalogues, which are most certainly an improvement on the previous catalogues, which had two or three modes of construction:—

1869 to 1887 .....	833 pages, published 1895.
1888 to 1892 .....	250 " " 1895.
1893 to 1895 .....	310 " " 1897.
1896 to 1898 .....	648 " " 1899.

Total pages ..... 1,241

The great Australian catalogue numbers about 1,170 pages, and it was published at the retirement of Mr. Walker. It contains the books deposited up to 1888 from 1869, but only works dealing with Australia and the Southern Ocean. With respect to the sale of the duplicate books to Messrs. Angus and Robertson, I cannot help expressing my regret and astonishment that any body of men would sell books bequeathed to the Library. I am told 5,215 books were exchanged for 1,100 books worth £253. I am told there were directories and "Army and Navy Lists" among the collection; and there are no copies to be bought. Such books are priceless to all writers as works of reference. Australian books are very scarce in England from the fact that during the last twenty years the second-hand booksellers have raked all the English libraries and bookshops in the United Kingdom for that particular class of literature, as it brought high prices in Australia. The old Trustees guarded with jealous care the old Australian books. I have been a close student of them and know their value for biographical and historical purposes. In my journalistic work I have written hundreds of sketches from them and upwards of 500 biographies. Beyond payment from proprietors of the magazines and newspapers of the Colonies and Great Britain, I never received any money for literary work from any private person in this or any other country. I have a thorough knowledge of early Colonial history, and my note-books contain thousands of remarkable facts of Colonial history. In the seventies my valuable library of old newspapers and manuscripts was destroyed by fire, and I never attempted to make a collection again. The Free Library has some of my collection, notably the famous London newspaper *John Bull* (vol. 1, 17th December, 1820, to vol. 12, 31st December, 1832), which is now worth some hundreds of pounds. In 1823, the two first volumes were worth £7 7s., and the Library has the only complete set known. I should be sorry to hear that the Trustees would part with such a valuable work from which old Sydney papers made extracts. This morning I have been glancing over my note-books containing the history of the Library, and I find that

the institution has never been incorporated, because it was the original intention of attaching it to the Australian Museum, which has an Act of incorporation. The original Library was to have been built alongside the Museum, and the two institutions were to be conducted on the same lines as the famous British Museum. It is very questionable whether the Trustees have power to make regulations, and I believe the Attorney-General has held (in 1898, or about that date) such to be the case. I now learn that it has been incorporated a few Sessions ago. The Library is worth £100,000, and the Mitchell Library is said to be worth another £100,000. Surely a deed of trust is necessary for the proper administration of the institution.

In conclusion, I would like to point out to the Committee the opinion of the House of Commons Select Committee on Libraries in March, 1849, as to the value of a State Library containing everything, down to a simple tract. "It is evident," says the Committee, "that there should be in all countries libraries of two sorts; libraries of deposit and research, and libraries devoted to the general reading and circulation of books. Libraries of deposit should contain, if possible, almost every book that has existed. The most insignificant tract, the most trifling essay, a sermon, a newspaper, or a song, may afford an illustration of manners or opinions elucidatory of the past, and throw a faithful though feeble light on the pathway of the future historian. In such libraries nothing should be rejected. Not but that libraries of deposit and of general reading may (as in the case of the British Museum) be combined. But though such combination is possible, and may be desirable, the distinction which we have drawn should never be forgotten."

I may point out that there are more books in Australia now on the history of early Australia than can be obtained in England. Second-hand booksellers bought up a great many volumes in England at so many shillings, which they afterwards sold for so many pounds. I may state that I lent a volume of "John Bull," to Judge Windeyer in 1885. He took it home, and read in it for the first time about Wentworth challenging Mr. Bigge to a duel for publishing something in the House of Commons about Wentworth's father. Commissioner Bigge was compelled to withdraw thousands of Imperial reports, and he altered them because of Wentworth's challenge. He read there for the first time in his life about Wentworth's offer when a boy to cross Australia. "John Bull" contains the pedigree of the aristocracy of England. Judge Windeyer said to me, "I will not give you the book back; it is too valuable for you to have"; I replied, "I will present the volumes to the Public Library. You make out a memo. for me, so that I can give them to the Public Library." I was going down to Newcastle, and Mr. Walker, the Principal Librarian, said that I ought to take a few pounds for the volumes; that was to say, £1 a volume. They are now worth £10 a volume. The result was that the Library authorities sent me a cheque for the books which have since become invaluable. "Gould's Birds" were being ruined in the Library. Mr. Walker did not think they were of much value, but they are worth £200 or £300. I believe they are ruined now.

2632. *Mr. Hogue.*] Is it only since you come into the Committee-room to-day that you learned that the Free Public Library has been incorporated? Yes; at this present moment.

2633. Until to-day were you under the impression that the Public Library had not been incorporated? Yes.

2634. Were you labouring under a mistake? Yes. I have been laid up about eleven months.

2635. *Mr. Anderson.*] You have referred to your being an old public officer;—how long were you in the Public Service? Seventeen years.

2636. When did you leave it? 1896. I never did a mean or dishonorable action in my life.

2637. Under what circumstances did you leave it? The circumstances under which I left Her Majesty's Service were of the most honorable character. I have a letter from the Public Service Board, stating that I was retrenched, but that I was eligible for reappointment. I am now a pensioner of Her Majesty the Queen.

2638. What year were you retrenched from the Public Service? In 1896. The same time as the late Under Secretary Fraser and other eminent officials.

2639. Have you applied for reappointment since then? Yes; but the Board say they have not reappointed anybody. They pensioned us off.

2640. Have you had any experience in the management of libraries at any time? Yes; at Newtown and Newcastle.

2641. Have you had any experience in the practical management of a library? With respect to observation, I have had most extensive experience.

2642. Have you had any experience in making catalogues? Yes.

2643. Where did you make the catalogues? In my own library; and I have seen catalogues made at the School of Arts Library. I have assisted in it; and it would be a good job if the Public Library had a catalogue like theirs. They give you an alphabetical list of all the books, and you do not require to go through four catalogues.

2644. Have you ever made any estimate of the expense of preparing one large, comprehensive catalogue of our Library? No; but I would give you an alphabetical catalogue of your Library in three months for £10.

2645. How many copies? Only one; it would depend upon how many printed catalogues would be given to me to facilitate the work.

2646. Would one copy of a catalogue be of any use to our thousands of readers and officers? I say that a catalogue in each of the reading rooms is indispensably necessary.

2647. Do you know that it would cost £4,000 to make a complete catalogue of our Library out of the existing supplements? I do not doubt it, after the way money has been wasted in cataloguing there. I would not be surprised if it cost £20,000.

2648. Would the Trustees be justified in incurring an expense of £4,000 in bringing these supplements into one general catalogue? The Trustees of the State Library would be justified in incurring any expense if the object is to raise up the educational power of the Library. I would not care if it cost £10,000.

2649. Do you know that the Trustees have not been granted any money for this purpose? I believe Parliament has reduced the vote by one-half. The State Library could be managed, I do not say with a very small subsidy, but very economically, and the catalogues could be manipulated in such a fashion that they would be of incalculable value to many students and readers who go there. That is not the case at present. It would not cost £50 or £100 to do that.

2650. How would you get the money to do that? Already the Government are paying what they conceive to be expert cataloguers. Let me have a few copies of catalogues now, and I will produce an alphabetical catalogue in three months which will supersede any system they have there now, because mine will be consecutive. You will not then have to wade through four volumes of catalogues, because I will dovetail them into one general catalogue, and keep it going from day to day. That is not the case at present.

2651. Do you realise that the catalogue that you would make to-day would be obsolete in six months? I have said that I would keep the catalogue going from day to day, and keep it up to date.

2652.

2652. Will you explain how? By arranging a general catalogue, from the four or half-dozen copies, as the case may be, in such a way that, as each book comes in, it can be put into its proper place, and the public can see what books were in the Library up to 5 o'clock the previous day.

2653. How could you foresee what space should be left for the entries which you would need to put in day after day? That is what you yourself have been doing; but you have not been doing it in a regular way. I would leave sufficient space to put in any additions from day to day. That is what you do yourself in your private catalogue; but you do not let the public see it, and the public have no access to it.

2654. What do you mean by our "private catalogue"? There was a very large volume that you had there of blank paper, and when you added a book to the Library you would cut out the description from the list of publications and gum it into that book. That was a splendid system. Where you made the mistake was in splitting the catalogue printed for public use into four sections. I have already referred to that in my evidence. There are five or six years left out in some of your catalogues. The consequence is that a man has to go through the four volumes to find out any special work, and it should not be so.

2655. Can you tell me when the British Museum published its catalogue? I have sufficient knowledge of the British Museum catalogues, and from those who have seen them, as well as yourself, to know that there is a splendid catalogue of subjects which a man can turn up at any moment and get the subject he wants. That saves him going through the general catalogues, which might involve days of work in any research. Why should not the same thing be done in our Library?

2656. Do you know that the subject catalogue of the British Museum covers fifteen years, while the Library itself extends over 140 years? I can only speak of what I have read in the guide books of the British Museum, and we must take it for granted that the statements there are true.

2657. *Chairman.*] Do you know anything of your own knowledge of the British Museum? I have never been there, except when a baby.

2658. *Mr. Anderson.*] Can you say when was Newcastle founded? Originally in the year 1801; it was settled and founded as a district, town, or city in 1804.

2659. Do you know that when the *Gazette* was sent to England by the Trustees to be reproduced that the Hon. P. G. King lent his copy to the Library to replace it during its period of absence? I do not know it, and if what you remark is true, it was a most infamous thing for the officers to be misleading me for months with regard to the information I wanted which was contained in that volume.

2660. You have said something about the reproduction of that *Gazette* being a private speculation? I have not said anything of the kind.

2661. You used those words in your statement;—will you kindly explain that? I called upon you with regard to that volume, and you informed me that it was not in the Library. I asked, "Where is it"? You said, "It is in England." I then asked you when it would be restored to the Library. You said nothing about the Hon. P. G. King's book then.

2662. *Chairman.*] You are asked for an explanation of your statement that it was reprinted as a private speculation? I am coming to that—if I said yes or no, my statement must be qualified. I called upon Mr. Anderson, who told me that the book was in England. I asked when it would be restored to the Library, and he replied "soon." I called again on Mr. Anderson, and he told me that he believed it was in a box of books sent from England. I called again three or four times, but I could never see that book. That was after Mr. Anderson's return from England. I told Mr. Anderson the value of the book now for historical research, and he immediately said that they would soon be breaking open the cases. I said to him, "How comes it that they sent this book home?" The reason that Mr. Anderson gave me was that he took the book to England to reproduce it, and that he believed the box with the reproductions were down in the basement of the Library, and that after they were opened, no doubt, the volume he took home to England would be amongst them.

2663. *Mr. Anderson.*] Is there one word in your answer to explain why you made the statement that it was a private speculation? Yes; I gave the further evidence, the printed announcement of Angus and Robertson with regard to the sale of that book—repeated by yourself to me and others. Desperate efforts were made to get rid of it, at something like £3 a volume.

2664. Do you know what the Trustees paid for reproducing that volume? I am not in the secrets of the Trustees.

2665. Do you know anything whatsoever about the directions of the Trustees to me with regard to that volume? Nothing more than what you told me yourself. You never told me that the Trustees ordered it, and I doubt whether you can produce a minute of the Trustees to that effect. If the Trustees did it as a speculation with Angus and Robertson, to sell it for £3 a volume, it is the most iniquitous thing I ever heard of. That is to say, a public body reprinting a book and selling it to the public. They are publishers and booksellers without doubt.

2666. Do you think that if the Trustees paid £150 for reproducing that volume that they were bound, as trustees of public funds, to recoup themselves in any manner possible? I say that any body of men who would lend themselves, as public custodians of manuscripts or documents, to reproducing them according to your statement now, as a private speculation, it would be the essence of audacity on their part. Such a thing could not have occurred in any other library in the world by responsible trustees.

2667. Do you know that the Trustees of the British Museum reproduce manuscripts every year, and that they have published five volumes of most valuable manuscripts, which they sell at 2 guineas a volume? I know that the British Museum Trustees do nothing of the kind without the authority of the Home Secretary or the Home Department, and I know, according to the Trustees of this Free Public Library, in their annual report, that they cannot spend one shilling of trust funds without Parliamentary authority. If they did such a thing they would outrage their duties as trustees.

2668. Have you ever been down in the basement, where newspapers are stowed? Yes.

2669. Is there any space there for allowing students to study and refer to those papers? Yes, decidedly.

2670. How much space would you say there is between the rows of newspapers? I cannot give the space without reference to my plans and maps.

2671. I am speaking about the present buildings, and the space for the accommodation of students? I should think there is space there for three tables for those who wish to deal with those papers for historical purposes.

2672. How long is it since you have been in the basement? Not for twelve months.

H. W. H.  
Huntington.  
19 Oct., 1900.

2673. What brought you into the basement twelve months ago? I will tell the reason. I was writing the history of Parramatta, and one of the most important newspapers is the *Parramatta Chronicle* of 1844. I asked for it for days and weeks; I could not get it. It was invaluable to me as an historian, writing about a particular period. It could not possibly be obtained for me. It struck me that it had been sold like many other valuable documents and books. They said to me, "We will show you the place where it was." I climbed down the spiral stairs and I looked for it; but it was not there. From that day to this I have asked for it; but I have never seen it—where is it? I have not visited that institution a hundred times within four years. I live within several stones' throw of it, and I should be there every day; but I prefer going to the School of Arts. The restrictions with regard to newspapers which the Trustees have placed on men who wish to do good for the country are of such a character that no one can use them.

2674. Have you signed any of those requisitions for books? Yes; under protest in every case. I have not come here because I have refused to sign requisitions. I have come here on national grounds. I have not seen the late Mr. Dymock for eighteen months.

2675. Will you swear that you can get newspapers in the Rotunda of the British Museum to which you have referred? I have not a guide of the British Museum to say what I can get; but I have read Dr. Garnett's statement that you can get books of reference on history, geography, encyclopædias, &c, and I presume newspapers are amongst them.

2676. Therefore, you know nothing of your own personal experience? I only know that Dr. Garnett says that all works of reference are given to every intelligent student who goes there, and if you say that a newspaper is not a work of reference you stand or fall by it. I may say that I have had most insulting things sent to me by post. Mr. Anderson and myself are the best of friends. Mr. Barton has been laid on his back for months, otherwise I am sure he would endorse everything I have said in my evidence. I am appealing to this Committee for the good of the institution, writers for the Press, and everybody. I have received marked extracts from newspapers by post, and the statements have gone through the length and breadth of the land. It is an infamous reckless statement, made by a public official holding a high and dignified position as Librarian of the State Library, and it was a thing he should have left unsaid. I do not think that Mr. Anderson applied it to me, or to Mr. Barton, but still we all know that the sword of Damocles is hanging over us. We are all frightened to use a book that is reserved under those circumstances. He states, in the most extraordinary way, that the lists are kept to show the losses and damages. It is a most infamous thing. What writer for the public Press would go to look at a newspaper or document after a statement of that character, that he must have a written document for the purpose of spying.

2677. Did you write this Sydney letter for the *Newcastle Morning Herald*? No. I do not correspond as a reporter with any paper, except for stated work.

2678. What newspapers do you write for? All the Sydney newspapers, English magazines and newspapers, and Melbourne papers. It would take a good dozen shelves of your library to hold my writings and contributions to the Press for thirty years. My first employer was Mr. D. H. Deniehy. I was for four and a half years with the late Mr. J. Williamson, the lawyer, and I was nine years law reporter for the daily newspapers.

John Thomas Vardy McLaughlin sworn and examined:—

J. T. V.  
McLaughlin.  
19 Oct., 1900.

2679. *Chairman.*] What are you? Library assistant in the Free Public Library of New South Wales.

2680. *Mr. Anderson.*] Are you in charge of the reading rooms alternately with another officer? Yes.

2681. Are you responsible for seeing that students make proper written requisitions for certain classes of books in what we call our reserves? Yes.

2682. When was the regulation made about that? In July, 1898.

2683. Do you know, of your own knowledge, that the Trustees made a regulation at that time with regard to that matter? Yes; I knew it from you. You gave me instructions that I should carry out, requiring persons asking for those books to fill in the necessary forms.

2684. Have you seen the regulation in the Trustees' minutes? Yes; you showed them to me.

2685. Have you always loyally observed that regulation? Yes.

2686. Has anyone ever made any complaint about the matter, except Mr. Huntington? No; not for those works. When people have asked for works which we have in the immoral index, I have produced the form for them to sign, and they have said, "If we have to go to all that trouble we will do without them."

2687. So that the tendency of that regulation has been to check the indiscriminate use of the works which the Trustees consider unfit for general use? Yes.

2688. But it does not discourage in any way the use of our rare, unique, and valuable books? Not at all, in my opinion.

2689. Do you know very well Mr. Barton, who is the most regular frequenter of the Library? Yes; for some years.

2690. Has he ever made the slightest objection to this regulation? Not to me.

2691. Do you know that this regulation is one of the new regulations made by the Trustees immediately after incorporation? Yes.

2692. Are you aware that these regulations have not yet been published, because they have not received Executive authority? Yes.

2693. Will you read out the regulation in Part 3, No. 14? It is as follows:—

14. A special reserve may be made, to contain:—

(a) Books of exceptional rarity and value.

(b) Books containing choice illustrations.

(c) Bound volumes of popular periodicals.

(d) Books not suitable for indiscriminate use by the general public.

Books from this reserve may be had only by written application on a prescribed form, with the approval of the Principal Librarian or the Senior Officer in charge of the Library, and the same must be personally returned to one of the Library assistants.

2694. Has that regulation been practically in use for the last two years and four months? It is dated July, 1898.

2695.

2695. Did Mr. Huntington present to you a written list of the books he wanted a few weeks ago? Yes; he gave me a small list.

2696. Will you produce that to the Committee? Yes; it is dated the 2nd of this month.

2697. Would there be any practical difference between the list dated to you in that way and one of our printed forms properly filled in? I have a copy of the printed form here. There would not be much practical difference.

2698. If Mr. Huntington objects to fill in the printed form, because he fears that any person in the Library will know the course of his study, would not that objection apply just as well to his own written requisition? Yes; I think so.

2699. From that written list would you not know the books he wanted, just as well as if he filled in our printed form? Yes.

2700. Would it not be impossible for you or any other assistant to get a number of books for students without the assistance of some list to help you? Certainly it would be impossible, we could not keep them in our memory.

2701. Have you, as an officer in charge of the reading room, taken every possible pains to have the books in the Library duly stamped? Yes; for the last few years I can safely say that all the books which have come into the Library have been stamped, and we have always taken pains to see that all the books that have come to the Library in past years have been stamped. Anything that we found unstamped we have always had stamped; and we have gone through all the books.

2702. Do you feel pretty confident now that every book in the Library is well stamped? Yes.

2703. *Chairman.*] Was that system which has practically resulted in a form of this kind being printed in vogue prior to 1898? Not to my knowledge.

2704. I presume it was usual for any person who came to the Library, and desired to secure more than one volume to facilitate matters by giving you a written list? Yes; I thought you were referring to the prescribed form. We could not retain in our memory the titles of a number of books.

2705. I presume it is a common occurrence for people who come in for more than one volume, or even one volume, to give you the name written on a slip of paper to facilitate matters? Yes.

2706. Have you any knowledge of "Moodie's Felony of New South Wales," with marginal notes, concerning certain libellous statements in the book? No.

J. T.  
McLaughlin.  
19 Oct., 1900.

WEDNESDAY, 24 OCTOBER, 1900.

Present:—

MR. MILLARD, | MR. QUINN.  
J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

George William Robertson sworn and examined:—

2707. *Chairman.*] You were, I believe, at one time a member of the firm of George Robertson & Company No, I was never a member of the firm; I was manager of the Sydney and Adelaide branches of the firm.

2708. Do you remember your firm tendering for the supply of books to the Reference Branch of the Free Public Library? I remember the firm tendering for the supply of books to the Free Public Library, but not to any particular branch of that Library. It was at the request of Mr. Anderson.

2709. Was that in 1894? In 1894.

2710. [*The Chairman handed to witness a document.*] Is that a copy of the original tender you sent in? That is the original tender.

2711. On the occasion of your tendering to supply books to the Library, did you tender purely and absolutely on behalf of your own firm? Yes.

2712. Was any arrangement entered into by you with the representative or head of any other firm of a similar nature? No.

2713. Then is it a fact —? No; I have heard about what you are going to refer to. There is nothing in it. Why should we make any arrangement with another firm?

2714. Then it was your own tender, and it was not shown to the head of any other firm? It was not shown to the head of any other house. It might have been spoken of, but it was never shown.

2715. No arrangement was made by you to the effect that you should tender and allow someone else a discount of 25 per cent.? No such arrangement at all was made.

2716. No guarantee to protect you against loss? No; it is absurd to suppose that any such arrangement was made with any representative of another firm.

G. W.  
Robertson.  
24 Oct., 1900.

WEDNESDAY, 31 OCTOBER, 1900.

Present:—

MR. HOGUE, | MR. MILLARD,  
MR. MEAGHER, | MR. THOMAS.  
J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Mr. H. C. L. Anderson appeared on his own behalf.

Henry Charles Lennox Anderson, Principal Librarian, recalled and re-examined:—

2717. *Chairman.*] You have been sworn, Mr. Anderson? Yes.

2718. You are desirous of making a reply to some evidence given at the last meeting of the Committee? Yes. I do not wish to notice in detail the extraordinary statements made by the last witness, but I should like to —

2719. *Mr. Hogue.*] You mean Mr. Huntington? Yes. He was not the last witness, by the way; but I should like to explain a few little points that might cause confusion in future years. I do not believe that any member of the Committee, after he has inspected our building, will be misled by the false statements made by that witness; but in future years some of the statements, unless they are contradicted now,

H. C. L.  
Anderson.  
31 Oct., 1900.

H. C. L.  
Anderson.  
31 Oct., 1900.

now, might cause misunderstanding. I wish, first of all, to refer to the question of the Copyright Act of 1879. Under that Act, as is shown by the quotations given by Mr. Huntington, a copy of every book published in the Colony should be sent to the Free Public Library, and to the University Library; but, unfortunately, the Act has been very badly drawn. The Attorney-General decided ten years ago—that was before my time—that it could not be shown from the Act who was to prosecute the defaulting publisher. For example, the Act says, “the librarian of the said library.” But that might be the University Library or the Public Library. The result is that my Trustees were advised not to take any steps that might subject them to defeat, and reveal the fatal weakness of the Act. We might not then get any books at all. In Great Britain every book published is copyrighted, for the author’s own sake, because copyright there is a valuable property; but, in New South Wales, I may say, as Registrar of Copyright, that not more than 140 books are copyrighted in a year; in other words, the authors of the books outside that number do not seem to think that it is worth paying 5s. to register their property in their book or pamphlet. Now, I instituted a system some years ago by which the officer in charge of the newspaper room makes a note of every book reviewed in any of the city and country newspapers that come under his notice. He gives a memo of these to me, and I then send a notice to the publisher in these terms—it has been done for the last six years:—

Sir, The Public Library of New South Wales, Sydney, I . . .  
I am directed by the Trustees to invite your attention to clauses 5, 6, and 7, of the Copyright Act of 1879, which provide that a copy of every book, pamphlet, newspaper, sheet of music, and periodical published in this Colony shall be delivered to the Librarian of this Library.

I need hardly point out to you that it is an advantage to the authors and publishers that all publications issued in New South Wales should be available for the use of the public in this the National Library of the Colony.

In the interests of present and future generations of students, the Trustees are particularly anxious to secure a copy of every publication that can in future years throw any light on any phase of our history, and have frequently to secure, at considerable trouble and expense, copies of pamphlets and other publications which should have been provided free by the publishers in past years, but are now rare and expensive.

The Trustees would, therefore, kindly request your compliance with the provisions of the Act as herein indicated, by forwarding the undermentioned publication, and any others published by you not previously supplied.

I have, &c.,

HENRY C. L. ANDERSON,  
Principal Librarian.

I am not aware of one valuable book that we have missed. There may be some little publications issued in some country towns, or in Sydney, that we do not get; but everything reviewed in newspapers, everything that comes under our notice in the shops, is demanded, and we get them. Moreover, as I have said, I am unable to find a record of any valuable book that we have missed getting. Underneath the notice that I have read we give the title of any book or pamphlet that we have noticed in any review, or in any other way. We have demanded, also, things that have been published privately, and there has been a great deal of opposition to our getting them. For example, the Governor published privately the other day a book giving a record of his brother’s life and service in the Transvaal. He had no intention of sending us a copy, and I understand from his publishers that he does not recognise his liability. It is a moot point as to what the liability is; but I say, as Registrar of Copyright, that it is the duty of any gentleman who publishes a work for private circulation to send a copy to us. The British Act makes it compulsory. It is far stricter than our Act. At any rate we have asked for a copy, not only of that book, but of everything similar, and invariably we have got it in the long run, though there has been a great deal of argument about it sometimes. Attached to the letter are the clauses referred to from the Copyright Act of 1879. On April 2nd and 9th, of 1889, we published in the daily Press of Sydney this advertisement:—

Public Library of New South Wales, Sydney, 29 March, 1898.

#### Notice to Printers and Publishers.

THE attention of printers and publishers is hereby invited to clauses 5, 6, and 7, of the Copyright Act of 1879, by which it is provided that a copy of every book, newspaper, pamphlet, sheet of music, map, chart, or plan published in this Colony shall be delivered to the Public Library by the publisher thereof within two months of date of publication. For every default, a penalty not exceeding £10 may be recovered.

By order of the Trustees,  
H. C. L. ANDERSON,  
Principal Librarian and Secretary.

So you will see that the Trustees are not neglectful of their rights. They try to get that to which they are entitled; but they have hesitated to drag cases into Court for the reason that, as I have previously stated, they might be defeated. We are leaving it to the good taste of the publishers to comply with the provisions of the law. I may say that we have never had a single refusal to supply any book that we have formally demanded. If we have lost anything, it has been only some small affair that has never come under our notice, or that has been published in a country town. Mr. Huntington asserted that we ought to allow access to all our newspapers. We should be delighted to do so, if we had the room. It would save our assistants an enormous amount of physical toil, and save us a great deal of trouble; but the simple fact is that we have not room. I will show you gentlemen, when you inspect the Library, as I hope you may at an early date, that there is not a passage of more than 27 inches wide in the whole of the Library. How could we put a table in the passage like that for the use of students? First of all, they would not have light enough, and secondly, there would not be room for the great volumes of the *Herald* and the *Times* and other papers; while I, as Librarian, would never countenance this thing, unless it could be done under the supervision of an officer of the Library; for I can assure you that the mutilation has generally been in the newspapers, and it must have been done by men who would never be suspected—men who cut out paragraphs from the bound volume of the *Times* to save themselves the trouble of transcribing them. There have been scores of paragraphs, short and long, cut out of the bound volumes by men who call themselves journalists. We know perfectly well that the real journalist would not do this dastardly sort of thing, because he has too much sympathy with our work; but there is a certain stamp of men, illiterate penny-a-liners, who do it,—fellows who compile marvellous lucubrations out of extracts cribbed and copied from old authors. And it has certainly done great damage to our bound volumes. At any rate no bound volume is given out in the British Museum, or in the Bibliothèque Nationale of France, without a written requisition, and under the supervision of a responsible officer. Mr. Huntington made a comparison between our methods and those of the British Museum. The British Museum is not a modern building, and the officers there have very much the same difficulties to contend with as I have; but they have a very fine rotunda or central reading-room, in which 20,000 works of reference are made available to the public; but remember that no member of the public

public is admitted to the library at all without an order—an order, issued on a recommendation, signed by two householders, and signed by the Principal Librarian. In the rotunda, they display works of reference like dictionaries, encyclopædias, works on heraldry, and directories of all the principal cities of the Kingdom; but certainly no newspapers. In our Library we have available for the public 50,000 volumes that any person can take down for himself, use as long as he likes, and leave on the table to be replaced by the assistants. Our works of reference, properly so-called, are available to the public without any intervention of the Library assistants at all. So that we are infinitely better off than the British Museum. Half our collection is available to the public. The other half is not available, because of the bad construction of the building, and because we could not possibly allow the public to go into the recesses of the Library without supervision. Of the works of reference available, we have five-sixths of those on pure literature—I mean belles-lettres; nine-tenths of those on jurisprudence and political and social economy; one-third of the works on natural science, music, and the fine arts; half of the biographical works; half of the works on geography; five-sixths of those on the drama and on poetry, but none of our serial literature or theological literature. Serial literature must be kept upstairs, where there is a little room for expansion. We must leave gaps to accommodate the succeeding volumes of magazines, scientific publications, and so on. Theological literature is kept in a little recess between the two buildings, which were erected at different times. It is simply owing to the formation of the building that we keep this class of literature apart. For years we allowed people to go into the recess to sit at a little table to study theology; and I regret to say that there was more abuse of our privileges in that than there was in any other part of the Library. Frequently the books were taken away but were brought back again. It is not actual thieving, properly speaking.

H. C. L.  
Anderson.  
31 Oct., 1900.

2720. *Mr. Hogue.*] They take French leave? A man will take a book away and bring it back in a few days.

2721. It is borrowing without your knowledge? Yes. I used to go down the streets and hear these fellows giving expositions of certain parts of the Bible and referring to, or quoting passages from, books which I am certain they must have got from our Library.

2722. *Chairman.*] They were spreading the knowledge that they acquired in that way? Yes. Mr. Huntington complains of our instituting requisitions for books from the reserves. What is done there is absolutely essential. A certain class of books is not fit for indiscriminate use, and we know, as librarians, that other books cannot be issued to certain people indiscriminately without our having some check on them. By having this written requisition we can see who had that particular book on a certain day, and may trace any damage that may have been done. I can say that since the Trustees introduced this system, in July, 1898, there has not been a single instance of mutilation of a volume issued under that system. I think that every genuine student who frequents the Library would exclaim, with Hamlet: "Let the galled jade wince, my withers are unwrung." No honest man need fear to sign a requisition for a book, enabling us to examine it afterwards to see whether it has been damaged or not. I asked Mr. G. B. Barton, who is our biggest customer, if I may use the expression, to come and give evidence. He has had a serious illness, however, and cannot come; but he wrote to me a very kind letter, saying that he had never heard anyone object to a regulation that he himself considers absolutely necessary and could not take exception to at all. I should like him to have been able to give evidence, because he has been regularly at the Library every day during the seven years that I have been in the place. He has made a number of valuable suggestions to us. He has suggested some very valuable books, which the Trustees have bought, and which are a great ornament to the Library. His investigations, his original work, are a credit to us, and we are proud of him and of the help that we have given him. We value the opinion of a literary man like that, but not that of an illiterate scribbler. Exception has been taken to the Trustees reproducing the first volume of the *Sydney Gazette*. I produce the original volume now for inspection, and you will see how, with constant wear and tear, the pages have become illegible. There is not another copy of this to be bought for love or money in the world, as far as we know. At any rate, Mr. Mitchell has never been able to secure a copy. He has bought odd parts to make up a copy, but he has four parts still missing to make up his volume. This work was becoming worn out by thumbing and was getting illegible. The Trustees asked the Government Printer for a tender to print it at their expense. He said he did not think it could be done, that he had no system of getting rid of the stains, and bringing out these old reprints at the present time. His price was £250 for 100 copies. As I was going to England just about that time I was authorised by the Trustees to get a tender in London from the British Museum printers. The lowest price was £150 for 100 copies. The Trustees determined to get the work done, and this is a copy (*produced*). It is much clearer than the original, and can be very easily read. The photolithographs were touched up with a pen. It was photographed on stone, taking the British Museum copy as a guide when our own was defective; and it has actually made the copy perfectly legible, which our original is not. Some copies have been sold by the agents for the Library at £3 3s. a volume with 10 per cent. commission.

2723. *Chairman.*] How many years are there in the volume? One year—from March 5th, 1803, to February 26th, 1804—in the volume. It came out at first weekly, then twice a week, and then daily.

2724. *Mr. Hogue.*] It is a perfect *fac simile*? It is better than the original. We shall repay ourselves by selling a fair number of copies.

2725. Have you sold any yet? Nearly thirty copies. And the Trustees are nearly repaid for the outlay. The Trustees will have a number for use for practically nothing. Angus and Robertson would buy the lot to-morrow at a profit to us; but the Trustees think it better to keep some copies for years to come, when they will be exceedingly valuable. It was the first newspaper in the Colony,—the first official publication in the Colony,—the first paper printed indeed in Australia, and contains valuable historical records of Australia in every page, from 1803 down to 1842.

2726. I see that tobacco was growing wild in the streets of Sydney at that time? It is a most interesting volume all through. No man could write the history of any phase of our social or political life without referring to that volume. It gives the very beginnings of our ecclesiastical, political, and social history. An account is given of the opening of the first Roman Catholic church. Certain authorities did not consult this volume, and, therefore, did not know when the first Roman Catholic service was held in New South Wales. To show that the British Museum, which we take as the great example for all British libraries, to show that the British Museum think it wise to publish on its own account, I show you a list of publications issued by the Trustees during the last few years, and made available for purchase at prices indicated in this catalogue. They think it a good educational work to reprint anything from their great collection

H. C. L.  
Anderson.  
31 Oct., 1900.

collection which the public would like to have. Here is one volume, out of many others, that we have had presented to us by the Museum. This is a volume of *fac similes* of Royal, historical, literary, and other autographs in the Department of Manuscripts, British Museum. The first is a letter from Oliver Cromwell. I think it a proper thing for the Trustees to publish a work giving photographs of old original documents, and translations or descriptions on such subjects. I hope the day will come when our Trustees may do exactly the same kind of work. I do not know that the Trustees make it pay, but I believe they should do it by the prices charged. Then, in Mr. Huntington's statement it is said that "Gould's Birds" was being ruined in the Library, that "Mr. Walker did not think it of much value," but that "it was worth £200 or £300," and he adds, "I believe they are ruined now." If that were said about me, I should not take the slightest notice of such absurd language; but it is said about a dead man. I can only say that Mr. Walker had the highest sense of the value of "Gould's Birds." It is a great work on Australian birds, and Mr. Walker knew that it cost the Trustees £250 to purchase. It is so valuable that we have put it among the reserves, and we allow it to students only on special requisition. The book is in no sense ruined. It has been very much used by artists and students of ornithology. I am sorry to say that lady artists in some cases have splashed a few splodges of water-colour on the book; but it is in no way ruined. It is an excellent copy, and is freely available for the use of *bona fide* students. I may also add that Mr. Mitchell has a most superb copy in his collection, and that it is as clean as the day it was issued in the original paper covers. It will be our copy in due course. Then there is a statement made by Mr. Huntington, that he was present when the books were opened from the boxes sent out by the London agents. I have consulted the old officers, but especially one gentleman who has been there twenty-three years. He says that is absolutely false—that it was absolutely impossible for any stranger or outsider to go into our *sanctum sanctorum* where the officials were at their administrative work. It would not be tolerated now. I do not believe that it was tolerated by such a strict officer as Mr. Walker. I feel certain that Mr. Huntington was never present when the Trustees inspected the books. He gave an extract from a report dating back to 1872—28 years old; but things have changed since then, and we are changing with them. The Trustees then had had one year's experience of their London agents. Dr. Norton, who has had twenty-two years' experience, and Professor McCallum, who has had fourteen years, have given their experience up to date. Mr. Huntington said that he had been told that there was "a suggestion book in the Library, but although I have often asked to view it, I have failed to see it." That book is kept on the chief assistant's table, at the entrance to the Library, and is given at once to any person who asks for it. The Trustees most gladly welcome any intelligent suggestions from the public. At every monthly meeting there are from two to twenty suggestions, most of them certainly for books of an ephemeral character and trumpery value. Now and again, however, we get a valuable book suggested, especially foreign books, and books published in the remote parts of the British Empire. I read all the notices in "Literature," in the "Publishers' Circular," and in the "Athenæum." I pick out the books that I think would suit our purposes, and the Trustees invariably order them. In nine cases out of ten the order is forestalled by our agents, whose London agents have already sent the book out on approval. I do not think that in one year we have to order 100 books picked out in the way indicated, other than those which have been submitted on approval by our agents. We have found these London agents exercise great judgment in sending out the best books. If you would kindly look at our most recent supplement, you will find that we are particularly strong in books on the Transvaal War and on the Chinese crisis; and as to old-age pensions, to which Mr. Huntington refers, I took particular interest in the subject seven years ago, when I gave a lecture on it in Sydney, by the way. I took care to order all the German, French, and British books, and Parliamentary papers on the subject, that could be got. The consequence is that we have a remarkably good little Reference Library on the question—a library of books of particular interest to students. If you will kindly look at the last Supplement, you will find that during the last five years the Trustees have added no fewer than thirty-seven books to the collection on old-age pensions. I should like you to see the system of cataloguing that Mr. Huntington strongly recommends. I have tried it on my own initiative. I also saw it carried on in Glasgow in 1897; but it broke down simply by its own weight. Another system had to be adopted, which meant a little more expenditure in one way; but it certainly has given more satisfactory results. We used to make four copies of the current catalogue, showing the books day by day as they came in. You will find, on looking at this, that we could not copy them in strictly alphabetical order. It made the lists so clumsy to consult that it was more difficult than if the public had to consult three or four separate catalogues. It is difficult for any man to foresee what space he must leave for any letter, or any two or three letters, of the alphabet. The book became very clumsy in a few years. The arrangement broke down, for I found it more awkward than having a few supplements year by year. We shall have only one every five years; and no one can complain if, on going into a National Library, he has four volumes to consult. It will not take anyone long to find out what he wants. The British Museum catalogue was in 2,000 volumes in manuscript, arranged on shelves around the central rotunda. It is now in eighty-one printed volumes. You can imagine the labour of referring to it. They are making accessions every year, so that the student going into the British Museum has now to look into thirteen different catalogues to see if the books he wants are in the Library or not. In our Library he has to look into four to see whether they are there or not. Generally speaking, he will not have to look into more than one. Our assistants try to help the public. I believe they do it in every way, and make the catalogue as simple as possible. As one who has given earnest thought for seven years to the subject of cataloguing, I can say that we have long abandoned the system advocated by this theorist for one that has been found to be a great deal better, both for the public and for the officers. I now most respectfully ask you to visit the Library at the earliest possible moment, and see the great difficulties under which we labour, through the very contracted state of the building, its imperfect condition as to mechanical contrivances, its poor arrangements from the modern librarian's point of view, and the altogether inadequate provision made for a library for a great young country like this. I hope it will not be out of place to thank you, Mr. Chairman, for your sympathy and kindness all through this inquiry, and that it is not impertinent in me to say that I am absolutely satisfied with the way in which you have treated me; and I believe that my Trustees would indorse what I have said if they were here.

## APPENDIX.

## WORKING OF THE FREE PUBLIC LIBRARY.

## APPENDIX.

## A 1.

[To Evidence of *H. C. L. Anderson, Esq., M.A.*]

The Public Library of New South Wales, Sydney, 1 September, 1900.

Books lent from the Public Library to Country Students, 1895-1900. Many of these were lent six to eight times to different groups of students.

1900

Legislative Assembly, New South Wales

SALE OF BOOKS FROM THE PUBLIC LIBRARY (RETURN RESPECTING)

Printed under No 8 Report from Printing Committee, 9 August, 1900

Answers to Questions (No 11) asked by J C. L Fitzpatrick, 7th August, 1900

I In May 1897, about 5,000 volumes a large majority of which were pamphlets, periodicals, Parliamentary papers, directories, year books, Army and Navy lists, and other literature not needed by the Library, were exchanged with Messrs Angus and Robertson for a selection of modern books to be included in the Travelling Libraries, lent to Schools of Arts and groups of students in the country Since that date no books have been sold  
2 By order of the Trustees of the Public Library of New South Wales

3. It was not practicable, in view of the pressure of work on the staff of the Library, to make a list of these books, and it was not necessary, as the tenderers were enabled to inspect the books and make any lists necessary for their own purpose. The larger part of the books had never been received into the Library's collection, and had therefore not been catalogued. Those which were taken from the shelves as unnecessary duplicates can be listed at any time.

4. No cash was paid for these books. The tenders of Messrs. Angus and Robertson, £219, was accepted on condition that modern books, to the value of £274, should be chosen in lieu of them, thus allowing 20 per cent off the shop price. A large number of the books were second-hand, and were thus bought at 30 per cent. below the published price, with 20 per cent. taken off that. There is a complete invoice of these books so received.

5. Tenders were invited from the firm of Angus and Robertson, E. W. Cole, and W. Dymock, the only ones deemed by the Trustees likely to deal in such stock. They were inspected by representatives from these three firms, but a tender was received from only the first.

6. No.

7. The cost cannot be ascertained, since comparatively few of the books were bought directly, very many of them being donations from foreign countries or from Government Departments, and being of no special value. A number of others were duplicates of books already in the Library, and were purchased in several large collections bought by the Trustees, no special value being assigned to each volume.

8. A few books, containing some newspaper cuttings and autographs of persons of no special renown, were sold, but in each case at least one, and generally two or three copies in duplicate, were retained by the Institution. No book "extremely valuable" was sold.

9. The books were inspected by Mr. R. C. Walker, the late Principal Librarian, at the same time one of the Trustees, and by whom all the books had been acquired during his term of office. They were also carefully inspected by the two senior officers of the Institution in order to make sure that no unique book was allowed to go away.

10. By the error of a subordinate officer who picked the duplicates off the shelves, some works of the Wise Bequest were included in the lot exchanged with Messrs. Angus and Robertson. As soon as this was discovered this firm reserved all the books that could be found bearing the stamp of the Wise Bequest, and thirty volumes were repurchased by the Trustees for £12 5s. 6d., this amount being deducted from the sum tendered for the books.

11. Any Australian book now in the Library can readily be identified by the marks and stamps put in certain places throughout the book. A number of persons have been prosecuted for stealing books during the last few years, and there has been no difficulty in identifying the property of the Trustees. Most of the books of any value are bound in the Library's own binding, and all are systematically marked and stamped as soon as received.

12. The Trustees have approved of the loan of books from the duplicates and from the Lending Branch to any *bona fide* students in country districts on the same terms as they lend boxes of books to country Schools of Arts and groups of students. Only such books as cannot be readily got in country towns are lent in this way. The books are sent and returned free of cost to all borrowers, and the expense is defrayed from the amount of £300 voted annually by Parliament.

13. An account is kept of all books on loan, and a list of the names of all borrowers, as far as practicable. No distinction is made between a borrower in the country and one in the city.

14. The amount of money spent on fiction during the three years ending 30th June, 1900, was as follows:—

Lending Branch.

Renewal of books worn out	...	...	...	...	£212	3	5
New fiction added to the Library, as chosen by the Trustees	...	...	...	...	91	9	0
Reference Library	...	...	...	...	£67	4	6

15. In December, 1894, at the request of the widow of the late Dr. Bennett, the Principal Librarian, in conjunction with the agents for the Library (Messrs. Angus and Robertson), valued Dr. Bennett's books, and conjointly estimated their value at £850. The Trustees were agreeable to take a very few choice books, which they needed, at a cost of less than £100, the agents taking all the rest. Five months afterwards a few of these books were chosen from the stock of a Sydney bookseller, although the choicest ones had been meanwhile sold to a gentleman who has since presented them to the Library as a gift. The books selected were submitted to the Trustees at their meeting in June, 1895, but their reduced vote for books having been meanwhile exhausted, the Trustees had to reject the books offered, as also other books then submitted.

H.C.L.A.

*Note.*—The most of these questions were asked in June, 1897, and answered by the late Mr. R. C. Walker, in my absence in England.

A 4.

[To Evidence of H. C. L. Anderson, Esq., M.A.]

List of Duplicates removed from the Australian Collection and from donation from the Colonial Secretary's Office, sold, together with others, to Messrs. Angus & Robertson, May, 1897:—

Anderson, R., Hawaiian Islands.	Beechey, Capt. F. W., Voyage to the Pacific.	2 vols.

## B.

[Appendix by the Committee.]

Sir,

Penrith College, Penrith, 29 August, 1900.

In the statement of complaints made by Mr. Lambton, Deputy Postmaster-General (as reported in the *Sydney Morning Herald* of this date) before your Committee in reference to books sent from the Free Lending Library to a country resident there is no doubt I am the person referred to, and therefore desire to state, before your Committee draw up their report, that, during the years that I taught in Sydney, the Public and other libraries were availed of by me mainly for the purpose of obtaining special information to impart to my pupils, and since my removal to Penrith the advantages of the Free Public Lending Library are far more necessary, as access to books is so much more limited here; consequently I requested the officials of the above library to allow me the privilege of still borrowing books, but while willing to accede to my request, they objected to the books being returned to the library by rail, and as the postal authorities refuse to transmit unless postage is prepaid, the great expense of returning the books by post acts as a distinct prohibition.

Since registered newspapers and periodicals, some of them of a most injurious nature, are distributed post free, it is not unreasonable to expect that the same privilege should be extended to the specially-selected books of the Free Public Lending Library, which so greatly tend to raise the moral and intellectual status of the people.

Owing to the variety of information required by a teacher, and the limited number of books and short time allowed to peruse them (two weeks) by the Library regulations, other sources of information must also be sought after, which cannot readily be obtained without great expense in country districts; therefore, without desiring to dictate to your Committee, I beg leave to state that in my humble opinion every possible assistance should be given to country borrowers who desire to benefit by the use of the Public Libraries, and that departmental objections should be treated as of secondary importance.

Mr. Lambton is reported to have said that "if the books had been sent to a public school master they might have been allowed to pass free." Why is not the same privilege extended to myself and other private school teachers? Are there to be such invidious distinctions in the same profession and where the same principles are involved?

We have the extraordinary spectacle of the Library authorities demanding more space to store the excess of books while country residents desirous of reading are refused reasonable facilities, and their minds are being starved and their intellectual progress retarded for want of these books.

I trust, however, if your Committee come to an adverse decision, some special concessions will be made to members of the teaching profession, for upon their knowledge and ability the advancement and enlightenment of the young people of this Colony depend.

I have, &amp;c.,

WM. REID, T.C.D.,

Headmaster.

The Honorable J. C. L. Fitzpatrick, M.L.A.,

Chairman, of Free Public Library Committee, Parliament House, Sydney.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

NATIONAL ART GALLERY OF NEW SOUTH WALES.  
(REPORT OF THE TRUSTEES FOR THE YEAR 1899.)

Presented to Parliament in pursuance of the "Library and Art Gallery Act, 1899," Section 28.

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

Annual Report, 1899.

National Art Gallery of New South Wales, Outer Domain, Sydney, 19 January, 1900.

In presenting their Report for the year 1899, the Trustees have again the satisfaction to refer to the well-maintained attendance of visitors to the Gallery, numbering, during the year, 243,998, the daily averages being 496 on week-days and 1,700 on Sundays.

The construction of the south façade is rapidly progressing—its completion, anticipated about December next, will also complete the entire Southern Wing to the new architectural design. The special provision made for utilising the basement of this addition for certain classes of exhibits is expected to prove valuable in the near future.

COUNTRY LOAN COLLECTIONS AT BATHURST, GOULBURN, AND NEWCASTLE.

The forty-four pictures distributed between these centres continue to prove useful to students and attractive to the general public.

THE WYNNE BEQUEST.

The annual prize at the disposal of the Trustees under this bequest was this year awarded to Mr. G. W. Lambert, for his oil painting, entitled, "Across the Black Soil Plains." The first award under the bequest was made in 1897.

STUDENTS.

The number of students enrolled since the commencement is 296, of whom fifteen were admitted in 1899.

The average, daily, of students, working in the Gallery is, say, two and a half.

NEW CATALOGUE.

The 7th Edition, recording to date contents of the National Collection, was published by the Trustees in December, 1899. This work, which illustrates many of the *chef d'œuvres*, is sold at 6d.

PERMANENT SEATING IN THE FOUR NEW COURTS.

Public want in this direction has been supplied during the year, to the advantage of the general appearance of the Courts, as well as the comfort of visitors.

At the special invitation of the Corporation of the City of London, and with the concurrence of the Honorable the Minister of Public Instruction, the Trustees have lent to the Corporation, for their Summer Exhibition at the Guildhall of the works of leading British artists, Sir E. J. Poynter's picture, entitled, "The Meeting of Solomon and the Queen of Sheba."

INCORPORATION.

The incorporation of the Trust will strengthen the hands of the Board in desirable directions.

BOARD OF TRUSTEES.

On 14th February, 1899, the services of the Hon. W. J. Trickett were lost to the Board, through resignation. On 3rd March, 1899, five new Trustees were appointed, and on 12th December, one additional, making six in all, as under, viz. :—

*Gazetted 3rd March, 1899.*

The Hon. Sir J. P. Abbott, K.C.M.G., M.P.  
Sir Julian E. Salomons.  
The Hon. J. H. Carruthers, M.P.  
John Sulman, Esq., F.R.I.B.A.  
Henry Gorman, Esq.

*Gazetted 12th December, 1899.*

The Hon. F. B. Suttor, M.P.

This accession of strength was cordially welcomed by the Board.

MEETINGS.

## MEETINGS.

Thirty-nine meetings were held during 1899.

## ATTENDANCES.

Mr. E. Du Faur, President	...	...	...	...	...	36
Sir J. E. Fairfax, Vice-President	...	...	...	...	...	9*
Mr. J. Mullens, Vice-President	...	...	...	...	...	26

						<u>£3,988</u>

During 1899, 243,998 persons visited the Gallery.

The attendance on week-days averaged 496; on Sundays, 1,700 daily.

Six persons were permanently employed, with two extra assistants on Sundays and holidays.

GEORGE E. LAYTON,  
Secretary.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT OF TRUSTEES, FOR THE YEAR 1899.)

Presented to Parliament pursuant to the provisions of the "Sydney Grammar School Act of 1854."

*Printed under No. 3 Report from Printing Committee, 5 July, 1900.*

The Chairman of the Board of Trustees to The Minister of Public Instruction.

Sir,

Sydney Grammar School, 1 May, 1900.

I have the honor to submit the following Report of the progress of the School, and the proceedings of the Trustees during the year 1899, in order that the same may be laid before His Excellency the Governor and the Executive Council, in accordance with the provisions of the "Sydney Grammar School Act."

It will be seen from the Return annexed that there has been a considerable increase in the number of the boys attending the School. This increase has rendered necessary the building of additional classrooms, and four are now being erected.

As it was found that the cost of building would exceed the balance available to the Trustees as on 31st December last, the approval of the Governor and Executive Council was, in accordance with the provisions of the School Incorporation Act, sought and obtained for the borrowing of a sum not exceeding £5,000, to be expended on the necessary additions and alterations.

The Teaching Staff has been supplemented, in order to ensure adequate attention to the larger number of pupils; and the Trustees are glad to be able to state that, in their opinion, the instruction given by the Masters has been efficient and thorough.

The Board desire to place on record the expression of their great regret that Mr. W. H. Catlett, who has acted as Secretary to the Trustees for more than forty years, has found it necessary, on account of failing health, to resign his post.

Mr. J. J. Brennan has been appointed to succeed Mr. Catlett.

The offices of Chairman and Vice-Chairman have been filled during the year by Mr. E. W. Knox and Mr. J. Russell French.

A Statement of Account for the year 1899, and a Return of the Teaching Staff and their emoluments, are hereto annexed.

I have, &c.,

EDWARD W. KNOX,  
Chairman of the Trustees.

RETURN of the Number of Masters and the Number of Scholars at the Sydney Grammar School in the year 1899.

Number of Masters	Number of Scholars				
	First Quarter	Second Quarter	Third Quarter.	Fourth Quarter	Average for Year.
21	493	508	515	510	506·5

JUSTIN J. BRENNAN,  
Secretary.

SYDNEY GRAMMAR SCHOOL.

1900

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT OF TRUSTEES FOR THE YEAR 1899.)

Presented to Parliament pursuant to Act 17 Vic. No. 2, sec. 9.

*Printed under No. 11 Report from Printing Committee, 11 September, 1900.*

TO HIS EXCELLENCY THE GOVERNOR AND EXECUTIVE COUNCIL,—

The Trustees of the Australian Museum have the honour to submit to your Excellency their Forty-sixth Annual Report.

1. There were no changes amongst the Trustees during the year, but Colonel Dr. W. D. Campbell Williams was granted leave of absence on account of his proceeding to South Africa in charge of the New South Wales Army Medical Corps.

2. The Museum continued open to visitors during the usual hours, viz., from 2 to 5 p.m. on Sundays, and from 10 a.m. to 5 p.m. on all week-days, except Mondays, which were reserved for cleaning purposes, but on Monday afternoons the collections have, as usual, been accessible to students and schools for teaching purposes, on application being made to the Curator. The total number of visitors recorded is given in Appendix VI, and shows an increase of 4,658 for the year. The average was 345 on week-days (334 the previous year) and 590 on Sundays (561 the previous year). The largest attendance on any one day occurred on Monday, 2nd October (Eight-hour Day), when 2,325 persons entered the building.

3. For the financial year 1899–1900, a slight increase was voted by Parliament for the maintenance of the Museum, but the needs of the Institution are still much in excess of the available funds, so that not merely economy, but penuriousness, has to be practised in some directions.

4. The most noticeable acquisitions by purchase during the year are detailed in the Curator's Report (Appendix I).

5. No collecting parties were sent out, and all acquisitions by "collection" (see Appendix VII) were either made by members of the Museum Staff during holidays, as opportunities occurred, or have resulted from the Government Trawling Expedition in H.M.C.S. "Thetis."

6. The Donations received were extensive, numbering in all 6,058 specimens from 317 donors. The most noticeable gifts are detailed in the Curator's and Departmental Reports appended.

7. The repairs to the Museum, for which a sum of £1,500 was voted as mentioned in previous Reports, have been duly carried out, i.e., the cleaning of all the stonework, repainting the doors and windows, making road from William-street gate, dwarf ornamental stone wall and new iron gates at corner of William and College Streets. A beginning was also made with the South Wing of the Museum, for which a sum of £13,500 was voted by Parliament on the 1898–99 Loan Estimates.

8. The only important change on the Scientific Staff has been the resignation of Dr. Thomas Cooksey, Mineralogist, but the Trustees have been fortunate in securing his services as "Consulting Mineralogist." A list of the Staff will be found in Appendix XV.

9. A careful revision of the Museum By-laws and Regulations was made in the beginning of the year, and some modifications inserted to meet altered circumstances, and as the result of experience. The amended code received the Governor's approval, as required by the Act of Incorporation, and was published in the *Government Gazette* of 5th April, 1899.

10. The work on the "Fishes of Australia" was continued by Mr. J. Douglas Ogilby, under the supervision of a committee appointed by the Trustees.

11. The Museum Publications issued during the year 1899 were :—

Catalogue XVII. The Tunicata of the Australian Museum, by Prof. W. A. Herdman.

Records of the Australian Museum, Vol. III, Parts 5 and 6.

Memoirs of the Australian Museum, Vol. III (On Funafuti Atoll), Parts 7, 8, 9.

Memoirs of the Australian Museum, Vol. IV (Results of "Thetis" Expedition), No. 1.

A list of papers published by members of the Museum Staff will be found in Appendix XIII, and a full list of Museum Publications in Appendix XII.

12. The "Catalogue of Nests and Eggs of the Birds of Australia," by Mr. A. J. North, Ornithologist to the Australian Museum, which was published by the Trustees of the Australian Museum in 1889, as No. XII of their series of Catalogues, being now out of print, the Trustees have decided to issue a new work in an enlarged form by the same author. This will contain representations of about 600 eggs on 30 full-sized plates, and arrangements are being made to have them hand-coloured for those who desire it. Some of the nests and breeding haunts of the birds will also be shown on full-sized plates, and a great number of illustrations will be interspersed among the text, where many of the birds themselves will be figured. The photographs, from which the plates representing the nests are made, have mostly been taken by the author personally, and show the actual surroundings of the birds' homes. The black and white drawings are by Mr. Neville Cayley, so well known for his life-like drawings and paintings of birds. The letterpress will contain descriptions of the birds, their nests, eggs, and haunts, and their life history. The preparation of the plates is well advanced, and the work will be issued in parts, as the letterpress can be got ready.

13. Full information with respect to the Museum will be found in the Appendices attached to this Report, viz. :—

- I.—Curator's Report.
- II.—Reports of Scientific Assistants.
- III.—Secretary's Report.
- IV.—Statement of Receipts and Expenditure.
- V.—Attendance of the Trustees.
- VI.—Attendance of Visitors and Summary for fifteen years.
- VII.—Return of Specimens acquired.
- VIII.—Donations.
- IX.—Exchanges.
- X.—Return of Information supplied to the Public.
- XI.—Additions to the Library.
- XII.—Publications of the Australian Museum.
- XIII.—Papers published by Members of the Museum Staff.
- XIV.—Museum Staff.

The Common Seal of the Museum was hereunto affixed, by order of the Board, this 18th day of May, 1900.

(L.S.)

JAMES C. COX, M.D.,  
President.

S. SINCLAIR,  
Secretary.

## APPENDIX I.

## CURATOR'S REPORT FOR 1899.

To the Trustees of the Australian Museum,—  
Gentlemen,

Sydney, January, 1900.

I have the honour to hand you the following Report, dealing with the work of the Australian Museum during the past year, and on the condition of the Collections in your charge:—

1. *General Condition*.—Both the Museum and its contents are in a very satisfactory condition, probably as good, and possibly even better, than at any time during its existence.

2. *Fire Appliances*.—The charge of these appliances still continues in the hands of the Metropolitan Fire Brigade, and periodical examinations of the gear are regularly made by its officers.

3. *Staff Duties, &c.*—Three changes took place in the *personnel* of the Staff during the past year. Much to my regret, the services of Mr. Thomas Cooksey, Ph.D., B.Sc. (Lond.), as Mineralogist were lost to the Museum through his appointment to the position of Assistant Government Analyst, for which his extensive Chemical knowledge eminently fitted him; he resigned on January 31st, 1899. By an arrangement, however, with the Department of Public Health, Dr. Cooksey was permitted to retain a connection with us as Consulting Mineralogist. The Messenger, J. A. Spencer, resigned on April 7th, and was succeeded by S. W. Griffith about the same time. On October 1st, A. W. Brown, Labourer, resigned through ill-health, and W. Thorpe was appointed in his place.

At the risk of being thought wearisome, I must respectfully ask you to again consider my remarks of last year on the undermanned state of the Museum as repeated. This will even be more forcibly brought under your notice as soon as the additions to the building, now in progress, are completed—towards the close of the present year—when more assistance, in the grade of Attendants *at least*, must of necessity be provided. Much needful work remains either undone, or in an incomplete state from the want of more mechanical help. Through causes to be explained hereafter, the past year proved an extremely trying one to me personally; and had it not been for the ever cheerful and ready help of all, and particularly that of the Assistant Taxidermist (Mr. R. Grant), and one of the Carpenters (Mr. B. Lucas), I could not have got through even the little that I did accomplish. I have the success of the Museum very much at heart, and I feel convinced that unless more help of the kind indicated is provided, we shall not be able to maintain the high position so far attained amongst the Museums of Australia.

4. *Care of the Collections*.—The Collections, both exhibited and in store, continue to be in excellent condition. Insect pests, an almost ineradicable evil in a warm climate, are now reduced to the smallest possible existence; so small, indeed, as to be hardly noticeable. This gratifying result has been attained not so much by the lavish use of disinfectants as by constant attention and examination on the part of those charged with such duties.

5. *Space*.—The second half of the Ichthyological Gallery was cased from the 1898–99 vote, thus completing the wall-casing of the building as it now stands. All that remains to be done towards filling up unoccupied space, is to provide balustrade cases for this gallery. Next will follow the important question of replacing the antiquated floor-space cases distributed in some of the rooms, by others of a more modern type. As soon as the rooms now in course of construction are completed, attention must necessarily be directed to providing them with both wall and floor-space cases—a costly undertaking.

6. *Structural Matters*.—In the Report for 1898 a sum of £1,500 was referred to, to be expended in repairs and small additions to the building as it is, and a list of those so far carried out was given. To these may now be added those items completed during 1899, as follows:—(1) Continuation of the freestone wall from the private entrance to the intersection of William and College Streets; (2) New iron gates at the private entrance; (3) Repair and repainting of all the venetian blinds; (4) Roadway from the old entrance in William-street to the Museum quadrangle; (5) Watchman's shelter hut in the last-named; (6) Cleaning of the whole of the stonework of the building, and coating with a preservative; (7) Painting of all doors and windows throughout the establishment; (8) Erection of a telephone closet; (9) Erection of doorkeeper's box at the public entrance; (10) Encasing of Corinthian capitals of the front elevation as a protection against birds; (11) Re-dressing of the asphalt paths throughout the Museum quadrangle.

It is with much satisfaction that I have to report the commencement in August last of a portion of the two galleries forming the south wing along the Sydney Grammar School alignment, and for which, as stated in the 1898 Report, an appropriation of £13,500 was taken on the Loan Estimates of 1898–99. The contractor is Mr. John Howie, of Parramatta. Excellent progress has already been made, and I cannot speak too highly of the manner in which Mr. Howie is carrying on the work.

7. *New Cases*.—The Ichthyological cases have already been referred to, the glass shelving in this instance being included in the contract; the cases were erected by our usual Contractors, Messrs. Thomas Jones & Co. A floor-space case was provided for a fifth Bower-bird Group. As regards the old locks of the balustrade Conchological cases, acting on my advice, you resolved not to replenish these, but rather to replace wholly, by degrees, with others of a better type. Several large glass shades were provided to cover previously exposed specimens.

8. *Collecting and Field-work*.—Through the refusal of the Government to provide the funds for a Collector's payment, the want of such an officer still remains the weakest point in our armour. During a few days spent in the Wallerawang District, Mr. E. R. Waite was able to replenish our duplicate skins of Macropodidae, &c., and Mr. J. A. Thorpe added to our Birds, when at Tarana. We are again indebted to the kind offices of Mrs. Thomas Nicholls, of Lord Howe Island, and to Mr. J. B. Waterhouse, another resident on the "Madeira of the Pacific," for continued efforts to advance our knowledge of the fauna of that island; by collecting marine objects, some of them new and interesting records for that locality.

9. *Presentations*.—Specimens donated in 1899 were less than in 1898, the respective totals being 9,629 and 6,058. Notwithstanding this, some very interesting things were received that have helped to fill gaps in our Collections. The more important were:—A fine series of Ores and Lode-stones from Charters Towers and Ravenswood, Queensland; Cretaceous Fossil-fish from North America, by Prof. A. H. Ward; Tertiary Fossils from the Murray River Basin, by Mr. H. Y. L. Brown; Skull of a Ziphoid Whale,

by

by the Manager of the Pacific Steam Navigation Co.; an "Ancestral" figure from Mallicollo, by Capt. T. Williams; a fine series of Cooking Pots from New Guinea, by the Hon. A. Musgrove; a "Widow's" Cap from the Darling River, by Mr. C. Kilgour; a Sacred Drum from Mallicollo, by the Rev. Watt Leggatt; Tree-trunks with aboriginal footholds, by the Hon. W. A. Long and Mr. B. Lucas; a Crescent Moonstone from Erromanga, by the Rev. H. A. Robertson; Mollusca used as food, and Pigments from N. E. Australia, by Dr. W. E. Roth; Miscellaneous Manufactures from the Ellice, Gilbert, and Samoan Groups, by Capt. E. C. Hoare; Bornean Manufactures, by Dr. C. G. Seligman. It will be noticed that by far the larger number of these gifts are Ethnological.

10. *Exchanges*.—The acquisitions by exchange were less in 1899 than 1898, being 3,436 as against 4,253, a considerable falling off in consequence of the depletion of our duplicate stock in certain sections. The more important exchanges were Australian Coleoptera for American Arachnida, with Dr. C. Brancsik; Bird Skins and Skeletons, with the Royal Museum of Natural History in Leiden; a collection of Invertebrates, chiefly Crustacea from W. Australia, for Insects, with Mr. A. M. Lea; Australian Tokens received from the Technological Museum in Sydney.

11. *Purchases*.—Our ability to purchase was less in 1899 than in 1898, only 301 objects having been bought in the former as against 646 during the latter period. This was in consequence of the miserable appropriation allowed by the Government for the purpose. The only purchases worth recording were a fine series of very old Australian, N. Guinea, and Pacific Ethnology, from Mr. H. Richards, a transaction that will be continued in the current year; a carved Tree-fern representing an "Ancestral" figure from Mallicollo, from Mr. J. A. G. Macdonald; and Ethnological specimens from N. Guinea and N. Britain, chiefly the latter, from the Rev. R. H. Rickard.

12. *Publications*.—The long-deferred descriptive "Catalogue of the Tunicata in the Australian Museum," by Prof. W. A. Herdman, was published last year. In 1888 my predecessor, Dr. E. P. Ramsay, acting on your instructions, forwarded a collection of Tunicata to Prof. Herdman. In 1893, however, just as the work was about to be sent to press, circumstances beyond your control temporarily put a stop to its publication, but in 1897 it was again possible to contemplate the completion of the Catalogue. At the time the specimens were forwarded to Prof. Herdman they formed a complete collection of the Tunicata of the N.S. Wales coast, as then known to us, and very few additional forms have since come to hand. It is, however, unquestionable that, by systematic collecting, which, unfortunately, you are not at present in a position to carry out, the list might be very much enlarged. In addition to the Museum material, Prof. Herdman incorporated certain forms known to him, but at present not represented in our Collection.

The Funafuti Memoir was completed last year, all but the index, by the publication of Parts 7-9. Good progress was also made by Mr. A. J. North with his "Catalogue of the Nests and Eggs of Birds found breeding in Australia." It was decided to spread the publication of this important work over three years, and to meet the first year's expenditure an appropriation of £200 was obtained through the 1898-99 Estimates. The work will consist of about three hundred pages letter-press, with one hundred and ten text figures by Mr. N. Cayley, thirty plates of eggs, and forty of nests, &c. On the same Estimates appeared the sum of £400 for the publication of the "Scientific Results of the Thetis' Trawling Expedition," and of which the first part, containing the "Introduction" and the "Fishes," both by Mr. E. R. Waite, was published in December last. The second part containing the higher Crustacea by Mr. T. Whitelegge is well in hand, and will appear early in the current year.

Two additional parts of the "Records" appeared, being Parts 5 and 6 of Vol. iii.

13. *Information and Duplicates Disseminated*.—Numbers of visitors interested in Zoology were afforded access to the Collections, and accommodation found for artists desirous of drawing from nature. Certain additional anatomical preparations outside the scope of our operations were transferred to the Anatomical Museum at the University. A collection of British plants, coming within the same category, was handed to the Director of the Botanical Gardens.

Numerous replies to correspondents seeking information were promptly made, and specimens named for students and others, the more important being:—Sub-fossil corals and shells from Fiji for Mr. C. E. Andrews; Living birds in the Botanical Gardens named for the Director; Silurian corals from Fernbrook for the Rev. Mr. Coombes; Corals from Funafuti Atoll for the Geological Department of the Sydney University; Australian and Exotic Coleoptera named for Mr. E. T. Fowell; Western Australian fossils named for the Government Geologist of W. Australia; Bird-skins determined for Dr. W. Macgillivray; Crustacea from Fiji for Mr. T. Steel; Post-Tertiary bones from Woodlark Island for Prof. T. P. Anderson Stuart, M.D.; List of Australian Mosquitos, with notes, for the same; and notes on the Oyster Worm (*Polydora ciliata*, Johnst.) for the Department of Fisheries.

A spirit collection of local Food-fishes was supplied to the Technical College at Newcastle; casts of typical Australian Meteorites to the Geological Department of Sydney University; and a collection of Australian Snakes to the School of the Sacred Heart Convent, at Rose Bay.

14. *Spirit Collections*.—These were maintained in good order, and from them numerous specimens, chiefly Fish, were selected for public exhibition. Other duties prevented Mr. C. Hedley from overhauling the Mollusca, but this duty will be carried out during the current year without fail. The six-gallon Copper Still by Townson and Mercer arrived, and was put to good use.

15. *Taxidermists (Messrs. J. A. Thorpe and R. Grant)*.—The chief work of the year consisted in the complete renovation of most of our mounted Fish, for exhibition in the new gallery; two hundred and seventy-nine were so treated. Excellent progress was made in converting the Psittacide into groups, for more efficient display, and economy in space; thirty-two new bird-groups were prepared, and ten old ones altered. Fifteen new Nest Groups were added.

Attention may specially be called to two by no means easy pieces of work—the mounting of a large Ribbon or Oar-fish (*Regalecus glesne*, Asc.), and the Palu from Funafuti. The former from the delicacy of its skin, and the ill-treatment it had received before arriving at the Museum severely taxed the energies of the Taxidermists, but was ultimately set up with much success. The latter, after capture, had been unnecessarily cut into three pieces, and then placed in spirit; but notwithstanding the shrinkage that had obviously taken place, a very successful mount was ultimately made of it. A very creditable year's work was carried out by the Taxidermists, no less than six hundred and thirty-five specimens of all kinds having received attention.

A full return of work will be found in Appendix VII.

16. *Articulators* (Messrs. H. Barnes, Junior, and A. R. Taylor).—The work of the Articulators during 1899 compares favourably with that of the previous year. The Osteological Comparative Series progressed well, by the addition of six hundred and eighty-two disarticulated bones. The most important skeletons mounted were—a female Orang Utan (*Simia satyrus*, Linn.); a Jabiru (*Xenorhynchus asiaticus*, Lath.); and an example of *Myopotamus coypu*, Geof.

In all seven hundred and sixty-seven specimens were handled, Birds heading the list. A full return will be found in Appendix VII.

17. *Formatori* (Messrs. H. Barnes Junior, and A. H. Taylor).—An additional cast of the 200 cwt. Mt. Stirling Meteorite was prepared, and three reproductions of the model of Funafuti. The Atoll was modelled by Captain E. C. Hoare, of the London Missionary Society, to scale after the new Admiralty Charts, from the surveys of H.M.S. "Penguin." It admirably depicts the remarkable physical features of a coral island of this description. A very fine piece of work was prepared in our workshop by Mr. Allan Hutchinson, late of Honolulu, by the casting from his own moulds of four figures of Hawaiians to form two Ethnological Groups, life-size. One group consists of a woman and a girl, representing the Kapa-beaters, the other of a man and a boy, the Poi-pounders. These will ultimately be exhibited in the new Ethnological Gallery.

A full return of work in plaster will be found in Appendix VII.

18. *Photographer* (Mr. H. Barnes, Junior).—Some high-class work was produced last year, consisting of a series of Bird-nest studies for the illustration of Mr. North's Catalogue, and a large number of Ethnological objects for illustrating our cases, for publication, and distribution.

A new departure was the inauguration of Micro-photography in connection with Palaeontological illustration. For this purpose a micro-photo camera was purchased.

19. *Carpenters* (Messrs. R. Barnes and B. Lucas).—It is almost superfluous to report that the carpentering work during 1899 was, as in former years, both extensive and satisfactory. Three hundred and ninety-four stands of various sizes were made, four large glazed cases (wooden frames) for seals, twenty-five glazed cases (metal frames) for large mineral masses, metal frames for descriptive labels, and several picture frames. Three large tree-trunks were reduced and mounted on stands; a twelve-foot case was fitted with a slope for "Cook Relics," with a large amount of work of a miscellaneous character. In many other ways I received every possible assistance from the Carpenters.

20. *Smiths* (Messrs. B. Lucas and R. Barnes).—Additional brackets and iron stretchers for the Taxidermist's and Articulator's shops, and support-work for the Giraffe and Eland skeletons were made, and sundry miscellaneous repairs and additions effected throughout the premises.

21. *Compositor and Printer* (Mr. J. W. Woodhead).—The number of labels composed and printed (7,910) rather exceeded that of the previous year, viz., 7,667. This means that during 1898-99, 15,577 old M.S. labels were discarded throughout the Museum and replaced by legible and well-executed printed ones. Allowing for certain disadvantages under which we labour in connection with such work, I look upon this as a very satisfactory result. It must not be forgotten that this in no way takes into consideration the mere labour of preparing the copy by the Assistants and myself, for every old label, before passing into the hands of the Compositor, is thoroughly revised and, in most cases, re-written. A full return will be found in Appendix VII, where it will be seen that the largest number in any one class was in the Insecta, the Ethnology following next. A commencement was made with the Conchological, Lower Invertebrata, and Numismatical labels.

22. *Mammalia*.—The donations and exchanges were less than in 1898, but specimens received by collection were more. The Mammals remain in the same condition as in 1898, and are in good order. By removing some skins of less value, a few others, either unrepresented, or of better quality, were inserted in the cases. Amongst the latter was a fine specimen of the Mountain variety of the Dingo, presented by Mr. E. G. W. Palmer. The skin collection was increased by some specimens collected by Mr. Waite in the Wallerawang District, and several valuable gifts from the N. S. Wales Zoological Society, such as a Tasmanian Devil (*Sarcophilus ursinus*, Harris), a Dorcas Gazelle (*Gazella dorcas*, Linn.), an Axis Deer (*Cervus axis*, Exlbn), and a Clouded Leopard (*Felis nebulosa*, Grif.). Liberal gifts were also received from Mr. F. C. Jansen, chiefly Marsupials.

23. *Aves*.—The donations, exchanges, and purchases in this section were less than in 1898, but the collected specimens were in advance.

The M.S. of Mr. North's "Catalogue of the Nests and Eggs of Birds found breeding in Australia" made steady progress, as a portion will be published during the current year. He visited Melbourne in March last to examine various collections, and, for the purposes of illustration, many eggs were generously lent by collectors, prominent amongst whom were Dr. C. Ryan and Messrs. G. A. Keartland, J. Gabriel, and C. French, Junior, all of Melbourne; and Mr. G. Savidge, of Copmanhurst, N. S. Wales. We are also under obligations to Mr. H. P. C. Ashworth for the loan of photo-negatives of nesting-places of sea birds in Bass' Strait.

An additional Bower Group was added to the exhibited series, the bower of the Spotted or Pink-naped Bower-bird (*Chlamydodera maculata*, Gould). This bower and its surroundings were obtained by Assistant-Taxidermist Grant at Buckinguy, and mounted from his notes, exactly as in nature. It is profusely decorated at both entrances with bleached bones of mammals and birds, shells, pebbles, bits of glass, and other objects. Fifteen new Nest Groups were added, chief amongst them being the nest of the Raven (*Corone australis*, Gould), and the Magpie or Black-backed Piping Crow (*Gymnorhina tibicen*, Lath.).

The following interesting objects were presented:—Nest of a *Gymnorhina*, based on a mass of entangled fencing wire, by Dr. Wharton Cox; portion of a sapling felled by a Yellow-tailed Cockatoo (*Calyptrorhynchus funereus*, Shaw), showing the method employed by the bird to obtain burrowing grubs, the large size of the chips cut off by the powerful mandibles of this Cockatoo being astonishing, by Mr. E. G. W. Palmer; a fine Egyptian Vulture (*Neophron percnopterus*, Linn.), and an Ostrich (*Struthio camelus* (Linn.)), by the Council of the N.S. Wales Zoological Society; and a collection of Erromangan birds, by the Rev. H. A. Robertson.

I regret to announce the death of the beautiful little Golden-shouldered Parrakeet (*Psephotus chrysapterygus*, Gould), after two years' confinement with us.

24. *Reptilia and Batrachia*.—No changes to speak of were made in this portion of the exhibited collection, except by the introduction of additional printed labels. The chief work remaining to be performed is a complete revision of the Ophidia, and additions to the Lacertilia; these, however, must remain in abeyance until the Ichthyological Gallery is completed.

Mr. Waite\* worked out the history of the Galapagos Tortoises, lately at the Gladesville Hospital for the Insane. The female we have, the male was purchased by the Hon. Walter Rothschild. The former was known as "Rotumah," having come from that Island to Tonga, where it was given by King George to the late Mr. Alexander MacDonald. It was removed to Sydney in the schooner "Ida," and was known by Captain Howard, who commanded the vessel, as a resident on Rotumah for upwards of fifty years, it having been landed there from the Galapagos Islands by an American whaler many years before; it lived in Sydney from 1866 to 1896. The female was brought to Sydney in 1863 by the American whaler "Winslow," and died in August, 1896.

A female crocodile, thirteen and a half feet long, was presented by the Council of the N. S. Wales Zoological Society.

The donations during 1899 were slightly less than in 1898, but the exchanges and specimens collected were slightly in excess.

25. *Pisces*.—During intervals, whilst preparing his Report on the Fishes of the "Thetis" Trawling Expedition, Mr. Waite was able to devote some little time to the arrangement of the Ichthyological Gallery, two hundred and fifty spirit specimens being prepared by Mr. Allan R. McCulloch for that purpose. This will be continued throughout the present year, and will necessitate a steady withdrawal of material from our stores, rendering our means of exchange in this section even less than they were before. Some few years ago, when I commenced the general re-arrangement of the Museum contents, all mounted fish-skins were withdrawn and passed into store. Accommodation being now available, two hundred and seventy-nine of these were selected, renovated by the Taxidermists and placed in the cases, making a very creditable display.

Two very important additions were made last year, a fine Ribbon or Oar-fish (*Regalecus glesne*, Asc.), and an example of the mysterious "Palu" of the Pacific. The *Regalecus* is the third Australian example known,† and was found cast upon Shark Beach, Port Jackson, in August last. With the exception of some injuries incidental to the fragility of its members, it was in fair condition, and measured thirteen and a half feet long; the donor was Mr. Fitzwilliam Wentworth. The Palu or "Oil-fish" turns out to be *Ruvettus pretiosus*, Cocco,‡ a deep-water North Atlantic species, known to the Portuguese as the "Escolar."

The donations and exchanges were in excess of those of 1898, but the collected specimens far below. This, however, is accounted for by the large number of specimens obtained during the trawling operations of the "Thetis."

26. *Osteology*.—Birds constituted the largest number of additions, including a Jabiru (*Xenorhynchus asiaticus*, Lath.). A female Orang Utan (*Simia satyrus*, Linn.), replaced an inferior and old example; and a Rodent (*Myopotamus cooperi*, Geoff.). The only specimen calling for special notice was the skull of a supposed "Sea-serpent," brought from Suwarrow Island by one of the vessels of the Pacific Navigation Co., and which proved to be that of a Ziphoid Whale (*Petrorhynchus*, sp.).

The donations were in excess, the exchanges very slightly so, and the collected material very slightly less than in 1898.

27. *Insecta, Myriapoda, and Arachnida*.—Good progress was made in the cabinet arrangement of the Australian moths. A number of additional Coleoptera were placed in the Museum cases, and some life histories added. The Exotic Lepidoptera were also supplied with printed labels. The principal presentations emanated from British New Guinea and the Solomon Islands, and the more important exchanges consisted of W. Australian Arachnida, and those of S. America and Madagascar.

The donations were considerably less than in 1898, but those received were of greater intrinsic value individually. Exchanges and collected specimens also fell off, although the total number of registrations was in excess of those of 1898.

28. *Conchology*.—On the completion of his investigation of the Funafuti Mollusca Mr. Hedley gave his attention to a reorganisation of the displayed shells, and mounted 450 additional tablets. He completed the rearrangement of the Pelecypoda.

The whole of the conchological cases have now been provided with movable covers.

Several important presents were made, the most noticeable being Central American and S. Australian shells by Prof. R. Tate, collected by himself; special novelties from Lake Tanganyika by Capt. E. C. Hoare; and *Nautilus pompilius*, and its mollusc from Mallicollo, by the Rev. H. A. Robertson.

The total donations were less than in 1898, specimens received in exchange greater, and those collected much in excess.

29. *Invertebrata (exclusive of Insecta, &c., and Mollusca)*.—Nearly the whole of Mr. Whitelegge's time was taken up with the "Thetis" Crustacea, the M.S. of the Decapoda and Stomatopoda being nearly ready for the compositor at the close of the year. This necessarily interfered with current work, but, notwithstanding, the printed labels were supplied to Lendenfeld's Sponge types and some others. The Tunicata received from Prof. W. A. Herdman were similarly treated.

The donations and exchanges were less than in 1898 by many specimens.

30. *Ethnology*.—The general acquisitions were numerous and valuable. Mr. North still continues to keep the Ethnological Register, but I have almost entirely relieved him of the practical work connected with this section. I continued my investigations of last year into the Ethnological stores, and at its close had all but completed a long and arduous task, assisted by Assistant-Taxidermist Grant. The result of this investigation is that the work of arrangement, when the new gallery in the South Wing is ready, will be much lightened, as the specimens for exhibition are in a great measure selected; altogether some thousands of specimens passed through our hands.

The collection of Pacific pottery was enriched with an excellent series of cooking pots from the Port Moresby District by the Hon. A. Musgrove. The Rev. H. A. Robertson was kind enough to supply another example of a Navelah Ring, or Moon "God," from Erromanga. These rings, representing the image

\* Waite, Rec. Austr. Mus., iii, Pt. 5, 1899, p. 95.

† Waite, Rec. Austr. Mus., iii, Pt. 6, 1899, p. 163.

‡ Waite, Mem. Austr. Mus., iii, Pt. 9, p. 539.

image of the full moon, or one of its quarters, are reported to have been worshipped in former days by the Erromangans. They were kept carefully hidden under ground, and produced only at annual feasts, or when procuring a wife, or to purchase peace, or to redeem the life of a friend. The material is *Yenis* stone, partly calcareous, partly siliceous, and probably altered upraised coral. We were very deficient in objects from the East Indian Archipelago, but this was to some extent remedied by the receipt of a small but very good series of Bornean articles from Dr. C. G. Seligman, of the Haddon Torres Straits Expedition. A second Upright or Sacred Drum from Mallicollo was acquired through the kind exertions of the Rev. T. Watt Leggatt. One of the most important objects was obtained by purchase, a carved Tree-fern caudex, twelve feet high, with a seated Phallic figure at the top, and on the sides two human faces, symbolic of the ancestral spirits of the villagers; it is from the "sing-sing" ground of a village in S.W. Bay, Mallicollo. Amongst Australian desiderata a "Widow's Cap," of a different type to that already in the Museum, was presented by Mr. C. Kilgour.

31. *Historical*.—A remarkable relic of bygone Colonial days was presented by the Hon. Varney Parkes, M.L.A., late Postmaster-General, in the form of an inscribed copper plate found on excavating a telephone-wire tunnel, three feet six inches below the existing pavement, at the corner of Phillip and Bridge Streets, and on the south side of the latter. The plate was embedded in a stone laid May 15, 1788, forming part of the south-east foundation of a building used as the Governor's (Captain-General Arthur Phillip) residence pending the erection of the first Government House. A still earlier erection was occupied by Governor Phillip, which is said to have been on the bank of the Tank Stream, near where Vickery's Chambers in Pitt-street now stand. The Inscription reads:—

His Excellency | Arthur Phillip, Esqr., | Governor in Chief | and | Captain General | in and over the Territory of | New South Wales, &c., &c., &c., | landed in this Cove | with the first Settlers of this country | the 24th day of January, 1788, | and on the 15th Day of May, | in the same Year, being the 28th | of the Reign of His present Majesty, | George the Third, | the first of these stones was laid.

32. *Numismatics*.—A large amount of work was performed in this Section by myself assisted by Mr. S. Sinclair, in addition to the ordinary registration by Mr. A. J. North. The Collection was largely increased by the transfer from the Technological Museum, with Ministerial sanction, of its collection of coins to the number of five hundred and thirty-one, and by a few purchases. The British War Medals, Exhibition and Memorial Medals, British, Indian, German, Belgian, Austro-Hungarian Current Coinages, and others, were arranged and labelled. The Australian Tokens were partially prepared for exhibition and will be completed during the current year. As donations we received from the Corporation of the City of London a copy of H.M.G.M. Diamond Jubilee Medal; from the National Shipwreck Society of N.S. Wales its Silver and Bronze Medals; from the Royal Humane Society of Australia its Bronze Medal; and from Mr. R. Parkinson, the current coinage of German New Guinea.

33. *Mineralogy*.—In consequence of Dr. Cooksey's resignation, what little systematic work was carried out, was performed for a time by myself. The supply of printed labels was steadily continued, and will be so throughout the current year as opportunity offers.

The more important gifts were Auriferous Lode-stones from the Charters Towers and Ravenswood Gold-fields, by the Minister for Mines, Queensland; Chrome and Nickel Ores from New Caledonia, by Mr. F. Danvers Power; and Zeolites from Victorian localities, by Mr. G. B. Pritchard.

The donations generally were much greater than in 1898, and the exchanges and purchases also larger.

34. *Palaeontology*.—Pressure of other duties compels me to confess that my own section was completely neglected, with the exception of the registration of acquisitions, and this will continue to be the case until I am provided with a competent Assistant.

The more important donations were:—From Prof. T. P. Anderson Stuart, M.D., bones from the Gold-bearing drift of Woodlark Island, British New Guinea, consisting of those of *Crocodylus porosus*, Schn., and *Halicore dugong*, Gmelin; Eocene Fish from Wyoming, by Prof. H. A. Ward, and not hitherto represented with us; Mesozoic Mollusca from W. Australia, by Mr. A. Gibb Maitland; Raised Coral-bed fossils from the Suva Sandstone, Fiji, by the Hon. J. Barry; and Tertiary fossils from the Murray River Basin, by Mr. H. Y. L. Brown.

35. *Library*.—Twelve new book-cases were supplied, and will to some extent relieve the pressure in certain portions of the Library. I regret to say through the shortness of funds our bookbinding is much behind.

36. *Office*.—During the year 1,079 letters were received and 993 despatched.

I have, &c.,

R. ETHERIDGE, JUN.,  
Curator.

## APPENDIX II.

### REPORTS OF SCIENTIFIC ASSISTANTS.

To the Curator,—

Sir,

I have the honour to hand you herewith my Annual Report for the year 1899.

#### *Mammals.*

Beyond the general care devoted to the collection by the Assistant-Taxidermist, the Mammals received no special attention. The gallery is quite full, and, in fact, in one or two places there is danger of overcrowding. At present many interesting and valuable acquisitions have to be passed into store for want of space. In a few instances it was imperative that new specimens should be inserted in their correct place in the series, and in order to provide accommodation it was necessary to withdraw some other specimen, a duplicate, though possibly an ill-spared one. Animals thus requiring space were *Macropus antilopinus* and *Onychogale unguifera*, received in exchange from the Perth (West Australia) Museum, and hitherto unrepresented in the gallery. A dingo (*Canis dingo*), and a Coypu (*Myopotamus coypu*) were

were similarly withdrawn to make room for finer examples, presented by Mr. E. G. W. Palmer and the Zoological Society of New South Wales respectively. From both these donors we have received many specimens, and in this connection I may also mention the names of Messrs. J. Stein, F. C. Jansen, B. Lucas, and the local committee of the Funafuti Coral-boring Expedition, who furnished us with further examples of *Mus exulans*. Exchanges were negotiated with the British and the Perth (W.A.) Museums, and during a few days spent at Wallerawang, I was able to add to our decreasing stores of Marsupials by collection.

The card catalogue system, which I adapted to Museum work and referred to in my last report, was extensively made use of; and the catalogue, and some other orders of Mammals, both exhibited and duplicate, is now complete. This work was undertaken for me by my young helpmate, Mr. Allan McCulloch, who, as a volunteer, has now well assisted me for eighteen months.

#### *Reptiles and Batrachians.*

With the exception of a few additions, the specimens in the Reptilian Gallery remain unchanged. All were, however, provided with new printed labels, prepared on the premises by the compositor. The Tortoises, Lizards, and Frogs, are in excellent condition, but much work will be required on the Snakes in order that a representative series may be displayed. The coloured casts, which form such attractive objects, have been transferred to cases more suitable than those which previously contained them. The whole exhibited Reptilian collection has been catalogued on the card system by my volunteer worker.

Early in the year I devoted some time to an examination of the huge Tortoises from the Galapagos Islands, and the result was published in the "Records of the Australian Museum."

#### *Fishes.*

The greater part of the year was occupied in the preparation of the Report on the fishes collected on the trawling expedition of H.M.C.S. "Thetis." In addition to the letter-press, I prepared over thirty drawings in illustration of the part which was published on December 23rd as Australian Museum Memoir IV, part 1.

Since my last Report the Fish Gallery has been completely furnished with wall cases, and, although I have personally done little towards supplying the cases with specimens, this work has by no means been neglected, for under my supervision my helper mounted two hundred and sixty specimens, and we hope to push on with this work during the present year.

The Taxidermist renovated the mounted fishes, and these also were stored in the gallery and await labels and systematic arrangement. A few fishes were cast and coloured during the year and one or two plain casts were purchased and will be coloured as opportunity occurs. The superiority of cast fishes over mounted ones is so great that an effort will be made to have all our principal species so represented.

Last year I mentioned that the spirit collection of fishes in the new spirit house had been broadly classified, but a more detailed arrangement was postponed. This collection is being so largely drawn upon for exhibition purposes that it would, at present, be useless to classify it more particularly.

The collections were enriched mainly by donations of which may be specially mentioned a specimen of *Regalecus glesne*, stranded in the harbour and presented by Mr. Fitzwilliam Wentworth—this was mounted and is now in the gallery; a small number of fishes were received from the local committee of the Funafuti Coral-boring Expedition—of these the most interesting was the celebrated Palu, which I found to be *Ruvettus pretiosus*. From Mr. Alex. Duncan we received fishes from Suva, Fiji, while Mrs. T. Nichols and Mr. J. B. Waterhouse sent us specimens from Lord Howe Island. By an arrangement with the Perth Museum (W.A.) we added examples from West Australian waters, while a small series of local food fishes was prepared for the Newcastle Museum by desire of the Minister for Public Instruction.

By the courtesy of Mr. J. A. Brodie, Secretary to the Fisheries Commissioners, I was enabled to visit the fish hatchery at Prospect Reservoir, and at the invitation of the Commissioners attended the experiments conducted for fishing by the electric light, an account of which was published as an Addendum to the Introduction of the "Thetis" Memoir.

#### *Skeletons.*

The collection remains in the condition indicated in my last Report, and, indeed, until further space is provided, but little improvement can be effected.

The articulators prepared seventy-eight skeletons during the year, of which twenty-six were mounted and placed in the gallery. A number of odd bones was added to the anatomical reference series.

It is very rarely that a zoologist has the opportunity of examining a veritable Sea Serpent. In February last the daily papers created considerable interest by announcing that, not only had one been seen, but that portions had actually been brought to Sydney. At the invitation of the manager of the Pacific Islands Company, in company with yourself, I examined the bones, and found them to be the skulls and portions of vertebrae of two Ziphoid Whales (*Petrorhynchus*). The animals were stranded together on Suwarrow Island, and we obtained one skull for the collection.

In addition to the work above indicated, I had the privilege of preparing five plates in illustration of two papers by yourself, and one for my colleague, Mr. T. Whitelegge.

I have, &c.,  
EDGAR R. WAITE.

To the Curator,—

January 25th, 1900.

Sir,

Herewith I have the honour to hand you the Annual Reports for 1899 of the sections under my charge.

#### *Aves.*

Four hundred and thirteen specimens were registered during 1899, made up as follows:—380 acquisitions and 35 re-registered from old collections. The principal acquisitions by presentation were Birds of Paradise from the Rev. C. W. Abel; a new species of Honey-eater from Dr. W. Macgillivray; various birds in spirits from the Rev. H. A. Robertson, New Hebrides; rare waders from Captain Bremer, R.N., and many valuable nests from Messrs. H. R. Elvery, J. Gabriel, E. H. Lane, S. W. Moore, and G. Savidge. The purchases were few and insignificant. By collection, the duplicates principally, have been enhanced by specimens obtained by J. A. Thorpe, at Tarana, and E. R. Waite, at Wallerawang.

Personally,

Personally, I have had little opportunity of doing any field work except on Saturday afternoons, and my annual leave, which is usually devoted to it, was, owing to an accident in the early part of it, devoid of very good results. The most note-worthy additions made by exchange are skins from Celebes, Borneo, and New Guinea, received from Dr. Finsch, of the Leiden Museum, and a specimen of *Paradisca augusta-victoriae* obtained from Mr. Anson Wood. Although in perfect plumage, I regret to report that the Golden-shouldered Parrakeet (*Psephotus chrysopterygius*) kept in confinement for nearly two years is dead, and has been transferred to the Reference Collection.

The Taxidermist has mounted a large number of birds during the year, and the following additions were previously unrepresented in the Group Collection, illustrating the life histories of our Australian avi-fauna:—*Ptilonorhynchus violaceus*, Vieillot; *Malurus leucopterus*, Quoy et Gaim; *Ephthianura tricolour*, Gould; *Megalurus gramineus*, Gould; *Petrochelidon nigricans*, Vieillot; *Ptilotis lewinii*, Swainson; *Corcorax melanorhamphus*, Vieillot; *Corone australis*, Gould; *Gymnorhina leuconota*, Gould; *Graculus melanops*, Latham; *Struthidea cinerea*, Gould; *Oreoica cristata*, Lewin; *Entomyza cyanotis*, Swainson; *Ocyphaps lophotes*, Temm., and a large case containing the bower or play-ground of the Spotted Bower-bird, *Chlamydotera maculata*, Gould. Under the careful supervision of the Assistant-Taxidermist the mounted and skin collections are in a good state of preservation, and free from insect pests.

As far as ordinary routine work in the section under my charge would permit, satisfactory progress has been made with the plates for Monograph II "Nest and Eggs of birds found breeding in Australia." A visit was paid to Melbourne during March for the purpose of examining various ornithological and oological collections, which, through the courtesy of the owners, resulted in my obtaining the loan of a number of rare and valuable eggs for figuring and description. In the preparation of the plates much of my time was taken up at the Government Printing Office. Many photographs of nests by Mr. H. Barnes, Junr., and several taken *in situ* by myself, have also been satisfactorily reproduced. Drawings of the principal birds have been made in the museum by Mr. Neville Cayley, and the blocks are approaching completion.

Small collections of birds and eggs have been determined, and information afforded either personally or by letter.

#### Ethnology.

During the year the collection has been enriched by 587 acquisitions. Numerically the additions exceed those made to the Ornithological Collection, and much of my time has been taken up with their registration, although relieved by yourself as far as possible, both in preparing the labels for the printer and placing the specimens in the cases.

The presentations received in the early part of the year, were, in many instances, made in response to your circular referred to in last year's Report. Many are very rare and of exceeding great value, but only a passing reference can here be made to the most important. As usual, the Rev. H. A. Robertson, of Erromango, has responded liberally to a request for specimens, among the most important of a large collection received from him being a very fine crescent Moon-god or fetish. Captain E. C. Hore, late commander of the missionary steamer "John Williams," has also contributed an interesting collection of shell necklaces, baskets, mats, and dresses from the Gilbert and Ellice Islands. An equally interesting collection from Borneo was presented by Dr. Seligmann, and a very fine sacred drum from Malicollo, by the Rev. T. Watt Leggatt. Spears and arrows were received from Mr. Craig Maginnis, of Tonga; different earthen and pigments, used by the Fijians in decorating their bodies or war implements, from Dr. B. G. Corney; a widow's cap and grave markers from the Darling River District from Mr. C. Kilgour; and a number of shells from Dr. W. E. Roth, the molluscs of which are used as food by the aborigines of the Batavia River District, North Queensland.

By purchase, the additions nearly equal in number those received by presentation. The most noteworthy is a large and varied collection from all parts of Australia, the Austro-Malayan, and Pacific regions, selected from a number of specimens secured during a period of twenty years' collecting by Mr. H. Richards. A smaller, but proportionately interesting, addition from the Caroline Islands, New Britain, New Ireland, and New Guinea was received from the Rev. R. H. Rickard, while small gaps in the collections were filled up by purchases made from Mr. H. Stockdale and Mr. P. Lawrence.

The acquisitions by collection and exchange are few and unimportant.

Under your supervision both the Exhibit and Store Collections are in perfect order and in a good state of preservation.

#### Historical.

The acquisitions to this collection consists of 34 specimens, presented. The most noteworthy was a copper plate, with inscription, and foundation-stone and bricks supposed to have belonged to the original Government House, found while excavating telephone tunnels in Bridge-street, received from the Hon. Varney Parkes, Postmaster-General. Of interest, too, is a piece of basalt from the summit of Cape Horn, collected by Captain Fitzroy when in command of H.M.S. "Beagle" in 1830. This specimen was presented by Captain Fitzroy to Captain P. P. King, the father of the donor, the Hon. Phillip Gidley King, M.L.C.

#### Numismatics.

Six hundred and sixty-two specimens were registered during the year, including 652 acquisitions and 10 registered from the old collection.

The acquisitions are unusually numerous. When first I took charge of the Numismatical Register in 1892, only one specimen was received; in 1893, two specimens; in 1894, two specimens; in 1895, nine specimens. At that time the work connected with this section was nominal; but in 1897, 176 were registered, and this ever-increasing collection in 1899 totalled 652 specimens. Valuable assistance in the registration has been rendered by yourself, and, towards the close of the year, by Mr. W. Thorpe.

The registering of the Numismatical collection from the Technological Museum has entailed much work, but apart from this important exchange the additions exceed all those registered during previous years.

By presentation, the collection has been enriched chiefly by the receipt of a bronze medal struck to commemorate the Diamond Jubilee of Her Majesty Queen Victoria, from the Corporation of the City of London; bronze and silver medals from the Committee of the National Shipwreck Society of New South Wales; a bronze medal from the Royal Humane Society of Australasia, Melbourne; and various coins and tokens presented by members of the staff, Messrs. E. R. Waite, F. T. Clark, B. Lucas, and Allan McCulloch. The additions by purchase consist principally of Australian tokens. The collection transferred from the Technological Museum embrace coins from nearly every country and value, and a number of old Australian tokens.

Apart from the registration, the administration of the Numismatical collection has devolved entirely upon yourself. During the year the collections of Australian tokens were sorted and determined, and British war medals were labelled with printed tickets, mounted, and properly displayed in glass cases in a strong-room retained by you for that purpose.

I have, &c.,  
ALFRED J. NORTH.

To the Curator,—  
Sir,

January, 1900.

I have the honour to hand you herewith my Annual Report on the Conchological Section for the year 1899.

The investigation of the Atoll of Funafuti which had already consumed most of my time for 1896, 1897, and 1898, again occupied my attention, and is at last finished. The part on the Bivalves was written and a supplementary collection procured by later visitors to the atoll, and presented by the Local Committee of the Funafuti Coral-boring Expedition, was studied. The mollusca of Funafuti were then registered and mounted.

After three and a half years detention from systematic museum work, I resumed it by revising the exhibited Australasian shells. The Pelecypoda were re-arranged according to an improved classification of Dr. W. H. Dall. In the remaining orders space was made by withdrawing many small shells, and in their room exhibiting species of larger bulk recently acquired. Defective mounts were repaired and nomenclature corrected as the work proceeded. The overflow of the exhibition cases was stored in a cabinet, the drawers of which are numbered to correspond with the numbers affixed to each case in the public gallery.

After the Funafuti Collection the most important acquisitions registered were an extensive series of South Australian and Central American shells, received in exchange from Prof. R. Tate; valuable donations were received from Captain E. C. Hore, of shells from Lake Tanganyika; from Mr. E. Ashby, of Chitons, from South Australia; and from Mr. A. Dean, of land-shells, from North Queensland.

A collection of shells used by the natives of North Queensland was named for Dr. W. E. Roth.

The wants of the Section under my charge are: firstly, exhibition cases better than those in which the collection is now shown; secondly, a revision of the marine Australian Gasteropoda, that division being now the worst represented in number of species, quality of mounting, or proper labelling; thirdly, some assistance in the discharge of my ever increasing duties.

From time to time my services have been required by you in the Ethnological Section.

Students and inquirers have as usual been supplied with names and other information.

I have, &c.,  
CHARLES HEDLEY.

To the Curator,—  
Sir,

15 January, 1900.

Herewith I have the honour to submit to you my Annual Report for the year 1899.

The number of specimens acquired is considerably less than last year. This is due to fewer exchanges and to a falling-off in the number of donations. Altogether 645 specimens have been registered, of these, about 550 are Crustaceans from the "Thetis" collection. The chief acquisitions are from the following sources:—Mr. J. Berry presented a valuable series of Crustacea from Fiji; Mrs. T. Nichols collected numerous examples of Echinoderms and Crustacea at Lord Howe Island, including several species not hitherto recorded from that extremely rich faunal region; another series of Crustacea and Echinoderms from the same island was collected by Mr. J. B. Waterhouse. The only exchange worthy of note is a useful collection of Invertebrates—chiefly Crustacea—from Western Australia, received from Mr. A. M. Lea.

During the year some attention has been given to the collections, both to the duplicates in store and also to those on exhibit; in regard to the latter, the work of removing the manuscript labels and replacing them with printed ones, has been commenced. The type collection of Sponges has been completed, and the labels for the remainder of the Sponges and the models of Foraminifera are ready and will be placed on the stands as soon as convenient.

Apart from the usual routine work, the "Thetis" collection has occupied nearly the whole of my time. The 550 specimens mentioned above form only a portion of the Crustacea; these, in part, have been generically and specifically determined. During the process of selecting the smaller Crustacea from the bulk material, opportunity was taken to pick out every object of value in all groups, so as to obviate the necessity of sifting it a second time. The result is that many of the smaller specimens of other groups are ready for study, when the opportunity arrives. The manuscript dealing with the Decapoda and Stomatopoda is almost ready for the press, and will form part of Memoir IV.

I have, &c.,  
THOMAS WHITELEGGE.

To the Curator,—  
Sir,

January, 1900.

I have the honour to hand you herewith the Annual Report of the Entomological Section for the year 1899.

*Insecta and Arachnida.*

The number of specimens received as donations is considerably less than that registered during the previous year. Notwithstanding this fact, however, a large percentage was of greater value than those recorded during 1898, as many of them filled up blanks in our collection, and were from such (to us) inaccessible localities as the Island of Funafuti, per the Local Committee of the Funafuti Coral-boring Expedition; Samarai, or Dinner Island, New Guinea, by the Rev. C. W. Abel; Kiriwini Island, New Guinea, by the Rev. S. B. Fellows; and a collection of Butterflies from the Solomon Islands by Lieutenant Roberts, R.N., H.M.S. "Mohawk." Generous donations have also been made to our duplicate collections by Messrs. W. S. Dun, J. A. Thorpe, G. Dixon, and Mrs. H. Forde.

There has been very little collecting done during the year, and this—chiefly Coleoptera—by Dr. E. P. Ramsay.

In the matter of exchanges, there has also been a falling-off in the number of specimens acquired. Under this head a large collection of West Australian Arachnida was received from Mr. A. M. Lea, and one of South American and Madagascan Arachnida from Dr. D. Brancsik. Small collections of European Coleoptera were received from MM. Emil Sandin, and E. Guérin.

The work of revising, remounting, and registering specimens for cabinets and gallery was diligently prosecuted during the year. The task of bringing together and marshalling in systematic order our large collection of Australian Moths, which had been commenced towards the close of 1898, was continued, and I am happy to report that very substantial progress was made. This collection, owing to the vast number of species, occupies a large amount of space. One cabinet, which had been cleared of its miscellaneous contents, has been arranged and completed; and a second, which I set apart and cleared for the same purpose, is now nearly finished. A large number of Beetles, not hitherto displayed, has been set out for exhibition, and so also has a large series of life histories illustrative of our indigenous Coleoptera and Lepidoptera. The total number of registrations under this head—old collection—is 902, an amount greatly in excess of 1898.

The whole of the manuscript labels attached to the exhibited collection of Exotic Lepidoptera have been replaced by printed ones, and those of the Australian Beetles are now receiving attention.

As in previous years, assistance has been extended to students of Australian Entomology, both in respect of the naming and preserving of specimens and in information as to life histories.

The collection is clean and free from insect pests.

I have, &c.,  
W. J. RAINBOW.

APPENDIX III.

SECRETARY AND LIBRARIAN'S ANNUAL REPORT FOR THE YEAR 1899.

To the Trustees of the Australian Museum,—  
Gentlemen,

I have to report that the office work has been efficiently performed by the Staff, documents and papers have been properly filed, and all clerical work duly attended to.

The Accounts have been audited monthly, and found in order by the Finance Committee, and the Annual Balance Sheet was certificated by Mr. J. Hunter Stephenson, Chartered Accountant.

The following is a return of the growth of the Museum as shown by the documents, which have passed through my hands:—

	1888.	1898.	1899.
Letters received ... ..	471	1,104	1,097
Letters written ... ..	385	1,009	993
Letters of thanks sent ... ..	345	1,246	980
Vouchers ... ..	397	405	417
Reports ... ..	25	37	31
Schedules—Books ... ..	.....	.....	704
Purchase ... ..	55	21	13
Exchange ... ..	42	57	45
Donation ... ..	360	776	641
Collection ... ..	.....	62	39
Information ... ..	.....	82	56

The Library continues to receive a large share of time and attention, and current work is kept up to date. The number of volumes received and registered was 507, besides numerous pamphlets and unbound parts.

The Library having out-grown the space provided for the section containing Magazines, Periodicals, and Proceedings of Societies, ten new bookcases were erected, and this room is now completely cased.

Many efforts have been made to exterminate insect pests in the Library with very fair success, and now very few are seen, the Silver-fish being probably the worst. Experiments are being made with formalin vapour, which is expected to have the effect of killing all insect life among the books.

I have, &c.,  
S. SINCLAIR,  
Secretary and Librarian.

APPENDIX IV.

Do	1	ABNORMAL DUCKLING.	Do	2	NESTS OF SATIN BOWER BIRD— <i>Ptilonorhynchus violaceus</i> .
Rev. T. Whan	209	SHELLS—1 <i>Sphærium magillivrayi</i> , 5 <i>Endodonta furverca</i> , 2 <i>Zonites nitidus</i> , 6 <i>Potamopyrgus niger</i> , 15 <i>Tatea rufilabris</i> , 3 <i>Laoma pictilis</i> , 40 <i>Hydrobia castanea</i> , 40 <i>Rissoa melanura</i> , 13 <i>Rissoa mariae</i> , 3 <i>Rissoa brazieri</i> , 30 <i>Alaba</i> sp., 20 <i>Littorina</i> sp., 11 <i>Montacuta semiradiata</i> , 20 (?) <i>Venus</i> Young.	Do	2	NESTS OF ROCK WARBLER— <i>Origma rubricata</i> .
Mr. C. W. Wheeler.	1	STONE AXE-HEAD.	Do	1	NEST OF YELLOW-FACED HONEY-EATER— <i>Ptilotis chrysops</i> .
Mr. H. L. White	5	EGGS OF WHITE-WINGED CROUCH— <i>Corcorax melanorhamphus</i> .	Do	2	NESTS OF LINEATED ACANTHIZA— <i>Acanthiza lineata</i> .
Mr. T. Whitelegge	2	CASELLA ATROMARGINATA.	Mr. F. Wilcox	1	BEETLE— <i>Stigmodera sanguinipennis</i> .
Do	1	FISH— <i>Creedia clathrisquamis</i> .	Capt. T. Williams	1	ANCESTRAL FIGURE—from <i>Mallicollo</i> , New Hebrides.
			Mr. Hy. Wilshire	2	NATIVE CATS— <i>Dasyurus viverrinus</i> .
			Mr. J. L. Winning	3	HAIRWORM— <i>Gordius</i> sp.
			Mr. W. J. Withers	1	MOTH— <i>Trictena labyrinthica</i> .
			Mr. E. Woods	1	ROSEHILL PARAKEET (xanthic variety)— <i>Platyercus eximius</i> .

APPENDIX IX.

EXCHANGES, 1899.

Specimens received.	Specimens forwarded.	Specimens received.	Specimens forwarded.
Botanic Gardens, Sydney. (25)	Botanical—Box of specimens.	Mr. Emil Sandin. (30)	Insects—46 specimens.
Dr. Brancsik. (31)	Insects—268 specimens.	Sisters of the Sacred Heart Convent. (33)	Insects—42 specimens.
Arachnida—253 specimens.			Reptiles—12 specimens.
Myriopoda—28 specimens.		Professor F. Starr. (36)	Ethnological—2 specimens.
Crustacea—8 specimens.		Stawell Technical College. (8)	Minerals—33 specimens
Mr. J. Brazier. (44)	Books—3 pamphlets.	Mr. H. Stockdale. (22)	Ethnological—2 specimens.
Palæontology—3 specimens.			Ethnological—14 specimens.
Mollusca—51 specimens.		Professor R. Tate. (18)	Mollusca—1,597 specimens.
British Museum. (12)			Mollusca—736 specimens.
Mammals—4 specimens.			Insect—1 specimen.
Dr. Caforio. (28)	Mammals—12 specimens.	Technological Museum, Sydney. (2)	Fishes—1 specimen.
Reptile—1 specimen.	Birds—12 specimens.		Ethnological—2 specimens.
Dr. H. Coutiere. (41)	Crustacea—6 specimens.	Fishes—1 specimen.	
Crustacea—6 specimens.		Mollusca—1 specimen.	
Dr. J. C. Cox. (29)	Books—2 pamphlets.	Ethnological—6 specimens.	
Dr. Otto Finsch. (38)	Birds—58 specimens.	Numismatical—519 specimens.	
Skeletons—4 specimens.		Mrs. Trench. (39)	Ethnological—1 specimen.
Birds—59 specimens.			Ethnological—15 specimens.
Mr. E. Guérin. (45)		University of Sydney. (1)	Abnormal—3 specimens.
Books—11 pamphlets	Bryozoa—10 specimens.		Books—119 pamphlets.
Mr. G. Kilgour. (35)	Ethnological—10 specimens.		Birds—3 specimens.
Ethnological—1 specimen.			Casts—5 specimens.
Mr. A. M. Lea. (24)	Insects—213 specimens.	Lieutenant Vaughan. (37)	Birds—12 specimens
Reptiles—33 specimens			Birds—10 specimens.
Arachnida—500 specimens.			Fishes—4 specimens.
Insects—46 specimens.			Reptiles—10 specimens.
Mollusca—5 specimens.			Insects, spiders, &c.—11 specimens
Dr. T. H. May. (27)	Mollusca—4 specimens.	Western Australian Museum and Art Gallery. (9)	Mammals—10 specimens.
Mollusca—6 specimens.			Birds—2 specimens.
Professor Paul Mayer. (34)	Crustacea—9 specimens.		Fishes—21 specimens.
Mr. D. A. Porter. (23)	Glass Tubes—24 tubes.		Ethnological—2 specimens.
Insects—41 specimens.			Photographs—8 specimens.
Minerals—2 specimens.		Mr. Anson Wood. (26)	Bird—1 specimen.
			Bird—2 specimens.

APPENDIX X.

RETURN OF INFORMATION SUPPLIED TO THE PUBLIC, 1899.

Name.	Details.	Name.	Details.
Mr. C. E. Andrews ...	Identification of subfossil Corals and Shells.	Mr. H. J. McCooey ...	Determination of a Skink.
Mr. Ansel .....	Giving information as to <i>Moloch horridus</i> .	Mrs. C. J. McMaster...	Showing Ornithological and Oological Col- lections.
Botanic Gardens .....	Naming Birds in Gardens.	Mr. W. Macpherson...	Giving information as to Bark of a Tree bored by the Larva of a Beetle.
Mr. J. A. Bragg.....	Giving information as to Ayraud's Leather- jacket; identification of Fishing Frog.	Dr. A. M. Morgan.....	Showing Australian Ornithological and Oological Cabinet Collections.
Mr. J. S. Bray .....	Supplying information about a Sand Crab.	Dr. Neil .....	Giving information as to <i>Saprinus laetus</i> and Family Histeridæ.
Rev. — Coombs.....	Naming Silurian Corals.	Messrs. Pender Bros....	Determining Wasp, and giving Life History.
Dr. J. C. Cox.....	Naming N.S. Wales Fossils; Queensland Fossils and Land Shells; Life History of Sandfly, and drawing figure in expla- nation.	Mr. J. W. Pidgeon ...	On Development of the Pleuronectidæ.
<i>Daily Telegraph</i> .....	Giving information as to Bite of Bulldog Ant.	Mr. S. W. Pring .....	Giving information as to Collecting and Preserving Insects.
Prof. T. W. E. David..	Naming Collection of Corals from Funafuti.	Mr. D. J. Quinn.....	Giving information as to Young of Brown- banded Snakes.
Dr. T. S. Dixon .....	List of Australian Leeches.	Mr. A. V. W. Rawlings	Identification of supposed "Sea Serpent" Bones.
Mr. H. S. Dove .....	Determination of Tasmanian Araneidæ.	Mr. H. Selkirk .....	Determination of Australian Silk-worm Moths.
Mr. J. Edwards.....	Giving information as to White Ants, and the means of combating them.	Mr. H. M. Shelley ....	Identification of Legless Lizard.
Fairfax and Roberts ...	Identification of Pearl Shell from New Caledonia.	Mr. Thomes Steel .....	Naming Crustacea from Fiji.
Fisheries Department..	Giving information as to Oyster Worm.	Prof. T. P. A. Stuart...	Determination of Crocodile Dugong Bones; List of Australian Mosquitoes, with notes.
Mr. E. T. Fowell .....	Naming Australian and Exotic Coleoptera.	Mr. G. Sweet .....	Identification of part of a Cretacean Man- dible from Tertiary Beds of Hobson's Bay.
Mr. W. L. R. Gipps ...	Determination of Marsupial Teeth.	<i>Town and Country</i> <i>Journal.</i>	Numerous Replies to Correspondents on various subjects.
Government Geologist, Perth, W.A.	Naming West Australian Fossils.	Visitor.....	Identification of Ostracion; identification and habits, &c., of Bridled Wallaby.
Government Geologist, Sydney	Identification of Specimen supposed to be a Mineral.	Mr. J. A. Wall .....	Naming Dragon Fly and Centipedes.
Mr. Hammond .....	Giving information as to Ornithological and Ethnological Collections.	Mr. E. Webb and Friend.	Exhibiting Cabinet Ornithological and Oological Collections.
Lieut. E. D. Jephson...	Naming Island Lepidoptera.	Mr. F. H. Westmacott	As to Appliances for Collecting, Methods of Preservation, &c.
Dr. H. Kreuger .....	Giving information as to Method of Captur- ing, Preserving, and Packing Mosquitoes for transmission by post.	Rev. E. S. Wilkinson..	Giving information as to Collecting and Studying Araneidæ, and displaying Specimens.
Mr. E. H. Lane .....	Giving information as to Ornithological and Oological Collections.		
Dr. W. MacGillivray ..	Determination of Bird-skins.		
Mr. Craig Maginess and Friend.	Describing Collections.		

APPENDIX XI.

ADDITIONS TO THE LIBRARY, 1899.

Reg. No	Books.	How acquired.	Reg. No.	Books.	How acquired.
PART I.—BOOKS.			9561	BROWN (Thomas). <i>Conchologist's (series) Text- Book, embracing the Arrangements of Lamarck and Linnæus, with a Glossary of Technical Terms.</i> 1 vol. 8vo. Glasgow, 1833. Presented by C. Hedley.	
9460	AGASSIZ (Alexander). <i>A Visit to the Great Barrier Reef of Australia in the steamer "Croydon" during April and May, 1896. (Bull. Mus. Comp. Zool., xxviii, 4, 1898.)</i> 1 vol. 8vo. Cambridge, Mass. 1898. Purchased		9571	BURROW (E. I.). <i>Elements of Conchology, according to the Linnean System. New edition.</i> 1 vol. 8vo. London, 1825. Presented by C. Hedley.	
9614	ALEXANDER (W. D.). <i>A Brief History of the Hawaiian People.</i> 1 vol. 8vo. New York, Cincinnati, and Chicago, 1899. Presented by Dept. Public Instruction, Hawaii.		9388	BURNS, PHILIP, AND COMPANY. <i>Western Pacific Islands by the Island Line of Steamers.</i> 1 vol. 8vo. Sydney, 1898. Presented by P. G. Black.	
9442	ANDRÉ (Ch.). <i>Relations des Phénomènes Météor- ologiques déduites de leurs Variations diurnes et annuelles.</i> 1 vol. 8vo. Lyon, 1892. Presented by Kon. Nat. Ver. van Ned. Ind. Batavia.		9455	CAMPBELL (F. A.). <i>A Year in the New Hebrides, Loyalty Islands, and New Caledonia. With an account of the Early History of the New Hebrides Mission, by A. J. Campbell; A Narrative of the Voyages of the "Day- spring," by D. McDonald; and an Appendix: Contributions to the Phytography of the New Hebrides and Loyalty Islands, by Ferd. von Mueller.</i> 1 vol. 8vo. Geelong and Melbourne, 1873. Purchased	
9503	APGAR (Austin C.). <i>Birds of the United States, East of the Rocky Mountains.</i> 1 vol. 8vo. New York, &c., 1898. Purchased		9504	COGHLAN (T. A.). <i>Wealth and Progress of New South Wales. Eleventh Issue.</i> 1 vol. 8vo. Sydney, 1899. Presented by Government Statistician.	
9397 to 9404	BELLARDI (Luigi). <i>Molluschi dei Terreni Ter- ziari del Piemonte e della Liguria; parte 1- 6, 1873-1890.</i> SACCO (Federico); do., parts 7-25, 1890-98. In 3 vols. 4to. Roma, Torino, Firenze, 1873- 1882; and 5 vols. 4to. Torino, 1884-1898. Purchased		9560	COLOMB (Sir J. C. R.). <i>The Defence of Great and Greater Britain.</i> 1 vol. 8vo. London, 1880. Presented	
9453	BERNIER (Julien). <i>Étude sur les Dialects Néo- Caledoniens, Australiens et autres.</i> 1 vol. 8vo. Nouméa, 1899. Presented		9855	DOBSON (G. E.). <i>Monograph of the Insectivora. Part 3, fasc. 1.</i> 1 vol. 4to. London, 1890. Purchased	
9615	BESANT (Walter). <i>Captain Cook (English Men of Action).</i> 1 vol. 8vo. London, 1894. Purchased				

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
9859	CORALS. Collected Works on Fossil Corals. 1 vol. 8vo. Purchased		9374	FARMER (Sarah S.) Tonga and the Friendly Islands. 1 vol. 8vo. London, 1885. Purchased	
	Contains:—		9413	FAUNA CHILENSIS. Abhandlungen zur Kenntniss der Zoologie Chiles, von Dr. L. Plate. Heft III Zool. Jahrb. Suppl. IV. 1 vol. 8vo. Jena, 1898. Purchased	
	1. Några iakttagelser öfver Zoantharia rugosa, af G. Lindström. <i>Ofv. K. Vet. Akad. Forh.</i> , 1865.		9600 } FOSTER, (George). A voyage Round the World in His Britannic Majesty's Sloop "Resolution," commanded by Captain James Cook, during the years 1772, 1773, 1774, 1775. 2 vols. 4to. London, 1777. Purchased		
	2. Die Zoantharia perforata der palæozoischen Periode, von K. v. Seebach. <i>Zeits. D. Geol. Ges.</i> , xvi, 2, 1866.		9601 }		
	3. Om tvänne nya öfversiluriska koraller från Gotland, af G. Lindström. <i>Ofv. K. Vet. Akad. Forh.</i> , 1868.		9458	GARDINER (J. Stanley). The Coral Reefs of Funafuti, Rotuma, and Fiji, together with some notes on the Structure and Formation of Coral Reefs in general. <i>Proc. Cambr. Phil. Soc.</i> ix., 8, 1898. 1 vol. 8vo. Cambridge, 1898. Purchased	
	4. Om operkularbildningen hos några nutida och siluriska koraller, af G. Lindström. <i>Ofv. K. Vet. Akad. Forh.</i> , 1870.		9439	GREVILLE (Edward) (Editor). Year Book of Australia for 1899. 1 vol. 8vo. London, Sydney, &c., 1899. Purchased	
	5. Beschreibung einer neuen aus Nordamerika stammenden, devonischen Art der Zoantharia rugosa, von W. Dybowski. <i>Ver. Rus. K. Miner. Ges.</i> (2), viii, 1873.		9456	HADDON (Alfred C.) Evolution in Art, as illustrated by the Life Histories of Designs. 1 vol. 8vo. London, 1895. Purchased	
	6. Några anteckningar om Anthozoa tabulata, af G. Lindström. <i>Ofv. K. Vet. Akad. Forh.</i> , 1873.		9856	FREERES DE LA COMPAGNIE DE JESUS. Mémoires Concernant L'Histoire Naturelle de L'Empire Chinois. Tome II, Part I. 1 vol. 4to. Chang Hai, 1888. Purchased	
	7. Beschreibung einiger neuen oder wenig bekannten Arten der Zoantharia rugosa aus der Kohlenformation Russlands, von W. Dybowski. <i>Ver. K. Rus. K. Miner. Ges.</i> (2), viii, 1873.		9537	HOBNE (John). A Year in Fiji. 1 vol. 8vo. London, 1881. Purchased	
	8. Ueber einige Anthozoen des Devon, von Clemens Schlüter. <i>Zeits. Deut. Geol. Ges.</i> , 1881.		9570	HUDSON (G. V.) New Zealand Moths and Butterflies (Macro-Lepidoptera). 1 vol. 4to. London, 1898. Purchased	
	9. Anteckningar om silurlagren på Carlsörarne, af G. Lindström. <i>Ofv. K. Vet. Akad. Forh.</i> , 1882.		9565	JAYNE (Horace). Mammalian Anatomy. A preparation for Human and Comparative Anatomy. Part I. The Skeleton of the Cat compared with the Skeleton of Man. 1 vol. 8vo. London and Philadelphia, 1898. Purchased	
	10. Silurische Korallen aus Nord-Russland und Sibirien, von G. Lindström. <i>K. Sv. Vet. Akad. Handl.</i> , vi, 18, 1881 (1882.)		9548	KIRK (Thomas). Students' Flora of New Zealand and the outlying Islands. 1 vol. 4to. Wellington, N.Z., 1899. Presented by Gov. Printer, N.Z.	
	11. Om de Palæozoiska Formationernas Operkelbärande koraller, af G. Lindström. <i>K. Sv. Vet. Akad. Handl.</i> , vii, 4, 1881 (1882.)		9536	LAWRY (Walter). Friendly and Feejee Islands in 1847; with Appendix on Manners, Customs, &c., by Elizabeth Hoole. 1 vol. 8vo. London, 1850. Purchased	
	12. Index to the Generic Names applied to the Corals of the Palæozoic Formations, by G. Lindström. <i>K. Sv. Vet. Akad. Handl.</i> , viii, 9, 1882 (1883.)		9539	LUSCHAN (Dr. V.) Das Würfholz in Neu-Holland und in Oceanien (with MS. translation by M. M. Meredith). ( <i>Sonder-Abdruck aus der Bastian-festschrift</i> ). 1 vol. 8vo. Berlin, 1896. Purchased

The water resources of Indiana and Ohio; by Frank Leverett. New developments in well-boring and irrigation in South Dakota; by N. H. Darton. Water storage and construction of dams; by J. D. Schuyler.	
9472	UNITED STATES FISH COMMISSION. Bulletin, Vol. XVII, for 1897. George M. Bowers, Commissioner. 1 vol. 4to. Washington, 1898.	Presented	9518-19	— Part 5. Mineral Resources of the United States. 2 vols. 4to. Washington, 1897.	Presented
	Contains:— Fishes of the Klamath River Basin, by Charles H. Gilbert. Salmon Investigations in the Columbia River Basin and elsewhere on the Pacific Coast, 1896, by Barton Warren Evermann and Seth Eugene Meek. Fishes found in the vicinity of Wood's Hole, by Hugh M. Smith. Salmon Fishery of Penobscot Bay and River in 1895 and 1896, by Hugh M. Smith. Descriptions of New or Little-known Genera and Species of Fishes from the United States, by Barton W. Evermann and William C. Kendall. The Work of the United States Fish Commission from 1st December, 1896, to 3rd November, 1897, by John J. Brice. Notes on the Halibut Fishery of the North-west Coast in 1896, by A. B. Alexander. Proceedings and Papers of the National Fishery Congress. The Freshwater Pearls and Pearl Fisheries of the United States, by George W. Kunz.			Contains:— Iron Ores; by John Birkinbine. Iron and Steel and Allied Industries in all Countries. Gold and Silver; by James M. Swank. Witwatersrand Banket, with Notes on other Gold-bearing Pudding Stones; by George F. Becker. Copper; by Charles Kirchhoff. Lead; by Charles Kirchhoff. Zinc; by Charles Kirchhoff. Aluminum, Quicksilver; by R. L. Packard. Manganese Ores; by John Birkinbine. Nickel and Cobalt; by Joseph Wharton. Antimony, Platinum; by Edward W. Parker. Coal; by Edward W. Parker. Coke; by Edward W. Parker. Petroleum; by F. H. Oliphant. Natural Gas; by F. H. Oliphant. Asphaltum; by Edward W. Parker. Stone; by William C. Day. Brownstones of Pennsylvania; by T. C. Hopkins. The Bedford Oolitic Limestone; by T. C. Hopkins and C. E. Siebenthal. Soapstone; by Edward W. Parker. Statistics of the Clay-working Industries in the United States in 1896; by Jefferson Middleton. The Clay-working Industry in 1896; Cement; by Heinrich Ries. Precious Stones; by George F. Kunz. Abrasive materials; Phosphate Rock; by Edward W. Parker. Sulphur and Pyrites; by Edward W. Parker. Gypsum; by Edward W. Parker. Salt; by Edward W. Parker. Fluorspar and Cryolite; by Edward W. Parker. Mica; by Edward W. Parker. Asbestos; Graphite; by Edward W. Parker. Mineral Paints; by Edward W. Parker. Barytes; Fuller's Earth; Lithographic Stone; by Edward W. Parker. Feldspar and Quartz; by Heinrich Ries. Mineral Waters; by Albert C. Peale.	
9595	UNITED STATES GEOLOGICAL SURVEY. Monograph, Vol. xxix. Geology of Old Hampshire County, Massachusetts, by Benjamin Kendall Emerson. 1 vol. 4to. Washington, 1898.	Presented	9578	— Nineteenth Annual Report. 1897-98. Charles D. Walcott, Director. 4 vols. 8vo. Washington, 1898-99.	Presented
9394	— Monograph, Vol. xxx. Fossil Medusæ, by Charles Doolittle Walcott. 1 vol. 4to. Washington, 1898.	Presented	9579	— Part 1. Director's Report. 1898. — Part 4. Hydrography. 1899.	Presented
9500-97	— Monograph, Vol. xxxi. Geology of the Aspen Mining District, Colorado, by Josiah Edward Spurr. 1 vol. 4to., and 1 vol. Imp. Atlas. Washington, 1898.	Presented		Contains:— Report of Progress of Stream Measurements for 1897; by F. H. Newell and others. Water-power Streams of Maine; by Dwight Porter. Water Supply of San Bernardino Valley; by J. B. Lippincott. The Rock Waters of Ohio; by Edward Orton. Preliminary Report on the Geology and Water Resources of Nebraska, West of the One hundred and third Meridian; by N. H. Darton.	
9598	— Monograph, Vol. xxxv. The Later extinct Floras of North America, by John Strong Newberry; a posthumous work, edited by Arthur Hollick. 1 vol. 4to. Washington, 1898.	Presented	9580-81	— Part 6. Mineral Resources of the United States, 1897. David T. Day. 1898.	Presented
9715-16	— Bulletins, Nos. 88, 89, 1898; Nos. 148, 149, 1897. 2 vols. 8vo. Washington, 1897-98.	Presented		Contains:— Iron Ores; by John Birkinbine. The American Iron Trade in 1897 and immediately Preceding Years; by James M. Swank. The Foreign Iron Trade in 1897, and immediately Preceding Years; by James M. Swank. Manganese Ores; Gold and Silver; by John Birkinbine. Copper; by Charles Kirchhoff. Lead; by Charles Kirchhoff. Zinc; by Charles Kirchhoff. Aluminium, Quicksilver; Nickel and Cobalt; Antimony; Chromic Iron Ore; by Edward W. Parker. Platinum; by David T. Day. Coal; Edward W. Parker. Coke; Edward D. Parker. Petroleum; by F. H. Oliphant. Natural Gas; by F. H. Oliphant. Asphaltum; by Edward W. Parker. Stone; by William C. Day. Soapstone; by Edward W. Parker. Clay Statistics; by Jefferson Middleton. The Kaolins and Fireclays of Europe; the Clay-working Industry of the United States in 1897; Cement; by Heinrich Ries. Precious Stones; by George F. Kunz. Abrasive Materials; Phosphate Rock; Edward W. Parker. Sulphur and Pyrites; by Edward W. Parker. Gypsum; by Edward W. Parker. Salt; by Edward W. Parker. Fluorspar and Mica; by Edward W. Parker. Asbestos and Graphite; by Edward W. Parker. Mineral Paints and Barytes; Fuller's Earth; Quartz and Feldspar; by Edward W. Parker. Mineral Waters; Mineral Resources of Hawaii; by A. C. Peale. Memorandum on the Mineral Resources of the Philippine Islands; by George F. Becker.	
9543	— Eighteenth Annual Report to the Secretary of the Interior. Charles D. Walcott, Director. 1896-97. Part I, Director's Report. 1 vol. 4to. Washington, 1897.	Presented			
9517	— Part 2. Papers chiefly of a Theoretic Nature. 1 vol. 4to. Washington, 1898.	Presented			
	Contains:— The Triassic formation of Connecticut; by W. M. M. Davis. Geology of the Edwards Plateau and Rio Grande Plain adjacent to Austin and San Antonio, Texas, with reference to the occurrence of underground waters; by R. T. Hill and T. W. Vaughan. A table of the North American Tertiary horizons, correlated with one another, and with those of Western Europe, with annotations; W. H. Dall. Glaciers of Mount Rainier; with a paper by G. O. Smith on The Rocks of Mount Rainier; by L. C. Russell. The age of the Franklin white limestone of Sussex County, New Jersey; by J. E. Wolff and A. H. Brooks. A geological sketch of San Clemente Island; by W. S. T. Smith. Geology of the Cape Cod District; by N. S. Shaler. Recent earth movement in the Great Lakes region; by G. K. Gilbert.				
9514	— Part 3. Economic Geology. 1 vol. 4to. Washington, 1898.	Presented			
	Contains:— Reconnaissance of the Gold-fields of Southern Alaska, with some Notes on General Geology; by G. F. Becker. Geology of the Yukon Gold District, Alaska; by J. E. Spurr; with an introductory chapter on the history and present condition of the district, by H. B. Goodrich; by J. E. Spurr and H. B. Goodrich. Some coal-fields of Puget Sound; by B. Willis. Geology and Mineral resources of the Judith Mountains of Montana; by W. H. Weed and L. V. Pirsson. The Mining districts of the Idaho Basin and the Boise Range, Idaho, by Waldemar Lindgren; with a report on the fossil plants of the Payette formation; by F. H. Knowlton and W. Lindgren. Preliminary report on the mining industries of the Telluride quadrangle, Colorado; by C. W. Furgerson.

9523	UNITED STATES COMMISSION OF FISH AND FISHERIES. Part xxiv. Report of the Commissioner for the year ending June, 1898. 1 vol. 8vo. Washington, 1899.	Presented	9522	UNITED STATES COMMISSION OF FISH AND FISHERIES. Proceedings, vol. xx. 1 vol. 8vo. Washington, 1898.	Presented
	Contains:— Report of the Commissioner. Report on Mackerel Investigations in 1897; by J. Percy Moore. Report on Fishes obtained by the Steamer "Albatross" in the vicinity of Santa Catalina Island and Monterey Bay; by Charles H. Gilbert. Notes on the Extent and Condition of the Alewife Fisheries of the United States in 1896; by Hugh M. Smith. Report on the Oyster Beds of Louisiana; by H. F. Moore. The Shad Fisheries of the Atlantic Coast of the United States, by Charles H. Stevenson. List of Fishes collected at the Revillagigedo Archipelago and Neighbouring Islands; by David Starr Jordan and R. C. McGregor. Report on Investigations by the U.S. Fish Commission in Mississippi, Louisiana, and Texas in 1897; by Barton W. Evermann. List of Publications of the U.S. Fish Commission available for Distribution, March 1st, 1899. Report on the Exhibit of the U.S. Fish Commission at the Tennessee Centennial Exposition in 1897; by W. de C. Ravenel. Notes on Cestode Parasites of Fishes; by Edwin Linton. Notes on Trematode Parasites of Fishes; by Edwin Linton. Preliminary Diagnoses of New Mammals of the Genera Lynx, Urocyon, Spilogale, and Mephitis, from the Mexican Boundary Line; by Edgar A. Mearns. Preliminary Diagnoses of New Mammals of the Genera Mephitis, Docalaphus, and Dicotyles, from the Mexican Border of the United States; by Edgar A. Mearns. Preliminary Diagnoses of New Mammals of the Genera Scurus, Castor, Neotoma, and Sigmodon, from the Mexican Border of the United States, by Edgar A. Mearns. Description of a New Crustacean of the Genus Sphaeroma from a Warm Spring in New Mexico, by Harriet Richardson. Notes on a Collection of Fishes from the Colorado Basin, in Arizona; by Norman Bishop Schofield. Revision of the Orthopteran Group Melanopli (Acrididae), with Special Reference to North American Forms; by Samuel Hubbard Scudder. Supplement to the Annotated Catalogue of the Published Writings of Charles Abiathar White, 1886-1897; by Timothy W. Stanton. Revision of the Deep-water Mollusca of the Atlantic Coast of North America, with Descriptions of New Genera and Species. Part I.—Bivalvia; by Addison E. Verrill and Katharine J. Bush. Contributions to Philippine Ornithology. Part I.—A List of the Birds known to inhabit the Philippine and Palawan Islands, showing their Distribution within the Limits of the two Groups; by Dean C. Worcester and Frank S. Bourns. Contributions to Philippine Ornithology. Part II.—Notes on the Distribution of Philippine Birds; by Dean C. Worcester.			Contains:— Description of a new Blenny-like Fish of the Genus Opisthocentrus, collected in Vulcano Bay, Port Mororan, Japan, by Nicolai A. Grebnikski; by Tarleton H. Bean and Barton A. Bean. Contributions to Philippine Ornithology. Part I.—A List of the Birds known to inhabit the Philippine and Palawan Islands, showing their Distribution within the limits of the two Groups; by Frank S. Bourns. Revision of the Deep-water Mollusca of the Atlantic Coast of North America, with Descriptions of New Genera and Species. Part I.—Bivalvia; by Katharine J. Bush. A Revision of Tropical African Diplopoda of the Family Strongylosomatidae; by O. F. Cook. Observations on the Astacidae in the United States National Museum and in the Museum of Comparative Zoology, with Descriptions of New Species; by Walter Faxon. Notes on a Collection of Fishes from the Colorado Basin in Arizona; by Charles Henry Gilbert and Norman Bishop Schofield. American Leaf-hoppers of the Sub-family Typhlocybinae; by Clarence P. Gillette. New Species of Coleoptera of the Family Chrysomelidae, with a short Review of the Tribe Chlamydini; by Martin L. Linell.

P 3 (41)	— Nests and Eggs of the Yellow-breasted Thickheads ( <i>Pachycephala</i> ). ( <i>Geelong Naturalist</i> , v, 2, 1896.)	Presented	P 31 (25)	— Sur le Mode de Formation des Coprolithes hélicoïdes, d'après les faites observés à la Ménagerie des Reptiles sur les Protoptères. ( <i>Comptes rendus</i> , 1896.)	
P 3 (42)	— Nests and Eggs (with Descriptions of two new Species of certain Australian Birds). ( <i>Geelong Naturalist</i> , vi, 1, 1896.)	Presented	P 31 (23)	— Remarque Sur l'Alimentation chez les Ophiidiens. ( <i>Comptes rendus</i> , 1892.)	
P 3 (50)	DONALD (C. W.) On the Penguins observed during the Sealing Voyage of the s.s. "Active" in the neighbourhood of Erebus and Terror Gulf. ( <i>Proc. Roy. Soc. Ed.</i> , 1893.)	Presented by Prof. D. W. Thompson	P 31 (16)	— Sur le Genre Megapleuron. ( <i>Comptes rendus</i> , 1892.)	
P 3 (35)	FINSCH (O.) Charakteristik der Avifauna Neuseelands als Zoo-geographische Provinz in ihren Veränderungen und deren Ursachen. ( <i>"Globus,"</i> lxxix, 2, 1896)	Presented by R. Etheridge	P 31 (24)	— Sur la Rhinatremia bivattatum Cuvier, de l'Ordre des Batraciens Péromèles. ( <i>Comptes rendus</i> , 1895.)	Presented by J. D. Ogilby.
P 3 (36)	— Erfahrungen über meine "Selecta-Hühner" (× Crèveceur Brahma). ( <i>Mitt. Ornith. Ver. Wien, "Die Schwalbe,"</i> xvi.)	Presented by R. Etheridge	PISCES.		
P 3 (51)	GURNEY (J. H.) On the Comparative Ages to which Birds live. ( <i>Ibis</i> , Jan., 1899.)	Presented	P 5 (18)	CANTO (C. Perez). Estudio sobre algunos Escualos de la Costa de Chile, Valparaiso, 1886.	Presented by Mus. Nat. Hist. Valp.
P 3 (52)	— The Bearded Titmouse, <i>Panurus biarmicus</i> , Lin. ( <i>Trans. Norf. and Norw. Nat. Soc.</i> vi., 1899.)	Presented	P 5 (10)	OGILBY (J. Douglas). New Genera and Species of Fishes. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	
P 3 (46)	NORTH (A. J.) List of Birds collected by the Calvert Exploring Expedition in Western Australia. With Field Notes by G. A. Keartland. ( <i>Trans. Roy. Soc. S.A.</i> , xxi, 2, 1898.)	Presented	P 5 (11)	— Additions to the Fauna of Lord Howe Island. ( <i>Proc. Linn. Soc., N.S.W.</i> , 1898.)	Presented
P 3 (48)	— Descriptions of the Nests and Eggs of Six Species of Australian Birds. ( <i>Vict. Nat.</i> xvi., 1, 1899.)	Presented	P 5 (15)	SEQUES (François). Deux Monstres Gastéropages adultes de Salmonides. ( <i>Bull. Soc. Zool. Fr.</i> , 1895.)	Presented by J. D. Ogilby.
P 3 (44)	SALTER (J. H.) Ornithological Notes from Mid-Wales. ( <i>The Naturalist</i> [41], ii, 17, 1898.)	Purchased	P 5 (13)	VAILLANT (Léon). Remarques Sur les Caractères qui peuvent permettre de distinguer le <i>Sternotherus nigricans</i> , Lacépède, du <i>Sternotherus castaneus</i> , Schweigger. ( <i>Bull. Soc. Philomathique de Paris</i> , 1891.)	
P 3 (49)	SALVADORI (Tommaso). Intorno ad una piccola Collezione di Uccelli fatta lungo il fiume purari nella nuova Guinea Orientale-meridionale. ( <i>Viaggio di Lamberto Loria nella Papuasie orientale</i> , xxi.)		P 5 (14)	— Sur la Possibilité du Transport des Galets dans l'Appareil digestif des Poissons. ( <i>Bull. Soc. Geol. Fr.</i> [3], xx, 1892.)	
			P 5 (15)	— Les Poissons d'Aquarium. Conférence faite à la Société nationale d'Acclimatation le 24 avril, 1891. ( <i>Rev. Sci. Nat. Appliquées</i> , 1892.)	Presented by J. D. Ogilby.
			MOLLUSCA.		
			P 6 (30)	HEDLEY (Charles). Description of a new Genus, <i>Austrosarepta</i> , and Notes on other Mollusca from New South Wales. ( <i>Proc. Linn. Soc., N.S.W.</i> , xxv, 3, 1899.)	Presented
			P 7 (105)	JANET (Charles). Sur une cavité du tégument servant, chez les Myrmicinae, à étaler, au contact du l'air, un produit de sécrétion. ( <i>Comptes rendus Acad. Sci</i> cxvi, 1898, p. 1168.)	Presented

Reg. No.	Books.	How acquired.	Reg. No.	Books.	How acquired.
P 20 (28)	JANET (Charles). Les Habitations à Bon Marché dans les de Villes Moyenne Importance. ( <i>Comptes rendus. Congr. Intern. des Hab. a Bon Marche.</i> ) Bruxelles, 1897.	Presented	P 7 (112)	FROGGATT (Walter W.). San Jose Scale—Aspidiotus perniciosus, Comstock. ( <i>Dep. Agr., N.S.W., Misc. Pub., No. 197. Agr. Gaz., N.S.W., 1897.</i> )	
P 6 (29)	MELVILL (J. Cosmo). Upon the Principles of Nomenclature and their Application to the Genera of recent Mollusca. ( <i>Journ. Conch., 1896.</i> )	Presented by C. Hedly.	P 7 (113)	— Further Notes on San Jose Scale. ( <i>Dep. Agr., N.S.W., Misc. Pub., 264. Agr. Gaz., N.S.W., 1898.</i> )

APPENDIX XII.

PUBLICATIONS OF THE AUSTRALIAN MUSEUM UP TO THE END OF 1899.

I.—CATALOGUES.

1. Catalogue of the Specimens of Natural History and Miscellaneous Curiosities in the Australian Museum, by G. Bennett. 1837. 8vo. pp. 71. (Out of print.)
2. Catalogue of Mammalia in the Collection of the Australian Museum, by G. Krefft. 1864. 12mo. pp. 133. (Out of print.)
3. Catalogue of the Minerals and Rocks in the Collection of the Australian Museum, by G. Krefft. 1873. 8vo. pp. xvii-115. (Out of print.)
4. Catalogue of the Australian Birds in the Australian Museum, by E. P. Ramsay, Part I, Accipitres, 1876. 8vo. pp. viii-64, and Supplement, 1890. Part II, Striges, 1890. 8vo. pp. 35. Second edition, revised by A. J. North, 1898. Part I, Accipitres. 8vo. pp. xii-74. Part II, Striges. 8vo. pp. vi-31. Part III, Psittaci, 1891. 8vo. pp. viii-110. Part IV, Halcyones, 1894. 8vo. pp. viii-24.
5. Catalogue of the Australian Stalk and Sessile-eyed Crustacea, by W. A. Haswell. 1892. 8vo. pp. xxiv-324, with 4 plates.
6. Catalogue of the Library of the Australian Museum. 1883. 8vo. pp. 178, with two supplements. (Out of print.) New edition. Part III, Pamphlets.
7. Catalogue of a Collection of Fossils in the Australian Museum, with Introductory Notes, by F. Ratte. 1883. 8vo. pp. xxviii-160.
8. Catalogue of the Australian Hydroid Zoophytes, by W. M. Bale. 1884. 8vo. pp. 198, with 19 plates.
9. Descriptive Catalogue of the General Collection of Minerals in the Australian Museum, by F. Ratte. 1885. 8vo. pp. 221, with a plate.
10. Catalogue of Echinodermata in the Australian Museum, by E. P. Ramsay. Part I, Echini, 1885. 2nd edition, 1890. 8vo. pp. viii-54, with 5 plates.
11. Descriptive Catalogue of the Medusæ of the Australian Seas. Part I, Scyphomedusæ. Part II, Hydromedusæ, by R. von Lendenfeld. 1887. 8vo. pp. 32 and 49.
12. Descriptive Catalogue of the Nests and Eggs of Birds found breeding in Australia and Tasmania, by A. J. North. 1889. 8vo. pp. iv, v-407, with 21 plates.
13. Descriptive Catalogue of the Sponges in the Australian Museum, by R. von Lendenfeld. 1888. 8vo. pp. xiv-260, with 12 plates.
14. Catalogue of the Fishes in the Australian Museum. Part I, Palæichthyan Fishes, by J. Douglas Ogilby. 1888. 8vo. pp. 34.
15. Catalogue of the Marine Shells of Australia and Tasmania, by J. Brazier. Part I, Cephalopoda, 1892. 8vo. pp. 20. Part II, Pteropoda, 1892. 8vo. pp. 22. Part III, Gasteropoda (Murex), 1893. 8vo. pp. 32.
16. Catalogue of Australian Mammals, with Introductory Notes on General Mammalogy, by J. Douglas Ogilby, 1892. 8vo. pp. xvi-144.
17. Descriptive Catalogue of the Tunicata in the Australian Museum, by W. A. Herdman. 8vo. pp. xviii-139. 45 plates.

II.—MONOGRAPHS.

1. Australian Lepidoptera and their Transformations, by the late A. W. Scott, with Illustrations by his daughters. Mrs. Morgan and Mrs. Forde. Edited and revised by Mr. Forde and A. S. Olliff. Vol. II, Parts 1, 2, 3, and 4, and index, fol. 1890-1898. pp. 36, and 12 plates.

III.—MEMOIRS.

1. History and Description of the Skeleton of a new Sperm Whale in the Australian Museum, by W. S. Wall. 1851. 8vo. pp. 66, with plates. Reprint, 1887.
2. Lord Howe Island: its Zoology, Geology, and Physical Characters. 1889. 8vo. pp. viii-132, with 10 plates.
3. The Atoll of Funafuti, Ellice Group: its Zoology, Botany, and General Structure, based on Collections made by Mr. C. Hedley. 1896-1900. 8vo. pp. vii-609. 27 plates.
4. Scientific Results of the Trawling Expedition of H.M.C.S. "Thetis." Part I, 23rd December, 1899. 8vo. pp. 132. 32 plates and chart. Part II, 23rd May, 1900. 8vo. pp. 67. 4 plates.

IV.—GUIDES.

1. Guide to the Australian Fossil Remains in the Australian Museum. 1870. 8vo. (Out of print.)
2. Guide to the Contents of the Australian Museum. 1883. 8vo. pp. iv-56. (Out of print.)
3. Guide to the Contents of the Australian Museum. 1890. 8vo. pp. 156.

V.—MISCELLANEOUS.

## V.—MISCELLANEOUS.

1. List of old Documents and Relics in the Australian Museum. 1884. Reprinted with additions, 1890. 8vo. pp. 4.
2. Descriptive List of Aboriginal Weapons, Implements, &c., from the Darling and Lachlan Rivers, by K. H. Bennett, F.L.S. 1887. Reprinted, 1897. 8vo. pp. 8.
3. Notes for Collectors. 1887. 8vo. pp. 43.
4. Hints for Collectors of Geological and Mineralogical Specimens, by F. Ratte, pp. 26, with a plate.
5. Hints for the Preservation of Specimens of Natural History, by E. P. Ramsay. 1891. 4th Edition, pp. 32.

## VI.—RECORDS.

- Records of the Australian Museum, Vol. I, 1890-91. 8vo. pp. 220. 30 plates.  
 Vol. II, 1892-96. 8vo. pp. 112. 23 plates.  
 Vol. III, Part 1, January, 1897. Vol. III, Part 2, August, 1897. Vol. III, Part 3, November, 1897. Part 4, June, 1898. Part 5, 17 April, 1899. 8vo. pp. 54. 5 plates. Part 6, 11 December, 1899. 8vo. pp. 33. 6 plates.

May be obtained from the Attendants at the Museum, or from Messrs. Angus and Robertson, Castlereagh-street, Sydney; Messrs. Turner and Henderson, Hunter-street, Sydney; Mr. E. W. Cole, George-street, Sydney, Book Arcade, Melbourne, and Rundle-street, Adelaide; Messrs. Melville, Mullen, and Slade, Melbourne; Messrs. R. Friedlander and Son, Berlin; Messrs. Kegan, Paul, Trench, Trübner, & Co., Paternoster House, Charing Cross Road, London.

[Exchanges of Serials, Works, Reports, and other Publications are earnestly solicited on behalf of the Museum Library.]

## APPENDIX XIII.

PAPERS PUBLISHED BY MEMBERS OF THE AUSTRALIAN MUSEUM STAFF  
DURING THE YEAR 1899.

ETHEBRIDGE, R. JUNR.

1. Further Carved Boomerangs, and two varieties of the Langeel from Northern Queensland. *Proc. Linn. Soc. N.S. Wales*, xxiii, pt. 4, 1899, pp. 701-704, pls. 20 and 21.
2. The Spear-Becket, or "Doigtier" of New Caledonia, the New Hebrides, and other Pacific Islands. *Proc. Linn. Soc. N.S. Wales*, xxiv, pt. 1, 1899, pp. 271-282, pls. 16-19.
3. The "Widow's Cap" of the Australian Aborigines. *Proc. Linn. Soc. N.S. Wales*, xxiv, pt. 1, 1899, pp. 333-344, pls. 26-31.
4. Method of suspending the Palu, or so-called "Shark" Hooks, as deduced from a Model. *Proc. Linn. Soc. N.S. Wales*, xxiv, pt. 3, 1899, pp. 424-426, pl. 36.
5. Tho Tanna Spear-Becket. *Proc. Linn. Soc. N.S. Wales*, xxiv, pt. 3, 1899, pp. 427-428.
6. On the Corals of the Tamworth District, chiefly from the Moore Creek and Woolmol Limestones. *Rec. Geol. Survey N.S. Wales*, vi, pt. 3, 1899.
7. On Two Additional Perforating Bodies, believed to be Thallophytic Cryptograms, from the Lower Palæozoic Rocks of N.S. Wales. *Rec. Austr. Mus.*, iii, No. 5, 1899, pp. 121-127, pl. 23.
8. On the occurrence of a Starfish in the Upper Silurian Series of Bowning, N.S. Wales. *Rec. Austr. Mus.*, iii, No. 5, 1899, pp. 128-129.
9. On a Fern (*Blacknoxydon talbragarensis*) with secondary wood, forming a New Genus, from the Coal Measures of the Talbragar District. *Rec. Austr. Mus.*, iii, No. 6, 1899, pp. 135-147, pls. 24-27.
10. *Palæopede Whiteleggei*, Eth. fil. *Rec. Austr. Mus.*, iii, No. 6, 1899, p. 166.
11. On the Ornamentation of some North Australian "Dilly-Baskets." A Study in Australian Aboriginal Decorative Art. *Internat. Archiv. Ethnographie*, xii, heft 1, 1899, pp. 1-20, figs.
12. Descriptions of New or Little-known Victorian Palæozoic and Mesozoic Fossils, No. 1. *Progress Report Geol. Survey Vict.*, 1899, No. xi, pp. 30-36, pls. A and B.

HEDLEY, CHARLES.

1. Mollusca of Funafuti, parts I., II., and Supplement. *Memoirs Aust. Mus.*, iii, pp. 397-535.
2. Summary of the Fauna of Funafuti. *Op. cit.*, pp. 549-564.
3. A Review of the Systematic Position of *Zemira*, Adams. *Records Aust. Mus.*, iii, pp. 118-120.
4. Descriptions of new land shells, with notes on known species. *Op. cit.*, pp. 151-154, pl. 28.
5. A Zoogeographic Scheme for the Mid-Pacific. *Pro. Linn. Soc. N.S.W.*, xxv, pp. 391-417.
6. Description of a new genus *Austrosarepta*, and notes on other Mollusca from N.S.W. *Op. cit.*, pp. 429-434 fig.

NORTH, A. J.

Descriptions of the Nests and Eggs of six species of Australian Birds. *Vict. Nat.* vol. xvi, No. 1 (1899).

RAINBOW, W. J.

1. "Contributions to a knowledge of Papuan Arachnida" (with three figures); in *Records of the Australian Museum*; vol. iii, No. 5, page 95.
2. "The Queensland Cattle Tick"; *loc. cit.*, p. 131.
3. "Descriptions of Two Beetles from Mount Kosciusko" (with two figures); *loc. cit.*, vol. iii, No. 6, p. 147.
4. "Larva and Pupa of *Batocera Wallacei*, Thoms"; *loc. cit.*, p. 150.
5. Index to Vol. I., Scott's "Australian Lepidoptera."
6. "Contribution to a knowledge of the Araneidan Fauna of Santa Cruz," P.L.S., N.S.W., 1899, Pt. 2., p. 304, pls. xxiv-xxv.

WAITE, EDGAR R.

*Papers, Notes.*

1. Description of a Ring-tailed Opossum, regarded as a variety of *Pseudochirus herbertensis*, Collett. *Rec. Aust. Mus.* 1899, iii, pp. 91-3.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## NAUTICAL SCHOOL-SHIP "SOBRAON."

(REPORT OF THE SUPERINTENDENT FOR THE YEAR ENDED 30TH APRIL, 1900.)

*Printed under No. 17 Report from Printing Committee, 22 November, 1900.*

The Commander and Superintendent, N.S.S. "Sobraon," to The Under Secretary of Public Instruction.

Nautical School-ship "Sobraon,"

Sydney, 1 June, 1900.

Sir,  
I have the honor to hand you, for the information of the Minister of Public Instruction, my Annual Report concerning the Nautical School-ship "Sobraon" containing a review of the twelve months terminating 30th April, 1900, in conformity with the 14th clause of the "Sobraon" Regulations.

### PART I.

#### THE FIRST STAGE—BOYS ON BOARD.

2. Upon 6th May last this institution closed its thirty-third year of active reformatory work, and up to that date boys to the number of 4,146 had been received from all parts of New South Wales. During the last year admissions numbered 208, being an increase upon the previous twelve months of 49, and furnishing a proportionately higher enrolment of 531. Discharges numbered 211, showing also the substantial increase of 54. The incoming and outgoing numbers being thus evenly balanced gives a daily average of 324, which is a desirable strength. I am pleased to be in a position to record a steady influx of committals, as it must be apparent to all visiting our city that no lack of juvenile waifs are available, frequenting public streets early and late to the injury of their future and danger to the community.

3. A small decrease in the previous year's cost per head has been made, but the total expenditure is somewhat higher.

Reference to Table "H" shows cost per head on the daily average as being £23 15s. 2d.; as applied to apprentices, £2 3s. 9d.; upon 625 boys under departmental control, £15 2s. 6d.; total expenditure, £9,455 1s. 11d. This sum covers cost of much permanent constructive work, both in connection with the ship and extensive shore premises. The outlay will provide for many years' requirements. Amongst other items must be counted the completion of a sea-wall and reclamation on Cockatoo Island; construction of a permanent wharf with jib-crane; casting and laying out a new iron water-main, with ball joints, from shore to ship; making and fitting a new conical mooring-buoy.

Another long-desired requirement is now in use—a very complete electrical-lighting plant. The engine and dynamo are from the well-known Westinghouse Company, and boiler of Britannia type from Messrs. Marshall & Co., of London. Although the duplicate boiler is not yet to hand and several minor fittings require adjustment, the light is in use, and provides a splendid substitute for the obsolete and dangerous kerosene lamps. Gain will be marked also in the reduced temperature of our sleeping-deck during the summer months. It would be a satisfaction to me here to express my grateful thanks to the Public Works officers and others who have so efficiently carried out the work of installation; they have spared no pains to make such a success.

4. The total absence of any case of absconding amongst an assemblage of boys where the changes during the year number 419 speaks volumes for the good tone prevalent and general contentment ruling. This, in the face of much unrestricted liberty and freedom outside the ship's bounds, will give satisfaction to many supporters of the "Sobraon" system.

I but do the boys justice in stating that their general conduct compares more than favourably with that of any large assemblage I could name. The rare necessity for corporal punishment is as pleasing to me as it undoubtedly is creditable to my charges.

Amongst those discharged are included no less than sixty-four boys returned to their relatives, which number is abnormally large in comparison with former years, and is the outcome of petitions made to the Minister of Public Instruction.

5. I would desire to again draw attention to the constantly-occurring evidence of parents regarding this institution as intended to serve the benevolent purpose of a temporary receptacle into which they thrust, at pleasure, their personal responsibilities, distasteful to themselves, and which are to be conveniently adopted by the State. In such cases, where the ship is intended to serve as an opportune asylum, I certainly think those profiting by its operations should, in part, be made to defray cost of maintenance. The absurdly inadequate contributions paid to the Treasury last year amounted to £267 9s., where, at least, £2,000 should be obtained. When the moral obligation is thus shirked, a legal demand should be exacted.

6. Coming to the health of the inmates, I am pleased to again report a clean sheet and absence from any epidemic. One unfortunate child, aged 8 years, and sent here in an incurable state of dropsy, was at once removed to the Sydney Hospital, where he died soon after admission. The healthful surroundings of the ship materially build up the poor physique of all new-comers, and nourishing food, with proper drill exercises, continues to displace the emaciated condition and slovenly bearing so conspicuous upon arrival.

It is necessary, however, to again draw attention to the absence of any medical examination or recognised standard of fitness prior to admission. The ship is still made use of for cripple boys and mere infants, towards whom a want of consideration is shown in subjecting them to such unsuitable experience. A minimum age for committal is quite as essential as a maximum age; at present none applies.

It is with much satisfaction I am able to claim immunity from the much-to-be-dreaded scourge, bubonic plague, now so generally abroad. The ship affords no encouragement to this danger, and it could only be introduced by new-comers, all of whom undergo a close scrutiny and disinfecting upon arrival.

7. An approximate monetary estimate of the industrial labour carried out by the boys when not attending school may serve to illustrate the good purposes to which they apply their time in occupations that would come under such headings as sailmaker's work, carpentry, making and repairing clothes, painting, rigger's work, work in connection with shore premises, cooking and stewarding, services of band as musicians, laundry, tiling baths and engine-room, washing and cleaning decks (also boats) daily, with ship's general work.

It is fair to assess the labour-earning capacity of each boy utilised as above at an average of 6d. per diem. This, with a daily average strength of 324 boys, provides a total sum of £2,956 10s. for the year's operations.

The general work routine gives opportunity for employment of all on board the ship, and allows of no idleness. When not so engaged during working hours, boys attend school on alternate days. This branch is still under our capable schoolmaster, Mr. A. Thompson, B.A., who is well assisted by the Messrs. Mitchell.

The customary school inspection and examination made by Chief-Inspector F. Bridges, J.P., Metropolitan-Inspector M. Willis, and District-Inspector J. McCredie, resulted in a highly creditable average being recorded, "Order" and "Discipline" receiving the highest attainable. The class of work accomplished will be gathered from a reference to Appendices, which will also explain some of the difficulties combated, which are consequent upon early neglect and lack of intelligence.

8. Instruction in swimming continues to form a leading part in our general curriculum, and, apart from its usefulness, does much to assist in strengthening and keeping healthy the ship's complement. All clubs maintain a full muster-roll, and are important factors for exercise and recreation.

The gymnasium turns out many well-set-up athletes, and is as popular as ever. Cricket and football matches were played with spirit during the respective seasons, whilst the winter months, with long evenings, are turned to account for concerts, lantern entertainments, and occasional dramatic performances.

During the last few months visits to public resorts have been somewhat curtailed owing to the sickness existing ashore. This is, unfortunately, a precaution necessary, but will, I trust, be but short-lived. Much patriotic spirit has been conspicuously in evidence amongst the boys, all war news being eagerly looked forward to, and progress of the British arms meets with the most enthusiastic demonstrations. Upon the occasion of the departure of the Imperial Bushmen's Contingent, who were the last of our troops to leave for South Africa, the Minister of Public Instruction (Hon. J. Perry), with much thoughtful consideration, provided a large steamer to convey 300 boys down the harbour, thus giving them an opportunity to assist in the send-off to our Colonial representatives.

As showing how strong the sympathy with our soldiers is, the boys quite voluntarily subscribed from their "good-conduct" pay the sum of £12 10s., and forwarded the amount as a donation towards the Patriotic Fund. Later, upon a movement being made to present Major-General Baden Powell, the hero of Mafeking, with a token of Australian admiration, the boys again provided £2 17s. 1d. towards that object. The Indian Famine Relief Fund was also contributed to by "Sobraon" lads, and a substantial sum forwarded. As all contributions are made under purely voluntary conditions, it is most pleasing to note the unselfish and humane tendency which prompts those who have but little to help fellow-creatures in need of assistance. The boys never fail to respond more than generously upon all such occasions, and make me feel justly proud of acts that would redound to the credit of more favoured citizens.

9. The very much mistaken idea that the "Sobraon" is a penal establishment still seems to exist in the minds of some people. Such is by no means the case, for boys sent here enjoy many privileges and advantages denied to other lads. There is no hardship attached to sending youths where they will be tutored in habits of cleanliness, order, obedience, made self-reliant and capable of paying the respect due to their seniors, and also to so conduct themselves as to establish the right to be regarded as trustworthy and honorable citizens. Letters continue to reach me asking the conditions upon which parents can place boys on board this ship. To all such I invariably make it clear that only as a last resort should parental influence be surrendered, as such, honestly and tactfully made use of, should prove a lever more powerful for good than any legal compulsion. I have little confidence in the honesty of parents who, at the first symptoms of vicious or insubordinate behaviour on the part of their offspring (which in all probability

probability arises from failure on their part to do their duty at an earlier stage), rush in to secure State relief from personal obligations, and trade upon their having themselves taken the initiative in so placing the boy, when they desire to profit by their more advanced age and reformed habits.

Petitions for discharge are constantly based and recommendations obtained on the grounds that parents were themselves instrumental in obtaining the boy's committal, and that they possess a good home, which arguments are no more than admissions of gross neglect and a desire to trade upon the State. These people never pay any adequate cost of their children's maintenance whilst on board.

10. During the year Mr. Inspector Green, from the Treasury Department, inspected books and accounts in connection with the ship. I am pleased to state the examination was satisfactory. Much needed clerical assistance has been promised by the Public Service Board, which will permit of necessary supervision over stores, &c., now rendered difficult of accomplishment.

## PART II.

### THE SECOND STAGE—APPRENTICESHIP.

11. A brisk demand continues to flow in for the services of boys as apprentices, which I find difficulty in keeping abreast of. The large increase in the number of petitions for release also hampers allotment of boys to employers, as many are conditionally under consideration for various periods, during which they are ineligible to leave. It is, however, a compliment to the ship's training to find such a ready outlet awaiting our lads, all of whom naturally look forward to entering upon the practical experience to be acquired at service. This is a connection in which the Colonies enjoy far greater scope than is the case in Great Britain, where the difficulty is to obtain desirable country employment for this class of labour.

The ship was fortunate in obtaining openings for twenty-four boys in fine British-owned vessels going round voyages. Almost without exception these lads were previous failures when apprenticed to shore pursuits. Being from 16 to close upon 18 years of age, their prospects, if again landed, were by no means bright, consequently the sea opened up a new avenue, well suited to their age and capabilities. Prior to leaving the port of Newcastle, I received assurance from captains shipping them that they shaped well. Undoubtedly a seafaring life has its hardships; and what avocation has not? But I am confident that for such boys no more valuable experience could be undergone than twelve months spent on board a well-found sailing vessel. They become self-reliant, resourceful, and useful, in addition to acquiring skilled knowledge, always available to profit by. The advantage to other inmates in being freed from the influence of old hands, whose return from service in disgrace was not helpful as an example, counts for something. That we shall always have some percentage of failures must be recognised, and there is no doubt that for those physically fit, and so desiring, the sea forms the outlet.

12. From the latest reports just to hand I am in a position to affirm the last year's high average of 93 per cent. of those who have left the ship and who are doing well has again been fully sustained. These lads may be regarded as having well started on a respectable career. This fact, with my daily experience of good orderly conduct on the part of over 320 boys under my own immediate supervision, affords me more satisfaction than I can express.

13. The wages paid to apprentices still forms a large turnover through the Post Office Savings Bank Department, and my sincere thanks are due to the Controller, Mr. Doak, and his efficient staff at the Head Office and branches for prompt attention to this business. Payments have now been made in cash amounting to £14,483 1s. 10d. since May, 1890, the individual amounts varying according to length of service—some amounting to £40. In view of the large demand for boys it will be worth consideration whether our wage rates should not be increased slightly, as an extra encouragement to faithful service. Many persons are inclined to attach undue importance to the rate of pay, which must, however, be always regarded as quite secondary in importance to that of useful teaching and the influence of a good home, with Christian, friendly guardianship. Much depends upon the employer, who either perfects or impairs our initiatory training here; and I quite recognise the importance of making a lad feel that he is being both fairly and considerably dealt with, and in no sense subjected to injustice in comparison with the conditions under which local boys of his age are employed; for contentment must precede practical interest in any duties assigned. It is always to be remembered that our boys require to be comfortably housed, clothed, fed, and instructed independently of wages. These obligations, honestly acted up to, form more than an equivalent to ordinary employment.

In each of my annual reports I have endeavoured to attach considerable weight to the matter of periodical and regular visits of inspection being paid to State wards serving apprenticeship. This is a matter the importance of which cannot be over-estimated, as it is necessary, in order to retain the confidence of these lads, that they should not be permitted to gather the impression that distance from headquarters renders them absolutely dependent upon the honest discharge of the obligations entered into by those assuming authority over them.

The person entrusted with this duty requires not only to be in sympathy with the boy, but should also have some previous knowledge of his character, which will render him a competent judge as to the truthfulness or otherwise of representations made to him; for these reasons the services of an officer from the institution itself are preferable to those of a stranger. The presence of such an inspector would materially assist both employers and boys in carrying out their respective sides of the common contract: little matters of disquietude could be readily adjusted by him, and both parties made to feel that the ship's influence was still far-reaching in its incidence.

The annual visit of inspection was made to the home of each apprentice by the police, who, through the never-failing courtesy of the Inspector-General, do this work with regularity and thoroughness. The local knowledge within reach of all members constituting the New South Wales constabulary proves invaluable in getting at the facts of what applies to each home. Our boys have long recognised that the mounted constabulary can be regarded as guardians in more senses of the word than that of preserving the peace. It is made clear to them on leaving the ship that they need have no hesitation in making confidants of these gentlemen as a reliable and safe medium for communication to myself. I would here like to pay tribute to the tactful and sympathetic advice, also assistance, always freely extended by Mr. E. Fosbery's staff, regardless of valuable time expended in this connection.

## PART III.

## PART III.

## THE THIRD STAGE—EX-APPRENTICES.

14. No flagging is shown in the interest and good feeling displayed by former inmates. Visits continue almost daily, with a large attendance when Sunday's leisure comes round, and many pleasant conversations convey to me the past and present impressions of "old boys," from a comparison of which something can be learnt, inasmuch as frequently young men admit to me that discharge from the ship's control, once regarded by them as a desideratum, would have been a misfortune in practice. I fear ingratitude is not an uncommon failing with all classes, but its absence, in many instances applying to old boys, renders the task of assisting them a pleasant one.

As I am favoured with full confidences of these young men, it at times falls to my privilege to advise them on all kinds of matters.

A new and promising avenue for some of our former well-drilled inmates has been provided in the Contingent sent to South Africa from this Colony to do military service for the motherland. No less than eight former charges of mine came to advise me of their good fortune in being recruited, and they mentioned other representatives also going to the front.

Amongst some hundreds of letters received, I have two from Manilla describing active-service experience with the American troops in the Philippines, where fortune and love of adventure landed the writers. London and Callao are ports from which interesting letters also come from boys. In these reference is made to happy times spent on board "Vernon" or "Sobraon." Coming nearer home, I have the pleasing knowledge of many staid married men having settled in our Colony, some in Government employ, who owe their prosperity to-day to this institution's training.

Boys who were returned to their parents during the last twelve months, and who have relapsed and been sent to gaol or returned to the ship, number four in gaol, and three recommitted to the ship.

15. That the "Sobraon" as an institution stands high in the esteem of many competent authorities I have reason to know; but even amongst the most severe of its critics it will be admitted that the ship does good work, where close scrutiny of results unmistakably points to the eradication of vicious and early ingrained criminal tendencies, and the substitution of aspirations that are healthy and honorable. It is at the early stage which permits of entry to the "Sobraon" that the growth of what are known as "pushes" can best be uprooted and rendered innocuous; and were the position thus grasped, the result would redound to the credit of our fine city, the rescue from criminality of hundreds of our increasing population, and a saving of thousands in expenditure to our State Treasury. I concur in the oft-expressed opinion of our worthy Comptroller-General of Prisons—that to catch and convert at an early stage the budding criminal is a wise and economic precaution, in which theory I think all will agree.

## PART IV.

## MISCELLANEOUS.

16. In providing for the physical requisites of a healthy body, the equally necessary religious instruction has not been overlooked. Prayers are read morning and evening: Tuesday afternoon in each week is arranged for visits from the various clergy and lay instructors. I have to thank the Reverend Father J. J. O'Driscoll and Reverend W. A. Charlton for the most conscientious devotion in attending quite gratuitously to minister to the boys, and in so doing, the services of such indefatigable assistants as Mrs. Ford and the Misses Hughes and Maguire must be mentioned. All give valuable time and counsel, regardless of personal inconvenience, and, at times, boisterous weather discomforts. I owe much to these ladies and gentlemen for the kindly and much-appreciated Christian teaching dispensed amongst, and, I feel sure, profited by, young minds only too frequently strangers to any idea of a Christian's duty to themselves and others.

During the past year a number of lads have been prepared for and admitted to the rite of confirmation by the very reverend heads of their respective religious denominations.

17. The "Sobraon" enjoys such a large number of generous patrons that their names all registered would prove too voluminous here, therefore I feel sure no exception will be taken to my confining mention to prominent contributors, amongst whom are the Hon. J. Perry, M.P., Minister of Public Instruction; Mr. J. C. Maynard, J.P., Under Secretary; Mr. F. Bridges, J.P., Chief Inspector; the Hon. J. See, M.P.; the Hon. W. J. Trickett, M.L.C.; Mr. R. Hickson, M.I.C.E.; Dr. Gabriel; Messrs. Thomas Cowlishaw, Turner, Conway, Christoe, Phillips, Patinson, Pateson, A. Kidman, Joseph, Rickards, Southwell, Fairland, Mrs. R. B. Cameron, and Miss F. Levvy, with numerous others, all of whom have my sincere thanks.

The school prizes dispensed in former years were again supplied to us through the generosity of such practical sympathisers as Mr. Bridges, Inspectors Willis, McCredie, Dettmann, and others above mentioned. The distribution was made immediately after the school inspection, the rewards being presented by the Chief Inspector (in the absence from Sydney of the Minister), who, in handing recipients their prizes, took opportunity to dispense kindly and valuable counsel to each boy in turn.

18. In an earlier part of my report I omitted to mention the loss of an old "Sobraon" identity, "Jumbo," the boys' Newfoundland dog, admitted on board when a puppy, and who succumbed to old age after ten years' ship-board life. His presence is still missed, but a substitute has been found in the form of a gift to the boys from the members of the Imperial Bushmen's Contingent; this took the form of a very tame kangaroo, who, his ability to stand the voyage to South Africa being doubted, acts as the Bushmen's representative to-day on Cockatoo Island. He is a general pet, and I am pleased to say, as in the case of all dumb animals here, receives the kindest attention at the hands of the boys.

19. As mentioned in last year's report, the Engineer-in-Chief's recommendation in favour of reverting to the use of a large mooring-buoy has been put in practice, but I regret to say has still failed in any degree to prevent the rapid erosion and deterioration of the new chain cable, which, owing to contact with the metal on the ship's bottom, loses its strengthening properties, and still continues to cause me much anxiety during boisterous weather. I am still firmly of opinion that the use of hawse-pipes, mooring-swivel, and provision for securing the chains inboard, will prove the only satisfactory solution of this important matter.

20. During the early portion of the year now dealt with, Mr. Leer was permitted to effect a change of position with Mr. W. H. Mitchell, who has since carried out the duties of first-assistant schoolmaster. With this exception my experienced and efficient staff remains unaltered. All deserve credit for the most loyal attention to onerous duties which demand continuous vigilance to avoid discreditable consequences sure to follow upon perfunctory performance.

21. The ship has maintained her popularity with visitors, from amongst whom are included many leading politicians in New South Wales and all other Australasian Colonies. Our present Ministerial head and his several predecessors in office have favoured the ship with visits; they have placed on record such complimentary expressions as the following:—

Mr. A. J. Stephenson, M.L.A., Queensland:—"Greatly pleased with all I have seen on board."

Mr. W. M. Hughes, M.P.:—"Everything in its usual condition of excellence."

Mr. C. Williams, Queensland:—"Would like to see such an institution in Queensland; very pleased to have seen the boys."

Mr. James Robb, Victoria:—"It has been quite a revelation to me."

Mr. J. R. Dacey, M.L.A.:—"I have just received your annual report, and notice with shame that I omitted to place on record my high appreciation of the really admirable service which you are rendering to the State in your capacity as Master of the 'Sobraon.' The nautical school-ship 'Sobraon' is a credit to the Colony."

Mr. Turner, Principal of the Public Training College, Fort-street:—"The students and ourselves beg to express to you the keen pleasure of their visit to the 'Sobraon,' on Friday afternoon last, which, through the invitation of the Chief, they were enabled to make. They feel very much the worth to themselves of seeing so finely organised an institution as the one under your charge, and feel too what a glorious agency for the good of the community the 'Sobraon' is."

Mr. E. H. Wilshire, S.M.:—"My visit has confirmed my good opinion of the ship."

Mr. Thomas Jessep, M.L.A., with other gentlemen:—"Splendid organisation, perfect discipline, well worthy of inspection."

The Hon. W. J. Trickett, M.L.C., Rev. H. Wallace Mort, M.A., the Hon. F. J. Humphery, M.L.C., Dr. P. J. Collins, with others:—"Our visit to the 'Sobraon' has been most interesting; everything evidencing a splendidly-directed institution."

Mr. F. Bridges, J.P., Chief Inspector of Schools, accompanied by a number of other gentlemen:—"Visitors to the N.S.S. 'Sobraon' leave it with feelings of great satisfaction and pride that so useful an institution exists in their midst. The ship is indeed doing a grand work."

Hon. J. Perry, Minister of Public Instruction:—"An official visit. Am well satisfied with the work being done on the ship."

Hon. John See, M.P., Colonial Secretary:—"I have been delighted with the boys' discipline and conduct, and I congratulate the captain and officers of the ship on the good results of their work." Mr. See was accompanied by the Hon. J. L. Fegan, Minister for Mines, together with representative members of the Wesleyan and Primitive Methodist conferences, who concur in Mr. See's remarks.

Mr. R. Hickson, Under Secretary of Public Works, writes as follows:—"As a not infrequent visitor to the 'Sobraon,' allow me to bear testimony to the very admirable work which has been done by you and your officers in connection with that ship. I look upon the 'Sobraon' as one of the most useful institutions in this Colony, in that it takes boys, who otherwise sink to the lowest grades, and converts them into respectable and useful members of society. As I take a special interest in the band, will you allow me to hand you the enclosed cheque for £2 2s., to be laid out at the discretion of yourself and the bandmaster, in whatever way you consider will best serve the interests of the band."

Hon. Jacob Garrard, J.P., President, Water and Sewerage Board:—"Am pleased to again visit the ship, and to find that Captain Mason and his staff continue to keep the ship up to high-water mark."

Mr. Geo. W. Phillips, solicitor, of Sydney:—"I am much struck with the perfect order and discipline on board the training-ship 'Sobraon,' and it reflects the greatest credit on Captain Mason and his officers."

Mr. N. F. Christoe, who occupies a leading position in banking circles:—" \* \* The institution is, I consider, one of the most valuable in the Colony, and reflects the greatest credit on the management."

Major F. G. Cotton, R.L.M.I.:—"The performance of the various exercises reflects the greatest credit on the instructors; everything is excellently done."

Mr. F. E. Bloxham, Governor of H.M.S. Gaol, Parramatta:—"My visit is one I have long looked forward to with much interest. The good work done here is known to all who follow humane work in this direction. The splendid discipline and order and general conduct of the lads have much impressed me."

Mr. Samuel Smith, M.P.:—"Very much pleased."

Mr. W. A. Gullick, Government Printer:—"With my congratulations to a brother-officer for his organisation."

The Hon. C. A. Lee, M.P., and the Hon. J. A. Hogue, M.P., late Minister for Works and Public Instruction, respectively:—"The continued high state of efficiency is unmistakable."

22. In conclusion, I desire to tender respectful thanks to all those occupying positions which bring them in direct touch with the institution, and who always make my undertaking a pleasant task by encouraging co-operation, amongst whom are the Ministerial head, the Under Secretary, departmental officers, Captain Neitenstein, J.P., who never ceases to interest himself, our Stipendiary and Police Magistracy, Mr. E. Fosbery, J.P., and his indefatigable staff.

I have the honor to be,

Sir,

Your most obedient Servant,

W. H. MASON,  
Commander and Superintendent.

## SCHOOLMASTER'S Report.

Sir,

I have the honor to report that the number of admissions for the year ending 30th April, 1900, was 208. These were classified as follows:—32 were placed in 3rd class, 25 in 2nd class, and 151 in 1st class. Generally speaking, the average intelligence and attainments of the new admissions were lower than previously experienced during the past four years; 42 might be said to have been absolutely ignorant, some not even knowing the alphabet, whilst the majority could scarcely read Primer I or add a column of four or five figures; 49 others could only read Primer II indifferently.

Each class was worked in two or three sections. The average number under my own care was 110; under that of the first assistant, 113; and under that of the second assistant, 93.

The conduct of the boys whilst under instruction has been in every way eminently satisfactory. The majority take a genuine interest in their school-work, and no difficulty whatever has been experienced in obtaining prompt and willing obedience.

The annual examination of the school took place in January, and was conducted by Mr. Bridges, Chief Inspector, and Mr. Willis. Their report upon the attainments of the boys was thoroughly satisfactory.

The many inducements held out by the regulations of the ship to encourage good conduct have served to considerably lighten the work in the schoolroom, and have materially assisted in obtaining good results.

I have, &amp;c.,

ALEX. THOMPSON,  
Schoolmaster.

The Commander and Superintendent, Nautical School-ship "Sobraon."

## DIETARY Arrangements.

*Daily Ration* authorised to be issued to boys on board the Nautical School-ship "Sobraon" :—

20 oz. bread	} # ration {	1 pint milk
2 oz. sugar		1½ oz. soap (best yellow)
1½ oz. jam or butter, at Superintendent's option		12 oz. fresh beef, or 16 oz. mutton
½ oz. tea		16 oz. potatoes
½ oz. salt		6 oz. vegetables for soup.

With extras, as authorised

*Alternative Daily Ration* authorised to be issued to boys on board the Nautical School ship "Sobraon" —

20 oz. bread	} # ration {	1 pint milk
2 oz. sugar		1½ oz. soap (best yellow)
1½ oz. jam or butter, at Superintendent's option		24 oz. fresh fish.
½ oz. tea		16 oz. potatoes
½ oz. salt		6 oz. vegetables for soup.

- With extras, as authorised

*Ration* authorised for boys on "Sobraon" (weekly ration).—

2 lb. flour	} # ration {	1 lb. fresh fruit or canned fruit, at Superintendent's option
½ lb. raisins		
1 oz. suet		

*Breakfast*—Tea, bread and butter, or jam.

*Tea*—Tea, bread and butter, or jam

*Dinner.*

	First Division	Second Division	Third Division
Monday, Thursday	Soup, roast meat, boiled potatoes	Stew, potatoes, and vegetables, pudding	Sea-pie, potatoes, and vegetables.
Tuesday, Friday	Stew, potatoes, and vegetables, pudding	Sea pie, potatoes, and vegetables	Soup, roast meat, boiled potatoes.
Wednesday, Saturday	Sea pie, potatoes, and vegetables	Soup, roast meat, boiled potatoes	Stew, potatoes, and vegetables, pudding.
Sunday	Roast fresh meat, boiled salt meat, vegetables potatoes, cake or pudding, fruit		

Each boy has 1 pint of milk with his dinner daily, and occasionally on Fridays fresh fish is substituted for meat. During the four winter months milk is provided with oat or maize meal for breakfast, in addition to bread and butter; and, for the same period, pea soup is added to the usual scale for dinner three times weekly.

## (N)

## WORK AND DRILL ROUTINE

*Morning*

Monday	9 to 10	General drill
	10.10 to 11.45	1 division, work
	10.10 to 11	2 divisions, rifle drill
	11 to 11.45	1 division, compass, lead and log line, numbers of flags. 1 division, rule of the road, names of spars, ropes, parts of boat and sails, launch for steering and steam instruction
Tuesday	9 to 11.45	1 division, work.
	9 to 10	2 divisions, squad drill
	10.10 to 11	Boat drill, two divisions pulling.
	11 to 11.45	Making sail, step and unstep masts, salutes, keeping close to ship; when weather permits, sails to be loosed in afternoon
Wednesday..	9 to 10	General drill
	10.10 to 11.45	1 division, work
	10.10 to 11	1 division, cutlass drill; 1 division, man boats, shove off, come alongside properly, toss oars, &c
	11 to 11.50	2 divisions, gymnastics and dumb-bell exercise
Thursday	9 to 10	3 divisions, boat exercise and flag instruction
	10.10 to 11.45	1 division, work
	10.10 to 11.45	2 divisions, land at Cockatoo for drill in marching, wheeling, &c, without arms. (Occasional long pull in winter)
Friday	9 to 10	General drill
	10.10 to 11.45	1 division, work
	10.10 to 11	Balance step, extension motions, saluting, squad drill
	11 to 11.45	Seamanship and launch instruction as on Monday (Occasional long pull in winter.)
Saturday	Until 11.45	Cleaning ship, arms, &c
	9 to 9.15	Lieutenant's inspection
	9.15 to 10.15	Commander inspects all boys, decks, grounds
	10.30	Land for church, or service aboard.

## NOTES.

Boys at drill to stand easy 1 minute in every 10

Watch boys to be selected weekly from 5 and 6 classes, one division in each watch in turn.

Cricket club practice on Island, on Friday, from 3 to 4.40

Athletic club practice on Island, on Monday or Thursday, from 3 to 4.40 Recall to be hoisted 5 minutes earlier.

When painting or special work is in operation this time-table to be suspended.

*Afternoon.*

Afternoon.

Monday	.....	Mending clothes, which are to be thoroughly overhauled by Divisional Officers. Boys are not to loiter after repairing clothes, but to be at once sent up on deck. Disengaged boys to barge and sailing instructions.
	1 to 2	... Barge to be cleaned.
	2:15	... Change watches.
	3 to 3:45	... Beginners to swim.
Tuesday	... 1 to 2	... 3 divisions, swimming, or physical drill with arms.
	2 to 2:45	... 1 division, clean all boats.
		2 divisions, gymnastics and dumb-bells.
	2:45 to 3:45	... Religious instruction.* Boatswain to overhaul any of his gear. Seamen to overhaul their boats, cushions, fenders, oars, &c. Any Officer absent from his boat should arrange with another seaman to do his work.
Wednesday..	1 to 2	... General singing instruction.
	2 to 3	... Special drill party and cleaning arms.
	3 to 3:45	... 3 divisions, swimming, or physical drill with arms.
Thursday	... 1 to 3	... 1 division, work, including cleaning arms.
	1 to 2	... 2 divisions, physical drill with arms, bayonet exercise, aiming drill, &c.
	2 to 3	... Boat exercise, wheeling, line abreast, line astern, learning to come alongside, shove-off (proper words of command to be given).
	3 to 3:45	... Swimming, or balance step, extension motions, saluting.
Friday	... 1 to 3	... 1 division, work, coaling ship, cleaning dormitory and swimming bath.
	1 to 2	... Special club party ;† remainder, seamanship, launch instruction.
	2 to 3	... Boat exercise.
	3 to 3:45	... Swimming exercise, or physical drill with arms.
Saturday	.....	Recreation—Cricket, athletics, harbour excursions, visits ashore for deserving boys.
	1:15	... Dinner and recreation.
	2:30	... Sunday-school.
	4	... Muster.

NOTES.

Inspection at 8:45 a.m. Divisions and prayers at 9 a.m.  
Recreation (10 minutes) at 10 a.m., when all boys go over lower masthead. Commander's Court of Inquiry at 12:50.  
Muster at 1 p.m. Muster, dismiss school, work and drill parties at 3:50 p.m.  
\* When religious instructors do not attend, boys not required by seamen in boats to be busily employed at either drill or work.  
† At 2 p.m. all the special drill party to be marched into school.

## MILITARY FORCES OF THE COLONY.

REPORT for the year ending 30th June, 1900, by Major-General G. A. FRENCH, R.A., C.M.G., Commanding Military Forces.

To the Principal Under Secretary,—

Sir,

I have the honor to submit the following Report on the Forces and Defences of the Colony for the year ending 30th June, 1900, for the information of the Honorable the Chief Secretary :—

### PERMANENT FORCES.

#### ROYAL AUSTRALIAN ARTILLERY.

1. "A" Battery was encamped at National Park for gun practice on 25th September, and carried out its annual course of practice; but owing to arrangements having to be made in connection with the despatch of a Contingent to South Africa, the Battery was brought into Head-quarters on the 24th October.

It was expected that the services of this Battery would have been accepted by the Imperial Government, but they were declined with the 1st Contingent, and, consequently, a number of their drivers and draught horses were transferred to the Army Medical Corps. The advantage to the latter of having these trained horses and drivers was most marked throughout the operations in South Africa. The mobility of the New South Wales Army Medical Corps was the theme of admiration on many occasions by general officers, and this mobility was all the greater by contrast with the Imperial Service, where the Royal Army Medical Corps have no independent transport, and are at all times dependent on another branch of the service when they have to move.

Subsequently the services of "A" Battery were accepted by the Imperial Government, and the Battery was made up to full war strength in men and horses, and embarked on the s.s. "Warrigal" on 31st December, 1899, without exception the most complete and efficient unit that ever left Australia.

Major	...	...	...	...	...	1
Subalterns (1 acting Captain)	...	...	...	...	...	4
Battery Sergeant-major	...	...	...	...	...	1
Battery Quartermaster-sergeant	...	...	...	...	...	1
Sergeants	...	...	...	...	...	6
Sergeant-farrier	...	...	...	...	...	1
Shoeing-smiths	...	...	...	...	...	4
Collar-makers	...	...	...	...	...	2
Wheelers	...	...	...	...	...	2
Trumpeters	...	...	...	...	...	2

Gunners	...	...	...	...	...	76
Drivers	...	...	...	...	...	63
Total, all ranks						175

Horses, 140.

15-pr. Guns, 6.

(2.) The subsequent history of the Battery after landing in South Africa was not fortunate. Some six guns were required for a detached force sent to the Prieska-Upington District. To have taken these from one of the Brigade Divisions of

of three batteries in which the Field Artillery are organised, would have involved the breaking up of a lieutenant-colonel's command, and our Battery standing quite alone, and in the vicinity, was only too convenient for the purpose, and was sent—the result being an inglorious campaign, in which officers or men never had an opportunity of distinguishing themselves like their comrades in the other branches of the Service.

#### GARRISON ARTILLERY.

(3.) The physique of 175 recruits, of which 21 were boys, passed for these Companies during the past year was good.

	Men.	Boys.
Average height ... ..	5 ft. 9 $\frac{3}{4}$ in.	5 ft. 3 $\frac{1}{2}$ in.
„ chest ... ..	38 $\frac{1}{4}$ inches.	29 inches.
„ weight ... ..	11 st. 4 $\frac{1}{2}$ lb.	9 stone.

The Annual Long Course of Gunnery extended from 19th June, 1899, to 19th December, 1899, and consisted of—

Royal Australian Artillery—N.C.O.'s and Gunners	...	19
Tasmanian Artillery—N.C.O.	... ..	1
Total ... ..	...	20

#### Certificates issued :—

1st class, extra ... ..	...	3
1st class ... ..	...	10
2nd class ... ..	...	4
Total ... ..	...	17

(4). A large number of men from this branch were utilised to fill vacancies in “A” Battery and other Corps proceeding to South Africa.

With 1st Contingent ... ..	7 Gunners.
“A” Battery ... ..	1 Lieutenant. 2 Corporals. 4 Bombardiers. 60 Gunners. 1 Trumpeter.
	68
With Second Contingent ... ..	1 Captain. 1 Lieutenant. 2 Sergeants. 1 Bombardier. 13 Gunners. 1 Trumpeter.
	19
Australian Bush Contingent ... ..	1 Major. 2 Lieutenants. 1 Company Sergeant-major. 3 Gunners.
	7
Imperial Bush Contingent... ..	1 Captain.
Total ... ..	102

Annual Competitive Prize-firing.—One of the Companies of the R.A.A. (No. 1 Co.) this year shot into a 1st-class Company, and another into a 3rd-class. This is the first time in New South Wales that a 1st-class has been obtained.

#### SUBMARINE

## SUBMARINE MINERS.

(5.) A practical course in laying Submarine Mines was carried out from 13th April, 1900, to 28th April, 1900.

The submarine-mining steamer ordered has not as yet been delivered, and this branch is at a serious disadvantage in consequence. The Agent-General was instructed to obtain this vessel through the War Office on 22nd November, 1898, and the contract was signed by J. S. White & Co. on 25th July, 1899.

The Partially-paid Sections, as usual, worked in with the Permanent Sections in the Continuous Training at Easter.

Extra S.M. mining cable required has been indented for.

## PARTIALLY-PAID FORCES.

## MOUNTED FORCES.

*Lancers.*

(6.) The first force of Australian Troops to land in South Africa were the New South Wales Lancers. These men formed a portion of the squadron of 102 officers and men referred to in my Report last year as having proceeded to Aldershot for a course of practical training. During their passage out from London war was declared, and the greater portion at once volunteered to land and go to the front, and several of those who could not then stop, for family or business reasons, subsequently rejoined their comrades in South Africa.

In all, 7 officers and 158 men of the New South Wales Regiment of Lancers have been landed at the Cape, and have done excellent service with the Cavalry Division under Lieutenant-General French, who has on many occasions borne testimony to their usefulness as scouts, and in locating the enemy, as well as in taking a full share in all the operations of war in which the Cavalry were engaged.

*Mounted Rifles.*

(7.) With the First Contingent sent from this Colony was a Company of Mounted Rifles, under Captain J. Antill, consisting of 3 officers and 97 N.C.O.'s and men of the Mounted Rifles Regiment and 2 officers and 32 N.C.O.'s and men of the 1st Australian Horse.

This Company worked independently for some time, but was merged as a Company of Mounted Infantry in the Regiment commanded by Lieutenant-Colonel Knight shortly after the arrival of the latter in the Orange River Colony.

The Regiment of Mounted Rifles has taken a full share in furnishing detachments for the different Contingents, and the superior training of the officers, non-commissioned officers, and men was a great assistance to the Corps to which they were attached.

*Field Batteries.*

(8.) "B" and "C" Batteries were encamped at National Park from 29th September, 1899, to 2nd October, 1899, when the following instruction was carried out, viz. :—

1st day : Standing Gun Drill, and Gun-laying.

2nd day : Standing Gun Drill, Gun-laying, and Shot Practice.

3rd day : Taking up Positions, Standing Gun Drill, and Gun-laying.

4th day : Competitive Prize-firing.

These Batteries will have a modern equipment at an early date (the equipment of one has already arrived). They have been at a disadvantage through the absence of many of their officers and men in South Africa and dearth of suitable harness during past year. The increase of this branch is a matter of prime necessity, and, in view of the considerable amount of equipment under order, might be taken in hand at an early date.

## NEW SOUTH WALES ARTILLERY.

(9.) *Competitive Prize-firing*: No. 5 Company (Newcastle) was this year the winning Company, obtaining a 3rd-class prize.

*Camp*: Nos. 3 and 4 (Sydney) Companies, and No. 6 (Wollongong) Company, went into Camp at the Heads for nine days at Easter, and No. 5 Company (Newcastle) formed their own local Camp.

Much useful instruction was given, and shot practice was also carried out with good results.

## ENGINEERS.

*Nos. 1 and 2 (Field) Companies.*

(10.) Companies are full strength.

A short Camp (five days) for continuous training was held at Easter. The Companies were camped at the Engineer Dépôt, Moore Park, and the usual routine of a Camp, with guard, &c., was carried out. The work done was of a very interesting and instructive character, including making rafts and forming bridge over one of the lakes in Centennial Park. The usual half-day drills took place during the year, the work done at same embracing Field Company Drill with horses (twice), the erection of a full-sized suspension bridge, the building of a full-sized redoubt, shelter trenches, &c. Stores for the four section carts at present on charge are complete. The stores for a Head-quarter waggon and two Company waggons are in store; but the Head-quarter waggon, two Company waggons, and two more section carts (with stores for these last) are necessary to complete the equipments for the establishment of two full Companies.

*No. 4 (Electric) Company.*

(11.) Company is up to full strength of Establishment. The usual Parades and three days' continuous training have been carried out during the year.

The fixed beam and search lights at Middle and South Heads (with the exception of the seaward light at South Head, which has been run twice) have been run about six times, viz., once a quarter and twice during continuous training. Everything has been most satisfactory. The installation for fixed beam at Newcastle is completed, and reported satisfactory. The search light at Newcastle is completed, with the exception of cable, lens, and projector, which have not yet arrived from England. No. 4 Company is still deficient of certain necessary stores (provision for part of which has been asked for on this year's Estimates), especially in the latest pattern of vehicles for Field Telegraph work. The search light installation at La Perouse is completed, and a trial run of the same gave satisfactory results.

## INFANTRY.

(12.) All the Partially-paid Regiments carried out practice with the Magazine Rifle; report of D.A.A.G. of Musketry attached. (*Appendix "B."*)

A full Company of Infantry was sent with the First Contingent; it consisted of a very carefully-selected body of men, but they had not been long in South Africa before they were horsed and utilised as Mounted Infantry, and afterwards merged in Lieutenant-Colonel Knight's Regiment. As Mounted Troops eventually were those only in request for South Africa, the Infantry had only a small percentage of their strength represented, though many of them joined Mounted Corps that were being formed, viz., Officers, 11; N.C.O.'s and men, 131.

## DEPARTMENTAL CORPS.

(13.) The Army Service Corps was increased by one Company during the past year, and though no distinct section of this branch was sent to South Africa, four officers and twenty-nine men proceeded there with other corps, Lieutenants Basche and Harriott, very promising officers, losing their lives.

(14.) The Army Medical Corps earned much praise wherever they served during the campaign, and Colonel Williams has had the satisfaction of knowing that his many years of plodding hard work and organisation has at length met with the

the recognition it deserved from the highest Military Officers in Her Majesty's Service. Further particulars as to this branch will be found in the report of the Acting Principal Medical Officer. (*Appendix "C."*)

It seems proper to draw attention to the voluntary offer of their services by such eminent surgeons as Fiaschi, MacCormick, and Scot-Skirving, which were gladly accepted, also to the good work done by Miss Gould and her staff of nurses.

#### VOLUNTEERS.

(15.) The Volunteer Force gave a fair share of its members for service in South Africa, the 1st Australian Horse taking the lead with 10 officers and 139 men sent; 5th Regiment, 3 officers and 16 men; 6th Regiment, 1 officer and 30 men; 7th Regiment, 1 officer and 21 men; 8th Regiment, 2 officers and 11 men.

This branch of the Force seems to be capable of almost indefinite extension; 144 Corps, numbering some 12,000 men, have been offered during the past year, being some  $33\frac{1}{3}$  per cent. more than the total numbers of the present Forces. Provision has been asked for on the Estimates for 2,000 men, which, even if approved, will still leave a vast number disappointed.

In common with the other branches of the Forces, the Volunteer Force suffers from the dislocation caused by the absence of Adjutants, Sergeant Instructors, and some of its most energetic members in South Africa.

#### CAMPS.

(16.) There was no large central Encampment during the past year; in fact, at Easter time the Imperial Bushmen's Contingent was being got ready for embarkation. There were small Encampments as per Appendix "D."

There was a large general parade at Centennial Park on Easter Monday, at which some 4,755 officers and men were present, notwithstanding the absence of so many in South Africa; parade state as below:—

Regiment or Corps.	Officers.	N.C.O's. and Men.	Total.
Head-quarters Staff ... ..	7	5	12
New South Wales Lancers ... ..	7	323	330
Imperial Bushmen ... ..	32	479	511
New South Wales Field Artillery, B and C Batteries	4	80	84
Royal Australian Artillery ... ..	6	134	140
N.S.W. Garrison Artillery, Nos. 3, 4, and 6 Companies	5	157	162
Engineers, Nos. 1, 2, 3, and 4 Companies ... ..	15	187	202
1st Infantry Regiment ... ..	17	347	364
2nd Infantry Regiment ... ..	24	391	415
3rd Infantry Regiment ... ..	18	250	268
5th Regiment (Scottish Rifles) ... ..	15	329	344
6th Regiment (Australian Rifles) ... ..	18	314	332
7th Regiment (St. George's Rifles) ... ..	14	358	372
8th Regiment (Irish Rifles) ... ..	8	347	355
National Guard ... ..	5	113	118
Third Contingent ... ..	5	217	222
Army Service Corps ... ..	4	81	85
Army Medical Corps ... ..	5	48	53
Naval Forces ... ..	27	359	386
Grand Total ... ..	236	4,519	4,755

#### DRILL-HALLS.

(17.) The Sydney Corps are still without any central drill-hall, though it is hoped that at last a suitable site has been found.

New halls were erected at Hornsby, Hunter's Hill, Orange, and Penrith, and it is proposed to erect similar halls at Singleton, Forbes, and Wellington during current year.

#### RIFLE

## RIFLE ASSOCIATIONS.

(18.) As there was no Central Encampment for the Forces, it was considered advisable to postpone the meeting of the Defence Force Rifle Association, the grant lapsing. I have not as yet had an answer to my application as to the amount being revoted, in which case a meeting might be held about the time of the National Association Meeting, and thus avoid the expense of a double lot of passes by rail.

The Rifle Associations still adhere too much to matches at known ranges, though certain of them have introduced matches of a useful nature for military purposes, thus—

## NATIONAL RIFLE ASSOCIATION.

*Rapid Firing.*

At 500 yards—10 shots in 1 minute and 45 seconds.

## SOUTH COAST RIFLE ASSOCIATION.

*Volley Firing.*

10 volleys at unknown ranges.

*Section Attack.*

Rapid Firing.

## SOUTHERN RIFLE ASSOCIATION.

Volley Firing.

Section Attack.

Rapid Firing.

## WESTERN RIFLE ASSOCIATION.

Volley Firing.

Section Attack.

Rapid Firing.

Disappearing Targets.

## WARLIKE STORES.

(19.) The old difficulties as to the supply of warlike stores were accentuated during the past year. A state of war prevailing seemed to be quite sufficient reason for not meeting the requisitions of this and other Australian Governments for such prime necessities of defence as arms and ammunition. The reason was probably more satisfactory to the War Office than to the Governments of these Colonies, who, while constantly having pressed upon them, and rightly so, the necessity for adopting exactly the same pattern arms and ammunition as in use by the Imperial troops, found themselves at a critical period quite unable to obtain them.

(20.) The arms sent to England for conversion in 1898 have not yet been received back, and a requisition for Magazine Rifles, sent in 1899, met with the response that in about a year's time their manufacture might be commenced, all of which goes to prove the truth of the statement in my Report of last year that "there is no central authority responsible for the defence of the extremities of the Empire."

## CONTINGENTS FOR SOUTH AFRICA.

(21.) In the first week of October, 1899, a Conference of Commandants met in Melbourne to formulate proposals for a combined Contingent being sent to South Africa. The Conference pointed out the desirability of furnishing a large proportion of mounted men, while yet representing all branches of the Forces, and that a sufficiently large Force, representing all arms, be sent as an "Australian Contingent." A total of over 2,000 officers and men was arranged for.

Before,

Before, however, the report was signed, instructions were received from England to the effect that units were to consist of about 125 men, that "in view of numbers already available, Infantry most, Cavalry least serviceable," and that two units might be supplied by Victoria and New South Wales and one from South Australia. Subsequently, units were approved for the other Australian Colonies.

(22.) The result of the above was that the Contingents from the different Australian Colonies embarked as so many independent atoms,\* no cohesion amongst them, and difficulties about command, even when on board ship; no head to the Australian Forces, or even to the Forces of a Colony; and, in fact, no one to refer to in anything of local importance.

(23.) The despatch of a Second Contingent was approved on 16th December, 1899, and "A" Battery embarked on 31st December, the Royal Australian Artillery having independent equipment of its own. The preparation of the rest of the Force was a rush all through, there being practically little in store, and almost everything required having to be made. The following letter (sent as a preliminary Report) gives some idea of the difficulties to be encountered at this period, and the causes of them:—

From Major-General G. A. French, C.M.G., R.A., Commanding New South Wales Military Forces, to  
The Principal Under Secretary.

*Subject:—South African Contingents.—Remarks with regard to Equipment.*

New South Wales Military Forces,

Head-quarters, Sydney, 9 July, 1900.

Sir,

I had intended dealing with the matters mentioned below in my Annual Report; but as that could not be furnished for some time, I have the honor to submit the following for the early consideration of the Honorable the Chief Secretary.

(1.) The system introduced during the past five years of deducting large sums from the Military Estimates seems to me to be primarily responsible for any failures in the supply of suitable equipment to the troops sent to South Africa.

Thus, for 1896-97	...	...	...	£20,000	was deducted.
1897-98	...	...	...	20,000	"
1898-99	...	...	...	37,703	"
1899-1900...	...	...	...	40,000	"

(2.) It should be understood that only small savings could accrue from—

- (a) Failure on the part of members of the Force to put in the full time for which pay was voted.
- (b) From failure of Volunteers to become efficient.

(c) That actual savings having been made in the first of the above years, they could not be repeated in succeeding years, or, to speak more plainly, an appointment having been abolished for the sake of economy in 1896, could not again show a saving by its abolition in 1897.

(3.) It was not competent for the Military Authorities to reduce the pay or allowances voted by Parliament for the members of the Forces, and consequently savings had to be made from the Vote for "General Stores and Contingencies."

(4.) The evils mentioned in (3) were further intensified, owing to a new system, brought into force by the Treasury, by which all sums unexpended on 30th June lapsed; thus, as the Military Department could take no action for the purchase of stores till Estimates were passed (about December), and as delays frequently occurred in the supply of stores—especially warlike stores from England—considerable sums lapsed, and the accounts had to be paid from the succeeding year's Vote. The accumulations due to the above causes put us in the position on 1st July, 1899, of having some £16,000 carried over to that financial year, and the Estimates further provided that £40,000 was to be saved; so that we started, as it were, with a deficit of some £56,000 (quite apart from other reductions of £10,240 made before submission to Parliament), or about 30 per cent. of the whole Military Vote.

While the above sweeping reductions were being made, the Forces were increasing in a greater proportion. Major-General Hutton, when Commandant, put the minimum expenditure at £200,000 per annum. When he left the Colony the Forces consisted of—

Permanent officers and men	...	...	...	...	538
Partially-paid officers and men	...	...	...	...	4,341
Volunteers do	...	...	...	...	198
Total	...	...	...	...	5,077

On 30th June, 1900, there were—

Permanent officers and men	...	...	...	...	829
Partially-paid do	...	...	...	...	4,244
Volunteers do	...	...	...	...	3,434
Total	...	...	...	...	8,507

showing an increase of 68 per cent. in numbers for an increase of 6 per cent. on the Annual Estimates.

(6.)

\* See Appendix "E."

(6.) A reference to my letter of 30th August, 1899, will show that I plainly pointed out the very serious disadvantage to the Military Service in practically having to start the year with a deficit of some £56,000; but apparently no action was taken, and consequently it can be readily seen that when, in October, the Military Department was called upon to prepare a Force for service abroad, the military stores and equipment available could not be much—the Forces, in fact, having been living from hand-to-mouth for many years past.

(7.) As a matter of fact, the First Contingent, and others sent to South Africa up to end of December, 1899, were well equipped, nearly all the mounted men having the Imperial pattern military saddlery; after that date we had to be content with what could be obtained at short notice.

On 21st December I submitted to the Government a proposal for the Second Contingent. On 30th December "A" Battery left by the s.s. "Warrigal," fully-equipped with a good outfit in every respect. On 17th January 702 officers, non-commissioned officers, and men embarked on the steamships "Surrey," "Moravian," and "Southern Cross."

(8.) *Helmets.*—Owing to information being cabled on 1st January that our first Contingents were liable to be mistaken for the enemy through wearing hats, it was ordered, on 4th January, that khaki helmets should be supplied. There were none in store, or obtainable in the Colony; so that thirteen days only were available to provide helmets for some 702 officers and men. Even afterwards, when the Citizens' Bushmen Corps was formed, an attempt to get these of proper shape and material from manufacturers resulted in one offer of 250 in twenty-one days, and this offer was withdrawn a few days after.

In these circumstances, the question resolved itself into obtaining, not what you wanted, but what you could get; and it is not surprising if helmets obtained in such circumstances could not stand the rough service of campaigning in wet weather. As a matter of fact, when an interested expert (who offered to supply 250 helmets, but could not do so) was questioned by the Clothing Board, he admitted that "it was the best article that could be got at the time."

(9.) *Uniform.*—The system under which uniform has been supplied to our Forces was plainly dealt with in my Report for 1897. Subsequently, the Right Honorable the Premier took steps towards the formation of a clothing factory; but I regret to say the idea was not carried out. Practically, we are still in the hands of one contractor; and as he is not bound to keep up any stock of garments, or even of material to make them, it can readily be understood what a rush there was when some 700 men had to be measured and fitted out with two suits of uniform in two or three weeks. In the matter of greatcoats and riding trousers we actually had to wait till the cloth was manufactured at the mills, and then wait for it to be made up.

The fact that our men were provided with cloth instead of cotton khaki was a decided advantage, especially when cold weather was coming on, though in response to an application as to further supplies of clothing being forwarded, we received an answer that the Imperial authorities in South Africa would attend to that; as a matter of fact, I believe they also replaced some of the helmets.

(10.) *Saddlery.*—One of my earlier acts after arrival in this Colony was to order 200 sets of military saddlery and 1,000 numnahs. These came in well for the Mounted Rifles and Lancers of the First Contingent, but afterwards only "bush" saddles were obtainable. The bush saddle may be all very well in the bush for a 10-stone man in his shirt-sleeves, but is not the saddle for the "Light" Dragoon, who, with his arms, ammunition, and gear for man and horse, rides 18 stone. Even with the best of saddles the half-starved, overweighted horses on active service suffer from galls and sore backs; it is, therefore, not to be wondered at if some of ours suffered similarly. To obtain sufficient saddles in the short period available was one of our greatest difficulties; they had to be obtained where possible. Those supplied by regular saddlers were generally satisfactory of their kind. In one instance, a speculative tailor apparently bought up some job lots of inferior saddles, the D's fastened with such bad leather that it could be torn across by hand. On this being reported, they were promptly condemned by a Board, and the whole consignment thrown back on his hands.

An extension of three days' time in the departure of the transports, which I asked for, was not approved; and to illustrate the pressure at this period (January), I may mention that my first mounted parade for inspection of the Mounted Infantry had to be made on the Sunday before their departure, and even then I had to take them one Company at a time, and wait till the next Company changed the one lot of saddles on to their horses; in fact, saddles and bridles were being delivered up to the hour of embarking. This left little margin for inspection.

(11.) I append hereto:—

- (a) Copy of my letter of 12/1/00, referring to saddlery.
- (b) Report of Major Boam, D.A.A.G., the officer appointed to attend to the issue of clothing of Contingents.
- (c) Report of Clothing Board as to helmets supplied.

In conclusion, I would like to remind the Hon. the Chief Secretary that the number of men and horses sent to South Africa from New South Wales was greater than from any other two Australian Colonies combined; that all Contingents were embarked up to time, and without any hitch in arrangements; that the Staff, in addition to their own work, had to purchase 2,500 horses and equipment, engage and fit out 2,684 officers and men, carry on the duties relating to transports, horse-fittings, forage and food supplies, &c., as well as perform the duties of absent members of the Staff, so far without any recognition whatever.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

From Major-General G. A. French, C.M.G., R.A., Commanding New South Wales Military Forces, to  
The Principal Under Secretary.

*Subject* :—Departure of Troops being deferred till 20th.

[Urgent.]

Sir,

New South Wales Military Forces,

Head-quarters, Sydney, 12 January, 1900.

I have the honor to submit, for the consideration of the Minister, the desirability of deferring the departure of the troops till Saturday, the 20th.

In submitting this suggestion, I do so mainly in consequence of the delays with regard to the supply of harness and saddlery, and the inferiority of workmanship. These have been of such a nature that the Mounted Infantry have not yet been able to have a mounted drill, and the Australian Horse have had to condemn a large portion of their supplies of saddlery. The time thus gained will be of great value in giving extra training to these hastily-raised Forces.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

(24.) The remainder of the Second Contingent embarked on the 17th January in the troopships "Moravian," "Southern Cross," and "Surrey," making a total, with those in the "Warrigal," of—

Officers.	Men.	Horses.	Guns.
55	826	814	6

It had been arranged that I was to proceed with the Second Contingent, but to my mortification this was afterwards countermanded, and the chance of a life-time lost.

(25.) On the 10th January, instructions were given for the formation of the New South Wales Bushmen's Contingent, the funds for which were mostly provided by public subscription. My instructions were to associate myself with J. R. Carey, Esq., in matters relating to the organisation, equipment, and despatch of the Force, and to undertake, with his assistance, the control of the arrangements.

(26.) More time was available as regards this Contingent, and as practical bushmen were supposed to be able to get on with less kit than the ordinary Volunteer, advantage was taken of this fact to reduce the kit in every possible way. The saddle adopted was practically the same as for the Second Contingent, but a saddle-bag was provided to hold some of the kit; this arrangement seemed satisfactory. I took the whole Force for a march to Liverpool and back, and although they marched some 40 miles within thirty hours, and many of the horses must have done much more, no cases of sore backs were reported.

(27.) This Contingent embarked on 28th February, 1900, the strength being as follows :—

Officers.	Men.	Horses.
30	499	529

The question of officers for this Force was a difficult one, and several had to be taken who had no military experience. Lieutenant-Colonel H. P. Airey, D.S.O., was appointed Lieutenant-Colonel Commanding, the Force being organised in four Squadrons of 5 officers, 120 non-commissioned officers and men each.

#### IMPERIAL BUSH CONTINGENT.

(28.) The organisation of this Force was authorised on 13th March, 1900. A large number of men who had been under training in what was known as the Third Contingent, and were awaiting the chance of going to South Africa, were at once available, and other *bonâ fide* bushmen were enrolled in the far west, officers being sent out to select them at such places as Hay, Cootamundra, Gundagai, Bourke, Wagga, Young, Cooma, Moree, Tenterfield, and Cobar, a splendid lot of men being engaged.

It was hoped that the service of Major Thompson, 7th Dragoon Guards, would have been made available for the command of this Contingent; but as the Imperial Government did not consent, Lieutenant-Colonel Mackay was appointed. The difficulties as to officers culminated with this Contingent. The more experienced ones, and those who could conveniently leave their private business, had already volunteered with previous Contingents, and it was most difficult to obtain the services of officers of any military experience for the command of companies. A suggestion of mine, that some of these positions should be given to officers already serving in South Africa, was not approved; and, on the whole, I think it was fortunate that some months elapsed, after arrival in South Africa, before this Corps was brought into contact with the enemy.

STRENGTH

## STRENGTH OF FORCES.

(29.) As this is the last report that I will have to make on the New South Wales Forces, it may not be inappropriate to compare the numbers on 30th June, 1900, with those at the time of my arrival in the Colony.

1896.				
Permanent Forces	Regimental Permanent Staffs.	Partially-paid Forces.	Volunteers.	Reservists.
551	78	4,249	199	*1,896
1900.				
742	88	4,374	3,365	1,426

\* Undrilled—no training.

(30.) In the above interval the greater portion of the Forces have been rearmed with the Magazine rifles and 303 rifles and carbines, and a plentiful supply of cordite ammunition provided.

Modern field-guns supplied, or in course of supply, to Field Batteries.

Submarine-mining steamer of latest type contracted for; quick-firing guns for defence of mine-fields obtained and mounted; 6-inch and 8-inch guns chasehooped, some being converted to quick-firing. Defence works rearmed and strengthened. Electric light installations supplied at Sydney, Newcastle, and Botany. Drill-halls (15) erected at Parramatta, Kiama, Bathurst, Richmond, Penrith, Orange, Cooma, Albury, Goulburn, Wagga, East Maitland, Lambton, Hornsby, Hunter's Hill, and Victoria Barracks. New rifle-ranges constructed at North Sydney, Hornsby, Hunter's Hill, Albury, Goulburn, Maitland, Newcastle, Tamworth, East Maitland, Wellington, Wagga, Bowral, Young, Kiama, and extensive alterations at Randwick and Flemington.

(31.) As regards the personnel, it would scarcely be for me to compare the state of efficiency; but I would point out that the Annual Encampments, which did not take place for some seven years, were reintroduced in 1897 in part, and generally in 1898; that practice camps for Field Artillery have been introduced, and horses purchased therefor; frequent practice at moving targets for Garrison Artillery; long courses of gunnery instruction, of which officers and non-commissioned officers from other Australian Colonies have been glad to avail themselves; a School of Musketry; additional Rifle Associations and Rifle Clubs formed; and a regular system of musketry prizes for all Corps. That the Army Medical Corps and Army Service Corps have been enlarged, and more fully equipped, and also the Engineer Companies, and, finally, that all Corps have had an increase of paid parades of some 25 per cent.

I think it but reasonable to suppose that the above causes must have produced increased efficiency.

## CONCLUDING REMARKS.

(32.) In conclusion, I would wish to place on record my thanks to the Staff of all ranks, and to Officers Commanding Corps and Companies, who, for years past, have done so much to further the efficiency of the Forces, and especially to Colonels Mackenzie, Taunton, Williams, and Smith, Lieut.-Colonel Blanchard, Majors Bridges, Owen, Boam, and Lee, who have each in their respective spheres afforded me most valuable assistance; to Lieutenant-Colonels Burns and Lassetter, by whose exertions the Mounted Forces of the Colony were brought into such prominence in England; to Lieutenant-Colonel Mackay, who raised, *ab initio*, that fine Volunteer Corps the 1st Australian Horse; and, finally, to those Officers, N.C. Officers, and men, who, by their endurance of hardship, efficiency, and proved valour on many a hard-fought field in South Africa, have brought much credit to themselves, to the Colony to which they belong, and to that great Australia whose Defence Forces lifted on to a higher plane, and under one head and one system, will be still better able to cope with all enemies of the Great Empire of which we are proud to form a part.

I have the honor to be,

Sir,

Your obedient servant,

G. A. FRENCH, Major-General,  
Commanding N.S. Wales Military Forces.

Head-quarters,  
Sydney, 3rd October, 1900.

APPENDIX A.

ANNUAL REPORT OF THE OFFICER COMMANDING ARTILLERY.

From Major F. T. B. Baynes, R.A.A., Commanding Artillery, to The Assistant Adjutant-General.

Sir, Artillery Staff Office, Victoria Barracks, 18 September, 1900.

I have the honor to forward a report on the Artillery under my command, for the twelve months ending 30th June, 1900.

Colonel Smith, R.A., was in command until 31st December, 1899, and Lieut.-Colonel Airey, R.A.A., D.S.O., until 27th February, 1900, when these officers proceeded to South Africa—Colonel Smith in command of "A" Battery, R.A.A., and Lieut.-Colonel Airey in command of the Citizens' Bushmen's Contingent.

"A" Battery.

1. On the 29th December, 1899, "A" Battery, under the command of Colonel Smith, R.A. proceeded to South Africa, with a strength of 5 officers, 170 non-commissioned officers and men, 6 guns and waggons, fully equipped, and 140 horses.

The strength was made up by drawing 1 officer and 67 non-commissioned officers and men from the Garrison Companies, R.A.A.

Horses. 2. There are at present 59 horses on charge, in addition to the ones in South Africa. Nineteen of these horses are used by the Permanent Cavalry Unit.

Men. 3. There are at present 30 drivers specially enlisted since the departure of "A" Battery to look after the horses, harness, &c.

Armament. 4. The battery of four 15-pr. Q.-F. field-guns, with the latest Q.-F. breech mechanism, and spade attachment to carriage for checking recoil, have arrived this month, together with harness. Waggon have also been ordered by cable.

I would recommend that the Battery be made up to a 6-gun Battery, and handed over to "A" Battery on their return.

Three hundred rounds of ammunition per gun has also been received.

Annual\_Camp. 5. "A" Battery were in camp at National Park from 25th September, 1899, to 23rd October, 1899, when much useful instruction was given.

Shot practice was carried out on 17th and 18th October.

Owing to the war in South Africa "A" Battery were brought back before originally intended.

"B" and "C" Batteries.

6. Both Batteries were in camp for four days—from 29th September, 1899, to 2nd October, 1899.

"B" Battery—Four officers and forty-eight men.

"C" Battery—Four officers and forty-seven men.

Their Annual Competitive Prize-firing was carried out on the last day, with the following results:—

"B" Battery—Third-class prize.

"C" Battery—No prize.

Colonel Smith, R.A., and Major Bridges, R.A.A., were present during the camp, and acted as umpires.

R.A.A. GARRISON.

Personnel. 7. Including Artillery Staff, twelve officers and ninety-six non-commissioned officers and men proceeded to South Africa with "A" Battery and the various Contingents, or as Special Service Officers.

These vacancies, up to the rank of corporal, have been partly filled up by enlisting other men.

On the 30th June last there were forty-four vacancies.

Company Course. 8. The usual Company Courses have been held, with very good results, considering the paucity of officers and the short service of a number of the men.

Long Course. 9. A Long Course of Gunnery was held, commencing on the 19th June, and terminating on the 19th December, 1899, consisting of nineteen non-commissioned officers and gunners of the R.A.A., and one corporal from the Tasmanian Artillery.

The following certificates were awarded:—

1st Class Extra...	...	...	...	...	...	3
1st Class...	...	...	...	...	...	10
2nd Class	...	...	...	...	...	4
						—
						17

Annual Competitive Prize-firing. 10. One of the Companies of the R.A.A. (No. 1 Company) this year shot into a 1st Class Company, and another into a 3rd Class. This is the first time in New South Wales that a 1st Class has been obtained.

Small Arms. 11. The R.A.A. Garrison are now armed with the Martini-Enfield Rifle.

Camp. 12. The R.A.A. Garrison only went into camp to act as instructors and fatigue men for the N.S.W.A.

N.S.W.A.

N.S.W.A. GARRISON.

*Partially Paid.*

13. No. 5 Company (Newcastle) was this year the winning Company, obtaining a 3rd-class prize. Competitive  
 14. Nos. 3 and 4 (Sydney) Companies, and No. 6 Company (Wollongong) went into Camp at the Camp.  
 Heads for nine days at Easter, and No. 5 Company (Newcastle) formed their own local Camp.  
 Much useful instruction was given, and Shot practice was also carried out with good results.  
 I append a few remarks on the Forts and Armaments (Confidential).

I have, &amp;c.,

FRED. BAYNES, Major,  
 Commanding Artillery.

## APPENDIX B.

Issued with G.O. 102 of 1900.

## NEW SOUTH WALES MILITARY FORCES.

## Report on the Musketry Training for the year 1898-99.

1. THE rendering of my Report of the Musketry Training of the New South Wales Military Forces 1898-99, has been delayed consequent upon my duties in connection with the departure of the several Contingents to South Africa, the loss of the Assistant Instructor, who left the Colony with the Infantry Contingent, and the change of administration in connection with my own department, and that of the Officer Commanding the Unpaid Volunteer Force.

2. The Annual Course was carried out in accordance with the local Musketry Regulations, 1896, which has now been superseded by a new edition, dated 1899, the publication of which renders reference to any Imperial Musketry Book unnecessary, thus saving the confusing and even perplexing effect produced by the ever recurring reference to several books on the subject.

3. The shooting does not show an improvement in the musketry of last year, attributable, no doubt, in a great degree to the introduction of the M.L.E. Rifle. I feel confident, however, that much better results will be recorded next year, when the men will have become accustomed to the new and superior weapon with which they have been armed.

4. Money prizes were for the first time offered this year. This innovation, I am sure, will in the future prove an incentive to better shooting.

5. The Annual Returns were fairly well prepared, showing a marked improvement over those of last year.

6. Field Firing appears to play a very unimportant part in the Musketry Training. This may probably be accounted for by the fact that Regiments under the existing Regulations have so little opportunity of carrying it out, and also in some instances of the great difficulty of obtaining suitable ground within a reasonable distance from the respective headquarters of Corps. I desire here to reiterate my remarks in this respect, contained in my report of last year:—"I venture to hope that the Force may have more opportunities of carrying out Field Firing than at present."

7. I would respectfully suggest that in future the co-operation of Officers Commanding Regiments be asked in the shape of furnishing a short report of the musketry training of the troops under their respective commands, which could be rendered at the end of the musketry year. This report is not required in detail (the Regimental Returns show this), but in a general narrative form, describing how the musketry was performed, &c., any points to be brought to notice, or propositions to be made. These reports may prove instructive and interesting to all concerned.

8. I regret that owing to pressure of work I have been unable to carry out the instructions contained in para. 2 of G.O. 22, of 7th March, 1899, as regards visiting some of the Corps during the time they were performing their musketry training.

9. *School of Musketry.*

Six courses of instruction were held at Randwick during the years 1898-99, one being Class "A" for Officers, and five Class "C" for Warrant and N.C. Officers of the R.A. Artillery and Permanent Staff.

No. 3.—Staff Officers' Course, 19th September to 10th October, 1898. Three Officers reported themselves, and two obtained certificates.

No. 2.—Warrant and N.C. Officers' Course, 13th August to 12th September, 1898, was attended by eight N.C. Officers of the Permanent Staff and two N.C. Officers of the R.A. Artillery. Certificates were awarded to seven of the Permanent Staff.

No. 3.—Warrant and N.C. Officers' Course, 19th November to 19th December, 1898, was attended by ten N.C. Officers of the Permanent Staff, eight of whom were awarded certificates.

No. 4.—Warrant and N.C. Officers' Course, 4th February to 6th March, 1899, was attended by five N.C. Officers of the Permanent Staff, and one N.C. Officer of the Corps of Engineers. All were awarded certificates.

No. 5.—Warrant and N.C. Officers' Course, 29th April to 30th May, 1899, was attended by one Staff Officer, seven N.C. Officers of the Permanent Staff, and two N.C. Officers of the R.A. Artillery. All were awarded certificates.

No. 6.—Warrant and N.C. Officers' Course, 8th July to 7th August, 1899, was attended by six N.C. Officers of the Permanent Staff, one N.C. Officer of the Corps of Engineers, and two N.C. Officers of the R.A. Artillery. All were awarded certificates.

Separate

Separate reports which have been furnished at the termination of each of the above courses have pointed out the keen interest displaying by all those attending.

The beneficial results which accrue from attendance at the School may readily be observed on parade when a comparison is made with the training of those Companies by a Staff Instructor who has received the special fire control instruction with those which have not. The instructions given at the School of Musketry, which demand an extra amount of work, have been useful in inducing those attending to study the nature of our new rifle and infantry fire.

No returns were furnished by the Australian Horse or National Guard, and those supplied by 1st and 2nd Garrison Artillery, 5th Scottish Rifles, and Army Service Corps were incomplete.

The total number of recruits shown as "exercised" or "part exercised" is 1,319, and 49, or 3·59 per cent.; remained "not exercised" at the end of the Musketry year 1898-99.

The following table shows the classification of recruits in comparison with the previous year :—

Year.	Percentage of—		
	1st-class Shots.	2nd-class Shots.	3rd-class Shots.
1897-98	25·15	46·15	28·7
1898-99	28·66	37·00	34·34

The total number of trained men "exercised" was 3,175 ; 1,218, or 27·72 per cent., were not "exercised."

The following table shows the classification of trained men in comparison with the previous year :—

Year.	Percentage of—			
	Marksmen.	1st-class Shots.	2nd-class Shots.	3rd-class Shots.
1897-98	22·11	30·01	39·24	8·64
1898-99	20·19	27·34	32·94	19·53

The total number of Reservists "exercised" or "part exercised" was 820 ; 418, or 33·76, per cent., were "not exercised."

The following table shows the classification of Reservists in comparison with the previous year :—

Year.	Percentage of—			
	Marksmen.	1st-class Shots.	2nd-class Shots.	3rd-class Shots.
1897-98	18·68	36·73	30·59	14·00
1898-99	78·29	13·41	6·84	1·46

Sydney, 15th June, 1900.

APPENDIX C.

Extracts from the Annual Report of the Acting Principal Medical Officer for the Year ending 30th June, 1900, on the Medical Services of the New South Wales Military Forces.

SUBJECT:—ANNUAL REPORT ON NEW SOUTH WALES MEDICAL SERVICES.

From the Acting Principal Medical Officer to The Assistant Adjutant-General.

Sir, Medical Department, Victoria Barracks, Sydney, 19 September, 1900.

I have the honor to forward, for the information of the Major-General Commanding the New South Wales Military Forces, the Annual Report on the Medical Services for the year ending 30th June, 1900.

1. Garrison Hospital.

There were 366 admissions to the Garrison Hospital during the year.

This number is 79 less than the number of admissions for the previous year (1898–1899). The admissions for that year, however, were in excess of previous years, owing to the measles epidemic. The admissions for the year 1897–1898 being 364, or 2 less than the year covered by this report.

Cases admitted for treatment were detained as follows:—

1 day.	3 days.	7 days.	14 days.	Over 14 days.
18	80	94	73	101

Total, 366.

Table of diseases of cases admitted into Garrison Hospital is shown in Appendix No. 1.

Admissions.  
  
  
  
  
  
  
  
  
  
Duration of cases in hospital.  
  
  
  
  
  
  
  
  
  
Table of diseases.

2. *Recruits.*Permanent  
Services.

347 recruits presented themselves for the Permanent Services, of whom 281 were passed as "fit," and 66 rejected as "medically unfit" for military service.

Of those accepted, forty-nine (49) were re-engagements, and five had seen service other than in the New South Wales Military Forces.

For their distribution and physical average, see Appendix No. 2.

Partially-paid  
Services.

The number of recruits who presented themselves for the Partially-paid Forces, together with particulars, is given in Appendix No. 3, and by which it will be seen that a fine physical standard has been maintained in the recruiting of the Partially-paid Forces.

The total number of recruits examined for the Partially-paid Services amounted to 1,386, of whom 1,226 were accepted as "fit," and 160 were rejected as "unfit."

## Active service.

From the 21st December, 1899, to 16th June, 1900, nearly 6,000 recruits for active service were examined by the medical officers, when the proportion of men rejected as "unfit" for service was small. The average measurements of those accepted for service were (about)—Height, 5 ft. 7 in. to 5 ft. 8 in.; weight, 11 st. 1 lb.; chest measurement, 37 inches.

The physical development of the accepted men was very good; and their appearance indicated that they were well adapted to bear the constant strain attendant upon active service.

The Contingents examined for active service during the year comprised the First, Second, Third, Australian Horse, Mounted Rifles, Lancers, Army Medical Corps, Australian Bushmen, and Imperial Bushmen's Contingents.

3. *Schools of Instruction.*

## Officers' Course.

One Officers' Course was held at Head-quarters during the year, viz., from 26th August, 1899, to 4th September, 1899, at which 14 Officers attended, of whom 3 passed with honors, 5 passed, and 6 did not go up for examination.

4. *Army Medical Corps Contingent for South Africa.*Army Medical  
Corps Contingent  
for South  
Africa.

The offer of the Army Medical Corps to provide a Half-bearer Company and a Field Hospital for Active Service in South Africa having been accepted by the Imperial Authorities, the Contingent left Sydney by the s.s. "Kent" on October 28th last, under the command of Colonel W. D. C. Williams, P.M.O.

The equipment of the Corps consisted of a complete field hospital of 50 beds, 5 ambulance waggons, 8 transport carts, 2 water carts, and 2 Maltese carts; 53 horses were also taken. This Half Unit acquitted itself in such a manner as to earn the highest praise from the Imperial Authorities, who in December cabled requesting the other Half Unit to be sent to join their comrades. This Second Contingent left Sydney in charge of Major and Brevet Lieutenant-Colonel Vandeleur Kelly, in the s.s. "Moravian," on 17th January.

In cabling for this second Half Unit, the Imperial Government paid a high compliment to our Corps, which I believe is unique. The credit of the organisation of the Army Medical Corps is entirely due to Colonel Williams, P.M.O.

5. *Camps.*

## Camps.

A Continuous Camp was held from December 21st, 1899, to June 16th, 1900, at the Randwick Rifle Range, Kensington Racecourse, Rookwood Park, and the Victoria Barracks, for the purpose of enrolling and training volunteers for active service in South Africa. Such a Camp necessitated a medical service for the purpose of examining recruits, and also for medical and sanitary supervision of the troops. A Field Hospital containing six beds was erected at the Camps, and was under the care of the Officers of the Army Medical Corps.

Considering the very large numbers of men who were at times under canvas at the various locations, there was very little illness, and that was, for the most part, of a mild nature. Two cases of typhoid occurred in the course of six months, but the patients, who had been transferred to the Coast Hospital, Little Bay, made good recoveries.

Lieutenant G. Lane Mullins, Army Medical Corps, acted as Senior Medical Officer of all the Camp, and carried out his duties in a most satisfactory manner.

At the several minor Camps held during the year, the usual medical and sanitary arrangements were carried out by Officers of the Army Medical Corps. No serious cases of illness occurred.

6. *Army Nursing Reserve.*Army Nursing  
Reserves.

The Lady Superintendent and nine Sisters of the New South Wales Army Nursing Reserve volunteered for active service in South Africa. Their offer was accepted by the Imperial Government, and they left in the s.s. "Moravian" with the second Half Unit of the Army Medical Corps. From reports to hand, they have rendered excellent service in the various hospitals.

7. *Sanitation.*

(a.) In general.—The general health of the garrison during the year has been good. Fortunately, no disease of an epidemic nature has occurred during the year in barracks. Although there has been a serious outbreak of bubonic plague in the city, no case has occurred amongst the troops or any member of their families.

(b.) Drainage.—Every attention has been given to keep this service in a sanitary condition, and to this fact the above-mentioned immunity from disease is to be largely ascribed.

(c.) Water Supply.—All barracks and quarters are now supplied from city services, with the exception of Wollongong.

(d.) Victoria Barracks—Men's Quarters.—I would strongly indorse the remarks of Colonel Williams, P.M.O., in his last year's report with reference to the addition of sanitary annexes. This matter is of urgent importance and should receive early attention.

8. *Capitation Fund, A.M.C. (P.P.).*

Regarding the above, the Corps has been very unfortunate during the past financial year, as the authorised grants placed to credit were totally insufficient to admit of the Requisitions, submitted periodically to the Military Central Clothing Board, being passed to contractor for supply thereof.

The clothing of members, which had lasted in excess of the prescribed period, could not be replaced, no funds being available. Nos. 1 and 2 Units depleted the store of all serviceable and unserviceable clothing; consequently, no stock was left for issue to recruits. The fund was also drawn upon by allowances paid to Officers of the Army and Medical Corps Units for South Africa.

The reason for the general exhaustion of funds would appear to be the issue of the "full dress" uniform, which expenditure had apparently not been provided for, thus practically absorbing the Capitation Grants for a considerable period.

Proper representation has lately been made to the Military Central Clothing Board, explaining the matter fully, and I hope that just consideration will be given in authorising amounts sufficient for the year's clothing requirements.

9. *Conclusion.*

The two half units of the Army Medical Corps took away practically all our Field Hospital and Bearer Corps equipment, together with transport. The Corps has, in consequence, been very much handicapped in its endeavours to maintain the high standard of efficiency which characterised it last year, but every effort has been made with the limited means at our disposal to bring it up to its previous condition. A and B Companies of the Partially-paid Army Medical Corps have, in accordance with G.O. 131 of 1899, now been recruited up to their full strength.

A temporary Sergeant-Instructor has been appointed with other N.C.O.'s to take the place of those now on active service.

I have, &c.,

H. WALTON SMITH Captain,  
Acting Principal Medical Officer.

APPENDIX No. 1.

*Acute Specific.*—Influenza, 66; Beri Beri, 1.

*Alimentary Canal.*—Colic, 2; Constipation, 2; Diarrhœa (acute), 2.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**7TH VOLUNTEER INFANTRY REGIMENT.**  
(REPORT OF THE COURT OF INQUIRY UPON MATTERS BETWEEN THE OFFICER COMMANDING  
AND MAJOR WAINE, AND THE ADMINISTRATION OF THE 7TH REGIMENT GENERALLY.)

*Printed under No. 15 Report from Printing Committee, 1 November, 1900.*

J. C. Neild, Esq., M.P., to The Chief Secretary.

Dear Mr. See,

18 January, 1900.

I beg your very urgent attention to the enclosed letter, which will be supported, if necessary, by the various Ms.P.\* representing the many electorates in which the members of the 7th Regiment reside. \* Say 26 in all

I should be glad if you will grant me an interview regarding the matter.

Very truly yours,  
JNO. C. NEILD.

I have already minuted that I cannot do this pending the consideration of the report.—  
J.S., 19/1/00.

[Enclosure.]

The Honorable John See, M.P., Chief Secretary,—

18 January, 1900.

Sir,

As Parliament is in recess, and I am at present debarred from bringing the matter before the Assembly, I, as the Constitutional representative of many members of the 7th Regiment—St. George's Rifles—beg to address you as Defence Minister, with regard to the Regiment, in which you have been pleased to evince a most considerate interest, especially in taking a prominent part in the Town Hall Church Parade of the Regiment on the 24th December last.

The affairs of the 7th Regiment were recently the subject of examination before a Court of Inquiry, authorised by His Excellency the Governor in the early part of last year, but before you take any action which might prejudice the Regiment or the Officer Commanding same (should any such action be recommended by the said Court) I desire to draw your attention to the following facts:—

- (1.) The said Court was not, in the opinion of Counsel, lawfully constituted nor qualified.
- (2.) That though Counsel, instructed by the Crown Solicitor, was employed at the public expense against the Regiment, the application of the Officer Commanding for legal assistance to protect the Regiment against the attacks made upon it, met with refusal.
- (3.) That the President insisted upon closing the Inquiry as soon as Counsel employed against the Regiment had concluded his case, and the Officer Commanding was denied all opportunity of considering the evidence adduced, and of preparing any case in reply to that which had been carefully built up during a period of six months.
- (4.) That he was thus prevented from calling a single witness on behalf of the Regiment or himself, and limited to addressing the Court and making a few unprepared statements in reply to the lengthy evidence adduced by the Crown Solicitor.
- (5.) That, as in the Dreyfus "trial," the Court had before it, *privately*, documents which were not "produced" or placed before the Court.

All of which statements I am prepared to affirm on oath.

These proceedings were so entirely un-English, and so utterly opposed to British law and usage, that I, as the Constitutional representative of over 600 persons constituting the Regiment, many of whom have spent large sums in connection with it, urge in the strongest possible manner that you will be pleased

pleased to exercise the utmost caution in respect of any recommendation of the Court, and will do nothing to prejudice the large body of respectable and loyal citizens constituting the influential and flourishing military organisation in question.

The Regiment is now over establishment strength, and since Major Waine has absented himself (now for nearly nine months) its affairs have been harmonious and prosperous.

Urging your prompt attention,—

I have, &c.,

JNO. C. NEILD, M.P.

I regret that I cannot give consideration to these matters until the report from the Committee of Inquiry is placed before me.—J.S., 19/1/1900. Await receipt of report.—C.W., 1/2/00. Report herewith.—J.G.C., 00-2,648.

## The Major-General Commanding the Military Forces to His Excellency the Lieutenant-Governor.

*Subject:—Report of Court of Inquiry re 7th Volunteer Infantry Regiment.*

Your Excellency,

Head-quarters, Sydney, 25 January, 1900.

In forwarding the enclosed report of the Court of Inquiry re 7th Regiment, I have the honor to offer the following remarks:—

The Court appear to have taken much time and trouble with their report, and to have thoroughly sifted all questions of importance relating to the discipline of the Regiment.

(I.) Taking the report in the order presented, I concur in the remarks as to Major Waine.

(II.) I concur.

(III.) I concur. From my own experience of Lieutenant-Colonel Neild, I am of opinion that discipline is scarcely to be expected from any corps under his command. I agree with the Court as to the blame attributable to the Adjutant, Lieutenant Holmes, with regard to the unsatisfactory manner in which the books were kept, the more so as he is a permanently-employed officer. As stated by the Court, the Quartermaster (2nd Lieutenant Brignell) "seems never to have made any serious attempt to fulfil any of his duties."

(IV.) I am not disposed to approve at present of the disbandment of the companies herein recommended, but concur in the other recommendations.

This report, and previous experience with the Regiment, forces me to the conclusion that, in the interest of the Public Service, a complete change must be made in its administration.

I would therefore respectfully submit, for Your Excellency's consideration, as follows:—

(a.) Lieutenant-Colonel Neild should, in my opinion, have been removed from the Military Service in connection with the matters dealt with in my report of 25/4/99, addressed to Your Excellency; owing, however, to the clemency of the Government, he was allowed to resume duty. (*Correspondence attached.*)

I do not wish it to be supposed that any new offence is alleged against this officer, but I see no advantage in his being allowed to remain on the strength of the Active Volunteer Force; he has been little else than a source of injury to that Force since he joined it, from a disciplinary point of view, and I would advise his being removed to the Reserve of Officers.

(b.) I would recommend that Major Waine be removed to the Reserve of Officers.

(c.) I propose to remove Lieutenant Holmes, the Adjutant, from his present position.

(d.) The Quartermaster, Hon. 2nd Lieutenant J. T. Brignell, seems to have not attempted to carry out the duties of his office. I would advise that he be allowed to resign his Commission.

If the above recommendations are approved, I would at once take steps for the re-organisation of the Regiment on a proper footing.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

For the Honorable the Chief Secretary.

I commend the General's recommendation and the report to the serious consideration of the Minister. This is not the first time the affairs of this regiment, and Lieutenant-Colonel Neild's connection therewith, have come under my notice. I am satisfied some such change as that suggested by the General is absolutely necessary in the interests of the Regiment.—FREDK. M. DARLEY, 31/1/00.

Submitted.—C.W., 1/2/00. Forwarded for the perusal of the Premier.—J.S., 16/2/1900.

[Enclosures.]\*

COURT OF INQUIRY re 7TH (VOLUNTEER) INFANTRY REGIMENT.

*Schedule of Papers.*

- (1.) Report.
- (2.) Evidence.
- (3.) Exhibits as per list therewith.
- (4.) Correspondence relating to Colonel Neild's charges, &c., against Major Waine, as per schedule therewith.
- (5.) Correspondence relating to Captain Wilks's case, as per schedule therewith.

(6.)

\* The enclosures referred to being so very voluminous, it was not considered desirable, on account of expense, to print them.

## (6.) Returns, viz. :—

     24 parade states, do, from 17/1/99 to 23/9/99 (including five Camp states).

PROCEEDINGS of a Court of Inquiry assembled at United Service Institute on the 18th September, 1899, by order of the General Officer Commanding, bearing date 9th September, 1899, to inquire into and report upon matters between the Officer Commanding 7th Regiment and Major Waine, and the administration of the 7th Regiment generally.

*President :—*

Colonel W. H. Holborow, C.M.G., V.D.

*Members :—*

Lieutenant-Colonel G. W. Waddell.

Major J. H. P. Murray.

The Court having assembled, pursuant to the above order, proceed to take evidence, and forward herewith report and all papers and evidence in connection with the Inquiry.

WM. H. HOLBOROW, Col.,

President of Court.

GEO. W. WADDELL, Lt.-Col., } Members.  
 J. H. P. MURRAY, Major, }

#### REPORT.

The Court in submitting their report desire to express regret at the delay that has taken place which, however, has for various reasons been unavoidable. A mass of evidence has been taken which has no direct bearing upon the issues before the Court, for great latitude was allowed witnesses so as to avoid any possibility of complaint hereafter.

#### I.

As to the charges and allegations preferred by the O.C. 7th Regiment against the Senior Major, Major J. C. Waine :—

- (a) The Court find that Major Waine's application for three months' leave of absence was not made *bona fide*, inasmuch as the nature of his private affairs was not such as to prevent him from attending to his regimental duties, except for the short time during which he was absent from the Colony.
- (b) The Court find that Major Waine's explanation of his leaving the parade ground on the occasion referred to is unsatisfactory.
- (c) In view of the conflicting nature of the evidence the Court are unable to say whether or not Major Waine was under the influence of liquor at the meeting at Victoria Barracks; Major Waine, however, admits that he made use of the words complained of; but the Court find that the O.C. Regiment subsequently agreed to overlook the matter.
- (d) The Court find that there is not sufficient evidence to support either the charge as to Major Waine making a "lunar" at the Regiment, or the charge as relating to the keys.
- (e) As to the charge relating to the Regimental subscription, Major Waine justifies his refusal to pay on the ground that the Regiment was indebted to him in a larger amount, and the Court find that this was the case.
- (f) The Court find that Major Waine has been negligent in matters of correspondence; but that the general administration of the Regiment was so lax that less blame attaches to him than would otherwise be the case.
- (g) The Court find that Major Waine's attendance at parades has of late been unsatisfactory; his explanation to the effect that he would not attend while his O.C. was in command shows a lack of military spirit verging upon insubordination.

#### II.

The small attendance at the Camp was, in the opinion of the Court, due to the fact that attendance was not compulsory, and to the absence of a true volunteering spirit in the Regiment, as the only excuses put forward by witnesses were, in the opinion of the Court, frivolous.

Two reasons were put forward for the small muster at the G.O.C.'s inspection—one that the counter attraction of a football match was too strong, the other that many were deterred from attendance by the unfavourable state of the weather. In the opinion of the Court both these excuses are frivolous.

The

The small attendance at the Defence Force Rifle Meeting was attributed by witnesses to the unserviceable character of the rifle issued to the Regiment; the Court, however, from personal inspection of the arms of the Regiment, and from the evidence of Staff Colour-sergeant Clarke, find that the rifles were serviceable, and the Court find further that the small attendance was due to a lack of enthusiasm among members of the Regiment.

As to the great disparity existing between the strength and the establishment, the bad attendance generally, and the small return of efficient, the Court are of opinion that this is mainly traceable to the friction existing between the O.C. the Regiment and Major Waine, the disorganisation of discipline among the officers, and the consequent ridicule cast upon the Regiment.

### III.

The Court find that the administration of the Regiment is weak in the extreme. This appears clearly from Major Boam's report, from the constant feuds and bickerings which have prevailed among the officers, and from the indiscriminate enrolling of recruits, a great proportion of whom leave the Regiment before they are dismissed recruit drill. The Court find that this is to a large extent due to the appointment to the responsible position of O.C. of a gentleman of no previous military experience, who has shown that he is himself not amenable to discipline, and who appears to lack the tact and judgment necessary to the efficient command of a Regiment. The Court are further of opinion that a successful administration of the Regiment is impossible while the present state of disunion exists among the officers.

The issue of clothing to officers from store without payment was, in the opinion of the Court, wholly unjustifiable, in view of the unsatisfactory state of the Capitation Fund; and the Court are of opinion that, had it not been for the holding of this inquiry, it is doubtful whether payment for these articles would have been insisted upon.

From the report of Major Boam it appears to the Court that the books of the Regiment are kept in a very unsatisfactory way, for which, in the opinion of the Court, the Adjutant of the Regiment, Lieut. Holmes, is to blame. This unsatisfactory state of affairs has been accentuated by the appointment to the position of quartermaster of an officer who, according to his own evidence, seems never to have made any serious attempt to fulfil any of his duties.

### IV.

The Court recommend that two of the head-quarter companies be disbanded, and that the O.C. Regiment should be allowed to form two companies in the suburbs in their place, since an examination of the parade states shows that the attendance in the head-quarter companies and also their strength compares very unfavourably with the attendance and strength of the suburban companies. Not more than one company should, in the opinion of the Court, be formed in any one suburb. The Court also recommend that careful attention should, in the future, be paid to the physique of recruits. The Court are also of opinion that more care should be taken in the selection of officers, both as regards their physical qualifications and otherwise.

As regards the service generally, the Court recommended that a drill-shed should be erected in a convenient place for the use of the volunteer regiments. This would, in the opinion of the Court, have the effect of bringing the men together, and fostering their *esprit de corps*.

While the Court are of opinion that it would be highly undesirable that a staff officer should be placed in command of the purely volunteer regiments, and recommend that the same system should be adopted as that which obtains in the P.-P. Regiments—that is, that communications should be had with the staff office direct—they are of opinion that a staff officer should be appointed to examine the books of the purely volunteer regiments, and to superintend generally the permanent officers and N.C.O.'s. attached to those regiments, and to see that they do their duty.

The Court desire to acknowledge the services of the shorthand and type-writer, Mr. Handcock, who carried out his duties very satisfactory.

#### SCHEDULE OF SUPPLEMENTARY PAPERS.

- (1.) Letter from O.C. 7th Regt. to A.A.G., of 21st December, 1899, and subsequent minutes, *re* legal assistance in connection with Court. (7th Regt. No. 99-610, two papers.)
- (2.) Letter from O.C. 7th Regt. to A.A.G., of 15th January, 1900 (C.R. 99-1,444), containing formal protest and objection to the constitution and proceedings of the Court of Inquiry, and copy of letter from O.C. 7th Regt. to A.A.G., of 21st December, 1899 (7th Regt. 99-610), *re* legal assistance (three papers), and subsequent minutes.
- (3.) Memo. from S.C. Sergt. Clarke, 7th Regt., dated 31st December, 1899, resigning his position, and subsequent minutes. (7th Regt. 00-10.) One paper.
- (4.) Memo (attached to above) from S.C. Sergt. Clarke, 7th Regt., of 12th January, 1900—application to withdraw resignation.
- (5.) Letter from S.C. Sergt. Clarke, 7th Regt., to President of Court of Inquiry, 7th Regt., dated 1st January, 1900, and subsequent minutes, *re* remarks made by Capt. Gosbell and Lieut. Holmes. C.R. 99-1,444, 7th Regt. 00-15. (Three papers.)
- (6.) Private letter from Colonel Neild to General French, of 16th January, 1900, reporting *re* strength of 7th Regt. (C.R. 00-307.)

7th Infantry Regiment (St. George's Rifles),  
Head-quarters, Victoria Barracks, Sydney, 21 December, 1899.

*Subject* :—Court of Inquiry.

From the O.C. 7th Regiment to The A.A. General, Chief Staff Officer,—

Sir,

I have the honor to remind you that when I applied for the allowance of a sum of money to enable me to have the benefit of legal assistance before the Court of Inquiry my application was refused, on the ground that it was not intended that the Military Authorities should be legally represented.

As this intention has been departed from, and Counsel, instructed by the Crown Solicitor, is now employed against the Regiment, I have the honor to request that authority may be granted for the employment of solicitor and counsel on behalf of the Regiment, in order that the interests of officers and men may be adequately represented before the Court, as, while willing to defend my own interests, it does not seem to me proper that the whole burden of the regimental interests should be cast upon myself.

I have, &c.,

JNO. C. NEILD, Lt.-Col.,  
Commanding 7th Regiment.

A.A.G.—To President of Court for report.—G.A.F., 27/12/99. The President. Passed.—H.D.M., Col., A.G., 27/12/99.

The A.A.G.—Mr. Edmunds is acting under instructions from the Crown Solicitor to bring witnesses before the Court, and to examine them on the second and third paragraphs of the instructions to the Court. In these matters there is no charge against the Regiment, and the interests of the Regiment is fully considered in the evidence elicited.—Wm. H. HOLBOROW, Col., President of the Court, 27/12/99.

A.A.G.—Pass to O.C. 7th Regt. to note.—G.A.F., 28/12/99. O.C. 7th Inf. Regt. Passed.—H. D. MACKENZIE, Col., A.A.G., 28/12/99.

The A.A.G.—These papers reached me on the 30th December, the day after the inquiry was closed.

On the 22nd December I wrote the President of the Court intimating I required an adjournment pending an answer to the application of 21/12/99, but received no reply, and the Court met and sat on the 27th ultimo, without any intimation to me, except an inaccurate message per telephone.

On the 28th December I applied to the Court for an adjournment pending a reply to mine of 21/12/99, but this was refused, though the Court has always adjourned on the applications of Mr. W. Edmunds.

I beg to draw attention to the minute of the G.O.C., of 18/8/99, viz.:—"There is no present intention of employing a solicitor to assist the Court, and I certainly would not approve of Government money being expended for legal assistance in a purely Military inquiry, without some very special reason being given."

The statement that "the interests of the Regiment is fully considered in the evidence elicited," *vide* No. 4, can only apply to the evidence elicited by my *cross-examination* of witnesses called for the Crown, as the entire purpose and procedure of the Counsel, "acting under instructions for the Crown Solicitor," was an attack upon the 7th Regiment, as is evident from the questions put to witnesses known or believed to be friendly to the Regiment, and to those known as belonging to the "Waine party"; as, for instance, while every witness known to be, or suspected of being, loyal to the Regiment was examined, and re-examined, respecting the purchase of uniforms, busbies, and the expenditure of the £10 allowed upon passing examination, no question of the kind was, I believe, put to Major Waine, Captain Wilks, or Lieutenant Reynolds, notwithstanding that evidence had been given that though these officers had received £10 each to purchase review order uniforms neither of them had done so.

And I feel it my duty to submit that it is contrary to, and subversive of all discipline, that a subaltern should be invited to discuss the qualifications and administrative acts of his superior and commanding officers, as was done in the case of Lieutenant Reynolds.—JNO. C. NEILD, Lt.-Col., Commanding 7th Regiment, 6/1/1900.

7th Infantry Regiment (St. George's Rifles),  
Head-quarters, Victoria Barracks, Sydney, 15 January, 1900.

*Subject* :—Court of Inquiry.

From the O.C. 7th Regiment to the A.A. General, C.S.O.,—

Sir,

Referring to the denial of legal assistance to represent the interests of this Regiment against the attacks of Counsel instructed by the Crown Solicitor, I beg to intimate that I have obtained the opinion of members of both branches of the legal profession, and acting upon advice I have the honor to request that you will note this my formal protest and objection to the constitution and proceedings of the Court of Inquiry appointed to inquire into matters connected with the 7th Infantry (Volunteer) Regiment upon the following grounds, that is to say, that the said Court was and is not constituted and qualified as required by Act 31 Victoria No. 5, and the Regulations issued under and by authority of the said Act.

JNO. C. NEILD, Lt.-Col.,  
Commanding 7th Regiment.

7th Infantry Regiment (St. George's Rifles),  
Head-quarters, Victoria Barracks, Sydney, 21 December, 1899.

*Subject* :—Court of Inquiry.

From the O.C. 7th Regiment to the A. A. General, Chief Staff Officer,—

Sir,

I have the honor to remind you that when I applied for the allowance of a sum of money to enable me to have the benefit of legal assistance before the Court of Inquiry, my application was refused on the ground that it was not intended that the Military Authorities should be legally represented.

As

As this intention has been departed from, and counsel, instructed by the Crown Solicitor, is now employed against the Regiment, I have the honor to request that authority may be granted for the employment of solicitor and counsel on behalf of the Regiment, in order that the interests of officers and men may be adequately represented before the Court, as, while willing to defend my own interests, it does not seem to me to be proper that the whole burden of the regimental interests should be cast upon myself.

I have, &c.,

JNO. C. NEILD,

Lt.-Col. Commanding 7th Regiment.

A.A.G.—To President of Court for report.—G.A.F., 27/12/99. The President.—Passed.—H.D.M., Col., A.A.G., 27/12/99.

The A.A.G.—Mr. Edmunds is acting under instructions from the Crown Solicitor to bring witnesses before the Court and to examine them on the second and third paragraphs of the instructions to the Court. In these matters there is no charge against the Regiment, and the interests of the Regiment is fully considered in the evidence elicited.—W. H. HOLBOROW, Col., President of the Court, 27/12/99.

A.A.G.—Pass to O.C. 7th Regiment to note.—G.A.F., 28/12/99. O.C. 7th Infantry Regiment. Passed.—H.D. MACKENZIE, Col. A.A.G., 29/12/99.

Leichhardt, 31 December, 1899.

S. CR.-SERGT. W. Clarke respectfully begs to resign from the Defence Force, and asks as a special favour that he may be paid up to and for the 18th proximo, and allowed to leave on that date.

W. CLARKE,

S. Cr.-Sergt., Attd. 7th Regt. (late Cr.-Sergt. "Cameronians").

The S.O.,

Recommended. I am informed that the Adjutant held over the original letter with the object of giving S. Cr.-Sergt. Clarke an opportunity for reconsideration, and, owing to having no proper place for keeping papers at R. R. Range, the document was unfortunately lost or mislaid, which is regretted.

JNO. C. NEILD,

Lt.-Col. Comdg. 7th Regt.

11/1/00.

The O.C. 7th In. Regt.,

Staff Cr.-Sergt. Clarke now wishes to withdraw his resignation.

By order,

M. BOAM,

Major, D.A.A.G. S.O. for U.V.F.

11/1/00.

The S.O.U.V.F.,

So far as regards S. Cr.-Sergt. Clarke's resignation from the Defence Force, this is necessarily a matter outside my jurisdiction; but in view of his general conduct and his recent action in addressing the President of the Court of Inquiry direct, and not through the authorised channel, and in bringing a charge alleged to be a "pure fabrication," I shall be glad if he can be removed from the Regiment under my command.

For some time past there has been a "leakage" of regimental matter from the office, and S. Cr.-S. Clarke's attitude has caused me to lose confidence in him.

JNO. C. NEILD,

Lieut.-Colonel Comdg. 7th Infantry Regiment.

18/1/00.

Randwick Rifle Range, 12 January, 1900.

The Adjutant, 7th Infantry Regt.,

S. Cr.-S. Clarke wishes to withdraw his application to resign, submitted on 31st ultimo.

W. CLARKE,

Staff Cr.-Sergt. Attd. 7th Infantry Regt.

Contingent Camp, Randwick, 1 January, 1900.

The President, Court of Inquiry, 7th Regt.,—

Sir,

I trust in forwarding this communication that I am justified by circumstances.

In giving evidence before the Court on the 28th ultimo, I was asked by the O.-Commanding. the Regiment, whether I would care to take any of the rifles on charge of the Regiment to a rifle meeting—Melbourne, for instance. I replied, that I had done so, and found it accurate, and with reference to ammunition I stated that I had fired a rifle which a recruit had objected to, and had made three centres and seven bull's-eyes with service ammunition.

On quitting the Court, Captain Gosbell, who was present when I gave evidence, came to me and said that I had upset the show and spoilt the game, as they wanted to prove that the rifles and ammunition were unfit for issue.

On the following morning, W. O. Naghten came to the Camp to inquire the number, &c., of the rifle I had used at the Melbourne meeting, and in the afternoon, when firing the Contingent test, I put on two bull's-eyes, the third shot being an inner, whereon Lieutenant Holmes, who was standing in rear, said, with a sneer, "You didn't hit the bull's-eye that time; it's a pity you didn't bring out that wonderful rifle you were speaking about at the Court of Inquiry."

As my evidence was taken on oath and *given in a straightforward manner*, I beg to appeal to the Court for protection, inasmuch that having this day submitted my resignation from the N.S.W. Defence Forces (my application for a transfer to another regiment having been refused regimentally). I am desirous of leaving on the 18th instant, with a character free from prejudice or regimental misrepresentation.

I have, &c.,

W. CLARKE,

Staff Cr.-Sergeant.

(Late Cr.-Sergeant 26th Cameronians).

S. Cr.-S. Clarke has made no such application to me.—  
JNO. C. NEILD,  
Lieut.-Col. Com.  
7th I.R., 19/1/00.

The

The A.A.G.—Forwarded for the information of the G.O.C. The members of the Court of Inquiry think that Staff Colour-Sergeant Clarke gave his evidence in a straightforward manner, and that the remarks of Captain Gosbell and Lieutenant Holmes were improper and uncalled-for.—Wm. H. HOLBOROW, Col., President Court of Inquiry, 11/1/00.

A.A.G.—Request Sergeant Clarke to hold over his resignation for the present (through usual channel). Refer his complaint to Lt. Holmes and Capt. Gosbell for report.—G.A.F., 12/1/—

O.C. 7th Regiment, for action, H.D.M., Col. A.A.G., 12/1/00. Captain Gosbell. For report *re* para. No. 2. of mint. 3.—Jno. C. Neild, Lieut.-Col. Comdg. 7th Regt., 13/1/00.

O.C., 7th Infantry Regiment,—

Staff Colour-Sergeant Clarke's statement is a pure fabrication, and I doubt whether he is in his right senses in making the statement. I simply deny the allegation; but in justice to myself I respectfully submit that under the circumstances I am justified in asking for an inquiry into the matter.

The action of the Court of Inquiry in accepting S. Cr.-S. Clarke's allegation as correct, appears to me most unusual, and altogether opposed to military law and custom, the Court having given credence to an *ex parte* unsupported statement of a subordinate.

As the statement of S. Cr.-S. Clarke contains a serious reflection upon myself, I have the honor to request that an inquiry may be held into the truth, or otherwise, of the allegations made by him against me.

JAMES W. GOSBELL, Captain,  
O.C. "B" Coy.

18th January, 1900.

The Adjutant 7th Infantry Regiment,—

S. Cr.-Sergt. Clarke has made a serious accusation against Captain Gosbell, *re* the evidence given by the former before the Court of Inquiry in a letter addressed direct to the President, and he further, in some letter, alleges that "when firing the Contingent test, I put on two bulls-eyes, the third shot being an inner; whereupon Lieut. Holmes, who was standing in rear, said with a sneer, "you did not hit the bulls-eye that time; it's a pity you did not bring out that wonderful rifle you were speaking about at the Court of Inquiry."

The President expresses the opinion that your remarks "were improper and uncalled for."

The G.O.C. asks for your report on the matter.

JNO. C. NEILD,  
Lieut.-Colonel Comdg. 7th Infantry Regiment.

13th January, 1900.

I have sent the original papers to Captain Gosbell for his report, as directed.—J.C.N.

O. C. 7th Infantry Regiment,—

So far as my remark to Staff Cr.-Sergt. Clarke is concerned, it was merely jocular, and made to him personally. I did not make the remark till Staff Cr.-Sergt. Clarke rose after firing, when I asked him what he had put on, and laughingly suggested that he would have made all bulls-eyes if he had fired with his M.H. Rifle.

ARTHUR HOLMES,  
Lieut., Adj. 7th Inf. Regt.

13th January, 1900.

The A.A.G.,—

Herewith are Captain Gosbell's and Lieutenant Holmes' reports. I beg to support the former's application for an inquiry.

(2.) Capt. Gosbell is a most conscientious and gentlemanly officer, and the charge made against him by S. Cr.-S. Clarke appears to me simply incredible. It also implies an accusation of a conspiracy involving the entire staff (except Clarke), and every Co. Commander in the Regiment.

(3.) The President of the Court of Inquiry has accepted a communication sent direct by a N.C.O., and not through the authorised channel.

(4.) I must beg to be permitted to protest in the strongest possible manner against the remarks of Col. Holborow, in which, upon unsupported accusation, he assumes the truth of S. Cr.-S. Clarke's libel.

(5.) The President of the Court of Inquiry, in the same manner that marked the proceedings of the inquiry, and called forth such animadversions in military, naval, legal and journalistic circles, has seen fit to accept these unsupported accusations as truthful, and to record a censure upon Captain Gosbell for words he denies uttering.

(6.) The opinion expressed by the President as to the straightforward character of S. Cr.-S. Clarke's evidence involves a reflection upon the O.C., Adjutant, all the Co. commanders, the S.-Major. Q.-M.-S., and S. Cr.-S. Pearce, everyone of whom gave evidence that conflicted directly with that of S. Cr.-S. Clarke.

(7.) Whether this N.C.O. resigns from the defence force or not, I trust that the 7th Regiment may be granted the services of a less discontented and more deserving S. Cr.-Sergt.

19 January, 1900.

JNO. C. NEILD,  
Lieut.-Colonel Comdg. 7th Infantry Regiment.

Dear General French,

On the eve of the departure of the 2nd Contingent, I am glad to be able to report that the strength of the 7th Regiment is now over establishment, and the "weeding" process will be applied to unsatisfactory attendants.

Greycairn, 16 January, 1900.

Very truly yours,

JNO. C. NEILD.

The Officer Commanding 7th Infantry Regiment to The Staff Officer for Unpaid Volunteer Force.

7th Infantry Regiment (St. George's Rifles),  
Head-quarters, Victoria Barracks, Sydney, 20 February, 1900.

Subject :—Uniforms.

HEREWITH I beg to hand you lists of 174 N.-C.O's. and men of this regiment who have worn their F.S. uniforms for periods exceeding those specified by the regulation, which (141) provide for a jacket to last two years, and two pairs trousers to last three years, namely, eighteen months each pair.

In the cases submitted it will be seen that in every one of new issue the jacket and trousers (120), one pair only, have been in wear from two years and one month to three years and two and a half months, and in the case of re-issues of partly-worn clothing (54) the garments have been in wear for from eighteen months to two years and four months.

As during the greater part of the time the men have been without great coats, their F.S. uniforms have had exceptionally severe wear, and have been used through two camps also.

The consequence is that a majority of the men having these uniforms are unable to wear them in consequence of shrinkage, rents, and really extreme shabbiness. The men are, therefore, not able to attend drill in some cases, and I am in great difficulties, and fearful of the result upon efficiency.

If clothing were ordered now it could not be delivered until March, being the ninth month of the official year.

I therefore ask permission to order the absolutely necessary clothing for the regiment in anticipation of next year's Vote, and beg for the earliest possible reply authorising this.

I may add that our efficiency for this year will certainly be very considerably larger than last.

JNO. C. NEILD, Lt.-Col.,  
Comdg. 7th Regt.

A.Q.M.G. for G.O.C.,—The Board would recommend that the O.C. 7th Regt. be allowed to operate, for clothing, up to an amount of £400, this being 50 per cent. of amount the Regt. earned last year by efficiency.—CHAS. F. ROBERTS, Colonel, Mil. Sec. and Prdt. My. C. Bd., 7/2/1900.

N.B.—The Board have not been able to hold a meeting since receipt of this letter on the 2nd March.—C. F. R., Col.

G. R. SMITH,  
Q.-M.S., 7th Regt.

The Officer Commanding 7th Infantry Regiment to The Assistant Quartermaster-General.

Sir,

7th Infantry Regiment, Victoria Barracks, 26 March, 1900.

On the 21st February I addressed a very urgent memorandum to the Staff Officer for Unpaid Volunteer Force, applying for permission to anticipate next year's capitation, to enable the supply of certain uniforms, without which the Regiment cannot be carried on.

I sent a reminder on the 5th instant, and this was received on the 6th.

I sent a second reminder on the 12th instant, which was received on the 13th instant.

On the 14th instant I received the reply following:—"Forwarded by the M.C.C. Board, 7/3/00, to A.Q.M. General, recommending an advance of £400 be made."

As this matter is of the utmost moment, I beg that I may be at once informed whether the money is available.

I have, &c.,

JNO. C. NEILD,

Lt.-Col. Commanding 7th Regiment.

G.O.C. This is one of the matters you said you did not care to deal with until you had received the decision of the Government upon the report of the recent Court of Inquiry.—J.G.O. TAUNTON, Lt.-Col., A.Q.M.G., 28/3/00.

Urgent. P.U.S. A new grievance will be established if I am not put in a position to deal with the affairs of the 7th Regiment without further delay.—G. A. FRENCH, M.-G., 29/3/00. Submitted.—C.W., 31/3/00.

The Major-General Commanding the Military Forces to His Excellency the Lieutenant-Governor.

Subject:—Court of Inquiry re 7th Regiment, asking that the decision *re* may be expedited.

Your Excellency,

Head-quarters, Sydney, 2 March, 1900.

With reference to my letter of the 25th January last, forwarding the Report of the Court of Inquiry re 7th (Volunteer) Infantry Regiment (St. George's Rifles), I have the honor to request that Your Excellency may be pleased to expedite the position in this matter, as, in my opinion, it is essential that the unsatisfactory condition of things at present existing in the above Regiment should be brought to an early conclusion.

I have, &c.,

G. A. FRENCH, Major-General,

Commanding N. S. Wales Military Forces.

Submitted.—C.W., 7/3/00. The Hon. Premier—J.S., 14/3/1900. The Under Secretary for Finance and Trade.—B.C., 14/3/00.—C.W. The Principal Under Secretary.—I understand the report referred to is now with the Hon. the Chief Secretary,—F.K., 22/3/1900.

J. C. Neild, Esquire, M.P., to The Prime Minister and Colonial Treasurer.

Sir,

16 March, 1900.

Having regard to the recent Military Court of Inquiry respecting the 7th Infantry (Volunteer) Regiment, I have the honor to draw your attention to a telegram from Melbourne, appearing in to-day's *Herald*:—"The sub-committee of the Cabinet appointed to inquire into the circumstances under which Davey was discharged from the Bushmen's Contingent, concluded its sittings to-day, but will not make its decision known till to-morrow, as it desired to give certain persons affected by it an opportunity of making any comment before its publication."

The manner in which the inquiry respecting the 7th Regiment was conducted gave large public dissatisfaction, and was distinctly one-sided, inasmuch as—

1. Counsel was employed to prosecute the Regiment and Officers suspected of loyalty to it, while legal assistance was refused them and the Regiment;
2. While seven (7) months were devoted to the preparation of a case against and prosecution of the Regiment, not one hour was allowed to prepare a reply or to call a single witness.
3. The Officer representing the Regiment was actually called upon to address the Court in reply before the evidence was closed. (See report of the proceedings.)
4. Papers were secretly supplied to and used by the Court, without notice to or knowledge of the officer representing the Regiment. A similar proceeding in the infamous Dreyfus case occasioned an outcry throughout the civilised world. His Excellency the Governor of this Colony was most pronounced in his condemnation, and cannot possibly approve of similar actions within the limits of his own jurisdiction.
5. The Court of Inquiry consisted of three officers, of whom two have not at any time passed the examinations required by law, and are not, therefore, officers within the intention of the statute law, though they (improperly) hold commissions. (See Local Army List, pp. 106 and 8.) The third member of the Court had not, when appointed, any experience of regimental command, and was, and still is, of inferior rank to the officer commanding the 7th Regiment, whose administration he reported upon.
6. Two members of the Court of Inquiry were wholly without experience as officers in, or commanders of, unremunerated volunteer regiments or corps, and therefore entirely without knowledge of the special circumstances surrounding such a regiment as the 7th, where the absence of any emolument, either in land orders or cash, precludes administration upon the lines obtaining in partially-paid (militia) regiments.
7. The same members of the Court of Inquiry were also without experience in the administration of a "consolidated" regiment, their commands and experience being limited to "administrative" regiments, viz., regiments consisting of small companies scattered amongst country towns. The 7th is the only "consolidated" regiment in the Colony. The President of the Court had the least experience of all in regard to the matters named in paras. 6 and 7.

For

For all these and for other cogent reasons, I have the honor, as a Member of the Legislative Assembly and a Parliamentary representative of the many hundreds of electors constituting the 7th Regiment, to urgently request that before any action affecting the Regiment or any member thereof loyal to it is taken upon the report of the Court of Inquiry, a sub-committee of the Cabinet may be appointed to investigate the statements made in this letter, and afford the members of the Regiment, who serve the Queen without reward of any kind, an opportunity of answering any allegations or recommendations made against the Regiment or themselves.

I have further the honor to request that the report of the said Court of Inquiry may not be made public until, following the Victorian precedent, those concerned have had an opportunity of making any comment they desire before its publication.

I have, &c.,

JNO. C. NEILD,  
Member for the Electorate of Paddington.

The 7th Regiment was never in such a flourishing condition as to-day, notwithstanding the difficulties which surround it. It is 200 over strength, though the Adjutant and non-commissioned staff have been taken away for three months.—J.C.N.

Acknowledge and send to Chief Secretary's Department, please.—W.D.B., 20/3/1900. Urgent.  
Ack.—C.E.F.R., 21/3/00. The Principal Under Secretary.—F.K., 21/3/00.

### The Officer Commanding 7th Regiment to The Assistant Quartermaster-General.

Sir,

22 March, 1900.

In reply to your minute of the 20th instant, stating that the G.O.C. "does not care to deal with any questions in connection with the 7th Regiment until he has received the decision of the Government upon the report of the recent Court of Inquiry," permit me to point out that as the Minister has decided that the report is to stand over until laid before Parliament, and as this cannot be done for, say, a couple of months, I beg that the G.O.C. will reconsider the matter, and take the necessary action to enable the 7th Regiment to be carried on in an efficient manner.

Any other course can but, I submit, result in loss to the public.

Should the G.O.C. feel indisposed to do this, I beg that I may be authorised to approach the Honorable the Minister for Defence regarding the status of my Command.

I have, &c.,

JNO. C. NEILD, Lt.-Col.,  
Commanding 7th Regt.

Urgent. P.U.S. Please obtain the decision of the Government in this matter at earliest possible date.—G. A. FRENCH, M.-G., 26/3/1900. Submitted.—C.W., 27/3/1900.

### J. C. Neild, Esq., M.P., to The Chief Secretary.

Sir,

28 March, 1900.

I have the honor to address you respecting the affairs of the 7th (Volunteer) Regiment.

Owing to the despatch of troops for South Africa the entire Permanent Staff of the Regiment was removed to Randwick about the middle of December last. Some have returned to duty with the Regiment, but the result has been that for, say, fifteen weeks the Regiment has been without an adjutant, fifteen weeks the Regiment has been without sergeant instructors, five weeks the Regiment has been without a sergeant-major, five weeks the Regiment has been without an orderly-room clerk, two to three weeks without a quartermaster-sergeant, and still is without an adjutant and one sergeant instructor.

This will give some idea of the very large amount of work thrown upon the Commanding Officer, Lieutenant-Colonel Neild.

During the past three months, however, upwards of 250 men have been enrolled, and are now completing their recruit drill, while about seventy men have been discharged for unsatisfactory attendance.

The Regiment is considerably over strength, and is being brought down to establishment limits by weeding out.

The Regiment and its administration were never in such an efficient condition as now; they challenge criticism.

Three matters, however, need immediate attention:—

- (1.) 100 old M.H. rifles are urgently required to enable recruits to complete their training. These rifles were applied for on the 21st February.
- (2.) Clothing for recruits, and to replace time-expired garments, now in rags, is also urgently needed.

I forward for your inspection a pair of trousers just returned by a member of the Regiment, as no longer fit for wear. This soldier, trained at the public expense, leaves the Defence Force for want of a uniform, and the Colony loses his services. Many other men's uniforms are in pretty much the same condition, having been in constant wear for three years and three to four months.

Urgent application was made on 21st February last for permission to order clothing in anticipation of the capitation grant for next year to enable these men to be clothed. The Military Clothing Board has recommended this; but no reply of any kind has been given to the application.

(3.) Owing to two officers having absented themselves for ten months, one officer gone to England on leave, one officer (a C.S.) being sent to Grafton, and two officers on S.A. Contingent duty, the Regiment is short-handed.

Sir

Six (6) very suitable gentlemen have been recommended some six weeks ago for Commissions.

May I, in the public interest, beg that you will authorise—

- (1.) The issue of 100 old M.H. rifles for recruits.
- (2.) The procuring of the uniforms stated.
- (3.) The appointment of the recommended officers.

If this is granted, the Seventh will, within one month from date, be a regiment in a condition of thorough efficiency, and a credit to the Colony.

I have, &c.,

JNO. C. NEILD,  
Member for Paddington.

Submitted.—C.W., 29/3/1900.

Put with other papers.—J.S., 29/3/1900.

J. C. Neild, Esq., M.P., to The Chief Secretary.

Dear Mr. See,

28 March, 1900.

Referring to our informal interview *re* the 7th Infantry (Volunteer) Regiment and the recent Court of Inquiry, I beg to say that as you told me that the papers had been sent on by you to the Premier, I addressed to Mr. Lyne a letter urging that the precedent established by the Government of Victoria (in the case of Private Davey) might be followed, and a sub-committee of the Cabinet appointed to investigate the one-sided proceedings of the Court of Inquiry, and also that the report of the said Court might not be made public until, following the Victorian example, those concerned had been afforded an opportunity of commenting upon anything therein affecting them.

These requests I repeat to you. If any persons are entitled to consideration, it is surely those who laboriously serve the country without recompense, and for Volunteers I claim open and above-board proceedings, and not anti-Dreyfus tactics.

I claim this sub-committee of the Cabinet as fair treatment, and as preferable, perhaps, to a Select Committee of the Assembly, which must otherwise be sought.

The manner in which the Seventh Regiment has had to struggle against opposition and refusal to answer correspondence is shown in another letter sent by me to you this day, and to which I beg your earnest attention.

I am, &c.,

JNO. C. NEILD, M.P.

J. C. Neild, Esq., M.P., to The Chief Secretary.

Sir,

31 March, 1900.

I understand that the question of uniform for the 7th Volunteer Regiment has been referred to you, and I think that, in the public interest, you should know that the men of this Regiment are wearing clothing issued to them in 1896, and which, by the rule of the Service, was time-expired, on an average, a year and six months ago.

Clothing is also required with pressing urgency for recruits who have been drilled at the expense of the public.

The late Premier and Defence Minister, Mr. Reid, officially authorised this, but, nevertheless, no clothing has been permitted the Regiment for six or eight months. On the contrary, the Officer Commanding the Regiment was formally advised that if he incurred the expense he "would be held personally responsible." This is the way Volunteers are "encouraged." The papers exist, if you doubt my statement.

No money is really required. Only £800 has been spent out of this year's capitation grant, despite Mr. Reid's authorisation that all (£1,900) could be spent.

I beg that you will at once order that the citizens constituting the 7th Volunteer Regiment may have fair treatment in the matter of clothing.

I am, &c.,

JNO. C. NEILD, M.P.

J. C. Neild, Esq., M.P., to The Chief Secretary.

Dear Mr. See,

31 March, 1900.

I send you, "informally," copy of a report sent to General French, showing the excellent condition of the 7th Regiment, despite the fact that it is the only regiment in the Colony which has to carry on without an adjutant, &c.

The amount of work that the Commanding Officer has had thrown upon him is impossible to explain, and the difficulties placed in his way you would not believe.

Very truly, &c.,

JNO. C. NEILD, M.P.

[Enclosure.]

Memorandum from The Officer Commanding 7th Regiment, St. George's Rifles, to The Assistant Adjutant-General, Chief Staff Officer.

Sir,

31 March, 1900.

Having now had the administration of this Regiment wholly in my hands for a period of more than three (3) months, I have the honor to report as follows:—

- (1.) In the latter part of December the entire Permanent Staff of the Regiment was removed to Randwick, in connection with S.A. Contingent duty.

During the first week of January the Quartermaster-sergeant returned to the Regimental Office, which was then re-opened.

On the 24th January, Sergeant-Major Shipley entered upon his duties, and has proved himself an excellent officer, giving satisfaction to all ranks.

Staff-

Staff-Sergeant Hamilton, Orderly-room Clerk, resumed duty at same time. Until the 26th instant, when Staff Colour-Sergeant Sloan was attached to the Regiment, the administrative work was carried on by the O. C., S. Major, Q.-M. Sergt., and O. R. Clerk.

E and F Companies—Balmain and Leichhardt—have received occasional visits from the Sergeant-Major, but the absence of Sergeant Instructors has been severely felt, the drilling of recruits being retarded.

**Officers.**

(2.) Lieutenant Shears has resumed duty after a long absence due to very serious accident.

Lieutenant Anderson received his commission and has been passed into the ranks.

Six gentlemen have applied and been recommended for commissions, and other applications await consideration when the former are gazetted.

Captain Smith left for England on the 28th February on six months' leave.

Captains Niesigh and Crane have been—the former for three months—on Contingent duty.

Major Waine and Lieutenant Reynolds have now been absent from all duty for eleven and ten and a half months respectively.

**Non-com. officers.**

(3.) Members of the Regiment have qualified by examination as follows:—For Sergeant, 5; Corporal 4; Lance-Corporal, 9; Total, 18.

Appointments and promotions have been made as follows:—

Colour-Sergeant, 1; Sergeants, 3; Acting Sergeant, 1; Corporals, 6; Lance-Corporals, 2; Total, 13.

Reduced for inattention to duty, Colour-Sergeant to Sergeant, 1.

Reduced for deficient attendance, Sergeants, 2, Corporals, 3.

Reverted for deficient attendance, Lance-Corporal, 1; Total, 7.

**Enrolments.**

(4.) Attested, 310; re-enrolled, 1; resignations cancelled, 3; Total, 314.

**Passed to the Ranks.**

(5.) The number of recruits passed into the ranks (31) would have been increased had not the Sergeant Instructors been absent, as already stated. There will be passed in in a few days about 150.

**Struck off.**

(6.) The prospect of forming a Company at Granville being unsatisfactory, those enrolled there in 1899, but not drilled, were struck off, viz., 22.

**Discharged.**

(7.) For deficient attendance, there have been discharged—from A Co., 10; B Co., 6; C Co., 8; D Co., 15; E Co., 17; F Co., 3; Total, 59.

**Leave.**

(8.) One private has been granted three months' leave.

**Deaths.**

(9.) Two deaths have occurred, one in Sydney and one—Private Cameron—in South Africa.

**Boards.**

(10.) Four Regimental Boards have been appointed and have reported on clothing, arms, and equipment.

**Classes.**

(11.) Classes of instruction for officers and non-com. officers have been held.

**Parades.**

(12.) Parades as per approved programme, together with voluntary and church parades, have been held. Two of the latter, under the auspices of E and F Companies, were in aid of the Patriotic Fund, and realised £56. At these, the Honorable the Premier and Minister for Defence delivered addresses.

**Administration.**

(13.) The administrative affairs of the Regiment have been brought up to and maintained in a most satisfactory condition.

The manner in which the clerical work has been carried on, and recruits personally drilled at Waverley and Chatswood by the Sergeant-Major, and at Hurstville by the Q.-M. Sergeant, is deserving of special mention.

The Officer Commanding has discharged his own duties, together with those of the Major and the Adjutant.

**Efficiency.**

(14.) Every man now in the Regiment is an efficient to date.

I have, &c.,

JNO. C. NEILD,

Lieut.-Col. Commanding 7th Regiment.

J. C. Neild, Esq., M.P., to The Chief Secretary.

Sir,

25 April, 1900.

Referring to my letter of the 16th March, 1900, addressed to the Premier, and in which I urged the appointment of a sub-committee of the Cabinet to investigate certain statements therein contained, with reference to the composition and proceedings of a Court of Inquiry held in connection with the 7th Infantry (Volunteer) Regiment, I have now the honor to request that a report be obtained upon the working and affairs of the said Regiment during the past four (4) months, being the period since the late Adjutant ceased to be connected with it, and the administration has been wholly in the hands of the Officer Commanding the Regiment.

I beg further to suggest that the said report be made by the Military Secretary, an officer of both British and Colonial experience. It is needless to say that Colonel Roberts has not been approached in any way whatever upon the subject, and knows nothing of this letter.

The attendance of this Regiment on special occasions, compared with last year, has been as follows:—

	1899.	1900.
Attendance at Easter Training ... ..	268	388
„ G.C.O.'s Inspection ... ..	251	404
„ St. George's Day Parade... ..	360	468

the latter being, it is believed, a "record" attendance for a Volunteer Regiment for very many years in New South Wales, every man possessing a uniform except 32 being present.

I have, &c.,

JNO. C. NEILD, M.P.

Memorandum.

Memorandum from The Officer Commanding 7th Infantry Regiment to  
The Assistant Adjutant-General.

Sir,

7 May, 1900.

As required by Regulation No. 32, I beg to report that Major J. C. Waine of this Regiment has been absent from regimental duty for twelve (12) months, including the G.C.O.'s annual inspection, in contravention of Regulation No. 108.

As a considerable number of the N.C.O.'s and men have been discharged for unsatisfactory attendance cannot action regarding this persistently neglectful officer be taken under Regulation No. 20?

I have, &c.,

JNO. C. NEILD,

Lt.-Colonel Commanding 7th Regiment.

Memorandum from The Officer Commanding 7th Regiment to The Staff Officer  
Unpaid Volunteer Forces.

Sir,

26 May, 1900.

On the occasion of the parade of this regiment on the 19th instant, at the Centennial Park, Major Waine and Lieutenant Reynolds attended in plain clothes, and took up a position a very few yards from and in full view of the troops, and there conducted themselves in a manner that gave great offence to all ranks, their actions conveying the impression that they were treating the Regiment with scorn.

This is not the first time that I have had to draw the attention of higher authority to the disregard of dress regulations [section 1, ss. (g) page 6] by these two officers; and I again beg that steps may be taken to at least protect the officers and men of the Regiment from their misconduct and studious affronts.

I have, &c.,

JNO. C. NEILD,

Lt.-Colonel Commanding 7th Regiment.

A.A.G.—Forwarded. M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.), 29/5/00.

Memorandum from The Officer Commanding 7th Regiment to The Staff Officer,  
Unpaid Volunteer Forces.

26 May, 1900.

As directed by Regulation No. 32, I have the honor to report that Lieutenant W. O. Reynolds of this Regiment has now been absent from duty for twelve months, and I beg to recommend that he be dealt with under Regulation No. 20.

JNO. C. NEILD,

Lt.-Colonel Commanding 7th Regiment.

A.A.G.—Forwarded. M. BOAM, Major, D.A.A.G.—S.O. (for U.V.F.), 29/5/00.

Memorandum from the Officer Commanding "F" Company to Officer Commanding  
7th Regiment.

22 May, 1900.

I do not very often complain about the amount of work I have to do in connection with "F" Company, or even the 7th Regiment, simply because my heart and soul is in the work. I must, however, impress upon you the urgent necessity of appointing one or more Lieutenants to "F" Company. Lieutenant Darnley is O.C. of "E" Company. Lieutenant Finney has been for some considerable time in the hospital, and upon his recovery, has to take charge of a country school, so there is no one at Leichhardt but myself, I find the work falls too heavily upon me. I have given up nearly all other matters I had in hand so as to devote my time to the welfare of "F" Company, and if it is neglected now it will fall away, so I must ask you to be good enough to give me some assistance. Sergeant Robert Smallwood, who has been connected with us from the formation of the Company, has expressed a desire to me to be appointed Lieutenant. He has been a most painstaking and energetic N.C.O.; he is 34 years of age; a fine built man; a splendid drill, and fair scholar. He is a master painter, and commands the respect of all the members of "F" Company. I do not know of any gentleman with whom I could work more in harmony, and who would do more for our Regiment. I shall be exceedingly pleased to have his assistance and his appointment as an officer would, I believe, meet with the general approval of officers, N.C.O.'s, and men.

It is, therefore, with very great pleasure that I recommend Sergeant Robert Smallwood for a Commission.

R. B. CROPLEY, Capt.,  
O.C. "F" Company.

The A.A. General,—As between the 20/1/00 and the 10/3/00 I have recommended no less than six (6) gentlemen for commissions, and have on many occasions urged the absolute necessity for their gazettal, with no result than to have my recommendations and applications ignored or refused, I do not forward this Memorandum with any recommendation for its approval, but send it to show that the refusal to give this Regiment the officers that it is entitled to by the Order-in-Council fixing its establishment, is threatening the Regiment with paralysis.

In non-commissioned officers and rank and file the 7th Regiment is up to establishment; but, as I have over and over again represented, is so short of effective officers (only one has been appointed in fourteen months, while two have been permitted, notwithstanding my frequent remonstrances, to absent themselves from duty for over a twelve month without rebuke), that it is not reasonable to expect the present reduced number of effective officers to continue to satisfactorily carry on the Regiment.

As the G.O.C. has in a letter to myself recognised the difficulties I am labouring under, I again urgently beg that the officers provided for in the regimental establishment may be at once approved and sent on for gazettal.

JNO. C. NEILD, Lt.-Col.,  
Commanding 7th Regt.

P.U.S. I think the O.C. 7th Regt. has good grounds for complaint. I can take no action till the affairs of the Regiment have been dealt with by the Government.—G. A. FRENCH, 30/5/00. Sub-  
mitted.—C.W., 1/6/00.

### Memorandum from The Major-General Commanding the Military Forces to The Principal Under Secretary.

4 June, 1900.

WITH reference to annexed, I should like to be informed when I may expect to receive the decision of the Government with regard to the affairs of the 7th Regiment.

G. A. FRENCH, M.-G.

### J. C. Neild, Esq., M.P., to The Chief Secretary.

Sir,

Parliament House, Sydney, 6 July, 1900.

On behalf of one hundred members of the Legislative Assembly, I have the honor to forward to you a letter signed by them, requesting that the establishment of the Seventh Infantry (Volunteer) Regiment, St. George's English Rifles, may be increased by two Companies of 100 men each, and beg that their request may be speedily complied with.

I have, &c.,

The Honorable the Chief Secretary and Minister for Defence.

JNO. C. NEILD.

Ackldg., 10/7/00. Refer to G.O.C. for report.—C.W., B.C., 10/7/00. A.A.G.—Inform Lt. Col. Neild that before making any recommendation to the Government I should like to inspect the Regiment. As a full muster will be required I leave the date to him to settle; this parade not to include any men from the Illawarra District.—G.A.F., 14/7/. S.O., U.V.F.—For necessary action.—H. D. MACKENZIE, Col., A.A.G., 14/7/. O.C., 7th Regiment,—For necessary action, attention is particularly called to latter part of Min. 3,—By Order.—M. BOAM, Major, D.A.A.G. S.O. (for U.V.F.), 16/7/00.

The S.O., U.V.F.—Having regard to the minute of the G.O.C., of 17/7/00, expressing decision not to "deal with matters concerning 7th Regiment, pending decision of Government on enquiry held regarding that Regiment," may I be informed whether this is to apply to the proposed inspection? Jno. C. NEILD, Lt.-Colonel, Comdg. 7th Regmt., 20/7/00.

The A.A.G.—Is the minute of G.O.C., dated 17/7/00, to apply to proposed inspection?—M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.) A.A.G.—As stated, I will inspect the Regiment at any convenient date and hour.—G.A.F., 25/7/00. S.O., U.V., for action.—H.D.M., Col., A.G., 25/7/. O.C., 7th Regiment,—*Vide* Minute 8.—By order, M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.), 26/7/00.

The S.O., U.V.F. Noted. Having regard to the fact that it is customary for the members of the Regiment to allot their Saturday afternoons for various engagements as soon as the quarterly programme of parades is issued, I beg to submit the date of the next Saturday parade, viz., the 18th August, for approval. Having also regard to the fact that men seldom reach home from their work until about 2 o'clock, and have then to dine and get into uniform, and in a large majority of cases have long distances to travel to reach the Victoria Barracks, I should be glad if the G.O.C. will approve of the parade falling in at 4 o'clock, and be ready to receive him at 4.30, at the Barracks, in order to secure as full a muster as possible.—Jno. C. NEILD, Lt.-Colonel, Commanding 7th Regiment.

A.A.G.—Forwarded. May the request of O.C., 7th Regiment, as regards time for parade be granted?—M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.), 30/7/00. Approved.—G.A.F., 2/8/. O.C., 7th Regiment,—*Vide* Minute 13.—By order, M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.), 3/8/00.

The S.O., U.V.F.—Noted and returned. With regard to the latter part of No. 3 I beg to point out that this Regiment has, from its inception, contained amongst its H.Q. Company members, many residents of the South Coast suburbs. I conclude that the G.O.C. does not mean to exclude such men, including the senior Colour sergeant and other non-coms., from his inspection. The Regiment having been denied its proper complement of officers, more than ever requires a full attendance of non-coms., and cannot, I submit, be expected to drill properly without them. I beg also to submit that to exclude from parade men who have been staunch attendants, is to practically drive them from the Regiment. For these reasons I beg that the G.O.C. will be pleased to reconsider the direction referred to.—Jno. C. NEILD, Lt.-Colonel, Commanding 7th Regiment, 4/8/00.

The A.A.G.—Forwarded.—M. BOAM, Major, D.A.A.G., S.O. (for U.V.F.), 7/8/00.

[Enclosure.]

[Enclosure.]

To the Honorable The Chief Secretary,—  
Sir,

2 July, 1900.

In view of the large numbers of electors applying to be enrolled in St. George's Rifles, and the fact that their applications cannot be granted in consequence of the Regiment being up to its full strength, we beg that you will approve of the enrolment of two additional companies of 100 men each.

We have, &amp;c.,

J. C. Neild, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Dear Sir William Lyne,

Parliament House, Sydney, 6 July, 1900.

For your information I beg to forward copy of a letter addressed to the Chief Secretary, asking for an increase in the establishment of the 7th Infantry (Volunteer) Regiment, St. George's English Rifles, by 200 men.

The letter bears the signatures of 100 Members of the Legislative Assembly, whose names remain unerased in the accompanying list.

On behalf of these Members I beg for your approval of the application.

Pray believe me to be,

Very truly yours,

JNO. C. NEILD.

Ack. please.—F.K., 12/7/00. Acknd.—C.E.F.R., 13/7/00. Submitted.—F.K., 16/7/00.  
Seen. The Principal Under Secretary.—F.K., 31/7/00. Refer to G.O.C.—C.W., B.C., 3/8/00. The  
Major-General Commanding the Military Forces. P.U.S.,—I am to inspect this Regt. on 18th, and will  
report further then.—G. A. FRENCH, M.-G., 8/8/-. May await further report.—C.W., 13/8/00.  
Approved.—J.S., 14/8/1900.

Regimental Order No. 48, by Lieut.-Colonel J. C. Neild, Commanding 7th Infantry Regiment.—Efficiency of 7th Regiment.

Sydney, 13 July, 1900.

At the beginning of the official new year the Officer Commanding offers his congratulations to the officers, non-commissioned officers, and men, upon the highly satisfactory condition of the regiment.

On 30th June, 1899, the actual strength did not exceed 500, and of these but 281 were efficient.

On 30th June, 1900, the regiment exceeded its establishment strength (634), and every member was an efficient.

There has also been a marked improvement in the administration, and the conduct of all ranks has been excellent.

These gratifying changes in the condition of the regiment date from the end of last December, when, the late Adjutant being required for Contingent duty, the Lieut.-Colonel Commanding assumed undivided control of its affairs.

The officers now on duty with the Regiment have, in the face of unexampled discouragement, shown by their conduct a spirit of loyalty to it and its Commanding Officer worthy of high praise, and which he begs appreciatively to acknowledge.

The Officer Commanding also records his strong sense of the excellent services of the recently appointed Sergeant-major, of the Quartermaster-sergeant, and Non-commissioned Staff, and begs likewise to recognise the conscientious and efficient manner in which the Non-commissioned Officers, Privates, and Bandsmen have worked together for the well being of the Regiment.

JNO. C. NEILD, Lt.-Col.,

Commanding 7th Infantry Regiment.

The Honorable Sir William Lyne, K.C.M.G., with the compliments of Jno. C. Neild.

Ack. please.—F.K., 16/7/00.

Acknd.—C.E.F.K., 17/6/00.

J. C. Neild,

J. C. Neild, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Dear Sir William Lyne,

25 July, 1900.

Herewith I beg to send you a brief statement, in *re* the 7th Regiment, and for this beg your careful perusal. May I beg an interview *re* same.

Very truly yours,

JNO. C. NEILD.

Ack. please.—F.K., 25/7/00. Acknow.—C.E.F.R., 25/7/00. Submitted.—F.K., 30/7/00.  
Mr. Robberds.—Inform please, Sir William will see him at any time he calls, if he is in the office.—F.K., 8/8/00. Informed.—C.E.F.R., 9/8/00. The Principal Under Secretary.—F.K., 29/8/00.

[Enclosures.]

In *re* the 7th Infantry Regiment and Military Court of Inquiry.

On the 3rd day of January, 1900, John Cash Neild, of Sydney, in the Colony of New South Wales Lieutenant-Colonel Commanding the said Regiment, being duly sworn, maketh oath and saith as follows :—

- (1.) I have made inquiries respecting the payment of the sum of £103 8s. 6d., made for certain blue-serve uniforms and web belts for the use of officers of the said regiment, from the capitation fund of the said regiment, and have ascertained that the facts are as under :
- (2.) The said sum of £103 8s. 6d. was claimed by Charles Anderson, by voucher dated the 5th July, 1898, which said voucher was received by the Military Central Clothing Board on 13th July, 1898, and by the said Board numbered 896, and "passed" as "correct" to the "Military Pay Office" for payment, as per stamp upon the said voucher.
- (3.) At the time such voucher was sent in and such payment made, Major Waine was in command of the said regiment, I, the said deponent, being absent on sick leave and very dangerously ill.
- (4.) I had no knowledge whatever of the said claim or payment for several months—not, I believe, until the month of March, 1899, when the matter became one of correspondence from the Chief Staff Office, as per papers now before the Court.
- (5.) From 10th June, 1898, until January, 1899, I was prevented by severe illness and continued ill-health from exercising any active supervision over or attending, except very occasionally, at the Regimental Office.
- (6.) The peremptory closing of the Court, without any time being allowed me to prepare a case in reply, prevented my tendering this evidence verbally.

Sworn, &c.,

(Signed) G. NORTON RUSSELL, J.P.

(Signed) JNO. C. NEILD.

Seventh Infantry Regiment, St. George's Rifles.

The Court of Inquiry, appointed in August, 1899, was instructed, *inter alia*, to report upon :—

1. Strength compared with Establishment.
2. Small Attendance at Easter Training.
3. Do. do. at General's Annual Inspection.
4. Do. do. at Defence Force Rifle Meeting.
5. Small number of Efficient on 30th June, 1899.
6. Administration of the Regiment.

The following are the relative figures for 1899 and 1900 :—

	1899.	1900.	Remarks.
No. 1.—	539 nominal	657 actual, or 23 over Establishment.	
2.—	268 do.	388 do. or four-fifths of men in ranks higher than any other Regiment.	
3.—	237 do.	404 do. higher than any other Volunteer Regiment.	
4.—	6 entries	No Meeting—insufficient entries.	
5.—	281 do.	629, being every man on the Establishment.	
6.—	The chief questions investigated by the Court were :—		

- (a) Supply of Uniforms to Officers—Lt.-Col. Neild had nothing to do with this (see affidavit attached).
- (b) Loss of Three Rifles—Lt.-Col. Neild had no knowledge of this until he took entire charge of the Regiment at end of 1899. Two of the rifles have since been recovered, and the G.O.C. has authorised the third being written off and charged against the public, presumably for the reason advanced by Lt. Col. Neild, viz., that the loss was occasioned by the Adjutant's neglect.
- (c) Resignation and Re-enrolment of Monaghan—This man was re-enrolled by Major Waine. He was in the Public Service (Civil), and is now in the Military Service.
- (d) Disagreements amongst Officers—There were none, except where the Adjutant, Major Waine, and Lieut. Reynolds were concerned, and they ceased with the absence of these officers.
- (e) Neglect in Administration—Neglect was shown by the Adjutant and Quartermaster in 1898 and 1899. This has been corrected by the Quartermaster during 1900. There being no Adjutant this year, Lt.-Col. Neild has discharged the duties, in addition to those of O.C. and Major. Correspondence is dealt with by him within twenty-four hours. He has not been absent from regimental duty for one day for eight months. The administration is now efficient and effective.

J. C. Neild, Esq., M.P., to The Staff Officer, U.V. Forces.

Sir,

Sydney, 1 August, 1900.

Referring to my unacknowledged letter of the 21st July *re* Hurstville, and in further reply to the minute of the G.O.C., dated 17/7/00, censuring me for drilling men (under the written authority of the A.A.G.) at Hurstville "in close proximity to the headquarters of the 8th Regiment," I have the honor to point out that it is announced that a Company of Rifles has been established at Drummoyne, situated nearer to Balmain, the headquarters of E Company of this Regiment, than Hurstville is to Kogarah. I beg to submit that if "it was most improper on the part of Lieutenant-Colonel Neild to attempt to raise a Company in close proximity to the headquarters of the 8th Regiment," it is even more improper for a Company to be formed in closer proximity to the headquarters of a Company of the 7th Regiment at Balmain.

I have, &c.,

JNO. C. NEILD, Lieutenant-Colonel,  
Commanding 7th Regiment.

P.U.S.—This letter is submitted for the consideration of the Minister. It is not desirable in the interests of military discipline that officers should be allowed to write letters of this sort, cavilling at the actions of the Government and of superior officers. I would again request that the Government may deal with the report of the Court of Inquiry on the 7th Regiment with as little further delay as possible.—G. A. FRENCH, M.G., 8/8.

J. C. Neild, Esq., M.P., to The Staff Officer, Unpaid Volunteer Force.

Inspection by the G.O.C. on 18th instant.

11 August, 1900.

As the time is passing, may I beg a reply to my inquiry of the 4th instant, *re* attendance of members of H.Q. Companies resident in the South Coast Suburbs.

JNO. C. NEILD,  
Lt.-Colonel Comdg. 7th Regimt.

A.A.G. This correspondence was forwarded to you on 7th inst.—M. BOAM, Major, D.A.A.G., S.O. for U.V.F., 13/8/00.

S.O., U.V.F. Inform O.C. 7th Regt. no objection to members of Regt. from Hurstville attending on 18th inst., who have twelve months' service and upwards. This not necessarily recognising any Hurstville detachment as such. Call for list of members of 7th Regt. residing at Hurstville and vicinity, showing dates of enrolment.—H. D. MACKENZIE, Col., A.A.G., 13/8/00.

Urgent. O.C. 7th Infy. Regiment. *Vide* Minute III. Please supply the list asked for.—By order, M. BOAM, Major, D.A.A.G., S.O. for U.V.F., 13/8/00.

The S.O., U.V.F. Para. 1 noted. I must beg to be permitted to respectfully protest against the injury proposed to be inflicted upon this Regiment, which, in face of unexampled opposition, I have rebuilt, and also against the ostracising of a considerable number of reputable citizen soldiers, who have fulfilled every legal and moral obligation, and stand before the law honorably as members of the Defence Force of the Colony, which, as electors and taxpayers, they assist to maintain. They have been drilled as recruits only at Hurstville, to save expense to the public, with the intimate knowledge and approval of the G.O.C., the A.A.G., and the S.O., U.V.F., extending over a period of six months, and the majority of them have been inspected by the G.O.C. Para. 2. List required sent herewith. It will be observed that it strictly accords with my letter to the G.O.C. of the 30th April, viz., "Apart from the question of trying to maintain proper discipline and drill with only one, or at most two officers in large companies, it is, I venture to submit, undesirable to have considerable bodies of men in detached localities such as Hurstville (76) and Chatswood (73), and no officer in the vicinity," to which statement the G.O.C., replying on the 1st May, took no exception.—JNO. C. NEILD, Lt.-Colonel Comdg. 7th Regmt., 15/8/00.

A.A.G. List asked for in Minute III, herewith. I am not aware of having given any approval for the drilling of recruits at Hurstville.—M. BOAM, Major, D.A.A.G., S.O. for U.V.F., 16/8/00.

I find that I was misinformed as to the residence of Cr.-Sergt. Arnold, and that there are not now so many members of the Regiment resident in the South Coast suburbs as formerly.—J. C. NEILD, Lt.-Col., Cdg. 7th Rgt., 15/8/00.

The Officer Commanding the 7th Regiment to The Major-General Commanding the Military Forces.

Sir, Sydney, 11 August, 1900.  
Twelve months have now elapsed since the Court of Inquiry met to investigate matters connected with this Regiment, and it seems appropriate to offer a few observations upon the progress that has been made during the past seven months, and under very adverse circumstances.  
It is needless to refer to that part of the inquiry which dealt with the actions of Major Waine. It will suffice to refer to that portion which involved the affairs of the Regiment generally.  
Attached is a statement showing the main points inquired into, and the widely-improved condition of the Regiment to-day.\*

- These excellent results have been achieved under the grave disadvantages of—
1. The public scandal occasioned by the proceedings of the Court.
  2. The serious effect upon the discipline of the Regiment.
  3. The fact that the Regiment has had—
    - (a) No major for nearly eighteen months.
    - (b) No adjutant for eight months.
    - (c) No sergeant-major for one month.
    - (d) No staff sergeant instructors for three months.
    - (e) Only one staff sergeant instructor for two months longer.
    - (f) That, owing to the absence 1 captain in England, 2 captains on Contingent duty, the absence of 2 lieutenants on sick leave, and 1 lieutenant without leave for fifteen months, and the refusal to appoint fresh officers, the Regiment was, for several months, officered as follows :—  
One lieutenant-colonel, 2 captains, 2 first lieutenants, 5 second lieutenants, 1 second lieutenant quartermaster.

In all eleven officers, instead of twenty-two provided for by the Establishment of the Regiment. To-day there are but thirteen officers. For several months two Companies were commanded by junior subalterns.  
I found it imperative to strike off the strength or secure the resignation of about 270 N.C. Officers and men whose attendance had been unsatisfactory.  
To bring the Regiment up to Establishment it was necessary to train 330 recruits. This has been done, and thus the Regiment of to-day is, to a greater extent than one-half, an entirely new force.

\* See enclosures to Mr. Neild's letter to the Prime Minister and Colonial Treasurer, dated 25 July, 1900, page 20.  
To

To achieve this result, the reduced Staff of the Regiment has worked at high pressure, day and night. Considerable bodies of recruits were simultaneously drilled at Hurstville, Chatswood, Waverley, and Victoria Barracks. Musketry proceeded at Randwick twice a week—on Wednesdays and Saturdays.

The arrears of work which came for the first time under my notice, after the Adjutant ceased (practically) his connection with the Regiment in December last, have also made a large demand upon the Staff and officers generally. Numerous Boards have sat and reported; lost arms, equipment, and clothing have been recovered; the disorganised state of the regimental stores has been dealt with; and correspondence brought into order and properly replied to.

The work has been so onerous that I have been unable to leave Sydney for even an hour for seven months, and every day, Sundays included, I have devoted from four to five hours to regimental duty.

I venture to hope that my energy, devotion, and successful achievement may outweigh crudities of manner and method in my actions and correspondence.

I trust that I have now, by hard experience, attained a knowledge of military duties to which I was previously a stranger.

I have found that I was most unwise in not accepting your advice, and pressing for the appointment of the late adjutant. Unacquainted as I was with military usage, I was anxious to secure the assistance of an officer who had held for many years the responsible position of Chief Clerk on the H.-Q. Staff, and who would, I believed, be able to correct my mistakes, and supply my deficiencies in correspondence and administration.

This was all the more needful as, though at all times desirous of acting strictly in accordance with both the letter and spirit of military discipline, my many years experience of political and Parliamentary life had accustomed me to act, speak, and write with the widest independence of conduct and expression.

Unfortunately, my expectations were not realised. I did not receive the guidance I required, and, as a result, my motives were not unnaturally misapprehended and difficulties resulted.

I placed implicit reliance in the late Adjutant, with unhappy consequences that have in some part been disclosed in recent correspondence.

These matter, however, belong to the past, and, while a subject for regret, will prove also a salutary lesson.

The Regiment is now, I believe, administered with reasonable efficiency, and stands on a firmer basis than it has hitherto done.

But it is sorely in need of officers, whose appointments have been recommended, and also of half-battalion commanders, without whom the drill of the 400 to 500 men now attending parades cannot of necessity be properly conducted.

May I hope that these appointments will be gazetted without further delay.

I have, &c.,

JNO. C. NEILD,

Lt.-Colonel Commanding 7th Regiment.

P.S.—I have addressed this letter to you in terms of Sec. 2,083 of Q. R. 1899, because, having sent the original addressed to the S.O.U.V.F., that officer has assumed the right to suppress it on the plea that your minute of 17/7/00 stated that you "would not deal" with matters relating to the 7th Regiment pending decision of Government on Court of Inquiry; but as that minute referred to the past, and you have since taken a good deal of action *re* the Regiment, I cannot suppose you intended to refer to the future. Further, you could not have intended to deny me the right of addressing you regarding the duties of my command.—JNO. C. NEILD, Lt.-Col.

W. H. Wilks, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Dear Sir William,

18 August, 1900.

Herewith please find a communication from Alderman J. C. Waine (Major, St. George's Rifles) complaining that he has not been acquainted with the findings of the Military Court of Inquiry appointed to inquire into certain charges made against him by Colonel Neild, O.C. 7th Regiment. At the time he was held up to considerable ridicule, and suffered, as a public man, much contumely. Would you be good enough to grant the request of his letter?

Yours &c.,

WILLIAM H. WILKS.

Acknowledge, please.—F.K., 20/8/00. Acknowledged.—C.E.F.R., 21/8/00. The Honorable the Chief Secretary.—W.J.L., 21/8/00. The Principal Under Secretary.—F.K., 22/8/00. Submitted.—C.W., 27/8/00. The papers have been asked for by resolution of the House, and I cannot anticipate this.—J.S., 28/8/1900. Mr. W. H. Wilks, M.P., informed, 29/8/00.

[Enclosure.]

"Waineholme," Park-road, Sydney, 14 August, 1900.

The Honorable the Premier of New South Wales, Sir W. J. Lyne, K.C.M.G.,—

Sir,

I beg the honor of addressing you on what is to me especially, and also to the community at large, a matter of the most serious import. I mean the Court of Inquiry into the matter of the 7th Volunteer Infantry Regiment.

I hope you will excuse me for placing my troubles and grievances before you; but you are the only person to whom I can look for redress of the same.

My case can be briefly stated as follows:—Some fifteen months ago certain very grievous charges and allegations were made against me by the O.C. 7th Regiment. These charges I answered, and asked for an inquiry into the truth or falsehood of the same. Subsequently a Court of Inquiry was appointed by His Excellency the Governor-in-Council. A complete investigation was made of the accusations. Eventually, I believe, the Court submitted its verdict to the G.O.C., towards the end of the year 1899.

With

With all respect I ask whether, considering the time that has elapsed since the Court came to a decision with regard to the before-mentioned accusations, I have not a right to be relieved of the suspense and anxiety which I have endured, by knowing the verdict?

The mental stress to which I have been subjected by the fact that I have even been suspected of committing breaches of military discipline, has affected my health, and the suspicion consequent on the silence maintained by those who ought to have published their decision in the full light of the day, has seriously injured my position and reputation as a public man. Relying, Sir, on your consideration, and your instincts of equity and justice as a member of that Empire which has always been the champion of a just cause, I feel sure you will grant my request. I am "guilty" or "not guilty." I merely ask for the verdict.

I have, &c.,

J. C. WAINE, Major,  
7th Infantry Regiment.

J. C. Neild, Esq., M.P., to The Chief Secretary.

Inquiry, 7th Regiment.

Sir,

23 August, 1900.

Having reference to the Military Court of Inquiry which sat last year upon matters connected with the 7th Infantry Regiment, I have the honor to forward attached extracts from the *Daily Telegraph* and *Australian Star* of Monday last reporting the inspection of the Regiment by the G.O.C.

As these reports show the remarkable improvement that has taken place in the affairs of the Regiment during the last eight months, *i.e.*, since its administration has been wholly in the hands of the Lieutenant-Colonel Commanding, I have the honor to request that these reports may be placed with the papers relating to the said Court of Inquiry, and be considered therewith whenever the matter is dealt with.

I have, &c.,

JNO. C. NEILD.

As requested, put with the papers relating to the inquiry.—J.S., 24/8/1900.

Seventh

[Enclosures.]

Seventh Volunteer Infantry Regiment.

THE record parade of a Volunteer Regiment in New South Wales was held on Saturday last, when Major-General French inspected five companies of the St. George's Rifles, at Victoria Barracks. The number present was 506 officers and men, and when drawn up in line to receive the General they extended the whole length of the Barrack square, the band of the Regiment and the band of the Leichhardt company being in the rear. Colonel Neild, O.C. the Regiment, was in charge, and with him were Captains Copley, Niesigh, Gosbel, and Crane; Lieutenants Darnley, Shears, Walsh, Davis, Parker, Kirkland, Anderson, and Brignell; Sergeant-major Shipley and Q.M.S. Smith.

The members of the staff accompanying the General were Colonel Mackenzie, A.A.G., Major Boam, D.A.A.G., Captain Webb, General Staff, Captain Walton Smith, Acting Principal Medical Officer, Garrison Sergeant-Major Muckleston, and two or three orderlies. The G.O.C. was received with a general salute, and proceeded to make a close inspection of every man, his arms and clothing. After this was accomplished the companies were marched off separately for drill under their respective commanders, whose work was keenly observed by the General. Eventually the battalion was re-formed and put through a number of movements by Colonel Neild and Captain Niesigh.

When addressing the Regiment afterwards, General French said that the object he had in his ordering the parade was to enable him to form an opinion regarding the increase of strength that had been asked for. He was most pleased with the very good attendance, and approved of Colonel Neild's action in discharging nearly 300 men who had given unsatisfactory attendance, and in getting better men to fill their places. The Regiment had made very satisfactory progress under adverse circumstances, and he would have great pleasure in recommending the increased strength asked for, *viz.*, two companies. Undoubtedly Colonel Neild was entitled to much credit for the way he had worked to make it the fine regiment it was to-day, and the officers who had been loyal to the Regiment deserved warm praise for the manner in which they had supported their Colonel.

As 100 Members of Parliament recently signed an application for the increase of strength, and the Major-General has now approved, it may be taken for granted that the Seventh will soon possess a strength of 850, and be the strongest regiment in Australia.

Military.—Seventh Volunteer Infantry Regiment.

A special inspection of St. George's (English) Rifles was held at the Victoria Barracks, on Saturday afternoon, by Major-General French, C.M.G., and was the largest parade of a purely Volunteer regiment that has been held in New South Wales for very many years. Though only five companies were required to attend, the number on parade was 506. In addition to Lieutenant-Colonel Neild, O.C. there were present Captains Copley, Niesigh, Gosbell, and Crane, Lieutenants Darnley, Shears, Walsh, Davis, Parker, Kirkland, Anderson, and Brignell, Warrant-officer Shipley, and Q.M.S. Smith.

The G.O.C. was accompanied by Colonel Mackenzie, A.A.G., Major Boam, D.A.A.G., Captain Webb, General Staff, Captain Walton Smith, Acting Principal Medical Officer, G.S.-Major Muckleston, and several orderlies.

The General, after closely examining the men, addressed them. He said he had ordered the parade for the purpose of a special inspection in connection with the application made for an increase in the established strength of the Regiment. He approved of Colonel Neild's action in discharging nearly 300 men whose attendance had been unsatisfactory, and filling their places with men who would attend. He was greatly pleased with the fine attendance that day. For the work he had done in making "the Seventh" the fine regiment it was now, Colonel Neild was entitled to great credit, and he complimented the officers who had been loyal to the Regiment for the manner in which they had supported their commanding officer. Under circumstances of extreme difficulty, the Regiment had made excellent progress, and he would have very great pleasure in recommending the increase of strength by two companies, as asked for.

J. C. Neild,

The 7th Regiment (St. George's Rifles) had, in 1899, a strength of 560 men, with but 281 efficient, a percentage of only 50·18. That the "weeding out" process subsequently inaugurated had beneficial results is evidenced by the fact that on June 30, 1900, the 7th Regiment had a strength of 629, of whom 624, or 99·20 per cent., were efficient.

On June 30, 1899, the 8th Regiment (the Irish Rifles) was numerically the smallest Volunteer Corps, having but 318 members, of whom only 217, or 68·23 per cent., were efficient. Recruiting has since been extensively carried on, and at the end of June in this year the strength of the 8th Regiment had been increased to 627 men, with an efficiency record of 582, or 92·82 per cent.

J. C. Neild, Esq., to The Chief Secretary.

Sir,  
I have the honor to forward attached extracts from *Hansard* of the 14th August and *Evening News* of the 28th August showing that the 7th Infantry (Volunteer) Regiment had this year—  
1. The largest attendance at Easter training.  
2. The largest number of efficient.  
3. The highest percentage of efficient (99·20) of all the Volunteer Regiments of the Colony.

I have the honor to request that this letter may be placed with the papers relating to the late Court of Inquiry *re* the regiment, and that it and the said extracts may be considered therewith whenever the matter is dealt with.

I have, &c.,  
JNO. C. NEILD.

Major-General Commanding the Military Forces to The Principal Under Secretary.

Subject :—Increase of St. George's Rifles by two Companies.

New South Wales Military Forces,  
Headquarters, Sydney, 5 September, 1900.

Sir,  
In continuation of my letter of 8th August, 1900,\* with reference to an addition of two (2) Companies to the St. George's Rifles, I have now the honour to report that I inspected the Regiment on the 18th August, parade state as annexed.

I found a general improvement as compared with my previous inspections, although there was a very large proportion of recruits in the ranks.

Though working short-handed, I am glad to be now able to state that Lieutenant-Colonel Neild has done very much for the efficiency of the regiment, and I feel has established a strong claim for the increase to the regiment asked for ; I therefore recommend that the St. George's Rifles be increased by two (2) Companies, to be formed in the Metropolis or Suburbs, but so as not to clash with other Volunteer corps.

I have, &c.,  
G. A. FRENCH, Major-General,  
Commanding N. S. Wales Military Forces.

Submitted.—C.W., 8/9/1900. Before deciding upon this matter, I should like to see the  
G.O.C.—J.S., 13/9/1900. The G.O.C.—C.W., 13/9/1900. Inform the G.O.C. this matter must  
stand over until the Estimates are passed.—J.S., 17/9/1900. The Major-General Commanding the  
Military Forces.—C.W., P.U.S., 17/9/1900. Noted.—G.A.F., 19/9/1900.

Victoria Barracks, 18th August, 1900.  
Nature of Parade—G.O.C.'s Inspection.

JNO. C. NEILD, Lieut.-Col.,  
Commanding 7th Regt.

The

J. C. Neild, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Sir,

1 September, 1900.

I have the honor to forward attached extracts from *Hansard* of the 14th August and *Evening News* of the 28th August, showing that the 7th Infantry (Volunteer) Regiment had this year—

- 1. The largest attendance at Easter training.
- 2. The largest number of efficient.
- 3. The highest percentage of efficient (99·20) of all the Volunteer Regiments of the Colony.

I have the honor to request that this letter may be placed with the papers relating to the late Court of Inquiry *re* the Regiment, and that it and the extracts in question may be considered therewith whenever the matter is dealt with.

I have, &c.,  
JNO. C. NEILD.

Acknowledge, please.—F.K., 7/9/00.      Acknowledged.—O.E.F.R., 10/9/00.

Volunteer Regiments.

Mr. Ashton asked the Colonial Secretary,—What was the establishment, strength, and number of efficient on the 30th June, 1899 and 1900 respectively, of the following Volunteer regiments, viz :— (1) The 5th Regiment, Scottish Rifles ; (2) the 6th Regiment, Australian Rifles ; (3) the 7th Regiment, St. George's Rifles ; (4) the 8th Regiment, Irish Rifles ?

Mr. See answered,—The following information has been furnished by the Major-General Commanding the Military Forces :—

Return showing establishments, strength, and efficient of the following :—  
1899.

Regiment.	Establishment.	Strength.	Efficient.
5th Infantry Regiment .....	423	370	356
6th       " .....	636	607	516
7th       " .....	629	560	281
8th       " .....	323	318	217

1900.

Regiment.	Establishment.	Strength.	Efficient.
5th Infantry Regiment .....	629	629	553
6th       " .....	636	636	536
7th       " .....	629	629	624
8th       " .....	629	627	582

Easter Encampment, 1899-1900.

Mr. Ashton asked the Colonial Secretary,—What was the attendance at the Easter training in 1899 and 1900 respectively of the following volunteer regiments, namely :—(1) The 5th Regiment, Scottish Rifles ; (2) the 6th Regiment, Australian Rifles ; (3) the 7th Regiment, St. George's Rifles ; (4) the 8th Regiment, Irish Rifles ?

Mr. See answered,—The following information has been furnished by the Major-General Commanding the Military Forces :—

Return showing the attendance at the Easter training in 1899 and 1900 of the following :—

Regiments.	Days.	1899.	Days.	1900.
5th Infantry Regiment.....	4	212	4	327
6th       " .....	4	456	3½	399
7th       " .....	4	262	3	404
8th       " .....	4	176	.....	Nil

An interesting return was some time ago compiled showing the relative strengths and efficiency of the 5th, 6th, 7th, and 8th Infantry Regiments, as at June 30, 1899, and June 30, 1900. The 5th (Scottish Rifles) had on the first-mentioned date a strength of 370, with 356 efficient, a percentage of 96·21. In June this year, though the strength had risen to 629, the efficient numbered 553, reducing the percentage to 88·23. This must, however, be considered highly satisfactory in view of the large number of recruits who must have been enrolled during the twelve months.

The 6th Regiment (Australian Rifles), in June, 1899, had 607 men on the roll, of whom 516 were efficient, a percentage of 84·99 ; while in June this year the strength was 636, with 536 efficient, or 84·27 per cent.

The Major-General Commanding the Military Forces to the Principal Under Secretary.

Sir,

Sydney, 21 September, 1900.

Circumstances connected with the engagement of officers for the 7th (Volunteer) Infantry Regiment (St. George's Rifles) to fill vacancies are becoming so involved that I should be glad to receive a reply to my letter of 25th January, 1900, and reminder of 2nd March, 1900 (both addressed to His Excellency the Lieutenant-Governor), with reference to the Court of inquiry on the administration of that regiment.

I have, &c.,

G. A. FRENCH, Major-General,  
Commanding N.S. Wales Military Forces.

J. C. Neild, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Dear Sir William Lyne,

28 September, 1900.

Herewith I beg to send you copy of two documents some time since addressed to the Hon. Mr. See, and I beg that you will take steps to have the matters referred to at your earliest convenience, as the G.O.C. refuses to deal with urgent regimental business pending Government action, and the delay is very serious.

Very truly yours,

JNO. C. NEILD,

Acknowledge, please.—F.K., 2/10/00. Acknowledged.—C.E.F.R., 3/10/00. The Honorable the Chief Secretary. Seen by Minister.—8/10/00.

[Enclosures.]

Remarks *re* Report of the Court of Inquiry upon 7th Regiment.

Parliament House, Sydney, 27 September, 1900.

1. Proposed abolition of two Head-quarters Companies, and the formation of two Suburban Companies in their place.

This has already been done by the O.C. without knowing that it had been recommended.

2. Rifles and rifle-shooting.

The Court base their finding solely on the evidence of Staff-Sergeant Clarke, and ignore the very positive evidence of the O.C., all the Captains, the Adjutant, Warrant-Officer Naghten (now Sergeant-major, 3rd Regiment), Q.-M.S. Smith, and Staff-Sergeant Pearce.

3. Quartermaster and Lieutenant Brignell.

As no charge has been made against this officer, it is suggested whether it is just to retire him without a hearing. See the judgment of the Chief Justice *in re* Dibbs *versus* Byrne, National Guard.

It is suggested that he be placed upon the Reserve of Officers on account of his advanced age, especially as he has given much better attention to duty during the past nine months, and because of his forty years' service in the Volunteer Force.

Subject to the above, it is suggested that the Report of the Court might be adopted.

Lieutenant-Colonel Neild.

The special recommendation of the G.O.C *re* this officer, it is suggested, should not be approved, for the following reasons—

1. It is not based upon, nor supported by, any recommendation or adverse opinion of the Court of Inquiry.
2. It is made because a similar recommendation was not acted upon by a previous Government.
3. The G.O.C. states he makes no fresh charge against this officer, and it is submitted that it is not reasonable nor usual that an officer should be removed on a bygone accusation, and on one which was dealt with by the Governor-in-Council eighteen months ago.
4. As shown by returns laid before Parliament, the 7th Regiment, under Colonel Neild's sole charge, had a larger attendance at the Easter training last April, and a larger number of efficient last June, than any other Volunteer regiment in the Colony.
5. The discipline of the 7th Regiment has been excellent ever since Colonel Neild has had exclusive control of its affairs.
6. The G.O.C. has shown by his recent minute recommending the increase of the strength of the 7th Regiment, and by his address to the Regiment on the 18th August, that Colonel Neild had done exceptionally useful work, and has brought up the Regiment to a highly efficient condition, notwithstanding that he has been, and still is, denied a major, an adjutant, and one-half the proper complement of officers.

J. C. Neild, Esq., M.P., to The Chief Secretary.

3 October, 1900.

Sir,

Report of Court of Inquiry *re* 7th Regiment.

I have the honor to beg that this report may, subject to the following remarks, receive the confirmation of the Executive:—

1. Abolition of two of the four head-quarter companies, and formation of two suburban companies in lieu thereof.

This has been long since carried out by the Officer Commanding the Regiment on his own volition.

2. Rifles and rifle-shooting.

The Court base their finding solely on the evidence of Staff Color-Sergeant Clarke, and ignore the evidence of the Officer Commanding, the Captains, the Adjutant, Warrant-Officer Naghten (Sergeant-major 4th Regiment), Q.-M.S. Smith, and Staff Color-Sergeant Pearce.

3.

## 3. Supply of uniforms to officers.

This was a matter with which Colonel Neild had nothing to do. It occurred when he was absent, dangerously ill, and was arranged between the Adjutant and the Military Central Clothing Board. See Colonel Neild's affidavit, attached to Report of Court.

## 4. Lieutenant and Quartermaster Brignell.

As no charge has been preferred against this officer, it is suggested whether it is just to retire him without a hearing. See the judgment of the Chief Justice *in re Dibbs v. Byrne*. This officer has given satisfactory attention to duty during the past nine months, and is a Volunteer of nearly forty years' service.

I have, &c.,

JNO. C. NEILD.

---

J. C. Neild, Esq., M.P., to The Chief Secretary.

Parliament House, Sydney, 3 October, 1900.

Sir,

Lieutenant-Colonel Neild.

With reference to the recommendation of the G.O.C. regarding this officer, and attached to the Report of the Court of Inquiry, I have the honor to make the following remarks:—

It is submitted that the recommendation of the G.O.C. *re* this officer, should not be approved, for the following reasons:—

- 1 It is not based upon, nor supported by any recommendation, or adverse opinion of the Court.
- 2 It is made because a former recommendation was not accepted by a previous Government.
- 3 The G.O.C. states he makes no fresh charge against this officer; and it is submitted that it is not reasonable nor usual that any officer (nor anyone) should be dealt with a *second time* on a bygone accusation, and one which was dealt with by the Governor-in-Council eighteen months ago.
- 4 As shown by returns laid before Parliament, the 7th Regiment, *under Colonel Neild's sole charge*, had a larger attendance at the Easter Training last April, and a larger number of efficient last June, than any other Volunteer Regiment in the Colony.
- 5 The discipline of the Regiment has been excellent ever since Colonel Neild has had undisturbed control of its affairs.
- 6 The G.O.C. has shown by his recent Minute recommending the increase of the strength of the 7th Regiment, and by his address to the Regiment on the 18th August, that Colonel Neild has done exceptionally useful work, and has brought up the Regiment to an efficient condition, notwithstanding that he has been (and still is) without a Major, an Adjutant, and half the proper complement of Officers.

I have, &c.,

JNO. C. NEILD.

---

J. C. Neild, Esq., M.P., to The Prime Minister and Colonial Treasurer.

Dear Sir William,

3 October, 1900.

There appears little likelihood of my having the proposed interview with you this evening.

I therefore beg to enclose three papers for your consideration. Two are addressed to Mr. See;\* the third suggests a course of action—in fact, two courses.

May I hope you will take such action as will put an end to the existing suspense?

It is most desirable, I venture to think, that the matter be dealt with before the Estimates are discussed.

*Few* will question the decision reached—*many* will question the absence of decision.

Very faithfully yours,

JNO. C. NEILD.

---

Ack. please.—F.K., 6/10/00.      Ackgd.—C.E.F.R., 9/10/00.      The Honorable the Chief Secretary.—W.J.L., 11/10/00.      The Principal Under Secretary.—F.K., 12/10/00.

---

[Enclosure.]

Suggested: (1.) That there be laid upon the Table of the Assembly the Report of the Court of Inquiry *only*: or, (2.) the Report of the Court of Inquiry; the Minute of the G.O.C. thereon; the Minute of the G.O.C., dated 8th September (?), recommending the increase of the 7th Regiment; the *two* letters of Mr. J. C. Neild, M.P., dated 3/10/00, addressed to the Chief Secretary.

 SPECIAL REPORT.
 

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 26th July, 1900, "*to inquire into and report upon the general administration of the Military Department and despatch of troops to South Africa*," and to whom was granted, on 15th August, 1900, "*leave to sit during the sittings of the House or any adjournment thereof*," and on 27th September, 1900, "*leave to report its opinions or observations, accompanied with Minutes of Evidence, from time to time*," have the honor to report the following resolution :—

"That the Chairman report to the House that Major-General French, after having been duly summoned as a witness before the Committee, and having been duly sworn, refused to answer the following question put to him by the Chairman :—'What is the number of cartridges possessed by the Colony?' it having been proved to the Committee that Major-General French had been instructed by the Honorable The Colonial Secretary to answer such question, when put to him by the Chairman, and information on this point having been already given to the House by the Honorable The Colonial Secretary; and, the Chairman reports the question to the House, as to whether the said question was a lawful question, which the said Major-General was lawfully compellable to answer."

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF  
THE LEGISLATIVE ASSEMBLY.

VOTES No. 21. THURSDAY, 26 JULY, 1900.

14. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. Sleath moved, pursuant to Notice,—  
(1.) That a Select Committee be appointed to inquire into and report upon the general  
administration of the Military Department and despatch of troops to South Africa.  
(2.) That such Committee consist of Mr. Piddington, Mr. Hurley, Mr. O'Connor, Mr. Chanter,  
Mr. Cook, Mr. Wilks, Mr. Meagher, Mr. Garland, Mr. See, and the Mover.  
Debate ensued.  
Question put and passed.

VOTES No. 29. WEDNESDAY, 15 AUGUST, 1900.

3. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. Sleath (*by consent*) moved, without Notice,  
That the Select Committee on "Administration of the Military Department" have leave to sit  
during the sittings of the House, or any adjournment thereof.  
Question put and passed.

VOTES No. 48. THURSDAY, 27 SEPTEMBER, 1900.

5. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. Sleath (*by consent*) moved, without Notice,  
That the Select Committee appointed during the present Session to inquire into and report upon  
"Administration of the Military Department" have leave to report its opinions or observations,  
accompanied with Minutes of Evidence, from time to time.  
Question put and passed.

VOTES No. 50. WEDNESDAY, 3 OCTOBER, 1900.

6. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. Sleath (*by consent*) moved, without Notice,  
That Mr. Quinn be added to the Select Committee now sitting on "Administration of the Military  
Department" in place of Mr. W. H. B. Piddington, deceased.  
Question put and passed.

VOTES No. 65. TUESDAY, 30 OCTOBER, 1900.

7. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. Sleath (*by consent*) moved, without Notice,  
That Mr. Hurley be discharged from attendance upon the Select Committee on "Administration  
of the Military Department," and that Mr. J. C. L. Fitzpatrick be added to the said Committee.  
Question put and passed.

VOTES No. 70. WEDNESDAY, 7 NOVEMBER, 1900.

3. ADMINISTRATION OF THE MILITARY DEPARTMENT :—*Mr. J. C. L. Fitzpatrick*, for Mr. Sleath (*by  
consent*), moved, without Notice, That the Report of the Court of Inquiry upon matters between  
the Officer Commanding and Major Waine, and the administration of the 7th Regiment, generally,  
together with Minutes of Evidence, &c., laid upon the Table of this House on 24th October,  
1900, be referred to the Select Committee now sitting on "Administration of the Military Depart-  
ment."  
Question put and passed.

VOTES No. 87. TUESDAY, 4 DECEMBER, 1900.

11. ADMINISTRATION OF THE MILITARY DEPARTMENT :—Mr. O'Connor, on behalf of the Chairman,  
brought up the Report from, and laid upon the Table, the Minutes of Proceedings of, and Evidence  
taken before the Select Committee, for whose consideration and report this subject was referred on  
27th July, 1900, a.m., together with Appendix.  
Ordered to be printed.

## ADMINISTRATION OF THE MILITARY DEPARTMENT.

## REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 26th July, 1900, "*to inquire into and report upon the general administration of the Military Department, and despatch of troops to South Africa,*" and to whom was granted, on 15th August, 1900, "*leave to sit during the sittings of the House or any adjournment thereof,*" and, on 27th September, 1900, "*leave to report its opinions or observations, accompanied with Minutes of Evidence, from time to time,*" and to whom was referred, on 7th November, 1900, "*the Report of the Court of Inquiry upon matters between the Officer Commanding and Major Waine, and the administration of the 7th Regiment generally, together with Minutes of Evidence, &c,*"—have agreed to the following Report:—

Your Committee being desirous of maintaining continuity in the evidence, decided to deal with the equipment and despatch of troops to South Africa, apart from the general administration of the Military Department.

Your Committee, having examined the witnesses named in the List\* (whose evidence will be found appended hereto), find as follows:—

\*See List,  
p. 13.

That the evidence discloses an absence of that organisation which is so necessary to properly ensure the maintenance of military discipline; carelessness and indifference amongst the officers—this, in some cases, more clearly demonstrated than in others; and that on the Officer Commanding, must rest the responsibility, as there is no evidence of that careful supervision so essential to discipline.

Your Committee have inquired exhaustively into the equipment of the troops despatched to South Africa, and have arrived at the following conclusions:—

That the helmets were of an inferior quality, absolutely unfit for active service.

That the saddlery was described by all the experts as of the cheapest make, altogether unsuitable for military work.

That the uniforms were of fair average quality, quite up to the ordinary standard, and seem to have given general satisfaction, with the exception of some material specially made to the order of the military officials (an imitation of Bedford cord), which was afterwards found quite unserviceable.

That the overcoats were not made of suitable material, the absence of what is known as "proofing" being a very serious defect, allowing rain to penetrate, thus making them in wet weather a serious burden for either man or horse to carry.

J. Brush,  
p. 109.  
T. H. H. Goodwin, M.L.A.,  
p. 111.  
W. H. Simpson, p. 113.  
J. J. Weeks,  
p. 114.  
C. McIvor,  
p. 143.  
F. Arnold,  
p. 148.

Your

Your Committee consider it a matter for regret that Major-General French should have decided (without any inquiry or information outside a newspaper paragraph) to abandon the Field Service Hat, which had been found so well adapted for active service, both by officers and men, and substituted a helmet which has been universally condemned. That the Imperial Government believed in the Field Service Hat is shown by the fact that the Imperial Yeomanry, the City of London Imperial Volunteers, Roberts' Horse, Kitchener's Horse, the Canadian troops, and, in fact, all irregular troops raised for this particular service were supplied with the Field Service Hat, and continued to wear them during the whole course of service.

The evidence relating to clothing contracts shows a most deplorable state of affairs. In no case is this so apparent as in regard to the supply of helmets, the evidence of the Chief Staff Officer in this Department, together with some of his subordinates, disclosing a marked neglect of duty.

There is no evidence to show that the contractor for clothing did not strictly comply with the conditions of his contracts; and his evidence, which stands uncontradicted, convinces your Committee that, although articles of inferior quality were supplied, they were in accordance with orders given, and no objection was offered by the responsible officers when delivered.

Your Committee, in view of the revelations made regarding the character of the clothing, &c., supplied by private contract, strongly recommend, in the interest of the military forces, as well as of the taxpaying public, the establishment of a State clothing factory. The same recommendation stands good in regard to the establishment of an ammunition and small arms factory.

T. J. Hoskins,  
p. 221.  
J. S. Bennett,  
p. 177.

In regard to the supply of carts for the different Contingents, no supervision or inspection took place; the evidence of experts and the contractors for the work, discloses the fact that the more modern ideas in regard to the work were put aside by the officers in charge, and the more primitive style, long since obsolete, adopted.

Your Committee are of opinion that the organisation of the Forces generally has suffered somewhat from the appointment of gentlemen, with no knowledge or experience of military discipline, to positions as officers commanding regiments; that the Report of the Military Court of Inquiry, in regard to the 7th Regiment, should have been promptly dealt with by the Government; and they entirely concur in the minute of the Lieutenant-Governor, Sir Frederick Darley. The evidence of all officers concerned clearly shows that this matter should be dealt with at once, as discipline cannot be maintained while matters remain as at present.

Major-General  
French,  
p. 309.

Your Committee regret that Major-General French should have voluntarily made a statement about the obsolete guns of the Naval Brigade, while maintaining a silence amounting almost to mystery in reference to our most modern guns, lately added to the strength of our Artillery.

Your Committee are of opinion that the general complaint of Officers that sufficient money has not been voted by Parliament for the maintenance of an efficient Defence Force is without foundation, and that the money voted, if properly expended, would have been quite sufficient for all legitimate purposes, had elaborate uniforms been considered of less importance than the supply of sufficient quantities of ammunition.

Your Committee made an effort to discover by what method officers were appointed to the different Contingents, but entirely failed, as every officer who might in any way be held responsible admitted his inability to throw light on the subject.

The principle in force of granting commissions to young and inexperienced lads (on account of the wealth or social standing of their parents), in preference to those who by experience are more fitted to command, is one that does not seem just or fair, or tend to the efficiency of our Forces.

Major-General  
French,  
p. 74, and 75.

The action of Major-General French in making an offer of 2,000 men for service in China, was, in the opinion of your Committee, a distinct breach of discipline on his part, as shown by the action of the Imperial authorities in referring him to his responsible Ministers. Your Committee are of opinion, that for some time the Major-General Commanding has been too prone to take offence at any action of the Minister; and even His Excellency the Governor and Commander-in-Chief, in taking part in the despatch of the Imperial Bushmen, unaccountably gave offence to the Major-General. The cause of this friction was the fact that he was not sent

sent to South Africa, to use the General's own language, "thus losing the opportunity of a lifetime." It would appear that an offer of his services was made to the Imperial authorities and declined by them; consequently, whatever praise or blame attaches to that refusal must rest, not with the Minister for Defence, but with the Imperial War Authorities.

Your Committee have examined the contracts in regard to the supply of flour and horse-feed, and find that generally, the best conditions in regard to price and quality were obtained.

Your Committee regret the disadvantages under which the Naval Brigade and Naval Artillery Volunteers labour in being practically a land force with no means of becoming acquainted with up-to-date naval armament; and consider that one of the ships of the Auxiliary Squadron might be utilised at certain periods of the year for the acquisition of knowledge so essential.

Your Committee would feel justified in making certain strong recommendations; but in view of the approaching transfer to the Commonwealth of all matters appertaining to the Defence Forces, your Committee feel that the expert knowledge at the service of the Federal Forces will be sufficient to remedy any evils or inefficiencies that may at present exist.

RICHARD SLEATH,  
Chairman.

Witness withdrew.

[Adjourned till Tuesday next, at 11 o'clock.]

## TUESDAY, 2 OCTOBER, 1900.

## MEMBERS PRESENT :—

Mr. Chanter,	Mr. Sleath in the Chair.	Mr. Garland,
Mr. Hurley,		Mr. Meagher,
	Mr. Wilks.	

Major John Randal Carey (*Chairman, Citizens' Bushmen's Committee*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at 11 o'clock.]

## WEDNESDAY, 3 OCTOBER, 1900.

## MEMBERS PRESENT :—

Mr. Chanter,	Mr. Sleath in the Chair.	Mr. Garland,
	Mr. Meagher.	

Colonel Charles Fyshe Roberts, C.M.G., recalled and further examined.

Witness handed in Statement of Expenditure on account of Equipment and Pay in connection with the various Contingents on service in South Africa to 31st July, 1900. [Appendix G.]

Witness withdrew.

Lieutenant Robert James Beauman (*Attached to the Army Service Corps*) called in, sworn, and examined.

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

## TUESDAY, 9 OCTOBER, 1900.

## MEMBERS PRESENT :—

Mr. Chanter,	Mr. Sleath in the Chair.	Mr. Cook,
Mr. Hurley,		Mr. Meagher,
Mr. Quinn,		Mr. Wilks.

Entry from Votes and Proceedings, adding Mr. Quinn to the Committee, in place of Mr. W. H. B. Piddington, deceased, read by the Clerk.

John Cash Neild (*A Member of the Legislative Assembly and Lieutenant-Colonel Commanding the 7th Regiment Volunteer Infantry*) called in, sworn, and examined.

Witness handed in Statement of papers and memos. addressed by Officer Commanding 7th Regiment to Assistant Quartermaster-General since 1st January, 1900. [Appendix H.]

Witness withdrew.

Colonel Charles Fyshe Roberts, C.M.G., recalled and further examined.

Witness withdrew.

[Adjourned till To-morrow, at 11 o'clock.]

WEDNESDAY,

WEDNESDAY, 10 OCTOBER, 1900.

MEMBERS PRESENT:—

Mr. Hurley, | Mr. Sleath.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 11 OCTOBER, 1900.

MEMBERS PRESENT:—

Mr. Sleath in the Chair.

Mr. Chanter, | Mr. Cook,  
Mr. Meagher, | Mr. Quinn,  
Mr. Wilks.

Colonel Charles Fyshe Roberts, C.M.G., recalled and further examined.

Witness withdrew.

Colonel Henry Douglas Mackenzie recalled and further examined.

Witness withdrew.

FRIDAY, 12 OCTOBER, 1900.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 18 OCTOBER, 1900.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 23 OCTOBER, 1900.

MEMBERS PRESENT:—

Mr. Hurley, | Mr. Meagher,  
Mr. Quinn, | Mr. Wilks.

Room cleared.

Committee deliberated.

Motion made (*Mr. Meagher*) and Question, "That Major-General French be summoned to give evidence at 2.30 o'clock p.m. This day,"—put. Committee

Committee divided.

Ayes.	No.
Mr. Chanter,	Mr. Garland.
Mr. Meagher,	
Mr. Quinn,	
Mr. Wilks.	

And so it was resolved in the affirmative.

[Adjourned till 5 o'clock p.m. This day.]

The Committee reassembled at the hour named.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Chanter,		Mr. Garland,
Mr. Cook,		Mr. Meagher,
Mr. J. C. L. Fitzpatrick,		Mr. Quinn,
	Mr. Wilks.	

Room cleared.

Committee deliberated.

[Adjourned till To-morrow, at 2.15 o'clock.]

WEDNESDAY, 31 OCTOBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Chanter,		Mr. Cook,
Mr. J. C. L. Fitzpatrick,		Mr. Garland,
Mr. Meagher,		Mr. Quinn,
	Mr. Wilks.	

Entry from Votes and Proceedings discharging Mr. Hurley from attendance upon, and adding Mr. J. C. L. Fitzpatrick to the Committee, read by the Clerk.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined.

Witness withdrew.

Harold Deering (*Clerk, Colonial Secretary's Department*) called in, sworn, and examined.

Witness withdrew.

Resolved (*on motion of Mr. Garland*), "That the Committee begs to report to the House that Major-General French has refused to answer the following question put to him by the Chairman of this Committee,—'What is the number of cartridges possessed by the Colony,'—after having been instructed by the Colonial Secretary to answer such question."

The Chairman submitted Draft Special Report.

Same read and agreed to.

Chairman to report accordingly.\*

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 6 NOVEMBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Chanter,		Mr. Garland,
Mr. J. C. L. Fitzpatrick,		Mr. Meagher,
Mr. Quinn,		Mr. Wilks.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined.

Witness handed in Circular Despatch from the Secretary of State for the Colonies enclosing copy of a Memorandum of the Colonial Defence Committee regarding Colonial Defence. [Appendix I.]

[Adjourned till To-morrow, at 11 o'clock.]

WEDNESDAY, 7 NOVEMBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. J. C. L. Fitzpatrick,		Mr. Meagher,
Mr. Quinn,		Mr. Wilks.

Major-General George Arthur French, C.M.G., R.A., recalled and further examined.

Witness handed in List of Officers of the Volunteer Forces (partially paid and unpaid) who are holding ranks without having passed an examination. [Appendix J.]

Witness withdrew.

[Adjourned till To-morrow, at 11 o'clock.]

THURSDAY,

\* See Special Report brought up on 1st November, 1900.

THURSDAY, 8 NOVEMBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Meagher,

Mr. Wilks.

Mr. Quinn,

Entry from Votes and Proceedings referring the Report, &c., in reference to the 7th Regiment, to the Committee, read by the Clerk.

Papers referred before the Committee.

Captain Francis Hixson (*Officer Commanding Naval Brigade*) called in, sworn, and examined.

Witness handed in Report of the Naval officers assembled in Melbourne, Victoria, to consider the question of Naval Defence of Australasia. (*Appendix K.*)

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

MONDAY, 3 DECEMBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Chanter,  
Mr. Meagher,

Mr. Quinn.

Mr. J. C. L. Fitzpatrick,  
Mr. O'Connor,

Ordered,—That the correspondence, &c., in reference to the supply of Forage be appended to the evidence [see *Appendix L.*].

Chairman submitted Draft Report.

Same read and considered.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 4 DECEMBER, 1900.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Chanter;

Mr. Quinn.

Mr. J. C. L. Fitzpatrick,

Draft Report further considered, verbally amended, and agreed to.  
Chairman to report to the House.

1900.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

ADMINISTRATION OF THE MILITARY DEPARTMENT.

TUESDAY, 7 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. HURLEY,

MR. GARLAND,  
MR. PIDDINGTON,

MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

Charles Fyshe Roberts called in, sworn, and examined:—

1. *Chairman.*] I believe you are Military Secretary? Military Secretary, and Director of Artillery and C. F. Roberts, Stores.
2. The scope of the Committee's inquiry covers the whole administration of the Military Department; 7 Aug., 1900. the Committee intend to take, first, the matter of the equipment and despatch of troops to South Africa, and not mix it up with the general administration of the Military Department;—can you tell us who is the Chief Officer responsible for the purchase of equipments, or, rather, is there any officer specially responsible who orders the equipment? I order portion of it, and the Quartermaster-General orders portion. I take what we call artillery stores—practically, arms and accoutrements, including saddlery. I have also this time had to take necessaries—that is, underclothing. The Quartermaster-General takes clothing; that is under his department. I am responsible for one portion, and he is responsible for the other—under the General.
3. Take the saddlery first: was that supplied by contract, or was it just purchased where you could procure it? The first lot—180 saddles—was issued from the stores. That was all we had in the store.
4. Was that for the First Contingent? For the First Contingent really—the Mounted Rifles and the Lancers.
5. *Mr. Garland.*] Where were those saddles procured? We had imported them from England.
6. *Chairman.*] Were they military saddles? Imperial military saddles. For the Second Contingent—at least the Mounted Infantry—we had to get saddles made in Sydney. They were obtained from various contractors on a pattern saddle selected by the General. The man who made several before one suited the General was a man called Weekes, who is, and was then, the Government contractor. The firm used to be Weeks and Buckhurst. He is in Druitt-street, at the back of the Town Hall.
7. He supplied a portion of the saddles to the Second Contingent? Yes.
8. Who supplied the rest? I sent to him, and asked him if he could make the whole lot required. He said he could not in the time. He only had about fourteen days at the outside to do it in. Then I sought other contractors, including Myles in York-street, Cooper and Fox of Marrickville, and a man called

C. F. Roberts. called Lappan, and they made the saddles as fast as they possibly could, and delivered them as fast as they could. Then the General directed me to hurry up and get more saddles, and I was informed that 7 Aug., 1900. Anderson could supply a hundred.

9. *Mr. Wilks.*] Is that the Government tailor? A son of the Government tailor. He brought a very fair saddle as a sample. I said, "How many can you supply?" and he said, "One hundred." I said, "The General authorises you to supply 100." Fifty saddles were then sent in and issued to the Australian Horse, under Thompson. They were complained of, and I inspected them with Thompson and one of the officers under him. We declined to pass the fifty that had been supplied, and I refused to take the balance of the 100, and threw them all back on Anderson's hands.

10. *Chairman.*] Do you know the number of saddles that Weekes supplied? Weekes supplied 275; Miles, 137; Lappan and Cooper supplied 25 each; making 462. The fifty which had been supplied by Anderson made a total of 512.

11. That included the whole of the Second Contingent and the 100 Australian Horse? Yes. I do not think there were quite 100 of the Australian Horse, as some had gone away in the "Langton Grange."

12. And there were about 450 of the Second Contingent? There were 412 or 416; just a little over 400.

13. More than 462 men went away;—where did the balance of the saddles come from? When we took away the fifty which had been supplied from the Australian Horse they resupplied themselves from their band and from other places where they had some regimental saddles. They took about thirty-two or thirty-eight saddles. We have not got a return, but that is how the balance was made up.

14. Who else besides yourself inspected the saddles when delivered? Thompson, the officer commanding the Australian Horse, and either Ebsworth or Vaughan.

15. In examining that saddlery, were you satisfied that it was anything like first-class? Anderson's saddlery was so bad that it was not anything like the sample that he had brought to us. I then found out that he had employed a man named Higson to obtain the saddlery for him—Higson, the saddler, of Oxford-street—and what they supplied was a very inferior lot. These saddles were sent in one evening to the Ordnance Stores, and there was an order to send them out next morning, before they could be looked at by any of us practically. The D's were badly fastened, and only fastened with common basil.

16. And with regard to the saddles that the Australian Horse actually went away with, do you think they were at all satisfactory? Yes; I think they were very good—that is, about fifty of Weekes'.

17. Would you be surprised to learn that they never went any further than Capetown—that Thompson was able to procure proper military saddles from the Imperial Government there, and threw these others away at Capetown? That bears out exactly what I wanted done. I wanted all the saddlery to be supplied by the official authorities at the Cape, as we could not make Imperial saddlery here, or anything near it—not in the time.

18. Would it not have been advisable, when you could not get a proper stamp of saddle here, to have cabled to the Imperial War Authorities, asking them to provide saddles? Yes, it would.

19. Whose duty would it be to suggest that? I suggested to the General that we should ask for these and several other things we could not supply; and his reply to me was that he thought the Imperial Government had quite enough to do in supplying their own people.

20. As an old military authority, do you know that in the matter of saddles, and all that sort of thing, the Imperial Government always have any amount in stock? I naturally thought they would have, or else I should not have made the suggestion.

21. You have had some experience of saddles? Certainly.

22. You can quite understand the difference between the proper military saddle and the ordinary bush saddle? Yes.

23. And you can quite understand that the advantage is all with the military saddle for that class of work? As a rule, "Yes." Some of the returned men speak very highly of the saddles we sent. I suppose, being always accustomed to the bush saddle, they did not like the Imperial saddle.

24. The Imperial saddle is set up, the panels giving free ventilation to the horse's back? Yes.

25. And prevents the possibility of the frame of the saddle coming down on the wither? Yes.

26. Did you pay particular attention to the frames of those saddles? To the trees, yes, as far as one could. I mean we saw samples of them, and saw them before they were put in the saddle.

27. Did they seem strong? Yes; as far as I could see.

28. Would you be surprised to learn that everyone of them opened out? Yes, I should, very much.

29. Would you be surprised to learn that many of the horses were lost through the tree opening out and allowing the frame to come right down on the horse's wither? I think that is probable from the stuffing or padding of the saddle working down, as it would do after a fortnight or three weeks work.

30. In regard to the stuffing, what were the saddles covered with? They were covered with serge. We have already had five of these very saddles fished out of the harbour, and I believe there are some more still in the harbour.

31. The serge was of a very poor quality surely? No; very good serge.

32. Did you see any of these saddles before they went away burst right across? No.

33. What colour was the serge? As a rule, fawn. A few, I think, were lined with blue, but I do not think the First Contingent had any but fawn.

34. I am talking about the Second Contingent? I am talking of the first supply of saddles we made. In the case of the Citizens and Imperial Bushmen Contingents, they had to make saddles for all of them. I think in the last two they had to use some blue serge.

35. *Mr. Garland.*] You are speaking now only of the First Contingent? Yes.

36. *Chairman.*] Did you consider it proper to send away new saddles of that class without making provision for restuffing them? We did make provision for restuffing them.

37. Were any of them restuffed? No; they were to be restuffed on board. We supplied them with the material necessary.

38. How long were they supplied before the men went away? Some of them only five or six days.

39. Is it not a fact that some of them were supplied on the Saturday night, and they were on board the boat on Tuesday? I do not think so. As far as I remember, they were all supplied on the Thursday. The last supply was made on the 15th.

40. But when were they delivered? They were delivered next day.

41.

41. On what day did they go away? The 18th or 20th, I forget which. I have the dates on which they were issued to Major Knight. The twenty-five supplied on the 15th were issued on the 15th. Weekes supplied forty-four, and Corporal Podmore came and drew, on the 15th, forty-two. C. F. Roberts.  
7 Aug., 1900.
42. You are sure they were not supplied on the Saturday when the troops had to be on board on the Tuesday? No. These are the supplies: The Australian Horse was supplied with 100 on 10th January and twenty-two on the 13th January.
43. Were those the ones that were condemned? Part of the 100 that were supplied on the 10th were condemned—fifty of Anderson's.
44. These saddles were absolutely new? Yes.
45. How long should a saddle last in constant work? Not out in the rain, and thrown about, and that sort of thing, a good saddle should last perfectly well for two years. It ought to be stuffed after the first three weeks or a month of use, when it has settled down.
46. Would you be surprised to learn that the whole of those saddles were condemned after two or three months' wear? Two or three months' wear in South Africa would be equivalent to about two years' here—in bad weather too; because I know how some of them were used. In the issue of one of Major Knight's lot I went and saw them, and I found the whole of one squadron's saddles thrown into a loose box.
47. Are you aware that the military saddles which went with Captain Antill's 1st Mounted Rifles, and which were saddles which received the same treatment, are still in use and in excellent condition? I should fully expect that.
48. They had some six or eight months, or about four times the amount of service? They had no padding; they were not stuffed saddles like the ordinary ones.
49. Then, you claim that a stuffed saddle is not suitable for that class of work? I do not think so, and never have.
50. And the panel saddle? The panel saddle is the proper one for military work.
51. And would last ever so much longer? I should think the panel saddle in this Colony now, with the use it would get, ought to last for from six to eight years. In fact, we are getting 400 made now for the Lancers.
52. What is the cost of the panel saddle? The panel saddle here costs about £6 15s., and the Imperial saddle costs £9 10s.—that is, with saddlery, complete.
53. And what does the saddlery equipment of the other classes of saddles cost? The saddle itself costs about £3 10s., and the other equipment would bring the cost up to £5 15s. to £6.
54. Did the bridles come under your jurisdiction too? Yes.
55. How were they supplied? They were supplied by contract, with the saddlery—bridles, breastplates, wallets, surcingles, and girths.
56. What sort of bits were supplied? The bits supplied were chiefly snaffle. Pelham bits could not be got for all.
57. Were they new? Yes, most of them.
58. Were they plain snaffle bits, or had they a quantity of brass? Only the cavalry had the brass part; a few of the balance were issued with what are called Imperial bits.
59. I saw quite a number of snaffle bits there that seemed to be old police horse bits—rusty, with a great piece of brass on each side of the bit. I saw those being fitted in with the bridles? Was not that a regulation bar-bit—a long bar-bit.
60. It was a long bar-bit with  $\frac{1}{2}$  lb. of brass on each side? That is the Imperial bit; the Imperial cavalry bit.
61. They do not use it in fighting? It is what they send to us from England as the pattern bit. It is the pattern bit.
62. Were the bridles supplied without the bits? The bridles were supplied, to a great extent, without the bits, and we fitted the bits ourselves.
63. You had nothing to do with the supply of clothes? Except underclothes, such as shirts and socks, &c.
64. You have been connected with the military service for a long time;—how long do you think an ordinary helmet, of a fair pattern, should last in the open? I should say not more than a year, at the outside.
65. If the helmet suffered so much the head would not last very long? In India, pith helmets used to last over a year, as a rule. Then, of course, they are not out in the rain very much.
66. A pith helmet is not an expensive helmet? In India, of course, it is made very cheaply.
67. Do you know the price? I should think a pith helmet, in India, would be about 3s. English money. Cork helmets cost a great deal more.
68. Did you see these helmets before they went away? No, I did not.
69. You did not look at them? No; beyond seeing them on the men's heads.
70. What would you think of this after two months wear—it is one of the worst (*helmet produced*)? I should call that pretty bad. There is no stiffening in it.
71. Did you ever see helmets made of calico and glue anywhere else? No.
72. Here is another, which is the best one I could procure (*helmet produced*); have you, in your lengthy military experience, ever seen a worse helmet than that? No; except the other one just shown me.
73. *Mr. Wilks.*] Is this a colonial production? I think so.
74. *Chairman.*] Would you be surprised to learn that those helmets were taken off the men's heads when they were being refitted with pith helmets—that they were wearing them just as you see them now? They appear to be made of calico and glue, or gum.
75. This matter is not in your special Department? No; I have nothing to do with them.
76. Still you admit that you never saw a worse class of helmet supplied to troops under any circumstances—in fact, there could not be a worse helmet? There could not be, if those are real samples.
77. One is the very best in the whole of the second Contingent, and the other, so far as I was able to judge, was the worst? It would be hard to imagine any worse.
78. You do not know anything about the cost of the helmets? No. Looking at these two helmets I should say they have had pretty bad usage.
79. With regard to the A Battery, they were supplied with revolvers? Yes.
80. What class of revolver? The Webley.
81. That is the regulation revolver? Yes. Of course, as they go on improving the marks—what they call mark 1, 2, 3—they get a better pistol. But they were the best we had or could get. 82.

C. F. Roberts. 82. Do you know what they cost? I think they cost about £3 15s., with pouch.

7 Aug., 1900. 83. Have you examined the Mauser revolver? Yes, I have seen one.

84. Have you had experience of it? I tried one at the barracks one day.

85. What do you think of it? I think it is very good. The unfortunate part is that the bore is so small; it has a very small bore.

86. Still the bullet is sufficiently large if it hits a man? It goes through him. They carry too far really; they do not hit a sufficiently hard blow. It is a beautiful little weapon.

87. Are you aware that, without exception, the whole of the British officers in the Transvaal are armed, at their own expense, with a Mauser revolver? No, I do not know. You may take anything you like when you go abroad, so long as you take a weapon that you can get ammunition for.

88. If the whole of the British officers in the Transvaal have armed themselves with the Mauser revolver, that fact would tend to show that it is much the superior weapon? I have no doubt it is, seeing that they were in possession of Webley's, and have laid it aside and taken to the Mauser. They do not give the drivers the Mauser; they give them the Webley.

89. But the whole of the officers have armed themselves with the Mauser? You know the reason of that—because they carry accurately perhaps 200 yards.

90. Are they lighter? They have a stock, and are very like a small rifle.

91. It is a magazine rifle, and holds ten cartridges? Yes.

92. At every shot you fire the hammer falls back, and the empty cartridge falls out? Yes; it is like a little machine gun.

93. Only a very slight pressure is required to fire the Mauser? Yes; the trigger is almost a hair-trigger.

94. And therefore there is the least possible chance of your being drawn off your object? I know this—that I tried one at about 10 paces, and three times I hit a red pencil stuck in the ground.

95. Do you know the cost of that revolver? I think Lassetter asked £4 10s. or £4 15s. for the one he sent up. There was only the one here.

96. It is probably about £1 dearer than the Webley? Yes; about that. I do not believe we could have got more than one or two here.

97. Perhaps you will be able to give the Committee some explanation of matters relating to the pay of the contingent? A *Gazette* notice gives the particulars of the pay. They are contained in General Order 112, dated 25th October, 1899.

98. There is a minute by the Chief Secretary attached to that General Order, which says:—

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of officers and warrant officers of the General and Permanent Staff or Permanent Forces selected for service in South Africa receiving the rates of pay which they now draw (unless employed in a higher or lower capacity), with the usual allowances, and of non-commissioned officers and men receiving their present rates of pay —

99. That is, 2s. 3d. all told? Yes; for a private.

It continues:

and usual allowances, with the addition, while actually on service in South Africa, of Imperial rates.

100. What are the Imperial rates? The Imperial rate for a private of infantry would be 1s.; cavalry, 1s. 2d.; army and medical corps, 1s. 2d.

101. Two shillings and 3d. and 1s. 2d. would be 3s. 5d. per day;—is that the amount they are receiving? For all we know, they are.

102. But are you not paying them more than 2s. 3d. here? Not these men—not the permanently paid.

103. But the *Gazette* notice says—

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the officers, non-commissioned officers, and men of the partially-paid or volunteer forces, proceeding for service in South Africa, being granted pay and allowances in accordance with the following scale:—

Take the case of a private in the Mounted Infantry? He would get 1s. 2d. in South Africa, and 3s. 4d. here—4s. 6d. altogether.

104. How do you get the 4s. 6d.? 2s. 3d. per day and 2s. 3d. per day deferred pay make 4s. 6d.

105. But it says in the minute, "With the addition, while actually on service in South Africa, of Imperial rates"? You will please read the first part of the minute—

Officers and warrant officers of the general and permanent staff or permanent forces selected for service . . . . and of non-commissioned officers and men receiving their present rate of pay.

That only refers to men like the artillery, people whom we pay from revenue.

106. The whole cost of sending forces to South Africa is paid out of the general vote for that purpose? Except in the case of the artillery, who are paid out of revenue. Although we have actually charged part of it to the contingent we recoup it. Their money is supposed to be put aside to be paid out of revenue.

107. Then the men you have sent away are on two distinct rates of pay? Yes.

108. Some are drawing 3s. 5d. and others 4s. 6d.? Yes. The only thing is that the 4s. 6d. men get no allowances, while the 3s. 5d. men get allowances, such as rations, fuel, and light, directed to be given to other people while they are away.

109. They are getting what they had here before, as a matter of fact? Practically the rule the General insisted upon was that they should only draw their Imperial rate of pay out there, and the balance should be left here for disposal amongst their friends and relations as they liked; or, if they did not leave it to anybody, then it accumulated until their return.

110. So that you have two rates of pay for the men who left here;—I suppose all the men of the Permanent Force, the partially-paid men, and the staff volunteered to go—no man went unless he volunteered to go? No, as far I know.

111. Every man was a volunteer as far as going to South Africa was concerned? Nobody was compelled to go.

112. And the men you sent there have had two distinct rates of pay—one 3s. 5d., and the other 4s. 6d.? Yes.

113. Do you think that is an advisable system on which to pay men volunteering for the same work? C. F. Roberts. For myself I should have advised 4s. 6d. all round, and made none of these reservations. Then we should have been on the one basis, and should have known what we were doing. We are getting 7 Aug., 19. 0. complaints that some of the men are not getting any pay at all.
114. Have you any minute dealing with the payment to the others of the 4s. 6d.;—had you anything to do with preparing the estimate of the cost of sending the first contingent to South Africa? No; I was not asked. That was done by the Quartermaster-General. I do not know why.
115. Therefore, you would not be able to give any information as to how that estimate was prepared, or on what it was based? No; I do not know how that was prepared. I fancy this rate of pay is taken from the report of the committee by the Commandants, who met some months before, as to the rates of pay which should be paid to the different grades. In fact, I feel pretty certain it was.
116. The *Gazette* notice says, "Buglers and privates, 4s. 6d. a day";—does that mean that this Colony pays those men 4s. 6d. a day? Yes, it provides 4s. 6d.
117. It does not say anything at all about the Imperial rate? Except in a note at the bottom.
118. It says nothing at all about what shall happen to the volunteers with regard to Imperial rates; as to the disposition of any Imperial pay, it does not say a word;—as a matter of fact, the Imperial Government was not obliged, unless it felt disposed, to pay any rate at all? No; but Mr. Chamberlain sent a circular saying that they would pay the men Imperial rates of pay while serving in South Africa.
119. But it was after the publication of this general order that you got that cable? About the same time, I think.
120. You have had some correspondence with the pay-master at Capetown? We wrote him a letter, but have received no reply. We wrote to him asking him to obtain for us a list of the payments and moneys already paid away.
121. But you wrote a letter to him pointing out that certain officers, of whom a list was given, should not draw any money in South Africa, except the difference between the colonial and Imperial rates? That letter was written by the General's instructions, and referred to certain special service officers.
122. I think the list included some twenty officers? It included what we call permanently paid officers—Knight, Williams, Grieve, Bayly—all the men who were permanently employed. The General wrote and said they were not to have anything but their Colonial allowance, as we were finding their pay here.
123. At any rate the list included all those whom you would call staff officers or permanent officers? Yes.
124. But it made no reference to volunteer officers? No.
125. Was it the intention then that the volunteer officers should receive the full Imperial rate of pay in South Africa as well as the Colonial rate here? That I cannot tell you. The rates of pay laid down for volunteer officers are contained in general order 107.
126. In the letter addressed to the Chief Paymaster in Capetown, which I saw, about twenty officers were named—that is, permanent officers—and the letter said that they were to receive only the difference between the Colonial and Imperial rates;—the Colonial rates of pay for officers are higher than the Imperial rates? Yes; with one exception the Colonial rates are.
127. But, generally speaking, they are higher, and it was said in the letter that these permanent officers were to receive only the difference between the Colonial and the Imperial rates in South Africa;—that is to say, an officer would receive 2s. or 3s. a day? I think it went further, and said that they were only to receive the Colonial allowance. As far as I remember, the letter said that with regard to Colonial allowance we did not wish to make a disposition about that, but that they were to receive no pay. They were to be paid from here.
128. Did you make any arrangements to pay them from here? The arrangements were that they could tell off their pay to their friends, and they have practically told it all off—that is, left it behind for them.
129. But suppose they did not leave it behind;—did you send any money out there at all; did you make provision for any payment direct by this Government to any men serving at the front in the Transvaal? No.
130. You made no arrangements for paying any men serving at the front in the Transvaal? No.
131. So that but for the Colonial allowance all the officers would have been stranded? There is a letter written by General French to the General Commanding at Capetown, dated 20th February, bearing on the subject of pay.
132. All the permanent or staff officers are named in the list? Yes.
133. But it says nothing at all about the volunteer officers;—was anything written with regard to them? There was a letter written, but we do not seem to have a copy of it.
134. It never reached Capetown? No, it did not.
135. Did you receive a reply from Capetown to the letter of the General's, dated 20th February? I do not think so.
136. Do you know from memory what was in the letter supposed to have been written in regard to the volunteer officers? What I remember is this, that volunteer special service officers, it was also said, were not to draw pay—that their pay was being found here.
137. Have you been paying the special service officers their full rate here? We have not been paying the special service officers. We paid their friends, according to the instructions left.
138. Have you deducted anything off for the Imperial rates? Yes; the Imperial rates.
139. And they have not been receiving Imperial rates? Of course that money is due to the relations, or is to accrue, if they have not drawn any.
140. But if the relations want it now—if they require it to keep them in the necessities of life, and keep their homes together—if these officers have not been drawing it out there, and their friends have not been allowed to draw it here, would not that be rather a hardship? I think it would be a very great hardship. Our instructions are to deduct it.
141. But when these officers went away you accepted orders from them in some cases to pay the whole of their pay to their wives? Yes; as indicated in the orders.
142. You accepted those orders, and the officers went away fully convinced that their wives would be paid;—in the case of a lieutenant, for instance, you accepted an order from him to pay to his wife 16s.? Yes.
143. And then afterwards, when he got to South Africa, you deducted the Imperial rate, which for a lieutenant would be 6s. 8d.? Yes.
- 144.

- C. F. Roberts. 144. So that instead of paying him 16s. you would merely have paid him 9s. 4d.? That is the rate.  
 7 Aug., 1900. 145. Although you accepted the order to pay 16s., and the man went away fully in the belief that 16s. would be paid to his wife, afterwards you deducted 6s. 8d., and paid only 9s. 4d.? Yes.  
 146. Without any guarantee that he had been receiving the 6s. 8d. in South Africa? Beyond the statement of Mr. Chamberlain that he would pay them Imperial rates.  
 147. In addition, there is what is called a Colonial allowance? Yes; 1s. 6d. a day.  
 148. And you have not paid that allowance in South Africa to any of the men? No; it was understood they would draw that there.  
 149. As a matter of fact, you have not paid a copper in South Africa? We have paid nothing direct in South Africa. We have remitted no money except £700 on account of the Lancers that were sent to the Cape from London.  
 150. Are you aware that in South Africa a great many of the officers and men have been absolutely destitute owing to no money having been transmitted to them? We have heard of some of them being very hard up;—but in those very cases the officers left every penny of their money to their people here, so could get nothing from us.  
 151. But they did not get even their field allowance;—you did not send them their field allowance of 1s. 6d. a day? No; we did not send it; it was payable there.  
 152. And you practically stopped the Imperial Government from paying, by the letter that was sent? Certain officers their rates of pay; but not volunteers.  
 153. That letter stopped the Imperial Government from paying the 3s. 6d., and you have not paid it? No; we have not paid it.  
 154. Do you not think that is rather rough on the officers;—you stopped the Imperial Government from paying it, and you do not pay it yourself? I should not like it myself, I admit; but I only had to act under instructions.  
 155. The local Colonial allowance amounts to 1s. 6d. a day? Yes; the Cape allowance.  
 156. And that is really all the money you are prepared to allow the officers to draw? Yes.  
 157. As a matter of fact, a field allowance has not been paid by New South Wales? Not to officers, except in so far as it may have been disposed of by orders left by officers in favour of their relatives or friends.  
 158. As a matter of fact, you have not sent any money to South Africa to pay either field allowance, or salaries, or anything else? We have remitted no money.  
 159. And you have asked the Imperial Government not to pay anything beyond the local Colonial allowance, which would be 1s. 6d. a day for officers? Yes; so far as Permanent officers are concerned.  
 160. You have had some experience, have you not, in India? Yes; I was there for five years.  
 161. You can form some idea of the condition of officers in South Africa? Yes; and their probable expenses.  
 162. You can understand, where there is a scarcity of provisions and that sort of thing, the necessity on the part of both officers and men to have money at their disposal? They both ought to have it, undoubtedly.  
 163. You quite understand that it is sometimes impossible for the Commissariat Department to supply tucker for days? Yes.  
 164. And it is only by having money in his pocket that a man can procure anything at all? I know this, and for that reason I took the precaution to supply my own son with money while there.  
 165. In what position does Colonel Williams stand in regard to pay;—his Colonial pay here, if I mistake not, amounts to 34s. 8d.? His Colonial pay and allowances amount to £2 7s. 3d.  
 166. But what is his actual pay here? £1 13s. 4d.  
 167. And his Imperial pay? £2.  
 168. So that we pay him 6s. 8d. less than the Imperial rate? Yes.  
 169. Therefore, if you are going to make him balance like the others, you will have to make him refund 6s. 8d.? He is paying 6s. 8d., as far as we know, into a bank here. I know he is remitting money. But he has disposed of his pay under an order which he sends every three months.  
 170. Are you aware that the letter of the 20th February, from your Department, caused a great amount of unnecessary trouble in the pay office in Capetown, and amongst our officers? I really do not know.  
 171. Have you been informed, privately or otherwise, that a great many of those officers have had to appeal to the Imperial authorities for money? Yes; I know that "A" Battery officers had to do so.  
 172. And men like Lieutenant-Colonel Bayly and others? I have not heard anything about Lieutenant-Colonel Bayly. I have never seen a line from him.  
 173. And are you aware that the Paymaster in Capetown has had to give orders to the Field-Paymaster to supply those men with money when they require it? Yes; I believe that is a fact.  
 174. Then it comes to this: that the men who volunteered to go to South Africa from here are receiving two distinct rates of pay; one lot are receiving 3s. 5d. altogether—that is, 2s. 3d. and 1s. 2d.—and another lot are receiving altogether 4s. 6d., though both are fighting in the same line? Yes; that is correct.  
 175. And as far as your knowledge goes, the permanent officers under instructions from the General are to receive no money at the front except 1s. 6d. per day, known as the South African Colonial allowance? Yes.  
 176. Payable by the Imperial authorities? Yes; these people have all disposed of their money—allotted every penny of it.  
 177. And in regard to the Volunteer officers, as far as you know no such arrangement has been made? No.  
 178. So that the Volunteer officer and the officer of the Permanent Force are treated again in two different ways? I have admitted that in the case of what we call the Volunteer officer—that is, the officer who has not been in the Permanent Force before—his Imperial rate of pay is deducted—6s. 8d., for instance, in the case of a subaltern.  
 179. But you instructed the Imperial authorities in South Africa to pay no money to the Permanent officers; but if the Imperial Government so choose, they can pay them 1s. 6d. a day, which is known as the South African Colonial allowance? That is correct.  
 180. But in regard to the Volunteer officer no such instruction has been given? No.  
 181. Although, in many instances, you will find a Permanent officer and a Volunteer officer in the same company? Take the case of Legge, Illiard, and one or two others; they are merely drawing their pay, as we call it, from revenue.  
 182.

182. And in the case of Volunteer officers, such as Lenehan, Bennett, and others, who may be in the same regiment, they can draw the Imperial rates, and are doing so, while the Permanent officer can only draw 1s. 6d. a day? Yes. C. F. Roberts.  
7 Aug., 1900.
183. Whose suggestion was it that this should be done;—was it your suggestion? No, it was not my suggestion; it was the General's suggestion, as I think that letter shows.
184. Take the case of a lieutenant;—you accepted an order from him to pay to his wife or nearest relative the full amount of 19s.? Yes.
185. And now you are deducting from that? The Imperial rate of 6s. 8d.
186. So that, instead of paying his wife 19s., you will only be paying her 12s. 4d.—that is, in the case of a Volunteer lieutenant? Yes.
187. And in the case of a Permanent lieutenant, you would be paying her the full rate? The full rate, under orders left.
188. Do you not think this rather a complicated way of getting to business in a matter like this? I do.
189. Do you not think that, when you send men and officers away from here to South Africa, it would be much better to treat them all on the one scale? I think it would have been far better to have done so.
190. And so have less complications and less dissension? Yes.
191. And do you not think that, if you accept an order from a lieutenant going away to South Africa to pay his wife 19s., and he leaves here with that distinct understanding, that you are in duty bound to pay that 19s.? I think so.
192. Take the case of an officer who does not leave any order—a Volunteer officer, who has not got a wife,—do you pay him any money in South Africa? We pay him nothing; he draws his Imperial pay.
193. I mean a Permanent officer; you are entitled to give him 3s. 6d. field allowance;—that field allowance is intended to be paid for use in the field? That applies to Volunteers, and has nothing to do with the permanently paid.
194. But the Permanent officers get a field allowance at the same rate as the Volunteers? Yes.
195. The field allowance is the same for all officers? We pay them according to the rates they are entitled to here.
196. It does not matter whether he is a Volunteer or a Permanent officer, a lieutenant gets 3s. field allowance; take the case of a lieutenant who has been in the Permanent Force; you have given instructions to the Imperial Government not to pay him his field allowance, which I presume is for use in the field? Yes.
197. It is an allowance that the officer only gets when on actual service; so that the Imperial military authorities evidently recognise that it is necessary that a man should have additional money when he is on actual service? The Imperial rates are lower than ours.
198. But in the case of an officer of the Permanent Force, who does not leave any order in regard to his money, you have instructed the Imperial authorities not to pay him his field allowance;—have you paid it? No.
199. So that, as a matter of fact, although he has left no order, you have so arranged it that he cannot get more than 1s. 6d. a day while at the front? Unless he has disposed of his pay.
200. Suppose he has not? I do not think we have a single case of that kind. I know of no case of a subaltern who has not disposed of his pay.
201. Are there not some who have given no order? No; so far as I know they have all given orders.
202. At any rate, you have stopped the Imperial Government from paying the field allowance, and you have not made any effort yourself to pay it? No.
203. Could you tell us who had the appointment and the selection of officers for the different Contingents? I believe the General had.
204. That did not come within your jurisdiction? No; I had nothing to do with it.
205. There was no board or anything of the kind? No. With regard to the pay, my idea was that we should credit these people with the whole of their pay; that the Imperial Government should pay them their pay; and, if necessary, it should be adjusted when they returned, which would have saved the present trouble.
206. Do you not think, seeing the class of work they had to go through, that they were entitled both to the 4s. 6d. and to the 1s. 2d.? I think so.
207. Are you aware what rates of pay are being paid to the Colonial forces raised in South Africa by the Imperial Government? I believe from 8s. to 10s. a day.
208. Are you aware that hundreds of men who went from here and joined the Colonial forces in South Africa receive from 7s. 6d. to 10s. a day? I know a good many who have gone—men who went away "on their own."
209. We are sending a force to China just now;—do you know anything about that? I know that a force is going.
210. Have you seen anything about the rate of pay likely to be given them? I see in the paper that they are to get 7s. 6d. a day instead of 4s. 6d.
211. From your experience as a military man, do you think the work in South Africa or in China would be the more tiresome and the more onerous? Certainly the work in South Africa.
212. *Mr. Chanter.*] If instructions have been given to the Imperial authorities not to pay the field allowance, and so on, and if the money is not being paid, to what fund does it go? It accumulates. One or two of the men who have returned have got their accumulated pay.
213. *Chairman.*] Here is a copy of a cable sent to the Imperial authorities at Capetown on the 27th December—that is, more than two months after you fixed the rates of pay on the 25th October;—it would appear, then, that on the latter date you did not know the men were going to be paid Imperial rates? *Mr. Chamberlain's* despatch, I think, arrived before the 27th December.
214. But here is a cable from the Colonial Secretary to Sir Alfred Milner, in which he says:—
- The Chief Secretary will be glad if your Excellency will be so good as to send the following cablegram to His Excellency the Governor at Capetown:—"My Government anxious to know if Imperial authorities are paying our men the Imperial rates of pay";—
- so that, apparently, on the 27th December, we did not know here that the men were going to be paid the Imperial rates of pay? Except from *Mr. Chamberlain's* promise. There is a despatch somewhere.
215. *Mr. Wilks.*] There were a good many cables passing about that time? It was in the early part of October that the General went away to Melbourne; that was the outcome of it. 216.

- C. F. Roberts. 216. I understand that your responsibility in connection with the Contingents embraced warlike stores, accoutrements, and necessities? Yes.
- 7 Aug., 1900. 217. I understand that your powers and responsibilities were in respect to the ordering, passing, and inspection of the goods, and that you said your opportunities of inspection were very hurried and limited? Yes.
218. But in the course of your limited inspection you discovered, in the case of those supplied by Anderson, that the saddles were bad, and you condemned fifty and cancelled the order for the remaining fifty? I did not see Anderson's saddles from the time they were delivered until they were on the horses' backs. They were delivered one afternoon and were issued to the men before one could inspect them practically. The order came that the saddles must be sent down at once.
219. They passed without inspection practically? They passed through our hands without inspection, and it was not until they were complained of and proved to be bad that we refused to take them.
220. You refused to take any of them? Yes. They had issued fifty; I refused to take those fifty, and I would not take any more of his contract.
221. And this Anderson was the son of Mr. Anderson, who has been the military clothing contractor for years? Yes.
222. Did you receive any complaint direct from the officers of the contingent, or from the men prior to their despatch as to the saddlery—I am referring now to the Second Contingent? The first I heard was that some saddles sent down in the afternoon—I think it was Thursday—were bad. I went next morning and saw them. The men had just come in from their morning drill. They had had them out the previous afternoon, and when I saw them they had been out for two drills. A great number of the D's. had tumbled out, and they were unfit for use.
223. Did you notice anything with regard to the saddles supplied by the other contractors—Weekes, Myles, Leppan, Cooper, and Fox? We had time to look at those saddles, and as far as we could judge they were very good.
224. You condemned none of those saddles—they were all passed? Yes.
225. The only saddles you condemned were those supplied by Anderson? Yes.
226. You supplied about 180 saddles drawn from the Government stores for the First Contingent of lancers, and mounted rifles? Yes.
227. Were they what you call the panel saddle? They were the Imperial Cavalry panel saddle.
228. That is a saddle which from your experience you would recommend that the rest of the contingent should be fitted out with? Certainly.
229. But you were unable to obtain them here? We could not get them. In fact we withdrew from the cavalry some of the saddles to make up this 180.
230. You withdrew from the store all the available saddles? We issued all we had, and withdrew some from the regiment.
231. You say you sent away material for repadding the saddles? A saddle requires to be restuffed and looked after after a time.
232. You were simply providing for the usual wear and tear? Also for repairs; we supplied basils, flax, hemp, thread, horsehair, and old canvas. The regimental saddlers asked for a certain quantity of this material, and we gave them what they wanted.
233. That material was supplied for ordinary repairs, and not in anticipation that the saddles would prove bad saddles? No; a saddle might get ripped or torn, and this material was for the purpose of renewing such deficiency.
234. You heard the Chairman explain his experiences with regard to these saddles, and you were surprised to learn that after two or three months they were absolutely useless? I suppose we all know they had very hard work.
235. But do you think that any conceivable hard work should destroy them in two or three months? Yes, if exposed to the rain. I cannot say anything about this particular lot supplied to the mounted infantry, but I know that the cavalry were out in the rain for five weeks without any cover at all. Theirs were Imperial saddles with very little stuffing, and they lasted.
236. *Mr. Garland.*] Had you anything to do with supervising the equipment of the Bushmen's Contingent? Yes; to a certain extent, under directions.
237. Under directions from whom? General French and Mr. Carey, who was the Chairman for the Bushmen. They selected the particular articles they wanted the men to have. Patterns were furnished which received their approval, and the equipment was made accordingly.
238. But did you inspect the articles before they were issued? Yes.
239. What class of saddle was issued to them? Practically the same pattern saddle as the Second Contingent had. They were made by the same men. We had more to make, and we had to get them made faster. Brush and Marsden were two extra makers, and also Walther, of Hunter-street.
240. Had you plenty of time to inspect them? We had more time, but not sufficient.
241. How did those saddles compare with the ones supplied to the Second Contingent? They were very much the same. Of course some of the men's work was of a higher class. Walther's was about as high class work as you could wish to see anywhere, but he could only do a limited number.
242. Then, with the exception of Walther, the others were about on a par with those supplied to the Second Contingent? Yes; some of Brush's were very good. But they were really good saddles.
243. And with regard to the last lot that went away from here with Colonel Mackay's men? We practically employed the same men again.
244. And did you inspect the saddles? Yes; I thought them particularly good.
245. Did you see a cablegram in to-day's paper, which stated that these men were the worst equipped men that landed in South Africa? No, I did not see it. But remember this: all we were allowed to do was just to issue the articles they required. I might advise a certain thing, but it was not always taken.
246. But as regards the Imperial Bushmen, who is responsible for the equipment of that force? General French and Colonel Mackay I should say. We had practically nothing to do with it beyond manufacture.
247. What were your duties in connection with the equipment of that force? Merely to provide articles according to pattern.
248. Had you not also to see that they were sound and up to sample? Yes; we overhauled them as far as we could. We examined them, and wherever there was anything wrong we sent for the contractor and made him alter it.

249. Had you plenty of time to inspect the saddlery? We had not sufficient time in all cases. As each contingent went away we got a little more time. But I should like myself to have had a month or six weeks to go gradually through the whole thing. C. F. Roberts.  
7 Aug., 1900.
250. With regard to the saddlery equipment of the Imperial Bushmen, were the articles made by the same men who supplied the former contingents? Yes; except that we left out three men, small workmen who could not undertake the work—could not work up to time.
251. And how did that class of saddlery compare with that, say, of the Second Contingent? I think if anything it was better—better finished.
252. Was the pattern of the saddle the same? Almost. It was the bush saddle. It was their own selection. They wanted the bush saddle themselves.
253. Who? Those who selected this pattern.
254. I am talking about the Imperial Bushmen? They selected their own.
255. Whom do you mean by "they"? The General, or whoever was responsible—the General and Colonel Mackay. They had committees for the Citizens' Bushmen, and Imperial Bushmen.
256. Would it have been possible to get panel saddles here? Not at the time.
257. It would have been possible to have had them at the Cape awaiting the men when they got there? Yes; I think so. That is what I wanted to be done from the start. I do not know whether it was the desire to hold parades, and see the men out on the move, but we found saddles for 678 men.
258. Do you know what reason was alleged for differentiating between the men as regards the rates of pay? No; beyond this, that I think the General said he did not think it right that they should draw pay here and draw the Imperial rate of pay as well—that they should not draw two rates of pay, or, in fact, get double pay.
259. I mean, why should that particular letter have been written which prohibited the permanent men from drawing any pay? I think the General says in the letter it was in order that they should not draw pay in two places.
260. *Chairman.*] Would not the same thing apply to the volunteer officer—that he should not be allowed to draw pay in two places? We always deducted the Imperial rate.
261. Could you not have deducted the Imperial rate from all of them just as easily as from one section;—if you have six men getting the same rate of pay, you can make a deduction from the whole six just as easily as you can make a deduction from only three and let the other three go? It would have been simpler to pay them all one rate of pay. If the Government had said they wanted to recoup themselves by the balance of the Imperial pay it could easily have been done.
262. *Mr. Chanter.*] Who is responsible for choosing the pattern saddle;—I understand that practically the same class of saddle was supplied to the Bushmen and to the Second Contingent? When the Imperial saddles had run out—that is, the 180 in store—a pattern saddle was made by Weekes for the General to approve of. Several saddles were inspected, and Weekes had to make a pattern saddle, and that was taken as the pattern saddle for the contingents afterwards.
263. Upon which the orders were given and the supplies furnished? Yes. Weekes is the Government contractor. He could not undertake to supply straight off the number of saddles we wanted—the number was 250 at first, and was afterwards increased; so he had to put on extra men to make the 275. As it was, they worked day and night, and all through the Christmas holidays, and through every holiday. That one pattern saddle was made and the other contractors had to go and look at it, and make up from it. They were shown a pattern of the class of tree that was wanted, the class of leather, which was the best that could be got. It was practically cowhide; they could not get sufficient pigskin. The greater part of the delay was due to the shortness of leather. Some of the contractors had to send all over the place, and even had to try to get it from Melbourne.
264. Would it be possible for you to produce the pattern saddle for inspection by the Committee? I will see if it is still at Weekes'.
265. It is not kept by the Department? We had to send it away to the contractors to make from, and I do not think it has been returned.
266. In regard to the Bushmen's Contingent, has there been any communication from the Imperial officers in reference to any of the officers commanding? Not that I know of. Those communications\* do not come to me; they go to the General. My branch deals with pay and equipment.
267. *Mr. Piddington.*] What is the total sum that has been remitted to South Africa for payments to the officers and men? Nothing has been remitted up to the present, beyond the £700 which was to pay the London detachment of Lancers. It was really to pay them while they were on the voyage to the Cape.
268. What is the total sum that has been paid by the Government of New South Wales here? I could not tell you correctly without reference.
269. I mean for the payment of officers and men under orders which have been accepted by the Department or otherwise? I could not tell you that offhand; it would take time to make it out.
270. Does it not go through your Department, as Military Secretary? It does; it goes through the Pay Department. The Military Paymaster pays the money. I could obtain the information in the form of a return.
271. How do the men in South Africa exist on the Imperial pay? The majority of the men, as far as we can make out, have drawn their pay from the Imperial authorities, and, when they leave, the Imperial Government give them some money on embarking—I suppose what we should call marching money. They generally give them about £1.
272. The conditions were that the Imperial Government should take them over on their arrival at Cape Colony, and take charge of them until they were landed in Australia again? Something to that effect.
273. So that the Imperial pay would be due until their arrival here? Yes; I presume so.

WEDNESDAY, 8 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. COOK,MR. HURLEY,  
MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

James Edward Doidge Taunton called in, sworn, and examined:—

- J. E. D. Taunton.  
8 Aug., 1900.
274. *Chairman.*] What position do you hold in the military service? Assistant Quartermaster-General.
275. What are your duties as Assistant Quartermaster-General? Amongst other things, I have supervision over the dress of the officers and the clothing and equipment of the soldiers.
276. The First Contingent that went away were, I think, an Infantry Corps under Captain Legge and a Mounted Rifles corps under Captain Antill? Yes.
277. Was the clothing supplied to them drawn from the general store or was it supplied specially? In the case of the Mounted Rifles, all the clothing the men who belonged to that corps had in charge they brought in. All the clothing of the other men who were enlisted outside and the second suit of clothing were supplied by the contractor, Mr. Anderson. That is to the best of my knowledge, because in the case of the First Contingent there was only a week from the time the order was given within which to complete the clothing. But I believe it was all got from the Government contractor, because I passed the accounts.
278. And, with regard to the despatch of what is known as the Second Contingent, under Colonel Knight? A general order, No. 142, notified that all applications with reference to the issue of clothing for the Mounted Infantry and Army Medical Corps Second Contingent were to be made to Major Boam, School of Musketry, Randwick Rifle Range, and that clothing obtained from other sources would not be recognised.
279. Who supplied the clothing? I believe Anderson supplied the jackets. Major Boam had full authority. He was instructed that all requisitions were to be made from him, and that gave him authority to act as he thought best.
280. And with reference to the pantaloons? In reference to the pantaloons: In this respect a very serious difficulty occurred, as no cotton Bedford cord was obtainable in the Colony, the stock having been used up in fitting out the Mounted Rifles. Messrs. Vickers, of Marrickville, undertook to manufacture a material in substitution for Bedford cord, the first of the kind ever made in the Colony; when a sample pair was made up the opinion of Mr. Murray, the managing director of the Parramatta Woollen Mills, was obtained as to the quality of the cloth, and he stated that it appeared to be excellent material, and would, he thought, wear well. It was, however, subsequently discovered that the cloth was too fine for rough wear; but this was not found out until the same material was issued to the Citizens Bushmen's Contingent, and therefore after the departure of the Second Contingent. The stock of Bedford cord, which was the very best we could get, being exhausted in the Colony, Vickers, of Marrickville, manufactured the cloth. It was splendid stuff. It was really too splendid; it was made of all wool, and I believe a little cotton should be introduced into those things to make them wearable.
281. Vickers supplied the material;—who made the garments up? Anderson made them up, to the best of my belief; I was away at the time. I may as well tell you, in connection with my duties, that there was an enormous pressure of work in the office. In addition to answering letters and making up estimates my time was chiefly spent down on the ships superintending and supervising the fitting up of the ships, so that I was away from the office, and had to delegate this work to Major Boam.
282. Who supplied the helmets? For the Second Contingent, Anderson. In reference to that a notice appeared in the *Daily Telegraph*—as far as I remember, about the 1st or 2nd January—to the effect that the Colonial troops in South Africa were going to discontinue wearing hats. The hat is the authorised head-dress for our troops. The helmets had been discontinued, and we had fitted out our Contingents with hats. We saw that they had been mistaken for the enemy at Arundel. The General then sent for me, and said, "Well, we must get a helmet for these troops—get a brown helmet." Hordern was interviewed, and he said he regretted that, owing to the short time available, he would be unable to supply the helmets. Anderson was sent for, and he said he had made inquiries, and could not supply them. That was on the 4th. On the 4th January I sent a memorandum to Major Boam:—
- The G.O.C. has approved of the accompanying helmet being issued to the South African Contingent, the pattern to be the same colour as helmet, the strap to be with buckle. Requisition for necessary quantity to the contractor.
283. Did you have any official communication from the Imperial authorities with regard to doing away with the hat? No.
284. You only acted on the report you saw in the *Herald*? Yes. The General wrote to the Principal Under Secretary:—
- With reference to the list of dress and equipment for the Australian Contingent proceeding to South Africa, forwarded under cover of my minute of the 22nd ultimo, I have the honor to inform you that a khaki-coloured helmet has been substituted for the large field service hat for the New South Wales troops, and to request that telegrams may be sent to the Premiers of the other Colonies informing them accordingly.
- This change was made in consequence of the information as per attached.
285. I suppose you would be surprised to learn that the Australian troops were the only troops that paid any attention to this? Yes, I should be surprised. It was done in the interests of the men—to try to save their lives.
286. You are not aware that in scores of cases men wearing helmets and all the paraphernalia have been mistaken at a distance, and the men fired upon? I have seen so lately.
287. And that, as a matter of fact, a great many of the Imperial troops bought up the old hats, and are wearing them now? So I heard latterly; but, at the time, that was the reason for substituting the helmet.
288. Did those helmets and clothes pass any inspection;—was there any Board of Officers, or were they inspected in any way after they were supplied? There was no time to inspect them. They were ordered on the 4th, and the troops went away on the 17th.
289. But if they were delivered, even to-night, there would be time to inspect them? Then they would be inspected regimentally. The rule of the service is that helmets would be issued direct to the regiment.
- The

The regiment would have a Regimental Board, which, if they had time, would make a report. We had no such report, so far as I know.

J. E. D.  
Taunton.

8 Aug., 1900.

290. As far as the Head-quarters Staff is concerned? As far as I am concerned, as Assistant Quartermaster-General, I know of no complaint.

291. I am not asking about the complaint. I am asking if there was any inspection by you, or by any Board of Officers, on the part of the Head-quarters Staff, of the clothing after it was delivered? No; nor would there be under any circumstances. That would be a regimental inspection, as to clothing.

292. But there was none? No; not by the Head-quarters Staff.

293. So that you could not say whether the stuff supplied was or was not up to sample? I could not say. I believe Major Boam can; but I personally cannot say so, because I did not see the clothing.

294. In the regimental inspection is the pattern supplied to the officer of the regiment, so that he may be able to judge whether or not the clothing is up to sample? I do not know. In this particular instance I do not know whether Major Boam supplied a pattern or not. I very much doubt it. The press of work was so enormous that it was utterly impossible to.

295. It would be impossible for the regimental officers to tell whether the clothing was according to pattern or not if they did not have a pattern? The regimental officers know the pattern, and they could see it at the store. Of course, the pattern was to be seen. In point of fact, I know the pattern was in Major Boam's tent at Randwick, which was close by the regiment.

296. If the Head-quarters Staff were so busy, would not the regimental officers who were making every preparation both individually and for the regiments to get away to South Africa, be also rather too busy to have any inspection? Yes; but they have a quartermaster whose business it is to look after those things—to look after all matters connected with clothing and equipment. He is appointed solely for that purpose. The business of the Quartermaster of the regiment is to see that things are up to sample, or if there is no sample that they are of good quality, and to report upon them.

297. And is it no one's duty to see that the quartermaster does his duty? It is the duty of the Colonel of the regiment to see that. No staff officer interferes with the regiment. The staff deal with the Colonel-Commanding the regiment; they have nothing to do with the regimental officers, except through the Colonel.

298. If troopers were sent away to South Africa with only one outfit, of course you do not take any responsibility for that? No.

299. And suppose some had gone away without any outfit at all, you would not take any responsibility? The officer commanding the regiment is responsible for that entirely. But, I think, Major Boam could answer that. I think he could point out that everybody was supplied.

300. If men were sent away with only, say, one suit of clothes instead of two—I presume every private was entitled to two suits of clothes? Yes.

301. And if men were sent away with only one, whose fault would that be? The Colonel commanding the regiment undoubtedly. Here is his order, and he is supposed to comply with it—

2. Officers Commanding Units of Contingent will send to the A.Q.M.G., by 12 noon to-morrow, statements showing deficiencies in clothing, arms, equipment, &c.; similar returns to be furnished daily till embarkation.

302. Then as Assistant Quartermaster-General, though it is down in the book that you are to look after all these duties, your duty apparently consists in handing it over to somebody else? No. You must remember that these were extraordinary times. In ordinary times when you have plenty of time the work of inspection is easy enough. But in this case I was working at high pressure. I was not in the office. I had to appoint an officer, Colonel Knight, who was doing the Deputy-Assistant Quartermaster-General work for me in connection with the First Contingent. I was down on board the ships. A man cannot be in half a dozen places at once.

303. What were your duties on board the ship? To see that the horse fittings were properly put up, to see that the men's bunks were all put up, and to see after the accommodation. And very arduous duties they were in connection with the "Kent," because the "Kent" was shockingly fitted up, and if I had not been down there to inspect things would have been wrong. You have no idea of the enormous pressure of work in the office at that particular time. In addition to my doing all these duties men were coming into the office all day long asking questions, and in one day alone we had 2,400 letters, and those had all to be answered and attended to.

304. But surely you could not have had 2,400 letters of very much importance? They all had to be attended to one way or another.

305. Could you not have got a clerk at £2 a week to simply say they had been received;—you surely do not give your attention to answering letters from every Tom, Dick, and Harry, and allow somebody else to superintend the equipment, which is specially set down in the regulations as your work? Let me show you this order, which meets this particularly. It was found impossible for a man to be in Victoria Barracks, and at the same time with the troops at Randwick, and that order was issued by the General.

306. It is all very well for the General or members of the Head-quarters Staff to issue an order; but what I want to ask you now is, are any of the Staff responsible for the equipment in any way, or was it the case that you had so much to do looking after the ships and answering those letters that there was nobody left to look after the equipment? The General himself inspected the equipment repeatedly.

307. Somebody must be responsible for the equipment and for the clothing;—surely if you give an order for equipment it is the duty of somebody to see that that equipment is supplied in proper quantity and of proper quality? Under ordinary circumstances—take equipment and clothing—the Director of Artillery and Stores would report that the contractors had supplied the equipment, and he would ask for a Board, and a Board would be appointed, and the equipment would be taken over; but, as I have pointed out, it was impossible to do this in the present instance.

308. How is that? May I show you a letter the General wrote on the subject that will explain the matter more clearly than I can do?

309. Surely you can explain to the Committee without a letter how it is impossible to hold a Board? We had not the officers; every officer was engaged. The officers who, as a rule, would have helped us were sent away as special service officers. Colonel Bayly, Captain Antill, and others had all gone on special service, and there was only myself, Colonel McKenzie, and Major Boam.

310. Were there not Major Boam, Major Baynes, Colonel McKenzie, Captain Stanford, Major Lee, and Major Owen—quite enough to hold about six Boards? But they were all working, and working at very high

J. E. D.  
Taunton.  
8 Aug., 1900.

high pressure. I can assure you it would have been an impossibility. There was a board held with reference to the saddles; but in the case of the clothing, it would not have been possible, because the clothing was being supplied up to the time the men went away.

311. Did you go down and examine it at all? No, I certainly did not; I had not the time. My chief business was in connection with the ships. I did not do so; the General did himself.

312. *Mr. Wilks.*] Would not the Colonel commanding a regiment want to supervise the shipping accommodation exactly the same as the Staff? No; the regimental officers have nothing to do with it. They simply go on board. That is a matter for the Staff, and the Staff are responsible.

313. The Colonel commanding the regiment is responsible for the equipment? When equipment is issued to a regiment, the Colonel is responsible for bringing under notice anything that is bad.

314. *Chairman.*] Do you not think that is rather a long way round to get at anything; suppose I am a contractor and I get an order from the Staff to supply 400 or 500 suits of clothes or helmets, and I supply them to the Staff; if the Staff is going to pass the inspection on to the Colonel of the regiment, I suppose the Colonel of the regiment will say that he has more to do than the whole Staff put together; he will say that he has his regiment to get together, his equipment to give out, his men to drill, and has to make arrangements for leaving;—it seems to me that the Colonel of a regiment has twice as much to do as all the members of the Staff? You can have no idea of the enormous work that is put on to the Staff.

315. If an invading force were to come here, what would the Staff do then? The work would not be left to three of us; we should have our usual Staff, and, besides that, we should have plenty of time to make our arrangements.

316. But what have the Staff to do? Originally this was a force composed largely of outside men. We had to provide them with equipment, which we had not got in store.

317. But you do not take any responsibility for that; you say it was the duty of the regimental officers;—you only sent the order along? I think you misunderstand me. I say the Staff orders.

318. But surely it would not take three of you to write an order for 400 or 500 articles? In the case of uniforms, when they are supplied, they are ordered to be supplied direct to the regiment. Under ordinary circumstances the regiment would hold a board on the uniforms to report whether they were good or bad, according to the pattern issued to them.

319. In this case then the Staff did not have that to do? No.

320. Well, what had the Staff to do that it was all broken up? The Staff had to superintend. In my case I had to superintend the ships, to superintend the transport, had to arrange for the contracts for the supply of rations, had to answer a thousand letters, and had to make out estimates of expenditure. I know I had not a second to myself.

321. Superintending the ships and going down to see whether they were being fitted up in accordance with directions would take an hour say? But it took me away from my office.

322. An hour out of three weeks? Twelve days. The first order was given on the 20th, and the ship sailed on the 28th, and there was a Sunday intervening.

323. But all the ships were not in at one time? You must take them in contingents. In the case of the first contingent the order was given on the 20th, and I was sent down to report upon the accommodation in the "Kent." I went on Sunday, and on the ensuing Saturday the men embarked. That was just seven days. The "Aberdeen" went three days afterwards.

324. What I cannot understand is what the Staff were doing;—I have named about a dozen officers who were available at the time, and I cannot make out what they were doing that they had not time to inspect this material that had been ordered and paid for? The material did not come in many cases until the day before the troops went; in fact, saddles and bridles were being delivered up to the hour of embarkation. This left little margin for inspection. That is in the case of the equipment. In the case of the clothing, that was being supplied on the day when the men were actually going on board the ship. The contractors were working at such high pressure that they were supplying clothing up to the time the men sailed.

325. Even if it were delivered at the very last hour, it has to be supplied, and I want to know if it was inspected by anybody, if it was anybody's duty to inspect it, or if it was the custom to accept whatever the contractor might send along? Certainly not. In the case of clothing, the contractor supplies the clothing direct to the regiment. The regiment requisitions the contractor, and he supplies direct to the regiment. The regiment holds a board to report upon the clothing, as to whether it is up to the sealed pattern. If it is not up to the sealed pattern, and not in accordance with the contract, they send it back to the contractor.

326. In this case did the regiment have a sealed pattern? That I cannot say.

327. How could the regiment inspect if they did not know what was ordered? It was distinctly laid down in order what the pattern was. I will read you the order.

328. Read me the pattern of the helmet if you have got it there? I have not got the pattern of the helmet. The pattern of the helmet was sent to Major Boam.

329. Could you get a pattern sample of the clothes? Yes; I have one outside. With reference to the clothes, the coat is the same as approved of by General Hutton years ago. Each regiment was already in possession of the pattern. They are all in possession of the sealed pattern, and there has been no alteration made except in the facings, and that alteration was the subject of an order.

330. With regard to the helmets, you say that, personally you did not look at them, so that you do not know whether they were up to sample, or whether they were not? Personally, I did not see the helmets.

331. From your long military experience you know something of helmets? Yes.

332. Have you ever seen any Indian pith helmets? I do not think I have. In my time the troops in the service did not wear helmets—they wore a shako. The helmet they wear here is only a cork helmet. I saw a pith helmet the other day—one which came with the returning troops. I produce a pattern of the jacket for the inspection of the Committee.

333. You do not know whether anybody had a look to see whether they were all up to that quality or not? I cannot say, except that they are all the same pattern. The regiments that have gone away have all got that pattern, the only exception being that the facings have been altered.

334. *Mr. Wilks.*] The cloth is of colonial manufacture? Yes, made by Vickers. It is very good stuff, and the men who have come back have all spoken very highly of it.

335. Who supplied the helmets? Anderson.

336. Do you know what price you gave for them? I cannot remember, but I think it was 6s.

337. Have you any samples or anything to show the character of the helmet? The following memo. was sent to Major Boam:—"The General Officer Commanding has approved of the accompanying helmet for issue to the South African Contingent, the button to be the same colour as helmet; the strap to be with "buckle."

J. E. D.  
Taunton.  
8 Aug., 1900.

338. Did you get that pattern of helmet? This was sent out to Major Boam. Major Boam was staff officer, and he would see that they were up to sample.

339. Did you submit this helmet to the General? Yes.

340. Did you have a look at it yourself before you submitted it? Yes, I had a look at it. As I say, it was ordered on the 4th. We could not get brown helmets of any sort, and this helmet was brought up, and Anderson said he could supply a sufficient quantity. The helmet, so far as it looked, and so far as I could judge—I do not profess to be an expert—seemed to be a very fair helmet at the time.

341. How long do you think it would last;—how long ought it to last? I should have thought that, with fair wear and tear, it would have lasted a considerable time. I know now it has not done so; but I know it was made a pillow of, and exposed to all sorts of weather.

342. Did you expect that the men in South Africa would carry a hat box for their helmets? Certainly not, but I would not expect the helmet to be made a pillow of.

343. Not in soldiering? In my days we had forage caps, and men did not take the helmet into the field.

344. Have you any idea of the length of life of an Indian pith helmet, going through the same work? No, I have not; I know nothing about helmets.

345. You say you have seen one brought here with the returned troops? Yes.

346. What do you think of it? It is a very fine helmet.

347. Do you know anything about the cost of those helmets? No.

348. Would you be surprised to learn that they cost about 3s. 6d. or 4s.? The cost would be very reasonable in India.

349. Would you be surprised to learn that the troops have been wearing those pith helmets during the whole of the war in South Africa? No, I should not be surprised. I should never dream of getting anything here if I had my way. I should send Home for them, or to India; but on the spur of the moment we are bound to get the best we can; and on the spot that was the best we could do at the time.

350. Could you not have cabled Home to get those pith helmets sent out, and would they not have reached South Africa long before the troops arrived there? Yes, we could have done that.

351. Do you not think that would have been a wise policy to have pursued? Yes.

352. Coming as it did within your Department, did you make a suggestion to that effect? I do not know that I did, with reference to the helmets; but I did about other things at times.

353. Here are a couple of the helmets supplied to our troops; that one, for instance (*helmet handed to witness*) is rather a nice-looking article after two months wear, is it not? Yes, it is.

354. You can see that there is nothing else in it but calico and glue;—this is another, only a little better (*helmet produced*); that makes the New South Wales military authorities look big in South Africa? Well, we could not get them made here; we had to do the best we could. It has been admitted by one of the experts here that it was the best that could be got under the circumstances.

355. *Mr. Wilks.*] You did not expect them to be made of glue and calico? I do not profess to be an expert in the making of helmets.

356. *Chairman.*] Did you ever see a worse helmet than that? It is pretty bad, there is no doubt about that.

357. Still there is no responsibility; it was nobody's duty, as a matter of fact, to see whether the helmets were up to pattern or to see anything about them? They were up to pattern, I presume.

358. The General and yourself accepted this as a pattern helmet? The helmet appeared at the time to be a fair helmet. It was the best we could get of the sort. The pattern helmet did not look like the one now produced. It looked a decent helmet.

359. You just look at it at a distance;—would you not, if you were going to buy helmets, want to see what was really inside? What are you to do if you cannot get any others? You tell me they still keep wearing the field service hats. I knew quite well they could replace those things in South Africa from the Ordnance Department. I knew the Imperial people could replace them.

360. Why should we give Anderson 6s. apiece for those helmets if they are not worth 6d.;—you tell me that the only reason why you changed from the hat to the helmet was because you saw some cable in the *Sydney Morning Herald*? No; I was ordered to do it.

361. But that was all the information you had; there was no direct communication from the Officer Commanding in Cape Colony? Not that I am aware of.

362. I suppose there were plenty of ordinary hats available;—you had plenty of soft hats? Yes; plenty of ordinary hats.

363. Have you worn the soft hat as well as the helmet? Yes. I prefer a cork helmet myself to a soft hat. I would not wear a soft hat in the sun. I was speaking to an Indian officer the other day, and he said that the soft hat was a very bad thing for the sun. During the time that General Hutton had the mounted brigade out at Campbelltown in January, just before he went away, the men were supplied with the soft hat, and they were going down with sunstroke. I had a soft hat on, and I felt that it was just a case with me, but I luckily happened to borrow a helmet and saved myself.

364. If you were lying behind a rock with a rifle in your hand, trying to get a shot at the other fellow, you would perhaps find that the helmet was not the institution it is cracked up to be? I quite grant that. The Imperial men wear the helmet in South Africa. For service purposes, for comfort, there is no doubt the felt hat is the nicest, but against the sun I believe the helmet is the best. That is my experience. I have tried both. To fight with, as a matter of safety, I prefer the felt hat undoubtedly.

365. Did you have the saddles examined;—were you a member of the Board that examined them? I was not one of the Board. The saddles were examined.

366. But did you examine them personally? No; I should not do it under any circumstances. Under ordinary circumstances, a Board would be held and would report; it would not be done by a single officer. Articles received from a contractor would be reported upon by a Board.

367. Would that Board consist of Staff officers? No.

368. Could you tell the Committee what the duties of the Staff officers are; and how many there are of them? The duty of the Staff is to deal with the whole of the correspondence in connection with the office. The correspondence in connection with the office is enormous. In my case, I am Secretary for Finance, and I have an enormous amount of work to do making out returns, replying to correspondence, and arranging for contracts, passing vouchers, &c.

369.

J. E. D.  
Taunton.  
8 Aug., 1900.

369. What returns have you to make out? Checking returns. There are large annual returns showing all the equipment and guns in the Colony. That is a matter which takes a clerk some considerable time, and it has to be supervised by myself.

370. You do not have to make out a return every day; the guns that are there to-day will be there to-morrow; and with regard to the correspondence, where does it come from? There are 8,000 men in the military force now in the Colony, and you would be astonished at the amount of correspondence which takes place.

371. What do they get to write about? I do not know, but they do. I have to pass the vouchers. From the 1st June, 1899, to the 30th June, 1900, I had 12,638 vouchers going through my hands—vouchers passed for money alone.

372. What is the use of passing a voucher if you have not looked at the stuff;—if an order has been given, somebody will take delivery of the stuff, and, as in ordinary business, he will initial the voucher that the goods have been received in good order? That is quite right.

373. Well, then, passing that voucher simply means another clerk putting that down? It means very constant checking.

374. You personally do not check it? It means for instance in the case of travelling, that I have to say for the information of the General Officer that the amount of travelling has been performed in accordance with orders. Very often officers send in claims for more than they are entitled to, and I have to check every figure of that sort—or my clerks have.

375. But you surely have not many travelling in that way? The correspondence with regard to it is enormous.

376. I suppose you know that there are over 200,000 British soldiers in South Africa;—are you aware that the Field-Marshal's Staff is not any bigger than yours? You must remember the difference between a volunteer force and a Regular Force. Volunteers ask questions on every possible subject, and the correspondence is considerable. In connection, for instance, with the 7th Regiment, the correspondence is very considerable. They ask questions, and they must be answered. If we do not answer questions we are called upon to explain why so and so has not received an answer to his correspondence. Probably a question is asked in the House why the Staff has not replied to So-and-So's letter. That is constantly occurring.

377. You have eight regiments, I think, you said? Eight infantry regiments as well as the Mounted Rifles, the Australian Horse, the Lancers, and the Artillery.

378. A total of 8,000 men? 9,000 men.

379. How many clerks have they got to write those volunteer's letters, if it takes a big staff with a number of clerks to answer them? At present the clerks at Headquarters Staff are working up to midnight every night.

380. *Mr. Chanter.*] How many clerks are there on the staff? Seven.

381. *Chairman.*] I want to know what the Staff does;—you say first they answer correspondence and pass vouchers? It is extremely difficult to explain to you what the work of the Staff is. It is one of those things you must see for yourself. There are questions of discipline, of organisation, of the moving of troops, and a hundred other things which I cannot explain, which have to be attended to, and orders have to be issued.

382. Take the moving of troops: how often do you move your troops; suppose you had to give an order every day—that would only take about one minute; if you gave an order to shift troops from one place to another, you would only give it to another officer; you would not go and get the troops together and shift them;—it seems to me there is nobody responsible here at all? We are all responsible in our various departments. I am responsible to the General as Assistant Quartermaster-General for my duties, whatever they may be.

383. I am trying to get at who is responsible for this equipment? The Director of Military Stores is responsible for the equipment, and I am responsible for the clothing. I will tell you the course which is generally pursued, and which is the proper course, in the service. In the case of any equipment received by the Director of Military Stores he calls for a Board to pass them, and when they have been passed by the Board, they are taken in charge and issued. With reference to clothing, that is issued to the regiment direct. The regiment then appoints a Board of its own officers, who inspect the clothing and report upon it.

384. Then, the Staff throws the whole responsibility on to the regiment? In regimental matters.

385. Suppose the regiment does not hold a Board, and does not inspect the stuff, is it anybody's business to see they do it? Then the General, or one of his Staff—in this particular case, the General—inspects the regiment and sees that they have the various articles in charge. In the case of these various Contingents, the General used to go down repeatedly and inspect the regiments, and he would see that every man was supplied with the articles of equipment. He would take notes at the time, and have a memorandum sent to the responsible officer asking why such and such a thing had not been supplied.

386. Have you any of these memoranda? I think I read one just now.

387. Have you ever seen the General taking notes? I saw him doing so once or twice. He goes round and inspects the men, and takes a note of any deficiency—that is to say, if a man has no saddle-bag or no great coat, he takes a note of it. There is a general order.

388. You issue many orders, but you do not see that they are carried out? If there was any deficiency the General would see it in the course of his inspection.

389. But whose business was it to see that the orders were carried out;—do you issue orders to the officers commanding regiments and then go to sleep? We do not go to sleep. The regimental officers make a report. How could any individual staff officer say that every man in a regiment is completely equipped? To do that, our whole time would be taken up.

390. The General issues an order, but it is nobody's business to see that the order is complied with;—whose duty is it to see that the officers of the regiment carry out the order? It is my duty to see that these memoranda are sent in.

391. I am not speaking of the memoranda being sent in, but of the order which is issued being carried into effect;—if the General issues an order that the officers of a regiment must do so-and-so, in regard to equipment, whose business is it to see that the officers of the regiment carry out that order? The Staff officer is responsible.

392. And in that case it would be you? In that case it would be me.

393. Then if a regiment going away did not hold a Board to pass the clothing, you would be responsible to see that they did do it? Yes; but, as I pointed out, it would have been impossible to do it. 394.

J. E. D.  
Taunton.

8 Aug., 1900.

394. You say it was not the duty of the Staff officers to do it; but it was the duty of the officers of the regiment, and if they did not do it, then it was your duty to see that the order was complied with? To see that they were in possession of their clothing and equipment—certainly.

395. Are you aware that men went away without being properly equipped? In some cases I know things were made on board ship. The Medical Staff Corps, for instance, had to take the tailors' coats and complete them, as there was not time.

396. Are you aware that right at the front men had only up to then been supplied with the one suit of clothing, that that had gone all to pieces, and there were actually soldiers fighting in the front without any pants at all;—are you aware of that? No; and I do not believe it.

397. I saw it? That does not show that they did not have the clothes. They may possibly tell you, but on reference you may find that they did have the clothes. If you give me any particular man's name I have no doubt I can prove whether he had any or not.

398. I can give you the name of J. McMillan, of "C" or "D" Company. The officer commanding, Colonel Knight, admitted that the man never had a second suit of clothes;—surely somebody is responsible for that? The officer commanding is responsible to report to me whether the man is deficient. If a man is deficient it is my business to see that he is completed. Probably he did not report. No Quartermaster-General, either in Sydney or any part of the world, in the Imperial service, is responsible further than that. I have been eleven years in the Imperial Service, and I know something about it.

399. Apparently nobody knows anything about the equipment and about the clothing? I think you will find that everything is known about the clothing. Major Boam was appointed to represent me in reference to the clothing, and he knows all about the clothing. I fancy you will find, when you have got him before you, that he will tell you everything in regard to that. I was not able personally to superintend, and the work was delegated to him.

400. You say you did not personally have anything to do with the saddles? No; I had nothing to do with them. The equipment I had nothing to do with.

401. You have nothing to do with the pay? No. My chief work—you may say it only took an hour; but it took considerably longer—was looking after the ships to see that the work was properly performed, and the accommodation was fit for the men. One had constantly to be down there, and I was away from my office a great deal. Then, again, in about twelve or fourteen days we had to get twenty-five carts built for one of the Contingents.

402. But you did not build the carts—you gave an order for them? I had to be constantly present looking after these things myself.

403. But you are not a wheelwright expert? Exactly; but one has to see that these things are done.

404. You would not know very much about the building of a cart;—but in the case of a helmet you could tear it to pieces and see what it was made off? With reference to the helmet, though I might be now, I honestly say that then I was not any the wiser. As to how helmets are made I am not an expert.

405. You surely knew that calico and glue were not materials of which helmets should be made? I knew we could not get a supply of cork helmets in the Colony.

406. Calico and glue is rather an extraordinary mixture for a helmet, is it not? It is what they call gossamer here. An expert admitted himself that it was the best that could be got in the Colony at the time—an outside person.

407. Did it never occur to you that we could have sent to England and got Indian pith helmets for less money—helmets that would have been of use;—did it not also occur to you, when you could not get helmets that would be fit for use, that it would have been better to let the men continue to wear the soft hat? I had only to obey orders. In that particular case it was the General's wish that helmets should be sent.

408. *Mr. Wilks.*] As a Quartermaster-General, under ordinary circumstances you would be responsible for the clothing? Yes.

409. Do you consider that in the case of actual service it would be more important to have this inspection than under ordinary circumstances? If there was time, certainly.

410. Then we are to understand that the time was so limited, and you were so rushed, that you were not able to carry out the duties of your office? The time was so limited, we were so rushed, and clothing was being brought in up to the last moment, that it was impossible to have a proper inspection. But I am led to believe, by Major Boam, who was acting for me, that he did have a proper inspection. You will see, I think, from his evidence, that everything was inspected. Speaking for myself, I did not inspect it.

411. Under nominal conditions, the proper course would be to appoint a board to inspect? Yes; under ordinary circumstances a requisition would be sent to the contractor, through the Clothing Board. The contractor would supply the clothing for the regiment, and the regiment would hold a Board, and if the clothing were not in terms of the contract the Board would return it to the contractor to be replaced, sending a notification to the Clothing Board of what they had done.

412. In the present instance, then, the Clothing Board was moribund, or did not exist? The officers were all over the place. Colonel Roberts was arranging for the equipment, I was looking after a hundred and one things, and Major Boam was at Randwick attending to the drill and the clothing.

413. *Mr. Chanter.*] The Clothing Board is a Board connected with the Staff, apart from the Regimental Board? Yes, quite apart. The Clothing Board, under ordinary circumstances, which deals with the supply of clothes, consists of myself, Colonel Roberts, Captain King, and Major Boam, the secretary.

414. You neglected a Board for the clothing, but provided a Board for the saddles? No; I would not say we neglected a Board for the clothing.

415. There was no Board for the clothing? There was no Board.

416. That was practically a neglect? No. I cannot say that the regiment did not hold a Board. The Staff held no Board for clothing. The ordinary Board on clothing to be supplied to the troops is a standing Board to which all requisitions for clothing for the partially-paid troops go under ordinary circumstances. This Board was split up when the Contingents went away, and the clothing was supplied through the contractor, or in some cases from Murray of Parramatta, on requisitions from Major Boam.

417. Then I am to understand that you removed from your ordinary duties, under order from the General, and took up other duties that were absolutely foreign, under ordinary circumstances, to your office? No; it was part of my duty.

418. For instance, in examining ships? That is part of the Assistant Quartermaster-General's duty.

419.

J. E. D. Taunton. 419. Most of your time was occupied outside the office down there? It was in this particular case—at least a great portion of my time. While Colonel Knight was here he assisted me in the office doing correspondence and other things, and when he was not here I had to do the best I could.

8 Aug., 1900. 420. You were acting as Embarkation Officer? Yes. In addition to that I had to answer all correspondence in connection with the supply of horses.

421. You consider that the helmets were unsuitable—even without inspection, you thought they were unsuitable? I did not at the time. I did not then know they were going to turn out so badly as they appear to have done.

422. And you preferred the felt hat to the helmet? Yes; I think the felt hats were better—not against the sun. I say the felt hat is better for fighting purposes, but the helmet is better against the sun.

423. And your impression then was, that according to your information they could not be supplied in the Colony, and it would have been advisable to send to England for helmets to be supplied to the men at the Cape? I think that would have been the wiser course.

424. What was the reason that induced them to give the order for the helmets here;—was it for the purpose of having a display through the streets—a street parade? No.

425. You do not think that influenced them? No; I do not think so. I think that order was given purely in the interests of the troops. The General, undoubtedly, did everything in the interests of the troops, and was very anxious that the comfort of the troops should be looked to.

426. We have evidence that the saddles could have been ordered from England and supplied to the men at the Cape, but that local saddles were ordered, and matters forced on in order, to a great extent, that there might be a display? I do not believe that.

427. That was the impression we got yesterday? I certainly do not believe it. I believe that whatever the General did was done purely in the interests of the troops—that he was anxious for the comfort of the troops, and did not for a moment do anything for the sake of display.

428. *Chairman.*] Do you think that supplying gum and calico helmets was in the interest of the men who had to wear them? Not at all. A mistake may have occurred through our not being experts. We will own that the helmets have turned out badly, but we did not foresee that at the time.

429. *Mr. Wilks.*] Was the looseness of the inspection, or want of inspection, accounted for by the high pressure under which the staff worked? With reference to saddlery, there was an inspection. There was a Board, consisting of Captain Hilliard, Lieutenant Holborow, and Lieutenant Garvan.

430. Did that Board report favourably with regard to the saddlery? The Board found that the workmanship throughout was generally satisfactory, and made the following recommendations:—

That an extra D for strap to secure ends of great coats be supplied on either side of saddle, about 6 inches lower down than D already affixed to knee-pads.

Straps with buckles to secure numnahs to saddles are urgently required to prevent numnahs working off.

The web girths supplied being of a most inferior and unserviceable quality, it is recommended they be returned and replaced with folded leather girths similar to supply already received.

Then Colonel Knight sent that on with this minute:—

Forwarded. The straps on the numnahs as fixed are for buckles on the saddles of another pattern. The straps referred to would be one on each side, through which the flaps of the saddle could be passed. The recommendation for the substitution of leather for web girths, I consider absolutely necessary. Those now issued would not stand for any length of time.

The General approves of it, and says, “Military Secretary to take immediate action.” That was sent on to the Military Secretary, who wrote:—

The numnahs are being supplied as made with special straps to steady same; the long side strap for saddle flap has been discontinued by the Imperial Service. The Imperial new pattern, which has been issued as far as possible, are having a small strap with buckles for attachment to the numnah tongues. Leather girths have been ordered; but with exception of 100 web girths, all the web girths were of the best British make, and full lengths. One of these should, I consider, be retained for each saddle in case of accidents. Great coats should be rolled, and with heel-ropes and picket-pegs placed on rear pad, not placed over the wallets. D’s, therefore, would not be required.

The General, on 13/1/00, asked Colonel Roberts whether the saddles were generally satisfactory:—

The General Officer Commanding wishes to know the names of the contractors who supplied saddles for Contingent, the numbers, and those who gave satisfaction.

He gives the name, and says all these gave satisfaction. Then:—

The General Officer Commanding desires you will arrange to obtain fifty saddles in accordance with the verbal instructions he gave you this morning; also 150 bandolier belts for Mounted Rifles.

431. *Chairman.* According to the reports you are reading, everything with regard to the saddles appears to be satisfactory; but we have sworn evidence that some saddles are returned;—there is nothing there about those fifty saddles? These were Colonel Knight’s lot. I believe the other lot were for the Australian Horse.

432. Could you send down, for inspection by the Committee, a full sample of the equipment sent with the troops, including great-coat, helmet, saddle, and everything? Yes; I think so.

433. *Mr. Wilks.*] Did I understand you to say that you relied to a great extent upon the regimental inspection? Any deficiency in clothing would have to be reported to the Staff by the regiment.

434. You relied upon that a good deal;—you said there would be a regimental inspection in ordinary times? In ordinary times we generally inspect the clothing. The clothing goes to the regiment; the regiments inspect and reports.

435. I think you said the Colonel would be responsible in that case? The Colonel would be responsible.

436. Did you receive any correspondence from the Colonels of any of these regiments, making complaints about the clothing? No; I think not.

437. Are we to understand that, owing, as you say, to high pressure, some of your ordinary duties were delegated to Major Boam? Only with reference to clothing. He gave the orders for the clothing; the clothing was sent through him.

438. He gave the orders, and he passed the clothing? I believe he passed the clothing.

439. In other words, we are to look to Major Boam for the responsibility in regard to the clothing? Major Boam will be able to answer any questions with regard to the clothing.

440. In this particular matter of clothing for the Contingent, Major Boam would be the officer to whom we would have to look? He would be responsible for seeing that the clothing was up to the patterns that were approved.

J. E. D.  
Taunton.

8 Aug., 1900.

441. *Mr. Chanter.*] Is the pattern of clothing which you exhibited to the Committee this morning, the clothing you spoke of in your evidence as having been manufactured by Vickers of Marrickville? Yes.

442. And made up by Anderson? Yes.

443. You have not told us anything about the pantaloons yet; you said that Bedford cord could not be obtained, and it was necessary to get a substitute for it;—can you tell us where the material for the pantaloons was procured? Up to the time the Second Contingent went, it was procured from Anderson. I refer to the ordinary Bedford cord pants. Messrs. Vickers of Marrickville undertook to manufacture the material in substitution.

444. Then Vickers manufactured the cloth for the jackets, and also the material for the riding pants? Yes; later on, Murray, of Parramatta, I think, made some cloth for the Bushmen's Contingent.

445. Did I understand you to say that Anderson was the contractor for the helmets also? Yes.

446. Then practically he was the contractor for the supply of the whole of the clothing equipment? There was nobody else to make them. Later on we tried to get some from Mr. Duncalfe, who undertook to make 250, but when the order was given, he could not do the work. We tried Hordern, and he said he could not do it in the time, and it dropped into Anderson's hands. Anderson has a helmet factory here, and I believe a clothing factory. In fact, he is at present the only man who can do the work. I believe Murray, of Parramatta, is now setting up a factory, and he proposes to go into competition with Anderson in these things.

447. I understood you to say that there was a Board appointed from the Staff to inspect clothing, but on this occasion the pressure of work prevented their appointment? No; I said there was a standing Board for dealing with all matters in connection with clothing. We do not inspect the clothing beyond the patterns. We inspect the patterns, and pass the patterns. We send the sealed pattern on to the regiment. The regiment receives the clothing, and inspects it in accordance with the sealed pattern delivered to them.

448. *Mr. Wilks.*] You check the clothing account? We check the clothing account and any matters in connection with clothing.

449. *Mr. Chanter.*] In matters relating to clothing material you rely on the Colonel of the regiment? First of all we have a pattern; we seal that pattern. We then send it to the regiment; the regiment then get their clothing from the contractor, and compare it with the pattern.

450. The Colonel of the regiment and his officers are responsible that the clothing supplied to them is in accordance with the pattern furnished by the Staff? They are responsible to the General that the clothing is in accordance with the pattern supplied.

451. Is it, or is it not, the duty of the Colonel of the regiment to report to the Staff as to whether the supply is satisfactory or otherwise? It is the duty of the Colonel to report anything in connection with the equipment or clothing of his regiment—any defects or otherwise—to the Staff.

452. Was that done;—have you any reports from the Colonels of regiments? I cannot say, at a moment's notice, what reports were sent in.

453. Is it not part of the system, and do not the Staff demand from Colonels of regiments that they shall report on all matters of supply in accordance with sample? The Staff demands that, in accordance with the custom of the Service, on anything that is issued that is defective a report should be made to the Staff officer responsible.

454. Suppose there is nothing defective;—suppose that everything is *bona fide*, and in accordance with sample, is it the duty of the Colonel of the regiment to report to the Staff accordingly—something on record, as part of the system? No. There is an inspection made by the General. The General has his annual inspection, and the Colonel then reports that everything is correct. The General is supposed to inspect every regiment. In case of service, and going to and from service, he finds out from the officer in command of the regiment if everything is correct.

455. I can understand that it is impossible for the General to personally inspect every helmet or jacket,—but this is what I want to find out, in order to see if the system is complete: The Staff places the responsibility on the shoulders of the Colonel of the regiment—is not that so? Yes.

456. And he is supposed to act in conjunction with his officers? Yes.

457. Do the officers themselves, or any one deputed by them, make a careful inspection before the clothing or equipment is issued to the men? The Colonel of the regiment is the man who is responsible for arms, equipment, and clothing. He is the man whom the General holds distinctly responsible for everything in connection with the regiment, in accordance with the Queen's Regulations.

458. The Colonel of the regiment, you say, is responsible to the Staff for the carrying out of the general orders in regard to his duties? Yes.

459. Whether matters are satisfactory or otherwise in connection with the supply of material, including equipment and everything else, is he expected to place on record a written report and hand it in to the Staff officers? No, not that I am aware of. The General inspects the regiment annually, and at the annual inspection the Colonel reports that his regiment is correct.

460. *Mr. Wilks.*] But in the interval the Quartermaster of the regiment reports? The General holds the Colonel of the regiment responsible. The Colonel is responsible for the command of his regiment. Anything between him and his junior officers the General does not recognise. He recognises only the Colonel.

461. *Chairman.*] A great deal may take place in twelve months;—how does the Staff know that the Colonel has done his duty? At the annual inspection.

462. But you could not have an annual inspection in this case? Going out and coming in—

The G.O.C. inspects the unit with a view to its efficiency, and on its inspection he finds out from the Officer Commanding if there is any deficiency or not.

463. How is the General Officer to know whether the regiment has held a Board or not;—inspecting every unit would not tell him? The General would not know that at all.

464. So that nobody knows really but the officer of the regiment whether they had a Board or not? That is true. But the Colonel Commanding is responsible for all clothing and equipment, and he reports to the General if the clothing is not up to contract.

465. But if he does not hold a Board, and does not see any deficiency—neglects his duty and does not report—you would not know whether he had done so or not? The General Officer Commanding would see himself. If the Colonel neglected his duty, the General would soon find out on inspection. He would see that the clothing was inferior—not properly made—and he would very soon call the Colonel to book.

J. E. D.  
Taunton.  
8 Aug., 1900.

466. *Mr. Chante.*] Would it not be better to insist in all these cases that a written report should be handed in, and kept as a record in the Military Department;—would not that relieve from responsibility those upon whose shoulders responsibility should not rest? I am not aware whether such a report is sent in or not. The annual inspection by the General, or the inspection by the General of the regiment coming in or going out, is the occasion when any deficiencies are supposed to be found out. The General is supposed to inspect each regiment on coming in and going out. He is supposed to find out from the Commanding Officer whether the regiment is complete in every detail, and if not, what are the deficiencies. The Commanding Officer has to report to him at the time.

467. Do you think that it is possible for the General or any other officer on a parade inspection to detect indifferent material in a helmet, or inferior material in clothes, just by a cursory inspection;—would it be possible to detect anything wrong? To detect whether the material is inferior—possibly not.

468. That being your opinion, do you not think it absolutely necessary that the Staff should hold some one in the regiment responsible for a careful inspection in every detail of these matters, so as to check improper doings on the part of contractors? We do hold the Colonel responsible. He is responsible for everything in connection with the regiment.

469. If a matter is detected on the part of the General, and no inspection or report is made by the Colonel of the regiment, then there is no check? If it escapes the inspection of those two officers, there is certainly no other check. With reference to equipment, for instance, if it has to pass a board of officers, and if the Board of Officers do not do their duty, I do not see what other check there is.

470. You have already told us that you rely upon the Regimental Board? With reference to clothing.

471. I am speaking only of clothing;—if they do not make a careful inspection then, practically no inspection is made? If they chose to neglect the clothing, they are responsible for the bad material supplied to their men, and the men suffer, no doubt, if the Colonel of the regiment, who is supposed to be responsible, does not accept the situation.

472. *Mr. Cook.*] Suppose a case where twenty new recruits join a company, assuming that the rules of the Service are all obeyed, what happens when they come up to be clothed—twenty new recruits want clothing—what happens? The Captain of the company is responsible to the Colonel that they get their clothing.

473. What does the Captain of the company do;—what is the method of procedure? He requisitions the Quartermaster for the clothing. The Quartermaster of the regiment draws the clothing from the contractor—in England from Pimlico, but here from the contractor.

474. There is a soldier in a Lithgow company who cannot be clothed because you have not got a suit of clothes that will fit him;—I want to know exactly what they do when these men have to be clothed? The requisitions are sent in for the clothing through the Board to the contractor.

475. Sent in to whom? I am not speaking of the despatch of the Contingents, but in ordinary cases. Requisitions are sent by officers commanding regiments for clothing to the Clothing Board.

476. That is the Regimental Clothing Board? No, the Staff Clothing Board. The Clothing Board sits in the Victoria Barracks every week—the standing Board.

477. I understood that there was a Regimental Clothing Board? No. There is a standing Clothing Board for dealing with all matters of expenditure, and seeing that the men do not get more clothing than they are entitled to. This Board deals with all matters in connection with the supply of clothing. The requisitions are sent in to the Board and passed on to the contractor. We compare those requisitions with what the men have had previously, to see whether the men are entitled to the clothing, and, if they are, we send them on to the contractor who supplies the clothing to the regiment, and it goes to the various companies for whom it is ordered. If there happened to be a case, such as you mentioned, the Captain of the company would report to his commanding officer that this man could not be fitted. The commanding officer would make application to have clothing specially made for that man, and he would be fitted; so that the fault would lie with the Captain of the company, if he has not drawn attention to it.

478. Does the Department supply the clothing direct to the Captain of the company? Direct to the company, in most cases.

479. But you say in the first place the Captain requisitions the Quartermaster of the regiment? To the head-quarters regiment, yes.

480. It is then sent on to the Clothing Board and the Clothing Board supply direct to the regiment? The contractors supply direct to the regiment.

481. It does not go through the Quartermaster, who makes the requisition? In the case of the head-quarter companies, in Sydney, all clothing is sent direct to headquarters, and they send it on to their companies. In the case of the country districts, the clothing is sent to the companies direct.

482. And not to the Quartermaster? No.

483. The Quartermaster is simply a vehicle through which the order goes, nothing more? Nothing more, in that case.

484. For the accuracy of the order, the quality of the article supplied, you rely upon the captain of the regiment alone? We must rely upon the Captain of the company, who is responsible for his company. We must rely upon him; there are no other means of seeing that he supplies his men complete. If his clothing is not up to sample he reports to his commanding officer, who passes it on to us.

485. But does it not strike you that you ought to have an expert in the Service? Yes; I think it would be a very good thing. We asked for that. In the case of the sealed patterns, the Board asked that an expert might be appointed to pass the clothing, and we had an expert when those patterns were passed.

486. In the case of the Captain of a regiment who might be a little careless about his own clothing, though perhaps none the worse soldier for that, and did not bother himself about what kind of stuff it was composed of, is it fair to expect him to be an expert in clothing? It would be a good thing to have an expert. In many cases I have no doubt they have experts in their own Company—men who are tailors. In the case of the Army Service Corps we have bootmakers who report on the boots. But, otherwise, we have no experts in the Service. In case of the clothing of which we have been speaking the sealed patterns were passed by an expert.

487. *Chairman.*] But what is the good of that in regard to the pattern;—the pattern may be as good as anything, but the stuff supplied may not be up to sample? What is done in other Departments who supply things. The men have to take what is given them.

488. *Mr. Cook.*] On that point, do you think the helmet produced was up to sample? I could not possibly tell you from a helmet like that whether it was up to sample or not.

489. Suppose Mr. Anderson comes here and says, "I supplied it according to the sample given me,"—who is to say that he did not? I do not know whether Major Boam has the sample or not.

490. You think these helmets now are bad? They have certainly not stood the test.

491. You are prepared to condemn them yourself? I am prepared to own that they have not turned out a good article.

492. You have been disappointed in them? Yes; I am prepared to own that.

493. But you say you could not get better helmets in the Colony? It was the best article we could get at the time. We asked Hordern, and Hordern could not supply them.

494. Are these the same kind of helmets that are ordinarily supplied to the Partially-paid Forces;—they all have helmets have they not? Yes. In the early days we got them from England, but we were informed that we were to get no more from England—that we were to encourage local industries.

495. Are the helmets now being supplied to the Partially-paid Forces made in the Colony? Yes. Of course, we shall take good care they will not supply any more of this lot. We shall call for fresh tenders, or insist that every company shall yet continue to wear the helmet.

496. Is the tender to supply to order or to supply in quantities? To supply in quantities, as called for from time to time.

497. As ordered? Yes, as ordered.

498. Is Anderson still the contractor? Yes; Anderson is the contractor up to the present time.

499. He is still supplying helmets after the pattern of those of which we have seen samples? Yes, he is supplying helmets; but there was a Board held by the regiment on some helmets supplied the other day by Anderson, and they would not take them.

500. Still he is the contractor? Yes.

501. You have not removed him from the list of contractors? No.

502. Do you not think, in view of what has occurred, that the Staff should take some steps with him? Yes; I think we shall undoubtedly.

503. Have you only now had this case brought under your notice? Only officially. I have not seen these helmets before. We had heard that there had been a complaint about the helmets. It is the first time I have seen the helmets, and the first time I have heard what the complaint was.

504. Still, someone has heard of it? They heard about them.

505. Did you investigate the matter? We investigated the matter, and found, as far as they went, they were the best article that could be got at the time. They were not in accordance with the approved pattern here. The approved pattern is a cork helmet.

506. You found that out yourself? Yes.

507. Did the Clothing Board come to the conclusion that they had been badly served? I have not got that paper here.

508. *Chairman.*] But you can answer the question whether the Clothing Board came to the conclusion that they had been badly served with these helmets? No; I do not think we did. We said it was a gossamer helmet, and as good a helmet as could be procured in the Colony at the time.

509. *Mr. Cook.*] But you told us just now that they were not in accordance with the pattern supplied;—The moment this came to your notice you should have said, "Here is a blot upon our administration; let us find out where the trouble is"? So we did. The helmet is in accordance with the pattern supplied for the Contingent; it was a gossamer helmet.

510. Then, who would be responsible for the pattern;—who gave Anderson the pattern? Anderson himself produced the helmet, and said he could supply so many, and it was taken to the General and approved by him.

511. Then Anderson supplied the pattern? Yes; in this particular instance.

512. It was he who originated the whole thing? It originated as I pointed out before.

513. But you told me just now that he was supplying these helmets to the Partially-paid Forces, and had been doing so for some time? Yes.

514. And this was the same pattern? No; not in accordance with the pattern for the Partially-paid Forces. The helmet for the Partially-paid Forces was a cork helmet.

515. But I asked you some time ago whether these helmets were being supplied locally for the Partially-paid Forces, and you said "Yes, by the same contractor"? I answer that by saying that he has been supplying these helmets to the Partially-paid Forces, but since these inquiries we have stopped the supply. A Board has been sitting, and I think, in the case of the 1st Regiment, it has condemned the helmet.

516. Then the pattern did not originate when the men were going away;—it was a pattern already in existence, and according to which the contractor was supplying the Partially-paid Forces? Yes; but this particular pattern of helmet was a coloured helmet that the contractor brought up, and said he could supply so many, which we accepted.

517. But when he brought this helmet to you and said he could supply it for the men going away, you say that was the same pattern of helmet that he had already been supplying to the Partially-paid Forces, and for some time previously? Yes; so I have found out since.

518. And who originated this pattern? He himself. He evolved it out of his own brain, I believe, before the Clothing Boards of the regiments made their own contracts.

519. It is quite clear that the Staff had nothing to do with the making of the pattern? No.

520. It is not a thing of your own invention or derivation? Certainly not. Our own helmet is a cork helmet. But during the time the regiments made their own contracts—which was before the Clothing Board was appointed—we had certain helmets which they used to get through the store. The patterns could not be supplied, and they went to the contractor, and the contractor then changed the pattern. I did not know it; no report was made of it till afterwards, and the whole thing has only just cropped up now.

521. The same contractor? The same contractor.

522. He changed the pattern of a helmet for an army at his own sweet will? Apparently so.

523. Is it not a monstrous state of things, if true, that an Army contractor, without knowledge or authority of the Staff, should change the pattern of clothing supplied to an army? I have no knowledge at all of the pattern of the helmet ever having been changed—of the pattern, which was a cork helmet.

524. But you said just now that it was changed? Yes, we found out since that it was changed.

525. Have you taken any steps to deal with a man who plays tricks on you like that? No steps have been taken yet.

J. E. D.  
Taunton.

8 Aug., 1900.

J. E. D.  
Taunton.  
8 Aug., 1900.

526. Why? Because there is a Board on the subject now with reference to these very helmets supplied to one of the regiments.
527. A special Board? No, a regimental Board. Anderson supplied one of the regiments with a lot of helmets the other day, and it was reported that they were not in accordance with the sealed pattern, and that matter is now being dealt with by a Board.
528. Was it in the course of these investigations that you found out that the contractor changed the pattern? That we found out that he changed the helmet—yes.
529. He has always been the designer of Army clothing as well as the contractor? No, not the designer. Most of the clothing now in wear was designed by General Hutton.
530. I mean as to the pattern;—General Hutton did not design this helmet, I hope? No; he did not design this helmet.
531. The contractor designed that himself, and brought it up to you, and, to put it in plain language, deceived you over the helmet;—do you not think so? I cannot say I was deceived. I took the helmet at the time, because I thought it to be a fair helmet.
532. You did not think it was going to turn out like that? No.
533. Then you must have been misled or deceived; surely he represented it to you as a helmet that would stand wear and tear; I suppose you had some idea when approving of the helmet of the rough and tumble of a campaign in South Africa? Yes, I knew something about campaigning.
534. Did he represent it to you as being sufficiently strong to stand a campaign of that sort? He said it was a good helmet. As I said before, other men say it was as good a helmet as could be got.
535. Did he submit this matter in writing, or was it all done verbally? It was all done verbally. We only had twelve days in which to clothe these men.
536. There is always time to write a letter covering a conversation? But where was the necessity? The helmet was approved, and a pattern sent to Major Boam.
537. The plain English of it is this: he came to you and said, "That is a pattern of a good helmet," and you said, "Yes, send it along"? No, I looked at it. We thought it was a good helmet at the time. I honestly thought it was a good helmet at the time.
538. You had no authority on these matters in the Department? No, no expert.
539. No man who could advise you? No expert in the matter of helmets.
540. Supposing a man had brought clothing to you, and it seemed a very good sample? I should know something about clothing, because I have had a good deal to do with clothing one way and another. I know what is wool and what is not. But with reference to helmets, I really do not profess to know anything more than that this looked a fair helmet.
541. You could not have been so deceived in the clothing? No; because I know what is good clothing.
542. Still do you regard it as part of the duty of the Assistant Quartermaster-General to be an expert in clothing? No. In the Home service everything is done at Pimlico, and they have experts.
543. You have not imposed any penalty in the case of the helmets? No.
544. I suppose you did not see very well how you could, since you approved of them? The matter of the helmets has not come up yet before the Clothing Board—not with reference to the regiments. I am speaking now of matters in connection with the Contingents, with which the Clothing Board has nothing to do.
545. Who compose the Clothing Board? Colonel Roberts, myself, Captain King, Major Boam, Colonel Knight, when he was here.
546. When is this Board likely to report;—when do you suppose you will finish your investigation into these matters? The question of the helmet has not come before the Board yet.
547. Is it likely soon to come before them? I should think so; very soon. The other day we had an inquiry with reference to helmets; but we had not any helmets before us at the time we went into the matter. The President pointed out that the Board had no samples before them of the helmets brought back from South Africa.
548. Would you furnish the Committee with a copy of the contract containing the penalties and conditions? Yes; I will show you the contract itself.
549. In reference to the supply of clothing to the Partially-paid Forces, is it the rule to make this clothing up in sizes, or to individual measurements? To size rolls, not to individual measurements.
550. Was it not the custom formerly that each man should be measured? Yes. We found it was a better plan to adopt the size rolls. It saved expense and trouble, and the men were generally fitted in sizes, and any little alterations that were required could be made by a local tailor.
551. Is it cheaper to do that? It was found cheaper to do that.
552. How much cheaper? That I cannot say at the present moment. I do not remember. The thing was gone into at the time, and that was our opinion.
553. In reference to the saddles, you say that Lieutenant Garvan reported on them;—what Lieutenant Garvan is that? Lieutenant Garvan of the Irish Rifles, I presume.
554. *Chairman.*] How long was he in the Irish Rifles? I cannot tell you without looking at the Army List.
555. *Mr. Cook.*] Is it usual to put men with as low a rank as Lieutenant on these important Boards? These are Regimental Boards. We have to take the material as we find them. If you have officers who do not know their work, what are we to do? We have to take them as we find them.
556. *Mr. Chanter.*] A Regimental Board would comprise all the commissioned officers? No; a Regimental Board generally consists of three—a senior officer as President and two juniors as members.
557. *Mr. Cook.*] With regard to the general work of administration, as to which you answered a great many questions from the Chairman, I take it that what you meant to say was that you generally criticise all the administrative work that is done;—for instance, you did not mean to suggest for a moment that you read all these letters yourself? Certainly, I read them all.
558. Every letter that comes in from a regiment? Every letter that comes in has to be attended to by a responsible officer.
559. Surely you do not mean to say that you could get through all the correspondence that comes from the whole Army yourself? No; that under discipline goes to the Adjutant-General; that under the various Departments I have to deal with comes to me. Every letter that comes in I have to read, and I either dictate an answer or I give the general headings. If it is an unimportant letter, and if it requires merely an answer, I do it myself.

560. But you generally rely upon a trusty officer beneath you, I take it? No; I have none, excepting the clerk. Every letter that comes into the office has to be dealt with by the officer-in-charge.

J. E. D.  
Taunton.

561. But you trust the clerk, do you not? We give the clerks the headings of what to say. I tell my clerk what answer is required, and he answers the letter.

8 Aug., 1900.

562. The correspondence clerk opens the letter, places it before you, and takes your instructions—he places it before you, and tells you what is in it? No; I read it myself. We have to read every letter ourselves. We have to go through everything that comes in.

563. Of whom is the Saddlery Board composed, besides yourself and Lieutenant Garvan? Captain Hilliard and Lieutenant Holborow.

564. *Chairman.*] You changed from hats to helmets because you saw something in the paper—or the General did? Yes.

565. Did you notice anything in the paper the other day—both the *Herald* and the *Daily Telegraph*—about the clothing and equipment of the Imperial Bushmen? Yes, I did.

566. Did you feel flattered? Well, I do not know why they changed the clothing, because the clothing was good enough.

567. Did it not give the reason in the paper? Not that I saw.

568. Did it not say that they were the most disgracefully-equipped men that ever landed in South Africa? But who said it? How do we know that the man who said it was responsible?

569. How did you know in the other case; you changed from hats to helmets because of what you saw in the paper; but when it is not quite flattering you want to know if it is a responsible man who said it; how long is it since the Bushmen left here;—do you not think there must have been something pretty bad in the clothing when the responsible officers there have had to make a change, and give them fresh equipment? Equipment is not clothes.

570. Do you think the clothes could have been of much account when the responsible officers of the British Army in charge of that particular division have ordered it to be changed? I certainly think the clothing was good. It may not be suitable to the climate; but it was certainly good clothing.

571. That is what you would have said about the helmets at the time they went away—that you thought they were good? I thought the helmets were good.

572. And you thought the clothing was? I am certain the clothing supplied to the Bushmen's Contingent was good. As to the helmets, I do not profess to be an expert, and the helmets have not turned out well. The clothing is made of wool, and I do not see what possible exception they could take to it.

573. The clothing might be made of wool, but it might be woven in such a way as to be absolutely useless;—it does not necessarily follow that because it is made of wool it must be good? Of course, I am not in a position, till I see what faults they find with it, to answer the question.

574. They must have found some very severe faults with it when they changed it? I cannot understand about the clothing.

575. Do you think the officers in charge of that division—Lieutenant-General Carrington, and the officers under him—are capable of forming an opinion on the subject? Certainly. I cannot say whether the condemnatory remark applied to the clothing. I cannot bear in mind exactly what it did say. I have had a letter from Major Miller, the Paymaster of that Force, and he says nothing about the clothes. He says the saddlery has been changed, but he says nothing about the clothing.

576. But this statement is in a cable subsequently? They were on the march to Bullawayo at the time, and he told me they changed the equipment.

577. Who is responsible for those saddles going; did this Board sit on them;—did the military authorities have anything to do with them? Yes; the Director of Military Stores had everything to do with them. He is responsible for all stores.

578. *Mr. Cook.*] Who is he? Colonel Roberts.

579. With reference to this matter of clothing, I suppose you throw open the tender for clothing? Yes.

580. The manufacture of cloth, for instance? No. We throw the tenders open for the manufacture of clothing in accordance with the pattern supplied.

581. But not as to cloth? No.

582. You simply get private offers? We get tenders for the garments made up.

583. You say that Vickers and Murray supply the cloth? Yes; Vickers and Murray at the present time are supplying the cloth.

584. At whose instance? At the instance of the contractor. With reference to certain supplies to some of the Bushmen, Murray supplied the cloth at my instance. We found it would be a good thing not to put everything into Anderson's hands, and we instructed Major Boam to try and see if he could get any other firm to do it, and Murray came forward and offered to make so many suits of garments.

585. Anybody else besides Murray? No; Hatfield tendered to make the garments, but not to make the cloth.

586. Who is Hatfield? He is another tailor; but his price put him out of court.

587. I am talking about weaving the cloth? We do not call for tenders for weaving the cloth. We call for tenders for the garments made up.

588. But you stipulate that they should be after the pattern of cloth supplied by So-and-So? Yes.

589. Then you yourselves select the cloth? We select the cloth.

590. *Mr. Wilks.*] Have you heard that Anderson, the military contractor, has an interest in the firm of Vickers & Co.? No; I have never heard that before.

THURSDAY, 9 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. COOK,  
MR. GARLAND,

MR. MEAGHER,  
MR. O'CONOR,  
MR. WILKS,

MR. PIDDINGTON.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Morris Marian Boam called in, sworn, and examined:—

591. *Chairman.*] What is your position in the Military Service? Deputy Assistant Adjutant-General.

M. M. Boam.

592. 9 Aug., 1900.

- M. M. Boam. 592. Carrying out your duties, did you have any part in the ordering or delivering of the supply of clothing to the troops? Yes, I had.
- 9 Aug., 1900. 593. The clothing supplied to the First Contingent under Captain Legge and Captain Antili? I had nothing to do with that.
594. Had you anything to do with the clothing supplied to the Second Contingent under Colonel Knight? Yes, I had.
595. What course of procedure did you take in ordering the clothing;—did you order it from the ordinary contractors? We ordered it from the ordinary contractors under an existing contract.
596. Anderson was the contractor? Yes; that was for the Second Contingent.
597. From the time you got the order until the troops were dispatched, what time elapsed? The first requisition forwarded to Mr. Anderson for the Second Contingent was on the 21st December, 1899, and the departure of the troops took place on the 17th January, 1900, which gave him twenty working days to complete the clothing he had to supply.
598. Would not that be twenty-seven days? Only twenty working days, by reason of the Christmas holidays and other holidays intervening. The clothing he had to complete within the twenty days, was as follows:—1,230 jackets, 1,230 pantaloons, 1,430 puttees, 905 field service hats, 900 field service caps, and 700 helmets.
599. How many men went away with that Contingent? I cannot exactly tell you. That clothing was distributed among 640 men, exclusive of officers. Two jackets were allowed for each man, and two pantaloons. There was an allowance of 10 per cent. to spare. After the clothing was issued to them the men lost some of the things. There was no time to have a board of inquiry, and we simply had to replace them. They lost them on the Range; they were stolen from their tents. That occurred in the case of all the Contingents—things were stolen from the tents.
600. Did you give a cap and a hat, as well as a helmet, to each man? Those who were supplied with helmets did not have hats.
601. You gave the order for the clothing? Yes.
602. Was it delivered to you or to the officers in charge of the Contingent? It was delivered to the officers in charge of the Contingent.
603. Was there any inspection of it after delivery? Yes.
604. Who inspected it? I did. Not only myself, as far as the Second Contingent was concerned, but also the Quartermaster of the regiment; that is to say, when the clothing went down there. I do not say I went down and inspected every portion that was delivered, but I went down there very often to look at the clothing, and we consulted together as to its quality.
605. Did you think the quality equal to the sample? Undoubtedly so; the quality was up to the sample.
606. Have you heard any report as to how it has lasted since? No; I have not heard anything at all, beyond rumour.
607. Did you notice particularly the quality of the stuff that was put in the pants sent away with the Second Contingent? Yes, I did. But if my memory serves me correctly, the pantaloons were a sort of mixed lot, for this reason: the Bedford cord which we were supplying to the Mounted Rifles had run out, and the cord was not to be obtained in the Colony, and Vickers made a cloth which was good, but too fine.
608. It may have been good for certain purposes, but not suitable for riding? Yes. I had a pair of the pantaloons down there when Mr. Murray, the managing director of the Parramatta Woollen Mills, came down, and I submitted a sample to him to get his opinion. He told me he thought it was a very good cloth; but I afterwards found out that the cloth was not suitable for pantaloons. It was, however, the only thing we could get in the Colony, there being no Bedford cord obtainable.
609. *Mr. Cook.*] The clothing which Mr. Murray told you was good, you say was not good? I do not say it was not good; it was too fine a cloth. I do not say the cloth was shoddy; but it was too fine a cloth for riding purposes—it would not stand the strain. It was the first kind made in the Colony by Vickers.
610. *Mr. Chanter.*] It was an imitation Bedford cord, I suppose? It was the nearest approach to Bedford cord we could get. There was no Bedford cord to be got in the Colony. You could get pieces of about 12 or 20 yards, but I suppose you could not get more than 100 yards even made up in pieces.
611. *Mr. Cook.*] You have since had reason to believe it is not a success as cloth for pantaloons? I had proof of it while I was there, before the Contingent went away, that it was not a success as a Bedford cord. That only refers to a portion of the Second Contingent. The remaining Contingents were not supplied with that Bedford cord.
612. In regard to the supply of helmets, you ordered those? I ordered those; I have a sample here (*produced*). That is the one sent to me as a sample by Colonel Taunton. It has been down at the School of Musketry ever since. There seems to be nothing wrong with that particularly.
613. *Mr. Chanter.*] Was that sample approved by the Staff Board? No; the Clothing Board had nothing to do with that helmet at all.
614. *Chairman.*] The General approved of this helmet, did he not? I believe these helmets were made up for a regiment here. I believe they were made up for the Second Regiment here by Anderson, and when it was decided that helmets should be issued to the Contingent instead of issuing them to the Second Regiment they were taken over and browned and issued to the Contingent.
615. Did you inspect the helmets that were supplied? No; I did not inspect them. I had nothing to do with the helmets at all. This was simply sent to me as the sample.
616. You ordered them, I suppose? No; I did not even order them. The Quartermaster-General gave the order to Anderson for the helmets, and this was the sample. I may have sent in the requisition for them, in accordance with the sample.
617. You cannot say whether they were up to sample or not? They were similar to the pattern. I saw them afterwards when they were supplied.
618. Did you examine them? No; I made no minute examination of the helmets supplied.
619. Could you tell us when the helmets were ordered on requisition? They were ordered with the other lot; I could not tell you the exact date of the requisition. I know they were ordered very late, because it was not decided until some time afterwards that the helmet was to be supplied—until the last moment almost, some eight or nine days before the Contingent went away.
620. Was it a wise proceeding to wait for a fortnight after you had given the other order before you gave the order for the helmets, thus limiting the time what the contractor had to supply them to about ten days, instead

instead of, say, four weeks? It was this way:—The change of the helmet from the field service hat was brought about in consequence of a paragraph which appeared in the paper. We had ample time to give the field service hat, but the change from the field service hat was brought about by a paragraph which appeared in the paper stating that our men had been mistaken for Boers and fired upon, and it was therefore decided to alter the field service hat to the helmet.

621. Who decided that? I think it was the General who decided it.

622. In any matter like that, does the General have a consultation with his Staff, supposing something appears in the paper? I presume he would.

623. I mean would you come under that? I was not there. I was not with the Headquarters Staff. I was away from barracks.

624. So that he had no consultation with you? No; I was away.

625. A fortnight after the clothes were ordered the helmets were ordered? Yes. The paragraph in the paper to which I have referred was to this effect—it was a cablegram:—

Owing to the fact that the Colonial troops were mistaken for the enemy at Arundel, an order has been issued that they shall wear helmets instead of hats.

That was a cutting from the *Sydney Morning Herald*. There was no cablegram from the Military authorities.

626. *Mr. O'Connor.*] No communication was opened with the War Office, I suppose, as to the truth or otherwise of that statement? That I could not tell you.

627. It does not appear on the papers? It does not appear here; but I suppose it is only reasonable to take cognizance of a cablegram like that.

628. Take official cognizance of it? Yes, in a time like this.

629. *Chairman.*] Did you take any notice of the cablegram which appeared the other day stating that the Australian Bushmen were the worst equipped force that had ever appeared in South Africa? No; I did not see it. That might not refer to the New South Wales Bushmen. "Australian Bushmen" might mean the men from one colony or the men from another.

630. With regard to this helmet, is this the class of helmet that has been supplied to the New South Wales forces right along? I believe it is. I believe that is the helmet that has been supplied to the New South Wales troops.

631. Right through? I think so.

632. *Mr. Cook.*] For how long? For a couple of years, at any rate.

633. *Chairman.*] Colonel Taunton, in his evidence yesterday, said, "I think the pattern helmet was a cork helmet"? The sealed pattern helmet was a cork helmet, I believe. The sealed pattern helmet is a cork helmet now. That is the pattern which is sealed for the sample.

634. *Mr. Chanter.*] When the Board find it necessary to alter the sample of a helmet, does it put the accepted sample under the denomination of a sealed pattern? Yes, and the contractor should be notified.

635. Has the sample helmet you produce now been put under that denomination as a sealed sample? This was only a helmet supplied to the Contingent, as it were.

636. A special helmet? A special helmet supplied to the Contingent.

637. *Chairman.*] Have there been no other helmets of that class supplied to the other troops? Yes, I believe there have been. In fact, I believe this is the helmet which has been supplied generally to the troops.

638. *Mr. Chanter.*] With the approval of the Staff Board? Well, there seems to be some little doubt about the sealed pattern of this helmet. As there seems to be a doubt about it, perhaps the evidence of the contractor himself should be heard in the matter.

639. *Mr. Meagher.*] You have had the advantage of seeing the sealed pattern you refer to, and you have that helmet in your hand;—do you differentiate much between the quality or the character of this helmet and the one that is sealed now? Undoubtedly.

640. There is a wide disparity between them? Undoubtedly. The one sealed now is a cork helmet.

641. A much superior article to this? I think it is a superior article. Of course, I am not an expert. I imagine that a cork helmet is a better helmet than this, undoubtedly. If I were purchasing a helmet, and were shown the two, I should take the cork helmet in preference to the other, if they were both the same price.

642. The Contingent, known as "England's Last Hope"—the Third Contingent—were not supplied with these? No; they were supplied with a different helmet.

643. Can you say of your own knowledge if any of these helmets have been worn here, and if so, what has been the effect upon them of inclement weather;—what has been the effect of the rain upon them? The helmet that has been supplied by Mr. Anderson for the last two years has had the ordinary wear which a helmet would be subjected to as regards weather and use. I think it has been used in one encampment, when it would be subjected to a little rough usage in a tent, where the men knock their helmets down, and perhaps sleep on them. There have been no complaints here about them; they have stood the usage.

644. This class of helmet? Yes; I believe this is the class of helmet.

645. *Chairman.*] Will you listen to this, and say whether you agree with it: Colonel Taunton, in reply to Mr. Cook, said in his evidence, "The pattern helmet is a cork helmet; but during the time the regiments made their own contracts, which was before the Clothing Board was appointed, they had certain helmets which they used to get through the stores. The pattern could not be supplied, and they went to the contractor, and the contractor then changed the pattern; I did not know it; no report was made on it till afterwards, and the whole thing has only just cropped up now"? Yes; I think Colonel Taunton is right. Under the old regime, when, as Colonel Taunton says, these regiments made their own contracts, they contracted for their clothing; but they did not make any contracts for helmets, because these were imported from England by the Military Department, and, as it were, sold to the regiments; but then the helmets ran short, as Colonel Taunton says there; they were running out of sizes, and the regiments then came to some arrangement with Mr. Anderson, the contractor, to supply helmets of the required sizes.

646. But Colonel Taunton says it was a cork helmet? So it was. It is a cork helmet that we imported from England.

- M. M. Boam. 647. A cork helmet that the contract provided for? No; they did not provide cork helmets. Colonel Taunton does not say a cork helmet was provided by the contractor.
- 9 Aug., 1900. 648. He says, "The pattern could not be supplied; they went to the contractor, and the contractor changed the pattern"? Yes; the contractor changed the pattern.
649. If it were a helmet like that before you, and they still use the same, there would not have been a change of pattern? But it was not a helmet like this before us—it was a cork helmet.
650. Further on Colonel Taunton says, in reply to Mr. Cook, "He changed the pattern of the helmet for an army at his own sweet will"—that is, the contractor"? I suppose it was this way: The regiments went to Anderson for helmets, and he could not supply a cork helmet, so I suppose he supplied the gossamer helmet, and they accepted it.
651. *Mr. O'Connor.*] Do you call this a gossamer helmet? Yes.
652. Are you a member of the Clothing Board? Yes; I am secretary.
653. And you have the right of adjudicating on the merits or demerits of the articles supplied? Do you mean as a sample? The helmet is not submitted to the Board as a sample.
654. May I take it that this helmet was designed and accepted before the institution of the Clothing Board? Yes; by the regiments. When they made their own contracts for clothing this helmet was accepted by them as the helmet to be supplied by the contractor.
655. Was any test made of the helmet;—was it exposed to rain or anything like that? No.
656. You did not think it advisable to make a test of that kind? As a matter of fact, we were so hard pressed at the time with work that there was little time for carrying out a test of any sort.
657. But this helmet has been in use for some years? It had been worn for nearly two or three years by the regiments, and no complaints have been made about it.
658. *Mr. Chanter.*] And used at encampments? Yes; where it would receive rough usage. I do not say it would receive the rough usage of a campaign, but it would receive pretty rough usage in camp with nine or ten men in a tent, throwing their helmets down and sleeping on them. We never received any complaints of the helmets.
659. *Mr. O'Connor.*] Do you know whether the helmet was ever exposed to a shower of rain;—do you believe it would stand a shower of rain? Yes; I undertake to say that if that helmet were put under water for twenty-four hours, it would not alter its shape. That has been tested. That has been done.
660. *Chairman.*] How long do you think the helmet would last in the ordinary wear and tear of a campaign? I should not like to say.
661. *Mr. O'Connor.*] Would you be surprised to hear this, that some of the men in South Africa said that the helmets were actually limp on the voyage over to South Africa, in consequence of being exposed to a shower of rain on the boat? I would not be surprised to hear that they said so; but whether it is a fact or not is another thing.
662. Are you willing to expose it to the test of being under water for twenty-four hours? I would put it under water for twenty-four hours, and it would not alter its shape.
663. Do you know what it is made of? What they call gossamer.
664. *Mr. Meagher.*] During some of the encampments in the last two or three years there has been a good deal of rain, and the men there have been out in the rain with these helmets? Not rain, perhaps, but rough usage; I am speaking of rough usage.
665. *Chairman.*] How long do you reckon they would last? It would depend upon the care that was taken of them. On board British troopships no man is allowed to wear his helmet. There is a helmet room, in which all the helmets are placed. That shows the care they take of the helmets.
666. *Mr. O'Connor.*] Do you know that that rule was also carried out on board the troopships going from here? I do not know that it was.
667. *Chairman.*] Have you any idea how long this helmet would last? It really ought to last twelve months.
668. Do you know if any such helmet has ever been supplied to the Imperial troops? I do not think so. I think all their helmets are cork; I could not say positively.
669. Have you seen any Indian-pith helmets? I saw them in the Soudan campaign.
670. Did you pay any attention to them as to what sort of article they were? It is fifteen years ago; I did not take special notice.
671. You do not know the cost of them there, I suppose? No; I do not.
672. Would you be surprised to learn that they are 3s. or 4s.? No, not at all, if they are any good.
673. If the helmet was admitted not to be a good one, would it not have been better to have cabled to England to get, say, pith helmets sent out to the Cape, so that, if you were going to supply the men with helmets, they could have been landed there before the troops arrived? Yes; but it is not admitted that the helmet was not a good one before the troops went away.
674. It was not? Not that I am aware of.
675. The helmet that you have produced to-day looks very nice, but this is one that has done about two months actual wear (*helmet produced*);—does that seem a nice sort of helmet now? This looks to me as if it had been in a grease pot. It looks inside as if it had been burnt. It has been in the fire. You cannot say that is reasonable wear. Half the lining is burnt. It has been thrown into a grease pot. Whatever helmet this was it must have been a very good helmet to have stood the knocking about that this has had. One can see at a glance the knocking about this has had.
676. Do you see what it is made of now—you call it gossamer? Is it the same helmet as this? It is a helmet got up to order. I could make the other like it in five minutes if you would allow me.
677. *Mr. O'Connor.*] Would you be surprised to hear that the helmet which the Chairman has just shown you was worn in that condition by a man at Bloemfontein? No; I would not be surprised.
678. You would not be surprised to know that that helmet was worn? I suppose a man would wear it if he had nothing else to wear.
679. Would you be surprised to hear that every helmet worn by the troops under Colonel Knight's command was in the same condition as that helmet? Yes, I would.
680. You are willing to admit that this is one of the helmets supplied to the troops that went to South Africa? Well, it looks very much like it.
681. You cannot see any difference? No, I cannot.
682. *Chairman.*] You were rather inclined to be a little hilarious over the fact that the lining of the helmet I showed you was singed? Well, I thought it had had rough usage.

683. You can see that this is a helmet that had exceptionally good treatment (*helmet produced*). The only thing is that the roof has collapsed. It bears the man's name, and his number, and everything, so I suppose you will not doubt that it was one of the helmets supplied? Yes, I think it is one. M. M. Boam.  
9 Aug., 1900.
684. What is the name inside? Kavanagh, 235 "B" Squadron.
685. That is after two months wear; you can see that has not had bad treatment. Do you think this helmet has been treated fairly? It looks so; it looks as if it had ordinary treatment.
686. After seeing it in that state do you think now that that is a good class of helmet? No; I do not think it a good helmet.
687. Did you ever see a worse one? No; I have never seen a worse.
688. You would not care about sending out troops wearing a helmet like that on service? No, it is a bad helmet. In my opinion a helmet of any kind, even a cork helmet, is a bad headgear for the service.
689. Are you aware that with a pith helmet you can use it for a pillow and squeeze it together, and when you get up and pull it out it is just as good as ever? No; I really do not know what a pith helmet is. I have never had anything to do with them.
690. *Mr. O'Connor.*] I suppose we may take it that this helmet consists really of cloth stiffened by glue? That I could not tell you.
691. *Chairman.*] Anyhow you had nothing at all to do with the pattern? No; not with the selection of the pattern. The pattern was simply sent down to me as a sample.
692. And you had nothing at all to do with the decision in regard to the men wearing helmets instead of field service hats? No; beyond carrying out my instructions.
693. Colonel Taunton in his evidence said that, owing to pressure of work, some of his ordinary duties were delegated to you, and that you would be able to answer any questions in regard to clothing;—you say you did pass the coats and pantaloons? Yes; I went down to the store and looked at them.
694. Was there any Board held for a general official inspection;—did you consider it part of your duty to pass that clothing, or did you just go down for your own satisfaction? I did not consider it part of my duty; I did it for my satisfaction when time permitted. Bear in mind one was working from 5 in the morning till 12 o'clock at night.
695. I want to know whether that was a duty devolving upon you, or whether you did it for your own satisfaction? For my own satisfaction; the real responsibility rested with the Quartermaster of the regiment. He was the responsible man; he was down there specially for that purpose.
696. *Mr. Chanter.*] In the event of clothing being sent to a regiment, do you get any regimental report as to its quality? Only in case the clothing is not up to the mark. If the clothing is up to the mark, the captains of the companies accept it. If the clothing is not up to the mark, and they consider it inferior to the sealed pattern, they report accordingly.
697. *Mr. Cook.*] The captain is the judge? Yes.
698. *Mr. Chanter.*] In the event of the clothing being up to the mark, do you not get a report to say so? We do in this way. The very fact of the Officer Commanding signing the receipt for clothing, we accept as tantamount to an admission that the quality is up to the pattern.
699. And you get those receipts? Yes; for every parcel of clothing received by a captain of a company he signs a receipt, and the contractor's vouchers, which are forwarded to the Board, would not be passed without that receipt from the Officer Commanding.
700. *Chairman.*] Does the Captain of the Company examine the clothes before he signs the delivery note? He would be a very unbusinesslike man to sign for twenty jackets in a perfunctory way without seeing those jackets.
701. *Mr. Wilks.*] He generally has them on parade to see if they fit? Yes.
702. *Chairman.*] If a carrier delivers a parcel, the Captain of a Company may be away following his ordinary avocations and the carter would not leave the clothes until he got the note signed? There is a Staff Sergeant attached to each company, and the Staff Sergeant would take delivery for the time being and sign the carrier's note.
703. But the Staff Sergeant would not open the parcel to examine the clothing in the absence of the Captain? Yes, he would; he is there for that special purpose.
704. And would the carrier have to remain there waiting while the clothes were opened and examined? Yes—as to quantity only; that would not take very long.
705. *Mr. Chanter.*] But the quality would be left to the captain? Yes.
706. *Chairman.*] Colonel Taunton said yesterday it was the duty of the regimental officers to pass the clothing, and not the duty of the Staff;—is that so? That is so.
707. That would be so in ordinary cases? In all cases.
708. Suppose there were no regimental officers, what would you do then;—how could they possibly form a Board if they did not exist? As we have no instance, and never had any instance, where there were no officers, I really cannot say what would be done.
709. Take the case of the Second Contingent; it was only towards the time of departure that the officers were appointed, and some of them were not even then appointed? But we had officers acting.
710. You did not have some of them acting? Major Knight was down there from the start.
711. And there were a great many other Majors there? Yes.
712. The question is, which of those Majors would be responsible for the clothing? We did not hand the clothing over until the regimental officers were made responsible.
713. Suppose it had to be handed over? We would not do it. I would not hand it over unless there was an officer responsible to take it.
714. But it might have happened that the Contingent might have gone away under the charge of a temporary officer—the officer commanding to join them at Capetown? Had that been the case I should have asked the General for instructions. I should have taken no action on my own responsibility. I should have asked the General for instructions as to who I was to hand the clothing over to. I certainly should not hand it over to anyone, unless they were responsible.
715. They might be responsible for the time being? If they were responsible for the time being, of course, that would release me from my responsibility.
716. They would not have been the permanent officers of the regiment? No. As I say, if there were no responsible officers I should have asked the General for instructions before taking any action.
717. Do you know if any Board was held by the regiment with regard to clothing? No; I do not think so. I do not think it was possible to have a Board in those times. It was one of the most difficult things we had to contend with.
718. You say it was almost impossible to have a Board during those times? Yes.

- M. M. Boam. 719. That being so, and it not being the duty of the Staff, it was almost impossible, then, that these clothes could be examined at all? As I told you, I went down to the store and looked at them myself. 9 Aug., 1900. I walked down to the store and consulted with the Quartermaster about the clothing—looked at it, and examined it.
720. Would you be surprised to learn that there were men sent away from here with only one suit of clothing? Were they sent away with only one suit of clothing, or did they go away with only one suit of clothing?—because there is a difference.
721. Would you be surprised to learn that members of that Contingent were despatched from New South Wales with only one suit of clothing? Yes; in some cases I would be rather surprised to hear that they were despatched with only one suit.
722. In some cases you would not be surprised? No; in some cases I would not, because I think the men lost some of their clothing.
723. I am not talking about losing them; I am talking about their only having the one suit supplied to them? Each man had two suits supplied to him.
724. What proof have you of that? I am fully under the impression that such was the case. The only proof that can be given, as far as that is concerned, is by the Quartermaster of the regiment who obtained the signatures of the men for the clothing supplied.
725. Have you those signatures? No; the Quartermaster of the regiment has the books with him. Each man signed for the clothing he took away with him. The Quartermaster has the books with him, and it could only be proved in that way.
726. So that you do not know? No; it would not be within my province to know. How could I? The clothing is handed to the Quartermaster for him to issue.
727. Is there any check upon the Quartermaster to see that he supplies the men with the proper clothing that they ought to be supplied with? The Commanding Officer should see to that.
728. Is there any check upon the Commanding Officer? He is the responsible man. You do not want to interfere with the Commanding Officer. He would tell you to mind your own business very quickly.
729. It is very well for the officer to do that; but still, if the men are sent away with only one suit of clothes instead of two, is it not time it was somebody's business to interfere? Then it is the time to call the Commanding Officer's attention to the fact that this man was only supplied with one suit of clothes, and ask for an explanation of the matter. The Commanding Officer is the responsible officer.
730. Even an explanation from a Commanding Officer does not do away with the fact that men have been going practically naked;—I suppose you recognise that a private is a man just the same as a Commanding Officer? Undoubtedly.
731. And that to despatch troops to the front improperly supplied with clothing demands something more than an explanation;—do you not think that is proved beyond doubt? It would not be for me to pass an opinion.
732. If it were proved that through the neglect of the Staff officers, or the officer commanding the regiment, soldiers were despatched from this Colony improperly clothed, while the clothes were available, resulting in their having to go practically naked, do you think a simple explanation from a commanding officer would put everything right? It would not be any part of my business to determine as to whether more than an explanation would be necessary.
733. But if such has been done, do you not think it would be necessary to have some other authority to see that these things are carried out—if you were sure that the officers were sufficiently neglectful to allow men to go away improperly clothed? There is no doubt it is a very serious matter if they did go away improperly clothed. I cannot see how it is possible for these men to be short of clothing, because every man we know, as a matter of fact, was clothed when he went through the streets of Sydney.
734. That would only account for one suit? And if it were found by any chance at all that any man had not a second suit, there was the 10 per cent. additional clothing, from which he could be supplied with the second suit.
735. *Mr. Meagher.*] But do you say that, as far as you know, every man got two suits? As far as I know, every man got two suits. We know, as a matter of fact, that every man had one suit, because he paraded in his one suit. But put the case in an extreme light, and suppose that every man was not supplied with a second suit; and if he had not a second suit, that might not have been the fault of the Department; he might have lost a suit. There was the surplus of 10 per cent. to provide for unforeseen cases.
736. *Mr. Chanter.*] Was there any periodical inspection of kits to discover whether a man had got more than one suit? The inspection of kits is made by the Commanding Officer with permanent troops.
737. At any stated intervals? Not that I am aware of.
738. There was no inspection of kits before the Contingent went away? I could not say; I had nothing at all to do with them.
739. Have you any samples of the clothing? This coat I picked out of a lot that was sent (*produced*). It was not a specially made coat, but it was picked out of a bundle.
740. Have you any of the overcoats,—did you pass them? Overcoats for the Second Contingent were not made specially for them. We had not time to make them; we got them in from the regiments—a 100 from each regiment. They were all in wear.
741. Did you consider that they were good coats for men to go on service with? I did not see anything very wrong with them. They were the ordinary coat that is worn by Tommy Atkins at home.
742. Did you get a sample of the overcoats? Yes.
743. Did you notice the finish of the overcoats? No, I did not.
744. Would you be surprised to learn that they were not hemmed or stitched round the bottom, but appeared as if someone had put them on a log and chopped a piece off with an axe;—you did not take stock of that? No. These coats that we supplied to the Second Contingent had been worn by the various regiments for some little time.
745. Are you sure some of them were not new? None of them were new.
746. Are you sure of that? I am positive that none of the overcoats issued to the Second Contingent were new, because there was no time to make them, and we had to call upon the regiments to supply these coats.
747. Could give us a sample overcoat? Yes; we have an overcoat made up.

748. *Mr. Meagher.*] How long would those overcoats have been in use before the Contingent went away? *M. M. Boam.*  
Not for any length of time. We told them to pick out the best they could select from those that were in wear. 9 Aug., 1900.

749. From whom would they be taken? They were taken from the 1st, 2nd, 3rd, and 4th Regiments.

750. *Mr. O'Connor.*] Did you have anything to do with saddlery? No, nothing whatever—nothing beyond the clothing.

751. You do not profess to have any expert knowledge about clothing? None whatever, beyond my experience in dealing with clothing for the last twenty-five years in connection with the regiments.

752. You are not able to distinguish between the quality of one piece of clothing and the quality of another? No.

753. In other words, you could not tell whether a material presented to you would be likely to wear well or not? No, certainly not. I doubt whether there is any one in the Colony who could do it.

754. *Mr. Chanter.*] With reference to the helmets, was there any inspection made of them at all by any one, so far as you are aware? Not as far as I am aware. They were sent down to the Quartermaster, the same as the other clothing was.

755. In reference to the issue of clothing to the troops, the only check you would have would be the receipts in the Quartermaster's book for the quantity supplied to the individuals? That is all. Every man signed for his clothing.

756. And the Staff Officers rely upon that as sufficient warrant to them that the men have been so supplied? Undoubtedly so. Suppose we supplied 500 suits of clothes to a regiment, and we were examining their books, we should want them to account to us for those 500 suits. They must show us the signatures for 500, or they must show us the signatures for 300 and show us 200 in store.

757. Has the Colonel of the regiment been called upon at any time to report to the Staff Board as to the issue of clothing to the men individually—I refer to the Contingent? Not that I am aware of.

758. *Mr. O'Connor.*] Boots were supplied by your department to the Australian Horse that went over in the "Surrey"? Yes.

759. Did anyone examine those? They were handed over to the Commanding Officer, Captain Thompson.

760. But was any inspection made of them by the Military authorities here as to quality? No.

761. What contractor supplied them? Messrs. J. P. Wright & Co.

762. You personally did not examine them? No.

763. Was anyone responsible for the examination of them? Yes; the Quartermaster.

764. The Quartermaster of the Regiment was the only man responsible for the quality? Yes.

765. No one at Headquarters Staff was responsible for the quality? No; the Quartermaster of the Regiment is responsible that he gets it up to standard quality.

766. *Mr. Chanter.*] That would be according to sealed pattern? Yes.

767. *Mr. O'Connor.*] Did you have any expert to examine the sealed patterns before the contracts were called? Not as far as the Contingents were concerned.

768. But generally? Yes; we had an expert.

769. Who was the expert for clothing? Someone from Farmer & Co. I do not know his name.

770. Is he employed permanently by the Military authorities? No; we paid him specially for this work.

771. Is he a gentleman in the employ of Farmer & Co.? Yes.

772. How was he paid? He was paid a fee.

773. A man in the employ of Farmer & Co. was the expert of the Military authorities to determine the quality contained in the samples? Yes.

774. And then it was the duty of the Quartermaster-Sergeant to see that the clothing was up to the sample? Yes.

775. You have had twenty years' experience? Yes.

776. And you admit you cannot tell the difference as to the wearing quality of clothing? I said I could not determine shoddy from any other cloth.

777. After twenty years' experience? Yes.

778. And the responsibility of determining whether the goods are up to sample or not rests with the Quartermaster-Sergeant, who may not have had two years' experience? He may not have had one year even.

779. *Mr. Meagher.*] This is the first occasion on which you have had any intimation as to the condition of the articles supplied to the troops in South Africa? No; I heard of it through the Press.

780. In consequence of statements made to the Press, did you make any investigation to see, if by chance, there was any truth in those statements? No.

781. Do you know if Major-General French has sent in a report, either to the Minister for Defence or any other quarter, in regard to the matter? Yes, I do.

782. To whom did he send the report? To the Colonial Secretary, I think. I know the report was sent in, because I was called upon to furnish some particulars.

783. How long ago is it that the report was sent in? I do not know.

784. How long ago was it when you were called upon to furnish particulars? I was asked on the 2nd August to furnish particulars, and on the 4th August they were submitted to the General.

785. What were the particulars you were asked for? I was asked this:—

MEMORANDUM from the Assistant Adjutant-General to Major Boam.

2 August, 1900.

For information of General Officer Commanding, and to enable him to furnish evidence for the Parliamentary Committee to inquire into Military matters.

Please furnish full particulars and details with regard to the clothing supplied to the various Contingents which proceeded to South Africa during 1899-1900.

H. D. MACKENZIE,  
Colonel, A.A.G.

The Assistant Adjutant-General. Particulars herewith.—M. BOAM, Major, D.A.A.G., S.O., for U.V.F., 4/8 00.

That is dated the 2nd of the present month.

786. Are you clear that Major-General French did not some three or four weeks ago send in a report? No; I do not know anything about that.

787. At any rate this was the first occasion on which you were asked to supply particulars? Yes.

788. And that is since this Committee was appointed? Yes.

789. When you were called upon to supply particulars, did you consult with anyone? No. 790.

M. M. Boam. 790. You simply wrote out your report? Yes.

791. Would you read the report? It is as follows :—

9 Aug, 1900.

PARTICULARS AND DETAILS WITH REGARD TO THE CLOTHING SUPPLIED TO THE VARIOUS SOUTH AFRICAN CONTINGENTS.

1. Paragraph 1 of G.E. 142 of 21st December, 1899 (copy attached), notified that all applications with reference to the issue of clothing for the Mounted Infantry and Army Medical Corps, 2nd Contingent, was to be made to Major Boam at the School of Musketry, Randwick Rifle Range, and that clothing obtained through any other source would not be recognised.

The scale of clothing for the above Contingents was laid down in paragraph 4 of the G.O. 146 of 27th December, 1899 (copy attached).

2. By memorandum of 22nd January, 1900 (copy attached), the Assistant Quartermaster-General issued instructions for the supply of uniform to the Bushmen's Contingent (Citizens) on the same scale as that issued to the 2nd Contingent.

3. On 20th March, 1900, the Assistant Quartermaster-General directed by memorandum of that date (copy attached), the issue of clothing to the Imperial Bushmen's Contingent on the same scale as for previous Bushmen's Contingent.

2nd Contingent's Jackets were of precisely the same material as supplied to the Partially-paid regiments, were quite up to sample in every respect, both as regards texture, colour, and make.

Pantaloon.—In this respect a very serious difficulty occurred, as no cotton Bedford cord was obtainable in the Colony, stock having been used up in fitting out the Mounted Rifles.

Messrs. Vickers, of Marrickville, undertook to manufacture a material in substitution of Bedford cord, the first of the kind ever made in the Colony. When a sample pair were made up, the opinion of Mr. Murray, the managing director of the Parramatta Woollen Mills, was obtained as to the quality of the cloth, and he stated that it appeared to be excellent material, and would, he thought, wear well.

It was, however, subsequently discovered that the same material was issued to the Citizens Bushmen's Contingent, and therefore after the departure of the Second Contingent.

Helmets.—These were supplied in accordance with sealed pattern supplied by the Assistant Quartermaster-General.

*Citizens' Bushmen's Contingent.*

Jackets.—In every way up to sample—supplied partly by Mr. C. Anderson, and partly by the Parramatta Woollen Mills.

Pantaloon.—Every endeavour was made to induce manufacturers of cloth, and others, to undertake the supply of Bedford cord, but without avail.

The Parramatta Woollen Mills.

Messrs. Hadfield Brothers.

Messrs. Hordern & Co., Pitt-street.

Mr. R. C. Hagon.

All stated that they could not supply this article, therefore there was no alternative but to accept the cloth manufactured by Messrs. Vicker & Co., which, although too fine in texture, was nevertheless excellent material.

Helmets.—Supplied by Mr. C. Anderson as per sealed pattern of Assistant Quartermaster-General.

*Imperial Bushmen's Contingent.*

Clothing supplied by Mr. C. Anderson and Parramatta Woollen Mills :—

Jackets.—Some complaints having been made with reference to a portion of the material supplied to the Citizens Bushmen's Contingent, although no doubt existed as to its quality, special care was taken as regards the material for the Imperial Bushman's Contingent, and both Mr. Anderson and the Parramatta Woollen Mills supplied articles of the very best quality.

In the first delivery of pantaloons by Mr. Anderson the supplied to previous Contingents, and upon his being informed that they were not wearing well he undertook to replace sixty pairs.

Messrs. Vickers then manufactured a heavier cloth in accordance with a sample submitted to them by order of the General Officer Commanding, and supplied by the Parramatta Woollen Mills, and no further complaints were received. Both the jackets and pantaloons were subjected to severe tests as to shrinkage. They were kept in water for several hours, then allowed to dry, and hung out in the sun, and at night-time. This process was repeated several times, and the articles withstood the test well.

Field Service Hats.—Supplied by Messrs. Hordern and Son, and were of very excellent quality.

*General Remarks.*

The first requisition forwarded to contractor (Mr. Anderson) for the Second Contingent was on 21st December, 1899, and the departure took place on 17th January, 1900, giving him twenty working days to complete the supply, consisting of—

1,230 jackets.	905 field service hats.
1,230 pantaloons.	905 field service caps.
1,430 puttees.	700 helmets.

The first requisitions for clothing of Citizens Bushmen's Contingent was forwarded to the contractor at 10 p.m. on 23rd January, 1900, and the departure took place on 28th February, 1900, therefore the contractors had twenty-six working days to supply the following clothing—

950 field service jackets.	475 great coats.
950 pairs cord pants.	475 helmets.
475 field service caps.	

The cloth for the cord pants had to be specially manufactured during the above period.

The first requisitions for clothing of Imperial Bushmen's Contingent were forwarded to the contractor on 23rd March, 1900, and the departure took place on 23rd April, 1900, therefore giving the contractors twenty-five working days to complete.

1,256 field service jackets.	967 field service caps.
1,361 cord pants.	734 great coats.
1,117 puttees.	

During the above period the whole of the cloth required for these articles had to be manufactured.

Local manufacturers were not prepared to meet this unforeseen demand, were working night and day, and putting aside their ordinary business orders to make up the cloth required to complete the military contracts, and the contractors were so pushed that in some instances it was not possible for them to deliver the clothing until the day of the departure of the troops.

M. BOAM, Major, D.A.A.G.,  
S.O. (for U.V.F.).

Sydney, 22 January, 1900.

PLEASE arrange to supply to the Bushmen's Contingent uniform on the same scale as that issued to the Second South African Contingent, *vide* G.O. 92-146, paragraph 4, amended by G.O. 1900-2.

The General Officer Commanding, however, thinks that the colour of the khaki was rather dark, and would prefer material of a lighter shade, if possible. Before, however, ordering helmets or pantaloons await further instructions.

By order,  
J. E. D. TAUNTON, Bt.-Col.,  
A.Q.M.G.

Major Boam, D.A.A.G.

20 March, 1900.

THE General Officer Commanding has approved of the following scale and nature of clothing for issue to the Imperial Bushmen's Contingent :—

2 jackets, as per sealed pattern.

2 breeches :—Khaki Bedford cord, as per sample of Parramatta Woollen Mills, shade as per Anderson's pattern, shown by you to the General Officer Commanding.

M. M. Boam.

9 Aug., 1900

- 1 field service hat and brown puggaree.
- 1 cap, field service, khaki.
- 2 pairs puttees, as per sealed pattern.
- 2 pair boots, ankle, screw soles, as per new pattern to be sealed.
- 1 great coat, as per sealed pattern.
- 10 per cent. spare suits and spare material to be provided, and one tailor's kit.

J. E. D. TAUNTON, Bt.-Col.  
A.Q.M.G.

The D.A.A.-G. and S.O. 3rd Contingent.

792. Do you know that the officers in command at South Africa have at various times sent reports to the General? No, I do not.

793. Have you not seen it in the paper. Even Colonel Knight, I think, sent a report as to the movements of his regiment to Major-General French? I read Major Knight's, I think.

794. You did not read it officially? No.

795. *Mr. Wilks.*] Did I understand you to say that you were not in favour of helmets of any description for active service? No, I am not. I favour the field service hat.

796. Were these Contingents first equipped with the field service hats? The First Contingent was supplied with field service hats.

797. And then there was a change to helmets? In the case of the Second Contingent it was contemplated to issue field service hats to them. In fact, arrangements had been made to supply them with field service hats, but suddenly that order was changed, as I have explained to the Committee, consequent upon a cablegram which appeared in the papers.

798. You did not make further inquiries from the authorities at the Cape? No.

799. Did you hear of any complaints with regard to the clothing prior to the embarkation of the troops? Only as regards the cloth manufactured by Vickers.

800. No complaints from the officers commanding the regiments? No; from the men themselves. They came up and showed me the cord, and how badly it was wearing.

801. That was a personal complaint? Yes.

802. There was no official complaint from the Officer Commanding? I had some of the captains of the companies bringing up their men to me, and showing me one or two, and, of course, we had those changed.

803. Did that give you any general impression about the clothing then? I had a little doubt about the pants. I had a little doubt from the commencement about those pants, and that is why I consulted Mr. Murray, the managing director of the Parramatta Woollen Mills.

804. Then you are not much surprised at the information which has been presented? Not as regards the Bedford cord pants. I am not surprised at the Bedford cord pants not wearing very well.

805. But you are with regard to the helmets and the rest of the clothing? I am a little surprised about the helmets. I did not think the helmet would collapse like that.

806. I understand from your evidence that the clothing you have charge of was not handed over until there was a Colonel appointed to accept it? Until Colonel Knight was placed in charge of the Contingent.

807. Then, his duty would be to accept the clothing? Undoubtedly; and accept the responsibility of everything.

808. And you consider that your responsibility was removed immediately he took command? Undoubtedly.

809. And you are under the impression that he gave the thorough inspection that any Officer Commanding would do? Not would do, but should do.

810. Going on active service, you consider the inspection should be more rigid than under ordinary circumstances? If I were Commanding Officer of the regiment, I should have taken care to see that my men were properly equipped. It would have been my first consideration.

811. And Major Knight being an Imperial officer, you naturally thought he would be more rigid in his inspection? I do not think Major Knight being an Imperial officer would make any difference. So long as an officer understood what his duty was, I do not think it would matter much whether he was Imperial or Colonial.

812. In your opinion, there would be no shirking of his duty? I have very strong reason to believe that Major Knight did not carry out his duties.

813. *Mr. Meagher.*] In regard to what? In this way: when Major Knight was there, and I tried to make certain suggestions to him in his tent, he simply told me that he was a big-bug now, and, therefore, I thought it was time for me to leave the tent.

814. *Mr. O'Connor.*] What did you make suggestions about? Several little things.

815. Clothing? Not only that, but the selection of the men. I thought it was time to leave the tent.

816. *Mr. Wilks.*] The impression you would get from that conversation would be that he was very lax in his duty? I consider Major Knight was very lax. I consider Major Knight lost his head entirely when he was in charge of the contingent.

817. Probably men would lose their lives through not being properly clothed? I consider everything was in a hopeless state of muddle when Major Knight got hold of it.

818. Are we to understand that, as far as the Contingent of which Major Knight had charge is concerned, any neglect in regard to clothing is traceable to Major Knight? I would not say it is traceable to Major Knight, as far as clothing is concerned; but I would say there was no finality to the thing. You will understand this: the General had decided upon a certain standard of qualification with reference to the men passing for the Contingent, and although the General had decided upon this standard of qualification as regards shooting—of course, they had passed the riding test, that was final—men were not selected until almost the last moment; and until men were selected it was impossible to put their clothing in hand and get them clothed. Men being selected at the last moment, the thing was rushed to get them into clothing; and therefore, as I say, matters were in a hopeless state of muddle as far as Major Knight was concerned. There was no finality to the thing.

819. *Mr. Cook.*] In replying to Mr. Wilks, you said that Major Knight was very abrupt, and ordered you out of his tent? No; he did not order me out of his tent. I said it was time I left his tent.

820. You also said you regarded him as a man who had lost his head, and as being in an inextricable state of muddle, did you not? I said things were in a state of muddle down there.

821. And you referred to Major Knight as having a big head or being a big-bug? Being a big-bug.

822.

M. M. Boam. 822. Are you prepared to say that Major Knight was responsible for any of the delinquencies that have been shown to exist in connection with the equipment of the troops? Well, he was Commanding Officer, and he was responsible.  
9 Aug., 1900.

823. And you did not regard him as a proper person to send away in charge? I do not say that. I do not pass any opinion as to his qualifications as a soldier, certainly not.

824. But as an administrator you regard him as incapable? I do not say he is incapable. Whether it was the rush of work that upset him, or his excitement, I cannot say; but at the time I certainly did not think him very capable.

825. To what did you attribute this state of muddle; there must be some reason for it in your judgment? I think if more time had been given—if instead of rushing the troops away in two or three weeks it had taken four, five, or six weeks, it would have been better. The thing was too rushed.

826. That accounted for the muddle? I think that may account for the muddle.

827. And not any delinquencies on the part of Major Knight? I do not think so. I think it was the rushing that did it.

828. But you said he lost his head? Well, one loses one's head when one is rushed.

829. Do you think you would have lost your head under similar circumstances? No, I do not think I would; I had a great deal more to do than Major Knight had.

830. And you did not lose your head? I would not cry "Stinking fish"; I allow others to judge whether I did or not.

831. You have told the Committee that in your opinion Major Knight lost his head, and that things were in an inextricable state of muddle? That they were in a state of muddle—Yes; I say they were.

832. Would you not regard that as a very serious reflection on a commanding officer? Yes; it is rather a serious reflection.

833. Do you regard Major Knight as a competent man to have been sent away with those men? Yes, I do, as far as his soldierly qualities are concerned.

834. You find no fault with him as to his abilities? Oh, no; I could not. I could not pass any opinion as to his abilities as a soldier. It would be impossible for me to do so. I only say that as far as the administration on the range was concerned, during the time he was there it was in a state of muddle.

835. And you say Major Knight is responsible? Yes, as Commanding Officer.

836. As to part of his duties you say he was in an inextricable state of muddle due to his having lost his head; as to that part of his duties, I suppose you would say he was incompetent? Well, I would not say he was incompetent either.

837. What then? I say that he lost his head in consequence of the rush of affairs there. The thing was so rushed that the man lost his head.

838. In other words, when an emergency arose to test Major Knight's administrative abilities he could not respond? Not with such a rush. The rush was too great.

839. Is this what you mean—that while Major Knight may be a good man on the field, you do not regard him as a good administrator? No; I do not say that even.

840. What do you mean? What I have said.

841. Were those circumstances sufficient to turn any man off his head temporarily besides Major Knight—did everybody else lose their heads? More or less, I suppose we did.

842. Do you regard a man as competent if he is merely a good tactician? I am not passing any opinion as to his competency whatever. I could not do so. I say that, at the time, in consequence of the rush, he certainly did lose his head.

843. You have always been on the best of relationship? Undoubtedly, the very best.

844. Did you not regard it as rather peremptory treatment to be told to clear out of his tent? He did not tell me to clear out.

845. When the helmets were changed from cork to gossamer you say the contractor did not consult you about them. When did those gossamer helmets begin to be in use? I think it has been explained already. There is some little dispute as to which helmet was submitted by the contractor.

846. Will you tell us how the helmet came into existence at all as a pattern:—how did it come to be a pattern chosen for the supply of helmets for the Forces generally, who originated the thing, who initiated it, who made it, who submitted it? Anderson.

847. To whom did he submit it? He supplied these in substitution of cork helmets.

848. At whose instance? His own.

849. And without reference to you? Yes, without reference.

850. And were they supplied without your knowledge? Yes.

851. Suppose the Captain of a company requisitioned for a supply of helmets, he would supply that kind of helmet to the Captain of the company without your knowledge and without the knowledge of the Clothing Board? Yes. There is some little doubt with reference to this helmet.

852. When did the change of the helmet come to the knowledge of the Staff? As a matter of fact it did not come to the knowledge of the Staff till Mr. Duncurley and Mr. Duncalfe made a report to the Colonial Secretary about the matter. That was about a couple of months ago.

853. Until then you did not know of the existence of a helmet like that? I did not know that the helmet had been changed.

854. You thought it was still a cork helmet? I thought it was still the helmet that was contracted for.

855. That is to say, a cork helmet? Well, there is a doubt about that. The contractor seems to dispute the fact that a cork helmet was the pattern—the sealed pattern.

856. Used this same contractor, Anderson, to supply cork helmets? Under the old system of supply each regiment made its own contract, and we obtained helmets for the forces from England—the cork helmets. He did not supply cork helmets.

857. This gossamer helmet is the only helmet Anderson ever supplied? Yes. It was only when the regiment ran short of helmets that Anderson supplied these to make up the shortage.

858. Who ordered the change in the method of procuring helmets;—you say that up to a certain point they were imported from England;—when that supply ran out who gave the order for Anderson to make helmets? He contracted for making helmets.

859. Contracted with whom? The Clothing Board.

860. Then the Clothing Board did know something about these helmets;—who originated this pattern;—who made the pattern? Anderson made the pattern.

861. And submitted it to the Board? And submitted it to the Board, so I understand. Anderson M. M. Boam. supplied a pattern, submitted it to the Board, and this pattern was rejected. Then a cork helmet was subsequently sealed. 9 Aug., 1900.
862. And how did this helmet come on the tapis again? That I could not tell you.
863. Is the cork helmet sealed now? Yes.
864. What I want to get at is who was responsible for the contractor supplying these helmets at all, whether the pattern was tested as to the quality and price, or whether the contractor was told haphazard to give you some helmets, irrespective of quality, price, or anything else;—what did really happen in connection with this particular kind of helmet? That particular kind of helmet was supplied to the Regiment.
865. And who asked Anderson to supply it? The Regiments themselves.
866. Not the Clothing Board? No, not the Clothing Board.
867. The Regiments applied directly to Anderson to give them helmets? That was before the Clothing Board was established.
868. Without any authority from anyone? They did not require any authority; they made their own contracts at that time.
869. Mr. Anderson had no contract with the Clothing Board for the supply of these helmets? Yes; for the supply of helmets.
870. Two years ago? Yes.
871. I am speaking now of the initiation of these helmets? Yes. The Clothing Board was established in October, 1897, and in the following year it called for tenders, and Mr. Anderson contracted to supply helmets amongst other clothing.
872. And you gave authority for the making of this helmet? No; I do not say so.
873. Had you a contract with Mr. Anderson for the supply of cork helmets? We had a contract for the supply of helmets as per sealed pattern.
874. Which was a cork pattern? Well, I am not prepared to say whether it was cork or not.

Henry Douglas Mackenzie called in, sworn, and examined:—

875. *Chairman.*] What is your official position? Assistant Adjutant-General.
876. What are your duties as Assistant Adjutant-General? They may be defined generally under the head of discipline. H. D. Mackenzie. 9 Aug., 1900.
877. So that, in your position on the Staff, you would not have anything to do with clothing? Nothing.
878. Nor general equipment? No.
879. Who selected the officers for the Second Contingent—Colonel Knight's lot? I think I may answer that generally by saying that in the case of all Contingents the General made the recommendations of the officers to be appointed.
880. Is it customary, when making recommendations of the officers, for the General to consult with the Staff? Not necessarily.
881. He may? He may.
882. Did he consult with you in regard to the appointment of the officers, say, of the Second Contingent? I forget the names of all the officers. In the case of a great number he did, and in the case of a great number he did not.
883. The captains were Hillyard, Lenehan, and Bennett? Hillyard, yes; Bennett, yes; Lenehan I do not remember. In using the word consult I presume what you mean is this: that if there was any record of previous service, or anything of that sort, we had to look those records up and post the General as to what their previous service was, and whether they had any qualifications on the face of them.
884. I meant that, and I mean more;—did he, for instance, in a confidential way, discuss the general qualifications of those particular officers for the positions? Hardly in a confidential way. It was done in the most open way. He would say, "There is an officer applying for such-and-such a position; I want to know exactly what his qualifications are, and what his previous service is. Have you any confidential reports with regard to him; if so, bring me all the particulars you can?" He was then placed in possession of all the particulars we could give with regard to everyone of the applicants, and then he made his selection.
885. He then made the selection without any further consultation? I am not quite certain that he did not consult with the individual commanding officers to a certain extent.
886. But I mean as far as you are concerned? No.
887. Do you remember Lieutenant Garvan's case? Lieutenant Garvan was in the Irish Rifles, as far as I recollect.
888. Do you recollect how long he was there? No. I said that in most instances the General sends for information; there were instances in which the Staff were not consulted at all.
889. Will you have prepared, for the information of the Committee, a list of the applicants for appointment, with particulars of their length of service and qualifications? Yes.
890. You had nothing at all to do with the supply of clothing? Nothing whatever.
891. It does not come within your jurisdiction? No; when the Contingents first started, the General assembled the Staff, and he told off the different heads of departments to do certain duties, and he held them responsible for them, and that is practically how the matter stands to this day.
892. Your duty was more in regard to discipline and drill? My duty was in regard to discipline, in regard to carrying on the force that was not going away, in regard to looking after the preparation of rolls and Gazettes, attending to interviews, making arrangements for all the various patriotic functions, and generally supervising what was going on outside special departmental work.
893. You are a man who has had considerable experience in military matters, and I am going to ask you, simply as a soldier, what you think of that helmet (*the helmet that was produced by Major Boam*)? It is all very well for peace manoeuvres, but it would not stand service.
894. Looking at that helmet you would not be surprised to find that after two months' wear it turned out like that (*helmet shown*)? I have seen a better helmet turn out as badly as that after two months' wear in the field.
895. In your experience, did you ever see a worse helmet than that? It is hard to believe that this helmet is of the same make as the one just shown me. I have my own opinion about the supply of helmets. 896.

H. D.  
Mackenzie.  
9 Aug., 1900,

896. Could you give us your opinion? Well, I think those who were responsible for the issue of them were in a very difficult position. They are called upon at comparatively a moment's notice to supply helmets. They go to a man who undertakes to give a certain article by a certain time. That article proves a failure. Now, if that man had not been asked, the whole Colony would have been up in arms. It would have been said, "Here there is a chance of a big order, and you will not even give our local men a chance." You give a local man a chance and, apparently, he fails.

897. Did you know anything at all about the reason why there was a change from the field service hat to the helmet? That occurred in consequence of our getting word, I think, from the High Commissioner, that all the Australians were being shifted into helmets on account of the head-dress they had taken with them—suitable and serviceable as it was—being mistaken for the Boer equipment.

898. Would you be surprised to learn that no such communication ever reached here from the High Commissioner, or from any of the Military authorities? I would.

899. Would you think it an unwise proceeding for the constituted Military authorities to decide on an alteration, especially when a proper local article was not available, simply on some small paragraph in a newspaper? But I think the proper article was available in the shape of a field service hat.

900. But I mean the proper article in the shape of a helmet;—do you think the change should have taken place simply because a small paragraph appeared in the paper? If it were only a small paragraph in the paper I should say certainly not, because very often paragraphs in papers are misleading. I was under the impression that there was something official about the helmets, in the same way that there was something official about the sending of horses not over 16 hands high.

901. As a matter of fact, you naturally came to that conclusion because you would think that such an alteration would not take place unless something official had been received? Quite so.

902. Have you any other information you desire to give the Committee? I have a statement showing the different contingents, the ships in which they went, and the dates of departure.

903. Do you hand that paper in? Yes. [*Appendix A.*]

904. *Mr. Cook.*] You told us you were Assistant Adjutant-General;—who is the Adjutant-General? Being a divisional command, there is no Adjutant-General, and the highest rank of the Staff officers is Assistant Adjutant-General. It really is as difficult to understand as to understand why a lieutenant-general is senior to a major-general. It is entirely a technicality.

905. How many of the Staff are in direct communication with the General? The Military Secretary has direct communication with the General. The rest may or may not have direct communication with the General; but they are supposed, and, where necessary, do communicate through me with the General. For instance, suppose a question crops up in the Quartermaster-General's Department, having reference, say, to an Army Service Corps' cart. The Quartermaster-General takes that to the General. But suppose a question of discipline occurs in connection with the administration of his branch of the service, then he has to come to me, and I report it to the General. In the same way with the Staff Officer of Engineers. If it is a question, say, of laying down piping or tubing, or digging a well, he gets the authority direct from the General; but if it is a question about one of his men misbehaving, or something of that sort, then he comes to me.

906. Then practically all the work of the service filters to the General through you, or through the Military Secretary? Or the heads of special departments like the Quartermaster-General or the Staff Officer of Engineers.

907. There are other officials then who have direct communication with the General? Yes, up to the point I have just explained—up to the point of discipline.

908. Take Colonel Smith, who went away for instance? That is a very good instance. As Officer Commanding Artillery he would be another Staff Officer. Suppose it was considered necessary to alter the charge for a certain gun. The Officer Commanding Artillery as the expert would take that direct to the General, and they would confer about it. Suppose the matter was connected with the discharge of a man it would be referred through me to the General.

909. You said that at the beginning of the Contingents going away the General assembled the Staff, and delegated to each his duty. Has the same organisation, which you say obtains under normal conditions, been observed right through this Contingent business? As far as circumstances would allow; but unfortunately two of the Staff were taken away to South Africa.

910. And not replaced temporarily? No, not replaced; their places were taken by the next in command. For three months I was absolutely without a Deputy Assistant Adjutant-General. I was doing the whole of that work. Major Bayly went to South Africa, and Major Boam was busy at the time as Enrolling Officer. I was working 217 days straight on hand night and day to try and keep the work down simply because we were so short-handed.

911. Were any special duties given to officers of the Staff in connection with this matter? Yes; Colonel Taunton and Major Boam, for instance, had all the clothing and that sort of thing deputed to them. In the case of the Military Secretary, all questions of saddlery and equipment, kits, and necessities, and so on, were deputed to him. My own work was to provide instructors for the different forces, watch the applications generally, attend to the general business of the Department, outside those special things told off, as well as answer all inquiries and receive all visitors.

912. Who would have to do with the selection of officers? The General had the final selection.

913. But in consultation with whom? Suppose you command a regiment. You write in to say, "I recommend so-and-so to be appointed Lieutenant." Well, the General takes your recommendation as the Officer Commanding the regiment. With a Contingent it is a little different, because there may be twenty applicants for one place. Then you do your best to get what you call their previous history, and then it becomes, as a rule, or should become, a case of the survival of the fittest.

914. But who assists in the determination? Nobody assists in the final determination. When the General has got all the information he can get, then he is the General—the final act, of course, being with the Government.

915. But, in getting all the information possible, the General would naturally consult with some members of the Staff? All those instances, unless the man came out of the Engineers or out of the Army Service Corps, would go through me.

916. And you would express your opinion concerning them? If I were asked. I know two or three instances in which I was not asked.

917. What is the fact generally—that you recommend officers? No; I never recommend anybody; I simply give facts.

H. D.  
Mackenzie  
9 Aug., 1900.

918. *Chairman.*] State as far as you know their qualifications? Exactly.
919. *Mr. Cook.*] You make no recommendation at all? No.
920. Not, for instance, as to whether a man should be a lieutenant or a captain? No; I do not think I have even done that. I may have gone so far as to say I think so-and-so would be a very suitable man for a captain. In fact, I know in one or two instances I did that.
921. What were those instances? One was the case of a man who did not go.
922. Had you any say in the selection of Colonel Knight, for instance? No; I had nothing to do with that. I thought then, and I think now, that at that time he was the only available man they could find to take command of that particular Contingent. When I say the only available man I mean the most suitable man—on paper and from previous experience.
923. Then as to the getting ready of the Contingent, you had nothing to do? No. I had more to do with seeing that they were supplied with the proper staff of instructors, and that sort of thing.
924. Were Colonel Taunton and Major Boam, for instance, responsible to the General direct or to anyone beneath the General? Major Boam was also enrolling officer.
925. He also had to do with the clothing, had he not? Yes.
926. Was he responsible directly to the General;—whom would he consult, for instance, if he wanted to consult anyone about him with regard to clothing? The Quartermaster-General.
927. He would communicate with him direct? Yes.
928. And as to saddlery? That was entirely in the hands of the Military Secretary.
929. For instance, Lieutenant Garvan had something to do with the saddlery;—suppose that Board wanted to communicate with anyone in higher authority? A Regimental Board would simply go to the officer commanding the regiment. A Regimental Board would be assembled by the Officer Commanding the Regiment to enable him to arrive at some conclusion. He would say, "I am too busy to go and look after this," and he might have three Regimental Boards sitting at once. He gets their report, and on their report takes whatever action he thinks necessary. If further action is necessary he sends it to the General through the Staff Officer concerned. For instance, suppose there was a Board on an accident to a man on the Rifle Range or at a sham fight. That would come through me, because it would be connected with discipline. If it were on a matter relating to clothing it would go through the Quartermaster-General or the Clothing Board, and I should know nothing about it.
930. And if it were a matter relating to saddlery it would go through the Military Secretary? Yes.
931. *Mr. Cook.*] You would know nothing about that? Not until the General's decision came out, and I might see the papers passing through.
932. Then, as a matter of fact, you know nothing about the clothing, the helmets, the saddles, or anything else? Not connected with equipment. The only thing I know about is the saddle-bags, of which, happily, I was the only one who had a sample, which was adopted and has given great satisfaction, and which, I did not know at the time, but found out since, was originally invented by Baden-Powell himself—a very curious coincidence.
933. *Chairman.*] You have nothing to do with the pay? No. The only thing I was very careful to do all I possibly could in was to assist Commanding Officers in seeing that the men of every Contingent left their next of kin papers properly filled in, and left their pay orders properly filled in. Although it was not absolutely my business I went out of my way to lend a hand to see that that was done as far as possible.
934. Do you know the rates of pay to be given to the various Contingents that left here? That is all laid down in General Orders.
935. Are you of opinion that they all left on the same pay? I believe they all did, except the Imperial men, who were told that they would serve outside South Africa—Rhodesia, and so on.
936. Would you be surprised to learn that there was a difference of over 1s. a day in the pay of men in the same Company? I do not know how that could arise.
937. But if it were so, you would think it was not a very wise proceeding? I think there must be some mistake; it must be capable of explanation.
938. You think it so ridiculous and so unwise that there must be some mistake? One does not quite understand two men, serving in the same company and being of the same rank, receiving two different rates of pay. It must be capable of explanation.
939. You would not think it was a wise system, or would tend to discipline or good feeling amongst the men, if one man got 3s. 5d. a day and another man 4s. 6d.? There must be a mistake somewhere.
940. *Mr. Garland.*] Who would be the officer directly responsible for the helmets with which these men went away? The officer immediately responsible for receiving them would be the Officer Commanding the Regiment.
941. And for supplying them? The officer immediately responsible for the supply would be the officer whose duties it was to look after the supply of clothing generally.
942. Who was that? That was the Board, consisting of the Quartermaster-General and Major Boam.
943. Was it their duty to see that all clothing supplied to the men was proper clothing? No; not as long as they were satisfied with the sealed pattern, and got that assured.
944. Do I take it that once you have a pattern that is sealed up every responsibility of the military officers ceases altogether, no matter what is supplied? The responsibility of the Department ceases, for this reason, that there being a sealed pattern it is open to the Commanding Officer and open to the contractor. It has taken perhaps weeks, or it may be a month or two, to thoroughly work up that pattern, and perhaps a dozen samples may have been made before it was approved.
945. Approved by whom? By the Clothing Board and, if necessary, brought before the General. Then it is the Commanding Officer's business. He knows what the sealed pattern is, and he has got it absolutely at his finger's ends to reject anything that is not up to that sealed pattern.
946. Do I understand you to say that once a pattern is determined upon, called a sealed pattern, then the responsibility of the officers who are responsible for the supply of clothing immediately ceases? It does not cease—it gets delegated.
947. When the sealed pattern is determined upon, does the responsibility, say in this case, of Colonel Taunton and Major Boam absolutely cease? Yes; absolutely, unless representations are made back to them that it is not proper clothing.
948. Take the case of these helmets;—after that sealed pattern was determined upon do you say that neither Colonel Taunton or Major Boam was in any way responsible for the supply of those helmets to the Second Contingent? If it was proved that that was the sealed pattern accepted—if they passed the sealed pattern —

H. D.  
Mackenzie.  
9 Aug., 1900.

949. Two years before? That was not passed specially for the Contingent.
950. When the contract was entered into at the end of 1897 or the beginning of 1898, we were told that there was a sealed pattern of a helmet, and that this article has ever since been supplied as that sealed pattern? Has it been compared with the sealed pattern? If it comes up to the sealed pattern I say yes.
951. You say, then, that Colonel Taunton and Major Boam have absolutely nothing to do with the supply of those articles? If they come up to the sealed pattern as originally approved.
952. *Mr. Cook.*] Suppose there are some recruits at Lithgow taken into the company, and they want clothing;—what happens? The Officer Commanding that company is absolutely and directly responsible for the proper clothing of those men.
953. What does he do? He makes his requisition out, and sends it through his regiment.
954. Through whom? Through the Adjutant.
955. What does the Adjutant do then? Sends it to the contractor.
956. What does the contractor do when he gets the order from the Board;—to whom does he deliver? You will have to ask a member of the Board that question.
957. You do not know to whom the contractor supplies the clothing, whether direct to the Captain of the Company or to some other person? No.
958. *Mr. Garland.*] Who is responsible for the supply of this particular class of helmet to the Contingent? Any officer who passed it.
959. Then, in your opinion, it is the Officer Commanding the Regiment to whom it was supplied who is alone responsible for his troops being clothed in that condition? No; I do not say that. If he was supplied at a moment's notice with what there was nothing else to replace, I think the Officer Commanding the Regiment was placed in a very difficult position.
960. Let me put this concrete case;—you know when Colonel Knight was appointed? Yes.
961. Suppose those helmets were supplied to his troops, about to embark in a hurry to South Africa, would you say that the responsibility in connection with those helmets rested with Colonel Knight or with the Board, seeing that the helmet had been supplied to the troops for two years? I should divide the responsibility there. I should put it directly on the Board for supplying it, and I should put it directly on Colonel Knight for not immediately reporting it.
962. *Chairman.*] Suppose you were in command of the regiment, and were anxious to get to the front, and suppose they supplied your men with the most rotten fit-out imaginable, and it meant either that you had to go with that or stop at home? I should not do either; I should go, but I should leave a protest, as a safeguard, behind me.
963. *Mr. Garland.*] With regard to Colonel Taunton's duties, if he had not to look after these matters, what was it that bustled him when the troops departed? There was the transport. There was a great deal to do at the different camps, Kensington and elsewhere.
964. Did he go out to superintend those? He had to see that everything was done, and he had to supervise all the rations and returns, and those sort of things. He had a great deal of responsibility there, and when it came to the embarkation he had a great deal to do with that; that is all Quarter-master-General's work.
965. Take the question of transport: what would be the actual amount of time and attention which Colonel Taunton would physically give to that work? Not a single voucher could go through without Colonel Taunton's signature. I think that was a mistake.
966. Then his time was taken up in signing his name to vouchers? To a great extent it was. His time should principally have been taken up with the supply and issue of clothing and embarkation.
967. But if he was not responsible for it I do not see that it would be much use taking up his time in that way; what had he really to do with regard to the supply and issue of clothing;—he did not go and inspect himself, did he? I should not think so. I suppose he satisfied himself that everything that was being sent out was in accordance with sealed patterns.
968. You think, then, it should have been part of his duty to do that? I do.
969. It should have been part of his duty to ascertain that what was sent out was in conformity with sealed patterns? Yes.
970. And if that duty were done it would take up a great deal of his time? Yes.
971. *Mr. Meagher.*] Do you remember hearing of a complaint made as to the equipment of these troops in South Africa? No, I do not; except what I read in the papers.
972. And how long ago would that be? Within the last week, I think.
973. Do you remember that, on the return of Mr. Sleath and Mr. O'Conor from South Africa, statements appeared in the paper as to the condition of certain articles supplied to the troops;—that was about seven or eight weeks ago? Yes.
974. If you carry your mind back to those statements, you will remember that the allegations were somewhat of a grave character, our troops being sent away with saddlery, for instance, in the condition alleged;—did you have a chat with the General about it? I have already been reminded that we were very weak to take any notice of paragraphs that appeared in the Press, so that it was not likely I should go and have a conversation about this. I was waiting for something official.
975. When you saw that two public men who were pretty well known, who had been on the very scene of action with these troops, had spoken of having absolutely in their possession here some of the very articles complained of which would justify the rather stringent remarks they made as to the quality of the equipment,—do you not think that when public men made those grave allegations, and they appeared in the Press, it was a very fair thing to have a chat about it? Well, I made inquiry into one case, and it broke down.
976. Which case was that? The case of a man who was taken on at the last moment—in fact, so much at the last moment that he never appeared in our first nominal rolls at all—taken on by Major Knight. Major Knight, like every other Commanding Officer, had several supernumerary suits of clothes, in case anything went wrong with a man. We did not know until after Major Knight arrived over there that this particular man was with his Contingent, and he must have been clothed and kept on board by Major Knight himself, who had an ample store to do it with. How could we go into a case like that. He was not even equipped from here.
977. *Chairman.*] Did Major Knight ever have authority to enlist men after he left New South Wales—to enlist men in his regiment? Not after he left New South Wales; he had not left New South Wales.
978. I mean, did he have authority to enlist men, say in Melbourne or Fremantle? No; I do not think so.

H. D.  
Mackenzie.  
9 Aug., 1900.

979. Are you certain about it? No, I am not, for this reason: If he were allowed a certain strength, and a man fell out, say, at Adelaide. I take it it would be quite within his rights, without any special authority, if he had properly discharged that man to fill up his number to the full strength.

980. Then would you contend that in the case, for instance, of Major Lee, whose original strength of about 200 is now, I believe, reduced to about five, he would be justified now in enrolling 195 Lancers? No, because the 195 have not been struck off the strength. They are still on the strength, and the Colony is still paying them somewhere or other, either as invalids or as returning to their country. You see if you did that you would not only be having a paper strength, but you would be having a pay strength of twice your number.

981. In the case of a number of men in a contingent being killed, would the commanding officer be entitled to enrol Dutchmen, Germans, Americans, or any other nationality as New South Wales soldiers? No; you cannot take people of any nationality beyond a certain percentage, unless they are naturalised.

982. The Dutchmen in Cape Colony are, of course, naturalised British subjects;—do you think it would be an advisable thing that the commanding officer of a regiment should be allowed to do that? What would be much more advisable in a case like that, especially when serving with Imperial troops, would be for the commanding officer to go and take the advice of the Imperial officer in command before he did anything.

983. There is another matter in regard to that on which I should like your opinion;—do you think Colonel Knight was authorised, or had the power, to enrol officers from outside his Contingent altogether? Yes. I rather think there is an authority somewhere under which commanding officers where—owing to casualties or anything of that sort—officers fall out, may, up to the strength, replace them. But that I am not sure about. I do not know about Colonel Knight particularly, but I think that was a sort of general understanding with all the Contingents.

984. That they could enrol officers from outside? I do not say from outside.

985. Outside their Contingent? Oh, no, I do not think so.

986. That is the question;—had Colonel Knight authority to take officers from outside his Contingent altogether, or outside the New South Wales Forces, and place them over the officers that left here? I do not think so.

987. *Mr. Meagher.*] You remember seeing the statements in the paper on the return from South Africa of Messrs. Sleath and O'Connor, about which I asked you a question just now? Yes; I remember that on the strength of that, or mainly due to that, a Board sat on the supply of helmets generally.

988. On what date did that Board sit? I could not tell you; it must have been about a month ago, I should think.

989. Did they bring up a report? I believe they did.

990. Would you mind producing it here? If it is one of my documents, I will do so with pleasure.

991. You have known Major Knight for some time? Yes.

992. And you remember when he was in command of the Second Contingent? I remember that he was put in command.

993. Did you come in contact with him often during the period before he embarked, and while he was in command here? No; not very often. Not in the way of conversation, or anything of that sort, except in the course of duty.

994. Personally? Yes. For instance, going out to the camp, or finding out if the rations were all right, and making general inquiries, and so on.

995. On those occasions, when you came in contact with him, did you notice any change in his demeanour;—did you notice whether he appeared like a man who was suffering from big head? No; I cannot say I did. I came to the idea that he ascertained that he had taken on something that he would rather a month than a fortnight to do it in. He gave me the idea of being rather hustled and rather worried, but he certainly did not give me the idea of a man who was puffed up by his own importance.

996. Did Major Boam ever tell you that his conduct was of such a character, so self-inflated, that he was practically compelled to leave his tent? No; I do not remember that; and I should rather doubt it, because if Major Boam made such a remark as that to me—if he had made it to me in any serious way—it would have been my duty to investigate it; but I should rather doubt that.

997. You would doubt that Major Boam had ever made any statement to you? Beyond anything that might be put in a jocular way, I should certainly doubt it.

998. Personally, you saw no difference in Major Knight's demeanour or anything else? No, not a bit.

999. *Mr. Wilks.*] Did it ever occur to you, either officially or privately, that any friction existed between Major Knight and any of the staff officers during the time that Major Knight was commanding the Second Contingent? None ever came to my notice.

1000. Neither officially nor privately? No, absolutely not. I cannot think of anything leading up to it at all. I always found Major Knight very well to get on with.

1001. In reference to the helmets, what is your impression with regard to their fitness or otherwise for use on active service? I gave my opinion when previously asked. This helmet is very good for peace manoeuvres; but it is not fitted for actual service.

1002. Did you express any opinion of that character before it was ordered? I do not think I ever saw it until to-day, except when the men were going away.

1003. You are aware that in this Colony they had the field-service hats, and then suddenly the men were ordered to appear in helmets? Yes.

1004. Do you know the reason of that? Simply what I have already stated. I understood there was a communication out to say that on account of our people being mistaken for Boers, owing to these very serviceable hats being alike on both sides, the Imperial troops were being supplied with helmets.

1005. Where did you think that communication was forwarded from? I understand it came from the Imperial authorities, and either appeared officially to us, or if it did not appear officially to us, it appeared in what they call a press cablegram.

1006. You did not take any more notice of it because it did not come within your jurisdiction? Personally, I did not.

1007. We are to understand that you had full control of the administration of the local forces while the contingents were being prepared by other staff officers? Subject to the General, of course.

1008. But you had full administrative control of the local forces? Still subject to the General; the same as it is now.

1009.

H. D.  
Mackenzie.  
9 Aug., 1900.

1009. You said that the special parades and patriotic functions gave you more work? Certainly.

1010. And you had other work in granting interviews? Quite so.

1011. As the medium between the General and the public? Quite so.

1012. The General told off, in the first place, the duties of the various staff officers? Quite so.

1013. If they were told off they would be in General Orders at the time? No, they would not. The duties of the different staff officers do not generally appear in General Orders. The General sends for the staff and gives them verbal intimation of what he wishes done. The General Orders simply come out to carry out the details which are necessitated by this action.

1014. Suppose the staff officers delegated their duties, would they acquaint the General with the fact? I do not think they would, necessarily. They might delegate a certain portion of their duties, where they required assistance.

1015. Would that be delegated verbally? Yes. For instance, I might delegate something to my garrison sergeant-major. I would probably delegate to him the duty of telling off so many instructors. Still that does not relieve me of the responsibility.

1016. The responsibility would still lie with the duties as originally told off to the Staff Officers? Quite so.

1017. With regard to the supernumerary suits of clothing, are you aware that Colonel Knight is reported to have had 10 per cent. of these? I do not know the quantity. I know he had a proportion. In fact they all had, I am told.

1018. Have you been made acquainted with the fact that some of the troops left with only one suit? No.

1019. And never got any more? If they had 10 per cent. more on board, and they did not get any more, then what were their Company Officers about. What was the use of their inspection on board ship? What was the use of their kit inspections.

1020. *Mr. O'Connor.*] Did they have the 10 per cent.? They signed for them.

1021. *Mr. Wilks.*] The Colonel Commanding signed for the 10 per cent.? Yes.

1022. *Chairman.*] Would it not be the case that the Quartermaster of the regiment or the Commanding Officer of the regiment would be responsible? When I say they were signed for, I mean they were signed for by the Colonel commanding the unit.

1023. *Mr. Wilks.*] Suppose some of the men had only one suit, to whose neglect of duty would that be ascribable? The Officer Commanding the Company. He should immediately report, "Private Jones has only one suit of clothes by some mistake or other," and immediately take steps to get him another suit.

1024. What is your impression with regard to the clothing contract system, say, with regard to the Contingents;—is it satisfactory at all? As I said before, I think, there is this great difficulty. What would have been extremely sound would have been to have cabled over to South Africa to the Imperial authorities to provide everything ready there. But if you had done that you would have had an outcry here that you never gave your local people a chance of making things when there was an opportunity for a big order.

1025. In other words, if you had had a free hand in the matter you would have taken the course of cabling to the Home Government to have the equipment and everything else at the Cape ready for the men? I would simply have said, "We can supply so much up to a certain point, beyond that we want everything." I think you will find that was the course taken with the Imperial Contingent.

1026. *Chairman.*] Do you think that would have been a wise course? I do, if you could have got over the terrible local difficulties and troubles there would necessarily have been.

1027. *Mr. Wilks.*] The only objection would have been the local disturbance; it would be said the local people had no opportunity of supplying the goods? That would be a very serious disturbance, bear in mind.

1028. *Chairman.*] For instance, take this helmet supplied; suppose you were satisfied that this helmet was not a helmet fit for active service? Then a very simple thing would have been for the Commanding Officer, finding it out on his way across, to have gone to the Inspector of Stores at the Cape and said, "I have 400 useless helmets here; give me 400 in exchange. Here are my requisitions ready."

1029. Still a great deal of money would have been paid for something which was absolutely useless? My attention has just been called to a matter I had forgotten. I now find that by law we could not have done what I have suggested, for under Treasury instructions we were bound to call for tenders for anything that is required in that way.

1030. Do you know if the case was put either to the Minister for Defence or to the Premier, that there was a difficulty in getting the quality desired? Without knowing anything about it, my impression is this: that they say to a certain man, "Can you do this"? He says "Yes." He has about ten days to do it in; he occupies eight or nine days in doing it. Then, when it is done, it is too late to make any alteration, and neither the Premier, the Minister for Defence, or anybody else, can help you through. Nothing can be done in two days. You are landed in a very great difficulty, and it becomes Hobson's choice—take them or leave them.

1031. The Officer Commanding could have seen the character of the helmet. It does not require a man with a great deal of knowledge to see that it would not stand a campaign? I do not think it would stand another afternoon sitting.

1032. In that case do you not think it would have been advisable to consult with the Treasury if there were difficulties in the way—that the position might have been explained as to the difficulty in getting local stuff of the quality desired—or do you know that that was done? That I cannot tell you.

TUESDAY,

TUESDAY, 14 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. MEAGHER,MR. HURLEY,  
MR. O'CONOR,

MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

George Arthur French called in, sworn, and examined:—

1033. *Chairman.*] You are Major-General Commanding the New South Wales Forces? Yes. G. A. French.
1034. I suppose that in the equipment and despatch of the troops to South Africa, you would have chief control? Yes; supervising everything. 14 Aug., 1900.
1035. I presume that different Staff Officers would have special work imposed upon them? Yes.
1036. That is, you gave instructions to the different Staff Officers to attend to different matters? Yes. The senior officer usually talked over anything that had to be done in a hurry, and it was settled on that.
1037. Seeing that this was a case where there was not much time for delay, did you consult and talk over matters with your senior officers? Yes; nearly always with regard to anything important.
1038. Can you tell us the date when the Second Contingent went away? About the 17th of January. I think they all got on board on the 17th, but did not leave till the 20th.
1039. If some members of your Staff say it was on the 23rd or 27th they would be making a mistake? Yes; I should say so.
1039. In regard to the equipment supplied, did you personally inspect the saddles? Yes; repeatedly. I may say that the previous Contingent were pretty well off in the matter of saddles, because we had Imperial saddles. We got about 200 when I came here first. I was never able to increase the number. Those were available. It was after the first lot that the trouble began.
1040. You had a look at the saddles supplied to the Second Contingent? Yes; but at the time they were supplied there was very little opportunity for inspection. On Sunday morning, before the Contingent left, on taking the regiments out for inspection, I had to wait to see each squadron separately, in order to let them change their saddles on to other horses. That was only three days before they embarked.
1041. So that three days before they embarked only a portion of the saddles had been supplied? I do not believe the last of the saddles were supplied until two days before they embarked.
1042. Do you know whether the Australian Horse or the Rifles were first supplied? I should rather think the Australian Horse, from a matter that turned up the other day.
1043. The Military Secretary ought to be able to give us the exact date on which delivery was taken of the saddles? Pretty nearly; but there was such a way of dropping the supplies as they could, that it was difficult to keep track of them.
1044. Would not someone have to sign for them, and make a note that they had received a certain number? Whoever was commanding the corps had to sign for them.
1045. Would not the record of them when they were received be available now as giving the actual date of the receipt? It would probably be with the Officer Commanding the corps.
1046. But, as far as the General Staff is concerned, would there be any record kept of when they were delivered? It is not likely they would have such a record if Colonel Roberts has not.
1047. But if Colonel Roberts, together with two officers of the Australian Horse, held an inspection? He would not hold an inspection of them, I think.
1048. Of the stores he did? He may have gone and looked at them; but when saddles would go to a corps the corps would inspect them.
1049. Anyhow, you had a look at some of these saddles? Yes.
1050. And what did you think of them for this class of work? With the saddles, as saddles to use about the country, I had no fault to find. The leather seemed good, and they were all right, but they were not fit for mounted work—for a mounted soldier carrying his kit, and riding about 17 or 18 stone.
1051. You think they were rather light for that kind of work? Not merely light; they had not the bearing on the horse's back which the long panels give. The result is, you get a greater weight on a smaller surface, and there is a much greater tendency to produce sore backs.
1052. Was a sample saddle supplied and approved of by you? Yes. When there was any change I usually selected a sample with Colonel Roberts or some other senior officer—Colonel Smith when he was here, and Colonel Airey afterwards. We looked into any points that should be attended to, and that was taken as a sample.
1053. And the order would be given then for a certain number of saddles of that pattern and that quality? Yes; and I think the order had to be divided out amongst as many saddlers as we could get hold of.
1054. Was that saddle available, say, to the officers of the Australian Horse, so that they could compare what they had delivered to them with the sample saddle? I suppose they could only see it by going to the Barracks, where it was under the charge of Colonel Roberts. But the Australian Horse had a few saddles of a pattern of their own, which had panels—I do not know how many. We tried to get as many of these as we could.
1055. When you approved of the sample, did you examine the tree of the saddle to see if it was satisfactory? No; except so far as it could be seen outside.
1056. Would you be surprised to learn that in a great many cases, if not in every case, the tree of the saddle has given way—has opened out? I have not heard that.
1057. And allowed the saddle to go right down on the wither? Of course, we know that even the very best saddles sometimes go down on the wither when a horse gets poor without opening out.
1058. But with the proper military saddles there is no chance of their going down on the wither? In north-west Canada I have known them go right down on the wither and gall the horses.
1059. The horses must have been very poor? Yes; mere bags of bones.
1060. How high do you think the panels would keep the saddle from the wither in an ordinary-conditioned horse? I should think fully 3 inches, or, possibly, more, if the horse were in good condition.
1061. And, in addition to that, it enables a current of air to pass between the saddle and the horse's back? Yes; it keeps the horse's back cool. Apart from any question of opening out, the stuffing gets settled down more and more.
- 1062.

G. A. French. 1062. In a panel saddle you have not that to contend with? No.

14 Aug., 1900.

1063. In a great many there is really no padding at all? No; but, of course, there is something instead; they have something underneath—they would have the blanket rolled or doubled.

1064. But there is no padding to give way in the panel saddle as in the other? No.

1065. Taking it by and large, did you think those saddles would really be suitable for military work? I was very doubtful of them. We kept trying to keep down the weight of the saddles all the time. In the case of the Bushmen we kept the weight down as low as it was possible in the case of mounted men.

1066. In view of the opinion you formed in regard to the usefulness of those saddles as military saddles, did it ever occur to you that it would be advisable to try to procure military saddles from the Imperial authorities? I think we did, in the case of one of the first Contingents that went.

1067. I am talking now of what is known as the Second Contingent? I do not think any definite question of that sort was asked.

1068. In view of the unfavourable opinion held generally by yourself and the Staff as to the usefulness or fitness of those saddles for the particular class of work required, did it occur to you that it would be advisable to communicate with the military authorities at Home as to whether they could supply you with military saddles, or whether you could buy them? I do not think we liked to ask the Imperial authorities, knowing, as we did, the way they were pressed for their own supplies.

1069. Was it ever suggested to you by any of the principal officers of your staff that such a thing should be done? I do not remember. It might have been said, but I do not think there was any sort of official suggestion. It might have been said, casually, "Would it not be better to get the Imperial Government to fit them out?" or something of that sort. We tried to fit out the Contingents in every possible way ourselves, and not fall back on the Imperial authorities.

1070. Would you be surprised to learn that the saddles supplied to the Australian Horse—I mean the bush saddles, not their own military saddles—were never taken any further than Cape Town? I believe they got them replaced from the Imperial Stores at some very early period.

1071. So that the saddles that were supplied to the Australian Horse were absolutely a dead loss? I suppose the Imperial Government will either return them to us or allow us value for them. I do not think you could call them a dead loss; they would not cost this Colony anything extra from the fact of their being exchanged.

1072. You understand that the Imperial authorities are re-equipping the Colonial troops there as occasion demands? Yes; we rather inferred that in many points they would assist us in that way. They had to find arms for some Contingents, while we were all right in that respect.

1073. As a matter of fact, the Imperial authorities must have thought very little of those saddles when they re-equipped the Australian Horse with proper military saddles before they even left Cape Town? No doubt they quite saw that the Imperial military saddle would be a far more suitable saddle for the field, where a man had to carry his kit and everything.

1074. They were not highly impressed with the saddles? No; I do not suppose so.

1075. Did you have control of the equipment for the Citizens' Bushmen's Contingent and the Imperial Bushmen's Contingent;—was the matter of equipment practically handed over to the military authorities in the case of the Citizens' Bushmen? Largely so, but the Citizens' Committee went into all these things themselves; in fact, they had a great deal to do with the selection. I should say they pretty well selected every saddle and bridle. I know Major Carey was very strong about it, especially the bridle.

1076. So that in regard to the Citizens' Bushmen's Contingent, the military authorities could hardly take any responsibility as regards the equipment of that force? They, of course, discussed it with the Bushmen's Committee.

1077. I mean they could not take the whole responsibility? No, of course not.

1078. Did you recommend to the Citizens' Bushmen's Committee the same saddle as that which went away with the Second Contingent under Colonel Knight? The samples prepared were approximately the same, with some little points of difference. We tried to carry the kit in a saddle-bag at the side, instead of having those wretched little pads at the back.

1079. Whose idea was that little pad? Some saddler here in Sydney; I forget which one.

1080. Do you know if he took out a patent for that idea? I do not think so; I never heard of it. It would have done for a horse travelling slowly, I think, but was not suitable for fast work, being liable to flop about.

1081. If you were galloping under fire, perhaps in rough country, the kit, and also the little bag, might shift considerably? It is not so much the shifting as the flopping up and down on the horse, which, frequently repeated, would probably gall him.

1082. You have had a good deal of experience in different parts of the world, having been in Canada, Queensland, and, I think, India? Yes.

1083. You never saw anything like that introduced into military saddles before? No.

1084. And from what you have seen of it, do you think it likely it will ever be introduced again? I do not think so.

1085. But, with these alterations, practically it was much the same sort of saddle that was supplied to the Imperial Bushmen? Yes, there was very little difference; you might call either of them the bush saddle.

1086. Neither was much superior to the other,—they were practically the same? They got rid of those little pads at the back.

1087. Admitting that to have been an advantage, the saddles were otherwise practically the same? I think most of us considered they were very much the same saddle.

1088. You would not be surprised to learn that the Second Contingent very soon got rid of the pads when they got to the front;—you would not be surprised to hear that the troopers discarded them—slung them away? No; I heard worse than that—that the troopers got rid of their numnahs, blankets, and so on.

1089. I suppose you know that when a soldier has to shift very quickly, or else perhaps be taken prisoner, he does not wait to collect all his gear? No, of course not, and in a case of that sort it is excusable.

1090. I suppose you are aware that the First and Second Contingents on many occasions had to shift at about five seconds' notice? Yes, of course.

1091. So that they had to leave all their tents and all the paraphernalia they carried with them, blankets and all? Yes.

1092.

G. A. French  
14 Aug., 1900

1092. Such things always occur in actual warfare? Yes.

1093. How long did you expect these saddles would last on actual service? The saddles, as saddles, would, of course, see the thing through.

1094. You think they should have done so? With an ordinary bushman in the seat, and not carrying a lot of stuff, I should think they would.

1095. Would you be surprised to learn that before three months' wear the whole of them were condemned? Condemned for simply wearing out?

1096. Opening out;—that they were condemned from some cause or other, and the Imperial authorities re-equipped the whole of the force with fresh saddles;—was not that more because they disapproved of the pattern? I should like to read an extract from a letter from Major Lee, who had experience of proper military saddles. He says—

Sore backs at the commencement of the campaign gave a lot of trouble; but we had a very small percentage during the march from Bloemfontein, which proves that sore backs are preventable.

Military officers know that one of the most difficult things on service, even with the very best saddles, is to prevent sore backs when horses are run down in condition.

1097. Still, if the military saddle were not a better one, the Imperial authorities would not have discarded these saddles and substituted military saddles? The military saddle, no doubt, for that work is far better.

1098. Do you think, under ordinary conditions, these saddles should have lasted out the campaign, practically? I should think so. I mean looking simply as a saddle carrying a man; but with all the gear of a mounted soldier it is different.

1099. You even thought before they went away they would not be strong enough? They were strong enough. I looked upon them as the best we could get—not what we wanted, but what we could get.

1100. Some were condemned;—did you see any of those? Yes.

1101. What were they like? The appearance of the saddle was nothing out of the way; but when you took hold of the D's, which should, of course, be really strong—in fact, should be riveted on to the plates where you could get them—you could actually take some of the basil and tear them across. I think there were a hundred of those. We threw them all back on the contractor's hands. He was not a saddler. I understood he was a tailor, and just bought up some job lots.

1102. I understand that this Mr. Anderson is the son of the contractor? I do not know. I know the saddles were all a wretched lot. They were at once "spotted" by the Board. I went down myself and tested them, and saw they were totally unsuitable. They were all thrown back to the contractor, which was rather a strain upon us, considering we were so pushed to get any saddles on at all.

1103. With regard to the bridles, did you have them looked at? Yes; the whole set of the saddlery.

1104. What did you think of the bridles? They were fairly good bridles, suitable for our men, who did not care for the heavy military bit.

1105. But were not a great many of them fitted with these heavy military bits? I should not think there were a great many.

1106. I mean the heavy snaffle bit, with brass on each side? I should not think there were very many. I suppose some of the earliest lot might have got some of these; but I should think the supply would run out very quickly.

1107. I now come to the question of helmets. The Committee had great difficulty in getting evidence in regard to the helmets. This has been supplied to the Committee as the pattern of the helmets supplied. [*The helmet produced by Major Boam.*] Are you able to give us the history of the helmet contract;—I think you were here when we ceased to import cork helmets from England? I think that is a long time ago. I came here in 1896.

1108. In 1897 apparently they ceased importing cork helmets. In 1898 what is known as the Clothing Board adopted a pattern helmet, presumably with your approval. I presume when they adopt anything they forward it to you? Yes.

1109. Are you prepared to say what sort of helmet that was? I could not say in the least.

1110. Could we not get that pattern helmet that was sealed, and have a look at it? The sealed pattern helmet, which I produce, has just been handed to me. There is no doubt they are not the same thing at all.

1111. Whose duty is it to see that the article ordered is in accordance with the sealed pattern? Whoever takes over the clothing.

1112. Suppose a Company of Volunteers at Lithgow, or of the Partially-paid Force have ordered twenty helmets which have been forwarded to them, how would the Captain of the Company know what the sealed pattern was like? He would not have a sealed pattern. If he had any doubt as to the helmets not being good I should think he would refer the question.

1113. Back to the Staff? Yes; it would come back to the Clothing Board eventually.

1114. But he himself would not have a sealed pattern? No. You cannot, of course, supply a standard all over the country.

1115. If you have one sealed pattern it cannot be at ten places at once; so that the Captain of the Corps would only have to judge whether the articles supplied was a decent sort of article;—he would not be able to form an opinion as to whether or not it was in accordance with the pattern? He would, of course, compare it with others he had previously had.

1116. This is a cork helmet, is it not? [*The helmet just produced.*] I am not much of an expert in helmets. I should not be able to tell, unless it were opened up, whether it was cork or not.

1117. Having seen me tear some of the covering off and expose the interior, you have no doubt that it is a cork helmet? Yes.

1118. I suppose the contractor contracts to supply the helmets required of that pattern at a certain price? Yes.

1119. If the contractor contracts to supply helmets of that quality at a certain price, and, instead, substitutes a helmet such as this (*the helmet produced by Major Boam*) he would not be acting very honestly towards the Government? No, of course not. But this helmet was not supplied under that contract.

1120. We have the evidence of officers of your Staff that it was so? These helmets we got hurriedly.

1121. This class of helmet has been supplied to the forces for over two years at contract prices, and, presumably, accordingly to that sample;—if a contractor contracted to supply the forces with a cork helmet

G. A. French. helmet of this pattern (*the cork helmet produced by witness*), and instead of that, supplied them with a helmet of much inferior quality do you think he would be acting honestly towards the Military Department? Of course not.

14 Aug., 1900.

1122. There can be no dispute about the quality of the two helmets? I should think not.

1123. Having read to you portions of Colonel Taunton's evidence (*Questions 511 to 531*), you will see that in supplying a helmet of much inferior quality to that of the sealed pattern, without any authority or instruction and without the knowledge of the military authorities, the contractor—putting it in business phraseology—was guilty of sharp practice? I think you might put it even stronger than that.

1124. You might almost say it was dishonest? I should think so.

1125. You have had some experience of helmets in India, I suppose;—you have seen the Indian pith helmet? The pith helmet does not stand wet.

1126. Are you aware that the Imperial authorities are now providing pith helmets for the whole of their men in South Africa? No, I have not heard of it. Does it stand the heavy wet?

1127. Have you noticed any of the pith helmets brought back by the returned soldiers? I have not carefully examined them.

1128. The helmet I show you now you will see is a genuine one;—it has the stamp "Mounted Infantry, B Division, No. 235," and the name of the trooper, "Walter Kavanagh";—I may tell you I received it from the very man himself, as he took it off his head when replacing it with a new one;—you have no doubt, in your own mind, that it is the same make of helmet as this one (*the helmet produced by Major Boam*);—you can see by the frame that it has not had particularly bad usage? I should say it was damaged by water.

1129. Do you think that is the sort of helmet with which troops should be supplied;—a helmet in such condition after two months' wear? Certainly not. This accounts for it—it's not being according to pattern.

1130. You can see also that it has lost its colour and has become almost white? Yes; it is not the proper khaki colour; the colour of the pattern is darker.

1131. And it has lost its stiffening? Yes.

1132. Wearing a limp helmet like it when cantering would not give troops a specially elegant appearance? No.

1133. That is the best one after two months' wear. This I think is the worst one. I do not say that it has had the very best of treatment? (*Helmet shown to witness.*) It has been burnt inside I think.

1134. From your experience did you ever see a worse helmet? No I have never seen anything like it.

1135. When the troops were going away, although Mr. Anderson had been supplying this helmet to the partially paid and volunteer forces, did he, apparently with the object of further deceiving you, produce a pattern helmet and explain that he would supply that helmet at a certain figure? I do not know that it was exactly the same as this.

1136. That is the pattern which it is alleged you approved of. We got this from Major Boam, who had it at the School of Musketry, and the evidence is to the effect that you approved of that helmet, presumably, as the only helmet that could be supplied? So I was given to understand, that we must take this or nothing, there being no time to get anything else. I knew better helmets could have been got if there was time.

1137. At the same time Mr. Anderson did not inform you that he had been supplying this helmet to the forces previously? No; I thought this was a new thing. It was not very much of a helmet to look at, but we had to take it or leave it.

1138. It was a question, practically, of accepting this helmet or doing without one? Yes.

1139. When you looked at the helmet I do not suppose you had any idea of the sort of material it was made up of? No. I had some of them put under water to see how the water affected them, especially as to retaining the colour. That test appeared satisfactory. I suppose when this helmet you have shown me got soaked through it lost its colour.

1140. If you had had the inside turned out, and had seen the stuff of which it was composed, you would have hesitated before approving of it? I should think so—yes.

1141. How was it you came to decide upon adopting helmets? It was cabled out that some of the Victorians were fired upon by some of our own people—cabled out from London—and I went into the question with some of the senior officers, and considered that it would not be advisable to take such a risk as that in fitting out our men, and I said we had better fall back on helmets, the same as the British army had. That is how we came to get them at all.

1142. You had no official intimation from the British authorities? No; there was only just the cable.

1143. A cable appearing in the newspaper? And, of course, I considered that in adopting the headdress worn in the British army I would be on the safe side.

1144. All the information you received was a short cable appearing in one of the papers? Yes; I think it said that some of the Victorian troops were just on the point of being fired on by some of the Queenslanders.

1145. Anyhow, you had no official information? Nothing beyond that.

1146. Did it ever occur to you that you might have cabled to the Commandant at Cape Town, asking whether it was advisable that our men should be fitted out with helmets? No; because, as I say, in fitting them out with helmets, the same as the British troops, I knew there could be no serious objection to that. And then there was so little time for anything, even asking questions.

1147. Have you noticed anything in the newspaper at any other time about one regiment of British troops firing on one another by mistake? At a long distance, where they cannot see the men, that will occur at any time. But, at short range, where you can tell a helmet from a hat, it is very different.

1148. Are you aware that the Boers, generally speaking, do not wear uniforms? I understand they generally wear the wideawake hat.

1149. Are you aware that they do not adopt the khaki uniform, but fight in all sorts of clothes—plain clothes in fact; that some of them wear moleskin trousers, some tweed trousers, some black coats, some light tweed coats—in fact, just the ordinary every-day clothing that a farmer or man of any other calling might wear? Yes. A helmet would stand out in contradistinction to a hat at a moderate range.

1150. But at a short range, where you could clearly distinguish that a man was wearing a helmet, would you not also be able to tell whether or not he was wearing a khaki uniform? I think it is doubtful; because, if the men were lying down, you would only see their heads.

1151.

1151. Has it come to your knowledge, from what you have read in the papers—the same as it came to your knowledge about the hats and the helmets—that in several instances one portion of the British regiment has fired upon another portion? Yes. G. A. French.  
14 Aug., 1900.

1152. So that, after all, the adoption of the helmet is not always a protection against such an occurrence? Of course not; only it is a protection at short ranges, that you can distinguish in appearance between one and the other. Troops have often been fired at at long range by their friends.

1153. Are you aware that the Canadians continue to wear the soft hat? I have no particular information about them.

1154. Are you aware that the City of London volunteers, the Yeomanry, of whom there are many thousands, still continue to wear the soft hat? Yes. Our last contingent took the hat again, and we were sorry we ever left it off.

1155. In this case, I think, the Field Service hats were obtained—the hats were actually bought? I do not think we were committed to pay for them; but I would not be certain on that point.

1156. According to the evidence of Major Boam 905 Field Service hats were supplied, while the number of men was only 614? There were instructions to send spare material. I rather fancy that some of the hats remained in stock and did not go.

1157. But it seems that the hats were ordered, and were ready? That is possible.

1158. The artillery are supplied with a revolver, are they not—I mean the gunners and others? No; only a few of the mounted non-commissioned officers carry revolvers.

1159. Does not every artilleryman carry a revolver? No. The field artillery carry a few spare carbines on the limbers.

1160. If one of your staff has given this evidence,—“With regard to the ‘A’ Battery they were supplied with revolvers? Yes.”—that would not be a correct answer? It was not the custom in the Royal Artillery to supply drivers or gunners with revolvers; I could not say off-hand what number of men get revolvers, but there is a certain proportion in all mounted corps that carry revolvers.

1161. Have you had a look at the Mauser pistol? I have seen a pattern one.

1162. What do you think of it? I think the principle is very good; but in the case of the one I saw the bullet was so small that I do not think it would be effective to stop a man who was close to you. It has no stopping power. It would kill the man eventually—he would die of the wound—but that would not be much satisfaction to you, after he had perhaps returned your fire.

1163. Are you a bit of a revolver-shot yourself? Not much.

1164. Have you tried the Mauser? No, I have not; but the principle of the Mauser seems a pretty sound one.

1165. If the whole, or nearly the whole, of the British officers at the front at South Africa have armed themselves, at their own expense, with a Mauser revolver, it would appear that they believe it to be the much superior weapon? I should think it would be very much so, only my objection is, from what I saw, that it has such a very small bore.

1166. But if the British officers, who have had a great deal of experience, discarded the Webley and provided themselves at their own expense with the Mauser, it would appear that the latter is the better weapon? Yes, it has many advantages; it is of course lighter, and so on. The few revolvers we issued were of British Service pattern.

1167. By the way, how do you arrange for the inspection of revolvers, rifles, and other ordnance when purchasing from Home;—you have some sort of examination? Yes; those are all thoroughly inspected. When they arrive here a Board sits at the Ordnance Store, and examines the stores as they arrive. Then a portion of ammunition is taken from every consignment and tested on the rifle-range before it is passed.

1168. Do you have anyone representing you at Home in regard to the purchase of stores? We rarely take anything in the way of warlike stores unless it has been passed by the Imperial Inspection Branch.

1169. With regard to the question of pay—on this subject there is a General Order, No. 112, dated the 25th October;—we will take first, “Privates and Buglers”—does that mean that privates would receive 4s. 6d. per day? One way or another, yes.

1170. Did you prepare the estimate submitted to the Minister of Defence or the Treasurer on that basis? Yes.

1171. So many men at an average of 4s. 6d. and so many officers at the different rates specified? Yes.

1172. Did you then know that the Imperial authorities were going to pay Imperial rates to those men in South Africa? Yes; we took credit for that as a deduction.

1173. If you look up the papers of the 26th or 27th December I think you will find that you sent some cables to the Imperial authorities, two months after this, asking them whether they were paying the men or whether they intended to pay them? Yes—that is, if they were actually paying the men.

1174. So that on the 26th December you were uncertain whether the Imperial authorities were paying them or not? We were not certain whether the men were actually getting the money. We, of course, gave the men an advance of pay when they left here.

1175. You granted them a month's advance? I think that was it. I think it varied, but I think it ran to about a month.

1176. That would, practically, land them in South Africa? Yes, with a month's pay in their pocket.

1177. They would get the pay here, but it would take them a month to get to South Africa? They could not spend it on board ship.

1178. Do they not run canteens on board ship? Yes.

1179. The general understanding was that the whole of the men volunteering for service in South Africa should receive, altogether, 4s. 6d. a day? Yes.

1180. What do you make of this note, signed “John See,” attached as a Minute to General Order 112:—

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of Officers and Warrant Officers of the General and Permanent Staff or Permanent Forces selected for service in South Africa, receiving the rates of pay which they now draw (unless employed in a higher or lower capacity), with the usual allowances, and of Non-commissioned Officers and men receiving their present rates of pay and usual allowances, with the addition, while actually on service in South Africa, of Imperial rates.

That only applies to Officers and men who were in the permanent employment of this Government—General and Permanent Staff. It would include the Permanent Artillery.

1181. So that, after all, the whole of the men did not leave here under the same payment? No; there was a distinct line of difference drawn between permanent men, who had not to chuck up work, and men who had to do so, and who would have to hunt round for work when they came back. We had to assume

G. A. French. that the Permanent men were on a better footing in that respect, inasmuch as they never lost a day's pay but stepped from one job into another, and would step back again.  
14 Aug., 1900.

1182. But do you think it was a wise policy that men in the same Company, fighting together in the same rank, should receive different rates of pay? It is not as bad as that when you come to look into it. That hard-and-fast rule applies to the whole of "A" Battery. Then there is the question of the odds and ends—men who came out of the Permanent Force and went into something else.

1183. A great many men of "A" Battery, including a number of your artillery drivers, were taken into the Army Medical Corps? Yes.

1184. Therefore they would only get 3s. 5d. a day—that is 2s. 3d. and 1s. 2d., while other drivers driving alongside of them would get 4s. 6d.? As a matter of fact a whole lot of them will only be drawing Imperial rates of pay, so that the actual cash drawn by them will be the same in South Africa, and when they come back—that is the point I have talked over with Colonel Roberts—we consider that that General Order is wide enough to let the Government allow these men to avail themselves of those higher rates if they wish, because they practically have allowed it in the case of returned officers. There would not be many cases of that sort; there might perhaps be sixty or seventy.

1185. It will affect the whole of "A" Battery? No; they are all working by themselves.

1186. But I mean they will all draw the lower rate? Yes; the settlement does not occur until they come back.

1187. But you only contemplate, as far as that goes, paying them, with the Imperial rate added, 3s. 5d.? I do not think they will have any further claim than that; they are not at all on all-fours with the ordinary Volunteers.

1188. Do you know the rates the Imperial Government are paying in South Africa—in Cape Colony and Natal? They are paying pretty high rates. I judge from what they paid the last Bushmen's Contingent, whom they allowed 5s. per day.

1189. Are you aware that they pay them 7s. 6d. to 10s.? I think that includes the keep of themselves and their horses.

1190. You are now referring to the Police; but take Brabant's Horse, are you aware that the Imperial Government pay those men something like 7s. 6d.? I had seen statements made but I did not know. They paid them pretty high, I thought.

1191. And Lock's Horse, Roberts' Horse, Kitchener's Horse, 8s. clear pay, everything else found? It seems a very good rate of pay.

1192. And the Yeomanry Scouts are also paid 8s.? That must compare unfavourably with their own Yeomanry out there.

1193. You are aware that this Colony has lately dispatched a small force to China? Yes.

1194. That being a Naval force, I presume you had nothing to do with it? No; we only sent some twenty-five men, whom they called Marines.

1195. Are you aware that they are receiving at the rate of 7s. 6d. per day? Yes; I saw that in the papers.

1196. From your knowledge and from reading private communications received, have you come to the conclusion that the campaign in the Transvaal has been a trying and a heavy one for both men and horses? Yes; very.

1197. One of the most trying campaigns we have ever read of? Yes; because, although the climate is fine the men have been without tents, often without blankets, and exposed in many ways.

1198. And they must have suffered much more severely than men in other campaigns, being very often short of food, owing to the great distance they had to cover, and the long lines of communication which had to be kept open? Yes.

1199. So that it has been a very trying campaign? Quite so.

1200. Under these circumstances, do you not think that, as far as remuneration to those who volunteered is concerned, this Colony ought to be something like equal to Cape Colony and Natal as regards the rates of pay? I should think so—if they wished to do it, of course.

1201. And with what we are doing in regard to those whom we are sending to China? Yes.

1202. You are in a fair position to form an opinion. Do you think that those men whom have gone to China are likely to have a more trying and difficult time than those who went to the Transvaal? No; I should think a great deal less so.

1203. That is very probable if they are on board ship? They would be comfortably housed and fed and so on.

1204. They would not have to sleep out without tents and in heavy rain? Probably not.

1205. Not if they are on board ship? No.

1206. *Mr. Meagher.*] Are they not to be used as a land force? I do not think they would be very far from the ship. Take the whole distance to Pekin—it would not be many days' march, not a hundred miles.

1207. *Chairman.*] In regard to climate, I suppose 80 per cent. of the men who have come back from South Africa suffered from enteric fever? I should think so. Of the last lot of fifty-six, only four were wounded.

1208. That shows that the South African climate is not a healthy one? The climate is always considered good enough, but enteric fever and dysentery are the curse of large camps.

1209. As far as you are able to judge, there is no reason why the men going to China should receive 7s. 6d. a day while those who have gone to South Africa only receive 4s. 6d.? I did not like the comparison, I can tell you.

1210. You see no reason why it should be so? No; I do not.

1211. You sent a letter to the Commandant at Capetown on the subject of the pay of the officers, instructing him not to pay twenty officers of the Permanent Force their field allowance, but if they chose they might be permitted to draw what is known as the South African allowance—you know the communication to which I refer? Yes; I have a copy of the letter, which I hand in. It is as follows:—

New South Wales Military Forces,  
Head-quarters, Sydney, 20 February, 1900.

From Major-General G. A. French, C.M.G., R.A., Commanding New South Wales Military Forces, to The General Officer Commanding, Capetown.

Sir,

Subject: Pay to Officers in permanent employ, Statement *re.*

I have the honor to submit the annexed statement showing names of certain Officers in permanent employ of this Colony, whose salaries are being paid in full by the Military Department here. I

## ON THE ADMINISTRATION OF THE MILITARY DEPARTMENT.

I would be much obliged by your passing on this statement to the proper quarters, so that duplicate payments may not be made. G. A. French, 14 Aug., 1900.

In accordance with arrangements made by the Imperial Government with the Government of New South Wales, it is understood that pay and allowances on the Imperial scale will be granted by the Imperial Government. It would, therefore, appear that the Imperial rates, in the case of Officers on the annexed list, should eventually be credited to this Government, and not paid to individual Officers.

I may further mention that "Field Allowance" is being paid by New South Wales to all these Officers; but if the South African "Colonial Allowance" is being paid to Imperial Officers, it may, if there is no objection, be paid direct to the Officers on the annexed list.

I have, &c.,  
G. A. FRENCH, Major-General,  
Commanding New South Wales Military Forces.

## [MEMORANDUM.]

From the Military Secretary, Victoria Barracks, Sydney, to Major-General French, C.M.G., R.A.

20 February, 1900.

THE following Officers are receiving their pay and allowances as provided upon the Estimates, and it is understood that they should not receive pay or allowances from the Imperial Authorities while serving in South Africa. Should they be in receipt of any pay or allowance, other than what is provided by the New South Wales Government, these amounts should be credited to the New South Wales Government.

*Special Service Officers.*

Lieut.-Col. M. W. Bayly, Infantry.  
Major W. T. Bridges, Artillery.  
Captain H. Dangar, Artillery.  
Captain A. P. Luscombe, Artillery.  
Lieut. R. L. Jenkins, Artillery.  
Lieut. C. W. Lamb, Artillery.  
Hon. Major and Capt. P. Owen, Engineer Staff.  
Captain L. H. Kyngdon, Artillery.  
Lieut. G. J. Grieve, Infantry.  
Captain A. P. Gribben, Veterinary Department.

*Officers with Units.*

Colonel (Major) S. C. U. Smith, Field Artillery.  
Capt. (Lieut.) E. A. Antill, Field Artillery.  
Lieut. S. E. Christian, Field Artillery.  
Lieut. H. St. J. Sweetland, Field Artillery.  
Lieut. H. J. C. Taylor (attached), Field Artillery.  
Colonel W. D. Campbell Williams, Medical Staff Corps.  
Capt. and Temporary Major G. L. Lee, N.S.W. Lancers.  
Capt. J. M. Antil, N.S.W. Mounted Rifles.  
Lt.-Col. (Major) G. C. Knight, Mounted Infantry.  
Captain M. A. Hilliard, Mounted Infantry.  
Capt. J. G. Legge, Infantry.

CHAS. F. ROBERTS, Colonel,  
Mil. Sec. and D. of A. and S.  
N. S. Wales, 20/2/1900.

Submitted.—G. A. FRENCH, Maj.-Gen., Commanding N.S.W. Forces, Sydney, N. S. Wales, 20/2/1900.

It applies wholly to the Permanent officers, whose pay was already provided. The object was to avoid duplicate payment. We assumed that each of these officers, unless provided otherwise, was getting the Imperial rate of pay in South Africa. Some left the whole of their pay here, and then expected to get paid there. Of course anything paid on behalf of their services should be re-credited to our Government. 1212. This communication deals only with Permanent officers? Permanent and Staff officers whose salaries were fully provided by this Government, and in most cases higher than what could be drawn there.

1213. You made no such provision in regard to the Volunteer Force? There was no liability of their being paid twice over.

1214. Could you explain what constituted the difference? The salaries of these officers were already provided on the Estimates. They were allowed to take those salaries, even though they were more than what they were entitled to on their rank there. If an officer left the whole of that money to be drawn here, he could not expect to draw it again in South Africa. All payments on behalf of the Imperial Government would be recredited to this Government.

1215. Take for instance a Captain; he gets 3s. 6d. field allowance? That is included in his pay here.

1216. But he only gets field allowance when on active service? The whole time on active service.

1217. In time of peace they do not draw this field allowance? No, they do not draw field allowance here in time of peace.

1218. Then the salaries provided on the Estimates would only provide for their salary, minus field allowance? Certain allowances are included in the salaries on the Estimates, as well as pay.

1219. I want to know what is "field allowance." Am I right in supposing that it is a special allowance provided for officers when on active service, when they take the field—when actually fighting or preparing to fight? Yes.

1220. That field allowance of 3s. 6d. would not be provided for in our Estimates for the Permanent officers? No; because their pay was supposed to be big enough to include all that.

1221. Your letter to the Commandant in Capetown provides that Imperial Authorities are not to pay to the officers the allowance of 3s. 6d. per day, say for a Captain? Which has been already paid by this Government.

1222. You gave instructions that they were not to pay that to the individual officers on service at the front? It is to be recredited to this Government to avoid duplicate payments.

1223. How are you going to pay that 3s. 6d. per day—I am talking now of the Permanent officers—in addition to their permanent salary? Their whole pay and allowances cover the field allowance as well as pay.

1224. But in time of peace we do not provide for a field allowance in their pay. While there is a sum of 3s. 6d. a day provided as field allowance for an officer going on active service, you communicated specially with the Imperial Authorities in Cape Colony asking them not to pay that 3s. 6d. to the officers? Credit this Government with it, for this Government has practically already paid it.

1225. How had the Government paid it? In the bigger salary they let them take.

1226. But they had that salary in time of peace, and there is a special allowance of 3s. 6d. per day when on active service in time of war? Put it this way: Suppose you are a Captain in the Permanent Force, going on service. We say, if you go you will get 20s. a day pay, and 3s. 6d. deferred pay, or field pay. But you are drawing your pay and allowances, worth 30s. per day—which will you take? You will naturally take the higher rate. I will always maintain that the Imperial Government should recredit this Government that amount.

1227. But you have not got the drift of my question; the higher rate was the rate which was being paid in times of peace;—is not that so? Yes.

1228. Because we in the Colonies pay a higher rate than they do in the Imperial Army? Yes.

1229. There is always a special or field allowance made to officers on active service, and, I suppose, as a matter of fact, to privates too? In some way, I suppose—an equivalent for it.

1230.

G. A. French. 1230. So that both officer and private receive something additional when on active service? Yes.

14 Aug., 1900. 1231. Our officers having received a higher rate of pay in time of peace, presumably because wages are higher in this country,—do you think that is a reason why they should not get the field allowance which it is customary to pay to all officers in practically all countries? Then you would be at once put in the difficulty that you would have two captains, serving alongside each other, one drawing a very much higher rate of pay than the other.

1232. Did you fix the pay of a Volunteer captain at less than that of a Permanent captain? The rates of pay were all settled by the Commandants' Conference which met in Melbourne.

1233. Has there been any provision made to stop the field allowance from the Volunteer officer? No; he will get it. The letter simply applies to officers of the Permanent Force and Staff who are drawing salaries from the Government here, drawing higher rates.

1234. What is this field allowance actually for? For an officer on ordinary rates of pay getting something extra to fit him out when he goes on service—really a sort of extra douceur, as it were.

1235. Is it not really for extra expenditure incurred in actual service—in actual fighting? I do not know exactly the points the Imperial Government had in view in originally fixing it. Theoretically, it is to help him to get his outfit, and so on.

1236. If it is paid at the rate of 3s. 6d. per day, it would appear that it was because he was going to incur extra expense while at the front;—if it were in order to supply an outfit, would it not be more reasonable to furnish the officer with a certain amount in actual cash, to start with? When the Imperial Government issue field allowance they usually issue about three months' allowance in advance.

1237. Although you stopped payment of the field allowance by the Imperial Government, did you make any provision here to have it paid to the officers by the New South Wales Government? It is in their salaries.

1238. Therefore, the stopping the payment of the 3s. 6d. might have left every officer practically stranded? I do not see why it should, because they were getting more pay actually than the others they were serving with.

1239. But they were not getting any—it was being kept here? Because they left it here themselves. If they had wanted their pay there, they would have got the whole of it.

1240. As a matter of fact, have you sent a single copper to South Africa to pay these men? Not unless they left orders for it to be sent.

1241. Whether they left orders or not, has one single penny gone? I should think in some cases it has, but I cannot tell you positively. That would be a matter for the Paymaster. Whatever their orders were, the money was applied for.

1242. If the Military Secretary says that not a single penny has been forwarded for their payment in South Africa, I suppose he would be in a position to speak positively? Yes; he would know.

1243. *Mr. Meagher.*] Do I understand that the Volunteer officer in South Africa draws his field allowance and the Permanent officer does not? Because the Permanent officer's salary covers, not only his field allowance, but a good deal more.

1244. *Chairman.*] Suppose a Volunteer officer left an order here to pay his money, say, to his wife; take the case of a lieutenant—an officer of the purely Volunteer Force;—his pay, with field allowance, would be 19s.? Yes.

1245. If you accepted an order from him to pay his wife 19s., I suppose you would consider yourself under some sort of obligation to pay her that sum, just the same as you would in the case of the wife of a lieutenant in the Permanent Force? I am rather doubtful if he would be allowed to do that, because a portion of that would be paid by the Imperial Government, and I think it would be less than that.

1246. But would it not apply in the same way to the Permanent officer? In what way?

1247. You allowed the Permanent officer to leave an order here for the whole of his pay, and you wrote specially to the Imperial authorities not to pay him anything? Because he had got that, and more, here.

1248. In regard to the Volunteer officer, if he left an order here for 19s., was it not just as necessary to communicate with the Imperial authorities, asking them not to pay the Volunteer officer anything, as he was getting it paid here? I should think Colonel Roberts would have done that, if there were such cases, and the whole amount was left to be paid here; but I rather think he stopped the Imperial rate, so that a man could not leave more, as it were, than the difference. In the case of a lieutenant, the amounts were 6s. 9d. and 19s.; he could only leave the difference.

1249. According to Colonel Roberts' evidence, you accepted orders leaving the whole amount? Yes. I should think all they would have in South Africa would be their Colonial allowance of 1s. 6d., which we did not take any cognizance of.

1250. Captain Hilliard is one instance;—supposing his pay were 30s. a day here on a peace footing, what would his pay and allowance be on active service at the front? He was allowed to draw his annual salary.

1251. Then his pay on a war footing at the front would be still 30s. a day? Yes.

1252. Therefore, he would not in any way reap the advantages of those field allowances which are made to officers when on active service? You would think so from that way of putting it; but as a matter of fact he is drawing, while on field service, lodging money and fuel and light allowance, stable allowance for two horses, and forage allowance, if a mounted officer.

1253. Would Captain Hilliard, on active service at the front, receive more money and allowances than when here on a peace footing, or would he receive exactly the same? He would receive the same; but he would get the South African Colonial allowance of 1s. 6d. a day in addition.

1254. Do the Imperial officers receive, in addition to their ordinary pay when on active service, 3s. 6d. field allowance per day for a captain and 1s. 6d., known as the South African Colonial allowance? I understand they do. All the details of these matters are in the hands of Colonel Roberts, and I have asked him whether any of the Permanent officers are getting field allowance, and this is his answer:—"All special officers leaving with Contingents have their pay calculated at their individual rate, with the addition of their allowance and field allowance of their rank."

1255. It would appear, then, that our Permanent officers have really not received any additional field allowance? They ought not to do so if their salary is in excess.

1256. But, as a matter of fact, did they? Not so far as I understand.

1257. With the exception of the South African Colonial allowance, they are not getting any allowance or additional pay outside of that which they would receive if they were remaining in New South Wales? They are in no sense at a loss.

1258-9. Have you a fair idea of the additional expenditure likely to be incurred by men on active service? G. A. French. I understand that in parts of South Africa where they require to buy things they have to pay very heavily for them. 14 Aug., 1900.

1260. Would you be surprised to learn, for example, that if they want a drink they have to pay 3s. for it? At some places, perhaps, they might have to pay that.

1261. At Bloemfontein, for instance, if they wanted to buy any ordinary article of food, such as tinned meat, they would have to pay about 300 per cent. more than the article would cost here? I have understood that generally the prices are much higher than they are here.

1262. Still you stopped permanent officers from getting their field allowance from the Imperial authorities by your communication dated 20th February? Only those who were drawing the equivalent or higher here. There was what we would call duplicate payment.

1263. But, as a matter of fact, you stopped all the permanent and Staff officers from drawing their field allowance from the Imperial authorities? If they were in receipt of an equivalent in pay and allowance here.

1264. Are there any permanent or Staff officers who have been allowed to draw their field allowance in South Africa from the Imperial authorities? I would not be certain, but I do not think so. The money should all be recovered and credited eventually to this Government.

1265. With regard to the Volunteer officers, they have been allowed to draw their Imperial rate of pay and their field allowances from the Imperial authorities? So I understand.

1266. Could you supply us with a list of the applications by those who wanted to go to South Africa as officers for commissions in the Second Contingent? I think you will find the whole of the names in the list I now produce (Vide Appendix B1.)

1267. Had you the recommending of officers for the Citizens' Bush Contingent? Only in part.

1268. With regard to the Imperial Bushmen, had you to do with the officers in that case wholly or in part? The work was mainly done by me.

1269. The recommendations in connection with the Second Contingent were made wholly by you? Yes mainly. Of course there were recommendations from various quarters.

1270. But you would finally submit to the Minister of Defence a list of the officers for his approval? Yes.

1271. In regard to the Second Contingent, were your recommendations generally adopted? I think so; I do not recollect any particular change.

1272. I see that Captain Anderson of the New South Wales Field Artillery was selected to go as lieutenant;—did he go? Yes. He was in the Field Battery, I think.

1273. Veterinary Surgeon Burrage went with "A" Battery? He was specially engaged for the Service, I think.

1274. Lieutenant Brace, I believe, was a Special Service Officer? Yes, he was in the Garrison Artillery.

1275. Did he go? Yes. I should point out that the list you are quoting from is a list of candidates. The particular officer to whom you now refer went, I believe, on the 17th January.

1276. Warrant Officer Drage is also in this list;—do you know what position he held? I believe he got a commission as second lieutenant, and was killed.

1277. I find also in the list the name of Captain Dibbs, of the Scottish Rifles, as a Special Service Officer;—his service, apparently, dates back to the 4th July, 1899? I believe he went with the Bushmen's Contingent.

1278. He was recommended as a Special Service Officer? I believe so. He went on the 28th February, I think—about the time the Bushmen's Contingent went.

1279. Had he been in the Scottish Rifles from the 4th July, 1899? I suppose he had, if that is the date mentioned in the list.

1280. I see in the list also the name of Lieutenant J. C. Garvan, of the Irish Rifles, whose services dated, apparently, from the 26th February, 1897? Yes; he was a young officer in the Irish Rifles.

1281. How long did he remain an officer of the Irish Rifles? He was in the Service for about thirteen months. I believe he left it in March, 1898.

1282. You are absolutely sure that he was thirteen months in the Irish Rifles? That is the information given me. I should think it would be about that time.

1283. Did he pass any examination for the position of lieutenant while he was in the Irish Rifles? I could not tell you without reference. He appears to have passed a portion of the examination.

1284. It is not shown that he passed the whole of it? No; but it is open to the officers to take a part of it at a time if they like.

1285. It is not shown that he passed the full examination? No.

1286. *Mr. Meagher.*] The whole of that officer's service was contained in the thirteen months during which he was in the Irish Rifles? Yes.

1287. *Chairman.*] In addition to the examination in military experience, are there any other tests required to be passed? Yes; the men are in camp, and, as far as possible, it is there seen what they can do.

1288. Many officers of foot regiments, such as the Irish Rifles, would not have had much experience in riding;—when they joined the Mounted Rifle Corps were they put through a riding test? Every officer was tested closely for riding.

1289. I suppose you did not put the officers through the shooting test? I do not think so, unless they wished to go through it.

1290. In selecting the officers, I suppose it was your desire to select the very best men? Yes, if possible; but, I may remark, that, after the first Contingents had been despatched, the conditions became much more difficult. It was very hard to get experienced officers, and many men who were experienced had not volunteered.

1291. Major Murray was the Officer Commanding the Irish Rifles? That was his position when he went.

1292. He went as a Special Service Officer, did he not? Yes.

1293. Was he first selected as an officer in the Mounted Rifles? He volunteered for that position, but the tests were not satisfactory for a Mounted Rifle Officer, and we let him go as a Special Service Officer.

1294. Was he going as a major of the mounted Rifles? As the captain of a company.

1295. But the tests you say were not satisfactory as regards a Mounted Rifle Officer? I do not think he himself was satisfied. He preferred to go as a Special Service Officer.

G. A. French. 1296. And he did actually go as a Special Service Officer? Yes.

14 Aug., 1900. 1297. If he had been a crack horseman he would, of course, have gone as a captain of a company? Probably.

1298. But as he was not a crack horseman, he went as a major—a higher rank? His own rank.

1299. *Mr. Chanter.*] Was riding the only test to which he was subjected? No; but he was not very well satisfied himself; he did not care to go as a Mounted Rifle Officer.

1300. *Chairman.*] In the case of an officer in the Cavalry or Mounted Rifles, riding would be a very important thing? Yes; especially in Cavalry.

1301. But also in Mounted Rifles? Yes; but there is a difference in the case of Mounted Infantry.

1302. *Mr. Chanter.*] Is it not necessary under those circumstances for an officer to have a knowledge of mounted drill in addition to foot drill? Yes; but our mounted drill is not difficult to learn.

1303. *Chairman.*] So far as mounted drill is concerned, a fairly intelligent man, if he put his mind to it, could learn it in a week? Yes; our mounted drill is very simple.

1304. Now, as regards Major Lenehan, was he first selected as captain in the Mounted Rifles? Yes.

1305. Was he afterwards selected as a Special Service Officer? He was selected as captain in the Mounted Rifles, I think.

1306. Lieutenant Mackellar was selected from the Scottish Rifles? Yes; the poor young fellow has been killed.

1307. I see he joined the corps on the 31st March, 1898;—did you select him as a first or second lieutenant? He went with the First Australian Horse.

1308. He had had no experience in a Cavalry regiment, apparently? No; he was in the Scottish Rifles.

1309. Purely an Infantry regiment? Yes.

1310. Did you know his age? I should think he was about 21 or 22.

1311. Would you be surprised to know he was only 19? I should have thought him older than that; he was a fine-looking fellow for that age. He passed the examination for an Imperial commission.

1312. When was that? Shortly before he went away.

1313. Was the examination for Cavalry or for Infantry? I think he wanted to get into the Gordon Highlanders.

1314. Lieutenant Mackellar was 19 years of age, he had no previous experience as a Cavalry officer, and he was promoted to be second in command of the Australian Horse? That is not exactly the way to put it. He was sent to a squadron of the Australian Horse under Captain Thompson. Lieutenant Mackellar's age had he lived would have been 20.

1315. But at the time he left he was a little over 19 years of age? Yes. But I should explain that there was a great deal of difficulty in getting officers to volunteer from the Australian Horse. In order to make up the squadron we had to promote two sergeants to officers.

1316. Do you not think a sergeant who had put in a number of years as drill sergeant, and that sort of thing in the Australian Horse, and who had had experience as a Cavalry soldier in the Imperial army, would have been more qualified to hold the rank of first lieutenant than would a boy of 19 years of age who had never had any previous experience in Cavalry? No doubt. But the appointments to the Australian Horse became a regimental matter. It was not an ordinary corps for which you could pick men from here, there, and everywhere. The Colonel of the Australian Horse submitted the whole list, and it was not interfered with.

1317. As a matter of fact, the recommendations of the Australian Horse were practically made by the Colonel of that regiment? Yes.

1318. And you did not interfere with them? No.

1319. In regard to Lieutenant-Colonel Onslow, the Officer Commanding the Mounted Rifles, I see that his service dates from the 17th July, 1891; he had experience in the Chitral expedition;—it is stated in the list which you handed in that he retired, but subsequently rejoined? I think that means that he withdrew his name.

1320. What position did he apply for? He was inclined to go as Colonel of the Mounted Rifles.

1321. Was he refused that position? I think he got the offer of some other position on the Imperial staff in South Africa, and was prepared to take that.

1322. Was it not when he was trying to go as Major of the Bushmen that he got the Imperial offer? I could not be certain about that.

1323. Had you any disagreement with him? No.

1324. He commanded the Mounted Rifles here? Yes. He had a strong claim to go.

1325. If he were qualified to command the Mounted Rifles here, would he not have been equal to the duty of Commander in this case? Yes, I should think so.

1326. Did you refuse to take him for that position? No. As far as I can recollect, he retired from the position himself.

1327. If he says that the reason he withdrew his name was that he found you were not likely to treat him fairly, and that you had refused to give him fair treatment, you could not understand such a statement? No. As well as I can recollect the circumstances, speaking from memory, he himself retired from the position.

1328. So that if he now says he was jockeyed out of the command, it would not, according to your knowledge of the case, be correct? I should not think so. I recollect pointing out to him what a better position it would be to command our own men than to take a subordinate position upon the Imperial staff.

1329. Practically as a galloper? Exactly; that is just what I told him, almost in your own words.

1330. I see here also the name of Lieutenant Dowel O'Reilly, who was four years in the Infantry, and who is now in the Reserve of Officers. Can you explain why Mr. Dowel O'Reilly was not granted a position, and why Lieutenant Garvan was granted one. Mr. O'Reilly had four years' experience, and passed all his examinations. Mr. Garvan had, on the other hand, one year's experience, and passed only portion of his examination. Had you anything against Mr. O'Reilly's character? I do not know of anything. I cannot remember any of the particulars; there was such a vast number of cases to be dealt with.

1331. Still you would think that an officer of four years' experience, who had passed all his examinations, would be preferred to an officer of one year's service who had not passed a full examination, other things being equal? Quite so.

1332. I come now to the case of Major P. T. Owen, a Special Service Officer on the Engineers' Staff;— G. A. French. his service dates back to the 6th September, 1884; he must have joined the service when he was very young? My impression is that he was out of the service for some years, and afterwards came back again. 14 Aug., 1900.

1333. He is on the Engineers' Staff? Yes.

1334. How long is it since he obtained the rank of major? It was only a temporary rank. I see that the date is August, 1899.

1335. How many majors have you, generally, in the Engineer Corps here? I think there are only about three.

1336. I mean on the Permanent Staff? I think there are only Major Lee and Temporary Major Owen.

1337. Is it the custom when an officer applies for special service, or for service, that he should be medically examined? Everyone going on special service should be medically examined.

1338. Could you discover the name of the medical man who examined Major Owen? Yes.

1339. Will you make a note of it? Yes.

1340. You know Major Owen? Very well.

1341. Does he look a strong, robust, healthy sort of man—the sort of man who would stand a campaign? No.

1342. Does he, as a matter of fact, look quite the opposite? From what I know of him I should say that he was inclined to go sick very easily. I advised him against going when I knew that he wanted to go.

1343. I suppose you are aware that he has now been invalided home from South Africa? Yes.

1344. Do you know how long he stood active service there? It must have been a short time. I am not sure of the exact time, but it was perhaps not more than a couple of months.

1345. Would you be surprised to learn that it was a much less period? I have no official information as to what he went home for. I understand, however, that it was not a case of enteric fever.

1346. Do you know where Major Owen was on service when in South Africa? He had some temporary staff appointment. My instructions to him were to endeavour to pick up as much engineering knowledge as he could; but I do not think he got much chance in that direction. I think he was sent towards Kimberley after it was relieved.

1347. And remained there until he was sent home? Yes.

1348. In addition to sending Major Owen, I believe the Government sent a servant for him? I think he was upon exactly the same footing with any other Special Service Officer in that matter.

1349. What rank does an officer require to hold before he can take a servant? Every officer is allowed a servant.

1350. The Special Service Officers who went from these Colonies took servants with them? Every officer may not have taken a servant, but he was entitled to take one, if he liked. Perhaps the officer might in some cases have determined to pick up a servant in South Africa.

1351. The Government not only provided Major Owen with a servant, but they provided him also with a horse? As a field officer he would be allowed a horse. I think that in the case of Special Service Officers the Government allowed the whole of them a horse.

1352. I believe he also cost the Government his fare to Capetown;—do you know how much that would be? I should think it would be about £25. I was under the impression that he went in one of the "troopers."

1353. The fare for his servant would be £14 14s., would it not? I rather fancy the Government must have had some rate for servants. There would probably be several others going at the same time.

1354. As a matter of fact, they paid full rates. I suppose the horse would cost another £12 12s.? Yes.

1355. So that there would be an expenditure of 56 guineas to land Major Owen at Capetown, and, after something like two months' service in the neighbourhood of Kimberley, he was invalided home. Do you know what Major Owen's rate of pay, and also what his allowances would be? As an officer in the Engineers' service he would get the consolidated rate. I suppose it would come to something like £500 a year.

1356. So that, in addition to the cost of 56 guineas to land him, his servant, and horse at Capetown, his pay amounted to £10 a week, and there was pay at the rate of about 24s. or 25s. a week for his servant. There would also be the cost of the return fare of the servant, presumably? Yes, if he did not come in a "trooper."

1357. The Major was paid during the whole time he was in South Africa, and his servant was paid during the whole of the time he was there. Can you tell me how long Major Owen could remain away as an invalid on full pay? If he was certified by the doctor as ill he would continue drawing pay; but from what I have heard he is on his way out. However, I have no official information on the subject.

1358. I am anxious to ascertain the full possibilities of the affair, because they appear to me to be vast. Suppose that Major Owen were of a weakly constitution, and that he was for years unfit to resume duty, would he be able to continue drawing his pay so long as he could obtain a medical certificate to the effect that he was unable to resume duty? Not according to the Imperial regulations.

1359. But according to our regulations? Under our regulations he would be put on half pay.

1360. He is on full pay now? Yes, temporarily.

1361. For how long could he remain on full pay? There would be no urgency up to (say) six months.

1362. Could he draw the full pay after that date? After that date the Medical Board would recommend what should be done with him.

1363. The question would be decided by an Imperial Medical Board? Yes.

1364. So that if an Imperial Medical Board decided that we should pay Major Owen full pay for two or three years he would receive that full pay? They would not be likely to do that.

1365. But if they liked they could do it? Six months is as much as is ever recommended. Afterwards the man has to come up again for examination.

1366. But suppose the man keeps coming up for examination, and is found still unfit for duty? That might be the case of course.

1367. Did you recommend Major Owen for special service? The matter eventually came before me, but a good deal of pressure was brought to bear by different officers who were anxious to get away on special service.

1368. Do you mean political pressure; and, if so, who applied the pressure? That I cannot tell.

1369.

- G. A. French. 1369. If there were pressure you must know from what direction it was coming? Various officers who were anxious to go tried to pull all the wires they knew of—Ministers, ex-Ministers, and so on.
- 14 Aug., 1900. 1370. But the whole responsibility devolved upon you if you recommended the men? Did any of these wild politicians approach you as regards any of the officers? Personally do you mean.
1371. What I mean is this: Did they come along and suggest that, for the sake of old times, you ought to make a certain recommendation which you did not feel inclined to make? I cannot recollect anything of the sort. I used to get letters of recommendation.
1372. In regard to Major Owen, I presume that he put in an application for special service? I suppose he did.
1373. That is the only way in which the matter could come before you, is it not? I do not know. There was a good deal of worrying on the part of Members of Parliament in recommending certain men. I could not say whether Major Owen actually sent in an official application, but the matter could easily be hunted up.
1374. Could you tell us whether any politician—Minister, ex-Minister, or Member of Parliament—approached you in any way with regard to the sending of Major Owen as a Special Service Officer? I cannot remember at this moment that anyone did so.
1375. You do not remember any Minister approaching you? I cannot say that I do. I often received notice that such-and-such a person was an applicant.
1376. If you have no recollection of anyone approaching you in regard to Major Owen, or of any special application being made by Major Owen himself, you must have appointed him from your own knowledge of him? The matter stands in this way: Major Owen is a very good officer, and I should naturally be willing to further his interests. Many of the permanent officers were very anxious to go, and I should not be likely to stand in their way.
1377. Still, Major Owen has not been a success as a Special Service Officer. Without his taking the fever, or without getting wounded, it was necessary for him to be invalided home. He appears to have been in a condition of general breakdown? That is the practical result. I am reminded that the Chief Secretary decided that Major Owen was to go, and in effect added his name to the list of Special Service Officers.
1378. Is that fact disclosed by your papers? I cannot say at this moment, but I presume so.
1379. *Mr. Meagher.*] Would the Chief Secretary be likely to add his name to the list without consulting you? I think it is quite likely he may have spoken to me with a view to ascertain whether I had any objection. Of course I would not be likely to have any, because Major Owen is an officer who is thoroughly well up in his work.
1380. *Chairman.*] If you had any objection to Major Owen going as a Special Service Officer, I suppose it would be in the rights of your position to protest so far as you were concerned? Yes; but I do not think in the circumstances I should be likely to do so. I had no objection to him.
1381. If you had had any objection you would have entered a protest? I think I remember saying to Major Owen that I did not think he was strong enough to go, but I did not make any official protest.
1382. With regard to Special Service Officers going out, or the officers of companies going out, do they find their own equipment? They were generally given a special sum with which to find their equipment.
1383. The maximum amount being what? In the case of a mounted officer, £25; in the case of a dismounted officer, £20. There are certain exceptions to officers drawing the full amount, but I will hand in the conditions. (*Vide Appendix B2*).
1384. Do you know what has been Major Owen's experience as an engineer? He has had varied experience. He knows a good deal about electrical engineering, and having been with Mort & Co. for some years, he knows a good deal of marine architecture.
1385. I suppose that you are aware that there are certain qualifications for different branches of engineering? Yes.
1386. Do you know what Major Owen's qualifications were? I see from the Army List that he was assistant engineer for military works in January, 1890.
1387. But does he belong to the Royal Society of Engineers for example;—has he passed the necessary examination? I do not think he has passed that examination, but he passed through a long course of submarine mining at Chatham and Portsmouth in 1894. I am told that he is an associate of the Architects' Institute, and also of the Engineers' Institute.
1388. What position does that carry with it? I do not know.
1389. I notice also in this list the name of Major Lee? He also passed through a course of submarine mining at Chatham and Portsmouth. He also passed examinations in electricity and the Brennan torpedo. That is the line in which he is now engaged.
1390. Is Major Lee or Major Owen the more expert man, taking their examinations as a test? Apparently as regards submarine mining, they have passed through the same course; they are probably both good in that line. But I should think Major Lee, taking him all round, would be the better man for the submarine mining of which he is now in charge.
1391. I see also in this list the name of Lieutenant R. A. Price, of the 2nd Infantry Regiment; he was not selected. His service began on the 11th June, 1898; did he pass his examination as lieutenant in full? I do not think so. If you want the full particulars I could let you have them.
1392. How do you account for Lieutenant Garvan being accepted, and Lieutenant Price being left out? Did Lieutenant Price want to go?
1393. Was it because he could not bring the same amount of pressure to bear? That I cannot say. What I have said with regard to pressure does not apply so much to these officers as to Permanent Officers who wanted to go on active service.
1394. If Lieutenant Price had brought sufficient pressure to bear then, you think he might have managed to get away? That I cannot tell. You have in front of you a big list of officers, and each name has to be carefully examined to see how the applicant would be likely to shape at his work, and so on.
1395. I see here also the name of Lieutenant Parton. He is said to have been an Engineer in the Kaffir and Zulu Wars in 1879, in the Transvaal War of 1880–81, and in the Nile Expedition of 1884–85. This officer with all these qualifications is refused? I think you will find that he is one of the Warrant Office instructors here. He was a Warrant Officer when I came, and I had him promoted.
1396. Apparently he has had more experience than any one I can see in this list, still it was not thought advisable to send him? We had to keep a certain number here. There were many officers who might have gone, but we could not allow them to go. There is Major Lee for example.

1397. Then you did not invariably send away the best officers but rather those you could best afford to spare? We had to keep a certain number of officers. Major Lee, for example, could not be allowed to go. It would not be easy to get a man to put in his place. G. A. French.  
14 Aug., 1900.
1398. *Mr. Meagher.*] As a matter of fact you yourself were anxious to go? Yes.
1399. *Chairman.*] Major Lee is of a more robust constitution than is Major Owen; could he not have been allowed to go while Major Owen remained here, and took charge of the submarine mining, in which case he would have received more careful treatment? It might have been done, but I do not think such a change was proposed.
1400. Did you recommend Colonel Smith to go in charge of "A" Battery? Yes.
1401. I suppose that he is looked upon as an excellent officer? As one of the best officers in the Artillery.
1402. What sort of reputation does he possess among artillerists? Excellent.
1403. You would not be surprised to hear that he is regarded as one of the four or five best artillerists in the British Army? Not at all surprised.
1404. I come now to Major Savage; what rank does he hold here? He is a Major in the Garrison Artillery.
1405. Is he a young man? No; none of the Majors are very young men.
1406. How old is he? I think he will be 50 in October.
1407. Is he a slight, active, athletic kind of man? No, but he has plenty of energy.
1408. In doing what? At his own work; I call him a good officer.
1409. Do you think he could walk 27 miles a day carrying 60 lb. of swag? No: he is not at all that kind of man.
1410. If his horse died could he walk 6 miles and carry his accoutrements? I think it would trouble him. My idea in letting him go was that it was probable that a siege train would be sent up to Pretoria, in which case a garrison artillery officer would be wanted.
1411. When a soldier reaches the age of 50, it is rather to the interests of the country to allow younger men to get experience? It is more desirable, certainly.
1412. I find here the name of Captain Shipway, who has fifteen years' service, and who went through the Soudan campaign; he was apparently rejected, no reason being assigned. A man of that service is rejected while Lieutenant Garvan and others who have had twelve months' experience in a volunteer regiment are accepted? I do not think the case should be stated in that way. It is necessary in a force sent away from here to see that various interests are represented. It is not desirable to take the men all from one regiment or from one corps.
1413. I notice also the name of Captain J. F. Thomas, of the Tenterfield Rifles? He had a good claim to go. He was taken from the command of one of the squadrons of Mounted Rifles at Tenterfield.
1414. Why was he rejected? I was under the impression that he went. Now I come to think of it, I believe he afterwards found that he could not go. He is a solicitor, and he found that he could not close up his business in time. To the best of my recollection he was sent away afterwards with the bushmen.
1415. Who really was responsible for the appointment of officers for the Bushmen's Contingent? My instructions were to afford the Bushmen's Committee every assistance in my power.
1416. To give them the benefit of your knowledge? Yes; to assist them in every way.
1417. I suppose they asked for your recommendation as regards the appointment of officers? Yes. When we reached that time we could not fall back upon the Service and take officers out of it because there were not enough of them, and in connection with the force of bushmen, it was expected that those of bush experience, even if they had no military experience, should have the first show.
1418. Did you suggest to the Bushmen's Committee any test to which either the bushmen or the officers should be put? Yes, they were very closely tested indeed in riding. An independent committee was appointed to do that.
1419. You are speaking, I presume, in regard to the officers. In regard to the men, what was the first qualification decided upon before they were allowed to go into camp? The bushmen put their own conditions first.
1420. What were they? I am not certain.
1421. Are you aware that the men had, first of all, to prove that they were bushmen? I believe that that was the idea.
1422. Was the same test applied to the officers? I am not sure.
1423. Would you call Lieut.-Colonel Airey a bushman? No; he received a distinct appointment.
1424. Although you admit that no private could enter the camp to go through the necessary tests unless he could first produce evidence that he was a bushman, you say that the same test was not applied to the officers? I think it applied largely to the officers; but the question of the Commanding Officer was, as you perhaps remember, a crux for many a long day.
1425. I think that was not the only crux in one way and another. You would not call Colonel Airey a bushman? No; but he was a good rider.
1426. Have you noticed telegraph boys riding round the city? Yes.
1427. Have you noticed that some of them are excellent riders? Yes.
1428. Have you noticed also that butcher boys are sometimes excellent riders? Yes.
1429. I come now to Mr. Robertson; was he a bushman? No.
1430. What was he? An Officer of Marines on one of the ships. His ordinary drill would be the Infantry Drill.
1431. He was put second in command? He was in command of one of the squadrons.
1432. You certainly could not call him a bushman? No; but he was understood to be a good rider and a good officer.
1433. Then there was Lieutenant Westgarth; was he also a bushman? I should not think so. He was a smart young officer in the permanent force, and a good rider.
1434. Could you give the Committee a list of the officers you recommended in connection with the Bushmen's Contingent? I am not sure that I could. As a matter of fact, every name was talked over by myself and a representative of the committee. There was a very long list.
1435. I believe a gentleman named Allen went as Lieutenant? I cannot place him just now.
1436. His father, I believe, is a manufacturer of soap at Paddington? I cannot place him.
1437. Could you tell me of one officer in the Citizens' Bushmen's Contingent who was really a bushman? The bushmen had largely the selection of officers, especially those who did not belong to the service. I conferred with the committee in the way I have explained to you.

G. A. French. 1438. Was Major Randall Carey a member of the committee? Yes.

14 Aug., 1900. 1439. What is his special line in military matters; of what is he a Major? He was Captain in New Zealand, and in consideration of his assistance in all matters in connection with the bushmen, I recommended that he should be given the rank of Major here.

1440. Of what was he a Captain in New Zealand? The Auckland Cavalry, I think.

1441. Where did you get that information from? I suppose from himself.

1442. You have nothing else to show that he was a Captain in New Zealand? No; I do not think it was considered a very serious matter.

1443. Is it not rather a serious matter to appoint a complete outsider a Major? Not if he had been a Captain in a volunteer corps some years previously; I do not see any objection to it. Besides he was not employed as a Major in any way. The conferring of the rank was intended as an honor, more than anything else. I thought in the first instance that Major Carey had not military experience, but he said that he was ten years in charge of a cavalry corps in New Zealand, and that prior to that he had been connected with the Victorian Volunteer Cavalry.

1444. If he held a position for ten years in the cavalry in New Zealand, it is to be presumed that he would be able to produce a commission? Yes, I suppose so, if he took care of it.

1445. You say that he also took a position in the Victorian Cavalry? I understand that he was associated with the Victorian Volunteer Cavalry in the Werribee encampment in the early fifties, but he may not have had a commission then.

1446. Did Major Carey volunteer to go in charge of the Bushmen's Contingent? Not at any time that I know of. I should like to state for the information of the Committee what my instructions were as regards this Bushmen's Contingent. They were as follows:—

Mr. J. R. Carey, who will hand you this note, is the gentleman who originated the movement for sending a contingent of bushmen to South Africa, and I shall be glad if you will associate yourself with him in matters relating to the organisation, equipment, and despatch of the force.

As Mr. Carey is not a military man, the Government will be glad if, with his assistance, you would undertake the control of the arrangements.

Those were my instructions from Mr. See.

1447. Could you give us a list in connection with the two Bush Contingents, such as that which you have handed in to-day? Yes; but it would be a very long list. A number of men were rejected, because they could not pass the riding test. In the case of the Citizens' Bushmen's Contingent, the committee would have the list.

1448. You wrote a letter, or a letter was written by your instructions, to the chief military authorities at Capetown as to the pay of permanent officers; did you receive any reply to it? I suppose it was acknowledged; I know that it was acted upon.

1449. Will you endeavour to produce the reply which you received? Yes.

1450. Can you tell us anything of Major J. J. Walters, late officer commanding the Lancers, and now in the reserve of officers. He seems to have sent in an application? I cannot remember the particulars; I recollect his being retired from the Lancers some time ago.

1451. When you were short of mounted officers, one would have supposed that he would have been the man for you? There may have been some objections. I do not recollect just now what they were.

1452. I am referring now to the Second Contingent—the Mounted Rifles. Did Captain Larkin volunteer for that contingent? I do not think that he volunteered for the Second Contingent; my opinion is that he volunteered for the Citizens' Bushmen's Contingent.

1453. Do you know what reputation he had as an officer in the Mounted Rifles? Very good. I look upon him as a capable officer. That is why I think I asked him to go.

1454. Has he the reputation of being one of the best officers in the Mounted Rifles? Yes; that is why I was so anxious to get him.

WEDNESDAY, 15 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. COOK,

MR. MEAGHER.

MR. PIDDINGTON,  
MR. WILKS,

RICHARD SLEATH, Esq., in the Chair.

Major-General George Arthur French recalled and further examined:—

G. A. French. 1455. *Mr. Chanter.*] Referring to your evidence given yesterday with regard to military appointments, did I at any time approach you personally, or by letter, or in any other form, to seek any favour whatever for any officer or man in the Contingent? Not at any time that I am aware of.

15 Aug., 1900. 1456. *Chairman.*] This is a sample of the overcoats supplied to the Second Contingent (*overcoat shown to witness*);—what do you think of the material and finish? I am not an expert in this line.

1457. Still, how would you like your best coat made like that? It does not seem to be finished off as well as it might have been.

1458. If you feel the material you can see what it is made of? I should judge it to be wool, or mainly wool; but I am not sure that my opinion is worth much on the matter.

1459. Do you think that would be capable of resisting (say) a heavy rainfall? I suppose for a certain time it would. I do not know whether it would be waterproof or not. I should not think so.

1460. Do you think that men sleeping out, without tents, in such an overcoat as that would be protected from heavy rain? I should not think so. I suppose there are waterproof sheets to protect the men from the damp of the earth, and I suppose they should have a tent over them to keep off the damp from above; but I understand that these men very rarely had a tent.

1461. With regard to the waterproof sheets, can you tell us anything about them? It has been our custom to let every man have a waterproof sheet, even in our own camps here.

1462. Could you tell us anything about the quality of them, or had you any personal knowledge of them? I had no personal knowledge of them, beyond seeing them in camp at times; but I did not hear any complaint of them.

1463.

1463. Would you be surprised to learn that some of the waterproof sheets supplied to the troops going *G. A. French.* away had been in stock for ten or eleven years? I had no idea of that.

1464. And would you be surprised to learn that, after being used for a week or two, they all blistered, and the rubber material came off? I have not heard of it. *15 Aug., 1900.*

1465. Do you think that waterproof sheets that had been in stock for eleven years would still be of sufficiently good quality, and would not be injured by being kept that length of time? I suppose they would, but I am not an authority on those points.

1466. This matter would come more particularly under the control of the Quartermaster-General? Yes.

1467. You, as Commanding Officer, did not consider it your special duty to go into details; in fact, it would be impossible for you to go into the examination of details? I look to the officers at the head of the different branches to see to those things; at the same time, wherever I possibly can, I give some attention to such matters myself.

1468. But it is the special duty of your Staff Officers to attend to these matters—that is what they are there for? Yes.

1469. *Mr. Wilks.* I understand from your evidence that you were hurried in your operations, and that accounted to a great extent for the want of inspection? Yes.

1470. Did you write to the Government informing them that, owing to your being hurried in your operations, a thorough inspection of equipment could not take place? Yes; in fact, I specially asked that there might be a delay of three days to give further time.

1471. So as to provide the necessary inspection? And generally in the interests both of the men and the material. We should have liked to have had three days more instruction, because the men were not mounted until a few days before they left; we had not got the saddles for them.

1472. Under ordinary circumstances there would be a close inspection of clothing and equipment by the Assistant Quartermaster-General? The clothing is issued direct to the corps; they must bring to notice anything incorrect with regard to clothing.

1473. But Colonel Taunton is held responsible for the clothing—as Assistant Quartermaster-General, that is his duty? Looking after the contracts connected with the matter; but the clothing does not come into his hands to be reissued again.

1474. I suppose you are of opinion that where troops are going on active service there should be a closer inspection of clothing and equipment? Yes.

1475. We have had evidence from Colonel Taunton, who is generally held responsible for that sort of work, that he excused himself by reason of pressure of other work on his shoulders—are you aware of that? In connection with the Clothing Board work, I think it was arranged that Major Boam was to take up that. He was out at Kensington looking after it. I understand that that work was carried out by Major Boam, and I think he took a great deal of trouble in the matter too.

1476. Major Boam, then, would be answerable at the Camp, and the other authority would be the Officer Commanding the regiment who should report? He should at once report as to any supplies that were not good.

1477. Major Knight had charge of this particular Contingent? Yes; at least the Mounted Infantry portion.

1478. Have you been made aware of the friction that existed between your Staff Officer, Major Boam, and Major Knight? I never knew that there was anything more than a little professional jealousy.

1479. We had evidence that Major Knight refused to recognise Major Boam's authority—so much so that the latter said he would have to leave the tent? That has not come to my knowledge.

1480. In regard to the saddles supplied to the Contingent, you said that at first you were very doubtful as to their usefulness? For military purposes, and carrying such a heavy weight with equipment.

1481. Did you urge any objection to the Government in regard to the saddles then? No. In conversation, I suppose, I let the Minister understand that we were doing the best we could.

1482. You would have preferred to send the men away and obtain the saddles at the Cape? If we were perfectly certain we could have been supplied with saddles; but we should have looked very foolish if we had landed a lot of men there without any equipment, and we knew that the Imperial Government were very much pressed owing to the immense number of men they were sending out beyond the number originally intended.

1483. You could have discovered by cable whether they had the necessary stores there as regards saddles? We did; we got some in that way. For instance, we got certain things we could not make here—mess-tins and so on; but naturally we wished to get things here if we possibly could.

1484. Your opinion from the first was that panel saddles, the saddles used by the Imperial Military Authorities, were the correct saddles to obtain? If possible. Our First Contingent had them; in fact, in that respect, I think our First Contingent were the best equipped troops that left Australia.

1485. We have evidence that in the case of the First Contingent you drew 180 saddles from the Military store? Here is an extract from the report on the matter:—

One of my early acts after arrival in this Colony was to order 200 sets of military saddlery, and 1,000 numnahs. These came in well for the Mounted Rifles and Lancers of the First Contingent, but afterwards only "Bush" saddles were obtainable.

So that the First Contingent were very well equipped.

1486. In the case of the Second Contingent, the matter of the saddles was not hurried, because of a desire to hold a parade of the Mounted Forces—a public parade? No; I was very anxious to hold a parade, but, as I told you yesterday, I could not get the men on parade until three days before they left, and then I had to change the saddles from one squadron to another, so as to parade them.

1487. The only local trouble you had in regard to saddles was as to those supplied by Mr. Anderson? Yes; they were all rejected.

1488. This Mr. Anderson was not in the saddlery line? Not at all. You asked me just now about delaying the departure of the troops. Here is an official letter, in which I asked that their departure should be delayed; it is dated January:—

I have the honor to submit for the consideration of the Minister the desirability of deferring the departure of the troops till Saturday, the 20th.

In submitting this suggestion, I do so mainly in consequence of the delays with regard to the supply of harness and saddlery, and the inferiority of workmanship. These have been of such a nature that the Mounted Infantry have not yet been able to have a mounted drill, and the Australian Horse have had to condemn a large portion of their supplies of saddlery. The time thus gained will be of great value in giving extra training to these hastily-raised forces.

1489.

G. A. French, 1489. In regard to the supply of helmets by Mr. Anderson, the contractor, we have it in evidence that  
 15 Aug., 1900. you had a sealed pattern, and that he substituted a pattern of his own, which was used by the Partially-paid Forces, unknown to the authorities? I understood that he used to supply the Partially-paid Forces under contract with helmets direct. Then, when the change of system came, he went on supplying them, and, as I understand, the Quartermaster-General did not know that the change had been made.

1490. In other words, the Quartermaster-General was of opinion the helmets were being supplied to sealed pattern, whereas we discover now by evidence that it was not so—that he substituted a pattern of his own? Apparently.

1491. And that the pattern that he substituted was a helmet similar to the one used by the Contingent? I believe it was.

1492. The specimens shown to you in the course of this inquiry by the Chairman prove how flimsy these helmets were? I should think in dry weather they would do well enough; but continued drenching in wet weather would no doubt reduce them to the condition of those shown by the Chairman.

1493. Still those are contingencies you have to provide for in actual service? Yes. At the same time, in India, where the pith helmet is really a protection against the sun, it will not stand the wet.

1494. At 6s. apiece you would naturally expect these helmets to have a longer life than two months? I thought they would last a reasonable length of time.

1495. Although not an expert, you did not think they were made of the material of which those shown by the Chairman are composed—calico and glue? Certainly not.

1496. Do the authorities intend to take action with regard to this contract? I do not know.

1497. Are they considering the matter at all? I cannot tell. I should think the report of this Committee would give them grounds on which to take action.

1498. We have evidence from Colonel Taunton that within the last fortnight a Military Board has been sitting on the matter of the helmets? A Board has for some time been inquiring into different matters. I suppose that is what he refers to.

1499. It is probable they will make some recommendations? No doubt.

1500. And the recommendations are likely to be of a character to cause action to be taken by the authorities? I should think so.

1501. This is part of Major Boam's evidence:

811. And Major Knight, being an Imperial officer, you naturally thought he would be more rigid in his inspection? I do not think Major Knight being an Imperial officer would make any difference. So long as an officer understood what his duty was, I do not think it would matter much whether he was Imperial or Colonial.

812. In your opinion, there would be no shirking of his duty? I have very strong reason to believe that Major Knight did not carry out his duties.

Do you consider that professional jealousy, or do you think it was an exact account of what took place? I cannot tell.

1502. It has never been reported to you? No.

1503. The evidence goes on:

813. *Mr. Meagher.*] In regard to what? In this way: when Major Knight was there, and I tried to make certain suggestions to him in his tent, he simply told me that he was a big-bug now, and, therefore, I thought it was time for me to leave the tent.

? I should think that was purely a jocular matter.

1504. Major Boam did not treat it as a jocular matter? I think he might have done.

1505. If it were taken seriously by Major Boam, would it be his duty to report it to you as General Commanding? It would, if he thought there was any idea of directly insulting him in that way; but I should look upon the whole of it as jocular.

1506. There is this further evidence:

814. *Mr. O'Connor.*] What did you make suggestions about? Several little things.

815. Clothing? Not only that, but the selection of the men. I thought it was time to leave the tent.

816. *Mr. Wilks.*] The impression you would get from that conversation would be that he was very lax in his duty? I consider Major Knight was very lax. I consider Major Knight lost his head entirely when he was in charge of the Contingent.

Upon that has any report been made to you? I know that a man who would go out tiger-shooting on foot would keep his head level at that sort of job.

1507. Was your experience of Major Knight such as to lead you to believe that he was a good administrator? As to administration I do not know that I have had any experience of him. But he was the Adjutant of his regiment, a man naturally accustomed to a certain amount of administration. I am talking of the regular Service, and I knew him to be a very cool officer in every way, and a good drill. But as to practical administration, I never had any opportunity of judging. This would be the first instance.

1508. You said just now that Colonel Taunton delegated his duties to Major Boam with regard to clothing? That I think was provided for in the General Order. I used to see Major Boam on the Rifle Range at Randwick attending to the issue of clothing, boots, and so on.

1509. I am to understand that Major Boam was the authority responsible for the proper clothing of the Contingent? Yes; clothing and boots.

1510. We have evidence that Major Boam was practically baulked in the administration of his duties by Major Knight, the Officer Commanding the Contingent;—is that as it ought to be? No; it would not be right for any officer, above or below, to baulk another in the execution of his duty.

1511. This is the first you have heard with regard to this matter? Yes. I knew there was some professional jealousy between those two officers, but I never knew the Public Service was suffering from it in any way.

1512. You were never of opinion that the clothing of the men and the men themselves were made to suffer by their professional jealousy? Certainly not.

1513. You are surprised that there has been no report made to you verbally? I have not heard of it.

1514. Later on Major Boam gave this evidence:

819. *Mr. Cook.*] In replying to Mr. Wilks, you said that Major Knight was very abrupt, and ordered you out of his tent? No; he did not order me out of his tent. I said it was time I left his tent.

820. You also said you regarded him as a man who had lost his head, and as being in an inextricable state of muddle, did you not? I said things were in a state of muddle down there.

You see the importance of this evidence? I was repeatedly in camp day after day, and nothing of that sort was brought before me then.

1515. Did you recognise any state of muddle? No, I did not. Of course, I knew there was great delay in getting supplies; but nothing whatever was brought to my notice to show that the state of affairs to which you refer occurred. G. A. French.  
15 Aug., 1900.

1516. You were not under the impression at the time that owing to jealousy between these two officers the whole camp was disorganised? No. Of course, where two senior officers are disagreeing like that, it is likely that the camp may suffer, though I may not hear of it.

1517. You changed the hats to helmets in consequence of reading a cable report in the *Herald* in regard to a certain action in which our men were mistaken for Boers? Yes, the Victorians, I think.

1518. Upon which you issued a minute to the Under Secretary? I notified the Under Secretary so that he should understand, because it was supposed at the time that the Colonies, as a whole, would send a general Australian Contingent, and it was desirable that they should be dressed alike.

1519. By that minute you wished the Under Secretary to intimate to the Premiers of the other Colonies what we were doing? Yes.

1520. Are you aware of any action having been taken by any of the Premiers of the other Colonies in response to that communication? I do not know that they did take any action, because I think the idea of an Australian Contingent fell through, and each Colony went on its own.

1521. You are not aware whether they all wore similar helmets? No, I am not.

1522. Referring not only to the Permanent Staff and Special Officers, but also to the Volunteer forces, did you have a free hand in the matter of selection? Generally, yes; especially in the case of the earlier Contingents.

1523. I am not going any further than the Second Contingent now? I do not think I was in any way seriously interfered with in the case of the Second Contingent. Of course, I recognise the claim that any Government would have to see that certain interests were represented. It would not follow, for instance, that if I took five of the best officers from the 1st Regiment, and none from the 2nd Regiment, that they would approve of that. In fact, I had a complaint from one regiment that they did not get their share when officers were appointed.

1524. Then you consider that the only interference was of a regimental character—that is to say, in the interests of certain regiments, and not in the interests of individuals? I would not put it altogether as in the interests of regiments. For instance, suppose that in a Contingent there was no representative of the Irish Rifles or the Scotch Rifles, I should think that would be a very reasonable ground for the Government to say, "We think these interests should be represented, and you should make a change."

1525. *Chairman.*] If capable men were available? Of course.

1526. *Mr. Wilks.*] Am I to understand that representations were made to you not to neglect certain regiments, but to see that they were represented? No; I do not say exactly regiments, but, we will say, nationalities.

1527. Would not that be regiments—the Scotch Rifles and the Irish Rifles? Yes; but of course there are plenty of Irishmen and Scotchmen in other regiments.

1528. The desire was to see that certain national characteristics were observed? Were not neglected.

1529. Do you think any more pressure was brought to bear on you than upon the various officers commanding in the other Colonies? I do not suppose so; I should not think so.

1530. Have you been advised, privately or officially, that the Commandants in the other Colonies had equal trouble with yourself in the matter? I have seen it stated, but I have never made any inquiries.

1531. You have seen it stated that they had? In the Press, yes.

1532. That they were brought under pressure? Yes.

1533. You have had experience in Canada, and also in Queensland? Yes. As regards Canada, I can tell you there is interference there, if you like.

1534. The interference is great in Canada? Yes.

1535. And in Queensland, was it greater or less than here? I was very much surprised in the change from Canada to Queensland—very much surprised to find what a very much better feeling there was amongst political parties in that way, and that military matters were left pretty much altogether to the Military head in Queensland.

1536. Then we are to understand that in Canada the Commandant would be interfered with to a greater extent than you are interfered with here? Yes; it is carried to a shocking extent in Canada.

1537. In a matter like the despatch of the Contingent, you think that more interference would be exercised in Canada? Yes. I should think they would keep up to their level at such a time as at others.

1538. With regard to clothing for the Contingent, the general order was that every man should have two suits? Yes.

1539. Have you been made acquainted with the fact that many men did not have two suits? No; I have not, because I have always held that even in camp time here, every man should have a complete change in case he should get wet.

1540. *Chairman.*] We had evidence that in the case of the Mounted Rifles under Colonel Knight it was not so? It was a shocking irregularity if they had not—a most improper thing. Any man when he gets wet should be in a position to have a complete change at all times.

1541. In addition to that, of course, you know that on active service material will not last very long—say, the material in pants? But over and above the two suits they had a percentage of spare material.

1542. In the case of a trooper receiving only one pair of pants, and being allowed to wear them until they were worn right out, with only small portions of them hanging round him, and not having another pair to replace them? But he should have two pairs.

1543. The responsibility of his not having them would rest upon whom? I should think upon the Captain of the Company and the Colonel; they ought to know. If the Staff take all precautions to see that a full supply is sent in bulk, it is for the officers commanding corps to see that the individuals get the clothing. On that point, here is an order of mine of the 12th January:—

Officers commanding units of the Contingent will send to the Assistant Quartermaster-General by 12 noon to-morrow statements showing deficiencies in clothing, arms, accoutrements, &c. Similar returns to be furnished daily until embarkation.

I was continually rubbing it in that they should see what was deficient, and that any deficiency should be made good. They had to send a return in daily, so that I should know day by day what was still deficient, in order that it might be obtained from the contractor.

1544. As far as you were able, you exercised every power to see that the troops went away properly clothed? Certainly that was my intention. 1545.

- G. A. French. 1545. The Officer Commanding was responsible if that were not so? Yes.
- 15 Aug., 1900. 1546. The Officer Commanding this Contingent was Colonel Knight? Yes; the officers commanding companies would be responsible to him, and he to us.
1547. If what the Chairman has stated is true in regard to clothing, it would be owing to the apparent neglect of the Officer Commanding the regiment, Colonel Knight? Yes. I should hope there were not many cases of men who went away without two suits.
1548. And there should not be any cases if they had the 10 per cent. surplus? That 10 per cent. should be to spare in case any man had his pants torn to pieces by an accident or lost them. They should have had two complete suits, and the 10 per cent. as well.
1549. Assuming that they had not the two complete suits, they would have had the extra 10 per cent. to supply the deficiency? Immediately it was represented to the Officer Commanding, yes.
1550. If the captain of the company did not report to his Commanding Officer that would be neglect of duty on his part? Yes.
1551. If he did report to the Officer Commanding, and the latter did not issue the stores, it would be neglect of duty on his part? Yes. I should think the Colonel would direct the Quartermaster to issue another pair of trousers or coat, or whatever might be deficient.
1552. Did you have any difficulty with regard to forage or produce for the Contingents—either for use in the camp or on board ship? No, we had no difficulty; there was a plentiful supply.
1553. Would you mind furnishing, for the information of the Committee, a return giving particulars of the tenders, including the names of the tenderers and those that were accepted? Yes.
1554. Did Colonel Taunton represent to you that he was unable to carry out the duties of his office, owing to the extra clerical work put upon his shoulders? I knew he had a tremendous lot to do. Everything in connection with the ships was in the nature of extra work.
1555. You knew he had a lot of work to do? Yes, a tremendous lot. The work in the twelve months was more than doubled, with fewer officers to do it. At that time the pressure was enormous.
1556. Is it a fact that your instructions, in the first instance, as to their duties in connection with the Contingent, were verbal;—that you simply called your Staff together and delegated to them certain duties? Each to look after what would fall in with the line of his particular duty. Of course, with regard to the A.Q.M.G., his special work would be in connection with transport, whether by land or sea; that would be an ordinary duty.
1557. If he were unable to carry out his duties, you would naturally expect him to report to you? Yes; but he is a hardworking officer, and would do his best to carry them out. He would not cave in before he had done his utmost.
1558. You received no report to the effect that he had shirked any of those duties? He certainly would not shirk a duty. He is not the officer to do so.
1559. And you are of opinion that he carried out his duties faithfully and well? Yes; I am certain he would so carry out any work he was given to do. He is one of the finest officers I have got.
1560. He is a gentleman of rather a nervous disposition, and probably would not show to advantage under examination? No, I daresay he would not. He means always to do the right thing, and he is an officer I have a very high opinion of.
1561. I believe that in connection with the Bushmen's Contingent and the Imperial Bushmen's Contingent, a new order of things was established in the shape of a Military Committee? In regard to the Bushmen's Contingent, I was to work in concert with the Bushmen's Committee, which practically resolved itself into Major Carey. That was the first Bushmen's Contingent. Working with him, he referred to his Committee from time to time.
1562. What was the personnel of the Committee as first established—the Committee that was to work in concert with you? Major Carey represented them.
1563. Was not a Committee appointed of which the Governor and Colonel Mackay were members? That was something to do with the Imperial Bushmen's Contingent. That was afterwards.
1564. Did they work in concert with you? In regard to that Committee, I could not exactly make out where the duties were divided.
1565. You were at a loss to understand why they were appointed, practically? I did not quite understand.
1566. Can you understand now why they were appointed? Not very well.
1567. The Minister of Defence was a member of that Committee? I think he was; but I would not be certain.
1568. Do you remember how many members were on the Committee? Of the Committee originally appointed, I was President; but I got an instruction that His Excellency the Governor was to take that position.
1569. Did His Excellency the Governor ever occupy that position? He sat once.
1570. Officially? Yes.
1571. Who were the other members? Colonel Mackay was on the Committee; but I think he was there in his capacity as a Minister.
1572. *Mr. Cook.* Was Mr. See on that Committee? I do not think he was. At the one meeting that was held I do not think he was present. There was a Mr. Thomas Watson on that Committee—I think specially in regard to horses.
1573. How many members do you think there were, speaking from memory? I think five was the outside number.
1574. *Chairman.* Did they ever sit as a full body? Once.
1575. Was the fifth member Major Thompson or Major Carey? I cannot recollect now; I do not think the fifth was present on that occasion.
1576. Was not Major Thompson, the Imperial officer who was here buying horses? I rather think he was invited to be on, but I doubt if he sat on that particular occasion.
1577. *Mr. Wilks.* What were the duties of that Committee? I cannot bear in mind now exactly what they were. I have not been looking up that point. I can give the Committee more information later on if I have time to look up the papers. At the present moment, I think it was mainly to do with the purchase of horses, material, and so forth.
1578. It had nothing to do with the officering of the Contingent? I am not quite sure. I know I did not feel happy over it.

1579. You were rather surprised at the innovation in the shape of a Committee, semi-civil and semi-military, of which you were President? Yes; to begin with.

1580. Did you end as President? No.

1581. How was that? As I told you His Excellency the Governor came on.

1582. He occupied the position on one occasion? Yes.

1583. Did they work in harmony with you or at variance with you, or how did they work? Well, I think there was only that one meeting after the Committee was formed.

1584. After having been given a free hand in the case of the other contingents, as Commandant of the Colony, you were naturally surprised at the introduction of this new body? I was; yes.

1585. Did you take it as a reflection on yourself? Well, it looked in that way to me; I do not know whether it was intended or not.

1586. Of course you have no reason to know whether it was intended or not, but still that was the impression any man in your position would have had? I had that view; I do not know that I expressed it in any way.

1587. Would a matter of that kind be likely to tend to the discipline and good order of your staff under you? No, certainly not.

1588. The introduction of a new body like that would not raise the Commandant in the respect of his Staff officers? I suppose that is a reasonable view of the case.

1589. *Mr. Meagher.*] You implied in your evidence yesterday that great pressure was brought to bear in regard to the appointment of officers, and in illustration you said that the Minister added the name of an officer who did not meet altogether with your concurrence, I refer to Major Owen;—did you say yesterday that Major Owen's name was added to the list by the Minister? Yes, that is correct. Probably the Minister did not add that name to the list without talking over matters with me.

1590. *Chairman.*] I think you also said that you entirely approved of Major Owen, except as regards his health? Exactly. It was only on the question of his health that I was at all doubtful.

1591. *Mr. Meagher.*] I understood that the whole trend of the examination yesterday was to show that Major Owen was a man of a physique so poor that it was a waste of money to send him and his servant to South Africa, and that he was invalided Home to England after seven or eight weeks' work, and the trend of the inquiry I think was that there being healthy men who were capable of standing the hardships of a campaign, and intelligent men, they should have been sent where available? Yes.

1592. I suppose I may take it now, shortly, that there were capable men available of more robust physique and more likely to stand an arduous and continuous campaign than Major Owen? If you mean generally in the force that is not altogether to the point. When it came to the question of Special officers going, it was important that the men selected should be those whose salaries were provided, so as to cause no extra expense to the State; therefore officers of the Permanent Force and Staff were sent because their going would not cost this Colony any extra expense.

1593. But could not officers of stronger physique have been selected; for instance, take the case of Major Lee; according to the schedule furnished yesterday, was not Major Lee a man whose employment in the military service was in the same groove as that of Major Owen—was he not senior in rank in the same line of service, and undoubtedly a man of robust physique? Yes, but Major Lee could not have been replaced. Major Lee I think had a strong claim to go, but the difficulty in his case was in replacing him.

1594. You see, General, you were prepared to go yourself as head of these forces? Yes. The Government would have had to consider whether there was someone to replace me in that case. In fact I have reason to believe that was why I was not able to go—because the Imperial Government said it would be inconvenient to replace me.

1595. In regard to this pressure you referred to, in order to be clear about it, was there any political pressure brought to bear? I should not call it political pressure. These officers, it must be remembered, were connected with the Permanent Force and the Permanent Staff. Their friends and relatives were at Ministers and others all the time. I could sympathise with an officer trying to get on active service, but unfortunately it did not always confine itself to that. I have known cases of wives, who thought their husbands should be promoted and so on, going worrying Ministers on the matter. Eventually some of these papers get to me, and I make pretty straight minutes on them, when I get them, in regard to promotion, because I think it a most unfair thing that any indirect influence should be used to get, unfairly, promotion over others. In fact I have at this moment in my mind papers of that sort sent on to me by the Minister, and I thanked him for giving me the opportunity of protesting officially against such back-door influence being employed.

1596. Were you approached personally by Members of Parliament to get certain individuals sent away? No; I do not think so. They might perhaps have spoken to me casually on behalf of a friend and so on.

1597. But you could not say there had been any pressure? No, not on me. I think the pressure was on the Ministers, not on me. Of course, some of the letters and papers would come on to me—say a recommendation that so and so was the finest fellow they ever knew.

1598. Can you say that any Ministers of the Crown ever asked you to take certain officers? I could not say that they directly asked me to take certain officers.

1599. What do you mean by "directly" asked you? Saying plainly "you are to do so and so."

1600. You know that, without directly asking a man for a favour, a very pressing suggestion has often more efficacy than a specific request? I should think when it came to a matter of that sort Ministers would take the responsibility of Ministers by putting the name on themselves, and I think in some cases they did that.

1601. Can you tell me from memory any particular officers whose names Ministers put down without reference to you? Yes.

1602. And you felt in rather a delicate position as to wiping those names out when a Cabinet Minister had put them down? I do not think I was afforded the opportunity of wiping them out.

1603. They were gazetted, then, practically without reference to you? Yes, that is what it came to. May I ask whether in putting these questions you refer to any particular contingent?

1604. I include Permanent officers and volunteer officers in connection with all the contingents, including the Imperial Bushmen's Contingent? It was in connection with the latter that some of the cases occurred.

1605. *Chairman.*] Did anything of the sort occur in connection with the other contingents, or only in regard to the Imperial Bushmen's Contingent? I do not think any cases occurred right up to the Imperial Bushmen's Contingent.

1606.

G. A. French.  
15 Aug., 1900.

- G. A. French. 1606. *Mr. Cook.*] You are quite clear about that? I cannot think of any cases that occurred except in connection with the Imperial Bushmen.
- 15 Aug., 1900. 1607. *Mr. Meagher.*] In the schedule produced yesterday, giving the names of applicants for appointments, you find on casually looking over it men who were senior in rank, longer in service, and apparently of superior qualifications, passed over for men, some of whom had only thirteen months' experience;—can you tell me if this apparent disparity was due to the fact that pressure was brought to bear? I should not think so.
1608. Take the case of Major Walters, who at one time was the Officer Commanding the Lancers. He appears to have been refused an appointment, when a lad of 19 years of age, of only thirteen months' standing, is appointed to the position of first or second lieutenant. Did you know Major Walters when he was in charge of the Lancers? Yes.
1609. Did you observe the discipline of the Lancers and its efficiency as a military body, and did it strike you that Major Walters was a capable man? As an officer with men there was no objection to Major Walters.
1610. You say that as a military man Major Walters is a capable man? Yes.
1611. He was replaced by Colonel Burns? Yes.
1612. *Chairman.*] Do you hand in, for the information of the Committee, a list of applicants for appointments in the Imperial Bushmen's Contingent? Yes. [*Appendix C.*]
1613. *Mr. Meagher.*] What was the first notification you got in regard to the Imperial Bushmen's Contingent;—was it a suggestion that sprung from yourself or from the Government? I think the initiative came from the Imperial authorities, who asked if the Government would permit of a force being raised here and paid for by the Imperial Government.
1614. Then you were communicated with? Yes.
1615. What was the first intimation you got that the matter was not to be decided by you as the controller of the forces here? I do not think I ever got an intimation in that bald fashion.
1616. What was the first intimation you got that your discretionary power, or, at any rate, some of your functions, were trespassed on? I cannot remember the particulars of that, but I can have the matter looked up.
1617. Was it intimated to you by any member of the Government that you were one of the committee;—how did the committee originate—you must have got some formal notification of it? Yes; that can be looked up.
1618. How many men were there on this committee;—the Governor was present at one meeting, you say? Yes; that became a new committee then. I was President of the committee, and made arrangements to start certain work. Then I was instructed that His Excellency the Governor had been appointed President.
1619. *Mr. Cook.*] Appointed President of the same committee, or another one altogether? One in substitution of that. Of course, I had to disappear when His Excellency was appointed.
1620. Was the personnel of the committee changed at all? I think not, except to that extent.
1621. *Mr. Meagher.*] When the committee met first you were President, and I suppose you formulated a line of action? Yes. I at that time assumed that the committee was meant to assist me and to see about the purchase of horses, and perhaps the engagement of bushmen out in distant parts, and so on. It was an idea I thought should be carried out—to go away out to the end of the railway track and engage bushmen there. We arranged for carrying that out, and certain officers went out to get horses, and to get bushmen too—away out of the towns.
1622. That was on your suggestion? Yes.
1623. Having formulated your suggestion, and it apparently having been acted upon, you were then notified that in your position as head of this committee you were supplanted by His Excellency? Well, I would not say that, but that His Excellency was nominated President.
1624. That was practically supplanting you—you had to step down I suppose? I would not like to put it that way.
1625. By whom was His Excellency nominated President? I suppose by the Governor-in-Council.
1626. Who communicated the fact to you—the Minister for Defence? Yes; the Principal Under Secretary was the actual channel of communication.
1627. When you found that after formulating a scheme and acting upon it the Governor was brought in and placed at the head in an executive position, did you see the Minister of Defence in regard to it to know the meaning of it? I cannot remember whether I spoke to the Minister for Defence, but I put something in writing which I can look up.
1628. You put something in writing to the Minister for Defence as a protest against your treatment? I do not think I put it that way; you will probably be able to see from the papers exactly what it was.
1629. Were you consulted in regard to the appointment of the officers for the Bushmen's Contingent? I submitted a certain list of officers.
1630. Practically it ought to have been the reverse way, and the list should have been submitted to you as the officer who should determine the appointments? No; I submit a list for the approval of the Minister—the approval of the Government.
1631. You submitted a list of officers for approval—were they approved? No, that list was not approved.
1632. Have you a copy of the list you submitted? Yes.
1633. Will you produce that this afternoon? Yes.
1634. How many officers were there whose names were submitted? There would be over thirty altogether, I think.
1635. You submitted that list to the Minister for Defence? Yes; he is my head.
1636. Before you submitted a list for approval to the Minister for Defence, were any lists submitted to you by any one? I made up a list from the applicants—those who were tested in camp and reported on—and talked over with the senior officers.
1637. Is it usual for the officer in command to submit a list to you in the first instance—say Colonel Mackay, who was in charge of the Imperial Bushmen? I submitted a list before ever Colonel Mackay went into camp.
1638. Did Colonel Mackay ever submit a list of officers to you? Yes.
1639. When was that? That was after my first list went in. I modified mine, to some extent, on that.
1640. Could we have a copy of Colonel Mackay's list? Yes. 1641.

1641. First of all you submitted a list of thirty officers to the Minister for Defence? I would not say *G. A. French.* that that was the exact number, but approximately.

1642. What became of that list—did the Minister act upon it in any way? No; it was held over; I had <sup>15 Aug., 1900.</sup> to write about it once or twice.

1643. To whom? The Principal Under Secretary—the usual channel for correspondence.

1644. Will you produce that correspondence as well? Yes, if you wish.

1645. Can you tell me whether Colonel Mackay was appointed after other officers had been appointed? I do not think they were actually gazetted. Many of them were in camp and doing duty weeks before Colonel Mackay came.

1646. But were they approved of? They were not gazetted.

1647. They were officially approved of—all prepared to be gazetted, I suppose? They were there, and they were under observation, as it were. In the case of a number of them their names had been forwarded by me before Colonel Mackay ever came into the camp.

1648. Was Major Carrington one of the officers in camp? He was in camp assisting in the training of the men.

1649. I take it, then, to be correct that you sent in a list which you will produce; but that list was not acted upon, and certain correspondence supervened between the Principal Under-Secretary and yourself, which correspondence you will produce; that then Colonel Mackay sent in a list, and your original list was then modified—was that so? Yes.

1650. How many officers of your original list were eventually approved of—what percentage, 50 per cent. or 75 per cent? I think there was only a difference of about five or six. Of course, their positions were different.

1651. As a matter of fact, were not nearly all the officers of the Imperial Bushmen's Contingent men without service? To a large extent, yes. That was the last of the Contingents; most of the others had been worked off, and it was very difficult indeed to get officers.

1652. You say that most of these men were without service;—did you see the application of Captain M. Gibson, who had been a captain in the Imperial Army, and had seen service in the Zulu, Boer, and Egyptian wars, and whose application was refused? I cannot tell from memory what the particular reason was.

1653. *Chairman.*] Can you furnish information as to whether you recommended Captain Gibson; and, if so, what objection was offered to him? I can probably find out.

1654. *Mr. Meagher.*] In regard to equipment, as an organiser, and as head of the department, considering the extremely short space of time you had within which to equip these troops with saddles and clothing and various other matters, there was great danger of an inferior article being placed upon you, and where that occurred there was no opportunity of remedying it in any way; I mean that the time was so short, and the emergency so pressing, that there was a liability of a bungle being made in the quality of the article or in its manufacture? Yes.

1655. Such being the case, the Imperial Government having large quantities of these equipments always in store, did it not strike you, as we were paying the piper, because we offered these troops with equipment, that instead of taking the risk of bad equipment being supplied on such short notice, it would have been far better to communicate with the Imperial Authorities with a view to having the men equipped at the Cape? What special equipment are you referring to?

1656. I am referring, for instance, to the saddles, which you say were brought up by young Anderson and were rejected? Suppose we take saddles; if we had carried out your idea and depended on the Imperial Government for a supply we should have been left helpless here in the first place—we should have had a lot of men and a lot of horses, and no saddles to use for the purposes of drill, or anything else, and that is a very serious objection.

1657. *Chairman.*] But I think you said in your evidence yesterday that, as a matter of fact, you did not have any drill? We had scarcely any mounted drill with the Second Contingent, because no saddles were supplied until the last few days.

1658. You only had the men out one Sunday, I think you said? Yes.

1659. And then you had to take out one squadron at a time? Yes.

1660. *Mr. Meagher.*] So that, practically, the men would not have been handicapped in that way;—they would not have had to lean idly against posts at Kensington without a saddle to exercise in, for according to your answer to the Chairman they had only a few days here within which to exercise? Yes. We had a difficulty at first in getting enough saddles to have the riding test carried on; we had to borrow people's saddles.

1661. Seeing that there would have been no great advantage gained as the men had only a few days in which to accustom themselves to these saddles, did it strike you that, instead of all this rush and emergency, it would have been far better to have communicated with the Imperial Authorities with a view to their equipment at the Cape? It did not seem to me as if it would be quite the thing for us to admit that we had no equipment.

1662. But we were paying for it; we were under no compliment; we would have paid the Imperial Authorities, I presume, whatever the equipment came to; but could the Imperial Authorities have furnished it? We were not certain on that point.

1663. The Imperial Authorities have a large amount in stock, have they not? There is no comparison between their military stores and those of a small colony like this? They have large quantities in store. That is where our difficulty is. We have nothing in store. Our stores have been starved for years.

1664. The Imperial Government having large quantities in store, seeing the great emergency and the risk you were running in putting a great tax upon contractors for the supply of equipment, do you not think it would have been better to have had these men equipped at the Cape by the Imperial Authorities. Colonel Roberts gave this evidence:—

18. Would it not have been advisable, when you could not get a proper stamp of saddle here, to have cabled to the Imperial War Authorities, asking them to provide saddles? Yes, it would.

19. Whose duty would it be to suggest that? I suggested to the General that we should ask for these and several other things we could not supply; and his reply to me was that he thought the Imperial Government had quite enough to do in supplying their own people.

20. As an old military authority, do you know that in the matter of saddles, and all that sort of thing, the Imperial Government always have any amount in stock? I naturally thought they would have, or else I should not have made the suggestion.

Is it correct that Colonel Roberts made that distinct and specific suggestion to you—that, in view of the rush and haste, it would be advisable to have these men equipped at the Cape by the Imperial Authorities? He may have done so; I do not recollect it. I do not suppose it is in writing. 1665.

G. A. French. 1665. You have no reason to believe that what he specifically swears to here is not correct? No.

15 Aug., 1900. 1666. *Chairman.*] He may have made a verbal suggestion? He may have made a verbal suggestion. I know we did apply for certain things which we could not possibly get here. I should like to draw attention to the fact that, so far as we know, the other Australian Colonies and New Zealand started their men off with such saddles as they could get. I believe in the matter of saddles our troops were as well off as those of any of the other Australian Colonies, and in one respect a great deal better, for we had some good saddles to start with—panel saddles.

1667. You have sworn that you recommended certain officers, approximately thirty, to the Minister for Defence, and that that recommendation was postponed as far as consideration or approval was concerned, and that in the interval Colonel Mackay had also submitted the names of certain officers, and that eventually the list was gazetted with considerable modifications upon that contained in your original recommendation;—you now produce the list? Yes, as gazetted.

1668. But the Committee would like first to have the list you sent in to the Minister for Defence? On the 2nd April I addressed to the Principal Under Secretary the following letter:—

Sir,

I have the honor to submit for approval and publication in the *Government Gazette*, appointments to the "Imperial Bushmen's Contingent" as per the accompanying schedule.

The enclosed list will not govern the order of seniority, which will be forwarded for approval later on.

I should be glad if the above could receive early consideration, as it is desirable that the gentlemen concerned should know of their appointment as soon as possible.

Appended to that letter was this list:—

*New South Wales Defence Force Gazette,*

Chief Secretary's Office, Sydney,

•, 1900.

Hrs Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following officers of the New South Wales Military Forces, &c., proceeding to South Africa with the Imperial Bushmen's Contingent, with rank as stated against their respective names while on service, viz:—

*Imperial Bushmen's Contingent.*

To rank as Captain:—

Captain and Honorary Major Granville John Burnage, 4th Infantry Regiment.

To rank as First Lieutenants:—

Captain Ernest William Reading Soane, Reserve of Officers.

Captain Thomas Walter King Waldron, 3rd Infantry Regiment.

First Lieutenant Harry George Grace, 3rd Infantry Regiment (seconded).

First Lieutenant Robert Henry Beardsmore, 2nd Infantry Regiment.

Second Lieutenant Albert Christian Muhs, 2nd Infantry Regiment.

Mr. William Oswald Hodgkinson, gentleman.

Mr. Stuart Leopold Mackenzie, gentleman.

Mr. Arthur Pigou Rainey, gentleman.

Mr. Henry Hamilton Brown, gentleman.

To rank as Second Lieutenants:—

Mr. Charles Mark Clement Rudkin, gentleman.

Mr. Vincent Wallace Ryrie, gentleman.

Mr. Fitzwilliam Wentworth, gentleman.

First Lieutenant David Frederick Miller, Army Service Corps.

Mr. Cyril Tracey Griffiths, gentleman.

Mr. Samuel Edward Morris, gentleman.

Second Lieutenant Alan Lloyd Maclean, 5th (Volunteer) Infantry Regiment (Scottish Rifles).

Mr. George Rich Irving, gentleman.

Mr. Keith Douglas Mackenzie, gentleman.

Mr. Allan Essington Gidley King, gentleman.

This notice will not govern the order of seniority, which will be published in a future *Gazette*.

(Sgd.) G. A. FRENCH, Major-General.

Commanding N. S. Wales Military Forces.

Head-quarters,

Sydney, 2nd April, 1900.

1669. This is the list you sent in officially on the 2nd April to the Minister of Defence? Yes. On the 5th April I wrote to the Principal Under Secretary, as follows:—

Sir,

With reference to the list of names of officers submitted for commissions on 2nd instant, I have the honor to point out that it is very important that they should be gazetted at earliest possible date, so that they may settle their private affairs, and obtain uniform before embarkation.

I would also point out that we have already suffered owing to our officers being gazetted after those of other colonies.

1670. Have you the list sent in by Colonel Mackay? I forwarded, on the 10th April, a complete list of recommendations. I had then had the recommendations of Colonel Mackay before me. My recommendations on the 10th included all the recommendations up to that date. I received, on the 8th April, the following letter:—

Camp, Rookwood, 8th April, 1900.

From Lieut.-Colonel Kenneth Mackay, Commanding Imperial Bushmen's Contingent, to The General Officer Commanding N.S.W. Military Forces.

Sir,

I have the honor to report that, after the most careful investigation, and a personal inspection at drill and in the lines, of the officers and gentlemen attached to the Imperial Bushmen's Contingent, I have selected those named in the accompanying schedule, and beg to recommend them for approval and publication in the *Government Gazette*.

As regards the subalterns, I desire to have them under further test till the end of the week, when I will intimate the names of those whom I recommend should be 1st Lieutenants.

In case of a vacancy occurring from any cause (at present unforeseen), I have submitted the names of two gentlemen as emergencies, who have consented to remain in camp upon that distinct understanding.

I have, &c.,

KENNETH MACKAY, Lieut.-Col.,

Commanding Imperial Bushmen's Contingent.

The enclosed list contains the following minute:—"Original taken to Principal Under Secretary by special messenger (Mr. Deering) at 11.50 p.m. this day, under special instructions from the Minister.—W.G., 11/4/1900." The list is as follows:—

#### SCHEDULE A.

LIST of Officers and Gentlemen attached to the Camp at Rookwood who are recommended for Commissions in the Imperial Bushmen's Contingent.

Staff.—

Major David Miller, Commanding Army Service Corps, to be acting Paymaster, with the rank of Major.

Captain Haviland le Mesurier, Royal Australian Artillery, to be Adjutant, with the rank of Captain.

First Lieutenant Arthur Holmes, Permanent Staff, to be Quarter-master, with the rank of Captain.

To

G. A. French.

15 Aug., 1900.

## To be Captains :—

First Lieutenant Granville De Laune Ryrie, 1st Australian Horse.  
 Captain William Edward O'Brien, Mounted Rifles.  
 Second Lieutenant Kenneth Mackenzie Wray, 1st Australian Horse.  
 Captain Ernest William Reading Soane, Reserve of Officers, late 3rd Infantry Regiment.  
 Captain Thomas Walter King Waldron, 3rd Infantry Regiment.  
 Henry Hamilton-Browne, gentleman.  
 with seniority as above written.

## To be Subalterns :—

Captain Alfred Ernest Chapman, 2nd Infantry Regiment.  
 Lieutenant David Frederick Miller, Army Service Corps.  
 Lieutenant Herbert Caines, 6th Infantry Regiment.  
 Lieutenant Albert Christian Muhs, 2nd Infantry Regiment.  
 Lieutenant George Richard Irving, 1st Australian Horse.  
 Lieutenant Alan Lloyd Maclean, 5th Infantry Regiment.  
 Robert James Leslie Little White, 1st Australian Horse.  
 John Evelyn Oxley, gentleman.  
 Charles Mark Clement Rudkin, gentleman.  
 Richard Dines Doyle, gentleman.  
 Thomas Edward Thomas, gentleman.  
 Graham Ernest Mylne, gentleman.  
 Charles Hanly, gentleman.  
 Keith Douglas Mackenzie, gentleman.  
 Vincent Wallace Ryrie, gentleman.  
 Arthur Pigou Rainey, gentleman.  
 Clarence Montrose Macpherson, gentleman.  
 Alan Essington Gidley King, gentleman.  
 Clarence Hyne Gibson, gentleman.  
 Arthur Raymond Cosgrove, gentleman.  
 Maxwell Learmonth, gentleman.  
 Henry Carhayes Mitchell, gentleman.  
 Fitzwilliam Wentworth, gentleman.

## Extras :—

Stewart Leopold Mackenzie, gentleman.  
 Harry Fletcher Robinson, gentleman.

(Signed)

KENNETH MACKAY, Lieut.-Col.,  
 Commanding Imp. Bushmen's Contingent.

Camp, Rookwood, 8th April, 1900.

## SCHEDULE B.

List of gentlemen whose services are no longer required :—

Mr. Meyer.	Mr. Tweedie.
Mr. McKinnon.	Mr. Healy.
Captain Grant (Scottish Rifles).	Mr. Wooldridge.
Mr. Denehar.	Mr. Hodgkinson.
Mr. Sheriff.	Mr. Weaver.
Mr. Greig.	Mr. Robinson (X).
Lieut. Beardsmore (2nd Inft. Regt.).	Mr. Lindsay.
Captain Newman (Reserve of Officers).	Capt. & Hon. Major Burnage (4th Inft. Regt.).
Mr. Rowlandson.	Mr. Griffiths.
Mr. Norris.	Mr. H. S. Robertson.
Mr. McGrigor.	Mr. Ford.
Lieut. Roberts (Gar. Arty., Newcastle).	Mr. Henderson.
Mr. Gould.	Mr. Childs.
Mr. S. Mackenzie (X).	

(X) Remaining in camp as emergency officers.

My letter of the 10th April to the Principal Under Secretary was as follows :—

Sir,

In reference to my letter of 2nd April, I have the honor to forward herewith a complete list of recommendations of officers for commissions in the Imperial Bushmen's Contingent.

In view of the fact that Lieutenant-Colonel Mackay has little experience as regards the Imperial Service, it is very desirable that he should have the assistance of an officer who has, and I therefore recommend that the Imperial Authorities in South Africa be asked to nominate a suitable officer as Major of the regiment.

It has been most difficult to obtain officers at all qualified to fill the more important positions owing to the Forces having already been picked over several times, as well as the fact that of those still available here many could not give up their private businesses. I have consequently submitted the names of certain "Special Service" officers now serving in South Africa. I should think that in any case these officers should have a preference.

If the position of Major cannot be filled by the Imperial authorities, I would advise the promotion of Major Burnage; his place in the command of a company being offered to Captain J. M. Antil, Mounted Rifles; Captain Cox, Lancers, or Captain R. R. Thompson, 1st Australian Horse, now in command of mounted men in South Africa, the place vacated being taken by the promotion of the next senior.

I would urge that the officers on annexed list be gazetted with least possible delay, as they have to obtain their outfits and arrange their private affairs in the next ten or eleven days.

Then follows the complete list of recommendations to which I have already referred.

*New South Wales Imperial Bushmen's Contingent.*

## Staff—

The Hon. Lieutenant-Colonel James Alexander Kenneth Mackay, Commanding First Australian (Volunteer) Horse, to command 1st Regiment, Imperial Bushmen's Contingent.

## To be Major—

## To be Adjutant—

Captain Alexander Popham Luscombe, Royal Australian Artillery.

## To be Paymaster (temporarily)—

Major David Miller, Commanding Army Service Corps.

## To be Quartermaster—

First Lieutenant Arthur Holmes (from Adjutant, 7th Regiment), Permanent Staff.

## To be Medical Officer—

George Lawaluk Bell, Esq., M.B., Ch. M. (Melb.), M.R.C.S. (England), L.R.C.P. (London), to have rank of Lieutenant.

## To be Veterinary Surgeon—

Estean Barbeta, Esquire, G.M.V.C., to have rank of Lieutenant.

CAPTAINS

G. A. French.

15 Aug., 1900.

## CAPTAINS—

Captain and Honorary Major Granville John Burnage, 4th Infantry Regiment.  
 Mr. Graham Ernest Mylne, late Lincolnshire Regiment.  
 Captain Henry Paul Ramsay Copeland, Reserve of Officers.  
 Captain Ernest Wm. Reading Soane, Reserve of Officers.  
 Captain Thomas Walter King Waldron, 3rd Infantry Regiment.  
 Mr. Henry Hamilton Browne, formerly N.S. Wales Lancers.

## To be First Lieutenants—

Lieutenant Wm. Ed. O'Brien, Mounted Rifles.  
 Lieutenant James Macdonnell Conroy, Corps of Engineers.  
 Lieutenant Granville DeLaure Ryrie, First Assistant (Volunteer) Horse.  
 Captain Alfred Ernest Chapman, 2nd Infantry Regiment.  
 First Lieutenant Harry George Grace, 3rd Infantry Regiment.  
 Second Lieutenant Albert Christian Meeks, 2nd Infantry Regiment.  
 Mr. Oswald Hodgkinson, gentleman.  
 Mr. Stuart Leopold Mackenzie, gentleman.  
 Mr. Charles Mark Clement Rudkin, gentleman.  
 Mr. Arthur Pigou Rainey, gentleman.  
 Mr. Charles Hardy, gentleman.

## To be Second Lieutenants.—

Lieutenant David Fredk. Miller, Army Medical Corps.  
 Mr. Arthur Raymond Cosgrove, gentleman.  
 Mr. Thos. Ed. Thomas, gentleman,  
 Second Lieutenant Hubert Cains, 6th (Volunteer) Infantry Regiment.  
 Mr. Markwell Learmonth, gentleman.  
 Mr. Richd. Dines Doyle, gentleman.  
 Second Lieutenant George Michael Irving, First Australian (Volunteer) Horse.  
 Mr. FitzWilliam Wentworth, gentleman.  
 Mr. Keith Douglas Mackenzie, formerly New South Wales Lancers.  
 Mr. Vincent Wallace Ryrie, gentleman.  
 Mr. Henry Carnayes Mitchell, gentleman.  
 Second Lieutenant Alan Lloyd Maclean, 5th (Volunteer) Infantry Regiment (Scottish Rifles).

## Emergencies :—

Mr. Clarence Montrose Macpherson, gentleman.  
 Mr. Allan Essington Gidley King, gentleman.  
 Mr. Albert Clarence Morton Gould, gentleman.

I received from the Principal Under Secretary on the 20th April the following communication :—

Sir,

Chief Secretary's Office, Sydney, 20th April, 1900.

I am directed by the Chief Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the appointment of the following gentlemen as Officers of the Imperial Bushmen's Contingent, viz. :—

## Staff—

Major David Miller, Commanding Army Service Corps, to be Acting Paymaster, with the rank of Major.  
 Captain Havilland Le Mesurier, Royal Australian Artillery, to be Adjutant, with the rank of Captain.  
 First Lieutenant Arthur Holmes, Permanent Staff, to be Quartermaster, with the rank of Captain.

## To be Captains—

First Lieutenant Granville de Laure Ryrie, 1st Australian Horse.  
 Captain William Edward O'Brien, Mounted Rifles.  
 Second Lieutenant Kenneth Mackenzie Wray, 1st Australian Horse.  
 Captain Thomas Walter King Waldron, 3rd Infantry Regiment.  
 Captain Ernest William Reading Soane, Reserve of Officers, late 3rd Infantry Regiment.  
 Henry Hamilton-Browne, gentleman.

## To be First Lieutenants—

Lieutenant Herbert Caines, 6th Infantry Regiment.  
 Graham Ernest Mylne, gentleman.  
 Lieutenant David Frederick Miller, Army Service Corps.  
 Lieutenant Albert Christian Muhs, 2nd Infantry Regiment.  
 Keith Douglas Mackenzie, gentleman.  
 Charles Hanly, gentleman.  
 John Evelyn Oxley, gentleman.  
 Richard Dines Doyle, gentleman.  
 Charles Mark Clement Rudkin, gentleman.  
 Lieutenant George Richard Irving, 1st Australian Horse.  
 Edward Haslam Thomas, gentleman.  
 Arthur Raymond Cosgrove, gentleman.

## To be Second Lieutenants :—

Robert James Little White, 1st Australian Horse.  
 Vincent Wallace Ryrie, gentleman.  
 Clarence Montrose Macpherson, gentleman.  
 Allan Essington Gidley King, gentleman.  
 Lieutenant Allan Lloyd McLean, 5th Infantry Regiment.  
 Fitzwilliam Wentworth, gentleman.  
 Henry Carhayes Mitchell, gentleman.  
 Maxwell Learmonth, gentleman.  
 Clarence Hyne Gibson, gentleman.  
 Arthur Pigou Rainey, gentleman.  
 Stewart Leopold Mackenzie, gentleman.  
 Harry Fletcher Robinson, gentleman.

In order of seniority as above shown.

2. I am to add that the necessary notification has been published in a *Supplementary Government Gazette* of the 12th instant.

I have the honor to be, Sir,

Your most obedient servant,

CRITCHETT WALKER,

Principal Under-Secretary.

Upon receipt of that letter I put upon it this minute for the Principal Under-Secretary : " This list did not emanate from me, but apparently from Lieutenant-Colonel Mackay. The list that I am responsible for differed very considerably both as regards names and order of seniority." That terminates the correspondence as to the appointment of officers of the Imperial Bushmen's Contingent.

1671. The documents you have produced show that you compiled a list which you submitted to the Minister for Defence. When you originally compiled your list, which you submitted to the Minister, had you all the applications named in the list already submitted as containing all the applicants for commissions in the Imperial Bushmen's Contingent? Yes; all received up to the date of my recommendation. I believe I had them all. G. A. French.  
15 Aug., 1900.

1672. In the selection of officers, would experience and military service be one of the essential considerations? It would be a very important one.

1673. You know that among the volunteers there was a great number of persons whose previous military experience was nil, and that among them also there was a number who had had considerable military experience;—is that so? Yes.

1674. Glancing casually at the list of applications, I take, for instance, the name of Mr. Brooks, who is stated to have had experience in the Zulu war and in the Soudan expedition; he was refused? Yes.

1675. You omitted him from your original list? I presume so, if his name is not in it. All the names were gone over by myself and some of the senior officers, and we considered the whole of the reports which were available concerning each of them.

1676. Then there is Lieutenant Chapman, who is stated to have had experience with Methuen's Cavalry, the 6th Dragoon Guards, in the Zulu war—he is not in your list? No.

1677. Can you say whether Captain M. Gibson, who is said to have had experience in the Zulu, Boer, and Egyptian wars, is in your list? No.

1678. I suppose you saw most of these applicants? I could not say that I saw them all, but the case of every one of them was thoroughly gone into.

1679. Do you remember seeing Captain Gibson? I cannot say I do, but I know that there was some unfavourable report connected with him. I have made inquiry since I was here this morning, and I have discovered that to be the case.

1680. Did the report affect his military qualifications? Incidentally, yes. But, if I may be allowed to say so, I do not think the merits of officers should be canvassed in public in this way, a report of what is said appearing, perhaps, in the press.

1681. The position of the matter is that the members of this Committee, having had no experience in military matters, are in doubt as to why men who have held positions in the Imperial service, and who have had large experience, should have been passed over? The fact is, I believe, that Captain Gibson—since the Committee insists on my giving the information—wrote a very insubordinate letter in reference to his Commanding Officer. It was not considered that an officer who would take that course would be likely to promote discipline. It is not at all desirable to have in the junior ranks a man who would take a stand against his Commanding Officer.

1682. We, of course, are only civilians, and we should like to know what would be considered by the military authorities an insubordinate letter? The letter can be produced if the Committee wish it; but I am averse to confidential communications concerning officers being made public here.

1683. But the Committee understand that it was in consequence of the writing of the letter to which you have referred that this man's application, notwithstanding all his military experience, was thrown aside. I think it would be only just to the Military Authorities, as well as to Captain Gibson himself, that we should have the letter. We could not accept it as an excuse unless we had an opportunity of judging for ourselves upon a knowledge of the contents of the letter? If the Committee wish it, of course the letter can be produced.

1684. *Chairman.*] To whom did the letter refer? To Colonel Airey.

1685. Was he Commanding Officer at the time Captain Gibson wrote the letter? At that particular time I believe he was simply an applicant for the command. He was out at the range looking after the mounted drill of all the different officers.

1686. Was Captain Gibson at the time he wrote the letter enrolled? I do not think so.

1687. So that really at the time neither Captain Gibson nor Colonel Airey were members of the Contingent? The letter was not a military offence in the strict sense of the term, if you put it in that way.

1688. Could you ascertain for the Committee whether Captain Gibson was enrolled as sergeant or sergeant-major under Colonel Airey after writing the letter of which you speak. Would he have been allowed to go as sergeant, if he had desired to go? I will endeavour to obtain that information for the Committee.

1689. *Mr. Meagher.*] I have asked you questions with reference to Mr. Brooks, Mr. Chapman and Mr. Gibson, the whole of them men of military experience in different portions of the globe, and you say that none of them were in your original list of recommendations? No.

1690. In that list was there a recommendation in favour of Mr. F. B. Carnell, who is said to have had experience in the Frontier Light Horse in South Africa? No.

1691. Then I observe in the list of applicants the name of Mr. C. Hill, who is stated to have had experience in the Kaffir and Boer wars and in the Moirisi campaign; was his name contained in your list? I think not.

1692. Was the name of Mr. L. M. Webster, who is set down as having had experience in the Zulu and Boer wars, in your list? No.

1693. Then there is Mr. J. B. Young, who had four years in the Second Life Guards in Egypt; is he in your list? No.

1694. The whole of these gentlemen were applicants? I presume so, if they are in the list from which you are quoting.

1695. Can you assign any reason why men of experience in military affairs, such as those whose names I have read out to you, especially a man of the rank of Captain Gibson, were passed over in favour of a man like Mr. F. Greig, who was made a Lieutenant having had no previous military experience? I should prefer to put the matter in another way—that is as to why those who had apparently such good qualifications were not appointed.

1696. I will put it in this way: why were these gentlemen, whose qualifications are set forth here, not in your list of recommendations? They were rejected, I presume, as the result of discussions I had with the senior officers, and of the reports of those who had to attend to the riding tests and other matters. I did not know any of them individually.

1697. I suppose you would imagine that a man like Captain Gibson should be able to pass the riding test? It is probable; but I do not remember at this moment what the report was. 1698.

G. A. French. 1698. Some of the men whom you recommended for appointment belonged to infantry regiments;—did they also pass the riding test? They all had to pass in riding.

15 Aug., 1900. 1699. Would you be prepared to say that a disqualification in riding affected any of these men? I could not be certain.

1700. Would you not think it probable that men who had served in the Zulu War, in the Kaffir War, and in the Boer War, and who had had general military experience, would be able to pass the riding test? I think it is very likely.

1701. Yet the whole of these men were rejected, while you recommended that Mr. F. Greig, who had no military experience at all, should be appointed as lieutenant. I notice also that Mr. G. R. Irving, who had had no military experience, was also recommended as lieutenant? A large proportion of those recommended had not had military experience.

1702. What qualifications had Mr. Irving, for example? I cannot recollect the particulars, but a large proportion of those who were appointed to the Bushmen's Contingent had no military qualifications at all.

1703. You did not recommend Mr. Greig in your first letter? I do not know.

1704. Did his name first occur in Colonel Mackay's list? That I cannot say.

1705. Can you say whether the name of Mr. Irving, who was made a lieutenant, appeared in your first list? It is possible; I cannot remember.

1706. Can you say whether the name of Mr. A. E. G. King appears in the first list? Yes. With regard to Mr. F. E. Greig, it appears that he was appointed by the Government to be a transport officer, with the rank of second lieutenant. I do not know whether I made a recommendation to that effect or not. I received a notification to that effect from the Chief Secretary's Office on the 23rd April. I do not think I made any recommendation in connection with the Transport Department, but the letter which I received on the 23rd April is as follows:—

Sir, Chief Secretary's Office, Sydney, 23rd April, 1900.  
I am directed by the Chief Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the appointment of the following gentlemen as officers of the New South Wales Imperial Bushmen's Contingent, shortly proceeding to South Africa, with rank as stated while on service:—

Medical Officer—

Francis William Kane, Esq., L.R.C.P., Ed., L.F.P. et S., Glas., L.R.C.F., Ed., to have the rank of Lieutenant.

Transport Officer—

Francis Ernest Greig, gentleman, to have the rank of Second Lieutenant.

2. I am to add that notifications of such appointments have been published in *Supplementary Government Gazettes* of the 21st instant.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

1707. *Chairman.*] Is it customary for you to recommend transport and medical officers? They should all be submitted by me ordinarily.

1708. But you would not decide yourself as to the qualifications of a medical man? No. I should look to the Principal Medical Officer to inquire as to that. Of course if we were taking a man from the country our own medical department might not know anything about him, and in that case inquiry would have to be made.

1709. But if it were the case of a medical man in the city, you would not consider that you were straining your position in recommending him? No, subject of course to the opinion of my Principal Medical Officer.

1710. Do you recommend chaplains? Yes, they are all submitted by me. We have a senior chaplain.

1711. You do not pose as a judge as to whether their theology was sound or not? No.

1712. In your first list, did you recommend two Mr. Mackenzies—Mr. S. L. Mackenzie, and Mr. D. K. Mackenzie—one having had military experience in the New South Wales Lancers, and the other having had no experience? Yes.

1713. Can you tell me if these men, gentlemen, are related to any officer upon your staff? The young fellow in the Lancers is the son of Colonel Mackenzie. The other, I think, is a bushman.

1714. What rank did Colonel Mackenzie's son hold in the Lancers? I can remember him only as a trumpeter; I do not think he became an officer.

1715. But you do remember him as a trumpeter in the Lancers? Yes; he went Home to the Jubilee celebrations; he was in England for some little time.

1716. You recommended him as second lieutenant? Yes; he is a smart young fellow.

1717. Then Mr. S. L. Mackenzie appears to have had no experience at all, but you recommended him as first lieutenant? He had bush experience, perhaps. But I cannot at this moment remember all the circumstances. Of course, where other things were equal, I should be prepared to put the older man in the higher place.

1718. *Mr. Meagher.*] Then there is another lieutenant, Mr. H. C. Michell, without any experience;—is he in your first list? No.

1719. Can you say how Mr. Michell's name came up;—was he one of Colonel Mackay's nominations? I cannot say at this moment.

1720. Out of this list of twenty officers whom you first recommended, eight had some previous military experience and twelve had none;—is not that so? I have no doubt it is the case if it is so stated in the papers.

1721. I take it that the previous military experience of the eight men would be confined to the Colony? I should think so.

1722. Does the name of Mr. J. C. Oxley appear in the first list? I think not.

1723. At any rate, without going categorically through the whole list, it appears that the names I have read are those of men, not only of colonial military experience, but of experience in different portions of the globe, and you say they had been passed over as the result of conferences with the senior officers, and probably on account of their failure to pass the riding test? That might be one of the reasons, but there were general reports concerning them.

1724. Would those reports be recorded with their applications? No.

1725. How many officers altogether were appointed to the Imperial Bushmen's Contingent? The total, I think, was forty.

G. A. French.

15 Aug., 1900.

1726. I see that Mr. Oxley was one of Colonel Mackay's recommendations? That may be so.

1727. In regard to one of these officers, although he had had considerable military experience, you put your hand upon him at once as an officer who should not be appointed on account of some communication he sent, when he was not an officer, concerning a man who was not himself an officer of the Contingent at the time? I have already said that, since you examined me this morning, I have made inquiries as to that case. Whether the reason I have assigned was or was not the only reason why he was not appointed I cannot now say; it is the only reason I can give at this moment.

1728. Do you know that, after the writing of the letter to which you have referred, this man was in camp taking part in the drill? I think he was instructing some men; but whether it was on his own account or not, I do not know. I gather from the remarks of the Chairman that he was employed as a sergeant; he may have been.

1729. *Chairman.*] I saw him drilling some men, and he could not have gone into camp and drilled men unless he was appointed to the position. I am speaking now of a time after most of the officers were appointed in connection with the Citizens' Bushmen's Contingent? That may be so; I cannot remember all the circumstances at this moment.

1730. *Mr. Meagher.*] Can you say how many of your recommendations were knocked out when the final *Gazette* appeared? I could not say, but I should think about half a dozen. There were officers in South Africa I wanted to join. Captain Luscombe had been sent to South Africa as a Special Service officer, and I thought he would be a useful man, but he was not approved.

1731. Captain Copeland was also in South Africa, I believe? Yes.

1732. And Lieutenant Conroy? Yes. They were both in South Africa, and I wished them to be attached. Then there was Lieutenant Grace, a plucky fellow who took a position as Corporal in the First Contingent. He had had useful experience. And I recommended also that Captain Antill, Captain Cox, or Captain Thompson should have a show, but none of those recommendations were approved.

1733. Neither Captain Antill nor Captain Cox appears in your final list;—I presume their names were submitted later on? Yes.

1734. These men were already in South Africa? Yes.

1735. They did not volunteer for this Service, and you had no authority from them to submit their names? No.

1736. If they had been approved and gazetted, they could, if they had felt inclined, have refused to join? One does not expect that when a soldier is appointed to a position, especially a higher position, he will refuse to take it.

1737. In the case of Captain Copeland, who held a position in South Africa as second in command of the pioneer corps;—he was one of those you recommended? Yes; but I had no information of his being second in command of the pioneer corps at that time.

1738. Would you expect him to throw up such a position in order to take the position of Captain in a bushmen's contingent? Probably not.

1739. Captain Copeland is an engineer, and he was employed as a Special Service Officer in the work of his own profession; he had not had any experience in a mounted corps, and his military experience consisted in engineering work? He was an engineer here.

1740. But he had never had any experience as a mounted officer; yet you made this recommendation in regard to him? I understood him to be a good rider, and accustomed to bush work.

1741. But the whole of his service here was in connection with the Engineer's Corps? Yes.

1742. So that the chances are that Captain Copeland would not feel flattered at being removed from his own particular work to take a captaincy in the Bushmen's Contingent? When I made the recommendation I did not know that he was in the position you refer to. I knew he was a Special Service Officer, and I thought that, perhaps, he might know what to do with himself.

1743. Captain Luscombe was entirely an Artillery Officer? Yes.

1744. So that he would not be likely to feel too much at home in the position of Adjutant of a mounted corps, although he was an officer in his own department? He is an officer I thought a good deal of.

1745. I also think him a very excellent officer, but he would feel more at home, would he not, in his own branch of the Service? Possibly; but, as a matter of fact, another Captain of Artillery has been made Adjutant of the Corps. It is an advantage to get a Permanent Force officer for the position of Adjutant.

1746. You say that there were about six names struck out of your list; four of these had proceeded to the front in South Africa, and were at the front at the time, having never volunteered for the Bushmen's Contingent? That is so.

1747. There is one officer here concerning whom I should like to ask you a few questions;—you recommended to be Quartermaster Lieutenant Arthur Holmes;—what is the position of Quartermaster in a corps? Usually a Quartermaster has the rank of a second lieutenant; and, taking the case of a Quartermaster in the regular service, he would, probably, be a man of a good deal of experience in a regiment, having been Quartermaster-sergeant, and promoted up.

1748. He is on the staff of the Officer Commanding the regiment, is he not? You would call him one of the regimental staff. His duty is to look after everything connected with the stores of the regiment.

1749. The Adjutant, the Paymaster, and the Quartermaster constitute the regimental staff? Yes.

1750. You recommended that this officer should go with the rank of lieutenant? Yes. I did not see that he had any claim to a higher rank.

1751. He was Adjutant of the 7th Regiment? Yes.

1752. That is a permanent position? Yes.

1753. In connection with a certain inquiry into the working of the 7th Regiment, did you practically recommend his withdrawal from the position? Here is another case in which you are dealing with an officer's character. As a matter of fact, I made a certain recommendation. I do not know whether it is right to mention what it was, because the matter has not yet been settled by the Government.

1754. While in matters of policy and administration the Government have the right to rule, it is the people who find the money with which to carry on the Military Department, and they have the right to know whether the Government or the military authorities are expending the money voted for military purposes in a proper way? I quite see that, but my position is this: I make a certain recommendation with which the Government have not yet dealt. Is it fair for me, under those circumstances, to say what the recommendation was.

1755. I think it is perfectly fair? I will mention it if the Committee think that I should do so.

1756.

G. A. French. 1756. I do not want you to go into the whole matter, but I think it is perfectly proper for any question such as that I have asked to be answered? I am perfectly prepared to answer it if the Committee say that I am to do so. I recommended that he should be withdrawn from the position of Adjutant of the Regiment.

15 Aug., 1900.

1757. *Mr. Chanter.*] As far as you are aware, no decision has yet been arrived at by the Government in that matter? It has not been communicated to me.

1758. *Chairman.*] A decision was arrived at by the Military Court which sat in the matter? Yes, as far back as last January.

1759. The particular recommendation which went through you from the Military Court was, that Lieutenant Holmes should be withdrawn from the position of Adjutant of the 7th Regiment? I would not say that the Court reported adversely upon him, but upon their report I made a certain recommendation.

1760. That he should be removed from that particular position? Yes.

1761. A Military Court having sat and taken evidence in regard to Lieutenant Holmes, and their report being unfavourable to him, did you think he would be an excellent officer to send away on active service in the important position of quartermaster? As quartermaster he is a very good officer and could attend to the work. What I objected to was his being promoted under the circumstances.

1762. You thought that although the Court or Board has reported adversely upon him, it was still quite proper that he should be sent away on active service as quartermaster? I did not think the report was of such a nature as to throw doubt upon his proper performance of the duties of quartermaster. Colonel Mackay was anxious to have him, and I think he recommended him. It was probably one of the recommendations in which I concurred.

1763. *Mr. Meagher.*] With regard to the difference between the rates of pay, concerning which the Chairman examined you yesterday. I believe there was a conference of Commandants in Melbourne? Yes.

1764. Did that matter crop up there? Those matters were all settled by that conference. That was the decision upon which we were acting.

1765. It was in consequence of the resolutions of that conference that the difference referred to by the Chairman occurred? The rates have been adhered to. The point raised I understood was as to the method of payment.

1766. I understood the Chairman to speak of the inequality which existed when one man in receipt of 3s. 5d. a day was fighting alongside and doing the same work as a man in receipt of 4s. 6d. a day? That inequality applies to our permanent battery which was sent. It was approved that they should receive only the pay they got here, plus the Imperial pay in South Africa.

1767. Approved by whom? By the Government. It was submitted by me, and gazetted. Some men being in permanent employment were going to give up that employment in order to take a temporary service, whereas the men in the permanent force were not giving up anything, and would not have to hunt for work when they came back. It was considered that those who gave up work here in order to volunteer had some claim to higher pay.

1768. Had you at Melbourne under consideration a communication from Mr. Chamberlain as to the status of officers of the contingent—that is to say, that you should not take officers higher than a certain rank? That communication arrived at the conclusion of the conference.

1769. You know that we sent four times as many men as were sent by Victoria? We sent considerably more, especially at first.

1770. Yet you have noticed this anomaly—that the New South Wales men were subservient to the Victorians? Yes, and I was not at all pleased at it either.

1771. Could you have obviated it in any way? I do not think so. We adhered to the orders we received not to send any officer of a higher rank than Major.

1772. Seeing that in the First Contingent the Victorians acted in the face of their orders, why did you not send an officer of higher rank, taking a leaf out of their book? They did not send with their men an officer of higher rank than they were entitled to, but they sent a senior officer as Special Service Officer. There was a certain amount of trouble on the "trooper" between the men of the different corps. There was some disagreement between the South Australians and the Tasmanians as to who should command, and the Victorians sent a colonel who relieved the difficulty, and he gradually got command of the whole body.

1773. *Chairman.*] Did you receive a communication from Captain Legge to the effect that he was under the command of an officer who, in his colony did not hold the rank which he himself held prior to his departure? I have complaints of that sort—that is, as to the men being commanded by men from other colonies.

1774. Do you think you could have obviated the difficulty by gazetting an officer of a higher status here? I might have done so, but I do not think it would have been wise to set to work a spirit of opposition in which each colony would be gazetting an officer of a higher status than an officer gazetted in another colony; it would not have been fair generally; it certainly would not have been fair to the Imperial service.

1775. Lieut.-Colonel Bayly held the rank of Lieut.-Colonel here for some years? Yes; while he was in the volunteer forces.

1776. He having been sent to South Africa as a Special Service Officer, and being still there, could you not have cabled asking him to take the command of our forces if advisable? I do not think so, and for this reason: In the first place we sent two units of a totally different nature, one mounted and the other dismounted. You could not appoint one commander of two such discordant elements.

THURSDAY, 16 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. O'CONOR,  
MR. COOK,MR. PIDDINGTON,  
MR. MEAGHER,  
MR. WILKS.

R. SLEATH, Esq., IN THE CHAIR.

Major-General George Arthur French recalled and further examined:—

1777. *Mr. Meagher.*] I think you said yesterday that the reason which actuated you in not dealing with Captain Gibson's appointment, was the fact that he had written a note which you regarded as an act of insubordination;—have you got that note? I said that was one of the reasons; not necessarily all. I have the letter here. G. A. French.  
16 Aug., 1900.

1778. You have heard the Chairman read the note; it is the document which you told us yesterday you considered as an act of insubordination;—at the time that was written, Lieutenant-Colonel Airey was not holding a commission in connection with this Contingent, neither was Captain Gibson? No. I should say the language was insubordinate.

1779. Leaving the language out of the question, the position of the parties at the time was this: that neither Lieutenant-Colonel Airey nor Captain Gibson was holding a commission in the Imperial Bushmen's Contingent? No.

1780. In that document, allegations are made against Lieutenant-Colonel Airey—first of all, of insulting language to Captain Gibson, and, secondly, of assault;—did you make any inquiries to see whether those grave allegations which Captain Gibson made against Lieutenant-Colonel Airey were true? From inquiries I made I had reason to doubt Captain Gibson's statements—not alone in that respect, but in every other.

1781. When you received that document containing those serious allegations against the conduct of Lieutenant-Colonel Airey, did you call on that officer for an explanation? I do not think so. I do not remember anything of the sort.

1782. Would you not think that would be the fairest and most direct way of arriving at the truth, when the conduct of a person was impugned—instead of going to outside quarters, to go direct to the individual and say, "Here are two very grave allegations made, not by an outsider, but by a man who has had a commission in the Imperial Army; are they correct"? I did not attach any importance to the allegations.

1783. Therefore you did not make any inquiry of Colonel Airey? I do not think I did; I do not remember.

1784. What portion of the letter do you consider insubordinate? I do not think this proper language towards a superior officer: "If those are the actions of a soldier, all I can say is that he never was taught the same in the British Army."

1785. *Chairman.*] Do you think a soldier would be taught in the British Army to insult a man by telling him he could not speak English, and hitting him with the crop of his whip—it would be the truth, but insubordinate,—is that your explanation? I consider the language used improper language to apply to a superior officer. Perhaps "improper" would be a more correct word than "insubordinate," as the latter would apply more to officers in their relative positions in an organised force.

1786. Neither of these gentlemen held a commission or were enrolled in the Force at the time? No; "improper" would be the better word.

1787. Do you believe an officer is taught in the British Army to treat a subordinate officer in that way? Certainly not.

1788. Then it would be the truth, but improper,—is that so? If Colonel Airey struck him I presume he only tapped him lightly, and told him to stand up.

1789. Had any officer the right to tap another officer in that way? No, of course not.

1790. If Colonel Airey did that, he was practically exercising a tyranny that he had no right to exercise? It was not a proper thing for him to do, of course.

1791. And if he did do it, you think it was improper for this officer, who had the service which he has proved he possesses, to complain of it? No; I do not think that. I think it improper of him to write of his superior officer in that way.

1792. But if it is true, is it improper for anyone to write the truth? If it is true that he struck him, of course he would be perfectly justified in reporting the circumstance.

1793. He was not under you—he was not enrolled—but, as a citizen of the country, he wrote to the Minister for Defence, complaining of the action of Colonel Airey? Yes.

1794. And you think it was improper for him to do that? I think his method, or his means of expressing it, did not show proper respect for superior authority.

1795. Suppose you are in a superior position; if you behave in a way you have no right to do, do you still maintain that your position demands respect if you yourself do not show respect for it? Perhaps not.

1796. Suppose you yourself were a few years younger, or even now, and in the position of this man, if Colonel Airey came round and started to tap you with his riding-crop, and told you you could not speak the Queen's English, simply because you might carry a little of your national accent with you, you would be inclined to hit him under the ear, would you not? I might, but I should endeavour to restrain it.

1797. But a fairly quick-tempered man might probably hit him in the ear? Yes.

1798. So that this man must have had a great deal of restraint not to do that, and, instead, to complain to the Minister for Defence;—do you not think so;—assuming that the statement is true, did not Captain Gibson show a great deal of restraint in not hitting Colonel Airey under the ear, and, instead of doing so, calmly writing a complaint? Yes; if this were done in any rough way I should think so, but I should rather infer that he merely tapped him.

1799. *Mr. Meagher.*] I suppose you will admit that the composition of the note written by Captain Gibson and read by the Chairman is not that of an uneducated man? No.

1800. Recognising the position this man held in the British Army, and the credentials he had personally from Mr. Cecil Rhodes and also from the South African Chartered Company, can you give any explanation why you made no inquiry as to the truth of his statements before you practically punished him by

G. A. French. keeping his recommendation back? I did not attach much importance to his letter; but, of course, I was up to my eyes in business at the time.

16 Aug., 1900.

1801. Do you say you consider that where a superior officer grossly insults a man by telling him he is an ignorant lout and cannot speak the Queen's English, and assaults him, that it is a matter to which no importance ought to be attached? As I say, in connection with other statements, I do not believe those statements to be correct.

1802. At the time you received that, you considered that it was incorrect,—is that so? I did not attach much importance to it.

1803. Why? Because, from conversations, I understood that it was doubtful, as well as a whole lot of his statements, and that he never occupied the position he alleged he had, and so on—that his statements were not entitled to very much credence.

1804. At the time you received that note, you had made inquiries as to his alleged position; you say now that the reason you attached no importance to that note was because you had found out that some statements, as to his status, were not correct;—being in possession of the fact that this man had masqueraded, apparently, under false colours as to his military status, you therefore treated his letter as of no importance? I did not attach much importance to it.

1805. Being satisfied at the time you received his note that this man was simply masquerading under false colours, would you mind telling us from whom you made inquiries as to the bogus nature of his military status? I cannot remember many particulars about it at all. Of course, that must have come about at the same time that he applied for a position in the Force, and my inquiries would have been made then.

1806. But this man alleges that he was an Imperial captain, and had served in responsible positions in British campaigns; he also alleges in his note two very serious allegations against Colonel Airey; your reply is that you made investigation into the character of this man, and you found he had made bogus statements as to his military status;—can you tell us in what quarter you made those inquiries? I cannot tell, and I am not certain that I made them at the same time, because I can remember nothing whatever about this man myself, individually.

1807. I can take it, then, that at the time you recorded that note you knew nothing detrimental to his military status? I would not be certain; I cannot remember.

1808. You would not be certain that you had heard anything against the man's military status when you received that note, and when you received it you made no inquiry as to the truth of it? I made no inquiry about it, as far as I can remember. I did not attach very much importance to it.

1809. You did not attach importance to it, not on account of the seriousness of the allegations, but of the unreliability of the man? I would not like to say about that. I cannot remember.

1810. You received a letter from Captain Gibson, making grave allegations against Colonel Airey; do I take it that you made no inquiries, on account of the unreliability of Captain Gibson, in regard to the statements he made as to his military status? I am satisfied I made no inquiries. I cannot remember having made any.

1811. Therefore, having made no inquiries, you simply punished this man for the note he wrote, because you considered it was an improper thing for him to do? I would not be certain about that,—that it depended solely on that note; I should not think so. That note would in itself be sufficient to make me object to his having a commission.

1812. Is it a usual thing when a complaint is made showing two grave charges against a superior officer to punish the man making those charges without making inquiry as to the truth of his allegations? Certainly it is not usual.

1813. Did you consider his note from Cecil Rhodes a bogus one, too? As well as I recollect, it was nothing particular. I think he had been employed in the Company or something. I do not remember the particulars of it.

1814. You know that the South African Chartered Company is a very large one, with a great staff of officials, and it is not a very usual thing for a man in the position of Cecil Rhodes to write a personal note to one of the many hundreds or thousands who are employed in that Company? I cannot remember what was in it. I do not think it was more than just a few lines.

1815. *Chairman.*] Are you sure about its not being more than a few lines? That is my impression; but it would come in I suppose with 100 other applications, and I cannot remember.

1816. Would you be surprised to know that it covered over two sheets of memo. paper about that size? Indeed; I had no idea.

1817. Would you be surprised to know it was so? I would, very much.

1818. And would you be surprised to learn that Cecil Rhodes says in that letter that he regrets the cause which necessitated Captain Gibson severing his connection with that Company—namely, the death of his father—and states also that if at any time he should come back to South Africa his position in the Chartered Company would always be open to him;—would you be surprised to learn that that is in the letter? Yes.

1819. Did you read it at all? I probably read it at the time.

1820. You do not recollect? I do not recollect anything about it.

1821. *Mr. Meagher.*] That is a pretty high credential for an unreliable man to have—a note of that character from such a source? From what the Chairman says, of course it was.

1822. There was one from the Secretary of the Chartered Company too, was there not? I do not know; I cannot remember.

1823. *Chairman.*] Would you be surprised to learn that the note from the Chartered Company, written, on their official paper, with their official seal attached, in which many complimentary things were said about this officer, was accompanied by a cheque for 100 guineas? I recollect there was a cheque or a payment of 100 guineas for some service.

1824. A sort of free gift for the excellent service he had rendered? Yes; I think it was an honorarium.

1825. *Mr. Meagher.*] Did you not think it rather an extraordinary thing that an unreliable man should receive 100 guineas honorarium from the Chartered Company, and yet that his word should not have been investigated in regard to that complaint;—would you not think that the complaint of a man who held such high credentials in any portion of the world would be worth while investigating? I apparently did not at the time.

1826.

1826. In regard to the equipment of the troops, when statements appeared in the paper by Mr. Sleath G. A. French. and Mr. B. B. O'Connor, on their return from South Africa, as to saddles and helmets, and to which much publicity was given in the papers, did you call for a report, or have any investigation made, shortly after they appeared in the paper? I do not remember that there was any formal investigation. 16 Aug., 1900.

1827. Or informal? I may have asked some officers if they could give any information about the matter, but I do not think I called for any report.

1828. This evidence was given by Colonel Mackenzie :

987. *Mr. Meagher.*] You remember seeing the statements in the paper on the return from South Africa of Messrs. Sleath and O'Connor, about which I asked you a question just now? Yes; I remember that on the strength of that, or mainly due to that, a Board sat on the supply of helmets generally.

988. On what date did that Board sit? I could not tell you; it must have been about a month ago, I should think.

989. Did they bring up a report? I believe they did.

990. Would you mind producing it here? If it is one of my documents, I will do so with pleasure.

Apparently, according to Colonel Mackenzie, over a month ago, before this Committee was appointed, a Board sat to investigate this question of the helmets;—do you know anything about the Board, or did you ever see their report? They sat and took evidence from some gentlemen here in town about helmets, I recollect. I am not sure that it was solely on account of these statements that had been made in the paper.

1829. You see that Colonel Mackenzie says that he remembers seeing the statements in the paper on the return of Messrs. Sleath and O'Connor, and he remembers that on the strength of that, or mainly due to that, a Board sat;—did you see the report of that Board? I think it was the Clothing Board which made the inquiries. I would not say it was a Board regularly told off to do so; I think the members of the Clothing Board went into the question.

1830. You do not know what evidence was given at that inquiry by the Clothing Board? I find it was not a special Board, but the Clothing Board; I have here the minutes of its proceedings, which the Committee can see.

1831. *Mr. Cook.*] You stated on the first day of your examination that some pressure had been brought to bear in connection with these appointments? Yes.

1832. The list I now hand you is Colonel Mackay's list? Yes.

1833. With regard to those recommendations, was the list compiled by you? My first list was.

1834. After consultation with your officers? Yes.

1835. What officers? I talked with the senior officer in camp, Colonel Mackenzie, and with others—with anyone who could give me information about any of these officers. Some of the gentlemen who were candidates did not belong to the force, and I had to get information where I could.

1836. At the time you presented the list you had not had any talk with any members of the Government—in other words, had they made any representations to you in regard to the selection of officers prior to your presenting your list? No; none whatever.

1837. And this is the list that originated with you? Yes. This is the first list.

1838. *Chairman.*] When you presented that first list was it a list of officers simply to carry on the camp for the time being, or was it a list of officers whom you specially recommended to go to South Africa? To carry on with the view of their going later on—most of them.

1839. If they were found satisfactory? Yes.

1840. The original list that you submitted was more with the intention of having officers to carry on the camp for instruction—was that so? And with the view of eventually going to South Africa, of course. We wanted officers to go on with, practically.

1841. *Mr. Cook.*] How was it that you did not submit a list, to begin with, of officers to completely officer the Contingent? We had to pick up officers and send them to camp, put them under instruction, get them reported on as to whether they could ride, whether they knew anything about drill, and so on, to gradually see what they were worth. They were not all officers who had been in the force and knew something about military matters, but mostly private gentlemen—people from the bush, from the back blocks.

1842. Those were selected by you with the view of their ultimately going to South Africa? Yes; and most of them, I think, did go.

1843. Did you recommend Lieutenant Caines? Yes; he was recommended by me in the final list.

1844. Not in the first? No; he was not in the list of twenty first recommended.

1845. Was his name in the list submitted to you by Colonel Mackay? Yes.

1846. What was the date of your final list? 10th April.

1847. And the date of Colonel Mackay's list? It came to me on the 8th. I had Colonel Mackay's list before me before making up my final list.

1848. Was the name of Lieutenant Gregg on your completed list? I think he was appointed transport officer at a date later than any of these lists.

1849. Appointed by whom? By the Government.

1850. Was Lieutenant Irving on Colonel Mackay's list? Yes.

1851. *Chairman.*] Was he also on your list? Yes; he was in both the first and the second lots submitted by me.

1852. *Mr. Chanter.*] Is it the practice of the Department to obtain written reports from officers commanding regiments as to the distribution of clothes? I think not. The clothing is in many cases issued to the company, and not direct to the Colonel of the regiment.

1853. In your opinion, would it not be an assistance if a system were in force demanding, from officers commanding regiments and companies, a statement or report that the distribution of clothing had taken place in accordance with the wishes of the staff? I think it would be a very great safeguard.

1854. Who had the final recommendation of the officers in charge of the Citizens Bushmen's Contingent? They were every one discussed by myself in consultation with the representative of the Citizens Bushmen's Committee, and then submitted to the Government.

1855. Were you aware that some of those officers commanding squadrons had no previous military experience? Certainly. It was understood that people from the bush were to be selected—to some extent. I tried to work in as many as I could with military experience.

1856. Have you had any reports from South Africa in reference to those officers? No.

1857.

- G. A. French. 1857. Have you heard anything concerning them from any other source? Nothing. They had not been landed very long. They went to Rhodesia, and we have not heard very much about them.
- 16 Aug., 1900. 1858. Are you aware if there is any friction between General Pole-Carew, an Imperial officer, and the officers commanding squadrons of that regiment? No; I have not the slightest information of that sort.
1859. The Imperial officer I speak of was in command of the squadrons at Buluwayo—have you heard anything with reference to the officers there? Nothing.
1860. It has been stated on pretty good authority that the officer to whom I refer lined the men up and told them in the presence of their officers that their own regimental officers were entirely responsible for the men not having been supplied with full rations, of which there were plenty at the base? I heard nothing of that.
1881. It has also been said that this Imperial officer told the men, or some of the men, that their officers were not fit to be troopers, let alone officers in command? I do not think a British officer would make such a statement to men, degrading the position of the commissioned officers in that way.
1862. *Chairman.*] Unless under very great provocation? No; I have heard nothing at all of the kind.
1863. *Mr. Chanter.*] Recognising the gravity of the statements, would you undertake to obtain, if possible, a report as to the truth or otherwise of those statements? Certainly; if I can do so, I shall be very happy, if you will give me information to go upon.
1864. *Mr. O'Connor.*] The troops going over in the "Surrey" had issued out to them a pair each of khaki pantaloons. The Officer Commanding compelled each man on board that boat to pay 6s. or 6s. 6d. for the pantaloons—have you any information in regard to that matter? None whatever. You mentioned this to me the other day, and I took a note of it, and I have ordered inquiries to be made from some of the men who have returned who can give us some information.
1865. *Chairman.*] That would be a most extraordinary proceeding, would it not? Very. Every man is supposed to have had two suits complete.
1866. *Mr. O'Connor.*] Has the Officer Commanding the Australian Horse sent in a report to you about this matter? No, I have seen nothing about it.
1867. Has any of the money which was collected by him been returned to the Colony? I do not think so.
1868. Did he have any authority to issue those pantaloons and charge for them? Not that I am aware of.
1869. If such authority had been issued you would know of it? Yes, I should think so.
1870. You can understand that there was a good deal of complaining about the matter and much irritation amongst the men at being charged 6s. 6d. for this pair of khaki pantaloons? Yes.
1871. If the Officer Commanding had no authority to issue them and charge for them, would you see that every man in the Contingent had returned to him the money paid for those pantaloons? I shall make a note of it, yes.
1872. Have you had any reports at all from Captain Thompson? Yes.
1873. Have you any idea of the date of the last report you got from him? I could not tell.
1874. Have you had any report from him since he arrived in South Africa? Yes, describing affairs at landing.
1875. There was no mention made of the issue of these pantaloons and the charge made for them? I do not think so.
1876. You have had inquiries made into this matter, which I mentioned to you before? I am having an inquiry made now. I can only inquire, of course, from one or two men who have returned.
1877. There was no official report made to you by Captain Thompson of his having issued the pantaloons, and having charged for them? No, I do not think there was. I do not remember anything of the sort.
1878. I suppose you have had no notification of Captain Thompson's conduct towards Lieutenant Wilkinson—I forget whether it was at Driefontein or Abraham's Kraal? Was it ever reported to you that on the day when young Bonnor was killed Captain Thompson, who was not present at the actual occurrence, rode up to Lieutenant Wilkinson and publicly stated that the blood of that young man was on Wilkinson's head? I have never heard any such report.
1879. That would be a very improper thing for a Commanding Officer to say to an officer commanding a squadron in the presence of his men? Very improper.
1880. When Captain Antill, of the Mounted Rifles, was going away, I believe he absolutely refused to take the Colonial made saddles—do you know whether he did or not? I do not recollect; but I do not think he had many Colonial saddles.
1881. It was intended that he should take them at first, but he refused to take them, did he not? I do not think so. I think at that time I had sufficient cavalry saddles to give the men.
1882. Captain Antill told me at Bloemfontein that he was offered these Colonial made saddles and he refused to take them, and he said there were 100 saddles used for escort purposes for the Governor? We had 200 cavalry saddles—100 for the lancers and 100 for the mounted rifles.
1883. For escort purposes? No. For the corps close to the city—complete cavalry saddles.
1884. I will put the question in a specific way—Did Captain Antill insist that in place of the Colonial made saddles there should be issued to him these Imperial made saddles? I do not think so; I do not think he was asked to take them.
1885. Was he refused the Imperial saddles by the military authorities here? I do not think so.
1886. Did the Military Secretary say to him, "These are issued for escort purposes, and if we issue them to you we will have none to escort the Governor up to Parliament House with"? I cannot tell if the Military Secretary said that. He had no authority from me to say it.
1887. Captain Antill is not a man given to imagining things? No.
1888. He is a pretty level-headed man, is he not? Yes. As a matter of fact, those cavalry saddles were with the First Contingent. What they did not use they took to the Lancers at the Cape.
1889. Captain Antill went with the first lot? Yes.
1890. *Chairman.*] With regard to the appointment of officers, did you object to any of the officers recommended by Colonel Mackay? No, I did not object to any of them. I may say that they were gazetted before there was any time.
1891. You told us that Colonel Mackay supplied you with a list before you gave in your final list;—did you object to any of the officers on the first list supplied to you by the Colonel of the regiment? I did not, as far as I can recollect, object to any one of them.
1892. With regard to Lieutenant Caines, against whose name is written "Mackay," did you recommend him because Colonel Mackay recommended him? Very probably, yes.
- 1893.

1893. Did you or did you not;—did you make any inquiry about it yourself? I should say it was because Colonel Mackay recommended him that I did. I do not think he is among the first lot of twenty that I sent in, and probably it was because Colonel Mackay recommended him that I recommended him. Of course Colonel Mackay would have a great say in those things. G. A. French.  
16 Aug., 1900.
1894. You understood you were taking the responsibility of your recommendations? Yes.
1895. Would you recommend a man without knowing anything at all about him, simply because Colonel Mackay recommended him? I would, of course, go greatly by Colonel Mackay's recommendation.
1896. But would you not make some inquiries yourself? No doubt we did. We inquired into the case of every man.
1897. And if you found he was unsuitable, in your opinion, would you still recommend him because Colonel Mackay had recommended him to you? I would go by Colonel Mackay's recommendation if I was not myself perfectly well satisfied he was not a fit officer.
1898. Suppose something arose which made you aware that this man, in your opinion, would not be a competent man for the position, would you still recommend him? Not if it was a very definite thing that I was certain about. These things are all questions of degree.
1899. I want to know where the degree comes in; you threw one man out because he wrote a letter complaining that Colonel Airey had used insulting language and hit him with his whip? Not solely on that account.
1900. What was the other account;—you said you never made any inquiries about anything? The inquiries with reference to that gentleman's statements were not satisfactory.
1901. In what way? He represented himself as a Captain of a certain regiment, and we could not find his name, and then he had to admit that that was not correct, and so on. Those were the reports I got.
1902. Who made those inquiries? I should think that inquiry would be made by Colonel Mackenzie.
1903. How many officers did you recommend in your final list? Thirty-nine, with the Major left blank; that would make forty in all.
1904. There were thirty-nine names on your final list, as submitted to the Minister of Defence? Yes.
1905. And how many were there on Colonel Mackay's list? Thirty-four.
1906. Did all those on Colonel Mackay's list go, or did some of them not go? I think everyone of those thirty-four went.
1907. And in addition Colonel Mackay himself? Yes.
1908. That would make thirty-five? Yes.
1909. I think you told us yesterday that there were five or six of the officers, whose names were submitted on your final list to the Minister for Defence, who did not go? I think there were about five or six; I would not be certain about that.
1910. And the difference between thirty-nine and thirty-five would account for four? The thirty-nine included the Doctor and the Veterinary Surgeon, who were not included in Colonel Mackay's list.
1911. You have in your hand, I think, the final gazetted list by the Government; how many commissions are there there? Thirty-three.
1912. So that if that is the final *Gazette* notice, only thirty-three commissioned officers went? I do not think the Medical Officer, the Veterinary Surgeon, or Colonel Mackay himself, are included.
1913. So that that would bring the list up to thirty-five? Colonel Mackay himself, one Medical Officer, and one Veterinary Officer would be three more, or a total of thirty-six. Two Chaplains and a Transport Officer were added afterwards.
1914. Did you have the two Chaplains in your final list? No.
1915. Did you have the Transport Officer in your final list? No.
1916. Did you have the Veterinary Officer in your final list? Yes; one Veterinary Surgeon and one Medical Officer.
1917. You say you recommended thirty-nine officers in your final list? Yes.
1918. And Colonel Mackay recommended thirty-four? Yes.
1919. What officers have you got in your list that Colonel Mackay has not got in his? The Veterinary Surgeon, the Doctor, and Colonel Mackay himself.
1920. That would bring the number up to thirty-seven, and you recommended thirty-nine;—if thirty-nine were recommended, and only thirty-seven were sent, it is clear that the two were not dropped out in order that somebody else should be put in their places? Yes.
1921. You recommended Captain Copeland, Lieutenant Conroy, Captain Luscombe, and Lieutenant Grace? Yes.
1922. Are there any other officers of the Bushmen's Contingent at the front whom you recommended? Without a very careful comparison I cannot tell you right off what the differences were.
1923. You know that you did recommend those four? Yes.
1924. Did you have any authority from those men to recommend them for service in the Bushmen's Contingent? No.
1925. They would have been perfectly within their rights in refusing to serve in the Bushmen's Contingent if they so desired? Yes; it would have been an unusual thing for an officer to do.
1926. That accounts for four you recommended? Yes.
1927. And in sending thirty-seven instead of thirty-nine, that would account for two more? Yes.
1928. So that that accounts for the whole six of your recommendations that were not adopted? In number; I do not know that the names are all quite the same.
1929. But that accounts for the number? Yes.
1930. You say that only five or six of the men you recommended did not go; I want to account for those in a reasonable and proper way, and I ask you now whether four of them were at the front who had never volunteered—is that so? That is correct.
1931. And instead of the authorities sending thirty-nine officers they only sent thirty-seven? Apparently so.
1932. So that that accounts for the six of your recommendations who did not go? Yes.
1933. You said just now it would be rather an unusual thing for an officer not to accept any appointment he might be asked to take up? On service it would be an unusual thing.
1934. Do you remember recommending to the Colonial Secretary Captain Onslow Thompson? Yes.
1935. And Captain Larkin? Yes.
1936. And Captain Thomas of Tenterfield? Yes.
1937. Did any of those three officers volunteer? Captain Thomas did. 1938.

- G. A. French. 1938. Did Captain Larkin or Captain Onslow Thompson? Captain Onslow Thompson and Captain Larkin were supposed to have done so in the First Contingent, but apparently they did not. It was assumed they would go, when they could not go.
- 16 Aug., 1900. 1939. Apparently they did not volunteer? No.
1940. Still it was supposed they would go? Yes.
1941. And you handed in a recommendation for their appointment to the Minister for Defence? Yes.
1942. Did they go? No.
1943. So that your experience in recommending men who did not volunteer was quite opposite from what you supposed it would be? Yes. Of course they were not on active service. They could not go on account of their private business.
1944. It was very trying for them, was it not, to have their names published in the paper as having volunteered and being accepted, and then having to remain here on account of their own business? Yes; they said that we acted without official information.
1945. And you think it would be rather trying on those men, and that they would be apt to be twitted with it? I am afraid they might.
1946. That they had not the courage—that after volunteering they had drawn out of it? Yes; that would be an unkind way of putting it, of course.
1947. But is not human nature very often unkind? Yes.
1948. Here is a Mr. Brodie, "Commission in the late Campbelltown Rifles";—you did not recommend him, did you? I do not recollect anything about him.
1949. Are you surprised to learn that though he was a young, active, smart man—an engineer by profession, who had great experience travelling all over the country following his profession, and also experience in the Mounted Rifles,—he was refused? For which Contingent?
1950. The Imperial Bushmen's Contingent;—you do not recommend him, do you, in any of your lists? No; I do not think he is recommended by me in any of the lists.
1951. There is Lieutenant Chapman, of Methuen's Cavalry and the Dragoon Guards? I was asked a question with reference to him yesterday.
1952. What was the answer? That I could not recollect.
1953. Then Major Cotter, "twenty-four years in the Royal Marine Light Infantry";—what sort of an officer is he? As far as I know, a very good officer, and one who takes a great deal of interest in military work.
1954. How old is he? I should think about 43.
1955. Practically in the prime of life? So I should think, at my age.
1956. And he was left out? We could not well take him.
1957. Then we have Colour-Sergeant Dransfield and Sergeant-Major Daly, of the Permanent Staff;—I suppose those are instructors? Yes.
1958. Before a man attains to the position of instructor he must have had considerable Imperial experience? Not necessarily Imperial; he must be a good instructor, and acquainted with military matters.
1959. But you generally get men from the Imperial service? Largely.
1960. Do you know if either of these men had any Imperial service? Daly I know had, and probably the other also.
1961. They must have had a number of years' experience? Yes.
1962. And would be thoroughly competent men? Yes.
1963. Did they instruct the young officers as well as the rank and file? Yes, any young officers joining.
1964. Both were refused—you recommended neither? I do not think they were recommended. As to Daly, I doubt if he was medically fit for active service, but I am not certain.
1965. And Hill? He was mentioned yesterday.
1966. Did you recommend him? I do not think so.
1967. Did you have his application before you? Every application was considered.
1968. Would you be surprised to hear that this is his record—"Six months under Commander Lexie Maclean, 1st Peddie (Native Levies); Transkie Peri Bush, Debs Nek, Chichaba Valley; rank of Lieutenant. Served five months under Commander Joe Wood, Moirisi Campaign, Drakensburg Mountains; received bonus of £25 for efficient services. Eleven and a half months in Basutoland, from relief of Mafeteng to end of war. We lost seventy men in this campaign under Colonel Brabant and Colonel F. Carrington. Sergeant, 1st Cape Yeomanry. [Offered to verify by cable to A. Douglas, M.L.A., Grahamstown, late Captain 1st Cape Yeomanry.] Age 38, born in Grahamstown, South Africa; speak Dutch and well up in management of natives and Cape boys, and can make myself understood in Kaffir; lived two years in Kimberley, and know the Orange Free State and Cape Colony well";—did you have that application before you? No doubt.
1969. And you did not recommend that man? Apparently not.
1970. Could there be any reason or anything against him? I do not know; I cannot remember.
1971. But you did not recommend him? No.
1972. Did you recommend Lieutenant Irving? Yes; he is in both my lists.
1973. You recommended him before Colonel Mackay recommended him? I think so; he is in my first list.
1974. He is one of the first twenty you submitted? Yes.
1975. What is his experience? I do not know; he had probably some bush experience.
1976. Are you aware he had none? I do not know what his qualifications were.
1977. Somebody has marked "Mackay" against his name? That probably means that he was also recommended by Colonel Mackay.
1978. But you told us just now that you recommended him in your first list of twenty? Yes; and I suppose he is in my second list too.
1979. And you thought that this Mr. Irving, without any experience, would be a better qualified man for fighting and having command in South Africa than a man with the experience of Mr. Hill, whose services I have just read out? I do not exactly know what the reasons were for Mr. Irving being recommended.
1980. Does it not seem strange that in preference to a man 38 years of age, a native of South Africa, with experience in all the different parts of South Africa, who knew the country well and had had a good deal of

of active service there, you should have taken this Mr. Irving with no experience at all? Of course Mr. G. A. French: Irving was put in a very junior position. The other man, 38 years of age, you could not put at the end of the Second Lieutenants, if you gave him a commission at all. 16 Aug., 1900.

1981. Take "A. Gidley King," who recommended him—is he on your list? He is put at the end of everything in my first list—junior of the lot.

1982. But he is on your first list? Yes.

1983. What experience has he had? I should think very little.

1984. It says here absolutely none—never belonged to a corps or anything of the sort? I think he is quite a young man. I rather think in his case he was given a show to go as a junior officer just to take his chance—that his name was that of an old identity in New South Wales, and that might be considered in connection with an appointment as a junior officer.

1985. Is that how you considered it? I think that had something to do with it. I rather fancy that was a matter I talked over with the Chief Secretary.

1986. But you are not very positive about it? No, I cannot be very positive.

1987. You submitted King's name simply because his people were old identities here? That probably had something to do with it. He was put in a very junior position—at the end of everything.

1988. Did you discuss any of those first twenty appointments with the Chief Secretary? I think it is quite likely I may have spoken to him about some of them.

1989. Is it customary for you to do so? Being in the office talking to him about matters, this would come up.

1990. Just casually? Yes.

1991. Do you know if anyone brought any pressure in regard to King? I do not think so.

1992. Did any one point out to you that he was the descendant of an old family or anything of that sort? I think it would probably be mentioned in the papers in connection with his application.

1993. Although you must admit that, on the face of it, Hill had far higher claims than either Irving or King, you recommended them in the first list in preference to Hill? Yes; I do not remember why Hill was not recommended. I can see a distinct objection to putting him in at the end of the lieutenants, he being 38 years of age.

1994. Then again, "S. L. Mackenzie," a lieutenant appointed, with no experience—do you know anything about him; was he on your first list of twenty? Yes.

1995. Is he a son of Colonel Mackenzie? No.

1996. He has no military experience, and he is also placed in before Mr. Hill? I think the "no experience" in that list refers to military experience; he may have had experience in the bush.

1997. Here is another man—H. C. Mitchell, a lieutenant, do you know anything about him? No.

1998. Was he on your first list? No.

1999. Was he on your second list? Yes.

2000. Was it on account of his name being in Colonel Mackay's list that you placed him there? I should think it very probable he was recommended by Colonel Mackay.

2001. That is the reason why you recommended him? Very likely.

2002. Lieutenant D. H. Mackenzie—who is he? That is a young fellow, a son of Colonel Mackenzie, to whom I referred in an answer to Mr. Meagher yesterday.

2003. Was he on your first list? I think so.

2004. Had he any previous military experience? He was in the Lancers as trumpeter, and went to the Jubilee, and so on—that is all.

2005. I see, also, in this list the name of Mr. Oxley. Was he one of your recommendations? I do not think so; I do not recollect the name.

2006. Would you say that you adopted in this case the recommendation of Colonel Mackay? It is very likely. I had no personal acquaintance or knowledge of many of these gentlemen. I had to act upon the reports of different persons.

2007. It would appear from this list that Mr. Hill had high qualifications; yet he is passed over, and Mr. Oxley, who had no previous military experience, is appointed lieutenant? I do not think he was one of my original recommendations, nor do I think you will find his name in my second list. My impression is that he was recommended by Colonel Mackay.

2008. You never recommended him? I think not.

2009. We now reach a very interesting stage. If you recommended these other men purely on account of their recommendation by Colonel Mackay, why was it that you did not recommend Mr. Oxley. You have led the Committee to believe that on account of Colonel Mackay recommending a certain number of these men you accepted their nominations and forwarded them to the Minister for Defence? I would not say that I did so purely on that account.

2010. Did you make any inquiry yourself? Of course I made inquiry as to all the cases, but no doubt the recommendation of Colonel Mackay would weigh very greatly with me.

2011. Do you remember making any inquiry as to Mr. Oxley? I have no doubt I did. That is probably one of the cases in which I did not concur with Colonel Mackay. Probably the putting in of Mr. Oxley would have involved the striking out of someone else.

2012. If you did not concur in the recommendations of Colonel Mackay, you would have struck out the names would you not? Yes; but there were not many of such cases, I think.

2013. The fact of your having struck out Mr. Oxley, although he was recommended by Colonel Mackay, shows that you were not guided entirely by Colonel Mackay's recommendations? Not wholly.

2014. Had you anything against Mr. Oxley? There was probably something. His qualifications perhaps did not appear to be the same as those of others on the list.

2015. They were exactly the same as those of many others who had no qualifications at all, and you struck him out of your list. You did not recommend him to Colonel Mackay, it was Colonel Mackay who recommended him to you? Apparently.

2016. That being so, you cannot place the responsibility on Colonel Mackay for the officers who are recommended in your officer's list? Not where there is any difference between us.

2017. With regard to the officers recommended in your final list, you cannot in any way place the responsibility upon Colonel Mackay? I do not seek at all to place the responsibility for that list upon him.

- G. A. French. 2018. You take absolutely the whole responsibility for all the officers submitted in your final list? Certainly, yes; but I do not think there were many points of difference between Colonel Mackay and myself.
- 16 Aug., 1900. 2019. Then the supposition that Colonel Mackay's recommendation had any influence upon you falls to the ground? I do not think that is entirely the case. Colonel Mackay's recommendations had great weight with me in many cases, but they did not weigh with me absolutely.
2020. If you felt that anyone whom Colonel Mackay had recommended was not fit for the position, it would have been your duty to strike out this name? Yes.
2021. And as a matter of fact, in the case of Mr. Oxley, you did do so? Mr. Oxley may have been suited to the position to a certain extent, but I probably thought that someone else was better suited to it.
2022. Did you recommend Mr. Rainey? Yes.
2023. Had he any previous military qualifications? Not according to the list before you. A number of the men recommended had no military qualifications.
2024. I see that Lieutenant Rudkin also had no military qualification;—did you recommend him? Yes; he is in my first list. I rather think he had some volunteer experience in the Old Country.
2025. It does not appear officially? No.
2026. I come now to Squadron Sergeant-Major Richards of the Permanent Staff;—he was not selected? He was one of the instructors, I think.
2027. To the Mounted Rifles? To some mounted corps.
2028. So that he would have rather high qualifications, in order to be an instructor? Yes.
2029. In fact as an instructor he would have to teach young officers as well as men their duty? He would have to do a good deal in that direction.
2030. But, in matters of drill, the Sergeant-Major in a mounted corps must be a really first-class man? Yes.
2031. He must be acquainted with the duties of officers up to the rank of Squadron Officer anyhow? Yes.
2032. A Sergeant-Major must be able in drill to do the duties of Captain of a squadron? He ought to be able to do so.
2033. If he were not able to do so, he would not be qualified for the position of Instructor? No.
2034. Is there any reason why Mr. Richards was not selected? I cannot remember at this moment, but I should think it probable that his age would be against him.
2035. How old is he? I should think he would be about 35 or 40, is he not?
2036. Would you consider the age of 35 or 40 too old for active service? No; but for a junior Commission. It is not usual in the Imperial Service to give a Commission from the ranks to men over 24 or, under certain circumstances, over 26. The idea is not to have an older man serving under a younger one.
2037. That brings me to this point: that age apparently is just as much a test as ability for a Commission? For a first appointment age would be a rather serious bar.
2038. Are there not some who never have a Commission before they are 35 or 40? I am speaking now of junior Commissions.
2039. Lieutenants? I do not know of any men of the age you mention appointed to a junior Commission. I have always endeavoured to arrange that age should receive due credit apart from other qualifications.
2040. Do you think it would be more advisable to put a boy of 18 or 19, without any military experience at all, or without any bush experience, in the position of troop leader in preference to a man like Mr. Richards, whom you must know to be capable of taking charge of a squadron, he being a man of considerable experience? I should not think it would be.
2041. Let me put the matter in this way: Take a squadron of Mounted Rifles; they would probably be divided up into three or four troops, so that a Subaltern would be in charge of each troop;—suppose the Captain at the head of one squadron were killed, or dangerously wounded, the Senior Lieutenant, or the Senior Troop Commander, would take charge of a squadron? Yes.
2042. Suppose the Senior Troop Commander were a boy, 19 or 20 years of age, and that the squadron consisted principally of men of 35 or 40 years of age, who had long and varied experience in actual warfare; do you think it would be a proper thing to put a boy in charge of such a squadron;—would it be advisable to place a boy of that age, whose brain had not fully matured, over the heads of veterans? It would not be expedient, perhaps, but it is a possibility which might occur. The boy would be appointed really at the bottom rank. He would be a Junior Second Lieutenant. But there is always the possibility of not only the Captain, but the Senior Lieutenant being knocked over.
2043. But in the case which occurred the other day—that of young Mr. Mackellar, who was appointed at the age of 19 a First Lieutenant—if he had remained in that position he would have been in full charge of the Australian Horse when Captain Thompson was invalided? Yes; but as a matter of fact, he was passed into the 7th Dragoon Guards.
2044. But as a Second Lieutenant far down in the list? Yes.
2045. Whereas you sent him as First Lieutenant? Quite so; but as I have already explained, the Australian Horse were peculiarly situated. They were a complete unit of their own. The Colonel practically nominated the whole of the officers. They were not necessarily my nominations. I merely concurred in them.
2046. Then we have Mr. V. W. Ryrie, a lieutenant? I cannot remember his case particularly.
2047. Did you recommend him? Yes; he is in my list.
2048. Had he any bush experience at all? I think so; the Ryries are a bush family; they live in the country.
2049. I suppose he has some military experience also? I am not certain about this particular man, but his two brothers had.
2050. *Chairman.*] Had you anything to do with the recommendation of Dr. Lawson? Quite formally. He would be recommended by our own branch medical officer, or by some medical gentleman of standing in the Colony.
2051. *Mr. Cook.*] Would you have selected these same officers if you had had the selection of them in the first instance? A very large number of them are the same as my recommendations.
2052. How large a number? As a matter of fact, I think there was a difference of opinion in only four or five cases as between my list and that sent in by Colonel Mackay.

2053. You take the full responsibility for the selection and the sending away of that Contingent? I G. A. French. take the full responsibility for the names I put forward. With the limited amount of knowledge I could obtain as regards the different officers, I could not possibly take the view that a man was necessarily the right man simply because I had recommended him. I could not take up such a position, because in regard to many of these gentlemen my personal knowledge of them amounted to nothing. I should not know one-half of them if I saw them. I had to be guided by the reports I received.

16 Aug., 1900.

2054. On the whole, you approved of the whole that was done concerning that Contingent? Yes; there are only a few points of divergence between myself and Colonel Mackay.

2055. *Chairman.*] You told us that you were appointed Chairman of the Imperial Bushmen's Committee? Yes; I was Chairman in the first instance.

2056. By whom were you appointed? By the Minister, and I presume with the approval of Government. The first official information I received on the subject was from the Chief Secretary. I should explain that a meeting took place before the receipt of his communication, in which he says, that His Excellency, myself, and others were appointed members of the Committee.

2057. Have you any document showing that you were appointed Chairman of the Committee;—have you any official document? No. As a matter of fact, I took the chair at the first meeting.

2058. You considered that you, being the highest military authority there, in virtue of your position you were entitled to take the chair? That is what occurred.

2059. That is practically all that was done? At the first meeting. I should like to say at this stage that, as far as I can see, this matter will resolve itself into an entirely personal question. I cannot see at this moment that it is a matter of interest to the public.

2060. But it has been dealt with by other members of the Committee, and a certain impression has got abroad, and I desire to see whether or not it is well founded? I have the correspondence here in its proper order, and I had perhaps better lay it before you if you insist on going into the matter, although, as I say, it does not appear to me to be a question of public concern. The following paragraph appeared in the *Sydney Morning Herald* of Saturday, 10th March:—

## OFFICIAL NEWS.—FORMATION OF A SELECTION COMMITTEE.

THE Premier states, in connection with the Australian Bushmen's Contingent, that it was decided at a Cabinet Meeting yesterday that a Committee of about half a dozen in number should be chosen to make the necessary selection of officers, men, and horses; in fact, the Committee will do everything that is necessary in relation to the formation of the Contingent. Mr. Lyne is not in a position to give the names of the members of the proposed Committee, as he has not yet communicated with the gentlemen in question. Major-General French, however, will be one member, and Colonel Mackay, Vice-President of the Executive Council, will be another. There will be another military man on the Committee, and the remaining members will be civilians.

On the 10th March Major Boam wrote the following memorandum:—

Having in view the reorganisation of the infantry and mounted infantry units of the Third Contingent, may I be informed what steps are to be taken as regards uniform already ordered, and subsequent supplies?

I may inform you that the men of the Mounted Infantry have all been tested as regards their shooting and riding; but as I am led to understand from the newspaper reports this morning that a Committee is to be appointed for final selection, I should think it would be inadvisable to continue clothing the men until such selection has been made.

Upon that I wrote this minute:

As it seems that a Committee has been formed to raise and equip the Bushmen's Contingent about to be formed, I presume that the Military authorities can take no action in the matter.

That minute is dated 14th of March, and probably the letter I am now about to read crossed it:—

My dear French,

I am desired by Mr. See to say that His Excellency the Governor will form one of the Committee to raise and equip the Bushmen's Contingent.

Chief Secretary's Office, Sydney, 13 March, 1900.

Yours faithfully,

CRITCHETT WALKER,

Principal Under Secretary.

Major-General French, C.M.G., R.A.,

Commanding Military Forces.

I received on the same date, also, the following letter:—

Dear General French,

Chief Secretary's Office, 13 March, 1900.

I am directed by the Chief Secretary to say that the Government has decided to appoint a Committee to take such steps as they may consider necessary in connection with the raising and equipping in this Colony of the troop of "Bushmen" to proceed to South Africa at the instigation of the Imperial authorities, and I am to inform you that you have been appointed a member of that Committee, in conjunction with His Excellency the Governor, the Honorable Colonel Mackay, Major Thompson, Major Carey, and Mr. Thomas Watson.

Yours faithfully,

CRITCHETT WALKER,

Principal Under Secretary.

Major-General G. A. French, C.M.G., R.A., &c.

From personal instructions—no official instructions were issued that I am aware of—I presided at the Committee meeting on the 13th, and those present arranged to proceed with the purchase of horses and the enrolment of bushmen. I jotted down some notes of what occurred at that meeting, and I will read them to the Committee:—

NOTES of first meeting of the Imperial Bushmen's Committee, held at Victoria Barracks, New South Wales, on 13th March, 1900.

Present: Major-General G. A. French, C.M.G., R.A.;  
The Hon. Lieutenant-Colonel J. A. K. Mackay;  
Major J. R. Carey;  
Mr. T. Watson;  
And later Major Thompson, 7th D.G.; and  
Colonel H. D. Mackenzie, A.A.G. and C.S.O.

It was understood that the meeting was appointed with Major-General French as President, but no special instructions were furnished.

Arranged, on suggestion by Major-General French, for certain districts to be visited by various members, for the purpose of provisionally enrolling men (bush) and possible purchase of horses. Men to be locally medically examined, subject to further medical examination in camp, and tested in riding by the Enrolling Officer; other conditions, on form attached, being observed. The signature of the Enrolling Officer, on the form signed by the doctor, to be guarantee as to riding, possible fitness, and character.

General Order, showing districts to be visited, attached.

Average price per horse, about £15.

Forms and railway passes to be issued.

An Orderly Sergeant to attend each Visiting Officer.

It was arranged that Major J. R. Carey and Mr. T. Watson should be a sub committee to test the riding of the mounted men in camp at Kensington, and to proceed at once with this duty.

It

2069. I believe you received a further communication from the Principal Under Secretary? I received, G. A. French. on the 19th March, the following letter:—

Sir,

With reference to your letter of the 16th instant, I am directed by the Chief Secretary to request that you will be so good as to state for his information whether the inference to be drawn from your communication is that you decline to assist the Government in the raising and equipping in this Colony of a troop of Bushmen?

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Major-General G. A. French, C.M.G., R.A., &c., &c., &c.,

Commanding the Military Forces.

2070. Did you write any reply to that? As a matter of fact, there was a misunderstanding as to what was intended by the terms of the letter I had received as to the appointment of the Committee. I attended the meeting in due course, and His Excellency was present. I do not think any record of the proceedings was kept; but I made some notes of what occurred. They are as follows:—

NOTES of a Meeting of the Committee appointed by the Government in connection with the raising of the Imperial Bushmen's Contingent.

Present:—His Excellency the Governor.

Lieut.-Col. The Hon. Mackay, M.L.C.

Major-General French.

T. Watson, Esq.

AFTER some conversation between Colonel Mackay and His Excellency, Mr. Watson was asked to withdraw temporarily.

Lieut.-Col. Mackay then made a statement to the effect that he had just been talking over with Mr. See (Chief Secretary) the fact of Major-General French having requested to be allowed to resign from the committee, that it was a surprise to him, as Major-General French had had a meeting of the committee (as originally formed), and the work of the members was laid out and going on, that he quite understood that the work of the committee was to see to the purchasing of suitable horses and the enrolment of *bona fide* bushmen.

In reply, Major-General French pointed out that that was his view from the instructions personally given to him by Mr. See, but as he subsequently received two official memoranda from the Principal Under Secretary to the effect that the committee was to "raise and equip" the force, he did not see how he could act on a committee which would practically usurp the functions of the military authorities.

His Excellency requested Mr. See's attendance, and placed before him lucidly the remarks made by Lieut.-Col. The Hon. Mackay and Major-General French; Mr. See confirmed the statement made by Lieut.-Col. Mackay, expressed the great satisfaction felt by the Government at the thorough manner in which previous Contingents had been organised by the military authorities, and his pleasure at knowing that Major-General French would continue to act on the committee.

The incident ended.

In consequence of members of the committee having to be away purchasing horses, it was thought desirable that another gentleman of bush experience should be employed to carry out riding tests at Kensington. Major-General French stated that Mr. Fetherstonhaugh had taken much trouble with the previous Bush Contingent, and it was agreed that he should be asked to undertake the work. Owing to members being so much on the move, no date was fixed for next meeting.

G.A.F., Noon, 19/3/1900.

The whole matter, as I said at the outset, was a personal one, and it does not seem to me to be of much public interest.

2071. It cannot be a purely personal matter when you found it necessary to go so far as to practically tender your resignation from the Committee, which simply meant that you were simply placing yourself above the Civil authorities—that you were so annoyed at what you considered a usurpation of your functions as head of the Military Department that, as I say you, practically tendered your resignation, and declined to do the work you had been asked to do by the Civil Head of the Military authorities? I still think that the whole matter might be dropped from the record of these proceedings as being purely a personal matter. There was a misunderstanding. It was a question of what was intended and what was written. It was intended that the Committee were to assist in the matter.

2072. Before you tendered your resignation, did you see the Civil Head of your Department, and inquire whether or not a mistake had been made? I had seen the Chief Secretary originally, and he had told me about the matter, and I afterwards received the official communication.

2073. Then I understand that you did not see him again, but that you at once tendered your resignation? Yes.

2074. When you received the letter to which you have referred, although you were satisfied in your own mind that it did not convey what had been conveyed to you by the Chief Secretary verbally, and although you saw that it was written by the Principal Under Secretary, and not by the Chief Secretary himself, you still thought fit to tender your resignation? As I say, I had had an interview with the Chief Secretary, but the letter I took to be official, receiving it afterwards.

2075. But you did not take the trouble to see the Chief Secretary personally, and ascertain whether or not any mistake had been made? No; I took the letter as official.

2076. Still you saw that it was signed, not by the Colonial Secretary, but by the Principal Under Secretary, and although Mr. See had previously told you that the Committee was to assist the Military authorities, you did not take the trouble to see him again? No; I took the letter to be a subsequent official settlement of what was done.

2077. And accordingly you tendered your resignation from the Committee? Yes.

2078. Would that not be held to be insubordination on your part? I do not think so. I did not see how I could serve on a Committee which was usurping the duties of the General Officer and his Staff.

2079. You understand that you are a public servant? Yes.

2080. The highest civil authority in your Department is the Minister for Defence, and the highest military authority is the Governor? Yes.

2081. From the civil and military standpoint, those are the two chief authorities? Yes.

2082. Suppose you asked Major Boam to serve on a Clothing Board, for example, and he thought that Colonel Knight, for instance, was also to be upon that Board, and considering himself a "big bug," he tendered his resignation to you, what action would you take;—in that case you would have deputed to him the duty of attending the Committee, and he would have refused to do so? He would have to give reasons for his action, I should think.

2083. But would he be expected to give reasons for disobeying the orders of a superior officer? I do not think that service upon a Committee of this kind can be looked upon as an order. In the case of service upon a Committee it is not an uncommon thing for persons to write a letter requesting that they may be excused from service.

2084. In that case there would be absolute freedom; but this Committee was in connection with your employment as a public servant? But I did not see that I could carry on duties on a Committee over my own head, as it were.

2085.

G. A. French. 2085. As a matter of fact, has there not been some friction for some time past between yourself and His Excellency the Governor? I do not think that question comes in in any way. It was a question of the whole Committee—not His Excellency the Governor. On the 5th April I wrote the following letter to the Principal Under Secretary:—

Letter from Principal Under Secretary, of 19th March, 1901, *re* General Officer Commanding assisting the Government in the raising and equipping of a troop of Bushmen.

To the Principal Under Secretary, —

With reference to the above communication, this matter was disposed of verbally by the Honorable the Chief Secretary, in the presence of His Excellency the Governor, on the 19th March, by pointing out that his wishes were misunderstood, that he had no intention of the Committee in question usurping the functions of the General Officer Commanding and Staff, and that it was mainly intended that the Committee was to assist the military authorities by purchasing horses and testing bushmen. This statement, of course, disposed of any objections I had to being one of the Committee.

In any case it would have been my duty to assist the Government in every way in my power in the raising and equipping of the Imperial Bushmen's Contingent, and, I believe, I have so far succeeded.

G. A. FRENCH, Major-General,  
Commanding N.S.W. Military Forces.

With all the facts before you, you will now see that it was really a question of misunderstanding, and I think if the Committee have no objection the record might very well drop out of the proceedings.

2086. It seems to me to be in the nature a storm in a teapot;—had you seen the Colonial Secretary instead of sending in your resignation, there would not have been all these papers, and all this trouble about the matter? I had seen the Colonial Secretary only the day previously.

2087. And it appears that he told you on that day something different from what was contained in the letter? I received the letter officially, and I took it to be final.

2088. When you next saw the Colonial Secretary you discovered that he intended by the letter exactly what he had first explained to you, and the whole matter was then fixed up? Yes.

2089. I suppose you would not have considered your dignity hurt in any way by ringing up to the Colonial Secretary, and saying to him, "Do you really intend that this Committee is to take the whole of the business in connection with the arranging and equipping of bushmen out of our hands; if so, I think I might be allowed to resign from the Committee?" that would not have infringed your dignity, would it? No, probably not. It will be understood that I did not introduce this matter at all; but some members of the Committee asked me yesterday to get the papers. It does not appear to me to be a matter of any public interest whatever. It is merely a misunderstanding, and I do not think it should appear on the record of these proceedings.

2090. Now, in the despatch of any of these Contingents, did any Minister of the Crown hamper you in any way? I do not think so. Of course, they were anxious to get them off quickly.

2091. It was, practically, a necessity, I suppose;—but what I mean is, that they did not tell you that you should not spend too much money? Not at all.

2092. They did not limit you in your expenditure? No; they wished that everything should be done, and that it should be done well.

2093. They practically gave you *carte blanche*? Yes; I was to do everything in reason.

2094. There was no reason for your complaining, and, as a matter of fact, you did not complain that you were not getting all that you required? No. The Minister's wish was that the men were to be well fitted out and were to get plenty of extra food on board ship, and so on. Everything was to be done well.

2095. The Colonial Secretary himself, on visiting the camp, gave certain instructions that extras should be issued—that bread, meat, and pickles should be available for men who might come into the camp late? Yes.

2096. So that, as far as the Minister was concerned, he did all he could to make the conditions as reasonable for the men as they could be made? Yes.

2097. Did you yourself offer a Contingent quite recently? There was a misunderstanding about that. I sent a private cable mentioning the bald fact known to all here that a couple of thousand men had volunteered, and I said I thought that 5,000 could be raised in Australia. It was an expression of my military opinion to another military man. As to my offering a Contingent, I do not know how such an idea could crop up. What authority could I have for offering five men, to say nothing of 5,000? I do not know how that matter comes into this inquiry, but I have given you the facts.

2098. The scope of the inquiry is very wide;—it takes in the whole administration of the Military Department? I perhaps ought to mention that the cablegram was private; the public did not pay for it.

2099. I am not questioning that;—I wish to know whether it was sent by you in your official capacity, and to whom it was sent? It was sent by me as an Imperial officer giving my opinion of the military situation to another Imperial officer in England.

2100. Do you know if any reply was received? I did not receive any reply direct.

2101. But a reply reached you? A reply came asking if I had sent the cable by the authority of the Government, or something to that effect? Of course, I had not done so.

2102. So that they must have taken it for more than a private cable in order to have cabled back again in that way? Probably.

2103. They would not have taken that course had they thought the cable merely an expression of your private opinion? Probably not.

2104. From whom did the cable come;—did it come from some officer? I think it was from the Secretary of State for the Colonies.

2105. So that the officer to whom you cabled must have thought the matter pretty public in order to have forwarded it to the Secretary of State for the Colonies? I suppose he must have considered that it was a matter of perhaps some importance.

2106. But you did not intend it to be taken in that way;—you intended it as your private opinion of the military situation? Yes; I worded the cablegram very carefully. I sent with it a letter stating that the cablegram was sent on my own responsibility, that there was no enthusiasm on the matter, and that if any men were raised, they would have to be raised entirely by the Imperial authorities.

2107. That was the letter covering the cable? Yes; I do not know whether it is necessary to bring such a matter as that into this inquiry. What connection has it with the matter under review?

2108. It has to do with general administration? It does not appear to me to have anything to do with the general administration.

2109. Suppose that Major Lee of the Lancers wished to send a cable to you from the Transvaal, not marked private, and I presume that in this case your cable was not marked private? No. 2110.

2110. Very well; suppose Major Lee had sent a cable to you not marked private, affecting the interests of the Forces in this Colony, would you take it as a private cable? Do you mean simply because it had not come through an official channel? G. A. French.  
Aug. 16, 1900.

2111. Yes? I might not; it would depend upon the tenor of the cable.

2112. The fact that Major Lee did or did not pay for the cable, would not make it private, or not private, as the case may be? No; but I should like to put this view of the matter before the Committee: Supposing that in this particular instance I did something which amounted to a mistake, why should it be held up to the public in a Parliamentary Blue Book for generations to come? It is not directly connected with this inquiry. How does it come before this Committee? Where, for example, did you get your information in the matter?

2113. I did not get it; I asked for it, and you gave it to me? But who gave you the information in the first instance?

2114. No one told me to ask you the question, if that is what you mean? Might I ask, how did you know anything about a private cable sent by me to anyone else?

2115. Apparently it had ceased to be a private cable? I cannot understand how you could come to know, because, as far as I am aware, nothing concerning it appeared in the Press. But supposing, as I say, that I had made a mistake, why should it be held up for generations to come in a Parliamentary Blue Book? As a matter of fact, the cable was military information, which I thought might be useful. Since this matter has been brought out, and possibly will be made public, I should like it to be known that I had not the slightest suggestion from any quarter to send such information. The next thing I may be told is that some one in England requested me to give the information without it going through the proper head of the Department. Nothing of the sort occurred. I sent the cable entirely on my own responsibility. Those who received the information never asked me to cable any information. I really do not think, however, that the matter should be brought up here.

2116. *Mr. Wilks.*] With reference to Lieutenant Holmes, I notice that he is marked in the list as not selected—I am referring now to the general list? He applied in connection with various Contingents which left this country.

2117. He is marked in the general list as not selected? He may have volunteered to go as an officer of the Forces. He has gone on the Staff; but originally he may not have been selected as a lieutenant, in which capacity he perhaps volunteered.

2118. He was not accepted in any prior Contingent? No.

2119. There was no previous recommendation from you, so far as he was concerned, in connection with any other Contingent? No.

2120. Was the recommendation yours or Colonel Mackay's? Colonel Mackay made the recommendation, and I supported it.

2121. You did not raise any objection to it? I did not raise any objection to his being made Quartermaster. I objected to his having the rank of Captain.

2122. This officer was Adjutant to the 7th Regiment? Yes.

2123. There was a Court of Inquiry in regard to the affairs of that regiment some time back? Yes.

2124. The Court brought in certain findings? Yes; but in connection with those findings, I raised the other day the point that the matter had not been dealt with by the Government; therefore, I should prefer not to go into it at all.

2125. You concurred in the findings of the Court generally? Yes.

2126. Has the Lieutenant-Governor approved of your recommendation? He sent the matter on to the Government, with a certain remark which I do not remember. If I did remember it I do not think it should be made public in any way at present, because, as I say, the matter has not yet been dealt with by the Government.

2127. *Chairman.*] There was a meeting of the Clothing Board on 20th June, 1900? Yes.

2128. They took evidence as to the supply of certain clothing and equipment? Yes; in regard to helmets particularly.

2129. You now produce a copy of the evidence submitted to the Board? Yes. [*Vide Appendix D.*]

2130. Was the evidence taken on oath? I do not think so. I do not think the Board had authority to take evidence on oath.

TUESDAY, 21 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. HURLEY,

MR. MEAGHER,  
MR. GARLAND,

MR. PIDDINGTON.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Colonel Charles Fyshe Roberts recalled and further examined:—

2131. *Chairman.*] You tender a sample "kit," as supplied to the various Contingents? Yes. I may mention that the kits supplied for the different Contingents were not all exactly the same. The Bushmen and the Imperial Bushmen did not, for example, have the same kits; they had fewer articles. C. F. Roberts.  
21 Aug., 1900.

2132. You also submit a "kit" bag? Yes. I have not submitted a section bag, which would take four of the kit bags. They are made of the same material.

2133. You also hand in samples of saddles? Yes; several samples. You will find them enumerated in the following abstract:—

Saddle .....	1	Reins, bridoon .....	1
Iron saddle-tree .....	1	Bit, Portmouth .....	1
Breastplates .....	5	Chain, curb .....	1
Head collars, with brow band and throat lash .....	5	Bit, bridoon .....	1
Saddle (damaged by water, recovered a few days after departure of s.s. "Southern Cross") ..	1	Rope, head—white cotton .....	1
1 bag, containing the under-mentioned articles received after six months' immersion in salt water. They were also issued to Contingent on "Southern Cross":—		Saddle (branded "Weckes") .....	1
Head collar, with brow band and throat lash ..	1	Leathers, stirrup .....	2
Reins bit .....	1	Irons, stirrup .....	2
		Breastplate .....	1
		Bucket, rifle, and straps .....	1
		Case, shoe, with strap .....	1
		Pad, harness, with three straps .....	1

I

C. F. Roberts. I should like to submit, in addition to the above-named articles, some articles of saddlery showing what can be made by the Ordnance Department if sufficient time be allowed. The work is done by day-labour, not by contract. The exhibit includes a carbine bucket, a lance bucket, a rifle bucket, a saddle-bag, and a bandolier with straps.

21 Aug., 1900.

2134. You observe the make of the saddle-tree in Exhibit No. 1? Yes.

2135. I mean particularly with reference to the joint? Yes.

2136. Is that the same pattern as the sample saddle-tree which we will call Exhibit No. 2? There is no material difference, I think.

2137. There would appear to be a difference in the gullet plate—the metal bar in the case of the sample saddle-tree is carried right across the gullet; but it may be, after all, a question of opinion whether one is stronger than the other? I think you will find, if you look at Exhibit No. 3, that the saddle-tree is identical with the sample saddle-tree.

2138. *Mr. Piddington.*] When you were giving evidence before the Committee on a former occasion, you said that you would have a return prepared with regard to the payments? It is now being made out. We had to ask for some information from the Treasury, and this has not yet been received. The return is practically ready.

2139. How many paymasters were sent with the Second Contingent? None.

2140. How many were there in that Contingent? I am not sure of the number at this moment, but there were over 400.

2141. And no paymasters were sent? No.

2142. Nevertheless two paymasters were sent with the much smaller force despatched to China the other day? I believe there were three altogether, but I do not know. I had nothing to do with the Naval Brigade Contingent, except that we had to supply them with some stores.

2143. *Mr. Meagher.*] Among the exhibits of saddlery you have produced, some are apparently new, whilst others have been used? There are some head-stalls and breast-plates which were over and above the supply necessary for the Second Contingent. Some of the exhibits were picked out of the Harbour, having been immersed in the water for six months. In other cases the exhibits were immersed for three or four days. You will find among the exhibits also a sample saddle similar to which the saddles were made.

2144. I believe that the whole of the saddles made by Mr. Higson were rejected? Yes.

2145. I believe they supplied 100, and fifty were rejected? Mr. Anderson was the tenderer. He tendered for 100, and submitted fifty, which were rejected; and we refused to take the balance of the 100.

2146. *Chairman.*] As a matter of fact, Mr. Anderson did not finally supply one saddle? No.

2147. *Mr. Hurley.*] Is it always necessary to supply breastplates? It is advisable, especially if the troops are going into hilly country. They ought to have cruppers also.

2148. Cruppers were not supplied in this case? No.

2149. Do you think the metal plate with the bolts and screws in the breast-plate are necessary? Before that would be used it would be slightly padded and covered up. The exhibits are the unfinished article.

George Whittington called in, sworn, and examined :—

G. Whittington. 2150. *Chairman.*] You went to South Africa as a member of the First Contingent? Yes; in "The Kent."  
2151. With the Lancers? Yes.  
2152. You were supplied with kits? Yes; the Government supplied us with full kits.

21 Aug., 1900.

2153. What were the provisions on "The Kent" like? They were very good.

2154. You went to Capetown? Yes.

2155. And where did you proceed to from Capetown? To Naauport.

2156. From there you went to Arundel? Yes; it is 18 miles away, towards Colesburg.

2157. After some considerable time there, you were taken prisoner? We occupied Rensburg, and went from there to Slingsfontein, where we were taken prisoners.

2158. You are referring now to the incident in which Lieutenant Dowling was also taken prisoner? Yes.

2159. You then went to Pretoria? Yes.

2160. How were you treated while prisoner? Pretty well in the Orange Free State, but up in Pretoria we were not treated well. There was no distinct ill-treatment, but the food was pretty scarce. The sanitary arrangements were very bad, and the medical attendance was also deficient.

2161. The hospital arrangements generally were bad? Yes.

2162. After being there some time, you decided that you would leave? Yes; we did not care about it.

2163. The conditions were not sufficiently attractive to offer you any inducement to stop, so you escaped and made your way to Delagoa Bay? Yes.

2164. From there you came on to Capetown and thence returned to Australia? Yes, arriving here about three weeks ago.

2165. I should like you to examine the articles as I hand them to you out of this kit, and tell me if you received the whole of them in your kit; there is a horse rubber,—did you receive that? Yes.

2166. Did you receive a dandy-brush like that? I did not receive any, but there were some on the ship.

2167. Were you supplied with these articles for polishing buttons? Yes.

2168. Did you receive the articles which are contained in the "housewife"—the knife, fork, spoon, razor, and other things? Yes.

2169. Did you receive two pair of socks and a pair of drawers of the quality of those produced? Yes.

2170. Did you receive a tin of blacking? Yes.

2171. Did you receive a loose suit of dungaree, and a cholera belt? Yes.

2172. Did you receive any sandshoes? Yes; we got those on board the ship.

2173. Did you receive two towels of this quality? The towels I received were rather hard, and not of the same quality as those produced. I received two of them.

2174. Do you say that they were not of as good quality as those produced? They were not.

2175. Did you receive this article? I do not recognise it.

2176. It is a fly-veil—you did not receive that? No.

2177. Did you receive any braces? Yes.

2178. You received also a cap and shirt? Yes.

2179.

2179. You got also your ordinary uniform—boots, leggings, spurs, and so on? Yes. We received also the kit-bag.
2180. Do you think this full bag is the sort of article a man going on active service should be supplied with? I do not see what use it would be.
2181. The fly-veil, for example—of what use would that be? I should think it would be in the road. Men going out on patrol as we used to do would sometimes find it in the road, I should think.
2182. Sometimes you would not have time to adjust them properly? No indeed, you would not.
2183. So that you would not think that was altogether a necessary article? No.
2184. Were you able to take all the contents of this bag through to Rensburg, Colesburg, and Slingersfontein? We got them as far as Arundel, and then we had to put them in kit-bags and give them to the Quartermaster. He took charge of them and sent them down to the store in the main barracks at Capetown.
2185. Judging from your experience in Capetown, would you be able to carry round all these articles with you; would any of them be of any use to a man on active service? You could not carry them. I do not see, either, what a man would want with so many brushes. What a man would really want would be trousers, drawers, shirt, and a cholera belt.
2186. You never saw anyone at the front carrying round a collection of articles such as that which I have produced? No; they are right enough for barracks and camp, but you could not carry them round on horseback with you. What we generally carried was a pair of socks, a shirt, a pair of drawers, and a little bit of soap and a towel. When we arrived at Capetown all the bright buttons were either painted or dirtied over.
2187. So that the buttons-cleaning implements, with which you were supplied, were not of much use? No.
2188. Were not many of the six brushes with which you were supplied useless? Yes.
2189. I suppose that you had your doubt as to what some of the brushes were really intended for—what, for example, was this brush intended for? I take that to be a hair-brush.
2190. Take the next one—what was that for? That I should say would be intended for scrubbing clothes.
2191. And this one? That is a blacking-brush.
2192. And this one? That is also a blacking-brush.
2193. And that? That is another blacking-brush.
2194. Would you want three blacking-brushes? We used them on the trip going over; but afterwards they were of no use.
2195. What would the other brush be for? That is a clothes-brush, I think.
2196. You yourself are not sure of the purpose for which the whole of these brushes were intended? No; they were of no use after we landed—many of them.
2197. Did you use them on the trip over? We had to muster every Sunday morning, and there was a certain amount of cleaning to be done.
2198. But with what sort of saddles were you supplied? We were supplied with Imperial saddles. They were all right, but they were not fitted to the horses. In the Imperial regiments all the saddles are fitted by the Commanding Officer. He comes round and fits them on to the horses. If one saddle does not fit a certain horse, he takes it off and fits it to another. The saddles are changed round till each horse gets a proper fit; but we were not treated in that way.
2199. You did not see any “bush” saddles which were sent from here? No.
2200. You can speak only of the equipment which you yourself had? Yes.
2201. Were you supplied with a carbine bucket like Exhibit No. 4? Yes; we had practically the same.
2202. And a lance bucket? Yes.
2203. And a bandolier resembling this one? We received shoulder bandoliers, which I think are better than the pattern you produce.
2204. You did not receive saddle-bags? No; there was quite enough on the horse without them.
2205. You carried in the Lancers a lance, sword, and carbine? I was there a month before I got a carbine. I left here without a carbine, and I went as far as Arundel without one. There I got one belonging to one of the men on the Staff. The Sergeant-major went round and got me one. I had previously to go round and to borrow one from some one else every time I wanted to go out.
2206. When you were going out to fight you had to borrow a carbine to arm yourself? Yes; they wanted me to go out several times without a carbine, and with only a lance and sword, but I wasn't having any. I had been in the country before.
2207. They wanted you to go out with only a lance and a sword? Yes; but I thought it was not good enough.
2208. You do not use a lance and sword at one and the same time? No; you cannot do that.
2209. Do you know whether the N.S.W. Lancers had occasion to use either the lance or the sword? Not up to the 16th January, the date on which I was captured. Up to that date we had used only the carbines.
2210. Do you, as a trooper of some experience, think it advisable to arm Lancers with both lance and sword? I never had any experience in the use of the lance or sword—the Lancers may have had occasion to use them after my capture, but up to the date of my capture they had only used the carbine.
2211. You could not use both the lance and the sword at one and the same time; of what use would both of them be? Generally, when the lance becomes useless—when it is no longer possible to use it with any effect—it is slung in the lance bucket, and the Lancer then uses the sword.
2212. As far as you have been able to gather from your reading, were there any charges in which the Lancers used the sword or the lance? I heard of only one, and that was in Natal, before we landed. It happened to the 5th Lancers at either Elandslaagte or Glencoe. At Kimberley, also, I believe there was a charge; but I could not say what actually occurred.
2213. I believe you are mistaken in regard to Kimberley? I could not say; I merely heard it reported.
2214. Suppose you had to face a man who had a Mauser rifle loaded up to the chin—what chance would you have with a lance? If the man were a good shot, we should not have any chance at all.
2215. You would rather be the fellow with the Mauser rifle than the fellow with the lance? Yes; I would rather have a rifle of any kind, especially when dealing with the Boers, because they will not stand up to the lances; immediately they see the lances, they are off like a shot.
2216. Do you not think that carrying both a lance and a sword makes the accoutrement rather cumbersome? I will tell you of an incident which occurred after we had been captured. They took our saddles off the horses and laid them on other horses, and they commenced to feel the weight of the bits and

G.  
Whittington.  
21 Aug., 1900.

and the saddles, and they also wanted to know the use of the lance and the sword. I noticed some of them lifting up the saddles and saying: "What a weight." They ride with stripped saddles—with almost nothing. They take as little clothing as possible, and they have only just enough "tucker" to keep them going.

2217. Their riding so lightly might account for their being able to get away so quickly? Yes; that in my opinion is why they are able to get away as they do.

2218. That would be one reason for it? Yes; it stands to reason that men burdened with useless kits and all sorts of things on the saddle would be handicapped.

2219. Coming to the question of pay—you belonged to the Lancers before you went to South Africa? I joined them in Sydney in order to go away.

2220. You had previous experience in South Africa? Yes. I was in two campaigns. I have had altogether nearly twelve months of active service.

2221. What were your expectations in regard to pay when you went away from here? I went away thinking that I should receive 4s. 6d. per day from the New South Wales Government, and that as soon as I landed at Capetown I should receive, also in addition to the 4s. 6d., the Imperial pay.

2222. Before you left did you assign your money to anyone? No.

2223. You left here expecting to be paid 2s. 3d. per day at first and 2s. 3d. deferred pay by the New South Wales Government alone? Yes; altogether 4s. 6d. from the New South Wales Government.

2224. You understood that you would receive 2s. 3d. pay while you were in South Africa, and that when you returned you would get the 2s. 3d. deferred pay? That is what I understood.

2225. That was to be in addition to the Imperial pay, you thought? Yes.

2226. Did you as a matter of fact receive any pay from the New South Wales Government while you were in South Africa? No; the only pay we received there was from the Imperial Government.

2227. *Mr. Piddington.*] Did you not get an advance when you left here? We got an advance from the latter end of October to the latter end of November. We received altogether £8 2s. That was paid to us on board the "Kent," by Major Lee when we were about five days out—before we reached Albany.

2228. *Chairman.*] Have you received any of your deferred pay yet? I have drawn a few pounds of my pay in advance since I have been back in Sydney.

2229. Have you been paid right up to date? No.

2230. When you last drew money, you were not paid up to date in full? No.

2231. How is that? I cannot say. When I came back to Sydney they wanted to know what money I wanted. I put down the money I required and got it.

2232. You have some pay in arrear? Yes; I had pay in arrear from since last December up to the day I landed here. I had drawn only a few pounds out of it. They simply asked me what money I wanted and then gave it to me.

2233. *Mr. Piddington.*] You did not apply for the full amount due to you? No; I did not ask for the full amount due, because I was afraid that if I did they would pay me only part of the amount due from New South Wales, whereas I wanted to draw the full amount I thought myself entitled to draw when I went away.

2234. *Chairman.*] I suppose you are aware that in the case of men coming back here invalided from South Africa, if they had no pay to draw, the Government are making provision for every man in that position? I was not aware of that.

2235. I suppose that when you reached Delagoa Bay you had a rough time? Yes; we could hardly walk when we arrived at Delagoa Bay.

2236. Did you see the alleged photographs of you on your arrival as they appeared in the newspapers? Yes, but we felt a great deal worse than the photographs would lead you to suppose.

2237. You went to the British Consul? Yes.

2238. Did he assist you? He gave us a thin suit of khaki, one shirt, a pair of boots, and a hat. He sent us to the best hotel there. We were stopped at Delagoa Bay for ten days; we wanted another change of clothes.

2239. I suppose you also required a spell? Yes. When I arrived at Durban I had to go ashore and buy more clothes. I bought there the suit in which I am now dressed. It was absolutely necessary to buy more clothes at Durban, because one could not wear the one shirt for three weeks on board the vessel.

2240. When you got to Capetown, were you resupplied with uniforms? No; we were there a month without uniforms.

2241. Did you finally get uniforms there? Yes, a few days before I came away.

2242. During the whole of the time you were in Capetown, I suppose you had to wear your own clothes? Yes, the suit I have on now. I know that Captain Bailey, the Commandant in charge of the Australians, put in a requisition for clothes.

2243. He is a Queensland officer? Yes. He treated us well, as far as was in his power. I know that he had to put in a requisition for clothes; I do not blame him in the least. He was very good to us as far as I could see.

2244. *Mr. Meagher.*] Beyond the incumbrances of which you complain in the kit, as regards the number of brushes, which would be of use only in a civilised place where men were going out to balls and parties only every second night, you have nothing to complain of—as to the quality of the harness and equipment of your horse or of yourself? No. I might mention, however, that we wore soft hats all the time. A short time before we were captured they were talking of giving us helmets. Once we were fired upon, and it was said to have been due to our wearing soft hats. It was proposed to substitute helmets. I do not know whether, after we were captured, the men actually received the helmets, but up to the time of our capture we wore soft hats.

2245. *Mr. Hurley.*] By whom were you fired upon? By the Carbineers—the 6th Dragoon Guards. They mistook us for Boers in the early morning.

2246. *Mr. Meagher.*] How far off were you when you were mistaken for the Boers? About three-quarters of a mile. They were going to give us helmets at once, but they had not the khaki covers. The men themselves would rather have the soft hats; they are more comfortable, and are better for them in every way.

2247. With regard to any portion of the clothing supplied to you had you any complaint to make? No.

2248. How long were you on active service before you were captured? Just seven weeks. 2249.

2249. I suppose I may take it that during that seven weeks you were moving about a good deal? Every day. G. Whittington.
2250. Was the weather fine all the time;—did you have different kinds of weather to contend against? Yes; it was wet and dry. 21 Aug., 1900.
2251. Notwithstanding that test, as far as you could see, there was no ground of complaint in respect of the clothing? No; not as regards the clothes. I have heard that others have made complaints; but I could not speak as to them.
2252. *Chairman.*] Your saddles were of the ordinary military type? Yes, they were good saddles. The second lot of Australian Horse who came with us had different saddles; their saddles had knee pads. I believe they were the saddles they took away with them. We had Imperial saddles, and they were the best sort there.
2253. Who were the Australian officers under whom you were? I was under Major Lee.
2254. Was Major Lee under any of the Victorian officers there? No.
2255. *Mr. Meagher.*] Who was the person with whom you were in communication as to the amount of money you were to draw? The Paymaster.
2256. The conversations to which you have referred, in answer to questions by the Chairman, were with the Paymaster, then? Yes. He did not say anything about the amount. I was asked to state what money I wanted, and was told that it would be given me.
2257. *Mr. Piddington.*] Did you ask for any advance at Capetown? Yes. I got my Imperial pay there; but it cost me all the money I drew there to live—to get something to eat.
2258. Was there no person there to whom you could apply for an advance of pay upon New South Wales? No.
2259. There was no provision there at all for the payment of any returning soldiers who might be wanting a few pounds? No. We got the Imperial pay of 1s. 2d. per day. We were told that if a man were unfit for further service and wanted his discharge, he could get his discharge there and his money. I should have liked to get my discharge there, but I could not because of my Colonial pay. I should have liked to stop, but I could not afford to do without my Colonial pay; so that I could not take my discharge.
2260. No provision was made in South Africa for the Colonial troops to be paid there any portion of the pay coming to them from this Colony? No.
2261. The only money you got there was the Imperial pay? Yes; that was the only money we were told we should get in South Africa.
2262. You did not leave any order here for the payment to anyone else of any money due to you? No.
2263. You allowed your pay to accumulate here? Yes. As I say, I wanted to stop there, but I could not get my Australian pay; therefore, I came over here. They would not send me to the front again, so that I had to come on here in order to get my pay. Now I shall have to go back to Capetown and pay my own fare over there. It does not seem to me to be at all fair.
2264. *Mr. Meagher.*] Were you invalided home? Yes.
2265. Have you made any application for assistance from the Patriotic Fund? Yes; I received a few pounds from it.
2266. Did you have any difficulty in obtaining it? No; still I should like to have received my money from South Africa, and so saved the money I shall have to spend upon my passage back. There should have been a Paymaster there to make up the accounts, and to pay off the men who wanted to be paid off there.
2267. What are they giving to the men from the Patriotic Fund? Some are getting £5 and others £10—they are getting chiefly £10.
2268. *Chairman.*] Did you draw it through the Treasury? No; Mr. Mitchell, I think, gave me a cheque.
2269. You say you believe that some of your fellow-men were fired at by the Carabineers on one occasion? Yes; one of the patrols we were in.
2270. Have you heard of other bodies of men on our side being fired upon by our own side? Yes. We, ourselves, fired on a small patrol of Carabineers one morning, although they wore helmets; but it was very early in the morning.
2271. From what one sees in the newspapers, one would imagine that that was quite a common occurrence? Yes, it is, according to what I heard.
2272. Therefore, the wearing of soft hats or helmets did not seem to stop it? No; in our case I was with Lieutenant Dowling one morning, and we saw three Carabineers leaving a farm-house near Slingsfontein. We thought they were Boers. It was in the grey dawn. Some of us dismounted, others held the horses, and we fired upon them. The officer in charge of the other patrol came up waving his handkerchief; but we had fired, I should say, about twenty shots. Lieutenant Dowling was in charge, and will remember the occurrence very well.
2273. Did you yourself see anything of the Boers showing the white flag and afterwards firing? I believe that one day at Colesberg they hoisted the white flag and took advantage of the opportunity to remove some guns. They got an armistice for a few hours while the white flag was hoisted, and they then shifted a pom-pom and a big gun. We heard all this afterwards from an officer who spoke to us about it.
2274. I suppose that in your experience at the front you found a few shillings very handy? I did. It bought a tin of jam occasionally when one could afford to pay for it.
2275. I believe that on some occasions you were pretty short of provisions? Yes.
2276. And if you had had a shilling or two in your pocket you would have been able to get them sometimes? We should have been able to get them when we came back to the base camp. We never got any advance from the day we landed up to time I was captured.
2277. I suppose that the price of provisions was pretty high? Yes; you would have to pay 2s. 6d. or 2s. for a small tin of jam, and that meant very nearly a day's pay gone.
2278. Any necessary that you wanted to buy you would have to pay an exorbitant price for? Yes; we had to pay three times the price here.
2279. Do you know what the pay of the Irregular Forces in South Africa would be? From 6s. to 10s. per day.
2280. Are not there many thousands of South African colonial soldiers? Yes; I believe there were 15,000 irregular troops there.
2281. There were a good many Australians among them? Yes. Immediately you get the corporal's or sergeant's stripes you would get more pay. 2282.

- G. Whittington. 21 Aug., 1900.
2282. Kitchener's and Roberts' Horse were getting more than 6s. a day—were they not? I cannot say definitely, but I believe so.
2283. What were Loch's Horse getting? I do not know; but I know that French's men were getting 10s. a day.
2284. What were the Rimington Scouts getting? 10s. a day.
2285. And the Montmorency Scouts? The same.
2286. And the Ycomanry Scouts? I do not know; I remember that in Matabeleland we used to get 10s. a day, and in Bechuanaland, in 1897, we were getting 6s. a day. In the irregular troops, troopers would get 6s. a day, and a corporal 7s. a day. In the case of our troops, a trooper would get 4s. 6d. a day, and a corporal 7s. a day. There is a big gap between 4s. 6d. and 7s.
2287. How would you like to wear a helmet in the shapeless condition of that which I now produce? I have seen a number in quite as bad order as that, down in Capetown. They are more like bits of bagging than anything else.
2288. *Mr. Garland.*] Have you seen many Australian helmets in that condition? Yes.
2289. *Chairman.*] Did you see many men with helmets like that when they came down from the front? Yes. The Indian helmets appeared to be made of cork; they are very strong, and they are also taller than the helmets our men wore.
2290. You wore a soft hat all the time? Yes.
2291. You would prefer it to a helmet? Yes.
2292. As being much more comfortable in every way? Yes.

Alfred Cook called in, sworn, and examined:—

- A. Cook. 21 Aug., 1900.
2293. *Chairman.*] You left Sydney with the Citizens' Bushmen's Contingent? Yes.
2294. On what ship? On the "Atlantian."
2295. Where did you join the Contingent? On board the transport on the 1st March.
2296. The day on which the vessel left Sydney? Yes. Just as she got outside the heads.
2297. Who enrolled you? Captain Thomas.
2298. Were you supplied with a uniform? Yes.
2299. And all the necessary equipment? Yes.
2300. The "Atlantian" called at Hobart? Yes.
2301. And proceeded direct from Hobart to Capetown? Yes.
2302. How did you fare on board the transport in the matter of provisions? Very badly indeed.
2303. Was there not some fruit supplied for the use of the troops? Yes, by the public of New South Wales.
2304. Did you get any of it? We got a few cases.
2305. What became of the remainder? They were flung overboard.
2306. Had the fruit gone bad? The officers could not eat it themselves, and they would not give it to the men. They would rather see it go bad first.
2307. What squadron were you in? I was attached to B squadron.
2308. What was the bread like? It was very bad indeed on two or three occasions.
2309. Did the men complain? They did, after a lot of trouble.
2310. Was any alteration made? They substituted biscuits for bread.
2311. Was the meat good? The fresh meat was very good; but the salt pork and the salt beef on one or two occasions were so bad that the doctor belonging to the regiment condemned it after a lot of persuasion from the men.
2312. But the fresh meat you say was all right? There was no fault whatever to be found with the fresh meat.
2313. How did the officers generally treat you? Some of the officers treated us right enough, but others did not treat us as bushmen ought to be treated.
2314. Did Lieutenant-colonel Airey sail on board the "Atlantian"? Yes; he commanded the regiment.
2315. How did he treat the men? He said he was proud to have such a good lot of men under his command.
2316. Was he specially kind to you? Yes; I have no fault to find with him for his conduct on board the ship.
2317. He had a son on board? Yes; Sergeant Airey. He was made sergeant; what for I do not know; it was done through influence I suppose.
2318. Did he exhibit the same kindness towards the men as was exhibited by his father? He did not.
2319. Was his behaviour in any way unpleasant to them? It was.
2320. Did any of the other officers exhibit carelessness or disregard of the men's comfort or well-being? Warrant-officer Hallett was very discourteous to the men, and he had word passed to him that if he did not behave himself he would be flung over the ship's side on the first dark night.
2321. He was not particularly courteous to the men until he received that hint? No; afterwards he drew in his horns a bit.
2322. He was a little more considerate? Yes; and so was Sergeant Airey.
2323. Did he also receive the hint? Yes; and another sergeant, since dead—a man named Myers, who died of enteric fever at Beira.
2324. Did Myers also get the hint? Yes.
2325. And any other officer? Sergeant Hurley.
2326. *Mr. Garland.*] All the sergeants, apparently? I might state that all the non-commissioned officers were far worse than some of the officers were. The non-commissioned officers were to blame for the whole of the trouble.
2327. *Chairman.*] You have not had much experience of soldiering? No, and I do not want any.
2328. Would you not think it the duty of the commissioned officers to see that the non-commissioned officers did their duty in a proper way? I should think so.
2329. So that if the non-commissioned officers were allowed to tyrannize over the men it would be the fault of the commissioned officers, and would be due to their not keeping the non-commissioned officers in their proper place? Yes.
2330. So that the commissioned officers would be actually responsible? Yes.
- 2331.

2331. Is the exhibit produced a sample of the biscuits with which you were supplied? That biscuit is one of them. It is one which I brought back from Cape Town. Some other biscuits were also sent back to the Colony by a late comrade of mine, a man named Marks. A. Cook.  
21 Aug., 1900.
2332. That biscuit was actually supplied on board the "Atlantian" in the place of bread? Yes. There was good flour on board the ship, but they would not use good flour; they used flour of an inferior quality. There were several bakers on board. I myself offered my services in that line.
2333. You are a baker? Yes, and I know what good flour is. A baker can use a certain quantity of inferior flour if he uses it properly; but the baker did not belong to the regiment; he belonged to the ship, and he did not care.
2334. You did not think much of the biscuits? No.
2335. When you got to Capetown what happened? Before we got to Capetown Dr. Meredith—I think that was the name, but I might be mistaken—ordered myself and the late comrade of mine named Marks, to come up in front of him, and he told us that we should have to go ashore at Capetown for not being vaccinated; and in my case also because I was suffering from an unpleasant complaint.
2336. So you went ashore? Yes.
2337. And you did not get anything for the time you were on board? Not a halfpenny.
2338. They did not put you through any test before accepting you? They had no occasion.
2339. They did not put you through a riding test on board ship, of course? No; they took my word that I was a good horseman and a good shot.
2340. Did they take your uniform from you when they put you ashore? They let me go ashore in a suit of dungaree, a pair of regimental boots, and a pair of drawers and a shirt belonging to the New South Wales Government. I could not do without the drawers. The "Atlantian" went alongside the South Arm at Capetown to take in stores, and I went ashore there.
2341. Did you stop at Capetown? No; I received work from the Imperial authorities.
2342. Where? In the Orange River Colony. I was employed as a baker at 7s. 6d. a day, and full rations. After being there some time I became ill and returned to Capetown, where I consulted a doctor. He eventually advised me to return home.
2343. *Mr. Meagher.* Were you taken on the boat as a trooper? I was taken on as a trooper.
2344. And you say you were enrolled on board? Yes.
2345. How did they come to be so late in the matter? Did they take you at the last moment? I was an emergency man. I went on board partly at their wish and partly at my own. I was anxious to go, and I went on board of my own free will, as the others did.
2346. Were others accepted on board without any test as emergency men? Yes; they took my word for my capabilities.
2347. How many men like yourself were accepted on board without any test at the last moment? As far as my recollection serves me there would be five or six. There might be less or there might be more; I did not keep any account of what occurred.
2348. You know that the public of Sydney extended to the regiment a great ovation, and gave them a great send-off? Yes.
2349. I suppose that some of the officers must have had swollen heads, since they behaved as you say they did? Yes. There is one matter which I should like to mention if I may be allowed to do so. Two letters have appeared in the newspapers—one from a trumpeter and one from a trooper—about the non-commissioned officers being fed on everything good, while the men had to do on anything.
2350. Putting that aspect of the case aside, a section of the public very generously sent a large consignment of fruit on board the boat for the use of the men? Yes.
2351. I think you said at the commencement of your evidence that the men received a very small quantity of that fruit, and that the rest was thrown overboard? Yes.
2352. Do you say that the fruit which was thrown overboard was in sound condition? It was rotten.
2353. Where was it thrown overboard? It was thrown overboard between Hobart and the Australian Bight; it was done very late at night.
2354. How many cases of fruit did the men receive? We received altogether, to my knowledge—I could not be exact—about twenty cases.
2355. Between how many men would that fruit be divided? Between 300 and 400 men.
2356. Did you receive some fruit every day? Every other day.
2357. The officer, I suppose, had it every day? Yes; each man would receive—say, three apples, or one apple, and one pear, as the case might be. I remember that, on one occasion, there were some cooking pears which no one could eat.
2358. Did the men make any complaint about not receiving the fruit? Yes.
2359. To whom did they complain? To the officer of the day. I told the officer myself that I was not receiving my just rights, and that I demanded them. I told him afterwards that whatever happened to me when I landed in New South Wales again I would let the public know what had happened.
2360. Do you not think you take an extreme view when you say that the officers prevented the men from getting the fruit, and, that sooner than see them get it, they would allow it to go rotten, and throw it overboard? I do say so, and I keep to my word.
2361. Was there any other present to the men of the Contingent which, according to you, was confiscated by the officers? Well, there was the tobacco.
2362. Mrs. Foster, of the Tivoli Hotel, sent some tobacco; and Mrs. Usher, of the Metropolitan, also sent some tobacco, cigars, and cigarettes? Those were sold to us.
2363. Who sold them to you? The man who sold them said he did so under orders from Captain Baker, of the canteen.
2364. Did you pay for any of the tobacco, cigars, or cigarettes? No; I do not smoke.
2365. Do you know that any of the men paid for them? Yes; all the men that smoked, excepting one or two men who would not do so. They were put ashore with me at Capetown. They said that the tobacco, cigars, and cigarettes were given to us, and they demanded them as a present.
2366. If, as you say, the men were so dissatisfied with the way in which these presents by the public of New South Wales were withheld from you, did they not, as a body, make any representations to Colonel Airey who was in command. Did you not represent to him that you were being asked to buy certain luxuries which were presented to the Contingent for your consumption? We made a complaint to that effect, and Colonel Airey said he would remedy it on the following morning; but the remedy was never carried out.

- A. Cook, 2367. Did that occur before the ship left the mainland? It was while we were on the high seas, half-way between Australia and Africa.
- 21 Aug., 1900. 2368. After the ship had left the mainland? Yes.
2369. Were there any other presents besides the tobacco, cigarettes, and cigars of the use of which you were deprived? Well, some beer and spirits were given to us, and that was also sold. In fact, we paid for everything which was given to us, as a present. Some tea, for example, was given to us by Mr. Inglis.
2370. *Mr. Garland.*] But you did not pay for the tea? I will not say anything about that.
2371. *Chairman.*] You did not pay for it? I took very good care that I did not.
2372. *Mr. Meagher.*] You are quite clear that the men never received the tobacco, cigarettes, or cigars, or the wine, spirits, or beer presented to them, except they paid for them? Yes.
2373. What would Captain Baker, of the Canteen, do with the money? He said that the proceeds of the sale would be used to buy the men extra food when they reached Capetown, and that it would also be used to buy them tobacco, with which they would be presented when they left Capetown.
2374. The money raised from the sale of tobacco on board the ship you were told was to be put into tobacco again at Capetown? Yes; and into the purchase of other provisions.
2375. *Mr. Garland.*] What officers or non-commissioned officers did you get into trouble with on the voyage? With Sergeant Hurley, with Sergeant Myers, and Sergeant Airey—more so with him than with the others.
2376. Did you get into trouble with any commissioned officers? With none whatever. I was well liked by them.
2377. Have you any complaint to make against any commissioned officer for the way in which he treated the men? I have against one man.
2378. Who is that? Lieutenant Zouchs.
2379. Was he Captain of your troop? No, Lieutenant.
2380. Who was Captain of your troop? Captain Thomas.
2381. What trouble did you have with Lieutenant Zouchs? I refused duty when sick. I told him I was unable to do duty, and he said I was able; I said I would not do duty until I was able, or until I had seen the doctor.
2382. What happened then? I was placed in the guard-room by his orders.
2383. Did that happen more than once in the course of the voyage? Twice; not only to me, but to others.
2384. He had you placed in the guard-room, you say? Yes, on that occasion.
2385. Why were you placed there on the second occasion? For creating a disturbance about the food.
2386. When was that second occasion? It was about a week later.
2387. How long before you were put ashore at Capetown? It was almost the last week of our being at sea.
2388. You say there were other men put in the guard-room during the voyage? About eight or nine.
2389. By whose orders where you put ashore at Capetown? By the doctor's.
2390. *Mr. Chanter.*] You have told the Committee about the bad bread which you say was served out to the men;—how long after you left on the "Atlantian" was the quality of the bread complained of? It occurred shortly after we left Hobart—I think on the Thursday morning.
2391. Was the bread of very bad quality? It was.
2392. What steps were taken by the officers and men on board to correct it? We were all brought up—all the cooks' mates—that is to say, the messmen who waited on the mess for the day, taking it in turns—and each man lodged a complaint. I think Lieutenant Lynch and Captain Dibbs, who went over as a special service officer, attended to the matter. We were told they would remedy the complaint by giving us biscuits in the place of bread.
2393. Were the complaints by the men specially lodged against the officers or the captain of the "Atlantian"? The complaints were lodged against the officers of the regiment.
2394. Did the Colonel Commanding the regiment wait on the captain in reference to the matter? Yes.
2395. Do you know the reply which the captain gave? No, I never heard of it.
2396. Did Colonel Airey state to the men that he was aware that their complaint was a just one? We never heard one word from the Colonel.
2397. Did any of the officers make that statement to the men in his behalf;—did Captain Dibbs or Lieutenant Lynch, for example, say that the complaint of the men was a just one? Yes.
2398. Did you hear whether Colonel Airey had waited on the captain in reference to the matter? Yes.
2399. As a consequence of that was the bread afterwards better? The bread afterwards went on very well until the last week—until we were nearing Capetown when it went back again into the same old style.
2400. The week previous to your reaching Capetown were you supplied with bread or biscuits? With biscuits.
2401. You said that some of the officers treated the men badly;—who were those officers? Lieutenant Zouchs, Lieutenant Allen, Captain Robertson, and Warrant Officer Hallett.
2402. To what squadron was Lieutenant Zouchs attached? To Captain Thomas' squadron.
2403. To what squadron was Lieutenant Allen attached? To D squadron.
2404. And Captain Robertson? I could not be sure about his squadron. I think it was A squadron. Warrant Officer Hallett was a staff officer attached to no squadron.
2405. To what extent did Lieutenant Zouchs treat the men badly? He treated them well on the first part of the voyage, but afterwards he got led on by his brother officers to act in the same way as they did.
2406. How did they act? They acted very discourteously to the men on one or two occasions. They spoke in a very rough unmannerly way to myself, and I would not put up with it.
2407. Will you tell us something that Lieutenant Zouchs said to you? He started calling me a bloody dog and a bloody mischief-maker. I told him I would make him prove his words if ever he came back alive.
2408. What warrant had he for saying those things? I do not know.
2409. What had you done? I had done nothing. I spoke for my rights, and complained about the way in which things were carried on aboard the boat; that is all.
2410. We want to get at the truth of this matter; you have made a very serious statement;—what did you consider were the rights of which as a trooper you were deprived? I wanted to be treated as a soldier ought to be treated.
- 2411.

A. Cook.  
21 Aug., 1900.

2411. How do you think a soldier ought to be treated? Well, if the fruit was put on board for the men, why not give the men the fruit to eat? I do not see why the men should be allowed to starve while the officers had the whole of the supply, so to speak.
2412. Did you say that to Lieutenant Zouch? I told him that we were not getting treated properly. I told him that the officers were living on the fat of the land, and that the men were almost starving. Those were my words.
2413. While you may have had a just complaint, do you think that it was in accordance with the discipline of a soldier to make the complaint in those terms? We Australians have more military privileges than ordinary soldiers have.
2414. Do you think that Australians should have more privileges than other soldiers have? They have always been treated with that respect as long as I can recollect.
2415. You thought you had justification for the complaint about the way in which you were treated, you say? Yes.
2416. Was it not a breach of discipline to tell an officer in command that he was living on the fat of the land while the men were almost starving? I did not say so until after he had treated me with discourtesy.
2417. Before this trouble arose between yourself and Lieutenant Zouch, did you make any special request from him? None whatever; there was not a word spoken by us.
2418. Then, how did all this matter come out; how did all this heat arise, causing you to make such a remark to Lieutenant Zouch;—what led to it? It was after he had called me a bloody mischief-maker that I made the remark to him which I told you of.
2419. Had you made any complaint to any junior officer? None whatever.
2420. Did you make your complaint direct to Lieutenant Zouch that the present given to the Contingent by the citizens had been withheld from the men? No.
2421. Did you make it to anyone else? All hands did.
2422. Did you yourself make a complaint to anyone? If you press me for it, I suppose I must give it to you: I believe the Government of this country gave the troops some live stock—some cattle and pigs—on board the boat, and the chief steward of the boat took it upon himself to claim ten sheep that did not belong to him, and I spoke about the matter to him; and that caused unpleasant words between us. When he found out that I was not going to give in to him, he admitted afterwards to me and others that he had done wrong, and asked me not to say anything about it at all as he would only get into trouble.
2423. That was the chief steward, you say? Yes.
2424. From whom did he claim the ten sheep? On behalf of the ship. He said they belonged to the ship's company.
2425. *Mr. Meagher*] He claimed them for the ship's crew? Yes.
2426. *Mr. Chanter*] Had Lieutenant Zouch any cause to resent that? That was the cause of the whole trouble between myself and Lieutenant Zouch. He found out that I had a few words with the chief steward.
2427. Would not your protest against the illegal claiming of these ten sheep for the use of the crew be in the interests of Lieutenant Zouch and the men of your regiment? Certainly, my action was approved of; but when Lieutenant Zouch found out that I was a very determined man, and that I would have what was given to me and my late comrades, he turned on me.
2428. But surely you do not mean to say that he would turn upon you for claiming that which belonged to the regiment? No; they all gave me credit for that.
2429. Then what caused Lieutenant Zouch to turn upon you for what was a commendable action? I will tell you how it occurred: The Lieutenant himself was down below one morning while we were feeding the horses. He was not at the time in the best of humours. He happened to knock against me, and he said, "There is that bloody mischief-maker again." Then I told him what I had said—about the officers living on the fat of the land.
2430. You accidentally jostled against him? Yes. I do not suppose for a moment that Lieutenant Zouch did it on purpose any more than I did.
2431. How long would that be after the sheep episode? I should say it would be about eight or nine days after we had gone to sea.
2432. What had happened in the meantime;—did you take any other action, or interfere with anyone else on board? No.
2433. Can you give the Committee any idea, then, why this spirit of resentment on the part of Lieutenant Zouch should have been exhibited against you, after your doing a commendable action in saving ten sheep for the regiment? I suppose he had had some glorification the night before, and got up in the morning with a bad head.
2434. How many others did that? All the officers.
2435. Did the men have it too? No—only the officers and non-commissioned officers; the men had not a chance to get a bad head.
2436. *Mr. Meagher*] You did not get enough to drink? They took very good care of that.
2437. *Chairman*] I suppose the officers would have a good time in the evening? Well I know it. I had not my eyes at the back of my head.
2438. *Mr. Chanter*] Did you have any difference with the non-commissioned officers of your squadron? Only with the three men I have named. They acted very spitefully against me.
2439. Were you reported at all by any of the Sergeants or Corporals for any alleged offence? I was only reported once.
2440. To whom would that report be made? To the Adjutant, and then it would go to the Colonel.
2441. Would Lieutenant Zouch be called upon to deal with that report? No; it would go to the Colonel, I think.
2442. What were you reported for? For misbehaviour; for disobedience of orders.
2443. It was after the report for disobedience of orders that this little fracas took place between Lieutenant Zouch and yourself? Yes.
2444. What action did Lieutenant Zouch take after the stable episode, when you say you gave him your mind? After I had been put in the guard-room and had been liberated by the Colonel he came up on the following day and apologised to me for what he had said.
2445. That was after you had been put in the guard-room? Yes; and I also apologised to him.

2446.

- A. Cook. 2446. Is it not usual when a soldier has been put in the guard-room for a certain offence for an inquiry to be made into that offence? Yes.
- 21 Aug., 1900. 2447. By whom? By the Colonel.
2448. Was your offence inquired into? Yes. I was discharged on the following morning with a caution.
2449. A caution against what? I was told not to do it again.
2450. After you had been discharged with a caution you say that Lieutenant Zouchs apologised to you? Yes, and I apologised to him, and he said that the matter must be allowed to drop.
2451. What were your relations after that? We were on very good terms.
2452. There was no further trouble? No; he always found me do my work well. He never had any trouble with me after that.
2453. You named Lieutenant Allen as one of the officers with whom you had trouble? Yes.
2454. What was the nature of your trouble with him? He did more in the exercise of his duty than he ought to have done. He was too extreme in his orders, and was very unfair to the men.
2455. Will you give us an instance of his extremities? Lieutenant Allen never seemed to be satisfied with the men's discharge of their duty. Whatever had been done he always found fault with, and the men were much annoyed about it.
2456. Was there anything objectionable in his manner when he found fault? Sometimes the horses would not suit him, and he would then take his handkerchief and brush them down, or make the men do them over again. On another occasion he would find fault with the way in which the men had washed out the stalls. Then he would say again that the horses were not fed properly.
2457. *Chairman.*] Did he complain in a pleasant way or was he gruff and offensive in his manner? On one or two occasions he was very gruff. On other occasions he seemed to pass the matter off as a joke.
2458. *Mr. Chanter.*] Do you mean that his manner of addressing the men was objectionable? On two occasions, but not on the last occasion.
2459. On the two occasions to which you refer how did he address the men? He came down below, where the horses were, and as soon as he got to the top of the stairs he let us know that he was coming. He said "Now then you bush rats, get ready and go to your horses."
2460. *Mr. Meagher.*] That would be jocular I suppose? Not out of his mouth.
2461. *Mr. Chanter.*] Did the men respond and obey orders by going to the horses? No. They all grouped together under the hatches, consulting about the matter.
2462. They objected, you mean, to being termed "bush rats"? Yes.
2463. Were there any other words used by him to the men to which they objected? No.
2464. Did he call them any other names? No.
2465. But you are sure that they resented being addressed as "bush rats"? Yes.
2466. So far as you are aware that is the only cause of objection they had? That was all.
2467. Was not Lieutenant Allen within his rights in taking exception to the cleaning of the horses and their stalls? No; I do not think so—not in the way he did so.
2468. Was there any regimental order as to how and when the horses should be cleaned? There was an order that the horses were to be cleaned every morning, and to be fed and watered and exercised. If a horse was sick or lame, a man was specially told to look after it well.
2469. Was each trooper in charge of his own horse? He was. If a trooper was sick himself, someone else would consent to do half the work, and someone else to do the other half—to help one another along.
2470. Did you make any complaint to Lieutenant Allen that his manner of addressing the men was objectionable? I did not.
2471. Did anyone make such a complaint? Not that I know of.
2472. There was no particular trouble as between Lieutenant Allen and yourself? None whatever; I know him too well.
2473. Warrant-officer Hallett was named by you as one of the officers who was objected to by the men. What men objected to him? He took a position on board the boat that he had no right to take. He took command as a boatswain.
2474. Were not the captain and crew of the boat including the boatswain completely separated from the military authorities? Yes; but Warrant-officer Hallett took the place of boatswain when he had no right to do so under the military rules. It was not his place to do so. What his men objected to was that he used to give orders for the men to wash down in the morning—taking that position out of the boatswain's hands. It was the place of the boatswain and the seamen belonging to the ship to do that.
2475. Did he ask you to do that? Yes; he acted in that capacity.
2476. You objected to wash down the decks? We did not object to do a little work in that respect, but Warrant-officer Hallett used to come in such a bullying manner to the men that they did not like it. Some of the men had never been on a ship before.
2477. Did the men object to being called upon to do this duty of swabbing the decks? No; they did not. I myself half liked it.
2478. Then what did it matter to you whether Warrant-officer Hallett or the boatswain of the ship asked you to do the work. If the boatswain of the ship had asked you to do it would you have raised any objection? We should have refused.
2479. *Chairman.*] It was not so much the work as the manner in which you were asked to do it in that you objected to? Yes.
2480. *Mr. Chanter.*] In what way do you mean? We used to get up to reveillé, and, before the men had had time to put on their boots and pants, Hallett used to run us up on deck to wash down.
2481. At what time did the bugles sound for stables? Half-past 5.
2482. From half-past 5, from the sounding of the reveillé, what time was permitted to the men to dress and get to stables? Half-an-hour.
2483. Was that not sufficient—was there any hurry under those circumstances? It was sufficient for me; but some of the men would take an hour.
2484. Do you yourself think there was any reasonable ground for objection when half-an-hour was allowed to elapse between the sounding of the bugle for stables and the lining up of the men at the stables for duty? The men who went to the stables did not object; it was the men who washed down the decks, who objected. They had only from five to twenty minutes to get up on the deck and be ready with the hose.
2485. Was there any order from the time of the sounding of the reveillé to the time when the men would be called upon to line up for swab duty? No.
- 2486.

2486. Was the time in that case left entirely to Warrant-Officer Hallett? Yes.
2487. In the event of some of the men being in his opinion not sufficiently smart, how did he address them? He would sing out in a very abrupt manner, which some of the men were not used to.
2488. Will you for the moment put yourself in Warrant-Officer Hallett's place, and tell us actually what took place? He would come along and sing out, "Now you lazy dogs, it is about time you showed up to wash down the decks. If you do not come up, I shall put you in the guard-room." The men would rush up then, and he would pick out those who were to wash down decks.
2489. Did you personally resent this manner of addressing the men—did you personally raise any objection to it? No; I was never called upon to wash down the decks.
2490. Are you aware that any of the men resented it? Yes.
2491. How did they address him in reply. They told Hallett that he had better treat them with more civility, and that if he did not, on the first opportunity that occurred he would have to take a sea grave. It is what he would have got too.
2492. That threat was also issued to Sergeant Airey, to Sergeant Myers, and to Sergeant Hurley? Yes.
2493. Did they report it? No; there was never a word said about it. After that order went round they did not know what to do.
2494. *Mr. Garland.*] They saluted you I suppose? No; and we never saluted them—they were not worthy.
2495. *Mr. Chanter.*] Are we to understand that, in consequence of the objectionable manner in which the men were addressed by the officers you have alluded to, they were threatened that if they did not desist they would be thrown over the side of the ship? That they would have a sea grave.
2496. And you say they made no retort? None whatever, so far as I am aware.
2497. Who took command after that before you reached Capetown—the officers or the men? The threatened officers.
2498. Were they obeyed? Yes, in every respect.
2499. Are you aware of any complaint having been made by any of the officers you have named to their superior officer? No.
2500. With regard to the tobacco which Mrs. Foster and Mrs. Usher presented to the troops;—you say that it was sold? Yes; Derby tobacco was sold at 4d. a cake, the cigars at 1d. the cigarettes at 1d. The whisky was also sold at 2d., and the beer at 2d., and the lemonade and ginger-beer and so forth at 1d. a bottle.
2501. Was the beer and spirit also presented to the Contingent? Yes. Some flour was put on board for the troops at Tasmania, but we were not concerned in that—that affected the Tasmanian Contingent.
2502. You say you were put into the guard-room after this little fracas between yourself and Lieutenant Zouchs? Yes.
2503. You said you were put in twice during the voyage;—what was the other offence for which you were put in? For refusing duty while I was ill.
2504. Was that inquired into? It was.
2505. By whom? By the doctor. He found out that I was ill.
2506. You were brought before Colonel Airey? Yes.
2507. And he inquired into the matter? Yes.
2508. What was his decision? He sent for the doctor. The doctor examined me, and told the Colonel that I was ill.
2509. Were you discharged? Yes; I was excused from duty for the rest of the voyage, and I was told that I should have to go ashore at Capetown. Colonel Airey also issued an order on the night the boat went alongside at Capetown that anyone who failed to answer the roll-call would be left behind.
2510. *Mr. Meagher.*] You were put ashore on account of ill-health, and not on account of misconduct? It was not on account of misconduct. Some of the officers after all the trouble reckoned that I had taken an extreme view, and that I was the only man on board who had spoken up for his rights—that I was the only straightforward man they had on board.
2511. *Mr. Chanter.*] What do you say you were put on shore for at Capetown? Through my being in ill-health, and through refusing to be vaccinated.
2512. Did you get your discharge papers? I got nothing.
2513. Is it not usual for a soldier who is invalided, and who is put on shore from a troopship, to get a certificate? Yes; but it was not done in my case, and it was not done in the case of another young fellow who came back suffering from rheumatism. In his case I know that Captain Dibbs arranged for an ambulance to come down and take him to the hospital.
2514. Who was the doctor? I think his name was Meredith: I think he came from Raymond Terrace.
2515. You have received no discharge papers up to the present time? None whatever.

Samuel Duncalfe called in, sworn, and examined:—

2516. *Chairman.*] What are you? A hat manufacturer.
2517. You did not supply any helmets to the military authorities? No.
2518. Have a look at that helmet (*scaled pattern cork helmet*)? That helmet is all right; it is a solid cork helmet of English make.
2519. It is of good quality? Yes; of good quality.
2520. Suppose you had contracted to supply a helmet such as that, and you supplied one such as this (*the gossamer helmet produced by Major Boam*)? I should say it would be an imposition.
2521. Just have a look at that helmet? It is a badly-constituted gossamer helmet.
2522. Is it one that would be likely, in your opinion, to stand the wear of a soldier's helmet on active service? No; it could not stand, for the simple reason that there is no proofing between it, and it is not made of the right calico.
2523. Would you be surprised to find that a helmet like that, after two months' wear, had become an article like this (*one of the returned helmets*)? This has been continually saturated with water, and there has been no proofing to resist the water. The proofing consists of shellac, and shellac is an expensive article in the manufacture of a gossamer helmet, and if the shellac is not there, there is nothing to hold the two calicoes together. In a properly constituted gossamer helmet, you could hardly separate the parts one from the other.

S. Duncalfe.

21 Aug., 1900.

2524.

- S. Duncalfe. 2524. Here is another one, not perhaps quite so bad (*returned helmet*)? This is constituted in the same manner; it is the same class of helmet.
- 21 Aug., 1900. 2525. Did you ever see a worse helmet than that? No; I did not. I did not think there was anything in the world like it.
2526. I suppose, in your profession as a hat manufacturer, you have seen all sorts of things got up, like the man's razor, to sell, and not to shave? I have been all my life, as my father and my grandfather were before me, continually handling this class of goods in particular, and I never saw anything in Petticoat-lane to equal it.
2527. It is certainly got up for sale, and not for wear? That is all. You can see here the raw calico; that is the white calico; that is where there is no proofing. This material is butter cloth—ordinary cloth they roll butter up in. Instead of that it should have been composed of twill, the cost of one being 1½d., and the other 4½d. There should be about 4-ply of that material to make a good sound gossamer helmet, and 4-ply would hold fully four times as much shellac as this could possibly hold. The crown of the helmet should have been almost as strong as the peak.
2528. Taking the sample helmet (*the gossamer helmet*) do you think it is of a quality that could be reasonably supposed to stand the usage of a campaign? No, because it is not made of the right material; it could not possibly stand. It has not got even 1-ply twill; it has not even received the labour. If this were put together with the proper amount of stuff, and properly ironed and blended together—this being the labour portion—you could not pull the stuff apart. Instead of pulling apart, it would tear away.
2529. Do I understand you to say that, apart from its being made of the worst material, there has not been even sufficient labour bestowed upon the helmet to make it as good as it might have been? Right through there is neither the workmanship nor the material in it to make a helmet—what we call a gossamer helmet—to stand any wear such as this helmet is supposed to stand.
2530. As an expert in helmets what would you consider the value of that helmet (*the sample cork helmet*)? It would be very hard for me to give you the value of that helmet, but I know what it could be made for in the Colony at the present time, without the ornaments.
2531. What do you think it could be made for? 6s. 3d. is the price I would quote for this in the Colony.
2532. And what do you think this helmet could be made for (*the sample gossamer helmet*)? This helmet runs about 5s. 6d. or 6s. complete.
2533. Then there would only be a difference of 9d. or 1s. in the cost of the two helmets? Yes; there is more labour in the gossamer helmet than in the cork helmet, but the material in the latter costs more.
2534. Taking the respective values of the two helmets for wearing purposes? There is no comparison.
2535. The cork helmet, although the cost is only a little more, would wear many times longer? This cork helmet could be kicked from here to the Victoria Barracks and it would be just as good when you got it back. This thing (*the gossamer helmet*) would not stand kicking down the stairs. With ordinary wear a man could never wear the cork helmet out; he could lie on it, and sleep on it. You cannot hurt it.
2536. The cork could not wear out anyhow? No, not under ordinary circumstances; you cannot break it. Of course you could chop it up, but you cannot break it by any ordinary method. You could hit it with a stick, or kick it from here to the barracks, and you would not hurt it.
2537. So that, from an economical standpoint, it would be much better to give the small additional cost for a cork helmet? The gossamer helmet is not supplied anywhere else that I know of for military purposes, nor for any work. Even the police will not use that helmet—they refused it; it has been tried on them several times, and they would not take it.
2538. Is there any great difficulty in manufacturing cork helmets here? The difficulty simply is that there has been no work done here of the kind, and consequently there have been none made here, and there has been no possible chance of getting an order for the manufacture of cork helmets.
2539. If you did get an order, say for 1,000? There would be no difficulty whatever.
2540. In making them at the price you stated? No difficulty whatever. In fact, they could be made at less cost if there were 1,000 required. My quotation is made without any number being given.
2541. *Mr. Piddington.* Even if you got an order to supply them in a hurry? You could not get them in a hurry, simply because you could not get the cork here; it would have to be imported.
2542. *Chairman.* If a manufacturer were in possession of the plant and material requisite for the manufacture of cork helmets, do you think they could be turned out quicker; because there is less labour in their manufacture than in the case of the gossamer helmets? Yes.
2543. I think you gave some evidence before a Board at Victoria Barracks? Yes.
2544. And you had various samples of helmets submitted to you? Yes.
2545. Were they any different from the sample gossamer helmet now before you? Yes.
2546. And were they all supposed to have gone away with one or other of the contingents? We had a bushman's helmet shown there.
2547. A different class of helmet? Yes. This is one of the bushmen's helmets after six weeks' wear in camp. It has inside the name of the man from whom I brought it, and who is now in South Africa.
2548. This is altogether of a different pattern, and of different material from the one we have previously shown you? Yes.
2549. What sort of a helmet would you call it? It could be made out of an old felt hat. That is what it is constituted of.
2550. Would the material in this helmet be superior to that in the alleged gossamer helmet? No.
2551. Is it worse again than that? It would not stand any wear. It would not stand looking at. It is impossible for it to stand.
2552. Did you tender for the supply of any of those helmets? I gave a price, not for that helmet, but for making a gossamer helmet for the bushmen. I endeavoured to get some of that work, but have not had the pleasure of doing any.
2553. Was your price much in excess of the price given? That is more than I can tell. I am never told other people's prices.
2554. Take the gossamer helmet, what would you produce an article like that for, if you had an order for a few hundreds? I will give you what I quoted for an emergency case. We were prepared to execute 250 helmets in three weeks, or 500 in five weeks, at 6s. each—helmets of the shape of the pattern gossamer helmet.
- 2555.

2555. Would your helmet have been of superior quality to that of the one produced? I have a sample of the kind, which I can show to the Committee, so that they can see the class of work and the material of which such a helmet should be made. S. Duncalfe.  
21 Aug., 1900.

2556. Did you tender for a helmet of this description (*the pattern gossamer helmet*)? I would not attempt to tender for a helmet of that kind. I never saw such a helmet turned out in my life, except for stage purposes, and that sort of thing.

2557. And you might never see one again? I never shall see one turned out like it again.

2558. Are those the only two samples of helmets you had before you at the meeting of the Clothing Board, held at Victoria Barracks? No; I was also shown the ordinary cork helmet and the original sample of the Bushmen's helmet.

2559. Looking through the evidence taken by the Clothing Board, there would seem to be an impression abroad that Mr. Anderson is in the habit of taking old helmets and recovering them, and supplying them as new helmets? Yes, that is a fact; that has been known for the last three years.

2560. I think Mr. Anderson admitted that? He admitted the fact by my examination. I take that to be so, and I think Colonel Roberts would also take it to be so.

2561. When tenders were called for the helmets, three years ago, did you then make any inquiries or tender? No; it is an impossibility for any hatter to tender under the present system.

2562. How is that? Because hatters are hatters, and not coat-makers, tailors, or bootmakers. At the present time they have separated the boots. But as tenders are called for even now, with the present schedule, it simply means that a man must tender for helmets, clothing, and caps, and the whole thing right through, and there is no such thing as a man, who is a practical man at his particular trade, in a country like this running a business of that description. If I were to take the whole of the contract, I should have to do as the present contractor does—I should have to sweat the clothing. I understand helmets, and I could take that portion of the contract myself. The present contractor is in the same position—being a clothier, he has to sweat the helmets.

2563. You are of opinion that it would be much better, in the interests of the Military Forces, and also of manufacturers, that tenders should be called for each particular section of trade by itself? Yes. We have been trying to bring that about for the last three years. We waited upon the former Premier, Mr. Reid, over and over again, to try and get it done, but we could never get any satisfaction. Perhaps I may be permitted to read an extract from a newspaper as an explanation of what took place three years ago, when the whole of this thing could have been stopped. This was done by the men who were working at the trade, and were trying to get the trade brought to its proper basis. This is from a report published in the *Australian Star* of an interview with Mr. Anderson, the contractor:—

"They have informed certain Members of Parliament that helmets which had been used were recovered and sent back to the regiments," was remarked. Mr. Anderson replied, "It is true old helmets have been recovered and sent back, but there have been only a few hundred. It is specified in the Government contract that the helmets shall be of cork. They are heavier than the gossamer pattern, but are more durable, and, as the Government demands them, we have to supply them."

"They would, of course, be obtained with Government knowledge?" "Yes; the old helmets are put up at public auction. I have bought some at the Stores Department, and some from the regiments, the officers of which have so much capitation allowance. The old ones I have in stock now cost me about one shilling apiece. The regimental funds would, I suppose, receive the benefit of the old helmets of the troops."

"Do you mean that the helmets are old by having been in use?" "No; they are condemned because the helmets have become moth-eaten, and for other reasons. The cork underneath is quite good, and we simply strip them, put new coverings on, and they are as good as ever. I have hundreds of them in stock, but with the men on strike, and no hope of getting other tradesmen, we shall have to abandon that part of the business. There are not half a dozen practical hatters in the Colony, but we can fall back on imports. The contracts have still three years to run."

"The men say that the stripping tears out the softer parts of the cork," was added. Mr. Anderson answered that he was not acquainted with the intricacies of manufacture, but he was aware that there was a compound for filling up and smoothing."

As an expert in cork helmets, I say it is impossible for any man to pull the cover off without pulling pieces out of it. Under these circumstances it is impossible for us to tender. I should be actually afraid to put in a price against that man, simply because I would know that I could not get the contract. He can tender at a most ridiculous figure, because he can go and buy these old helmets and recover them, as he says, and sling them in and get paid for them. We have failed to find any record at the Stores of this class of helmet being sold by public auction. I have a witness who has seen them come in a dray to Mr. Anderson's. I have an apprentice at the present time who has seen these helmets coming to Mr. Anderson's in dray-loads at a time.

2564. So that you consider that the competition would not be fair if Mr. Anderson had an opportunity of getting the old helmets and refixing them up? Most decidedly.

2565. But if you all started fair—if the old helmets were sold by public auction, and you had the same opportunity of purchasing them that Mr. Anderson has, and the same opportunity of resupplying them, then the competition would be perfectly fair? It would be fair in one sense, but I should not like the risk. I should be very dubious myself about sending second-hand helmets in to the authorities. If it were an understood thing, and they received them as such, I could understand it. If they sent them out and asked us to recover them at a price, I could understand it, and would be prepared to do any amount of that work.

2566. What would be the cost of recovering a cork helmet? The thing would not really pay a manufacturer who was making the right article. They are not covering them for the sake of saving the stuff; they are covering them for the simple reason that the man does not know how to make them.

2567. If it would be as cheap for Mr. Anderson to supply new cork helmets as to recover the old ones, then it is not of much advantage to him to recover? The advantage to him is that he cannot make them. The authorities want a solid cork helmet. When they send to him for 100 solid cork helmets, and he cannot make them, and has not time to send home to get them, he has to make some sort of a thing, and he fixes up these second-hand helmets, and sends them in in the ordinary way. They have never made a solid cork helmet in this country. Then again, instead of sending solid cork helmets, they are getting gossamer helmets, such as those sent away with the Second Contingent. That helmet, I can prove, should have been a solid cork helmet if the Government contractor had carried out his contract with the authorities. The Government contractor had an order to send so many helmets to the Second Regiment. All the helmets for the partially-paid men are supposed to be of solid cork. The Government contractor was hurriedly asked to make, I think, 500 helmets for the Second Contingent. They were to be made in

S. Duncalfe. three weeks. It was impossible in this city to get 500 helmets turned out in three weeks by one contractor or any one particular firm at the time. Instead of the men going without, the authorities said, "We will have to find something else," so Mr. Anderson's idea was: "I have the white helmets on hand to be issued to the Second Regiment. They want khaki helmets, and the only thing to do is to stain the helmets that we were going to give to the Second Regiment—stain them a khaki colour, and let them go with the men." The helmets were stained with saffron water. It can be seen that this helmet on the table has been stained with saffron water, and I am quite satisfied that it is one of those that was issued to the Second Contingent. According to the Government contractor's contract, the helmets to be supplied by him to the regiment of partially-paid men should have been solid cork helmets. If he had white solid cork helmets, and had stained them, he would have performed his contract satisfactorily—he would have issued the right helmet; but they were supplied instead with the gossamer helmet. You can see how unfair it is to any would-be contractor who, going up to the barracks, would be shown a helmet which the authorities say is the helmet they want, and for which he is asked to give a price. He accordingly gives a price, and loses the contract, and the man who gets the contract supplies this gossamer helmet. I ask, is that fair to anybody who wants to get a share of that work?

21 Aug., 1900.

2568. Would you be surprised to learn that the weight of the pattern gossamer helmet is 7½ lb., and the weight of the cork helmet is 6½ lb.? I do not doubt it; I think the cork helmet is the lighter. The helmet on the table (*the pattern gossamer helmet*) is a *fac simile* of the helmet substituted for the cork helmet which should have been supplied to the regiments of the partially-paid men. The cork helmet is the one the contractor tendered to supply. I would call attention to the inside of that helmet, and the quality of the leather of which it is composed. No man can import that leather under about 4s. a dozen. On the other hand, the material used in the gossamer helmet is of the commonest basil that could possibly be got—easily obtainable at 10s. a gross. If I had been the contractor, and had got an order to make cork helmets, and I had sent in such a helmet as this, I should have expected to have it thrown at me. It is impossible for any honest man to tender while this is allowed to go on. He could not possibly tender with safety. The difference in the green "unders" would alone condemn the gossamer helmet as compared with the sealed-pattern cork helmet. The cork helmet, in its entirety, could not be turned out in this Colony, because the original cork helmet was a patent helmet. When the patent died out, they found some other method of extending the patent by making an improvement, and they introduced a piece of velvet, and substituted indiarubber ventilators for cork ventilators.

2569. *Mr. Chanter.*] Could not these cork helmets be turned out in the Colony? You could turn them out, but you would be liable to be sued for the infringement of patent rights.

2570. Would it not be possible for the military authorities to have an arrangement with the patentees for the use of the patent? That is more than I can say; but the patentees would not accept any royalty.

2571. *Chairman.*] As a matter of fact, if the sealed pattern were altered so as to have the ordinary cork ventilator, and so as to dispense with the velvet, the helmet would be just as comfortable, and equally as serviceable? Yes.

2572. The inside of the gossamer helmet (*produced*) is quite as comfortable as the other, though not as expensive? More so, as there are no stitches to rub against the head.

2573. Still, after all, this is a very small matter? It is a matter of about 3s. a dozen in the price of the helmets.

2574. You would say, then, looking at this sample cork helmet, that in calling for tenders for a helmet to be manufactured in the Colony it would be a mistake to have this costly inside, when it does not give either added strength or comfort? Yes. It would reduce the price per helmet at the present time to the extent of 2s. or 3s. a dozen. I gave a price to the authorities, but I never had any reply. I do not know whether I was giving a price for the benefit of any one else, but it seems like it.

2575. Being in the trade, do you think if tenders were called for cork helmets of an approved pattern, not necessarily with this expensive inside, there would be fair competition amongst the hatters in Sydney, if they could see their way to get a fair order in the event of their tender being successful? The competition could not be great in this Colony, for the simple reason that it is a line of article that has never been manufactured here in any style at all. It would be entirely a new industry in this country. It is only within the last twelve months or two years that cork helmets have been made in Victoria. The same thing applied in Victoria, and the helmets are being made there. The Government contractor is a man named Ramsay, I think, and he is making solid cork helmets under the same conditions that would be imposed here. If the military authorities were to call for a price they would get the Victorian price, and they would compare that with the imported article, and if it would suit they would give the order. If we came within a reasonable figure, we should naturally like to see the helmets supplied from here, but as to competition, there could not be competition.

2576. But what I mean is this: Suppose the military authorities were calling for tenders for the supply of helmets for the whole of the forces—some 10,000 or 12,000 men—(say) for a period of three or five years, would there be, amongst those connected with the trade, a fair competition to get that order, and start the industry in the event of the order being secured? I could not say what other people would do; I have no means of knowing. I say it is entirely a new industry. Possibly the firm in Melbourne would go for it. In Victoria they would have every opportunity of going for it.

2577. If the Government were to call for tenders for the supply of helmets over a period of from say, three to five years, so many being supplied per month, or so many hundreds or thousands per year, would it pay you to get the proper blocks and material, and tender for the supply of the helmets at something like a fair rate? I have so much interested myself in the matter that at the present time I have on the way from Spain 500 sets of cork, purely on spec, on my own responsibility; so that I had some idea of going in for it. I have been trying all I know to get this work, or else I should not have placed the facts before the Military Clothing Board as I have done. Although I am a gossamer hatter, as well as a solid cork hatmaker, I should certainly go in for the thing, which I could make here without further trouble.

2578. *Mr. Chanter.*] In regard to your answer to one of the chairman's later questions, is it not a fact that competition could be secured from the whole world at the present time? Certainly.

2579. There is no duty on bats at the present time? No.

2580. Therefore Victoria could compete at the present time? The whole world can compete at the present time.

2581. I think I understood you to say when describing certain parts of the cork helmet, especially the inside, that there was a patent in regard to that portion? A patent band.

2582.

2582. That would be an objection to anyone here, as they could not use that patent? No doubt the manufacturer of the helmets could sue them if they used it. S. Duncalfe.
2583. Do you not know that the Crown can use any patent? I am not aware. 21 Aug., 1900.
2584. I think you said in reply to the Chairman that you were placed at a disadvantage, owing to the present method of calling for tenders, as a number of other articles were embraced in the tender besides helmets? Yes.
2585. Did you at any time when tenders were called for—say at the time you mentioned, three years ago—obtain a copy of the contract and schedule? Yes; I obtained such a document from the military authorities.
2586. Did you notice that, included in the contract form or schedule, were Treasury instructions to the effect that a tenderer could tender for any of the articles, or for the whole of them? No. On making personal inquiries at the barracks I was told that such was not the case.
2587. Did you get a copy of the contract and schedule? I got the ordinary schedule form, issued when tenders are called in connection with the different regiments.
2588. Did that schedule or contract form tell you that you could lodge a tender for any item separately? We went to the barracks and made inquiries several times, and we were plainly told that such was not the case—that we must tender for each or any section in its entirety.
2589. Did you ask for separate schedules? We got the usual lists—one for the 1st Regiment, one for the 2nd, and one for the Mounted Rifles, and so on.
2590. You say that tenders were invited for helmets, jackets, boots, and so on; that these were all on the one form, and you, as a bidder, were thus placed at a disadvantage;—could you not have procured separate schedules, and have tendered for any of the items, or for the whole of them? I was told I could not; I was told that I could only tender for the one section.
2591. Would not that one section deal with helmets alone, if you choose to tender for helmets? No. We waited upon Mr. Reid three years ago, with a view to obtaining an alteration in the system, so that we might have a chance of tendering solely for the articles in our own particular trade. At present the schedule includes a number of things. The only schedule which deals with one class of article alone is Schedule 5—boots and leggings. I believe Mr. McGowen got these separated from another section.
2592. Did you notice that on the tender form there was a special sheet of white paper pasted on, indicating to you that you could tender separately? No, I never saw one. The form I had was like the one produced. It was given to me by Colonel Roberts when we waited upon the Colonial Secretary, Mr. See.
2593. I suppose you applied to the Clothing Board for these particulars? I applied myself personally. A deputation from the society waited upon Mr. See, who referred them to Colonel Roberts, and Colonel Roberts was then under the impression that what you state was the case; but we found out that it could not be done.
2594. *Mr. Piddington.*] How long is it since they called for tenders? I suppose it is two years ago now. I do not believe that they have ever received a tender for helmets from anybody but the one person. They have never had a tender from a manufacturer; no man would tender.
2595. You made the same statement with regard to helmets before the Clothing Board, and Major Boam said that tenders had been called for helmets before the Contingent came into the question? Tenders had been called long before. I will tell you how that came about: Helmets were wanted for the Second Contingent, and the first attempt to get them was through a drapery firm in the city. A draper was asked if he would make 500 helmets in three weeks.
2596. Was that Hordern? Yes. Hordern's firm asked me if I would manufacture them for them. I said, "No, I would not even give a price, for the simple reason that I had been caught once over railway matters in the same way." The railway people came the same game on another firm in the town, and it was of no use for me to make an article and to have it sweated through a drapery shop, and I would not give a price to a draper for any contract work. The authorities said there was not time; but I said, "If you had called for tenders I would have given you my price, which will always be considerably lower than that of a drapery shop." Instead of calling for tenders when they knew they wanted helmets, they wasted a fortnight running about to different people, and then they came to me afterwards to make them in three weeks. They should have called for tenders when they wanted them. If anybody else wants work he has sense enough to put in a shilling advertisement, and, as a result, gets plenty of applications. They wanted 500 helmets in three weeks, and if they had come to me I might have said, "I can make 250," and other manufacturers could have said the same, and they could have got the helmets.
2597. *Chairman.*] Could you have made them during the period from the 20th December to the 17th January, which would have been twenty-seven days, including holidays? It was on the 29th January that I saw Major Boam about the Bushmen's helmets. That was the only chance I had. It took me about a week to find out who to go to then. I could not tell who to go to. You would have thought if you went to the Secretary you could have got the information. I went to the Secretary, and he said, "I have nothing to do with it; go to Mr. Carey." I went to look for Mr. Carey, but could not find him. I went to the *Daily Telegraph*, but could not see him there. It took me four days to find out, and at last I got so disgusted that I said to Mr. Carey's clerk, in Bridge-street, "It looks to me as if there was some sort of fiddling about it." Eventually I ascertained that I had to write to Colonel Taunton, and Colonel Taunton then sent a letter to me to go and wait on Major Boam, which I did. It would not take an ordinary business man that time; it would not take him five minutes to find out where to get them made. A shilling "ad." would fetch me quickly. I read them every night.
2598. *Mr. Piddington.*] Did you say that to your knowledge Mr. Anderson had been supplying the Partially-paid Forces with second-hand helmets? Mr. Anderson admits that in his evidence.
2599. Do you know that of your own knowledge? Yes; we have men who have seen it done.
2600. And got the full price for them? As far as we know; we have no knowledge of the price. Mr. Anderson knows what I can make a solid cork helmet for; I do not know what he can turn one out for.
2601. *Chairman.*] In the evidence you gave before the Clothing Board at the barracks you were not on oath? No.
2602. You would be quite prepared, if called upon, to give the very same evidence on oath? Yes.
2603. Looking at the gossamer helmets, you are satisfied that, after two months' wear, they are the worst helmets you ever saw, with the exception of the ones supplied to the Bushmen's Contingent? Yes.
- 2604.

- S. Duncalfe. 2604. Did you ever see a helmet like this before (*helmet supplied to Bushmen's Contingent*)? Yes, I have seen a helmet made like that.
- 21 Aug., 1900. 2605. I mean of that material? Yes, I have seen them made for stage purposes. If a theatrical manager were to ask me to make him 500 helmets for stage purposes, and he wanted them very low, he would get them at 42s. a dozen.
2606. But outside of stage purposes, they do not generally make this sort of helmet? No. I do not know how they could have the cheek to send it out at all. The sealed pattern I saw at the barracks is equally as bad, and it has not been worn at all.
2607. Then they have a sealed pattern of this helmet? Whether it is sealed or not I do not know, but it was submitted. This helmet, produced by me, was the helmet supplied to the Citizens' Bushmen's Contingent, and I understand that a similar helmet was supplied for the Imperial Bushmen, but the attention of the Military authorities being called to it and strong objections being raised against it, it was condemned. I do not know whether the contractor got paid for it or what became of it.
2608. Do you know what sort of helmet the Imperial Bushmen went away with? I think it was a soft felt hat; they could not get helmets in time. I gave a price for a helmet for the Imperial Bushmen, and I was told that I would hear further of it. A statement appeared in the *Evening News* that I had received an order for 250. I could not guarantee to make more than 250 in the time given—three weeks. They wanted more for the Imperial Bushmen than 250. A statement appeared in the Press that I had a contract from General French to supply 250. I was glad to think that I was going to get a chance at last, and I went down, but could not get any information. I went to the *Evening News* and I was told they got the information from the barracks. I said, "I had received no intimation and that unless I heard something about it, they would have to contradict the statement." I went up to the barracks and made inquiries, and found out that the General had altered his decision, and was going to give the Bushmen soft felt hats, so that I did not get the order. People still think I made some of the helmets, and I have made nothing whatever for the Military authorities.
2609. As a matter of fact, you felt that it would be rather a reflection on your firm to have it publicly stated that you had supplied some of those helmets? I should "go" for anybody who said it.
2610. And you took the trouble to write a letter, which was published in the *Evening News* of 20th March, asking them to contradict the statement, and pointing out how unfair it was to your firm that it should be saddled with the responsibility of turning out a helmet of that quality? Yes; I asked the *Evening News* people to contradict the statement and I could not get them to do so, so I wrote a letter to the paper.
2611. Will you furnish the Committee with a sample of a first-class gossamer helmet? Yes; such a helmet as it should be.

John Dunkerley called in, sworn, and examined :—

- J. Dunkerley. 2612. *Chairman.*] What are you? A hat-maker, and secretary to the Hatters' Union.
- 21 Aug., 1900. 2613. Therefore you are a practical man in regard to helmets? Yes.
2614. Would you mind looking at this helmet, which is the sealed pattern of the helmets supposed to be supplied to the New South Wales troops? (*The cork helmet.*) Yes; that is a very good helmet, a solid cork helmet.
2615. Of good quality? Of good quality.
2616. And a helmet which would stand a good deal of knocking about without injury? Yes.
2617. A helmet you could safely recommend for troops going away on active service? Certainly.
2618. Would you mind having a look at this helmet—a pattern of those supplied to the Second Contingent;—what sort of a helmet would you call that? A very poor one; it is what they term a gossamer helmet.
2619. Is it a gossamer helmet of the best quality? It is of very poor manufacture.
2620. Do you think there is a sufficient quantity of shellac in its manufacture? There is not.
2621. As a practical man, looking at that helmet, you would say it is not capable of resisting water? Not for a time; it would, perhaps, just for an hour or two.
2622. A shower? Yes. It might do for a holiday hat, but it would not do for wear.
2623. Have a look at that helmet—one of the returned helmets;—does that seem to be of the same pattern and make as the gossamer helmet you have just been looking at? Yes; it is the same hat—it is one of the stained hats that went to the war.
2624. It is the same as the pattern you have been looking at? Yes; it is the same.
2625. Are you surprised to see it in that condition after two months' wear? Certainly not.
2626. You could not say that that is what you would call a piece of elegant head-gear—take it as it is now? No; it is not.
2627. Would you mind having a look at that helmet (*the other returned helmet*)? This is one of the same class and of the same make.
2628. Are you surprised to see it in that condition? No, because there is nothing in it except calico.
2629. It is even thinner than calico? Yes.
2630. It is more like butter-cloth? Yes; if butter-cloth is filled with shellac and welded together, it will stand, but this has never been filled. This is what is termed gossamer, but it is actually butter-cloth.
2631. Suppose any firm contracted to supply that pattern cork helmet and supplied instead those gossamer helmets you have just been examining—do you think that would be doing justice to the people of this country who were paying for them? No; decidedly not.
2632. As a practical man, what do you think would be the difference in the life of those helmets—the cork helmet and the gossamer helmet? The cork helmet after going through the wear that those returned helmets have gone through would be much better than the gossamer helmet when new. That is all on account of the make; there is nothing in the gossamer helmet.
2633. I suppose it would not add to the appearance of troops to see them marching along with head-gear like that? I should think not.
2634. Would you have a look at this helmet supplied to the Citizens' Bushmen's Contingent? That is worse than all—that is felt.
2635. It must be pretty bad then, I suppose? Yes.

2636.

2636. How do you think it would turn out after going through the wear this returned helmet has gone J. Dunkerley through? It would not be even so good as that; it would be a pulp.
2637. As a practical man, do you think that any of those helmets, with the exception of the cork one, 21 Aug., 1900. ought to have been adopted for wear on active service? No, decidedly not.
2638. If they had been submitted to you or any other practical man? They would have been condemned.
2639. You would have been able to point out that they would not stand for any time on active service? Yes.
2640. The gossamer helmet might do for what you might call Sunday soldiering? Yes.
2641. But would the felt hat stand even that? No, not in the brim; it will not bear its own weight now, and would not at any time, it being made of felt alone.
2642. So that it would be no good even for a peace parade of volunteers? No.
2643. It seems rather a big pattern of helmet for a soldier to wear? It seems like a block made for the purpose, or a block that has been used.
2644. You gave evidence before the Clothing Board at the Victoria Barracks? Yes.
2645. You were not on oath then? No.
2646. Would you be prepared to swear on oath the whole of the evidence you gave there? Certainly.
2647. You did not take an oath there, because there was no one who was empowered to administer the oath to you? Yes.
2648. Otherwise you would have been pleased to give your evidence on oath? Certainly.
2649. Have you any idea of the relative cost of those helmets, or what they ought to cost—I mean the value of them? The value of them is nil, but the cost is another thing. You can see that I can separate the stuff quite easily. If those different layers of material had been properly filled with shellac, I would not be able to separate them so easily.
2650. The stuff seems rather white and clean and dry? Yes; there is nothing in it. It is not filled, you can see that. Every one of the pores ought to have been filled.
2651. Apart from the fact that the material is not of a quality likely to last long, the workmanship, in your opinion, is also defective? Certainly.
2652. There should have been more shellac and more labour? Yes; more shellac would have necessitated more labour to properly consolidate the material.
2653. Are there many hat-makers in the city of Sydney—I mean those engaged in the trade? At the present time there are only about sixteen belonging to our society. A few years ago there were about seventy.
2654. There may be some outside of your society? Yes; there are a few outside the society. Many have had to take to other work. Some have gone cutting wood, and others as musicians, or anything they could get.
2655. *Mr. Chanter.*] How many were there three years ago? About fifteen waiting for the Government to give work, besides those who were in work.
2656. How many were there in Sydney when the last contract was called for the supply of helmets for the military forces? Between thirty and forty I suppose.
2657. How many helmet makers do you think there are in the city whether connected with the society or otherwise at the present time? About twenty I should think in the trade and out of it—working at the trade.
2658. *Chairman.*] You say that some of them went wood-cutting, and some took to music, so that if there was a rush in the trade, and a big demand for competent helmet-makers, there would probably be more than twenty? I could bring thirty together next week.
2659. How many competent helmet-makers are there in the Colony altogether working at the trade, or working at anything else? There are some a long distance away, but from the suburbs and Sydney I could bring thirty together in a week's time.
2660. Does Mr. Anderson run a helmet or hat factory? Yes.
2661. Do you know how many employees he has? He has three in what is termed the gossamer line—men, not women?
2662. Do they belong to your union? No.
2663. Does female labour come in in the manufacture of these helmets? Yes, to do the trimming and binding, and sew the straps, and to put the patent ventilators in.
2664. If a big demand were to arise for a good class of helmet, to be manufactured in the Colony, there would not be much difficulty in getting men? No. I will tell you where the difficulty would arise, and it ought to be obviated. These trimmings and army fixtures ought to be supplied by the Government.
2665. But you do not think that any difficulty would arise in finding the men? Not the slightest.
2666. In regard to the manufacture of cork helmets, I understand there is no such industry in this city at the present time? No.
2667. Would it be more difficult for the employee to manufacture a cork helmet if he had material than to manufacture the other class of helmet? No; he would simply have to learn the different method, and he would very soon drop into it.
2668. Are you satisfied in your own mind that if an order were given for a quantity of cork helmets, you would find employers here prepared to take it up? Certainly.
2669. I believe you have repeatedly lodged complaints with the Colonial Secretary and others about the supply of these gossamer helmets? Yes.
2670. Were you aware that the sealed pattern with which they were supposed to be supplied was a cork helmet? No.
2671. What then is your objection to the gossamer helmet? The manner in which it was made.
2672. You complained because the gossamer helmet was not the best of its kind? Yes. I said it was a disgrace to allow them to go out, because it would bring discredit on makers in New South Wales.
2673. It was before the troops went away that you made that statement? Yes.
2674. After you had had a look at the helmet that had been supplied? Yes. I saw the hats that were made for the First Contingent, and I said to Mr. See that it would bring discredit upon the hatters of New South Wales if an article such as that were allowed to go, and I asked that there should be open competition for the next lot.
2675. And what did Mr. See say to that? He sent me up to Colonel Roberts.

- J. Dunkerley. 2676. And what did Colonel Roberts say? He said he thought that such a thing could be done—that anyone could compete.
- 21 Aug., 1900. 2677. Did they call for tenders then for the Citizens' Bushmen's Contingent? No; they never called for tenders at all.
2678. So that no one outside Mr. Anderson had an opportunity of competing? Yes; they wrote, I believe, to Hordern Brothers, the drapers, and they wrote also to Mr. Duncalfe.
2679. Do you think they wrote to Mr. Duncalfe? I am not certain about that. We had an interview with Mr. See about the goods that were going away, and pointed out that if two or three or more of us wished to supply such an article we were not able to do so, though perhaps walking about the streets waiting for work. The only outcome of this was that one of the men forming the deputation which waited upon Mr. See had a wife and daughter working for Mr. Anderson, and their services were not any further required.
2680. I suppose the fair deduction was that Mr. Anderson dispensed with their services because the husband had been on the deputation? Yes. He was walking about the streets himself for want of work.
2681. This cork helmet you recognise as the sealed pattern of the military authorities? Yes.
2682. What experts are there in the Colony to supply a helmet of that character? There are many; they have been making those for thirty years in Melbourne. But the difficulty is getting the knowledge that these are required, and getting the material from the old country, and from Spain.
2683. *Mr. Chanter.*] The military authorities invited tenders to make a certain number of helmets, to be delivered in a certain time, according to that pattern; is not that so? I never heard of it.
2684. Did you at any time tender or apply for tender forms? No. I have asked that they might be tendered for separately, but I have never seen a separate tender called for helmets; clothing and helmets have always been together.
2685. Did you tender? No.
2686. Did you apply to the military authorities for any forms of tender or contract? Yes.
2687. Did you receive them and look over them carefully? Yes.
2688. Did you notice a special schedule attached to the tender form giving you the opportunity to tender for that item alone? No; not in any of the forms I received.
2689. Did you ask for or receive any special instructions from any officer or authority that you could tender? No; I said I could not, and Colonel Roberts said I was mistaken, and gave me the papers to look through. When I came to look through them I found that the tenders were in certain schedules, and the one schedule included helmets and clothing. A hatter cannot tender for clothing, nor can a tailor tender for a hat.
2690. Is there anything about the cork helmet which would prevent it being made in the Colony? Nothing whatever.
2691. *Chairman.*] Will you have a look at that printed form? This is exactly the same thing.
2692. Was there a white sheet of paper on the forms you got. No. Section 1 is the nearest approach to our trade. It includes caps, hats, helmets, puggaries, and chin-straps. We are not cap-makers—that is a distinct trade of itself.
2693. So that the caps and the hats would be out of your line? The caps and the felt hats, yes.
2694. And the helmets and the puggaries for the helmets, and the chin-straps would be in your line? Yes.
2695. Do you know of your own knowledge that until quite recently what they call the field-service hat, or the soft hat, was presumably the largest item? Yes.
2696. That all the mounted Forces, and a great many of the foot, used to wear the field-service hat until quite recently? Yes.
2697. And everyone uses a service cap? Yes.
2698. So that either of them would be a bigger item, perhaps, than the helmet? Certainly.
2699. And a firm like the one you are employed with would have to farm out the hats and the caps? Certainly they would.
2700. Therefore, if they have taken a contract for the helmets, and for the hats and caps, they would have to farm out practically two-thirds of their contract? Yes!
2701. *Mr. Chanter.*] What quantity of helmets could a successful tenderer supply? It would all depend upon the number of men he employed.
2702. With the available assistance you could obtain? I suppose we could easily get the number of men who would turn out 200 a week.
2703. According to the sealed pattern? Yes; if we had the material.
2704. *Chairman.*] And if they were the class of helmets supplied to all our troops here? You would only want new helmets once in five years.
2705. Would not the successful tenderer have the material on hand then? Certainly. If once it was known that these were in future to be of solid cork, the material would be imported by the warehouses for the hatters straight away. There would be no difficulty in getting material if it were known. Of course it would take four or five or six months.
2706. The reason the material for cork helmets is not available is because there has never been a demand for that class of article? They have never been required. It appears to me that the one man has had it in his hands all through.

WEDNESDAY, 22 AUGUST, 1900

Present:—

MR. CHANTER,  
MR. COOK,

MR. WILKS.

MR. HURLEY,  
MR. MEAGHER,

RICHARD SLEATH, ESQ., IN THE CHAIR.

Charles Anderson called in, sworn, and examined:—

- C. Anderson. 2706½. *Chairman.*] You are a master tailor? Yes.
- 22 Aug., 1900. 2707. You have supplied certain clothing to the Military Forces—helmets, amongst other things? Yes.
- Before replying to any further questions, I would ask that I may be allowed to read the statement which

I have very carefully prepared. It embodies the whole history of my transactions with the Military C. Anderson.  
authorities in connection with the supply of helmets. If, afterwards, the Committee care to ask me any questions, founded upon the statement, I shall be very glad to answer them. The statement is as follows:— 22 Aug., 1900.

In very respectfully submitting this statement, I am desirous of furnishing such information on the question of the supply of helmets as will remove the false impression conveyed to the public on the matter through the Press. At the same time, the Committee will observe that I desire to give them every information at my disposal that may aid them in their inquiry. In support of this latter, I attach herewith all documents to which I refer, and, further, am prepared to submit evidence to the Committee on all questions involved.

As the matter of the endurance of a helmet may be considered from the properties of its foundation, I give below a short description of helmets known in the military world, viz.:—

- (a) *The Cork Helmet*.—Cork in sections, united by rubber solution.
- (b) *The Gossamer Helmet*.—A combination of cotton fabric and chemical solution producing a material, light, pliable, and waterproof.
- (c) *The Felt Foundation Helmet*.—This foundation is of the best wool felt, brought to perfection by the most modern machinery.
- (d) *The Pith, or Indian Helmet*.—The manufacture of this is not known here.

The following are the weights of the helmets referred to:—

Cork .....	6½ oz.
Gossamer .....	6½ „
Felt .....	7½ „
Imperial Pith .....	14 „, with cover 16 oz.

(This Imperial pith helmet was the helmet supplied in South Africa to the Second Contingent from New South Wales. One brought back I had specially weighed.)

I now proceed to give the history of my dealings with the Military Department in the matter of helmets:—

(1.) Previous to my contract, commencing in June, 1898, I held no specified or definite contract for Infantry helmets. Prior to this date the Military authorities imported from England quantities of helmets for issue. As there is always a difficulty in gauging the proportion of sizes, it was found that certain sizes ran short, and, to meet the difficulty, I was called upon to alter sizes—that is, where possible, to reduce or make large existing sizes as required.

Following this, and for “sizing” up purposes, I was asked if I would make helmets as used by the Infantry. I replied in the affirmative, but with the distinct intimation that the helmets I would supply would have gossamer bodies, not cork. This reservation was made only because I had no stock of cork, and it is obvious it would be commercially injudicious to keep a stock on the off-chance of sizes running short in military imported stocks of helmets.

An order for fifty helmets was duly received on the 29th March, 1895, and these were supplied, being made on gossamer bodies. They proved satisfactory, and from that time forward I have continually received orders for Infantry helmets, which have been supplied in all cases as on gossamer bodies. I have never at any time, or under any circumstances, represented these helmets to be other than “gossamer,” nor had I any object in doing so, having regard to the admitted satisfaction they had given.

(2.) *First Tender for Infantry Helmets*.—Tenders for clothing, including helmets, were publicly called for in May, 1898. The advertisement in the daily papers stated that sealed patterns of all articles could be inspected at Victoria Barracks. I attended and examined the patterns exhibited, but found there was no sealed pattern helmet for Infantry on view. On drawing attention to the matter I was informed that although no pattern was shown, the supply for Infantry was to be made in accordance with the quality and sample I had been supplying for over three years previous.

Here I would respectfully draw attention to the fact that in the schedule attached to the contract setting forth in detail the description of articles to be tendered for, there is no mention made of a helmet of cork foundation.

My tender was accepted, and shortly after I was directed by the A.Q.M.G. to supply helmets for sealed patterns. This was done, but the samples were kept some time at the Staff Office, and although subsequently they were not held as sealed, I can produce one of them which was returned to me, and which bears the official seal.

Some eight months after the acceptance of my tender, in conversation with the A.Q.M.G., this gentleman informed me that he had sealed an imported helmet, and he pointed it out to me, lying on his office table alongside one which I had made for a sealed pattern—to which reference is made above. I distinctly told him there and then that the imported helmet was not that for which I had tendered, and that I would not supply that pattern.

During the currency of my contract for these eight months, I had supplied the gossamer helmet, and it had given every satisfaction. Having thus put it plainly that I had tendered for the gossamer pattern, I quite expected that if the authorities decided to reject that pattern, they would send me official notification, in accordance with clause 18 of the contract. I heard nothing further in the matter, and doubtless would not, but for recent public statements.

(3.) The following are the contract prices for helmets:—

Infantry (gossamer bodies) ... ..	5s. each.
Artillery (cork bodies) ... ..	5s. 9d. each.

A consideration of the difference in these rates will go to show that, when quoting, I distinctly meant gossamer helmets for the Infantry, as previously supplied, before the actual contract was entered into.

Here I may mention that the margin of profit is so small, in the matter of helmet manufacture for military purposes, that of itself it would be poor encouragement to me, in a freetrade community, to go to the great expense I have incurred in providing modern appliances for hat and helmet production. On the other hand, it has been a source of business trouble totally out of proportion to the remuneration derived.

(4.) *Helmets for Second New South Wales Contingent*.—It was originally intended to issue hats to the Second Contingent. I received the order for these, and had them prepared with special puggarees, ready for delivery. Owing to some cable advice as to the hat being objectionable, the military authorities decided at the last moment to substitute a helmet for a hat. The order for the hats was countermanded, and these, with the puggarees, were thrown on my hands, which meant a serious loss—especially as the puggarees, being of a special colour, were useless for other purposes.

I was asked to supply helmets in lieu. The time available was ten days—actually about six working days—to supply 640 helmets. The time was so limited that it was impossible to produce the quantity; but I suggested that I had a lot of infantry gossamer helmets with white covers in stock, which, I suggested, would be suitable if khaki covers were put on them, as used by the Imperial troops. It was decided to accept them, but instead of the suggested cover they were to be stained a khaki colour. Samples duly stained were submitted and approved.

It is apparent that the helmets could not be properly dyed, as the process of manufacture was complete, and the consequence was that the stain had to be brushed on externally. Invalided men, returned here, have informed me that the rain washed this stain out, and the men were ordered to restrain the helmets with “potash of Cond’s Fluid”—permanganate of potash. (See letters of Privates M. Healy and S. Bird attached.)

The rain would appear to have destroyed the virtue of this stain also; and in order to keep up the staining order, the process to meet it developed into dipping the helmets in water and plastering them with mud or clay. I need hardly point out that this latter process of itself is enough to destroy the good appearance of any helmet, apart from the consideration of the damage it would certainly do to the material employed in its construction. Referring to the use of permanganate of potash as a stain or dye, I have the written opinion of the leading wholesale druggists in this city that the use of such a drug in staining will not alone damage but rot the cover of the article, such as a helmet, upon which it is used.

(5.) The “gossamer” helmet has been worn by the Infantry for the past five years, and has been generally preferred to the imported helmets, and I have never heard a word of disapproval as against them, either for wear or appearance, until the matter was mentioned in the public press.

(6.) The adoption of the “gossamer” helmet for the Infantry did not, as has been asserted, make my contract the more lucrative, as my tender was based on the supply of that class of helmet. I may mention that after the matter, amongst others, was publicly threshed out before the Military Central Clothing Board in June last, I officially intimated my willingness to allow the Infantry contract for helmets to be cancelled, so that public tenders could be again invited. This shows what importance, from a monetary point of view, I attached to the contract. (7.)

C. Anderson.  
22 Aug., 1900.

(7.) Before leaving the question of the gossamer helmet, I would respectfully point out that the helmets supplied to the Second New South Wales Contingent were not *condemned* by the Military authorities in South Africa because of their being unserviceable, nor because of faulty manufacture, but were ordered to be discarded on account of their colour. Some men have informed me that they regretted having exchanged their Colonial helmets for the Imperial ones, as the latter were so much heavier.

#### WOOL- FELT HELMETS SUPPLIED TO THE THIRD CONTINGENT AND NEW SOUTH WALES BUSHMEN.

(8.) The process of manufacture of this helmet is:—The bodies are made of wool felted, and undergo the same treatment as a felt hat up to the "hardening stage," after which they are lined, covered, and finished with waterproof solution in the same way as cork or gossamer. The process requires the employment of expensive machinery, and the cost of production is greater than gossamer, and equal, if not in excess of, that of cork; in fact, the helmets I supplied to the above Contingents were of such good quality felt that they cost more than cork helmets. They are, however, slightly heavier than the gossamer and cork helmets—1½ ounce.

(9.) When I was approached as to helmets for the Third Contingent and New South Wales Bushmen, I found that the time allowed was *again very limited*. The number required was about 800, and it was impossible to turn out gossamer bodies for that quantity in the time allowed. Fortunately I had in stock a large quantity of felts used by me in the manufacture of hats, and I also possessed the necessary machinery for the production of a felt helmet. At the request of the authorities I submitted a sample wool felt helmet, which was approved. The supply was duly made in accordance with the approved sample. The helmets were honestly manufactured, the best felt was used, and I considered, as I do now, that they were fit for the service they were intended for. There is no suggestion of my having taken advantage of the situation. I felt rather that I had put forth an effort to satisfactorily cope with very urgent Military requirements.

(10.) The whole question of helmets was inquired into before the Military Central Clothing Board on the 21st June last, and two gentlemen engaged in the hat trade in Sydney were present, admittedly as hostile to me. These gentlemen boldly asserted that the wool felt helmet was useless, but were unable to adduce any technical objections to it. One of them, a hat manufacturer, produced a gossamer helmet made by himself, and submitted it to be tested. This helmet "was placed under a shower bath with the water turned slightly on; it had not been there for more than an hour when the water went right through it, and lodged under the band, and it went quite soft. Mr. Anderson's helmet had been under the water twenty-four hours, and withstood the test." (Extract from evidence given before the Board.)

This test speaks for itself, and the result is a tribute to the good quality and sound manufacture of the wool felt helmet. The opinion of this manufacturer as to this helmet may be discounted, when it is considered that he is not in a position to produce it, but he can produce the gossamer pattern.

(11.) I have heard no complaints from South Africa as to the helmets in question, but I am quite confident that they were thoroughly fit for field service, and will collectively stand the test of the campaign as well as any other pattern helmets—much better, I should say, than the pith helmets supplied by the Imperial Government.

(12.) Any unbiased expert in helmet manufacture will express a favourable opinion on the quality of these wool felt helmets.

#### CORK HELMETS FOR R.A. ARTILLERY.

(13.) Public statements have been made that I supplied gossamer helmets to the R.A. Artillery instead of cork. I desire to emphatically state that this is a gross misstatement. I tendered for cork helmets, and I imported and supplied them. I may, however, add that I find on reference to my books, that on one occasion some ten gossamer helmets were substituted for cork under the following circumstances:—In the imported cork helmets certain small sizes ran short, and they were urgently required. I had no stock of cork, and, with the concurrence of the authorities, and, as a matter of expediency and urgency, I supplied the ten above referred to.

(14.) In addition to this statement, I respectfully submit copies of certain documents, to which reference is made, and which are set forth on Schedule attached herewith.

I also beg to submit samples of helmets, as follow:—

- No. 1. Submitted for sealed pattern, Infantry—F.
- No. 2. Gossamer helmet body supplied to Second New South Wales Contingent—G.
- No. 3. Gossamer helmet supplied to Second New South Wales Contingent, unstained—H.
- No. 4. Second Contingent helmet returned from South Africa—I.
- No. 5. Felt helmet body supplied to New South Wales Bushmen—J.
- No. 6. Felt helmet supplied to New South Wales Bushmen—K.
- No. 7. Felt helmet body supplied to Irish Rifles—L.
- No. 8. Felt helmet supplied to Irish Rifles—M.
- No. 9. Solid cork helmet, hand-made—N.
- No. 10. " " machine-pressed—O.
- No. 11. Imperial pith helmet returned from the front; weight, 15 oz—P.

In conclusion, I would very respectfully request the favourable consideration of your honorable Committee of the facts set forth. I feel that I have been grossly libelled in the public Press and by certain rival traders in the matter of the supply of helmets. My transactions in this respect with the Military authorities were thoroughly straightforward. I contracted to supply the helmets in question to sample approved, and I did so—delivering sound, reliable goods, honestly manufactured. Inquiry will elicit the fact that I stand in high repute in the business world of the colonies and London. My commercial honesty has been the life and impetus of a successful business career, and to preserve it makes me earnest in approaching you for that opportunity of defence which will remove the wrong impression conveyed to the public.

Since preparing the above statement, it has occurred to me that I ought to submit to the Committee the following statement, which may be taken as supplementary to that which I have already read:—

- (1.) As a manufacturer, I purchase the best material in the market.
- (2.) I also employ the best mechanics to produce the best work; but, as you are aware, manufacturers do not always get it, although they may pay for it.
- (3.) Mr. Duncalfe, who has appeared before you, is a manufacturer, and, as shown in my principal statement set forth above, it is to his interest to condemn my work, in anticipation of orders for himself. (See report of test of helmets made by myself and Mr. Duncalfe, at the Victoria Barracks, referred to in para. 10 above. Mr. Duncalfe is the manufacturer referred to).
- (4.) Helmets, as shown in my statement, were made from new felt bodies which I had in stock for making hats for civilian wear.
- (5.) The shellac was the best to be had for the purpose, and properly treated in process.
- (6.) As to the quality of the gossamer helmet made by Mr. Duncalfe, I would refer the Committee to the test at the Victoria Barracks (Military Central Clothing Board Report of proceedings, 21st June, 1900).
- (7.) As gossamer helmets, those produced by me are as good as can be made by the best manufacturers.
- (8.) The question of the supply of stripped cork helmets was before the then Premier, Mr. Reid, and was fully investigated, and to my entire exoneration.
- (9.) I have no objection to the tenders being invited separately for helmets and hats.
- (10.) I offered to cancel my infantry contract for helmets with the above view, as stated in para. 6 of my principal statement.
- (11.) I can manufacture cork helmets.
- (12.) As to Mr. Dunkerley, I would respectfully remind the Committee that he approaches the question with an amount of hostile feeling towards me. He was once in my employ, but as I had occasion to discharge my then foreman, he and others left in sympathy with him. I discharged him, strange to say, for slumming helmet work.

I received the following letter, under date of July 27th:—

Dear Sir,

Valley-street, Bega, 27 July, 1900.

Your letter of the 17th to hand. I was very sorry I was not at home when the letter came, as I was away for a few days.

You said in your note that you would like to know about the uniform that was supplied to the troops that went to South Africa. I think that the clothes that were supplied to us in Sydney were the best in South Africa. They were very warm, and they lasted as long as any other clothes would have done in the same place. From the time we put them on they were very seldom off the whole time we were there.

As

As regards the helmets, they were condemned at the Modder River. Before we went into any engagement we were ordered to dye them with potash of Condry's Fluid, to make them a chocolate colour. But that was no good, for the rain used to bleach them white again. Well, after our first engagement, we met Lord Roberts' column, and we travelled all the time, and wore the helmets up to Bloemfontein. About fifty of us came back as an escort to a convoy of sick and wounded to Kimberley, and then to Naauppoort. It was at this place, on the 26th March, 1900, that we had our helmets served out to us. I was very bad with the fever at the time, and had a terrible headache, so I asked Lieutenant Newman if it was compulsory to take one of the helmets, and he said "No." So I kept the helmet that I brought from Sydney, as it was very light, and as the helmets that were served out were very heavy, I did not take one. My helmet came back again with James Symonds, one of the first batch of invalids. If you want to know any more about the helmets I would try and get the one that came home from James Symonds.

I cannot say at present when I will be in Sydney again, possibly not for a month or two.  
I will now bring my letter to a close, hoping, &c.

I am, &c.,  
MICHAEL HEALY.

2708. The writer speaks of having received your letter;—did you ask him for these credentials? I saw him in Sydney, and having heard about the helmets wearing badly, I asked him how his own wore, and from what he told me, and after hearing what was likely to occur, I thought it well to get his evidence in writing.

2709. Is he an old friend of yours? I never saw him before.

2710. How did you find him in Sydney? He and another man came into my shop to buy some badges, and I met him at the counter. I have not seen him since he left my shop when I took his order. I received this letter under date of 28th July last:—

Mr. Chas. Anderson,

Dear Sir,

Marrickville, 28th July, 1900.

Re the matter of uniform and helmets, of which you were speaking to me about.  
I herewith give you my opinion of same as I found them in South Africa.  
I may state that the uniform was in every way satisfactory, and stood the wear and tear very well indeed, and, in fact, at the time of my being invalided it was in very good order, and fit to do a few months' more active service.  
Touching on the matter of helmets, I may state that, up to the time of exchanging for the Imperial helmet, mine was in very good order. The reason for exchanging was, as I understood, that our helmets, by reason of their colour, appearing too conspicuous. But since having worn the Imperial helmet, I, myself, would have preferred to have continued with my own, provided it had been covered with a khaki cover, as our own helmets were ever so much lighter than the Imperial. However, I, like the majority when new helmets were mentioned, was quite anxious to obtain one, contending that it was advisable to obtain new articles whenever the opportunity occurred, which, I can assure you, was, in the majority of cases, not too frequent.

Now, sir, trusting I have given you an idea of how these things served us, I will conclude, having the honor to ascribe myself,

Yours most respectfully,

Private S. BIRD.

(No. 361, 2nd Contingent, N.S.W.M.I.)

2711. How did you come across Bird;—is he an old friend? No; he called upon me as a matter of business, as any other person would do who wanted to buy something at my establishment.

2712. Did he pay cash for what he had? Yes.

2713. He did not ask you if he could write? No.

2714. You just casually entered into conversation and then Private Bird sent along the letter which you have just read? Yes.

2715. Do you know when the Second Contingent left here? I think it was the 17th January.

2716. But if the authorities say that the "Southern Cross" left on the 21st and the "Surrey" on the 20th, you would not dispute the point with them? No.

2717. Do you remember when they arrived at Capetown? No.

2718. I suppose that you are aware that neither steamer is an ocean greyhound—they do not travel fast? I suppose not.

2719. Would you be surprised to learn that it was the 20th February before they arrived at Capetown? That would not be a very quick passage.

2720. The vessels, of course, had to call in at Hobart and also at Western Australia; but I suppose you are aware that the soldiers do not wear their helmets while at sea? No; but I am told that they were not improved while they were on board from the way in which they were stored.

2721. We are told many things, but we cannot get anyone to come here and say them. It is always a question of someone else having told a person such-and-such a thing, and we cannot admit that as evidence. You know that the Contingents were provided with caps for wearing when in undress uniform? Yes.

2722. Private Healy goes into ecstasies over the quality of the helmet, yet it has apparently had only a month's service. He is quite surprised that it is not shattered to atoms after a month's wear. After all, it is not much of a recommendation to say that a helmet stood a month's wear. You would not take that as much of a recommendation; that a helmet lasted a month and was then in wearable condition? No.

2723. Apparently Healy quite forgot the date. He must have thought that it was January in the year before that he left here with the helmet, in order to feel warranted in giving it such a reputation? I believe he belonged to the Mounted Rifles.

2724. Have you the helmet with you? Yes; that is the one returned to me. It is the helmet which Healy said he sent back with Symons, who says he brought it back.

2725. Beyond that we have no proof before the Committee that it is the helmet. But admitting that it is, do you think that it is in excellent condition after only a month's wear? It depends upon the wear it received. If a man were to lie in a gutter and put the helmet under his head, of course, in a very short space of time it would become damaged.

2726. Mr. Meagher.] Who handed you that helmet? Symons.

2727. Has Healy seen it since it has been in your possession, from Symons? No, but he sent me Symons' address, and I went to Symons' house and got the helmet from him. He is quite prepared to come here and give evidence in the matter.

2728. Chairman.] But according to Healy's statement, this helmet has been worn a little over a month? Yes.

2729. Are you aware of what kind of weather they had in South Africa, between the 23rd and 24th February, and, say, the 26th March, that is in the portion of South Africa where our troops were? No.

- C. Anderson. 2730. If Healy says that he used to get the helmet drenched when it was raining, and it is discovered that there was no rain at all during that period where our troops were, his evidence on that point would not be very reliable, would it? No.
- 22 Aug., 1900. 2731. You say that the wear of a helmet depends upon the use it receives;—do you think the helmet you produce has been badly used? I think there is no doubt about it.
2732. In what way do you suppose it had been badly used? Unless it had been badly used it would not be broken down in that way at the crown.
2733. Is it not possible that the wearer may have bumped his head against the top of the tent and things of that kind? Yes. But it has been badly treated in other respects, I think the man was probably lying upon it.
2734. Do you think it likely that if he wished to lie upon it he would place the helmet upright on the ground and rest his head upon its crown, or do you think he would be likely to put it sideways and rest his head on the side? He might do that perhaps. In any case the helmet does not appear to me to have received fair treatment.
2735. As a matter of fact, the frame of the helmet is not injured, it is only the stiffening which has gone out of the top? Purely the stiffening.
2736. Is that a thing which is likely to occur from anyone merely lying on the helmet? It is hard to say. The helmets were made rather light, because the men like light helmets.
2737. There does not appear to be much blemish about the helmet except that the stiffening has gone out of the crown of it; yet you appear to think that it has been badly used? I think so, considering that it was worn for about a month when it ought to have been worn for twelve months. Our postmen wear the same description of helmet for a long period.
2738. The helmet I now produce was brought back by me from South Africa;—what do you think of it after two months' wear? Well, I could hardly express an opinion.
2739. You would not call that an elegant article of clothing, would you? No.
2740. Have you examined the material of which it is composed? No.
2741. You have no doubt that that is one of your helmets? I could not identify it. I would not say that it was not one of our helmets; it looks very much like one of them.
2742. Will you do me the favour to look at the gossamer of which it is composed? This helmet has evidently been in the fire, and gossamer and shellac, as you are perhaps aware, will not stand fire. The helmet does not appear to me to have been subjected to a fair test.
2743. The helmet was cut as you now see it in the presence of the Committee;—do you think the material disclosed by the cut has been in the fire? I was not referring to that part of the helmet; but I have no hesitation in saying that it has not been fairly used.
2744. Do you think that the material I now show you has been in the fire? No, not that portion, but a portion of the lining of the helmet has evidently been burnt; it bears marks of fire.
2745. Will you look at that piece of material which I have just cut out of the helmet with my knife? Yes.
2746. Do you consider that that material was properly treated with shellac before it was put into the helmet? I am not able to say.
2747. Does it present to you the appearance of having sufficient shellac upon it? There does not seem to be much upon it now.
2748. Does it not appear to you to be perfectly dry? It does.
2749. The pores, or openings, of the material are quite clear;—they do not present the appearance of ever having had any shellac upon them? It may have been rubbed out to some extent.
2750. But I have just cut out that piece of material now? I mean that it may be rubbed out inside the helmet. The helmet, for example, has been wet, and has evidently been heated by fire afterwards.
2751. But would the water be likely to wash the shellac out of that piece of material when it was inside the hat? I think a certain amount of heating would take the nature, as it were, out of the shellac, and it would then probably crumble to pieces.
2752. But do you think the small trace of burning exhibited by the helmet would be sufficient to take the stiffening out of the shellac right round on the other side? I am not an expert in these matters, and it is very difficult to say what application of heat would be necessary to destroy the shellac.
2753. Here is another helmet brought back by me from South Africa;—does that present any appearance of having been damaged by fire? I think not.
2754. Do you think it has had bad usage? I do.
2755. Is the frame or lower portion of the helmet broken in any way? It does not appear to be broken.
2756. The leather binding seems to be perfectly sound; it does not seem to have been damaged to any great extent? The binding looks to me as though it has had two or three years' fair wear.
2757. But you would not take off an old binding which had been worn for two or three years and put it on a new helmet? No.
2758. Does the band appear to have been knocked about or damaged? No.
2759. I have just cut the material in the crown of the helmet, and I now hand you a piece of the gossamer which I have taken out;—you yourself saw me cut it from the helmet? Yes.
2760. Do you think that that piece of gossamer has been properly treated with shellac? I think it very possible that it may have been.
2761. But do you not see that it is quite open? I can of course see the state of the helmet, but I could not tell you what sort of treatment it has had. I should imagine that a helmet of this description would never present that appearance with fair treatment. If you compare it with the sample which I now produce you will see that it cannot have received fair treatment and present such an appearance.
2762. You have no doubt as to this being one of the helmets which you supplied? I have no doubt it is.
2763. I may tell you that I got both of these helmets from the heads of troopers when they were getting them replaced; you would not doubt my word I suppose? I quite believe that; but that does not touch the question of the treatment which the helmets have received.
2764. You cannot imagine anyone, even Mr. Healy, being anxious to retain a helmet like that in the place of a new one? No.
2765. You have produced a helmet which you say is not at all in a bad condition? I am told that it is about a fair specimen of the helmets. It certainly looks a good deal better than those which you have exhibited.

2766. The helmet you produce has been in wear only one month; the others have been in wear two months? Yes. C. Anderson.
2767. You have no objection to my cutting the helmet which you have produced in order that the Committee may see the state of the fabric inside? No. 22 Aug., 1900.
2768. You see that I have cut it, and that all the different layers of gossamer come loose of their own accord; they do not adhere to one another, as they should do? I see that that is the case, but I do not know what treatment the helmet may have received. When a helmet has been washed several times with Condyl's Fluid, and has been rubbed over with mud, which is said to have been done, you could hardly expect it to present a decent appearance.
2769. Would you say that a helmet which would get into that condition after a month's wear was a proper helmet for soldiers on active service? It is certainly not the best of helmets, and I may say that I am rather surprised to see them in that state.
2770. You do not profess to be an expert in the matter of helmets? I do not.
2771. You submit a sample pattern of the gossamer helmets you supply to the military authorities? I do.
2772. The authorities approved of that pattern? They did.
2773. You supplied the helmets to that pattern? Yes.
2774. They were of equal quality with the pattern? Yes.
2775. Therefore you do not hold yourself responsible as to how they would wear? No.
2776. Your contention is that you supplied the article which you guaranteed to supply? Exactly.
2777. You never had an opportunity to see them under ordinary wear except on Sunday parade, and that sort of thing? That is all.
2778. When you see the helmet cut you naturally come to the conclusion that that class of helmet would not be suitable for active service? Just so.
2779. When you see it in that state after practically a month's wear? Yes.
2780. You quite understand that this Committee is not here to blame you because the helmet is not a good one? I quite understand that.
2781. You think that if the authorities state that the helmet will do, and supply you with a pattern, and if you supply helmets to the pattern, it is their business and not yours if the helmet does not answer? Quite so.
2782. Here is a piece of gossamer foundation for a helmet; can you split it into separate fabrics as you have seen me split the foundation in one of the helmets which you supplied? I think that if this foundation were subjected to the same treatment as were the helmets from which you have cut the material I should be able to do so.
2783. But the helmet from which I cut the material just now has been hanging on a nail, and has not received any rough treatment at all. I cut it from the helmet which you supplied to Major Boan as a pattern. You see how the fabric comes asunder in the foundation; but in the piece of foundation which I hand to you you will find it impossible to pull the pieces of fabric asunder. You cannot pull them asunder, can you? No.
2784. As a matter of fact, the fabric will tear before you can pull it apart? Yes.
2785. The foundation which comes to pieces is taken from the sample helmet supplied to Major Boan;—do you still maintain that the gossamer in that foundation has sufficient shellac in it for water-resisting purposes? I may say that the great resisting medium is on the outside, and is contained in the rubber, as it is called. The foundation is covered with rubber, and is then dried and covered again. When the foundation is treated in that way it ought certainly to resist moisture. The inside of the foundation is also covered with rubber.
2786. *Mr. Meagher.*] But are you not surprised that in the case of a helmet in such good condition the gossamer material should be so easily separated? I cannot very well understand it. There is something in it I cannot quite account for.
2787. *Chairman.*] I will now ask your opinion of a piece of fabric which I will cut out of the sample pattern; you can then compare the two pieces of fabric—one, as you see, has been cut out of the sample helmet, and the other has been cut out of the helmet supplied by you;—do you see any difference in the material? Yes; one is a twill.
2788. You see that the twill is thoroughly filled with shellac while the gossamer is not? Yes; one would carry more shellac than the other.
2789. But you notice that one piece of material is perfectly dry and open;—should not all the holes be filled in with the shellac? Yes.
2790. But you see that they are not? Exactly; but the lower portion of the helmet you have there is of the same material as the lower portion of the other helmet—it is twill in both cases. The two helmets—the pattern and the one which was sent to South Africa—were made by the same workmen.
2791. You have seen me cut this gossamer material from the pattern helmet which has never been used, and you see that the material is quite open;—is it not the fact that in manufacturing helmets you have to use sufficient shellac to fill up the openings in the material, and so to thoroughly consolidate the different pieces of fabric? That is so.
2792. Is it not evident then that in the case of this pattern helmet an insufficient quantity of shellac was used, otherwise the different pieces of fabric would not come asunder;—I do not see that you need have any difficulty in answering the question; it does not appear to me to affect you in the least; the military authorities have passed a certain helmet, and if those which you supplied were up to that pattern your responsibility ends. Do you not think yourself that insufficient shellac is used? There does not seem to be much shellac in the material which you have cut out of that pattern. Perhaps I ought to explain that the material is dipped in a solution of thick-liquified shellac. It is then wrung out and put one piece on the other and dried in the sun. I do not see how, under those circumstances, one piece should carry more shellac than another.
2793. *Mr. Meagher.*] But the two pieces of material put before you do not appear to be the same? No, one piece of material is twill; but, as I have already explained, the twill in each case comes out of the lower portion of the helmet. The gossamer is in the crown, or upper portion.
2794. *Chairman.*] Is it not the fact that if you used more shellac and less water it would require more labour to consolidate the fabric and to press it? Yes, I have no doubt it would.
2795. But in this case you had not very much time—you were pressed for time, and you had not as much time as you would have liked to produce the article required? That is quite true. The helmets also improve by keeping for a time. They get harder, and last much longer. 2796.

C. Anderson, 2796. You see the two samples of stuff which I produce? Yes.

2797. You know what they are? Yes.

22 Aug., 1900. 2798. One piece is what you would call thin gossamer, and the other is twill? Yes.

2799. Did you yourself ever pay much attention to the different kinds of material? No.

2800. You see the effect of my pressing my thumb across the gossamer; it goes away to nothing. If I press my thumb across the twill in the same way it opens up a little, but the fabric remains comparatively solid? I see that.

2801. What do you think would be the difference in price between the twill and the gossamer? One would be about 2d. a yard and the other about 3½d.

2802. You see this third material: it is a thin twill or a thick gossamer, and you see the way in which it is affected by my thumb; it is not affected so much as a thin gossamer. Would you be surprised to learn that this is similar to the material in the helmets? Yes, I should.

2803. Would you be surprised to learn that the thin gossamer is 1½d. per yard, and that this thicker material is 3½d.? I think they would be about the prices, but I am not an expert in these matters.

2804. Are you aware that the twill is 4d. per yard? I dare say; but that is a branch of the business I leave entirely to my sons.

2805. Are they experts? Yes. I have also a foreman who will be able to give you the information you want on that point.

2806. Suppose anyone were to allege that the material at 1½d. per yard were not gossamer at all. Have you seen in your domestic experience such material used for anything but helmets? I do not know what it would be used for.

2807. Have you ever seen it wrapped round butter? I have seen material like it wrapped round butter, but I cannot say whether it is quite the same material.

2808. As a matter of fact it is alleged that this is not gossamer at all? I do not think it is. I do not know what you would call it. I know that in the manufacture of gossamer helmets plain muslin and twill are all used.

2809. It is said that you cannot make gossamer out of this material—that it is too thin—although you may make something and call it gossamer? I cannot tell you about that.

2810. Just as margarine might be made out of dead cats and sold for butter; nevertheless, it would not be butter. You could not call any material made out of butter-cloth gossamer? No.

2811. Would you be surprised to learn that the piece of material I now produce is genuine gossamer? It looks to be so.

2812. But it does not resemble the stuff which you have in your helmets? I do not see why the one material should not hold shellac as well as the other.

2813. It would appear from the portion of the sample helmet which I have cut out that it does not hold the shellac? I do not know that it is altogether a disadvantage to have the material loose. I fancy it is rather an advantage to have it loose, for the purpose of holding the shellac.

2814. But do you say that experience shows that loose material does hold the shellac like the piece of stronger fabric which I have cut out of the sample helmet this morning; compare the two pieces? Apparently the piece of gossamer you show me has not as much shellac upon it as the piece of twill.

2815. The helmet I now produce was supplied to the Citizens' Bush Contingent. Can you identify it as being one of your helmets? It is one of them, I have no doubt.

2816. What sort of helmet do you call it? It is a helmet with a felt body.

2817. You see that a piece has been cut out of the crown of this helmet. Apart from that, what sort of wear do you think the helmet has had? It has had a good deal of wear; there is no doubt about that. It would stand a lot of knocking about.

2818. You see how the frame or lower portion of the helmet bends? That is a fault in those helmets.

2819. Is it not a marvellously shaped helmet? It is.

2820. What pattern is it;—it is from the Chinese army? No; but it was considered that the pattern, gossamer helmet, supplied to the troops did not sufficiently cover the ears.

2821. Who discovered that the ears were not sufficiently covered—was it yourself or the Military authorities? It was not I; I was asked if I could produce a helmet which would protect the ears.

2822. I suppose from what you have seen you thought it entirely unnecessary to get a helmet which would cover the eyes of the Staff officers? I hardly understand the meaning of your question.

2823. Would you be surprised to learn that the helmet, now in your hands, was worn only for a few days? I should indeed.

2824. That helmet was supplied to Private Hutchinson of "A" Company, number 379—you think it a good substantial sort of helmet which should wear pretty well under fair conditions? It should do.

2825. The piece of material I now produce you recognise as felt? Yes.

2826. Will you look at this piece which I have taken out of one of the helmets, supplied to the Citizens' Bushmen's Contingent, which you have just looked at. You see that it tumbles to pieces quite easily. It is quite soft—almost like compressed dust? It is strongly felted wool; if you were to get a piece of cork, about the same size as the piece you have crumbled, you would find that it would break away quite as easily, and cork is supposed to make the best of helmets.

2827. When this piece of felt has been in water for half-an-hour you can institute a comparison between it and a piece of cork which has been in water. Suppose a manufacturer swore that these felt helmets were never made for any other than stage purposes? I have heard that stated, But it is a very much better material than that which is used for stage purposes. The helmet you produce is made exactly of the same material that is used for making hard felt hats.

2828. Who approved of this pattern? I believe the General.

2829. This pattern was only sprung upon us the other day by an outsider, and so far as the Military authorities are concerned they have failed to recognise that such a helmet was ever supplied. It is purely by accident that we are in possession of it. Which are the Committee to understand will stand the most wear—the felt helmet or the gossamer helmet? The felt helmet, I should think, would be very much stronger.

2830. Did any of the men go away with helmets like that produced? Yes, the Bushmen's Contingent.

2831. You mean the Citizens' Bushmen's Contingent? Yes.

2832. With what head covering were the Imperial Bushmen's Contingent supplied? They had felt hats.

2833. Did you get an order for the supply of helmets for that Contingent? No.

2834.

C. Anderson,  
22 Aug., 1900.

2834. You did not supply them? No.

2835. It was never contemplated, as far as you know, to supply them with helmets? No.

2836. You are positive about that? It was not contemplated to my knowledge.

2837. Suppose Colonel Taunton swore that an order for some hundred helmets was given to you for the Imperial Bushmen's Contingent, and that afterwards the order was withdrawn because objection had been taken to the quality of the helmets supplied—would he be telling the truth or otherwise? This is the first I have heard of it.

2838. Surely if you supplied 700 helmets for the Imperial Bushmen's Contingent you would have some record of it? We supplied helmets to the Citizens' Bushmen's Contingent.

2839. But if you supplied any quantity of helmets whatever for the Imperial Bushmen's Contingent you would have some record of it? I have already told you that we did not supply that Contingent with helmets.

2840. If you had supplied the Contingent with helmets, and they were returned, you would have a record of it? They were never supplied. I do not think we ever had the order. If we had I never heard of it. I ought to explain perhaps that the Military authorities had the sealed pattern of the felt helmets like those which you have produced.

2841. They had that pattern when you supplied the helmets? Yes. I have already said that the material in the felt helmets is exactly the same material as is used in an ordinary hard felt hat. Everything of course depends upon the usage to which the felt is subjected; but I should think that under any conditions it would last much longer than would gossamer. I will produce now a pattern of the helmet which we supplied to the Irish Rifles. It has been adversely commented upon, and I thought I would like to have one before the Committee so that they might see it.

2842. I notice that the sizes of the specimen helmets submitted are very small. One is  $6\frac{1}{2}$  and the other  $6\frac{3}{4}$ ? The specimens are not very big helmets.

2843. The helmet you produce as having been supplied to the Irish Rifles is practically of the same material as the helmet you supplied to the Second Contingent? No, there is a difference. The body of the helmet supplied for the Irish Rifles is made of felt, and the brim of gossamer.

2844. How long have you been supplying these felt helmets to the Irish Rifles? They have been supplied lately in a great hurry.

2845. Previous to that, with what sort of helmet did you supply them? This is the first helmet they have had.

2846. Then you have not had an opportunity to test how they might eventually wear? I had no doubt about their wearing qualities.

2847. But you had no opportunity to test them? No.

2848. Will you look at the sealed pattern of cork helmet I now hand you;—you see the seal upon it? Yes.

2849. Do you understand what it means? Yes. It appears to have been sealed on the 23rd August, 1899. It is a sample of the helmet supplied to the Partially-paid Engineer and Infantry Forces. It bears the signature of Colonel Taunton as a sealed pattern.

2850. Did you supply the Forces with helmets according to that sealed pattern? No.

2851. Did you contract to supply helmets of that pattern? No.

2852. Then can you arrive at any conclusion as to why the authorities had it sealed? The object of putting the seal on a pattern, no doubt, is to have helmets made in accordance with that pattern.

2853. Yet you say that you never tendered for helmets in accordance with that pattern? I had no sealed pattern in my tender. My contract started nearly twelve months before the date on that sealed pattern.

2854. The authorities apparently sealed it up afterwards? Yes.

2855. Is not that very much like the Municipal Council accepting a tender and then drafting a specification;—the military authorities in this case accepted a tender for a helmet; and some eight months afterwards they sealed a pattern;—does not that seem to you a most extraordinary way of doing business;—would you, as a business man, do anything like that? I would not.

2856. If 100 helmets were wanted, would you let your men make them first and then supply them with a pattern to show the sort of helmet? No.

2857. Presumably the Military authorities were not gifted with second sight—they could not foresee what you might do eight or twelve months afterwards? This is the matter in contention between the Military authorities and myself at the present time.

2858. Have you not anything in writing as to the contract, was it not signed in the proper way? Yes.

2859. You have the contract with you? Yes.

2860. What is the date of the contract? My signed contract was dated 15th June, 1898, and the helmet was sealed as a pattern on 23rd August, 1899. There is a longer interval than I thought. The helmet appears to have been sealed not eight months after my contract, but fourteen months afterwards.

2861. I do not suppose the Military authorities allow you to put up sealed patterns for them? No.

2862. The handwriting upon the sealed pattern produced is not yours? No.

2863. It is Colonel Taunton's handwriting, is it not? Yes.

2864. Then how can there be any dispute in the matter. I thought you said there was a dispute? I simply say that no sealed pattern was submitted for inspection of tenderers when tenders were called for infantry helmets.

2865. Do they deny that? I believe they were not aware that there was not a sealed pattern for the Infantry helmets. From what I now know I think they could not have been aware that there was not a sealed pattern.

2866. Would you be surprised to learn that Colonel Taunton swears that there was a sealed pattern when your tender was accepted? How could that possibly be, when the pattern was not sealed until fourteen months after the signing of my contract.

2867. Would you be surprised to learn that Colonel Taunton says he did not know that you were supplying a gossamer helmet until a little while ago—that he swears, in fact, that you, on your own responsibility, changed the helmet from cork to gossamer? That requires a little explanation.

2868. Are you aware that Colonel Taunton has sworn, in answer to a question by Mr. Cook, that you, on your own responsibility, without the knowledge of the authorities, changed the cork helmet, as per pattern provided, to one of gossamer? I was not aware of that. I should like to explain that until this contract was entered into under the Clothing Board, under date of 1st June, 1898, the Officers Commanding the Regiments made their own contracts. This cork helmet, the sealed pattern, had been supplied to the partially.

- C. Anderson. partially-paid infantry forces. Previous to that the authorities had got out about 5,000 of them. That, I believe, was the number, and they were divided up amongst the various regiments. After a time, they ran out of certain sizes, and they asked me if I could alter the sizes for them; I did so for a considerable time, but ultimately they had to get some helmets made to make up some sizes of which they were short. When I was asked if I could make a helmet like the one produced, I said I could not, because I had not any cork in stock. I said that I could make a nice serviceable helmet of gossamer, and I made one as submitted. It was submitted either to the officer commanding the 2nd regiment, or to the adjutant, I could not be sure which, and that helmet was the same as those supplied to the Second Contingent. This took place about four or five years ago. They were running short of sizes in the helmets they had imported, and I was asked to supply the sizes of which they were short. I told them I could not make the helmets in cork, because we had not any cork in stock, but that I could make them in gossamer and I supplied samples. They liked them very much, and I have gone on supplying the same thing ever since, and no fault has been found until the present time. As there was no sealed pattern for infantry exhibited amongst the sealed patterns when tenders were called for, I thought that what I had been supplying, namely gossamer, would give every satisfaction, and I tendered for gossamer. My price for gossamer was 9d. less than the price for the Partially-paid Artillery sample which was exhibited, and which was of cork. I have been supplying these cork helmets to the Volunteer Artillery ever since, and charging 9d. more than for the infantry gossamer. So that I think that will go to show that, whatever they meant, I thought what was wanted was what I was supplying. If the sealed pattern had been there of course that would have settled the question. The specification does not say "cork" helmets.
2869. You say that when you tendered some years ago you did not see a sealed pattern of a cork helmet? For infantry regiments, I did not. The artillery helmet is of a different pattern.
2870. But for the infantry? There was no sealed pattern; for the artillery there was.
2871. They did not supply helmets for the mounted rifles or the lancers? No; I do not think I ever supplied them.
2872. I think they used to wear field service hats? Yes.
2873. When you undertook to supply the Second Contingent with a certain number of helmets you furnished a pattern? Yes.
2874. Which was approved of? Yes; it was taken up and stained or coloured.
2875. Do you or do you not know that that was the pattern? (*The sample gossamer helmet produced by Major Boam*). That might be the pattern.
2876. If it is sworn to as the pattern you would be quite prepared to accept it as such? Yes; it looks very much like it.
2877. When you submitted this pattern and it was approved, I suppose you tendered or gave a price? Yes.
2878. What officer carried out the negotiations leading up to the contract, or whatever it might be? I should think the order should come from the D.A.Q.M.G.'s Office, or it might have been Major Boam. I do not remember now.
2879. Has it been customary when helmets have been ordered from you to give the order verbally or in writing? Very often verbally.
2880. Was it customary for the military authorities to cover any verbal message by letter afterwards? Yes.
2881. Have you any of the orders that you received—say, especially, the order for the helmets for the Second Contingent;—do you think you could produce the covering letter in that case? Yes; I have no doubt we have it.
2882. I suppose if any dispute arose it would be a question of documentary evidence more than mere verbal statements. In business you would not risk a difference of opinion involving you in a serious loss? It would be much more satisfactory to have it in writing.
2883. From a business point of view? Yes.
2884. And you say you always received covering letters when you were given a verbal order? I have frequently been asked to put something in hand that was wanted in a great hurry, and had been told that a requisition would be sent along.
2885. The requisition would be in writing? Yes.
2886. Do you think you could produce any of those requisitions so that the Committee might see what form they take? Yes.
2887. You saw me put this piece of felt in a glass of water? I did.
2888. It has been in water probably an hour and a half; would you look at it, and compare it with the piece of felt that has not been in the water? Yes.
2889. How has it stood the test of an hour and a half in the water? There is very little difference I think. If you were to put cork in the water like that it would swell.
2890. It has got rather limp, though, has it not? It is not so hard as when it was put in the water, naturally.
2891. Have you got a pattern of the helmet supplied to the Citizens' Bushmen's Contingent? Yes.
2892. Would you mind producing it? This shows the body (*produced*), and this shows the helmet finished (*produced*).
2893. You say that the military authorities decided the shape? Yes.
2894. Did you submit a pattern sample to start with? Yes.
2895. And they approved of it? Yes.
2896. And you then supplied a helmet of equal quality to the sample you submitted? Yes.
2897. In the helmet just produced you see the quality of the material of which the lining under the brim is composed? Yes; it is cashmere.
2898. Is the quality and finish of the cashmere equal to that in the sample cork helmet? I should say the expense of the one would be about as much as that of the other; but I take the lining of the sample cork helmet to be composed of cotton, and it is thicker; it makes a very suitable lining.
2899. Have you seen Indian pith helmets? Yes.
2900. Do you claim to be an expert in helmets? No.
2901. So that you would not be in a position to give an expert opinion as to the quality of that pith helmet? No.
2902. Would you have any objection to produce a sample pith helmet? I produce a sample pith helmet.
2903. This was brought back from South Africa by one of the invalided soldiers, was it not? Yes.

2905. Do you see the pliability of it, and how it springs back again, practically into its original shape? Yes. C. Anderson.
2906. Do you think, looking at it, that it is a helmet that would stand a good deal of kicking about? Yes. 22 Aug., 1900.
2907. Of course, you have had no experience in the manufacture of those helmets here? No.
2908. Have you any other helmets you would like to submit for inspection by the Committee? I brought down some of the various sorts we have been supplying, so that the Committee might see them. This is a solid cork helmet (*produced*), made of the same shape as the Citizens' Bushmen's helmet. It is made partly by hand and partly by machine. It is not an imported article, but is a cork helmet made at our factory.
2909. Would you have been in a position—I mean had you the material convenient—to have made cork helmets. Not in that number.
2910. You had not the material? We had not the material, and, if we had, I do not think we could have done so; it would have taken a longer time to make cork helmets than those of felt, which were partially made at the time of the order.
2911. Is this a helmet generally supplied to military bodies, or is it more a civilian's helmet? I think it is more a military helmet. I next submit for the inspection of the Committee a cork helmet all made by hand (*produced*).
2912. Do you consider the hand-made article the better of the two? No; the machine-made article is the better. In the case of the hand-made article you cannot get the same pressure that is used in the manufacture of the other helmet, which is put into a press and immense pressure is employed so that the solution thoroughly consolidates the different parts.
2913. Have you anything else you would like to hand in to the Committee? This is the body of the helmet made for the Irish Rifles (*produced*). I have also the unfinished portion of the gossamer helmet supplied to the Second Contingent (*produced*). After the contracts had been signed I had a requisition to send up to be sealed as pattern helmets, and this is one of those sent up. These were for the regular contract for the supply of helmets to the Infantry.
2914. This apparently was the sealed pattern? Yes; it was sent back many months afterwards. That helmet and the sample cork helmet were in Colonel Taunton's office. He called my attention to the sealed pattern cork helmet and to this one of mine that he was sending back, and he said he did not like it so well as the imported helmet.
2915. So that over 12 months after you had really taken your contract you explained that you did not contract for cork helmets? Yes, and I pointed out to Colonel Taunton that this was the helmet I had contracted for—this gossamer helmet.
2916. Was this then sealed? No; he had not sealed it then; he said "I have sealed this instead; I like this better; it is an English helmet"—meaning the cork helmet. "I said this is what I contracted to supply"—the gossamer helmet.
2917. But there has been a seal on this gossamer helmet? It was prepared for Colonel Taunton to put his name on, the same as in the other case, and I suppose before it was sent back to me they pulled that off.
2918. There is no doubt that this gossamer helmet had been prepared ready for sealing, and for Colonel Taunton to attach his name to; but he then, some fourteen months after you had taken the contract, decided to seal the cork helmet, as he liked it better? Yes, and in the meantime I had supplied a good many of those gossamer helmets.
2919. Clause 3 of the conditions of contract says:—"The clothing to be supplied to be similar in every respect to the sealed patterns on view at the Headquarters' Staff Office, Victoria Barracks; and, in those instances in which sealed patterns are not exhibited, the clothing must, as regards material, manufacture, and workmanship, be to the satisfaction of the Commanding Officer of the regiment or corps for which such clothing is supplied, and such clothing must be of the best quality of its several kinds." For the first fourteen months of your contract there was no sealed pattern? No.
2920. And during that period of fourteen months you were supplying helmets to some of the Infantry corps? Yes.
2921. Did any of the officers of the regiments or corps find any fault with them? No.
2922. When did the first objection to this gossamer helmet arise—I mean of a serious character? At the time some reference was made in the newspapers to the helmets not giving satisfaction in South Africa.
2923. Presumably coming from certain statements that I, myself, had made? I believe so.
2924. Or, at least, about that time? Yes, about that time.
2925. And you had been supplying this gossamer helmet to the Infantry for how long previous to that? About four or five years.
2926. And no objection had been taken to it by any of the officers either of the regiments or of the Headquarters Staff? No.
2927. But after certain statements appeared in the newspapers, quite recently, inquiries were instituted in regard to the matter? That is so. At this stage I might call attention to the fact that my price for the Infantry helmet was 5s., whereas my price for the helmet exhibited for the Partially-paid Artillery was 5s. 9d., showing that I did not reckon them of the same class.
2928. I think it is generally admitted by those in the trade that the cork helmet is more expensive than the gossamer? Yes.
2929. Could you tell us from memory the price you received from the Military authorities for the helmet you supplied to the Second Contingent? I think it was 6s. 6d.
2930. And what was your ordinary price? 5s.
2931. And you charged the additional price, I suppose, on account of the little time at your disposal? Well, we had to stain them, and for the additional price we supplied a chin strap.
2932. You did not supply a chin strap with the others? No; that was an extra. And another thing is that we had hats and puggies ready to supply to the Contingent just at the point when it was found that hats were dangerous to wear in South Africa.
2933. And then you had to substitute helmets? Then the question came as to whether it was possible to get helmets ready for them.
2934. The chin-strap in itself would not cost very much, would it? No.
2935. And the dyeing or staining would not be a very expensive matter? No.
2936. The additional 1s. 6d. charged would be greater than the value of the chin strap and the staining of the helmets? We had to employ labour and work overtime.
2937. That is exactly what I asked you just now, and you said no. Is it a fact that owing to the limited time at your disposal within which to fulfil the order you required an additional price? Yes. 2938.

- C. Anderson. 2938. That accounted in a great measure for the additional price? Yes.
- 22 Aug., 1900. 2939. And having had the order for the field service hats, and practically having them ready to supply, you naturally considered you were entitled to a full price for the helmet on account of having the service hats thrown on your hands? Quite so.
2940. You see this overcoat (*produced*);—that is one of your make? Yes.
2941. You are an expert in regard to that material? Yes.
2942. Would you mind just feeling that cloth? Yes.
2943. Do you think that material would resist water? I think so—a heavy shower.
2944. Has it any water-proofing in it? Yes; it has been put through a solution of proofing material.
2945. Do you think there is any proofing in that? I should prefer that the manufacturer of the cloth should answer that question. I understand it was put through some solution of water-proofing.
2946. Is the finish of that overcoat what you would call good? The finish is not particular; but, as a rule, they are not particular in great-coats of this description.
2947. Is it not customary to hem them round the bottom? No.
2948. Have you seen any of the Imperial overcoats? Yes.
2949. Have you not found that they are carefully hemmed? I never saw one of them hemmed.
2950. What material were they made of? A material like this—grey Infantry overcoats—only much thicker, more like a felt.
2951. Where did you see the grey overcoats being used in the Imperial service? In the Old Country.
2952. Was that some time ago? Yes; twenty years ago.
2953. Would you be surprised to learn that they are now supplying the whole of the Infantry with blue overcoats? I have not heard of that.
2954. With a layer of water-proofing fixed in the centre of the cloth? I have not heard of that.
2955. Is there a sealed sample for overcoats? Yes; the sealed sample is like this. If the edge of the coat were turned up and hemmed, it would look rather unsightly. It is not usual to do that, even with private overcoats.
2956. This overcoat, you claim, is according to sample? Yes.
2957. What sort of stuff do you call this (*sample of material produced*)? This is a Bedford cord.
2958. Who is the manufacturer of that? I think this was imported.
2959. Do you think this was imported also (*sample produced*)? This is locally made.
2960. Who made it? I fancy Messrs. Vickers.
2961. What do you think of the respective qualities of the two cloths? There is a good deal of linen in the imported material, and the colonially-made cloth is all wool.
2962. In a cloth such as that, do you think the addition of linen would make it more serviceable, so that it would wear longer in rough work? It would not be so liable to break.
2963. It would be tougher? Yes.
2964. Of course this locally-made cloth, manufactured by Messrs. Vickers, was approved by the Military authorities before you had it? Yes.
2965. And they were satisfied? Yes; they had to be satisfied.
2966. They did not say, “I think that is no good; cannot you get better”;—did they say that? Well, it was the best we could make, so that it was no use of them to ask for better.
2967. They accepted it as such? Yes.
2968. This is an ordinary tunic (*produced*)? Yes.
2969. Do you consider that of fair quality? Yes.
2970. I suppose in tunics they have a sealed sample also? Yes.
2971. And this is in accordance with the sealed sample? Yes.
2972. You have a contract for the clothing, have you not? Yes.
2973. Have you a contract for boots? No.
2974. Did you offer to supply any saddles to the Second Contingent? No; I had nothing at all to do with the supply of saddles. I was asked if I could supply any, because I had some splendid saddles; but they were only officers’ saddles—very expensive ones. I had them all sold in a very short time.
2975. You are in the habit of supplying outfits for young officers? I am.
2976. I suppose that is probably on account of your being what might be termed the military tailor;—you make a special line of it? I make a special line of it.
2977. Of uniforms and equipment of officers? I daresay I supply 90 per cent. of all officers’ uniforms in the Colony.
2978. Those officers pay for the uniforms themselves? Yes.
2979. Must they be supplied according to a pattern, or can they have, say, helmets of different qualities? They have to have the same pattern.
2980. I mean the same quality of material;—for instance, can one officer order a cork helmet and another officer order a gossamer helmet? I think so.
2981. As far as you know, there are no restrictions in that way? No.
2982. And the Military Staff has nothing to do with the supply of officers’ uniforms? No.
2983. That is purely a question for the officers themselves? Exactly.
2984. If it were hinted that you gave special concessions to officers—concessions which they could not get anywhere else,—would there be any truth in that? I think not. I have made an offer in this way: Where there are a number of officers—regimental officers—if they send all their orders in together and pay cash, I take 10 per cent. off.
2985. That is an ordinary thing to do in trade, is it not;—where you are able to get, say, twenty orders instead of one, and to be paid cash instead of supplying the goods on credit, is it not usual to allow a certain percentage? It answers my purpose better than taking off 2½ per cent. in three months.
2986. Still, it may be done, and practically is done in many cases in the ordinary way of trade? Yes; I dare say it is.
2987. What would be the cost of a uniform and equipment for a young officer—from £40 to £60? About £60; it might be more. They are not all obliged to go in for the full rig out.
2988. Mess uniforms, I suppose, run into a good deal of money? Yes.
2989. In the case of young officers, you fully equip them, do you not—I mean in regard to belts, swords, and all those little showy nick-nacks? Yes.
2990. Is it customary for a military tailor to supply officers with their full equipment? It is. 2991.

2991. So that the allegation, if made, that you did that and got them in your debt, so that they might C. Anderson. use their influence to give you concessions that no one else could get, would be practically groundless? 22 Aug., 1900.  
It would not be true.

2992. Because you claim that it is customary for military tailors to fully equip young officers with all they require? Exactly.

2993. How do they pay, as a rule—not too bad? Not too bad.

2994. Some of them, I suppose, just as in any other walk in life, do not part too freely? That is so.

2995. Do you do other tailoring outside military tailoring? Yes.

2996. I suppose even the civilians do not all rush you with the cash immediately it is due? No.

2997. On a fair average, are the military officers worse or better payers than the civilians, or are they much about the same? Possibly they are about the same.

2998. I suppose you look upon every man who gets a commission as having some little standing in the country? I do.

2999. And I suppose you consider that it would not add either to his honor or glory to try to do the tailor out of his uniform? That is so.

3000. Do you think a young man would become an officer in any volunteer regiment simply for the purpose of getting a uniform, and then not paying the tailor for it? I should hardly imagine so.

3001. The inference would be that if he did not intend to pay for his uniform he would not join? Yes.

3002. Beyond that little concession you make to them of 10 per cent., on condition that they all club together and give you the order and pay you cash, you do not give them any more favourable conditions than any one else would get? No.

3003. If twenty or thirty civilians clubbed together, and all ordered dress suits from you and paid you cash, you would probably allow them a percentage also? Yes.

3004. So that you would not consider that in allowing this percentage in the case of a number of officers giving an order and paying cash there was anything out of the way? No, nothing out of the way; it is almost like a wholesale order.

3005. Did you have anything to do with the supply of leggings to the Contingent? No.

3006. You supplied the boots? No.

3007. *Mr. Wilks.*] The concession of 10 per cent. you spoke of in regard to clothing is an ordinary business arrangement, and nothing more? Exactly.

3008. The reason that young officers come to your place for their outfit is that you have charge of the sealed pattern, is it not? No; anybody can have the pattern.

3009. You have no special monopoly? No; the description of patterns is given in the general orders.

3010. Put it in another way: I suppose the reason they come to your place for clothing is that very few other tailors direct their attention to the making of uniforms? I dare say that is it.

3011. And as you import largely material for making uniforms, you are able to do the work cheaper than any one else? Yes.

3012. That is really the reason? I should think so.

3013. You are able to import more cheaply, being in that particular line, and are able to fit them out more cheaply than any other tailor; that being so, they naturally go to your place? Yes.

3014. Are you interested in the firm of Vickers & Co.? No.

3015. The commissioned officers on the staff purchase their own uniforms, do they not? Yes.

3016. They invariably obtain them from you? Yes.

3017. For a similar reason that the volunteer officers do—that you are able to do the work cheaper? Yes.

3018. You make no special concessions to them for it? No.

3019. There are no relations between you and the staff officers of a monetary character? No, none at all.

3020. If it were stated that you obtained contracts simply because there were monetary relations between you and, say, the D.A.Q.M.G. or any other responsible officer passing the clothing, it would not be true? It would not be true.

3021. Have the Clothing Board ever penalised you at any time for breach of contract or supposed breach of contract? Yes.

3022. Have they done so at any recent date? Not recently.

3023. Have you found them strict in the matter of contracts? Yes.

3024. You must be surprised, then, to hear the evidence we have before us in regard to the substitution of a helmet; the statement that the helmet referred to as the sealed pattern cork helmet was removed and your gossamer helmet substituted? I never heard that.

3025. That gossamer helmet you have been supplying to the Partially-paid Forces for several years? They never had a sealed pattern at all. This (*the cork helmet*) is the first sealed pattern they had, and it was sealed twelve months or more after I took the contract.

3026. They produced the sealed pattern twelve months after the contract had been in existence? Exactly. They might have sealed a helmet worth a guinea. It was not business.

3027. And it would not have interfered with your contract? No.

3028. Colonel Taunton gave this evidence:—

517. But when he brought this helmet to you and said he could supply it for the men going away, you say that was the same pattern of helmet that he had already been supplying to the Partially-paid Forces, and for some time previously? Yes; so I have found out since.

518. And who originated this pattern? He himself. He evolved it out of his own brain, I believe, before the Clothing Boards of the regiments made their own contracts.

519. It is quite clear that the Staff had nothing to do with the making of the pattern? No.

520. It is not a thing of your own invention or derivation? Certainly not. Our own helmet is a cork helmet. But during the time the regiments made their own contracts—which was before the Clothing Board was appointed—we had certain helmets which they used to get through the store. The patterns could not be supplied, and they went to the contractor, and the contractor then changed the pattern. I did not know it; no report was made of it till afterwards, and the whole thing has only just cropped up now.

I believe that is true. I do not suppose he knew of it—not till I pointed it out to him.

3029. And that Board of Inquiry was practically the result of Mr. Sleath's ventilating in the Press the state of the helmets in South Africa? I believe so.

3030. Who do I understand you to say was not aware of it—Colonel Taunton or yourself? Colonel Taunton. I fancy he was not aware there was no sealed pattern for infantry helmets.

3031. How was it he held the sealed pattern? He had not the sealed pattern. I do not think he knew that he had not a sealed pattern.

3032.

- C. Anderson. 3032. Where has the sealed pattern been all the time—the sealed pattern of the cork helmet that he presents now? That was not in existence until fourteen months after the tenders were called for and the contract accepted.  
 22 Aug., 1900.
3033. Was there any discussion about the introduction of the sealed pattern then—fourteen months after the contract? The only discussion was this: I sent a lot of helmets up to be sealed as patterns. They were there I believe for a long time before he sealed them, and in the meantime I was supplying helmets according to this one that I sent up. About twelve or fourteen months after the contract had been in existence I was in his office one day, and he said, "I have not sealed this sample of yours, Anderson; I have sealed an English-made helmet."
3034. *Chairman.*] Is it not a fact that there was always a sealed pattern? No.
3035. Was there not a different shape of helmet from this cork helmet always as a sealed pattern? That was for the old pattern, but there was a new pattern adopted for the infantry.
3036. Then the old pattern would be the sealed pattern until the new pattern was adopted? Exactly.
3037. So that really during the fourteen months there was a sealed pattern, although at the expiration of the fourteen months it was altered? No; that was a sealed pattern until the alteration of the shape was adopted. After that they had no sealed pattern for the new pattern helmet.
3038. Did not the old sealed pattern hold good until this new sealed pattern was adopted? No; because it was a different pattern helmet.
3039. But did not the old pattern hold good until the new one was adopted? I would not take it so.
3040. When you tendered for those gossamer helmets, did you see any sealed pattern? There was a sealed pattern there for the Volunteer Artillery.
3041. But this was a helmet for the Infantry? Yes.
3042. Was there any sealed pattern when you tendered for the helmet for the Infantry? No.
3043. *Mr. Wilks.*] Again, in Colonel Taunton's evidence this occurs; "He changed the pattern of a helmet of an Army at his own sweet will? Apparently so."? It would have been as easy for me to tender to supply cork as to supply gossamer if tenders had been called for cork helmets.
3044. Then the tenders were not called for cork helmets? To my thinking. I had been supplying this helmet for three or four years. It was always a nice smart helmet, and I believe it is in wear now, and has been in wear for five years, and is liked, I think, better than the cork helmet, because it is a smart, light, nice helmet.
3045. What was your contract price? 5s.
3046. What would have been the price if the helmet had been a cork one? My cork helmet for the Volunteer Artillery was 5s. 9d.
3047. And what would be the price for the helmet you have been supplying for the Infantry? 5s. 9d., if of cork.
3048. You are of opinion that Colonel Taunton was not deceived by the pattern you worked upon? Oh, no.
3049. He was fully aware of it? Yes.
3050. And was there any discussion when he sent down this sealed pattern fourteen months after the contract? Yes.
3051. What was the nature of the discussion? I told him that the sealed pattern—the pattern I tendered for—was what I had been supplying. He said what they wanted was cork. I said they had not had a sealed pattern, and what I had been supplying for years was what they now wanted, and I tendered for that.
3252. How long ago is it since that conversation took place with Colonel Taunton? Nearly twelve months ago.
3053. Then he must have been labouring under a mistake when he said that he only recently knew of the change? I told him at the time that this was the helmet I tendered for, and I was not going to make the cork helmet at the same price at which I was making the gossamer helmet.
3054. That is, it would have been at variance with your contract? Yes.
3055. Then it must be a surprise to you to find Colonel Taunton saying, in answer to a question, that it was only recently that he discovered there was a change of pattern? I am rather surprised at that.
3056. That would be practically since Colonel Taunton heard of the information published through the Press on Mr. Sleath's representation of the alleged bad character of the helmets in South Africa? Yes.
3057. *Mr. Cook.*] Did you state this morning that you had supplied this gossamer helmet since 1895? Yes.
3058. You told Mr. Wilks that Colonel Taunton was not misled, and that he knew the pattern you were supplying? Yes.
3059. Does that relate to five years ago? He had nothing to do with it five years ago, because at that time the officers commanding regiments made their own contracts; but at the time I mentioned they had run short of certain sizes in helmets, and I was asked if I could supply them and make helmets like this. I said I could, but not of cork; I had not got the cork. So I supplied a sample, and that sample was liked very much, and it has gone on ever since like that.
3060. How long ago was that? I think that was about five years ago.
3061. At that time Colonel Taunton had nothing to do with the clothing? No.
3062. You submitted a pattern at the beginning of the Contingents going away? Yes.
3063. They asked you if you could give them a helmet for the Contingent? Yes.
3064. You supplied a pattern; you said, "Yes, I can give you this"? Yes.
3065. Did they understand that the helmets you then presented to them was the same helmet that you had been supplying to the Forces previously? Yes; I told them I had been making it for the 2nd Regiment—that I had a quantity ready, or nearly finished, for the supply of the 2nd Regiment.
3066. Then, why would they ask you to submit a pattern? They wanted the helmet to be coloured. They wanted to see a sample. The helmets I had been supplying were white, and I suggested that they should have a khaki covering, the same as the Imperial ones. The General thought it would make them too heavy. Then I was asked if I could stain them, and I said I would try. I stained several samples; I took up two or three, and they ultimately decided upon one.
3067. Were those several patterns which you suggested different in quality? They were all of the same quality.
3068. In what did they differ? In nothing but shade; they were made of gossamer.

3069.

C. Anderson.

22 Aug., 1900.

3069. I thought you said you submitted several samples? Yes; for the shading, or staining.
3070. I think you said, in answer to Mr. Sleath, that you had never heard of any complaints until recently? Yes.
3071. I suppose the helmet ordinarily supplied to our home forces does not get very much knocking about? I think not.
3072. Not to the extent as in the campaign? No.
3073. Do you still think the helmet you have supplied is good enough for the wear and tear of a campaign, after seeing the specimens which have been produced? I think not; I do not think it is strong enough.
3074. And you would not pretend to submit a similar pattern again for a helmet to stand a campaign? Not for a campaign, I think. They are very good for local work, as long as the men have not to sleep out, and use them as a pillow, and all that sort of thing.
3075. I think you said you had letters from some of the soldiers in South Africa, or were informed by some of the returned soldiers, that they regretted having to exchange their helmets in South Africa owing to the Imperial helmet being very much heavier? Yes.
3076. Do I understand from that that they were compelled to exchange the helmet? I should imagine they would be on account of the colour. One of the men who writes to me says that when he was sick he asked his officer, Lieutenant Newman, that he might retain the helmet he took out from New South Wales because it was much lighter and more comfortable for him, and his officer said, "Yes." If he had continued with the force I think they would have insisted upon his having the heavier helmet on account of the colour.
3077. What is the difference in the colour? There is a great difference, as will be seen by comparison of the two helmets. Our helmet, which is lighter in colour, is, I believe, rather conspicuous at a distance.
3078. That would be the only reason for insisting upon the change? Yes.
3079. What is the difference in the weight of the two helmets? The helmet supplied to the men in South Africa by the Imperial authorities is about twice the weight of the helmet they took with them.
3080. *Chairman.*] We have had the helmets weighed, after being stripped: the pith helmet weighs 11½ oz.; the hand and machine-made cork helmet weighs 7 oz.; and the felt helmet, as supplied to the Citizens' Bushmen's Contingent, weighs 8½ oz.;—it will thus be seen that the pith helmet is much the heaviest? Yes.
3081. *Mr. Chanter.*] You have had several transactions with the Military Department in the way of tendering for supplies? Yes.
3082. Do you recognise that document (*handed to witness*) as a true copy of the tender forms issued to you? Yes.
3083. Are you aware that at any time any other tenderer received any similar document from the military authorities, with the white paper attached? I am not aware.
3084. Did you always understand that in tendering for military stores you were privileged to tender for the whole or any part of them? Yes.
3085. Do you know a gentleman named Duncalfe, engaged in the hat business? I do.
3086. Was he ever in your employ? No, not to my knowledge.
3087. Do you know a gentleman named John Dunkerley? Yes.
3088. Is he also engaged in the helmet business? Yes.
3089. Was he ever in your employ? He was.
3090. What were your relations together during the time he was in your employ? I never interested myself very much in the helmet business; I left it principally to my sons. But we had a foreman, whom we looked upon as the responsible man, to see that everything was turned out properly.
3091. Did Mr. Dunkerley leave your employ of his own accord? He did.
3092. Was there any friction between you during the time he was in your employ, or afterwards? Not while he was in my employ.
3093. Afterwards? Well, afterwards the friction was something like this: I discharged my foreman because he had been passing work that was not properly turned out. Dunkerley was then in my employ, and I think about four others. They took umbrage at my discharging my foreman. I do not know why, but they left, and I had to make application in Melbourne for men to take their places. The society in Melbourne were informed that my men were out on strike, and until the strike was settled they could not send me any men, according to the rules of the society. I wrote back to my friend in Melbourne, saying that there was no strike, no question of wages, but that these men had cleared out because I had discharged my foreman for not turning out the work properly, and that if the society supported men who were not capable or not disposed to turn the work out properly, I thought it was a bad case. I ultimately got men over from Melbourne. After that these men lost no opportunity of trying to discredit my work. They also wrote to the papers here at that time, saying that I had been supplying the military authorities with old helmets—old helmet bodies.
3094. Was that true? That was true; but their object was to do me an injury. It did not do me an injury, because the bodies that I supplied were good and serviceable. A new pattern had been adopted for military service, and the old helmets—they were called old, though they had only been worn a day—were sold.
3095. How were they sold? I bought some from the regiments, and I bought some from dealers in town. Amongst others, were helmets that had been imported for the rifle brigade that was in existence some years ago—the Reserves, I think they were called.
3096. Did you at any time purchase any of these so-called old helmets by auction from the Government store? No; but I bought them from a man who purchased them there. There was an investigation into this matter at that time. I interviewed the then Premier, Mr. Reid, on the subject, and explained what was done, and the class of article I was supplying. He sent a confidential man to my place. I wished him to do this, and to see the whole thing—to see how the old helmets were stripped, the state of the cork, and how they were finished. He saw all this, and I believe his report to Mr. Reid was that he considered I was carrying my business on in a thoroughly legitimate manner.
3097. Have you any objection to give the name of the gentleman who so reported? I do not know who he was.
3098. Do you know whether he is connected with the military authorities? No, I think not.
3099. Did you look upon him as an expert? I do not know who he was.

- C. Anderson. 3100. He had free ingress to your establishment? Yes.  
 3101. And he reported to Mr. Reid? Yes.  
 22 Aug., 1900. 3102. Was that report made public? I think not.  
 3103. Did Mr. Dunkerley take any further action against you? No.  
 3104. What was the result of your letter to the society where they intimated to you that they could not allow any of their body to work for you? I wrote to a friend of mine in Melbourne, who saw the secretary of the society there. The secretary said that according to the rules of the society, while there was a strike on in my place, they could not send any men.  
 3105. And were you thus prevented from obtaining sufficient hands from carrying on your work? From their society.  
 3106. Did you obtain them from any other source? Yes; I got men over from Melbourne. I am not quite sure whether they were members of the society or not; they do not belong to the union here, I know. There are about seven in the union here, I think, and Mr. Dunkerley is secretary. That is what I have heard.  
 3107. Was the only cause for discharging your foreman the fact that he was not supervising the work you placed in his hands properly and turning out the articles up to sample? That was it.  
 3108. Did Mr. Dunkerley ever at any time allege any other cause of offence against you besides the discharging of the foreman? No.  
 3109. Would it be possible for you to produce for the inspection of the Committee one of the helmets that you recovered and which have been spoken of as old helmets, and to explain to the Committee how they were recast? Yes; I shall do so with pleasure. A very uncalled for remark was made, according to the report in the paper, by one of these men yesterday, to the effect that my helmets were made of old hats.  
 3110. Would one of the helmets referred to, after being recovered, be as good as if it were made new? It would be.  
 3111. Were the helmets supplied by the Contingent a true sample of the so-called sealed pattern—I mean the gossamer helmet? Yes.  
 3112. Did you submit that gossamer helmet to the military authorities as a sample? Yes.  
 3113. Did they accept it as a sample? Yes.  
 3114. And the orders they gave you were supplied by you to that sample? Exactly.  
 3115. It has been stated by two gentlemen in evidence before the Committee, Messrs. Duncalfe and Dunkerley, that they were debarred from tendering for helmets alone; during the whole course of your dealings with the Military Department have you seen any other class of tender form with schedules attached than the one now shown you? No.  
 3116. Have you at any time heard of any other being issued? No; I think the one I brought down to you to-day is a duplicate of this.  
 3117. This specially notifies to tenderers, does it not, that they can tender for any item or for the whole? Yes; that is how I take it.

THURSDAY, 23 AUGUST, 1900.

Present:—  
 MR. CHANTER, MR. GARLAND,  
 MR. COOK, MR. MEAGHER,  
 MR. O'CONOR.

RICHARD SLEATH, ESQ., IN THE CHAIR.

John Brush called in, sworn, and examined:—

- J. Brush. 3118. *Chairman.*] You are a member of the firm of John Brush & Co.? Yes.  
 23 Aug., 1900. 3119. You trade in saddlery and harness and leather goods generally? Yes.  
 3120. Do you remember whether you were asked to tender for saddles for any of the Military Contingents leaving for South Africa? Yes; for the Imperial Bushmen's Contingent. We also supplied some saddles for the Citizens' Bushmen's Contingent.  
 3121. Can you give us roughly the number of saddles which you supplied in both cases? I suppose there would be between 400 and 500.  
 3122. Will you look at this saddle (*Exhibit No. 4*) and tell me whether it is one of your make? It is not.  
 3123. Will you examine it carefully and tell the Committee what you think of it? As the saddle now is it would be impossible to tell what kind of work there is inside. It would be like valuing a watch by looking at the case. If you allow me to take the panel away from the saddle I can give you some idea.  
 3124. You are quite at liberty to do so;—having now had an opportunity to examine carefully the work inside the saddle, what is your opinion? We should call it about a third-quality saddle.  
 3125. *Mr. Cook.*] Is that the lowest quality? No, there are other qualities. But excepting those intended for the island trade, this would be about the lowest-quality saddle which we should make. It is what you would call a good ordinary stock saddle—nothing out of the way.  
 3126. *Chairman.*] What do you think of the panel? It is a fair ordinary panel.  
 3127. Will you look at *Exhibit No. 3*—the saddle-tree? It is a good tree.  
 3128. Does the carrying of the piece of plate right across the gullet to the tree points materially strengthen the tree? I think so.  
 3129. If the plate did not extend to the points of the tree the gullet would be liable to go? Yes; even with the lightest of race-saddles, say only 2½ lb., we always put in the plate across the gullet to the end of the tree points.  
 3130. Is that saddle (*Exhibit No. 1*) much the same as *Exhibit No. 3* in quality? I should think it was about the same quality. The knee-pads and thigh-pads of *No. 4*, however, are covered with hogskin, while in *No. 3* they are covered with bag-leather.  
 3131. With that exception you see no difference between the two saddles? No.  
 3132. I want you to have a good look at *Exhibit No. 4*. I wish you to look at the D's, because they are an important feature in saddles to be used for military purposes. They are quite different from the saddles used for ordinary purposes in that respect. Do you think that these D's, fixed as they are, are strong enough to carry a fair weight? No, they are not; they would carry a pannikin or a pouch, or anything of that sort, but they would not do for military purposes.  
 3133.

3133. The D's are fixed in the case of Exhibit No. 3 in a much better way? Yes; they are put in with iron clamps and screws. J. Brush.
3134. In the case of Exhibit No. 4 they are fixed on with bridle leather which would not stand any great strain? Just so. 23 Aug., 1900.
3135. Any considerable weight would be liable to tear the D's right out? Yes. The saddle is an ordinary bushman's saddle—it is not fit for military work.
3136. The D's are fixed on with pieces of bridle leather nailed to the cantle with three tacks? Yes.
3137. Take the panel from Exhibit No. 1—is the stuffing and the covering equal to that of the panel in No. 4? No; the panel in No. 4 is superior to that in No. 1.
3138. Is it much superior? Yes. The panel in No. 4 is faced with hogskin, while panel in No. 1 is faced with only bag-leather.
3139. The panel in No. 4 is superior in quality and in workmanship? Yes.
3140. You think that both the workmanship and material in the panel of No. 1 is inferior? Yes.
3141. Will you examine the stuffing in the panel of No. 4? All saddles ought to be half-lined when they have been in use a fortnight or three weeks. The stuffing of No. 4 is decidedly superior to that of No. 1.
3142. Is the covering of No. 1 of equal quality with that of No. 4? No; the serge in No. 4 is also superior to that in No. 1.
3143. Will you look at the panel of Exhibit No. 3? That is beyond expressing an opinion upon—it appears to have been wet.
3144. Will you look at Exhibit No. 1—the saddle—is it your make? No; I do not think it is.
3145. How does it compare with the saddle No. 4? No. 1 is a stronger saddle than No. 4.
3146. In what particular? The trees in each case are of equal strength I should say, but the D's are put in stronger in the case of No. 1.
3147. Do you remember reading in the newspapers some months ago an account of some inquiry made in regard to the saddles supplied to one of the Victorian Contingents? I remember seeing something of it.
3148. Do you remember that, as the result of the inquiry, it was said that although the stirrup-irons looked splendid they turned out to be made of pewter, or some such material? I do not remember that.
3149. In order to form an opinion as to the strength of the trees, I suppose it would be necessary to know how the metal in them was fixed up? It is branded steel.
3150. If it turned out to be pewter, it would not, I suppose, be very strong? It is branded steel in this case. I expect it would be iron—but it would amount to much the same thing.
3151. You think, then, that the trees of the two exhibits would be about on a par? Yes.
3152. In the case of No. 1 the knee-pad and the thigh-pad are of bag-leather, while in No. 4 they are of hogskin? Yes; there are also heavier D's in No. 1.
3153. You see this exhibit—No. 2—a saddle-tree, will you compare that tree with the tree in Exhibit No. 4? They appear to be of the same make. They are what you would call serviceable stock-trees.
3154. Would you be surprised to hear that many of these trees have opened out? I suppose that a certain number in each hundred would be liable to do so.
3155. When you say that that is a serviceable stock-tree, you mean that it is serviceable for bush work, I suppose? Yes. It would be useful for a stockman's saddle.
3156. But when one has to ride 17 or 18 stone, that weight would be a bit rough on the saddle? Yes; you mean carrying a lot of swag.
3157. So that considering the weight at which one would have to ride at the front, you would not be surprised to learn that a good many of the trees opened out? I should be rather surprised to learn that a good many of the trees had opened out, but I know that sometimes they do open out.
3158. Even the best trees do that? They are all liable to spread a trifle, but you would not put a tree like that into the best make of saddle.
3159. I suppose you understand that for service purpose it is rather a serious thing if a saddle opens out? Yes; it would be liable to come down on the withers, and might bring on a fistula.
3160. And I suppose that when a horse gets damaged in that way it takes some time to get him well? Yes.
3161. Of course, the condition of the horse would have something to do with the matter? Yes. If it were a poor-conditioned horse, the withers would be more likely to get damaged without the tree opening at all.
3162. You see Exhibit No. 5, can you tell me what it is? It is a valise pad; it fixes on at the back of the saddle.
3163. Did you make any of these for the saddles you supplied? No; I do not remember any. We have made a few, I think, but they were all for private individuals.
3164. You do not claim to be the patentee of this valise pad? No.
3165. As a practical man, what do you think of the idea? It is copied from the Imperial troops; it is an Imperial pad.
3166. What Imperial troops did you see or hear of carrying that pad? I have seen these made in military saddles from Home. Instead of there being the two fangs out at the back of the saddle there is that pad. It is used here by bush people when they are carrying a valise behind them on the saddle.
3167. Where have you seen it used in the bush? I cannot recollect seeing it used at any particular place, but I know that we have made the pads for that purpose.
3168. Have you made many of them? I would not say many, but we have made them.
3169. I have seen a great many Imperial troops, and have lived for a great many years in the bush in different colonies, but this is the first time I have seen such an article? I could show you one which has been in our place for forty years.
3170. Apparently there is not much demand for them? There is not a great demand.
3171. Would you not think that if that pad were buckled on to the saddle at the back, and a weight were carried on it over rough country, it would be likely to injure the horse's back? It would flop, of course.
3172. It would not be very nice for the horse? Certainly not.
3173. You would not be surprised to hear that the Colonial troops threw them into the Orange River or the Modder River? I should not be at all surprised.
3174. You would not be surprised to hear either that they expressed regret that they could not throw after them the man who recommended that the troops should be supplied with them? I should not be surprised at that either. They are used in the bush occasionally, because some bushmen prefer to carry the weight at the back instead of on the front of the saddle.

- J. Brush. 3175. Will you look at Exhibit No. 6, and tell me what it is? I should call it a shoe-case. Those cases would be used, I suppose, to carry a spare shoe for a horse. The pattern, however, is different from that generally supplied; the case is generally much smaller. The one you show me seems unnecessarily large.
- 28 Aug., 1900. 3176. Will you tell me what you think of the material in that bridle (*Exhibit No. 7*)? It appears to have been wet, and it is difficult to say what it was like when it was new. There appears to be several kinds of leather in it. It is made of ordinary colonial leather with a slight difference in quality.
3177. What do you think of the bit;—should you not say that it was unnecessarily heavy? Yes.
3178. You see that it contains a lot of brass—that is not at all necessary, is it? It might be used for full dress parade; but it would be quite unnecessary, I should think, for active service. An ordinary bar-mouth pelham would be quite sufficient.
3179. Will you look at Exhibit No. 8, and tell me what they are? I should call them wallets.
3180. Did you supply any of those with your saddles? I do not think so.
3181. As a rule, they are carried only by officers? Yes; as far as I know.
3182. Will you look at the material and workmanship in the exhibit? We are accustomed always to see the very best work in our place. For an article of this kind I do not suppose you would require the very best material.
3183. Would you call it a good, strong, serviceable article, which would stand any amount of knocking about? Yes, I daresay it would do that.
3184. Will you look at Exhibit No. 9—a rifle-bucket—and tell me what you think of it? One of the straps is defective; the leather appears to have been cut from an inferior portion of the hide. When one is supplying hundreds of such things, however, one is not surprised to find some slight defect in any one bucket. Of course, you would not take the bucket you now exhibit as a sample.
3185. Will you look at Exhibit No. 10—a breast-plate? It is made of good, strong, colonial leather. Might I ask whether it is intended for use by the men or by officers?
3186. It is intended for use by the men? It would have been better to have the nuts at the back of the breast-plate under cover.
3187. Do you not think that a bright article of that description would be liable to attract attention, and offer a mark to a rifleman? We made some bridles for some private customers who were going to the front, and they objected to the nickel buckles that were put on, because they said they would attract attention, and we had to japan them a khaki colour.
3188. Those were necessary buckles? Yes.
3189. This metal plate does not add any extra quality to the martingale? It makes it more expensive, but it does not add to the quality.
3190. It is put there purely for ornament? Yes.
3191. And if, in active service, the sun were playing upon it, it might offer a mark for riflemen? Yes.
3192. Will you look at Exhibit No. 11, which is a new head-stall? Might I ask whether it is intended for the men or for officers?
3193. It is supposed to be for the men? It is not of bad quality. Of course, I do not know what was paid for it. Comparing it with what we call a stockman's bridle, it is very good.
3194. I do not wish to discover any trade secrets, but could you give us any idea of the value of it? I could not.
3195. The bridle is made of a fair material, and it contains fair workmanship? Yes.
3196. Will you look at Exhibit No. 12? It is a saddle-bag.
3197. What do you think of it? I should pass it.
3198. What description of leather is it made of? It looks like bag-leather.
3199. Will you look at Exhibit No. 13—a carbine-bucket? I should pass that as good saddlery.
3200. Will you also look at Exhibit No. 14—a lance bucket? I should also pass that.
3201. Will you look at Exhibit No. 15—a rifle-bucket; comparing it with Exhibit No. 9, would you say that it was of equal quality of workmanship? Yes; No. 9, of course, is an older article, and it is very difficult, therefore, to institute a comparison.
3202. You could not very well draw a comparison between them? No.
3203. Owing to the condition of No. 9—it having been in the water? Yes.
3204. Will you look at Exhibit No. 16—a bandolier with straps? It is a fair sample of work, and the material is good, but it is not what we should call first class.
3205. You consider Exhibit No. 4, the saddle, a fair stockman's saddle? Yes.
3206. Under fair conditions of wear how long do you think it would last, approximately? About three years, I should say; it depends, of course, in what weather it is used, and the care it receives. With ordinary wear and tear it would last about three years.
3207. You did not tender for the supply of saddles for the Second Contingent? No.
3208. Did the Military authorities approach you in regard to that matter? No.
3209. You are sure you did not supply any saddles for the Second Contingent which left on the 17th January? No; the first saddles we supplied were for the Citizens' Bushmen's Contingent.
3210. Previous to the despatch of that Contingent you were not asked to tender? No.
3211. The Military authorities did not ask you whether you would supply saddles? No.
3212. If they had come to you about the 20th December, could you have turned out a good few saddles of the type of Exhibit No. 4 between that date and, say, the 16th January? That would have given us pretty well a month. We might have been able to turn out 150—keeping our own business going at the same time.
3213. If you had received an order of that description at a fair price you would have made a special effort? Yes, having regard to the circumstances.
3214. You would have put forth every effort to execute the order? Yes.
3215. But you say you were not asked to supply any saddles? No.
3216. *Mr. Chanter.*] How many saddles did you supply to the Citizens' Bushmen's Contingent? About 100 or 150; I am not sure which. A number of private citizens bought saddles for that Contingent.
3217. Were the saddles you supplied made to any pattern? No; we made our own sample.
3218. Did you submit a sample to the Military authorities? No. In the case of the last Contingent I think we made a saddle, and sent it up as a sample. That would be for the Imperial Bushmen's Contingent. I know that they had a tree specially made for them, extra strong. In the case of the Citizens' Bushmen's Contingent, Mr. Carey and Mr. Atkinson visited my place of business and selected a pattern saddle.
- 3219.

3219. The saddles supplied by you to the committee were selected by them from your stock? Some were selected and some were made. J. Brush.  
23 Aug., 1900.
3220. Were those which you made made to a particular sample? They selected a sample.
3221. Did you see any other saddle purchased by the committee which was not made by you or selected from your establishment? No; we were too busy to look round.
3222. You spoke, in reply to the chairman, of the trees—which do you consider the stronger tree, the galvanized tree or the plain black-metal tree? I have always heard it said that the galvanizing of iron weakens it. There is this advantage, however, in the galvanized iron—it does not rust.
3223. If that opinion be correct, the galvanized tree would be the weaker of the two? I cannot say from my experience, but if the scientists are right that would be so. I know that the bush people like the galvanized tree because it does not rust.
3224. *Mr. Cook.*] I suppose the metal on the breast-plate, to which the chairman directed your attention, has no utility—it is there purely for ornamental purposes? Purely for ornamentation.
3225. Suppose there were no distinguishing mark, and that our troops were mixed with the Imperial troops, there would be some difficulty in the men of the different regiments identifying their different saddles, would there not? Yes, if there were no distinguishing mark.
3226. *Chairman.*] But, as a matter of fact, every saddle is branded with a number? Yes.
3227. *Mr. Cook.*] The metal-work cannot be placed upon the harness for the purpose of identification? No; it is very much like coffin furniture.
3228. *Chairman.*] You have seen the saddle Exhibit No. 4, and the attachments;—were those you supplied of the same quality? Those we sent in were better than that. We used a better class of leather; it was a better saddle all through. The D's were also put in much stronger. They were put in with hoop-iron bent and covered over with leather.
3229. But, apart from that, were the saddles of much the same quality as No. 4? They were a better class of saddle.

Thomas Henry Hall Goodwin, M.P., sworn and examined:—

3230. *Chairman.*] You are a Member of the Legislative Assembly for the electoral district of Gunnedah? Yes. T. H. H.  
Goodwin,  
M.P.  
23 Aug., 1900.
3231. You are also a lieutenant in the Australian Horse? Yes.
3232. You have had considerable experience of the back country of New South Wales? I have lived in it nearly the whole of my life.
3233. You are a surveyor? Yes.
3234. And in the exercise of your profession you have gone into the back districts of the Colony? Yes.
3235. While there you have of necessity been brought a good deal into contact with horses, saddlery, &c.? Yes. I may state that I began my career on a station. I spent some four or five years on a station before I took up the profession of surveying.
3236. But after you took to surveying you were necessarily brought into contact considerably with horses and saddles? Yes. I still retained my grazing property, and that necessitated my keeping in touch with my early calling. I am still the owner of a grazing property.
3237. Will you look at Exhibit No. 4;—is it a fair sample of a stockman's saddle? No.
3238. In what respect is it deficient? In general workmanship. I do not call it a good saddle by any means. I should like to say that I was called down early in January, and was kept here three weeks while the authorities were getting off one of the Contingents, and my only duty was to report on saddles. The saddles I reported upon were much inferior to that exhibited.
3239. Will you look at those D's? They are not fit to carry a carbine-bucket—still they are stronger than those in the saddles I previously inspected.
3240. They might be strong enough to carry a pannikin, but you would not dream of sending a saddle away with those things to carry all the military paraphernalia? I should be sorry to see saddles sent out with gear of that description to carry arms. In the case of this exhibit the D is supported by coming through the skirt. In the saddles I examined the D's had no such support. I tore a number of them off. The leather was so rotten that I could twist a number of the D's off without any effort. I did so, and handed them to Sir William Lyne.
3241. If there were much weight slung on to the D's as you see them in Exhibit No. 4 it would be liable to tear portion of the skirt away? Yes.
3242. If you were buying a saddle for your own use would you purchase a saddle similar to that? No; I always obtain the best saddle I can. First, with a view to the comfort of the rider, and secondly, for the sake of the horse's back. I pointed out to the Adjutant, who asked me to make a report, that if he mounted men on the saddles I inspected the backs of the horses would be ruined in three or four days.
3243. So that it is not a matter altogether of the actual cash price; you have also to consider the horse and the comfort of the man? Yes; and the man's safety. It is of no use to put a cavalry man on a saddle unless it is properly constructed, because his arms are attached to the saddle, and not to his person; and in the event of the saddle being defective it is quite possible that the man might be left in a dangerous position totally unprotected, having lost his arms through the D's coming out of the saddle, for example.
3244. Will you look at the tree in saddle No. 4? I do not know that there is anything objectionable in the tree. It is a moderately strong tree.
3245. Would that tree be strong enough if a man were riding up to 18 stone with all accoutrements? With regard to the tree itself, I should not like to express a definite opinion; I think, however, it is a fair tree. It is the work which is put on to the tree which I consider defective.
3246. Will you look at this saddle (*Exhibit No. 1*)? I do not think the D's in that saddle are the original D's; I think they have been put on. This is a much worse saddle than No. 4, owing to the flat nature of the tree. In my opinion, it would be almost impossible to put that on a horse's back without ruining the back.
3247. *Mr. Chanter.*] What weight would you calculate those trees would carry without spreading? The tree in No. 1 appears to have been spread before the saddle was put together. I think the tree itself would carry a fairly heavy man; but I do not think it was ever of much use. If it had spread, you would see some sign of it.
3248. *Chairman.*] You consider that the tree is far too flat, and, in your opinion, it would ruin any horse's back? Yes. 3249.

T. H. H.  
Goodwin,  
M.P.  
23 Aug., 1900.

3249. No matter how the stuffing was placed? It could never be made into a comfortable saddle to ride upon.
3250. And it would be always liable to seriously injure the horse? Yes.
3251. Will you look at Exhibit No. 3;—what is your opinion of that? The saddle never was a good one. My remarks as to Exhibit No. 1 apply to Exhibit No. 3; but I am sure that these D's have been altered since the saddle was delivered, both in the case of No. 1 and No. 3. The D's have been put on with iron and screws, and as you see them there they would carry any ordinary weight.
3252. Have you noticed the difference between the work of the trees in the gullet in No. 1 and No. 3? I notice that the tree in No. 1 is plated with galvanized iron, and that the other is plated with ordinary black iron.
3253. *Mr. Chanter.*] Which do you consider the better? I think that, with ordinary care, the black iron is good enough; but the galvanized iron, on the other hand, does not rust. If you look at No. 1 you will see how the iron is rusted on immersion—the iron is scaling off now.
3254. *Chairman.*] How do you suppose the iron came to be in that state? It is difficult to say. Sometimes a saddle is wet through a horse swimming a river, and then the iron will rust.
3255. Would you be surprised to know that that saddle had been in the waters of the harbour for some time? I thought it had been in water of some description.
3256. Without any immersion in water the iron would not rust if it were properly covered? No, not with ordinary care.
3257. What do you think of the panel of Exhibit No. 3? It is now in such a dilapidated state that I could not express an opinion as to what it would be like when new.
3258. Will you compare the panel of Exhibit No. 4 with the panel of Exhibit No. 1? The panel of No. 4 is undoubtedly the better of the two. The panel of Exhibit No. 1 somewhat resembles the panels that were on the saddles which I was asked to inspect. The small quantity of padding in the panels led me to point out to the Adjutant that the saddles could not be used without crippling the horses' backs. The padding in Exhibit No. 4 is much better.
3259. Will you look at the serge covering of the panel of Exhibit No. 1? I do not profess to be a judge of material. It is not the material I complain of so much as the general get-up, and want of padding in Exhibit No. 1. I could not offer an opinion upon the quality of the material.
3260. But the small amount of padding in Exhibit No. 1 would be your chief objection to it? Yes.
3261. I suppose that with a flat tree, such as you have seen to-day, and with such a small amount of padding, it would be impossible for the horse's back to escape? In my opinion, no matter how expert the rider might be, he must cripple the horse.
3262. Will you look at Exhibit No. 10—a martingale;—do you call that average colonial leather? It is a fairly good serviceable piece of work. When I made my inspection last January I found that the bridles were all made of exceptionally good colonial leather, and also the stirrup leathers, but the girths were discreditable. By some strange coincidence, however, every bridle I examined buckled on the off instead of on the near side. Take this pattern for example: If the man wanted to lengthen the bridle, he would have to go round to the offside to get at the buckle. It should have been on the other side. I examined much the same class of bridle; I consider it a good serviceable article.
3263. You are referring now to Exhibit No. 11? Yes.
3264. With regard to the ornament on the breast-plate of Exhibit No. 10, do you think it is advisable to send men to South Africa with harness fixed up in that way? No; it only adds unnecessarily to the work of the trooper.
3265. And with the bright sun shining on the ornament it might present a mark for a rifleman? It is just possible; but the breast-plate would be under the horse's neck, and the sun could not very well reach it.
3266. You see the nuts at the back of the breast-plate—would they not be likely to interfere with the horse? It is never worn tight upon the horse, and I do not think the nuts you speak of would be likely to chafe the animal unless the breast-plate were too tight or unless the man were riding in hilly country.
3267. You will notice that the edges of the nuts are pretty sharp? If it were found that they touched the horse the man could easily file the edges. I do not think there is much objection to the breast-plates on the score of the nuts.
3268. Is the ornament upon it of any use? Not so far as I know.
3269. It is purely an ornament? Yes.
3270. Have you observed that during the South African war the tendency has been to do away with all ornamentation, both on the uniforms of the men and the equipment of the horses, even down to the bright buttons on the tunics? Yes.
3271. Under those circumstances, is it not rather a mistake to send away a lot of these gay trappings which would not be of any use? So far as I can see, they would be of no use, and, as I say, the trooper would have more work in keeping them clean.
3272. Will you look at Exhibit No. 12—it is a saddle-bag—did you see any of them? No.
3273. What do you think of it? It is a good bag.
3274. You did not notice that any of the Second Contingent were supplied with them? No, I saw none of them.
3275. Will look also at Exhibit No. 15—a rifle-bucket—that is of fairly good quality? Yes.
3276. Will you look also at Exhibit No. 15—a carbine-bucket? I should also call that of good quality.
3277. And also the lance-bucket—Exhibit No. 14? That is also good?
3278. Here is a bandolier—Exhibit No. 16? That also appears to be a good article.
3279. Do you prefer a bandolier of that shape to a bandolier which comes across the shoulder? I should not care to express an opinion, because, although I am in the Australian Horse, I never had actual experience beyond a few days in camp.
3280. Will you look at Exhibit No. 6;—what do you call that? This, I presume, is for the carrying of horse-shoes, or something of that sort. It would be attached to the saddle.
3281. It would not make much difference whether it was of good quality or not? No. I think it is only adding weight to the trooper to put this on the horse—that is, if it is to be constantly carried.
3282. Will you look at Exhibit No. 5, and tell the Committee what it is? I do not know the technical name of it. I know that it is to go behind the saddle to carry any little swag.
3283. Do you think it rather a good idea? I have never carried one.

3284.

3284. Does it impress you as being a good idea? I presume the idea struck some one as helping to make the saddle as much like a military saddle as possible. It is attached to the crupper D at the back of the saddle.

T. H. H.  
Goodwin,  
M.P.

3285. You used an ordinary bush-saddle in the country; I suppose, it never struck you to get a supply of these? It did not. 23 Aug., 1900.

3286. How would it be likely to affect the horse, if the country was pretty rough? I think the swag would be likely to wallop about a good deal.

3287. Would it be liable to cause friction on the horse's back? Possibly if the weight were heavy.

3288. With reference to the girths, you say that you closely examined the webbing of the girths supplied to the Second Contingent? Yes; they were web girths.

3289. I suppose you examined them pretty closely? Yes.

3290. What opinion did you form in regard to them? They were absolutely valueless.

3291. You would not care about risking yourself on a flighty horse with one of those girths? Some of those girths were really so bad that there were not more than three or four stitches holding the buckle to the end of the web.

3292. And the webbing itself was narrow and of inferior quality? As a matter of fact, web girths are practically out of date for country use, owing to all webbing rotting so quickly.

3293. But whenever they are used in the country they are always of a broader and stronger pattern than those supplied to the Second Contingent? I have not seen web girths used in the country for some considerable time—for many years. When I speak of the country, I mean for station use. You might see them about towns, where the horses are not sweated very much, and are not liable to get wet.

3294. When you have seen them you have noticed that they were of a better quality than those supplied to the Second Contingent? The girths I inspected were of ordinary width, but they were of inferior quality. As a matter of fact, the girths were not of sufficiently good quality to be supplied to anyone.

3295. Did you make any representations in reference to the girths? Yes, to the Adjutant.

3296. Did they afterwards get leather girths? I cannot say; it happened just a day or two before the men embarked. I was asked to make the inspection, and to report. I was called in and examined by the Adjutant. I asked whether I should put a report in writing, but they said they were too hurried, and that they would have it verbally. The result was that the saddles were taken with the Contingent with the intention of remedying the defects in the course of the voyage.

3297. *Chairman.*] Did you know anything about the supply of forage to the troops? No; I saw none of the forage.

William Henry Simpson called in, sworn, and examined:—

3298. *Chairman.*] You are a master saddler? Yes.

3299. Carrying on business in Sydney? Yes, for the last forty years.

3300. Did you supply saddles to any of the Military Contingents which left for South Africa? No, except to a few of the men privately.

W. H.  
Simpson.

23 Aug., 1900.

3301. You did not supply any to the Government or the Citizens' Bushmen's Committee? No.

3302. From your experience in the trade, you ought to be a pretty fair authority on saddlery? I ought to be.

3303. Would you have a look at that saddle (*Exhibit No. 4*);—what class of saddle would you call it? I should say it was about a third-class saddle. I have seen worse, and I have seen a great deal better.

3304. It would be a sort of ordinary bush-saddle, would it not? An ordinary bush-saddle of, as I say, about a third quality.

3305. Do you think the tree is rather flat? The mistake in all our bush-saddles is that the tree is too curved or deep in the seat, and that is the reason why there are so many sore backs.

3306. That would be for ordinary bush wear? For military wear especially, because the rider carries such heavy equipment. The flatter and the longer the tree, the better for the horse's back. The English military saddle—which is the best saddle—is a very long saddle, and takes a larger bearing on a horse—what they call the panel saddle.

3307. Would you look at the gullet? The gullet is very strong; the webbing is good; but this kind of saddle, in my opinion, is altogether unsuitable for military work.

3308. Will you look at the D's;—do you think they are capable of supporting a carbine, a sword, a swag, and several other things? No, I do not think so; they consist of only a bit of ordinary bagging-leather. In my opinion, there should have been a small piece of iron or metal under the leather screwed on to the wood. The staples are poor and light. One of the best saddles for military purposes is the American military saddle—what is called the Whitman-McLelland saddle. The chief point is to have a saddle which takes a large bearing on the horse's back, so that the weight does not settle down in one place.

3309. The military saddle, standing up as it does, allows a free current of air, which is an advantage to the horse? Yes. The American saddle is cut in the middle; there is a piece right out from the very centre of the seat, which permits of ventilation.

3310. And that would assist to keep the horse's back cool? Yes; the saddle does not then touch him on the centre of the back—the backbone.

3311. Would you look at this saddle (*Exhibit 1*);—comparing it with *Exhibit 4*, which do you think is the better—or would they be pretty well equal? This saddle (*Exhibit 1*) is a very common thing. No. 4 is the better saddle, although it is only a third-quality saddle. This is an exceedingly common thing of the sort (*Exhibit 1*). The straps supporting the D's appear to have been placed there after the saddle was made, as the finish does not look like that of the saddle itself. The weight of this No. 1 saddle is something terrible.

3312. Do you think it would be a suitable saddle for military purposes? Utterly unsuitable.

3313. So that you would not be surprised to learn that these saddles were very quickly discarded by the Colonial troops? Not at all surprised.

3314. In fact, it is what you would expect? Yes. The weight of that saddle, with the panel in it, and the man on top of it with all his equipment, would be enough to ruin any horse's back in the world. With regard to the panels of the two saddles, I do not think there is much choice between them. There is the same common stuff in both—just ordinary cow-hair. The panel of No. 4 is, perhaps, a better article.

3315. It has a better finish? It is a better panel; there is no doubt about that.

3316. And in regard to the material with which they are covered? It is in both of a common quality, the only difference being the colour.

W. H.  
Simpson.  
23 Aug., 1900.

3317. Looking at the saddle, do you see that the fact of the leather straps that fasten the D's projecting over the trees, and the pressure of which is seen on the panel, shows that the saddle would be very injurious to a horse's back? Yes; it may have been done for strength, but I think the object would have been better attained by a couple of screws.
3318. It must have a tendency to injure a horse's back? Yes. You can see the pressure there has been on the panel.
3319. Will you look at this breast-plate (*Exhibit 17*)? There is nothing the matter with that, except that it is rather a coarse, rough thing; but it is strong enough.
3320. Will you also look at this saddle (*Exhibit 3*)? This has had hard work.
3321. The D's in that saddle are rather substantial, are they not? Yes; they are put on with screws; that is right. In other respects the saddle is of a very ordinary type. It has not been as bad a saddle as the last one we looked at. I cannot understand the webbing, which supports the seat between the saddle-trees, giving way as it appears to have done. That is a very bad sign, as it is a part of the saddle where most of the weight comes.
3322. Look at this saddle-tree (*Exhibit 2*);—would you call it a fair average tree for ordinary work? Yes, a fair average tree; neither the best nor the commonest—just about a middle quality of tree. It is rather a common quality, but it is a strong ordinary tree.
3323. What do you think of this head-stall and bit (*Exhibit 7*)? It is a strong serviceable thing—an ordinary thing. I think that would be suitable enough for the work.
3324. What do you think of the bit? The bit is the old-fashioned military bit—a terrible thing; the weight is awful.
3325. It ought to have been discarded half a century ago? Yes; our Australian horses do not want a bit like that.
3326. Only a plain pelham bit? The snaffle-bit is almost universally used in the Colony; I do not know whether it would be strong enough for military purposes.
3327. At any rate, this is an unnecessarily clumsy and heavy thing? It is.
3328. Will you look at this stirrup leather and iron (*Exhibit 18*);—what is the quality of the leather? A poor quality. Both the leather and the iron are about as common as you could get.
3329. This is a head-stall and bridle (*Exhibit 11*)? This is a good strong article.
3330. Fair material and fair workmanship? Yes; that is alright.
3331. What is your opinion of this breast-plate (*Exhibit 10*)? These are right enough.
3332. Fairly serviceable? Yes, I think so; they are of coarse leather, but they are strong serviceable goods.
3333. And this numnah (*Exhibit 19*)? I am not very strongly in favour of these things, but they are adopted under the military regulations, I think. After wear, owing to the sweat and use, they get very hard and very heavy.
3334. And rather inclined to be hot on the horse's back? There is no doubt about that; still for that sort of thing it is of fair quality.
3335. I suppose you would not be surprised to learn that the Imperial soldiers have practically discontinued the use of these? I would not be at all surprised; I do not think much of them myself.
3336. And they use instead just an ordinary blanket with the military saddle? Just so. This is a German material—German felt. It gets very hard with wear, and you cannot keep it soft.
3337. Personally you are not at all impressed with this? No; I do not think it is a good thing.
3338. And after experience the Imperial authorities do not appear to be particularly impressed with it either? No.
3339. Will you look at this rifle-bucket (*Exhibit 9*)? I think that it is alright.
3340. Comparing it with this new rifle-bucket (*Exhibit 15*), would you say they are of equal quality? Yes. The new one is of rather better leather and a little better finish, but still the old one is a strong serviceable article.
3341. What do you call that (*Exhibit 6*)? A pouch to carry a horseshoe in. It is alright for the sort of thing it is wanted for.
3342. Would you be surprised to learn that in actual warfare they do not carry this at all—that they have to carry enough without carrying spare horseshoes? Yes. I should think a few horseshoes might go in some of the waggons, without a man having to carry them about on his saddle all day long. Still they do carry them.
3343. Will you look at this holster wallet (*Exhibit 8*)? This is part of an officer's equipment. It is a very common thing of the sort.
3344. With regard to girths, of which we have no sample in the room, is the web girth generally fashionable for saddlery now? The bushmen generally use the leather girth, which is better, and much more durable.
3345. I suppose the web girth would be apt to get rotten with wet and sweat, and that sort of thing? Yes.
3346. And would not have the same life as a leather girth? No.

John James Weekes called in, sworn, and examined:—

J. J. Weekes.  
23 Aug., 1900.

3347. *Chairman.*] What are you? A manufacturing saddler, carrying on business in Sydney.
3348. In a fairly large way? Yes.
3349. I think you have a contract from the Military authorities for the supply of saddles? Yes.
3350. Your contract is for the ordinary military saddles that are supplied from time to time? The contract I have existing. There is a running contract yearly, which embraces chiefly the Police saddles—that is the ordinary stock saddle.
3351. Do you supply any of the saddles known as the military panel-saddles for the Military Forces? Yes; I am making some now, without panels.
3352. I mean the wooden tree only, without the stuffing? Yes; I have supplied some already.
3353. Do you make those yourself? Yes.
3354. What is the cost of what is known as the military saddle, with the wooden panel, and of the ordinary saddle which you would supply to the Police? The wooden-panel saddle complete, with all its fixings,

fixings, including girths, stirrup-leathers, breastplate, bridle, and complete outfit, less the carbine-bucket, or lance-bucket, costs somewhere about £6 10s., saddle-cloth and all complete. The saddle supplied to the Police is a special saddle, which is scheduled at £5, of course less discount. J. J. Weekes.  
23 Aug., 1900.

3355. Would that include the other equipments? No; it is a different class of saddle.

3356. If you were to add the other equipments, of course that would bring the cost up equal to that of the Military saddle? It would bring it up to more than the cost of the Military saddle.

3357. It would be more expensive than the wooden panel Military saddle? Yes—that is the saddle which they have; they have an all-over hogskin saddle.

3358. You supplied some saddles to some of the Military Contingents that went away? Yes.

3359. Can you state roughly how many you supplied altogether—that is to the Second Contingent and the two Bushmen's Contingents? I should say about 400 altogether.

3360. Have a look at that saddle (*Exhibit 4*); do you know whether it is your make or not? Yes, that is my saddle.

3361. What quality of saddle would you call it? It is what we call a medium quality stock saddle.

3362. You see that tree and gullet? Yes.

3363. How would that compare with the gullet on *Exhibit 1* for strength and durability? I think the one in No. 4 is better; I look upon that as a very good gullet. Personally I prefer this one (*Exhibit 4*), because the iron is much stouter. The cost is about the same.

3364. You see these staples,—are they pretty securely fixed in? Yes; they go right through the timber of the tree, and are clenched over the iron to either side.

3365. Would you have a look at those D's;—do you think they are of sufficient strength to carry, say, a soldier's equipment? These D's are not put in to carry a soldier's equipment, but are only the D's supplied in an ordinary stock saddle. The Military D's we supplied were much larger, and more securely fastened.

3366. So that you did not supply this to the Military authorities as a pattern saddle for either of the Contingents? The saddles supplied were in every sense of the word similar or better; but the D's were strengthened, as required, by a piece of galvanized iron going inside the leather, and being then covered with leather. The bulk of them were screwed on to the wood of the tree instead of being nailed. The Military authorities were very particular about having the D's securely fastened; they impressed that upon me particularly.

3367. Will you have a look at this saddle (*Exhibit 1*);—did you supply that? No.

3368. You see that the tree and gullet is practically of the same quality as that on the last saddle I showed you? Yes.

3369. Would you look at the D's as fixed on there; do you think they were fixed on before or after the saddle was finished? I could not tell that.

3370. Would it not be objectionable to have the leather projecting over the metal of the tree? Not in this case, because the wood of the tree only goes to a certain point, and you would only have the one nail.

3371. This is the panel of that saddle;—do you see the marks where the leathers have been crushing through? Yes, there are too many nails altogether.

3372. Would not that have a great tendency to damage a horse's back? I do not think so. The panel belonging to *Exhibit 1* is not sufficiently stuffed.

3373. But, with the panel as it is now, you see where the leathers that project over the metal of the tree have been cutting, practically, into the panel. If the weight were such that the leathers cut into the panel with only that small amount of stuffing in between, would not the tendency be to give the horse a sore back? I do not think so, if the panel were properly stuffed.

3374. But with that panel as it is? No; I do not think it would.

3375. If the panels were supplied as they are, and were never restuffed? I do not think they would give any horse a sore back.

3376. If you used the saddle without having it restuffed in the ordinary course after a fortnight's wear or so, would not this be liable in itself, without anything else, to give a horse a sore back? No; because the stuffing would come in level.

3377. Do you consider that this panel (*Exhibit 1*) is of as good quality as the panel I now produce—(*Exhibit 4*)? No. 4 is a better stuffed panel than the other—there is more stuffing in it.

3378. Is there any difference in the finish? I consider it is a better made panel.

3379. Would you mind trying the weight of saddle No. 1—does it seem rather heavy? It seems pretty heavy. I do not see much difference between it and saddle No. 4.

3380. Do you notice any difference in the material of the two saddles? Yes.

3381. In what does it consist? In saddle No. 1 the knee-pad and thigh-pad and the seat are made of bagging leather, while the material in saddle No. 4 is pigskin.

3382. Have you looked to see how the staples in *Exhibit 1* are fixed in? The staples are fixed in in the ordinary way.

3383. Do you observe the seat webbing? In some cases I have seen where the webbing has been purposely left a little slack on the inside while the outside was perfectly tight, but nothing resembling this.

3384. Will you have a look at the webbing in *Exhibit 3*—that does not seem to have been cut? No. Where has the saddle been?

3385. I believe it was in Port Jackson. Is this one of your saddles; would you recognize it? Yes; it is mine.

3386. The tree is identically the same as that in saddle *Exhibit 4*? Yes.

3387. And the D's on which the equipment is hung are screwed into the timber, and therefore are very strong? Yes.

3388. Does this saddle differ in any way from the new saddle (*Exhibit 4*)? The new saddle has a skirt all round, while this one has a short skirt.

3389. Are the knee-pads and thigh-pads similar to those on *Exhibit 4*? Yes. The knee and thigh pads are bagging leather, and the seat is of hogskin. The staples are fixed in the same way as the staples in *Exhibit 4*.

3390. Do you think these are suitable staples for Military purposes—that is, if you have to ride at 18 stone? They are used considerably here, and a number of stockmen would carry that weight. Sometimes a stockman will carry a saddle-bag right across the saddle, and sometimes the total weight would be as much as I have mentioned.

3391.

- J. J. Weekes. 3391. But the average weight of a stockman in pursuit of his ordinary avocation would be from 10 to 12 stone? Yes.
- 23 Aug., 1900. 3392. And the weight of a mounted rifleman, with all the paraphernalia attached, would be what? With the bridle, carbine, breastplate, &c., the saddle would carry about 3 stone.
3393. In addition to that, have you weighed the piece of soap and the towels, and the spare pair of pants, the pair of drawers, the pair of socks, the shirt, the cavalry overcoat, the blanket, and a few little odds-and-ends like that, which a man on actual service must carry with him? What I saw weighed was everything for active service. There was a tent-peg, the ropes, and everything attached. The saddle, bridle, and the attachment for active service weighed 70 lb.
3394. But that would not include the things I mentioned? I presume it would. Everything was packed in the valise and in the wallets in the front.
3395. Where did you see that? I saw Mr. Thompson, of the Australian Horse, weigh a saddle on one occasion with the full equipment.
3396. Are you aware that an officer going on active service always has a servant to carry his kit? This was a trooper's saddle, as mounted.
3397. Did you notice how many brushes there were in that equipment? No; I did not; I did not see the equipment open; it was simply the saddle, all fixed up.
3398. You could not say whether there were ten or twenty brushes? No.
3399. Would you be prepared to contradict the statement that at the front, in actual warfare, it is considered that the men ride on an average, 18 stone? I would not attempt to go into matters of that kind; I have no idea of the weight they would carry.
3400. So that a saddle that might be suitable for carrying a 10 or 12 stone man would not be so suitable for carrying 18 stone? No; I do not think so.
3401. How many saddles did you supply altogether? About 400 to the different Contingents.
3402. You had no complaints from any of the Military authorities in regard to the quality of the saddles you supply? No.
3403. I suppose, when you first got an order for this class of saddle, the Military authorities selected a pattern of which they approved? Yes.
3404. And the saddles you turned out you are confident were equal to the pattern that was selected by the Military authorities? Yes; some of the saddles were better, unfortunately for me. I had to supply better material to be able to get them finished in the time. Saddles of better quality, which we had in stock, we had to supply to make up the quantity.
3405. Do you think that saddle-tree is too flat? No; I do not.
3406. What is the best form of saddle-tree to carry weight, that is, the best for the horse? The longer the bearing, naturally, the better able is the horse to carry the weight.
3407. Do you think there is any difference in the pattern of those two trees (*Exhibits 1 and 3*)? No. 1 is slightly cast in the centre, more than the other. In my opinion, the tree of No. 1, being slightly cast in the centre, might have a tendency to make the saddle rock up and down.
3408. You know that Military saddles with wooden panels stand up a considerable distance from the back of the horse—some 3 or 4 inches? Yes.
3409. In a saddle like this (*Exhibit 3*) when the horse was not in too good condition and when the saddle had worn down and become consolidated—would the tendency be for that to go through on the horse's wither? Naturally it would if the horse got very thin, and if the panel were not stuffed. Hence the reason for restuffing after the saddle has been worn awhile.
3410. But I suppose you would understand that at the front there would be very little opportunity for restuffing saddles? An ordinary saddle should have sufficient stuffing to last, not through a campaign, but for two or three weeks. In fact some saddles have kept for a lifetime without being restuffed.
3411. But they generally repack them after a fortnight or three weeks' wear. They stuff saddles too much, in my opinion.
3412. Do you see that saddle-tree (*Exhibit 2*);—would you call that just a fair serviceable tree? That is a good serviceable tree.
3413. Apart from saddles, do you make the rest of the saddlery for the Military Forces? No.
3414. Would this headstall (*Exhibit 7*) be of your manufacture? No.
3415. Just look at the leather, and tell me what you think of it? It is very fair leather. A good average colonial leather.
3416. And the make and finish? Fair.
3417. What do you think of this as a bit? It is a military-pattern bit.
3418. Would you be surprised to learn that that was discarded by the Imperial Army nearly a quarter of a century ago? Yes, I would; it is shown in the present diagrams.
3419. You mean the diagrams you get from some English firms? Yes.
3420. Did it never occur to you that probably those English firms, having a large stock on hand and not being able any longer to supply them to the Military authorities of Great Britain, would be anxious to show them in the diagrams, and get clear of them in Sydney, Melbourne, or Canada, or anywhere else? They are Military diagrams, to which I refer—diagrams of Military outfits. I have diagrams of the outfit of every branch of the service—officers' outfits and troopers' outfits—and they show the same bit. Personally, however, I am against it myself. The ordinary Pelham bit is before it, in my opinion, and is much lighter in weight.
3421. How heavy would you consider this bit to be? I should say from 2½ to 3 lb.
3422. All this brass on the side is altogether unnecessary? Not wanted at all. This must be an old store bit. It was never issued by any contractor in Sydney, I should think. These old bits have been in store for some time, no doubt.
3423. You being an expert saddler having had experience in the handling of bits, you would never dream of recommending a bit such as that for any purpose? No, I would not, personally.
3424. You cannot see any advantage to be gained by handling a bit of that weight and make? None whatever.
3425. But you consider the leather of a fair average Colonial quality, and the make fair? Yes.
3426. Will you look at this stirrup-iron and leather (*Exhibit 18*);—do you know whether you supplied that or not? No, I did not.
3427. What do you think of the quality? That, I should say, was a fair thing, but it is in such a state that you can hardly tell its quality.

J. J. Weekes.

23 Aug., 1900.

3428. What part of the hide would you think that leather came off? I could not say.
3429. I suppose you will admit that it came from nearer the belly than the back? No, I would not. You could not get that length near the belly. There is, no doubt, a wonderful difference in the leather according to the part of the beast from which it comes. There is a lightness in one part of this leather, but it is difficult to get an even thickness right through. It is not a stout leather, but I think the quality is fair.
3430. Would you reckon that that is a fair stirrup-leather to supply to a force going away on active service? Yes.
3431. I suppose you know that a man's life very often depends on his stirrup-leathers being sound and good? Yes.
3432. That the weight occasionally thrown upon them in military service is very great? Yes.
3433. And yet you think this is of sufficient quality to stand a campaign? I think so. Where the actual wear is the leather is of sufficient thickness, though there may be some slight deficiency in the other parts.
3434. Is not that a very narrow leather strap? It is a bare inch and a quarter—slightly under the average. This would appear to be on account of the size of the buckle.
3435. Do you think the stirrup-iron is of sufficient strength to stand military work? Yes; it is plenty stout enough.
3436. How would you compare it with the bit? I cannot compare them; the bit I always considered as of too much weight for a horse's head.
3437. Is not that stirrup-iron rather a light-made iron? No, a fair weight.
3438. You consider that that stirrup leather and iron is a sufficiently strong article for the purpose of military work? Yes.
3439. And if the whole of the Imperial leathers and irons are much stronger, then the Imperial horses carry additional weight for no good purpose? I do not think there is any benefit derived from it.
3440. Would you be prepared to put your opinion forward against that of old military authorities. Take a cavalry officer, who has been at the game practically from his boyhood. If he declared that it is necessary to have both a heavier iron and a wider leather and of better quality than this, would you be prepared to put your opinion against his in regard to practical work? Of course, I would naturally say that if you could get a better leather it would be just as well to get it. Personally, I am a believer in a very heavy stirrup, which again would tell in the matter of weight, looking at it from the military standpoint. If a man is thrown from his horse, he can catch a heavy stirrup much quicker. For ordinary stockman's work this is an ordinary stockman's leather.
3441. Do you think a stockman would require the same strength and quality of leather as a cavalry man—or, say a lancer charging with lance in hand, throwing his whole weight and force on the stirrup-leathers;—would you require as substantial a stirrup-leather for stockman's work as you would for work of that sort? No doubt a lancer would have greater weight on his stirrup-leather than a stockman, but I believe a stockman's leather would be strong enough for the requirements of a lancer's work—that is, good ordinary leather.
3442. And, of course, it would be more than strong enough for the stockman? That may be.
3443. Still you keep supplying them of about this quality? Yes.
3444. Have a look at that (*Exhibit 17*)—is that some of your make? No.
3445. What do you think of it? I think it is very fair.
3446. Both as regards the quality of the leather and the workmanship? Yes.
3447. How would you compare it with this (*Exhibit 10*)? The quality of the leather is much about the same.
3448. And about the same workmanship? Yes, I think you might put it down at about the same. The new one is, perhaps, a little better finished in some places.
3449. But as regards durability, you would imagine that one would be equal to the other? Yes.
3450. Did you ever make any of these—(*Exhibit No. 13*)? No, not of this pattern.
3451. Did you make any carbine-buckets at all for any of the Contingents that went away? No.
3452. Did you make any rifle-buckets? No.
3453. What do you think of that carbine-bucket? It is very well made.
3454. Of good quality? Yes.
3455. You could not tell from looking at it who the maker was? No.
3456. Would you be surprised to learn that that was made by day-labour in the Paddington Barracks? No; I would not be surprised at all.
3457. You think the finish and workmanship of it are very good? Very good; you could not improve on it.
3458. There would not be much need to improve on it? No, there would not.
3459. Did you make any of these (*saddle-bag, Exhibit 12*)? No.
3460. Do you consider the material and workmanship of that article to be good, fair, or bad? Very fair.
3461. Both workmanship and material? Yes.
3462. Did you ever see anything like that before? No.
3463. Do you ever go to the Randwick Races? No, not for the last ten or twelve years.
3464. Did you supply any of these (*Exhibit No. 8*) to any of the officers? Yes, I made some of those—that is a long time ago—not for any of the Contingents.
3465. Could you say whether this is your make or not? No, it is not mine.
3466. What do you think of it, both as regards quality of material and workmanship? It is fair.
3467. Nothing to get startled over? No; it is fair.
3468. Did you supply any girths with your saddlery to the Contingents? Yes, all girths.
3469. What sort of girths did you supply? I think, in the first instance, I supplied web girths, and afterwards a number of leather girths. I think the latter were sent back and the web girths taken.
3470. Would you be sure it was not exactly the other way—that you first supplied web girths, which were either returned or condemned, and that leather girths were then requisitioned for? No. I first made a supply of leather girths; they were not issued. I then made inquiries as to what leather girths they were going to have, and they decided to have woollen. I had about 150 girths in stock, and they were not taken. I supplied woollen girths in the first lot. Then I think they got some sort of leather girths made in

- J. J. Weekes** in place of the web girths. I suggested leather girths, and what was the cause of the web girths being supplied I do not know.
- 23 Aug., 1900.** 3471. When you submitted a sort of sample or pattern saddle, and gave a price as to how many you had and what price you could make them for, I suppose you submitted girth and all? No; only the bare saddle. I submitted a sample of what I had most of in stock.
3472. Therefore, in regard to the girths you supplied, there was really no pattern and no examination of them? No. The girths were a secondary consideration; the saddles were the chief trouble. But I made leather girths, thinking they would take leather girths, and when I came to inquire, they decided to have web girths.
3473. Is the web girth going out of date, do you think? Yes, most assuredly.
3474. And leather is being generally adopted? Yes.
3475. I suppose one reason for that is that webbing will rot quicker from the wet and the sweat of the horse? Yes. The tendency is in favour of leather girths. The saddle I am making now for the Government has a folded back leather girth.
3476. Are those saddles for the Police? I do not know what purpose they are for.
3477. By whom are they ordered? The Military authorities.
3478. Did they give you an order for police saddles? No.
3479. That order would come from the Inspector-General of Police? From the Stores.
3480. So that you are making saddles now for the Military authorities, and you are supplying them with folded back leather girths? Yes.
3481. What is the pattern of the saddle you are making? The wooden tree that you speak of—the long wooden panel.
3482. Practically, a military saddle? It is a military saddle.
3483. Here are two pieces of fabric from panels No. 1 and No. 4, one being white, and the other fawn colour;—which do you think is the better quality, or is there any difference? I cannot see any difference, except in colour. The fawn would be the more expensive of the two.
3484. Still, that would be a very small matter in the making of a saddle? A mere bagatelle; it would only mean a penny or penny-halfpenny a saddle.
3485. Have you a contract to supply the Military authorities with anything else besides saddlery? There is a general contract that embraces a number of things in the general saddlery line; such as sponges, whips, curry-combs, mane-combs, and things of that kind. The contract also includes letter-carriers' bags in connection with the Post Office.
3486. That contract would be with the Postal Department? Yes.

TUESDAY, 28 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. HURLEY,

MR. MEAGHER,  
MR. WILKS.

RICHARD SLEATH, Esq., IN THE CHAIR.

William Holmes called in, sworn, and examined:—

- W. Holmes.** 3487. *Chairman.*] You are Major in the First Infantry Regiment, Partially-paid? Yes.
- 28 Aug., 1900.** 3488. You left with the First Contingent for South Africa? Yes; on board the "Aberdeen," on the 3rd November.
3489. Though holding the rank of Captain here, you sank that rank and went as Lieutenant, did you not? Yes.
3490. After being in South Africa for some time your regiment was converted into Mounted Infantry? Yes; after we had been in South Africa for about five weeks we were sent to Nauerpoort, and there turned into Mounted Rifles.
3491. And you first joined the Second Contingent at Bloemfontein? I did not meet the Second Contingent until we arrived at Kroonstad, about the 12th May.
3492. They must have just come in to Bloemfontein when you went out? My squadron was sent out from Bloemfontein about the 27th April, and they came in about the 29th April.
3493. Therefore, you would not have had much opportunity of knowing anything about the saddlery and general equipment of the Second Contingent when it left here? No; I had no opportunity. When I met them at Kroonstad, some had the Imperial Cavalry pattern of saddle, and others had the American Army saddle.
3494. They had really been re-equipped? Yes; I do not think that they then had one single saddle which was taken from Australia.
3495. Did your men, when leaving here, wear the Field Service hats or helmets? They wore hats throughout.
3496. Do you think the hat is more serviceable for active service than the helmet;—which do you prefer? I much prefer the hat. We wore the hats until we got to Nauerpoort, just about five or six weeks after our arrival in the country, and there we were told that we were not to be allowed to wear the hats any longer, as there was danger of our being fired upon by our own men, and that the hats were to be discarded altogether; therefore, the whole squadron were refitted with the Imperial pattern helmet.
3497. Did it ever occur in your experience that sometimes, even when wearing a helmet, one party of the British would fire upon another party? I never had personal experience of that.
3498. But I suppose you have heard? I have heard that such a thing was done, but it never came within my personal knowledge; but what struck me as peculiar was that the corps afterwards arriving in the country from England should have these very hats which were taken from us at Nauerpoort—the same pattern of hats. For instance, the City Imperial Volunteers and the West Ridings Regiment of Mounted Infantry all wore the same pattern of hats. What struck us as peculiar was that they should take those hats from us, and afterwards allow their troops to wear the same pattern.
3499. These troops were really fitted out after they took your hats? Yes.
3500. You are not an expert in helmets? No.
3501. Still, as a man of common sense, you have a little knowledge of them? Yes.

3502.

3502. Just have a look at that helmet [*sample gossamer helmet produced by Major Boam*];—look how the strands are put together? I should not care to wear it myself on active service. It is certainly nothing like the helmet which we had supplied to us. We had a pith helmet, covered with khaki cloth—certainly very different from this. W. Holmes. 28 Aug., 1900.
3503. You can see that that material is very open, and is not even filled with shellac, so that the chances are it would not stand rough usage? Yes.
3504. Would you be surprised to find that this helmet [*one of the returned helmets produced by Mr. Sleath*] is one of those helmets, after about two months' wear? It is a peculiar looking headgear altogether.
3505. You could not say that a helmet in that condition would be ornamental? Nor useful, I should think.
3506. And would you be also surprised to find that that is one of the same helmets [*the other returned helmet produced by Mr. Sleath*]? I saw a good many of these helmets out there, while the men were wearing them; but I certainly saw none in this condition.
3507. Did you see any as bad as that [*the better of the two helmets produced by Mr. Sleath*]? Certainly not. I saw them broken, but I certainly never saw any in use as bad as either of these.
3508. Would you be surprised to learn that I got these from the Second Contingent when they came in from Karri, in the presence of Captain Hilliard, and Lieutenants Newman and Legge and others? No; I would not be surprised. That would be just after I left Bloemfontein, about the end of April. They had not come in before I left, so I did not see them then. I had a small proportion of the Second Contingent with me when we went out to Thaba'nchu. I had about forty of those men with me, and some of them wore these helmets. But certainly none of them were in such a bad condition as either of these.
3509. Look at the better of the two returned helmets;—is there anything in the material to strengthen or support it? Certainly it looks very bad.
3510. There was nothing to prevent it from collapsing? It does not seem to have any body in it at all.
3511. This is a sample of material for a gossamer? It seems different from the material in the other two helmets.
3512. But you can see that the pores of the material in the sample pattern I have shown you are all filled with shellac? Yes.
3513. Did you see any other troops wearing a helmet of the quality of this gossamer pattern? No; none but our own.
3514. Will you look at this helmet [*sample cork helmet*]? This is a solid cork helmet. I think our men wear these here now.
3515. You can see that you can twist it about, and it is as good as ever? Yes.
3516. You have had sufficient experience to be able to say which of these two helmets would be the more serviceable, and wear the longer? Certainly this one [*sample cork helmet*].
3517. If anyone contracted to supply you with cork helmets, and, without the knowledge of the Military authorities, substituted gossamer helmets of this quality, you would think that they would not be acting too well? I certainly do not think there is any comparison between the quality of the two helmets.
3518. Will you have a look at this helmet [*felt helmet supplied to Citizens' Bushmen's Contingent*]? That looks like a felt helmet.
3519. Have you had any experience of felt helmets? No; I have not.
3520. You never saw any of these on active service? I saw some of our own men—I saw two or three of the Bushmen—wearing them; but I have not seen them anywhere else.
3521. You know that, as a matter of fact, felt helmets have been practically discarded for twenty-five years? I have been wearing a helmet myself for over twenty years, and I have never worn a felt one.
3522. You have never seen a felt helmet used for military purposes? Either a pith or a cork helmet is usually worn.
3523. How did those helmets seem to stand when they were worn by the Bushmen? Well, in shape they seemed all right. I never examined them closely. They seemed to stand better than the gossamer helmets.
3524. The crown had not fallen in? No; they seemed to have kept their shape better.
3525. This is another gossamer helmet [*Second Contingent helmet sent back from the front*]? This is somewhat similar to the sample gossamer helmet.
3526. What condition would you consider that helmet to be in now—I mean without the cut, but with the crown knocked in as it is? I do not look upon it as a serviceable helmet for active service.
3527. How long would you think, from looking at it, that it had really been in wear? The quality being that of the gossamer helmet you showed me first, I should not think it would last any time. I should not be surprised at this one giving way very early in the campaign.
3528. You would not be surprised to learn that it was only on service for about a month? No; having examined the quality of it, I would not be surprised.
3529. And would you be surprised to learn that that helmet is brought here as a vindication of the good quality of the article supplied? I would be surprised.
3530. Did you see any of these helmets out there [*pith helmets*]? Yes; this is something similar to the helmet I wore myself.
3531. Are they pretty serviceable? Yes; I brought my own back with me, and it is now pretty well as good as when I got it.
3532. They would stand a good deal of wear and knocking about? Yes; I wore mine for about nine months, and often slept in it.
3533. Did you feel that the helmet was too heavy? No; I never noticed that the helmet was too heavy; but I noticed that when we took to the helmets we got very much sunburnt. When we had the hats we were at Enslin, where there was absolutely no shade. We were there for five weeks, and there was not a tree within miles of us. The sun did not touch our faces at all while we wore the hats; but directly we took to the pith helmets the skin of our ears and faces peeled off; but I never felt any inconvenience as far as the weight of the helmet was concerned.
3534. You felt it rather a comfortable helmet? Yes; it is a comfortable helmet. Those we had were good helmets, because we could sleep in them, and they did not break.
3535. You would not like to sleep in one of these gossamer helmets, I suppose? No; I would not like to wear them at all.

- W. Holmes. 3536. Did you see any of the saddles? I saw some at Bloemfontein after they had been discarded.
- 28 Aug., 1900. 3537. In what condition did the saddlery seem to be that you saw discarded? I was at the Ordnance store for a couple of days, getting equipment for my own men, and some saddles were lying in a heap. They were pointed out to me as being the saddles of the Second Contingent. I did not examine them closely; but they did not seem to me to be saddles that would carry the weight that a military saddle is required to carry.
3538. Not at all suitable for the work? No; I do not think they were. They seemed to me like a hurriedly-made saddle; but I did not examine them closely. I saw them in a heap together, and I was told that was what they were.
3539. Did the saddles with which you were supplied when you were mounted last you right through? Yes, right through; they were beautiful saddles. We were mounted on the Indian cavalry remounts. The cavalry chargers were sent out from India, and all their saddles and fittings and gear were sent out with them, so that we had the saddles belonging to the horse, and numbered to agree with the number of the horses. That was the Indian pattern cavalry saddle. The result was that when I met the Second Contingent they complained of a good many sore backs, while I had hardly a sore back in my squadron. I heard that they had a great many sore backs until they got rid of that class of saddle. I had more men fit and more horses fit after having done three or four months longer active service—a fact which I attributed to the better class of saddle. The saddle had been fitted to the horse's back, and everything was in our favour.
3540. As a matter of fact, in the military service, do they not make a point of fitting the saddle to the horse? Yes; the saddle is always fitted to the horse.
3541. You had nothing to do with rigging out the mounted men here? Nothing at all; we went away as infantry.
3542. Could you tell the Committee what was the impression in your mind when you left here in regard to pay? My impression in regard to pay was that the Colonial Government would pay us 19s. a day.
3543. That was as Lieutenant? Yes. I am speaking now of my own case.
3544. Did you understand that the Imperial authorities were going to pay you Imperial pay, and that the New South Wales Government were going to deduct it here? No; I knew nothing about any deduction. Nothing was ever said about that. When we went away we were told that we were to be paid 19s. a day by the Colonial Government. I was asked how I wished it to be paid, and I said 10s. to my wife here and 9s. to me in South Africa.
3545. And did you get that payment? No; I never had anything from this Government in South Africa. I was paid, I think, 7s. 8d. per day by the Imperial Government, and my military matters have not been gone into here yet.
3546. As a matter of fact, there was no possibility of drawing any money from this Government in South Africa, was there;—was there any money available? No, I think not. So far as I know nothing was transmitted from this Government. I suppose arrangements could have been made; but we were always on the march from one place to another, and it was very difficult, indeed, to get any money at all for anybody.
3547. I suppose out there you felt that a little money was very serviceable? Yes, when we came to towns. For instance, when we left Bloemfontein I was told we were going out for two days. We were to go very light, and take just what was absolutely necessary. My valise and all my kit I left behind at Bloemfontein, and I have never seen them since. I went away without even a change of shirt. So that when we came to towns like Lindley and Heilbron, I wanted money to buy some clothes.
3548. And sometimes, I suppose, in shifting about you did not have an over-supply of food? No; very much the other way.
3549. If you wanted to get any food at the towns, you had to pay excessive prices? Yes; we had to pay very heavily for it.
3550. Owing, of course, to the difficulty in getting it up? Just so. Our trouble was that the Boers had been through the town before us and taken most of what was there, and the prices were raised on what was left.
3551. After, perhaps, doing a week or a fortnight on very light rations, when you came to a town, I suppose, you wanted if possible to lay in a little stock? Yes; that is what we did wherever we could. If we came to a town like Lindley or Heilbron we would buy what we could in the way of tinned stuffs and carry it along on a spare horse or in a Cape cart.
3552. I suppose, as a matter of fact, all your Imperial pay went in getting absolute necessities? Yes; more than my Imperial pay. I took some money over with me, as I did not know what difficulty there might be in getting money over there, and it was all spent.
3553. So that if you had been a permanent officer here you would have been much better financially at home in time of peace with your ordinary staff pay than you would have been in South Africa with your Imperial pay added? Yes. In fact, as it happens now, my pay as Secretary of the Water and Sewerage Board was stopped by the Government, although I had been granted six months' leave of absence by the Board on account of my twenty-two years' continuous public service, during which time I had not received any leave. After a few months they stopped paying my salary altogether, and all my wife had to keep my house and children together while I was in South Africa was 10s. a day military pay; so that it has been a great loss to me financially.
3554. In addition to the hardships and risks that one naturally runs in a campaign, you have been at a heavy financial loss? Yes; a heavy financial loss. The Government paid my salary for a few months, and then, I understand, some direction was given that the money could not be drawn by me in two capacities, although I had got my six months' leave on account of my twenty-two years' service under the Government. They not only stopped that, but they notified my wife that they would bill me for a refund of what I had had. So, altogether, I have been at a financial loss.
3555. Do you know anything about the pay of any of the irregular forces raised in South Africa? No.
3556. In regard to the men, I suppose you would think that a few shillings would be very useful to them also? Yes. The men were very glad when we could get them £1 occasionally.
3557. Would you be surprised to learn that the irregular forces raised in South Africa received from 6s. to 10s. a day? Yes; I had no idea they were getting that much.
3558. Would you be surprised to hear that the Yeomanry Scouts got 8s.; Loch's Horse, 8s.; Brabant's Horse, 7s. 6d.; and the Montmorency Scouts, 8s.? Yes; I am surprised to hear that, because if they got that they were very much better off than our fellows.
- 3559.

3559. Are you aware that the men of the Contingent, consisting of a Naval Brigade, sent to China recently, received from this Government 7s. 6d. per day? I was not aware of that. That was before I came back. W. Holmes.  
28 Aug., 1900.

3560. Take an ordinary labourer or mechanic working here, if he volunteered for service in South Africa, even if he received 4s. 6d. a day from this Government and 1s. 2d. Imperial pay, do you think he would make a good thing out of it financially? No. I understand a labourer's pay is about 7s. a day, and under those circumstances he would not, because there are a lot of expenses which he has to incur. If he is a married man he has to keep his family here, and has to spend money also at the other end.

3561. As a matter of fact, all the men would be at a heavy financial loss? Certainly; a man who had a family and had to keep a house together would. I do not know about single men.

3562. They would be at a financial loss, though they would be better able to bear it? Yes.

3563. *Mr. Wilks.*] Was the stoppage of pay generally complained of by the officers? I have not heard any general complaint; but I do not know of any other officers who were situated in the same way as myself. None of the others had the service I had. I had twenty-two years' service under the Government, and in consequence of that the Water and Sewerage Board granted me six months' leave on full pay, the same as any other civil servant would get under similar circumstances. There were others who had gone out to South Africa and whose pay had ceased; but then they had not the service that I had. Under the Civil Service Act, after twenty years' service an officer is entitled to six months' leave on full pay.

3564. What I mean is, did the officers during the campaign complain about the Government not continuing the pay, as they understood would have been done—I mean the balance of pay from here? I have not heard of any complaints, because most of the officers are under the impression that it will be settled here when they come back. They have been getting something to carry on with from the Imperial Government—the Imperial rates of pay.

3565. Was that sufficient for them to carry on with—to obtain the necessities you spoke of? Yes.

3566. They were not placed at any inconvenience? No; I have not heard any complaint.

3567. In answer to the Chairman, you said that you were placed at an inconvenience? It was in this way: I went out from Bloemfontein, and had to leave my kit and valise, with all my things, behind me, and I have never seen them since, and probably never will. I had, of course, to renew my kit.

3568. Then yours was an exceptional case? Mr. Dove and Mr. Harriott, who were with me, were similarly situated. I only speak of these three cases because I know of them. There might be others similarly situated of whom I do not know.

3569. It is reasonable to believe there are many other officers similarly situated, who had to leave their kits behind them? Yes, there may be others.

3570. But it was not a matter of general discussion either amongst the officers themselves or amongst Imperial officers—the neglect of the Colonial authorities? No.

3571. There was no comment made upon it at all? No; I never heard of any comment of the kind.

3572. With regard to the men, how did they take this matter—were they placed under strong disadvantages by reason of it? No doubt they were. To some of the men I had to advance money myself out of my own pocket, because they had run out and could not get any money.

3573. Then I understand that they felt the inconvenience so much that they had to report it officially to you? They said they would like a little money, and I said, "We cannot get any money for you now; there is no way of getting it from the paymaster; I will let you have a little out of my own pocket."

3574. From your experience as an officer and administrator, do you think it was wise of the authorities to make this innovation or stoppage of pay? As far as the Second Contingent is concerned, I do not know what was done. As regards the First Contingent, I think most of them understood that they were going to get this pay in addition to what they might receive over there.

3575. Then it must have come as a thunderclap to find that it was deducted? As a matter of fact, they did not know.

3576. There is a glorious uncertainty amongst the officers as to what is being done? There is uncertainty whether they are going to receive the money which was arranged for here in addition to the Imperial pay. Some papers were received out there from which it appeared that on one occasion a question was asked in Parliament here as to whether the pay was to be given. There seemed to be some uncertainty as to whether or not it was to be deducted, and the matter has been left until the troops come back.

3577. Then, financially speaking, the campaign has been a dead failure personally? Yes.

3578. And there are other officers similarly situated to yourself? Yes. Officers went out there who had good positions here—professional men and others who had good incomes, and some of them good positions under the Government—and if the Imperial pay be deducted, they will, of course, be at a loss.

3579. The credit will be glory, and the debit will be financial loss? Yes.

3580. *Mr. Meagher.*] On arriving in South Africa, were you under the command of a Victorian officer? Soon after we arrived we were. When we arrived in South Africa we reported at the Castle, and we were directed to proceed by train to the Modder River and report to Colonel Hoad, the Victorian officer. When we reached Enslin we found that Colonel Hoad was there, and had with him the Victorians, South Australians, Tasmanians, and West Australians as one regiment, and we, I understood, were to form one company of that regiment.

3581. Colonel Hoad was directly in command, so to speak? Yes, he was in command of the whole as a consolidated regiment. Those five corps were formed into one regiment, called the Australian Regiment.

3582. Between Colonel Hoad and yourself there would be some superior officer? Yes; there was a major, second in command—the late Major Eddy, a Victorian officer. Then, of course, came the captain of my company. The Victorian element was very strong.

3583. Can you say from memory whether some of the Victorian officers to whom you were subordinate in Australia held a lower rank than some of the New South Wales men held who were under them—held a lower rank in Australia? Yes. I went from here as a subaltern, and when we arrived at Enslin Colonel Hoad decided that my seniority should date from the day I reverted to the rank of lieutenant—that was in October—although I had been a captain since 1893, and a subaltern since 1886. He directed that the date of my commission should be the 25th October, the day I was gazetted to the Contingent. That made me junior in the regiment to one Victorian officer, who had only about three months' service. I appealed against that, and had an interview with Colonel Hoad, and, although there was no

W. Holmes. official reply, it was practically admitted that I was to be the senior subaltern afterwards. But we did not like the arrangement at all, by which we were placed under Colonel Hoad as part of an Australian regiment. Our idea was that we were being sent out there by our Government to be attached to an Imperial regiment, and by that means get better training. We asked permission of Colonel Hoad to cable out to our Government here to know whether the arrangement was satisfactory, and he refused that permission. That state of things continued until we were mounted. About five weeks afterwards we were mounted at Nauerpoort, and then we were split up, and my squadron was working principally with the Inniskilling Dragoons, and with No. 4 Battery of the Royal Artillery. So that Colonel Hoad, although nominally in command of the Australian regiment up to that time, was not really in command—we were on our own, attached to Imperial regiments.

28 Aug., 1900.

3584. Did this paradox, as I would call it, of men of junior rank being placed in seniority to men belonging to another colony apply to Captain Legge as well as to yourself;—was he connected with you at that time? Yes; Captain Legge was the captain of the company at that time. As a matter of fact, I was senior to Captain Legge out here; but the General determined that Captain Legge, being a staff officer, and an officer he thought a good deal of, was to command the company. The General sent down to know whether I would be prepared to act as subaltern. I was anxious to go, and to go as anything, so I went as subaltern. I did not get a new commission as subaltern, but the words of my appointment were, "Captain Holmes to act as Lieutenant whilst serving with the Infantry company in South Africa."

3585. I suppose, having pointed out this very reasonable aspect of the case to Colonel Hoad, and asked for permission to cable out for instructions in the matter, his refusal would hardly tend to create a spirit of harmony amongst the New South Wales men? No. It even went so far that we complained about his administration. For instance, we complained that it was all Victorian. The Colonel was a Victorian, the Major was a Victorian, the Quartermaster was a Victorian, the Sergeant-Major was a Victorian, and the Quartermaster-Sergeant was a Victorian. All of the Staff were Victorian. We complained of that, and said we were not satisfied with it, and pointed out certain things we considered wrong. Colonel Hoad saw we were getting a little troublesome, I suppose, and he told us that he would recommend that we should be sent down for garrison duty at the Cape. We did not want to go down there, so we had to put up with it; but it was all remedied afterwards when we became mounted.

3586. Do you know that we contributed something like four times as many men to the Contingent as Victoria? Yes; I know we did.

3587. And yet she seems to have grabbed all the positions for her officers? Colonel Hoad was really sent out as a special service officer, and wanted a job. He was very proud of having been appointed to the First Australian Regiment for active service.

3588. *Chairman.*] You say that the feeling in South Africa amongst the men and the officers is that when they return they will get their accounts balanced, when they expect to get the Imperial pay in addition to their pay from here? Yes; as far as the First Contingent is concerned, they believe they are entitled to the Colonial pay here as well as the Imperial pay, because nothing was said about any deduction before they left. I know nothing about the arrangements with the Second Contingent.

3589. How were you treated on board the "Aberdeen" going out—were the provisions good? Very good; no complaint at all. We were splendidly treated.

3590. The "Aberdeen" was chartered by the New South Wales Government? Yes.

3591. And the Mounted Rifles were also on the same ship? Yes; Captain Antil's Squadron was with us.

3592. Was the provision for the horses, and that sort of thing satisfactory? Everything very satisfactory; no complaint whatever. We had a very happy time altogether.

Maurice Alfred Hilliard called in, sworn and examined:—

M. A.  
Hilliard.  
28 Aug., 1900.

3593. *Chairman.*] You went to South Africa, as Captain of "C" Squadron, Second Contingent? Yes.

3594. That was the Contingent commanded by Lieut.-Colonel Knight? Yes.

3595. In what vessel did you go? The "Southern Cross," which left here on the 17th January.

3596. How were the provisions on board—were they good, bad, or indifferent? From a soldier's point of view, satisfactory.

3597. Still, it was not like a picnic? Certainly not.

3598. Did you have helmets supplied to you on leaving here? Yes; a few days before we left.

3599. Is that the class of helmet (*the sample gossamer helmet produced by Major Boam*)? Yes; that is the class of helmet.

3600. As a matter of fact that is the pattern? Yes.

3601. Could you tell us how the helmets wore on active service;—how did they last? They did not last very well. The time we had from the Modder River to Bloemfontein was a pretty rough one. The men had sometimes nothing to sleep in but the helmets; they would rest their heads on their helmets, which, being rather of light build, would not stand such treatment.

3602. I do not suppose you are a helmet expert, but you will understand the method by which these helmets are made;—the material consists of layers of cloth dressed with shellac, and consolidated together by machinery;—this helmet has never been in wear, but I should like you to look at some of the strands of cloth? I am not an expert.

3603. But you can see that the material is not filled with shellac? Certainly not.

3604. And there is nothing to keep out the water? No; it is quite open.

3605. Do you think you ever saw this helmet before (*the better of the two returned helmets produced by Mr. Sleath*)? I do not know that I ever saw that particular helmet, but I have seen some like it. We had a photograph taken of some of these helmets.

3606. Do you remember my receiving a couple of helmets when you were camped near Bloemfontein? Yes; I remember that.

3607. I think Lieutenant Legge and Lieutenant Newman wrapped them up for me? Yes.

3608. You would not be surprised to find that this is one of them? No.

3609. Did you see any helmets in as bad a condition as this being worn by the men out there? I do not know that they were quite so much crushed down as that, but they were mostly broken at the top, and, in some instances, perhaps as bad as that.

3610. Did you ever see one as bad as that returned helmet, or do you think you ever saw that one before? I do not know this particular one, but I have seen helmets as bad as this. Of course you and I

M. A.  
Hilliard.

28 Aug., 1900.

I remember the circumstances under which those were taken. These are really the pick of the worst of them. Still this is one of the old helmets.

3611. Here is another helmet (*Second Contingent helmet sent from the front*); as a matter of fact this belongs to a trooper in A squadron, named Healy;—did you see many of them worn as bad as that? Yes; a great number of them got broken in at the top. That was the fault in them. It was caused by the men sleeping in their helmets—lying back.

3612. How long do you think that helmet might have been in wear? You could knock one of those out in a week probably, but it might have lasted three months. It would depend upon the care bestowed upon it by the wearer.

3613. You are not an expert in helmets, but did you ever see a helmet like that before (*felt helmet supplied to Citizens' Bushmen's Contingent*)? I should say this was a better class of helmet than the other, that is all.

3614. What do you think of the shape of it? I cannot say I admire the shape of it.

3615. You never saw any of these felt helmets used at the front? I never examined the helmets carefully to see what was inside underneath the cover.

3616. Did you ever see anything like that (*pith helmet*)? Yes; that is what we call out there a regular Tommy's helmet. All the Tommies wear them.

3617. It is what is known as an Indian pith helmet? Yes; I have seen those. I brought one out with me.

3618. Are these good, serviceable articles? Yes; when I was in India I saw them in use, and they were very good. In fact, I wore something like this throughout the whole of the recent campaign, and brought it back with me perfectly good, except that it bears a few marks where it has been crushed in.

3619. Did you feel the weight of it;—did it feel specially heavy? No.

3620. You did not notice it in the wearing? Not at all.

3621. And if you were to sleep in this helmet it would not hurt it much? No; mine was not injured, and I wore it throughout.

3622. Will you please look at that helmet (*sealed pattern cork helmet*)? That is a solid cork helmet.

3623. It is rather a good style of helmet, is it not? It is very nice and light.

3624. Would it stand a little knocking about? I should think it would, with ordinary care.

3625. You could not compare those two helmets—the sample cork helmet and the pattern gossamer helmet? Certainly not; it is obvious which is the better of the two.

3626. You could hardly make a comparison? No.

3627. When you look at this saddle (*Exhibit 4*), is that the class of saddle you were supplied with on leaving here? Yes.

3628. And about the same quality, you think? Yes.

3629. You see that the knee and thigh pads and the seat are of hogskin, and the flaps are not hogskin? Yes.

3630. Did the trees of these saddles stand well? As far as I know, yes.

3631. Did they go down on the horse's back in any case;—did the horses suffer from sore backs? Yes; we had a good many sore backs, attributable to the padding more than to the tree. A saddle properly padded will not hurt a horse's back.

3632. Do you think that is at all a serviceable saddle for military work? No, I do not.

3633. It might do very well for ordinary bush work? Yes. That is a very comfortable saddle, and would do to ride about in the bush in Australia, and so on; but when you come to put a man's heavy kit on it, with the addition of a rifle bucket, in which a man will not only place his rifle, but, when he gets tired, lean upon it, the saddle is not heavy enough. It is apt to work on the horse's back, and is, therefore, more liable to give a horse sore back than the proper regulation saddle used by the Dragoons.

3634. As a matter of fact, your horses did suffer a good deal from sore backs? Yes.

3635. This is the padding of No. 4 saddle;—were they all much like that? Yes. The saddles came from different contractors, and every man does not make a saddle the same way; but on the surface that is about the style of saddle.

3636. Here is another saddle (*Exhibit 1*);—do you think that saddle is of as good quality as the last one? No.

3637. You see that the knee-pads and thigh-pads are made of ordinary bagging leather? I should say the saddles came from different contractors, and every man builds a saddle in a different way. These are of different quality as regards leather.

3638. Do you not think the weight is rather heavy for the size of it? I do not know that I can say that; it is not a very heavy saddle.

3639. Will you look inside and see how the D's are fixed on;—do they not look as if they had been put on since the saddle was made;—it is not very artistic work anyhow? No; I should call it a very roughly made saddle.

3640. And do you notice the padding inside, how loose it is? Yes.

3641. Will you look at the padding of No. 1 saddle;—is that of as good quality as the padding of No. 4 saddle;—has it got the same amount of padding, do you think? No. They are very badly padded; there is no doubt about that.

3642. Riding a saddle such as that, for instance (*Exhibit 1*), with all a man's accoutrements on it, would naturally give any horse a sore back? Yes; there is no doubt about that.

3643. Will you look at this (*Exhibit 7*);—is that the sort of bit you had? No.

3644. I suppose you had all sorts of bits? Yes.

3645. Some of them were of that style, I think? Yes. This is the bit that was issued here when the Cavalry movement was first started in 1885 or 1886. I remember the bit perfectly well—the regulation bit.

3646. It is a powerful sort of article, is it not;—would you be surprised to know that it weighs  $3\frac{1}{2}$  lb.? It must be nearly that.

3647. Do you not think that a plain Pelham bit would be suitable for the work? Some horses, in the excitement of battle, want a very heavy bit to curb them. A light bit would, perhaps, not be so suitable. This is what they call the regulation Cavalry bit. They have these in the Dragoon Guards. It is not considered in the Service too heavy for the horses. A man, when he has only one hand to hold a horse, requires a heavy bit to control it.

3648.

M. A.  
Hilliard.  
28 Aug., 1903.

3648. In most cases is it not a fact that you wanted a spur more than a bit? Our horses after some time got knocked out, and we did require a spur. But even then a tired horse, in the excitement of action, will become very lively indeed. When a man carries a rifle, and has only one hand to control his horse, he wants something pretty solid in the horse's mouth to hold it.

3649. Were your Contingent supplied with those (*Exhibit 5*)? Yes.

3650. Did they turn out very useful? No. On the contrary, I must admit they were unserviceable. With a horse trotting or galloping it would work about, and the weight of it would give the horse a sore back. We used them to Bloemfontein, but never used them again.

3651. None of the other mounted regiments were jealous of your having these? I did not hear any expressions of that kind.

3652. Were all your men supplied with one of these (*shoe-case*)? I do not know whether they were all supplied with them, but I have seen the article before.

3653. What did they use it for—carrying horse-shoes? Yes; it is supposed to be for carrying horse-shoes, but, as a matter of fact, we did not carry them.

3654. You had enough to carry without carrying a few spare horse-shoes about with you? Yes; according to the regulations we are supposed to carry two shoes, but we had quite enough to carry, and did not utilise these.

3655. You found it more serviceable, I suppose, to carry some spare tucker for yourself and horse? Yes.

3656. This is a pair of officer's wallets (*Exhibit 8*)? I do not know that I should recognise it as a pair of officer's wallets. We were supplied with wallets.

3657. Wallets of that pattern? I do not know whether the leather was as good.

3658. But the pattern and the shape is the same? Yes.

3659. Will you look at this saddle-bag (*Exhibit 12*);—were any of your men supplied with an article like that? No.

3660. Would that be a good serviceable article, do you think, for cavalry or Mounted Rifles to carry round? It would be a very handy thing, but I do not know that it would be very serviceable. I have seen better ideas than that.

3661. In what way? Such as they have attached to the Mexican saddles. They have one piece of leather which goes across underneath the saddle, and there is a pack which hangs on either side of the horse—flatter than that.

3662. That would balance the weight more evenly on the horse? Exactly. With this hanging on one side of the saddle the horse would feel the weight more, and would be more likely to get a sore back. It would be much better to have the weight equally distributed, as in the case of the Mexican saddle.

3663. Is this the style of bandolier with which you were supplied [*Exhibit 16*]? That was the shape.

3664. Were they found very serviceable? Yes. They only carry sixty rounds of ammunition, and, of course, something that would carry more ammunition would be more serviceable.

3665. When this was fixed on, would not the soldier have some difficulty in getting round to the back? Yes. I think, myself, that the shoulder bandolier is better.

3666. You think it would distribute the weight better;—did you ever hear any of the troopers complain that the weight of this bandolier rests on the small of the back? No; I never heard that.

3667. Is that about the style of your rifle bucket (*Exhibit 15*)? Something of the style; but that is not the rifle bucket we had.

3668. Yours had not either as good quality or as good finish as this, had it? No; it was not such a good bucket as this.

3669. Is that more like yours [*Exhibit 9*]? Yes, that is more like it. It is very inferior to *Exhibit 15*. There is one thing in connection with the saddles that I should like to say. The saddles are no doubt rough looking, but they had to be made at a moment's notice, and they were simply pushed together. That could hardly be considered anyone's fault.

3670. But do you not think it might have been advisable to cable to the Imperial authorities to get proper military saddles? They could hardly anticipate that these would not prove as serviceable as they expected. Had they been able to foresee the trouble they would have, it would have been a better course.

3671. When did you get re-equipped with saddles? At Bloemfontein.

3672. And you discarded the old saddles? Yes.

3673. And got fitted with what pattern? Some of the Mexican saddles and some of the cavalry pattern saddles.

3674. Did you find them more serviceable? Certainly.

3675. The military panel saddle is undoubtedly the saddle fitted for that class of work? Yes; it is the only saddle really suitable.

3676. I suppose you had to get a great many fresh horses at Bloemfontein? Yes; we had a great number of remounts there.

3677. Had a great many of your horses been suffering from sore backs up to that time? Yes; a great number of them.

3678. It was, of course, rather a trying march from Modder River to Bloemfontein both for men and horses? Yes; it was a rapid march, and very trying. You know what it means when you get a horse's back wet and have to put a saddle on when it is wet—a thing we had to do. That would be one cause of sore backs, as well as the saddle.

3679. There would not be the same risk of that kind, I suppose, in the case of the military saddle? No. Our experience was that the regulation cavalry pattern saddle was the best.

3680. There would be no padding and that sort of thing to get wet and hold the wet for so long a time? No; there is no padding. You simply put the blanket underneath.

3681. You were supplied with these numnahs (*Exhibit 19*)? Yes.

3682. Do you think they are a good idea? I do not believe in them. That is my private opinion.

3683. Have they a tendency, with heat and sweat, to get hard? Yes; and when they get hard they cake underneath, and, resting on a horse's back, tend to injure it. Generally at the back of the saddle it cakes hard after a time, almost like a piece of old leather.

3684. So that you think the plan of having a blanket under the military saddle is better? All the British cavalry are supplied in that way. They have the blankets underneath the saddle. The Second Dragoon Guards have that description of saddle. It is certainly a better idea than the numnah. 3685.

M. A.  
Hilliard.

28 Aug., 1900.

3685. And the blanket would be serviceable for other purposes? The blanket at night is taken off, the saddle put on one side, and the blanket put over the horse to protect him against the weather.
3686. Taking the clothing generally, was it fairly satisfactory? Yes.
3687. You had helmets going away from here? Yes.
3688. You have had some experience in the Permanent Force here of the field-service hat, have you not? Yes.
3689. Which do you think the more suitable and the more comfortable? The hat.
3690. You prefer the hat? Absolutely.
3691. And you think most of the men would prefer the hat? Yes, I do. On the field the helmet is often in the way when a man is firing. The men have to take the helmet off. In raising the head to get an elevation the back of the helmet is in the way. The hat, to my mind, is the more comfortable. I do not say that in a place like India, or during some of the hot months in Africa, the hat would be sufficient to protect the men sufficiently against the intense heat of the sun, but it is more comfortable.
3692. Still away up in the northern portion of Queensland, and right in the tropics, the ordinary individual manages to get along with a hat all right? Oh, yes.
3693. It is a good deal a matter of custom? Exactly; what a man is used to.
3694. If you were to take a man from a country with a very cool climate, and put him in one of these hot tropical places with a hat on, he would naturally feel the heat more than a man who is used to being out in the sun? Certainly. As an illustration of the difference between the hat and the helmet, I may say that when I was in India Sir George White ordered that we should remove our hats and wear helmets. We preferred to wear the hat as a matter of personal comfort. But Sir George White ordered us to discard our hats, and gave orders that we were to be supplied with helmets, which was done.
3695. I suppose this is a fair sample of the tunics (*produced*)? That is the jacket.
3696. They wear pretty well? Yes, very well.
3697. Are they a serviceable stuff, if not very artistic? Very serviceable. They were considered so by the officers of the Imperial army. They liked this stuff better than khaki. We found that in wet weather the jacket did not hold the wet so much, and in the warm weather it was cool. It was a jacket that soon dried if it got wet—a very excellent jacket.
3698. How did the trousers stand amongst your men? Generally, very well. But some men, of course, are rougher in riding than others, and would wear out a pair of riding breeches quicker. Generally speaking, they stood well.
3699. How did the overcoats last;—is this a fair sample of what you are supplied with (*produced*)? Yes; I recognise the overcoat. They did not wear well at all.
3700. Did they turn out to be waterproof? No. I do not think they were supposed to be waterproof when we took them. However, they did not keep the wet out. We discarded them at Bloemfontein, and the British authorities issued a more serviceable overcoat, which would protect the men from both wet and cold.
3701. They were really waterproof? Yes; I have one of those overcoats, which I could show you.
3702. The finish of this overcoat is not what you would call artistic? Certainly not.
3703. It has not even been cut off square? No.
3704. You were not highly impressed with the overcoats, but the balance of the clothes wore fairly well? Certainly. The overcoats and the helmets I should say were certainly not serviceable.
3705. Were all your men supplied with these articles (*produced*)? These form part of a man's kit.
3706. Did they use this mosquito-net, for instance? No; we had them with us, but there was no necessity to make use of them.
3707. I suppose a great many of these articles comprising a man's kit would be more serviceable for peace manoeuvres? A blacking-brush is not an article that a man requires every day in the field, and there is the shaving-brush and razor. Those are things occasionally used. Then there is the button-stick.
3708. The Committee are rather concerned about the purposes for which all these brushes are required? There are two blacking-brushes, a clothes-brush, and some other brushes. To boil it all down, I think you might say that the hair-brush is the only one that a man would actually require in the field.
3709. For a man going into camp for peace manoeuvres I suppose all these things would be all right, where they had not to carry them about? Quite so. The blacking-brushes are required sometimes, but blacking was a thing we did not use in South Africa. We found that "dubbing" was the most serviceable thing to put on the boots, as it preserved the leather and kept out the wet, and the boot always looked clean.
3710. Then, after all, the hair-brush is the only sort of brush that one really wants at the front? To boil it down to a fine point, if a man had to do with as little as possible he could get along with a hair-brush.
3711. What would they use this piece of sponge for on active service? It is intended to clean buttons and other things.
3712. If your opinion were asked now about an equipment for active service it might be somewhat different from what it was before you had your latest experience? Certainly.
3713. In regard to pay, what is your pay on the staff in New South Wales in time of peace,—I mean under ordinary conditions? My pay is made up of pay and allowances.
3714. What is the actual pay? Roughly, about 30s. a day.
3715. As Captain and Adjutant? Yes.
3716. What do you estimate that your allowances are worth annually? I am rather a bad hand at figures, and I should have to look that up.
3717. When you went away from here for active service, did your allowances still continue—your forage allowance, for instance? No; deductions were made; certain allowances were cut off.
3718. Have you received, for instance, your field allowance? No.
3719. Is it customary in the Imperial army when officers go on active service to allow them an additional amount beyond what they are allowed in time of peace? They get what we call a field allowance.
3720. That is paid when on actual service? The present field allowance in South Africa is 1s. 6d. per day.
3721. And in addition to that there is a field allowance of 3s. 6d. a day? Yes; there is a Colonial field allowance of 1s. 6d., and then a field allowance of 3s. 6d.
3722. That is allowed to officers on actual service? Yes.
3723. Did you receive your field allowance right through either from the Imperial Government or from the Colonial Government? No; I did not.

3724.

M. A.  
Hilliard.  
28 Aug., 1900.

3724. So that although you went on active service you received no additional allowance beyond what you were receiving here in time of peace? It is due to me, but I have not received it.
3725. But suppose the Colonial Government say you are not to get this field allowance of 3s. 6d.? I did not know that that would be so.
3726. You would think it rather unfair if it were so, would you not? I should be surprised.
3727. Because you were fully in the belief that you would receive the ordinary field allowance? That was partly the understanding on which I went.
3728. I suppose, being in the front at South Africa is rather expensive;—anything you buy in the way of food or clothing you have to pay a high price for? Yes; what we call luxuries out there.
3729. We would not call them luxuries here, but they are looked upon as such there? Such things as sardines, jam, and articles like that we would buy if we could, in order to vary the ordinary rations of bully-beef and biscuits.
3730. I suppose after a few months of bully-beef and biscuits a man could do with a change in the way of a tin of sardines? Yes; a change of diet was very acceptable.
3731. If you had to buy any clothing, I suppose that also would be pretty expensive? We had depôts of clothing from Bloemfontein to Pretoria, and we could always get what we wanted.
3732. But Major Holmes has explained that when he left Bloemfontein he was only supposed to be going away for two days, and consequently left only with what he stood up in, and he had to buy articles of clothing at Heilbron and Lindley? The depôts you speak of would be on the main line of communication, and if you were off the line of communication probably you would not be able to get anything from the depôts in the way of clothes? That is quite true.
3733. As long as you were on the main line of communication you would be able sooner or later to get clothes without paying, but otherwise you would have to pay for them? I can only recall one instance where I had to buy clothing.
3734. Still money does not go very far on active service? No.
3735. What was your idea when you left here;—did you understand that you were going to receive your pay as usual here, in addition to any pay that might be made to you in South Africa? Yes; I understood that I was to receive my pay and allowances here with certain deductions, and that in addition I would receive the Imperial pay. That was my understanding when I left.
3736. And from your experience, was that the general understanding amongst both officers and men? Yes.
3737. That seemed to be the general feeling? That was the general feeling.
3738. If you had drawn the Imperial rate of pay in South Africa, I suppose you would not have been much in pocket, taking into consideration the additional expenditure? I would not have been much in pocket certainly in that way. Of course there are many expenses which are necessary before a man goes. I could not say I should have been in pocket.
3739. Perhaps it might have been the other way? I could hardly go so far as to say that. It would have been a very acceptable adjunct.
3740. Were you aware of the pay supposed to be granted to privates—the rate of pay? Yes.
3741. Was it 4s. 6d. (say) for buglers and privates? Yes; 2s. 3d. and 2s. 3d.
3742. Were you aware that every man of the Permanent Force who volunteered was only to receive 2s. 3d. per day altogether from this Government? I was not aware of that.
3743. And that, even with the addition of the Imperial rate of pay, would only make a total of 3s. 5d.? That is quite news to me.
3744. Would you think it an advisable thing to send away men from here who, as a matter of fact, were all volunteers for active service, and pay one lot 4s. 6d., and another lot 3s. 5d., though perhaps they were all in the same company? No; I should not.
3745. Do you think it would conduce to better discipline if every man in the same rank was treated alike? It would certainly be more generally satisfactory to the individual.
3746. This communication was sent from Major-General French to the General Officer Commanding at Capetown:—

I have the honor to submit the annexed statement showing names of certain Officers in permanent employ of this Colony, whose salaries are being paid in full by the Military Department here.

I would be much obliged by your passing on this statement to the proper quarters, so that duplicate payments may not be made.

In accordance with arrangements made by the Imperial Government with the Government of New South Wales, it is understood that pay and allowances on the Imperial scale will be granted by the Imperial Government. It would, therefore, appear that the Imperial rates, in the case of Officers on the annexed list, should eventually be credited to this Government, and not paid to individual Officers.

I may further mention that "Field Allowance" is being paid by New South Wales to all these Officers; but if the South African "Colonial Allowance" is being paid to Imperial Officers, it may, if there is no objection, be paid direct to the Officers on the annexed list.

In that letter it is alleged that a field allowance is being paid;—were you paid any field allowance by the New South Wales Government? Not that I am aware of. The Staff Paymaster has regularly every month made payments to my Bank; but as to how they have been made up, I have not had time to inquire.

3747. Did you get any field allowance from this Government in South Africa? No; unless it has been paid into my account here without my knowing it.

3748. But did you get any field allowance paid to you in South Africa by this Government? No.

3649. And you see by the letter I have just read that the Imperial authorities were prevented from paying you a field allowance? Yes; I realise that.

3650. Had you much difficulty in getting pay there at all—in getting anything at all in the way of money from any source;—did you hear any complaints about shortage of cash and not being able to get it? No; not in my own individual command.

3751. I mean in regard to the New South Wales officers generally? Some of them had some little difficulty in getting pay. I made arrangements for my own squadron for pay, and could always get it.

3752. How far did you go north;—did you get as far as Pretoria? Yes; 26 miles further north. Bronkhurst Spruit was the furthest north I went.

3753. Did you come across any of the New South Wales Bushmen? No; we had left Pretoria before their advent.

3754.

M. A.  
Hilliard.  
28 Aug., 1900.

3754. In regard to pay, I would point out that the list attached to the letter of Major-General French only includes Permanent officers—that is, practically, officers of the Permanent Staff—and the letter only refers to such officers, while it leaves the Volunteer officers at liberty to receive both pay and field allowance from the Imperial Government;—do you not think it would have been better to have treated all the officers who went to South Africa as on the same scale; for instance, take your own case; you were a Permanent officer, Captain of one squadron; then there was Captain Lenehan, a Volunteer officer, who was Captain of another squadron, and Captain Bennett, a Volunteer officer, was Captain of another squadron;—do you not think that holding equal rank, and doing the same class of work, you should have all stood on the same footing as regards payments and considerations advanced to you at the front? I do not see any reason why we should have been debarred from receiving pay from the Imperial Government. They were willing to pay us, and I cannot see any reason why Permanent officers should be excluded.

3755. If the Volunteer officer was allowed to draw the Imperial rate of pay, do you not think the Permanent officer should have had the same privilege? The cases are hardly parallel. As a Permanent officer my livelihood is here, and I am paid by the Government. The Volunteer officer is engaged privately in some everyday walk of life; and, perhaps, when he went to the front his pay or his income here, whatever it was, would cease. Therefore, while at the front, he would only be drawing money from the one source—that would be the Imperial Government. I suppose the idea was that, as I was being paid by the Government here, and of my pay and allowances, with certain deductions to which I have previously referred, would still go on, I would be receiving too much pay if I got Imperial pay as well.

3756. The Volunteer officer would not, as you say, if in private employment, be drawing his salary while away, but then he would be drawing his military salary just the same as you would be? Yes.

3757. Then, if he draws his military salary from New South Wales the same as yourself, why should he draw the Imperial rate, while you are debarred from doing so? The distinction is merely such as I have pointed out—that I am a Permanent officer and he is a Volunteer officer.

3758. But, as a matter of fact, you were a Volunteer too, were you not, in the true sense of the word? Yes; I volunteered for active service.

3759. You could have remained at home, and drawn your salary and allowances, if you had so chosen? Certainly.

3760. So that the salary you received from the Government was not an active service salary, but a salary for certain Staff work done here? Quite so.

3761. Take the case of Major Holmes, who is a Volunteer officer;—even as a subaltern, it would appear that if he drew the Imperial rate he would be receiving more military pay than you would be drawing altogether? That is true.

3762. And, in addition to that, if he had his ordinary salary from the Water and Sewerage Board, he would be in a much better position again? Certainly.

3763. So that, as between yourself and Major Holmes, the position is entirely in his favour? There is one thing which I should like to remind you of, and that is that, during my absence, some one has had to do my work. The authorities here have been paying an Acting-Adjutant 5s. per day for doing my work.

3764. But this Government could not expect you to do your work in the Northern district, and at the same time be at Pretoria on active service? No.

3765. And while they have had to pay someone a small amount to do your work, so I suppose in the case of Major Holmes they have had to employ someone to do his work;—and is it not a fact that in nearly every case where an officer was employed by a private firm he has practically received leave of absence in many cases on partial pay? Yes; I know there are such cases. When we went away people were very patriotic, and promises of that kind were made, and I have no doubt they will be carried out.

3766. And the chances are that no man who got leave from a private employer to go to the front is likely to suffer on his return? I think he would be deserving of all the privileges the employer would give him.

3767. *Mr. Meagher.* Patriotism is a very peculiar thing. Some of the famous Six Hundred died in poor-houses in England. Patriotism cools pretty quickly occasionally? No doubt it does. Still if an employer gave his word to an employee when he went away that his salary would run on, I should think when the employee would come back the employer would keep his word.

3768. *Chairman.* We may take it this way then: that your patriotism in volunteering for active service has resulted in a financial loss to you—that is, your expenses at the front being greater than they would be here? Of course my expenses have been heavy, and I daresay that, perhaps, it would turn out a financial loss. I really have not had time to look into my finances since I have been back.

3769. And especially since you are not to get the field allowance of 3s. 6d. per day? I should be surprised if I did not get that; it is the first time I have heard that the field allowance was not to be paid. Coming away suddenly from the front as I did, I had no time to look into the matter of allowances or anything of that kind.

3770. You were invalided home? Yes.

3771. You are on three months' leave? Yes.

3772. And should your services be required you intend to return at the expiration of your leave? I shall certainly go if it be necessary.

3773. There is just a chance that it will not be necessary? All the heavy fighting was over when I left there, and the present guerilla warfare I do not think will last more than a few months. Our strength out there has been so greatly reduced that they can do without an officer or two, and I do not think my services will be required. In fact I think it probable that I would be more useful here, and I think we ought to look after some of our own front gates now, and keep some of our men at home.

3774. Taking it all through, it has been a pretty trying campaign, has it not? Most decidedly.

3775. For both men and horses? Yes.

3776. The necessity to keep up such long lines of communication, I suppose, made it worse than it otherwise would have been? Yes. It meant the employment of a large number of troops.

3777. And there was the difficulty of getting provisions and other supplies to the front in sufficient quantities? Yes.

3778. Owing to sickness and other causes the number of our forces has been considerably reduced in South Africa? Yes; owing to wounds and different forms of sickness inseparable from a campaign.

3779. *Mr. Meagher.* While you are on leave you are on full pay, are you not? I understand so.

3780. Some of the Colonial officers have been invalided home to England, have they not? Yes.

3781. Including some of the Staff—such as Major Bridges and Major Owen? Yes; I understand they have gone Home.

3782.

M. A.  
Hilliard.  
28 Aug., 1900.

3782. When an officer is invalided, is it a matter of choice with him whether he goes home to England or whether he comes back to Australia? I can only give you my own experience. When I was in Capetown they offered me the choice of whether I should go to England or whether I should come out here, and I thought it better to come to Australia. Had I so chosen, I could have gone to England; but I preferred to come out to Australia.

3783. How long does full pay for an invalid last;—for what length of time could you be invalided—for twelve months? According to the extent of the officer's furlough. In my case it is three months.

3784. *Chairman.*] And at the expiration of the three months, would you undergo another medical examination to see whether you are fit for duty? I understood that would be the course.

3785. And so on until you were fit for duty? Yes.

3786. *Mr. Meagher.*] In regard to firearms, the Lee-Enfield, I believe, is the rifle our troops took to South Africa? Yes.

3787. Did any prominent defects show themselves, in your experience, or that of your men, in regard to that type of arm? No. The Lee-Enfield is looked upon as one of the latest pattern weapons, and one of the best that a man could use. It is the weapon used in the British Army at the present time.

3788. Is the Lee-Enfield as good a type of arm as the Mauser, in your judgment? I think the Lee-Enfield is a better killing weapon than the Mauser, because it carries a bigger projectile. I do not say it is such an active shooting weapon; but in answer to your question directly, I do not say that it is a better weapon than the Mauser.

3789. Do you think it is as good as the Mauser? Each has its own peculiar characteristics.

3790. Do you not think that in the present style of warfare a magazine rifle of the type of the Mauser is the one most favoured by experts? It, no doubt, impressed us very favourably out there. We have not used the Mauser, and we cannot speak of it from practical use; but it is undoubtedly an excellent weapon.

3791. Has not the Mauser the advantage over the Lee-Enfield that a man can fire more quickly a number of charges;—would you fire more shots from a Mauser than you would from a Lee-Enfield in a given time? It would depend upon the individual using the weapon.

3792. *Chairman.*] The magazine of the Mauser holds five cartridges? Yes. The Lee-Enfield holds ten.

3793. *Mr. Meagher.*] I was referring more to the method of putting the cleats in? The question is one I hardly know how to answer, because in the case of the Lee-Enfield rifle, where the magazine is not employed, it is a matter of individual loading; but where you use the magazine you can rattle off ten rounds from the Lee-Enfield just as quickly as you can fire the five rounds from the Mauser.

3794. Suppose I were going to fire a hundred shots, would I be able, loading the Mauser with cleats, to fire the hundred shots quicker than with the Lee-Enfield? Probably you would fire quicker from the Mauser.

3795. *Chairman.*] There would not be a great deal of difference? As I say, it really depends a good deal upon the individual; some men are much quicker than others.

3796. *Mr. Meagher.*] In regard to the sighting on the Lee-Enfield, do you know that some communication was sent out from the Imperial authorities that all the sights were wrong? I heard something of that.

3797. Did you have any practical experience, or hear any complaints, that the sighting was bad? No; it is since I left that I heard about the sighting. Over there we did not realise that there was anything wrong with the sighting of the rifle.

3798. Do you know, as a matter of fact, that the Imperial authorities have set to work to try to rectify the sighting of the Lee-Enfield? No.

3799. *Mr. Chanter.*] Has the Mauser bullet any greater penetrating power than any other class of bullet? No. It has a velocity of about 2,000 feet a second, and the penetration, I should think, is not greater than that of the Lee-Enfield. It is a smaller bullet, and for that reason, perhaps, its penetrating power is not as great as that of the Lee-Enfield, which is a 218 grain bullet.

3800. *Chairman.*] But there is no great difference in the size of the two bullets? Very little.

3801. You can scarcely distinguish it by looking at them? No.

3802. *Mr. Chanter.*] Did you have any personal experience in the matter, or did you hear from any reliable authority that any of the bullets used by the Boers were poisoned? We heard that rumour, but I am very much inclined to think it is not true. The Boers have a habit of covering the bullet with grease, the object being to prevent the fouling of the barrel and to keep the rifle clean. In a campaign like that, a man cannot always clean his rifle as well as he can in peace time. This grease, after it has been applied, looks like verdigris. I read in a London paper, at Capetown, that this supposed poison on the Boer bullet had been submitted to medical analysis at Aldershot, and that the chemist who tested it said it was simply fat and not poison. The question is one we thrashed out a good deal with the Boer prisoners, with whom we had many conversations, and they all gave the assertion a most emphatic denial, and I am far more confident that it is not true than I could be persuaded to think it was.

3803. Did you, in your experience, see any soft-nosed or explosive bullets? Yes, I have seen both. I have seen the explosive bullet, the expansive bullet, and the soft-nosed bullet.

3804. What is your opinion of those? They are far more dangerous than the ordinary bullet, and neither is supposed to be used in warfare between civilised races. In fact, it was understood at the beginning of the war that the dum dum bullet was not to be used by either side; but the soft-nosed or dum dum bullet was used by the Boers. The explosive bullet, which they also used, has a small charge on top of it which bursts when the bullet strikes the object. The expansive bullet is an ordinary looking bullet, but it has four nitches, and when it strikes an object the outside casing is cut, which enables the bullet to expand. The soft-nosed bullet has at the end about a quarter of an inch of soft black lead, so that when the bullet strikes a hard substance it scatters and takes the shape of a mushroom.

3805. Are you aware that some of the medical officers now serving in South Africa have deliberately stated that bullets have been poisoned by the Boers? No; I never heard that before.

3806. And, further, that in the event of a soldier being struck by one, no matter how slight the wound, his chance of recovery is almost hopeless? That is entirely news to me, and I am not at all prepared to believe it is a fact;—I mean I cannot believe that poisonous bullets were used. It is a question we thrashed out many times with Boer prisoners. I had Colonel Botha in my custody, and I spoke to him about it, and he explained to me what the object was in covering the bullets with grease, and he assured me—and he seemed a very honorable man, as many of them are—that the statement that the bullets were poisoned was absolutely untrue.

3807.

3807. Would not the fact of covering a brass substance with grease cause verdigris? Exactly. That is the cause. It was this greenish appearance which made our men think the substance was poisonous.

3808. *Chairman.*] Poisonous bullets might be used, but you are of opinion that it would not be done with official sanction? Certainly not with official sanction. As an expert—and I have had some little experience in connection with musketry matters—I would put this common-sense view: Is it reasonable to suppose that a bullet would retain any of this alleged poisonous covering after the effect of the explosion in the rifle and the flight of the bullet for a distance of from 2,600 to 2,800 yards?

3809. If the Boers used expansive bullets, soft-nosed bullets, and explosive bullets, which you say are barred by civilised nations, then it would not be much more cruel on their part to use a poisonous bullet if they could? I quite agree that if they could use it they would be quite capable of doing so. But I say, in answer to Mr. Chanter's question, that I do not see how they could use it.

3810. *Mr. Chanter.*] Would there be any nick in the bullet by which the poisonous substance might be retained? No, I do not think so.

3811. Did you ever closely examine these so-called poisonous bullets? Many a time.

3812. *Mr. Meagher.*] The only way to effectively poison a bullet would be to insert the poisonous substance in the bullet itself, as you think it impossible for poison to remain on the surface of the bullet after the process of explosion and ejection from the rifle? I am confident in my own mind that the surface of the bullet could not convey poison to the human body. On the other hand, if you put poison in the interior of a bullet it could have no effect, as the interior of the bullet could not come in contact with the flesh of the body.

3813. *Mr. Chanter.*] Did you ever have any personal experience of the abuse of the white flag? Yes; I have seen that. We lost one of our men in that way—Private Abrahams from Bega. We were passing a house over which the white flag was flying, and he was fired upon and shot right through the heart.

3814. Was he one of your men? Yes.\*

3815. Did you hear on reliable authority that there were other cases of that kind? Yes, I heard of many other cases; but it was a thing we did not take much notice of.

3816. That being so, would it be a matter of wonder to you that men indulging in warfare of that kind, and abusing the white flag, should resort to the practice of poisoning bullets, if they found they could do so? I said, in answer to the Chairman just now, that if they were able to do so I am inclined to think they would, but I do not think it is feasible.

WEDNESDAY, 29 AUGUST, 1900.

Present:—

MR. CHANTER,

MR. COOK,

MR. GARLAND.

RICHARD SLEATH, Esq., IN THE CHAIR.

George Arthur Elliss called in, sworn, and examined:—

3817. *Chairman.*] You were a private in the Mounted Infantry, in the Second Contingent, under Colonel Knight? Yes.

3818. What company were you in? "D" Company, under Captain Bennett.

3819. You have returned invalided? Yes.

3820. When did you come back? I arrived home on Friday week.

3821. How far north did you get? About 10 miles the other side of Kroonstad.

3822. You went out in the "Southern Cross"? Yes.

3823. How was the ship provisioned on the trip out? Very badly indeed. At times we had scarcely enough to eat, and what we had was very bad indeed. I never fared worse.

3824. Almost as bad as being on bully beef and biscuits at the front? Yes. Well, there was an excuse for that. On several occasions the food had to be thrown overboard and something else provided for us. On one occasion bully beef had to be served out. On that occasion I think it was the fish that was bad. At another time the tripe was very bad.

3825. Did the officers seem to make any effort to get the best they could for you? We made complaints to them several times, but apparently they could do nothing.

3826. I suppose you are aware that the Government here made every effort as far as they could to see that you were well looked after? Yes. It seemed to me that there must have been some flaw in the arrangements about the provisions. That is, I think, what most of them thought.

3827. That it was owing to some leakage somewhere? Yes.

3828. They were satisfied that the Government of this Colony would not purposely do anything of the kind? Yes.

3829. You were supplied with uniform, saddle, &c.? Yes.

3830. How did you find the saddles last? They lasted no time at all; in fact, they were worse than useless—spoilt the horses' backs. In the first engagement I lost blanket and everything—the D's pulled out.

3831. You are perfectly satisfied that they were not at all suited to the work? Not at all, I am perfectly satisfied of that.

3832. Would you consider them a good saddle even for ordinary bush wear, apart from soldiering? No, not made as they were.

3833. Was that opinion generally shared by your comrades? Yes; it was very general.

3834. In regard to the clothing, how did that last? The clothing was good with the exception of the helmets and overcoats. The tunic and pants were good, and so were the shirt, socks, and boots.

3835. Is this the style of helmet you were supplied with? (*Pattern gossamer helmet produced by Major Boam.*) I think this seems slightly better than the others.

3836. This is a new helmet that has never been used;—you see the material; you can see right through it? Yes.

3837. You can understand that that would not keep out wet or stand any rough usage? This is not quite of the same colour as the one we were supplied with.

3838.

\* NOTE (on revision):—My answer to this question was intended to convey that Private Abrahams was in the regiment. He was not a member of my squadron, but in Captain Antill's, from whom I heard of the manner of his death.

M. A.  
Hilliard.  
28 Aug., 1900.

G. A. Elliss.  
29 Aug., 1900.

- G. A. Elliss. 3838. Do you see this helmet [*Second Contingent helmet, returned from the front*] ? Yes. This is more the class of the helmet ; it is about the same kind.
- 29 Aug., 1900. 3839. Did you see many of them in as good condition as that after they had been worn for some time ? No.
3840. In fact, that would have been considered a rather well preserved one ? Yes ; more like an officer's helmet.
3841. Do you remember seeing me at Bloemfontein ? I saw you there on one occasion when we were in camp, after we came in to refit.
3842. Would this helmet [*the better of the two returned helmets produced by Mr. Sleath*] resemble anything like the helmet you saw the men wearing while you were getting refitted ? That is the style of helmet worn by those who had helmets at all ; some of them had not any.
3843. Did you ever see anything like that [*the worst of the two returned helmets produced by Mr. Sleath*] ? Yes ; this is a typical one.
3844. You are not surprised to learn that I secured these two helmets from the men when they were being refitted ? No ; I heard about it.
3845. I suppose some of the men were talking about it ? Yes ; some of them intended seeing you. I was one ; but I was away at the time, having gone to the hospital to see some of those who were sick.
3846. Therefore, you were not able to see me ? No.
3847. In fact, you were only there a few days ? Yes.
3848. You are not surprised to learn that these two helmets are just as I secured them from the men when they were being refitted ? No.
3849. You see the stuff inside ? Yes ; that is the same helmet.
3850. You would not expect that to keep out water ? No. I suppose you know we had to colour them.
3851. They washed white, and you had to colour them with whatever you had available ? Yes.
3852. Did you see any of this class of helmet there [*pith helmet*] ? Yes, that is the Imperial helmet ; it has a cover.
3853. Did you wear one of these for some time ? Yes ; I brought one back.
3854. How did you find them suit ? They suited very well.
3855. They can stand a good deal of rough usage ? Stand any amount of rough usage. You can make a pillow of this helmet, and push it back into shape again.
3856. You found it very serviceable ? Yes ; that is a very serviceable helmet.
3857. And one that would stand a good deal of wear ? Yes.
3858. You were all supplied with a kit on leaving ? Yes.
3859. Were you supplied with all these different brushes ? Yes ; with blacking brushes, a button brush, hair brush, a clothes brush, and a shaving brush.
3860. There seems to be an extra one, for which there is no special use ? Yes.
3861. All these brushes would be very necessary and very handy in a stationary camp ? Yes.
3862. But no one would dream of carrying them about with him ? No ; we left ours in our kits at Capetown.
3863. I suppose, if you got your kits brought up to Bloemfontein, you would have left them again with your kits ? The kits were brought up to Bloemfontein from Capetown, and again on the advance we left these behind.
3864. As a matter of fact, from your experience, you find that it is better to travel as light as you possibly can ? Yes ; like a man would in the bush.
3865. In the interests of yourself and your horse ? If he equipped himself, a man would not carry a lot of that lumber.
3866. It is altogether unnecessary for service at the front ? Yes.
3867. Would you mind telling the Committee how you understood you were to be paid when you left here ; did you understand that you were to get 4s. 6d. a day from the New South Wales Government in addition to anything you might get as Imperial pay ; or did you understand that the Imperial pay was to be deducted from the 4s. 6d. ? I understood that the pay was to be made up, with the Imperial pay, to 4s. 6d.
3868. You understood that the whole of the pay you would get would amount to 4s. 6d. ? Yes. I do not know where I got the information from, but that was the impression in my mind.
3869. Did you ever hear any of the men discussing it out there amongst themselves ? Yes ; and we have had arguments about it.
3870. So that there was a difference of opinion in regard to the amount. Yes.
3871. I suppose some of the Contingent thought they were entitled to the 4s. 6d., and the Imperial pay in addition ? Yes ; I think they were in the minority, though.
3872. While others contended that the whole amount should total 4s. 6d. ? Yes.
3873. Did you find that if you wanted to buy anything at the front it was rather expensive ? Yes.
3874. I suppose on many occasions, after a long march, and at other times, there were a great many things you really wanted to buy for your own comfort ? Yes ; and if you had the money you would buy it, no matter what it cost you—if it were anything eatable ; also such articles as tobacco and cigarettes. I have seen 6s. 6d. given for a 2d. packet of cigarettes.
3875. And if you wanted a pair of socks, or something like that—which you might want, I suppose—if you had the money you would get the socks, even if they were very expensive ? Yes ; you would get them if you wanted them.
3876. *Mr. Chanter.* Could you not get socks from the store ? Only while we were refitting at Bloemfontein.
3877. *Chairman.* I suppose, in the hurry and bustle at the front, you, with your comrades, had some pretty narrow escapes—you were in some pretty tight corners—and it was just possible that a number of you might lose horse, kit, and everything ? Yes, lose everything. On several occasions I noticed that.
3878. And when you were on the advance you did not carry a store with you from which you could be refitted ? There was no way of getting anything at all. A comrade might lend you anything he could share with you. We had no way of getting new equipment until we reached a base on the line of communication.
3879. I think you were stationed out at Karree for some time ? Yes, at Spitfontein.
3880. You were there for some weeks, I think ? About three weeks.

3881. And during that time you had no tents, had you? No; a great many had no blankets or water-proof sheets. G. A. Ellis.
3882. And during all that time you were in touch with the enemy? Yes; under fire almost every day. 29 Aug., 1900.
3883. As a matter of fact, the Boer outposts and your outposts were watching one another, and there was not a day passed that you were not exchanging shots? That is so.
3884. And during that time, did it not rain pretty heavily for five or six days? Yes, it did. I think it was just before Easter.
3885. It knows how to rain, too, out there when it starts? Yes; the showers are heavier than they are here.
3886. You could not mistake it for a thick mist? No.
3887. And in that rain for five or six days you had no tents, and some of you had no waterproof sheets and no blankets? Yes. In a case like that, two of the men would share a blanket.
3888. So that you had a pretty rough time out there? We had a very rough time.
3889. And, in addition to that, the rations would be the ordinary "forty-niners"—I think they call them—biscuits and bully beef? We were getting bread there. We tried to get biscuits in place of the bread. The bread was of such a bad quality that it put a lot of them into the hospital.
3890. It was absolutely black and doughy? Yes. The biscuits were far preferable to the bread.
3891. And sometimes you got a little fresh meat there, I think? Yes, not through the depots.
3892. But when any sheep or other animal of that kind attempted to attack you, you stood to arms? Yes.
3893. Your ordinary ration was bully beef and bread, or biscuit? Yes.
3894. *Mr. Chanter.*] And poultry on some occasions? We were not then in a position to get poultry.
3895. Could you not commandeer any poultry? We could not do so there; there were not many farm-houses about, and the Boers were too close to us.
3896. Were any orders given to the men by the officers in command that they were not to make any raids upon the houses or farms? Yes.
3897. Was the order generally observed by the men? No.
3898. *Chairman.*] The opportunities to commandeer anything in the way of food were pretty limited? They were very limited; especially if the "Tommies" got there first.
3899. As a matter of fact, a proclamation was issued by the Field Marshal to the effect that anyone caught looting would be shot? Yes; the penalty was death, and the regiment to be sent to Capetown.
3900. So that when you were out at Karree the food supply was not as good as it might have been? No; considering that the base was not far away.
3901. Practically within a few miles? Yes.
3902. So that when you got to Bloemfontein, if you had money available, you would have gone in for a few luxuries—what would be considered luxuries there? Exactly.
3903. You went through from the Modder to Bloemfontein, did you not? Yes.
3904. And then on to Karree? Yes.
3905. I suppose it was a pretty trying march? It was. I have heard the opinion expressed that it was the quickest march on record for such an army.
3906. And going through from the Modder the provisions were pretty limited, were they not? I think it was during the first three days that we had nothing at all to eat. That was not owing to a mistake on the part of the Imperial officers, but to some mistake in the drawing of the different provisions. The whole of the regiment did not suffer like that, but only one division. We went to the Colonel about it, and he gave us something one night.
3907. So that, in addition to the ordinary risks of war, such as the danger of being shot or wounded, the hardships the soldier has to contend with at the front are many? Yes. The other dangers, I think, are much greater than that from the fire of the enemy. You are so weak when you get the fever that you have no chance of shaking it off.
3908. As a matter of fact, you did not find any man out there who was afraid of the Boer bullets? No.
3909. They were always prepared to face them? Yes.
3910. But they did not like the idea of enteric fever? They thought they were rather hardly treated as regards provisions; in fact, they thought greater efforts might have been made to get the provisions for them. We often had meat. We would catch a goat or a sheep, and we would cook it and eat it without any bread or salt, and of course that caused a lot of dysentery.
3911. After being two or three days without anything at all? You are almost bound to get dysentery.
3912. You think, and I suppose it is the general opinion amongst the men, that with greater care and attention on the part of the officials handling those things, there would have been no necessity for the men to go through all those hardships? Things might have been better.
3913. You had enteric fever? Yes; I had dysentery first, and then I had enteric. I did not go into the hospital with dysentery.
3914. What sort of bandoliers did you have? Those with the shoulder straps.
3915. The same as these (*Exhibit 16*)? Yes.
3916. How did you think those suited;—did you like them? I think they could have been improved upon. You cannot get the cartridges out when you are in action.
3917. Did you think the shoulder bandolier would have been preferable? Yes, far preferable. We got them wherever we could.
3918. Were you fitted with helmets when you left here? Yes; the class of helmet you showed me just now.
3919. Have you ever worn the field-service hat? No.
3920. Do you think this hat would be more comfortable to wear than the helmet [*sealed pattern, Field Service hat*]? Yes, far more comfortable to wear, and you would be able to shoot better with it. There is one thing in reference to the helmets that I did not mention, and that is that you cannot fire with them while you are lying down. They catch you at the back of the neck, and the peak in front is pushed down over your eyes; so as to interfere with your sight when taking aim. We always reversed the helmets when we went into action; we put the peaks in the front.
3921. So that you would much prefer the field-service hat? Yes.
3922. And it would stand any amount of knocking about? Yes—if it were not for being so like the enemy's hat.
3923. Did you notice that the C.I.V.'s were all supplied with soft hats? Yes. 3924.

- G. A. Elliss. 3924. And the Canadians still stuck to their felt wide-brims? Yes.
- 29 Aug., 1900. 3925. And the Imperial Yeomanry? Yes, the Imperial Yeomanry had hats like that, and also Roberts' Horse, Kitchener's Horse, and Brabant's Horse.
3926. Did you ever hear of any case where one lot of men fired on another, even when both were wearing helmets? I did not see such a thing, but I heard that the Gordons fired on Kitchener's Horse at Tha'banchu, near the waterworks. One of the Gordons told me.
3927. Did you hear anything about one portion of an Imperial regiment firing on another portion at Paarderburg? No; we were not there then.
3928. It would seem that if the Imperial authorities thought it so necessary to have the helmets, they would have had the C.I.V.'s and the other corps mentioned supplied with them? You would think so.
3929. Did you hear anything of any of our men in the corps you were with showing especial bravery in carrying men out under fire, or assisting comrades when under heavy fire? Yes. In one case my horseholder, a man named Nixon, had his horse shot through the neck, and in a case like that anyone would go back, I think. Although I was told not to go back by the lieutenant and the sergeant, I went back. He had the saddle right under the horse, and I got him out all right. Then, again, although I did not see it, I know there was a case in which Trooper English carried some one out under fire. You often hear of one man assisting another like that. There is never any mention made of it afterwards.
3930. I think there was the case of Fisher also? Yes; I think he is in C Company.
3931. I think he rode back to rescue one of his comrades under fire? Yes.
3932. And there were several other instances? Yes.
3933. Do you know that in such cases it is the correct course for the officer in charge of the company to report to the Colonel of the company? Yes, I think so.
3934. And it would then be the duty of the Colonel to send the reports on? Yes; or compliment the men, or something like that.
3935. Send them on to the Headquarters Staff, to be dealt with there? Yes.
3936. Did you ever hear it asserted that in some cases our officers failed to send on those reports? I never heard of them sending them on. I did not know anything about departmental work or reports; I never heard of any.
3937. But we see, occasionally, where one man or another is mentioned for special bravery? Yes, in other regiments.
3938. Even although in your regiment you know that yourself and others showed conspicuous bravery you never heard that you were mentioned in dispatches in any way? Never had any recognition of it at all.
3939. Trooper English, I think, at Dryfontein, carried a wounded man out under heavy fire? Yes.
3940. And yourself and Trooper Fisher and several others have done acts of conspicuous bravery, and, as far as you know, they have never received any recognition at all? None at all.
3941. *Mr. Chanter.*] Were those acts known to your officers? Yes. I was ordered by an officer not to go back. It was a heavy fire. It was the day Captain Bennett was wounded. We were riding away, and we made a mistake and rode into the Boer lines. I was ordered not to go back, but Nixon was one of my four, and, of course, I was responsible for him. The horse fell right on top of him.
3942. Who was the officer who ordered you not to go back? Lieutenant Legge and Sergeant Humphries. Nixon is here now.
3943. Would they consider that an act of insubordination—disobedience of orders? No, not in a case like that. They told me not to stop—"He is all right; do not stop." We were galloping away at the time, and the fire was very heavy.
3944. Did they make any remark to you after you had rescued this man? Some of the others did, but not the officers.
3945. The officers took no notice of it? No. I think Sergeant Humphries said to me, "Oh, he is back all right," or something like that. That is all I heard from him.
3946. When you were on the march on active service what were the military arrangements for the supply of food to the men—where was the base? When we were on the line of march we took our food with us. We had a very large convoy bringing it on. Of course, we had to make our own base as we went.
3947. *Chairman.*] From the Modder to Bloemfontein the base would be De Aar? Yes.
3948. *Mr. Chanter.*] Can you state the average distance that the convoy would be away from the base? There is a base from which the convoy would take the supplies.
3949. In the event of the convoy being cut off, how long would it take to get a fresh supply of food for the men from the base? It would take some days. It might take a fortnight.
3950. Can you give the Committee any information in regard to the non-supply of food from the base or the convoy;—in your squadron to whom did the men look for their food? They looked to their sergeant in the first place.
3951. To whom did the sergeant look? He looked to the quartermaster-sergeant.
3952. And to whom did the quartermaster-sergeant look? The quartermaster.
3953. And to whom did the quartermaster look? That I could not tell you.
3954. All you know is that the food was not supplied? It was not supplied as we thought it should be.
3955. You cannot tell the reason why? No.
3956. In reference to the helmets shown to you by the Chairman;—taking the most disreputable one, is that a fair sample? It is about a fair sample, I think.
3957. Of what the men were wearing? Of what the men were wearing before they refitted—that is, those who had helmets at all. A number of them had hats, and some had Imperial helmets, which they got at Karree Siding, principally.
3958. How long did the helmets which the men took with them last? They were shabby before we got over there, and we only wore them at one or two parades on the boat.
3959. Were they broken on the boat? The tops were crushed in; of course, nothing like they are now. They were shabby, although we only had them out two or three times on board.
3960. When you were out on the march at the front, I suppose it was usual for the men to lie on their helmets—to keep them on their heads when lying down? Sometimes; but it was not the rule. Some of them would do it.
3961. In the event of a halt for an hour or a couple of hours, the men would naturally lie down? They would lie down with their helmets on, of course.
3962. Would they take the saddle off the horse? No, not if it were only a halt for an hour or two. Sometimes we would not be allowed to take the bits out of the horses' mouths to give them grass.

G. A. Elliss.

29 Aug., 1900..

3963. To your knowledge, were those helmets treated with reasonable care? They were.
3964. Considering the duties and the kind of work that had to be performed? Yes; I know we were extra careful of them when we saw what they were made of.
3965. *Mr. Cook.*] Had you any experience over there as to the way in which the Imperial troops were provisioned—were you ever in close contact with any of them? Yes; they seemed to get better rations than we did.
3966. Would you attribute that to the better arrangements made by their officers? Yes; we put it down to the vigilance of their officers in looking out for their men.
3967. And so far as you were able to ascertain was that generally the case? Of course, sometimes they would be short too, but on the whole they were better treated than we were as regards rations.
3968. I suppose that in some of these rapid marches shortness of rations is unavoidable? You cannot expect to have full rations always, or even half rations; but when you see it there, and cannot get it, it is rather hard.
3969. What do you mean by seeing it and not being able to get it? At Klipdrift we had a very heavy rainstorm while we were on the march. It was on Sunday evening. Though the rations were there the quartermaster would not issue them. We went to the officers, and at last we went to the Colonel, and he managed to get half a biscuit each for us.
3970. Why would not the quartermaster give you any? He said the rations had already been issued. But we had not got them. They had been put on some waggon or something like that, and went astray. We never got any.
3971. Did he take no steps to satisfy himself that the men had not got them? He said the rations had been issued once, and he could not issue them again. The Colonel got us some about 10 o'clock that night. It was during a very heavy rain.
3972. In regard to the kit—you say you left a lot of things behind at the Cape? Yes. And then again at Bloemfontein. They are still there. My kit-bag is there still.
3973. Was it really intended that these things were to be dragged over the veldt? I think not.
3974. They were intended, I suppose, to equip you for the march, both here and after you got off the boat, until you got into the fighting country? Yes; I think that would be about it. We had orders from our officers to leave certain portions of the kit behind.
3975. In your opinion it was never intended to take all this kit with you to the scene of operations? No. I do not know what was intended here, but it was not intended among our officers to take it.
3976. Had you any opportunities of seeing "Tommy's" kit? Yes.
3977. Was his kit much like yours? I never saw his full kit, but his active service kit was small. That of the mounted men was just about the same as ours. The infantry, of course, carry very little—a blanket, waterproof sheet, water-bottle, haversack, and bandolier.
3978. But the Imperial soldier too, I suppose, had a very much more elaborate kit when he left Home? I could not say.
3979. You have said that you did not fare as well as "Tommy" in regard to provisions? Yes.
3980. I think you said you had the helmets out several times on the boat, going over? I think about three times.
3981. What would you want to wear helmets for on board the boat? For full-dress parade.
3982. Then you had full-dress parades on the boat? Yes, and kit inspections, when you had to show every article in your kit. We had three or four kit parades on the boat.
3983. What would that be for? To show that each man still had his full kit.
3984. There was no way of getting rid of any of your kit on board, except by throwing it overboard? Well, we lost a lot; we lost some with the crew. The crew got hold of it.
3985. You mean the crew commandeered it? Yes. They took our riding pants and different things that we would put out on the line. We would hang them out to dry, and next minute they would be gone.
3986. When was it that you began to perceive that the helmets were going? Shortly after we got them—long before we reached Africa.
3987. They were by no means firm when they were supplied to you? No.
3988. Had you any idea when the helmet was supplied to you that it was not as good as it might be? Well, we thought they were very light helmets at first—about as light as they could be. We could see at the time that they were not made of anything substantial, and would not look well after a heavy shower of rain.
3989. You thought that before you left here? Yes.
3990. Were you in the Service at all before you went out to South Africa? No; I was a civilian.
3991. Then you would not be able to make any comparison between the helmets supplied to the forces here and those supplied to the troops going away? No.
3992. You regarded the helmets as unsatisfactory from the first? Yes.
3993. Was that the general opinion amongst the troops? Yes.
3994. You have seen the Indian pith helmet? Yes; I have one of those.
3995. You know that it is much heavier than the helmet supplied here? Yes.
3996. For that reason would you prefer your own? No, not at all.
3997. You prefer the Indian pith helmet notwithstanding it is much heavier? Yes.
3998. Why? Because you can depend upon its lasting, and it is better for service. You can shoot with it; you cannot shoot with the other unless you reverse it. The pith helmet is a more substantial helmet in every way.
3999. Is it the custom to use your helmet as a pillow when you are out on the veldt? Yes; we often used them. Our old helmets were of very little use for that purpose.
4000. The Indian pith helmet would be? Yes.
4001. Owing to its elasticity? Yes; it would make a pillow, while the other would simply collapse.
4002. Altogether it is a superior helmet to the one which was supplied from here? Oh, yes.
4003. And would you regard it as a superior helmet to the cork helmet? I had one of the K.O.S.B's. cork helmets; it was not the same shape as the pith helmet; it was shorter at the back, and did not protect the neck from the sun so well.
4004. Which helmet of all would you regard as the most superior? The pith helmet.
4005. *Chairman.*] You say you were in Captain Bennett's squadron? Yes.
4006. Do you remember when you came in from Karree to Bloemfontein? Yes.

4007.

- G. A. Elliss. 4007. What condition were you in as regards clothes—underclothing, uniform, and everything? In a very bad state—and as regards boots too.
- 29 Aug., 1900. 4008. In fact, some of you had not had an opportunity of having a change of clothing for some weeks? That is so.
4009. And men, through no fault of their own, were actually lousy in some cases? They were.
4010. And when you came into Bloemfontein, what provision was made for you in regard to having a wash and a change;—how was the water supply carried on at that camp? I think it was over a mile away.
4011. Do you remember how many water-tanks you had for the whole Contingent? There was one large tank where we watered the horses.
4012. I mean for carting water for your domestic arrangements in the camp? There was one for each company.
4013. Could you get as much water as you liked? Oh, no; the water was very limited.
4014. Even in Bloemfontein? There was plenty of water there.
4015. But I mean as far as you were concerned? We had not the opportunity of getting it.
4016. You had one water-tank for each squadron? I would not be quite certain on that point, but I think so.
4017. It might have been one for the whole Contingent? No. I know that E Company and D Company each had a water-tank.
4018. Do you remember if there was practically a guard there on the water-tank? There was.
4019. So that you could not get any water unless you put in a proper claim for it? No; the water-cart would be full there sometimes, and we would have our bottles empty, and would not be allowed to take any.
4020. That was at Bloemfontein? Yes.
4021. And about a mile away there was a tremendous dam of water? Yes.
4022. But before you could go to that dam to wash your clothes or do anything you would have to get leave from your officers? You would have to get leave, and you would have to be off duty also. We were supposed to be having a rest there, but we were grazing horses and at the stables all day almost.
4023. Did you know anyone named McMillan in your squadron? Yes; there were two of that name. I know the one you mean—he was a tall, fat man.
4024. Did you notice anything peculiar about his pants when he came into Bloemfontein? Yes.
4025. Will you explain to the Committee the condition in which his pants were? He had a pair of underpants on, and his other pants were torn off from above the knee, and the underpants were very grimy. I noticed him particularly.
4026. As a matter of fact, they were only an apology for pants? That is all.
4027. They had gradually dropped off until scarcely anything was left? Yes. The majority of the pants were in a very bad condition.
4028. *Mr. Chanter.*] Did I understand you to say that the clothing—the jackets and the pants—were of good quality? Yes. I am making no reflection at all on the clothing. The clothing was good, but we had it too long. We had too much work to do, and wore it out. I consider the pants were good and the boots too, but we had them too long.
4029. How long had this particular pair of ragged pants been in wear? From the time we left here.
4030. What length of time would that be? About three or four months.
4031. Were the pants exposed to more than ordinary wear? In making breast-works we had, of course, to carry stone, and pants will not last very long at that kind of work. I think the pants lasted us as well as any pants would have lasted under the circumstances. I think they were very good.
4032. *Chairman.*] You were in the same squadron as this man McMillan? Yes.
4033. And there was also a trooper called Young? Yes, J. D. Young.
4034. Did you ever hear of any complaint made by either of these men about only being supplied with one pair of pants? Yes; I think that was in the case of McMillan. I would not be sure, but I know there were several cases of the kind. Somehow or other they could not get fitted at the time, and then bustled away with only one pair.
4035. Did you ever hear out there that the quartermaster who was in charge of the issuing of these stores stopped £1 out of the pay of either Young or McMillan? I heard that 19s. 6d. was stopped for pants that were never supplied.
4036. And the officers afterwards admitted that they had never been supplied? Yes.
4037. When you got your kits up from Capetown to Bloemfontein, of course you had your second suit in your kit? Yes.
4038. But those unfortunate men who had only one pair of pants issued to them here, of course had no second pair? No; and a number had taken their second pair of pants, and had worn them out.
4039. I suppose amongst the men you always found a readiness and willingness to undergo any hardship without complaint? Yes, without flinching at all.
4040. There were not any that might be called growlers amongst them? No, not without cause.
4041. Did you get any stuff supplied from the New South Wales Red Cross Society? No.
4042. Do you know if any of your comrades got anything? I never heard of it.
4043. I suppose you had not much opportunity of visiting that Red Cross establishment? Not that one. But a lance-corporal and myself visited one Red Cross Society to take some shirts and things to those who were in hospital at Karree.
4044. But you did not visit the New South Wales Red Cross Society controlled by Nurse Morgan? No; I never heard of it.
4045. You had not much chance; you were not long in the town of Bloemfontein? Not the second time. The first time we were within 4 miles of the town for a fortnight.
4046. This society was not established there then;—would you be surprised to learn that the New South Wales people sent out great quantities of flannels, socks, shirts, towels, handkerchiefs, &c., gathered from all the towns of New South Wales? I had heard so from home, but I never saw anyone or met anyone who had received any of those things.
4047. If, when you came in from Karree, you could have got a few hundred good comfortable undershirts they would have been very acceptable? Very.
4048. And you would think it would be neglect on the part of some one if they were lying there in the Red Cross establishment, and no one took the trouble to get them for you? Certainly.
- 4049.

4049. *Mr. Chanter.*] You said that the kits were inspected on board the ship on two or three occasions; —was a very careful inspection made? Yes, you had to have every article. The inspection was made, not as to quality but as to the different articles. G. A. Ellis.  
29 Aug, 1900.
4050. At those inspections, were any of the men found to be in possession of more than the regimental supply? Not on inspection days; I do not know of other days.
4051. Was there any "commandeering" of clothing on board—one from another? Well, I think there was.
4052. To use a plainer term, was there any thieving on board? Well, yes; a little. You would occasionally hear of someone losing a pair of socks, or something like that. I had to pay for a pair of socks of which I was short.
4053. Did you hear of any of the men losing their pants at any time? Yes. Some of the pants were found. One pair I know of was found in the sailors' quarters. It was taken from the line while drying.
4054. The man from whom those pants were stolen would be deficient at the kit inspection? Yes; he had to pay. I could not say exactly whether he paid or not. I think the 19s. 6d. was stopped from him; but when he got the pants back the amount was refunded—either refunded or struck off.
4055. So that the fact of some of the men having only one pair of pants on board the ship would perhaps be due to their other pair of pants having been stolen? Perhaps so; but I know that some of the men were not supplied with two pairs of pants.
4056. You know that? Yes. Trooper Watts, I know, was deficient of a whole kit.
4057. And was he lined up for inspection? Yes.
4058. And what was the action of the officers when it was found that he had no kit? I think they took his explanation. I think he came in at the last moment. I know, in reference to his pants, that he could not get any large enough before he went away. He could not get the two pairs large enough; he got one pair.
4059. Were there any number of the men who were supplied with only the one pair of pants? There were several of whom I know—men of my own squadron.
4060. I understand that the rule is, that if a man is deficient in his kit, a deduction is made from his pay? If he is deficient before he goes into action.
4061. *Chairman.*] That is, if he had been supplied with the articles and had signed for them? Yes.
4062. But if they had never been issued to him? I suppose he could prove that.
4063. *Mr. Chanter.*] On the officers making an inspection and finding that a man had only one pair of pants, what explanation would they ask for? They would ask him if he had only one pair issued to him, or, if not, where was the other pair.
4064. If the man replied that he had only one pair issued to him? They would pass on to the next man. There was no means on board of further inquiry.
4065. But we have been told that there were extra stores on board to the amount of 10 per cent.? The men never got the second pair.
4066. Could not the officer immediately take steps to supply the deficiency? No; I do not think so.
4067. As far as you know, the deficiency was not made good on board? No.
4068. Was it made good when you arrived at the Cape? No. In one case that I know of it was not; I could not speak of the whole of them. I refer to the case of Watts, who only had one pair.
4069. And did he go into action with only one pair? Yes. Of course, we are supposed to leave one pair behind at the base.
4070. But he would not leave any behind if he had only one pair? No.
4071. Apart from the hurry, and a certain amount of unavoidable hardship, do you think that matters could have been materially remedied if your officers had been more practical in their methods of distribution? I think so. We put it down to their newness to the work—their want of experience, occasionally, in getting things for us.
4072. Due discipline being observed, were the relations of the officers and the men as they should be between soldiers? Oh, I think so; yes.

Leslie Reginald Hopkinson called in, sworn, and examined:—

4073. *Chairman.*] You were a private in the Mounted Infantry Contingent, commanded by Colonel Knight? Yes.
4074. What Company? D Company.
4075. Who was the Captain? Captain Bennett.
4076. You went from Sydney in the "Southern Cross"? Yes.
4077. What were the conditions in regard to tucker, and that sort of thing, on board the "Southern Cross";—were the provisions good, bad, or indifferent? They were not too good.
4078. Some of the provisions were not too fresh, were they? No.
4079. Do you know if any complaint was made amongst the men, in regard to the provisions, on the way out? Yes; there were two or three complaints made. The men went to the officers, who I think did the best they could for them.
4080. Is it a fact that some of the food supplies had to be condemned, and something else substituted? Yes.
4081. Were you out at Karree? No.
4082. You were camped at Rusfontein? Yes.
4083. Do you remember seeing me out there? I cannot say I do.
4084. You had no tents? No.
4085. And it rained considerably there for five or six days, did it not? Yes; about five days.
4086. It can rain fairly well there when it starts? Yes.
4087. What was the food like when you were camped at Rusfontein, about 2 miles from Bloemfontein? The food there was pretty good.
4088. Of what did it consist? We had about half a loaf of bread a day—the loaves were 1 lb. loaves; and we had jam every second day, and cheese. That was the best food we got while I was with them.
4089. And you had bouilli beef, or sometimes fresh beef? Nearly always fresh beef.
4090. How did the bouilli beef compare with some of the fresh beef you got out there? I would rather have the bouilli beef by far.

L. R.  
Hopkinson.  
29 Aug, 1900.

- L. R.  
Hopkinson.  
29 Aug., 1900.
4091. I think that is the general opinion among most of the "Tommies"? Yes.
4092. The fresh beef always seemed to have been cut off the horn, or some such part? Somewhere where it was pretty hard.
4093. What was the quality of the bread,—was it good? It was not very good.
4094. A bit doughy? Yes, it was doughy, but we were glad to get hold of it.
4095. And pretty dark in colour? Yes.
4096. If anyone supplied you with bread of that quality here you would be apt to object? Certainly.
4097. Do you know what they used to charge for one of those small loaves? You could buy one for 2s. I paid 5s. just out of Johannesburg for a loaf of bread.
4098. So that it was rather an expensive country if you wanted to purchase anything in the way of food? Yes.
4099. The additional cost is due, is it not, to the fact that there are long lines of communication to keep up, and consequently great difficulty in getting stuff there? Yes.
4100. What did you think of the saddles and the horse equipment that you had? It was pretty fair, but the D's on which you hang your things broke off soon.
4101. They were too weak, and could not carry the weight of your accoutrements, saddle bags, &c.? Yes.
4102. How did the horses' backs stand, as a rule? I think the padding used to give the horses sore backs at times.
4103. Before you got the remounts at Bloemfontein the horses were a pretty scrubby-looking lot, were they not? Yes.
4104. And most of them then had, or had previously had, sore backs? Yes.
4105. *Mr. Chanter.*] Was the sore principally on the wither or the back of the horse? Principally on the wither.
4106. *Chairman.*] In fact, some of them were sore all over? Yes.
4107. Did you afterwards get the military saddles? I had a military Imperial saddle issued to me at Naawpoort.
4108. How did you like it for that class of work when you got used to it? It is a good saddle, I think.
4109. It has a bigger bearing on the horse's back, being longer? Yes.
4110. And seems to be better for the horse as well as the rider? Yes, much better for the horse.
4111. The saddles you took with you might be right enough for ordinary bush work, but do you consider they were class enough for military purposes? No.
4112. As a matter of fact, as soon as you got Imperial saddles you discarded them? Yes. I would rather have the Imperial saddle by far.
4113. Was it not a standing joke amongst some of you, that the greatest disaster that could occur to the Boers would be to throw those saddles out on the veldt and let them pick them up? I have heard that said.
4114. That went to show that they had not a very high opinion of the saddlery? Exactly.
4115. How did your helmets stand? The helmets were no good at all.
4116. They were of this pattern, were they not [*sample gossamer helmet produced by Major Boam*]? Yes; that is something like what they were when we left.
4117. And afterwards they became like that [*Second Contingent helmet, returned from the front*]? Yes.
4118. And afterwards did you see any of them look like that [*the better of two returned helmets produced by Major Boam*]? Yes, concertinas.
4119. You used to call them that in joke amongst yourselves? Yes.
4120. That would be a fair sample of what the helmets were like before you got supplied with fresh ones? Yes.
4121. Did you ever see one like that [*the worst of the two returned helmets produced by Mr. Sleath*]? I cannot say I ever saw any as bad as that.
4122. Still, if I tell you that I got that direct from one of your Contingent, you would have no reason to doubt it? No; they would come like that in time.
4123. Looking at the material inside, you can see that it is not the sort of stuff with which helmets should be made? Yes.
4124. That material would be more suitable to wrap butter in, would it not? Yes; something like that.
4125. How did the great-coats wear? They were not very good, either; the water used to come through them.
4126. This is the pattern, is it not [*produced*]? Yes, that is the style; but none of them were as good as this one when we started from here. They must have been old ones, because at the back were the names of the different regiments they had belonged to in Sydney. None of them were new.
4127. You say they would not resist the rain? No.
4128. Afterwards the Imperial authorities supplied you with overcoats? Yes; they were dark blue, lined with red.
4129. How did they seem to suit? They were a great deal better than the overcoats we got from here.
4130. They would resist the rain to a very great extent, would they not? Yes; and were a great deal warmer.
4131. You had to camp without any tents, and sometimes without any blankets, and it was necessary that you should have a very good overcoat, was it not? Yes.
4132. Because it knows how to be cold out there, does it not? Yes; it is very cold at night.
4133. And even when there is no rain a very heavy dew or frost falls during the night? Yes.
4134. So that in the morning the grass or herbage, if there is any about, will be hanging with the water? Yes.
4135. So that even out doing patrol work at night you want something to protect you from the dew, even if there is no rain? Yes.
4136. And you think the overcoat supplied by the Imperial authorities was very much superior to this one? Yes.
4137. In regard to the balance of the clothes, how did you like them? I always found that they were pretty well.
4138. Apart from the helmet and the overcoat, do you think the other portions of clothing were of fairly good quality? Yes.
4139. And you have no fault to find with them? No.

L. R.  
Hopkinson.  
29 Aug., 1900.

4140. Were you supplied with two full suits of clothes? I was supplied with two full suits, but I only wore the one tunic all the time I was there.
4141. I suppose you got through a couple of pairs of pants? I had two pairs of pants. One pair I had at Naawpoort, when they were put into the kit bags, and I have not seen them since, and do not know where they went to.
4142. That was the fate of a great many kit bags? Yes.
4143. They were left at some base, and the troopers never saw them again? Yes.
4144. Did you know a trooper named McMillan in your squadron? I think I know McMillan by name.
4145. And another trooper named Young? I know Young to speak to.
4146. Do you remember seeing anything special about McMillan's pants? No.
4147. Are you aware, from your own knowledge, that some of the members of the Contingent only had issued to them one suit of clothes when they left here? I know that a trooper named Watts only had one suit issued to him.
4148. And there might have been other cases which you do not know of? Yes.
4149. Do you remember seeing that Contingent after they came in from Karree, and when they were camped close to the Irish hospital? No; we went away from Bloemfontein the day before they came in.
4150. You went with Captain Holmes? Yes.
4151. Would you mind telling the Committee what your idea was as to how you were to be paid? I was told that I could leave money here. I left 3s. 4d. for my mother, and I was to get the 1s. 2d. out there—Imperial pay.
4152. Your impression was that you were only to get 3s. 4d. here, with the addition of the Imperial pay—making 4s. 6d. altogether? Yes.
4153. Did you ever hear this question discussed amongst the men themselves out there? Yes; I have often heard them talk about the pay. That is all they believed they were to get—3s. 4d. here.
4154. Did you ever hear the theory advanced that they should get 4s. 6d. here, in addition to the 1s. 2d. Imperial pay? I heard the First Contingent talking about that, but none of our own Contingent.
4155. Taking into consideration the scarcity of rations and the liability to enteric fever, dysentery, and that sort of thing, apart altogether from the ordinary difficulties of warfare, you had a pretty rough time of it? Yes.
4156. How far did you go north? To Johannesburg.
4157. From Bloemfontein, after you went to Thabanchu, going north, I suppose you had some pretty trying times on the march? Yes.
4158. Some days, I suppose, you would get very little "tucker"? Some days none at all.
4159. Either for yourself or your horse? Yes; the horse got very little.
4160. And I suppose you suffered occasionally also from a difficulty in getting anything like decent water? Yes; you could not call any of the water decent.
4161. All those rivers in South Africa seem to have the same peculiarity, and look like mudholes? Yes.
4162. Did you find that the men, all through, seemed to face all those difficulties in a most satisfactory way? Yes.
4163. None of them were what you would call chronic growlers? Oh! no.
4164. But I suppose, in some cases, where rations ran short and where there was absolute neglect on the part of some one or other, the men would naturally feel annoyed? Yes.
4165. When the men knew that the provisions could not be obtained, they went without in a very cheerful way? Yes.
4166. I suppose that sometimes you came to the conclusion, in your own mind, that some one had blundered when you were perhaps a day or more without anything to eat? Yes; we thought some one was at fault.
4167. Because, after all, it is not a difficult country to get a transport through, is it? I could not say.
4168. I mean the tracks are all pretty solid? Yes.
4169. You were invalided from Johannesburg with enteric fever? Yes.
4170. *Mr. Chanter.*] Do you feel any effects from the fever now? If I walk any distance I feel it in my legs, and I cannot put my mind to reading a book or anything like that now. If I sit down to read, I read a couple of lines and give it up.
4171. How long were you in the hospital? About a month I think. I was bad before I went in, and I was bad after I came out. They said I was well enough to come out, but I knew myself I was not too well.
4172. From Bloemfontein you were with the advance column? Yes.
4173. But prior to that you were taking on remounts? Yes.
4174. On board the ship, did you hear of any men being deficient of any of their kit? Yes. I never got my kit myself until I was within a week of Cape Town. There were three or four of us who did not sign until the last day of leaving here. I went away in the uniform of the regiment to which I belonged in Sydney, and I never got my kit until within a week of arriving at Cape Town.
4175. When you were lined up for kit inspection, did you notice whether any of the men had only one pair of pants? Yes.
4176. Did they say they only had one pair issued to them? Yes. Trooper Watts only had the one tunic and the one pair of pants issued to him.
4177. Was he supplied with any more on board? I could not say; I know he did not have the second tunic up as far as Naawpoort.
4178. Was there any commandeering or any thieving on board? Yes, a lot of it.
4179. Of clothing? Everything.
4180. So it was possible for a man to be deficient in consequence of having had some of his kit stolen? Yes.
4181. Were there many cases in which only the one pair of pants for instance had been issued? I cannot say there were many cases, I only know of one or two.
4182. You do know yourself of one or two cases? Yes.
4183. Do you know whether, in those cases, when you landed at the Cape the deficiency was made up and the kit completed by the officers? I could not say. Watts was without his things until he got to Naawpoort.
4184. Did the men make any complaint to their officers on board in regard to the quality of the food? Yes.

L. R.  
Hopkinson.  
29 Aug., 1900.

4185. Did the officers take any steps to remedy matters? Yes; the officers did their best. There was always an alteration when we made a complaint.
4186. After the complaint had been made, and the officers had interfered, was the supply better? Yes.
4187. In regard to the saddles, were the sores on the horses confined more to the withers than to the back? Yes; they were more on the wither than on the back.
4188. What was the average weight that you would carry on the pommel of the saddle? I could not say exactly.
4189. I presume you did not carry saddle frames? No.
4190. When encamped, how did the men use the saddles; did they put them in the tent? They had no tents to put them in.
4191. You did not string a rope and put them across? No; when you got off you would link the horses together and put your saddle in front of the horse.
4192. Did you use them for sitting on, or for pillows? No.
4193. Did any of the men use them for that purpose? Yes; they used to sleep on them at night, and if it came on to rain they would lay them across their chests for protection. At Rusfontein we got galvanized iron off the roof of the houses and made bits of huts to put the saddles in.
4194. The saddles were not used for seats on the ground? No, I never saw that.
4195. Were there any footballers in your corps? I could not say.
4196. You did not have any games of football with the helmets? No; I never saw the men playing football with them.
4197. The helmet shown to you by the Chairman, for instance, was not used as a football? I could not say; I never saw it before.
4198. Did that helmet belong to a member of your corps? Yes; in the same regiment.
4199. Can you give any reason why, if it had ordinary care, it should be burnt inside? I cannot say why it should be burnt inside like that.
4200. Were there any of your men who, in some exceptional cases, would not take reasonable care of their things? Yes; there were a lot who would not take care of them—who would sleep on them, or do anything like that with them. They would not stand any treatment like that. If you put your head on the helmet it would go in. I never tried it with mine.
4201. Did the bulk of the men use their helmets in a reasonable manner? Yes.

Martin Abel called in, sworn, and examined:—

M. Abel.  
29 Aug., 1900.

4202. *Chairman.*] Were you a member of the Second Contingent? Yes; under Colonel Knight.
4203. What Squadron were you in? B Squadron.
4204. Who was the Captain? Captain Lenehan.
4205. You left Sydney in the "Southern Cross"? Yes.
4206. What were the provisions on board like? Not too good.
4207. What was the meat like? Sometimes we could eat it, sometimes we could not.
4208. And the bread? Very doughy.
4209. The provisions generally were bad or indifferent? Yes.
4210. Did the men make any complaint? They were always complaining, but they could get no satisfaction.
4211. You landed at Cape Town and proceeded to Modder River? Yes.
4212. From there you joined in the march to Bloemfontein? Yes.
4213. Will you give me your opinion upon some of these helmets;—I suppose you were all supplied with helmets? Yes.
4214. Is *Exhibit C* like the helmet with which you were supplied? Yes, in shape, but it was lighter than that in colour; we had to put Condry's fluid on to the helmets to darken them.
4215. I do not suppose you are an expert in helmets; still, do you think the gossamer material of which this helmet is made would resist wet? No; the wet used to come through.
4216. You were not surprised, when you look at the material, that the wet did come through? Not a bit.
4217. How did your helmet stand? It was very easily dented, and it was finally of no use to anyone.
4218. You see this helmet (*Exhibit I*), returned from the front;—would that be a fair condition for a helmet to be in after it had been worn for some time;—would the helmets with which you were supplied be in a better or worse condition? Worse.
4219. This helmet is a bit soft on the top? Mine was worse than that.
4220. As a matter of fact, did not the men generally call them concertinas? Yes.
4221. From the fact that they collapsed? Yes.
4222. Here is a helmet which I myself brought from the front;—yours was, I suppose, in much the same condition as that? Mine was slightly worse.
4223. This helmet, according to the name inside, belonged to Walter Kavanagh;—you are satisfied, I presume, that that would be Kavanagh's helmet? Yes; it is of the same description as those supplied to us.
4224. You say that yours wore even worse than that? Yes.
4225. You wore the helmets from here to Bloemfontein? Yes.
4226. You arrived at Capetown about the 20th February? Yes.
4227. And you got fresh helmets supplied at Bloemfontein from the 20th to the end of April? Yes.
4228. So that your helmet would have had only two months' actual wear? Yes.
4229. And you say that during that time your helmet got worse than that I am now showing you? Yes; my horse fell on the top of me, and my helmet went underneath. It was worse than the helmet you are now showing me, however, before that. Of course when it got underneath the horse it got broken up altogether.
4230. You see this other helmet, brought from the front;—were many of the helmets you saw in as bad a state as that? Yes; I have seen a number as bad as that.
4231. You see the gossamer material of which that helmet is made;—have you ever seen what is called "butter cloth"? Yes.
4232. With the exception that "butter cloth" is cleaner than that piece which I now show you, it would resemble it, would it not? It is something similar.
- 4233.

M. Abel.

29 Aug., 1900.

4233. You do not think it is the sort of material which would resist wet? No.
4234. In your opinion, therefore, the helmet supplied to you was of very bad quality? Yes.
4235. It did not stand wear at all? No.
4236. What did you think of the helmets before you went away? I thought they were very light, but that if we got any changeable weather they would be of very little use. In hot weather, it looked as though they would not be of much use to the back of our heads. They had no peak on them, and our faces began to peel from exposure to the sun. We had to turn the helmets back to front to keep the sun off, and what with the dust and sweat, and our faces peeling, it was very painful.
4237. Did you belong to any Volunteer regiment before you went away? No; I was a trumpeter of the Permanent Artillery.
4238. Did you always wear a helmet? In the summer time, and caps in winter.
4239. You had no experience of the soft felt hat? No. I got one coming away from Cape Town, but I had no previous experience of it.
4240. Would you think it a more comfortable and serviceable article of wear than the helmet? I think so.
4241. You would much prefer a soft hat to a helmet? Yes.
4242. Even if the helmet were of better quality than that supplied to you? Yes.
4243. Do you think that is the general opinion among the men? Yes; they all, when they saw the hats, tried to exchange their helmets for them.
4244. In regard to the other clothing supplied, did you think it suitable? I had to make mine last as well as I could, because they gave me only one pair of trousers.
4245. Did your tunic stand fairly well? Yes.
4246. And the pants? Yes.
4247. How did the overcoat suit you? Some of the overcoats supplied were all right; I had a good one, but a number of them did not seem to stand wear at all.
4248. Do you know if they were all new, or whether some of them were second-hand? I could not say.
4249. Were they waterproof? When it rained there, it rained as a rule very heavily; the coats kept the rain out for about three hours of good rain—at least mine did; I do not know about the others.
4250. You reckon that yours was a specially good one? Yes.
4251. Was it like the overcoat exhibited? Yes; but I think mine had more lining.
4252. The coat exhibited has no lining? No; mine had white lining across the shoulders.
4253. That might to some extent account for its keeping out the rain? Yes.
4254. Have you since been supplied with Imperial overcoats? Yes; I got one in Capetown.
4255. One of the dark blue ones? No; I got a Queensland coat; a new one.
4256. Did you see any of the blue ones given out, with red linings? There were some new blue ones given out, but they were not the kind of coat you are referring to; they were not quite so heavy.
4257. Did you see any of the big heavy coats, with pockets in the sides? No.
4258. How far north did you go? I got within 5 miles of Bloemfontein.
4259. The big overcoats were given out afterwards? Yes.
4260. Then you got enteric fever? I had a horse fall on me first; then my kidneys were injured, and I was sent into hospital. I got enteric fever afterwards.
4261. Then you cannot speak in regard to what took place after your arrival at Bloemfontein? Not from personal knowledge.
4262. What do you think of the saddlery supplied? It was no good.
4263. That is the conclusion you have come to? Yes.
4264. You think it was unsuitable? Yes.
4265. Was it the means of giving many of the horses sore backs? It gave them all sore backs.
4266. Were the sores on the withers or on the backs? Both.
4267. Did you find that the D's would not hold? They would not hold at all.
4268. The result would be that, in using them, you would be liable to lose your equipment? You would be liable to lose everything on the saddle.
4269. I suppose you saw some of the military saddles there? Yes.
4270. What opinion did you form as to them? They were a great deal better than ours; they were stronger in every way.
4271. The panels were much longer? Yes.
4272. They would therefore cover a greater space and ease the horse? Yes.
4273. Distributing the weight more evenly over the horse? Yes.
4274. In regard to provisions—how did you get on during the march; you had a pretty rough time, had you not? Sometimes it was catch-as-catch-can; at other times we got two biscuits given to us. When you went to ask for meat you would find that the officers had it, and there was none to spare, or something of that sort.
4275. So that you had a pretty rough time of it? Yes.
4276. You were at Paardeburg? Yes.
4277. It was just before Paardeburg that you had your first engagement? No, it was after Paardeburg. We were patrolling up and down the river when they brought Cronje's lot down. We were sentry all round, to see that they did not escape across the Modder.
4278. You were there when young Holborow got shot? Yes; I took him to the hospital.
4279. You had a pretty hot five minutes? Yes; it was hot while it lasted.
4280. Do you know Trooper English? Yes.
4281. Did you hear about him rescuing some one? No.
4282. You say that provisions were very scarce? Yes.
4283. And I suppose that food for horses was also pretty scarce? Sometimes we could not get any.
4284. Even when you got your full rations it was not enough for you? No.
4285. Not for a hearty young man having a lot of work? No.
4286. You got what was alleged to be a pound of bouilli beef? Yes.
4287. But, as a matter of fact, it was a short pound? Yes; they put so much of it into the tin, and there was not the quantity which was supposed to be put in.
4288. In fact, the weight was a little over three-quarters of a pound? Yes.
4289. How many biscuits were regular ration? We got only four.

4290.

- M. Abel. 4290. And, practically,  $\frac{3}{4}$  lb. of bouilli beef is a full ration? Yes.
- 29 Aug., 1900. 4291. But in case of your going out for four or five days you would generally be limited to half ration? Yes; and we sometimes had to go on emergency ration.
4292. Did you ever see some of those emergency rations opened? Yes.
4293. I believe they are contained in a small tin about 4 inches long and oval in shape? The tins supplied to us at the Modder River were quite round.
4294. There is a division in the centre, and on one side there is chocolate, and on the other side beef tea? Yes.
4295. Altogether the whole lot would weigh how much? I do not know the weight, but the tin would not be quite as big as an ordinary glass.
4296. And that ration is supposed to keep you for how long? I do not know, but they told us not to open the tins unless we were fairly stuck for food.
4297. Would you be surprised to learn that that ration is supposed to last you for thirty-six hours? I do not think it would last me thirty-six hours.
4298. If you could get nothing else, perhaps it would; but you found, even when you were getting full rations, they were not quite sufficient? At times I thought so.
4299. There were many times when you could have done with another piece of beef and a loaf of bread? Yes; or a biscuit.
4300. When you got fresh beef and mutton, how did you fare? There was very little of it.
4301. And was the quality good? Yes; but we got very little.
4302. Which did you generally prefer, the bouilli beef or the fresh ration? The fresh meat.
4303. In some cases I suppose the men preferred the bouilli beef? Some would rather have the bouilli beef.
4304. I believe there is a certain regulation which provides for a ration of rum being served out to the troops occasionally? Yes.
4305. Did you get it pretty regularly? We got it once.
4306. But you were supposed to get it, how often? Twice a week, I heard.
4307. And you say you got it once? Yes; at Modder River.
4308. Do you think it was not supplied, or that, having been supplied, for some reason or other, you did not get it? I am not able to say.
4309. Did you, at any time during the advance from Modder River, see any special act of bravery performed by any of our men? No.
4310. Generally speaking, how did the troops regard the officers who went away from here—had they full confidence in them? Our men had in one officer—Lieutenant Liddiard.
4311. He is rather a smart fellow? Yes.
4312. How used you to view the Colonel? We did not think much of him; he used to get excited. The first time he was under fire he fired the first shot and then got back out of the firing-line; he lost his helmet and he lost his book, and we never saw any more of him until we went into Osfontein. I saw him there when I took Lieutenant Holborow to hospital.
4313. Is it a fact that sometimes, when the Colonel was in a tight corner, he used to sing out to the men in the most excited way? Yes.
4314. His language was sometimes a little more forcible than polite? Sometimes. I used to think that he would not remain too long among the men.
4315. You thought sometimes that his actions and language were such that he would so annoy the men that they would take the law into their own hands? Yes.
4316. And do what is supposed to have been done on other occasions, where the men are said to have shot their own officers in action? Yes; because he was always bullying, cursing, and swearing. The men would be always trying to do their best, and they were always willing when they got under fire. The more fighting they had the more they seemed to like it; but the Colonel used to curse and swear at them and use some horrible expressions.
4317. A rather favourite practice was to call them all "by and large bloody fools"? Yes.
4318. And when he got into a tight corner, instead of giving the order to retire in a proper and dignified way, did he sometimes say, "Retire, you bloody fools, retire!"? Yes; or he would say, "Come back out of that!"
4319. That sort of conduct did not impress the men at all? No. The men would do anything Lieutenant Liddiard asked them to do—they would obey his orders straight away, and think nothing of it; but when Colonel Knight gave orders they used to sulk, and did not care whether they obeyed or not.
4320. You were in Lieutenant Liddiard's troop? Yes.
4321. How did the Captain of the squadron get on? I never saw the Captain when we got under fire.
4322. Of course, when you were under fire, it would be mostly in extended order? Yes; but you can generally hear the Captain singing out to you if he is there.
4323. There would be how many troops in your squadron? Four.
4324. One troop would be under Lieutenant Liddiard, another under Lieutenant Basche, another under Lieutenant Kelly, and another under Lieutenant Anderson; there would thus be four troop leaders? Yes.
4325. So that if the squadron had instruction to advance to a position, each troop leader would receive instructions from the Captain and would take out his men to the positions indicated? Yes.
4326. So that you do not mean to convey to the Committee, when you say that you did not see the Captain that the chances are that he was not about? None of us saw him. A trumpeter on one occasion came in at night and said that he was lying under a rock, and that the Captain hunted him out and laid under the rock himself. On another occasion, when he saw some men galloping into the firing line, he turned round and called them damned fools, and asked them if they wanted to be shot.
4327. Who was the Captain? Captain Lenahan.
4328. Is it not the fact that there were generally a good many yarns going about at the front? Yes.
4329. Therefore, one had to be very careful as to what one had to believe? Yes.
4330. Then, although the trumpeter had told this tale, it may not have been true? It may not have been true, but all I can say is, that none of us saw him in the firing line. When the men camped at Osfontein, they were asking one another, whether any of them had seen Captain Lenahan, and everyone said "no."
- 4331.

4331. *Mr. O'Connor.*] You had no actual knowledge of the incident to which you refer? No.

4332. It may have been merely a rumour in the camp? Yes.

4333. *Chairman.*] In regard to the officers with the other squadrons, did you hear anything about them, or was your attention confined to your own squadron officers? I remember seeing Lieutenant Kelly among the men just the same as the others, but I cannot speak as to the other officers.

4334. As a matter of fact, you would have more chance of seeing the troop leader than the squadron leader? Yes; but in the first engagement we were split up, and we advanced in different directions for the kopje.

4335. Did you hear anything about Captain Hilliard or Captain Bennett? No; I only heard that Captain Bennett was shot at Driefontein.

4336. After the surrender of Cronje at Paardeburg did you proceed towards Bloemfontein? Yes; we marched all that day without anything to eat. We were picked out the night before we started for Bloemfontein to guard the river, and we were told that in the morning we should get coffee and biscuits before we started. We had only a biscuit and a bit of meat the night before. We were sent away on patrol all night, and in the morning we were all expecting a drink of coffee; we had been working all day before, and we were out all night doing two hours on and four hours off on patrol, but in the morning there was no sign of biscuit or coffee, and we had to go all day without anything to eat.

4337. You found it was not all beer and skittles being a soldier? Not in South Africa.

4338. I suppose you came across a number of Imperial troops, some of whom had seen active service before? Yes.

4339. What was their general opinion of the campaign as compared with other campaigns? They thought that it was a terrible place.

4340. They thought the campaign very severe? Yes.

4341. Still, taking it big and large, the men were always cheerful and willing to go on? Yes.

4342. They never grumbled if they knew the tucker could not be got? If they knew that the transport could not get in, they said nothing about it; if the food was there, they expected to have it.

4343. And when the rations were there, and they did not get them, they thought it pretty rough? Yes.

4344. In some cases where rations were on the ground and available, you did not receive the full amount? No.

4345. Whose fault do you think it would be? It would be McGlen's fault; he was the quartermaster. He would not let us go near the water-cask at times when we were almost dying for a drink, and when we got to the Klip Drift he let us go and get one small pannikin; that was all we got, and the rest we had to forage for the best we could.

4346. McGlen, apparently, was a bit of a martinet? Yes.

4347. I believe he is great upon the subject of regulations? Yes.

4348. There was always a general order to show that you ought not to get provisions at all? Yes.

4349. No matter what occurred, he could produce authority to show that it was right? Yes.

4350. And I suppose that in these cases the men naturally felt a bit annoyed? They did feel annoyed with him. It was his fault on the boat that we got such bad food. He gave us steak one day we could not eat; the men complained, and the matter was taken to the Colonel. He then told the Colonel that it was not the same steak he had put out to be cooked for the men. At night we got some rice and prunes, and he came down "smoothing" the men, and asking them if the rice was all right. They did not make any kind remarks, and after that they called him "The Smooger."

4351. You were taken ill before the time for the reissue of clothes? Yes.

4352. So that you could not speak as to what occurred then? No.

4353. What hospital were you in? I was at Rondebosch; I was sent to Kimberley at first, and from there to Rondebosch.

4354. What sort of treatment did you receive in hospital? Very good.

4355. When you got out of hospital as convalescent, did you come right away? I was in hospital for some time, and they then sent me on board a hospital yacht at Cape Town. I was treated very well there; that is where I picked up—in fact, I got quite fat.

4356. You are referring now to a yacht which a gentleman placed at the service of the Tommies when they were convalescent? Yes.

4357. Every kindness was shown you when you were on the yacht? Yes.

4358. From there where did you go? I went back to Rondebosch again.

4359. And then you went on board the boat? No, I was sent to the Maitland Camp; it is a cavalry camp two miles from Cape Town.

4360. Did you do duty there? Yes.

4361. Did you get refitted with uniforms? Not until I was just coming back. I had no clothes at all worth speaking of when I went there; if I wanted to go into Cape Town I had to borrow a suit of clothes to go in.

4362. How were you off for underclothing? I had only a shirt and a flannel bandage, which they gave me when I was coming from the yacht. When I went to Maitland we got no blankets, and I had to lie down on the damp ground and sleep the best way I could on my overcoat. We were five days without blankets, and the ground was terribly cold and damp.

4363. That again would be the fault of the quartermaster in camp? Captain Bailey, the Queensland officer in charge of us, did all he could. He said he could not get the blankets up; he tried hard to do so, and did all he could for us. Afterwards, some gentleman got on to him about it. He said he was on the Australian Committee; his name I think was O'Donnell. He saw the way in which we were getting treated. There was a "dixie" between five tents; the food was put into it, and the men used to rush at the "dixie" like dogs to get the meat and potatoes. Mr. O'Donnell sent a letter to Sir Alfred Milner, and he came out and inspected the place and got us put in some huts which they were building, and got us beds and blankets; he then got us clothes. Captain Bailey did not like this man coming about the place, and all the boys went to him and told him how things were going on. He made a complaint. But for him I do not think we should have got any clothes at all.

4364. So that, as far as the chief authorities are concerned, they seemed to be quite willing that the men should be well treated; when it came to Sir Alfred Milner's notice that our men were not being well treated, he took steps to have things altered? Yes.

4365. The chief men there seem to have desired to treat the men well, and to supply them with clothes? Yes.

4366.

Mr. Abel.

29 Aug., 1900.

- M. Abel. 4366. But this desire was not carried out, because some of the under officers failed in their duty? Yes.
- 29 Aug., 1900. 4367. In regard to pay, what was your idea as to what you were to receive when you left here? We were supposed to get 1s. 2d. a day from the Imperial Government and 4s. 6d. from the New South Wales Government.
4368. Did you expect to get the 4s. 6d. and the 1s. 2d.? No.
4369. You expected to get 4s. 6d. altogether? Some men said they expected the Imperial pay and the 4s. 6d.; but I did not expect it.
4370. Still, I suppose you could do with it? Yes, it would be very handy.
4371. I suppose that anything you wanted to buy in the shape of provisions in South Africa was very expensive? Yes.
4372. Small articles of clothing, too, were also very dear? Yes.
4373. Did you, before you went away, sign an order for your pay to be given to any one? Yes.
4374. And while you have been away have they received the amount? Yes, 3s. 4d.
4375. You found that 1s. 2d. a day would not go very far in getting what you wanted? No.
4376. I suppose that on many occasions you could have done with a pound or two? Yes.
4377. To purchase simple necessities? Yes.
4378. Taking it all through, the part of the campaign you were engaged in was pretty rough work? Yes, very rough.
4379. Hard living? Yes.
4380. Hard fighting? Yes.
4381. And hard marching? Yes, at times;—we were sent out scouting. I was No. 1 in our four; and while we were some time out they would have tea or something like that, and often when we came in there would be nothing left for us.
4382. Was not some presentation of fruit, beer, tobacco, and cigars made by citizens to be distributed among the men? Yes.
4383. Did these things reach you all right? No; we never got any of them, and what we got we had to pay for.
4384. Who took the money;—what was done with it? I could not say.
4385. A large consignment of fruit also was put on board the ship? I never saw any fruit, only what the officers had.
4386. You think the officers were able to look after themselves fairly well? They did very well on board, from what we saw on the table. Everything seemed to be made pretty snug for them. If we complained about anything, they would put us on what were called Imperial rations. One table complained and they put them on Imperial rations and stopped their duff on Sunday.
4387. I believe the men used to buy poultry off the cook? Yes; sometimes they stopped the bread.
4388. Where did the cook bump up against the poultry? He used to cook it for the officers.
4389. I suppose he cooked more for the officers than they were likely to use? Yes.
4390. And what the officers did not eat he was able to sell to you fellows? Yes.
4391. The Imperial ration on board the ship is not too good? No.
4392. And when the men made any complaint, you say they used to threaten them with Imperial rations? Yes.
4393. Did you meet any of the Imperial regiments in the advance from the Modder? Yes.
4394. How did they get on;—did they get on as well as you did, or better? They seemed to do better than we did; they always seemed to have a biscuit to chew as they went along.
4395. But you do not think the ordinary Tommy can give the Australian points in foraging? No; but when we went foraging and brought anything home there was always a row about it.
4396. By whom? By the Colonel. He would always kick up a row if he saw anything or heard anything in that way.
4397. As a matter of fact, the Colonel used to get very wrath if you happened by accident to kill a sheep? Yes. He did not like it at all.
4398. And you think that on those occasions a great many of the Imperial officers used to look the other way? They did; they were always trying to get a bit of beef when there was a chance of it.
4399. I suppose they recognised that if men were to fight they must be fed? Yes.
4400. While the principle of commandeering may not be altogether right, it is at times absolutely necessary? Yes.
4401. Did the subordinate officers seem to take any notice of it if you got anything in the shape of mutton or beef? No, they would give you a look, and that was about all; they would never say anything to you.
4402. But the Colonel used to get very wrath? Yes.
4403. *Mr. O'Connor.*] Did you have any quarrel with Captain Lenehan? No.
4404. Are you friendly with him? Yes.
4405. Were you friendly with him going over on board the boat? Yes.
4406. Do you think it is fair to make such statements as you have made about your officer, seeing that he is in South Africa? Well, seeing the way in which they treated us over there, I think it is well to let people know about it.
4407. You have virtually accused your officer of cowardice in the field? No, I do not.
4408. You do not accuse him of cowardice? No.
4409. What do you accuse him of? I only mentioned the yarn that came in. I myself never saw him under the rock.
4410. Then you do not accuse him of cowardice? No.
4411. *Chairman.*] As a matter of fact, you have heard yarns about nearly every officer? Yes.
4412. And some of these yarns you knew could not be true? Just so; all sorts of yarns came in.
4413. *Mr. O'Connor.*] In fact, it was a common thing out there for one man to think himself a brave man and another man a bit of a coward? Yes. We were always joking with one another; we gave one another nasty hints now and again. If a man took it, it was his own fault; if he let it go by, he got on much better.
4414. You do not wish to lay any serious charge against Captain Lenehan of cowardice in the field? No.
4415. You have seen Lieutenant Liddiard in the field oftener than your captain? Yes.

4416. He would have charge of you on many more occasions than would your captain? Yes. M. Abel.
4417. *Chairman.*] With regard to the issue of clothing;—what clothing was supplied to you? I got two jackets and one pair of trousers. I was supposed to get another pair of trousers on the boat, but I never got them. 29 Aug., 1900.
4418. *Mr. Cook.*] Did you ask for them? Yes; they said they did not have them.
4419. *Chairman.*] So that you were a pair of trousers short? Yes.
4420. And if your health had remained good, and you had gone on to the front, you would have required them? Yes; I required them as it was.
4421. Do you know of any other man who received only one pair of trousers? No. We had kit inspection on the way over to South Africa, and I told them that I had only one pair of trousers, but they said that they had not any.
4422. Do you know that they were supposed to issue to every man two full suits, and in addition to that take 10 per cent. of spare suits for any emergency that might arise? Yes.
4423. If they had done that they would have been able to fit you out with a second pair of trousers? Yes; but they said that they had not any more.

THURSDAY, 30 AUGUST, 1900.

Present:—

MR. CHANTER,  
MR. MEAGHER,

MR. COOK,  
MR. PIDDINGTON,

MR. WILKS.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Clarence McIvor called in, sworn, and examined:—

4425. *Chairman.*] What are you by occupation? I am a stock expert, and hold the qualifications of a veterinary surgeon. C. McIvor.
4426. You were connected with one of the contingents that went to South Africa? I was directly connected with the Second Contingent from its inception to its embarkation, and also with the Citizens' Bushmen's Contingent. 30 Aug., 1900.
4427. In what way were you connected with them? I first offered my services as an officer, having had previous active service in the Veterinary Department. I could not get in, and I then offered to enlist as a private, but objection was taken on account of my age.
4428. Did you have an opportunity of becoming acquainted with matters relating to the forage? Assuming that the Committee want to get as much information as possible, perhaps I had better tell the story in my own way. I was there from the inception of the Second Contingent and saw the first horses put on the lines in December. Things were at sixes and sevens, and I made various suggestions, having had previous experience. Many of those horses had never been on picket lines previously, and I asked the officers of the day to have the heel ropes put on and let loose, so that the horses might become accustomed to them and so that the ropes might not injure their heels. This was not done. The horses were fastened on to the picket lines—to the pegs—and the result was that horses that had not been accustomed to have their heels strapped, in a great many cases had their heels injured—there were sores, suppuration, and greasy heels. I suppose there were 40 per cent. of them affected in that way. This was intensified by the fact that the heel straps were of new leather, and had never seen a drop of oil. I requested some of the officers to have the heel straps steeped in neatsfoot oil, which would do away with 30 per cent. of the friction, but the suggestion was not attended to. There were then a great number of injured horses on the lines, and I suggested that hospital lines should be put down, which Captain Le Messurier asked me to do. He gave me a fatigue party, and I put down hospital lines and got men set apart to attend to the horses that were injured. An abnormal number of horses were injured owing to the want of discretion on the part of the officers in selecting horses for the riding tests. Many of the horses had never jumped a fence in their lives, and did not know anything at all about it. The men were put on them, and they were presented at the three fences. Where the riders were resolute enough, horses that did not know anything about jumping were very frequently injured, and the men exposed to the risk of being rejected. I have judged horses frequently at shows. In one case a gentleman I knew came down to Sydney and enlisted as a private. He was put on an old crock of a horse that would not jump a rail on the ground, and he was rejected, although at one of the important country shows, where he always rode his own horse, he had competed in a hunting contest, and myself and my brother judge had given him first prize as the most finished horseman out of about thirty competitors. Yet he was rejected by Colonel Airey for inferior horsemanship. I presented these facts to Colonel Airey, who afterwards passed this gentleman on my word. The horse rations were probably the most unsuitable that were ever given to horses. Trying to follow out the Queen's Regulation Cavalry ration, which consists of 8 lb. of oats, 4 lb. of bran, and 20 lb. of hay, they substituted a ration consisting of the same quantity of oats and bran and 20 lb. of lucerne hay. If the gentlemen who had control of these affairs had had larger experience they would have known that they could not have given horses anything more injurious than lucerne, considering the work that would be expected from them. No one who wants any severe exercise out of horses ever gives them lucerne. It has an injurious effect on the lungs and the kidneys—the wind and the water. It will make flesh, but will not do anything to improve the muscle. The oats were given to the horses whole, without any chaff, still following out the British Army Regulations. The result was that most of these horses, being grass-fed country horses, bolted the oats without mastication, and the food went through them undigested. I made several representations that they should get some chaff, and substitute oaten hay, and so feed the horses that they would put on some condition, which would serve them when they got on camp work; but things were at sixes and sevens, and the men were inexperienced. To illustrate the want of promptness and knowledge, I may say that I suggested that a forge should be got, as a lot of the horses required to be shod, and there were several smiths among the troopers to act as farriers. I made this representation to Colonel Airey, who passed it on to Captain Le Messurier, and Captain Le Messurier passed it on to the Acting Quartermaster, who eventually made a requisition for a forge for this purpose. A cart was sent in, and a forge was brought out without any anvil. Next day another trip was made for an anvil and shoeing tools. The anvil and some hammers, pincers, knives, and rasps came out; but no tools or nails, and consequently another trip had to be made.

4429.

- C. McIvor. 4429. *Mr. Piddington.*] How long did it all take? It took four trips to get a forge from the Barracks, and when the anvil came it was so bad that the smiths could hardly beat a shoe on it. I only mention this in passing as illustrative of what happened. While on the question of transport carts, I may say that in my wide experience, and I have had a good deal of back-country experience, I have never seen anything more absurd than the military transport cart and transport harness. They belong to the seventeenth century. The harness of the poor unfortunate horse is exceptionally heavy, and actually clothes the greater portion of him. The result is that the perspiration produced by having to carry this abnormally heavy harness has an effect upon the horse. The most serious thing of all in connection with these transport-carts is that the draught is so high that the horse is incapacitated to the extent of 25 per cent. of what he would be able to draw if properly yoked; but the military authorities are hardly to blame in the matter, because this is the War Office pattern. Now I come to the saddlery. A thing I got myself considerably out of favour over was that I objected to so many artillery officers going out who practically did not know anything about cavalry or mounted infantry drill. I further represented to several officers that it was the most ridiculous thing I had ever seen that the Second Contingent should have no mounted drill. They got plenty of infantry drill on foot; but there were only one or two occasions when a small troop of twenty-five men were given mounted drill. They actually went on board the ship without ever having been mounted. When I made this representation, Captain Le Messurier and others said that they had no saddles, which was not quite correct, because there were probably 100 saddles there which would have been available. Several of the troopers had brought their own saddles, and there were some others. I saw most of the saddles and the gear. The saddles were made of fair material; but they were hurriedly put together. I saw the first load that came out, and I told them then that the saddles were so hurriedly put together that they would fall to pieces. I also said that the webbing girths must have been selected by somebody who had had no experience whatever, and that they would not last any time. I also objected to the stirrup-irons; they were made of what we back-block men call "pot metal." I further said that they could easily have got these saddles well within the time required if they had farmed them out to the different celebrated saddlers in our country townships, such as Wagga, Bathurst, and other places, where there are men who have wide reputations for making saddles. The number required could easily have been got by sending to Wagga for fifty, to Bathurst for fifty, and to Orange and other towns, instead of being put through a factory at a slop rate. There was a serious objection also to the stirrup-irons. I saw several accidents out there. The regulation boot was a fairly big boot. Many of those young fellows from the back country have pretty good "understandings," and when they put their foot into a stirrup-iron it was literally jammed, and in case of an accident, they could hardly get it out. I saw three or four men, who had come off their horses, dragged in this way.
4430. *Chairman.*] Were the stirrup-irons below the average size? Yes; they were quite below the average size. Nothing causes so much fear in a horseman as a stirrup-iron in which his foot is jammed. In regard to the saddlery, knowing South Africa, and that there was a lot of hill work to be done, I represented strongly that the Second Contingent, and all the other troops that were going, ought to be supplied with sound good breastplates. I may state that the D's in the saddles, on which are hung the trooper's rifle, bucket, and other paraphernalia, were simply scandalous. I pulled a dozen out. In regard to the saddles themselves, there is no new saddle, which, after a week's work, does not require restuffing, and these saddles should all have been used and restuffed before the men left. It was the most silly thing that was ever perpetrated. Everybody who knows about saddles knows that a new saddle must be restuffed after a week's work. One of the most ridiculous orders I had ever heard given in my life—and I have heard a few given at various times—was with regard to the gear the men were instructed to put under the saddle. First there was a heavy felt numnah, then there was the man's blanket, and then a water-proof sheet. This raised the saddle practically 8 or 9 inches above the horse's back, making the seat insecure and dangerous, as well as painful to the man and to the horse. This was an order that I was very much amused about. Three or four of the Dragoon Regiments in India were supplied with the skeleton saddle—a saddle without a panel—and orders were given that the waterproof, the blanket, and the numnah were to act instead of a pad; but our saddles were all colonial saddles, and yet this ridiculous order was insisted on and acted upon. With regard to the purchase of the horses, I was there every day, and I should be sorry to exaggerate in the slightest in regard to the quality of the horses. Colonel Airey was the officer in charge of the purchasing department, assisted at first by Lieutenant Veterinary Surgeon Bowker. I was very sorry to see an immense number of what I would term rusticated 'bus horses, who had served long terms of drudgery in the Sydney streets, purchased as mounts for these men. There is also another thing, which I am rather dubious about stating, and which is rather painful to me to have to say, but it is a fact, and I suppose it had better be brought out. Numbers of the officers had crocks in different places—practically pensioned off—screwed and useless. These crocks came in, and I noticed that a great many of them were accepted. I may tell you that after they rejected me, I was asked to write military articles and keep an eye on the Contingent, which I did very faithfully, and I may say that I was the Ishmail among the scribes; I always saw everything myself, while the other gentlemen of the Press went to the officers.
4431. *Mr. Meagher.*] For what paper were those articles written? They appeared in the *Australian Star*. I wrote under the pen name of "Old Campaigner." I may say that a few days before the Contingent left, after I had made strong representations to Major Knight and others about the rations the horses were getting, a few tons of chaff were sent down, and it was noticeable that the horses began to improve directly they had chaff, so that they could masticate their oats. The riding test was really not severe enough. It was a ridiculous thing. It was much better in the case of the Citizens' Bushmen's Contingent, when Mr. Featherstonhaugh introduced a variation. The correct reason why the Second Contingent received little or no mounted drill, was because most of the officers, being artillerymen, knew nothing at all about mounted drill. Amongst the Sergeant-Majors there was only one who had any cavalry or mounted infantry experience. I fancy that had a great deal to do with the fact that the men were not drilled on horseback. It was very much better in the case of the Citizens' Bushmen's Contingent; they received a considerable amount of mounted drill from which both horses and men benefited, because a horse requires knowledge of drill as well as a man does.
4432. *Chairman.*] In regard to the saddles, you said that in hilly country the men ought to be supplied with good strong breastplates? Yes; a good strong plain leather breastplate.
4433. And were they not so supplied? No.

4434. Did they not have breastplates? No; the Second Contingent did not have breastplates—not that I saw. The saddlery was brought in cart-loads after the men had shifted on to the show-grounds, and a few breastplates might have been included in that way. But there were no breastplates with the first lots of saddles that came. C. McIvor.  
30 Aug., 1900.

4435. What officer was in charge of the Forage Department? That comes under the Veterinary Department; Captain Gribben would be responsible for that.

4436. You say that, to start with, they were giving the horses oats without any chaff? Yes; they followed the stupid Imperial Cavalry regulation, except that instead of having 20 lb. of English meadow hay, which is highly nutritious, they had 20 lb. of lucerne, a fodder which is essentially leguminous, and has the effect of bringing on a disease we call diuresis—a profusion of water, or a form of diabetes. There is not a single employer of horses—take, for instance, the big stables of Anthony Hordern—who sends an ounce of lucerne into his stable.

4437. It may be good enough for fattening, but does not do for work? For flesh production it is fairly good, but even then you must not have too much of it. It is very good for a change, and a little on board ship would have been very advisable.

4438. It would naturally make the horses soft? Yes; it would make them soft and flabby. My idea was to have the horses built up—to put a little muscle and condition on them—so that when they arrived in Africa they would be able to stand some hardship.

4439. What do you think of the horses, as a class, that were purchased for the Second Contingent? I think that 30 per cent. of them ought to have been rejected.

4440. From what you have seen, do you think that Lieutenant-Colonel Airey is really a good judge either of horseflesh or horsemanship? I should be very sorry to judge with him in the show-ring, because we should have very big differences. He never paid sufficient regard to the horse's feet, and one of the most essential things in Africa, and, indeed, anywhere, is to have a good-footed horse.

4441. You said that he rejected one man for his riding who had taken prizes in the show-ring? Yes, at the Wagga Show, not once, but repeatedly. I judged him once at Wagga, and he was given the prize as champion horseman, and there were thirty or forty other competitors, all pretty good riders.

4442. Do you remember his name? Yes—poor Andrews, who died at Capetown. He was so cut up about this that he would not go with the mounted rifles. He went over and joined the Australian Horse, and was immediately made a corporal.

4443. Do you know of any others who were rejected, and afterwards shown to be good horsemen? I saw three distinct cases of personation; men who wanted to go, and could not ride, found substitutes to pass the riding test.

4444. Did you know a trooper called Rudd? Yes, very well—Frank Rudd.

4445. Did you ever see him ride? Yes; that is a case that slipped my memory. I think he is about as good a horseman as you could find in Australia—an all-round horseman.

4446. He is considered a crack rough rider? Yes.

4447. Do you know whether he was rejected? Yes; I know he was, and I made representations to Colonel Airey about him too. It was the most ridiculous thing in the world. I would back him against any man on the ground as an all-round horseman. Probably he was a little rough; but as a horseman he was a really good man.

4448. Did you see of any of the forage supplied for the horses on board ship? I saw the "Southern Cross" fodder—the lucerne. There was a lot of that faulty. It was a bit rank—what we call a bit "bambooy."

4449. Did you see any of the transport waggons or carts that they had? Yes; I saw them all. I paid close attention to everything that was there.

4450. What sort of vehicles were they? The transport carts were of very good material, and well and faithfully built. But I find fault with the pattern, as I have already remarked. A practical carrier would not have anything to do with it. The draught is so high that you lose 25 per cent. of the pulling power of the horse.

4451. Did you take particular notice of the naves of some of the wheels? There were a few that were hurriedly put together and covered over with paint; but taking them on the whole, I think they were a fair lot.

4452. Is it a fact that in some of the carts the shafts were not interchangeable? Yes, that was so; some of them were fixtures.

4453. Do you think that either the carts or the waggons were suitable for that class of work? No, decidedly not. Knowing the country, I suggested that our Contingents, in order to get through the country, should have a number of pack-horses and pack-saddles. Two pack-horses would carry as much as you could carry in one of those carts through South Africa.

4454. But seeing that wherever an army has to go its guns and ammunition carts must also go, the pack-horse would only come in under certain special circumstances? For flying columns and despatch work.

4455. Is the class of waggon that is handled by the military here of a pattern which you would adopt if you were a private individual? Decidedly not.

4456. Do you know if there are any regulations in regard to weight, size, and that sort of thing? I could not say that; but I know they are unwieldy and unsuitable, even for carrying heavy material. They could be much lighter, and still quite as durable as they are now.

4457. Did you come to the conclusion, after taking a great deal of interest and doing a lot of work in connection with the Contingent, that amongst the Military authorities there were very few officers who had any idea how to treat horses at all? It was really scandalous the treatment the Second Contingent horses got on the lines. It was a most insane thing to take a good horse, fresh from the country, that had never been picketed before, and put him on the picket lines and make him fast by the head and the heels. There is a big chance of injury to the horse himself and also to the horses on the lines near him. The horses should have been trained to go on the lines.

4458. There was surely plenty of time to do that? Ample time. Five or ten men could have been deputed to look after the lines, and to take the new horses and make them trail the heel-ropes for a little while, and show them they had to be held by them.

4459. And if they had steeped the heel-straps in neatsfoot oil it would have been an improvement? It would have done away with 30 per cent. of the friction. The leather was new and hard, and, of course, it got wet, and the sand there made it much worse.

- C. McIvor. 4460. Did you see an examination of any of these horses conducted? Yes, repeatedly. In fact, I acted one day as veterinary officer in the selection of the horses. All the dealers got a tremendous "set" on me; I did not take quite as many as used to be taken.
- 30 Aug., 1900. 4461. Do you remember some instructions reaching the camp that they were not to take horses under 15·2? Yes. They paid more regard to the height of their horses than to anything else.
4462. Did you see a number of horses getting measured out on the range one day? Yes, I did; and I saw a beautiful horse rejected which ought not to have been rejected.
4463. Do you remember how many officers were gathered together to superintend the measuring of those horses? Yes; I think there was Major-General French, Major Knight, Lieutenant-Colonel Airey, Captain Lenehan, and Captains Mills, Gribben, and Pearce. I remember having to go to Captain Gribben. He was classifying horses in the different departments—infantry and cavalry. They had commandeered six or seven private horses belonging to friends of mine who were away drilling, and I had to go and make strong representations indeed to get those horses back.
4464. *Mr. Meagher.*] You say that the horses that were on the line and which had not been picketed before suffered from greasy heels and other injuries in consequence? Yes. A tremendous lot of horses were injured on account of the practice of indiscriminately taking horses off the lines for riding tests and putting horses over fences that had no knowledge of negotiating a jump.
4465. *Chairman.*] Did you not say that at least 30 per cent. of the horses suffered from greasy heels? Yes; and I am sure I am understating it. As an old soldier, I may refer to the question of the helmets which I see has come under your consideration. From the very first I said the helmet was the most ridiculous thing you could take on an active campaign. They have adopted it in India, of course. It is very good in the barrack-room where you hang it up, but where you have to lie on the grass, and out in the wet and frost, your helmet begins to lose its shape and becomes useless, and when you are on the firing line it always gets down over your eyes somehow or other. They have, of course, a reason for not taking the wide-awake felt hats, but for a campaign the wide-awake felt hat is the best thing that could be taken.
4466. In the case of the Citizens' Bushmen's Contingent, did you notice that some of the horses sent down as presents from squatters were practically useless—that they were dangerous to other horses and also to the men on account of their kicking propensities? A lot of the horses that were sent down by squatters as presents were certainly fresh, but I did not see any of them that a capable horseman could not master.
4467. And you think that the horses which the pastoralists sent down as presents were a good class of horse? Yes; in some cases they were excellent horses. I remember one lot in particular which came from Mr. Frank Mack, of Narromine; they were excellent horses. It was quite a pleasure to see them alongside some of the horses that had done service in 'buses. I may say that there were a great many of the 'bus-horse kind among the horses of the Citizens' Bushmen's Contingent also.
4468. Did you personally recognise those horses as having served in a 'bus? Yes; you can always tell a horse that has done a lot of collar-work. A trained eye will always distinguish such a horse.
4469. Were any of these 'bus-horses among the number of those which passed the inspection of the nine officers whom you mentioned? Yes; scores of them.
4470. *Mr. Piddington.*] The 'bus proprietors were working off their old stock? I do not know anything about that; but they went into the hands of the dealers, and they found their way into the camp, and many of them found their way to South Africa.
4471. *Mr. Meagher.*] In connection with the Citizens' Bushmen's Contingent, was Mr. John Randall Carey one of the gentlemen who assisted in passing the horses? He was.
4472. I suppose you know that for many years he was a director of the 'bus company? Yes. I remember a very good joke when I was out there one day. Major Carey was buying a horse, with the assistance of the Lieutenant Veterinary Surgeon, and amongst the horses offered was a horse that had reputedly belonged to Major-General Hutton. The vendor was very loquacious. The horse was really a good sort of horse; but I noticed that on the near side he was hipped, and on the off side his hip was what was called "slipped." On account of these malformations it took half an acre of ground to turn him. They bought this horse, and I chaffed Major Carey about it immediately they had selected him. I said, "You have done a very clever thing in buying that horse—it will take half an acre of ground for him to turn in."
4473. *Mr. Piddington.*] Could you say how many instances occurred to your knowledge in which good riders were rejected through being put on these 'bus horses? It was really an every-day affair.
4474. Were there many of them? Yes, I saw any number. A good horseman always knows another. All you have to do is to see him pick up his reins and get into his saddle, and you know at once whether he is a good horseman or not. I saw any number of capable horsemen put upon those corks that should not have been used for the purpose, and the result was that they looked ridiculous. They had neither whip nor spurs, and when you are on an old plug, no matter how good a horseman you may be, you do not look as you ought to do. Apropos of this, they began to take umbrage at my suggestions out there. In fact, I was treated with a great deal of hauteur after things had settled down and got into the military rule. I remember suggesting to Colonel Airey and Major Knight that we should pick out a lot of the horses that we knew were capable of jumping, and then the horses would be less liable to be injured, and it would be fairer to the men in the riding tests. We picked out about forty horses that we knew were proved jumpers, capable of carrying the men over the obstacles, and the result was that fewer horses were injured and fewer riders rejected. Many a good man was rejected on account of his riding who should not have been rejected.
4475. Was it an every-day occurrence for one man to ride for another man? I cannot say. It was commonly reported in the tents among the men that there was a good deal of impersonation, and I know of three distinct cases.
4476. *Mr. Wilks.*] You stated in your evidence that many of the officers worked off some of their old "corks," as you called them? Yes.
4477. Was that general amongst the officers of the Contingent? I do not say it was general. I do not say it was the officers of the Contingent even. But certain military officers had certain horses that were practically pensioned off—out for long spells, more or less screwed—and they appeared, and a great many of them were accepted.
4478. You do not say the officers were officers of the Contingent? No.
4479. Do you say they were Staff Officers? They were military officers of New South Wales.
4480. That might mean Volunteer officers? I do not mean Volunteer officers; I mean Permanent Military officers.
- 4481.

C. McIvor.  
30 Aug., 1900.

4481. Staff Officers? Yes.
4482. Staff Officers worked off their horses that were pensioned off—what you call “crocks”? They worked off horses that were more or less used up.
4483. That were not marketable under ordinary circumstances? Quite so; or, if they were marketable, they were marketable at a very small sum.
4484. You would put them on a level, perhaps, with the ’bus horses you spoke about;—were they worse than the ’bus horses? Some were worse, and some better.
4485. And did they get a substantial price for them? I think so; I am not quite sure about the price, but I am given to understand the price was satisfactory to the vendors.
4486. Then the vendor would probably be the purchaser too? No; the horses had to pass Colonel Airey and also the Military Veterinary Officer.
4487. But in that case Colonel Airey and the Military Veterinary Officer would be passing horses which belonged to fellow officers of the Staff? I do not say that there was any collusion in any way. I do not know whether Colonel Airey and the Military Veterinary Officer would be able to identify them, but nevertheless they were bought.
4488. Do you not think it quite possible that Captain Gribben, for instance, who is a Staff Officer, would recognise one of these pensioned off horses, when it was brought before him, as belonging to one of his fellow Staff Officers? It is quite possible.
4489. Would you not have been able to recognise a horse belonging to one of the Staff if you had been in that position? Yes.
4490. Would you not think that a skilful veterinary surgeon like Captain Gribben would immediately recognise one? I do not know.
4491. Can you give us an instance of a particular Staff Officer? Captain Le Messurier was riding a horse there which did not suit him, and he asked me to look out for a good horse amongst those which were coming in. I saw a horse that would suit him, and I said, “There is a horse over there that would suit you very well”; so he looked at the horse, got him, and had a ride and was pleased with him. The result was that he got this horse purchased, and made arrangements to substitute his own private horse for the horse he purchased. There were several other horses well-known at the Barracks which appeared on the lines and were purchased by the purchasing committee.
4492. And these horses well-known at the Barracks were what you call screws? More or less “screwed.”
4493. The only excuse for an experienced man like Captain Gribben in passing them would be that there was a rush? I do not want to say anything derogatory to any officer, but this irregularity arose, and I pointed it out at the time to two or three of them, and I said that it might be a source of trouble to them. There was a great deal of commandeering and rushing about with horses there; in fact, I was constantly in hot water rescuing private horses from officers who were taking them from the owners.
4494. Is there any truth in the report circulated at the time, that officers would take the horses that were given to some of the privates—say, for instance, where a private, leaving a certain district, was presented with a valuable horse? Yes.
4495. There is truth in it? Distinctly.
4496. That is to say that the officers, of their own free will, would appropriate a man’s horse—that if Private Jones, say, of Mudgee, brought a valuable horse that had been presented to him, some officer would appropriate it to his own use? It happened this way: When an officer was on the lookout for a good horse he would go and get the veterinary officers to pass the horse and then he would appropriate it. In some cases the owner never got the horse back again. I will give an instance in which Alfred Du Freyer, who got the Queen’s Scarf the other day, was concerned. He brought down a horse from Narandera—a very good horse. During the time he was in camp a particular friend of his came to see him, and after looking at his horse very carefully, the friend said, “Look here, Alf, I do not think that horse is fit to carry you, I will send you Playboy.” Playboy was a celebrated hunter and show prize-winner. These horses coming down were consigned to the Military authorities at Randwick, and were, of course, brought down free. An officer and a party of men went every day to get the horses from the railway station. As the time of departure approached, and Playboy did not arrive at the camp at Randwick, Du Freyer became very much exercised about it. He could not understand it, as he had received a letter stating that the horse had been despatched. Eventually, when the Contingent moved to the Show-ground, I saw the horse in the officers’ lines, and I identified him at once; so I went to Du Freyer, and said, “Here is your horse up here,” and we went to take him away, and we found that he was supposed to be an officer’s horse. We assured them that he was private property; but, of course, we could not take him away by force, and he was left there. Du Freyer was very indignant, and I came in and wrote a very scathing article about it, which was inserted in the *Star*. Major Knight saw the article, and had the horse restored to Du Freyer. There were several instances of the kind.
4497. *Mr. Meagher.*] Who was the officer who commandeered that horse? It is very hard for me to have to tell you; but it was Major Lenahan. It was done in more instances than one.
4498. *Mr. Wilks.*] In the case you mention the horse was restored to the owner? On account of Major Knight seeing my scathing article.
4499. Your article forced the hand of the Colonel Commanding? Yes.
4500. But there were several other cases where the horse was not restored? Any amount.
4501. Do you not think that commandeering is a very mild term for that sort of work? It is always done among mounted corps in the army.
4502. *Chairman.*] In fact, it is one of the great institutions of the army? Yes; it is always done.
4503. *Mr. Meagher.*] In regard to your statement about Captain Le Messurier, you say that he was riding a horse which did not suit him, and you obtained another horse for him, for which he substituted his own;—do you mean to say that the horse did not suit Captain Le Messurier individually, and was also unsuitable for cavalry purposes? No; Captain Le Messurier’s horse was quite a good horse, and very useful. I was showing the principle of the thing, and how it could be done. I have shown you by this case how it was done without any harm to the corps; but I leave you to infer that it was done where the corps did not benefit.
4504. You say that, although the horse did not suit Captain Le Messurier individually, yet it was a suitable horse for military purposes? Decidedly. Captain Le Messurier’s horse was quite as suitable for the corps—in fact, more suitable to carry a heavy man—than the one for which it was exchanged. I have

C. McIvor. have pointed out how this could be done in a harmless way, but it was also done in a way it should not have been. I know for a positive fact that one officer sent down six crocks in the hands of dealers—of course he got men to take them down—and I know that four of these were purchased which should not have been. I cannot give the name of the officer, but it was a well known thing about the camp. I saw the horses at the Victoria Barracks, and I recognised them as having been purchased at the Randwick camp, and they were not suitable for South Africa.

30 Aug., 1900.

4505. Would you be prepared to say, seeing them at the Barracks, that they were the property of any officer? I presume that they would not have been in the Barracks unless they belonged to some officer.

4506. The mere fact of their being in the Barracks would not necessarily prove that they belonged to an officer;—they might have been there for other purposes? Quite so. Still, it seems singular that these horses should have been at the Barracks, and should afterwards have been brought down and purchased at the Randwick Camp.

4507. *Chairman.*] Was it in the horse lines at the Victoria Barracks that you saw them? In the stables.

4508. At the Battery stables? At the stables behind the main buildings—the officers' stables.

4509. I suppose you are aware that all the horses in the Battery stables are Government property? I know that very well; but the officers have other stables. One horse in particular I saw ridden by an officer, but that officer I am unable to identify.

Francis Arnold called in, sworn, and examined:—

F. Arnold. 4510. *Chairman.*] What are you? A manufacturing saddler, carrying on business in Sydney.

4511. What sort of saddle would you call that (*Exhibit 4*)? An ordinary stock saddle.

30 Aug., 1900. 4512. Do you think it would be suitable for military purposes? No; I do not think any saddle of that class is suitable for military purposes. These saddles are merely for ordinary stock purposes—station purposes, boundary riding, and so forth.

4513. Where an ordinary weight has to be carried? Yes, a 10 or 11 stone man.

4514. Not 18 stone? No; it should not be asked to carry more than 10 or 12 stone, although the tree is as good as in any ordinary stock saddle you could get.

4515. If that saddle were required to carry 18 stone would it be likely to last? No.

4516. Is it what you would call a third-class saddle? I would call it a second-class stock saddle.

4517. And with regard to the panel? The panel is not in keeping with the saddle.

4518. Would you have a look at this saddle (*Exhibit 1*)? The webs under the seat are very dicky. The webbing was not strained before it was put on to the saddle. There is a vast difference between the webbing on this saddle and the webbing on No. 4. The webbing in the latter saddle is of the best quality, while the webbing in saddle No. 1 is only a common line. One would cost 6s. and the other 9s. 6d.

4519. What do you think of that tree;—it is somewhat different from the other one? It is a galvanised tree. It is a good tree.

4520. What do you think of the finish of the D's on No. 1 saddle? The D's should have been screwed in.

4521. You would not call that a bit of artistic work—the fixing of those in? No, I would not.

4522. Does it not appear to you as if those straps were put on after the saddle was finished? I never saw a D strap put over the plate in that way before. I should say it would be likely to hurt a horse's back.

4523. This is the panel of No. 1 saddle? The panel of No. 4 saddle is worth three of this, both as regards make and material. This is a very common panel, about as poor as you could have it. You can see by the indentation made on the panel that the D strap would be almost sure to hurt the horse's back.

4524. There is very little between the horse's back and the strap? Very little.

4525. And you consider that the panel in No. 4 saddle is worth three of the panel in No. 1? Yes.

4526. Looking at No. 4 saddle you will see that the seat and the knee and thigh pads are made of hogskin? Yes.

4527. And that the pads in No. 4 are what you would call in the trade quilted? Yes. In No. 1 the knee and the thigh pads and the seat are of bag leather, and the knee pads are not quilted.

4528. Taking saddle No. 1 complete with the panel, do you think it equal in material and make to saddle No. 4? Not in any way.

4529. You consider that it is of much inferior quality right through? Very much inferior, and also the workmanship. In saddle No. 1 the seat is attached to the skirt by machine stitching, which is the cheapest and commonest way of manufacturing saddles.

4530. What class of saddle would you call No. 1—quality 4, quality 3, or quality 2? I would call it the commonest quality—bar the tree, which is good.

4531. Is the only quality of saddle worse than this one some particular saddle which they send to the Islands? The saddle for the island trade is about the worst class of saddle that could be manufactured—the cheapest. The island saddle has not a tree in it like this one. The tree in this saddle is all right.

4532. It is about the only portion of the saddle which you can really say is good? Yes.

4533. Will you look at this bridle (*Exhibit 7*)? This does not appear to have been used. I have seen worse bridles than that. It is a fair quality of bridle. If it has been in the harbour, as I am given to understand, that would account for the harshness of its appearance. I should say it had not been used.

4534. Do you think the bit is a good class of bit? They use this kind of bit for Military purposes. It seems entirely out of place from an Australian's idea of guiding horses.

4535. You would never recommend it? I am a rider myself, and I would never think of riding a horse with a bit like that.

4536. It is unnecessarily heavy and clumsy? Undoubtedly so.

4537. You would not be surprised to hear that it weighs 3½ lb.? I can quite imagine that. It must be very awkward and cumbersome; an unnecessary lump of metal, I call it.

4538. It might have been right enough twenty-five or fifty years ago? Yes.

4539. But it is about time that every reasonable man dispensed with it? Yes.

4540. *Mr. Meagher.*] Do you not think that a strong-mouthed horse, with only one hand to guide him, would require a heavy bit? We have bits here that would hold any horse that was ever bridled, and they would not weigh more than ¾ lb.

4541.

4541. *Chairman.*] With such a bit as that, you would have just as much control over a horse as with this bit? Yes. Even, if a horse required it, a curb could be attached and the weight would not exceed altogether 1 lb. F. Arnold.  
30 Aug., 1900.
4542. Do you know what this is [*Exhibit 5*]? A pad for the back of the saddle.
4543. Did you ever see any of those in actual use? Yes; I have seen them on the back of the saddle attached to the D's.
4544. Did they work satisfactorily;—is it an idea of which you approve? I would approve of it as a means of carrying a valise—to keep the valise away from the horse's back.
4545. You consider that something like that, with an ordinary stock saddle, is necessary? Yes; but a differently made article from that. It is too limp, and too thick and clumsy. There is more padding in that to carry a valise than there is in a saddle to carry 12 or 14 stone.
4546. Would you be surprised to hear that we have evidence from some of the troopers who have returned that they discarded these altogether as soon as they could as being a nuisance? I should think this would be a nuisance; but a properly made article, which would keep the valise or baggage from the horse's back, would be an acquisition instead of a hindrance. This particular pad, however, I should think would be liable to fly up and down, and would be too clumsy.
4547. Will you look at these two rifle buckets [*Exhibits 9 and 15*]? No. 15 is a well-made article; the workmanship is very good. I do not think you could have anything better than that. It is a better made article than No. 9.
4548. Would you say that both the leather and the workmanship are better in No. 15 than in No. 9? If No. 9 has been in the water it is not a fair comparison. It is not bad leather.
4549. The finish and the workmanship in No. 15 is, I think, somewhat superior, as compared with the other? Yes; it is a better made article. You could not produce anything better than that.
4550. Here is another saddle [*Exhibit 3*];—I think this is one that was under water too—six months in the harbour;—would you say that this saddle was equal to No. 1? It is a better saddle than No. 1. It is rather difficult to judge of a saddle in this condition, but you can see the make of the saddle. The seat is of hogskin, and it is made on the same principle as No. 4, except that the knee-pads and thigh-pads are of bag leather, and not quilted.
4551. The D's are pretty substantial? Yes; they are fixed on with iron, and screwed into the tree.
4552. This is a numnah [*Exhibit 19*]; what do you think of these things as saddle-cloths;—do you think they are a good idea, or do you think they have a tendency to heat the horse's back? Yes; I think they have.
4553. You would not be surprised to learn that some of the officers and men who have returned say that they are apt to cake inside and get hard? They certainly would, especially when a horse was shedding his coat, and when he wants looking after. These are all right enough for a man who can look after his equipment.
4554. And get into a stable every night? Yes.
4555. But when you have to camp out in all sorts of weather, without any tent or covering? They would get as hard as a board.
4556. As a matter of fact, you think, for military purposes, the long military panel saddle, with the fans on the back and front, is the best? Most undoubtedly.
4557. It distributes the weight better over the horse? Certainly.
4558. And it will last a considerable time? Yes.
4559. How long do you think the life of an ordinary saddle should be, even with some rough usage, on active service at the front;—how long should it last carrying up to 16, 17, or 18 stone? The new saddle [*Exhibit 4*], carrying 16 or 17 stone, would last two or three years—that is, if the stuffing were attended to.
4560. Would you be surprised to learn that the saddles supplied to the Second Contingent had to be thrown on one side at Bloemfontein after about six weeks' use? I would not be at all surprised at some saddles not lasting. But you must take into consideration that that class of saddle was made from a sample on the stockman's principle. The saddlers were never given to understand that it was intended to carry 16 or 17 stone—a weight it should never be expected to carry.
4561. Did you give a price for any saddles to the Military Department? No, although I made some. I made all the saddles which were made for John Hunter. I do the whole of their manufacturing. I brought with me for the inspection of the Committee two samples of the D's that I put on the saddles I manufactured [*Handed in.*]
4562. *Mr. Meagher.*] Do you know for which Contingent your saddles were utilised? The Bushmen's Contingent.
4563. *Chairman.*] The fastenings of these D's have a piece of galvanized iron on the side of the leather, covered over with the leather and riveted through near the D? Yes. I submitted this sample to the Military authorities, because when I found that the rider was to carry a carbine on the side of the saddle I thought it would be ridiculous to have a simple attachment such as that on saddle No. 4, which would only carry a pair of hobbles or a pannikin. This sample of D would carry almost anything.
4564. How many saddles did you make for John Hunter? About 200.
4565. Did you have an opportunity of seeing the saddles that went away with the Second Contingent in the "Southern Cross" on the 17th January? Yes.
4566. Did you supply any of those? No.
4567. What did you think of them? I thought they were a very poor lot. I thought some of the saddles should not have been sent at all.
4568. It was said that there was not sufficient time, and they had to supply anything they could lay their hands on? We were asked to supply the saddles in a given time, so that the troops would be able to use them before they went away. We had to supply a certain number every week. We were asked how many we could make a week, and we told them, and we were asked to supply that number every week.
4569. If there was such a rush that there was not time to make the saddles properly, do you not think that instead of taking inferior saddles, not at all suitable for the work, it would have been better to send to some of the up-country towns and get a few from each town? I sent to the country towns for workmen.
4570. I suppose there are some very good saddle-makers in the up-country towns? Yes; some of the most substantial men are in the country. I served my time in the country, and I have been twenty years in the country.
- 4571.

- F. Arnold. 4571. And that is the system you adopted? All the saddles that were turned out in my place were made on the premises. There was not one article which was made outside of my factory.
- 30 Aug., 1900. 4572. You did not go round buying up cheap job lots? No, we gave a top price for everything; in fact, we had to do it, or else we could not have got the stuff. I think all the job lines were bought up for the first lot that went.
4573. *Mr. Meagher.*] I suppose, as a practical man, you admit that even the best of saddles would want stuffing within a week or so? Yes. It is always recognised that if a new saddle is used every day for a week it requires a little renovating. A bushman getting a new saddle will always have it stuffed after a week or two; at any rate, he would not leave it more than a month—that is, of course, if he had facilities for getting it done.
4574. With the saddles you supplied to the Bushmen's Contingent, did you furnish stuffing in order that, going over on board the ship, they might restuff saddles that required it? No; I did not supply stuffing.
4575. *Chairman.*] That was not asked for, I suppose? No.
4576. *Mr. Wilks.*] Was there any difficulty in obtaining material and labour for the manufacture of the saddles? There was great difficulty in obtaining labour in the city. You might advertise every day in every paper, and you could not obtain men in the city. The men I got I obtained from the country.
4577. Did you have any difficulty in obtaining material? We had no difficulty in obtaining the material, because we were prepared to pay a fair price.
4578. Would not the difficulty as regards labour have been overcome by letting the work out to well-known saddlers in country districts? The difficulty in the matter of labour could have been easily got over. I even sent to Lismore for men, and I got men also from Goulburn and from Young.
4579. The authorities, with a little bit of judgment, could have let out contracts to the country places? That was tried, not by the authorities, but by people who were desirous of taking a contract for the saddles if they could have got the hands. For instance, Bathurst was tried.
4580. What was the result? They could not make them.
4581. Why? I do not know the reason exactly. They would not undertake to make more than two or three a week. I know one manufacturer who went to Bathurst and saw Pullwark, one of the leading makers there, and he said he did not care about taking the job—that he might make two or three a week, but would not undertake to supply a quantity.
4582. Am I to understand that if they wanted local production the Authorities were compelled to take a saddle similar to that you inspected just now? They were compelled; they had to take them.
4583. There was such a demand? Yes; in Sydney you could not get a saddle—all the stocks were drawn from.
4584. There was a regular corner in saddles? Yes.
4585. Did you hear whether the same state of things occurred in the other colonies? I know that the Melbourne people sent here for saddles. I could have got an order from Melbourne for 200 if I could have turned them out.
4586. Have you heard that the experience of the Melbourne people was similar to that of New South Wales in regard to faulty saddles? I read in the paper that their saddles were bad.
4587. Has any inquiry been made into the matter down there? I could not say.
4588. You say you read it in the papers;—by whom was the statement made? By one of their own people in Africa. It was said in the report that was sent to Melbourne that the saddles and helmets were disgraceful. I read that about two or three months ago.
4589. Then the faults in regard to saddles have been common to both colonies? Yes; and to Brisbane also.
4590. You read of that, too? I heard from a man just returned from Brisbane, and who was employed in the manufacture of saddles for the Bushmen's Contingent which went from Brisbane, that there was great dissatisfaction there in regard to the saddles. There is no doubt there is dissatisfaction, because that class of saddle is not suitable for carrying a 16 or 17 stone man engaged in a campaign. It was never intended that the saddles should carry that weight. If they wanted the Bushmen to go away from here with saddles that would last them, and be of service, they should have had the military saddle with fans behind.
4591. They could not have been obtained here? No.
4592. Do you think it would have been more advisable if the Military authorities here had asked the Imperial authorities to supply the troops with the Imperial military saddle at Capetown? If they could not have been obtained here, certainly.
4593. You say they could not? The military saddle in any quantity could never have been turned out here. We have not the tree-makers here. We should have had to cable home for trees, and they would not have arrived in time.
4594. You were aware, in the first instance, that these saddles were entirely unfit for the purpose for which they were required? I was not aware of it; because I was not aware that they would be asked to carry such a load.
4595. You had some idea of the character of the equipment, had you not? No; I do not think the men would have to cart all that equipment about with them.
4596. When did you first know the amount of equipment they would have to take? Some time after they had gone. The only equipment I understood they were to carry was the carbine; and, as to that, I was in doubt whether they would carry it at their side or on their shoulders.
4597. *Chairman.*] You did not know they would have to carry, perhaps, two day's horse feed? No. It is ridiculous to expect a saddle like that to carry, besides the rider, two days' horse feed, two days' tucker, a blanket, and all the things a man requires in camping out.
4598. As well as 300 rounds of ammunition;—so that you will see that the 16 or 17 stone would be easily made up? Yes.
4599. *Mr. Wilks.*] In view of that, were not the Staff Officers, who were responsible for these matters, and who would know the amount of equipment required, very much to blame for accepting saddles like these? To a certain extent I should think they were. On the other hand, the Bushmen regarded that saddle as more suitable for their purposes, as it was supposed they would be employed in flying round as scouts.

4600. Do you not think there was lax administration on the part of the authorities in not inquiring from an expert saddler what these saddles would carry? I do not think that is for me to say; it is not for me to criticise what they should do. F. Arnold.  
30 Aug., 1900.

4601. *Chairman.*] You are only an authority on saddles, and not on military officers? Yes.

Harry George Grace, sworn and examined:—

4602. *Chairman.*] You went to South Africa with the First Infantry Contingent? Yes; I joined as a private. H. G. Grace.  
30 Aug., 1900.

4603. Previous to that, had you had any military experience? I was First Lieutenant in the Dubbo Company of the Third Regiment. In the first place, I tried to go as an officer; but only four were to go with the Infantry, and I was not one of those selected. When I found that that was the case, I volunteered to go in any capacity, and went as a private.

4604. You went in the "Aberdeen"? Yes.

4605. What were the provisions on board the "Aberdeen" like? I think there was nothing to complain of in the provisions. Taking everything into consideration, I think they were fairly good.

4606. What happened when you arrived at Capetown? We were sent straight up to Enselin. We came out of the boat, and were immediately put on to the train.

4607. That is beyond Dee Aar? Yes; just to the south of Magersfontein. We were then turned into Mounted Infantry, and were brought round to Colesberg into General French's Brigade.

4608. So that you had no experience of the saddlery that was sent away from here? No; we were supplied with Indian saddles and Indian horses.

4609. Were they good saddles? Yes; my saddle lasted me last through. The horse with which they supplied me also carried me right through.

4610. Did you go through from Magersfontein to Bloemfontein? No; we came through with General Clements' Brigade.

4611. When General French left the Colesberg district, General Clements took command? Yes.

4612. And you remained with his Brigade? Yes.

4613. You had a good deal of marching? Yes. We were first of all driven back from Colesberg almost to Naaupoort, but we hung out at Arundel until reinforced. We then drove the Boers back, and eventually relieved Colesberg. We went through then, as far as I could judge, in three columns, with General French's brigade; we were to the left of the railway line. General French himself was on the railway line, and there was then, I think, another column away on the right; so that often, when we were going through from Norval's Point to Bloemfontein, we were very short of provisions owing to our being away from the line of communications. Sometimes we had only half a biscuit a day; sometimes we were able to buy food at the farms—bread, for example.

4614. How far north did you get? I became ill just before we got to Bloemfontein; they thought it was enteric fever, but I thought it was malaria. I was laid up in Bloemfontein while they were getting fresh horses, and I was then attached to a new regiment which was then formed under Colonel Parrott—the Mounted Pioneer Corps. I was acting Sergeant-Major for them; they were like an Engineer Corps, mounted. We had to take Scotch carts with picks and shovels; in some of the carts we had also to take dynamite to blow up culverts and other works as might be necessary. There were in the corps men of all trades and professions. We had, for example, men who could tap telegraph wires, signallers, and so on. Our duties were principally to keep up to the firing line, and at the halt to put a guard over the water. Previously horses and men rushed into the water at once, and if the men stayed there a few days they had to drink the water into which the horses had been. We had to put a guard over the water, and to pump out water for drinking purposes and so forth. It was General Hutton's idea.

4615. How far north did you get? As far as the Zand River.

4616. And then you got fever? Yes.

4617. Had you any opportunity to form an opinion as to the equipment of the Second Contingent? No; we were never with the Second Contingent as a body. When the corps joined the Second Contingent I had gone into the Pioneer Corps.

4618. Did you hear any complaints about the saddlery;—were any of the men of the Second Contingent encamped at Karee while you were there? I never came much into contact with any of the Second Contingent.

4619. You were supplied with the felt service hats when you landed there? Yes; they were of very good quality. Comparing them with the hats issued to the other troops, ours seemed to be the best hats in the field.

4620. You were afterwards supplied with helmets? Yes.

4621. Were they Indian pith helmets? Yes; they were very good ones. I am sorry I did not bring mine down with me; it served me right through. Exhibit "P" would be the style of helmet; they had covers.

4622. You found it a serviceable helmet? Yes; the men used to use them as pillows. We had a lot of kopje work, and were out all day and night—going constantly. You could easily bend the helmets over and use them as pillows, and they would afterwards resume their original shape.

4623. You wore your helmet a number of months? I should say at least eight months.

4624. It was in fair condition then? It is in fair condition now.

4625. You see this pattern helmet [*Exhibit C*—you see the gossamer material of which it is made? I do not know very much about the material of which helmets are made.

4626. But do you think a helmet made of that material would keep out water? I could not say. I do not know what the material is, but, looking at it as you hand it to me, I should not think it would keep out water; however, I am not a judge of these things.

4627. Will you look at Exhibit I, one of the returned helmets;—your helmet did not collapse in the crown like that? I have not had any experience of that sort of helmet, and I do not know what usage it has had. I can only say that, from what I saw of the Imperial helmets, I do not think there would be the slightest chance of their collapsing like that.

4628. The Imperial helmets were made of very different material? Yes.

4629. Would you be surprised to learn that that helmet was reduced to that condition after one month's wear? Yes; I should think it would stand longer than that. 4630.

- H. G. Grace. 4630. Will you now look at Exhibit B, another returned helmet;—how would you like to wear a helmet like that? Of course, I do not know what usage this helmet has been subjected to. I have never worn a helmet of that type. I certainly should not care about using it in its present state.
- 30 Aug., 1900. 4631. You did not see any of those helmets? I never came into contact with them before.
4632. If you look at the material of which that helmet is made you will see there is nothing to hold it up;—you can quite understand that it would very soon get out of shape? It does not appear to be very substantial.
4633. Here is another helmet [*Exhibit A*] which is in even a worse condition? Not knowing much about the material of which these helmets are made, never having worn them, and not knowing the usage to which this particular helmet has been subjected, I should not like to express an opinion. It certainly does not look too well in its present state.
4634. You see the material which I have cut out of the body of that helmet;—it looks to you very much like butter-cloth, does it not? I am no judge of material; it looks very peculiar stuff.
4635. In regard to the question of pay—what was your impression when you left here as to the pay you would draw? My opinion, and, I think, the general opinion, was that we were to draw the Imperial pay in addition to the Colonial pay; of course, we had nothing definite about it; but from talking with some men on the way back on the subject I gathered that when they left their headquarters in the country they understood from the order read out to them by their officer commanding that they were to draw Imperial pay in addition to their Colonial pay. That was before they came down to Sydney to undergo examination. They were men in the First Contingent.
4636. Did you sign over any of your pay before you left here? I signed over as much as I was allowed to do for my wife to draw while I was away. I had to take a shilling a day for myself. I also insured my life privately.
4637. At the front you got the Imperial rate of pay? We got paid at different times; we would get a pound at one halt, and a pound or two at some other place; we never actually got a settlement—there was not any opportunity for it. The Captain would arrange a day when the men were to be paid, and perhaps we would start marching on that very day before there was time to pay the men. I know that on one particular day, at Arundel, we were all getting paid, and before the pay was half over we were ordered out; we had to stand to our horses and saddle them, and did not come in till two days after.
4638. You found the price of provisions pretty high? Yes.
4639. In some of the towns, when you had been a day or two without much to eat, I suppose you wanted a few shillings to get a good square meal? Yes.
4640. So that the expense of the men generally would be pretty heavy? Yes. Taking everything into consideration, of course a number of the men actually bought more than they really wanted to live upon; they purchased luxuries whenever they had a chance of doing so.
4641. When they had the money? Quite so.
4642. What would be called luxuries over there we should regard here as ordinary fare? Yes. For instance, a tin of jam would cost over double the amount you would have to pay for it here; a tin of jam, you could get here for 6d., you would have to pay 1s. for there, and you would be very glad to pay 1s. to get it.
4643. At the various places the prices changed? Yes.
4644. Taking it all through, it has been a pretty trying campaign for all the men engaged in it? Yes.
4645. You had long marches? Yes. I never had any sickness in my life before I went to South Africa. I became very weak.
4646. I suppose a number of other men were affected? Yes; you would see men who had been strong men dropping out day after day.
4647. Having enteric fever, dysentery, or malarial fever? Yes; the hardships of the campaign were very severely felt by the men.
4648. Do you remember any case where you were short of provisions through the neglect of someone who should have attended to the matter? No; I do not think I do. Our officers on the whole did their best for us.
4649. You are referring now to Captain Legge, Lieutenant Holmes, Lieutenant Hogan and Lieutenant Dove? Yes.
4650. You reckon that on the whole they looked after you as well as they could? Yes; on the whole we considered ourselves lucky in having the officers we had.
4651. They generally looked after their men well? Yes.
4652. They made every effort to do the best they could for you? Yes.
4653. When you went out you sometimes took some days' rations with you, and I suppose at times you were short? Yes; sometimes we took two days' rations with us, and we were out for three days, and then naturally we ran short, but that would not be the fault of the officers.
4654. When you were upon any of the long marches, did you ever find when you called a halt at night that through some neglect or other, although the transport was there, you failed to get the provisions you were entitled to? No; I do not remember such an occurrence.
4655. That was not your experience? No.
4656. Your experience after all was with only a small portion of the whole army? Yes.
4657. You were under General Clements? Yes.
4658. And afterwards you were with Colonel Parrott? Yes; but at that time it was considered by most of the people that though we were only a small portion of the army, our work round about Colesberg was particularly arduous; we were going day and night.
4659. The reason I asked the question is this: Although you were only a small portion of the army, and were fairly well looked after in regard to food, it would not follow that the same thing would apply to other portions? Of course, we were short of food at times; but it was not through neglect. The waggons sometimes could not get across spruits and gullies, and therefore could not get to us.
4660. In those circumstances, of course, the men would quite understand the position, and would be satisfied? Yes.
4661. *Mr. Meagher.*] You sent in an application in the first instance for the position of officer? Yes.
4662. How many years service have you had? I had previous to that ten years' service.
4663. In the Infantry in this Colony? Yes; I had been through two Schools of Instruction. When I sunk my rank to go out I did so with the idea that, with my previous training and experience, when I came

came back, and a position was open, I should have a chance of qualifying for it. I wanted to take up the army as my profession. In the first of the two Schools of Instruction I passed, and in the second school I was the only one in the school who passed with honours. H. G. Grace.  
30 Aug., 1900.

4664. For what position did you apply in the first instance? I applied to Headquarters to go as one of the officers of the Infantry Contingent.

4665. Can you say whether any of the successful applicants who were appointed officers had less qualifications than you had in the matter of examinations or length of service? I cannot say; I never looked up their qualifications. When I found out that I was not one of the chosen officers, I immediately made up my mind to go even if I went as a private. I was appointed Acting-Corporal before I left here, and after being in South Africa I was made a Sergeant. I had to rise on my own qualifications, and not through any influence.

4666. So that you are not in a position to say what were the qualifications of those who went as officers with the First Contingent? No; I do not for a moment think that I was unfairly treated in the matter. Having gone through what I have, I am now putting in an application for one or two positions which are open, and I desire a chance of qualifying for one of them.

4667. I am putting you these questions because we find that in the case of some of the other Contingents men with eminent qualifications were set aside to make room for men with no qualification at all;—that you think does not apply to your Contingent? Not as far as I know. The men selected, for aught I know, may have better qualifications than I have.

4668. *Mr. Piddington.*] You say that although you left an order here for your wife to draw the whole of your pay with the exception of 1s., you were, nevertheless, paid in South Africa? I had advances made to me.

4669. By whom? By the officer commanding my company. It was supposed to be the Imperial rate of pay. The pay was never actually kept right up. They simply gave us an advance. When they had an opportunity to pay the men they did so.

4670. That would be the Imperial Government? The officers obtained the money from the Imperial Government, and whenever they had an opportunity of getting money they let us have an advance.

4671. There were men in other Contingents, were there not, who could not get any money at all? I do not know. I can only speak as to our own Contingent.

4672. *Chairman.*] The overcoat you now exhibit is the class of coat which the Imperial authorities supplied? Yes; I had a cavalry overcoat; but this is an infantry overcoat. The cavalry overcoats are made for riding; there is a V at the back fitting over the back of the horse, and the sides cover the legs and keep one dry on horseback. When I got ill the whole of my kit was lost in the hospital through some negligence on the part of the man who took the kit from me; the whole of my clothes and a few little curios I had I lost. When I was convalescent I was sent down to Capetown on the road home, and I was then supplied with a new turnout, of which the overcoat I now exhibit formed part. It is an infantry overcoat.

4673. It would keep out the wet? Yes; I wore it this morning in the heavy rain, and you see that it is quite dry inside. It is a good coat.

4674. How did the overcoats you took away from here last? They lasted very well, but they were not up to the Imperial Cavalry coats; still they suited very well. I think some of the men of our Contingent wore them right through.

4675. But they would not protect you from the rain like the coat you now exhibit? It would take a lot of rain to get through them. When wet they became pretty heavy.

4676. The coat I now hand you is a sample of the overcoats supplied to the Second Contingent;—you see that there is no waterproofing in that coat? Apparently not.

4677. But there is waterproofing in the coat you yourself exhibit? Yes.

4678. The chances are, then, that the water would lodge in the coat I am now showing you, and that after a time it would become very heavy? Yes.

4679. So that it would not be a very serviceable coat in wet weather? Not so serviceable, perhaps, as the Infantry coat supplied to me. With regard generally to the uniforms supplied to the Contingent, I would like to say that they were very good. I wore my jacket right through; when I went into the Cavalry I had Imperial pants issued to me, but I used my jacket issued to me here right through, and it lasted very well. The whole of the soft hats were taken away from us, and we were made to wear helmets on account of our being mistaken for Boers and fired upon.

4680. Did you never hear of any troops wearing helmets being fired upon by their own side? Yes; we were actually fired upon by our own side, but it was not altogether their fault; we got further in advance in a certain position than they thought we were, and that brought us into the line of fire between them and the enemy.

4681. You would not say in that case, then, that it was because you were wearing hats you were fired upon? Yes, I would; because in the distance when wearing hats we might be easily mistaken for Boers.

4682. Did not some of our own men once fire upon the Carabineers? I was not out with them if they did fire on them.

4683. But if they did fire upon them, it could not be that they were mistaken for Boers through wearing hats, because, as a matter of fact, they wore helmets? They wore helmets; but some of the Imperial Cavalry wore hats. I thought it very funny that they should make us wear helmets, and that the Yeomanry, the C.I.V., and other Imperial troops were allowed to wear hats.

4684. The Yeomanry, the C.I.V., Roberts' Horse, and Kitchener's Horse were all formed after you were supplied with helmets, and the Imperial authorities supplied them with hats? Yes. I thought it rather strange.

4685. So that they must have come to the conclusion that it was not simply on account of their wearing hats that various detachments had been mistaken for the enemy, or they would not have supplied these irregular forces with hats? Quite so; but that was the idea at the time that they made us wear helmets.

4686. Does it not appear then that that idea has now been exploded? Yes; because other troops have been allowed to wear hats.

4687. *Mr. Meagher.*] At a distance of 1,000 yards the difference between hats and helmets would not be easily distinguishable, would it? In a certain way you could tell the difference. The whole of the uniform being of khaki, with a helmet on top, you could tell the difference between a helmet and a hat. All the officers had glasses, and they could distinguish between the two things at a distance.

John Joseph Anderson sworn and examined :—

J. J.  
Anderson.  
30 Aug., 1900.

4688. *Chairman.*] You are employed by your father, who is a clothing contractor? Yes.
4689. I believe you manage the hat-manufacturing department? I am principally in that department, but it is not my sole place.
4690. It is one of the departments you look after? Yes.
4691. Do you understand the manufacture of hats? I could not make a hat myself, if that is what you mean; but I am so much among the men that I could at once detect anything wrong.
4692. You yourself are not a practical worker? No; I never worked at hats myself, although I have seen a good deal of their manufacture.
4693. Do you recognise this helmet (*Exhibit C*) as one of those turned out by your factory? I am pretty certain that it was turned out of our factory.
4694. It was the pattern helmet for the Second Contingent, was it not? It was the infantry pattern.
4695. Will you kindly look at the fabric in that helmet and tell me whether you think sufficient shellac has been put into it to make it water-resistant? Yes; I think so.
4696. Does not the fabric seem very dry? It is dry, of course.
4697. But the material seems to be quite open? What you mean, I suppose, is that there does not appear to be any shellac upon it.
4698. Not sufficient shellac? It might appear so, but this fabric treated with shellac is very much like the dressing on calico—the more you rub it, the more it powders out.
4699. Do you recognise the piece of material I hand you as a piece of gossamer? Yes.
4700. Do you think you could tease that out in the same way that you could tease out the piece of fabric I have cut out of the helmet? I could tease it out, but it is an entirely different class of fabric from that which you have taken out of the helmet.
4701. Is it a better quality? It is quite different. It is made for the brim of a helmet.
4702. *Mr. Meagher.*] The piece of material which the Chairman has handed to you was never intended to be used in the body of a helmet? No; it could not be made into the body of a helmet. Perhaps I ought to explain that in making a helmet each of the plies has to be put on to the block separately and dried.
4703. *Chairman.*] What would there be to prevent you from putting a piece of material like that which I have handed to you on to the block? The material which is placed upon the block is treated quite differently. The piece of material you hand me is intended for quite another part of the helmet.
4704. What is the material I now hand you? It is twill.
4705. The sample piece of gossamer I first handed you is also made of twill, is it not? The outside plies are twill—in fact, I am pretty certain that it is all twill.
4706. Take the piece of clean twill which I handed you just now, could you not stretch that on the block? Yes.
4707. What takes place when the material has been stretched on the block? The shellac preparation is painted on to it with a brush.
4708. Would there be any more difficulty in painting the preparation on to the twill than on to a piece of material like buttercloth? Yes. As I explained to you just now, the muslin is put on to the block in separate pieces; the trouble is in the case of the thicker material that, when you pull it out on the block, it is apt to crease down towards the brim; the muslin gives better to the block. Thick material would go into wrinkles when pulled down on to the block—at least it would be more inclined to do so.
4709. *Mr. Meagher.*] What you mean is, that the thinner material is more pliable? Yes.
4710. *Chairman.*] Still, you would not say that the difficulty of getting a piece of twill on to the block without creasing is insurmountable? No; but the more pliable material makes a better body.
4711. Do you say, then, that the gossamer in this pattern helmet would resist water better than the sample of material I handed you? No.
4712. Do you believe it would be less liable to damage from being knocked about? No; but you cannot very well compare the two classes of material, because they are intended for two distinct portions of the helmet. The body of the helmet is made by putting one ply of gossamer over another, and brushing each ply over with shellac, and drying it before the other ply is put on. It is so dried as to deprive the shellac of its stickiness; then another ply is put on, and the same process is gone through until a sufficient number of plies have been put on; then the whole is dried.
4713. How do you dry them? In ordinary weather they are dried in the atmosphere; in wet weather they are dried by artificial heat—usually by means of a stove; but we prefer the atmosphere on a fairly fine day.
4714. You have a sort of stove or oven for drying purposes? Yes; but we generally dry by putting the material into a heated room. The temperature, I suppose, would not be more than 100 degrees at the outside.
4715. Do you regard that helmet as a good serviceable helmet? I think it is a very fair helmet. Under proper treatment it ought to stand a lot of wear.
4716. What would you call proper treatment? Well, we will say that it would wear for twelve months, from 6 in the morning to 6 at night in all sorts of weather. Of course, that does not presuppose that the man would take off the helmet and hit a horse with it, or place it on the ground and put his head upon it. That pattern helmet would stand a good amount of fair wear. Once a gossamer helmet is bruised, of course it will start to go, because once the water starts getting in the plies become separated, and afterwards when it dries the shellac loses a certain amount of its nature and powders.
4717. You see this helmet;—do you know that it is a specimen helmet which has never been worn, which has never been out in any weather, and which has not been bruised? There is one portion of the helmet which you now hand me which I consider is in fair order.
4718. I have now cut a section out of the part of the helmet to which you refer;—the plies, I suppose, ought not to come apart? No; but it would be better to cut a piece out with a pair of shears than with a knife. If you cut it with a knife the plies would be apt to come apart.
4719. I have cut a piece out of the portion of the helmet you yourself have selected with shears? Yes; but it is only fair to point out that that helmet has had a certain amount of knocking about, otherwise the crown would not be in that condition; it is full of dinges.
4720. You see that the pieces of fabric in the section which I have cut out with the shears open out like a book? Yes; but it is unfair to compare that with the piece of material you first handed to me; they are not the same class of material; they are manufactured in quite a different way.
- 4721.

J. J.  
Anderson.  
30 Aug., 1900.

4721. Do you consider that the piece I have cut out with the shears is in good order, and is fit to be put in the body of a helmet? Yes.
4722. You will see that there are two plies in one piece, which I have cut out of the body of the helmet, and that another piece is only one ply thick? There are two plies in both pieces, but in one case there is no overlapping.
4723. It is quite clear that there is only one ply in one of these pieces;—would that not go to show that the covering is not brought down in the way you have described? I should have to give you a lengthy explanation of the manufacturing process in order to make the matter quite clear. The most tender portion of a helmet is the portion which fits on to what we call the shoulder of the block, about 2 inches from the crown; a certain number of plies come right down to the band, and others terminate about 1½ or 2 inches from the band. What you point out is no detriment, therefore, to the helmet.
4724. You see the piece of material which I have cut out of the portion of the helmet selected by you;—will you look at it and tell me if there is sufficient shellac upon it? There is any amount of shellac upon it for that helmet.
4725. What you might call the pores of the cloth are not filled, are they? They are not filled, but that is the recognised strength of shellac used in the trade; it requires to be of a certain strength.
4726. Is the shellac put on to that fabric of the recognised strength? Yes.
4727. Will you look at Exhibit Q and tell me what sort of helmet it is? It is a gossamer helmet. I should like to explain, before you go any further, that the twill, of course, would make a stronger body, but we contend that it is not necessary.
4728. What is the body of the helmet in Exhibit Q? It is a gossamer body made, judging from the appearance on the outside, of twill.
4729. So that it is quite possible, after all, as you now admit, to make the body of a helmet out of twill? It is quite possible, but I understood that the comparison you were making was between the piece of material you handed me and the piece that you cut out of Exhibit C. You understand, of course, that the lower part of the helmet is made of a different material.
4730. It is admitted that the lower part of the helmet is all right; it is the other portion that is not all right which the Committee would like to have explained? No doubt that will make the body stronger; but for the purposes for which the helmet was made, I contend that it was strong enough.
4731. For what purpose was it made? It was made for the Volunteer Forces—for ordinary parade purposes.
4732. Would it stand wear like Exhibit Q? No.
4733. So it is quite possible to make a gossamer body stronger than that; but you did not think it necessary? No. We could make a gossamer helmet similar to those worn by the Victorian police, which you would have difficulty in breaking.
4734. *Mr. Meagher.*] What would be the difference in cost between a twill and gossamer helmet? The twill helmet exhibited just now by the Chairman is what we call a consolidated helmet; it would, I think, consist of five-ply twill, taking the lining as a ply.
4735. It would be more expensive than a gossamer helmet, would it not? Yes. The body, I should say, would be about 10 per cent. dearer. It is, however, very difficult to make a comparison in the matter of cost. The labour in the two cases would be different.
4736. *Chairman.*] But the chief difference, I take it, would be the difference between the cost of twill and gossamer? And the putting of the plies together.
4737. Making a helmet of twill you would require, say, five plies? Yes.
4738. And making a helmet of gossamer or buttercloth material, how many plies would you require? Taking material of the thickness which you have exhibited, I should say that five plies of gossamer would be equal to three of twill.
4739. Then you would want about nine plies of gossamer to be equal to five of twill? Yes.
4740. But if the twill cost more in actual price, you would require nearly double the quantity of gossamer, and you would also require more labour to put on nine plies than to put on five; there would be more handling of shellac, and more drying? Yes, no doubt, it would be more expensive.
4741. So that a helmet of twill would not on the whole cost much more than one of buttercloth? I reckon that that would be about 10 per cent. dearer.
4742. How much twill would it take to make a helmet with five plies? I should say roughly that it would take 1½ yards to make the body.
4743. What would be the price of twill? About 3½d. per yard; it depends, of course, where you buy it.
4744. What would be the cost of the piece of twill I now hand you? I suppose about 3d. a yard.
4745. And what would be the price of the buttercloth? About 2d. a yard.
4746. So it would take 1½ yards of twill at 3½d.—that would be about 4½d.;—you would require over 2 yards of gossamer at 2d.—say 2½ yards, that would be 5d.; so that the buttercloth material would really be dearer? I think you would find that they would come about the same.
4747. But there would be more labour in the buttercloth helmet, would there not? I do not know about that; you would lose some labour in trying to get your creases away.
4748. But you would have nine plies to put on instead of five—that would mean more labour, would it not? It would not take more labour altogether, because you could put on two gossamer plies while you were putting on one of twill.
4749. Then the labour and material, you say, is much the same in the two kinds of helmets? Yes.
4750. There would be a little more drying in the case of the buttercloth helmet, and that would mean more delay in handling? Yes.
4751. In the face of that, why do you say that you think the twill helmet would be about 10 per cent. dearer? It takes more shellac.
4752. Would there be more shellac on five plies of twill than on nine plies of buttercloth? I should say so; the shellac would hang on the surface of the twill more than it would on the other material; it seems to go more into the thicker material; it is a fluffier material, and it drinks in more shellac.
4753. Do you think it would take twice the amount? It would not take twice the amount, but I should say half as much again.
4754. Half as much again on five plies would be equal to seven and a half, and there are nine plies of gossamer; how would you use more shellac then? Of course, I am answering these questions off-hand; I cannot be exact as to the quantity. I am not prepared to answer the question definitely with regard to the quantity of shellac.

4755.

J. J.  
Anderson.  
30 Aug., 1900.

4755. If you are not prepared to answer the questions, it is of no use to examine you on this point? I suppose I know as much of the subject as does anyone in Sydney.

4756. Yet you cannot tell us the difference between the cost of making a twill helmet and one of butter-cloth? I should have to charge you more for the gossamer helmet.

4757. But I understood you just now to say the contrary, in reply to Mr. Meagher? I probably misunderstood the question, or expressed myself badly.

4758. It is very important that the Committee should arrive at some definite conclusion on this point; you now state the opposite of what you previously stated; you told Mr. Meagher that a twill helmet would cost 10 per cent. more than a gossamer helmet; now you say that a gossamer helmet would cost more than a twill one? A twill helmet would contain five plies of twill, and the other helmet would contain five plies of muslin. If you want me to make a gossamer helmet of the same substance and strength as the twill helmet I should have to put on nine plies, and that would make it the more expensive helmet. If I had to make a helmet of the same strength as the twill helmet, therefore, I should have to charge you more for it. A helmet with only five plies of gossamer would be cheaper.

4759. *Mr. Meagher.*] There are five plies of twill in the helmet, Exhibit Q; if those five plies were put into a helmet in place of the material in Exhibit "C," it would make it dearer? Yes, it would be a much stronger helmet in the crown if I put five plies of twill into the helmet—taking Exhibit C for example—in place of five plies of muslin; I should then have to charge you 10 per cent. more for it.

4760. You see this helmet (*Exhibit I*);—what sort of usage has it had? I should say it has had pretty rough usage for the crown to be knocked about in that way.

4761. Would you be surprised to learn that your father brought it here as an exhibit to show how well the helmet had stood? No, I should not; but it has had a lot of rough usage nevertheless.

4762. How do you know that? Of course I have not seen the usage it has received.

4763. Still, you think it has had rough usage? I am sure it has been knocked about a great deal.

4764. But you did not see it? No; but I have handled a great many helmets, and I have also worn them. I have been eight years in the service myself.

4765. Your experience would consist mainly of Saturday afternoon's parade? Yes, and in camps; I was in a position to see a good deal.

4766. You think that helmet (*Exhibit I*) should stand a lot of rough usage? Yes; I have outside a specimen of a helmet which has had a lot of rough usage.

4767. You cannot have had much experience of that particular class of helmet? A gossamer helmet is a gossamer helmet all the world over.

4768. If it be made of equal material and with equal workmanship? Yes.

4769. You do not mean to say that gossamer helmets all over the world are of equal quality? No.

4770. My reason for saying that you cannot have had much experience of that sort of helmet is that you have not been long supplying them;—how long, as a matter of fact, have you been supplying them to the troops? In the statement read by my father you will find the exact date. Speaking offhand, I should think we had been supplying them between five and six years.

4771. I think, according to the contract, you have been supplying them from three to four years? We have been supplying helmets under the contract about to expire for three years, and they were supplied for some time before that; I suppose the total period would be about four years.

4772. During that time, how many camps have there been among Volunteer Forces? There have been several little camps here and there in different parts of the Colony, but there has been one big camp at Rookwood.

4773. How long did the camp at Rookwood last? I think it was ten days. The Volunteers were not in camp so long as were the Partially-paid Forces. I think they stayed a week.

4774. You consider that a helmet that would last ten days in a Volunteer encampment at Rookwood would be quite good enough for active service? I should say so. The helmets, however, lasted much longer than that; they might be ten days in camp, but they might be also five years knocking about in a house, and perhaps being played with by children.

4775. How has that helmet [*Exhibit B*] lasted;—the brim seems all right, does it not? Yes.

4776. But what about the gossamer? The gossamer is in good order, except that it has been broken. Of course, if you exert sufficient strength you could break a tin helmet.

4777. Still the gossamer in the brim is all right? It has not perished.

4778. Will you now look at the gossamer in the body of the helmet;—does it look as if it were perished? It is very much perished, I should say.

4779. Will you now look at Exhibit A; you say you know something about helmets;—do you, after seeing this helmet, insist that it is of a quality fit to supply to troops which are being sent away on active service? No. I do not say now that that helmet is not good enough for service such as that from which our men are now returning.

4780. That is really all I have been asking you, and you have been fencing the question all the time;—what do you say now, in the light of the experience and the knowledge you have gained since you supplied this class of helmet? I should say that, for the sort of service our men have had, this helmet would require to be much stronger in the body.

4781. But as it is made it is not suitable for active service of that description? No.

4782. As a matter of fact, the Military officers passed it, did they not? Yes; you have the sample there.

4783. They thought the quality quite good enough? Yes.

4784. It was not your business to tell them whether it was or was not good enough? No; of course we submitted that pattern of helmet. I do not quite remember when it was first submitted.

4785. And the authorities approved of that pattern? Yes.

4786. You made the helmets of equal quality with the pattern supplied? They were all practically made at the time; the one sent in was taken from bulk.

4787. They were all of equal quality? Yes; they were all supposed to be five-ply.

4788. If the Military authorities wanted helmets of only three-ply, as a business man you would tender for them; and if you got the contract you would be only too pleased to supply them? Of course.

4789. And if the authorities wanted a ten-ply helmet you would take up just the same position? Yes.

4790. In carrying on your business, you would, of course, supply just what the Military authorities wanted? Just so; it is not my place to dictate to them what they should wear.

4791.

J. J.  
Anderson.  
30 Aug., 1900.

4791. After having seen these helmets, you are perfectly satisfied that they are not serviceable helmets for the purpose for which they were required? It would be a serviceable helmet provided it were made strong enough; but these helmets were not strong enough for the purpose for which they were wanted. A gossamer helmet is a very serviceable helmet if it is made strong enough.

4792. I suppose you had nothing to do with the arrangement of the contract; your father did that? I had a good deal to do with the compiling of the tenders.

4793. The Military authorities contend that the sealed pattern helmet—the cork helmet—is the helmet you contracted to supply, whereas you supplied the gossamer helmet? I happen to know a good deal about that.

4794. You recognise the exhibit as the sealed-pattern helmet? It is not the pattern that we tendered upon. At the time the contract was made there was no helmet submitted as an Infantry pattern helmet; there was only the Artillery pattern helmet. Previous to that contract the schedule was compiled for cork helmets for Infantry; but for two or three years the Military authorities have been having gossamer helmets, because we could not supply them in cork. We had not the cork, and it would not have paid us to get out the machinery and stock the cork; therefore we submitted a sample of a gossamer helmet, which was approved. The helmet must have been submitted and approved, otherwise it would not have been taken by the authorities.

4795. But do you know of your own knowledge that the helmet was submitted? Well, I could not give you any date, if that is what you mean.

4796. When the last contract was entered into, what was the sealed pattern presented to you? There was no sealed pattern presented. There was no sealed pattern for several small lines.

4797. Did you not see that exhibit—the sealed pattern? I saw that pattern twelve months after the contract had been made. Colonel Taunton, I know, spoke about the matter to Mr. Anderson, and he refused to supply cork helmets. I was not present; but the conversation was repeated to me.

4798. You say that there was no sealed pattern when you tendered for the gossamer helmet? No; not for the Infantry helmets.

4799. The pattern produced was not submitted to you as a sealed pattern? No.

4800. But you recognise it as the sealed pattern of a cork helmet? Yes.

4801. The difference in cost between a cork helmet of the sealed pattern and a gossamer helmet of the quality you supplied would be how much, roughly? We have not made many cork helmets—perhaps not a couple of dozen altogether—and it is hard to say what the difference would be. The cost would depend a good deal upon the quantity supplied, and the time allowed for the supply. If we were supplying a number, we could supply a cork helmet of that pattern for about 5s. 9d. At present a gossamer helmet could be supplied at about 5s.

4802. So that there would be about 9d. difference in price? Yes.

4803. You positively assert that this cork helmet was not the sealed pattern for the Infantry helmet when you got the contract the last time? Yes. There was no sealed pattern submitted, and we having supplied the gossamer helmet for two years previously, we continued to supply it. The price goes to show that it was a gossamer helmet that they were calling tenders for, and not a cork helmet. At the same time, we tendered for cork Artillery helmets at 5s. 9d.

4804. What sort of helmet is that—[Exhibit E]? It is a felt-body helmet.

4805. What is the felt made of? It is made of the same material as ordinary felt hats; it is well felted together.

4806. I suppose it is a sort of scrap wool? No; the body of that helmet is the same as that in the brown hat bodies.

4807. Do you think it would last better than a gossamer helmet? Yes; it does not break so readily; it will stand a lot of knocking about before it breaks.

4808. Would you consider an ordinary bowler hat a sufficiently strong article for men to take away with them upon active service? If they were prepared like Exhibit E, and covered.

4809. In what respect? In the stiffening put into it. There is more proofing, as it is called, put into the body of the helmet; it is proofed very hard, and that makes the felt more durable.

4810. Would that not make it more liable to break? Yes; the stiffer it is the more liable it would be to break; but it is the cover that would resist the blow—the inside material would not give.

4811. What is the cover made of? Of khaki drill.

4812. It is not a very thick material? It is a fairly strong material—very strong, in fact; it is the line always stipulated for in the Imperial contracts.

4813. You see that helmet, [Exhibit E];—what condition do you think it is in? It is in very fair condition.

4814. It does not look as if it had been knocked about? It has had a fair amount of usage, I should say.

4815. Does it seem to have had very rough usage? I daresay it has.

4816. Where is it broken? It is not broken.

4817. Then what makes you think it has had rough usage? I can hardly put what I think into words; the peak has given way a bit, and I do not think it would have done so unless it had had a lot of usage.

4818. Is Exhibit K the same pattern helmet? Yes.

4819. I suppose you recognise that as one of your own make? Yes.

4820. It was brought from your place of business the other day, and has never been soiled by handling;—I suppose you would not pick out the worst helmet to bring down here? No; we would pick out a fair sample.

4821. Does not the peak of that helmet feel a little weak? No. It is a bad shaped helmet to test in that way, but if it were of the same shape as Exhibit Q the peak would stand much better.

4822. *Mr. Meagher.*] You mean that if the brim were more perpendicular it would be much stronger? Yes.

4823. *Chairman.*] You think the peak of the helmet in Exhibit K is quite strong enough? Yes.

4824. Will you look at Exhibit J;—is that also of felt? Yes.

4825. Has Exhibit K the same material in the peak? I should say so. Sometimes you come across a helmet which is a little bit weak.

4826. But you brought that helmet down as a pattern; take Exhibit L, you say that if Exhibit K had a peak like Exhibit L it would be much stronger, and yet in Exhibit L you have put gossamer on the peak? Because the felt body comes only to the brim.

4827.

- J. J. Anderson.  
30 Aug., 1900.
4827. If you were going to have a peak like that in Exhibit L you would not make it of felt at all? Yes, we should.
4828. Why is Exhibit L made of two materials then, if you consider that one material would be sufficiently strong? In the first place, we had these particular bodies in stock, and, as business people, it no doubt suited us to tender for them; we used up for the Contingent the whole of the other bodies, and we had a lot of Cuba bodies ready for making civilians' hats; we picked out the biggest, and made them into these helmets. Then we had a lot of smaller ones left. The helmets were wanted in a hurry, and we had not time to get the bodies made; we lost money over it, in fact, but it was the only way to get the bodies out to time.
4829. *Mr. Meagher.*] How did your financial loss arise? Because the felt body in Exhibit K would be worth half-a-crown to put into a civilian's hat, and then there would be also a certain amount of labour to be considered.
4830. *Chairman.*] These helmets were brought by Mr. Anderson and submitted as samples, showing how felt hats were made; in Exhibit J you have a piece of twill on the brim;—for what purpose is it put there? To stiffen the brim.
4831. But you say that the brim is strong enough without it? The brim in Exhibit E may have the same material in it for aught I know.
4832. And, if it has got it, you have submitted two qualities of helmets under the same contract? I do not know that it is the same contract.
4833. The helmet was brought down to us and guaranteed by Mr. Anderson to be an exact pattern of one of the helmets made for the Bushmen's Contingent;—if one of these helmets has the stiffening on and the other has not, you have supplied under one contract helmets of different quality? If in the making up of felt helmets it is found when the body is finished that it is a bit light and not up to sample, it is put aside and has to be stiffened. Exhibit K has no stiffening on it, because I suppose it did not require it.
4834. Do you wish the Committee to understand that you examine every helmet you turn out? I do not pass them myself, but we have a foreman who is responsible.
4835. If you got an order for 500 helmets then you would supply some with twill round the brim and some without? Yes.
4836. But if you were asked to supply helmets to pattern and you supply two sorts of helmets, do you think you would be supplying in accordance with the pattern? The whole of the helmets might not be alike in every small detail; it is impossible to get them exact in every way; you cannot, for example, get two pieces of cloth exactly the same shade. Some need stiffening; others do not.
4837. Supposing you were sending out a few helmets without a cover, would you send out some like the black helmet and some like Exhibit J? If we supplied a dozen helmets or hats of that class you would find they would be of different strength; the bodies do not come out with exactly the same thickness. Some bodies lose a little more wool than do others in the milling-up process.
4838. But if you take a contract to supply a helmet with the brim stiffened in that way, and you supply them without the stiffening, it would be a different matter;—did you pick these helmets out for Mr. Anderson to bring down to us? No; my brother did so. He is stationed permanently at the hat factory; my duties take me all over the different factories.
4839. This helmet was brought down to us as a pattern of the helmet to be supplied to the Bushmen; it is supposed to be one of those helmets before it is covered? The helmet when covered would be as good as the other helmet you are looking at, and would be called the same helmet.
4840. But if in the case of one helmet you looked inside and found the twill there it would be considered an improvement? If the helmet were found weak that would be the way to stiffen it. If the helmet is of the proper strength without any twill why should the twill be put upon it; it does not make the body of the helmet any stronger.
4841. Then the putting on of the twill does not give any additional strength you say? It would give greater stiffness to the brim, but the strength of the two helmets all round would be the same.
4842. If Exhibit J is presented to us as an unfinished pattern of that helmet, and it has a piece of twill on it to give it added stiffness and strength, it is not a fair test. If Mr. Anderson wanted to bring a half finished helmet here he might have brought it without the twill; but if he says it was discovered that the peaks generally were not sufficiently strong, and that the piece of twill was put on for the purpose of giving them all added strength it is a very different thing;—that was his explanation, yours is a different one—which are we to accept? I am in a position to explain the matter better because the helmets come more directly under my notice.
4843. Someone must have told Mr. Anderson what he said? I suppose that seeing a helmet like that he would come to the conclusion that the twill was put there to give strength.
4844. Did you supply any saddles for any of the Contingents? I supplied fifty saddles, and I have them still. They are at my saddlery place at the risk of the Military authorities. They still belong to them. I am storing them at their risk.
4845. Did they pay you for them? No.
4846. How is that? I have not charged for them yet. Colonel Roberts told me he was under stress of business. I know that he has been very busy, and I have not been worrying him.
4847. What has he been doing? I cannot say exactly what his business has been; but I have often had occasion to visit him on matters of business, and I know that it has been very hard to see him. I have had to wait sometimes an hour.
4848. I suppose that if you went for a cheque for these saddles you might have to wait a day? At present I might have to wait a week.
4849. Under what conditions did you supply the saddles? We supply officers with saddles, and stock them according to the Imperial regulation pattern. Colonel Roberts asked me one day if we could do any saddles. I told him I thought we could do them equally with anyone else in the town. He said he wanted a certain number—I forget what the number was—but, I think it was about 500. I told him that if he would give me until the following day I would bring up a sample. I then went to my saddler. He is a man who does an immense amount of work for us—in fact half his output is for our firm in one way or another. I refer to Mr. Higson of Oxford-street. I told him that some bush saddles were wanted, and I described them to him. When I asked Colonel Roberts what sort of saddles he required, he mentioned

J. J.  
Anderson.  
30 Aug., 1900.

mentioned the bush saddle, and said the price was to be about £3. I told Mr. Higson this. He had a quantity of saddles in stock which seemed to be about the sort of thing I described. He also procured in town some other saddles of the same description. The sample was submitted and approved. We were to supply fifty, and they were fitted up with stirrup irons, straps, valise pads, and girths. Colonel Roberts said he wanted more D's. The saddle submitted was an ordinary bush saddle with four D's, and Colonel Roberts said he wanted some more D's put on. He said, I could see a sample down at Weekes'. I went down to Weekes' with my saddler, and I happened to meet Colonel Roberts down there. He himself pointed the saddle out to me, and that was the sample for the D's. He said he wanted the D's put on like Weekes' sample. I said we could not put the D's on in that way, because it was a full-skirted saddle, and the saddle I supplied was only a half-skirted saddle.

4850. You mean that in the long-skirted saddles the D's come through the skirt? Yes. In a half-skirted saddle there would be two of the D's outside, and the only way would be to put the D's on in the same way as in the saddle which was approved. There being no skirt we could not put them through it, and they were, therefore, tacked on to the tree. The saddles were delivered at the Ordnance Stores, stamped with the Government stamp, and sent out to the Agricultural Society's Ground. The saddles were issued to the men, who put their names on them in all sorts of letters; some of them 1½ inches in length, and in nearly every case in ink; they also used the saddles. I believe they were out on parade twice. A lot of the D's came away. Colonel Roberts caused me to be rung up, and I had to attend at an inspection of saddles. I took up Mr. Higson with me. They told me that the D's came away, and were in a bad state. Colonel Roberts said that the saddles would not do, and he was in a great state about it. I myself was very much annoyed about the matter, and was angry with Mr. Higson. He said that the D's had been put on in the ordinary way, and that if they were to be put on in a specially strong way he should have been informed so. However, they sent the saddles back to us without the girths, stirrup-irons, stirrup-straps, and valise-pads, to have the D's rectified. The Military authorities had taken delivery of the saddles, and they sent them back without one word. The D's were rectified, and were put on with zinc, and made as strong as possible for that class of saddle. I had them ready to deliver again. I have spoken to Colonel Roberts about it on two or three occasions, and he is going, I suppose, to let me know when to deliver them.

4851. *Mr. Chanter.*] Did he not send a written communication when the saddles were returned? No; I do not believe there was any; but I could find out. This happened, of course, some time ago.

4852. *Chairman.*] But if you had received a communication from the Military Department, whether from Colonel Roberts or anyone else, condemning the saddles, and stating that the Department could not accept them, and that they returned them because they were not up to pattern, you would remember if you had received it? If we did receive any communication we did not take it in that way. I do not think, however, that we received any communication at all. I think everything was done through the telephone.

4853. And now you say you have the saddles ready to return? Yes. I mentioned the matter to my father at the time. He said he had not time to bother about saddles, and that if there was anything in the thing I could take it myself.

4854. I suppose you found out that there was not a great deal in it as it turned out? No; but the saddles were up to the sample submitted, and the Military authorities will have to pay for them, I reckon.

4855. You were quite prepared to strengthen them straight away? They were strengthened straight away.

4856. *Mr. Meagher.*] You knew that the Contingent was waiting to go away and you strengthened the D's at once? Yes.

4857. Why did you not send them back, having performed your part of the contract? We asked for particulars as to delivery.

4858. But having strengthened the D's, why did you not take the saddles back again? I waited upon Colonel Roberts myself wanting instructions what to do with them, and he put me off. I do not know whether they are going to take the saddles latter on or not, but I believe that the idea was that they might come in for the Permanent Infantry.

4859. You having done all that you were asked to do went back to Colonel Roberts, and you say that he put you off;—did it not strike you that that was practically rejecting them? I daresay he would like to get rid of them, but there are the saddles ready for delivery.

4860. From the reception that Colonel Roberts gave you did you think there was any hope of his taking the saddles? I reckon that they will have to take them. I do not know what the procedure is in regard to Government Departments, but if I were dealing with an outside firm I know what I should do.

4861. You mean that you would invoke the law to make Colonel Roberts take them? He has not said definitely that he will not take them, but he has always put me off.

4862. And you have the impression that he is not going to take them? My impression is that he would sooner not take them.

4863. *Chairman.*] A good time has elapsed since you supplied the saddles? Yes.

4864. Have you not sent in your account? No.

4865. How often does your firm send in their accounts? This was a transaction of my own.

4866. And you were in a position to be for six months out of pocket to the extent of the price of all these saddles, without asking for any money? Mr. Higson and I are out between us.

4867. But Mr. Higson did not supply all the saddles; he bought some; therefore he is out of pocket for all the saddles he bought? It is my fault really; he has been at me several times about sending in vouchers.

4868. You have actually paid for some of the saddles you have on hand? Mr. Higson has done so.

4869. Still you do not send in any account? That is entirely my fault, I suppose.

4870. What was to be the price of the saddles? I am not sure, but I think the contract price was £3 5s.

4871. *Mr. Chanter.*] Was £3 fixed as the price of the saddles in the first instance? No; that was only approximate. I wanted an idea of what sort of saddle Colonel Roberts required.

4872. But did you not agree upon a price after inspecting the sample saddle at Weekes'? I agreed to a price before I inspected the saddle at Weekes' at all. The saddle at Weekes' was not the sample required, but was only a sample as to the position of the D's.

4873. The saddle at Weekes' was to be a sample, so far as the number of D's were concerned? Yes; I submitted my own sample.

4874.

J. J.  
Anderson.  
30 Aug., 1900.

4874. *Chairman.*] If Colonel Roberts says that these saddles were immediately sent back as being not up to sample, what would you say? They were up to sample. I submitted a sample, and the authorities approved of it, and the saddles supplied were quite up to it.

4875. But suppose the Military authorities thought they were not up to sample, and say that they were returned immediately they were delivered, because they were not up to sample? They were returned some time after delivery; they had been used.

4876. But if Colonel Roberts says that the saddles were returned immediately after delivery, because they were not up to sample, would he be strictly accurate? Do you mean on the same day?

4877. Yes? He did not return them on the same day. I do not know quite what you would call immediately.

4878. I mean were the Military authorities given a clear day for the inspection and return of the saddles; I should consider that an immediate return? I should think there would be from three to four days from the time they were delivered until they were returned.

4879. And you say that some of them had been used? The whole of them.

4880. You say that the stirrup leathers and irons, the girths, and the valise-pads were not returned? No; they were taken to rig up other saddles.

4881. You have had no definite notification from the Military authorities at any time that they refused to take delivery of these saddles? No.

4882. I suppose you are aware that a rumour was circulated that you and Mr. Higson went round and bought up a number of saddles for 30s., and supplied them to the Military authorities for £3;—would that be correct? I know nothing about it.

4883. You did not do the buying? No.

4884. Did Mr. Higson do it? Yes.

4885. As far as you know, the saddles bought and supplied were up to sample? Yes; I think I ought to explain, in case what I did should be misinterpreted, that I had occasion to go into one of the warehouses. I am not a practical saddler; but I saw some saddles which I reckoned were very good, and I got the firm to give me the refusal of them for a few days. Instead of that they sent them up to me, and when I found out from Mr. Higson that they were no good, we returned them. That is the only transaction I had personally in the saddle line.

4886. In the ordinary way of business, if you submit a pattern of a saddle or a helmet, and it is approved of, and you give a price for an article equal to the pattern you have submitted, which is only one-half of the price which you are being paid for it, that would be only a matter of ordinary business? That, as you say, is business.

4887. It is the person to whom you are supplying the articles who should display ordinary business ability and see that he is not being had? I should say so. The saddles we supplied to the Military authorities can be inspected at any time; they were worth in the ordinary way of business about 50s.; you could not get the same saddles after we had bought them for £4, because there was a panic at the time in the trade.

4888. *Mr. Meagher.*] You say that at the same time you were tendering for the gossamer helmets you were tendering for cork artillery helmets at 5s. 9d.? Yes.

4889. Are you still supplying those helmets at 5s. 9d.? Yes.

4890. Was there any sealed pattern of that cork artillery helmet? Yes.

4891. And you are still faithfully supplying helmets in accordance with that pattern? Yes, with one exception; there was a great demand for small sizes, and we imported some of the helmets half-made and finished them here. With, I am pretty well certain, the knowledge of the Military authorities, we substituted for the helmets required, and which we had not in stock, about ten gossamer helmets.

4892. *Mr. Chanter.*] You say that that was done with the knowledge and the approval of the authorities? I am not quite certain, but I am pretty well sure that it was.

4893. *Mr. Meagher.*] What I understand you to say is that running short of certain sizes you submitted, with or without the approval of the authorities, these gossamer helmets? Yes.

4894. Have you since supplied the cork helmets? Yes. It was only for extremely small sizes—sizes such as we never dream of importing—that we substituted the other helmets.

4895. Whatever cork helmets you now supply to the Military authorities are not of your own manufacture? No.

4896. *Mr. Chanter.*] Can you account for the excessive demand for these small sizes? No. I think the helmets were required previous to the artillery going into some camp; they had been wanting them for some time and we could not supply them, although under our contract we were supposed to do so. It is often necessary to stretch a contract either one way or the other under such circumstances.

4897. *Chairman.*] It seems funny that the soldiers should have had such small heads? It was quite an exceptional case.

4898. *Mr. Chanter.*] When you had an interview with Colonel Roberts with regard to the saddles, you say the price was fixed at about £3? Yes.

4899. And you afterwards exhibited a sample saddle? Yes.

4900. The Military authorities approved of that saddle, with the exception that more D's were to be put on? Yes.

4901. At that stage was the price again mentioned? No.

4902. At any stage was the actual price mentioned subsequently? No.

4903. Do you consider that an agreement of that kind would give Colonel Roberts or you any latitude in regard to the price of the article;—how, for example, do you yourself come to fix the price at £3 5s.? The saddles, to the best of my recollection, were quoted complete with valise-pad at the back for £3 5s. I dare say I can give you the exact information from my papers.

4904. Whatever price you quoted was accepted by Colonel Roberts? Yes; there was no demur.

4905. Then Colonel Roberts, whether the price was £3 5s. or £3, was quite cognisant of the fact? Yes. I myself remember seeing the price in writing.

4906. Apart from these saddles, have you yourself had any contract with the Military authorities? No.

4907. Have you seen the tender forms issued by the Military Department? Yes.

4908. Do those tender forms give the tenderer an opportunity to tender for any item, or for the aggregate items? I think the tendering is for the aggregate items.

4909. Have tenderers the option of tendering for a portion? Not to my knowledge.

4910.

4910. *Chairman.*] How does the saddle you submitted compare with Exhibit No. 4? Exhibit No. 4 was quite a different saddle.

4911. Is it of better quality than that you submitted? I should say it was; but I am not a practical saddler.

J. J.  
Anderson.  
30 Aug., 1900.

4912. What do you think of the panel? I should say that, on the whole, it was a better class of saddle than that we submitted; but I cannot speak from any practical knowledge of saddlery.

4913. Is there anything further you would like to state to the Committee? I should like to exhibit (*Exhibit R*) a gossamer helmet worn for eighteen months by a postman; also (*Exhibit S*) a section of a civilian's pith helmet. I have also an old artillery solid cork helmet, and as the statement has been made that it is impossible to take the cover off an old helmet without tearing pieces out of the cork, I will now take the cover off, and show that it can be done without in any way destroying or injuring the body. It can be taken off by rubbing the cover with naphtha, which dissolves the rubber. (*Exhibit T*.)

TUESDAY, SEPTEMBER 4, 1900.

Present:—

MR. CHANTER,  
MR. HURLEY,

MR. MEAGHER,  
MR. PIDDINGTON.

RICHARD SLEATH, ESQ., IN THE CHAIR.

James Reid called in, sworn, and examined:—

4914. *Chairman.*] What is your occupation? I am a public writer.

4915. Have you had any military experience? A great deal.

4916. Where? In India.

4917. To what regiment where you attached there? I belonged to the local Bengal Artillery.

4918. For how many years? Thirteen.

4919. Have you taken any interest in the organisation and equipment of the different Contingents going to South Africa? I have watched what has been published, and I should like permission to read a copy of a memorandum which I addressed to Mr. Reid, who was then Premier, last year. It is as follows:

J. Reid.  
4 Sept., 1900.

MEMORANDUM to The Right Honourable G. H. REID, P.C., M.P. Prime Minister.

9th March 1899.

In reference to your reply to the proposal of J. C. L. Fitzpatrick, Esq., M.P., that the Public Service Board should be appointed a Royal Commission to investigate the system of military administration, and the emoluments of military officers, I beg respectfully to point out to you that in my paper on the "Prospects of Australian Federation," published in the "United Service Magazine" for September 1896, nearly all that needs to be said on the subject has been said.

I submit that nearly all the points in my indictment can be determined by "gentlemen without military qualifications or experience." They are:—

- 1st. That no officer of the General Staff possesses the qualifications required for his position by the "Queen's Regulations."
- 2nd. That with one exception, there is no properly educated artillery or engineer officer in the permanent service of the Colony (this does not apply to General French, or Colonel Smith.)
- 3rd. I also pointed out that many officers of the Staff and Permanent Force lived miles away from the barracks; but this, at my suggestion, was remedied a year ago.
- 4th. I also pointed out that officers receive the South African "Colonial Allowance," though the conditions of service here are very different from those which obtain in South Africa.
- 5th. The allowance in lieu of quarters is ridiculously excessive. Captains and subalterns are each allowed one room in barracks, and are only entitled to rent for one room when living outside.
- 6th. Captains and subalterns of garrison artillery are not entitled to forage allowance.

The regulations regarding these matters are in print, and accessible to anyone who is interested. To decide whether they are being acted on here requires no military training. If it does I will put my experience at the disposal of any commissioner you may appoint.

J. REID.

I have also written some observations which I should feel glad if the Committee would take into their consideration. I could afterwards give evidence upon any matter contained in them. With regard to the saddlery supplied to the Contingent, I may venture to say that I have given a great deal of study in the course of my life to the organisation of other armies than the British army, and their equipment. I now hand into the Committee a rough drawing of the British hussar saddle, and also a sketch of the tree upon which the saddle is made. It struck me at the time complaint was made as to the saddles supplied to the Contingent that a simple remedy would have been, instead of supplying of a valise to contain the men's kits, seeing that saddles of the necessary pattern could not possibly be made here, owing to the impossibility of getting the trees, to supply every man with the saddle-bags which are used by many bushmen in Australia. These would then go upon the saddle and would obviate the necessity for the valise and valise pads. A valise carried on the cantle of the saddle, necessarily brings its weight on to the very weakest part of the horse's back. If it rests on a pad only loosely strapped on to the cantle of the saddle, then with every motion of the horse the valise shifts up and down, and is apt to cause a sore back and to injure the horse in other ways. The saddle-bags are under the rider, and fastened by a surcingle, remain there, merely adding, of course, to the rider's weight.

4920. Have you any knowledge of the equipment of the different Contingents which left here? I have personal knowledge only as to the helmets. I am very well acquainted with the Indian helmet, and I did not see any of them issued to the Contingents. The helmet used by the soldiers in India is made upon a wickerwork body. The wickerwork consists simply of split cane, very much like the cane of a chair.

4921. Did you ever see a helmet like that (*Exhibit P*)? I think that if you took it to pieces you would find it to be something like the old pattern of helmet introduced in India in the fifties. I think you will find that it is made of grass.

4922. Is it like the helmet you yourself saw used in India? No.

4923. Would you be surprised to learn that it is the helmet which is being used in India at the present time? That may be the case. The wicker helmet I speak of was introduced in 1859, and was superior to that which you now exhibit.

4924. I suppose you will admit that those who have been wearing these helmets in the interval ought to have some idea of their quality? Yes.

4925.

J. Reid,  
4 Sept., 1900.

4925. And if they had discarded the 1859 helmet and have substituted this one, it would not look as if the 1859 helmet were superior? There are many other reasons which caused that helmet to be disused.
4926. There are a variety of opinions as to the quality of different helmets? Yes. The wicker helmet was much lighter than that which you now exhibit, and lightness is a great advantage.
4927. We are not particularly interested in the helmet introduced in India in 1859; we are dealing with matters which affect the present administration;—you had not had under your observation any of the helmets recently supplied to the troops leaving New South Wales? I have not.
4928. You had not personally inspected any of them? No.
4929. *Mr. Meagher.*] You say that the helmet introduced into India in 1859 was a lighter helmet than that exhibited? A much lighter helmet.
4930. *Chairman.*] More suitable for service, you think? Yes. The helmet was supplied with two covers which could be taken off, and washed or dyed if it were necessary to use any special colour. The covers could always be kept clean.
4931. Do you know what that piece of material is composed of? It appears to be a sort of felt.
4932. Do you know that it is a piece of the 1859 helmet, of which you have been talking? I think not, with all respect.
4933. It is evidently not felt, because it is composed of pieces of straw, among other things? At first sight it resembles felt.
4934. What do you think this second piece of material is composed of? It seems to be some sort of cloth, over something very much like leather. I could not tell you what it is. The material you first showed me might have formed part of the helmet issued to the troops in India in 1857; it is not wicker.
4935. Would you be surprised to learn that the piece of material I now hand you is felt? It may be felt.
4936. What do you think of that helmet (*Exhibit K*)? It is some sort of felt.
4937. What makes you think so? I presume so from the feel of it.
4938. What do you think of that helmet (*Exhibit J*)? It is very much like pasteboard.
4939. What do you think of that piece of material? It is some description of cloth, a very thin gauzy substance. If that is the material of which any helmet is made, I should imagine it would not stand wetting, although it would look very well for parade purposes, and that sort of thing.
4940. Suitable for wrapping up butter, if the material were clean? Yes, but I should say it would not stand much wetting.

Horace Percival Cooper Nixon called in, sworn, and examined:—

H. P. C.  
Nixon.  
4 Sept., 1900.

4941. *Chairman.*] You were a trooper in the Second Contingent? Yes; in the mounted infantry.
4942. Under Colonel Knight? Yes.
4943. You left here when? On the 17th January.
4944. In the "Southern Cross"? Yes.
4945. How was the ship supplied with provisions;—were they of good quality? No.
4946. Did the men complain? Yes; there were complaints at every meal.
4947. Were the faults remedied;—did you get any better provisions? No.
4948. Was the meat bad? Yes.
4949. What was the bread like? We got half a pound of bread in two days.
4950. Was it of good quality? The bread was fairly good.
4951. I believe a lot of fruit, cigars, tobacco, and other things were sent on board ship for the use of the troops;—did you get any of it? We got no fruit; the only fruit I saw was that which the officers had.
4952. Did you get any tobacco, cigarettes, or anything of that sort? No.
4953. Did you not hear of these things being presented to the Contingent by different persons before you went away? I saw it stated in the newspapers that certain things had been presented to the Contingent, but we got none of them.
4954. Taking it by-and-large, the provisions on the ship were not too good? No. Some of them were not fit for the men to eat.
4955. Did you hear that the responsible Minister had done all in his power to see that you were well looked after? No, I cannot say that I did.
4956. You were in camp at Randwick before you went away? Yes.
4957. How did you get on? We were treated very well there.
4958. As a matter of fact, the authorities went outside the ordinary military regulations and provided pickles, cheese, and jam occasionally? I did not see any pickles, but I saw some jam.
4959. Did you see any cheese? Yes.
4960. Do you know that men coming into camp late at night were ordered by the authorities to be supplied with cold meat and pickles, and that sort of thing, it having been represented to the Minister that the men coming into camp at that hour did not get anything until the next morning? I did not see any of that.
4961. But the provisions may have been there for aught you know? Yes.
4962. Still you are perfectly satisfied with the arrangements made for feeding the men at Randwick? Yes.
4963. But on board the boat things got considerably worse? Yes.
4964. What did the officers say when you lodged any complaint;—did they assign any reason for the bad provisions? No reason whatever.
4965. Did they say anything at all to you about the provisions? I remember Captain Bennett saying: "This is good living compared with what we had going over to the Soudan." I myself did not think it possible that the provisions could have been much worse.
4966. Did you chaff Captain Bennett about the Soudan? No.
4967. You did not make the slightest reference to the goat and the donkey? No.
4968. When you arrived at Capetown you went up to the Maitland camp? Yes.
4969. And from there where did you go? To the Modder River.
4970. Did you take part in the advance from the Modder River to Bloemfontein? Yes, right through.
4971. Were you in any military force before you started with the Contingent? No.
4972. You had issued to you two suits of clothes? Yes.
4973. And a kit? Yes.
4974. Containing a good many brushes? Yes.
4975. Did you know what to do with the whole of the brushes? Yes.

4976.

H. P. C.  
Nixon.

4 Sept., 1900.

4976. These brushes I now exhibit are taken from the sample kit; what are they all for? Three are boot brushes, one is a hair brush, and another is a button brush. Then there was a small clothes brush. We did not receive the big clothes brush, such as you have in that sample kit.
4977. If you had had the big brush, you would not have wanted the smaller one? No.
4978. If you had had the two brushes, you would have had to use one at a time, or one in each hand? Yes.
4979. Did you find any need for these brushes when you were at the front? We never had any use for them.
4980. Did you use up all the blacking? No. We did not have the kit with us at the front; it was left at Capetown.
4981. And you did not feel the want of it? No.
4982. Did you have these fly-nets issued to you? Yes; at the Modder River.
4983. Did you not get one when you were going away from here? The nets were brought from here, I think, but they were given to us at the Modder.
4984. The nets were not issued by the Imperial authorities? Not that I know of.
4985. Did you see any of the regular Imperial forces wearing them? No.
4986. Did you see any force beside your own wearing them? No.
4987. Did you wear them regularly? We did not wear them at all.
4988. I suppose you thought they would come in very handy to boil a bit of cabbage in? Well, there were no flies there for one thing.
4989. Do you know whether all the men on the "Southern Cross" had two suits of clothes issued to them? I could not say if they all had.
4990. Do you know of any men who did not? No.
4991. Do you know Trooper Watts? Yes, he came from the police force.
4992. Did he have two suits of clothes? Now I come to think of it, he had not.
4993. You know that for a fact? Yes.
4994. Do you know Trooper McMillan? No.
4995. Do you know Trooper James Young? Yes.
4996. Do you know whether he had two suits of clothes issued to him? I could not say.
4997. Did you have kit inspection on the way over? Yes, about six or seven times.
4998. Then the officers would become aware of it if any men were short of clothes? Yes.
4999. Was there any pilfering of clothes on board ship? There was a little.
5000. Did you lose any of yours? I lost a pair of socks, a knife, and a lanyard for which I was charged 3/-.
5001. The loss of your clothes would not necessarily mean that your comrades took them; they may have been taken by the ship's crew? Yes.
5002. Did you hear about anything being found in the seamen's quarters? Yes; some rifles, some bandoliers, and some clothes.
5003. When you missed your socks, you were charged the full price for them? They charged me 3s. for the socks, knife, and lanyard.
5004. Did they re-issue socks to you? No.
5005. Although they charged you for the pair you lost? Yes.
5006. How did your clothes last? The tunic and the white riding trousers lasted very well, but the brown ones were very inferior.
5007. Were the brown ones of the material like that exhibited? No; they were a cheaper material.
5008. Were they like the second class of material exhibited? No; they were not like either of those pieces.
5009. One of these pieces is Imperial Bedford cord, and the other is a locally manufactured article? The trousers were not like either of those pieces of material. The trousers we had were more like moleskin trousers; the material was very stiff and did not last.
5010. How did the overcoats last? They lasted fairly well.
5011. Were they a good serviceable coat? They were not as warm as the last issue of coat we got from the Imperial authorities.
5012. Were they a blue coat? Yes; the cavalry coat.
5013. Lined with red cloth? Yes.
5014. Were they like this exhibit? Exactly the same.
5015. Did you find it a serviceable coat? Yes; it kept out the wet, too.
5016. Was the coat you had issued to you here something like that produced? Yes, something similar to that.
5017. Were all the coats issued to the Contingent new? No, they were not.
5018. Some were second-hand? Yes; the coat I had myself was a second-hand coat.
5019. Did they keep out the wet? No; the wet went right through them.
5020. They became like a wet blanket—very heavy and disagreeable? Yes.
5021. I suppose that on many occasions you had to do without tents? We had no tents after we left the Modder River?
5022. Therefore, it was the more necessary that you should have a good, substantial overcoat? Yes.
5023. Both to keep out the wet and to keep you warm? Yes.
5024. You found the cavalry coat issued by the Imperial authorities very superior to the coat issued to you here? Yes.
5025. I suppose you had a pretty rough time going through from the Modder River to Bloemfontein? Yes.
5026. What were the provisions like? On that march I do not think we were as well provisioned as were the Imperial troops.
5027. How do you account for that—was it due to laxity on the part of the officers? In one case it was.
5028. Would you mind telling us of that occasion? That was on the day we left Modder River and went to Klip Drift. The night before we came in from outpost duty around Conje and his prisoners. The next morning we started straight for Paardeberg, and camped at the Klip Drift. We were all that day without anything to eat. I am referring now to No. 2 troop of D Company. It appears that Lieutenant Legge would not send back a man for provisions for that troop.

5029.

H. P. C.  
Nixon.  
4 Sept., 1900.

5029. I suppose there were plenty of provisions at the base? Yes; in this instance the carts were coming up behind us, and the other troops sent back men for provisions for the day, but Lieutenant Legge would not send back a man. We reached Klip Drift at 9 o'clock, and it commenced to rain, and rained for three hours, and we had to stand to our horses. We went to Lieutenant Legge about the food, and he said he knew nothing about it. He told me he had had nothing to eat himself. I said, "Excuse me, I saw you with a loaf of bread at dinner-time; I saw you buy it."
5030. Of whom did he buy the bread? He bought it at a farm.
5031. Had you all liberty to go into farms on the road to buy what you could? On an occasion of that sort we had.
5032. I suppose you were short of money? Some of us were.
5033. Perhaps the bread may have run out at the farm? They had no more bread. At night, when we got into camp at Klip Drift, we wanted to see Colonel Knight; but we could not get a non-commissioned officer or a commissioned officer to take us to him.
5034. You could not go without having an officer or non-commissioned officer to carry the information to Colonel Knight that you wanted to see him? No.
5035. You could not get any officer to take him the information? No.
5036. So that you were all that day without anything to eat? Yes.
5037. And in that case, in your opinion, provisions could have been obtained by sending back for them? Yes.
5038. The ordinary ration, I believe, consists of a small tin of meat? Sometimes the meat is in 1lb. tins and sometimes it is in 6lb. tins.
5039. But the men are supposed to be allowed a pound of meat a day? Yes.
5040. And this meat is in small tins, which do not really contain a pound? I could not say.
5041. You are supposed to be allowed 1lb. of bouili beef and four biscuits a day? Yes.
5042. Supposing you were drawing full rations, how did that quantity suit you? It was not sufficient.
5043. Not even when you were drawing full rations? No.
5044. Is it not the fact that some of the men used to eat the whole of their day's rations in the morning? Yes.
5045. And they would get nothing until the next morning? Nothing, perhaps, for two or three days.
5046. After all, a pound of bouili beef and four biscuits is not a big feed? No.
5047. If you were hungry you could go right through the lot at one meal, and not break yourself up? Yes, and feel just comfortable after.
5048. You were getting half rations sometimes? Yes; during the march from the Modder River to Bloemfontein we were nearly always on half rations.
5049. So that you suffered a good deal from the want of sufficient food? Yes.
5050. Being in the saddle sometimes ten or twelve hours a day? During that march we were in the saddle at times day and night.
5051. And having plenty of work like that you naturally have a good appetite? Rather.
5052. Taking it by-and-large it was a pretty rough trip? Yes.
5053. I suppose most of the time you felt the want of food more than you were troubled about the risk of getting wounded or killed? Yes, the want of food was all that troubled us on that march.
5054. You did not trouble yourself about the Boers' bullets? No.
5055. As far as your experience went you did not find anyone flinching from duty at all? No; I should not like to say that I did.
5056. Generally speaking, all the men were quite game as far as the enemy were concerned? Yes.
5057. How far north did you go? Only as far as Bloemfontein.
5058. How did you find the saddles you took away from here stood? Very badly.
5059. Did they give the horses bad backs? They did.
5060. Had many of the horses bad backs? Most of the horses in my troop had bad backs.
5061. You did not get any fresh saddles? There were some saddles issued after they left Bloemfontein.
5062. You did not get any yourself? No.
5063. You were then invalided with enteric fever and dysentery? Yes.
5064. Were you in the first action just after Paardeberg? Yes, at Osfontein.
5065. When Lieutenant Holborow was wounded? Yes.
5066. You were in Captain Bennett's company, you say;—how did your officers get along? We got along first-rate with Captain Bennett, and also with Captain Hilliard.
5067. Who were the subalterns under Captain Bennett? Lieutenant Legge, Lieutenant Watson, Lieutenant Drage, and Lieutenant Garvan.\*
5068. Each of those subalterns would have command of a troop? Yes.
5069. How did they shape? They shaped very well.
5070. So that you are perfectly satisfied with the officers of your squadron? Yes; there could not be four better officers.
5071. But you think that sometimes they might have made an extra effort to get you some tucker? That was not their fault; that was the fault of the men having charge of the transport.
5072. But if the officers of the other troops sent back and got provisions, might not the officer of your troop have done the same thing? Yes, he might have done. I do not know what was Lieutenant Legge's reason for not sending back on the occasion to which I referred.
5073. With that exception, you are perfectly satisfied with the officers? Yes.
5074. How did Colonel Knight seem to be regarded among the different troops? They did not care for him at all.
5075. Did he use strong language occasionally? Yes, I have heard him.
5076. Do you think he had provocation? On the occasion I have in my mind I do not think so.
5077. Would you mind telling us what was the language, and what were the circumstances? It was about 12 o'clock on the day on which we first fought. We had chased about forty Boers that morning, and we stopped at a dam to water the horses and give them a spell. I was watering my horse alongside Colonel Knight, who was sitting on a bank with Captain Hilliard, and I heard him sing out to Lieutenant Garvan, who did not hear him. He then said, "God damn and blast you, you damned fool; can't you hear me?"
5078. So that the Colonel was not very popular among the men? No, not at all.

5079.

NOTE (on revision) :—Lieutenant Garvan is not in D Company, but in B Company.

H. P. C.  
Nixon.

4 Sept., 1900.

5079. They did not like him? No.
5080. Did he get a bit hustled when he was in a tight corner? Yes, very much so.
5081. Instead of maintaining a cool and collected manner, he used to sing out a great deal to the men? Yes.
5082. Using pretty rough language? Yes.
5083. And, in your opinion, without any justification? Yes.
5084. So that he was not popular among the men or officers? No. As far as the men were concerned? he was not. I do not know so much about the officers.
5085. Did you ever hear him address the men generally as bloody fools? Yes; he did that at Abraham's Kraal.
5086. What did he say? I heard him sing out to some of the men who were getting into position. He said, "You bloody fools; why don't you get down?"
5087. Do you remember hearing anything about Trooper English at Paardeberg? No. I do not remember his case.
5088. Do you remember any cases among our men in which you might say they both showed special bravery—in assisting to rescue a comrade, for example? Yes.
5089. What cases were they? Well, there was my own case at Abraham's Kraal. I had my horse shot, and a man named George Ellis wanted to come back for me. Lieutenant Legge and Sergeant Humphreys sang out to him, and told him he was not to go. He went on with the troop a bit, and then came back to me.
5090. Did he carry out from under fire? No. He did not carry me out—my horse was only shot in the neck; but just as I was mounting, my saddle came off. He came back again, and helped me to put on my saddle, and got me on my horse again. I was stunned.
5091. Were you under fire then? Yes. They were directing all their fire on to us. We were only about 600 or 700 yards away from the Boers.
5092. You got fever before the advance from Bloemfontein? Yes.
5093. You did not know anything of what took place at Karree? No.
5094. Did you hear case of special bravery outside that of Ellis's? No.
5095. Was Ellis mentioned by the commanding officer for having done that act? No.
5096. Did you yourself think that Ellis had displayed conspicuous bravery in coming back for you? Most decidedly I do.
5097. Did the men generally think so also? Yes.
5098. As far as you know, no mention was made of that by the commanding officer or by the other officers? No; they said nothing to me or to Ellis.
5099. You do not know whether your names were mentioned in reports to the headquarters staff or not? They were not, as far as I know.
5100. If they were, you heard nothing of it? No.
5101. How did the helmets with which you were supplied last you? They were no earthly good. As soon as they got wet they collapsed.
5102. Is the helmet now produced much the sort of helmet which you got supplied to you? Yes, ours was somewhat similar to that.
5103. This is Exhibit C;—would you be surprised to learn that that was the pattern? It might be.
5104. Your helmet was the same shape? Yes.
5105. And, so far as you can judge, it was constructed of the same material? Yes.
5106. Do you see the material in that helmet where it is cut? Yes.
5107. Did you ever see anything like it before? Not that I know of.
5108. You have seen the cloth which is generally rolled round butter? Yes.
5109. Does this material resemble that? It looks slightly like the stuff they put round cheese.
5110. You see that helmet (*Exhibit I*);—did you see any helmets in as bad condition as that? Some of them were worse than that.
5111. That would be considered rather a good one? Yes; when we reached Bloemfontein it would.
5112. Did you see any as bad as that? Yes. I have seen them as flat as that; with no stiffness whatever in them.
5113. The crowns had fallen right in? Yes.
5114. Used you not to call them concertinas, because the crowns had fallen in? That is just what we used to call them.
5115. This helmet bears the name of Walter Kavanagh;—I suppose you had no doubt that it is really his helmet? I could not swear it, of course, but I should say it was one of the helmets which was worn. I have seen helmets in quite as bad condition as that.
5116. You would not be surprised to learn that it was brought from Bloemfontein and handed to me by the trooper whose name it bears? No.
5117. Did you ever see any helmets in as bad a state as that (*Exhibit A*)? The men generally took to the service caps when the helmets got as bad as that.
5118. You would not be surprised to learn that that helmet is in the same condition as when it was taken off the trooper's head when he was getting refitted? I never saw one quite as bad as that.
5119. But you have seen them as bad as Exhibit B? Yes.
5120. The helmets were not, in your opinion, of much account? No. They were not at all suitable. When you were lying down they would strike the back of your neck and come over your eyes, so that you could not see the sight of the rifle; they would not stand the wet either.
5121. When you were sick the men were supplied with fresh helmets? Yes.
5122. You yourself did not get a fresh helmet? No.
5123. The overcoats, you say, were not as of as good quality as the Imperial cavalry overcoats? No.
5124. And the helmets were very bad? Yes.
5125. With those exceptions, how did the balance of the clothes wear? They wore very well. The tunics and the white trousers were very good; the boots were also good.
5126. On what date did you become sick? On the 26th March.
5127. And you arrived in Cape Colony about the 20th February? Yes.
5128. So that you were only a little over a month in the actual fighting line? Yes.
5129. In what condition was your helmet when you became sick? It was all broken in.

H. P. C.  
Nixon.  
4 Sept., 1900.

5130. Did you give it reasonably fair treatment? Yes.
5131. You used not to sit upon it? No.
5132. Or play football with it? No.
5133. Did you see any other men doing anything like that with their helmets? No.
5134. There was a sort of general collapse among the helmets? Yes; it was the rain that did it all.
5135. In regard to the pay, what pay did you expect when you got away from here;—what were your ideas in regard to it? I expected to receive 4s. 6d. per day from the Colonial Government, and the Imperial pay, whatever it might be, in addition.
5136. I suppose you found South Africa rather an expensive place? Yes.
5137. If you wanted to buy anything, you had to pay a big figure for it? Yes; it cost me 10s. for a feed at Capetown.
5138. And as you went up country things became more expensive? Yes.
5139. That was owing to the difficulty in getting up stores? Yes; the Military authorities had charge of the traffic.
5140. People could get stores up only with Military sanction? Yes.
5141. And the Military naturally served themselves first? Yes.
5142. The consequence was that provisions became very scarce and very dear? Yes; at Bloemfontein the stores were all bought out about a week after we arrived there.
5143. In what hospital were you at Bloemfontein? I was at St. Michael's Home.
5144. How were you treated at the hospital? Very well.
5145. Did you hear any complaints about the hospitals among the men? I heard frivolous complaints, but I took no notice of them. You could not expect any other treatment over there at that time.
5146. As far as you were able to judge, the men received fair attention in the hospitals? Yes; first-class attention.
5147. Did you at any time visit the New South Wales hospital? No; I was never through that hospital. They were full up when I became ill, and they could not take my case.
5148. Was there a general desire among the men to get into the New South Wales hospital? Yes.
5149. It was generally full up? Yes.
